Experience Public Safety Long Term Evolution (XPSLTE) 2016

When

Tuesday, May 3, 2016, 10 a.m. - 4 p.m.

Where

Adams County Government Center
4430 South Adams County Parkway
Brighton, CO 80601

RSVP

Please RSVP for this free event at tinyurl.com/XPSLTE

Why

This event will provide Colorado's first responders the opportunity to explore the potential of public safety broadband, to fully understand the capabilities of the technology today and envision its future uses and potential.

Come spend the day with the FirstNet Colorado team and other public safety professionals to experience public safety Long Term Evolution - or LTE - technology. During this one day educational event, participants will have the opportunity to see demonstrations and experience specific technologies on a dedicated public safety wireless broadband network.

We will explore two common use cases that law enforcement (LE), fire and emergency medical services (EMS) encounter in their work: an injury motor vehicle collision (MVC) and a planned event where responders will work in concert to keep the public safe and handle incidents during the event. You will see how public safety devices, applications (e.g., Push-To-Talk [PTT] and situational awareness) and other technologies continue to shape the way public safety teams respond to, coordinate, investigate, and recover from incidents. Participants will gain a greater appreciation of how LTE technology could transform agency response and help keep communities safer.
