“GOVERNOR’S ENERGY OFFICE’S ANNOUNCES SERVICES TO ADVANCE RENEWABLE AND ENERGY EFFICIENCY PROGRAMS”

DENVER – The Governor’s Energy Office (GEO) has added new services to support the goals of Gov. Ritter’s New Energy Economy for Colorado. GEO is responsible for implementing statewide renewable and energy efficiency programs through the Clean Energy Funds. These services will enable GEO to better serve Coloradans in their efforts to reduce energy usage and carbon emissions.

GEO announces the following services:

- **K-12 School Energy Programs:** GEO will provide assistance to K-12 school districts interested in energy efficiency programs and energy performance contracting. Joel Asrael, commercial buildings engineer, will lead the training and outreach efforts to the school districts.
- **Development and Grant Writer:** Susan Jarvinen will manage fundraising for the Clean Energy Fund’s 501c(3). She will also handle grant writing for the office.
- **Residential Energy Services:** This program is combining with income-based energy services. It will be supervised by Eric Stern, residential energy senior program manager. Income-based services include no-cost energy efficiency services such as Weatherization and other energy efficiency expanded outreach services.

“Energy prices are continuing to rise and GEO is working to help Coloradans control and reduce their energy usage. We’ve aligned key energy experts with our programs to best assist communities, businesses, and individuals take advantage of GEO’s energy efficiency and renewable energy programs.”

To learn more about the programs and opportunities at GEO, please visit GEO’s website at www.colorado.gov/energy.
