

Proposal of Adding D5213 and D5214 – Cast Metal Framework Partial Dentures

CDT Procedure Description	CDT Code	Max Allowable Fee	Program Payment	Max Patient Co-Pay	Dental Procedure Guidelines
Maxillary Partial Denture – cast metal framework with resin denture bases (including any conventional clasps, rests and teeth)	D5213	\$ TBD (under Medicaid is \$728.93)	\$ TBD	\$ TBD	Reimbursement made upon DELIVERY (completion) of partial maxillary denture. D5213 or D5214 should not be used to report an interim partial denture (D5820, D5821). D5213 and D5214 should be considered definitive treatment. Routine follow-up adjustments or relines within 12 months should be anticipated and are included in the initial reimbursement. A partial cast metal base can be made right <u>after</u> having teeth extracted (healing from only a few teeth is as extensive as healing from multiple). A partial cast metal base denture can be made before having teeth extracted if the teeth being removed are in the front or necessary healing will be minimal. Several impressions and “try-in” appts may be necessary and are included in the cost. Frequency: There should be an expected life span of 5 or more years before replacement dentures should be considered - documentation that existing prosthesis cannot be made serviceable should be maintained.

Proposal of Adding D5213 and D5214 – Cast Metal Framework Partial Dentures
