### SIPA to Support Colorado Going Google

**Denver - Tuesday, March 20, 2012** - The Statewide Internet Portal Authority ([SIPA](#)) will support the State of Colorado as it transitions more than 26,000 employees to [Google Apps for Government](#). SIPA has been providing this suite of applications since 2010 to Colorado local governments including Larimer and Eagle County, Douglas County School District and the cities of Delta and Montrose and many others. All governments across Colorado are able to take advantage of this product through SIPA. SIPA will assist the State of Colorado in acquiring the licenses and providing executive support throughout the contracting, planning, implementation, and post go-live phases of the project. SIPA is proud to be involved in this project and understands its significance and importance to the employees and people of the State of Colorado.

“The decision by the [Governor’s Office of Information Technology](#) to move to Google is a tremendous decision and SIPA will ensure the support and resources are available throughout the project,” said John D. Conley, Executive Director, Statewide Internet Portal Authority. “SIPA has been involved with Google implementations since 2010 and it will bring all the lessons, expertise, and knowledge from these implementations to the table to assist in this project.”

SIPA has a partnership with [Tempus Nova](#), a Colorado company that is a leading provider of Google solutions. This partnership was created in 2010 and allows governments across Colorado to have access to professional services and support when moving to Google. Tempus Nova has worked with companies and governments of all sizes as they have transitioned to Google Apps. Some of the notable companies include the State of Wyoming, Kohl’s Department Store, the federal General Services Administration, and National Oceanic and Atmospheric Administration (NOAA).

“Tempus Nova is looking forward to bringing this transition to Google to a successful conclusion for the State of Colorado.” said Kyle Quinn, Managing Partner, Tempus Nova. “Our team is looking forward to getting started on the project and supporting Colorado with making this transition to a best in class application.”
