Subject: Model 1250 and 1500 Gallon Septic Tank - Acceptance  
For Use in Colorado On-site Wastewater Treatment Systems

Dear Mr. Anderson:

Pursuant to section 43.13 of the On-site Wastewater Treatment System Regulation 5 CCR 1002-43 (Regulation 43), the Water Quality Control Division (Division) has reviewed drawings and specifications received April 21, 2014, October 8, 2014 and November 10, 2014, for the following septic tanks:

- 1250 Gallon, Double Compartment
- 1500 Gallon, Double Compartment

The Division finds the tank design to be consistent with the criteria of section 43.9 of Regulation 43. The Division also provides this acceptance of the tank(s) referenced above as meeting these criteria and acceptable for use in Colorado.

Pursuant to section 43.13(G)(2), at least five percent of tanks must be tested for watertightness at the manufacturing facility. A summary of testing results must be submitted to the Division by February 15 each calendar year. The testing results submittal form is available on the Division website. It should also be noted that as your tanks do not have a precast outlet tee, all tee connections that will be attached to the precast outlet shall meet the requirements of section 43.9(B)(4)(d) of Regulation 43.

This acceptance does not constitute an endorsement of this product. As individual local public health agency regulations may be more stringent than Regulation 43, the Division cannot ensure the acceptance of a septic tank within any given jurisdiction.

If you have any questions regarding the Division's review or findings, please contact me at (303) 692-2366 or [chuck.cousino@state.co.us](mailto:chuck.cousino@state.co.us).

Sincerely,

Charles J. Cousino, REHS
