

**FIFRA Section 24(c) Supplemental Label
RIMON[®] 0.83EC Insecticide**

FOR USE ONLY ON ALFALFA GROWN FOR SEED

**FOR DISTRIBUTION AND USE
ONLY WITHIN MESA COUNTY, COLORADO**

EPA Reg. No. 66222-35-400

EPA SLN No. CO-070004

- It is a violation of Federal law to use this product in a manner inconsistent with its labeling.
- This labeling must be in the possession of the user at the time of pesticide application.
- Follow all applicable directions, restrictions, Worker Protection Standard requirements, and precautions on the EPA-registered label.

DIRECTIONS FOR USE

Ground Application

Apply recommended dosage by conventional ground sprayer equipment capable of delivering sufficient water to obtain thorough, uniform coverage of the target crop. Spray equipment boom and nozzles should be oriented in a manner to minimize boom height to optimize coverage uniformity, maximize deposition and reduce spray drift. Drop nozzles may be required to obtain uniform coverage against certain pests that develop down in the canopy. A minimum spray volume of 5 gallons per acre should be used with ground spray equipment. Higher gallonages will provide better coverage and performance. Use hollow cone, disc-core hollow cone or twin jet fan nozzles suitable for insecticide spraying.

Aerial Application

For aerial application apply in a total of at least 5 gallons per acre using a nozzle configuration that will provide a median droplet size of 200-300 microns. Higher gallonages will provide better coverage and performance. Observe the minimum safe application height – not greater than 12 feet above crop canopy. Boom length must be less than 75% of wing span and swath markers, flagging or GPS system should be used during application. Applications should be made when wind speed is between 2 and 10 mph. Do not make applications when wind speed exceeds 10

mph. Under low humidity and high temperatures, spray volume should be adjusted upward to compensate for evaporation of spray droplets. Ultra Low Volume (ULV) application is not permitted.

INSECTS CONTROLLED BY RIMON 0.83EC IN ALFALFA GROWN FOR SEED

Target Pests	Application Rates Fl. Oz. Per Acre	Application Timing
Lygus bugs	9 - 12	Begin application when plant bugs appear and oviposition is initiated. Repeat at 7 to 14 day intervals as needed to maintain control. Rimon will not control adults.
Alfalfa weevil (suppression)	6 - 9	<p>If later instars, or adults are present, or if a quick knockdown is required, tank mix with a knockdown insecticide at the lower rate of 6 to 9 oz. per acre.</p> <p>Use higher rates and higher spray volumes when foliage canopy is dense and high infestations occur. For the most effective control, fields should be scouted.</p>

Restrictions/Precautions:

- Do not apply more than 48 oz. per acre per season.
- Do not apply more than 4 applications per season.
- Do not apply within 14 days of harvest.
- Read and follow directions of tank mix partners to ensure accurate use directions and avoid detrimental effects on pollinators; since some of the knockdown insecticides can negatively impact pollinator conservation.
- Do not apply within 250 feet by air equipment of bodies of water such as lakes, reservoirs, rivers, permanent streams, natural ponds, marshes or estuaries. All applications must include a 25 foot vegetative buffer strip within the buffer zone to decrease runoff.
- Use this product only on pure stands of alfalfa to be harvested for seed.
- Do not allow livestock to graze treated fields. Do not use treated crops for livestock feed. Crop residues are not to be fed to livestock or baled for such use.
- Do not harvest seed for sprouting.
- Processed seed must be labeled “Not for human or animal consumption” at the processing plant. All alfalfa seed screenings must be disposed of in such a way that they cannot be distributed or used for food or feed.
