Water Quality Control Commissio Regulation No. 85 - Nutrients Management Control
Compiled by the Water Quality Control Division **Version Date:** March 18, 2013

Explanation: This list identifies industrial and municipal wastewater treatment facilities required to evaluate potential future nutrient (phosphorus and nitrogen) discharge reductions. Inclusion on the list is primarily a function of Capacity to Use (discharge volume) and Watershed Priority (current/future impacts). Permits not renewed are administratively contined. Acutal treatment improvements can not be determined until facility-specific engineering analyses are completed.
