[1] USA mortality data based on all 50 states combined.

▲ Rate is significantly higher than corresponding rate in column to the left.
▽ Rate is significantly lower than corresponding rate in column to the left.
● Rate is significantly higher than White/Non-Hispanic rate for this sex, geographic area, and time period.
○ Rate is significantly lower than White/Non-Hispanic rate for this sex, geographic area, and time period.

HIGHLIGHTS

- In Colorado, the cumulative lifetime risk of stomach cancer is 1 in 92 for males and 1 in 205 for females.
- The 2002-06 Colorado stomach cancer incidence and mortality rates were generally about 15-25% lower than U.S. rates, and Colorado Hispanic females had a 45% decrease in their stomach cancer incidence rate between 2002-06 and 2007.
- During 2002-06 and 2007 in Colorado, Hispanics and blacks had substantially higher incidence and mortality rates of stomach cancer than non-Hispanic whites.
- The five-year survival rate for stomach cancer in Colorado improved from 16% to 22% from 1996-99 to 2000-03.
