“CLEAN ENERGY PARTNERSHIPS” FORUM ANNOUNCED

Event is Part of the Statewide Colorado Tech Week, September 18-22

DENVER, CO – As part of the Governor's 2006 Tech Week, the Governor's Office of Energy Management and Conservation (OEMC), Colorado State University and the Northern Colorado Economic Development Corp. will host a morning energy forum: “Clean Energy Partnerships.” The forum will have two sessions focusing on clean-energy technologies and will be held on Monday, September 18, at Colorado State University’s (CSU) Engines and Energy Conversion Laboratory.

The first session of the forum will have presenters from Colorado’s premier universities and laboratories. The presenters will discuss recent research and development in renewable energy and emerging energy technologies.

The forum will also address economic development and private-public partnerships that focus on renewable energy projects in Colorado. The benefits of these projects, as well as the challenges, will be discussed.

“Colorado has some great examples of collaboration between private-public partnerships, universities, and communities in renewable energy technologies,” said Drew Bolin, OEMC director.

There will be exhibits demonstrating emerging energy technologies in transportation, alternative fuels, renewable energy, and a tour of the CSU Engines and Energy Conversion Laboratory. A question-and-answer period will be encouraged after the forum.

Event Information:

- Date & Time: Monday, September 18, 8:00 a.m. to 12:30 p.m.
- Location: Colorado State University, Engines & Energy Conversion Laboratory, Fort Collins, Colorado
- RSVP by September 13, to Kourtnie Harris, Kourtnie.Harris@state.co.us or (303) 866-2401
- For more information: Visit OEMC at www.colorado.gov/oemc or Colorado Tech Week at www.coloradotechweek.com
