

- NOTES:**
1. Vegetation is sampled during the growing season at the five air monitoring stations.
 2. Vegetation is sampled three times during the grazing season, typically at the Property boundary fence line along the east, west and south sides of the site as shown.
 3. Animal tissue samples are collected from rabbit species collected within the Property boundary and, as necessary, from cattle grazing within 3 km of the site.
 4. TES species surveys are conducted within the Property boundary and within a 200-ft buffer surrounding the Property boundary.
