

**M E M O R A N D U M**

**MEMO #:** PS93-04

**To:** Permit Section Staff  
**From:** Dennis M. Myers  
**Date:** October 1, 1993  
**Subject:** NSPS and NESHAP applicability determinations

=====

EPA has established an Applicability Determination Index (ADI) for New Source Performance Standards determinations, and for NESHAP determinations. The ADI is a compilation of determinations that have been made from 1970 until present.

If you have any questions concerning whether NSPS or NESHAPS apply to a source, the ADI is a good place to look for help on making that determination. The ADI is available on the Technology Transfer Network (TTN) bulletin board, which also contains both PSD and NA NSR determinations.

The ADI allows for searches to be made based on keywords, subparts, regulatory citations, and issue date. Terms can be combined with "and" or "or" for more specific searches. Downloading of applicability letters and determinations can be done.

A copy of the ADI User's Manual can be found in the black bookcase.
