PRODUCTS FOR OPTIMIZED FARMING

LIGHTNING
Hay Moisture Monitors
- Baler mounted
- Monitor Moisture from 5%-37%
- 5000 readings per second
- Large sensor foot print, 16 sq. inches
- Automatic model to power up inoculant applicator
- Choice of instant/average moisture readings
- Peace of mind, knowing your hay moisture
- Bale higher quality and quantity, consistency

Dflow Powdormaster
- Digitally controlled granular additive applicator
- Output range: 1.8oz - 70oz per minute depending on the volumetric weight of additive
- Manual or automatic, adjustable rate
- Optional 12 volt air fan & hose
- Total product read out button
- Reversible opening in top lid
- 110# & 175# capacity
- Instant stop & go
- Low level alert

Culbac
Hay Treatment for Alfalfa, Grass, etc.
- Decreased mold & spoilage
- Decreased heat damage & weather risk
- Increased harvest yield & nutritive value
- Improved palatability
- Fewer days to baling
- Noncorrosive, economical
- Product stability, all natural ingredients

The Colorado Hay Directory is provided as a service to hay producers and buyers. A listing in this directory does not constitute an endorsement by the Colorado Department of Agriculture.

Every effort has been made to include all producers who direct market their hay. If you are not listed and would like to be included in the next edition, please complete and return the form in the back of this book or contact the Markets Division.

For current hay price information call:
www.ams.usda.gov/mnreports/gl_gr310.txt

For additional hay resources please visit www.coloradoagriculture.com.

The Livestock and Grain Market News Branch (LGMN) of the Livestock and Seed Program (LSP) provides a timely, high-quality, unbiased service to help facilitate the orderly marketing and distribution of agriculture products.

The primary function of the Livestock and Grain Market News Branch is to compile and disseminate information that will aid producers, consumers, and distributors in the sale and purchase of livestock, meat, grain, hay and other related products nationally and internationally. LGMN information is free by visiting our website at www.ams.usda.gov/market-news/livestock-poultry-grain.

ATTENTION! HAY DEALERS. DEALERS of FARM PRODUCTS  
(HAY, LIVESTOCK, HORSES, PRODUCE)

Colorado state law (C.R.S. 35-37-104) requires that anyone who purchases farm products for  
processing or resale MUST have a valid Colorado Farm Products dealer license prior to the  
purchase of same. Failure to have a valid license is a Class 6 Felony.

For information contact the Colorado Department of Agriculture, Farm Products Program, (303)  
869-9090.

Hay Sampling Tips

Courtesy of the Colorado Hay and Forage Association

Identify a single ‘lot’ of hay. A hay lot should be identified, which is a single cutting, a single field and variety, and generally less than 200 tons. Don’t mix cuttings or fields.

Choose a sharp coring device. Use a sharp coring device 3/8”-3/4” diameter. Never send in flakes or grab samples. Corer should have tip 90 degrees to shaft, not angled. Sharpen frequently. See list of probes at National Forage Testing Association (NFTA) website, www.foragetesting.org.

Sample at random. Walk around stack - try to represent all areas of the stack. Don’t avoid bales or select certain bales. Choose bales at random.

Take enough cores. We recommend a minimum of 20 cores for a composite sample to represent a hay lot. Take more than 20 cores in highly variable lots, e.g. weedy fields.

Use proper technique. Sample butt ends of hay bale, between strings or wires, not near edge. Probe should be inserted at 90 degree angle, 12”-18” deep. On round bales, sample towards middle of bale. A greater number of core samples is better.

Not too big, not too small. Sample so that you produce about 1/2 pound of sample. Too-small samples don’t fairly represent the variation in the hay lot. Very big samples (common with large length or diameter probes) cannot be easily ground by the labs. If a probe is too big or small to produce about 1/2 pound in 20 cores - get a different one!

Handle samples correctly. Seal composite sample in a sealed plastic bag and protect from heat. Double bagging is beneficial, especially for DM measurements. Deliver to lab as soon as possible.

Never split samples without grinding. To test two labs, ask for your ground sample back to send to another lab. Unground samples are not a fair split. Use several samples to test average bias between labs. Don’t work with labs that are unwilling to do this.

Choose a National Forage Testing Association Certified Lab. Some labs have volunteered to participate in NFTA’s quality proficiency tests. To be certified, labs must match the true mean within an acceptable range of variation. NFTA labs have demonstrated their commitment to good results, are more likely to be interested in accuracy.
To capture a premium in today’s market use

Dyna-Cure
Advanced Hay Conditioner
for more leaf retention and more weight in the bale.

Premium • High Quality • Hay

CDA Program Provides Value-Added Opportunity to Colorado Farmers While Reducing Noxious Weeds

The Colorado Department of Agriculture’s “Certified Weed Free Forage & Mulch” program works to reduce noxious weeds and provides an opportunity for farmers to sell their product as “certified weed free.” The program inspects forage or mulch before it is harvested to ensure there are no noxious weeds in the mulch or forage. The use of certified weed free forage and mulch is intended to reduce the spread of weeds on public land or other areas where forage or mulch is used.

“This program is of great value to our farmers and purchasers of their products. Certain public and provincial lands have areas that require regional weed free forage and this program offers that certification,” said Les Owen, CDA’s Conservation Services division director. “Plus, we do all the work to assist farmers in getting signed up. We help gather the information, such as the number of acres involved, schedule the inspection, and provide the specially colored twine that labels it as weed-free.”

Weed free forage is required on U.S. Forest Service and Bureau of Land Management lands, in National Parks and Monuments, Bureau of Reclamation land, Military Reservations, Tribal Lands, and National Fish & Wildlife Refuges. Colorado is a part of the Regional Weed Free Forage program. Forage that is regionally certified in Colorado will be accepted in all states participating in the Regional Weed Free Forage program.

Those certified through the program are also listed in a booklet and online to better connect sellers and buyers. In 2017, approximately 32,000 acres in Colorado were certified as weed-free through 159 growers.

The Certified Weed Free Forage Crop Certification program is an industry funded program. The law requires that fees be charged to cover all direct and indirect costs of the program. The producer will be charged the following: Inspection time, driving time, mileage, administrative and an acreage fee in addition to the twine or wire. The program fees to the producer are $20/hr for inspection and drive-time and $2.50 per approved acre. The twine is sold at cost.

For more on the program and to find certified weed-free products, visit www.colorado.gov/pacific/agconservation/weedfreeforage. Growers can ask questions and begin the process to become certified by contacting Don Gallegos, Chemigation Coordinator, at (303) 869-9038 or email cda_weedfree@state.co.us.
