

Forest View Acres Water District

Operations Report – November/December 2015

Prepared by Mike Kielma and Gabrielle Begeman

ORC Water Professionals

Arapahoe Water Plant

- The plant produced water as the back-up to the surface water plant.
- The new booster pumps and control panels for the new booster station are being stored in the AWP.

Surface Water Plant

- The plant is running consistently with adequate flows.

Distribution System

- Located all but 3 service lines on Forest View Rd for the Global project.
- Final walk through performed with JDS and Global for new lines on Pike View, Sierra Vista and El Rancho.
- In November, ORC had to go to every home that had a new smart meter installed and collect pertinent information to enable the setup of the meter and associated address into the Beacon database system. This will enable us to collect the meter reads via the cloud. The data then had to be entered into the Beacon system. This took additional time and was included on the November billing as such.
