These cost estimates include $300,000 to place court and district attorney personnel under P.E.R.A. and the new state health insurance program. (This amount would be necessary only if judicial system personnel were to become state employees, and is an estimate of the net increase required over the amount presently expanded on employer contributions for group insurance and retirement.)

In summary, the additional annual cost to the state of assuming full judicial system fiscal responsibility at present staffing and salary levels could range from $5.4 million to $6.2 million.

If the state were to assume fiscal responsibility for courts only, the total amount required under the above assumptions would be from $4.1 million to $4.9 million. It would require from $3 million to $3.8 million to finance district courts alone (including the Denver juvenile, probate, and superior courts and the Denver and El Paso County juvenile detention halls).

State assumption of the entire cost of the court system involves much more than a transfer of the fiscal burden from the counties, although this shift in burden may be the primary concern of many of those advocating this change. Likewise, a study of the factors involved in the state assuming full financial support encompasses much more than a precise determination of actual costs, reallocation of fines and fees, and required statutory changes.

Judicial System Control

If the state is to undertake full support of the court system, it can be argued that it has a corresponding two-fold responsibility: 1) that the level of judicial services is adequate throughout the state; and 2) that the best possible use is made of the funds expended in light of the needs of the system as a whole and the money available to finance it.

Full state financial support implies some degree of state control over court system operations, including such matters as:

1) court administration—records, clerical procedures, accounting, and equipment;
2) judicial personnel – qualifications, recruitment and retention, salary schedules, and fringe benefits;
3) probation services—staffing patterns and levels of service;
4) counsel for indigent defendants—amount of fees, public defenders, etc.; and
5) court facilities—determination of need, construction, and maintenance.

Without some degree of control, the state in effect would be signing a blank check, because it would be underwriting the expenses of a judicial system whose needs and adequacy of service would be determined at the district and county levels where there would no longer be any fiscal responsibility. The same problem exists in any contemplated increase in partial state support of the judicial system. It is for this reason that the Legislative Council Administration of Justice Committee rejected recommendations to have the state underwrite a portion of the salaries of court clerks and some other judicial employees. The committee felt that additional state funds should not be expended unless the state had the authority to set personnel standards and dtermine staffing needs.†

The major questions concerning state control over the judicial system may be stated as follows:

1) Who should have the responsibility and authority?
2) To what extent and in what ways should control be exercised?

**The preliminary work on this study was carried on as a cooperative effort of the Governor's Local Affairs Study Commission and the Joint Budget Committee. It is being completed by the Judicial Administrator's office at legislative request.*

***According to the preliminary study findings.*

†It should be noted that state oid to juvenile probation follows this principle. Even though the state does not decide the number of officers needed, nor have any responsibility for their selection, aid is given only to augment the salaries of those probation officers who meet statutory qualifications.

3) What is the proper balance between state control and local judicial authority to avoid infringement on the independence of the judiciary and to allow for circumstances peculiar to a particular area or judicial district?

In other words, the possibility of state control raises the same issues discussed in Smith v. Miller, when the question at hand was the extent, if any, that control over court budgets and salaries could be exercised by the county commissioners.

Colorado Supreme Court. It would appear that the way to resolve these issues is to place state responsibility for court system operation and budget control in the supreme court to be exercised by it through the judicial administrator. Any other choice would conflict with the equal and independent status of the executive, legislative, and judicial branches. The supreme court's authority with respect to the court system as a whole is set forth in Article VI, Section 21 of the Colorado Constitution, which states in part:

> The supreme court shall make and promulgate rules governing the administration of all courts and shall make and promulgate rules governing practice and procedure in civil and criminal cases . . . .

Article 11 of Chapter 37, Colorado Revised Statutes of 1963, created the office of judicial administrator and established judicial departments, each of which is presided over by a justice of the supreme court, for the supervision of all courts of record in the state. The authority and responsibilities of the departmental justices and the judicial administrator are also set forth.

Under the supreme court's authority, a judicial budgeting process could be developed comparable to the executive department budgeting process, with the end product—a budget for the judicial system as a whole—submitted to the Joint Budget Committee for its consideration and recommendations to the General Assembly. There are a number of obstacles to overcome in developing this budgeting process in a meaningful way, and the consideration of these obstacles involves the questions of the extent of state control and the ways in which it should be exercised.

Personnel and Administration. As might be expected, there is very little uniformity throughout the state's judicial system as to the number and salaries of judicial employees, their duties, hours of work, and fringe benefits. There is also a great variance in the types of records used, clerical and accounting procedures, the quality of probation services, the fee schedules for court appointed attorneys, and in court facilities.

There are a number of reasons for the variations in personnel and administration practices and policies. Such variations are to be expected in the absence of any central control or uniform standards. Some of these differences stem from county commissioners' policies during the period prior to the Smith v. Miller case, when commissioners in a number of counties exercised varying degrees of control over court budgets, number of judicial employees, salary levels, and court facility and equipment needs.*

Patronage has played no small part in the selection of judicial employees and in the determination of their number. While this practice is understandable when judges are elected on a partisan political basis, it adds to the difficulty of developing uniform personnel standards, and it has made it almost impossible to consolidate district and county court clerical functions, even when it would be less costly and more efficient to do so.

Because of the existing variations in personnel and court administration practices and policies and the state's responsibility for supervision and operation of the court system if it is going to finance it, it appears necessary that at least the basic ingredients of a statewide personnel and administrative program be developed, so that it can be put in operation at the same time the state undertakes complete financial responsibility. Failure to do so would in effect be giving state sanction to existing personnel and administrative policies (whether good or bad), making subsequent change and greater exercise of control at the state level more difficult.

Counsel for Indigent Defendants. At the present time, with the exception of the 2nd (Denver), 17th (Adams County), and the 22nd (Montezuma and Dolores counties) judicial districts, counsel for indigent defendants are appointed by the judges. (In the 2nd, 17th, and 22th judicial districts, public defenders have been appointed under permissive legislation adopted in 1963.)

There is a wide variance among judicial districts as to the amount of fees paid to court-appointed attorneys. If the state assumes full financial responsibility for the court system, some kind of uniform policy for the payment of fees seems necessary, even if variations are allowed. Further, it would appear that serious consideration should be given to the establishment of the public defender system on a statewide basis, if the state is going to have the responsibility for financing and operating the judicial system.

**For example, efforts of the judicial administrator to improve the court record forms in some counties have been stymied by long-term purchasing contracts entered into by the county commissioners.*

Probation Services. At the present time, both adult and juvenile probation officers are appointed by the court. With one exception, there are no full-time qualified probation officers outside of the most heavily populated judicial districts. As previously indicated, the state pays a portion of the salaries of qualified juvenile probation officers, but makes no financial contribution to adult probation staffs.

If the state assumed the full cost of probation services, its responsibility for this function would be similar to its responsibility for the operation of the juvenile and adult parole programs. Consequently, some decisions are required concerning the relationship between probation and parole services and the extent to which the former require improvement.

Marriage Counseling. Marriage counselors are employed, even on a part-time basis, only in a very few judicial districts in heavily-populated areas. If the state has the full fiscal responsibility for the court system, some policy determination is required concerning the use of this auxiliary court service.

County Court. Under the new county court act adopted in 1964, the county court in each county determines where and if the court will sit elsewhere than the county seat (with the exception of those counties, where the statutes provide specifically where associate and assistant county judges shall hold court).

Since the holding of court in locations other than the county seat may require additional personnel, especially in multiple-judge counties, aswell as the provision of court facilities, a policy decision is required on whether the supreme court (through the judicial administrator) should make or review this determination. If the supreme court is to exercise this authority, should it have the corresponding responsibility to determine the number of county judges needed (both full and part time)? If it should, and makes recommendations accordingly to the General Assembly, what should be the relationship between these recommendations and proposed legislation to add or delete judges introduced at the request of attorneys or other groups in particular areas? In other words, these questions relate to the extent of authority to be exercised by the supreme court over the judicial system.

Court Facilities

The provision and maintenance of court facilities is a matter of importance equal to those concerning court system operation and finances. None of the recommendations to transfer court system fiscal responsibility to the state have dealt adequately with court facilities. If court facilities are to be continued as a local responsibility, what controls, if any, could be imposed at the state level? For example, how could the state effectively make any decisions concerning the construction of additional facilities or the remodeling of existing ones? Yet, the relationship between proper court administration and court facilities is obvious. It is difficult to see how the responsibility for court system operation and court facilities could be divided.

If the state assumes the responsibility for court facilities, should it be required to pay a rental fee to counties in addition to underwriting the costs of new facilities? This approach would undoubtedly find favor among county officials, but may not have much appeal at the state level. It raises all sorts of questions concerning the establishment of an equitable and acceptable rental schedule and opens a new area of possible dispute and controversy between the courts and county officials.

One possible solution would be for the state to assume control of existing facilities without any expenditure of funds involved, except for maintenance. All new facilities would be constructed at state expense. Even under this approach, several problems are presented: Who pays the cost of facilities under construction at the time the state assumes responsibility for the court system? Does or should the state have any responsibility for the construction of county facilities necessitated by the expansion of court facilities within existing buildings, thereby displacing county offices?

The whole problem of court facility fiscal responsibility and control requires very careful study, resulting in decisions prior to state assumption of the full fiscal burden for court operations.

Concluding Comments

The problems, questions, and policy decisions involved in state assumption of complete responsibility for the judicial system are many and complex, but not insoluble. It requires, however, extensive study and thoughtful consideration to resolve these matters satisfactorily. Their satisfactory resolution could result in further strides being made in the improvement in judicial administration which began with the recent court system reorganization.

If the decision is made for the state to assume control of the court system, Colorado will be the first state with elected judges to do so. The other states which have complete state financed and controlled systems have appointed judges. For this reason, Colorado's problems are somewhat different from those experienced in these states, although their experience should provide a valuable guide.

to be in the all-weather gravel, oil, and concrete surface classifications; however, slightly more than twenty-two percent of the present primary system consists of dirt or primitive roads. While this is much less than the proportion of the secondary system in these classifications (63.2 percent), it raises the question of whether all county primary system mileage is properly designated.

This designation raises no problem at present under the highway users' fund distribution formula, because each mile of county road is treated alike for distribution purposes. It could create a problem, however, under any distribution formula keyed to county primary system mileage.

County Road Fund Revenue

State and Local Sources. County highway revenues from all sources totaled $26.9 million in 1964, 20.2 percent more than in 1960. Almost sixty percent of county highway revenues came from state sources in 1964, including highway users' fund distribution, specific ownership "A" tax, motor vehicle penalty assessments, gasoline tax refunds, and State Highway Department maintenance payments. During the five-year period, 1960 through 1964, the proportion of total highway revenue from state sources remained fairly stable, varying from a high of 62.8 percent in 1960 to 59.8 percent in 1964.

Eighteen counties received more than seventy-five percent of their highway revenue from state sources in 1964. With the exception of Montrose and Alamosa, these counties have less than 10,000 population, thirteen having less than 5,000 population. Eight counties received less than fifty percent of their total highway revenue from state sources in 1964. The proportion of county highway revenues from state and local sources from 1960 through 1964 is shown in Table 19.

Although 36.1 percent of all county highway revenues came from local sources (primarily from property taxes) in 1964, eight counties received less than ten percent. Seven counties, all of them among the twelve largest, depended on local sources for more than fifty percent of total highway revenue in 1964.

Road and Bridge Fund Levies. All counties, except two (Moffat and San Miguel) levy a property tax for road and bridge construction and maintenance. In 1966, these levies ranged from a low of .50 mills in Ouray County to a high of 10.70 mills in Elbert County. Between 1960 and 1966, fourteen counties reduced their road and bridge fund mill levy, and seven counties had no change.

Of the forty-one counties with mill levy increases, between 1960 and 1966, ten had increases of .50 mills or less; twelve counties had increases between .51 and 1.00 mill; nine had increases of between 1.01 and 2.00 mills; and ten had increases of more than 2.00 mills. Mesa is the only county with more than 50,000 population to have a mill levy reduction between 1960 and 1966. Ten of the fourteen counties with mill levy reductions during this period depend on state sources for sixty percent or more of their highway revenue: Cheyenne, Custer, Dolores, Gilpin, Mesa, Moffat, Montezuma, Montrose, Park, and Washington.

Six of the seven counties which had no mill levy change between 1960 and 1966 also depend on state sources for sixty percent or more of their highway revenue: Archuleta, Costilla, Gunnison, Huerfano, San Juan, and San Miguel.

County Road Expenditures

County highway expenditures totaled $26.05 million in 1964, 14.2 percent more than in 1960. Slightly more than seventy-nine percent was spent for construction and maintenance, including rights-of-way acquisition; fourteen percent was spent for new equipment; four percent for administration; and the remaining three percent covered county treasurers' property tax collection fees and miscellaneous expenditures.

Per Mile Expenditure Analysis

No meaningful interpretation of per mile expenditures can be made without reference to other aspects of county road department administration and finance. Table 20 shows the relationships among county population, road and bridge fund mill levies, proportion of revenue from state and local sources, proportion of road system classified as primitive and dirt, and selected per mile expenditures. The counties are divided in this table into five population groups: I) 50,000 or more; II) 10,000-25,000; III) 5,000-10,000; IV, 2,500-5,000; and V) less than 2,500.

General Patterns and Relationships. There is considerable variation among counties within each group in each category. Nevertheless, when population group averages are compared as shown in Table 21, several general patterns and relationships emerge which may be summarized as follows:

1) Counties over 50,000 population depend much more on local revenue sources and much less on state revenue sources than any of the other population groups. Counties in this group also have the smallest proportion of their road systems classified as primitive or dirt; therefore, as might be expected, this group has the highest total per mile expenditures and the higher per mile expenditures for construction and maintenance, administration, and equipment. Even though this group depends much more on local revenue sources than any other, its average mill levy is the lowest among the five groups.

Based on recent highway users' fund revenue collection experience and projected increases in gasoline tax revenue and vehicle registrations, the total net amount for highway users' fund apportionment is estimated at $57.1 million in calendar 1965 and $59.3 million in calendar 1966. Using these estimates, counties received approximately $14.85 million and municipalities, $5.14 million in calendar year 1965. In the current calendar year, counties will receive an estimated $15.42 million and municipalities, an estimated $5.34 million.

Municipal-County Controversy

Municipalities have long disagreed with the highway users' fund allotment of nine percent to cities and towns, and the Colorado Municipal League for many years has passed resolutions at its annual conference endorsing a larger municipal share. The resolution adopted in 1965 did not recommend a specific change in the present formula, but called for an additional one cent motor fuel tax to be divided equally among the state, counties, and municipalities.*

The municipalities have also expressed their interest (as shown through League resolutions) in obtaining some kind of sharing arrangement with counties having road and bridge funds which are financed in part from a property tax levy in both incorporated and unincorporated areas.

The counties have contended that they need additional revenues to meet their road needs and have opposed any change in highway users' fund allocations which would reduce their share. Except in a few isolated instances, there has been no sharing of county road and bridge funds with municipalities, and the legal authority of counties to do so has been questioned. At least at one Governor's Forum held in 1965, the county commissioners from a populous county complained that the present formula for allocating the counties' share within the twenty-six percent allocation favors rural counties at the expense of urban ones, which have more vehicular traffic, demand for better roads, and, hence, higher per mile costs.

County Highway Finance

County Road Mileage. County road mileage in 1964 (the last year for which figures are available) totaled 65,474. Between 1960 and 1964, county road mileage increased only 1.8 percent (1,168 miles). Thirty-eight counties had increases in county road mileage during this period, although some increases were very minor. Seven counties had no change in road mileage, and seventeen had a mileage reduction.

There are several reasons why a county might have reduced mileage: 1) county road mileage which is added to the state system; 2) annexations or incorporations which add mileage to the municipal system; and 3) abandonment of county road mileage. The first appears to be the most significant, except in highly urbanized areas where annexations are an important factor.

Eight counties had 2,000 miles or more on their road systems in 1964, with Weld having the most, 4,440. With the exception of Moffat County, these are all eastern plains counties with large rural areas and a predominant agricultural economy. Nine counties had fewer than 300 miles on their road systems in 1964, all of these are located in the most mountainous portions of the state.

Surface Classification. Almost seventeen percent of the total county road mileage is classified as "primitive with no maintenance." Even though road mileage in this category does not receive even minimum maintenance, it is included in determining each county's allocation from the highway users' fund. In fact, the difficulty factor is also applied to this mileage as it is to all other county road mileage.

More than eighteen percent of the county road system is classified as "dirt with scraping and little or no maintenance." Consequently, thirty-five percent of the county road system has little or no maintenance (primitive plus dirt). Fifteen counties have at least fifty percent of their road systems in the primitive and dirt classifications, and only seven counties have less than twenty percent of their road systems in these classifications.

Slightly more than sixteen percent of the county road system is classified as dirt roads which are graded, aligned, drained, and scraped. A large portion of the county road system (41.4 percent) is classified as "all weather gravel," and only seven percent is classified as oil treated, oil process, or concrete.

Thirteen counties have more than ten percent of their road systems classified as oil treated, oil process, or concrete, with Jefferson (41.8 percent) having the largest proportion so classified. Most of these counties have large populations and are located on the eastern slope; however, three western slope counties (Mesa, Delta, Rio Blanco) and one from the San Luis Valley (Rio Grande) are included.

Primary and Secondary Systems. In 1964, almost thirty-two percent of the total county road system mileage was classified as primary, with the remainder designated as secondary. Presumably, the roads classified as primary should be those which are major county thoroughfares, as distinguished from farm-to-market roads. If this is true, then virtually all of the primary system in each county might reasonably be expected

It should be noted that this resolution was approved prior to adoption of the temporary one cent gas tax increase by the General Assembly for disaster relief in the second 1965 special session.

to be in the all-weather gravel, oil, and concrete surface classifications; however, slightly more than twenty-two percent of the present primary system consists of dirt or primitive roads. While this is much less than the proportion of the secondary system in these classifications (63.2 percent), it raises the question of whether all county primary system mileage is properly designated.

This designation raises no problem at present under the highway users' fund distribution formula, because each mile of county road is treated alike for distribution purposes. It could create a problem, however, under any distribution formula keyed to county primary system mileage.

County Road Fund Revenue

State and Local Sources. County highway revenues from all sources totaled $26.9 million in 1964, 20.2 percent more than in 1960. Almost sixty percent of county highway revenues came from state sources in 1964, including highway users' fund distribution, specific ownership "A" tax, motor vehicle penalty assessments, gasoline tax refunds, and State Highway Department maintenance payments. During the five-year period, 1960 through 1964, the proportion of total highway revenue from state sources remained fairly stable, varying from a high of 62.8 percent in 1960 to 59.8 percent in 1964.

Eighteen counties received more than seventy-five percent of their highway revenue from state sources in 1964. With the exception of Montrose and Alamosa, these counties have less than 10,000 population, thirteen having less than 5,000 population. Eight counties received less than fifty percent of their total highway revenue from state sources in 1964. The proportion of county highway revenues from state and local sources from 1960 through 1964 is shown in Table 19.

Although 36.1 percent of all county highway revenues came from local sources (primarily from property taxes) in 1964, eight counties received less than ten percent. Seven counties, all of them among the twelve largest, depended on local sources for more than fifty percent of total highway revenue in 1964.

Road and Bridge Fund Levies. All counties, except two (Moffat and San Miguel) levy a property tax for road and bridge construction and maintenance. In 1966, these levies ranged from a low of .50 mills in Ouray County to a high of 10.70 mills in Elbert County. Between 1960 and 1966, fourteen counties reduced their road and bridge fund mill levy, and seven counties had no change.

Of the forty-one counties with mill levy increases, between 1960 and 1966, ten had increases of .50 mills or less; twelve counties had increases between .51 and 1.00 mill; nine had increases of between 1.01 and 2.00 mills; and ten had increases of more than 2.00 mills. Mesa is the only county with more than 50,000 population to have a mill levy reduction between 1960 and 1966. Ten of the fourteen counties with mill levy reductions during this period depend on state sources for sixty percent or more of their highway revenue: Cheyenne, Custer, Dolores, Gilpin, Mesa, Moffat, Montezuma, Montrose, Park, and Washington.

Six of the seven counties which had no mill levy change between 1960 and 1966 also depend on state sources for sixty percent or more of their highway revenue: Archuleta, Costilla, Gunnison, Huerfano, San Juan, and San Miguel.

County Road Expenditures

County highway expenditures totaled $26.05 million in 1964, 14.2 percent more than in 1960. Slightly more than seventy-nine percent was spent for construction and maintenance, including rights-of-way acquisition; fourteen percent was spent for new equipment; four percent for administration; and the remaining three percent covered county treasurers' property tax collection fees and miscellaneous expenditures.

Per Mile Expenditure Analysis

No meaningful interpretation of per mile expenditures can be made without reference to other aspects of county road department administration and finance. Table 20 shows the relationships among county population, road and bridge fund mill levies, proportion of revenue from state and local sources, proportion of road system classified as primitive and dirt, and selected per mile expenditures. The counties are divided in this table into five population groups: I) 50,000 or more; II) 10,000-25,000; III) 5,000-10,000; IV, 2,500-5,000; and V) less than 2,500.

General Patterns and Relationships. There is considerable variation among counties within each group in each category. Nevertheless, when population group averages are compared as shown in Table 21, several general patterns and relationships emerge which may be summarized as follows:

1) Counties over 50,000 population depend much more on local revenue sources and much less on state revenue sources than any of the other population groups. Counties in this group also have the smallest proportion of their road systems classified as primitive or dirt; therefore, as might be expected, this group has the highest total per mile expenditures and the higher per mile expenditures for construction and maintenance, administration, and equipment. Even though this group depends much more on local revenue sources than any other, its average mill levy is the lowest among the five groups.

a. Does not include federal sources, such as Mineral Leasing Act, Forest Service, Land Materials Act, and Taylor Grazing Act; also does not include receipts from municipalities for operations performed by the county (10 counties).

b. Includes Highway Users' Tax, Specific Ownership "a" Tax, Motor Vehicle Penalties, Gasoline Tax Refunds, Receipts from State Highway Department and other state revenues.

c. Includes property tax, transfers from other funds and other local receipts.

TABLE 21

COUNTY ROAD REVENUE SOURCES, PERCENT OF PRIMITIVE AND DIRT ROADS, SELECTED PER MILE EXPENDITURES, AND MILL LEVIES, AVERAGES BY COUNTY POPULATION GROUPS

	Group I (Over 50,000)	Group II (10,000-25,000)	Group III (5,000-10,000)	Group IV (2,500-5,000)	Group V (Under 2,500)
Percent of Revenue: State Sources	50.4%	64.7%	65.2%	72.5%	76.4%
Percent of Revenue: Local Sources	47.5	31.0	29.2	24.4	16.6
Percent of Primitive & Dirt Roads	25.3%	32.3%	40.5%	41.0%	49.4%
Total Expenditures Per Mile[a]	$878	$450	$421	$393	$494
Construction & Maintenance Expenditures Per Mile[a]	692	356	333	290	331
Administration Expenditures Per Mile[a]	39	17	19	18	26
Equipment Expenditures Per Mile[a]	105	56	65	67	109
Road and Bridge Mill Levy	2.83	3.64	3.75	4.03	3.45

[a]Primitive mileage excluded.

2) The degree of dependence on state and local revenue sources appears to be a function of population size; state source dependence increases and local source dependence decreases as county population decreases.
3) The proportion of county road systems classified as primitive and dirt is also a function of population size, being much higher in the three smallest population groups, especially Group V (under 2,500).
4) With the exception of Group V, per mile expenditures decreases as county population decrease, although there is little difference among groups II, III, and IV in average expenditures per mile for administration and equipment.
5) Group V (under 2,500 population) has higher average expenditures per mile than any other group, except Group I (over 50,000 population). Even though average per mile construction and maintenance costs are lower for this group than any other except Group IV (2,500-5,000 population), its average per mile administrative expenditures are second only to Group I. Furthermore, the average per mile equipment costs are higher for this group than any other, even though almost fifty percent of its road systems are classified as dirt or primitive.

These general patterns and relationships indicate that perhaps small counties are receiving a greater share of the counties' highway users' fund allocation than can be justified on the basis of types of roads constructed and maintained and amount of travel (assuming vehicle miles traveled have some relationship to population). Further, this allocation reduces substantially the need for local highway program support in these counties.

It can be argued that most small counties, because of low assessed valuations, are not as able as the large ones to support the county highway program locally without increasing the property tax burden substantially. The question remains, however, as to the main objective of distributing state highway users' funds to local units. Is such distribution to provide property tax relief or to provide funds to assist in the construction and maintenance of major county thoroughfares, as determined by use and need studies?

The unusually high per mile costs of the road program in the smallest counties (when compared with the other groups) raises the question of whether it actually costs more to construct and maintain roads in very small counties because they are too small to be efficient units for road program operation. If this is the case, perhaps the consolidation of road functions on a district basis might be one way to reduce costs. Such consolidation is presently permitted by statute, but no counties have taken advantage of this provision.[4]

Road System Organization and Administration. Many counties, including the small ones, do not operate their road programs as county units. The non county-unit counties operate their programs on a county commissioner district basis to the extent that some have three road supervisors, three garages, separate equipment, and (in at least one instance) three road material batch plants.

Extensive study would be required to measure with any degree of preciseness the effect that road program organization has on administrative, equipment, construction, and maintenance costs. The wide range in per mile costs, such as administration and equipment, among counties within each population group may be

explained, at least in part, by road program organizational differences.

Proportion of Expenditures. Construction and maintenance costs account for an average of seventy-nine percent of total per mile expenditures in Group I, II, and III counties, seventy-four percent in Group IV counties, and sixty-seven percent in Group V counties. Administrative costs range from 3.8 percent of the total in Group II counties to 5.2 percent in Group V counties. Equipment expenditures constitute twenty-two percent of total costs in Group V counties, but only twelve percent in Group I, although the per mile averages are very similar. The proportion of total expenditures from construction and maintenance, administration, and equipment is shown by county population group in Table 22.

TABLE 22

PROPORTION OF TOTAL COUNTY HIGHWAY EXPENDITURES FROM SELECTED FUNCTIONS COLORADO, 1960-1964 AVERAGE

	Construction & Maintenance 1960-64 Average	Administration Expenditures 1960-64 Average	Equipment Expenditures 1960-64 Average
Group I (over 50,000)	78.8%	4.5%	11.9%
Group II (10,000-25,000)	79.1	3.8	12.4
Group III (5,000-10,000)	79.0	4.5	15.4
Group IV (2,500-5,000)	73.7	4.6	17.0
Group V (Under 2,500)	67.0	2.5	22.1

Relationship Between County Construction and Maintenance Expenditures and Highway Users' Fund Distribution

The relationship between each county's construction and maintenance expenditures and the amount it receives from the highway users' fund provides a guideline for assessing the equity of the formula used for distributing the counties' twenty-six percent allocation. To determine this relationship, the proportion of total county construction and maintenance expenditures made by each county for the five-year period, 1960 through 1964, was compared with the proportion of the total county highway users' fund distribution received during the same period.

This comparison is shown in Table 23, with the relationship between the two (construction and maintenance expenditures and highway users' fund distribution) expressed by the index number shown in the last column. An index of 100 would mean that a county received the same proportion of highway users' funds as its proportion of construction and maintenance expenditures. An index of less than 100 means that a county's proportion of total construction and maintenance expenditures was *more* than its proportion of the highway users' fund distribution. An index of more than 100 indicates that a county's proportion of construction and maintenance expenditures was *less* than its proportion of the highway users' fund distribution.

Nineteen counties had indices of less than 100, with Boulder (52.1) and Arapahoe (59.1 being the lowest. All nine of the counties with more than 50,000 population fell in this category, as did five with populations between 10,000 and 25,000, two with populations between 5,000 and 10,000, and three with populations between 2,500 and 5,000.

The remaining thirty-three counties had indices of more than 100, with eight with indices of more than 150, which means that these eight counties received proportionately 1.5 times as much from the highway users' fund as their construction and maintenance expenditures. The largest of these eight counties has a population of 8,750 and the remaining seven have populations of less than 5,000.

The use of this analysis of the relationship between construction and maintenance expenditures and highway users' fund allocation to show possible inequities in the distribution formula is valid to the extent that:

1) highway construction and maintenance are considered to be the major purposes for which highway users' funds should be distributed; and
2) construction and maintenance expenditures made by each county between 1960 and 1964 bear a close relationship to actual needs during this period.

Financing Municipal Streets

Municipal Street Mileage. There were 5,485 miles of municipal streets in 1964 credited for allocation of the municipal share of the highway users' fund. This total represents an increase of almost thirteen percent from 1960. Denver had 1,487 miles of the total or 27.1 percent. Seven other municipalities had more than 100 miles of streets: Colorado Springs, 372; Pueblo, 297; Aurora, 175; Boulder, 142; Arvada, 139; Englewood, 113; and Greeley, 109. Almost seventy percent of the municipal street system in 1964 was classified as oil treated, oil process, or concrete. Twenty-two percent was classified as all-weather gravel; graded, aligned and drained dirt accounted for two percent; dirt, with little or no maintenance, 5.4 percent; and primitive (no maintenance) .6 percent.

Registration Factor. Municipalities are grouped in Table 24 according to registration factor. This is the factor that is applied to motor vehicle registrations in each municipality in determining its share of the highway users' fund. The factors are applied as follows:[5]

TABLE 23

RELATIONSHIP BETWEEN PROPORTION OF CONSTRUCTION AND MAINTENANCE EXPENDITURES AND PROPORTION OF HIGHWAY USERS' FUND COUNTY ALLOCATION COLORADO, 1960-1964

County	Pop.[a]	Pct. of All County Exp. Const. and Maint. 1960-1964[b]	Pct. of County Allocation From Highway Users' Fund 1960-1964	Index of Relationship[c]

a. January 1, 1965 estimate, State Planning Division.
b. Includes rights of way acquisition costs.
c. This index shows the relationship between the proportion of the county highway users' fund allocation which a county received and the proportion of all county construction and maintenance expenditures made by the same county. An index of 100 would mean that the proportion of highway users' funds received by a county and its proportion of construction and maintenance expenditures were the same; an index of less than 100 means that a county's proportion of construction and maintenance expenditures was larger than its proportion of the highway users' fund allocation; an index of more than 100 means that a county's proportion of construction maintenance expenditures was smaller than its proportion of the highway users' fund allocation.

Registrations	Factor
1 - 500	1.0
501 - 1,250	1.1
1,251 - 2,500	1.2
2,501 - 5,000	1.3
5,001 - 12,500	1.4
12,501 - 25,000	1.5
25,001 - 50,000	1.6
50,001 - 85,000	1.7
85,001 - 130,000	1.8
130,001 - 185,000	1.9
185,001 and over	2.0

As can be seen from the above table, application of the registration factor weights this component of the highway users' fund distribution formula in favor of the larger cities. Denver is the only city to receive a factor of 2.0, and there are none in the 1.7 through 1.9 categories. There are only three which receive a factor of 1.6, and six which receive a factor of 1.5.

Colorado's ten largest cities account for almost fifty-five percent of the total street mileage in the state. The 212 smallest municipalities of the state's 249 account for almost twenty-seven percent of the total street mileage.

[e]1963 not included.

Municipal Street Revenue

Municipal street revenue from all sources totaled $21.23 million in 1964, 36.4 percent more than in 1960. State sources provided 29.6 percent of municipal street revenue in 1964 and just slightly less than thirty percent during the five-year period, 1960 through 1964. Municipal sources supplied slightly more than fifty-eight percent of total street revenue in 1964 and fifty-five percent of the total from 1960 through 1964. Other revenues accounted for 12.3 percent of the total in 1964 and 14.2 percent during the five-year period. Table 25 shows total municipal street revenues by major source from 1960 through 1964.

Municipal Street Expenditures

Municipal street expenditures totaled $20.4 million in 1964, 31.4 percent more than in 1960. Of this total, maintenance accounted for 61.4 percent; construction, 22.4 percent; new equipment, 2.9 percent; administration, 2.6 percent; and rights-of-way acquisition and other expenditures, 11.0 percent.

During the five-year period, 1960 through 1964, maintenance accounted for 63.7 percent of total expenditures; new construction, 22 percent; new equipment, 4.6 percent; administration, 3.2 percent; and rights-of-way acquisition and other expenditures 6.5 percent. Table 26 shows municipal street expenditures by major function for 1960, 1962, and 1964.

Construction and Maintenance: Per Mile Expenditures. As indicated above, construction and maintenance together accounted for almost eighty-six percent of municipal street expenditures between 1960 and 1964. The average construction and maintenance per mile cost for all municipalities during this period was $2,944.

Six of the ten largest cities in the state exceeded the average cost per mile for all cities during this period. Colorado Springs had the highest per mile costs among the six: $5,022, followed by Englewood, $4,962; Denver, $4,540; Grand Junction, $3,956; Fort Collins, $3,228; and Pueblo, $3,206.

Ten other cities with a registration factor of 1.3 or more also exceeded the five-year over-all municipal per mile average cost for construction and maintenance: Craig, $5,022; Alamosa, $4,063; Sterling, $3,819; Golden, $3,792; Glenwood Springs, $3,655; Edgewater, $3,580; Montrose, $3,562; Fort Morgan, $3,504; Durango, 3,413; and Littleton, $3,154.

Relationship Between Municipal Construction and Maintenance Expenditures and Highway Users' Fund Distribution

The relationship between municipal construction and maintenance expenditures and highway users' fund distribution was examined much in the same way as was done with counties. Because of the number of municipalities involved, this analysis was limited to 1964, so the results may not be as conclusive as if a five-year period were used (as with counties). The proportion of total municipal and construction expenditures in 1964 made by each municipal registration factor group was compared with the proportion of the total municipal highway users' fund received.

This comparison is shown in Table 27, with the relationship between the two (construction and main-

TABLE 26

COLORADO MUNICIPAL STREET EXPENDITURES BY MAJOR FUNCTION, 1960, 1962, AND 1964

	1960		1962		1964		Average 1960-1964		Pct. of Change 1960-64
	Amount (in $1,000)	Pct.	Amount (in 1,000)	Pct.	Amount (in $1,000)	Pct.	Amount (in $1,000)	Pct.	
Administration	$ 487	3.1%	$ 557	3.2%	$ 534	2.6%	$ 568	3.2%	9.7%
Maintenance	9,758	62.7	11,624	67.2	12,540	61.4	11,355	63.7	28.5
Equipment	794	5.1	850	4.9	584	2.9	823	4.6	(26.4)
New Construction	3,561	22.9	3,379	19.5	4,525	22.1	3,916	22.0	27.1
Rights-of-Way Acquisition	53	.5	31	.2	177	.9	87	.5	205.1
Other	893	5.7	869	5.0	2,077	10.1	1,073	6.0	232.5
Total	$15,551		$17,310		$20,437		$17,822		31.4

tenance expenditures and highway users' fund distribution) expressed by the index number shown in the last column. An index of 100 means that a municipal group's proportion of total construction and maintenance expenditures was *more* than its proportion of the highway users' fund distribution. An index of more than 100 indicates that a municipal group's proportion of construction and maintenance expenditures was *less* than its proportion of the highway users' fund distribution.

The groups with registration factors of 1.3 or more all had indices of less than 100. The groups with registration factors of 1.0 through 1.2 all had indices of more than 100, with group 1.0 having an index of 227.1, which means that its share of the highway users' fund was 2.27 times as great as its share of construction and maintenance expenditures.

Implications of Analysis. Even though this analysis was limited only to one year, it indicates that there is a general inequity in favor of small municipalities in the distribution of the municipal share of the highway users' fund. As was true with counties, however, this analysis has validity only to the extent that:

1) street construction and maintenance are considered to be the major purposes for which highway users' funds should be distributed;
2) construction and maintenance expenditures made by each municipality bear a close relationship to needs.

TABLE 27

RELATIONSHIP BETWEEN PROPORTION OF CONSTRUCTION AND MAINTENANCE EXPENDITURES AND PROPORTION OF HIGHWAY USERS' FUND ALLOCATION, MUNICIPALITIES GROUPED ACCORDING TO REGISTRATION FACTOR, COLORADO, 1964

Registration Factor	No. of Municipalities	Pct. of all Municipal Exp. Const. and Maint.[a]	Pct. of Municipal Allocation from Highway Users' Fund	Index of Relationship[b]
1	142	1.93%	4.39%	227.1
1.1	51	3.55	4.65	131.1
1.2	19	3.39	3.79	111.6
1.3	17	7.57	7.06	93.2
1.4	10	9.79	9.66	98.7
1.5	6	13.85	13.81	99.7
1.6	3	17.30	16.32	94.4
2.0	1	42.62	40.32	94.6

[a]Includes right-of-way acquisition costs, median expenditures used for each group.

[b]This index shows the relationship between the proportion of the municipal highway users' fund allocation which each group of municipalities received and the proportion of all municipal construction and maintenance expenditures made by it. An index of 100 would mean that the proportion of highway users' funds received by a group of municipalities and its proportion of construction and maintenance expenditures were the same; an index of less than 100 means that a municipal group's proportion of construction and maintenance expenditures was larger than its proportion of the highway users' fund allocation; an index of more than 100 means a municipal group's proportion of construction and maintenance expenditures was smaller than its proportion of the highway users' fund allocation.

County-Municipal Relationships

Highway Users' Fund Distribution. As indicated in the first part of this report, municipal officials have long expressed their dissatisfaction with the amount of the highway users' fund municipal allotment; the increase to nine percent in 1959 was considered only a step in the right direction. County officials have resisted attempts to decrease the county share from its present twenty-six percent. Since the state's share of the highway users' fund is likely to remain at sixty-five percent, because of federal requirements for state matching funds, any increase in the municipal share would require a decrease in the counties' share, and vice-versa.

Although the municipal street system has less than ten percent as many miles as the county road system, its per mile cost is more than seven times as great, and its per mile construction and maintenance costs are more than eight times as much. This cost differential is explained, at least in part, by the large proportion of the county system which receives little or no maintenance.

Total county highway revenues increased 20.2 percent between 1960 and 1964, as compared with 36.4 percent for municipalities. During the same period, county road system mileage increased only 1.8 percent, as compared with 12.9 percent for the municipal system, and county total road expenditures increased 14.2 percent, as compared with 31.4 percent for municipalities.

Counties received almost sixty percent of their road revenues from state sources from 1960 through 1964, as compared with almost thirty percent for municipalities. Slightly more than thirty-five percent of total county revenues came from local sources during this period (forty percent of which came from municipal property owners), while municipalities depended on local support for slightly more than fifty-five percent of total street revenues.

These and other selected comparisons between counties and municipalities are shown in Table 28.

TABLE 28

COUNTY AND MUNICIPAL COMPARISONS, SELECTED HIGHWAY AND STREET FINANCE FACTORS, COLORADO, 1960-1964

County Road and Bridge Fund

The conflict between municipalities and counties is not limited to the highway users' fund, although the portion each should receive is a source of substantial disagreement. It also extends to that portion of county road and bridge funds financed from local sources, because this burden falls alike on property owners in both incorporated and unincorporated areas. Municipal officials claim that municipal property owners are in effect subject to double taxation because they must pay for both municipal streets and county roads, including those which are used primarily or entirely by rural residents.

The road and bridge fund levy must be uniform throughout the county to comply with the provisions of Article X, Section 3 of the Colorado Constitution which states in part: "All taxes shall be uniform upon each of the various classes of real and personal property located within the territorial limits of the authority levying the tax, . . ."

Counties have no authority to establish special service areas or districts for road improvements or maintenance. Special districts may be created to provide street improvements in unincorporated areas, but only one such district (Jefferson County) has been created.[6]

Proportion of County Highway Revenue Paid by Municipal Property Owners. From 1959 through 1965, municipal property owners provided between 35.8 percent and 43.3 percent of county road and bridge fund property tax revenue.

In 1965, municipal property owners in five counties provided over fifty percent of county road and bridge fund property tax revenue: Boulder, 69.2; Arapahoe, 65.2; Pueblo, 58.5; El Paso, 55.9; and Larimer, 55.7 percent. In an additional six counties, municipal property owners provided over forty percent: Alamosa, 48.3; Fremont, 48.0; Montezuma, 47.4; Otero, 46.5; Adams, 42.3; and Mesa, 41.5 percent.

In eight counties, municipal property owners payed less than ten percent of the county road and bridge fund property tax revenue in 1965: Costilla, 3.0; Rio Blanco, 5.5; Park, 5.6; Washington, 6.1; Elbert, 6.1; Cheyenne, 9.8; and Douglas, 9.8 percent.

County officials take the opposite view concerning municipal property owner support of the county road and bridge fund. They feel that county thoroughfares are a countywide responsibility which falls upon city and county dweller alike. Further, they point out that the construction and maintenance of good county roads facilitates travel to shopping centers, which adds to municipal economic well-being.

Sharing of County Road and Bridge Revenues with Municipalities. Some municipal officials have advocated that counties share road and bridge fund revenues with municipalities as one possible solution to what they consider to be present inequities. The legal basis for counties to do this has been questioned, and counties have opposed recent efforts to enact permissive and clarifying legislation. Very few counties have shared road funds, either in cash or in work performed, with municipalities.

Long-Range Highway Needs Study

The 1965 long-range highway needs study is much more limited in scope than the 1949 study. The 1949 study covered construction and maintenance needs, as well as highway finance, and developed recommendations on the basis for and amount of highway users' funds to be allocated to the state, counties, and municipalities. The current study is limited to the determination of construction and improvement needs, including the county and municipal systems, between 1965 and 1985.

This study was made in conjunction with the U.S. Bureau of Public Roads, and similar information has or is being developed in each of the other forty-nine states and other jurisdictions receiving federal grants-in-aid for highway purposes.

1985 Construction Needs. Table 29 shows the construction needs and estimated costs for county roads and municipal streets as determined by the current long-range needs study.

In 1964, the county and municipal systems together accounted for 70,959 miles, 92.3 percent of which was on the county system. The needs study calls for a combined mileage on the two systems of 82,656 by 1985, an increase of 16.5 percent. By 1985, the county system would account for slightly less than ninety percent of the combined total.

As can be seen in Table 29, the municipal system should have the greatest proportion of mileage increase of the two systems by 1985, 51.18 percent, with the municipal secondary system to increase slightly more proportionately than the municipal primary system.

The county system as a whole should have an increase in mileage of 13.57 percent by 1985. Most of this increase would be in the county secondary system, 6,556 miles, or 14.86 percent more than in 1964. The county primary system (as redefined) would have an increase of slightly less than eleven percent.

The estimated cost of the needed additions to the county system by 1985 is slightly more than one billion dollars. The estimated cost for municipal system additions is almost $647 million.

TABLE 29

CONSTRUCTION NEEDS AND ESTIMATED COSTS, COUNTY ROADS AND MUNICIPAL STREETS, TO BE COMPLETED BY 1985[a]

	1964	1985	Pct. of Increase	Estimated Cost of Increase
County Roads				
Primary	21,347	23,691[b]	10.93%	$ 701,166,000
Secondary	44,127	50,682	14.86	306,817,000
Total Mil.	65,474	74,683	13.57%	$1,007,983,000

Total Mil.	5,485	8,292	51.18%	$ 646,639,000

[a]Abstracted from Colorado State Highway Department Needs Study tables; these figures should not be considered final as they may be subject to further revision.

[b]Primary systems redefined to include only arterial and collector roads and streets, and to exclude unimproved mileage.

Estimated Vehicle Miles of Travel. In conjunction with the needs study, the research and statistics division of the State Highway Department has developed estimates of vehicle miles of travel for the state, county, and municipal systems. These estimates are derived from the highway and street vehicle county studies made by the highway department on a continuing basis. Table 30 shows the estimated proportion of total vehicle miles for each of the three systems in 1964 and 1985.

TABLE 30

ESTIMATED PROPORTION OF VEHICLE MILES OF TRAVEL FOR THE STATE, COUNTY, AND MUNICIPAL SYSTEMS, 1964 AND 1985

System	Proportion of Vehicle Miles of Travel 1964	1985
State	64.8%	70.7%
County	12.8	10.0
Municipal	22.4	19.3

Source: Colorado State Highway Department

The state system is expected to become even more important by 1985, as far as vehicle miles of travel is concerned. The county system's proportion of total vehicle miles in 1985 is expected to be only seventy-eight percent as much as it was in 1964. The municipal system's proportion of total vehicle miles is expected to decline fourteen percent between 1964 and 1985. The municipal system's estimated proportion of total vehicle miles traveled on the three systems was 1.75 times that of the county system's in 1964, and is expected to be 1.93 times that of the county system in 1985.

Needs Study Implications. The current needs study does not provide any ready-made solutions to the problems of local government highway finance, nor does it provide any ready-made revised formula for the allocation of highway users' funds to counties and municipalities. It does add an important factor (long-range construction needs) which must be considered in determining what changes, if any, should be made in the allocation of highway users' funds to local units. Further, it indicates the continuing need for the state's share of the highway users' fund to remain at least at the present level, because almost sixty-two percent of the estimated costs of construction needed by 1985 are for the interstate, federal-aid primary, federal-aid secondary, and state highway systems. It also shows the expected relative importance of the state, county, and municipal systems in serving vehicle traffic needs in 1985.

Commission Study Findings

The major result of the Commission study is a more precise identification of local government highway finance problems and inequities, particularly with reference to the distribution of highway users' funds to counties and municipalities. These study findings on problems and inequities should be used only as general guidelines in considering what changes, if any, should be made in the distribution of highway users' funds to counties and cities. This limited use is suggested, because the necessary tools of analysis were not available (for example, benchmark cost standards on construction and maintenance) to determine:

1) whether per mile expenditures for the various road and street functions were similiar to what these expenditures should have been, too high, or too low;
2) whether expenditures made during the five-year period covered by the study were an accurate reflection of highway or street needs of the local units making them; and
3) whether the proportion of local support for highways and streets was an accurate reflection of each local unit's ability to provide such support.

Within these limitations, the study found the following problems and inequities:

Counties.

1) highway users' funds distributed for road mileage (primitive) which receives no maintenance and to which the maintenance difficulty factor is applied in the same way as to other mileage;
2) highway users' funds distributed for road mileage (dirt) which receives very little mainteance on the same basis as other mileage, including application of difficulty factor;
3) highway users' funds distributed disproportionately to less populous counties at the expense of the most populous counties and without apparent adequate consideration in the formula of need as indicated by population, vehicle registration, vehicles miles of travel, and the expense of maintaining the types of road surfaces needed for extensive use;
4) lack of uniformity in the amount and proportion of local financial effort, especially between the least and most populous counties; and
5) apparent out-of-line per mile expenditures in the least populous counties in comparison with those in other population groups.

Municipalities.

1) highway users' funds distributed for primitive and dirt mileage on the same basis as other mileage.*
2) highway users' funds distributed disproportionately to less populous municipalities at the expense of the more populous ones and without apparent adequate consideration in the formula of need as indicated by population, vehicle registration, vehicle miles of travel, and the expense of maintaining the types of road surfaces needed for extensive use; and
3) lack of uniformity in the amount and proportion of local financial effort.

County - Municipal Relationships. If per mile expenditure costs are an accurate reflection both of need and of what these costs should be, it would appear that municipalities as a whole have received an insufficient share of the highway users' fund distribution to local units. Municipal local fiscal support is considerably greater than county local fiscal support, and municipal property owners also provide forty percent of the local support for county roads.

This is a less serious problem than with counties, because there is proportionately much less mileage in these categories and because mileage is a much less important factor in the municipal allocation formula than it is in the county formula.

Major Policy Questions

Past efforts to change the highway users' fund distribution formulae to local units have been designed so that no local unit would receive less money, without any determination as to whether the amount previously allocated was both equitable and consistent with the purposes for which state aid is granted.

Present recommendations to change the method of distribution or to augment it are in the same vein. It has been proposed that the gasoline tax be raised from $.06 to $.07 per gallon on a permanent basis; the additional revenue from this increase has been incorporated in the various suggested alternatives to the present highway users' fund formulae in such a way that nobody would lose except those paying the tax.

The continuance or possible increase of the temporary registration fee is one way to augment state aid from the highway users' fund without disturbing the present formulae. The people paying this registration fee, however, are also the ones who are already paying the major portion of local support for highways and streets. There is presently no way to assure that this money would actually be used to expand road and street programs instead of being used to provide property tax relief. Further, no determination has been made as to the proper relationship, if any, of a special registration fee to other aspects of highway finance.

A substantial revenue increase, such as would result from a one cent per gallon increase in the gasoline tax (estimated $8.32 million in 1967), could provide additional financial assistance where it is needed without any present recipient having to suffer a loss. But such a revenue increase without a formal reexamination and reevaluation of purpose and effect of state aid would compound any existing misallocation of funds and merely postpone the time when such a review is made.

Basic Philosophy. The determination of equity is a key factor in deciding the share of highway users' funds to be distributed to counties and municipalities. This determination also extends to formulae to be used for allocating each municipality's and county's share within these distributions. The question of equity, however, can not be separated from the determination of the major purposes and objectives to be achieved by distributing a portion of highway users' funds to local units. For example, are highway users' funds to be distributed on the basis of current and future construction and maintenance needs? To what extent should local effort be required? Should state support be given for roads other than arterials and major thoroughfares? Should highway users' funds be distributed to equalize or reduce property tax burdens for road and street purposes?

It would appear that none of these problems and related questions can be resolved on a piece-meal basis and provide a long-range solution which satisfies both counties and municipalities and achieves the most efficient use of state funds.

A shift of one percent in highway users' fund allocations between counties and municipalities would result in approximately $600,000 more being available to the benefiting local units, but with an accompanying loss to the others. Whether such a loss or a greater one can be justified again depends on the basic purposes for which funds are to be distributed, and any shift should be accompanied by a reexamination of the distribution formula within each allocation.

General Guidelines

Several general guidelines to be followed in developing a new formula for the distribution of highway users' funds to counties and municipalities have been recommended by the Intergovernmental Relations Committee of the Commission:

1) Benchmark standards should be established both for use in the formula and as a tool of analysis in reviewing the results of previous distributions. Such benchmarks would relate to the costs of constructing and maintaining a mile of road in each of the several county road and municipal street surface classification.
2) Emphasis should be placed on county and municipal primary systems, and these systems should be redefined to include only arterial and collector roads and streets.
3) Greater emphasis should be placed on motor vehicle registrations in the formulae for both counties and municipalities.
4) Counties should be encouraged to adopt county unit systems for road and bridge administration and operation. The smaller counties should be encouraged, whenever feasible, to join together for road and bridge construction and maintenance, or at least some functions, such as equipment pooling to reduce costs.

VII

MUNICIPAL AND COUNTY HOME RULE

Theory and Development of Home Rule

Definition

Home rule in its broadest context may be defined simply as "self government," meaning local control and local decision-making over the organization and operation of governmental activities at the local level. Traditionally, this broad definition of home rule has been applied in the United States primarily to municipal government; some thirty-seven states provide for municipal home rule constitutionally, by statute, or both. Home rule, usually in a more limited form, has been provided constitutionally for county government in fourteen states. A number of other states provide a measure of county home rule authority by law.

Federal System. To understand the meaning and role of home rule in its modern day context, it is necessary to examine the relationship between local governments and the national and state governments in our federal system.

The United States Constitution sets forth certain powers which are specifically and exclusively granted to the federal government; however, all powers which are not expressly delegated to the national government are reserved to the states. Nowhere in the federal constitution are there any specific powers reserved for local government units, counties, cities, districts, etc. On the contrary, local government has its legal origins in those powers which are reserved by the constitution to the states. Each state constitution contains provisions relating to the establishment of local government. Colorado is no exception, and its constitution contains several such provisions. Counties, cities, towns, school districts, special service districts, and other forms of local government are given legal status by the state constitution. Certain powers and limitations on the organization and operation of local governments are also usually contained in the state constitution, although these are generally described in greater detail by state law. Such laws must be enacted pursuant to the constitution but, within this limitation, organizational forms, procedures, and powers of local government are left to the discretion of the legislature to provide. Home rule can be considered an extension of federalism to the local level, so that counties and municipalities have greater freedom from state control.[1]

Municipal and County Status. As a general rule, a municipality is a creature of the state and has no inherent powers except those delegated by the state. State law outlines the form and procedure for the incorporation of cities and towns, as well as the powers which such units may exercise. The courts have traditionally construed narrowly the powers delegated to municipal corporations. The significance of this practice is that while a state constitutionally may exercise any power not forbidden to it, a city must have specific authorization for the exercise of any power.

The legal basis for this doctrine is that the legislature intended to grant only those powers which it expressly granted or which are necessarily or incidentally implied. It is precisely this setting which gave rise to the home rule movement. Cities sought freedom from control and restraint by the state legislature over their own governmental organization and over the matters of their own local concern.

Traditionally, a county has been considered to be a local subdivision of the state government for the administration of state programs. This traditional concept of county government has changed somewhat over the years, it is now considered by many to be a separate unit of local government, although with a dual nature; in certain ways it acts as part of the state government performing functions on its behalf, but it is also a unit of local government.[2]

Forms of County Home Rule. It is because of the dual nature of county government that fewer states provide for county home rule than have for municipal home rule. It is also for this reason that the scope of county home rule is usually much more limited than that of municipal home rule. In general, county home rule has taken two forms: 1) administrative home rule, which permits counties to exercise local self-determination over government organization and structure; and 2) functional home rule, which in addition to government organization, permits counties to exercise local self-determination over at least some county powers or functions.

Forms of Municipal Home Rule. Municipal home rule in most states encompasses both government organization and powers. This is more likely to be the case in those states, such as Colorado, where municipal home rule is provided constitutionally rather than by statute. The amount of power which may be exercised by a home rule city varies from state to state, as do the eligibility requirements for home rule status; some states, Colorado included, prohibit municipalities of less than a certain population from adopting home rule charters.

Origin and Early History of Home Rule in the United States

The origin of municipal home rule in this country preceded county home rule by thirty-six years. Municipal home rule was first provided in the Missouri Constitution in 1875. The concept soon spread to other states and by 1900 had been adopted in California, Washington, and Minnesota. Colorado was one of the first states to authorize home rule for its municipal corporations. Article XX of the Colorado Constitution was approved in the general election of 1902. In addition to authorizing municipal home rule, it created the City and County of Denver as a home rule entity.

The first constitutional provision for county home home (other than a consolidated city and county) was adopted in California in 1911. Maryland adopted a constitutional county home rule provision in 1913, and Minnesota in 1918. Most of the remaining states providing constitutionally for county home rule did not do so until after 1930.

County Home Rule

In general, there are two types of county home rule—administrative and functional—which may be described as follows:

Administrative Home Rule

Some states make available, either through constitutional or statutory authorization, alternate forms of government which a county may adopt, thus permitting the exercise of local self-determination as to which of several prescribed options is most desirable for a particular county. Other jurisdictions permit a county to develop and adopt a charter which establishes a form of government particularly tailored to its needs. Such charters may be adopted pursuant either to constitutional authority or direct legislative enactment. In some states, the constitution may direct the legislature to provide for county home rule. In others, the legislature may provide for adoption of a county home rule charter under its general powers concerning local government without a specific constitutional mandate. Administrative home rule is the form permitted in most states providing for county home rule.

Functional Home Rule

Functional home rule permits counties to exercise self-determination over at least some powers and functions in addition to government organization. Complete functional home rule has not been provided nor recommended in any state, since all counties are required to perform state functions on the local level as prescribed by the state legislature. A few states, however, have permitted counties to determine the scope of some functions and powers which are matters of local concern. Such functional authority may include the power to perform urban services on a special taxing district basis; the taxing district requirement is incuuded to protect municipal residents from paying the costs of urban services in unincorporated areas.

Functional home rule authority may be granted either constitutionally or through legislation enacted pursuant to broad constitutional authorization. It may be provided generally or by specific enumeration of the function, services, and powers which a home rule county may undertake. Only one state (Oregon) permits counties to have full control over functions and powers of local or county concern, although New York grants counties a great deal of authority in this respect.

County Home Rule in Other States

While there are now fourteen states which provide some sort of constitutional county home rule, the concept was slow to take hold. County home rule has not been extensively used in the states where it is possible to do so. At the present time, approximately thirty counties throughout the country have adopted some form of home rule.

County home rule has usually been adopted in highly urbanized counties, and some states limit constitutional home rule permission to counties of a certain size; e.g., Missouri, 85,000 population or more; and Texas, 69,000 population or more. At least twenty-three of the counties throughout the country adopting home rule are part of a standard metropolitan area as defined by the Bureau of the Census.*

In two states (Minnesota and Pennsylvania), the legislature has never implemented constitutional coun-

Over 50,000 population in the central city or cities.

ty home rule provisions. Wisconsin's constitutional provision has been limited by judicial interpretation to apply only to Milwaukee County.[3] The Florida constitutional provision applies only to one county—Dade County. While Tennessee adopted a general county home rule amendment in 1953, including permission for municipal-county consolidation, only one home rule county has been formed.

No home rule counties have been formed in either Ohio or Texas. The lack of adoption in Ohio can be attributed to: 1) the requirement that the voters in each municipality within the county must approve a charter by concurrent majorities before it can be adopted; and 2) the fact that Ohio statutes provide for several forms of county government which may be selected without adopting home rule. No county has been able to meet the requirements set forth in the Texas constitution, even though some have been interested. Only three counties in Maryland and one in Missouri (all highly urbanized) have adopted home rule charters.

The states where county home rule has been adopted to the greatest extent are California, Oregon, and New York.

California. Eleven counties have adopted home rule charters in California. Only two of these eleven counties have less than 100,000 population, the smallest having 25,305 in the 1960 census. California's form of county home rule is basically administrative, although the constitutional county home rule provision was amended to permit contractual service arrangements between counties and the municipalities within their boundaries. The broad range of functions which California counties may perform and the wide array of powers which they may exercise are authorized by statute and apply to both home rule and non home rule counties. California law also permits optional forms of government for non home rule counties.

Oregon. Oregon adopted its constitutional home rule provisions in 1958. Three counties have adopted charters, charters have been rejected in a few counties, and others still have charter committees at work. Of the three counties adopting charters, two are over 100,000 population and the other has a population of 13,000. Oregon provides functional as well as administrative county home rule. Its constitution states that a county home rule charter may provide for the exercise of county authority over matters of local concern, including the provision of local services and improvements to be paid for only by those who receive benefits, unless otherwise provided by law or charter.

The two largest counties adopting home rule charters have been slow to exercise new powers and provide new services. The third home rule county charter has been aimed primarily at administrative organization.[4] The question of county powers and functions was a point of issue between municipal and county representatives in drafting the Multnomah County charter, which has not yet been adopted.[5] Multnomah County is the state's most populous and includes the city of Portland. Oregon law for many years has given counties authority to create county service districts for some functions in lieu of special districts.

New York. New York adopted constitutional amendments providing for county home rule in 1959 and 1963. Prior to 1959, the New York Constitution permitted the legislature to enact special charters for counties, and three counties obtained such charters. Five counties have adopted charters under the new constitutional authorization and the legislation implementing it, and at least one other county is in the process of drawing up a charter. All of these charter counties are highly urbanized and include most of the major poulation centers of the state outside of New York City.

Under the recently enacted home rule amendment, counties (as well as other local units) are granted a broad range of powers covering government organization and administration, functions, and intergovernmental relations. Some of these powers, however, depend on legislative authorization or regulation. For example, the legislature has the authority to restrict the adoption of local laws on certain matters and has the express duty to restrict the power of taxation, assessment, and the incurring of debt, so as to prevent abuses. The amendment reserves certain matters as legislative prerogatives because of state concern, but also requires the legislature to enact and amend laws granting local government powers in addition to those granted in the constitution. (A power so granted may be repealed, diminished, or suspended only upon approval of the governor and passage at two successive legislative sessions.)

Legislative Home Rule. Permissive legislative enactments providing a measure of home rule authority have been adopted in a number of states. Indiana permits counties maintaining fewer than 1,000 polls to consolidate the offices of clerk, recorder, and auditor. Since 1927, North Carolina has allowed counties to use either a county commission form or a county manager form of government. Montana has the only completely rural county in the United States utilizing a county manager system; Petroleum County has functioned under this general legislation since the early 1920's. The city of Butte and Silverbow County have tried unsuccessfully twice to consolidate under Montana's general laws. Consolidation of Ormsby County and Carson City was authorized by the Nevada legislature in the early 1950's. Many other states have also permitted considerable experimentation with county governments by statute.

County Home Rule Attempts in Colorado

There have been three unsuccessful attempts in Colorado to amend the constitution to provide for county home rule.

1958 Proposal. In 1958, a constitutional amendment was proposed which would have permitted alternative forms of county government upon approval of county voters. This amendment would have allowed counties to adopt a "home rule" charter, but counties could exercise only those powers authorized by the General Assembly. A "local taxing district" provision was included which would have given counties the authority to create and operate special districts for local improvements. The amendment lost in the general election 241,636 to 158,666.

1960 Proposal. Another constitutional amendment was placed on the ballot in 1960. This amendment would have repealed section 15 of Article XIV and would have amended sections 8 and 12 of the same article. Basically, the measure would have permitted all counties with population of 75,000 or more, upon voter approval, to modify county organizational structure including: 1) extending elective terms of office to four years; 2) basing salaries of county officials on factors other than population; 3) paying county officials' salaries from sources other than fees; and 4) permitting either the appointment of election of county attorneys. This amendment was defeated 328,241 to 231,025.

1962 Proposal. In 1962, the third county government amendment was placed on the ballot. The proposal would have: 1) permitted the change of county and precinct officials' salaries at any time; 2) authorized the payment of salaries rather than compensation by fees for certain officials; 3) permitted the establishment of county salary schedules on factors other than population; 4) enabled the General Assembly to establish terms of office longer than two years; and 5) allowed any county to change or abolish any county office with the approval of the electorate. This amendment received much attention prior to the 1962 general election and was recommended by the Legislative Council's Interim Committee on County Salaries in 1961. The amendment was barely defeated 208,867 to 207,442.

Municipal Home Rule

Types of Municipal Home Rule

Several states, including Colorado, have adopted broad constitutional provisions which guarantee constitutionally certain home rule powers to municipalities. Other states, such as Arkansas and Kentucky, have granted a measure of self-determination and local control by legislative enactment. In Alaska and some other jurisdictions, constitutional and legislative provision of home rule have been combined, and the legislature has delegated home rule authority to municipalities pursuant to express constitutional authorization.

Home rule is rarely made available to all municipal units of government. Colorado, for example, limits home rule to cities with 2,000 population or more. In general, home rule may be extended to municipalities in one of three ways. Permissive home rule may be granted by the state legislature, usually by approving a special charter. Mandatory home rule occurs when municipalities automatically acquire home rule powers pursuant to constitutional or statutory requirements. Self-executing home rule takes place when eligible municipalities may adopt local charters in accordance with procedures and guidelines outlined either constitutionally or by statute without further legislative action required.

There are two model constitutional provisions which illustrate the two basic ways in which powers are granted to home rule municipalities.

National Municipal League. The National Municipal League model municipal home rule provisions are contained in the fourth edition of the Model State Constitution published in 1948. These provisions set forth the powers of home rule municipalities in broad general terms, with specific enumeration of certain powers, but without restricting the general grant of municipal self-governing authority. The power of the legislature to enact laws of statewide concern is expressly preserved.

This approach to the grant of municipal home rule powers reserves an area which is exclusively local and municipal and not subject to legislative control. The advantage to this approach (similar to Article XX of the Colorado Constitution) is that it protects municipal home rule from interference by the state legislature. Its weakness lies in the fact that a burden is placed upon the court to decide what is of local concern and what is of statewide concern; consequently, municipalities run the risk of unfavorable judicial decisions which could erode the home rule concept. In the event of such judicial decisions, municipalities may be severely hampered because their only remedy may be constitutional amendment.

National League of Cities.* The second model provision was drafted by the National League of Cities in 1953. It vests broad powers in home rule municipalities, but provides for legislative supremacy in the area of state-local relationships. It protects the right of municipalities to adopt local home rule charters and sets forth in broad terms the conditions with which municipalities must comply, such as elective officers, charter procedures, etc. Home rule cities are given all governmental powers except as may be expressly denied by general class legislation enacted by the state legislature, or otherwise restricted or denied by the constitution or local charter.

The strength of this approach to municipal home rule is that no powers are granted which are above legislative control, should it be affirmatively asserted; if it is not asserted, then home rule cities are granted plenary power over all aspects of municipal government by the constitution. It, thereby, avoids the uncertainty of judicial interpretation on matters of state versus matters of local concern. It provides flexibility in state-local relationships because changes can be made by legislative action, rather than requiring constitutional amendment. Its weakness lies in the fact that, with certain exceptions, home rule municipalities may be subject to legislative control in matters generally considered to be of exclusive local concern.

Constructive suggestions relating to these two basic approaches have been offered by various legal authors. For example, Professor Terrance Sandalow, University of Minnesota, suggests that there is a serious weakness in the National League of Cities and National Municipal League model provisions, in that no provision is made for annexation and extraterritorial powers to be exercised by home rule municipalities.[6] Professor Sandalow persuasively urges that home rule should not grant blanket authority for the local exercise of these powers, but rather, such power should be governed by the conditions and procedures established by statutory enactment.

Professor Richard B. Dyson, University of Kansas, also makes a case for the proposition that home rule cities should have no authority to dissolve, enlarge or contract municipal boundaries without express statutory delegation by the state's legislative body.[7] In addition, he suggests constitutional phraseology which would provide that local regulation shall be deemed to conflict with state legislation only when, by every reasonable construction, to obey or carry out one would either be to disobey the other or tend to defeat the purpose of the other. Further, Dyson and other authorities suggest that home rule municipalities be expressly prohibited from enacting regulations on general private law and civil relationships and from defining and providing for the punishment of felonies.

Formerly known as the American Municipal Association.

Summary of Major Approaches. The following comments by an authority on home rule analyze the strength and weaknesses of the two basic approaches to municipal home rule, and make a strong case for the National League of Cities approach:

> Traditionally, local governing bodies were considered mere creatures of the state; legislatures gave municipalities life by the passage of general or special legislation and it was assumed that the local agencies held only those powers specifically enumerated by legislation. Translated into judicial idiom, this position was sanctioned by the famous Dillon rule—an interpretation sanctioned by the U. S. Supreme Court.
>
> . . . reformers attempted to carve out governmental powers for municipalities. They reasoned that if these powers could attain constitutional status, the home rule battle would be won. The creation of a domain followed two basic patterns. On the one hand. . . . the constitutional amendment described municipal powers in general terms: municipalities should have exclusive control over "local matters," and the state could enter the field only if it legislated on a matter of "general" concern. Given supposedly co-equal spheres of authority, the courts became the arbiter in any disputes between state and city. Drawing a line between state and local matters, essentially a critical policy decision, became the function of the courts. . . . The courts did not relish this role [of judicial home rule], and they generally accepted legislative judgment as conclusive evidence that a particular subject was of general concern. Hence, the legislature could and did cut into the realm of municipal powers.
>
> To counteract the tendency of the courts to construe local powers narrowly, municipal reformers turned to another formula for the allocation of powers. It enumerated powers to be wielded by municipalities. Along with the enumerated powers, the constitutional amendment contained a clause specifying that they were not to be construed as the limits of local authority.
>
> Legally, the enumerated powers amendment has had little more success than the general powers clause. In the grey area beyond the enumerated powers, the courts must again operate as arbiters between local and state powers. Moreover, despite specific language to the contrary, courts have tended to restrict municipal authority to subjects specifically enumerated.
>
> The use of enumerated powers may be seriously questioned from the perspective of general public policy. It automatically lengthens state constitutions already hardly noted

for brevity and conciseness. Of greater importance, the enumeration of powers rigidifies a governmental relationship which has been mobile in the past and may be expected to fluctuate in the future. Under these circumstances, the advisability of sealing a set of municipal governmental powers in the relatively inflexible confines of a constitutional straight jacket may be suspect. This is an especially pertinent question when related to the expanding metropolitan character of urban areas . . . a rigorous constitutional delineation of municipal powers might serve as yet another inhibiting force against metropolitan cooperation. . . . The growth of county control over functions traditionally considered municipal in nature also casts doubt on the validity of an approach which rigidly guarantees municipal authority over a wide range of activity.

In light of the general failure to create a set of municipal powers by constitutional fiat, home rule should be approached from a different assumption. That is, the state constitution should recognize the primacy of legislature if the latter wishes to legislate on matters which affect municipalities; viewed practically, courts have generally reached this conclusion despite constitutional provisions to the contrary. Hence, the assumption merely brings the state's basic charter into conformity with prevalent judicial interpretation and eliminates the legal fiction of a separate domain of municipal powers within the state. It would also relieve the court from engaging in the onerous task of differentiating local and state matters. This policy question would be placed firmly in the hands of the legislature . . . The principle of legislative supremacy in the event of conflicts between state and local authority would be acknowledged. At the same time the municipality, by express constitutional dictum, would be allowed to exercise any powers not denied it by laws applicable to all cities or to appropriate classes of cities. On subjects where the legislature has passed general laws, the municipality should be allowed to exceed minimal state requirements so long as its action is consistent with the spirit of state law.

. . . In the sensitive area of intergovernmental relations it is not expected that any constitutional formula will provide a panacea for the present and future problems involved in the relationship. The use of the principles of legislative home rule in the constitution, however, should tend to counteract several of the most vexing aspects of the classical home rule pattern.

Yet, it must be remembered the most critical requisites for effective utilization of home rule authority are the corollary and the willingness of municipal officials to wield home rule powers. Regardless of the . . . constitutional provisions, a meddlesome legislature can easily interfere with local matters at every turn. If municipal officials refuse to exercise their rightful powers, there can be little hope for municipal home rule in any guise.[8]

Municipal Home Rule in Colorado

Events Leading to Adoption of Home Rule. Home rule in Colorado has had a very interesting historical development. Most of this history centers around the political turmoil faced by the city of Denver in the late 1800's and early 1900's.

In 1861, when Colorado became a territory, the territorial legislature passed an act incorporating the city of Denver under a special charter. This charter stayed in existence until home rule was adopted in 1902. During the intervening years, the city was regarded as a subject of special legislation, separate from municipalities organized under general laws. Denver's city charter was amended or revised in nearly every legislative session before and after statehood. The climax came in 1889, when the General Assembly amended the charter to provide for a board of public works, with absolute power over public improvements, whose members were appointed by the governor.

In 1891, the charter was again amended to provide for a fire and police board, also appointed by the governor. This board had complete control over fire and police services and was empowered to issue saloon licenses. These acts were upheld by the supreme court as a matter of "legislative discretion." Public discontent led to the election of a non partisan mayor in 1895, who was reelected in 1897, but defeated in 1899, apparently because of alleged ballot stuffing and other election abuses.

During this period, efforts to consolidate the city's five school districts so as to equalize taxation and centralize administration were frustrated by judicial declarations that this was contrary to Denver's city charter.

Dissatisfaction also resulted from the alleged corruption in the granting of utility franchises. In 1898, the then mayor called a charter convention to correct some of these abuses, but special interests managed to disrupt this effort and nothing constructive was accomplished. A bill designed to remedy the situation was introduced in the General Assembly, but met with no success.

In 1901, an active "home rule" movement was started, and newly elected legislators from Denver proposed a new Article XX to the state constitution which would create the City and County of Denver. This plan, consolidated part of Arapahoe County, Denver, and six contiguous communities in the area into a single body politic know as the "City and

County of Denver." The proposed amendment received public support from leading newspapers and many community organizations; utility corporations and other interests opposed the move. After a bitter struggle, the amendment was referred by the General Assembly to a vote of the people. In November, 1902, Article XX became part of the state constitution by a majority of more than two to one. The consolidation was implemented, but the difficulties were not over.

Legal Battles After Passage. In 1903, the Colorado Supreme Court denied the contention of opponents that the amendment established "an unrepublican form of government" and sustained its constitutionality. After the defeat of one proposed charter, municipal electors approved a second and quite comprehensive charter in 1904.

In People v. Johnson, decided in 1905, the Colorado Supreme Court (increased from three to seven members by a constitutional amendment adopted in 1904) held that "unless the City and County of Denver had two sets of officers—one for the city and one for the county—it would have an unrepublican form of government in violation of the constitution of the United States."[9] A vigorous dissent was filed by Justice Steele who wrote the majority opinion in the 1903 case. Since the charter of the City and County provided for only one set of officers, which the court found to be unconstitutional, the whole purpose and design of Article XX was jeopardized.

A change in judicial attitude took place in 1911, largely due to changes on the court itself, and in People v. Cassidy, the Johnson case was discarded, and the provision in Article XX permitting one set of city and county officers was sustained.[10] This widely proclaimed victory was followed, however, by a series of other cases which again showed a very restrictive judicial attitude toward home rule. One such case held the selection of judges to be a matter of statewide concern, on which the people of Denver had no right to legislate; years later this decision was also discredited by the courts.

Although the original amendment appeared to make it clear that Denver was freed from Dillon's rule and that the city had supreme authority in the area of local and municipal concern, some uncertainty still prevailed in 1912. But in that year, an amendment was added to Article XX designed to erase all doubt about this freedom for Denver and other home rule cities. The first portion of this amendment states:

> The people of each city or town of this state having a population of two thousand inhabitants as determined by the last preceding census . . . are hereby vested with, and they shall always have, power to make, amend, add to or replace the character of said city or town, which shall be its organic law and extend to all its local and municipal matters. Such charter and the ordinances made pursuant thereto in such matters shall supersede within the territorial limits and other jurisdiction of said city or town any law of the state in conflict therewith.[11]

Specific powers were granted by this same amendment. No amendments were made to Article XX until 1956 when Article XXV transferred jurisdiction of utility regulations in home rule cities to the state. Numerous judicial interpretations of Article XX have been rendered which contribute to the historical development of municipal home rule in Colorado. But the basic principle and strength of home rule was definitely established by 1913.

Summary of Article XX. Several sections of Article XX relate exclusively to the City and County of Denver. Section 1 provides that a body politic known as the City and County of Denver shall own and possess all property previously owned by Arapahoe County, Denver city, and the other municipal corporations involved in the consolidation. It is empowered to assume all rights and liabilities, including outstanding bonds and debts, and to convey, lease, purchase or otherwise manage all local utilities and transportation systems. Also granted is the power to issue such bonds as may be necessary if approved by the local electorate, and as prescribed by charter.

Section 1 also provides for annexations by the City and County of Denver:

> The general annexation and consolidation statutes of the state shall apply to the city and county of Denver to the same extent and in the same manner that they would apply to the city of Denver if it were not merged, as in this amendment provided into the city and county of Denver. Any contiguous town, city or territory hereinafter annexed to or consolidated with the city and county of Denver, under any of the laws of this state, in whatsoever county the same may be at the time, shall be detached per se from such other county and become a municipal and territorial part of the city and county of Denver, together with all property thereunto belonging.

Section 2 relates to the officers of the City and County of Denver. It provides the number of officers, method of appointment or election, jurisdiction, term of office, duties, and qualifications shall be as provided by local charter. Salaries of officers must be provided by charter and for officers within the classified service by ordinance pursuant to charter. This portion of Article XX also prohibits any elective officer from receiving an increase of compensation during his term of office.

The transfer of government in the City and County of Denver is provided for in Section 3 of Article XX. Certain designated officers existing prior to the pas-

sage of the amendment are made ex officio officers during the transfer and pending the approval of a charter. Also included in this section is the following provision relating to civil service: ". . . and every charter shall provide that the department of fire and police and the department of public utilities and works shall be paid under such civil service regulations as in said charter shall be provided."

Section 4 specifies the procedure to be followed by Denver and other municipalities in adopting a home rule charter: First, an election must be held on the question of whether the municipality wishes to achieve home rule status. If the electorate gives its approval, a second election must be called to elect twenty-one taxpayers who have been qualified taxpayers within municipal limits for a period of at least five years; this group shall constitute a charter convention for the purpose of drafting a charter and has sixty days to complete its work. When the proposed charter is completed, the constitution requires that it be published by the clerk of the city three times at weekly intervals. If the charter, by a majority of the electors voting thereon, is approved, it must be filed with the Secretary of State, and it then becomes the official charter of the city. If the charter is rejected, another special election must be held within thirty days to select another charter convention. The second charter convention has sixty days to complete the drafting of another charter. Another election must then be held on the second charter. This process is repeated until a charter is adopted.

The time and place of the convention and the compensation, if any, must be provided by ordinance. All expenses of the charter convention are required to be paid by the municipality by order of the city council. Section 4 also requires that the Denver charter make provision for the continuance, amendment, and repeal of ordinances (also apparently applicable to other cities), and the Denver City Council is authorized to fix the rate of taxation annually. This section also provides that no franchise shall be approved except by a vote of the qualified electors.

Section 5 sets forth charter revision and amendment procedures. Charter amendments or a request for a new charter convention may be initiated by a petition signed by not less than five percent of the qualified electors in the municipality voting at the last gubernatorial election; the council must submit the issue at a special election not less than thirty nor more than sixty days from the filing of the petition.

The proposed amendments or proposed new charter must be published three times, a week apart, in an official newspaper within the municipality. If approved by the voters, the amendment or charter must be published again and filed with the Secretary of State, at which time it shall become effective. If a new charter is approved, it must provide for initiative and referendum procedures. A new charter may not diminish the tax rate for state purposes or interfere with the collection of state taxes. Also guaranteed is the power of the city council to refer any ordinance to the voters at a special election within thirty days after the passage of the ordinance.

Section 6 expressly grants home rule authority to other cities and towns. A municipality must have a population of 2,000, as determined by the last official census, in order to qualify for home rule. If a municipality so qualifies, it has authority to adopt its own charter, which shall be its organic law and extend to all local and municipal matters. Such charter and the ordinances governing matters of local and municipal concern, made pursuant to it shall supersede conflicting state laws. Powers granted by this section include the power "to legislate upon, provide, regulate, conduct and control" the following:

1) municipal officers and agencies;
2) police courts and magistrates;
3) municipal courts and magistrates;
4) municipal elections;
5) municipal bonds and elections;
6) municipal park and water districts;
7) assessment and collection of municipal taxes; and
8) enforcement and collection of fines for violations of municipal regulations.

Included in Section 6 is a very broad statement to the effect that the intention of Article XX is to grant to home rule cities the full right of self government in local and municipal matters, and the enumeration of the specific powers listed above are not to be construed as a limitation of the power of cities to exercise full home rule rights.

Section 7 provides that the City and County of Denver shall alone always constitute one school district to be known as District No. 1. The district is to be governed by a board of education elected in such manner as provided by the general laws of the state. Except as provided by this section of the amendment, the district is to be governed by the general school laws of the state. Upon annexation of any contiguous territory which includes other school districts or parts of school districts, the same are to be merged, all property to be owned by District No. 1 and all bonds and obligations to be paid by District No. 1; provided, however, that the indebtedness of such annexed district shall be paid by the district by a special tax to be fixed by the board of education. In the case of partially included districts, the tax is to be equitably apportioned among the several parts thereof.

Section 8 covers possible constitutional conflicts by providing: "Anything in the constitution of this state in conflict or inconsistent with the provisions of this amendment is hereby declared to be inapplicable to the matters and things by this amendment covered and provided for."

Municipal Home Rule Problems in Colorado

Several significant procedural and substantive municipal home rule problems either have developed or have become more apparent in recent years. In part, these problems have arisen from judicial interpretations of Article XX of the constitution, especially the provisions delineating matters of local concern and related powers. In part, they are a consequence of population growth and accompanying urbanization, technological development, and shifting economic and social patterns, all of which require continuing reexamination of powers and responsibilities of the state and its local governments and of intergovernmental relations.

Procedural Problems

There are four major procedural problems relating to the adoption of home rule charters under the present provisions of Article XX. The first is the minimum population requirement of 2,000, which denies home rule status to smaller municipalities interested in attaining a greater degree of self government.

The second problem arises from the election procedures to be followed in adopting home rule. Article XX requires three separate elections, which makes the adoption of home rule cumbersome and expensive. Third, Article XX limits the home rule charter convention to only sixty days in which to complete the charter draft. This time limitation is too short to permit the necessary deliberation and legal thoroughness which should be given to a municipal charter. The fourth problem is caused by the requirement in Article XX that charter convention delegates must have been taxpayers for at least five years; this provision has been construed to mean that a municipality must be in existence at least five years before it can adopt home rule.

Other minor problems concern the cumbersome publication requirements in Article XX and the size of the charter convention (twenty-one members), which has been criticized as being too unweildy a group. The constitutional provision of home rule adoption procedures constitute at least as much of a problem as the procedures themselves, because it is impossible to modify them easily from time to time as experience and changing conditions warrant.

Substantive Problems

The language of Article XX attempts to delineate an area of "exclusive local and municipal concern" which is not subject to the control of or interference by the General Assembly. Yet, it also attempts to protect the sovereign power of the General Assembly in the area of "statewide concern." For the past sixty years the courts have engaged in a continuing struggle to define and protect the sovereign power of home rule municipalities without jeopardizing or restricting the power of the General Assembly to regulate matters of statewide import. A number of these decisions have tended to promote considerable confusion and uncertainty on the part of municipal authorities as to the meaning and extent of home rule.

The judicial interpretations of Article XX have tended to give superior status to the state's authority when it conflicts with local home rule regulations. Because such decisions interpret constitutional delineations of power, they may not, as a general rule, be modified by the General Assembly through additional grants of authority to home rule municipalities. In one instance, however, it can be concluded that the Colorado Supreme Court has upheld the supremacy of the General Assembly to decide, at least in some instances, when matters of statewide concern may be subject to concurrent local regulation.[12] Generally, the definition of "matters of local concern" encompasses a changing grey area, still beyond the power of the General Assembly to regulate. Consequently, even though state-local relationships under Article XX are constantly undergoing change, the final allocation of jurisdiction is being made by the courts rather than the General Assembly.

Matters of Statewide Concern (The Merris Cases). Many decisions rendered by the supreme court over the years have limited the exercise of municipal home rule powers on the basis that the power exercised constituted regulation in the area of statewide concern rather than local and municipal concern. The most recent and controversial litigation in this area was the famous Merris case and those related decisions which followed Merris.

Prior to the Merris decision, the peace and order of home rule municipalities in Colorado were maintained by local ordinances which often included jail sentences as penalties for violations, as well as fines. Violations were prosecuted in municipal courts as civil cases without the constitutional protections afforded to criminal defendants, such as a jury trial. Many of these municipal ordinances regulated matters which were already made criminal by statute; it was generally thought that Article XX extended to home rule cities extensive rights of self government, which included the regulation of matters concurrently with the state. Both of these practices by home rule cities were drastically affected by the Merris decision.[13]

In the Canon City v. Merris case (1958), the supreme court affirmed the judgment of the Fremont County Court in dismissing the prosecution's complaint for violation of a Canon City ordinance on driving while intoxicated. The decision was based on two separate grounds: 1) violations of municipal ordinances which have a counterpart state criminal

statute punishing the same conduct must conform to the constitutional requirements for criminal procedure; and 2) since the ordinance in question was one of "exclusive statewide concern" and consequently one on which home rule cities have no power to regulate, it was invalid—the power of home rule cities to regulate is limited to local or municipal matters only.

The first portion of the decision was generally lauded, as attorneys and laymen alike could see the logic of affording due process protections to a defendant who could be imprisoned for a violation of an ordinance. However, the second portion of the decision—that relating to municipal jurisdiction—caused considerable consternation to municipal officials who were placed in the confusing position of determining which of their municipal ordinances, other than those related to drunken driving, were invalid because they constituted matters of "exclusive statewide concern." Since the real meaning of this term would have to await clarification on a case by case basis municipalities continued to prosecute other ordinance violations, although trial by jury and other criminal protections were provided.

In 1959, municipal officials, through their statewide association, introduced legislation which provided that, if the subject matter of a municipal ordinance is of both municipal and statewide concern, the existence of state legislation thereon should not preempt the field, unless the state expressly declares that only the state has such power. This bill was passed by the General Assembly, but referred to the supreme court by the governor prior to his signature. The court held, with very little explanation, that this legislation was an unlawful delegation of legislative power and therefore unconstitutional.[14] It was apparent that the court pursued its line of reasoning in the Merris case and decided that the area of statewide concern and the area of local concern are "mutually exclusive" under Article XX and may not be delineated by legislative declaration.

After the failure of legislative efforts to resolve the municipal jurisdiction dilemma, the supreme court decided several cases which reflected a significant departure in court philosophy from that expressed in the Merris case. In Davis v. City and County of Denver, decided in 1959, the court indicated that it would not permit such a highly inflexible system to be applied, by stating: "This kind of 'straight jacket' rule is inappropriate to the changing society in which we live and [the Merris case] should not be construed as so holding."[15] This decision, however, held driver licensing violations to be matters of exclusive statewide concern.

In Retallack v. City of Colorado Springs, the court went even further by affirming the conviction of a violator of a municipal ordinance against reckless driving, notwithstanding the existence of a state statute prohibiting the same offense.[16] It was indicated here that, since the significance of the Merris case was that criminal procedures should be made available to ordinance violators, there is no harm in leaving local law intact, particularly since state sovereignty would not be undermined.

Three months later in the case of Gazotti v. City and County of Denver, the supreme court retreated from the Retallack holding and declared invalid a Denver ordinance which prohibited and punished larceny as an offense. The majority opinion in the case said that larceny was a matter of statewide con-'cern; separate concurring opinions explained that larceny was traditionally a common law offense and should be included in those offenses which are exclusively within the legislative power of the state. Even more disturbing was some language in this opinion suggesting that a municipal ordinance may be invalid because the penalty differs from the penalty provision of a state statute punishing the same offense.[17]

The last judicial word in the parade of Merris cases came in Wolverton v. City and County of Denver, decided in 1961.[18] This decision held that a municipal ordinance prohibiting gambling was valid in spite of a state statute prohibiting the same offense. The court came to grips with the problem of those subjects which have both statewide and municipal implications by concluding: "If an ordinance and a statute which do not conflict can coexist, it would follow that a city, acting with the express consent of the state, can legislate on a subject within the legitimate sphere of both its interest and that of the state."[19]

Following these post-Merris cases, the General Assembly in 1961 again enacted legislation which expressly delegated to municipal and local authorities the power to enact additional traffic regulations covering all matters of traffic control, except driving under the influence of alcohol or drugs, the registration of vehicles and driver licensing, and the obligation of persons involved in traffic accidents.[20] Superficially at least, this legislation, together with the post-Merris court decisions, have settled the jurisdiction of home rule municipalities over local traffic control. Municipal jurisdiction over offenses other than those relating to traffic regulation which would appear to have aspects of both statewide and local concern has not been completely resolved. As a practical matter, however, many offenses formerly tried in municipal courts are now prosecuted in state courts as violations of state law.

This explanation of the cases stemming from Canon City v. Merris reflects the dilemma that constantly confronts the courts in interpreting home rule powers and limitations under Article XX. Which matters are of statewide concern, which are of local concern, and which have aspects of both? The dilemma is one of preserving municipal authority over matters which have local application without destroying the sovereign power of the General Assembly to act in resolving the ever-increasing number of problems which have import to the entire state.

The problems and confusion reflected in the Merris cases could pose monumental difficulties for the future legal development and application of municipal home rule in Colorado. Questions of statewide versus local concern can be resolved only by the courts within the guides set by the legal language presently contained in Article XX. By the most recent Merris cases, the court has indicated that it will weigh carefully state and local interests and probably will be reluctant to define subject areas as being either of exclusive statewide concern or of exclusive local and municipal concern.

The Doctrine of Constitutional Preemption—(The Sweet Case). This problem is closely related to statewide versus local concern. The doctrine of constitutional preemption stands as another major obstacle to the exercise of municipal home rule powers. Although more limited in scope than the judicial determination of statewide concern, this doctrine has already been applied to limit the taxing sources available to home rule municipalities and to circumscribe the financial powers of their governing bodies. Potentially, it could be extended further by judicial construction.

The most important application of this doctrine was in City and County of Denver v. Sweet, decided in 1957.[21] The question presented was whether a Colorado home rule city had the legal authority to enact a city income tax. The supreme court answered the question in the negative. It denied Denver's contention that Article XX vested home rule cities with exclusive authority over matters of local concern and that this authority included the power to levy any kind of tax. While ostensibly affirming the authority of home rule cities over financial matters of local concern, the court held that this power had been restricted by the passage of a 1937 amendment to Article X, Section 17 of the Colorado Constitution which empowered the General Assembly to levy an income tax for the support of the state and its political subdivisions. The court reasoned that since this amendment was subsequent to the passage of Article XX, the field of income taxation had been "constitutionally preempted" to the state and that home rule municipalities had no authority in a taxing field which the court concluded had been "exclusively" vested in the state by Article X, Section 17.

One recognized authority in the field of local law criticized the decision and implications of the Sweet case, suggesting that no "exclusive jurisdiction" or "preemption" was intended by Article X, Section 17—that the state was merely adopting a constitutional provision which would enable it to enact a graduated income tax law to meet its financial needs.[22] He concludes that a court should be extremely reluctant to find that a state statute, let alone a constitutional provision, has preempted a tax field for the state in the absence of specific language clearly indicating an intent to preempt.

Another recognized author in municipal law and taxation has this to say on the subject:

> The occupation of the field doctrine should be discarded. If the matter is a general one in a home-rule state, or any kind elsewhere, the legislature can prevent further municipal regulations by simply indicating its wish. In the absence of such specific indication of the legislative intent the judiciary would be well advised to avoid invalidating municipal ordinances upon inquiries into the legislative psyche. The doctrine may provide a too handy prop for invalidating municipal rules with which jurists are unsympathetic. One cannot help but notice how avidly courts invalidate municipal regulations in one 'field' and to forecast whether one has been 'occupied,' the doctrine is unserviceable to the bar.[23]

It should be noted, however, that the supreme court has sustained the authority of a home rule city to enact and levy a local cigarette tax.[24] Such a tax was held not to be preempted by Article XXIV relating to excise taxes and old age pensions.

Regardless of the merit or lack of merit in the judicial use of constitutional preemption, the doctrine holds possible danger to municipal home rule in Colorado.

Home Rule—A Limitation (MCID). Legislation was passed in 1961 authorizing the formation of a Metropolitan Capital Improvement District to provide the financial basis for cooperative efforts in the construction of capital improvements in the Denver metropolitan area. Accordingly, leaders of several communities in the Denver area met and drafted an implementing proposal designed to establish a broad-function improvement district throughout the four-county area to be financed by an areaswide sales tax. The proposal was defeated in the three suburban counties, but approved by a sufficient majority in Denver to secure its passage. The legality of this legislation was contested, and on February 12, 1962, the supreme court found the MCID enabling act unconstitutional in the case of Metropolitan Capital Improvement District v. Adams County.[25] Significantly, the basis for the decision was that Article XX had already vested home rule cities with the exclusive power to do those things proposed to be accomplished by the district; accordingly, the General Assembly had no power to delegate the same authority to a special district. In other words, MCID invaded municipal home rule, contrary to Article XX. In this connection, the court said:

> . . . We assert that no multiple county district embracing numerous home rule cities, can be empowered by action of the General

> Assembly to function in such cities in matters of local and municipal concern, so long as Article XX remains a part of the constitution of Colorado. Any who seek to persuade this court to emasculate this constitutional provision by judicial fiat are doomed to disappointment.[26]

Although the MCID decision might be said to be a judicial ratification of the home rule concept, it also indicated that Article XX could be interpreted as a bar to or restriction on cooperative efforts between home rule cities for the mutual benefit of all.

Summary. While the decisions in the Sweet and MCID cases pose significant problems for municipal home rule, the major difficulties stem from the attempt constitutionally to delineate matters of exclusive local and municipal concern. Such delineation, of necessity, is subject to judicial interpretation from time to time. These interpretations, because they involve constitutional questions, are not generally susceptible to legislative modification, even on those matters determined to be of statewide concern, so constitutional amendment is required. Because judicial decisions usually do not go beyond the scope of the matter in the case before the court, a series of constitutional amendments would appear to be required if modification of judicial interpretations is desired. Since constitutional amendment is a lengthy and costly process, the result is to rigidify the relationship between the state and its home rule municipalities and, in some instances, to circumscribe the ability of home rule cities to join in formal arrangements with other governmental entites to solve areawide or regional problems. The lack of flexibility in state-municipal relationships and authority is a major handicap in meeting needs brought about by changing conditions in a rapidly urbanizing society.

Expansion of Home Rule in Colorado: Commision Recommentions

All of the Commission's recommendations for constitutional change, including those relating to home rule, were included in one amendment in recognition of the interrelationship of local government problems and to avoid piecemeal approaches which might solve a particular problem without regard to other consequences. The proposed Local Government Home Rule Amendment would accomplish the first comprehensive overhaul of constitutional provisions applying to local government since the adoption of Article XX in 1902. It would replace all of Article XX except the first three sections, which apply only to the City and County of Denver. The amendment's four major objectives all involve the expansion of home rule, both in scope and application, and are as follows:

1) to make necessary changes in municipal home rule to correct procedural and substantive problems;
2) to provide a permissive local government structure to meet present and future urban needs in existing and emerging metropolitan areas;
3) to provide a way to streamline and modernize county government while preserving local control and initiative; and
4) to eliminate a number of constitutional impediments to the proper functioning of local government, including state-local relations and intergovernmental cooperation.

Municipal Home Rule

The portion of the amendment providing for municipal home rule would become Section 4 of Article XX. Under the provisions of this section, the opportunity to adopt home rule would be extended to all municipalities. The detailed procedures for becoming a home rule municipality and adopting a home rule charter would be provided by statute subject to two constitutional requirements: that at least five percent of the qualified electors of the municipality would have to initiate a home rule petition; and 2) that a home rule charter must be approved by a majority of qualified electors voting thereon. This section also makes it possible for new municipalities to adopt home rule at the time of incorporation.

The present inflexibility in charter adoption procedures, requiring three elections, twenty-one charter delegates, and limiting charter conventions to sixty days, is also eliminated. Under the proposed amendment, the detailed procedures for becoming a home rule city and adopting a charter would be provided by statute, making modifications possible without further constitutional amendment.

Substantive Problems. Municipal home rule substantive problems are handled by changing the definition of municipal home rule to guarantee to home rule cities all powers of government and taxation except as expressly limited or denied by specific legislative enactment. Any limitation or denial of powers, however, would have to apply to no less than one class of municipalities consisting of at least three home rule cities.

This section provides further that annexation or extraterritorial authority shall not be exercised except as provided by law, and home rule cities would be prohibited from defining and punishing felonies or enacting charter provisions or ordinances governing

or regulating relationships between private persons, associations, or corporations.

This new definition of municipal home rule is similar to the one proposed by the National League of Cities, but has been modified to clarify annexation and extraterritorial authority and to prohibit home rule cities from legislating on matters that are clearly of statewide concern, such as felonies and private law relationships. Protection is given to individual municipalities by the requirement that any limitation or denial of powers must apply to at least one municipal class consisting of at least three cities.

By using this method of granting home rule powers, the courts would be replaced by the General Assembly as the referee on matters of state and local concern. This change should provide the necessary flexibility to adjust state and local relationships as changing conditions warrant, and it would also eliminate legal barriers in coordinating state-local jurisdiction in a variety of matters.

Urban Counties

The urban county form of government is recommended by the Commission to meet metropolitan area needs and problems.* The provision applying to urban counties would become Sections 5, 6, and 7 of Article XX. It is important to note the major difference in home rule powers given urban counties and municipalities. Urban county home rule functional powers would be limited to those services of a municipal nature which an urban county would be required to perform throughout the county. These powers would also be subject to express denial or limitation by the General Assembly. As indicated previously, home rule municipalities would have *all* powers of government and taxation not expressly limited or denied by the General Assembly. Additional restrictions are placed on the scope of urban county home rule powers to preserve the existence of municipalities within urban counties, while at the same time providing for the home rule authority of each.

In a further attempt to avoid jurisdictional conflicts between an urban county and the municipalities within its boundaries, the amendment expressly provides that a home rule municipality within an urban county shall not perform any function or service for which the urban county has the sole and exclusive authority.

An urban county charter would also prescribe the organization of the urban county government subject to certain requirements specified in the amendment. Urban counties would be required to have a municipal-type government with a council or board of directors of at least seven and no more than twenty-one members as provided by charter. Council members would have to be elected either entirely by district or by a combination of district and at large. The amendment also specifies that an urban county shall have an elected or appointed chief executive. These are the only limitations imposed on the authority of an urban county to determine its own form of government.

Described at length in Chapter V.

Non Urban County Home Rule

Permissive authority is provided in the amendment for any county (other than the City and County of Denver and those adopting the urban county form of government) to adopt a home rule charter establishing the organization and structure of its government. These provisions would become Section 8 of Article XX.

The procedures for adopting a home rule charter would be specified by statute, but at least five percent of the qualified electors of the county would have to initiate a home rule petition.

It would also be possible for one or more adjacent counties to join in the formation of one home rule county, provided that both the petition to form a home rule county and the charter are approved by a majority of those voting in each of the counties concerned.

The charter would be required to provide for a county board of supervisors of at least three and no more than nine members and also for an elected or appointed chief executive. In addition the charter would provide for other elected and appointed officials, their duties, responsibilities, and compensation.

Non urban home rule counties would continue to derive their authority and powers by statute, including, but not limited to, the provisions of services and improvements in unincorporated areas. Nothing would preclude a county from adopting this form of home rule and then becoming an urban county, or a portion thereof, at a later date, if it meets the eligibility requirements.

This proposal for county home rule would accomplish several things with respect to county government problems:

1) It would make it possible for any county upon the initiation of its citizens to provide the county government structure best suited to its particular needs, while at the same time it would require a separation of legislative and executive functions and assure that there would be a chief executive, whether elected or appointed.
2) Adoption of a home rule charter would make it possible for any county on its own prerogative to reduce the number of elected officials (other than members of the board), eliminate them entirely, combine positions, and carry out any other inventive and imaginative changes in government organization that are acceptable

to the electorate. Counties adopting a charter would be able to set their own salaries for county officials and would no longer be dependent on the General Aseembly, which is required to consider only population as a factor in setting these salaries.

3) It would make it possible for counties to consolidate easily, if they wished to do so, without requiring consolidation on a mandatory basis. The wishes of each participating county would be given equal weight both in the consolidation phase and in charter approval, so that no large county would impose its will on a smaller one, either in forcing consolidation or in dictating the structure and organization of the consolidated county government.

Elimination of Obstacles

Other provisions of the amendment would eliminate several constitutional roadblocks to the proper functioning of local government and home rule. The amendment would make it possible:

1) for home rule cities and urban counties to levy an income tax, unless expressly denied or limited by the General Assembly;
2) for state-levied and collected and locally-distributed taxes to be handled on a direct basis; and
3) for home rule jurisdictions to cooperate and contract with each other, either directly or through the authorization by statute of a separate government entity as an instrument to be used through voluntary participation by cooperating or contracting political subdivisions.

This portion of the proposed amendment also removes the constitutional impediments to the creation, by statute, of county service districts which would provide services in unincorporated areas now serviced by special districts. It would do this by modifying several constitutional limitations now placed on counties, including the requirement of uniform taxation throughout the county.

Summary

The Local Government Home Rule Amendment would make municipal home rule available to all municipalities. It would also change the definition of home rule to avoid the substantive problems which have developed over the years from judicial delineation of matters of statewide and local concern. It permits the creation of a form of government to meet metropolitan area problems (urban county) with home rule powers carefully specified to avoid conflicts and infringements with home rule municipalities within an urban county. It extends to all counties the authority to adopt a charter prescribing the structure and form of county government.

The General Assembly would be the arbiter or balance-wheel among the various kinds and levels of home rule jurisdictions. It would do this, on the one hand, by limiting or denying powers to home rule cities and urban counties as required by state concern or to avoid jurisdictional conflicts and, on the other, by granting powers to non urban home rule counties. Constitutional obstacles to the effective functioning of the General Assembly in this role would be eliminated, as would bars to intergovernmental cooperation among home rule entities.

Other Recommendations Concerning Home Rule

Two other proposals providing for local government home rule were introduced and considered in the 1966 session of the General Assembly. One of these applied only to counties and the other to both municipalities and counties.

S.C.R. 3 (1966)

Senate Concurrent Resolution No. 3, introduced by Senator Scott, would have added a new article to the Colorado Constitution to provide for county home rule. Under this proposed constitutional amendment, counties would be permitted to adopt charters providing both administrative and functional home rule. This amendment provided in part:

> (2) A county home rule charter may provide for the performance of any function and the exercise of any power of county-wide concern . . .
>
> (3) A county home rule charter shall provide for the organization of the county government, including all county officers, except judicial officers, and the number, method of selection, qualifications, compensation, tenure, and responsibilities of such county officers.
>
> (4) The charter shall provide for the performance of any function and the exercise of any power required by the general assembly and authorized directly by charter pursuant to the provisions of this section.

This proposed amendment appears to be modeled after the Oregon constitutional provisions for county home rule, with the exception of subsection (4) above, which applies to state-county functional relationships.

Advantages. The advantage to this proposal is that it would extend broad home rule powers to counties, as to government organization, powers to be

exercised, and functions to be performed. This amendment appears to free home rule counties from legislative interference, not only on matters of county concern, but as to functions which the county performs as an arm of the state. Counties would also be free to adopt whatever form of government they choose. For example, a county could adopt a charter providing for the same number of elected officers and government organization as it presently has and still assume authority by charter over matters of countrywide concern.

Disadvantages. Some of S.C.R. 3's advantages might also be considered disadvantages from another point of view. The problems resulting from the necessity of judicial delineation of matters of state and local concern have been discussed at length. There is no reason to assume that the same sorts of problems would not develop as the courts are called upon to determine questions of state versus countywide concern. While this has not happened in Oregon as yet, its history of judicial interpretations of municipal home rule has been quite different from Colorado's, although its municipal home rule provisions are similar.

Not only would the supreme court be required to determine questions concerning matters of countywide concern, but it could easily be placed in the position of arbitrating disputes between counties and municipalities, because of conflicts arising from countywide versus local or municipal concern. This proposal has many inherent possibilities of county-municipal conflict and competition which could adversely affect orderly urban growth and development.

It is not entirely clear what is meant by the language of subsection (4). On the one hand, this subsection seems to require that the county charter shall provide for the performance of any function or the exercise of any power required by the General Assembly, thereby recognizing the county's role as an agent of the state. This subsection goes on to state, however, that not only must the function or power be required by the General Assembly, but that it must also be authorized in the county charter. This latter language implies that if a county did not authorize a state required function in its charter, it would not be obligated to perform it. Consequently, this section could also be subject to endless litigation, and, depending on judicial interpretation, could place the state in the peculiar position of having a county charter take precedence over state law on a matter of statewide concern. Previous decisions concerning municipal home rule, however, indicate that state sovereignty would probably be upheld.

The wisdom of granting broad functional home rule authority to counties without any assurance that the form of county government would be changed is questionable. The Commission's study concluded that the major county problem is a governmental structure which is inadequate to meet present and future circumstances. Consequently, the Commission recommended that county government structure be changed, so that additional powers may be exercised more efficiently.

This proposal would also make it possible for the Denver metropolitan area to comprise four home rule counties with broad powers. In the view of many, this would make the attainment of any over-all solution to Denver metropolitan area problems and needs virtually impossible.

S.C.R. 10 (1966)

Senate Concurrent Resolution No. 10, introduced by Senator Armstrong, would have repealed and reenacted Article XIV of the Colorado Constitution to provide for county home rule and would have repealed and reenacted sections 4, 5, 6, and 8 of Article XX to change the definition and application of municipal home rule.

County Home Rule. Under S.C.R. 10, counties would be granted the authority to adopt home rule charters. The procedures for charter adoption would be provided by statute, but a petition to adopt home rule would have to be initiated by not less than five percent of the qualified electors of the county. This amendment provides that:

> (2) A home rule county shall be empowered to perform all functions and to exercise all powers of government and taxation in matters of county concern, as defined by law by the general assembly, unless such function or power shall be specifically prohibited to counties by law enacted after the effective date of this article, as amended, and not otherwise prohibited or limited by charter or this constitution.

The General Assembly is given the express authority to provide, specify, and define the functions, powers of government, and powers of taxation which are of county concern and shall also have the power to prohibit the performance of any function or the exercise of any power by counties; such prohibition would have to apply to all home rule counties.

Municipal Home Rule. The sections of S.C.R. 10 providing for municipal home rule are similar to those providing for county home rule. All municipalities would have the authority to adopt a home rule charter establishing the organization, structure, and functions of municipal government. A home rule municipality would be empowered to perform all functions and to exercise all powers of government and taxation in matters of municipal concern, as defined by law, unless expressly prohibited by charter or the constitution, or prohibited by the General Assembly; such

prohibition by the General Assembly would have to apply to all home rule cities.

In many ways the language of S.C.R. 10 applying to county and municipal home rule is similar to that referring to municipal home rule contained in the Local Government Home Rule Amendment recommended by the Commission, but there are some very important differences. S.C.R. 10 requires that county and municipal powers of government and taxation must be defined by the General Assembly. The General Assembly is not required to make such definition, however, but is merely empowered to do so. Further, S.C.R. 10 states that home rule counties and municipalities may not exercise any power prohibited by the constitution, but there is no section referring to the relationship of other constitutional sections to the provisions of S.C.R. 10. Consequently, it is not clear whether other sections of the constitution apply or are superseded.

Advantages. S.C.R. 10 eliminates the problems resulting from judicial delineation of matters of state and local concern by placing the General Assembly in the role of arbiter rather than the courts. It does this by giving home rule counties and municipalities all powers of government and taxation as defined, and except as prohibited by the General Assembly. This approach makes it possible, as well, for the General Assembly to avoid, or at least limit, county-municipal conflicts. It extends home rule to all counties and municipalities on the same basis, and provides that the procedures for adopting home rule shall be specified by statute, thereby assuring flexibility, because they can be changed as conditions warrant without further constitutional amendment.

Disadvantages. The major disadvantages of S.C.R. 10 stem from its language, rather than its seeming intent. Rather than granting all powers of government and taxation, except as expressly denied by the General Assembly, it requires that the General Assembly first define these powers. The General Assembly is not required, but merely authorized, to define these powers. Consequently, there is no constitutional guarantee of home rule powers, because if the General Assembly does not make such definition, the language of S.C.R. 10 implies that there would be no powers to exercise.

The result as far as county home rule is concerned is to place counties in the same position as does the Local Government Home Rule Amendment. In other words, home rule counties can not exercise any powers unless authorized by the General Assembly. This may or may not be a disadvantage, depending on one's view of county home rule, but it is different from the seeming intent of S.C.R. 10.

The result as far as municipal home rule is concerned is far more drastic. Despite substantive and procedural problems, Colorado municipalities have had a constitutional guarantee of home rule powers for more than sixty years. Under S.C.R. 10 this guarantee would be eliminated, because the General Assembly would first have to define powers before they could be exercised. Thus, constitutional municipal home rule would be changed to legislative municipal home rule.

It also appears that the language of S.C.R. 10 limits the authority of counties to provide services in unincorporated areas, because it does not modify or even refer to those sections of the constitution referring to uniformity of taxation, county indebtedness, and the pledging of county credit, but states that counties can exercise all powers defined and not prohibited by the General Assembly or not prohibited by the constitution. The absence of any referral to these other sections of the constitution when construed with the constitutional prohibition on the exercise of powers referred to above implies that these sections would continue to inhibit the ability of counties to establish service areas or special taxing districts.

S.C.R. 10, while it extends home rule authority to all municipalities, does not contain any express authority for cities to adopt home rule upon incorporation. The absence of such authority makes it doubtful that a municipality could incorporate and adopt home rule at the same time, thereby avoiding the difficulties and expense of a series of separate elections to attain home rule status.

The problems raised in connection with S.C.R. 3, concerning county government organization and structure and the possibility of four home rule counties with broad powers in the Denver metropolitan area, also apply to S.C.R. 10, but to a lesser extent, because S.C.R. 10 makes it possible for the General Assembly to exercise some control through the definition and prohibition of county home rule powers.

APPENDIX A

House Concurrent Resolution No. 1005 (1966)

SUBMITTING TO THE QUALIFED ELECTORS OF THE STATE OF COLORADO AMENDMENTS TO ARTICLES XX, XI, AND XIV OF THE CONSTITUTION OF THE STATE OF COLORADO, CONCERNING LOCAL GOVERNMENT INCLUDING COUNTIES AND MUNICIPAL AND QUASI - MUNICIPAL CORPORATIONS, AND PROVIDING FOR MUNICIPAL HOME RULE, URBAN COUNTIES, NONURBAN COUNTY HOME RULE, TERMS OF OFFICE OF MUNICIPAL AND OTHER LOCAL OFFICIALS, AND LIMITATIONS ON DEBT CONTRACTED BY MUNICIPAL AND QUASI-MUNICIPAL CORPORATIONS.

SECTION 1. At the next general election for members of the general assembly, there shall be submitted to the qualified electors of the state of Colorado, for their approval or rejection, the following amendments to the constitution of the state of Colorado, to wit:

Sections 4, 5, 6, 7, and 8 of article XX of the constitution of the state of Colorado are hereby REPEALED AND RE-ENACTED, WITH AMENDMENTS, and said article XX is further amended BY THE ADDITION OF A NEW SECTION 9, to read:

Section 4. (1) All municipal corporations are hereby vested with and reserved the power to adopt home rule. Each home rule municipality established pursuant to the provisions of this section shall adopt a home rule charter establishing a government consistent with the terms of this article.

(2) The procedures governing the adoption of a home rule charter shall be prescribed by the general assembly; provided, that action to initiate home rule shall be by petition, signed by not less than five per cent of the qualified voters of the municipality seeking home rule authority; and provided further, that no home rule charter shall become effective until approved by a majority of the qualified electors voting thereon at a special election called for that purpose.

(3) (a) A petition for municipal incorporation may provide for the adoption of home rule; provided, that:

(b) Such petition is signed by not less than five per cent of the qualified voters residing within the area to be incorporated;

(c) The procedures governing the adoption of a home rule charter shall be as prescribed in subsection (2) of this section; and

(d) Such municipality shall not exist, operate, and function until a home rule charter is adopted.

(4) Municipal home rule charter provisions establishing the organization and structure of government shall be superior to and take precedence over the statutory authority of the general assembly, except for the requirement that the municipal legislative body shall be subject to popular election, and the general assembly shall have authority to establish procedures for judicial review.

(5) Municipal home rule charters may provide the procedures for amending, revising, or re-enacting the charter, which procedure shall be superior to the statutory authority of the general assembly; provided, that initiative and referendum powers reserved to the people by article V of this constitution shall be reserved to the qualified voters of a municipality relative to the amendment, revision, or re-enactment of a municipal home rule charter and the initiative or referendum of any legislative measure enacted pursuant to charter and consistent with this article.

(6) (a) A home rule municipality shall be empowered to perform all functions and to exercise all powers of government and taxation not expressly denied or limited by specific legislative enactment, and not otherwise prohibited or limited by charter or this constitution. Such powers of government and taxation shall include but not be limited to the power to levy and collect taxes of every kind and nature, to condemn property for public purposes, to incur indebtedness, and to define and provide for the punishment of violations of its charter and ordinances.

(b) A home rule municipality shall have no power to adopt charter provisions or enact ordinances which have as their primary purpose the regulation of, or the provision of procedures governing, the status of or relationships between private persons, associations, or corporations.

(c) A home rule municipality shall have no power to define and provide for the punishment of felonies.

(d) A home rule municipality shall have no power to annex territory or change boundaries, except under such conditions and procedures as may be authorized by the general assembly for no less than one class of municipal corporations consisting of at least three municipalities.

(e) A home rule municipality shall have no extraterritorial police or taxing powers, except under such conditions and procedures as may be authorized by the general assembly for no less than one class of municipal corporations consisting of at least three municipalities.

(7)No statutory limitation or restriction shall be placed upon municipal home rule authority or nothing

shall be required of any home rule municipality unless such limitations, restrictions, or requirements are made applicable to no less than one class of municipal corporations consisting of at least three municipalities.

(8) All municipal home rule charters, including the charter of the city and county of Denver, adopted prior to the passage of sections 4 through 9 of this article are expressly recognized as valid and shall remain in full force and effect insofar as applicable and consistent with this section, sections 1, 2, and 3, of this article notwithstanding.

(9) A home rule municipality within an urban county established pursuant to this article shall not perform any function or service for which the responsibility is vested solely and exclusively in the government of said urban county pursuant to section 7 (3) (b) of this article.

Section 5. (1) (a) Authority is hereby established for the creation of urban counties which shall be political subdivisions of the state. The following general criteria are established for the formation of urban counties pursuant to the provisions of this article:

(b) The area to be included within the boundaries of a proposed urban county shall have a population of at least one hundred thousand persons, as determined by the last federal decennial census or the last official annual population estimate of the state as defined by statute;

(c) The area to be included within the boundaries of a proposed urban county shall have an aggregate population density of at least one hundred persons per square mile of territory included;

(d) The area to be included within the boundaries of a proposed urban county shall include all of the territory within an existing municipal corporation, so that such municipal corporation is either wholly within or wholly without the urban county boundaries;

(e) Any proposed urban county in the area encompassing Adams, Arapahoe, Jefferson, and Denver counties shall include territory from each of these counties, provided that the territory included from each shall meet the standards set forth in subsections (1) (b), (c), and (d) of this section; this provision shall not apply to any proposed urban county to be formed outside of such area only to the extent that such urban county may include any municipality partially within Adams, Arapahoe, or Jefferson counties.

(f) Such other criteria, qualifications, or standards as may be established by the general assembly consistent with this article.

(2) Nothing in this constitution shall prevent the formation of an urban county within all or parts of any county or counties; provided, that all territory included within an urban county shall be adjoining compact territory containing no enclaves.

(3) An urban county may include all or part of one or more judicial districts, and the creation of an urban county shall not affect or alter the boundaries of existing judicial districts. Neither shall the creation of an urban county affect or alter the boundaries of any existing school district or municipal corporation; provided, that nothing herein shall be construed to prevent the generaly assembly from providing by statute for the formation, consolidation, and dissolution of such political subdivisions in accordance with other applicable constitutional provisions.

(4) (a) Any provision of this constitution establishing representative and senatorial districts for the general assembly shall also apply to urban counties, provided an urban county shall be divided by law into representative and senatorial districts for the general assembly.

(b) At the first session of the general assembly following the adoption of an urban county charter, such urban county shall be divided into representative and senatorial districts as provided in subsection (4) (a) of this section, and the general assembly shall make any other adjustments in senatorial and representative districts which may be required by changes in county boundaries.

Section 6. (1) Urban counties may be established which meet criteria set forth in section 5 of this article.

(2) (a) The procedure for the establishment of an urban county and the procedure governing the adoption of an urban county charter shall be established by the general assembly; provided, that the following limitations shall apply:

(b) Action to create an urban county shall be initiated by a petition signed by not less than five per cent of the qualified electors, within the county or counties from which territory is to be included in the boundaries of the proposed urban county.

(c) The petition to create an urban county shall define the boundaries of the proposed urban county and, if necessary, shall make provision for the disposition or transition of territory to other contiguous county or counties, in accordance with such procedures and conditions as shall be established by statute; provided, that such disposition may be changed by the general assembly. The procedures for the division or adjustment of assets, rights, and liabilities between an urban county and any contiguous county or counties which has territory transferred to or from an urban county shall be established by statute.

(d) The question of whether an urban county shall be formed shall be voted upon at a special election called for that purpose by the qualified electors of all counties from which territory is to be included within the boundaries of the proposed urban county, pursuant to such election procedures as shall be provided by statute.

(e) Concurrent with an election on the question of forming an urban county, the qualified electors of the territory included within the boundaries of the proposed urban county shall elect in accordance with statutory procedures not less than fifteen charter delegates to a charter convention. Each county with territory included within the boundaries of a proposed urban county shall be represented by a proportion of the total number of charter delegates equal to the proportion that the population of such territory is of the total population of the proposed urban county.

(f) After the formation of an urban county, a proposed charter shall be prepared and submitted to and voted upon by the qualified electors of the urban county at a special election called for that purpose pursuant to procedures provided by statute. Upon the approval of the proposed charter by a majority of the qualified electors voting thereon, the urban county government shall be established by charter. The charter shall prescribe the schedule for the transition and assumption of the performance of the functions set forth in section 7 (3) (b) of this article and shall also provide for the transfer or adjustment of assets, rights, and liabilities between the urban county and affected local units within its boundaries. In the event that the proposed charter is disapproved, a new charter shall be prepared and submitted to the qualified electors of the urban county in accordance with statutory procedures, and these procedures shall be repeated as many times as necessary to accomplish the approval of an urban county charter; except that if a charter is not adopted within two years after the formation of an urban county, the urban county shall be dissolved and the territory included therein shall revert to its status prior to the formation of such county. Any charter convention for the preparation of a subsequent charter shall not have less than fifteen members.

(g) An urban county charter may provide the procedures for amending, revising, or re-enacting the charter, which procedure shall be superior to the statutory authority of the general assembly; provided, that initiative and referendum powers reserved to the people by article V of this constitution shall be reserved to the qualified voters of an urban county relative to the amendment, revision, or re-enactment of an urban county charter and the initiative or referendum of any legislative measure enacted pursuant to charter and consistent with this constitution.

Section 7. (1) An urban county established pursuant to the provisions of this article shall adopt a home rule charter which shall provide for a government consistent with the provisions of this article.

(2) The urban county charter shall make provision for either an elective or appointive chief executive with such administrative and executive responsibilities and authority as may be provided by charter. The charter shall provide for a county board of supervisors or council consisting of not less than seven nor more than twenty-one members, who may be elected either entirely from districts of as equal population as may be, or both from such districts and at large as prescribed by charter. The board of supervisors or council shall be the responsible legislative body for the urban county and shall have full power to enact and enforce ordinances, resolutions, and other measures in accordance with the provisions of this section. The county court shall constitute the proper court of jurisdiction for all violations of ordinances or legislative measures enacted by an urban county board of supervisors or council. Except as otherwise provided in this section, charter provisions establishing the organization and structure of the urban county government shall be superior to and take precedence over the statutory authority of the general assembly; provided, that the general assembly shall have authority to establish procedures for judicial review.

(3) (a) An urban county shall have the responsibility for the performance, administration, and supervision of any function, duty, or responsibility which by statute may be delegated to or required of county governments.

(b) An urban county shall have sole and exclusive responsibility for the performance of the following functions and services throughout the incorporated and unincorporated portions of the urban county: (i) Domestic water supply and distribution; (ii) sanitary and storm sewer collection, treatment, and disposal; (iii) airports and air transport facilities; (iv) trash and refuse disposal; (v) library facilities and services; and (vi) park and recreation facilities and services, except that municipalities may own, operate, and maintain local parks and recreation programs as may be provided by statute. An urban county shall have sole and exclusive responsibility to provide such additional functions and services throughout the incorporated and unincorporated portions of the urban county as may be authorized by the general assembly for all urban counties and expressly assumed by the urban county charter.

(4) (a) An urban county shall assume, own, possess, and control assets, rights, and liabilities related to the functions and services defiined in subsection (3) (a) and (b) of this section, and counties, municipalities, and the local improvement districts therein, and quasi-municipal corporations wholly within an urban county shall be divested of such assets, rights, and liabilities in the manner prescribed by urban county charter.

(b) Existing quasi-municipal corporations located partially within an urban county and providing functions and services defined in subsection (3) (b) of this section, shall no longer exist as independent governmental units only as to those portions located

within the boundaries of the urban county. All assets, rights, and liabilities previously vested in such quasi-municipal corporations and located within an urban county shall be transferred to, assumed, owned, and possessed by the urban county; provided, that service arrangements made between the remaining portions of such quasi-municipal corporations and the urban county, and financial adjustments for the assets and liabilities assumed by the urban county shall be made between the urban county and the remaining portions of such quasi-municipal corporations under conditions and standards established by statute consistent with this article.

(5) The urban county charter or ordinances enacted pursuant thereto shall designate the responsible officers who shall perform the functions, duties, and responsibilities enumerated in this section and shall make provision for their compensation. Such officers shall carry out their duties and responsibilities in the manner prescribed by charter or ordinance enacted pursuant thereto, except that officers charged with performing county functions, duties, and responsibilities under subsection (3) (a) of this section shall be required to perform their functions, duties, and responsibilities as prescribed by statute.

(6) (a) Except as limited by charter or this constitution, an urban county shall have all powers of government and taxation reasonably related to or connected with the functions described in subsection (3) (b) of this section which are not otherwise expressly denied or limited by the general assembly through specific legislative enactment applicable to all urban counties. Such powers of government and taxation shall include but not be limited to the power to levy and collect taxes of every kind and nature, to condemn property for public purposes, to incur indebtedness, and to define and provide for the punishment of violations of its charter and ordinances.

(b) An urban county shall have no power to adopt charter provisions or enact ordinances which have as their primary purpose the regulation of, or the provision of procedures governing, the status of or relationship between private persons, associations, or corporations.

(c) An urban county shall have no power to define and provide for the punishment of felonies.

(d) An urban county shall have no power to annex territory or change boundaries, except under such conditions and procedures as may be authorized by the general assembly, provided that any such annexation shall be subject to the approval of a majority of the qualified electors voting thereon in the county in which the territory to be annexed is located.

(e) An urban county shall have no extraterritorial police or taxing powers, except under such conditions and procedures as may be authorized by the general assembly.

Section 8. (1) The qualified electors of any county of this state are hereby vested with and reserved the general power of home rule and self-determination and shall be permitted to adopt a nonurban county home rule charter establishing the organization and structure of the county government.

(2) The general assembly shall provide by statute procedures governing the adoption of a nonurban county home rule charter; provided, that home rule shall be initiated by petition, signed by not less than five per cent of the qualified electors of the county. No home rule charter shall become effective until approved by a majority of the qualified electors of the county voting thereon at a special election called for that purpose.

(3) (a) Two or more adjacent counties may form a single nonurban home rule county, according to procedures prescribed by statute; provided, that:

(b) The petition for home rule shall be initiated by not less than five per cent of the qualified electors of each such adjacent county;

(c) The formation of a single nonurban home rule county shall be approved by a majority of the qualified electors of each such adjacent county voting thereon at a special election called for that purpose.

(d) The home rule charter shall be approved by a majority of the qualified electors of each such adjacent county voting thereon at a special election called for that purpose.

(4) A nonurban county home rule charter shall provide for a county board of supervisors consisting of not less than three nor more than nine members, who may be elected from districts of as equal population as may be, or at large, or a combination of both as prescribed by charter. The board of county supervisors shall be the chief supervisory body and shall be responsible for coordinating all functions, duties, and responsibilities of the county. The charter shall provide for either an elective or appointive chief executive with such administrative responsibilities and authority as may be provided by charter. Such a county charter shall make no provision affecting the number, selection, tenure, compensation, powers, or duties of elected judicial officers.

(5) A nonurban county home rule charter shall provide for establishing the organization and structure of the county government which shall be superior to and take precedence over the statutory authority of the general assembly.

(6) Nonurban county home rule charters may provide the procedures for amending, revising, or reenacting the charter, which procedure shall be superior to the statutory authority of the general assembly; provided, that initiative and referendum powers reserved to the people by article V of this constitution shall be reserved to the qualified voters of a nonurban home rule county relative to the amendment, revision,

or re-enactment of a nonurban county home rule charter and the initiative or refrendum of any legislative measure enacted pursuant to charter and consistent with this article.

(7) The county board of supervisors and other county officers established by charter shall perform only such functions and exercise only such powers as may be provided by statute, including, but not limited to, services and improvements in the unincorporated portions of the county.

(8) Nothing herein shall preclude the formation of an urban county pursuant to this article in all or portions of any nonurban home rule county or counties established in accordance with this section.

Section 9. (1) It is the intent of sections 4 through 9 of this article that the provisions of this article be construed liberally and, unless otherwise prohibited in this article or other provisions of this constitution, authority is reserved in the general assembly to enact legislation to encourage and facilitate the formation of urban counties, and to enact legislation to encourage and facilitate the adoption of home rule by counties and municipalities throughout the state.

(2) (a) The provisions of sections 4 through 9 of this article, the legislation enacted pursuant thereto, and the charters adopted pursuant to both such constitutional and statutory provisions shall have the following relationship to other constitutional provisions:

(b) Sections 1, 2, 3, and 4 of this article shall apply to and govern the city and county of Denver so long as it shall exist as a city and a county. Effective upon the passage and approval of any urban county charter which shall include within the territorial limits thereof the city and county of Denver, sections 1, 2, and 3 of this article shall be repealed; provided, that nothing contained herein shall affect the continued existence of the city of Denver under the provisions and limitations of section 4 of this article.

(c) The provisions of sections 3, 4, and 5 of article XIV shall not apply insofar as the general assembly is authorized by this article: (i) To provide procedures for the transition of territory from one county to another county in connection with the establishment of an urban county; and (ii) to enact annexation procedures for the expansion of urban county boundaries when adjacent territory meets such urbanization standards as may be provided by statute.

(d) The provisions of section 2 of article XIV shall not apply insofar as an urban county charter may designate the urban county seat.

(e) The provisions of section 6 of article XI, relating to county indebtedness, shall not apply to an urban county, nor shall it apply in any county to the establishment and operation of special taxing districts as provided by statute.

(f) The provisions of section 1 of article XI, relating to the pledging of public credit, shall not apply insofar as an urban county may pledge the credit of the county with respect to the discharge of any indebtedness assumed by or bonds issued on behalf of services or facilities transferred to the urban county by other local units of government pursuant to sections 6 and 7 of this article, nor shall it preclude any county from pledging the credit of the county with respect to the discharge of any indebtedness assumed by or bonds issued in behalf of special taxing districts established as provided by statute.

(g) The provisions of section 10 of article VI, relating to judicial districts, shall not apply insofar as the boundaries of an urban county may include all or parts of two or more judicial districts, and the district court may sit in locations other than the county seat as provided by statute.

(h) The provisions of section 16 of article VI shall not apply insofar as an urban county may provide by charter for the method of selection of county judges, and the county court of the city and county of Denver shall cease to exist as provided by charter of any urban county which includes within the territorial limits thereof the city and county of Denver.

(i) The provisions of sections 1, 14, and 15 of article VI shall not apply to any urban county which includes within the territorial limits thereof the city and county of Denver, insofar as the juvenile court of the city and county of Denver shall become the juvenile court of the second judicial district and the probate court of the city and county of Denver shall become the probate court of the second judicial district.

(j) The provisions of sections 6, 7, 8, 9, 10, and 12 of article XIV shall not apply to an urban county or to a county which adopts a home rule charter pursuant to section 8 of this article, nor shall section 15 of said article XIV apply, insofar as it provides for the compensation of county officers.

(k) The provisions of section 13 of article XIV shall not apply as a limitation on the general assembly's authority to establish classes of home rule municipalities for the purposes set forth in section 4 of this article.

(l) The provisions of section 38 of article V shall not apply insofar as the general assembly shall, as prescribed in this article, provide for the distribution or adjustment of assets, rights, and liabilities between urban counties and territory transferred to other counties and between urban counties and quasi-municipal corporations divided by urban county boundaries.

(m) The provisions of section 3 of article X shall not apply insofar as: (i) Urban counties may establish special taxing districts as provided by statute, and may also establish urban and rural zones by charter for services provided pursuant to section 7 (3) (b) of this article; (ii) home rule counties organized under section 8 of this article may establish special taxing

districts as provided by statute; and (iii) all other counties may establish special taxing districts as provided by statute.

(n) The provisions of section 7 of article X and section 2 of article XXIV shall not apply as a limitation on the authority of the general assembly to provide for state-levied and collected taxes to be distributed to local governments.

(o) The provisions of section 17 of article X shall not apply as a limitation upon the power of urban counties and home rule municipalities to exercise all taxing authority, subject to such limitations as may be provided by statute.

(p) The provisions of section 35 of article V shall apply to urban county functions and improvements in the same manner and to the same extent as it applies to municipal functions and improvements.

(q) The provisions of section 14 of article XII shall apply to urban counties in the same manner and to the same extent as it applies to other political subdivisions of the state.

(r) The provision of article XXV shall apply to urban counties in the same manner and to the same extent as it applies to home rule cities and towns.

(3) (a) Nothing in this article or constitution shall be construed to prohibit the state or any of its political subdivisions from cooperating or contracting with one another for the performance of any function or service lawfully authorized to each of the cooperating or contracting units, including the sharing of costs, the imposition of taxes, or the incurring of debt; provided, that the imposition of a tax or the incurring of a debt shall be subject to the approval of a majority of the qualified electors in each of the cooperating or contracting units.

(b) Nor shall anything in this article or constitution be construed to prohibit the authorization by statute of a separate governmental entity as an instrument to be used through voluntary participation by cooperating or contracting political subdivisions.

(c) Nothing in this article or constitution shall be construed to prohibit any political subdivision of the state from contracting with private persons, associations, or corporations for the provision of any legally authorized function or service outside its boundaries.

The foregoing amendments to article XX of the constitution shall take effect on July 1, 1968.

Section 8 of article XI of the constitution of the state of Colorado is hereby REPEALED AND RE-ENACTED, WITH AMENDMENTS, to read:

Section 8. No municipal or quasi-municipal corporation shall contract any debt by loan in any form, except by adoption of a legislative measure which shall be irrepealable, until the indebtedness therein provided for shall have been fully paid or discharged, specifying the purposes to which the funds to be raised shall be applied and levy of a tax sufficient to pay the interest and principal of such debt. No such debt shall be created unless the question of incurring the same be submitted to the qualified electors of the municipal or quasi-municipal corporation who shall in the year next preceding have paid a property tax therein, and approved by a majority of those voting on such question. Nothing in this constitution shall prevent the general assembly from establishing by general statute limitations on the authority of any municipal or quasi-municipal corporation to incur indebtedness.

The foregoing amendment to section 8 of article XI of the constitution shall take effect on January 1, 1967.

Section 12 of article XIV of the constitution of the state of Colorado is hereby amended to read:

Section 12. The general assembly shall provide for the election or appointment of such other county, township, precinct, and municipal officers as public convenience may require, and their terms of office shall be as prescribed by law. ~~Not to exceed two years.~~

The foregoing amendment to section 12 of article XIV of the constitution shall take effect on January 1, 1967.

SECTION 2. Each elector voting at said election and desirous of voting for or against said amendment shall cast his vote as provided by law either "Yes" or "No" on the proposition: "Amendments to articles XX, XI, and XIV of the constitution of the state of Colorado, concerning local government including counties and municipal and quasi-municipal corporations, and providing for municipal home rule, urban counties, nonurban county home rule, terms of office of municipal quasi-municipal corporations."

SECTION 3. The votes cast for the adoption or rejection of said amendment shall be canvassed and the result determined in the manner provided by law for the canvassing of votes for representatives in Congress, and if a majority of the electors voting on the question shall have voted "Yes", the said amendment shall become a part of the state constitution.

APPENDIX B

FEDERAL GRANT-IN-AID AND OTHER ASSISTANCE PROGRAMS

Federal Program	State-Operated	State-Controlled	State-Coordinated	Federal-Local	Comments
AGRICULTURE					
Plant and Animal Disease and Pest Control	X				State Matching Required
Agricultural Experiment Station	X				State Matching of Grant over $90,000 yearly
Forestry Research	X				State Matching Required
Agricultural Extension			X		State Matching Required
Rural Renewal				X	Loan Program
SCS Watershed Protection				X	Loan Program
Agric. Statistical Reporting	X				Grant Program (non-matching)
Commodity Distribution		X			Grant Program (non-matching)
School Lunch			X	X	State Matching Required
School Milk			X	X	Grant Program (non-matching)
Food Stamp Program		X			State matching required for administration
Forest Cooperation	X				State Matching Required
Forest Revenue Sharing		X			Grant Program (non-matching)
Agric. Marketing Research		X			Private Producers Match Funds
EDUCATION					
Vocational Education		X			State Matching Required, except for ARA classified localities
A & M Colleges	X				Federal Grant (non-matching)
Higher Education Facilities	X			X	State and Local Matching Required; also a loan program
National Defense Education Act					Loan Program available also to private institutions
College Student Loans	X			X	Grant Program available also to private institutions
Graduate Fellowships		X			State Matching Required
Secondary Science & Languages		X			State Matching Required
Guidance & Counseling	X			X	Grant Program, available to private institutions
Educational Research			X		Grant Program, available to private institutions
Education Television	X			X	Grant Program, available to private institutions
Advanced Study Institutes (NDEA)	X			X	Grant Program, available to private institutions
Mentally Retarded Education	X			X	Grant Program, available to private institutions
Educational Statistics	X				Grant Program (non-matching)
Federally Affected Schools				X	Grant Program (non-matching)
Films for the Deaf			X		Grant Program (non-matching)
Library Construction		X			State Matching Required
NSF Science Teaching	X			X	Collegiate institutions eligible for grants
Desegregatoin of Public Education	X			X	Grant Program (non-matching) and technical assistance
Elementary and Secondary Education Act of 1965					
Aid for low-income areas				X	Grants (non-matching) to improve education quality
School Library Resources	X				Grant Program (non-matching)
Supplementary Centers			X	X	Grant Program (non-matching)
Educational Research	X			X	State Education department and higher education institutions eligible for grant program (non-matching)
Aid to State Departments	X				Grant Program (non-matching)
Higher Education Act of 1965					
Community Service & Continuing Education	X				State Matching Required
College Library Assistance				X	Local Institutional Matching Required
Strengthening Developing Institutions				X	Local Institutional Matching Required
Student Assistance	X			X	Local Institutional Matching Required; States designate the agency to operate the student loan program
Teacher Programs				X	National Teacher Corpsmen assigned to requesting school districts, supplemented with fellowships for graduate training
Improvement of Undergrad. Inst.				X	Local Institutional MatchingRequired
HEALTH					
General Health	X				Collegiate institutions eligible for grants
Chronically Ill and Aged		X			Grant Program (non-matching)
Heart Disease Control	X	X			State Matching Required
Cancer, Heart Disease and Stroke Control		X			State Matching Required, except for demonstration projects

FEDERAL GRANT-IN-AID AND OTHER ASSISTANCE PROGRAMS (Cont.)

Federal Program	State-Operated	State-Controlled	State-Coordinated	Federal-Local	Comments
HUMAN RESOURCES (Cont.)					
Low-Income Housing Demonstration Program				X	Non-matching Grants for low-income families and handicapped persons
Housing and Urban Development					
Private Rent Payments				X	Local Matching Required
Rehabilitation of homes in Urban Renewal Areas				X	Local Matching Required
Community Water and Sewer Facilities				X	Local Matching Required
Neighborhood Facilities				X	Local Matching Required
Advance Community Acquisition and Development of Land				X	Loan Program, supplemented by Matching Grants
TRANSPORTATION					
Highway Construction and Maintenance	X				State Matching Required
Interstate Highways	X				State Matching Required
Outdoor Advertising Control	X				State Matching Required
Elimination of RR Crossing Hazards	X				State Matching Required
Highway Planning and Research	X				State Matching Required
Urban Mass Transportation	X			X	Loans or grants for research and development and grants (non-matching) for relocation available
Urban Transportation Planning	X				State Matching Required
Emergency Highway Repair	X				State Matching Required
Forest and Public Lands Roads			X	X	Grant Program (non-matching)
Highway Landscaping and Preservation of Natural Beauty	X				State Matching Required
MISCELLANEOUS					
Civil Defense			X		Grant Program (non-matching)
Airport Construction				X	Local Matching Required
Public Power License Sharing	X				Grant Program (non-matching)
Veterans' Homes					
Facility Construction	X				State Matching Required
State Home Grants	X				Grant Program (non-matching)
Nursing Home Care				X	Grant Program (non-matching)
Civil Rights Disagreements				X	Technical Assistance only
Surplus Property Donations		X			Grant Program (non-matching)
U. S. History Collection				X	States, local agencies, and nonprofit institutions are eligible to receive non-matched grants
Small Busines Development Loans	X				Loans to state development companies must be matched with commercial loans
Small Business Research	X				State agencies and state institutions of higher education eligible
Technical Services (Business)	X				State-designated agency eligible for non-matching grant
Law Enforcement Assistance	X			X	State and local public and private (non-profit) bodies eligible for non-matching grant
Arts-Humanities Foundation	X			X	Public or nonprofit private agencies eligible to apply for matching grants
Sidewalk Repair Reimbursement				X	Grant Program (non-matching) for repairs adjacent to federal buildings

September 1983

ACKNOWLEDGMENTS

This report marks the tenth anniversary of the publication of the first Colorado Tax Profile Study. It is particularly appropriate at this time to express our heartfelt appreciation to Senator Leslie R. Fowler of Boulder, and Mr. Lyle Kyle, Director, Colorado Legislative Council, for their initial encouragement and continuous support of these studies.

We also wish to acknowledge the contributions of the many other individuals and organizations who participated in the preparation of the study. We are grateful for the cooperation of the various state agencies which provided current tax information -- particularly the Colorado Department of Revenue, the Department of Local Affairs, the Division of Accounts and Control and the Division of Property Taxation. We are especially indebted to Stanley B. Schwartz and Thomas A. Dunn of the Research Division, Department of Revenue, for their helpful assistance. Additionally, we wish to thank Susan Velsir and Julie Edwards for preparing the manuscript for publication.

In the 1973 CTPS report, we stated that the principal objective of the study was

> "to develop a comprehensive tax profile of the State of Colorado which can be used by interested citizens, legislators and public administrators as the basis for assessing the distribution effects of the present tax structure, as well as of new tax proposals."

We trust the present study will continue to serve this objective for the State of Colorado.

INTRODUCTION

This report, the fifth in the "tax profile" series originally commissioned by the Colorado Legislature in 1972, examines the size, structure and distribution of the state and local tax burden levied on Colorado households and businesses in fiscal year 1982.

The decade covered by these studies may be characterized as a period during which the Colorado economy experienced an unprecedented growth in income. The U.S. Department of Commerce data show that the total personal income of Colorado residents increased during the decade at an average annual rate of 13.1 percent, as compared with a national rate of 10.8 percent. On this basis, Colorado's rate of economic growth was exceeded by only six other states--Alaska, Arizona, Florida, Nevada, Texas and Wyoming.

During this decade the state tax system was also significantly revised. In the late 1970's and early 1980's, large tax cuts were enacted in the state's two major sources of general fund revenues--the state general sales tax and the state income tax. Food was removed from the sales tax base, income tax credits were granted both "across-the-board" and for a variety of special purposes, and full indexation of the individual income tax was introduced to compensate for inflationary "tax creep." The net budgetary impact of these tax reduction measures was that general fund revenues in fiscal year 1982 were about 20 to 25 percent lower than they would have been in the absence of the tax cuts and the state was confronted with large potential deficits and a continuing fiscal crisis.

It is equally important to recognize that the changes enacted in the state tax structure also have had a variety of distributional effects--an impact on the relative tax burdens borne by low-income, middle-income and high-income households. As in previous "tax profile" studies, this report is primarily concerned with the distribution of state and local taxes among five major income categories of resident taxpayers which in 1982 comprised 1.3 million Colorado households.

In brief, this Colorado Tax Profile Study for fiscal year 1982 attempts to answer the following basic questions:

- How important is each of the major state and local taxes?
- How does the state tax burden compare with the local burden?
- How has the overall Colorado state-local tax structure changed during the past decade?
- How much of the state and local tax is directly levied on resident households? How much on the business community?
- Measured against income, what are the relative tax burdens of the poor, the middle class and high income groups?
- And finally, what changes have occurred in the patterns of tax distribution over the past decade?

SECTION I. THE COLORADO STATE-LOCAL TAX BURDEN

The combined state-local tax burden incurred by Colorado resident taxpayers in fiscal year 1982 reached an all-time high of $3.2 billion, or 21 percent more than in fiscal year 1980, the year on which the previous "tax-profile" study was based. Thus, despite the major tax reduction measures enacted in recent years, state and local revenues have continued to increase as a result of the marked rise in the nominal income and consumption expenditures of Colorado resident households.

Tax Burden Trends

Whether measured in terms of the net collections reported by government agencies or on a liability basis adjusted to cover only Colorado resident taxpayers,[1] the growth in state and local taxes during the 1972-1982 decade closely paralleled the growth in Colorado's personal income and adjusted gross income. For example, the latter rose at an average annual rate of 12 percent for the decade, whereas the total state-local tax burden increased at a rate of 11 percent during this same period. In contrast, the comparable total federal individual income tax paid by Colorado resident taxpayers increased at an average annual rate of 15 percent.

As a result of the above differences in growth rates, the 1982 total federal income tax liability of Colorado resident households was more than one-fifth larger than their combined state-local tax liability for that fiscal year. In contrast, a decade earlier the reverse relationship prevailed--the combined state-local tax liability actually exceeded the federal income tax by almost one-fifth. Table I summarizes state and local tax liabilities of Colorado resident taxpayers for fiscal years 1972, 1980 and 1982.

On the adjusted liability basis, state taxes rose from $525.7 million in fiscal year 1972 to $1,468.7 million in fiscal year 1982, or at an average rate of increase of 10.8 percent per annum. Similarly, the total local tax burden increased from $596.0 million to $1,720.0 million, or at an annual rate of 11.2 percent over the same period. Of

TABLE I. SUMMARY OF STATE AND LOCAL TAX LIABILITIES, FISCAL YEARS 1972, 1980 AND 1982

	Fiscal Year			Average Annual Rate of Increase 1972-1982
	1972	1980	1982	
	(Money amounts in millions of dollars)			
State Taxes				
Sales and Use	$ 176.9	$ 495.2	$ 584.4	12.7%
Individual Income	156.2	437.6	483.1	11.9
Highway User	109.1	158.2	184.1	5.4
Corporate Income	33.3	99.7	75.6	8.5
Cigarette and Liquor	25.4	38.1	40.3	4.8
All Other[a]	24.8	72.0	101.2	15.1
Total State Taxes	$ 525.7	$1,300.8	$1,468.7	10.8%
Local Taxes				
Property	$ 492.0	$ 961.7	$1,201.9	9.3%
Sales and Use	68.3	277.5	394.3	19.1
Specific Ownership Tax	10.8	24.5	31.0	11.1
Cigarette Taxes	2.9	16.1	16.9	19.2
All Other[b]	22.0	56.6	75.9	13.2
Total Local Taxes	$ 596.0	$1,336.4	$1,720.0	11.2%
Total State-Local Taxes	$1,121.7	$2,637.2	$3,188.7	11.0%
Addendum				
Federal Individual Income Tax	$ 944.0	$2,712.4	$3,850.9	15.1%

[a] Includes insurance, severance and regulatory business taxes.

[b] Includes franchise, occupation and other regulatory business taxes.

course, the increases were not uniform among the "big three" revenue sources--sales, income and property taxes. The general sales tax showed the largest annual rates of increase for the decade on both the state and local levels--12.7 percent and 19.1 percent, respectively; while the smallest were the 8.5 percent annual rate for the state corporate income tax and the 9.3 percent rate for the local property tax.

Recent Trends

It is also important to note that there were marked differences between the growth rates of the 1970's compared with those of the early 1980's. Table II shows the average annual rates of change for the periods between fiscal years 1972-80 and fiscal years 1980-82. First, it should be noted that the average annual rates of inflation for the two periods remained practically unchanged, while both measures of Colorado income show a marked improvement in the early 1980's over the 1970's. The decline in rates of growth in state-local revenues cannot be attributed primarily to a decline in the rate of income growth but rather it mainly reflects statutory changes in the state-local tax structure.

For example, on the state level the individual income tax liability of resident households during the 1970's rose at an average annual rate of 13.7 percent, but for the early 1980's the average rate dropped to 5.0 percent--significantly less than the almost 14 percent annual rate of increase in the state's personal income for the same period. Parenthetically, it is generally recognized that because of its progressive rate structure, the state's individual income tax has a built-in "income elasticity" coefficient greater than one, i.e., if the statutory base and rate structure of the income tax are not changed, every one percent increase in personal or adjusted gross income should yield an increase in tax revenues in excess of one percent.

Similarly, with regard to the state's most important source of revenues--the general sales tax--the average annual rate of increase dropped from 13.7 percent for the 1970's to 8.7 percent for the early 1980's. This was primarily due to the removal of household food and utilities from the sales tax base. And the most dramatic change occurred in the case of the state's corporate income tax--a 14.7 percent

TABLE II. RATES OF CHANGE IN PRICES, INCOME AND TAXES BETWEEN FISCAL YEARS 1972, 1980 AND 1982

	Average Annual Rates of Increase for Periods:	
	1972-1980	1980-1982
Prices:

Combined State-Local Taxes	11.3	10.0
Federal Individual Income Tax[a]	14.1	19.1

[a]Colorado residents' federal tax liability.

average annual rate of increase for the eight year period of the 1970's was followed by an 11.5 percent annual rate of decrease for the two years from 1980 to 1982.

On the local level, the continued expansion of the general sales tax increased at the unprecedented average annual rate of 19.2 percent during both periods, i.e., for 1972-80 and 1980-82. But it is noteworthy that the local property tax had an average annual growth rate of 11.8 percent for the early 1980's, compared to an 8.7 percent growth rate for most of the 1970's.

Overall, the state's fiscal bind in large part is due to the fact that the 12 percent growth rate in state taxes for the 1970's was cut in half to a 6.2 percent rate in the early 1980's. This occurred despite the fact that personal income of Colorado resident taxpayers rose at an annual rate of about 14 percent during these same two years. On the other hand, the "tax savings" affected at the state level were partly absorbed by Colorado's local taxing jurisdictions, as evidenced by the fact that the overall local tax burden increased at a significantly higher annual rate during the latter period--13.5 percent during the past two years, in contrast to a rate of 10.6 percent for the 1970's.

SECTION II. THE COLORADO STATE-LOCAL TAX STRUCTURE

Total net collections for all of Colorado's state and local taxing jurisdictions in fiscal year 1982 amounted to $3,369.3 million. State taxes on a collection basis were $1,612.5 million or slightly less than 48 percent of the total.[2] Local property taxes amounted to $1,217.4 million or 36 percent, and all other local taxes totaled $539.4 million or 16 percent.

Tax Liability Adjustments

When measured on the CTPS adjusted basis, which more closely corresponds to the actual tax liability borne by Colorado resident households, the total combined state-local tax burden amounted to $3,188.7 million, or five percent less than the collections reported by all government jurisdictions. The net difference of $180.6 million between these two measures represents adjustments for non-resident tax collections; the excess of net cash flow over tax liabilities for the given fiscal year; nonallocable and nontax revenues such as penalties, interest earned and audit deficiencies; and vendors discounts on retail sales and excise taxes. The dollar amounts of these adjustments were as follows:[3]

	Millions Of Dollars
Exclusion of:	
Non-resident tax collections	$ 83.7
Excess of tax collections over liabilities	84.8
Nonallocable and nontax revenues and credits	46.4
Inclusion of:	
Vendor discounts on tax collections	-34.3
Total Adjustments	$180.6

Relative Importance of Major Taxes

The relative importance of each of the major tax categories on this adjusted basis of the net tax burdens for Colorado resident house-

holds for fiscal years 1972, 1980 and 1982 is shown in Table III and the accompanying Charts I, II and III.

On the state level, the general sales and use tax continues to be quantitatively most important, increasing steadily from less than 34 percent of the total state tax burden in 1972 to almost 40 percent in fiscal year 1982. In contrast, the share represented by the state individual income tax has remained relatively stable--about 30 percent of the total state tax burden in 1972; 34 percent in 1980 and 33 percent in 1982. Together these two "broad-based" taxes accounted for almost two-thirds of the state tax burden at the beginning of the period and for almost three-fourths by the end of the decade. Correspondingly, the shares represented by the corporate income, highway user and other consumer excise taxes (cigarette and liquor) were all significantly smaller. Overall they declined from 32 percent in fiscal 1972 to 20 percent in fiscal 1982.

On the local level, the property tax continues to be the major single tax liability, but its relative importance declined significantly during the decade. In 1972, property taxes represented more than 82 percent of the total local tax burden imposed on Colorado resident taxpayers; by 1982 it accounted for less than 70 percent. Conversely, the relative share represented by the local sales and use tax during this same decade almost doubled--expanding from less than 12 percent in fiscal year 1972 to almost 23 percent in fiscal 1982.

Property Tax. Overall, the local property tax amounted to $1,261.9 million, net of $15.5 million of state old age property tax credits, in fiscal year 1982. As such, it continued to be the largest single revenue source in the state-local tax structure, but its relative importance steadily declined during the 1970's. The property tax accounted for 44 percent of the combined state-local tax liability in 1972, whereas the respective ratios were 36 and 38 percent in 1980 and 1982.

Sales and Use Tax. The state-local general sales and use tax ranked next in importance. In fiscal 1982 it amounted to $978.7 million. Despite the fact that household food and utilities were excluded from the base, the state sales tax for fiscal 1982 was still substantially larger than in 1972 or 1980, whether measured in relative or

TABLE III. CHANGING STRUCTURE OF STATE AND LOCAL TAXES BETWEEN FISCAL YEARS 1972, 1980 AND 1982

	Percent Distribution		
	1972	1980	1982

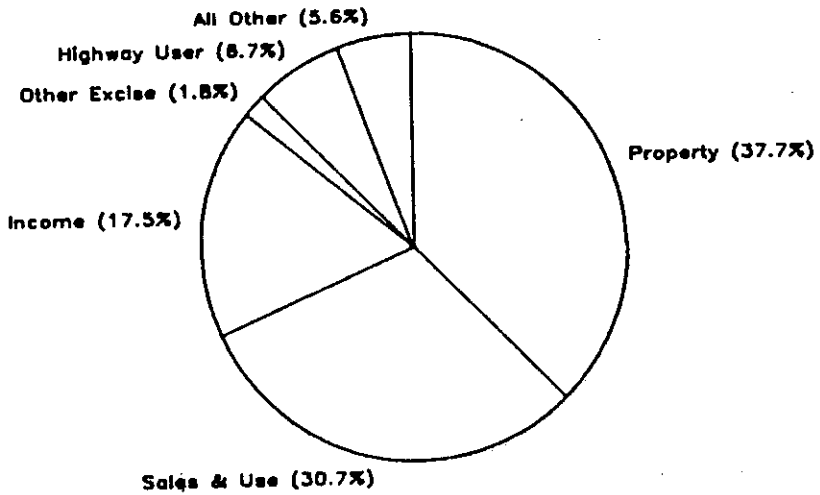
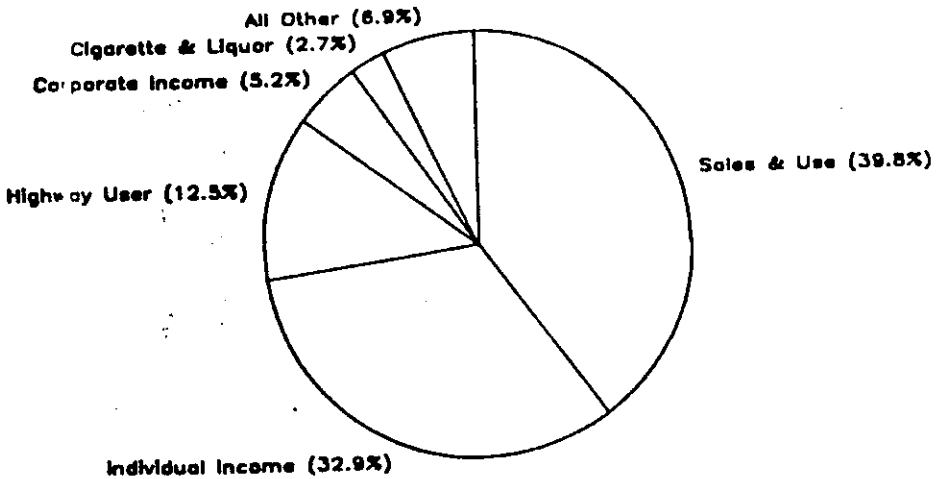
CHART I. THE COLORADO TAX STRUCTURE,
FISCAL YEAR 1982

Combined State and Local Tax Structure



State Tax Structure



Local Tax Structure

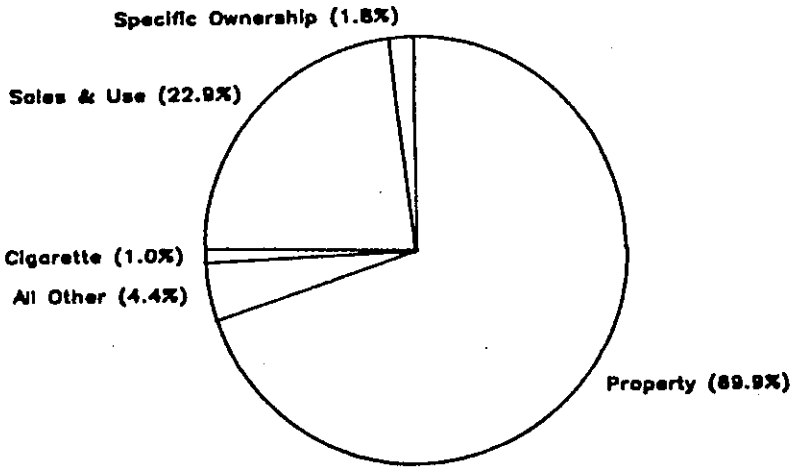


CHART II. THE CHANGING COMBINED STATE-LOCAL TAX STRUCTURE, FISCAL YEARS 1972, 1980 AND 1982

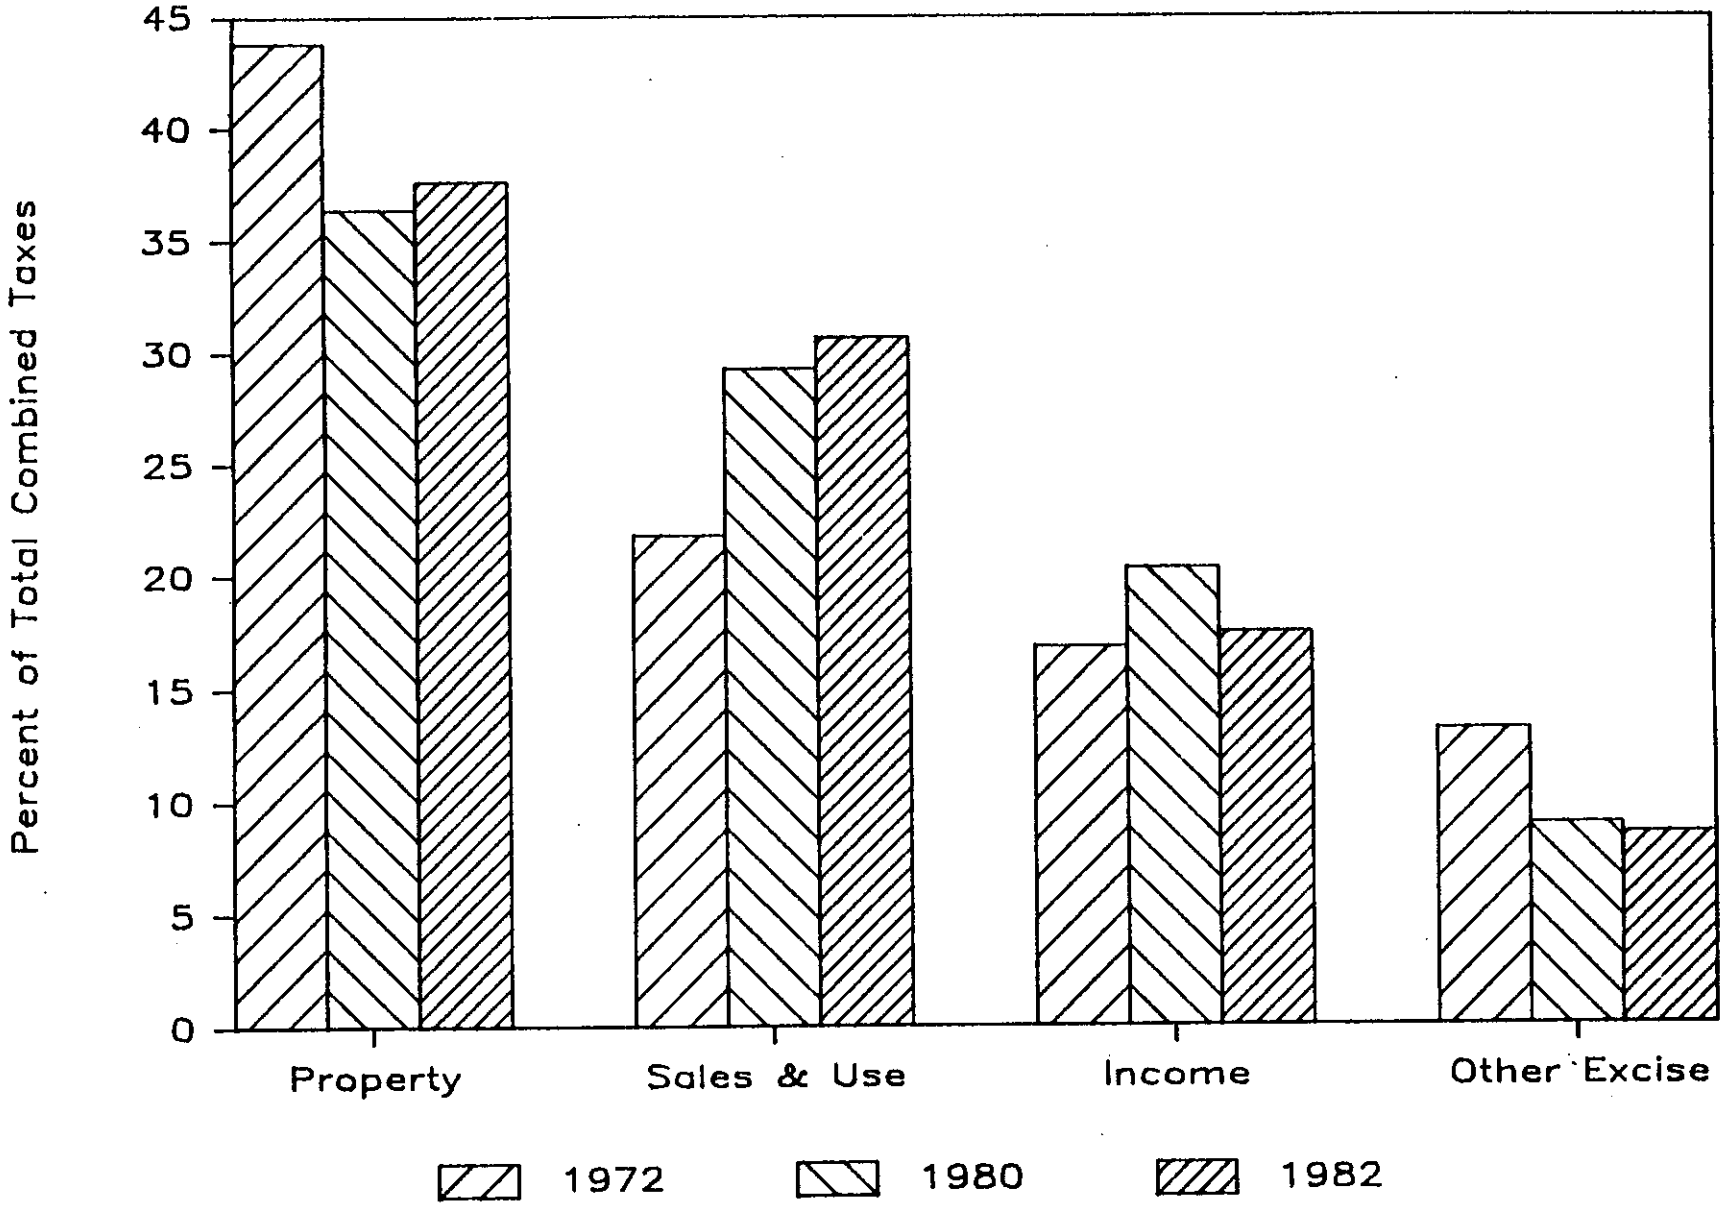

CHART III. THE CHANGING STATE TAX STRUCTURE
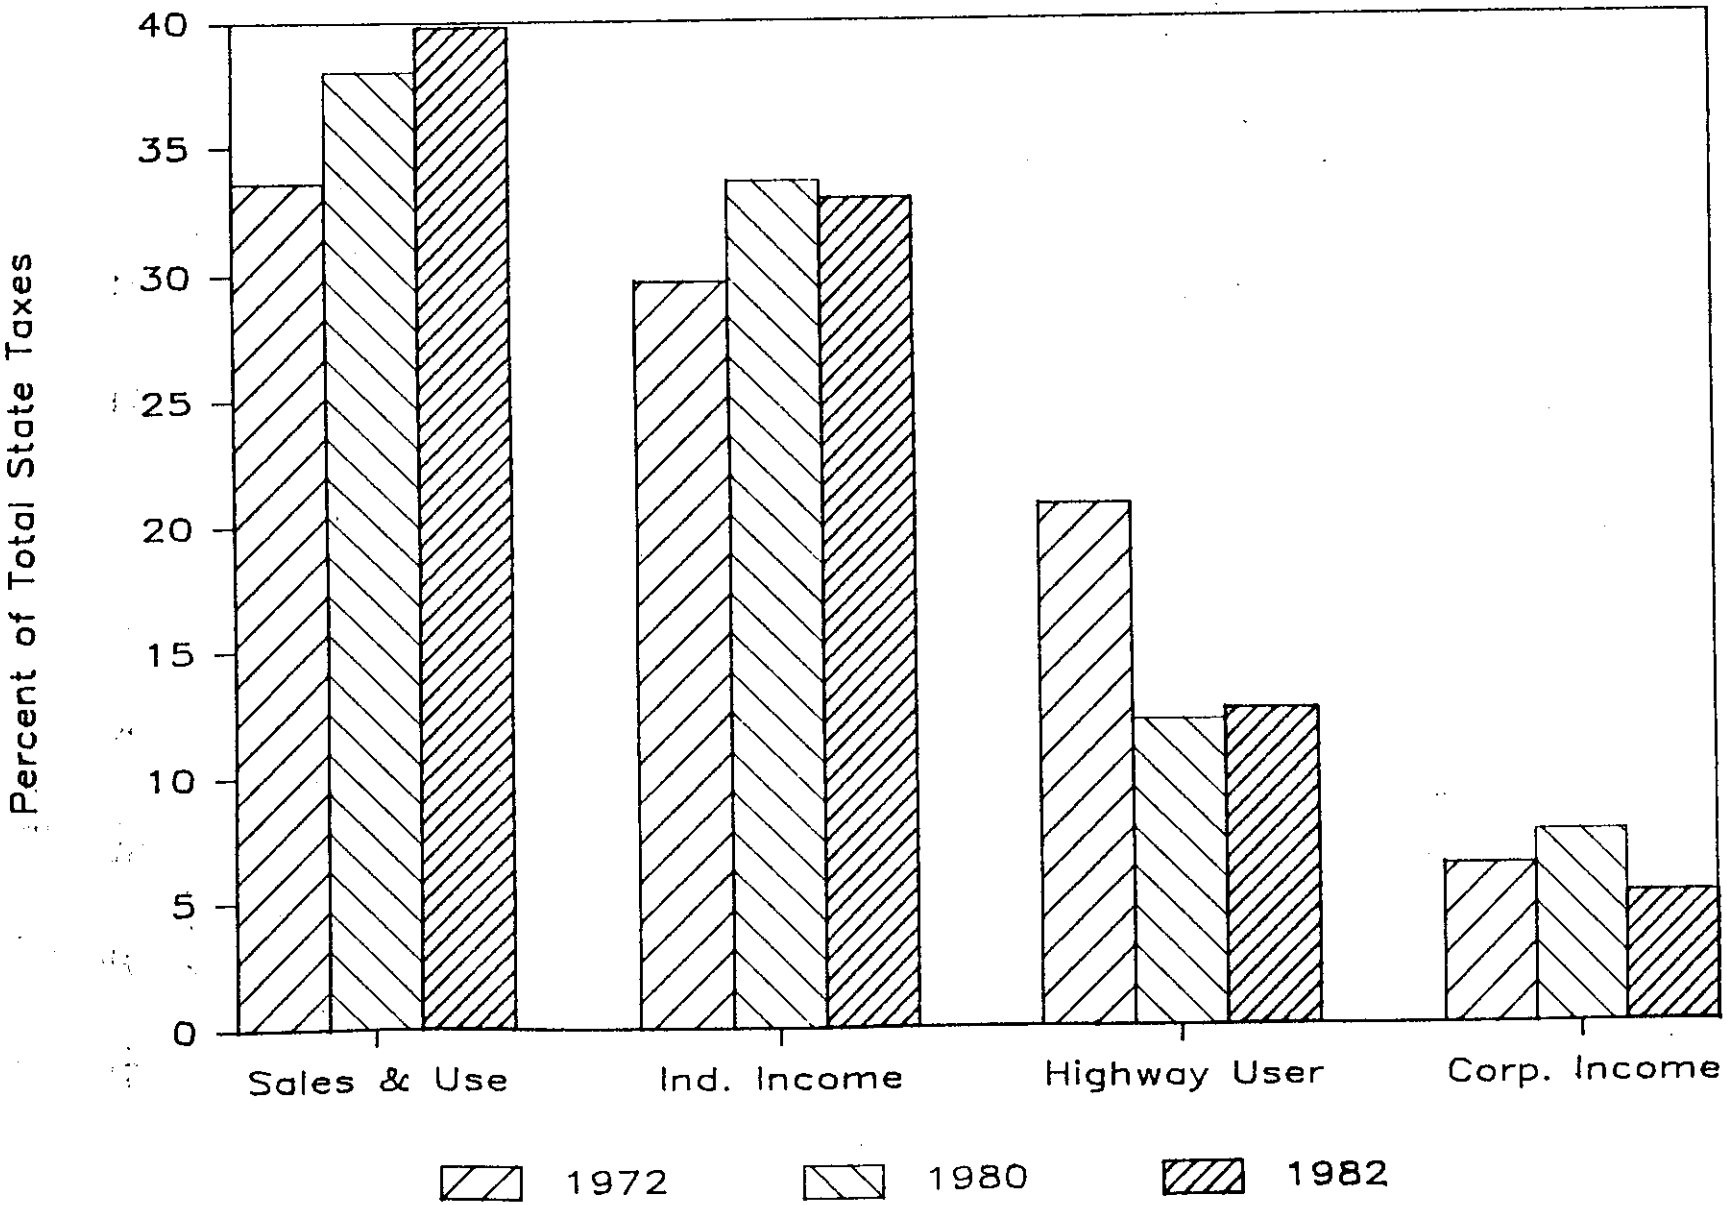
FISCAL YEARS 1972, 1980 AND 1982



absolute terms. As a percentage of the total state-local resident tax liability, the general sales and use tax in fiscal 1982 accounted for almost 31 percent, while the comparable ratios for 1972 and 1980 were 22 percent and 29 percent, respectively.

Income Tax. The state income tax ranked third among the "big three" tax sources which combined accounted for 83 percent of the total state-local tax burden. In fiscal year 1982 income taxes amounted to $558.7 million on a liability basis, of which the corporate income tax represented $75.6 million and the resident individual income tax accounted for $483.1 million.

The non-resident portion of the income tax continued to be comparatively small--only $4.8 million or less than one percent of the total. As a share of the total state-local tax burden, the income tax on resident households accounted for 15 percent in fiscal 1982 or only one percentage point more than in 1972 and actually two percentage points less than in fiscal 1980. Correspondingly, as a share of the state tax burden, it increased from 30 to 34 percent in the 1970's and then dropped to 33 percent in fiscal 1982.

A similar, but more marked pattern occurs in the case of the corporate income tax. Its share in the overall state-local tax picture has been relatively insignificant throughout the period, never accounting for as much as four percent of the total. In fiscal 1972 it amounted to 3.0 percent, rose to 3.8 percent in 1980 and then fell to 2.4 percent in 1982--the low point for the decade. The comparable percentages for the corporate income tax as a share of the total state tax burden were 6.3 percent for fiscal 1972, then up to 7.7 percent in fiscal 1980, and finally down to 5.2 percent for fiscal 1982.

Highway User Tax. The highway user tax category includes state motor fuel and ton-mile taxes, as well as motor vehicle and operators license fees and the specific ownership tax levied by local government. These levies in fiscal 1982 amounted to $215.1 million, or less than seven percent of the total state-local tax burden. At the state level, highway user taxes accounted for less than 13 percent in fiscal 1982, compared with 12 and 21 percent of the total state tax burdens in 1980 and 1972, respectively. The dramatic decrease in the relative importance of these levies for the decade in large part reflects the motoring public's response to the energy crises of the 1970's.

Consumer Excise Taxes. Cigarette and alcoholic beverage taxes continue to be quantitatively least important in the state-local tax structure. On the combined basis they amounted to $57.2 million, and as a relative share of the total these excises have steadily declined since the early 1970's--from 2.5 percent in 1972 to 1.8 percent in 1982. As a percentage of the total state burden they have dropped from slightly less than five percent to slightly more than two and a half percent during the decade.

All Other taxes. This category represents all business taxes, licenses and fees, other than the corporate income tax and the allocated portions of the general sales, property and highway user taxes paid by business firms. It includes oil and gas production taxes, other severance taxes, the employers' share of the Denver occupation tax, insurance, franchise and utility taxes, and miscellaneous regulatory fees. In fiscal 1982, these combined taxes amounted to $177.1 million, or almost six percent of the total state-local tax bill. As a group, they have steadily increased during this decade--from 4.2 percent in fiscal 1972 to 5.6 percent in fiscal 1982. On the state level these other business taxes as a category appear to have been relatively more important, increasing from 4.7 percent in 1972 to 6.9 percent in fiscal 1982.

SECTION III. THE DIRECT AND INDIRECT TAX ALLOCATION

A distinction is often made between tax "impact" and "incidence"--the former is where the tax is legally imposed, the latter where it finally comes to rest. Theoretically, the incidence of all taxes are on individuals. However, it is useful to initially classify taxes into the two general categories: household (or direct) taxes and business (or indirect) taxes. The allocation of taxes between households requires specific tax shifting assumptions with regard to their final incidence.

Tax Shifting Assumptions

As in previous Colorado Tax Profile studies, household taxes are defined as those directly levied or shifted to individuals comprising the household unit and generally are based on the earning of income, the purchase of consumer goods and services, or the ownership of particular forms of wealth (e.g., real estate). In this sense, direct taxes include individual income, retail sales, consumer excise and residential property taxes. The householder cannot shift such direct taxes to others through the pricing system.

In contrast, it is assumed that business taxes are either shifted forward to individuals as consumers or borne by the owners of resources since such taxes represent business costs which ultimately are reflected in market prices, reduced dividends or undistributed corporate earnings. The corporate income tax, highway user and sales taxes paid by business firms on their purchases, severance taxes and all other franchise and regulatory business taxes fall into the indirect category.[4]

It should also be noted that in deriving the resident tax burden for a particular state, it is not possible to empirically determine the amount of business taxes exported or imported by firms engaged in interstate commerce. As in the 1980 study, it is assumed that the export of Colorado business taxes has been approximately balanced by the import of taxes from jurisdictions outside Colorado.[5]

Taxes on Households and Business

Based on the above assumptions, the allocation of Colorado state and local taxes between those levied on resident households and those on businesses for fiscal year 1982 is shown in Table IV and Chart IV. On the adjusted liability basis, direct household taxes amounted to $1,879 million, accounting for almost three-fifths of the total Colorado tax burden. Correspondingly, the indirect portion levied on business was $1,310 million, or two-fifths of the total. The major direct and indirect taxes for fiscal year 1982 and their quantitative importance follows:

- The residential property tax ranked first and amounted to $633 million, or 34 percent of the total direct tax burden borne by Colorado resident households. This was higher than the 31 percent for fiscal 1980, but still markedly below the 39 percent ratio for fiscal 1972.

- The non-residential property tax amounted to $569 million or 43 percent of total business taxes. As such, it was lower than the 45 percent estimated for 1980 and significantly below the 53 percent for 1972.

- The sales and use tax on households was the second largest tax directly levied on resident households. It amounted to $582 million, of which three-fifths represented the state sales tax and two-fifths the local levy. The combined state-local sales tax accounted for 31 percent of the total direct tax burden--the same ratio as in 1980, but significantly larger than the 22 percent for fiscal 1972.

- The sales and use tax on business was also the second largest of the indirect taxes on business. It amounted to almost $397 million, or 30 percent of the total indirect taxes. In fiscal 1980 it represented 27 percent, and in fiscal 1972 only 22 percent of the total business taxes.

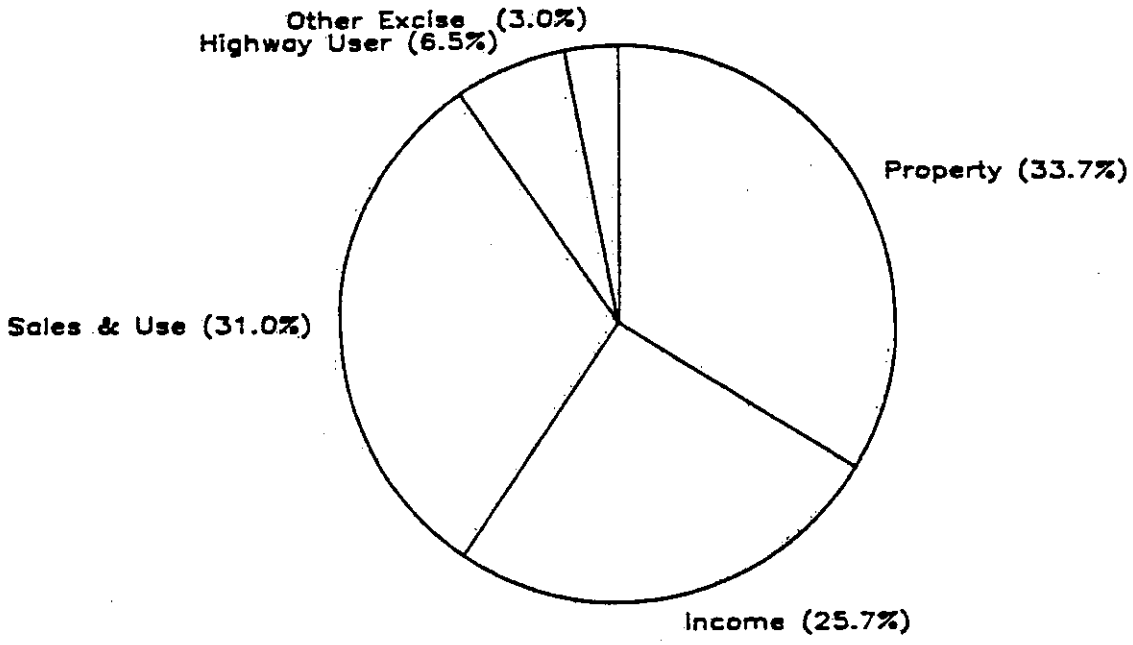
TABLE IV. SUMMARY OF MAJOR TAXES ON COLORADO RESIDENT HOUSEHOLDS AND BUSINESS, FISCAL YEAR 1982

	Total Taxes	State Taxes	Local Taxes
	(Money amounts in thousands)		
Taxes on Households (Direct)			
Residential Property	$ 633.4	--	$ 633.4
Sales and Use	582.2	$ 348.4	233.8
Individual Income	483.1	483.1	--
Highway User[a]	122.9	101.2	21.7
Cigarette and Liquor	57.2	40.3	16.9
Total Direct Taxes	$1,878.8	$ 973.0	$ 905.8
Taxes on Business (Indirect)			
Non-Residential Property	$ 568.5	--	$ 568.5
Sales and Use	396.5	$ 236.0	160.5
Corporate Income	75.6	75.6	--
Highway User[a]	92.2	82.9	9.3
Other Business Taxes[b]	177.1	101.2	75.9
Total Indirect Taxes	$1,309.9	$ 495.7	$ 814.2
Total Resident Taxes	$3,188.7	$1,468.7	$1,720.0

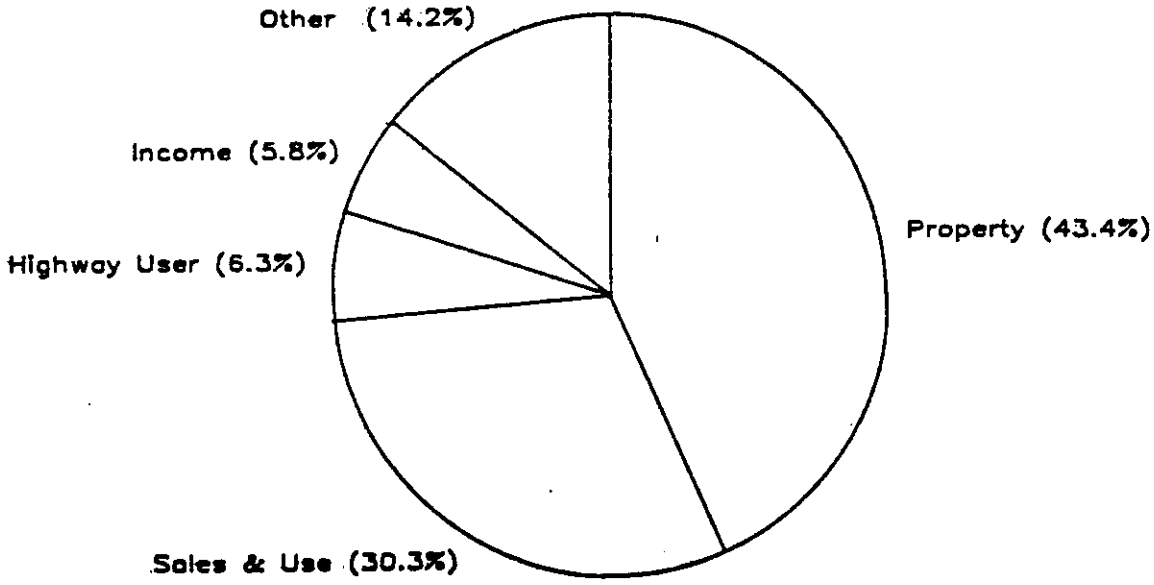
[a]Includes share of specific ownership tax.

[b]Includes insurance, severance, occupation, corporate franchise and miscellaneous regulatory taxes.

CHART IV. DISTRIBUTION OF HOUSEHOLD AND BUSINESS TAXES, FISCAL YEAR 1982



Household Taxes



Business Taxes

- The individual income tax ranked third in the household category and amounted to $483 million. Its share of the direct tax burden was slightly less than 26 percent--two percentage points below the 1980 ratio, but two points above 1972.

- The corporate income tax amounted to $76 million and accounted for less than 6 percent of the combined state-local tax bill imposed on business. This was markedly smaller than the 9 percent share for fiscal 1980 and 8 percent share for fiscal 1972.

It is evident that the "big three"--property, sales and income taxes--continue to account for the overwhelming share of the taxes imposed on both of these taxpayer categories. Combined, they represented 90 percent of the direct tax burden imposed on resident households, and almost 80 percent of the total indirect taxes levied on business in fiscal year 1982.

State Taxes

At the state level, taxes amounting to $973 million, or two-thirds of the total state burden, were classified as direct household taxes. Of this amount, the individual income tax (inclusive of surtax) represented 50 percent, while retail sales and highway user taxes accounted for 36 and 10 percent, respectively. Because of energy conservation, highway user taxes were significantly below the 1972 ratio of 20 percent. The other state excise taxes levied directly on resident households were $40 million, or four percent of the total.

State taxes on business were estimated to be $496 million, or one-third of the adjusted state total. Quantitatively, the most important state tax levied on business was the allocated portion of the sales and use tax --it accounted for 48 percent of the total. Business highway user taxes and the corporate income tax ranked next, representing 17 and 15 percent, respectively. All other state business taxes, such as insurance, corporate franchise, severance and other regulatory taxes, accounted for 20 percent of the total.

Local Taxes

On the local level, direct household taxes were estimated to be $906 million, or 53 percent of the total, while the indirect business portion was estimated to be $814 million. The allocation of total local taxes between households and business essentially reflects the classification of the property tax into residential and non-residential categories. It was estimated that the actual and imputed property taxes on owner-occupied and renter-occupied residences together amounted to $633 million or 70 percent of the total local taxes levied directly on resident households. And in the case of the non-residential property tax, it amounted to $569 million, which also worked out to be 70 percent of the total local tax levied on the business community.

SECTION IV. A PROFILE OF COLORADO TAXES BY MAJOR INCOME CLASSES

The distribution of Colorado state and local tax liabilities of resident households, classified by major income categories, is presented in Tables V through IX. Data on the number of resident taxpayers, household income and state individual income tax liabilities were analyzed in detail in a companion study prepared by the Colorado Department of Revenue.[6]

Income Concepts

This sub-section describes basic concepts and adjustments required for the derivation of the income measures used in the analysis of tax burdens. Because Colorado does not have a "split-income" provision for married taxpayers, approximately one-third of all individual income tax returns filed were "married-separate" returns. For the purposes of this study, the "married-separate" returns of husband and wife were merged and treated as a single return in order to obtain a more accurate picture of the distribution of resident household income and taxes.[7]

Adjusted Gross Income. On the corrected basis, the adjusted gross income reported by resident households on state tax returns filed in fiscal 1982 amounted to $23,919 million. It represented 71.9 percent of the corresponding 1981 Colorado state personal income of $33,256 million estimated by the U.S. Department of Commerce.[8] The difference between these two income measures of $9.3 billion mainly are due to conceptual differences between the economic and statutory definitions of income. The latter excludes various forms of tax-exempt money income and nontaxable transfer income, such as payments for public welfare, social security, unemployment compensation and portions of private pension and retirement income. On the other hand, the economic concept of household income (the Department of Commerce personal income measure) includes, in addition to the above money transfer payments, sundry forms of imputed income, such as the estimated rental value of owner-occupied residences, imputed interest and employer contributions to pension funds.

Adjusted Broad Income. In order to obtain an alternative income measure which more closely corresponds to the conventional concept of income, an adjusted broad income measure was developed for the original 1972 Colorado Tax Profile Study. This measure is narrower than the personal income concept in that it excludes all forms of imputed income, but broader than adjusted gross income since it includes an estimate of the nontaxable money transfer payments, as well as other forms of tax-exempt income not reported on tax returns.[9]

On an overall basis, total adjusted broad income for Colorado resident taxpayers was estimated to be $28,611 million, or 20 percent larger than the corresponding adjusted gross income for fiscal year 1982. The difference between these two income measures in fiscal year 1972 was slightly more than 13 percent. The more rapid rate of growth in the adjusted broad income relative to the increase in adjusted gross income reported on tax returns is primarily due to the steady rise in Colorado personal transfer income.

Also it should be noted that the total amount of transfer payments included in the 1982 adjusted broad income measure was approximately three times larger than the amount included to represent tax-exempt forms of non-transfer money income. Thus the largest relative adjustments required to place the resident households on a broad income basis were made for those in the lowest income categories since they were the major recipients of nontaxable money transfer income. Conversely, adjustments for excluded non-transfer money income were largest for taxpayers in the upper income strata since they were the principal beneficiaries of the preferential tax treatment accorded capital gains, interest and dividend income.

In the remainder of this report, the comparative tax burdens of Colorado resident households are presented in terms of both adjusted gross and adjusted broad income. It is evident, however, that the latter is the more appropriate and meaningful basis for evaluating the distributional effects of the Colorado state and local tax structure.

Distribution of Households and Income

Almost one and a third million Colorado resident households filed state income tax returns in fiscal year 1982. Of these, four out

of every five were taxable returns, i.e., they had a positive net normal income tax liability. The income measures and overall tax analysis for this study are based on all resident returns, taxable and nontaxable. Households filing nontaxable returns, of course, were also subject to sales, excise and property taxes and were recipients of transfer and other forms of money income excluded from adjusted gross income. But first it is important to note that because of the marked rise in both the nominal and real incomes of Colorado households since 1972, the distribution of number of households by adjusted gross income categories has shifted significantly upwards during the past decade as shown below:

CTPS Fiscal Year	Percentage Distribution of Households by Reported Adjusted Gross Income: Below $15,000	$15,000 to $25,000	$25,000 and Over	Total
1972	84.1	12.3	3.6	100.0
1980	61.2	20.5	18.3	100.0
1982	55.2	19.3	25.5	100.0

Distribution of Taxes

Table V presents the total dollar amounts of state and local taxes on a resident liability basis, as well as the number of households and the total dollar amounts of household income in terms of both adjusted gross and broad income, for each of the five major income classes. The relative tax burden comparisons -- the "current tax profiles" -- are developed on the basis of these data for fiscal year 1982.

TABLE V. DISTRIBUTION OF COLORADO RESIDENT TAXPAYERS, HOUSEHOLD INCOME AND MAJOR STATE AND LOCAL TAXES, FISCAL YEAR 1982

	Major Income Classes[a]					
	Under $5,000	$5,000 to $15,000	$15,000 to $25,000	$25,000 to $50,000	$50,000 and Over	Total
	(Money amounts in thousands of dollars)					
Number of Resident Households	335,428	397,714	256,802	281,475	57,618	1,329,037
Household Income:						
Adjusted Gross Income	$ 703,568	$3,839,217	$5,062,814	$9,621,198	$4,692,543	$ 23,919,340
Adjusted Broad Income	1,617,432	5,093,873	5,810,592	10,713,204	5,376,247	28,611,348
Direct Taxes on Households:

Total State and Local Taxes:						
State Taxes (Direct & Indirect)	93,596	270,032	325,004	537,926	242,141	1,468,699
Local Taxes (Direct & Indirect)	181,685	387,203	378,821	571,708	200,623	200,623
Total State-Local Taxes	$ 275,281	$ 657,235	$ 703,825	$1,109,634	$ 442,764	$ 3,188,739
Addendum:						
Federal Individual Income Tax	$ 17,716	$ 343,103	$ 653,736	$1,526,066	$1,310,247	$ 3,850,868

[a]Based on adjusted gross income

The percentage distributions of the direct state and local tax burden among Colorado's relatively low, middle and high income taxpayers are summarized in the following tabulation:

	Percent Distribution of Direct Taxes for Households with Adjusted Gross Incomes:		
	Below $15,000	$15,000 to $25,000	$25,000 and Over
State Taxes:			
Individual Income	26.7	44.2	60.6
Sales and Use	49.1	38.6	29.6
Consumer Excises	24.2	17.2	9.8
Total	100.0	100.0	100.0
Local Taxes:			
Residential Property	72.5	66.1	69.8
Sales and Use	22.6	28.8	26.8
Consumer Excises	4.9	5.1	3.4
Total	100.0	100.0	100.0

The largest single state tax levied on the two lowest income classes (under $15,000), which together comprised more than one-half of Colorado's resident households, continued to be the state's retail sales tax, which amounted to $104.0 million. When combined with the excise taxes on motor fuels, alcoholic beverages and cigarettes, consumer expenditure taxes on the state level for these relatively low income taxpayers accounted for more than three-fourths of their total direct state tax burden in fiscal year 1982. For the one-fifth of the households comprising the middle income group ($15,000 to $25,000), consumption expenditure taxes on the state level amounted to $119.6 million and accounted for more than one-half of their direct state tax burden. In contrast, for the two highest income strata ($25,000 or more), representing the top quartile of households, the state personal income tax was quantitatively the largest. It amounted to $331.8 million and accounted for more than three-fifths of their total direct state tax burden; while their consumer expenditure taxes, particularly the excises, were relatively small.

On the local level, as expected, the residential property tax of $633.4 million accounted for two-thirds or more of the direct local tax burden for all income categories.

Tax Equity

Table VI shows the percentage distributions of the Colorado resident taxpayers, adjusted gross and broad income, and each of the major state and local taxes, classified by the five household income categories, based on data presented in Table V. A comparison of the tax distribution with the distribution of household income provides an approximate measure of the degree of tax equity in the state. The taxpayers comprising the two top income groups, with adjusted gross incomes of $25,000 or more, represented the top quartile of households but accounted for three-fifths of total income; while the poorest households, those in the lowest quartile (incomes of $5,000 or less), accounted for only three percent of the adjusted gross income and less than six percent of the broad income.

State Taxes. With regard to the allocation of the overall state tax burden (combined direct and indirect taxes), it appears that for all major income classes, the respective shares of the state tax generally parallel the distribution of adjusted broad income, as shown by the following tabulation:

Income Classes	Percent Distribution		
	Adjusted Broad Income	Direct State Taxes	Total State Taxes
Under $5,000	5.7	4.8	6.4
$5,000 to $15,00	17.8	16.9	18.4
$15,000 to $25,000	20.3	22.0	22.1
$25,000 to $50,000	37.4	37.9	36.6
$50,000 and over	18.8	18.4	16.5
Total	100.0	100.0	100.0

The share of the direct state tax burden borne by the poorer households (reported incomes of less than $15,000) was slightly lower than their respective income share, but their share of the total state tax was slightly higher. Correspondingly, for households in the two upper income strata (top quartile) the direct state tax share was practically the same as their income share, and their total state tax share was only slightly lower. On this adjusted broad income basis, the direct state tax structure proved to be slightly progressive, while the total state tax structure worked out to be slightly regressive in fiscal

	Major Income Classes:[a]					
	Under $5,000	$5,000 to $15,000	$15,000 to $25,000	$25,000 to $50,000	$50,000 and Over	Total

[a]Based on adjusted gross income.

year 1982. Previous CTPS reports show a similar pattern of proportionality. It appears that despite the marked shift of taxpayers into higher income brackets, increased consumption expenditures, and the statutory tax reductions enacted during the past five years, the overall state tax structure has not become significantly more progressive or regressive.

The proportionality achieved in the distribution of the overall state tax burden reflects a balancing of the state's major taxes, since similar distributions do not hold for any of the specific taxes. The state individual income tax continues to be highly progressive. Households in the two lowest income categories (incomes under $15,000) accounted for 24 percent of the broad income but only 12 percent of the income tax liability. At the other end of the income spectrum, taxpayers in the two top categories (incomes of $25,000 or more) accounted for 56 percent of the broad income but almost 69 percent of the total state income tax liability. Stated more generally, the top one-fourth of Colorado's resident households accounted for more than one-half of the income (regardless of which income measure is used) but almost three-fourths of the total state income tax.

Conversely, the distribution patterns of all other state taxes proved to be essentially regressive -- that is, the tax share relative to income was greatest for the lowest income group and smallest for those with the highest incomes. For example, the lowest income group's share of direct consumer expenditure taxes (retail sales and excises) was approximately one and a half times as large as its share of adjusted broad income; whereas for the highest stratum it was only three-fifths as large as its income share. And a similar relationship holds for the indirect state business taxes. In short, the magnitude and progressivity of the Colorado state income tax offsets the regressivity of all the other state taxes, resulting in a state tax structure which is essentially proportional.

Local Taxes. With regard to the allocation of the local tax burden, the data indicate that all of the major local taxes (direct and indirect) worked out to be highly regressive. For households in the two lowest income strata, their share of the residential property tax, expenditure taxes and indirect business taxes in every instance was sig-

nificantly larger than their share of adjusted broad income; while for taxpayers in the highest income strata, the tax shares were below their respective income shares. This overall regressivity of the local tax structure must be attributed primarily to the magnitude and regressivity of the local property and sales tax.

Average Household Income and Taxes

The average income and taxes of Colorado households for fiscal year 1982, classified by the five major income categories, are presented in Table VII. Resident taxpayers had an average income of $21,528 (on a broad income basis) and an average combined state-local tax burden of $2,399. This was almost one-fifth less than the average federal income tax of $2,897 paid by Colorado residents that year. Total state taxes (direct and indirect) averaged $1,105 per resident household and as such were 15 percent less than the average local tax burden of $1,294.

When the taxes are expressed as averages for each of the major income categories, the average dollar of tax per resident household increased directly, but not proportionately, with the rise in income. The average total state tax (combined direct and indirect) ranged from $279 for taxpayers in the lowest quartile (incomes less than $5,000) to $2,300 for those at the other end of the scale (incomes of $25,000 or over). On the other hand, the average local tax burden was significantly higher than the state burden for the poor, and lower for the top quartile -- ranging from $542 for taxpayers in the bottom group to $2,278 for the highest.

TABLE VII. AVERAGE INCOME AND TAXES FOR COLORADO RESIDENT TAXPAYERS, CLASSIFIED BY MAJOR INCOME CATEGORIES, FISCAL YEAR 1982

	Major Income Classes:[a]					
	Under $5,000	$5,000 to $15,000	$15,000 to $25,000	$25,000 to $50,000	$50,000 and Over	Total
Taxpayers Income:						
Adjusted Gross Income	$2,098	$ 9,653	$19,715	$34,181	$81,442	$17,998

Total State and Local Taxes:						
State Taxes (Direct & Indirect)	279	679	1,266	1,911	4,203	1,105
Local Taxes (Direct & Indirect)	542	974	1,475	2,031	3,482	1,294
Total State-Local Taxes	$ 821	$ 1,653	$ 2,741	$ 3,942	$ 7,685	$ 2,399
Addendum:						
Federal Individual Income Taxes	$ 53	$ 863	$ 2,546	$ 5,422	$22,740	$ 2,897

[a]Based on adjusted gross income

The variance in these relationships can be readily compared by expressing the average taxes of households in the lowest quartile as percentages of those in the top quartile as shown below:

	Average Income and Taxes for Households with AGI		
	Lowest Quartile (Under $5,000)	Highest Quartile ($25,000 and Over)	Lowest Quartile as Percent of Highest
Adjusted Broad Income	$4,822	$47,448	10.2
State Taxes:			
Individual Income	13	979	1.3
Sales Tax on Households	86	477	18.0
Excise Taxes on Households	41	157	26.1
Direct State Taxes	140	1,613	8.7
Business Taxes	139	687	20.2
Total State Taxes	$ 219	$ 2,300	12.1
Local Taxes:			
Residential Property	229	833	27.5
Sales Tax on Households	58	320	18.1
Excise Taxes on Households	13	40	32.5
Direct Local Taxes	300	1,193	25.1
Business Taxes	242	1,085	22.3
Total Local Taxes	542	2,278	23.8
Total State and Local Taxes	$ 821	$ 4,578	17.9

State Taxes. The average broad income of households in the lowest income category was slightly more than 10 percent of the average income of households in the highest quartile. The marked progressivity of the state income tax is revealed when the income tax ratio is compared with the broad income ratio. For example, the average state income tax for all households in the "under $5,000" class was only 1.3 percent of the average income tax for taxpayers in the highest quartile.[10] In contrast, the comparative tax ratios of all the other direct state taxes were generally twice as large as the income ratio.

However, the regressivity of the state sales and excise taxes was offset by the progressivity of the income tax so that the overall direct state tax structure remained slightly progressive--the average tax ratio was only 8.7 percent compared to the income ratio of 10.2

percent. On the other hand, the total state tax structure (direct and indirect) proved to be slightly regressive with an average state tax ratio of 12.1 percent.

Local Taxes. The greater regressivity of the local tax structure also is revealed by these data. The average local tax for households in the lowest quartile was almost 24 percent of the average paid by those in the top quartile. Moreover, when state and local tax liabilities are combined, the overall Colorado tax structure for fiscal year 1982 worked out to be clearly regressive--the average combined tax ratio of the poor to the rich was 17.9 percent compared to the corresponding broad income ratio of 10.2 percent.

SECTION V. A PROFILE OF EFFECTIVE TAX RATES AND BURDENS

A more conventional and simpler method of comparing relative tax burdens is to express the absolute dollar amount of tax liability as a percentage of household income before taxes. Since all taxes ultimately are paid out of available income, such a measure of the tax burden actually represents an "effective tax rate" on household income. However, the degree of regressivity or progressivity of the tax structure as a whole or of any particular tax is dependent upon the income concept used. For purposes of this study, the relative state and local tax burdens are expressed as percentages of both adjusted gross income and adjusted broad income.

Effective Tax Rates Based on Adjusted Gross Income

The relative burdens or effective tax rates for fiscal year 1982, based on adjusted gross income, are shown in Table VIII. On this adjusted gross income basis, the combined state-local tax burden on the poor was four times as heavy as that on the upper income group -- a 39.1 percent effective tax rate for households reporting incomes of less than $5,000 compared with an 9.4 percent rate for those with incomes of $50,000 or more.

This overall regressivity, however, must be mainly attributed to the local tax portion for which the relative burden on the lowest income group was actually six times larger than that on the highest -- 25.8 percent compared with 4.3 percent. All taxes on the local level, when based on adjusted gross income, show a high degree of regressivity and in the case of the residential property tax, the effective rates ranged from 10.9 percent for the lowest income group to 1.6 percent for the highest.

The state tax structure as a whole was only about one-half as regressive as the local tax structure, since the regressivity of the consumer expenditure and business taxes was partially offset by the progressivity of the state's individual income tax. With regard to the state income tax, the effective rate for households in the under $5,000

TABLE VIII. RELATIVE BURDEN OF MAJOR TAXES ON COLORADO RESIDENT TAXPAYERS, TAXES EXPRESSED AS PERCENT OF ADJUSTED GROSS INCOME, FISCAL YEAR 1982

[a] Based on adjusted gross income.

category was less than one percent, or slightly less than one-fourth the rate for taxpayers with incomes of $25,000 or more. For the overall state tax structure, the effective tax rates based on adjusted gross income ranged from 13.3 percent for the lowest stratum to 5.2 percent for the highest.

But, as already noted, the above disparities in the relative tax burdens between the low and high income categories are misleading because the adjusted gross income measure on which they are based understates the money income of households in the lowest income stratum, and therefore overstates their tax burden relative to that of other taxpayers.

Effective Tax Rates Based on Adjusted Broad Income

When the effective tax rates are expressed more appropriately in terms of adjusted broad income, the relative tax burdens and the measured regressivity of both the state and local tax structures are significantly reduced, as shown by the data in Table IX.

On this broad income basis, the measured regressivity -- the ratio of the effective rate for the lowest income class (under $5,000) to that of the highest ($50,000 and over) -- in all instances is reduced to less than one-half of that calculated in terms of adjusted gross income. For example, on broad income the relative burden of local taxes (direct and indirect) varied from 11.2 percent for the lowest income group to 3.7 percent for the highest, whereas when the adjusted gross income measure was used, the local burden on the poor was more than six times greater than that on the highest income group.

The regressivity of the state tax structure also was significantly smaller when measured against adjusted broad income. The effective state tax rate for households in the lowest income category was reduced from 13.3 percent to 5.8 percent and as such, was less than a third (rather than one and a half times) larger than the effective rate for those in the top income stratum.

Moreover, as already noted when the tax liabilities are compared against broad income, the total direct state tax structure--individual income and consumer expenditure taxes--actually proved to be progressive. The effective burden of the direct state taxes was 2.9

TABLE IX. RELATIVE BURDEN OF MAJOR TAXES ON COLORADO RESIDENT TAXPAYERS, TAXES EXPRESSED AS PERCENT OF ADJUSTED BROAD INCOME, FISCAL YEAR 1982

	Major Income Classes:[a]					
	Under $5,000	$5,000 to $15,000	$15,000 to $25,000	$25,000 to $50,000	$50,000 and Over	Total

[a] Based on adjusted gross income.

percent for households in the "under $5,000" income category compared to a burden of 3.3 percent for those in the "$50,000 and over" category.

With regard to the individual income tax, the average effective rates of tax for the income classes successively increased from a low of less than 0.3 percent for taxpayers in the lowest income stratum to a high of 2.3 percent for those in the highest stratum. In other words, the relative state income tax burden of the rich was about eight times as large as that levied on households with reported adjusted gross incomes under $5,000.

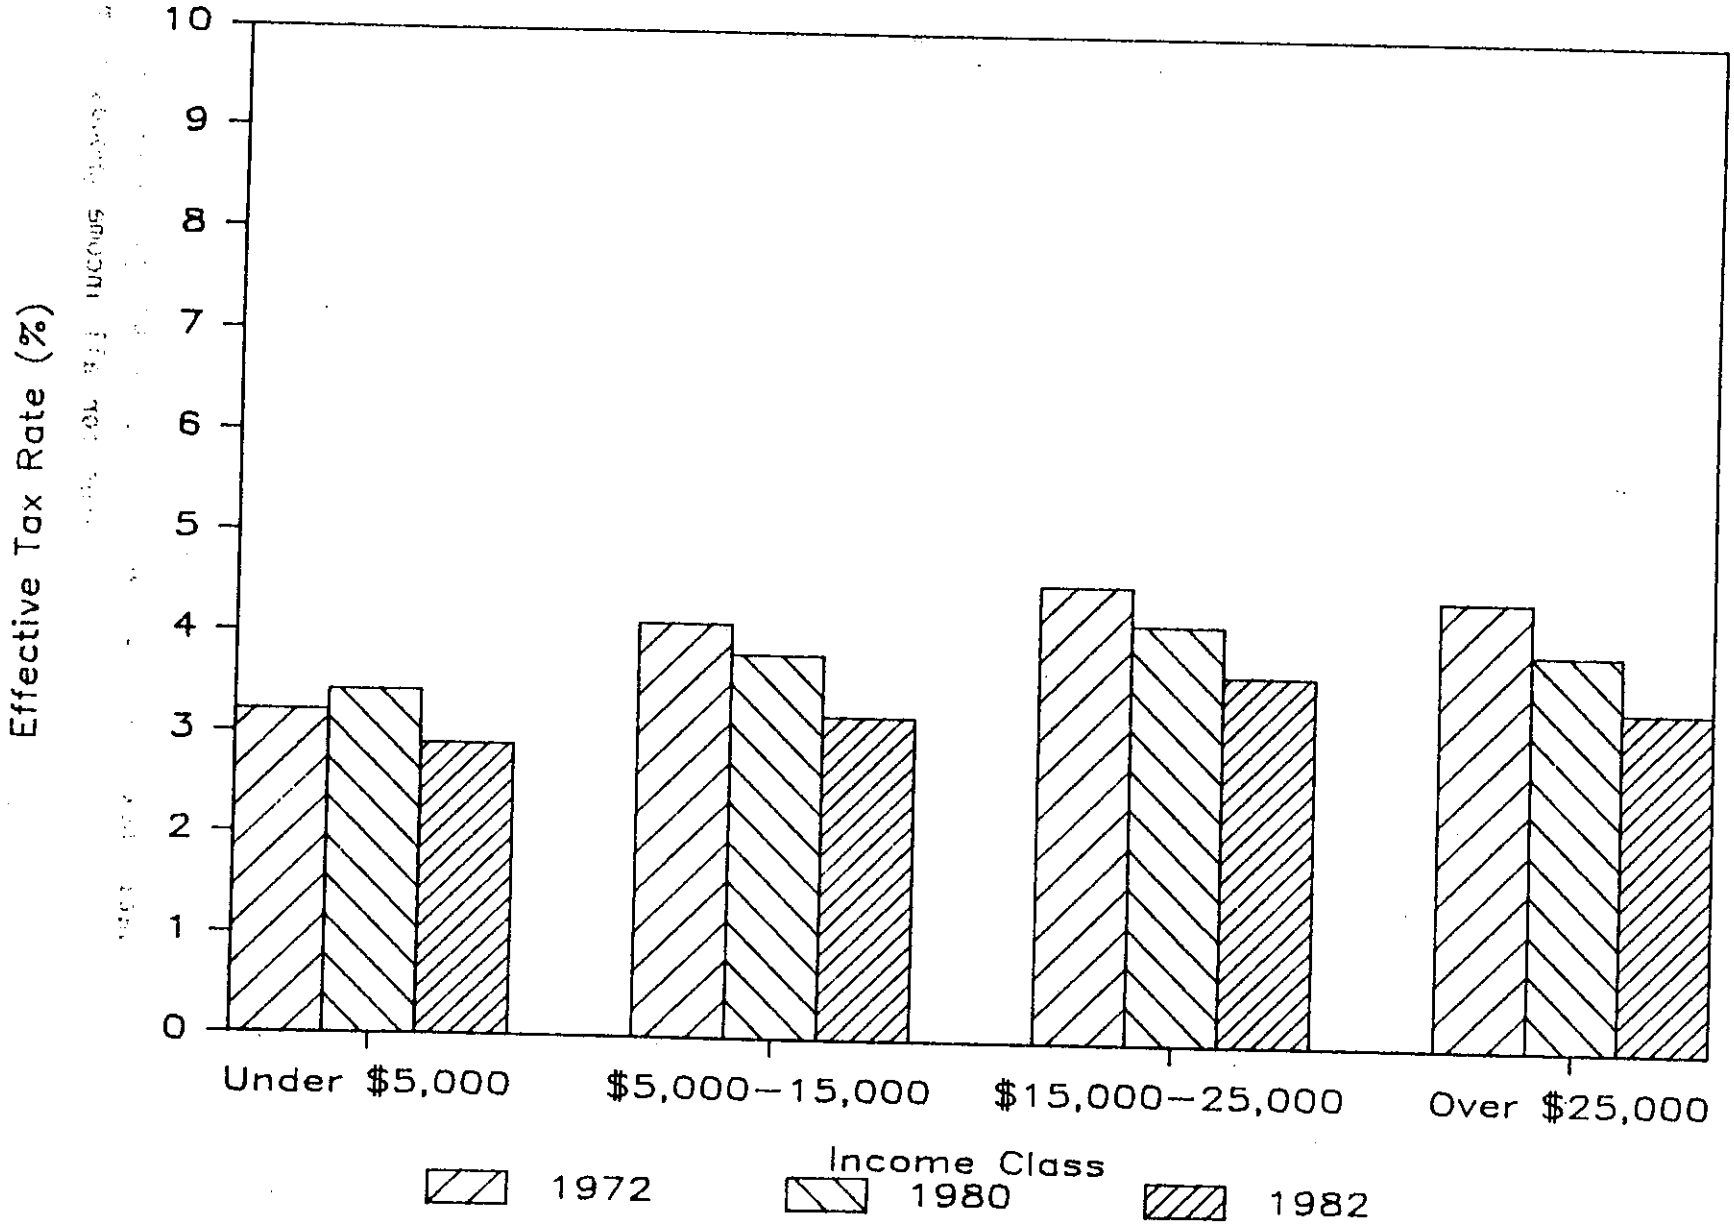
In order to make the analysis consistent with previous reports, the effective tax rate on broad income for all taxpayers with reported incomes of $25,000 or more are compared with the other income strata. On this basis, the effective tax rates on broad income for fiscal years 1972, 1980 and 1982 are shown in the following tabulation and Charts V and VI:

Effective Tax Rates on Broad Income for Direct State and Local Taxes Fiscal Years 1972, 1980 and 1981

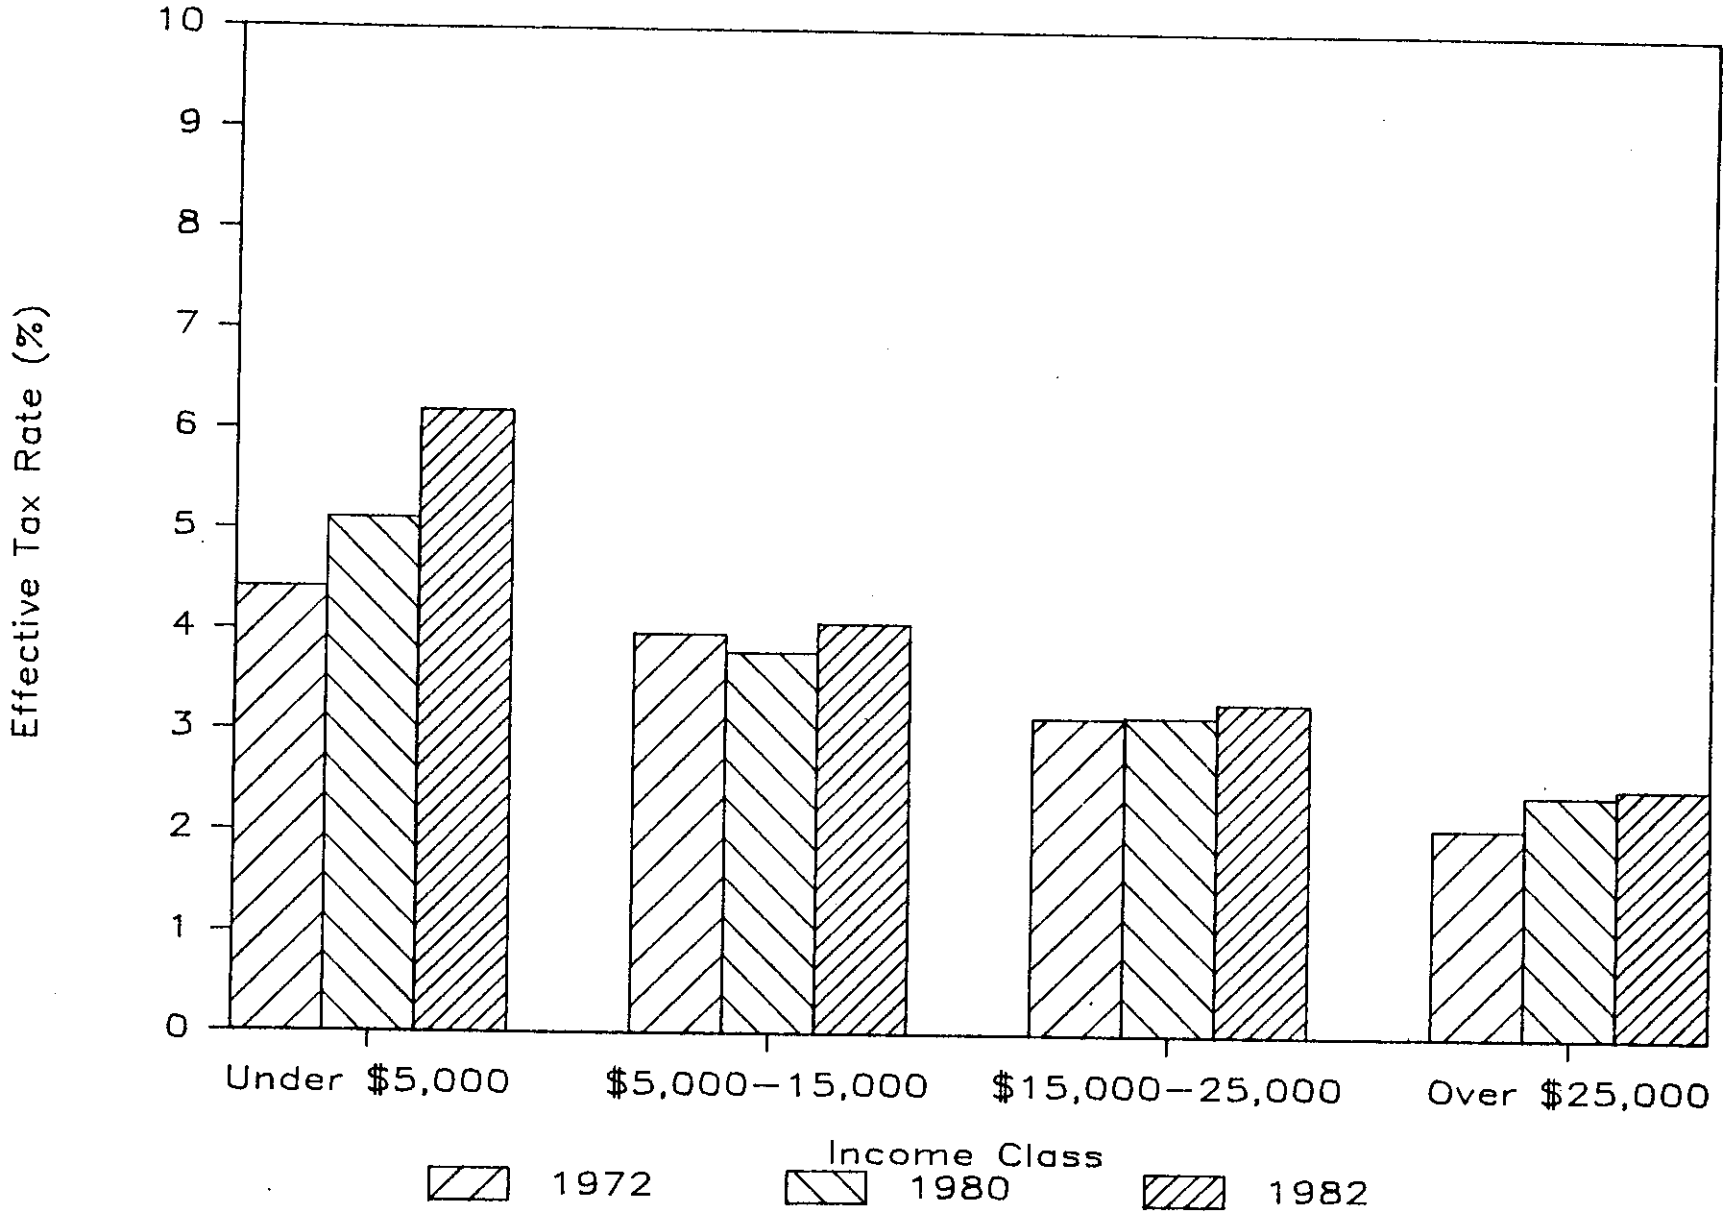
Income Class	State Direct Tax	Local Direct Tax	Total Direct Tax
Under $5,000			
1972	3.23	4.43	7.66
1980	3.43	5.13	8.56
1982	2.91	6.20	9.11
$5,000 to $15,000			
1972	4.13	3.98	8.11
1980	3.83	3.80	7.63
1982	3.23	4.09	7.32
$15,000 to $25,000			
1972	4.56	3.17	7.73
1980	4.18	3.18	7.36
1982	3.69	3.32	7.01
$25,000 and over			
1972	4.46	2.10	6.56
1980	3.95	2.44	6.41
1982	3.40	2.51	5.91

The data show the significant drop which has occurred in effective tax rates for direct state taxes for all income groups from

CHART V. COMPARISON OF EFFECTIVE TAX RATES FOR DIRECT STATE TAXES, FISCAL YEARS 1972, 1980 AND 1982*



* Based upon Adjusted Broad Income



* Based upon Adjusted Broad Income

1972 through 1982. In contrast, the effective rates on the local level, especially for low income households, have increased dramatically over this time period.

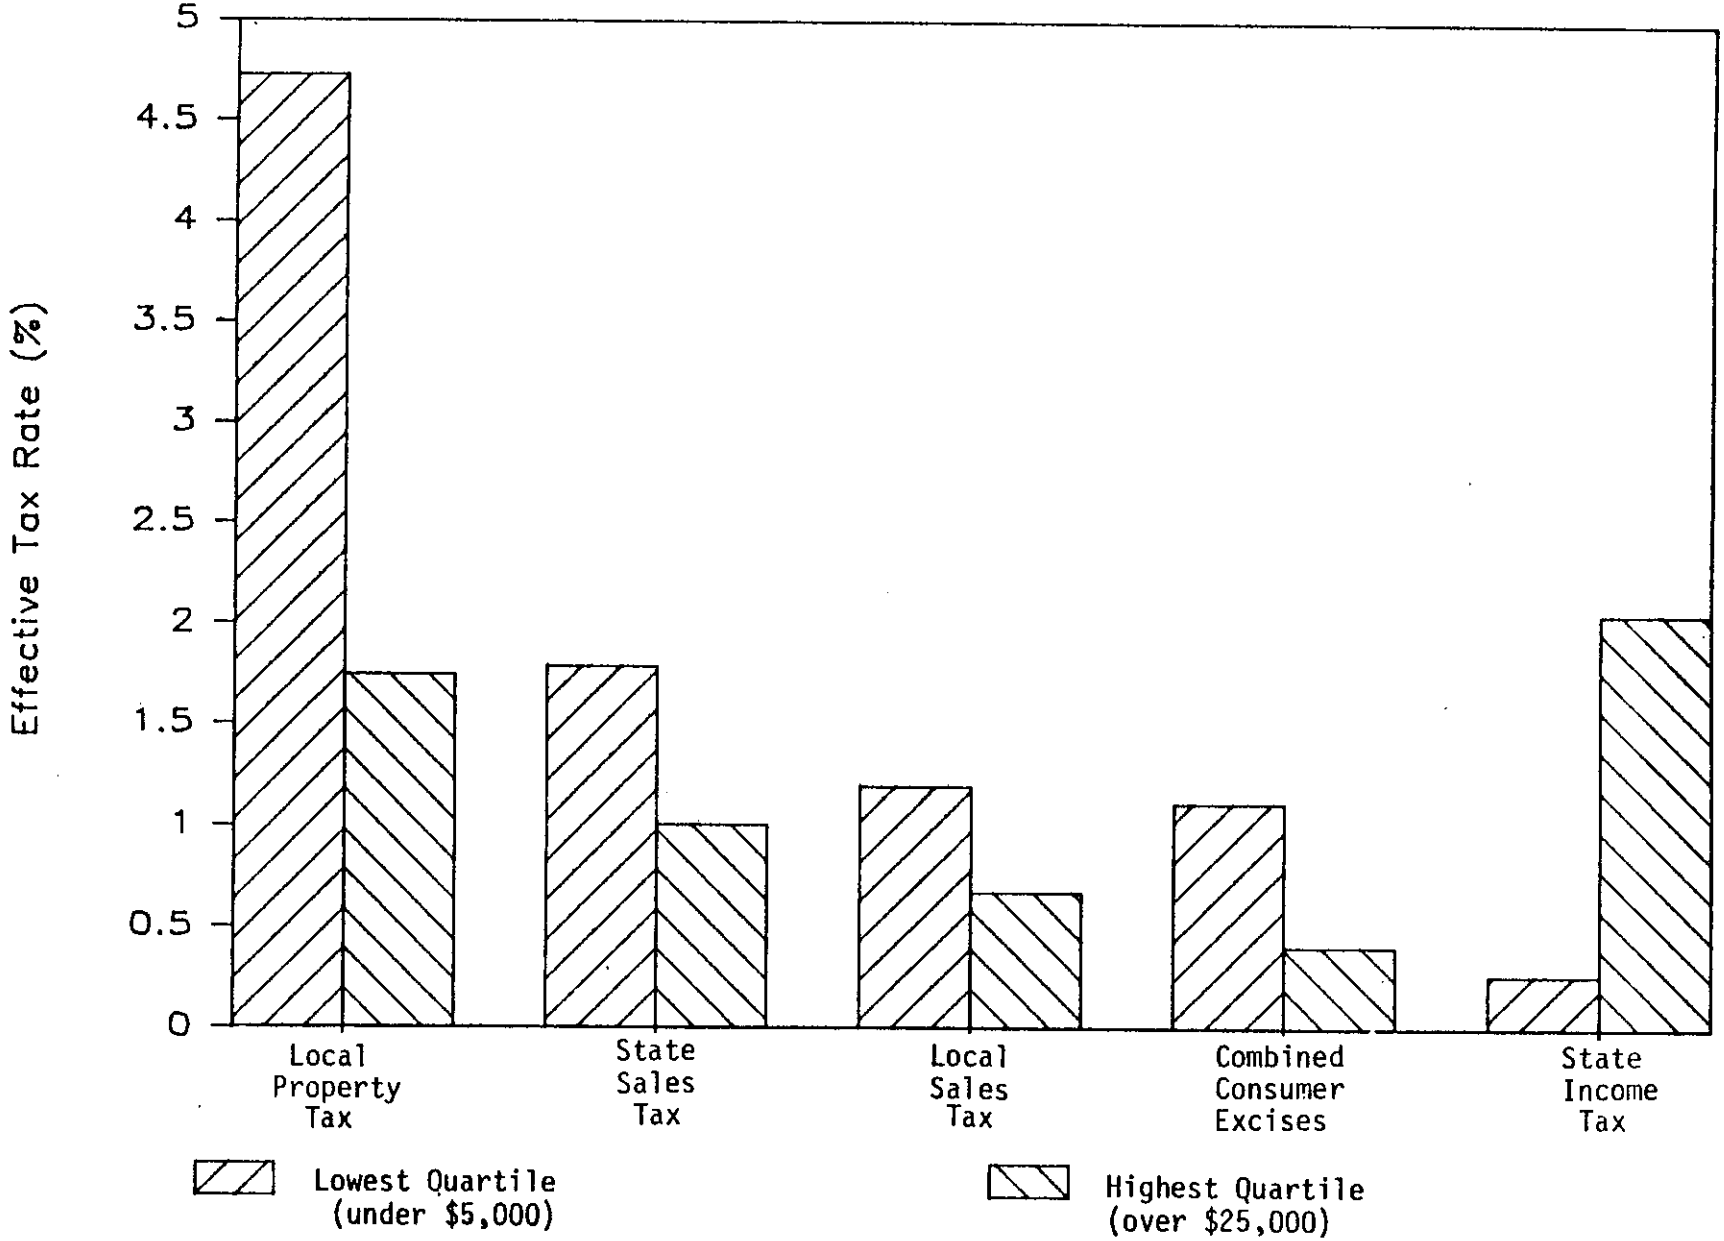
The marked growth in Colorado income during recent years, as noted, has shifted a large number of Colorado households into higher income classes. By fiscal year 1982 one-fourth of all households were in the "$25,000 and over" category, and about one-fourth remained in the "under $5,000" category. On the basis of this classification the 1982 effective tax rates for each of the major tax categories for the lowest and highest quartiles are compared as shown below and in Chart VII:

	Effective Tax Rates Expressed as Percentages of Adjusted Broad Income		
	Lowest Quartile (Under $5,000)	Highest Quartile ($25,000 and over)	Lowest Quartile as Percent of Highest
State Taxes:			
Individual Income	.27	2.06	.13
Sales Tax on Households	1.79	1.01	1.77
Excise Taxes on Households	.85	.33	2.58
Direct State Taxes	2.91	3.40	.86
Business Taxes	2.88	1.45	1.99
Total State Taxes	5.79	4.85	1.19
Local Taxes:			
Residential Property	4.73	1.75	2.70
Sales Tax on Households	1.20	.68	1.76
Excise Taxes on Households	.27	.08	3.50
Direct Local Taxes	6.20	2.51	2.47
Business Taxes	5.03	2.29	2.20
Total Local Taxes	11.23	4.80	2.34
Total State-Local Taxes	17.02	9.65	1.76

CTPS Progressivity Index

The following analysis has been based on an approximate measure of the regressivity or progressivity of each tax determined by expressing the relative tax burden (effective tax rate) of the lowest income stratum as a ratio to that of the highest. This "broad income"

THE LOWEST AND HIGHEST QUARTILES, FISCAL YEAR 1982*



* Based upon Adjusted Broad Income

index of progressivity/regressivity was first developed for the 1972 Colorado Tax Profile Study. If the ratio or index number is equal to 1.0, the tax should be considered proportional; if less than 1.0, the tax is progressive; and if more than 1.0, regressive.

As noted, in order to make the analysis consistent with previous reports, the index measure for fiscal year 1982, in terms of adjusted broad income, is based on the effective rates of the lowest income group (under $5,000) compared with those of the two highest strata combined, i.e., with the effective rate for all taxpayers with reported adjusted income of $25,000 or more. On this basis, the index values for each of Colorado's major state and local taxes, for the fiscal years 1972, 1980 and 1982 are summarized below:

	CTPS Progressivity Index Based on Broad Income -- Tax Burden Ratios of Lowest to Highest Income Class		
	1972	1980	1982
State Taxes:			
Individual Income	.16	.16	.13
Sales Tax on Households	1.85	2.04	1.77
Excise Taxes on Households	2.21	2.47	2.58
Direct State Taxes	.72	.87	.86
Business Taxes	1.33	1.85	1.99
Total State Taxes	.90	1.16	1.19
Local Taxes:			
Residential Property	2.13	2.06	2.70
Sales Tax on Households	2.00	2.03	1.76
Excise Taxes on Households	2.52	3.11	3.50
Direct Local Taxes	2.11	2.09	2.47
Business Taxes	1.93	2.05	2.20
Total Local Taxes	2.02	2.17	2.34
Total State-Local Taxes	1.35	1.61	1.76

The data clearly show that the Colorado state-local tax system has become more regressive during the decade since fiscal year 1972. On the broad income basis, the CTPS progressivity index number for the combined state-local structure rose from 1.35 in 1972 to 1.76 in fiscal year 1982. This means that in the latter year the combined state-local relative tax burden for households comprising the lowest quartile

(incomes under $5,000) was approximately three-fourths larger than that imposed on households in the top quartile (incomes of $25,000 or more). A decade earlier the relative burden on the poor was only about one-third heavier than that on the rich. This increased regressivity of the overall Colorado tax structure must be attributed primarily to the local tax structure. In 1972 the relative local tax burden of the lowest income stratum was twice that of the highest, by 1982 it had become almost two and a third times larger.

On the state level, the CTPS index for the total state tax burden continued to increase but at a significantly smaller rate in recent years--from 1.16 in fiscal 1980 to 1.19 in fiscal 1982. However, it appears that overall the state tax structure has remained essentially proportional during this decade. The progressivity of the direct state tax component has largely offset the regressivity of the indirect business tax component. For example, although the regressivity of state consumer excise taxes--highway user, cigarette and alcoholic beverages--has increased since 1980, the CTPS index numbers for both the state retail sales and individual income tax have decreased. In short, the state sales tax has become less regressive and the state income tax more progressive over the past two years.

It is also important to note that the state income tax continues to be the only significant progressive tax in the entire battery of state-local taxes levied in Colorado. Over the decade, the CTPS income tax index number has remained remarkably stable and with regard to this aspect, the income tax has shown the least variation of any of the major state-local taxes since 1972 when these studies were first initiated. The CTPS income tax index was .16 in both fiscal years 1972 and 1980, and dropped to .13 in fiscal year 1982. In other words, the increased progressivity of the state income tax for the latter year means that the relative income tax burden for households in the lowest income stratum (under $5,000) was only about one-eighth that of the relative burdens imposed on taxpayers in the top income category ($25,000 and over), whereas in the prior years the relative burden of the poor was about one-sixth that of the rich. This increased progressivity of the state income tax must primarily be attributed to the indexation of the base and rate provisions, optional itemization and a variety of other income tax revision measures introduced since 1978.[11]

In summary, it appears that despite the significant state income tax reductions enacted in recent years, the legislated progressivity of the state income tax has actually been improved and continues to offset to a large degree the regressivity of consumer expenditure taxes and other levies comprising the Colorado state tax structure.

Text Footnotes

1. See Appendix A, Table A-1 for a summary of officially reported state and local net tax collections for fiscal years 1972-1982 and Table A-2 for a summary of these taxes for the same years adjusted to a CTPS resident tax liability basis for purposes of this study.

2. See Appendix A, Table A-1. Net state tax collections are exclusive of state inheritance and gift taxes, hunting and fishing licenses, and pari-mutuel betting taxes which totaled $45.8 million in fiscal year 1982.

3. Reconciliation of reported net tax collections with adjusted tax liabilities of resident taxpayers on the state level is shown in Appendix A, Table A-3, and on the local level in Table A-4.

4. See Appendix A for the methodology and assumptions used for the allocations of specific taxes between households and businesses.

5. A similar offsetting assumption is not required for the direct taxation of non-residents. As indicated, an estimate of the Colorado taxes paid by non-residents (e.g., tourists in Colorado) has been excluded from the adjusted totals of state and local taxes. Similarly, taxes paid elsewhere by Colorado residents as out-of-state tourists are not considered part of the Colorado tax burden since they are not imposed by Colorado jurisdictions.

6. A companion study to this report presents a detailed analysis of the state individual income tax. See Colorado Department of Revenue, Colorado Statistics of Income, Individual Income Tax Returns Filed in Fiscal Year 1982, Colorado Legislative Council, Research Publication No. 279 (April 1983), Denver, Colorado.

7. For purposes of this study, all non-resident tax returns were excluded. They represented two percent of the returns filed and one percent of the reported income and tax liability.

8. U.S. Department of Commerce, Survey of Current Business, August 1982, p. 52.

9. See Appendix B for a description and derivation of the "adjusted broad income" measure.

10. The relatively small average income tax for households in the lowest quartile is partly due to the fact that three out of every five tax returns in this income category were nontaxable returns.

11. See Analysis of the Colorado Income Tax: Inflation, Indexation, and Credits, Colorado Legislative Council, Research Publication No. 260, (January 1981), Denver, Colorado, pp. 13-22.

Appendices

APPENDIX A

METHODOLOGY USED FOR ADJUSTMENT AND APPORTIONMENT OF STATE AND LOCAL TAXES BETWEEN HOUSEHOLDS AND BUSINESS

The state and local tax liabilities of Colorado resident taxpayers for fiscal year 1980 used as the basis for the present study were developed from original data obtained from a variety of sources. The state and federal individual income tax data for Colorado households were derived from a stratified random sample of 23,320 state tax returns. A description of the sampling methodology and statistical reliability of the income tax data are provided in Appendix B of the 1982 Colorado Statistics of Income report on individual income tax returns filed in fiscal year 1982. State and local revenue data on a collection basis were obtained from the Colorado State Department of Revenue, the Division of Accounts and Control, the Division of Property Taxation, the Department of Local Affairs, and the City of Denver Finance Office. These data are summarized and presented in Table A-1. In order to put the data on a resident liability basis, the reported collections were adjusted for nonallocable and nontax revenues, taxes paid by non-resident taxpayers, and vendor discounts on tax collections. The income tax data also were adjusted for the cash flow difference between collections and liabilities. A summary of the state and local taxes as adjusted for this study is presented in Table A-2.

Adjustment and Classification of State Taxes

The adjustments made in state taxes and the allocation of the adjusted taxes between those levied on households (direct taxes) and those levied on business (indirect taxes) are presented in Table A-3.

The base figures for "Reported Net Tax Collections" are exclusive of nonallocable state inheritance and gift taxes, hunting and fishing license fees and pari-mutuel betting taxes. All other nonallocable and/or nontax revenues were treated as adjustments to the reported net collections. These items represented sales tax assessments, penalties

and interest, audit deficiencies, and sales and motor vehicle taxes collected by the Revenue Department for local jurisdictions. These adjustments amounted to $23.0 million in fiscal 1982.

Income tax collections for any given year in an expanding economy will exceed the actual income tax liability incurred on the previous year's income because of tax withholding and declaration of estimated taxes. In fiscal year 1982 the reported net income tax collections were signficantly larger than liabilities. There also was an excess cash flow from the severance tax. Combined, these adjustments amounted to $84.8 million or five percent of the reported state collections.

The estimates of non-resident taxes by major source were as follows:

	Dollar Amounts in Millions		
Non-Resident Taxes	1977	1980	1982
Individual income taxes	$ 2.1	$ 3.8	$ 4.8
Retail sales taxes	19.9	26.9	32.4
Motor fuel taxes	10.6	11.4	15.7
Cigarette taxes	1.5	1.5	1.9
Alcoholic beverage taxes	2.4	2.6	3.1
Total	$36.5	$46.2	$57.9

The non-resident individual income tax was derived from the CTPS income tax analysis. The non-resident sales tax estimate was based on information provided by the Travel Marketing Section of the Colorado Division of Commerce and Development and the Colorado Visitors Bureau. The ratio of non-resident sales tax collections to total sales tax collections directly allocated to households was used as the basis for estimating non-resident excise taxes on motor fuel, cigarettes and alcoholic beverages.

The final adjustment for purposes of resident tax burden analysis was the addition of vendor discounts on sales, motor fuel and cigarette taxes retained by merchants as compensation for their costs of tax collection. This component of the tax burden is not included in either the gross or net taxes reported by the Department of Revenue. Vendor discounts on state tax collections for fiscal 1982 were as follows:

Vendor Discounts on Resident Taxpayers	Dollar Amounts in Millions 1977	1980	1982
Retail sales taxes	$10.4	$15.9	$18.0
Motor fuel taxes	2.4	2.7	3.2
Cigarette taxes	.7	.7	.7
Total	$13.5	$19.3	$21.9

On the basis of all of the above adjustments, the estimated state total tax liability averaged 91 percent of the reported net tax collections.

Table A-3 also shows the apportionment of the adjusted state taxes between resident households and business. For the purposes of this study, the individual income tax and excises on cigarettes and alcoholic beverages were treated as direct levies on Colorado resident households. The corporate income tax, insurance, severance and all other franchise and regulatory business taxes were classified as indirect or business taxes since such taxes ultimately are borne by individuals in the form of increased market prices or decreased dividends or undistributed corporate earnings. The remaining major state taxes -- the sales and use tax and the highway user taxes -- were apportioned between these two broad tax categories on the basis of information provided by the Research and Statistics Section of the Colorado Department of Revenue. The apportionment of state sales and highway user taxes between households and business firms for fiscal year 1982 are shown in Table A-5.

Adjustment and Classification of Local Taxes

Tax collections of local governments were treated in a manner similar to that described above for adjusting and allocating state taxes. Colorado local governments generally operate on a calendar year basis and the most recent data available on a uniform statewide basis were for calendar year 1981 which overlaps fiscal year 1982 by six months. A summary of the adjustments made to these levies and their apportionment between households and business are shown in Table A-4.

The specific adjustments made in local taxes for the CTPS study were as follows: the exclusion of the employee share of the Denver city occupation tax since these levies could not be allocated by

income classes; the exclusion of estimated non-resident sales and cigarette taxes based on the method used for computing non-resident state taxes; the reduction of the residential property tax by the old age property tax credits for the year; and the addition of vendor discounts on local sales and cigarette taxes.

The adjusted local tax totals also were apportioned between households and business firms. Cigarette taxes were classified as direct levies; all utility, franchise and regulatory taxes as indirect. The specific ownership tax was alloctated on the basis of motor vehicle licenses. Also, the two major sources of local tax revenues -- property and sales taxes -- were separately apportioned between households and business. The local sales tax was apportioned on the basis of the ratios described above for allocating the state sales and tax. The allocation of the residential portion of the property tax by income class is shown in Table A-6. The allocation assumed that property taxes on renter-occupied housing units were shifted forward and that such average taxes generally were smaller than those on owner-occupied units of families of comparable income and household size. The 1982 Colorado Statistics of Income report on individual income tax returns filed in fiscal year 1982 provided the basic data on household real estate tax deductions taken on itemized returns classified by adjusted gross income. The ratio of taxpayers reporting such deductions to the total number of taxpayers in each income stratum varied directly and significantly with the level of income.

Other Business Taxes[c]	46.8	78.4	128.6	144.5	177.1
Other Excise Taxes[d]	28.3	49.1	54.2	55.8	57.2
Total State and Local Taxes	$1,121.7	$1,951.4	$2,637.2	$2,829.8	$3,188.7

[a] Includes surtax and corporate income tax.

[b] Includes local specific ownership tax.

[c] Includes insurance, severance, corporate franchise, occupation, miscellaneous regulatory business taxes.

[d] Cigarette and alcoholic beverage taxes.

TABLE A-3. SUMMARY OF COLORADO STATE TAXES ALLOCATED BETWEEN HOUSEHOLDS AND BUSINESS, FISCAL YEARS 1972-1982

	Fiscal Years				
	1972	1977	1980	1981	1982
	(Money amounts in millions of dollars)				
Reported Net Tax Collections	$568.4	$1,009.2	$1,398.2	$1,373.2	$1,612.5
Adjustments					
Non-tax Revenues	-5.6	-7.6	-8.2	-17.2	-23.0
Excess of tax collections over tax liabilities	-19.5	-40.0	-62.3	-20.7	-84.8
Non-resident tax collections	-27.2	-36.5	-46.2	-50.4	-57.9
Vendor's discounts on sales and excise taxes	+9.6	+13.5	+19.3	+18.5	+21.9
Total Adjustments	-42.7	-70.6	-97.4	-69.8	-143.8
Total State Taxes	$525.7	$ 938.6	$1,300.8	$1,303.4	$1,468.7
Taxes on Resident Households					
Individual Income[a]	$156.2	$ 332.5	$ 437.6	$ 424.0	$ 483.1
Sales and use	104.3	218.7	304.8	300.7	348.4
Highway User[b]	68.7	78.5	87.8	85.0	101.2
Cigarette	13.6	16.8	17.1	18.2	18.1
Alcohol Beverage	11.7	17.5	21.0	21.0	22.2
Total Household Taxes	$354.5	$ 664.1	$ 868.3	$ 848.9	$ 973.0
Taxes on Business					
Corporate Income[c]	$ 33.3	$ 57.5	$ 99.7	$ 99.0	$ 75.6
Sales and Use	72.6	114.4	190.4	203.8	236.0
Highway User[d]	40.5	58.8	70.4	71.8	82.8
Insurance	16.2	27.8	39.9	40.9	46.7
Severance	.6	2.2	21.2	27.7	41.9
Other Business Taxes[e]	8.0	13.8	10.9	11.3	12.7
Total Business Taxes	$171.2	$ 274.5	$ 432.5	$ 454.5	$ 495.7

[a] Includes surtax.

[b] Includes allocated portion of fuel taxes, motor vehicle licenses and operator's fees, and safety inspections and other motor vehicle fees.

[c] Includes fiduciaries.

[d] In addition to allocated portion of highway user taxes listed above, includes special fuel and gross ton mile taxes.

[e] Includes franchise and all other regulatory business taxes.

TABLE A-4. SUMMARY OF COLORADO LOCAL TAXES ALLOCATED BETWEEN HOUSEHOLDS AND BUSINESS, FISCAL YEARS 1972-1982

	Fiscal Years				
	1972	1977	1980	1981	1982
	(Money amounts in millions of dollars)				
Reported Net Tax Collections	$604.9	$1,034.2	$1,367.7	$1,563.7	$1,756.8
Adjustments					
Nonallocable taxes[a]	-5.1	-6.4	-7.3	-7.4	-7.9
Non-resident Taxes	-6.0	-11.4	-17.1	-22.4	-25.8

Vendor's discounts on sales and excise taxes	+2.2	+5.3	+8.8	+10.5	+12.4
Total Adjustments	-8.9	-21.4	-31.3	-37.2	-36.8
Total Local Taxes	$596.0	$1,012.8	$1,336.4	$1,526.4	$1,720.0
Taxes on Resident Households					
Residential Property	$254.2	$ 382.0	$ 479.8	$ 589.4	$ 633.4
Sales and Use	42.2	110.7	176.2	187.5	233.8
Cigarette	2.9	14.8	16.1	16.6	16.9
Specific Ownership Tax	7.6	11.3	17.2	18.9	21.7
Total Household Taxes	$306.9	$ 518.9	$ 689.3	$ 812.4	$ 905.8
Taxes on Business					
Non-Residential Property	$237.8	$ 400.2	$ 481.9	$ 513.2	$ 568.5
Sales and Use	26.1	54.4	101.3	128.1	160.5
Other Business Taxes[b]	25.2	39.3	63.9	72.7	85.2
Total Business Taxes	$289.1	$ 493.9	$ 647.1	$ 714.0	$ 814.2

[a]Represents employee's share of Denver Occupation Tax.

[b]Includes business shares of Specific Ownership Tax and Denver Occupation Tax.

TABLE A-5. APPORTIONMENT OF COLORADO STATE SALES AND HIGHWAY USER TAXES BETWEEN HOUSEHOLDS AND BUSINESS, FISCAL YEAR 1982

	Ratio of Households to Business	Dollar Amounts (Thousands)		
		Total	Households	Business
A. Sales and Use Taxes:				
Food and apparel	100/0	$ 45,444	$ 45,444	--
Personal services and miscellaneous retail trade	95/5	105,724	100,437	5,287
General mdse., furniture, applicances, autos, auto parts and accessories, hotels and lodgings	90/10	138,791	124,913	13,878
Eating and drinking places	80/20	54,070	43,256	10,814
Hotels and lodging	60/40	13,743	8,246	5,497
Finance, insurance and real estate, NCE	50/50	3,815	1,908	1,907
Electric, gas, communications, transportation, utilities	25/75	32,811	8,203	24,608
Bldg. materials, hardware and farm equipment	15/85	36,627	5,494	31,133
Agr., mining, construction, manuf., whsle. trade	0/100	94,647	--	94,647
Net Sales Tax		$525,672	$337,901	$187,771
Less: Non-resident tax	100/0	-32,400	-32,400	--
Plus: Net use tax	43/57	73,127	31,737	41,390
Vendor's Discounts (Res)	62/38	17,962	11,128	6,834
Total Resident Sales and Use Tax	60/40	$584,361	$348,366	$235,995
B. Highway User Taxes				
Motor fuel taxes	75/25	$122,049	$ 91,537	$ 30,512
Motor vehicle operators licenses and other fees	70/30	33,431	23,402	10,029
Special fuel and ton-mile taxes	0/100	41,076	--	41,076
Reported Highway User Taxes		$196,556	$114,939	$ 81,617
Less: Non-resident motor fuel taxes	100/0	-15,731	-15,731	--
Plus: Vendor's discounts on motor fuel	72/28[a]	2,837	2,038	799
Vendor's discounts on special fuel	0/100	432	--	432
Total Resident Highway User Taxes	55/45	$184,094	$101,246	$ 82,848

[a] Inclusive of non-residents, the ratio was 75/25.

TABLE A-6. DERIVATION OF COLORADO RESIDENTIAL PROPERTY TAXES, FISCAL YEAR 1982

	Adjusted Gross Income Classes					
	Under $5,000	$5,000 to $15,000	$15,000 to $25,000	$25,000 to $50,000	$50,000 and Over	Total
Number of Resident Returns:						
With real estate tax deductions on itemized returns	13,075	79,711	127,457	235,106	53,616	508,965
All other households	332,353	318,003	129,345	46,369	4,002	820,072
Total number of households	335,428	397,714	256,508	281,475	57,618	1,329,037
Percent of total with real estate tax deductions on itemized returns	3.9%	20.0%	49.6%	83.5%	93.1%	38.3%
Average Property Taxes:						
Average property tax on returns with real estate tax deductions	$ 642	$ 552	$ 578	$ 745	$ 1,282	--
Average property tax imputed to all other households	$ 249	$ 313	$ 388	$ 552	$ 1,140	--
Total Property Taxes (in Thousands):						
Households with itemized deductions	$ 8,388	$ 43,968	$ 73,699	$175,263	$68,747	$ 370,065
All other households	80,266	99,560	50,186	25,596	4,562	260,170
Total Tax Unadjusted	$88,654	$143,528	$123,885	$200,859	$73,309	$ 630,235
Percent Distribution of Total Tax	14.07%	22.77%	19.66%	31.87%	11.63%	100.0%
Distribution of CTPS Property Tax	$91,294	$147,745	$127,566	$206,791	$75,463	$ 648,859
Less: Old Age Property Tax Credit	-14,796	-646	--	--	--	-15,442
Net Property Tax	$76,498	$147,099	$127,566	$206,791	$75,463	$ 633,417

APPENDIX B

DERIVATION OF HOUSEHOLD INCOME AND ALLOCATION OF TAXES BY MAJOR INCOME CLASSES

The extent to which a "tax profile" corresponds to the actual burden of state and local taxes borne by the poor, the middle class and the rich depends not only on how accurately the income and tax data are measured, but on the validity of the income concept and the reasonableness of the tax allocators developed for the analysis. This appendix describes both the income measure and tax allocations used for this study.

Income Measures for Tax Burden Analysis

It is generally recognized that the adjusted gross income reported on tax returns is not an adequate measure of income for tax burden analysis because of differences between the economic and statutory definitions of income. The latter excludes various forms of money income which are considered to be primarily transfer payments, such as public and private welfare payments, social security payments, veterans beneftis, and unemployment compensation. In contrast, the economic concept of income (e.g., the personal income measure in the national income accounts), in addition to transfer payments, includes sundry forms of imputed income, such as imputed rent on owner-occupied residences and interest on insurance and savings. The magnitude of the difference between these measures for Colorado is indicated by the fact that for fiscal 1982 the total adjusted gross income reported on state income tax returns represented only 72 percent of the total personal income for Colorado as estimated by the U.S. Department of Commerce.1

Intermediate measures of money income also have been based on sample surveys conducted by government agencies. Such money income measures are generally in accord with the popular concept of income since they exclude imputed income but include nontaxable money transfers as well as tax exempt interest, dividends and capital gains.

In order to obtain an alternative measure which would more closely correspond to the conventional concept of income and provide a broader base than the adjusted gross income reported on Colorado income tax returns, an adjusted broad income measure was developed. A recent study by the Bureau of the Census provides a detailed analysis of household money income for all families and unrelated individuals in the United States for 1981.[2] In this report the sources of income were classified by Census money income levels. After converting the money income into corresponding adjusted gross income classes, the Census allocation of transfer income was applied to the total money transfers received by Colorado households in 1981, as estimated by the U.S. Department of Commerce.[3]

In addition to the above money transfer income adjustment, the CTPS adjusted broad income measure includes an estimate of the tax exempt capital gains, dividends, interest and other money income statutorily excluded from adjusted gross income. An estimate of such income for Colorado was derived from the "tax expenditure" data presented in the U.S. Treasury, Special Budget Analysis, Fiscal Year 1981.[4] Non-transfer money income excluded from adjusted gross income, in turn, was allocated among the income strata on the basis of the distribution of family property income reported by the Bureau of the Census and excluded capital gains income reported by the Internal Revenue Service.[5]

A summary of the final adjustments made to the CTPS 1982 adjusted gross income in order to derive the corresponding adjusted broad income used as the alternative base is shown in the following table:

TABLE B-1. DERIVATION OF ADJUSTED BROAD INCOME FOR THE COLORADO TAX PROFILE STUDY, FISCAL YEAR 1980

Income Classes	A Average Adjusted Gross Income	B Ratio of Excluded Tax Exempt Income[a]	C Ratio of Excluded Transfer Income	D Income Expansion Factor (1+B+C)	E Average Broad Income (AxD)
Under $5,000	$ 2,098	.0331	1.2658	2.2989	$ 4,822
$5,000 to $15,000	9,653	.0367	.2901	1.3268	12,808
$15,000 to $25,000	19,715	.0358	.1119	1.1477	22,627
$25,000 to $50,000	34,181	.0433	.0702	1.1135	38,061
$50,000 and over	81,442	.0986	.0471	1.1457	93,308
Totals[b]	$17,998	.0512	.1450	1.1962	$21,528

[a]Capital gains, dividends and interest on public debt.

[b]Weighted totals and ratios based on total dollar amounts.

The Consumer Expenditure Profile

In order to allocate Colorado state and local expenditure taxes on retail sales, cigarettes, liquor and gasoline as well as business taxes shifted forward to consumers, it was necessary to develop an appropriate consumer expenditure profile of Colorado household expenditures, classified by household income level. The most comprehensive data on consumer spending by American households are provided by the U.S. Bureau of Labor Statistics' consumer expenditure surveys for 1972 and 1973.[6] The household expenditure and income data contained in these reports were used as the basis for allocating the sales, excise and indirect business taxes among households after the income measures were made comparable and the expenditure outlays were updated for price inflation. In accord with the definitions of taxable commodities and services under Colorado's present statutes, the estimated average household expenditures were classified into taxable and nontaxable categories. These average data were then used to derive the total expenditures for each major category of spending, classified by income level, in order to obtain the current patterns of consumption expenditures of Colorado households.

The specific 1982 consumer expenditure-income ratios developed for the CTPS analysis are summarized below:

TABLE B-2. RATIOS OF CONSUMER EXPENDITURES TO ADJUSTED GROSS AND BROAD INCOMES USED IN THE COLORADO TAX PROFILE STUDY, FISCAL YEAR 1982

	Colorado Consumer Expenditures as Ratios of:			
	Adjusted Gross Income		Adjusted Broad Income	
Income Classes	Taxable Expenditures	Total Expenditures	Taxable Expenditures	Total Expenditures
Under $5,000	1.424	3.403	.619	1.480
$5,000 to $15,000	.675	1.372	.509	1.034
$15,000 to $25,000	.564	1.080	.492	.941
$25,000 to $50,000	.433	.838	.389	.752
$50,000 and over	.305	.589	.266	.514
Total	.504	1.002	.421	.837

Tax Allocators Used for Burden Analysis

The allocations of individual state and local taxes by income class were made on the following basis:

- Individual income tax -- allocation obtained directly from the CTPS independent analysis of a stratified, random sample of 1981 Colorado individual income tax returns filed in fiscal year 1982 and prepared by the Department of Revenue for the companion report, Colorado Statistics of Income, 1982. A description of the sample and its statistical reliability is presented in Appendix B of that report.

- Sales and use taxes -- the direct portions of state and local sales taxes were allocated on the basis of ratios of taxable consumer expenditures to adjusted gross income developed from U.S. Bureau of Labor Statistics, 1973 Survey of Consumer Expenditures updated for inflation. The indirect portions of these taxes were allocated by total consumer expenditure ratios since such taxes represent business costs assumed to have been shifted forward to consumers.

- Excise taxes -- the cigarette, alcoholic beverage, specific ownership and the direct portions of highway user taxes also were allocated on the basis of updated Survey of Consumer Expenditure data. Ratios of consumer expenditures for these particular items to adjusted gross income were developed and applied to the CTPS tax data. The indirect portion of the highway user taxes was allocated on the basis of total consumer expenditure ratios.

- Property taxes -- the allocations of residential property taxes by income classes were based on the CTPS individual income tax analysis which provided detailed data on the number and amount of real estate tax deductions reported on itemized returns. Non-residential property taxes were allocated on the same basis as other business taxes, i.e., the ratios of total consumer expenditures to adjusted gross income.

- Corporate income tax -- one-half of this tax was assumed to be shifted forward to consumers and allocated on the same basis as the other indirect taxes described above. The remainder was assumed to be borne by equity stockholders and allocated on the basis of the distribution of family property income reported by the Bureau of the Census.

- Other business taxes -- this category includes all taxes levied on business firms other than the corporate income tax. As in the case of all other business costs, these business taxes were assumed to be indirectly borne by households and accordingly were allocated on the basis of the ratios of total consumption expenditures to income.

MEMORANDUM NO. 2

July 26, 1983

TO: Committee on Fiscal Policy

FROM: Legislative Council Staff

SUBJECT: Old Age Pension Fund

This memorandum provides background information and data on the Old Age Pension Fund (OAPF). Two associated funds, the Old Age Pension Stabilization Fund and the Old Age Pension Health and Medical Care Fund, are also described, but the focus of the memo is on the OAPF. The constitutional and statutory provisions which are cited have been appended.

OLD AGE PENSION FUND

Constitutional and Statutory Provisions

In November 1936, the voters approved Article XXIV of the Colorado Constitution. This article created the Old Age Pension Fund and set forth some basic guidelines concerning the fund. The 1936 constitutional provisions were amended by a vote of the people in 1956.

In addition to the constitutional provisions mentioned above, the Colorado statutes contain provisions regarding the OAPF. The relevant sections are 26-2-111 (2) and 26-2-112 through 117, C.R.S. 1973.

Sources of Revenues

Section 2, Article XXIV of the Colorado Constitution provides that the following monies must be allocated to the OAPF:

-- 85 percent of all sales, use and excise taxes;
-- 85 percent of retail license fees;
-- 85 percent of liquor taxes and license fees connected therewith;
-- any federal grants for old age assistance; and
-- all estate taxes and incorporation fees.

Any monies left in the OAPF after paying awards are transferred to the Old Age Pension Stabilization Fund. The stabilization fund is required to be maintained at $5 million. Monies in the stabilization fund are used solely to stabilize payments of old age pension awards.

After satisfying the OAPF and stabilization fund requirements, the remaining funds are transferred to the Old Age Pension Health and Medical Care Fund. Monies in this fund, up to $10 million annually, are used to provide health and medical care to persons who qualify for old age pensions (except those in tuberculosis or mental institutions). The remaining monies flow into the general fund.

The sequence described above may be best illustrated by the following diagram.

$ → OAPF → Stabilization Fund → Health and Medical Fund → General Fund

Eligibility Requirements

In order to receive OAPF benefits, a person must meet certain requirements. The person:

-- must be a citizen of the United States;
-- must be a resident of Colorado;
-- must be 60 years of age or older;
-- must have insufficient income, property or other resources as determined by the Department of Social Services;
-- must not, while receiving benefits or within five years of applying for such benefits, make a voluntary assignment or transfer of property for the purpose of rendering himself eligible; and
-- must not be an inmate of a penal institution (section 26-2-111).

It should be noted that if a person's total income exceeds the total maximum award, he is not eligible for assistance.

Types and Amounts of Awards

There are five types of benefits funded by the OAPF: basic minimum award, home care, adult foster care, winter utilities and funeral/burial. The home care and funeral/burial awards should be self-explanatory. The adult foster care award is to help defray room, board and other costs at certified facilities. The basic minimum award is a monthly benefit for eligible persons. Finally, the monthly winter utility award is to help eligible persons pay utility expenses and is only distributed from December through April.

The actual and projected maximum awards allowed for each of these benefits from FY 1981 through FY 1985 are enumerated below. When reviewing this table several items should be noted:

-- Except for funeral/burial expenses, these awards are all paid on a monthly basis.

-- The basic minimum award is set by the constitution (Section 6, Article XXIV) and statute (section 26-2-114) at $100, but it is allowed to be adjusted upwards by the Department of Social Services twice a year.

-- Adult foster care and home care awards may also be adjusted. Winter utility awards are statutorily set at $32 per month and funeral and burial awards have a maximum statutory limit of $500 and $200 respectively.

-- A person may receive a combination of these rewards.

-- Except for winter utility awards, the amount actually received by any one person depends on a number of factors including the person's resources and earned and unearned income. Awards are reduced by income according to a formula. Winter utility awards of $32 per person are reduced to $16 for a married couple if both are qualified to receive an old age pension.

MAXIMUM OAPF AWARDS
FY 1981 THROUGH FY 1985

Award	FY 1981 Actual	FY 1982 Actual	FY 1983 Actual
Basic Minimum	$293 (7-80) 307 (12-80)	$326 (7-81) 337 (12-81)	$341 (7-82) 352 (12-82)
Home Care	260	278	$295
Adult Foster Care	140	150	159
Winter Utilities	32	32	32
Funeral/Burial	500 (f) 200 (b)	500 (f) 200 (b)	500 (f) 200 (b)

Award	FY 1984 Projected	FY 1985 Projected
Basic Minimum	$364 (7-83) 374 (1-84)	$382 (7-84) 391 (1-85)
Home Care	310	325
Adult Foster Care	167	175
Winter Utilities	32	32
Funeral/Burial	500 (f) 200 (b)	500 (f) 200 (b)

Actual and Projected Expenditures

The table below provides a breakdown of the actual OAPF expenditures during fiscal years 1981 and 1982 as well as the projected expenditures for fiscal years 1983 through 1985. To get a full picture of monies distributed for old age pensioners, one must add to the OAPF total the $10 million in state funds which are annually allocated through the Old Age Pension Health and Medical Care Fund and any monies which are placed in the stabilization fund to maintain it at the $5 million level.

OLD AGE PENSION FUND
ACTUAL AND PROJECTED EXPENDITURES
FY 1981 THROUGH FY 1985

Award	FY 1981 Actual	FY 1982 Actual	FY 1983 Projected
Basic Award	$21,930,797	$24,294,080	$23,978,876
Home Care	1,522,619	2,591,241	4,430,340
Adult Foster Care	42,558	77,494	118,889
Funeral/Burial	147,335	142,360	155,000
Winter Utilities	3,329,250	3,402,336	3,370,624
Total	$26,972,559	$30,508,511	$32,053,729

Award	FY 1984 Projected	FY 1985 Projected
Basic Award	$26,165,568	$28,458,912
Home Care	6,353,650	8,506,710
Adult Foster Care	168,461	225,234
Funeral/Burial	155,000	155,000
Winter Utilities	3,566,700	3,716,700
Total	$36,409,379	$41,062,566

Number of Recipients

The average number of recipients of OAPF benefits for actual FY 1981 through projected FY 1985 are provided below on a monthly basis. Data is not available on the number of those receiving funeral/burial awards.

AVERAGE MONTHLY NUMBER OF OAPF RECIPIENTS
FY 1981 THROUGH FY 1985

Award	FY 1981 Actual	FY 1982 Actual	FY 1983 Projected
Basic Minimum	23,129	24,214	23,778
Home Care	561	985	1,689
Adult Foster Care	39	68	84
Winter Utilities	22,912	23,395	23,034

Award	FY 1984 Projected	FY 1985 Projected
Basic Minimum	24,778	25,778
Home Care	2,277	2,899
Adult Foster Care	119	149
Winter Utilities	23,778	24,778

COLORADO CONSTITUTION

OLD AGE PENSION

Article XXIV

Section 1. Fund created. A fund to be known as the old age pension fund is hereby created and established in the treasury of the state of Colorado.

Added November 3, 1936; as amended November 6, 1956. (See Laws 1937, p. 881; Laws 1957, p. 554.)

Section 2. Moneys allocated to fund. There is hereby set aside, allocated and allotted to the old age pension fund sums and money as follows:

(a) Beginning January 1, 1957, eighty-five percent of all net revenue accrued or accruing, received or receivable from any and all excise taxes now or hereafter levied upon sales at retail, or any other purchase transaction; together with eighty-five percent of the net revenue derived from any excise taxes now or hereafter levied upon the storage, use, or consumption of any commodity or product; together with eighty-five percent of all license fees imposed by the provisions of sections 138-6-1 to 138-6-42, both inclusive, of Colorado Revised Statutes 1953, and amendments thereto; provided, however, that no part of the revenue derived from excise taxes now or hereafter levied, for highway purposes, upon gasoline or other motor fuel, shall be made a part of said old age pension fund.

(b) Beginning January 1, 1957, eighty-five percent of all net revenue accrued or accruing, received or receivable from taxes of whatever kind upon all malt, vinous, or spirituous liquor, both intoxicating and non-intoxicating, and license fees connected therewith.

(c) All unexpended money in any fund of the state of Colorado, or political subdivision thereof, as of January 1, 1957, which prior to said date has been allocated to the payment of an old age pension.

(d) All grants in aid from the federal government for old age assistance.

(e) All inheritance taxes and incorporation fees appropriated under 101-2-2 to 101-2-4, both inclusive, Colorado Revised Statutes 1953, for old age pensions.

(f) Such other money as may be allocated to said fund by the general assembly.

Added November 3, 1936; as amended November 6, 1956. (See Laws 1937, p. 881; Laws 1957, p. 554.)

Section 3. Persons entitled to receive pensions. From and after January 1, 1957, every citizen of the United States who has been a resident of the state of Colorado for such period as the general assembly may determine, who has attained the age of sixty years or more, and who qualifies under the laws of Colorado to receive a pension, shall be entitled to receive the same; provided, however, that no person otherwise qualified shall be denied a pension by reason of the fact that he is the owner of real estate occupied by him as a residence; nor for the reason that relatives may be financially able to contribute to his support and maintenance; nor shall any person be denied a pension for the reason that he owns personal property which by law is exempt from execution or attachment; nor shall any person be required, in order to receive a pension, to repay, or promise to

repay, the state of Colorado any money paid to him as an old age pension.

Added November 3, 1936; as amended November 6, 1956. (See Laws 1937, p. 882; Laws 1957, p. 555.)

Section 4. The state board of public welfare to administer fund. The state board of public welfare, or such other agency as may be authorized by law to administer old age pensions, shall cause all moneys deposited in the old age pension fund to be paid out as directed by this article and as required by statutory provisions not inconsistent with the provisions hereof, after defraying the expense of administering the said fund.

Added November 3, 1936; as amended November 6, 1956. (See Laws 1937, p. 883; Laws 1957, p. 555.)

Section 5. Revenues for old age pension fund continued. The excise tax on sales at retail, together with all license fees levied by the provisions of sections 138-6-1 to 138-6-42, both inclusive, Colorado Revised Statutes 1953, and amendments thereto, are hereby continued in full force and effect beyond the date on which said taxes and license fees would otherwise expire, and shall continue until repealed or amended; provided, however, that no law providing revenue for the old age pension fund shall be repealed, nor shall any such law be amended so as to reduce the revenue provided for the old age pension fund, except in the event that at the time of such repeal or amendment, revenue is provided for the old age pension fund in an amount at least equal to that provided by the measure amended or repealed during the calendar year immediately preceding the proposed amendment or repeal.

Added November 3, 1936; as amended November 6, 1956. (See Laws 1937, p. 883; Laws 1957, p. 555.)

Section 6. Basic minimum award. (a) Beginning on the effective date of this article, every person entitled to and receiving an old age pension from the state of Colorado under any former law or constitutional provision shall be entitled to receive the basic minimum award hereinafter provided for, without being required to make a new application therefor, and such basic minimum award shall be paid each month thereafter, so long as he remains qualified, to each person receiving an old age pension at the time of the adoption of this article, and such basic minimum award shall likewise be paid to each person who hereafter becomes qualified to receive an old age pension; subject, however, to the provisions of this article relating to net income from other sources.

(b) From and after the effective date of this article, the basic minimum award payable to those persons qualified to receive an old age pension shall be one hundred dollars monthly, provided, however, that the amount of net income, from whatever source, that any person qualified to receive a pension may have shall be deducted from the amount of the pension award unless otherwise provided by law.

(c) The state board of public welfare, or such other agency as may be authorized by law to administer old age pensions, shall have the power to adjust the basic minimum award above one hundred dollars per month if, in its discretion, living costs have changed sufficiently to justify that action.

Added November 3, 1936; as amended November 6, 1956. (See Laws

1937, p. 884; Laws 1957, p. 556.)

Section 7. Stabilization fund and health and medical care fund. (a) All the moneys deposited in the old age pension fund shall be first available for payment of basic minimum awards to qualified recipients, and no part of said fund shall be transferred to any other fund until such basic minimum awards shall have been paid.

(b) Any moneys remaining in the old age pension fund after full payment of such basic minimum awards shall be transferred to a fund to be known as the stabilization fund, which fund shall be maintained at the amount of five million dollars, and restored to that amount after any disbursements therefrom. The state board of public welfare, or such other agency as may be authorized by law to administer old age pensions, shall use the moneys in such fund only to stabilize payments of basic minimum awards.

(c) Any moneys remaining in the old age pension fund, after full payment of basic minimum awards and after establishment and maintenance of the stabilization fund in the amount of five million dollars, shall be transferred to a health and medical care fund. The state board of public welfare, or such other agency as may be authorized by law to administer old age pensions, shall establish and promulgate rules and regulations for administration of a program to provide health and medical care to persons who qualify to receive old age pensions and who are not patients in an institution for tuberculosis or mental disease; the costs of such program, not to exceed ten million dollars in any fiscal year, shall be defrayed from such health and medical care fund; provided, however, all moneys available, accrued or accruing, received or receivable, in said health and medical care fund, in excess of ten million dollars in any fiscal year shall be transferred to the general fund of the state to be used pursuant to law.

Added November 6, 1956. (See Laws 1957, p. 556.)

Section 8. Fund to remain inviolate. All moneys deposited in the old age pension fund shall remain inviolate for the purpose for which created, and no part thereof shall be transferred to any other fund, or used or appropriated for any other purpose, except as provided for in this article.

Added November 3, 1936; as amended November 6, 1956. (See Laws 1937, p. 884; Laws 1957, p. 557.)

Section 9. Effective date. This article shall be in force and effect from and after January 1, 1957.

Added November 6, 1956. (See Laws 1957, p. 557.)

COLORADO STATUTES

OLD AGE PENSION

26-2-111. Eligibility for public assistance. (2) Old age pension. (a) Public assistance in the form of the old age pension shall be granted to any person who meets the requirements of subsection (1) of this section and any one of the following requirements:

(I) He has attained the age of sixty years or more;

(II) REPEALED.

(III) He is an inmate of an institution, not penal in character, maintained by the state or by a municipality therein or county thereof, and he meets the requirements of subparagraph (I) of this paragraph (a). The period of confinement as a patient in such institution shall be considered as residence in the state of Colorado.

(b) No person otherwise qualified shall be denied the old age pension by reason of the fact that relatives may be financially able to contribute to his support and maintenance, but income and property of the spouse of an applicant or recipient of the old age pension shall be considered in determining eligibility pursuant to rules and regulations of the state department, which rules and regulations shall be based upon and relate to the need of the applicant or recipient.

26-2-112. Old age pensions for inmates of public institutions. (1) Except as otherwise provided in this section, the application procedure, the investigation of applications, the procedure for granting of pensions, and all other provisions of this article relating to the administration of old age pensions shall apply to the class of old age pensions provided in section 26-2-111 (2) (a) (III).

(2) Where an inmate of an institution, not penal in character, maintained by the state or by a municipality therein or county thereof, meets the requirements for the class of old age pensions provided in section 26-2-111 (2) (a) (III) and has been committed to said public institution by order of the district or probate court, the superintendent or chief administrative officer of such institution shall make application for such pension for and in behalf of said inmate in the same manner as provided in section 26-2-106.

(3) (a) (I) Assistance payments under the old age pension granted to an inmate of the Colorado state hospital at Pueblo, Colorado, or the state home and training school at Ridge, Pueblo, or Grand Junction, Colorado, shall be paid to the chief financial officer of the institution within which the inmate is confined. Such chief financial officer shall receive and disburse such pension funds as trustee for such inmate and shall account for the same to the state controller in the manner now prescribed by law for the handling and accounting of trust or quasi-trust funds.

(II) Such chief financial officer shall be required to furnish, at the state's expense, a surety bond in such amount as the department of institutions shall from time to time deem sufficient in the premises to protect such funds.

(III) It is the duty of such chief financial officer to pay monthly from the assistance payments under the old age pension, as prior claim therefrom, all lawful claims of said public institution for the care, support, maintenance, education, and treatment of said inmate in accordance with article 12 of title 27, C.R.S. 1973.

(b) Where assistance payments under the old age pension are granted to an inmate of an institution maintained by any county or municipality, such payments shall be paid to such conservator or guardian as the district or probate court of such county may appoint, and under and amendable to the statutes applicable to conservators and guardians when so appointed.

26-2-113. Funds for old age pensions. (1) The state old age pension fund and the moneys allocated thereto pursuant to the provisions of article XXIV of the state constitution shall include amounts received from the incorporation fees and inheritance taxes imposed pursuant to subsection (2) of this section.

(2) (a) In addition to all other fees, charges, and impositions now fixed by law, there shall be assessed and collected, by the governmental department, person, or party in charge under whose jurisdiction the present collection is now required by law, the following fees, charges, sums, and impositions, which fees, charges, sums, and impositions shall be set aside, allocated, and allotted to the old age pension fund:

(I) Ten percent additional amount of the fees which are due and paid to the secretary of state upon incorporation of any corporation or association for profit; and

(II) Ten percent additional upon the amount of any tax payable under the provisions of the inheritance tax laws of this state.

(b) In computing the amount of the additional tax or fee as provided in paragraph (a) of this subsection (2), the nearest multiple to five cents shall be taken in all cases.

(3) Any and all of such funds collected by any state official or state department pursuant to subsection (2) of this section shall be paid over by such official or department to the state treasurer, who on the first day of each month shall divide and pay the same into each of the county old age pension accounts of the county social services funds in this state on the pro rata basis which the population of the respective county has to the population of the entire state according to the last official United States census.

26-2-114. Amount of assistance payments - old age pension. (1) The basic minimum award payable to those persons qualified to receive an old age pension shall be one hundred dollars monthly; but the state board may adjust the said basic minimum award above one hundred dollars if, in its discretion, living costs have changed sufficiently to justify such adjustment.

(2) (a) The state board, with the consent of the general assembly, may provide, from funds available pursuant to article XXIV of the state constitution, for special needs in the form of adult foster care or home care for persons eligible to receive old age pensions. For purposes of this paragraph (a), "adult foster care" means the care and services defined in section 26-1-111 (2) (j), and "home care" means care provided to an eligible recipient in his own home pursuant to rules of the state department when the recipient

requires personal care that he is no longer able to provide for himself. Need for home care shall be certified by the recipient's attending physician. Home care provided pursuant to state department rules includes, but is not limited to, supervision of self-administered medications, exercise, assistance in personal hygiene and activities of daily living, and preparation of meals. This paragraph (a) shall take effect July 1, 1979.

(a.5) Effective July 1, 1979, the state board shall provide, from funds available pursuant to article XXIV of the state constitution, to each person qualified to receive an old age pension, the sum of thirty-two dollars each month for the months of December, January, February, March, and April to provide for the increased expense of providing heat and fuel as special needs during said winter months; except that a husband and wife residing together both of whom are qualified to receive an old age pension shall not receive between them more than thirty-two dollars for each of the aforementioned months.

(b) (I) The amount of net income from whatever source, either in cash or in kind, which any person qualified for an old age pension may receive shall be deducted from the amount of monthly pension which such person would otherwise receive. The rules and regulations of the state department may require an applicant or recipient who may be eligible for benefits under another federal or state program or who may have a right to receive or recover other income or resources to take reasonable steps to apply for, otherwise pursue, and accept such benefits, income, or resources.

(II) In computing said net income, the county department shall not consider the ownership of real estate occupied as a residence by the recipient as income. In addition, in computing said net income, the county department shall not consider as income funds received by or on behalf of the recipient from the federal government for rent supplementation or relocation payments or income earned by the recipient up to the maximum extent allowed by Title I, section 2, of the social security act.

(III) Whenever the United States congress shall provide by law for a retroactive increase in monthly benefits under the old age, survivors, and disability provisions of the social security act, or for a retroactive increase in monthly benefits under the railroad retirement act, and the amount of such retroactive increase in monthly benefits shall be subsequently paid to an old age pension recipient in a lump sum, then the amount of such lump sum payment shall not be considered as income and shall not be deducted from the amount of monthly pension otherwise payable to such recipient for the month in which such lump sum payment is received.

(IV) Any special payment by the federal government in the form of a one-time-only credit against or refund of federal income taxes shall not be considered as income for purposes of this title unless required by federal law.

26-2-115. State old age pension fund - priority. All moneys deposited in the state old age pension fund shall be first available for payment of basic minimum awards to qualified old age pension recipients, and no part of said fund shall be transferred to any other fund until such basic minimum awards shall have been paid.

26-2-116. Old age pension stabilization fund. Any moneys remaining in the old age pension fund after full payment of basic minimum awards to qualified old age pension recipients shall be transferred to a fund to be known as the old age pension stabilization fund, which fund shall be maintained at the amount of five million dollars and restored to that amount after any disbursements therefrom. The state board shall use the moneys in such fund only to stabilize payments of old age pension basic minimum awards.

26-2-117. Old age pension health and medical care fund. Any moneys remaining in the state old age pension fund after full payment of basic minimum awards to qualified old age pension recipients and after establishment and maintenance of the old age pension stabilization fund in the amount of five million dollars shall be transferred to a fund to be known as the old age pension health and medical care fund, which is hereby created. The state department shall establish and promulgate rules and regulations for administration of a program to provide health and medical care to persons who qualify to receive old age pensions and who are not patients in an institution for tuberculosis or mental diseases. The costs of such program, not to exceed ten million dollars in any fiscal year, shall be defrayed from such health and medical care fund, but all moneys available, accrued or accruing, received or receivable, in said health and medical care fund in excess of ten million dollars in any fiscal year shall be transferred to the general fund of the state to be used pursuant to law.

To Members of the Fifty-seventh Colorado General Assembly:

Submitted herewith is the final report of the Committee on Tax Policy. The committee was appointed by the Legislative Council pursuant to House Joint Resolution No. 1030, 1989 session.

At its meeting on November 9, the Legislative Council reviewed this report. A motion to forward the report and recommended bills of the Committee on Tax Policy to the Fifty-seventh General Assembly was also approved.

Respectfully submitted,

/s/ Representative Chris Paulson
Chairman, Colorado Legislative Council

Summary Of Recommendations

The interim Committee on Tax Policy was directed to study the tax base of the state and local governments and the relationship of taxes to the long-term economic growth of the state and its communities. (House Joint Resolution 1030). The interim Committee on Tax Policy recommends a concurrent resolution and four bills.

Senate Concurrent Resolution A -- Constitutional Amendment -- Property Taxation

Senate Concurrent Resolution A submits to the voters of Colorado a proposed amendment to the state constitution. The amendment specifies the value for assessment of residential property to be 50 percent of market value. The value for assessment of all other property is 100 percent of market value.

This proposal also amends the state constitution to give the power of initiative to the citizens of counties, school districts, and special districts. The resolution limits the power of the initiative to changes in the property tax mill levy. No more than 15 percent of the registered voters, the actual percentage to be specified by statute, may be required to initiate a ballot proposal to either increase or decrease mill levies of counties, school districts, and special districts.

Bill 1 -- Sales and Use Taxes -- Out-of-State Retailers

Bill 1 provides for the collection of sales or use taxes imposed by the state on personal property purchased by Colorado residents from out-of-state retailers. The bill requires out-of-state retailers to collect local sales or use tax on these purchases. The authority to enforce collection is contingent upon federal enabling legislation.

Bill 2 -- Study of State and Local Taxes

Bill 2 authorizes a comprehensive study of state and local taxes. An advisory committee of ten members appointed by the President of the Senate and Speaker of the House of Representatives directs the study. The research director of the Legislative Council administers the contract for the performance of the study, which is to be delivered to the General Assembly by January 1, 1992.

Bill 3 -- Certification of County Assessors

Bill 3 requires assessors to be certified by the Board of Assessor Certification within two years of taking office. The bill creates the Board of Assessor Certification in the Department of Local Affairs. Members of the board will be compensated at the standard rate for boards and commissions.

The program is cash funded by fees paid by assessors seeking certification. (The bill also has an appropriations clause.) Assessor certification requires 55 hours of training and the successul completion of an examination. The bill establishes additional requirements for optional certification of assessors as residential appraisers or general appraisers.

Bill 4 -- Property Taxes

Bill 4 contains several changes to Colorado property tax laws. Changes are made in the schedule for protests and appeals. The bill clarifies when a property owner should use the abatement procedure rather than the appeals procedure. Assessors must give written explanation for an increase in actual value in an intervening year of more than 75 percent from the previous year. The price of new or used mobile homes must be provided when an application for certificate of title is made. The use of discount factors in valuing vacant land is extended up to 30 years from ten years under current law.

Summary Of Committee Activity

Committee Charge

House Joint Resolution 1030 charged the interim Committee on Tax Policy with studying the tax base of the state and local governments and the relationship of taxes to the long-term economic growth of the state and its communities. HJR 1030 directed the study to include, but not be limited to, the following:

- examination of the changing tax burdens on individuals and businesses imposed by the major state and local taxes;
- consideration of the changing burdens on the state and local governments in financing the provision of public services to the residents of Colorado;
- analysis of the optimum combination of broad-based state taxes and other state and local taxes in the financing of state and local government activities;
- identification of future trends which will create financial impacts on state and local governments within the next ten years and the ability of the tax base of state and local governments to respond to these trends; and
- examination of the rates, bases, credits, and exemptions of each major state and local tax.

Committee Activities and Findings

The committee met eight times and heard from state and local officials, administrators, and interested persons knowledgeable about state and local taxes and expenditures. The first six meetings were fact-finding hearings and the last two meetings concerned recommended legislation. The committee found the following issues to be relevant to the examination of the tax policy of the state.

Property Taxes

Consideration was given to assessment rates on residential and nonresidential properties and the use of the initiative to limit or increase property taxes at the local level. The committee evaluated two potential problem areas, the taxation of personal property and the taxation of vacant land. The need for the certification of assessors was also addressed.

Assessment rates. The committee reviewed the constitutional requirements for the assessment of residential and nonresidential property. Article X, section 3 of the Colorado Constitution requires that residential real property be assessed at a rate that ensures that the percentage of residential to total assessed value remains the same as it was in the year

preceding a reappraisal. This provision, added to the constitution in 1982, is commonly referred to as the "Gallagher Amendment." The effect of the provision is to require residential real property to total approximately 45 percent of total assessed property in the state. In 1982, the residential assessment rate was set at 21 percent of market value, while the assessment rate for all other properties, except oil and gas production, was set at 29 percent. Oil and gas properties are assessed at 87.5 percent of the value of annual production.

Since 1982, the rate at which residential property is assessed has steadily dropped in order to maintain its 45 percent share of total assessed value. The residential assessment rate was reduced to 18 percent in 1987 and to 16 percent in 1988 and was 15 percent for 1989. While the residential assessment rate has dropped, the assessment rate for other types of property has remained at 29 percent of actual value.

The decline in the residential assessment rate has resulted in an assessment rate on nonresidential properties nearly twice as high as on residential properties. Further declines in the residential assessment rate would place residential assessments below 50 percent of nonresidential assessments, a situation that could prove unhealthy for the continued economic development of the state because of the adverse impact of high assessments on small businesses and newly established enterprises.

The committee considered assessing all property at 100 percent of market value with a homestead exemption of 50 percent of market value up to a maximum of $50,000. For other types of residential property, such as rental property, another type of exemption tied to income tax credits was discussed. These changes would require an amendment to the state constitution.

The committee reviewed the income approach to determining the value of apartments. Testimony suggested that the income approach would improve the accuracy of valuing apartments, but the use of the income approach in valuing rental property would also require a constitutional change.

The committee recommends a concurrent resolution that recognizes a two-to-one ratio between the assessment rates of nonresidential and residential property. Establishing a fixed assessment rate for residential and nonresidential properties at 50 and 100 percent respectively will reduce some of the uncertainty in property taxes. As noted below, the concurrent resolution also provides for the use of the initiative in setting local government property tax mill levies.

The initiative power in property taxation. Testimony was provided on the 1988 initiative to limit state and local revenues and the expected initiative in 1990. Committee concerns were expressed that a statewide limitation on property tax revenues could be inappropriate if the problem was confined to certain districts or counties within the state. The committee recommends the power of the initiative be extended to residents of all local governments. Because residents of municipalities already have this right, the committee's proposal brings this right to residents of counties, school districts, and special districts. The initiative to change property tax mill levies is included in Senate Concurrent Resolution A.

Valuation of vacant land. Another topic addressed was the assessment of vacant land. Vacant land falls into several different categories, and administrative practices should take this into account.

After testimony regarding assessor practices in valuing platted vacant land, the committee voted to extend the time that assessors may use. Current law allows the use of present worth factors (discount factors) in valuing vacant land below 80 percent of buildout. However, section 39-1-103, C.R.S., states that the "time period shall not generally exceed ten years." Since market absorption rates can easily exceed ten years, the committee voted to recommend a 30 year maximum horizon.

Taxation of personal property. Personal property tax collections are a problem for county administrators and businesses because a large percentage of the tax bills are for small amounts of money. County treasurers, assessors, and business interests suggested that the first $200 of taxes due on personal property be exempt from taxation. This exemption would reduce administrative costs and, to a lesser degree, compliance costs. Personal property is approximately eight percent of total taxable property in the state.

The committee asked the Office of Legislative Legal Services for clarification on the constitutionality of a partial exemption on personal property taxes. Legislative Legal Services staff said that the courts have ruled that exemptions must be explicitly granted in the constitution. Thus, an exemption for personal property having a value of less than a specified amount probably would require an amendment to the state constitution.

Certification of assessors. In order to improve the professionalism of county assessors, the committee recommends that a certification program be required of assessors to be administered by a board in the Department of Local Affairs. At the time of the committee deliberations, a similar bill which applied to real estate appraisers was being considered in the Sunrise/Sunset Committee.

The bill does not require a candidate for the office of assessor to have a background in assessment or appraisal. However, the assessor must have taken course work and passed an examination on these topics within two years of taking office.

Trends in State and Local Taxes

The committee reviewed the level of Colorado state and local taxes in comparison with other states and the trends in General Fund revenues by tax category.

Colorado taxes compared with other states. Compared with other states, Colorado ranks low in the amount of state taxes collected and high in the amount of local taxes collected. In fiscal year 1987, the latest year for which statistics are available, Colorado ranked 41st among the states in state government tax collections per capita and 7th in local government tax collections per capita.

Rankings of state government tax collections per $1,000 of personal income show Colorado to be 47th. In contrast, Colorado placed 6th in local government tax collections

per $1,000 of personal income. In the overall rankings considering state and local taxes together, Colorado ranked 34th.†

The advisability of greater state government funding of programs now financed by local governments was also discussed. Several members said that increases in state support should be tied to reductions in local government reliance on property taxes. A greater state role in K-12 education and social services was reviewed. The committee recognized that local government discretion in tax and spending decisions is also an important consideration.

General Fund revenues. Colorado is increasingly reliant on individual income taxes to fund the General Fund. In fiscal year 1975-76, individual income taxes accounted for 38.8 percent of General Fund revenues. In fiscal year 1988-89, this proportion had increased to 52.7 percent of General Fund revenues. During the same period, revenues from excise taxes fell as a percent of General Fund revenues. In fiscal year 1975-76, excise taxes were 42.6 percent of General Fund revenues. In fiscal year 1988-89, excise taxes comprised 33.6 percent of General Fund revenues.

Gross General Fund Receipts by Tax Sources (in percent)

Fiscal Year	Excise Tax	Individual Income Taxes	Corporate Income Taxes	Other Receipts	Total
1976	42.6%	38.8%	8.0%	10.6%	100.0%
1977	43.7	38.8	8.4	9.2	100.0
1978	44.0	39.1	7.9	9.0	100.0
1979	44.3	36.8	8.4	10.5	100.0
1980	44.4	34.4	8.7	12.6	100.0

†Colorado Public Expenditure Council, How Colorado Compares, 1989 Edition.

Sales and Use Taxes

The need for a uniform sales and use tax base for the state and local governments within the state was evaluated. The committee also discussed taxing catalogue sales made to Colorado residents.

Sales and use tax base. Counties and municipalities have a sales tax base similar to the state, with exceptions in the taxation of food, residential utilities, and machine tools. A minority of counties and municipalities relying on sales tax revenues exempt the same items as the state.

Business and local government representatives testified on the advisability of a uniform sales tax base. Businesses favor a uniform base because the costs of compliance will be lower. Local governments oppose a uniform base because the large number of exemptions granted by the state has reduced the base on which the tax is collected.

A draft bill that would have broadened the state sales tax base by repealing most exemptions to sales and use taxes was considered but not recommended. The fiscal impact of ending the exemption on food sales, with restoration of an income tax credit for low-income families, was estimated to be $58.8 million. The estimated fiscal impact of repealing most other sales tax exemptions was $129.6 million. Extending the sales tax to cable television services, long-distance telephone calls, computer software, and recreational admissions would increase sales tax revenues an estimated $41.5 million. The bill was split into two bills so that the exemption on food for home consumption could be considered separately. Both bills later failed in committee.

Catalogue sales. Although sales taxes are due on out-of-state mail order purchases by Colorado residents, the collection of these taxes is rare because the state cannot require out-of-state retailers to collect sales and use taxes. The Supreme Court held in National Bellas Hess vs. the Illinois Department of Revenue that states could not compel out-of-state retailers to collect these taxes.

This decision would be overturned in a bill currently before Congress. The bill would allow states to require out-of-state firms to collect sales tax on purchases made to residents of their state. The committee recommends Bill 1 to allow the Department of Revenue to collect these taxes should Congress enact the enabling legislation. Should Bill 1 become law, Colorado would become one of approximately ten states to require the collection of sales taxes on catalogue sales.

Tax Policy Committee Advisory Committee

An advisory committee was formed to assist the committee in its charge to study state and local government tax issues. Members of the Tax Policy Committee nominated people to serve on the advisory committee and members of the committee were appointed by Senator Strickland from the list of nominees.

The advisory committee met eight times and discussed a wide range of tax policy issues. In October, the advisory committee voted to recommend a concurrent resolution and a bill to the Tax Policy Committee. The recommendations and background report of the advisory committee are appended to this report.

Other Topics Considered by the Tax Policy Committee

The Joint Rules of the Senate and House limited the number of bills to be recommended by the committee to four. The committee initially voted to recommend two bills, summarized below, before selecting the four recommended bills described in this report. The two bills that could not be recommended will be carried by individual members of the committee.

Limitation on state spending. The committee reviewed the current seven percent limit on state appropriations and voted to replace the fixed-percent limitation to a limitation tied to growth in Colorado personal income. The seven percent restriction on General Fund appropriations growth is found in section 24-75-201.1, C.R.S. This bill is not committee recommendation, however.

Truth in taxation. The committee reviewed the procedures for increasing property tax revenues by more than 5.5 percent by statutory municipalities and county governments under section 29-1-303, C.R.S. These procedures, called "truth in taxation," are scheduled for repeal January 1, 1990. After testimony from the Colorado Municipal League, Colorado Counties, Inc., and the Division of Local Government, the committee voted that the truth-in-taxation statutes should be continued. This bill is not committee recommendation, however.

COMMITTEE RECOMMENDATIONS

The following concurrent resolution and four bills are recommended for action in the 1990 session of the Colorado General Assembly.

Senate Concurrent Resolution A– Concerning the Power of the Initiative with Respect to Increases or Decreases in General Fund Mill Levies and Providing for the Valuation for Assessment of Residential and Nonresidential Land

Senate Concurrent Resolution A submits an amendment to the Colorado Constitution to the voters. If approved, the amendment will change current law in two areas.

Initiatives on Property Tax Mill Levies

Articles V and IX of the Colorado Constitution are amended to give the power of the initiative to the citizens of counties, school districts, and special districts. The initiative power is limited to changes in the property tax mill levy. Provisions for exercising the initiative power are to be specified by statute. No more than 15 percent of the registered voters will be required to propose a change in the mill levy.

The amendment also provides that if voters of a school district vote to decrease the mill levy, the state has no responsibility to make up the **decrease** in revenues. If the voters of a school district vote to **increase** the mill levy, the state has no responsibility to increase appropriations in order to equalize expenditures among school districts.

Property Tax Assessment Rates

Article X of the Colorado Constitution is amended to change the assessment rates of residential and nonresidential property. Residential property is to be assessed at 50 percent of actual value and all other types of property are to be assessed at 100 percent of actual value. Currently, real residential property tax are assessed at 15 percent of actual value and all other property is assessed at 29 percent of actual value. Oil and gas property is currently assessed at 87.5 percent of the value of its annual production.

Under the current law, the assessment rate on real residential property varies from year to year. Each reapprisal year the residential assessment rate must be set so that the assessed value of residential property is a fixed percentage of the total assessed value of all types of property. The proposed amendment ends this requirement. Residential property is assessed at a lower rate than other property, providing an exemption for homesteads and rental property.

Bill 1– Concerning the Collection of Sales and Use Taxes on Purchases by Colorado Residents from Out-of-State Retailers

Catalogue sales to Colorado residents by out-of-state firms are subject to sales and use taxes. However, the state cannot compel out-of-state retailers to collect these taxes. The U.S. Supreme Court, in a 1967 decision, National Bellas Hess v. Illinois Department of Revenue, 87 S.Ct. 1389, held that states could not require out-of-state mail order companies to collect sales and use taxes if the company had a limited presence in that state. Because out-of-state mail order companies do not collect sales taxes in these states, the mail order companies may have a competitive advantage compared to companies located within the state.

The strong growth of the mail order industry, coupled with innovations in telemarketing and cable television sales, means that increasing amounts of sales are not subject to Colorado sales taxes. Led by the National Conference of State Legislatures and the National Governors' Association, many states have moved to close the Bellas Hess loophole.

Bill 1 allows state and local governments to collect taxes due on catalogue sales, contingent upon federal enabling legislation. Several states have recently enacted legislation to enhance the tax compliance of out-of-state vendors including Arkansas, California, Florida, Louisiana, Nebraska, North Dakota, Ohio, Oklahoma, South Carolina, and South Dakota. A bill by Representative Jack Brooks of Texas (House Resolution 2230) authorizing states to require mail order companies to collect sales and use taxes will probably be debated in Congress in 1990.

Bill 1 has been drafted to use federal guidelines for in-lieu tax payments if the federal legislation allows this type of payment. The bill has a sunset provision that repeals the authority to require the collection of sales and use taxes on catalogue sales 24 months after the effective date of the federal legislation. If Bill 1 and federal legislation are enacted, the estimated increase in Colorado sales tax receipts is $22.8 million.

Bill 2– Concerning a Study of State and Local Taxes

Bill 2 authorizes a comprehensive review of state and local taxes, open to bid by public and private researchers. An advisory committee of ten members is appointed by the President of the Senate and Speaker of the House of Representatives. The research director of the Legislative Council administers the contract. The last comprehensive overview of state and local taxes in Colorado was the 1959 McNichols Study, named after then-Governor Stephen McNichols. According to the National Conference of State Legislatures, most states have conducted a tax study during the past ten years.

The advisory committee recommended the comprehensive review of state and local taxes. The advisory committee believes that a study of trends in state and local taxes will show an erosion of the tax base. The Tax Policy Committee voted to fund a comprehensive analysis with the following goals:

- to study the relationship of state and local taxes to long-term economic growth;
- to evaluate the tax burdens on individuals and businesses and how these burdens have changed over time;
- to examine the changing burdens on the state and local governments in providing government services;
- to analyze and recommend the best combination of broad-based and equitable taxes needed by the state and local governments of the state;
- to identify trends that will affect state and local government finances in the next ten years;
- to examine rates, bases, credits, and exemptions of state and local taxes; and
- to examine potential revenue and expenditure limitations for state and local governments.

The bill has a blank appropriations clause. The cost of the study could be between $350,000 and $500,000. The range of costs of recent studies in other states has been between $350,000 and $1,500,000. The study must be completed and delivered to the General Assembly by January 1, 1992.

Bill 3– Concerning the Certification of Assessors

Bill 3 creates the Board of Assessor Certification in the Department of Local Affairs and requires the certification of county assessors. Assessors do not need certification to run for office but must obtain certification from the Board of Assessor Certification within two years of taking office. The intent of the proposed legislation is to improve the professionalism of county assessors. Although many assessors are well trained and participate in professional organizations such as the International Association of Assessing Officers, this bill would set a minimum standard for all assessors.

The bill requires 55 hours of training, and assessors must pass an examination in order to receive certification. Additional requirements for optional certification of assessors as residential appraisers or general appraisers are established. The certification program is cash funded by fees paid by assessors seeking certification. Members of the board will be compensated at the standard rate for boards and commissions of $50.00 per day, plus expenses.

Bill 4– Concerning Property Taxes

Bill 4 combines several committee concerns relating to property taxes under a broad title.

Sales data on manufactured homes. Under current law, the sales price of real property must be reported when the conveyance document is filed for recording. Bill 4 extends this

requirement to manufactured homes. The price of a new or used manufactured home must be provided when an application for a certificate of title is made.

Vacant land. The use of discount factors in valuing vacant land is extended to 30 years from 10 years under current law. The vacant land must be within an approved plat. Discounting may be used until 80 percent of the lots are sold. Although up to 30 years can be used, the period should reflect the expected market absorption rate.

Notices of valuation. Assessors must give written explanation for an increase in actual value in years between reassessment years of more than 75 percent from the previous year. Notices of Valuation (NOVs) must be mailed by May 1 of each year rather that May 15 under current law.

Schedule changes. Several sections of the bill change the schedule for protests and appeals of the assessed value of real property.

Activity	Existing Deadline	New Deadline
Mailing of NOVs	May 15	May 1
Notice of Appeal to Assessor		
by Mail	June 10	May 27
in Person	June 15	June 1
Assessors' Last Day to Hear Appeals	June 15	Last working day in June
Notice of Appeal to County Board of Equalization	July 10	Third Monday in July
Audit of Assessments	August 15	September 15
Review of Abstracts by State Board of Equalization	September 5	September 20

Court appeals. Appeals made under current law to the District Court are changed to the Court of Appeals. The appeal procedure is specified by Colorado Appellate Rules and section 24-4-106(9), C.R.S.

Abatements. The bill clarifies the procedures for abatements and abatement appeals. Abatements are allowed when taxes have been levied illegally or erroneously, as defined in the bill.

Extract From the Advisory Committee Report

An advisory committee to the interim Committee on Tax Policy was formed to assist the interim committee in its charge to study the tax base of the state and local governments and the relationship of taxes to the long-term economic growth of the state and its communities. The paragraphs which follow summarize the two recommendations to the interim Committee on Tax Policy.

Recommendation 1

The Tax Policy Advisory Committee voted to recommend that the interim Committee on Tax Policy adopt a concurrent resolution which would submit to the registered electors of the State of Colorado an amendment to section 1 of Article V, section 2 of Article IX, and section 3 of Article X of the constitution of the State of Colorado.

Background

The 1982 amendment to the Colorado Constitution, commonly referred to as the "Gallagher Amendment," establishes an assessed valuation relationship of 45 percent for property classified as residential and 55 percent for all other classes of property. At the time the amendment was approved by the voters, assessed valuation was set at 21 percent of actual value for residential property and 29 percent of actual value for nonresidential classes of property. The exceptions to these rates are oil and gas properties, which are assessed at 87.5 percent of the prior year's production.

Since 1982, the rate at which residential property is assessed has steadily dropped in order to maintain the overall relationship required by the constitutional amendment. The residential assessment rate was reduced to 18 percent in 1987, 16 percent in 1988, and was further reduced to 15 percent for 1989. Many people believe that this reduction has resulted in a shift of an ever increasing property tax burden to nonresidential classes of property. Certain exemptions and assessed valuation reductions have been granted to some nonresidential properties during the past seven years. However, the market value of existing nonresidential properties has fallen at a rate proportionately faster than the market value decline of existing residential properties.

The consensus of the Tax Policy Advisory Committee is that this trend will likely continue, further reducing the residential assessment rate in order to be in compliance with the Gallagher amendment. While the Gallagher amendment has had the effect which was originally intended, continued increased reliance on nonresidential properties is unhealthy for the economic well-being of the state. Therefore, a constitutional amendment which freezes the relationship of assessed valuations for residential properties at one-half the nonresidential rate is in the best interest of both the residential and business communities.

The Tax Policy Advisory Committee is also of the opinion that the citizens of the state at any level of local government should be given additional authority to adjust local mill levies in either direction in order to fund desired levels of local services. Currently, the electorate may vote to increase property taxes, but may not vote to decrease property taxes. This would be accomplished through the initiative and election process.

Recommendation 2

The Tax Policy Advisory Committee recommends that the interim Committee on Tax Policy adopt the bill entitled CONCERNING A STUDY OF STATE AND LOCAL TAXES.

Background

The last comprehensive analysis of financing government in Colorado was submitted to former Governor Steve McNichols by the Governor's Tax Study Group in 1959. Since that time, a number of tax profile studies have been conducted under the direction of Legislative Council with a primary emphasis on the individual income tax.

An independent analysis of the Colorado tax structure which goes beyond the scope of recent tax studies is necessary in order to plan for the financing of state and local governments into the twenty-first century. Over the past 30 years, individual legislative actions, while well intended at the time, have eroded the tax base and complicated the process of financing all units of government within the state. For this reason, a fresh look at where the state is, and where the state is going, is necessary to carry out sound fiscal policy in the future.

According to Steve Gold, National Conference of State Legislatures, most states have conducted a tax study during the past ten years. The cost of these tax studies varied greatly, depending on the content and depth of the study. The table below identifies selected states which have conducted recent tax studies and related statistical research.

State	Cost	Study Group	Duration
Arizona	$600,000	Economics Professors	14 months
Minnesota	$625,000	In-house/Academic	18 months
Nebraska	$381,371	Syracuse University	12 months
Nevada	$450,000	Price Waterhouse	18 months
New Jersey	$1,500,000	Select Committee	24 months
Texas	$350,000	Tax Equity Committee	18 months
Utah	N/A	In-House/Consulting	N/A
Washington	$450,000	Peat Marwick	12 months

Interim Committee on Tax Policy

SENATE CONCURRENT RESOLUTION

SUBMITTING TO THE REGISTERED ELECTORS OF THE STATE OF COLORADO AN AMENDMENT TO SECTION 1 OF ARTICLE V, SECTION 2 OF ARTICLE IX, AND SECTION 3 OF ARTICLE X OF THE CONSTITUTION OF THE STATE OF COLORADO, RESERVING TO THE REGISTERED ELECTORS OF EVERY COUNTY, SCHOOL DISTRICT, AND SPECIAL DISTRICT THE INITIATIVE POWER WITH RESPECT TO INCREASES OR DECREASES IN GENERAL FUND MILL LEVIES, MODIFYING THE STATE'S OBLIGATION TO PROVIDE A THOROUGH AND UNIFORM SYSTEM OF FREE PUBLIC EDUCATION UNDER CERTAIN CIRCUMSTANCES, AND PROVIDING THAT THE VALUATION FOR ASSESSMENT OF RESIDENTIAL PROPERTY SHALL BE FIFTY PERCENT OF ACTUAL VALUE AND THAT THE VALUATION FOR ASSESSMENT FOR ALL OTHER PROPERTY SHALL BE ONE HUNDRED PERCENT OF ACTUAL VALUE.

Resolution Summary

(Note: This summary applies to this resolution as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Amends section 1 of article V of the state constitution to reserve the initiative power to the registered electors of

every county, school district, and special district with respect to an increase or decrease in the general fund mill levy. Allows the general assembly to establish by law the manner for exercising such initiative power. Sets the percentage of registered electors required to propose an initiated measure at fifteen percent. Requires the election on any initiated measure to be held on general election day in even-numbered years or on the second Tuesday in November in odd-numbered years. Amends section 2 of article IX of the state constitution to provide that the state has no responsibility to increase state appropriations to equalize expenditures in school districts where the registered electors have approved an initiated mill levy increase or to supplant lost property tax revenues in school districts where the registered electors have approved an initiated mill levy decrease.

Amends section 3 of article X of the state constitution to set the valuation for assessment for residential property at fifty percent of actual value and to set the valuation for assessment for all other property at one hundred percent of actual value. Eliminates procedures for adjustment of the valuation for assessment for residential property based on the percentage of the aggregate statewide valuation for assessment which is attributable to residential real property.

Be It Resolved by the Senate of the Fifty-seventh General Assembly of the State of Colorado, the House of Representatives concurring herein:

SECTION 1. At the next general election for members of the general assembly, there shall be submitted to the registered electors of the state of Colorado, for their approval or rejection, the following amendment to the constitution of the state of Colorado, to wit:

Section 1 (9) of article V of the constitution of the state of Colorado is amended to read:

Section 1. General assembly - initiative and referendum. (9) (a) The initiative and referendum powers reserved to the people by this section are hereby further reserved to the

registered electors of every city, town, and municipality as to all local, special, and municipal legislation of every character in or for their respective municipalities. The manner of exercising said powers shall be prescribed by general laws; except that cities, towns, and municipalities may provide for the manner of exercising the initiative and referendum powers as to their municipal legislation. Not more than ten percent of the registered electors may be required to order the referendum nor more than fifteen per cent to propose any measure by the initiative in any city, town, or municipality.

(b) THE INITIATIVE POWER RESERVED TO THE PEOPLE BY THIS SECTION IS HEREBY FURTHER RESERVED TO THE REGISTERED ELECTORS OF EVERY COUNTY, SCHOOL DISTRICT, AND SPECIAL DISTRICT AS TO THE INCREASE OR DECREASE IN THE GENERAL FUND MILL LEVY. FOR ANY FUTURE BUDGET YEAR, THE REGISTERED ELECTORS MAY PROPOSE AN INCREASE OR DECREASE IN THE GENERAL FUND MILL LEVY FROM THE MILL LEVY FOR THE CURRENT BUDGET YEAR. THE MANNER OF EXERCISING SAID POWER SHALL BE PRESCRIBED BY THE GENERAL ASSEMBLY BY GENERAL LAWS. NOT MORE THAN FIFTEEN PERCENT OF THE REGISTERED ELECTORS MAY BE REQUIRED TO PROPOSE AN INCREASE OR DECREASE IN THE GENERAL FUND MILL LEVY IN ANY COUNTY, SCHOOL DISTRICT, OR SPECIAL DISTRICT. ANY ELECTION HELD ON AN INITIATED MEASURE PURSUANT TO THIS PARAGRAPH (b) SHALL BE HELD AT THE GENERAL ELECTION IN EVEN-NUMBERED YEARS OR AT A SPECIAL ELECTION HELD ON THE FIRST TUESDAY AFTER THE FIRST MONDAY IN NOVEMBER IN ODD-NUMBERED YEARS.

Section 2 of article IX of the constitution of the state of Colorado is amended to read:

Section 2. Establishment and maintenance of public schools. (1) The general assembly shall, as soon as practicable, provide for the establishment and maintenance of a thorough and uniform system of free public schools throughout the state, wherein all residents of the state, between the ages of six and twenty-one years, may be educated gratuitously. One or more public schools shall be maintained in each school district within the state, at least three months in each year; any school district failing to have such school shall not be entitled to receive any portion of the school fund for that year.

(2) (a) THE REQUIREMENT OF SUBSECTION (1) OF THIS SECTION FOR THE ESTABLISHMENT AND MAINTENANCE OF A THOROUGH AND UNIFORM SYSTEM OF FREE PUBLIC SCHOOLS THROUGHOUT THE STATE IN REGARD TO GENERAL FUND MILL LEVIES OF A SCHOOL DISTRICT SHALL BE SUBJECT TO THE DECISION OF THE REGISTERED ELECTORS IN ANY SCHOOL DISTRICT TO INCREASE OR DECREASE ITS GENERAL FUND MILL LEVY IN AN ELECTION HELD PURSUANT TO SECTION 1 (9) (b) OF ARTICLE V OF THE STATE CONSTITUTION.

(b) IF THE REGISTERED ELECTORS OF A SCHOOL DISTRICT VOTE IN AN ELECTION HELD PURSUANT TO SECTION 1 (9) (b) OF ARTICLE V OF THE STATE CONSTITUTION TO INCREASE THE GENERAL FUND MILL LEVY, NEITHER THE STATE NOR THE GENERAL ASSEMBLY SHALL BE REQUIRED TO INCREASE STATE APPROPRIATIONS TO MATCH SUCH INCREASE IN THE GENERAL FUND MILL LEVY IN WHOLE OR IN PART OR

TO EQUALIZE EXPENDITURES OF OTHER SCHOOL DISTRICTS IN RELATION TO THE SCHOOL DISTRICT WHICH VOTED TO INCREASE ITS GENERAL FUND MILL LEVY. IF THE REGISTERED ELECTORS OF A SCHOOL DISTRICT VOTE TO DECREASE THE GENERAL FUND MILL LEVY, NEITHER THE STATE NOR THE GENERAL ASSEMBLY SHALL BE REQUIRED TO INCREASE STATE APPROPRIATIONS TO SUPPLANT THE LOST PROPERTY TAX REVENUES WITH STATE REVENUES.

Section 3 (1) (b) of article X of the constitution of the state of Colorado is amended to read:

Section 3. Uniform taxation - exemptions. (1) (b) Residential real property, which shall include all residential dwelling units and the land, as defined by law, on which such units are located, and mobile home parks, but shall not include hotels and motels, shall be valued for assessment at ~~twenty-one~~ FIFTY percent of its actual value. ~~For the property tax year commencing January 1, 1985, the general assembly shall determine the percentage of the aggregate statewide valuation for assessment which is attributable to residential real property. For each subsequent year, the general assembly shall again determine the percentage of the aggregate statewide valuation for assessment which is attributable to each class of taxable property, after adding in the increased valuation for assessment attributable to new construction and to increased volume of mineral and oil and gas production. For each year in which there is a change in the level of value used in determining actual value, the general assembly shall adjust the ratio of valuation for~~

~~assessment for residential real property which is set forth in this paragraph (b) as is necessary to insure that the percentage of the aggregate statewide valuation for assessment which is attributable to residential real property shall remain the same as it was in the year immediately preceding the year in which such change occurs. Such adjusted ratio shall be the ratio of valuation for assessment for residential real property for those years for which such new level of value is used.~~ All other taxable property shall be valued for assessment at ~~twenty-nine~~ ONE HUNDRED percent of its actual value. ~~However,~~ The valuation for assessment for producing mines, as defined by law, and lands or leaseholds producing oil or gas, as defined by law, shall be ~~a portion of~~ the actual annual or actual average annual production therefrom, based upon the value of the unprocessed material, according to procedures prescribed by law for different types of minerals. Nonproducing unpatented mining claims, which are possessory interests in real property by virtue of leases from the United States of America, shall be exempt from property taxation.

SECTION 2. Each elector voting at said election and desirous of voting for or against said amendment shall cast his vote as provided by law either "Yes" or "No" on the proposition: "An amendment to section 1 of article V, section 2 of article IX, and section 3 of article X of the constitution of the state of Colorado, reserving to the registered electors of every county, school district, and special district the initiative power with respect to

increases or decreases in general fund mill levies, modifying the state's obligation to provide a thorough and uniform system of free public education under certain circumstances, and providing that the valuation for assessment of residential property shall be fifty percent of actual value and that the valuation for assessment for all other property shall be one hundred percent of actual value."

SECTION 3. The votes cast for the adoption or rejection of said amendment shall be canvassed and the result determined in the manner provided by law for the canvassing of votes for representatives in Congress, and if a majority of the electors voting on the question shall have voted "Yes", the said amendment shall become a part of the state constitution.

Interim Committee on Tax Policy

A BILL FOR AN ACT

CONCERNING THE COLLECTION OF SALES AND USE TAXES ON PURCHASES OF TANGIBLE PERSONAL PROPERTY BY PERSONS IN COLORADO FROM OUT-OF-STATE RETAILERS.

Bill Summary

(Note: This summary applies to this bill as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Provides for the collection of sales or use taxes imposed by the state or a political subdivision thereof on sales of tangible personal property purchased by and delivered to a person in Colorado from an out-of-state retailer. Provides that provisions relating to the collection and remittance of sales and use taxes by retailers are applicable to out-of-state retailers collecting sales or use taxes. Provides a mechanism for the collection of the local sales or use tax and for the distribution of the moneys collected.

Makes these collection procedures contingent on passage of federal legislation authorizing states to require collection of sales or use taxes by out-of-state retailers.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. Article 26 of title 39, Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW PART to read:

PART 3

SALES AND USE TAX -

COLLECTION OF TAX BY OUT-OF-STATE RETAILERS

39-26-301. Legislative declaration. The general assembly hereby declares that the purpose of this part 3 is to implement federal legislation authorizing states to require out-of-state retailers to collect the sales or use tax imposed on the sale of tangible personal property by such retailers to persons in this state.

39-26-302. Definitions. For purposes of this part 3, unless the context otherwise requires:

(1) "Local sales or use tax" means a sales or use tax imposed by a political subdivision of the state.

(2) "Out-of-state retailer" means a retailer subject to the provisions of this part 3 as determined by the executive director of the department of revenue.

(3) "Sales or use tax" means the state sales or use tax and the local sales or use tax.

(4) "State sales or use tax" means the sales or use tax imposed by the state pursuant to parts 1 and 2 of this article.

39-26-303. Out-of-state retailer - collection of sales or use tax. (1) An out-of-state retailer subject to the provisions of this part 3 shall file an application for a license pursuant to section 39-26-103 and shall collect and remit the state sales or use tax and the local sales or use tax imposed on sales of tangible personal property by such

retailer.

(2) (a) Except as otherwise provided in paragraph (b) of this subsection (2), the sales or use tax required to be collected by such out-of-state retailer pursuant to the provisions of subsection (1) of this section shall be collected and remitted to the state in the manner provided in part 1 of this article for the collection and remittance of sales taxes collected by retailers, and all such out-of-state retailers shall be subject to the provisions of part 1 of this article which apply to retailers collecting sales taxes except for those provisions determined by the executive director of the department of revenue by rule and regulation to be inapplicable to out-of-state retailers collecting the sales or use tax pursuant to the provisions of subsection (1) of this section.

(b) The provisions of sections 39-26-105 and 39-26-109 relating to the time periods for reporting and remitting sales taxes shall not be applicable to out-of-state retailers collecting and remitting the sales or use tax pursuant to the provisions of subsection (1) of this section, and the time periods for reporting and remitting the sales or use tax shall be established by the executive director of the department of revenue by rule and regulation.

39-26-304. Out-of-state retailer - collection of set fee in lieu of actual local sales or use tax - distribution of local sales or use taxes collected. (1) Except as otherwise provided in subsection (2) of this section, an out-of-state

retailer required to collect a local sales or use tax shall collect such local sales or use tax at the actual local sales or use tax rate, and the moneys collected shall be distributed to the affected political subdivision in accordance with procedures adopted by the executive director of the department of revenue by rule and regulation.

(2) (a) In lieu of collecting the local sales or use tax at the actual local sales or use tax rate, the out-of-state retailer may elect to collect an in-lieu fee at the in-lieu rate established in accordance with paragraph (b) of this subsection (2). Such out-of-state retailer shall notify the executive director of the department of revenue whether he intends to collect the in-lieu fee, and once such election has been made the out-of-state retailer shall use such method for the collection of the local sales or use tax on all sales of tangible personal property made to persons in this state.

(b) The executive director of the department of revenue shall establish the in-lieu rate in accordance with a formula based upon federal legislation and adopted by such executive director by rule and regulation.

(c) The in-lieu fees remitted to the department of revenue pursuant to the provisions of paragraph (a) of this subsection (2) shall be distributed to political subdivisions in accordance with a formula based upon federal legislation and adopted by the executive director by rule and regulation and within the time period established by such executive director by rule and regulation.

39-26-305. Applicability. (1) The provisions of this part 3 shall be applicable following the passage of federal legislation authorizing states to require out-of-state retailers to collect sales or use taxes in connection with sales of tangible personal property.

(2) The provisions of section 39-26-304 (2) relating to the collection of an in-lieu fee shall not be applicable unless the federal legislation includes a provision authorizing such fee in lieu of collection of the local sales or use tax at the actual local sales or use tax rate.

39-26-306. Repeal of part. This part 3 is repealed, effective on the December 31 following the end of the twenty-four month period beginning on the effective date of the federal legislation authorizing states to require out-of-state retailers to collect sales or use taxes in connection with sales of tangible personal property.

SECTION 2. 29-2-106 (3) (a), Colorado Revised Statutes, 1986 Repl. Vol., is amended to read:

29-2-106. Collection, administration, enforcement. (3) (a) The executive director of the department of revenue shall, at no charge, except as provided in paragraph (b) of this subsection (3), administer, collect, and distribute any sales tax imposed in conformity with this article. The executive director shall make monthly distributions of sales tax collections to the appropriate official in each county and in each incorporated city or town in the amount determined under the distribution formula established in accordance with

this article. Except as provided in ~~section~~ SECTIONS 39-26-208 AND 39-26-304, C.R.S., any use tax imposed pursuant to section 29-2-109 shall be collected, administered, and enforced by the city, town, or county as provided by ordinance or resolution.

SECTION 3. Safety clause. The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

Interim Committee on Tax Policy

A BILL FOR AN ACT

CONCERNING A STUDY OF STATE AND LOCAL TAXES, AND, IN CONNECTION THEREWITH, MAKING AN APPROPRIATION.

Bill Summary

(Note: This summary applies to this bill as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Creates a state and local tax advisory committee. Provides for appointment of one-half of the members of the advisory committee by the president of the senate and one-half by the speaker of the house of representatives. Sets forth the duties of said advisory committee. Requires that the director of research of the legislative council, with the advice of the advisory committee, contract for a comprehensive study of state and local taxes. Specifies objectives of said study. Provides that the study shall be completed and the final report submitted to the general assembly by January 1, 1992. Sunsets the advisory committee on July 1, 1992. Makes an appropriation.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. Article 21 of title 39, 1982 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW SECTION to read:

39-21-115.5. State and local tax policy advisory committee created - comprehensive study of state and local taxes. (1) (a) There is hereby created a state and local tax

advisory committee. Said advisory committee shall consist of ten members, to be appointed as follows: Five of the members of the advisory committee shall be appointed by the president of the senate; and five of the members shall be appointed by the speaker of the house of representatives. Members of said advisory committee shall include, but shall not be limited to, individuals with knowledge or experience in finance, economics, or public tax policy. No member of said advisory committee shall be an elected official.

(b) The advisory committee shall make recommendations to the director of research of the legislative council in regard to the contracting for and the conducting of the comprehensive study of state and local taxes specified in subsection (2) of this section.

(c) Members of the advisory committee shall receive no compensation for their services but shall be reimbursed for actual and necessary expenses incurred in the performance of their duties.

(2) The director of research of the legislative council shall, with the advice and recommendations of the advisory committee, contract to conduct a comprehensive study of state and local taxes and to prepare a report to the general assembly concerning findings, conclusions, and recommendations.

(3) The state and local tax study shall be completed and the final report to the general assembly shall be submitted on or before January 1, 1992.

(4) The objectives of the study of state and local taxes shall include, but shall not be limited to, the following:

(a) To study the relationship of state and local taxes to the long-term economic growth and prosperity of the state, its communities, and its citizens;

(b) To evaluate the burdens on individuals and businesses resulting from taxes imposed by the state and by local governments and to determine how these burdens have changed over time;

(c) To examine the changing burdens on the state and local governments in financing the provision of public services to the residents of Colorado;

(d) To analyze and make recommendations concerning the optimum combination of broad-based state and other state and local taxes to adequately finance future needs for state and local government services and equitably distribute the burdens on taxpayers;

(e) To identify future trends which will create financial impacts on the state and local governments within the next ten years and to evaluate the ability of the tax base of the state and local governments to respond to these trends;

(f) To examine the rates, bases, credits, and exemptions of each state and local tax; and

(g) To examine potential revenue and expenditure limitations for state and local governments, including, but not limited to, the indexing of the maximum annual increase in state expenditures to indicators of growth.

(5) (a) This section is repealed, effective July 1, 1992.

(b) Prior to said repeal, the committee appointed pursuant to this section shall be reviewed as provided in section 2-3-1203, C.R.S.

SECTION 2. 2-3-1203 (3) (e), Colorado Revised Statutes, 1980 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW SUBPARAGRAPH to read:

2-3-1203. Sunset review of advisory committees. (3) (e) (XI) The state and local tax advisory committee, appointed pursuant to section 39-21-115.5, C.R.S.

SECTION 3. Appropriation. In addition to any other appropriation, there is hereby appropriated, out of any moneys in the general fund not otherwise appropriated, to the legislative department, for allocation to the legislative council, for the fiscal year beginning July 1, 1990, the sum of _____ dollars ($), or so much thereof as may be necessary, for the implementation of this act.

SECTION 4. Safety clause. The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

Interim Committee on Tax Policy

A BILL FOR AN ACT

CONCERNING THE CERTIFICATION OF COUNTY ASSESSORS.

Bill Summary

(Note: This summary applies to this bill as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Effective January 1, 1991, requires assessors to be certified by the board of assessor certification within two years of taking office and to maintain such certification while holding office. Allows assessors to receive additional certification.

Creates the board of assessor certification in the department of local affairs. Specifies the qualifications of members of the board and provides for the appointment of such members. Creates the board of assessor certification cash fund in the state treasury for moneys collected from fees for certifying assessors and specifies that moneys in such fund shall be appropriated for the administration of the article. Provides for the issuance of assessors' certificates and the renewal of thereof.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. 24-1-125, Colorado Revised Statutes, 1988 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW SUBSECTION to read:

24-1-125. Department of local affairs - creation.

(7) The board of assessor certification created by article

2.5 of title 39, C.R.S., shall constitute a part of the department of local affairs and shall exercise its powers and perform its duties and functions under the department as if it were transferred to said department by a type 1 transfer.

SECTION 2. Part 8 of article 10 of title 30, Colorado Revised Statutes, 1986 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW SECTION to read:

30-10-801.5. Additional qualifications - certification. (1) On and after January 1, 1991, in addition to any qualifications specified in section 30-10-801, any assessor shall become certified by the board of assessor certification pursuant to the provisions of section 39-2.5-105 (1), C.R.S., within two years from the date on which such assessor was sworn into office and shall maintain said certification while holding office. Any costs and expenses incurred by any assessor in obtaining and maintaining said certification shall be deemed reasonable and necessary expenses of the assessor incurred in the performance of his duties and shall be allowed by the board of county commissioners and paid out of the county treasury.

(2) On and after January 1, 1991, upon becoming certified pursuant to the provisions of section 39-2.5-105 (1), C.R.S., any assessor may become certified as a residential appraiser or as a general appraiser, or both, by the board of assessor certification pursuant to the provisions of section 39-2.5-105 (2) or (3), C.R.S.

SECTION 3. Title 39, Colorado Revised Statutes, 1982

Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW ARTICLE to read:

ARTICLE 2.5

Board of Assessor Certification

39-2.5-101. Definition. As used in this article, unless the context otherwise requires:

(1) "Board" means the board of assessor certification created in section 39-2.5-102.

39-2.5-102. Board of assessor certification - creation - compensation - immunity. (1) There is hereby created in the department of local affairs the board of assessor certification. Said board shall be comprised of five members appointed by the governor with the consent of the senate. Of such members, three shall be real estate appraisers, one shall be a county assessor currently holding office, and one shall be a member of the public at large. Of the members of the board appointed for terms beginning July 1, 1990, two of the appraiser members and the public member shall be appointed for terms of three years, and the county assessor member and the remaining appraiser member shall be appointed for terms of one year. Members of the board appointed after July 1, 1990, shall hold office for terms of three years each. In the event of a vacancy by death, resignation, removal, or otherwise, the governor shall appoint a member to fill the unexpired term. The governor shall have the authority to remove any member for misconduct, neglect of duty, or incompetence.

(2) The board shall exercise its powers and perform its

duties and functions under the department of local affairs as if it were transferred to said department by a type 1 transfer as such transfer is defined in the "Administrative Organization Act of 1968", article 1 of title 24, C.R.S.

(3) Each member of the board of assessor certification shall receive the same compensation and reimbursement for expenses as those provided for members of boards and commissions in the division of registrations pursuant to section 24-34-102 (13), C.R.S. Payment for all such per diem compensation and expenses shall be made out of annual appropriations from the board of assessor certification cash fund created in section 39-2.5-104.

(4) Members of the board shall be immune from suit in any civil action based upon any disciplinary proceedings or other official acts they perform in good faith pursuant to this article.

(5) A majority of the board shall constitute a quorum for the transaction of all business, and actions of the board shall require a vote of a majority of such members present in favor of the action taken.

39-2.5-103. Powers and duties of the board. (1) In addition to all other powers and duties imposed upon it by law, the board has the following powers and duties:

(a) To promulgate and amend, as necessary, rules and regulations pursuant to article 4 of title 24, C.R.S., for the implementation and administration of this article;

(b) To charge application, examination, and renewal fees

in the amounts authorized pursuant to section 39-2.5-104 to all assessors for certification, examination, and renewal pursuant to the provisions of this article. No fees received from assessors seeking certification, examination, or renewal shall be refunded.

(c) (I) To keep all records of proceedings and activities of the board conducted under authority of this article, which records shall be open to public inspection at such time and in such manner as may be prescribed by rules and regulations formulated by the board.

(II) The board shall not be required to maintain or preserve certification history records of any assessor certified under the provisions of this article for any period of time longer than seven years.

(d) To issue, deny, or refuse to renew a certificate pursuant to the provisions of this article;

(e) Except as otherwise provided in section 39-2.5-105 (4), to develop or purchase any examination required for the administration of this article, to offer each such examination at least twice a year or, if demand warrants, at more frequent intervals, and to establish a passing score for each examination which reflects a minimum level of competency.

39-2.5-104. Board of assessor certification cash fund - creation - use of funds - fee adjustments. (1) All fees collected pursuant to the provisions of this article shall be transmitted to the state treasurer, who shall credit the same to the board of assessor certification cash fund, which fund

is hereby created. All interest derived from the deposit and investment of moneys in the fund shall be credited to the fund. All moneys in the fund shall be subject to appropriation by the general assembly for the direct and indirect costs of the activities of the board pursuant to this article.

(2) (a) The board shall propose, as part of its annual budget request, an adjustment in the amount of each fee which it is authorized by law to collect. The budget request and the adjusted fees, when such fees are combined with other revenue credited to the board of assessor certification cash fund, shall reflect direct and indirect costs.

(b) Based upon the appropriation made and subject to the approval of the property tax administrator, the board shall adjust its fees so that the revenue generated from said fees, when combined with other revenue credited to the board of assessor certification cash fund, approximates the direct and indirect costs of the board. Such fees shall remain in effect for the fiscal year for which the budget request applies.

(c) For fiscal years beginning on or after July 1, 1990, any unexpended and unencumbered moneys remaining in the fund at the end of the prior fiscal year shall be included in the appropriation to the board for the next fiscal year, and the fees of the board, when adjusted for said next fiscal year, shall be adjusted so that such amount is not raised from fees collected by the board. If a supplemental appropriation is made from the fund to the board for its activities, the fees

of the board, when adjusted for the fiscal year next following that in which the supplemental appropriation was made, shall be adjusted by an amount which is sufficient to compensate for such supplemental appropriation.

(d) Moneys appropriated to the board in the annual general appropriation act shall be designated as cash funds and shall not exceed the amount anticipated to be credited to the fund.

39-2.5-105. Qualifications for assessor certification. (1) Any assessor applying for certification shall apply in such form and manner as prescribed by the board. Applicants shall have had at least fifty-five hours of education and training in appraisal practice, as approved by the board, and shall pass an examination developed or purchased by the board, except as otherwise provided in subsection (4) of this section for the initial examination pursuant to this section.

(2) Any assessor applying for certification as a residential appraiser shall have met the qualifications of subsection (1) of this section and shall apply in such form and manner as prescribed by the board. Applicants shall have had at least forty hours of appraisal education and training or a college degree in a related field as approved by the board, shall have at least two years of appraisal experience, and shall pass an examination developed or purchased by the board, except as otherwise provided in subsection (4) of this section for the initial examination pursuant to this section.

(3) Any assessor applying for certification as a general

appraiser shall have met the qualifications of subsection (1) of this section and shall apply in such form and manner as prescribed by the board. Applicants shall have had at least one hundred fifty hours of appraisal education and training or a college degree in a related field as approved by the board, shall have at least two years of appraisal experience, and shall pass an examination developed or purchased by the board, except as otherwise provided in subsection (4) of this section for the initial examination pursuant to this section.

(4) The initial assessor appointee to the board shall not participate in the development of the initial examinations given pursuant to this section. Any other person who participates in the development of an examination pursuant to this section shall be prohibited from taking such examination for a period of two years from the date the examination is first given.

39-2.5-106. Expiration of certification - renewal. Any certificate issued by the board shall expire on January 1 of the third year following issuance if not timely renewed by the assessor; except that the initial certificate issued to any assessor shall expire January 1 of the year following issuance and shall be renewed as provided in this section. Upon compliance with this section and any applicable rules and regulations of the board regarding renewal, including the payment of a renewal fee plus a late payment penalty fee in the amounts authorized pursuant to section 39-2.5-104, the expired certificate shall be reinstated. No certificate which

has been expired for a period of time greater than two years shall be reinstated, and such person shall be required to make new application for certification.

39-2.5-107. Denial of certificate - renewal. (1) The board is empowered to determine whether an applicant for certification possesses the qualifications required by this article.

(2) If the board determines that an applicant does not possess the applicable qualifications required by this article, or such applicant has violated any provisions of this article or the rules and regulations promulgated by the board, the board may deny the applicant a certificate or deny the reinstatement of a certificate pursuant to section 39-2.5-106, and, in such instance, the board shall provide such applicant with a statement in writing setting forth the basis of the board's determination that the applicant does not possess the qualifications required by this article. Such applicant may request a hearing on such determination as provided in section 24-4-104 (9), C.R.S.

SECTION 4. Appropriation. In addition to any other appropriation, there is hereby appropriated, out of any moneys in the board of assessor certification cash fund not otherwise appropriated, to the department of local affairs for allocation to the board of assessor certification, for the fiscal year beginning July 1, 1990, the sum of _____ dollars ($) and ___ FTE, or so much thereof as may be necessary, for the implementation of section 3 of this act.

SECTION 5. Effective date. This act shall take effect July 1, 1990.

SECTION 6. Safety clause. The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

Interim Committee on Tax Policy

A BILL FOR AN ACT

CONCERNING PROPERTY TAXES.

Bill Summary

(Note: This summary applies to this bill as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Requires an application for certificate of title for a manufactured home to specify the new or resale price of such manufactured home, wherever is applicable, paid by such applicant. In the valuation of vacant land, changes the maximum time period for anticipated market absorption rates from 10 years to 30 years. Changes the date by which notices of valuation for real property are required to be mailed. Modifies the dates by which taxpayers must give notice of protest by mail and in person to assessors. Requires the assessor to give a taxpayer an explanation of the reasons why the actual value of property in an intervening year has increased by more than seventy-five percent from the previous year.

Changes the date by which assessors shall file public notice concerning the commencement of hearings of tax protests. Modifies the date by which assessors shall conclude such hearings. Changes the date by which assessors must report the valuation for assessment of real property and the protests of such valuations to county boards of equalization. Modifies the date by which taxpayers are required to file petitions for hearing regarding real property with county boards of equalization.

Defines certain terms for purposes of abatement or refund of property taxes. Allows taxpayers to appeal abatement and refund decisions. Specifies procedures for such appeals. Makes amendments to certain statutory provisions to conform to current law.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. 38-29-107, Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

38-29-107. Applications for certificates of title. In any case under the provisions of this article wherein a person who desires or who is entitled to a certificate of title to a manufactured home is required to make formal application to the director therefor, such applicant shall make application upon a form provided by the director in which appears a description of the manufactured home, including the manufacturer and model thereof, the manufacturer's number, the date on which said manufactured home was first sold by the dealer or manufacturer thereof to the initial user thereof, and a description of any other distinguishing mark, number, or symbol placed on said home by the manufacturer thereof for identification purposes, as may by rule be required by the director. Such application shall also show the applicant's source of title, THE NEW OR RESALE PRICE OF SAID MANUFACTURED HOME, WHICHEVER IS APPLICABLE, PAID BY SUCH APPLICANT, and shall include a description of all known mortgages and liens upon said manufactured home, each including the name of the legal holder thereof, the amount originally secured, the amount outstanding on the obligation secured at the time such application is made, the name of the county or city and county and state in which such mortgage or lien instrument is recorded or filed, and proof of the fact that no property

Defines certain terms for purposes of abatement or refund of property taxes. Allows taxpayers to appeal abatement and refund decisions. Specifies procedures for such appeals. Makes amendments to certain statutory provisions to conform to current law.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. 38-29-107, Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

38-29-107. Applications for certificates of title. In any case under the provisions of this article wherein a person who desires or who is entitled to a certificate of title to a manufactured home is required to make formal application to the director therefor, such applicant shall make application upon a form provided by the director in which appears a description of the manufactured home, including the manufacturer and model thereof, the manufacturer's number, the date on which said manufactured home was first sold by the dealer or manufacturer thereof to the initial user thereof, and a description of any other distinguishing mark, number, or symbol placed on said home by the manufacturer thereof for identification purposes, as may by rule be required by the director. Such application shall also show the applicant's source of title, THE NEW OR RESALE PRICE OF SAID MANUFACTURED HOME, WHICHEVER IS APPLICABLE, PAID BY SUCH APPLICANT, and shall include a description of all known mortgages and liens upon said manufactured home, each including the name of the legal holder thereof, the amount originally secured, the amount outstanding on the obligation secured at the time such application is made, the name of the county or city and county and state in which such mortgage or lien instrument is recorded or filed, and proof of the fact that no property

taxes for previous years are due on such manufactured home. Such proof shall be a certificate of taxes issued by the county treasurer of the county in which the manufactured home is located. Such application shall be affirmed by a statement signed by the applicant and shall contain or be accompanied by a written declaration that it is made under the penalties of perjury in the second degree, as defined in section 18-8-503, C.R.S.

SECTION 2. 39-1-103 (8) (a) (I) and (14) (b), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended to read:

39-1-103. Actual value determined - when. (8) (a) (I) Use of the market approach shall require a representative body of sales sufficient to set a pattern, and appraisals shall reflect due consideration of the degree of comparability of sales, including the extent of similarities and dissimilarities among properties which are compared for assessment purposes. In order to obtain a reasonable sample and to reduce sudden price changes or fluctuations, all sales shall be included in the sample which reasonably reflect a true or typical sales price during the ~~twenty-four--months preceding--the--date--of-taking-the-sample~~ PERIOD SPECIFIED IN SECTION 39-1-104 (10.1), (10.2), OR (10.3), WHICHEVER IS APPLICABLE. Sales of personal property exempt pursuant to the provisions of sections 39-3-102, 39-3-103, and 39-3-119 to 39-3-122 shall not be included in any such sample.

(14) (b) The assessing officers shall give appropriate

consideration to the cost approach, market approach, and income approach to appraisal as required by the provisions of section 3 of article X of the state constitution in determining the actual value of vacant land. When using the market approach to appraisal in determining the actual value of vacant land, assessing officers shall take into account, but need not limit their consideration to, the following factors: The anticipated market absorption rate, the size and location of such land, the cost of development, any amenities, any site improvements, access, and use. When using anticipated market absorption rates, the assessing officers shall use appropriate discount factors in determining the present worth of vacant land until eighty percent of the lots within an approved plat have been sold and shall include all vacant land in the approved plat. The use of present worth shall reflect the anticipated market absorption rate for the lots within such plat, but such time period shall not generally exceed ~~ten~~ THIRTY years.

SECTION 3. 39-1-104 (16) (a), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-1-104. Valuation for assessment. (16) (a) During each property tax year, beginning with the property tax year which commences January 1, 1983, the director of research of the legislative council shall contract with a private person for a valuation for assessment study to be conducted as set forth in this subsection (16). The study shall be conducted in all counties of the state to determine whether or not the

assessor of each county has, in fact, used all manuals, formulas, and other directives required by law to arrive at the valuation for assessment of each and every class of real and personal property in the county. The person conducting the study shall sample each class of property in a statistically valid manner, and the aggregate of such sampling shall equal at least one percent of all properties in each county of the state. The sampling shall show that the various areas, ages of buildings, economic conditions, and uses of properties have been sampled. Such study shall be completed, and a final report of the findings and conclusions thereof shall be submitted to the general assembly and the state board of equalization by ~~August 15~~ SEPTEMBER 15 of the year in which the study is conducted.

SECTION 4. The introductory portion to 39-1-104.2 (7) (a), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-1-104.2. Legislative declaration - adjustment of residential rate - role of state board of equalization. (7) (a) Commencing January 1, 1989, for each year in which there is a change in the level of value used in determining actual value, the state board of equalization shall review, prior to September ~~5~~ 20 of such year, the abstracts of assessment submitted by the county assessors pursuant to section 39-2-115. Utilizing such abstracts, the state board of equalization shall ascertain:

SECTION 5. 39-2-117 (6), Colorado Revised Statutes, 1982

Repl. Vol., as amended, is amended to read:

39-2-117. Applications for exemption - review - annual reports - procedures. (6) If the decision of the board is against the petitioner, the petitioner may ~~within-thirty--days after-such-decision,-petition-the-district-court-of-the-county wherein--the-property-is-located~~ PETITION THE COURT OF APPEALS for judicial review thereof ~~pursuant--to~~ ACCORDING TO THE COLORADO APPELLATE RULES AND THE PROVISIONS OF section 24-4-106 (9), C.R.S. If the decision of the board is against the respondent, the respondent, upon the recommendation of the board that it is a matter of statewide concern, ~~and-within thirty-days-after-such-decision,~~ may petition the ~~district court--of-the-county-in-which-the-property-is-located~~ COURT OF APPEALS for judicial review ~~pursuant--to~~ ACCORDING TO THE COLORADO APPELLATE RULES AND THE PROVISIONS OF section 24-4-106 (9), C.R.S.

SECTION 6. 39-4-109, Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-4-109. Judicial review. (1) Any petitioner or any other public utility, assessor, or board of county commissioners adversely affected or the administrator may appeal any decision of the board of assessment appeals denying a petition in whole or in part to the ~~district--court--of--the judicial-district-in-which-the-property-in-question-is-located or--to--the--district--court--in-the-city-and-county-of-Denver~~ COURT OF APPEALS. No new or additional evidence may be introduced in the ~~district~~ court OF APPEALS unless such other

public utility, assessor, or board of county commissioners adversely affected has had no opportunity to present such evidence at the hearing before the board of assessment appeals; otherwise, the cause shall be heard on the record of the board of assessment appeals, which shall be certified by it to the court in which the appeal was taken. Whenever any new or additional evidence is introduced, the court, in its discretion, may remand the case to the board of assessment appeals for rehearing.

(2) An appeal may be taken to the ~~district court at any time within thirty days~~ COURT OF APPEALS ACCORDING TO THE COLORADO APPELLATE RULES AND THE PROVISIONS OF SECTION 24-4-106 (9), C.R.S., after the decision of the board of assessment appeals is issued, but, if the appeal is taken by the public utility actually owning the property involved in the petition to the board of assessment appeals, such public utility shall pay the full amount of all taxes levied upon the valuation for assessment of its property and plant to the treasurer of the county in which the same is located prior to taking its appeal.

(3) If, upon appeal to the ~~district court~~ COURT OF APPEALS, the petitioner is sustained, in whole or in part, then, upon presentation to the treasurer to whom the taxes were paid of a certified copy of the order modifying the valuation for assessment of its property and plant, the treasurer shall forthwith make the appropriate refund of taxes, together with ~~interest thereon at the rate of six~~

~~percent-per-annum-from-the--date--of--payment--thereof~~ REFUND INTEREST AT THE SAME RATE AS PENALTY INTEREST AS SPECIFIED IN SECTION 39-10-104 (3) (a) AND (5) (a), and the petitioner shall also be entitled to a refund of costs incurred in the hearing before the board of assessment appeals and in the appeal to the court or such portion thereof as the court may decree; but, if judgment is for the board of assessment appeals, then the board of assessment appeals shall receive its costs from the appellant. SUCH REFUND INTEREST SHALL ONLY ACCRUE FROM THE DATE ON WHICH PAYMENT OF TAXES WAS RECEIVED BY THE TREASURER.

SECTION 7. 39-5-121 (1), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-5-121. Notice of adjusted valuation. (1) No later than May ~~15~~ 1 in each year, the assessor shall mail to each person whose land or improvements have been valued at an amount different than the same were valued in the previous year a notice setting forth the amount of such adjustment in valuation. The notice shall state the actual value of such land or improvements in the previous year, the actual value in the current year, and the amount of such adjustment in actual value. The notice shall not state the valuation for assessment of such land or improvements. Based upon the classification of such taxable property, the notice shall also set forth either the ratio of valuation for assessment to be applied to said actual value of all taxable real property other than residential real property prior to the calculation

of property taxes for the current year or the projected ratio of valuation for assessment to be applied to said actual value of residential real property prior to the calculation of property taxes for the current year and that any change or adjustment of the projected ratio of valuation for assessment for residential real property shall not constitute grounds for the protest or abatement of taxes. With the approval of the board of county commissioners, the assessor may include in the notice an estimate of the taxes which shall be owed for the current property tax year. If such estimate is included, the notice shall clearly state that the tax amount is merely an estimate based upon the best available information. The notice shall state, in bold-faced type, that the taxpayer has the right to protest such adjustment in valuation but not the estimate of taxes if such an estimate is included in the notice, the classification of the property which determines the assessment percentage to be applied, and the dates and places at which the assessor will hear such protest. Such notice shall also set forth the following: THAT, to preserve his right to protest, the taxpayer must notify the assessor either by mail or in person of his objection and protest; that, if notice is made by mail, such notice must be postmarked no later than ~~June 10~~ MAY 27 and that, if notice is made in person, such notice must be made no later than June ~~15~~ 1; and that, after such date, the taxpayer's right to object and protest the adjustment in valuation is lost. The notice shall also state, in general terms, the administrative or

legal remedies available to the taxpayer. The notice shall be mailed together with a form which, if completed by the taxpayer, allows the taxpayer to explain the basis for his valuation of the property. Such form may be completed by the taxpayer to initiate an appeal of the assessor's valuation. However, in accordance with section 39-5-122 (2), completion of this form shall not constitute the exclusive means of appealing the assessor's valuation. FOR THE YEARS WHICH INTERVENE BETWEEN CHANGES IN THE LEVEL OF VALUE, IF THE DIFFERENCE BETWEEN THE ACTUAL VALUE OF SUCH LAND OR IMPROVEMENTS IN THE PREVIOUS YEAR AND THE ACTUAL VALUE OF SUCH LAND OR IMPROVEMENTS IN THE INTERVENING YEAR AS SET FORTH IN SUCH NOTICE CONSTITUTES AN INCREASE IN ACTUAL VALUE OF MORE THAN SEVENTY-FIVE PERCENT, THE ASSESSOR SHALL MAIL TOGETHER WITH THE NOTICE AN EXPLANATION OF THE REASONS FOR SUCH INCREASE IN ACTUAL VALUE.

SECTION 8. 39-5-122 (1), (2), and (4), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended to read:

39-5-122. Taxpayer's remedies to correct errors. (1) On or before May ~~15~~ 1 of each year, the assessor shall give public notice in at least one issue of a newspaper published in his county that, beginning on the first working day after notices of adjusted valuation are mailed to taxpayers and until THE LAST WORKING DAY IN June, ~~15~~, he will sit to hear all objections and protests concerning valuations of taxable real property determined by him for the current year; that, for a taxpayer's objection and protest to be

heard, notice must be given to the assessor; and that such notice, if given by mail, must be by ~~June 10~~ MAY 27 or, if given in person, must be by June ~~15~~ 1. The notice shall also state that objections and protests concerning valuations of taxable personal property determined by him for the current year will be heard commencing June 15; that, for a taxpayer's objection and protest to be heard, notice must be given to the assessor; and that such notice, if given by mail, must be by June 30 or, if given in person, must be by July 5. If there is no such newspaper, then such notice shall be conspicuously posted in the offices of the assessor, the treasurer, and the county clerk and recorder and in at least two other public places in the county seat. The assessor shall send news releases containing such notice to radio stations, television stations, and newspapers of general circulation in the county.

(2) If any person is of the opinion that his property has been valued too high, or has been twice valued, or is exempt by law from taxation or that property has been erroneously assessed to him, he may appear before the assessor and object, he may complete the form mailed with his notice of valuation pursuant to section 39-5-121 (1) or (1.5), or he may file a written letter of objection and protest by mail with the assessor's office before the last day specified in the notice, stating in general terms the reason for the objection and protest. Any change or adjustment of any ratio of valuation for assessment for residential real property pursuant to the provisions of section 39-1-104.2 shall not

constitute grounds for such objection. If the form initiating an appeal or the written letter of objection and protest is filed by mail, it shall be presumed that it was received as of the day it was postmarked. If the form initiating an appeal or the written letter of objection and protest is hand-delivered, the date it was received by the assessor shall be stamped on the form or letter. As stated in the public notice given by the assessor pursuant to subsection (1) of this section, if the taxpayer notifies the assessor of his objection and protest to the adjustment in valuation by mail, such notification shall be postmarked by ~~June 10~~ MAY 27 in the case of real property and June 30 in the case of personal property. If the taxpayer notifies the assessor in person, such notice shall be given by June ~~15~~ 1 in the case of real property and July 5 in the case of personal property. All such forms and letters received from protestors shall be presumed to be on time unless the assessor can present evidence to show otherwise. The county shall not prescribe the written form of objection and protest to be used. The protestor shall have the opportunity on the days specified in the public notice to present his objection by mail or protest in person and be heard, whether or not there has been a change in valuation of such property from the previous year and whether or not any change is the result of a determination by the assessor for the current year or by the state board of equalization for the previous year. If the assessor finds any valuation to be erroneous or otherwise improper, he shall

correct such error, but, if he declines to change any valuation which he has determined, he shall state his reasons in writing on the form described in section 39-8-106, shall insert the information otherwise required by the form, and shall, on or before the last regular working day of the assessor in June in the case of real property and July 5 in the case of personal property, mail two copies of such completed form to the person presenting the objection and protest so denied.

(4) The assessor shall continue his hearings from day to day until all objections and protests have been heard, but all such hearings shall be concluded by THE LAST REGULAR WORKING DAY OF THE ASSESSOR IN June ~~15~~ in the case of real property and July 5 in the case of personal property.

SECTION 9. 39-5-132 (2) (a) (I) (D) and (3), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended to read:

39-5-132. Assessment and taxation of new construction. (2) (a) (I) (D) In order to promote the most efficient administration of this section, each county or municipality shall ensure that any office or agency that received information relative to the state of completion of new taxable buildings shall promptly transmit such information to the county assessor. After January 1, 1987, the property tax administrator shall transmit to the assessor in ~~July~~ AUGUST of each year both the assessed value of any newly constructed buildings owned by public utility companies and their state of

completion on July 1 as well as their value on the previous January 1.

(3) By ~~September--15~~ OCTOBER 10 of each year, the assessor shall notify the board of county commissioners of the amount of the growth valuation for assessment of the county for that tax year, the percentage that such growth valuation for assessment bears to the total valuation for assessment of the county for such tax year, the portion of such growth valuation for assessment which is attributable to newly constructed taxable buildings within the boundaries of each taxing authority in the county, and the percentage that such portion bears to the total valuation for assessment of each taxing authority in which such newly constructed taxable buildings are located.

SECTION 10. 39-8-105 (1), Colorado Revised Statutes, 1982 Repl. Vol., is amended to read:

39-8-105. Reports of assessor. (1) At ~~the--first~~ A meeting of the county board of equalization ON THE SECOND MONDAY IN JULY, the assessor shall report the valuation for assessment of all taxable real property in the county. He shall submit a list of all persons who have appeared before him to present objections or protests concerning real property and his action in each case.

SECTION 11. 39-8-106 (1) (a), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-8-106. Petitions for appeal. (1) (a) A statement informing such person of his right to appeal, the time and

place at which the county board of equalization will hear appeals from determinations of the assessor, and that, by mailing or delivering one copy of the form to the county board of equalization which is received or postmarked on or before THE THIRD MONDAY IN July ~~10~~ of that year for real property and July 15 of that year for personal property, such person will be deemed to have filed his petition for hearing with the county board of equalization. The date the form is received by the county board of equalization shall be stamped on the form. All such forms shall be presumed to be on time unless the county board of equalization can present evidence to show otherwise.

SECTION 12. 39-8-108 (2), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-8-108. Decision - review - opportunity to submit case to arbitration. (2) If the petitioner has appealed to the board of assessment appeals and the decision of the board of assessment appeals is against the petitioner, he may ~~within thirty-days-after-such-decision,~~ petition the court of appeals for judicial review ACCORDING TO THE COLORADO APPELLATE RULES AND THE PROVISIONS OF SECTION 24-4-106 (9), C.R.S. If the decision of the board is against the respondent, the respondent, upon the recommendation of the board that it either is a matter of statewide concern or has resulted in a significant decrease in the total valuation for assessment of the respondent county, may ~~within--thirty--days-after-such decision,~~ petition the court of appeals for judicial review

ACCORDING TO THE COLORADO APPELLATE RULES AND THE PROVISIONS OF SECTION 24-4-106 (9), C.R.S. In addition, on and after June 7, 1989, if the decision of the board is against the respondent, the respondent may petition the court of appeals for judicial review of alleged procedural errors or errors of law within thirty days of such decision when the respondent alleges procedural errors or errors of law by the board of assessment appeals. If the board does not recommend its decision to be a matter of statewide concern or to have resulted in a significant decrease in the total valuation for assessment of the respondent county, the respondent may petition the court of appeals for judicial review of such questions within thirty days of such decision.

SECTION 13. 39-10-114 (1) (a), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is REPEALED AND REENACTED, WITH AMENDMENTS, to read:

39-10-114. Abatement, cancellation of taxes. (1) (a) (I) If taxes have been levied erroneously or illegally, whether due to erroneous valuation for assessment, irregularity in levying, or clerical error, the treasurer or the owner of the property shall report the amount thereof to the board of county commissioners, which, after a hearing held pursuant to section 39-1-113, shall proceed to abate such taxes in the manner provided by law. If such taxes have been collected by the treasurer, the board of county commissioners, after the hearing, shall authorize refund of the same in the manner provided by law. However, in no case shall an

abatement or refund of taxes be made unless the petition for abatement or refund is filed within one year of the date upon which the taxes were due or within one year of the issuance of a final order or judgment in an appeal filed pursuant to section 39-8-108, whichever is later.

(II) The change or adjustment of any ratio of valuation for assessment for residential real property pursuant to the provisions of section 39-1-104.2 shall not constitute grounds for abatement of taxes as provided in subparagraph (I) of this paragraph (a).

(III) The assessor shall certify the proportional amount of the total amount of abatements and refunds granted pursuant to the provisions of this section to the appropriate taxing entities at the same time that the certification of valuation for assessment is made pursuant to the provisions of section 39-5-128. Any taxing entity may adjust the amount of its tax levy authorized pursuant to the provisions of section 29-1-301, C.R.S., by an additional amount which does not exceed the proportional share of the total amount of abatements and refunds made pursuant to the provisions of this section. After calculating the amount of property tax revenues necessary to satisfy the requirements of the "Public School Finance Act of 1988", article 53 of title 22, C.R.S., any school district shall add an amount equal to the proportional share of the total amount of abatements and refunds granted pursuant to the provisions of this section prior to the setting of the mill levy for such school

district. Any additional amount added pursuant to the provisions of this subparagraph (III) shall not be included in the total amount of revenue levied in said year for the purposes of computing the limit for the succeeding year pursuant to the provisions of section 29-1-301, C.R.S. Where a final determination is made granting an abatement or refund pursuant to the provisions of this section after the certification of tax levies in any given year, the abatement or refund granted shall be payable upon payment of property taxes for the property tax year immediately following said final determination. For the purposes of this subparagraph (III), a taxing entity's proportional share of the total amount of abatements and refunds granted shall be based upon the amount of tax levied by a taxing entity on such real property in proportion to the total amount of tax levied on such real property by such taxing entities.

(IV) For purposes of this paragraph (a):

(A) "Clerical error" means a mistake or fact made by the county assessor which is apparent on the face of the records or any clerical error made by a taxpayer in completing any declaration schedules pursuant to the provisions of article 5, 6, or 7 of this title. "Clerical error" does not include misclassification of property.

(B) "Erroneous or illegal" means any valuation or tax that is wholly or partially illegal; however, the term does not include any excessive valuations or overvaluations.

(C) "Irregularity in levying" means an incorrect amount

of mills levied or a property being incorrectly included within the territorial limits of an authority levying the tax.

SECTION 14. Article 10 of title 39, Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW SECTION to read:

39-10-114.5. Decision - review - judicial review. (1) If the board of county commissioners, pursuant to section 39-10-114 (1), or the property tax administrator, pursuant to section 39-2-116, denies the petition for refund or abatement of taxes in whole or in part, the petitioner may appeal to the board of assessment appeals pursuant to the provisions of section 39-2-125 within thirty days of the entry of any such decision.

(2) If the petitioner has appealed to the board of assessment appeals and the decision of the board of assessment appeals is against the petitioner, he may petition the court of appeals for judicial review according to the Colorado appellate rules and the provisions of section 24-4-106 (9), C.R.S. If the decision of the board is against the respondent, the respondent, upon the recommendation of the board that it either is a matter of statewide concern or has resulted in a significant decrease in the total valuation for assessment of the county wherein the property is located, may petition the court of appeals for judicial review according to the Colorado appellate rules and the provisions of section 24-4-106 (9), C.R.S. In addition, if the decision of the board is against the respondent, the respondent may petition

the court of appeals for judicial review of alleged procedural errors or errors of law when the respondent alleges procedural errors or errors of law by the board of assessment appeals. If the board does not recommend its decision to be a matter of statewide concern or to have resulted in a significant decrease in the total valuation for assessment of the county in which the property is located, the respondent may petition the court of appeals for judicial review of such questions.

SECTION 15. Repeal. 39-1-103 (8) (e), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is repealed.

SECTION 16. Effective date - applicability. This act shall take effect upon passage; except that section 1 shall take effect July 1, 1990, and sections 7, 10, and 11 shall take effect January 1, 1991. Section 39-1-103 (14) (b), as contained in section 2 of this act, shall apply to property tax years commencing on and after January 1, 1991.

SECTION 17. Safety clause. The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

To Members of the Fifty-ninth Colorado General Assembly:

Submitted herewith is the report of the 1993 Interim Committee on Tax Policy. House Bill 93-1246 directed the Executive Committee of the Legislative Council to, in the absence of the adoption of a study resolution during the regular session, determine the interim studies and provide for the conduct of such studies. The Interim Committee Study Resolution adopted by the Executive Committee of the Legislative Council on May 25, 1993, created the Interim Committee on Tax Policy. In accordance with the resolution, the committee reported its recommendations to the Executive Committee of the Legislative Council on December 17, 1993.

Respectfully submitted,

Representative Paul D. Schauer
Chair, Colorado Legislative Council

EXECUTIVE SUMMARY

Committee Charge

The Interim Committee on Tax Policy was charged with studying the tax policies of Colorado state and local governments and make recommendations which ensure the fair application of tax laws to all Colorado state taxpayers.

Committee Activities

The committee held seven meetings at the State Capitol and six meetings around the state. During meetings held outside the Capitol, testimony concentrated primarily on the interaction of the Gallagher and the TABOR amendments to the Colorado State Constitution, and the resulting impact on local communities.

Committee Recommendations

The Interim Committee on Tax Policy recommended four bills for consideration by the Legislative Council. On December 17, 1993, the Executive Committee of Legislative Council approved the four bills summarized below.

Bill 1 — Optional County Personal Property Tax Deferrals. Bill 1 allows each county the option of granting property tax deferrals to taxpayers who otherwise receive tax bills for personal property for less than $25. The deferral is payable when the total accumulated tax exceeds the lesser of the value of the property or $75, or when the property is sold, whichever comes first.

Bill 2 — Tax Policy Committee. Bill 2 creates a Tax Policy Committee consisting of thirteen members: five members appointed each from the House of Representatives and the Senate, and three members appointed by the Governor. The committee is to review and make recommendations regarding state and local government tax policy. The bill also creates an advisory committee of nine members with expertise and knowledge in state and local taxes. Both committees sunset July 1, 2000.

Bill 3 — Definition of "Hotels and Motels" for Property Tax Purposes. Bill 3 specifies that establishments which constitute hotels and motels include any residential condominium units, residential time share estates, and other residential real property which operate as part of an establishment primarily engaged in providing lodging or actually renting on an overnight or weekly basis for more than 30 calendar days per year.

Bill 4 — Concerning Property Taxes. Bill 4 eliminates the "unusual condition" provision for revaluing real property during the "intervening year" of an assessment cycle when property value change is greater than 10 percent of actual value. It raises the income eligibility requirements for elderly and disabled property tax grants, and reclassifies one acre of farm land underlying or adjacent to a farm residence from agriculture to residential property.

Bill 4 also allows taxpayers 12 months, rather than 30 days, to protest and appeal their valuations of real and personal property. Overvaluation is eliminated as grounds for an abatement or refund of taxes. In addition, the bill reduces the filing time period for an abatement or refund petition.

Advisory Committee

The Interim Committee on Tax Policy was assisted by a nine-member citizen advisory committee. The committee held six meetings and discussed state and local tax policy issues. The advisory committee presented its observations and master list of possible solutions to the Interim Committee on Tax Policy on October 18, 1993.

COMMITTEE REPORT

Committee Charge

The Interim Committee on Tax Policy was created on May 25, 1993, by the Executive Committee of the Legislative Council with the adoption of the Interim Committee Study Resolution. The study resolution stated that the charge and the membership of the Interim Committee on Tax Policy was to be developed later. On June 14, 1993, the executive committee adopted the resolution establishing the Interim Committee on Tax Policy and its respective charge. The study resolution provided the committee consist of fourteen members: five senators appointed by the President of the Senate; six representatives appointed by the Speaker of the House; one member of the executive branch of state government; one representative of county governments; and one county assessor. Later amendments to the resolution allowed for the appointment of an additional member from the House of Representatives and the Senate. The resolution directed the committee to undertake a study of the tax policies of Colorado state and local governments which were to include:

- the appropriate valuation for assessment ratio for each class of taxable real and personal property;
- exemptions from taxation of various classes of real and personal property, including recommendations regarding the implementation of a homestead exemption;
- changes in tax policy generally; and
- any other changes which would ensure the fair application of tax laws to all taxpayers in the State of Colorado.

Legislative Council required a committee report and presentation of recommended legislation on or before January 1, 1994. The resolution also allowed for the interim committee to appoint a citizens advisory group consisting of nine members with expertise and knowledge of state and local taxes. The advisory committee was charged with studying tax policy issues and making recommendations to the interim committee. Appended to this report are the advisory committee recommendations.

Committee Activities

The committee held seven meetings at the State Capitol Building and conducted six meetings outside the Capitol in the cities of Durango, Grand Junction, Colorado Springs, Pueblo, Fort Collins, and Greeley. Meetings outside the Capitol allowed committee members to receive testimony from citizens and local officials regarding

perceived problems with the state's current tax structure. Testimony at the committee meetings focused on providing background information on the state's overall tax structure. Attention primarily focused on the application of property taxes; however, there were also presentations regarding sales tax, income tax, and tax increment financing.

Property Tax

The committee devoted portions of its meetings to reviewing the history and evolution of property taxes in Colorado and attempts made over the years to equalize the property tax burden. Primarily, the committee focused its attention on understanding the combined impact of the "Gallagher Amendment" (Article X, Section 3, Colorado Constitution) and the "TABOR Amendment" (Article X, Section 20, Colorado Constitution). The Gallagher Amendment was a constitutional amendment enacted by the voters in 1982. The amendment requires that for each year in which the level of value changes, the General Assembly must adjust the residential assessment rate. The adjustment must ensure that the proportion of statewide total valuation of residential property, in relation to all other taxable property in Colorado, remains essentially the same as in the prior year (approximately 45 percent).

During the November election of 1992, the electorate passed a constitutional amendment referred to as "Amendment 1" or the "Taxpayer's Bill of Rights" (TABOR). TABOR limits taxing, spending, and revenue-raising by state and local governments. In terms of taxing, TABOR requires prior voter approval for "any new tax, tax rate increase, mill levy above that for the prior year, valuation for assessment ratio increase for a property class, or extension of an expiring tax, or a tax policy change directly causing a net tax revenue gain."

Since 1982, the residential assessment rate, as enacted by the General Assembly, has declined from 21 percent to 12.86 percent in 1993. To compensate for the decline, and to hold revenues constant, counties have tended to raise mill levies. However, discussions with the Tax Policy Committee revealed that the effect of the TABOR Amendment is taxing entities cannot increase mill levies without voter approval. Local officials expressed concern that although home values have increased, the continued lowering of the residential assessment rate, along with TABOR limitations, will reduce revenue to local governments. Testimony from the Tax Policy Advisory Committee reiterated that the TABOR Amendment, combined with the Gallagher Amendment, is particularly difficult for small communities as their tax base is almost exclusively composed of residential property.

The impacts of the Gallagher and TABOR amendments on school finance were also addressed by the committee. Information submitted to the committee indicated that the lowering of the residential assessment rate from 14.34 percent in 1991 to 12.86 percent in 1993 will result in a $50.1 million funding decrease for schools from property tax revenue.

Other property tax matters examined by the committee are described below.

Homestead Exemption. One alternative was the implementation of a homestead exemption, particularly in the mountain resort areas. Statements made to the committee indicated that property values were increasing because non-residents were buying residential properties at very high prices. In Aspen, for instance, approximately 70 percent of the county residential properties are owned by non-residents. As a result, the valuation for the local residents has increased dramatically, and some residents find it difficult to pay the associated increased taxes. One suggestion was to give local residents a homestead exemption for their primary residence.

Annual Assessment. Smaller communities expressed concerns about the anticipated increased costs from the change from biennial to annual assessments. The change is to occur in 1997.

Agricultural Designation. The agricultural land designation applies to both the burdens on taxpayers when agricultural land is reclassified to vacant land and the tax break afforded individuals whose land is classified as agricultural when, in fact, the designation should be vacant land or residential. Testimony tended to indicate that there was no consistency among the counties in the application of the agricultural assessment.

Simplifying Property Tax Process. Options were presented for simplifying the property tax process: 1) multiply both the current non-residential rates of 29 percent and the residential rate of 12.86 percent by a factor of 3.45. This would readily identify that non-residential property is taxed at 100 percent of its value, while residential property is taxed at 44.34 percent of its value; 2) divide the current mill levy in each county by a factor of 3.45; 3) accept the 40 percent ratio for residential property versus non-residential property. However, from this point forward apply a fixed ratio to both for any increases or decreases in assessments; and 4) freeze the current 100 percent non-residential property assessment and 44 percent residential property assessment and abandon the Gallagher Amendment.

Property Tax Appeals Process. The property valuation appeals process was examined to determine the fairness to the taxpayer and the local governments. Changes discussed with the committee were:

- require that a petitioner, agent, or attorney submit information supporting the appealed value to the assessor and to the county board of equalization. Failure to present information at the assessor and county board of equalization levels would prohibit a petitioner from appealing beyond the local level;
- if a county board of equalization, county board of commissioners, or property tax administrator and a petitioner reach a stipulated value, then the written stipulation is submitted to the county treasurer. This written stipulation would have the same force and effect as the filing of an order of the Board of Assessment Appeals;

- require a $25 filing fee on all abatement petitions filed with the Board of Assessment Appeals. *Pro se* taxpayers, representing themselves, are exempt from a filing fee; and
- require that to be eligible for an abatement on overvaluation, taxpayers must have pursued their administrative remedies set forth in Section 39-5-122, C.R.S.

Tax Policy Proposals. The committee discussed the merits of various tax policy proposals. In discussing the contents of any tax proposal recommended by the committee, it decided that the common themes of any proposal be: 1) simplicity; 2) fairness; and 3) stability. The assorted proposals considered by the committee consisted of a combination of changes to property tax, income tax, and sales tax, with the bottom line goal being revenue neutral. The various proposals and their projected economic impacts are available from Legislative Council staff.

Sales Tax

When discussing sales tax issues, the committee focused primarily on three areas: 1) implementing a tax on services; 2) instituting a state-collected, locally-shared sales tax revenue system; and 3) eliminating all state sales tax exemptions. The committee received an overview and history of the state's sales tax structure from the Department of Revenue. The department noted that a state sales tax was first imposed as an emergency measure in 1935 at a rate of 2 percent. The tax became a permanent part of the tax base by a constitutional amendment in 1936 that required the revenue first fund the Old Age Pension Fund and that any remaining funds be transferred to the state's General Fund. The tax rate remained at 2 percent until 1965 when the rate increased to 3 percent. Since that time, the only rate change has been a temporary 15-month increase of one-half percent to provide relief for a state budget deficit. In 1935, there were only five sales tax exemptions, but the state now has over 50 specific exemptions.

With regard to the administration of the sales tax statewide, 242 governmental entities collected $1.8 billion in sales tax revenue in 1991. The Department of Revenue processes and collects sales tax revenue for 156 cities, 39 counties, and three special districts. Forty-three home rule cities administer their own tax and are not subject to the statutory requirements of the state sales tax. Home rule cities collect 68 percent of all local government sales taxes and 36 percent of all sales taxes collected in the state.

The Department of Revenue submitted a report to the committee entitled "An Examination of Colorado's Current Sales Tax System". The committee discussed the concepts in the report concerning a statewide uniform rate system and distribution, as well as taxes on services.

Income Tax

The committee's work in the area of state income taxes focused on gaining an overall perspective of the history of the state income tax and its revenue raising potential. As a source of revenue to the state, the committee was informed that the General Fund has become more reliant upon the income tax. The state's income tax is progressive but becomes less progressive at the higher income levels. As an historical perspective, a state income tax was first implemented in 1937 with a range of one percent on the first $1,000 of income to six percent on incomes over $10,000. Since that time, the tax rate changed five times to the current flat tax rate of five percent. Information presented to the committee from the Governor's Office of State Planning and Budgeting noted that from 1978 to 1990, taxes kept pace with personal income, but did not exceed personal income.

Tax Increment Financing

The committee discussed the merits and fiscal impacts of tax increment financing (TIF). As authorized in Colorado's statutes, TIF involves the creation of a special fund comprised of certain revenue increases in ad valorem property taxes, municipal sales taxes, or both, generated within an area of urban redevelopment. Tax revenue increases, which are due to development of the area, are pledged to pay debt service on the bonds issued to finance the redevelopment. In theory, the urban area needs a means to stimulate private development. In addressing a sales tax TIF versus a property tax TIF, it was stated that property taxes are much more stable as they are not as dependent on the economy. On another note, the Colorado Supreme Court has considered the issue of tax increment financing and has ruled it is not an indebtedness to the public entity. Rather, TIF is a form of revenue bond financing.

Individuals speaking on behalf of TIF indicated that the funding mechanism provided a development tool for communities to accomplish three basic goals: 1) to meet civic objectives of communities; 2) to provide incentives to bring new jobs to a community; and 3) to balance the disproportionate share of property tax burden carried by one taxpayer versus another. Tax increment financing has been a part of the nation's urban development strategy since the federal Model Cities programs of the 1960s. Historically, TIF projects were designed to save or rejuvenate downtowns. Testimony indicated that the financing mechanism is the cornerstone of public-private partnerships whereby the community seeks to make a strategic investment that serves a genuine civic purpose but which needs private sector investment of a magnitude far greater than the community can afford.

Those raising concerns about TIF pointed out that the state is not a player in the negotiations, yet the state "backfills" school finance. Consequently, the state must provide additional funding for schools for property tax dollars diverted to tax increment financing to pay off urban renewal bonds. Further, testimony reflected a belief that counties should be full partners in urban renewal infrastructure projects and funding

decisions. County representatives stated that they are not fully apprised about TIF agreements and are left out of the decision-making process. They also noted that with the passage of TABOR, counties do not have the ability to replace the funds diverted to the tax increment financing without voter approval.

Committee Recommendations

Bill 1 authorizes the board of county commissioners in each county to create a program that grants a tax deferral to personal property taxpayers who owe less than $25 in personal property tax in a year. A resolution adopted by the county commissioners begins the program, effective the year immediately following the year in which the resolution is adopted. Thirty days after adopting the resolution, the county commissioners must notify the county treasurer. The county treasurer is to receive a certificate of deferral with the name of the taxpayer granted the deferral, the amount of the tax deferral, the year of the grant deferral, and the taxing entities levying a property tax on the property. Copies of the deferral certificate are to be sent to the commissioners and the taxpayer. The county commission can repeal the program upon the adoption of another resolution.

Taxes will be paid when the personal property is sold, when the total amount of personal property tax deferral exceeds $75, or when the total deferral exceeds the market value of the personal property, minus the total amount of any liens filed against the property. County assessors determine the market value of the personal property. The bill does not allow for interest, charges or penalties for the deferrals granted.

If the tax deferral exceeds the limits allowed, the county treasurer is to notify the taxpayer of the amount of deferred taxes due for the most recent property tax year. The county treasurer may use any method for collecting such deferred taxes as the law authorizes. The bill requires county treasurers to distribute the deferred taxes to authorized entities in the year the tax is paid as though no deferrals were granted.

Bill 2 creates the Tax Policy Committee and authorizes the committee to review any phase of state and local tax policy. Specifically, the committee is to:

- review the valuation for assessment ratio for each class of taxable real property to determine its appropriateness;
- examine the advisability of creating a homestead exemption for property taxation;
- review any tax exemption;
- examine the difficulties in the current operations of state and local tax systems and make recommendations to reduce or eliminate the problems;

- ensure an equitable state and local tax burden;
- recommend legislation concerning state and local tax policy;
- create subcommittees and appoint members that are not on the Tax Policy Committee to subcommittees; and
- appoint a tax policy advisory committee and review the advisory committee's recommendations.

The Tax Policy Committee would consist of thirteen members: three appointed by the Governor; five members of the Senate; and five members of the House of Representatives. Of the House and Senate appointees, no more than three are to be from the same political party. The advisory committee is to consist of nine members elected by majority vote of the Tax Policy Committee. The sunset date of the committee is July 1, 2000, unless the General Assembly extends the date.

Bill 3, concerning the definition of hotel and motel property tax purposes, modifies the tax procedures for "condo-hotels." The bill includes properties currently assessed as residential properties under the definition of hotels and motels for property tax purposes. These properties include residential condominium units, residential time share estates, and other residential real property if the property is under common ownership or control and the primary activity is to provide lodging. Lodging provided could be by the day, week, or month. The expanded definition applies to those properties rented for more than 30 days per year.

The bill requires property owners to keep a record of rentals of the property for each tax year and submit the rental records to the county assessor no later than February 1 of the following year. If the owner fails to provide the records, the property receives a hotel or motel property classification for the property tax year. "Common ownership" means that all the real property owned by the same owner or an affiliate of the owner that is under common control with the owner. "Control" means that the separate owners of the real property are required to make the property available for rent for a portion of a year and must use an exclusive agent.

Bill 4, concerning property taxes, makes several changes to the property tax system. The bill allows county assessors to adjust the level of value for taxable real property with data from the last day of the five-year period prior to the July 1 preceding the assessment period. The bill also eliminates the requirement that county assessors revalue property in the intervening year if the value of property changes by more than 10 percent.

The bill eliminates the annual reappraisal requirement beginning in 1997. Time frames in which taxpayers may protest and appeal valuations of taxable property changes from the current 30 days to one full year after the mailing of notices of valuation. Postmarks for written protests for real property are accepted no later than April 27, and protests made in person must be made by May 1 of the year immediately

following the year the notice was mailed. Deadlines for protesting personal property appeals are June 10 for written protests and June 15 for protests made in person for the year immediately following the year of the notice mailing. All hearings on protests are to conclude within 20 days of the protest filing or by June 1 of the year following the year of the protest filing. The bill requires assessors to submit a written decision concerning the complaint within 30 days after receiving the complaint or by July 20 in the year following the year the notice of valuation was given.

An overvaluation of property no longer is grounds for filing for abatements or refunds. The bill reduces the time frame for applying for such an abatement for real and personal property taxes to one year after January 1 of the year following the year in which the taxes were levied.

The bill also changes the classification of a one acre parcel of land underlying and adjacent to any residential improvements and land underlying certain farm and ranch improvements from the agriculture classification to the residential classification. Taxpayers who purchase agricultural land for more than twice the market value bear the burden of proof if the land is still to be considered as agricultural land.

Last, the bill raises the qualifying eligibility requirements for the old age income tax credit by the rate of inflation for elderly and disabled persons. The adjustment would increase the 1980 rate by inflation factors to the present. Single taxpayers qualify for the full credit with incomes at or below $8,600 and $15,000 for married taxpayers. The credit decreases by 20 percent for incomes in excess of the income limits. Taxpayers will not receive any credit with incomes in excess of $12,900 for single taxpayers and $19,300 for married taxpayers. Future increases in the qualifying income levels would change based on changes in the Denver-Boulder Consumer Price Index. The amount of the credit in future years would remain at $500.

TAX POLICY ADVISORY COMMITTEE REPORT

Committee Charge

The nine-member Tax Policy Advisory Committee was established by the Tax Policy Committee to study tax policy issues and make recommendations to the Interim Committee on Tax Policy. The appointments were approved by the Tax Policy Committee at its meeting on July 21, 1993.

The mission of the Tax Policy Advisory Committee was to critically review the State of Colorado's approach to raising revenue and expending funds. Based upon its review, the advisory committee would provide alternatives to the committee to improve the state's ability to raise revenue fairly and to expend the revenues equitably. The mission statement included short-term and long-term components.

A. **Short-Term Statement of Mission.** The Tax Policy Advisory Committee will define the state's fiscal problems and provide specific alternative solutions to those problems, including adjusting state and local revenue and expenditures. Particular attention will be paid to increased efficiencies in government.

B. **Long-Term Statement of Mission.** The Tax Policy Advisory Committee will provide specific alternatives to the interim committee regarding how the state's approach to raising revenue and expending state funds, and its interrelationship with local governments should be evaluated and revised to meet the long-term economic and social goals of the State of Colorado.

The advisory committee adopted a two-track approach to the analysis of the state's current policies relating to state and local government tax and expenditure issues. First, the advisory committee reviewed and discussed the current fiscal conditions of the state and identified potential fiscal problems. Second, the committee reviewed the fiscal relationship between the state and units of local government and identified long term issues and possible solutions.

Committee Activities

The advisory committee held a total of six meetings from August through October, 1993, drawing upon staff research, expert testimony, and internal discussions designed to address the specific provisions in its charge.

Committee Recommendations

The advisory committee presented its observations and list of possible alternatives to the interim committee on October 18, 1993 (see Appendix A). The advisory committee report expressed the viewpoint that the primary fiscal problem facing the state today is a result of the combined effects of the 1982 Gallagher Amendment and the 1992 TABOR Amendment. These two constitutional amendments have impacted the stability, certainty, sufficiency, and equity of the property tax as the major source of local government revenue. Additionally, the committee recognized that school funding will be competing with escalating fixed cost statutory requirements at the state level to fund Medicaid, social services programs, and prison overcrowding.

The advisory committee report questioned whether the present structure of government in Colorado is capable of responding to the long-term service obligations required by the public. It is possible that certain functions of government should be centralized for greater equity and efficiency, while other functions should be decentralized for greater local government accountability.

The advisory committee report also provides an overview of certain issues and identifies possible alternatives which might improve the workings of each level of local government. Specifically, discussions are provided regarding school districts, counties, municipalities, and special districts. Additionally, structural issues associated with property, sales, and income taxes are discussed within the body of the report.

As a long-term alternative, the advisory committee identified the need to either establish a local government policy council or to create a statutory tax policy review committee. The committee would study, review, and recommend legislative changes to the General Assembly.

MATERIALS AVAILABLE

The materials listed below are available upon request from the Legislative Council staff.

APPENDIX A

TAX POLICY ADVISORY COMMITTEE MISSION STATEMENT

I. **PREAMBLE** Colorado must recognize the interrelationship of the state and local governments in both revenue needs and service obligations. The recognized standards of a sound tax system must be followed, including; (1) productivity; (2) equity in the distribution of tax burdens; (3) a recognition of the rights and problems of taxpayers; (4) adaptability of the tax program to the immediate and long-range needs of the economy as a whole and (5) the use of taxes that do not unduly interfere with rational economic decisions. Colorado needs to avoid competition between state and local governments for tax bases. Colorado should recognize the inequities between and among levels of government. The state and units of local government need to work together efficiently and effectively. Units of local governments also need to work together efficiently and effectively.

II. **STATEMENT OF MISSION** The mission of the Tax Policy Advisory Committee ("TPAC") is to critically review the State of Colorado's approach to raising revenue and expending funds. Based upon its review the advisory committee would provide alternatives to the Interim Committee on Tax Policy to improve the state's ability to fairly raise revenue and administer the equitable expenditure of those revenues. This mission statement is comprised of the following short-term and long-term components.

A. **Short-Term Statement of Mission.** The TPAC will define the state's fiscal problems and provide specific alternative solutions to those problems. Alternative solutions include adjusting revenues and adjusting or modifying state and local expenditures. Particular attention will be paid to increased efficiencies in government.

B. **Long-Term Statement of Mission.** The TPAC will provide specific alternatives to the Interim Committee regarding how the state's approach to raising revenues and expending state funds and its interrelationship with local governments should be evaluated and revised to meet the long-term economic and social goals of the State of Colorado.

III. **APPROACHING THE MISSION** The TPAC has adopted a two-track approach to the analysis of the State of Colorado's current policies relating to state and local government tax and expenditure issues.

A. **Review and Discuss Current Fiscal Conditions.** First, the TPAC will review and discuss the current fiscal conditions of the state. The Gallagher Amendment and the Tabor Amendments, their impacts, and issues related to school finance and local government finance will be discussed. The TPAC will identify potential fiscal problems and the timing of those problems. Economic efficiencies and responsiveness to current demands will be identified.

B. **Review Relationship Between State and Local Governments.** Secondly, the TPAC will review the fiscal relationship between the state and local units of government. Long term issues and possible solutions will be identified.

SO WHAT'S THE PROBLEM?

OVERVIEW

One of the primary principles of a high-quality revenue system is that the system should produce revenue in a reliable manner. In order to maintain a reliable source of revenue, a tax system must have **stability, certainty, sufficiency, and equity**.

Diversification of revenue sources over broad bases allows a revenue system to be more stable during periods of economic uncertainty. The six major sources of state and local taxes are the sales tax, personal income tax, property tax, excise taxes, business taxes, and user fees. The ability to collect revenues varies greatly between and among urban and rural jurisdictions of the state.

In Colorado, state services are funded primarily from sales tax, individual income tax, and user fees. Most counties and many special districts rely on the property tax as their primary source of revenue. Many municipalities rely heavily on the sales tax. Revenues for school districts are about evenly split between the property tax and intergovernmental transfers from the state.

Timing is a critical issue. As long as the economy remains strong in most parts of the state, potential funding problems may be delayed, but they will not be eliminated. The harder potential funding problems are to identify, the harder they will be to remedy.

THE PROBLEM

The combined effects of the 1982 Gallagher Amendment and the 1992 TABOR Amendment have impacted the stability, certainty, sufficiency, and equity of the property tax as the major source of local government revenue. The spiraling down of the residential assessment rate, combined with the inability of local governments to adjust the mill levies upward without a vote of the people to compensate for this fact will result in a reduction of property tax revenues for many local governments in the future. The services which are provided by local governments will most likely be adversely impacted.

The revenues of school districts, and any other unit of local government which is dependent upon property taxes for its revenue base will be specifically impacted. School districts will receive less revenue from the property tax due to the spiraling down of the residential assessment rate. The stability and sufficiency of the property tax as a revenue source will be jeopardized for all units of local government which rely on this revenue source, however, school districts face an additional uncertainty regarding state equalization funding. The spending limits placed on the state by the TABOR Amendment will limit the amount of state moneys available to fund all state services. **School funding will be competing with escalating fixed cost statutory requirements to fund Medicaid, social services programs, and prison overcrowding.** The state does not have the revenue necessary to fully fund all of these services. In addition, due to statutory spending limitations, the General Assembly will need to prioritize the funding of these and all other services.

THE STRUCTURE OF COLORADO STATE AND LOCAL GOVERNMENT

QUESTION

Is the present **STRUCTURE** of government in Colorado capable of responding to the long-term service obligations required by the public? If the answer is "NO", then the solutions are to either change the structure of government, and/or to modify the service obligations to fit the current government structure.

OVERVIEW

Colorado has created a complex system of state and local government over the past century. While the number of counties has remained fixed since 1913, many additional cities and towns have been created. School districts were consolidated during the 1950's, however, the number of special districts has risen dramatically over the past three decades. At the end of 1992, Colorado had: 1 state government; 63 counties; 266 municipalities; 176 school districts; and 1,467 special and other districts, for a total of 1,973 governmental units.

Since the early 1970's, Colorado has developed a financial system that could be described as one of "fiscal decentralization". Local governments receive more tax revenue than does the state. Each unit of government is dependent upon a major source of revenue, and resists encroachment by another public entity into their revenue source.

While this system may well serve the needs of the most populous areas of the state, factors like Federal mandates such as Medicaid and social services programs, plus court orders on school equalization and prison overcrowding, have placed even greater demands upon limited state government resources.

In a growing economy, increased revenues may adequately meet these demands. However, in a period of recession, combined with restrictions imposed by the 1992 TABOR Amendment, the state will be unable to meet these demands, and will be forced to cut services unless the voters approve tax increases. Faced with this scenario, is it possible to provide for a functional realignment of government services? That is, should some functions of government be centralized at the state level for greater equity and efficiencies, and other functions be decentralized to the local level for greater accountability? Could functional appropriateness supersede existing political boundaries?

THE STRUCTURE OF COLORADO STATE AND LOCAL GOVERNMENT (continued)

POSSIBLE SOLUTION ALTERNATIVES

I. Authorize the state to absorb various governmental functions. Functions to be considered for absorption would include social services programs and complete funding of K-12 education. The need for enhanced state revenue sources in order to provide these services would go along with absorption of a function;

II. Expand county and municipal authority to create districts under the control of the existing governmental structure, thus reducing the proliferation of special districts. One result of this action would be to bring accountability for these functions under the direct control of county government;

III. Consolidate governmental units, including counties, cities, school districts, and special districts;

IV. Use the Regional Service Authority power to provide specified services, as provided for in statute. This would include the provision of services for items such as water, drainage, waste water treatment, transportation, and solid waste on a regional basis. The use of regional service authorities could result in a reduction in the number of special districts.

SCHOOL DISTRICTS

OVERVIEW

I. The residential assessment rate is projected to continue to decline, as a result of the Gallagher Amendment. This will occur because residential values will increase and residential construction will continue to outpace non-residential construction.

II. Under the TABOR Amendment, property mill levies are no longer allowed to automatically increase to compensate for a reduction in assessed valuations due to changes in the residential assessment rate.

III. The majority of the state's school districts will face property tax revenue shortfalls as a result of the combination of these two factors.

IV. School district revenue shortfalls will come at a time when the combination of spending limitations at the state level and fixed cost expenditure requirements in other areas of state government will limit the amount of funds available for state equalization to fund public education.

POSSIBLE SOLUTION ALTERNATIVES

I. At the school district level:
   1. Reduce expenditures by reducing services;
   2. Seek voter approval for property tax increases to fund operating expenditures;
   3. Increase student fees or impose new student fees;
   4. Adopt developer impact fees on new residences or businesses;
   5. Utilize innovative funding and operational mechanisms, such as cooperative governmental revenue and operational agreements;
   6. Reduce administrative expenditures through possible school district consolidation and program efficiencies.

II. At the state level:
   1. Fund state equalization of schools at CURRENT aggregate spending levels, resulting in decreased funding on a per pupil basis as the number of students increases;
   2. Increase state taxes in order to continue the current per pupil state equalization funding levels or to increase the funding levels;
   3. "Fully fund" state equalization of schools, thereby reducing funding for other state programs;
   4. Impose a statewide property tax to provide additional funding for schools;
   5. Fund public education exclusively at the state level, and expand the concept of schools of choice.

COUNTIES

OVERVIEW

I. The primary sources of county revenues are property taxes, user fees, intergovernmental transfers, and in some cases, sales taxes. In unincorporated parts of certain urban counties, population growth is creating a situation which requires the need for additional government services.

II. The state is divided into four distinct geographic regions - the Front Range; the Western Slope; the Eastern Plains; and the Mountain Region. Each region of the state is faced with very different economic and political realities. Some counties are impacted by urban and suburban growth problems, while other counties are confronted with rapid growth of recreational development. Still other counties are faced with declining economies and declining assessed valuations. As a consequence, large disparities exist with respect to the abilities of counties throughout the state to produce locally generated revenues to meet the service needs of their constituents.

POSSIBLE SOLUTION ALTERNATIVES

I. Reduce specific services;

II. Encourage and reward increased efficiencies in county government;

III. Request voter approval for increases in the property tax mill levy;

IV. Impose additional county taxes, with voter approval;

V. Increase existing user fees or implement new user fees;

VI. Return certain mandated programs to the state;

VII. Implement intergovernmental agreements to provide for certain local services;

VIII. Create special districts under the control of the boards of county commissioners for the provision of the services which are not of county-wide concern;

IX. Provide for financial incentives to encourage certain governmental efficiencies, and for trade-offs of certain types of government services between local governments;

X. Implement a method of regional revenue sharing.

MUNICIPALITIES

OVERVIEW

I. Certain urban municipalities have the ability to raise significant amounts of revenue from the sales tax. As a result, some urban municipalities will be faced with the question of whether to refund excess revenues or to ask the voters for approval to keep and spend the excess moneys collected.

II. Revenue sources for many rural municipalities are limited to property taxes, intergovernmental revenues, and user fees. Without an adequate retail base, sales tax revenues are not a significant revenue source. The revenue sources which are available to these communities may not be adequate to fully fund required municipal services.

III. Large fiscal disparities exist among the state's governmental units. As sales tax receipts have become the most significant revenue source for many municipalities, those differences become most acute at the sales tax base level. Municipalities with large retail sales bases will be better able to provide various services than those without the retail sales base.

IV. The fiscal externalities of one type of government impact other levels of government. For example, growth immediately outside of municipal boundaries may affect the service requirements of the municipality. In addition, the effects of urban renewal authorities and tax increment financing will affect the revenue and expenditure requirements of other levels of government.

POSSIBLE SOLUTION ALTERNATIVES

I. Expand the use of intergovernmental agreements among governmental units;

II. Encourage and reward increased efficiencies in municipal government;

III. Create a "revenue sharing" system between the state and municipalities;

IV. Extend a municipality's "sphere of influence" beyond its political boundaries into unincorporated areas in order to capture additional revenue, provided there are intergovernmental agreements regarding land use;

V. Provide for financial incentives to encourage certain governmental efficiencies, and for trade-offs of certain types of government services between local governments;

VI. Since the fiscal externalities of one type of government impact other levels of government, provide for better intergovernmental cooperation and coordination of county comprehensive plans to control growth in unincorporated areas which are adjacent to municipal boundaries. In addition, increase the level of cooperation regarding the implementation of tax increment financing plans.

SPECIAL DISTRICTS

OVERVIEW

I. The primary revenue source for many special districts is the property tax. Examples include fire protection districts, library districts, and cemetery districts, and some metropolitan districts.

II. In addition to the use of the property tax as a revenue source, some special districts have the ability to raise revenues through the imposition of user fees. Examples include water and sanitation districts, park and recreation districts, and metropolitan districts.

POSSIBLE SOLUTION ALTERNATIVES

I. Reduce or eliminate specific services;

II. Request voter approval for increases in the property tax mill levy;

III. Increase existing user fees, or implement new user fees;

IV. Consolidate special districts;

V. Create additional special districts;

VI. Grant counties and municipalities the power to create "limited purpose" special districts which would be subject to periodic sunset review.

PRIMARY REVENUE SOURCES

The six major sources of Colorado state and local revenues are the sales tax, the personal income tax, the property tax, excise taxes, business taxes, and user fees. State government receives a majority of its revenue from **income taxes**, while local governments receive the bulk of their revenues from **property taxes**. State and local governments each receive the same amount of revenues from **sales taxes**.

The structural issues associated with each of these major tax groups, as well as possible solution alternatives are identified in this analysis.

PROPERTY TAX

OVERVIEW

I. There has been an increase in assessed valuation in most urban areas of the state. The historic rate of growth in the market value of the residential class of property has outpaced the rate of growth in other classes of property. As a result, an increasing amount of the property tax burden has traditionally been shifted to non-residential property owners through mill levy increases.

II. Property tax revenues for many local governments in rural Colorado are impacted by stagnant or declining residential property values, in addition to the local impact from the statewide decline in the residential assessment rate. Growth attributable to the limited amount of new construction in many communities will result in significant declines in actual property tax revenues.

III. In the past, reductions in the residential assessment rate have triggered higher mill levies in order to maintain the same amount of property tax revenues. Under the TABOR Amendment, any reduction in the residential assessment rate will result in actual reductions in local government revenues. This impact will be the greatest among school districts because the majority of property tax revenues are attributed to schools.

IV. Legislation enacted by the General Assembly over the years have granted specific exemptions from property tax, diminishing the property tax base.

V. Court decisions have resulted in the reclassification of certain types of property. This has resulted in a lowering of assessed valuation, and a corresponding reduction in the property tax base.

PROPERTY TAX (continued)

POSSIBLE SOLUTION ALTERNATIVES

I. Repeal the Gallagher Amendment, and replace it with a tier classification system based on fair market value;

II. Repeal the Gallagher Amendment, and replace it with a full market value (100 percent valuation) assessment system. This approach could include a homestead exemption for residences which are owner occupied by full-time Colorado residents;

III. Refer a constitutional amendment to allow mill levies to "float" in order to raise the same amount of property tax revenue;

IV. Repeal the imposition of property tax on business personal property;

V. Make changes in the types of property which constitute residential property (condo-hotels, land under agricultural residences, income or revenue requirements for property to be classified as agricultural, primary residences vs. second homes, owner occupied property vs. renter occupied property, etc.);

VI. Consider a homestead exemption or circuit breaker for owner-occupied residences and possibly for renter-occupied residences;

VII. Re-examine the current agricultural capitalization rate;

VIII. Re-examine the statutes regarding the exemption status of certain religious, charitable, and non-profit corporations, including the use of certain properties for income generating purposes;

IX. Increase reporting compliance to assure that new construction is properly added to the tax roles;

X. Provide the General Assembly with the ability to authorize new or increased real estate transfer taxes at the local government level.

SALES TAX

OVERVIEW

I. In many parts of the state, a geographic disparity exists between where people live and where they make the majority of their retail purchases.

II. Urban areas of the state receive sales tax revenues from purchases made by area residents, businesses, tourists, and rural residents. Urban areas are generally considered to be net sales tax importers.

III. The state has provided sales tax exemptions for many specific types of goods. Most of these exemptions were granted based on sound economic policy at the time.

IV. Personal consumption patterns of residents have changed considerably over the years, and a greater proportion of consumption has shifted to the purchase of services.

V. The complexity of the current administrative system is an enormous administrative burden on many businesses.

POSSIBLE SOLUTION ALTERNATIVES

I. Review exemptions currently in statute in light of current economic conditions in order to re-evaluate whether they should be continued;

II. Consider the imposition of sates tax on certain personal services and some business services;

III. Increase the state sales tax rate;

IV. Consider imposing a state collected-locally shared sales tax;

V. Increase enforcement of sales tax audit procedures which could increase sales tax revenues through increased compliance and reporting of taxable sales by certain businesses;

VI. Streamline the administration of state and local sales tax collection procedures;

VII. Reduce the vendor's discount from the current rate of 3.33 percent.

INCOME TAX

OVERVIEW

I. The Colorado individual income tax is progressive. Although the state imposes a flat tax rate of five percent, the progressive nature of the federal income tax system is taken into account in determining Colorado net taxable income. Therefore, families and individuals with high net taxable income pay a greater proportion of their income in state income tax than families with low net taxable income.

II. The corporate income tax generates a relatively small amount of revenue for the state.

III. Federal income tax law statutes affecting individuals and corporations were changed as part of the Omnibus Budget Reconciliation Act of 1993. While some of these changes will affect certain individual and corporate taxpayers, the overall impact on state income tax revenues in the short term is projected to be relatively small.

POSSIBLE SOLUTION ALTERNATIVES

I. Create a minimum business tax on all corporations, regardless of the level of income;

II. Consider a return to a graduated individual income tax rate, which would increase the progressivity of the individual income tax;

III. Increase the corporate income tax rate;

IV. Consider the elimination of certain Colorado modifications to federal income, such as the exclusion of certain pension income;

V. Increase enforcement of corporate and individual income tax audit procedures. This could increase income tax revenues through increased compliance and reporting of income by certain businesses;

VI. Broaden the regulation of "withholding at the source" for payments made to non-residents.

BILL 1

A BILL FOR AN ACT

CONCERNING AUTHORIZATION FOR COUNTIES TO DEFER PERSONAL PROPERTY TAXES WHICH DO NOT ANNUALLY EXCEED A SPECIFIED DOLLAR AMOUNT.

Bill Summary

(Note: This summary applies to this bill as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Interim Committee on Tax Policy. Authorizes boards of county commissioners to grant property tax deferrals to taxpayers who would otherwise receive tax bills for personal property taxes for less than $25. Establishes limits upon the aggregate amount of personal property taxes which can be deferred. Specifies procedures to establish and discontinue such personal property tax deferrals. Requires the issuance of certificates of personal property tax deferrals. Specifies that deferred personal property taxes constitute a lien against the personal property and provides that deferred personal property taxes become payable upon the occurrence of certain events. Specifies methods by which county treasurers can collect and shall apportion deferred personal property taxes.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. Title 39, Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW ARTICLE to read:

ARTICLE 3.6

Optional County Personal Property Tax Deferrals

39-3.6-101. Optional county personal property tax deferrals - creation - discontinuance. (1) BEGINNING WITH PROPERTY TAXES LEVIED IN 1993 FOR COLLECTION IN 1994 AND CONTINUING FOR PROPERTY TAX LEVIES AND COLLECTIONS THEREAFTER, THE BOARD OF COUNTY COMMISSIONERS OF A COUNTY, BY ADOPTION OF A RESOLUTION, MAY GRANT A PROPERTY TAX DEFERRAL TO ANY TAXPAYER WHO WOULD OTHERWISE RECEIVE A TAX STATEMENT FOR PERSONAL PROPERTY TAXES TOTALING LESS THAN TWENTY-FIVE DOLLARS; EXCEPT THAT THE AMOUNT OF SUCH DEFERRAL SHALL NOT EXCEED THE CURRENT MARKET VALUE OF THE PERSONAL PROPERTY, AS DETERMINED BY THE COUNTY ASSESSOR IN WHICH SUCH PERSONAL PROPERTY IS LOCATED, MINUS THE TOTAL AMOUNT OF LIENS FILED AGAINST SUCH PERSONAL PROPERTY AS OF THE DATE SUCH PERSONAL PROPERTY TAX DEFERRAL IS GRANTED. SUCH DEFERRAL SHALL BE WITHOUT PENALTY OR INTEREST. SUCH PERSONAL PROPERTY TAX DEFERRALS MAY BE DISCONTINUED ONLY UPON THE ADOPTION OF A RESOLUTION BY THE BOARD OF COUNTY COMMISSIONERS AND SHALL TAKE EFFECT FOR THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE RESOLUTION IS ADOPTED.

(2) (a) WITHIN THIRTY DAYS FOLLOWING THE ADOPTION OF A RESOLUTION TO ESTABLISH OR DISCONTINUE PERSONAL PROPERTY TAX

DEFERRALS, THE BOARD OF COUNTY COMMISSIONERS SHALL NOTIFY THE COUNTY TREASURER OF THE ESTABLISHMENT OR DISCONTINUANCE OF PERSONAL PROPERTY TAX DEFERRALS. UPON RECEIVING NOTIFICATION OF THE ESTABLISHMENT OF PERSONAL PROPERTY TAX DEFERRALS AND UPON THE CALCULATION OF ANY TAX STATEMENT FOR PERSONAL PROPERTY TAXES TOTALLING LESS THAN TWENTY-FIVE DOLLARS, THE COUNTY TREASURER SHALL ISSUE A CERTIFICATE OF DEFERRAL INCLUDING ALL OF THE GOVERNMENTAL AUTHORITIES WHICH HAVE LEVIED PROPERTY TAXES UPON THE PERSONAL PROPERTY, THE NAME OF THE TAXPAYER GRANTED THE DEFERRAL, THE AMOUNT OF PERSONAL PROPERTY TAX DEFERRED, AND THE YEAR IN WHICH THE DEFERRAL IS GRANTED.

(b) THE CERTIFICATE ISSUED PURSUANT TO PARAGRAPH (a) OF THIS SUBSECTION (2) SHALL BE RECORDED WITH THE COUNTY CLERK AND RECORDER OF THE COUNTY IN WHICH THE PERSONAL PROPERTY IS LOCATED AND THEREAFTER SENT TO THE BOARD OF COUNTY COMMISSIONERS. ONE COPY OF THE CERTIFICATE SHALL BE SENT TO THE TAXPAYER TO WHOM THE PERSONAL PROPERTY TAX DEFERRAL HAS BEEN GRANTED, AND ONE COPY SHALL BE RETAINED IN THE OFFICE OF THE COUNTY TREASURER.

(c) A LIEN FOR DEFERRED PERSONAL PROPERTY TAXES SHALL ATTACH ON THE DATE THE CERTIFICATE OF DEFERRAL IS ISSUED, SHALL HAVE PRIORITY OVER ALL LIENS EXCEPT GENERAL TAX LIENS, AND SHALL NOT BE FORECLOSED EXCEPT UPON THE OCCURRENCE OF AN EVENT SPECIFIED IN SECTION 39-3.6-102.

39-3.6-102. Payment of deferred personal property taxes. (1) PERSONAL PROPERTY DEFERRALS GRANTED PURSUANT TO THE PROVISIONS OF THIS SECTION SHALL BECOME PAYABLE WHEN:

(a) THE AGGREGATE AMOUNT OF PERSONAL PROPERTY TAXES OF A TAXPAYER DEFERRED PURSUANT TO THIS SECTION AND THE TOTAL AMOUNT OF PROPERTY TAXES LEVIED UPON THE PERSONAL PROPERTY OF THE TAXPAYER FOR THE MOST RECENT PROPERTY TAX YEAR EXCEEDS SEVENTY-FIVE DOLLARS; OR

(b) THE AGGREGATE AMOUNT OF PERSONAL PROPERTY TAXES OF A TAXPAYER DEFERRED PURSUANT TO THIS SECTION AND THE TOTAL AMOUNT OF PROPERTY TAXES LEVIED UPON THE PERSONAL PROPERTY OF THE TAXPAYER FOR THE MOST RECENT PROPERTY TAX YEAR EXCEEDS THE CURRENT MARKET VALUE OF THE PERSONAL PROPERTY, AS DETERMINED BY THE COUNTY ASSESSOR IN WHICH SUCH PERSONAL PROPERTY IS LOCATED, MINUS THE TOTAL AMOUNT OF LIENS FILED AGAINST SUCH PERSONAL PROPERTY; OR

(c) THE PERSONAL PROPERTY ON WHICH TAXES WERE DEFERRED IS SOLD.

(2) UPON THE OCCURRENCE OF PARAGRAPH (a) OR (b) OF SUBSECTION (1) OF THIS SECTION, THE COUNTY TREASURER SHALL INCLUDE IN THE TAXPAYER'S TAX STATEMENT THE AGGREGATE AMOUNT OF

DEFERRED PERSONAL PROPERTY TAXES WITH THE TOTAL AMOUNT OF PROPERTY TAXES LEVIED UPON PERSONAL PROPERTY OF THE TAXPAYER FOR THE MOST RECENT PROPERTY TAX YEAR.

(3) THE COUNTY TREASURER SHALL UTILIZE ANY METHOD OF COLLECTING DEFERRED PERSONAL PROPERTY TAXES AS AUTHORIZED BY LAW FOR THE COLLECTION OF PROPERTY TAXES.

(4) UPON COLLECTION, DEFERRED PERSONAL PROPERTY TAXES SHALL BE APPORTIONED, CREDITED, AND DISTRIBUTED TO THE AUTHORITIES WHICH LEVIED PROPERTY TAX UPON SUCH PERSONAL PROPERTY IN THE SAME MANNER AS IF SUCH PERSONAL PROPERTY TAXES HAD NOT BEEN DEFERRED.

SECTION 2. Safety clause. The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

BILL 2

A BILL FOR AN ACT

CONCERNING A REVIEW OF THE TAX POLICIES OF GOVERNMENTS IN COLORADO, AND, IN CONNECTION THEREWITH, CREATING THE TAX POLICY COMMITTEE AND THE TAX POLICY ADVISORY COMMITTEE.

Bill Summary

(Note: This summary applies to this bill as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Interim Committee on Tax Policy. Creates the tax policy committee. Provides for reimbursement of the members of the tax policy committee. Sets forth the powers and duties of the tax policy committee. Authorizes the tax policy committee to review any phase of state or local tax policy, to recommend legislation affecting state or local tax policy, and to create subcommittees as necessary whose members shall serve without compensation.

Creates the tax policy advisory committee and requires members of the advisory committee to have expertise and knowledge of state and local taxes. Requires the tax policy advisory committee to study state and local tax policy and make recommendations to the tax policy committee. Provides that members of the tax policy advisory committee shall serve without compensation.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. Article 3 of title 2, Colorado Revised Statutes, 1980 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW PART to read:

PART 15

TAX POLICY COMMITTEE

2-3-1501. Legislative declaration. (1) THE GENERAL ASSEMBLY HEREBY FINDS, DETERMINES, AND DECLARES THAT:

(a) THE GENERAL ASSEMBLY IS CONSTITUTIONALLY OBLIGATED TO PROVIDE FOR AN ANNUAL TAX SUFFICIENT TO DEFRAY THE EXPENSES OF STATE GOVERNMENT AND IS AUTHORIZED TO VEST COUNTIES, CITIES, TOWNS, OR OTHER MUNICIPAL CORPORATIONS WITH THE POWER TO ASSESS AND COLLECT TAXES;

(b) THE STATE CONSTITUTION REQUIRES THAT THE GENERAL ASSEMBLY ASSURE JUST AND EQUALIZED VALUATIONS FOR ASSESSMENT OF NONEXEMPT REAL AND PERSONAL PROPERTY;

(c) THE POWER OF THE GENERAL ASSEMBLY TO ADJUST THE AMOUNT OF TAXES LEVIED AND EXPENDED AND TO MODIFY TAX POLICY TO ASSURE THE FAIR ALLOCATION OF THE TAX BURDEN AMONG THE VARIOUS CLASSES OF TAXPAYERS HAS BEEN RESTRICTED THROUGH THE ADOPTION OF SECTION 20 OF ARTICLE X OF THE STATE CONSTITUTION;

(d) THE TAX POLICY OF THE STATE HAS NOT BEEN COMPREHENSIVELY STUDIED SINCE 1958; AND

(e) A COMPREHENSIVE, ONGOING REVIEW OF THE STATE'S REVENUE SYSTEM WILL AID THE GENERAL ASSEMBLY IN CARRYING OUT ITS OBLIGATION TO ASSURE THE EQUITABLE DISTRIBUTION OF STATE AND LOCAL

TAX BURDENS AMONG COLORADO TAXPAYERS.

(2) THE GENERAL ASSEMBLY FURTHER FINDS, DETERMINES, AND DECLARES THAT A REVIEW OF THE STATE'S REVENUE SYSTEM INVOLVES COMPLEX ECONOMIC CONSIDERATIONS AND THAT THE APPOINTMENT OF A COMMITTEE TO FOCUS ON THE REVIEW, WITH THE AID OF AN EXPERT ADVISORY COMMITTEE, IS THE MOST EFFICIENT AND EFFECTIVE METHOD OF OVERSIGHT OF THE STATE'S TAX POLICY.

2-3-1502. Tax policy committee - created - vacancies. (1) THERE IS HEREBY CREATED A TAX POLICY COMMITTEE CONSISTING OF THIRTEEN MEMBERS AS FOLLOWS:

(a) THREE MEMBERS SHALL BE APPOINTED BY THE GOVERNOR, WITH CONSENT OF THE SENATE, FROM SUCH LOCAL GOVERNMENT AND BUSINESS GROUPS AS TO ADEQUATELY REPRESENT THE ENTIRE STATE, NO MORE THAN TWO OF WHOM SHALL BE FROM THE SAME POLITICAL PARTY;

(b) FIVE MEMBERS OF THE SENATE SHALL BE APPOINTED BY THE PRESIDENT OF THE SENATE, NO MORE THAN THREE OF WHOM SHALL BE FROM THE SAME POLITICAL PARTY;

(c) FIVE MEMBERS OF THE HOUSE OF REPRESENTATIVES SHALL BE APPOINTED BY THE SPEAKER OF THE HOUSE OF REPRESENTATIVES, NO MORE THAN THREE OF WHOM SHALL BE FROM THE SAME POLITICAL PARTY.

(2) EACH MEMBER SHALL SERVE FOR A TERM OF TWO YEARS; EXCEPT THAT, SIX OF THE MEMBERS FIRST APPOINTED SHALL SERVE FOR ONE-YEAR TERMS, OF WHICH TWO SHALL BE APPOINTED BY THE GOVERNOR, TWO SHALL BE APPOINTED BY THE PRESIDENT OF THE SENATE, AND TWO SHALL BE APPOINTED BY THE SPEAKER OF THE HOUSE. VACANCIES SHALL BE FILLED FOR THE REMAINDER OF THE UNEXPIRED TERM BY THE APPROPRIATE APPOINTING AUTHORITY.

(3) MEMBERS OF THE TAX POLICY COMMITTEE SHALL BE REIMBURSED AS PROVIDED FOR MEMBERS OF THE GENERAL ASSEMBLY IN SECTION 2-2-307 (3).

(4) THE TAX POLICY COMMITTEE SHALL MEET AT LEAST ONCE EACH YEAR.

2-3-1503. Powers and duties of the tax policy committee. (1) THE TAX POLICY COMMITTEE SHALL HAVE THE FOLLOWING POWERS AND DUTIES:

(a) TO COMPREHENSIVELY STUDY THE TAX POLICY OF THE STATE AND LOCAL GOVERNMENTS IN COLORADO;

(b) TO APPOINT MEMBERS OF THE TAX POLICY ADVISORY COMMITTEE CREATED IN SECTION 2-3-1504;

(c) TO REVIEW RECOMMENDATIONS OF THE TAX POLICY ADVISORY COMMITTEE CREATED IN SECTION 2-3-1504;

(d) TO REVIEW THE VALUATION FOR ASSESSMENT RATIO FOR EACH CLASS OF TAXABLE REAL AND PERSONAL PROPERTY TO DETERMINE ITS APPROPRIATENESS;

(e) TO REVIEW EXEMPTIONS FROM TAXATION;

(f) TO REVIEW THE ADVISABILITY OF IMPLEMENTING A METHOD OF PROPERTY TAXATION WHICH INCLUDES A HOMESTEAD EXEMPTION;

(g) TO REVIEW ANY DIFFICULTIES ARISING FROM THE STATE AND LOCAL TAX SYSTEMS CURRENTLY IN OPERATION AND TO RECOMMEND CHANGES TO REDUCE OR ELIMINATE THOSE DIFFICULTIES;

(h) TO REVIEW ANY OTHER ASPECT OF STATE AND LOCAL TAX POLICY FOR THE PURPOSE OF DETERMINING WHETHER CHANGES IN POLICY OR TAX LAWS WOULD AID IN ENSURING THE EQUITABLE DISTRIBUTION OF STATE AND LOCAL TAX BURDENS AMONG COLORADO TAXPAYERS;

(i) TO REVIEW ANY PHASE OF STATE OR LOCAL TAX POLICY;

(j) TO RECOMMEND LEGISLATION AFFECTING STATE OR LOCAL TAX LAWS OR POLICY; AND

(k) TO CREATE SUBCOMMITTEES AS NECESSARY IN ORDER TO AID IN THE REVIEW OF THE TAX POLICY OF THE STATE. SUBCOMMITTEES MAY INCLUDE INDIVIDUALS NOT SERVING ON THE TAX POLICY COMMITTEE OR TAX POLICY ADVISORY COMMITTEE, INCLUDING, BUT NOT LIMITED TO, TAXPAYERS, SPECIAL DISTRICT REPRESENTATIVES, SCHOOL DISTRICT REPRESENTATIVES, LOCAL GOVERNMENT REPRESENTATIVES, AND BUSINESS REPRESENTATIVES. SUBCOMMITTEE MEMBERS SHALL SERVE WITHOUT COMPENSATION.

(2) LEGISLATION RECOMMENDED BY THE COMMITTEE SHALL BE TREATED AS LEGISLATION RECOMMENDED BY A STATUTORY LEGISLATIVE COMMITTEE FOR PURPOSES OF ANY INTRODUCTION DEADLINES OR BILL LIMITATIONS IMPOSED BY THE JOINT RULES OF THE GENERAL ASSEMBLY.

(3) ALL PERSONNEL OF THE DEPARTMENT OF REVENUE SHALL COOPERATE WITH THE TAX POLICY COMMITTEE AND WITH ANY PERSON ASSISTING THE COMMITTEE IN CARRYING OUT THE DUTIES OF THE COMMITTEE PURSUANT TO THIS SECTION.

2-3-1504. Tax policy advisory committee - repeal. (1) THERE IS HEREBY CREATED A TAX POLICY ADVISORY COMMITTEE CONSISTING OF NINE MEMBERS TO BE APPOINTED BY THE TAX POLICY COMMITTEE. APPOINTMENTS SHALL BE BY MAJORITY VOTE OF THE MEMBERS OF THE TAX POLICY COMMITTEE. MEMBERS SHALL HAVE EXPERTISE AND KNOWLEDGE OF STATE AND LOCAL TAXES. EACH MEMBER SHALL BE APPOINTED FOR A TERM OF TWO YEARS; EXCEPT THAT, OF THE MEMBERS FIRST APPOINTED, FOUR SHALL SERVE A ONE-YEAR TERM. MEMBERS SHALL SERVE WITHOUT COMPENSATION. THE TAX POLICY ADVISORY COMMITTEE SHALL STUDY STATE AND LOCAL TAX POLICY AND MAKE RECOMMENDATIONS TO THE TAX POLICY COMMITTEE AS DIRECTED.

(2) (a) THIS SECTION IS REPEALED, EFFECTIVE JULY 1, 2000.

(b) PRIOR TO SAID REPEAL, THE TAX POLICY ADVISORY COMMITTEE SHALL BE REVIEWED AS PROVIDED FOR IN SECTION 2-3-1203, C.R.S.

2-3-1505. Repeal of part. THIS PART 15 IS REPEALED, EFFECTIVE

JULY 1, 2000.

SECTION 2. 2-3-1203 (3), Colorado Revised Statutes, 1980 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW PARAGRAPH to read:

2-3-1203. Sunset review of advisory committees. (3) The following dates are the dates for which the statutory authorization for the designated advisory committees is scheduled for repeal:

(m) JULY 1, 2000: THE TAX POLICY ADVISORY COMMITTEE APPOINTED PURSUANT TO SECTION 2-3-1504.

SECTION 3. Safety clause. The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

BILL 3

A BILL FOR AN ACT

CONCERNING THE DEFINITION OF "HOTELS AND MOTELS" FOR PROPERTY TAX PURPOSES.

Bill Summary

(Note: This summary applies to this bill as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Interim Committee on Tax Policy. Specifies that establishments which constitute hotels and motels include any residential condominium units, residential time share estates, and other residential real property operated as part of an establishment primarily engaged in providing lodging or actually rented on an overnight or weekly basis for more than a specified number of days each year.

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. 39-1-102 (5.5), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-1-102. Definitions. (5.5) (a) "Hotels and motels" means establishments which are primarily engaged in providing lodging, camping, or personal care or health care facilities and which are predominantly used on an overnight or weekly basis. "HOTELS AND MOTELS" INCLUDES, BUT IS NOT LIMITED TO, RESIDENTIAL CONDOMINIUM UNITS AND RESIDENTIAL TIME SHARE ESTATES CREATED PURSUANT TO ARTICLE 33 OF TITLE 38, C.R.S., AND ANY OTHER RESIDENTIAL REAL PROPERTY IF THE REAL PROPERTY IS:

(I) UNDER COMMON OWNERSHIP OR CONTROL AND OPERATED AS PART OF AN ESTABLISHMENT PRIMARILY ENGAGED IN PROVIDING LODGING; OR

(II) ACTUALLY RENTED ON AN OVERNIGHT OR WEEKLY BASIS FOR MORE THAN THIRTY CALENDAR DAYS PER YEAR, AS EVIDENCED BY THE PROPERTY RENTAL RECORDS FOR THE PREVIOUS CALENDAR YEAR.

(b) FOR THE PURPOSE OF DETERMINING WHETHER PROPERTY SHALL BE CLASSIFIED AS HOTEL OR MOTEL PROPERTY, THE OWNER OF THE PROPERTY SHALL KEEP A RECORD OF RENTALS OF THE PROPERTY FOR EACH PROPERTY TAX YEAR AND SHALL FILE THE PROPERTY RENTAL RECORDS WITH THE ASSESSOR OF THE COUNTY IN WHICH THE PROPERTY IS LOCATED NO LATER THAN FEBRUARY 1 OF THE FOLLOWING YEAR. IF THE OWNER FAILS TO FILE RENTAL RECORDS ON OR BEFORE FEBRUARY 1 OF ANY YEAR THE PROPERTY SHALL BE CLASSIFIED AS HOTEL OR MOTEL PROPERTY FOR THE PROPERTY TAX YEAR FOR WHICH THE RECORDS WERE TO BE KEPT.

(c) FOR PURPOSES OF THIS SUBSECTION (5.5), UNLESS THE CONTEXT OTHERWISE REQUIRES:

(I) "COMMON OWNERSHIP" MEANS THAT SUBSTANTIALLY ALL OF THE REAL PROPERTY IS OWNED BY THE SAME OWNER OR AN AFFILIATE OF

THE OWNER THAT CONTROLS, IS CONTROLLED BY, OR IS UNDER COMMON CONTROL WITH THE OWNER.

(II) "CONTROL" MEANS THAT, AS A CONDITION OF OWNERSHIP, THE SEPARATE OWNERS OF THE REAL PROPERTY ARE REQUIRED TO MAKE THE PROPERTY AVAILABLE FOR RENTAL FOR A PORTION OF ANY YEAR AND TO USE AN EXCLUSIVE RENTAL AGENT.

(III) "ESTABLISHMENT" MEANS A BUSINESS, FIRM, CLUB, INSTITUTION, RESIDENCE, HOMEOWNERS' ASSOCIATION, CONDOMINIUM ASSOCIATION, MANAGEMENT COMPANY, OR ANY OTHER INDIVIDUAL OR ENTITY THAT ACTS AS AN AGENT FOR THE OWNER OF THE REAL PROPERTY IN RENTING THE PROPERTY.

SECTION 2. Effective date - applicability. This act shall take effect upon passage and shall apply to taxable years commencing on or after January 1, 1995.

SECTION 3. Safety clause. The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

BILL 4

A BILL FOR AN ACT

101 CONCERNING PROPERTY TAXES.

Bill Summary

(Note: This summary applies to this bill as introduced and does not necessarily reflect any amendments which may be subsequently adopted.)

Interim Committee on Tax Policy. For property tax purposes, changes the definition of "agricultural land" to exclude: 1) A one-acre parcel of land underlying and adjacent to any residential improvement located on the land; and 2) Land underlying certain farm and ranch improvements. Creates a rebuttable presumption that property classified as agricultural land which is sold for more than twice the market value of comparable agricultural land is no longer agricultural land for property tax purposes. Modifies the definition of "residential land" to include a one-acre parcel of land underlying and adjacent to any residential improvement located on agricultural land. (Section 1)

For purposes of property taxation, specifies that the level of value be adjusted to the last day of the 5-year period immediately prior to July 1 immediately preceding the assessment date instead of adjusted to the last day of the data-gathering period. (Section 3)

Eliminates, as an unusual condition for which assessors are to revalue real property during the intervening year of the reassessment cycle, any occurrence, condition, factor, act, or change which results in the actual value of the property being less than or greater than the correct level of value by more than 10%. (Section 4) Repeals the annual property tax reappraisals which were to commence in 1997. (Sections 2, 5, 10, and 17)

Changes the time frame in which taxpayers must protest and appeal valuations of real and personal property to allow for protests and appeals to be made within a one-year period following the May 1 deadline for mailing of notices of adjusted valuations and following the July 1 deadline for issuing notices of adjusted valuations for property of public utilities. (Sections 6 through 9 and 11 through 13)

Eliminates the overvaluation of property as grounds for an abatement or refund of property taxes. Reduces the time period in which a petition for abatement or refund must be filed. (Section 14)

Raises the income eligibility requirements to qualify for grants for elderly and disabled persons based upon property taxes paid on residential property, specific ownership taxes paid on trailer coaches, and other equivalent payments. Increases the income levels used to compute the maximum allowable amount of grant to be awarded. (Section 15) Provides that such income eligibility requirements and income levels be adjusted annually in accordance with changes in the consumer price index for the Denver-Boulder metropolitan statistical area. (Section 16)

Be it enacted by the General Assembly of the State of Colorado:

SECTION 1. 39-1-102 (1.6) (a) and (14.4), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended, and the said 39-1-102 (1.6) is further amended BY THE ADDITION OF A NEW PARAGRAPH, to read:

39-1-102. Definitions. (1.6) (a) "Agricultural land" means either of the following:

(I) A parcel of land, whether located in an incorporated or unincorporated area and regardless of the uses for which such land is zoned, which was used the previous two years and presently is used as a farm or ranch, as defined in subsections (3.5) and (13.5) of this section, and the gross income resulting from such use equals or exceeds one-third of the total gross income resulting from all uses of the property during any given property tax year, or which is in the process of being restored through conservation practices. Such land must have been classified or eligible for

classification as "agricultural land", consistent with this subsection (1.6), during the ten years preceding the year of assessment. Such land must continue to have actual agricultural use. "Agricultural land" under this subparagraph (I) ~~includes~~ DOES NOT INCLUDE A ONE-ACRE PARCEL OF land underlying AND ADJACENT TO any residential improvement located on such agricultural land. ~~and also includes the land underlying other improvements if such improvements are an integral part of the farm or ranch and if such other improvements and the land area dedicated to such other improvements are typically used as an ancillary part of the operation.~~ The use of a portion of such land for hunting, fishing, or other wildlife purposes, for monetary profit or otherwise, shall not affect the classification of agricultural land.

(II) A parcel of land which consists of at least forty acres; which is forest land; which is used to produce tangible wood products that originate from the productivity of such land for the primary purpose of obtaining a monetary profit; which is subject to a forest management plan; and which is not a farm or ranch, as defined in subsections (3.5) and (13.5) of this section. "Agricultural land" under this subparagraph (II) ~~includes~~ DOES NOT INCLUDE A ONE-ACRE PARCEL OF land underlying AND ADJACENT TO any residential improvement located on such agricultural land.

(c) IT SHALL BE PRESUMED THAT PROPERTY CLASSIFIED AS AGRICULTURAL LAND WHICH IS SOLD FOR MORE THAN TWICE THE MARKET VALUE OF COMPARABLE AGRICULTURAL LAND IS NO LONGER AGRICULTURAL LAND. THIS PRESUMPTION MAY BE REBUTTED BY EVIDENCE SUFFICIENT TO SHOW THE LAND MEETS THE DEFINITION OF "AGRICULTURAL LAND" SET FORTH IN THIS SUBSECTION (1.6).

(14.4) "Residential land" means a parcel or contiguous parcels of land under common ownership upon which residential improvements are located and which is used as a unit in conjunction with the residential improvements located thereon. The term includes parcels of land in a residential subdivision, the exclusive use of which land is established by the ownership of such residential improvements. THE TERM ALSO INCLUDES A ONE-ACRE PARCEL OF LAND UNDERLYING AND ADJACENT TO ANY RESIDENTIAL IMPROVEMENT LOCATED ON AGRICULTURAL LAND. The term does not include any portion of the land which is used for any purpose which would cause the land to be otherwise classified. ~~The term also does not include land underlying a residential improvement located on agricultural land.~~

SECTION 2. 39-1-103 (8) (a) (I), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-1-103. Actual value determined - when. (8) In any case in which sales prices of comparable properties within any class or subclass are utilized when considering the market approach to appraisal in the determination of actual value of any taxable property, the following limitations and conditions shall apply:

(a) (I) Use of the market approach shall require a representative body of sales sufficient to set a pattern, and appraisals shall reflect due consideration of the degree of comparability of sales, including the extent of similarities and dissimilarities among properties which are compared for assessment purposes. In order to obtain a reasonable sample and to reduce sudden price changes or fluctuations, all sales shall be included in the sample which reasonably reflect a true or typical sales price during the period specified in section 39-1-104 (10.2). ~~or (10.3), whichever is applicable.~~ Sales of personal property exempt pursuant to the provisions of sections 39-3-102, 39-3-103, and 39-3-119 to 39-3-122 shall not be included in any such sample.

SECTION 3. 39-1-104 (10.2) (d), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-1-104. Valuation for assessment. (10.2) (d) For the purposes of this article and article 9 of this title, "level of value" means the actual value of taxable real property as ascertained by the applicable factors enumerated in section 39-1-103 (5) for the one-and-one-half-year period immediately prior to July 1 immediately preceding the assessment date for which the administrator is required by this article to publish manuals and associated data; except that, if comparable valuation data is not available from such one-and-one-half-year period to adequately determine such actual value for a class of property, "level of value" means the actual value of taxable real property as ascertained by said applicable factors for the five-year period immediately prior to July 1 immediately preceding the assessment date. Said level of value shall be adjusted to the final day of the ~~data gathering period~~ FIVE-YEAR PERIOD IMMEDIATELY PRIOR TO JULY 1 IMMEDIATELY PRECEDING THE ASSESSMENT DATE.

SECTION 4. 39-1-104 (11) (b) (I), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-1-104. Valuation for assessment. (11) (b) (I) The provisions of subsection (10.2) of this section are not intended to prevent the assessor from taking into account, in determining actual value for the years which intervene between changes in the level of value, any unusual conditions in or related to any real property which would result in an increase or decrease in actual value. If any real property has not been assessed at its correct level of value, the assessor shall revalue such property for the intervening year so that the actual value of such property will be its correct level of value; however, the assessor shall not revalue such property above or below its correct level of value except as necessary to reflect the increase or decrease in actual value attributable to an unusual condition. For the purposes of this paragraph (b), and except as otherwise provided in this paragraph (b), an unusual condition which could result in an increase or decrease in actual value is limited to the installation of an on-site improvement, the ending of the economic life of an improvement with only salvage value remaining, the

addition to or remodeling of a structure, a change of use of the land, the creation of a condominium ownership of real property as recognized in the "Condominium Ownership Act", article 33 of title 38, C.R.S., any new regulations restricting or increasing the use of the land, or a combination thereof, the installation and operation of surface equipment relating to oil and gas wells on agricultural land, any detrimental acts of nature, and any damage due to accident, vandalism, fire, or explosion. ~~On and after January 1, 1989, any other occurrence, condition, factor, act, or change which results in the actual value of the property as of June 30 of the preceding year being less than or greater than the correct level of value by more than ten percent of the correct level of value shall also be an unusual condition for purposes of this paragraph (b).~~ When taking into account such unusual conditions which would increase or decrease the actual value of a property, the assessor must relate such changes to the level of value as if the conditions had existed at that time.

SECTION 5. 39-4-102 (3) (b), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-4-102. Valuation of public utilities. (3) (b) For property tax years commencing on or after January 1, 1987, there shall be applied to the actual value of each public utility an equalization factor to adjust the actual value for the current year of assessment as determined by the administrator pursuant to subsections (1) and (2) of this section to the public utility's level of value in the appropriate year which is prescribed in section 39-1-104 (10.2) ~~or (10.3), whichever is applicable,~~ and which is used to determine the actual value of properties which are subject to said applicable subsection.

SECTION 6. 39-4-108 (1), (2), (4), and (5), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended to read:

39-4-108. Complaint - hearing - decision. (1) Any public utility, being of the opinion that the actual value of its property and plant as determined by the administrator is illegal, erroneous, or not uniform with the actual value of like property similarly situated, as determined by the administrator, may, no later than July ~~15~~ 1 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF VALUATION WAS GIVEN, file a petition or complaint with the administrator, setting forth such illegality, error, or lack of uniformity.

(2) Any assessor or board of county commissioners, being of the opinion that the actual value of the property and plant of any public utility as determined by the administrator is illegal, erroneous, or not uniform with the actual value of like property similarly situated, as determined by the administrator, or that the amount of valuation for assessment of any public utility has not been correctly apportioned among the counties entitled thereto, may, no later than July ~~15~~ 1 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF VALUATION WAS GIVEN, file a petition or complaint with the administrator setting forth such illegality, error, lack of

uniformity, or incorrect apportionment.

(4) The administrator shall HEAR, on the first working day after notices of valuation are mailed, and on succeeding days if necessary, ~~hear~~ all such petitions and complaints. In case there are several petitions or complaints filed involving like questions, the same may be consolidated for the purpose of hearing and determination. The administrator shall hear all evidence presented and listen to arguments touching upon the matters ~~concerning~~ FOR which the petition or complaint was filed. ~~He~~ THE ADMINISTRATOR shall have power to subpoena and compel the attendance of witnesses and to require the production of any books or records deemed necessary to arrive at a proper determination of the matter. Upon good cause, any hearing may be adjourned from time to time, but in no event beyond FOURTEEN DAYS AFTER THE DATE UPON WHICH THE PETITION OR COMPLAINT WAS FILED OR July ~~27~~ 15 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF VALUATION AT ISSUE WAS GIVEN, WHICHEVER OCCURS FIRST. Hearings conducted under this section shall be informal, and a verbatim record need not be made, as required under section 24-4-105 (13), C.R.S.

(5) The administrator shall render his decision upon any petition or complaint, in writing, no later than ~~August 1~~ THIRTY DAYS AFTER THE DATE UPON WHICH THE PETITION OR COMPLAINT WAS FILED OR JULY 20 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR FOR WHICH THE NOTICE OF VALUATION AT ISSUE WAS GIVEN, WHICHEVER OCCURS FIRST, and shall transmit a copy ~~thereof~~ to all parties affected.

SECTION 7. 39-5-121 (1) and (1.5), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended to read:

39-5-121. Notice of adjusted valuation. (1) (a) No later than May 1 in each year, the assessor shall mail to each person whose land or improvements have been valued at an amount different than the same were valued in the previous year a notice setting forth the amount of such adjustment in valuation. The notice shall state the actual value of such land or improvements in the previous year, the actual value in the current year, and the amount of such adjustment in actual value. The notice shall not state the valuation for assessment of such land or improvements. Based upon the classification of such taxable property, the notice shall also set forth either the ratio of valuation for assessment to be applied to said actual value of all taxable real property other than residential real property prior to the calculation of property taxes for the current year or the projected ratio of valuation for assessment to be applied to said actual value of residential real property prior to the calculation of property taxes for the current year and that any change or adjustment of the projected ratio of valuation for assessment for residential real property shall not constitute grounds for the protest or abatement of taxes.

(b) With the approval of the board of county commissioners, the

assessor may include in the notice an estimate of the taxes which shall be owed for the current property tax year. If such estimate is included, the notice shall clearly state that the tax amount is merely an estimate based upon the best available information.

(c) The notice shall state, in bold-faced type, that the taxpayer has the right to protest such adjustment in valuation but not the estimate of taxes if such an estimate is included in the notice, the classification of the property which determines the assessment percentage to be applied, and the dates and places at which the assessor will hear such protest. Such notice shall also set forth the following:

(I) That, to preserve ~~his~~ THE TAXPAYER'S right to protest, the taxpayer must notify the assessor either by mail or in person of ~~his~~ THE objection and protest;

(II) That, if notice is made by mail, such notice must be postmarked no later than ~~May~~ APRIL 27 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE WAS MAILED; ~~and~~

(III) That, if notice is made in person, such notice must be made no later than ~~June 1~~ MAY 1 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE WAS MAILED; and

(IV) That, after ~~such~~ THE APPLICABLE date, the taxpayer's right to object and protest the adjustment in valuation is lost.

(d) (I) The notice shall be mailed together with a form which, if completed by the taxpayer, allows the taxpayer to explain the basis for his valuation of the property. Such form may be completed by the taxpayer to initiate an appeal of the assessor's valuation. However, in accordance with section 39-5-122 (2), completion of this form shall not constitute the exclusive means of appealing the assessor's valuation.

(II) For the years which intervene between changes in the level of value AND if the difference between the actual value of such land or improvements in the previous year and the actual value of such land or improvements in the intervening year as set forth in such notice constitutes an increase in actual value of more than seventy-five percent, the assessor shall mail together with the notice an explanation of the reasons for such increase in actual value.

(1.5) (a) No later than June 15 in each year, the assessor shall mail to each person whose taxable personal property has been valued at an amount different than that returned by him in his personal property schedule a notice setting forth the amount of such adjustment in valuation. The notice shall state the actual value of such personal property in the previous year, the actual value in the current year, and the amount of such adjustment in actual value. The notice shall not state the valuation for assessment of such personal property. The notice shall also set forth the ratio of valuation for assessment to be applied to said actual value prior to the calculation of property taxes for the current year.

(b) With the approval of the board of county commissioners, the assessor may include in the notice an estimate of the taxes which shall be owed for the current property tax year. If such an estimate is included, the notice shall clearly state that the tax amount is merely an estimate based upon the best available information.

(c) The notice shall state, in bold-faced type, that the taxpayer has the right to protest such adjustment in valuation but not the estimate of taxes if such an estimate is included in the notice and the dates and places at which the assessor will hear such protest. Such notice shall also set forth the following:

(I) THAT, to preserve ~~his~~ THE TAXPAYER'S right to protest, the taxpayer must notify the assessor either by mail or in person of ~~his~~ THE objection and protest;

(II) That, if notice is made by mail, such notice must be postmarked no later than June ~~30~~ 10 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE WAS MAILED; ~~and~~

(III) That, if notice is made in person, such notice must be made no later than ~~July 5~~ JUNE 15 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE WAS MAILED; and

(IV) That, after ~~such~~ THE APPLICABLE date, the taxpayer's right to object and protest the adjustment in valuation is lost.

(d) The notice shall be mailed together with a form which, if completed by the taxpayer, allows the taxpayer to explain the basis for his valuation of the property. Such form may be completed by the taxpayer to initiate an appeal of the assessor's valuation. However, in accordance with section 39-5-122 (2), completion of this form shall not constitute the exclusive means of appealing the assessor's valuation.

SECTION 8. 39-5-122 (1), (2), and (4), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended to read:

39-5-122. Taxpayer's remedies to correct errors. (1) (a) On or before May 1 of each year, the assessor shall give public notice in at least one issue of a newspaper published in his county that:

(I) Beginning on the first working day after notices of adjusted valuation are mailed to taxpayers and until June 1 OF THE FOLLOWING YEAR, ~~he~~ THE ASSESSOR will sit to hear all objections and protests concerning valuations of taxable real property determined by ~~him~~ THE ASSESSOR for the current year; ~~that,~~

(II) For a taxpayer's objection and protest to be heard, notice must be given to the assessor; ~~and that~~

(III) Such notice, if given by mail, must be ~~by May~~ POSTMARKED NO LATER THAN APRIL 27 OF THE YEAR IMMEDIATELY FOLLOWING THE CURRENT YEAR; or

(IV) SUCH NOTICE, if given in person, must be GIVEN by ~~June~~ MAY 1 OF THE YEAR IMMEDIATELY FOLLOWING THE CURRENT YEAR.

(b) The notice shall also state:

(I) That objections and protests concerning valuations of taxable personal property determined by ~~him~~ THE ASSESSOR for the current year will be heard commencing June 15;

(II) That, for a taxpayer's objection and protest to be heard, notice must be given to the assessor; and

(III) That such notice, if given by mail, must be ~~by~~ POSTMARKED NO LATER THAN June ~~30~~ 10 OF THE YEAR IMMEDIATELY FOLLOWING THE CURRENT YEAR; or

(IV) THAT SUCH NOTICE, if given in person, must be GIVEN by ~~July 5~~ JUNE 15 OF THE YEAR IMMEDIATELY FOLLOWING THE CURRENT YEAR.

(c) If there is no such newspaper, then such notice shall be conspicuously posted in the offices of the assessor, the treasurer, ~~and~~ the county clerk and recorder, and in at least two other public places in the county seat.

(d) The assessor shall send news releases containing such notice to radio stations, television stations, and newspapers of general circulation in the county.

(2) (a) If any person is of the opinion that ~~his~~ property has been valued too high, or has been twice valued, or is exempt by law from taxation or that property has been erroneously assessed ~~to him, he~~ THE PERSON may: Appear before the assessor and object; ~~he may~~ complete the form mailed with ~~his~~ THE notice of valuation pursuant to section 39-5-121 (1) or (1.5); or ~~he may~~ file a written letter of objection and protest by mail with the assessor's office before the last day specified in the notice, stating in general terms the reason for the objection and protest. Reasons for the objection and protest may include, but shall not be limited to, the installation and operation of surface equipment relating to oil and gas wells on agricultural land. Any change or adjustment of any ratio of valuation for assessment for residential real property pursuant to the provisions of section 39-1-104.2 shall not constitute grounds for such objection.

(b) If the form initiating an appeal or the written letter of objection and protest is filed by mail, it shall be presumed that it was received as of the day it was postmarked. If the form initiating an appeal or the written letter of objection and protest is hand-delivered, the date it was received by the assessor shall be stamped on the form or letter.

(c) (I) As stated in the public notice given by the assessor pursuant to subsection (1) of this section, if the taxpayer notifies the assessor of ~~his~~ THE objection and protest to the adjustment in valuation by mail, such notification shall be postmarked by ~~May~~ APRIL 27 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF ADJUSTED VALUATION WAS MAILED in the case of real property and June ~~30~~ 10 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF

ADJUSTED VALUATION WAS MAILED in the case of personal property. If the taxpayer notifies the assessor in person, such notice shall be given by ~~June~~ MAY 1 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF ADJUSTED VALUATION WAS MAILED in the case of real property and ~~July 5~~ JUNE 15 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF ADJUSTED VALUATION WAS MAILED in the case of personal property.

(II) All such forms and letters received from protesters shall be presumed to be on time unless the assessor can present evidence to show otherwise. The county shall not prescribe the written form of objection and protest to be used.

(d) The protester shall have the opportunity on the days specified in the public notice to present ~~his~~ THE objection by mail or protest in person and be heard, whether or not there has been a change in valuation of such property from the previous year and whether or not any change is the result of a determination by the assessor for the current year or by the state board of equalization for the previous year.

(e) If the assessor finds any valuation to be erroneous or otherwise improper, ~~he~~ THE ASSESSOR shall correct such error, but, if ~~he~~ THE ASSESSOR declines to change any valuation which ~~he~~ THE ASSESSOR has determined, ~~he~~ THE ASSESSOR shall state ~~his~~ THE ASSESSOR'S reasons in writing on the form described in section 39-8-106, shall insert the information otherwise required by the form, and shall, NO LATER THAN THIRTY DAYS AFTER THE DATE UPON WHICH THE PETITION OR COMPLAINT WAS FILED OR on or before the last regular working day of the assessor in June OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF ADJUSTED VALUATION WAS MAILED, WHICHEVER OCCURS FIRST, in the case of real property and NO LATER THAN THIRTY DAYS AFTER THE DATE UPON WHICH THE PETITION OR COMPLAINT WAS FILED OR July 10 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF ADJUSTED VALUATION WAS MAILED, WHICHEVER OCCURS FIRST, in the case of personal property, mail two copies of such completed form to the person presenting the objection and protest so denied.

(4) The assessor shall continue ~~his~~ hearings from day to day until all objections and protests have been heard, but all such hearings shall be concluded:

(a) NO LATER THAN TWENTY DAYS AFTER THE DATE UPON WHICH THE PETITION OR COMPLAINT WAS FILED OR by June 1 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF ADJUSTED VALUATION WAS MAILED, WHICHEVER OCCURS FIRST, in the case of real property; and

(b) NO LATER THAN TWENTY DAYS AFTER THE DATE UPON WHICH THE PETITION OR COMPLAINT WAS FILED OR BY July 5 OF THE YEAR IMMEDIATELY FOLLOWING THE YEAR IN WHICH THE NOTICE OF ADJUSTED

VALUATION WAS MAILED, WHICHEVER OCCURS FIRST, in the case of personal property.

SECTION 9. 39-5-123 (1), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-5-123. Abstract of assessment. (1) (a) ~~Upon conclusion of hearings by the county board of equalization, as provided in article 8 of this title,~~ The assessor shall complete the assessment roll of all taxable property within ~~his~~ THE ASSESSOR'S county, and, no later than August 25 in each year, ~~he~~ THE ASSESSOR shall prepare ~~therefrom~~ three copies of the abstract of assessment and in person, and not by deputy, shall subscribe ~~his~~ THE ASSESSOR'S name, under oath, to the following statement, which shall be a part of such abstract: "I, ..., the assessor of ..... county, Colorado, do solemnly swear that in the assessment roll of such county I have listed and valued all taxable property located therein and that such property has been assessed for the current year in the manner prescribed by law and that the foregoing abstract of assessment is a true and correct compilation of each schedule.

....."

(b) Upon completion by the assessor of the abstract of assessment, the chairman of the board of county commissioners shall examine such abstract and shall sign the following statement, which shall be a part of such abstract: "I, ..., chairman of the ..... county board of county commissioners, certify that ~~the county board of equalization has concluded its hearings, pursuant to the provisions of article 8 of this title, that~~ I have examined the abstract of assessment, and that all valuation changes ordered AS OF ....., 19.., by the county board of equalization have been incorporated therein.

....."

SECTION 10. 39-5-203 (1), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-5-203. Mobile homes - determination of value. (1) For the property tax year beginning January 1, 1983, and for each property tax year thereafter, the actual value of a mobile home shall be determined by the assessor in accordance with the provisions of sections 39-1-103 (5) and 39-1-104 ~~(10.3)~~ (10.2) for the determination of the actual value of real property.

SECTION 11. 39-8-105, Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-8-105. Reports of assessor. (1) At a meeting of the county board of equalization on the second Monday in July, the assessor shall report the valuation for assessment of all taxable real property in the county ~~He shall~~ AND submit a list of all persons who have appeared before ~~him~~ THE ASSESSOR AS OF JULY 1 to present objections or protests concerning real property and his action in each case.

(2) At a meeting of the board on July 15, the assessor shall report the valuation of all taxable personal property in the county and shall note any valuations for assessment of portable or movable equipment which have been apportioned pursuant to the provisions of section 39-5-113. ~~He~~ THE ASSESSOR shall submit a list of all persons in the county who have failed to return any schedules and shall report ~~his~~ THE ASSESSOR'S action in each case. ~~He~~ THE ASSESSOR shall also submit a list of persons who have appeared before ~~him~~ THE ASSESSOR AS OF JULY 10 to present objections or protests and ~~his~~ THE ASSESSOR'S action in each case.

(3) AT A MEETING OF THE BOARD ON THE SECOND MONDAY OF EVERY MONTH OTHER THAN JULY, THE ASSESSOR SHALL SUBMIT A LIST OF ALL PERSONS IN THE COUNTY WHO HAVE APPEARED BEFORE THE ASSESSOR AS OF THE FIRST DAY OF THE MONTH TO PRESENT OBJECTIONS OR PROTESTS AND THE ACTION OF THE ASSESSOR IN EACH CASE.

SECTION 12. 39-8-106 (1) (a), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-8-106. Petitions for appeal. (1) The board shall receive and hear petitions from all persons whose objections or protests have been refused or denied by the assessor. Such petitions shall be in a form, approved by the property tax administrator pursuant to section 39-2-109 (1) (d), the contents of which shall include the following:

(a) A statement informing such person of ~~his~~ THE right to appeal, the time and place at which the county board of equalization will hear appeals from determinations of the assessor, and that, by mailing or delivering one copy of the form to the county board of equalization which is received or postmarked NO LATER THAN THIRTY DAYS AFTER THE ASSESSOR'S DECISION HAS BEEN RENDERED OR on or before July 15 of ~~that~~ THE year IMMEDIATELY FOLLOWING THE PROPERTY TAX YEAR FOR WHICH THE DECISION WAS RENDERED, WHICHEVER OCCURS FIRST, for real property and NO LATER THAN THIRTY DAYS AFTER THE ASSESSOR'S DECISION WAS RENDERED OR ON OR BEFORE July 20 of ~~that~~ THE year IMMEDIATELY FOLLOWING THE PROPERTY TAX YEAR FOR WHICH THE DECISION WAS RENDERED, WHICHEVER OCCURS FIRST, for personal property, such person will be deemed to have filed ~~his~~ THE petition for hearing with the county board of equalization. The date the form is received by the county board of equalization shall be stamped on the form. All such forms shall be presumed to be on time unless the county board of equalization can present evidence to show otherwise.

SECTION 13. 39-8-107 (2), Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended to read:

39-8-107. Hearings on appeal. (2) The board shall continue its hearings from time to time until all petitions have been heard, but all such hearings shall be concluded and decisions rendered thereon NO LATER THAN THIRTY DAYS AFTER THE PETITION WAS FILED WITH THE BOARD OR by the

close of business on August 5 of ~~that~~ THE year IMMEDIATELY FOLLOWING THE PROPERTY TAX YEAR FOR WHICH THE NOTICE OF ADJUSTED VALUATION WAS MAILED, WHICHEVER OCCURS FIRST. Any decision shall be mailed to the petitioner within five business days of the date on which such decision is rendered.

SECTION 14. 39-10-114 (1) (a) (I) (A), (1) (a) (I) (D), and (1) (a) (I) (E), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended to read:

39-10-114. Abatement, cancellation of taxes. (1) (a) (I) (A) Except as otherwise provided in ~~sub-subparagraphs (D) and~~ SUB-SUBPARAGRAPH (E) of this subparagraph (I), if taxes have been levied erroneously or illegally, whether due to erroneous valuation for assessment, irregularity in levying, OR clerical error, ~~or overvaluation,~~ the treasurer shall report the amount ~~thereof~~ to the board of county commissioners, which shall proceed to abate such taxes in the manner provided by law. If such taxes have been collected by the treasurer, the board of county commissioners shall authorize refund of the same in the manner provided by law. Except as provided in sub-subparagraph (E) of this subparagraph (I), in no case shall an abatement or refund of taxes be made unless a petition for abatement or refund is filed within ~~two years~~ ONE YEAR after January 1 of the year following the year in which the taxes were levied. For purposes of this sub-subparagraph (A), "clerical error" shall include, but shall not be limited to, any clerical error made by a taxpayer in completing personal property schedules pursuant to the provisions of article 5 of this title.

(D) ~~Except as provided in sub-subparagraph (E) of this subparagraph (I), an abatement or refund of taxes based upon the grounds of overvaluation of property shall be made only for taxes levied on and after January 1, 1988. With regard to petitions filed prior to June 5, 1991, an abatement or refund may be made pursuant to this section if, on June 5, 1991, such petition is pending or upon which a final administrative order or court judgment has been issued on the grounds that overvaluation of property was not grounds for an abatement or refund of taxes. With regard to petitions which have been denied on such grounds, petitions for abatement or refund of taxes may be refiled pursuant to this sub-subparagraph (D) on or before December 31, 1991. No abatement or refund of taxes levied on and after January 1, 1990, shall be made based upon the ground of overvaluation of property if an objection or protest to such valuation has been made and a notice of determination has been mailed to the taxpayer pursuant to section 39-5-122.~~

(E) Notwithstanding the periods of limitation for filing a petition for and determining the amount of an abatement or refund of taxes provided in ~~sub-subparagraphs~~ SUB-SUBPARAGRAPH (A) ~~and (D)~~ of this subparagraph (I), when an audit of prior years' taxes for the period described in section 39-10-101 (2) (b) discloses that taxes are due and owing on mines and on oil

and gas leaseholds, such taxes shall be subtracted from any overpayment of such taxes determined to be due pursuant to this subparagraph (I) for any years during such period and prior to computing delinquent interest.

SECTION 15. 39-31-101 (2) (a), (2) (b), and (3) (b), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are amended to read:

39-31-101. Real property tax assistance - eligibility - applicability. (2) Such grant shall be the amount of the general property taxes actually paid on the residence or the amount of taxes actually paid on a mobile home, plus any tax-equivalent payments computed pursuant to subsection (4) of this section, with respect to the rent of a trailer space during the year for which such grant is claimed, or the amount of the specific ownership tax actually paid on a trailer coach, or the amount of the tax-equivalent payments, computed pursuant to subsection (4) of this section, actually made during the year for which such grant is claimed, but in no event may it exceed:

(a) In the case of an individual, five hundred dollars reduced by twenty percent of the amount by which ~~his~~ THE INDIVIDUAL'S income exceeds ~~five thousand~~ EIGHT THOUSAND SIX HUNDRED dollars;

(b) In the case of a husband and wife, five hundred dollars reduced by twenty percent of their income over ~~eight thousand seven hundred~~ FIFTEEN THOUSAND dollars.

(3) Such grant shall be allowed to such persons as described in subsection (1) of this section who meet the following requirements:

(b) Have income from all sources for the taxable year of less than ~~seven thousand five hundred~~ TWELVE THOUSAND NINE HUNDRED dollars if single or, in the case of a husband and wife, less than ~~eleven thousand two hundred~~ NINETEEN THOUSAND THREE HUNDRED dollars including, but not limited to, for this purpose, alimony, support money, cash public assistance and relief, pension or annuity benefits, federal social security benefits, veterans' benefits (except those specific veterans' benefits that are service-connected disability compensation payments), nontaxable interest, workers' compensation, and unemployment compensation benefits but not including outright gifts. "Service-connected disability compensation payments" means those payments made for permanent disability, which disability shall be limited to loss of or loss of use of both lower extremities so as to preclude locomotion without the aid of braces, crutches, canes, or a wheelchair; loss of use of both hands; blindness in both eyes, including such blindness with only light perception; or loss of one lower extremity together with residuals or organic disease or injury which so affects the functions of balance or propulsion as to preclude locomotion without the use of a wheelchair.

SECTION 16. Article 31 of title 39, Colorado Revised Statutes, 1982 Repl. Vol., as amended, is amended BY THE ADDITION OF A NEW SECTION to read:

39-31-105. Annual review of income eligibility levels. IN EACH TAXABLE YEAR COMMENCING ON OR AFTER JANUARY 1, 1995, THE INCOME LEVELS SET FORTH IN SECTION 39-31-101 SHALL BE REVIEWED BY THE DEPARTMENT OF REVENUE AND ADJUSTED IN ACCORDANCE WITH THE ANNUAL PERCENTAGE CHANGE IN THE CONSUMER PRICE INDEX FOR THE DENVER-BOULDER METROPOLITAN STATISTICAL AREA.

SECTION 17. Repeal. 39-1-104 (10.2) (c) and (10.3), Colorado Revised Statutes, 1982 Repl. Vol., as amended, are repealed.

SECTION 18. Effective date - applicability. This act shall take effect upon passage and sections 1, 3, 15, and 16 of this act shall apply to property tax years commencing on and after January 1, 1995, and sections 4, 6 through 9, and 11 through 14 of this act shall apply to property tax years commencing on and after January 1, 1994.

SECTION 19. Safety clause. The general assembly hereby finds, determines, and declares that this act is necessary for the immediate preservation of the public peace, health, and safety.

An Examination of Colorado's Current Sales Tax System

Roy Romer
Governor

Renny Fagan
Executive Director

November 2, 1993

Governor Roy Romer
136 State Capitol
Denver, CO 80203

Dear Governor Romer:

Accompanying this letter is a Department of Revenue study of Colorado's state and local sales tax system.

Scope of the Study. Early in 1993, you sought information regarding (a) the effects of local sales tax rates upon local retail shopping center outlet location decisions and (b) the definitional blurring of the distinction between goods and services for some purchased items, such as information. You did not request policy recommendations for further action.

In the past the Department has conducted studies of many components of Colorado's tax system. We took your inquiry and expanded upon it. The study now includes a detailed description of the sales tax system and an overview of current administrative practices and costs. More significantly, we constructed a model which demonstrates various methods of establishing a uniform base of taxed items, applying a uniform rate and redistributing collected dollars to maintain local governments with the same revenues as they collect under the present system.

We took this extra step of constructing a model of a state collected - locally shared sales tax system because vendors who collect the sales tax often cite the complexity of Colorado's system. The issue of uniformity versus the autonomy of home rule cities has been hotly contested for years. We felt that a statistical model may provide useful information to those debating this issue.

Similarly, we additionally constructed a model that would add certain types of services to the sales tax base. Since the economy tends to include an increasing proportion of services, we again felt that a model which helps to examine the effects upon tax rate and regressivity would be helpful to those who choose to consider the issue.

Recommendations. Both of these models have significant policy implications. A primary goal of a state collected-locally shared sales tax model is to achieve administrative simplicity, for both vendors and governmental entities. However, achieving this goal through establishing a uniform base and rate while maintaining the same revenues for local jurisdictions is impractical at this time. The local base and rate are tailored to the needs of a local community such as economic characteristics, financial needs, population growth and bond payment obligations, which uniformity would significantly disrupt. In Colorado's decentralized government, most local citizens probably feel that their local sales tax dollars should remain in their community. To maintain the same amount of dollars as under the current system, a uniform system would take dollars from one community and send them to another. A uniform system is adverse to the constitutional powers of home rule cities. For these reasons, we recommend that you do not support adoption of a uniform base-rate model.

At the same time, we believe that other means are available to achieve greater simplicity of administration. We recommend that the Department of Revenue work with the Colorado Association of Commerce and Industry, the National Federation of Independent Business, local associations of the tax officers of Colorado corporations, the Colorado Municipal League, Colorado Counties, Inc., the Office of Regulatory Reform in the Department of Regulatory Agencies and any other interested parties, in order to further achieve simplicity and uniformity in the following areas: application for sales tax licenses, forms for remitting sales tax, common definitions of taxable items in more than one jurisdiction's base, joint audits, and procedures for protests concerning assessments. Most importantly, this group should evaluate the viability of central collection and administration of the sales tax system, without changing current bases or rates.

With regard to expanding the base to include certain kinds of services, using the experience of other states, our model makes certain assumptions about which types of services could be added to the base. Certain industries who provide these services would probably reach different conclusions. Adding services without establishing a credit system for low income persons does not reduce the regressivity of the sales tax. Finally, while adding some services to the base would allow for a reduction in rate while maintaining the same revenues, the burden of payment shifts to different consumer groups, a shift which may not reduce regressivity. For these reasons, we recommend further study of this issue and public comment. Therefore, we recommend that you do not support adoption of the model presented at this time.

Renny Fagan
Executive Director
COLORADO DEPARTMENT OF REVENUE

Executive Summary

This paper examines the adequacy, efficiency, tax equity, and simplicity of Colorado's sales tax system. Because various interested parties have debated alternatives to the current complex system, this study constructs and presents the results of various collection/distribution methods. Lastly, this document will study a hypothetical expansion of the sales tax base and its impact on tax equity and other revenue goals.

CHAPTER 1

Chapter 1 presents a brief history of state and local sales taxes in Colorado and the evolution of these taxes to their present form. Along with the history of sales taxes in Colorado, the chapter covers the composition of the state sales tax base.

During the Great Depression era, Colorado adopted a state sales tax in 1935 along with many other states. Originally instituted as an emergency measure, the tax was extended permanently in 1937. The initial sales tax rate of 2 percent was increased to its current level of 3 percent in 1965. Although the Legislature increased the rate to 3.5 percent in 1983 for a period of 15 months, the sales tax has remained at the 1965 level despite several legislative and ballot initiatives to increase the rate. Since 1978, 35 states have increased their sales tax rates; in 1991, fifteen expanded their sales tax bases. Colorado is among the few states that have not increased the rate or scope of their sales taxes over the last 15 years.

The City and County of Denver enacted a local sales tax in 1948 with Pueblo following in 1955. Another 39 jurisdictions adopted a sales tax in the 1960s. One hundred twenty-one jurisdictions, nearly half of the current number of taxing jurisdictions, enacted sales taxes in the 1970s and another seventy-three did so in the 1980s. In the 1990s, nine jurisdictions adopting sales tax ordinances. The overall growth in the number of local jurisdictions establishing sales taxes in Colorado mirrors a national trend. In 1976, 4,893 jurisdictions levied sales taxes; by 1991, there were 6,438 taxing authorities.

The decentralized nature of government in Colorado and the ability of local governments in the state to collect their own sales tax revenues, causes a great divergence between the state's ranking with regards to the state sales tax burden and the state's ranking regarding state *and* local

government sales tax burdens. Colorado ranks 43rd among 45 states in state sales tax collections per capita and per $1,000 of personal income; however, the state ranks 14th and 25th, respectively, in state and local sales tax collections per capita and per $1,000 of personal income.

Sales and use tax revenues increased at an average annual rate of 5.25% between 1981 and 1993. They comprise an increasingly smaller portion of state revenues than in previous years. Sales and use tax receipts contributed 29 percent of the revenues in the General Fund in 1993; in its peak year, 1984, sales and use tax receipts made up nearly 43 percent of General Fund revenues.

Partially responsible for the diminishing role of the state sales tax are the specific exemptions to the sales tax that have been granted over time. Over 50 specific exemptions to the sales tax exist, 27 of which were adopted during the 1970s and 1980s. The total estimated value of statutory exemptions for FY 1993 was nearly $350 million.

Clearly absent from the state's sales tax base are the sales to Colorado residents from out-of-state mail order firms and home television shopping networks. It is estimated that the state was unable to collect $26.5 million from this class of sales in 1992. A 1967 U.S. Supreme Court decision held that states and localities could not require mail order firms, without a presence in their taxing domains, to collect sales taxes upon the sale of taxable goods to residents of those jurisdictions. The decision does not nullify the sales tax liability of consumers, but indicates instead that state and local governments must find another means of collecting sales tax liabilities on behalf of individual consumers rather than requiring mail order firms to act as state and local government collecting agents. Without the facilitation of mail order firms in collecting sales tax liabilities, state and local governments face an administratively untenable task in tracking and collecting the sales tax liabilities of individual consumers, leaving most revenues uncollected.

In an effort to collect a portion of such revenues, some states have combined their efforts, through regional agreements, to promote compliance with sales/use tax laws. Some of their efforts include the promotion of voluntary compliance among mail order firms, auditing direct marketers, and sharing the information they obtain from those auditing efforts relating to the purchases of consumers. This information allows state and local governments to directly pursue the sales tax liabilities of individual consumers.

A 1992 U.S. Supreme Court decision upheld the Commerce Clause provisions of the 1967 decision, but also clearly stated that the issue was strictly a Commerce Clause issue rather than a due process issue. This new development enables Congress to legislate provisions that would enable states to impose taxes on this particular type of interstate commerce. Colorado has adopted a law to require sales tax collections from out-of-state mail order retailers upon the passage of such legislation. However, the tax increase limitations set forth by Amendment One may preclude the state from receiving the increased amount of revenues unless the issue is submitted to a vote of the people, should Congress act upon this matter.

CHAPTER 2

In Colorado's current sales tax system, a total of 241 different entities received $1,778 million in sales and use tax revenues in FY 1990-91. For the most part duality exists in the collection of these revenues. The state collects approximately 64 percent of total state and local sales and use tax revenues while home rule cities collect and administer the remaining 36 percent. In terms of local sales and use tax revenues, the state collected $292 million in revenue for statutory cities, counties and special districts in FY 1990-91; home rule cities, accounting for 68 percent of total local revenues, collected $634 million that year.

In performing their role as collection agents for the various taxing entities, retailers receive remuneration for the expenses they incur in collecting and remitting sales taxes. This reimbursement is commonly referred to as a "vendor discount". In FY 1990-91 an estimated $49 million in vendor discounts were allowed by state and local taxing jurisdictions on total collections of $1,727 million. For the state, special districts and most of the counties, vendors may retain 3.33 percent of total sales taxes collected. For statutory cities, the comparable percentage is 2.63 percent. Home rule cities have the lowest vendor discount at 2 percent. Statewide, the vendor discount averages 2.82 percent.

Based on a review of characteristics of other states, Colorado is unique in its method of administering sales tax. Of the thirty-two states that permit enactment of local sales and use tax, state administration of these taxes occurs in all but six states. In twenty-four states, local taxing jurisdictions are required to adopt the state's sales tax base. Of the 46 states, inclusive of the District of Columbia, that levy a state sales tax, twenty-seven states allow the vendor to retain a collection fee. Colorado has the highest flat rate vendor discount in the nation at 3.33 percent while Wisconsin and Texas have the lowest at 0.5 percent. In eleven of the 26 states where the state collects local sales taxes, a state administration fee is charged for collecting the tax. Rates range from 0.82 percent of collections in California to a tiered rate structure in Alabama. In Colorado the state may only recover costs for collecting taxes on behalf of certain special districts and may not do so for its collection efforts for counties and statutory cities.

The chapter examines whether the state should charge local taxing jurisdictions for the collection of sales tax. The state's service of collecting local sales tax is examined in terms of the theory of "public goods." It is noted that the current centralized provision of these services for statutory cities, counties and special districts results in gains for local taxing jurisdictions since they can avoid the cost of replicating the resource requirements devoted to administration and collection of the tax. Additionally, the provision of these services by a centralized authority creates spillover benefits (in the form of cost savings) for the entire class of taxpayers affected stemming from unified reporting and remittance of sales tax collections for several different taxing jurisdictions. The alternatives to centralized administration and collection of taxes for local jurisdictions is either a replication of the state's resource effort in collecting these taxes or contracting with a private entity for the provision of these services. Both of these alternatives result in higher costs of collection for the taxing entity than they are now paying. Under both

of these alternatives to centralized collection, the spillover benefits to taxpayers stemming from unified reporting and remittance of sales tax collections is effectively nullified. There appears to be good rationale for the state to offer subsidized collection services to statutory cities and counties.

CHAPTER 3

Colorado's localities, over time, have come to rely increasingly on revenues derived from local sales taxation. Unlike many other states, Colorado does not restrict the base of taxation, does not restrict the rate of taxation imposed, and does not employ an equalization scheme to minimize disparities of local tax effort. The actual yield of the tax on a locality-by-locality basis varies a great deal in Colorado. This is due to an interplay of the volume of retail sales that is taxable and the tax rate imposed.

Three data bases that summarize the tax base for each kind of jurisdiction -- county, home rule city, and statutory city -- were created using information from the Division of Local Government and Department of Revenue files. A tax base also was computed for those localities that receive their revenues on the basis of a county formula. The tax base of all localities was re-defined to create a uniform sales tax base (specifically, one that matched the state sales tax base). A uniform tax rate (one that would produce approximately the same total revenue) was derived in addition to individual local tax rates. These latter tax rates in some cases resulted in rates that were potentially at variance with the state's statutory maximum sales tax rate. Several localities lost a significant portion, even the majority, of their tax bases from the exemption of grocery store food purchases. Thus, many of the individual tax rates computed were severely impractical.

Both the reasons for, and the effectiveness of, the interjurisdictional divergence of tax policies are reviewed, yet the findings are inconclusive with regards to Colorado localities; the vast majority of studies have been conducted on the interstate level. Most analysts believe tax policy rivalry to be a no gain proposition, but there are dissenting voices.

The data bases were also used to examine the effects of other distribution systems (other than point-of-sale) and whether these systems would produce a revenue distribution under a uniform base/uniform tax rate system that would be similar to the status quo. None of the systems resulted in a satisfactory outcome. It would be possible to redistribute revenues received under a uniform system so that each locality would be held reasonably "revenue harmless" from such a system. However, such redistribution would require shuffling dollars from one community to another.

CHAPTER 4

A current topical issue in tax literature is base broadening as it relates to sales taxes. Base broadening is a fiscal tool that states are using, or at least are discussing, to fulfill many different purposes: to halt the erosion of sales tax revenues as consumers shift their spending from goods to services; to create more equitable tax structures for taxpayers -- for households, base

broadening can be used to lessen regressivity -- for businesses, it can be used to reduce the distortional effects of taxing goods only; and/or to stabilize the yield of sales tax revenues. The sales tax is one of the least disliked of the taxes levied by governments, and for many states, the service sector provides a source of previously untaxed revenues.

Without changes to the sales tax statutes, Colorado sales tax revenues will reflect a diminishing consumer preference towards taxable goods. The proportion of taxable consumer expenditures is shrinking in comparison to non-taxable consumer expenditures. In 1965, 40.5 percent of total consumer expenditures were attributable to services. The proportion of income spent by consumers on services by 1990 was 54.4 percent. Consumption of services in the year 2005 is projected to be 64 percent of consumer dollars. A comparison of Colorado tax revenues to personal income over the last 20 years confirms the same trend. Since the 1970s taxable sales as a percentage of personal income has trended downwards with the exception of the boom period in Colorado between the late 1970s and early 1980s in which taxable sales as a percentage of personal income actually increased. During the early '70s taxable sales were roughly 55 percent of personal income; by the '90s taxable sales had decreased to 46% of personal income. Holding population and inflation constant, there is a divergence between state expenditures per capita and sales tax revenues per capita. Since 1980, real per capita sales tax revenues have decreased 14% while real public expenditures per capita increased approximately 35% over the same period.

Consumer choices play a large role in the revenue yield of the sales tax as witnessed by the revenue response of the sales tax to the diminishing role that goods play in consumer budgets. Sales tax revenues also respond to economic cycles. Consumers are sensitive to economic cycles: typically, they react to recessions by paring their spending on taxable items (especially durable goods), and react to periods of growth by boosting their spending on taxable goods. This pattern of behavior by consumers generates a volatile stream of sales tax revenues. Colorado's sales tax provides nearly thirty percent of the revenues that flow into the General Fund. It is the second largest source of tax revenues to the state. Due to its prominence in funding state services, it is prudent to examine the impact of the reduction in per capita sales tax revenues and the volatility of the tax on planning and budgeting state services, and examine possible alternatives. Base broadening is one alternative that has the potential to address some of these issues.

Studies in current tax literature indicate that broadening the sales tax base may help stabilize sales tax revenues, diminish the competitive advantage that service providers may have over retailers, and/or moderate the regressivity of the sales tax. A sales tax base that includes not only goods but also services conforms to the notion that the sales tax is a tax on consumption.

A larger base would also allow the state to assess a lower sales tax rate. Consumers and businesses sometimes make buying and pricing decisions based on the amount of sales tax that is charged or is not charged (as is the case for the purchase of services) on an item. If a tax causes consumers or businesses to behave in a manner different from what they would normally choose to do without the tax, the tax is distorting the decisions of consumers and businesses. However, the lower the tax rate and the broader the tax base, the lower the chances of the tax

impacting a buying or pricing decision. Broadening the sales tax base would level the playing field for retailers and service providers and would allow the state to decrease the tax rate which would in turn diminish the distortional effects of the sales tax on decisionmaking by consumers and businesses.

One means of broadening the base would be to repeal all or a portion of the 50 sales tax exemptions that the state allows. A majority of these exemptions to the sales tax result in a relatively insignificant difference of revenues to the state. Over half resulted in a reduction of $1 million or less in sales tax collections. The exemptions that yield the greatest sales tax relief are those for food for off-premises consumption; gasoline and special fuel; fuel for residential heat and light; prescription drug sales; sales to governmental units; purchases of machinery or machine tools used in manufacturing processes; sales to charitable organizations; and cigarette and tobacco products sales. The total estimated value of these eight exemptions is roughly $320 million.

Another method states can use to broaden their sales tax bases is to include services in their sales tax bases. A 1991 Federation of Tax Administrators (FTA) study of the taxation of services among the 50 states plus Washington D.C., ranked Colorado 47th in the number of services that are included in its sales tax base. Of a possible 160 services listed in the study, Colorado taxes 12. Hawaii and New Mexico had the most comprehensive sales tax bases: both include 154 services in their sales tax bases. Among Colorado and its neighboring states, Colorado ranked the lowest in the number of services included in its base: Kansas ranked 13th; Wyoming, 16th; Arizona, 17th; Utah, 21st; Nebraska, 23rd; and Oklahoma, 28th. Oklahoma, the lowest ranked Colorado neighbor taxed at least 32 services in comparison to the 12 services that are included in the Colorado sales tax base.

A model of the revenue impact of broadening the sales tax base was constructed for this chapter. The current sales tax base was combined with other combinations of currently non-taxable consumer expenditures and the resulting sales tax revenues were derived. Given these various alternatives, the sales tax rate could be reduced from 3 percent to as low as 2.15 percent, depending upon the magnitude of the additional base. Expanding the current base by incorporating all consumer services plus current exemptions from the base would allow the state to reduce the tax rate to 2.15 percent while remaining revenue neutral. However, this is the most regressive of the alternatives. The least regressive alternative was the combination of the current sales tax base with a tax on consumer services, a repeal of the food and energy exemptions, and a credit for sales tax expenditures on food for home consumption and utilities by low income families. Under this model, a tax rate of 2.35 percent would be required to maintain the current level of sales tax revenues.

Base broadening could be an alternative for states that want to revamp their sales tax structures. However, Florida serves as an example of the problems a state may encounter in incorporating services and previous exemptions into a sales tax base, and in garnering the support of taxpayers to enable the ratification of such policy. Despite its efforts to involve various sectors of the community in drafting the legislation, Florida faced an entrenched and effective opposition

(which is likely to exist in most large communities) that was successful in defeating the new policy. Although the Florida legislature successfully passed a fairly comprehensive sales tax on services and former exemptions, the newly enacted legislation was repealed within six months of implementation.

Including a service component into the sales tax base of localities, under a uniform base and rate system, would allow sales tax rates to decrease while maintaining overall revenue neutrality. The rates would decrease as follows: counties could levy a tax rate of 0.69% rather than 1.11%; home rule cities could decrease their rates to 2.14% from 3.20%; and the uniform rate for statutory cities could be decreased to 2.28% rather than 3.44%. This system of sales taxation would require the redistribution of revenues in order to maintain the revenue stream that localities currently experience. As seen in the third chapter, a uniform rate, uniform base system based on point of sale leaves rural areas, that chiefly depend on the revenues derived from the sales tax on food for home consumption, with less revenues than they would normally receive. The addition of a services component to the base of localities would further exacerbate the distributional disparities between localities. Whereas urban areas and towns with heavy tourism would most likely benefit from the inclusion of services into the sales tax base, rural areas would be at a disadvantage without a redistribution of revenues since services are more abundant in the urban and high tourism areas.

I The History and Evolution of State and Local Sales Taxes in Colorado and a Review of the Statutory Tax Base and Exemptions to the Base

In 1935 Colorado joined other states during the Great Depression era in passing sales tax laws. The legislature acted after an estimated 2,500 people attended a meeting on the state capitol lawn. The state sales tax was instituted as an emergency measure but soon extended permanently in 1937. The state tax rate was initially set at 2 percent and increased in 1965 to 3 percent where it stands today. During a state revenue shortfall in 1983, the rate was briefly increased for 15 months to 3.5 percent. In November 1992, the state's voters defeated a proposal to increase the state's tax rate to 4 percent. Many tax exemptions have been enacted over the years with few additional taxable items added.

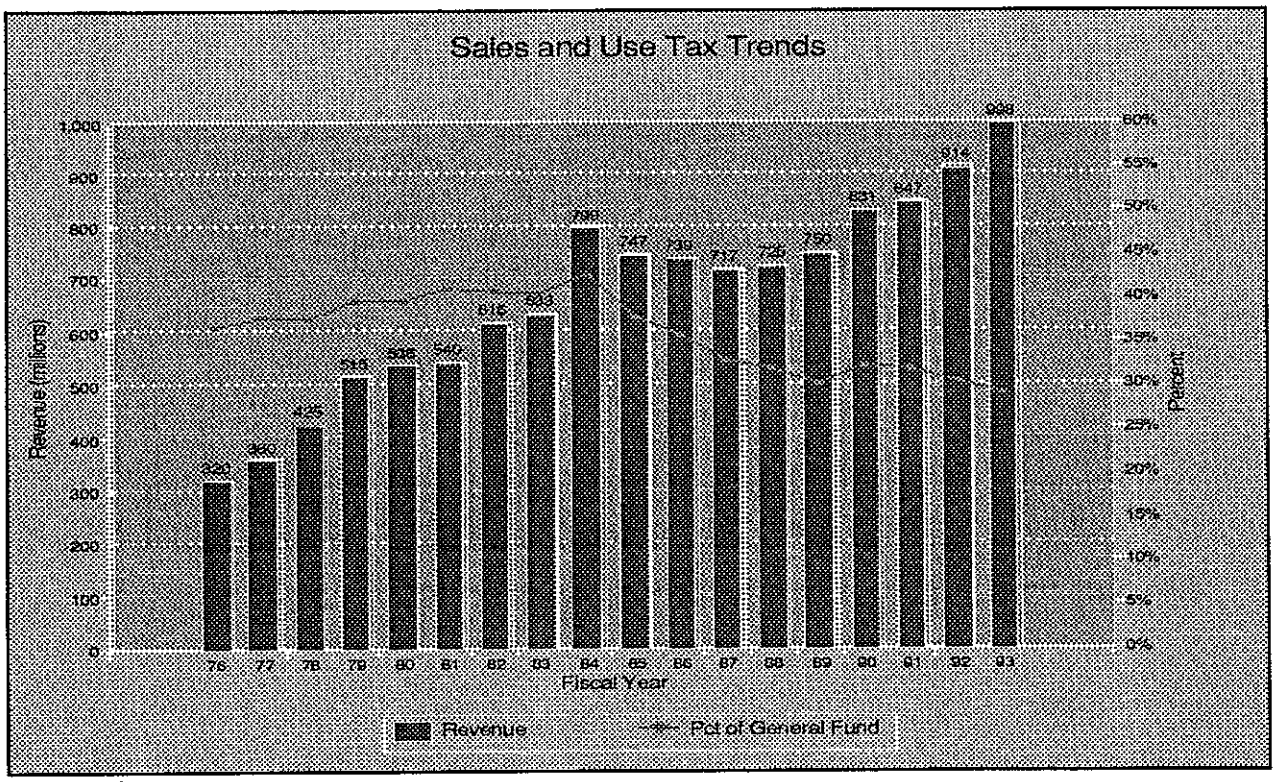

Figure 1.

Figure 1 shows the historical trend of sales and use tax collections since fiscal year 1976. The apparent flatness of growth in 1980 and 1981 is due to the removal of food and home heating fuels during that time. The spike in 1984 is due to the aforementioned tax rate increase. Sales

and use tax revenue increased at a 5.25% average annual rate during the 1981-1993 period. The remainder of the general fund has grown at a 10.0% rate (all general fund revenues grew at an 8.32% annual rate). Therefore, the relative importance of the state sales and use tax as a funding mechanism has declined. In 1976, sales and use tax accounted for 36.6 percent of gross general fund and has declined to 29.0 percent in 1993 after reaching a peak of 42.6 percent in 1984. For comparison purposes, Colorado population and inflation (using the Denver-Boulder CPI) increased at an average annual rate of 5.80%.

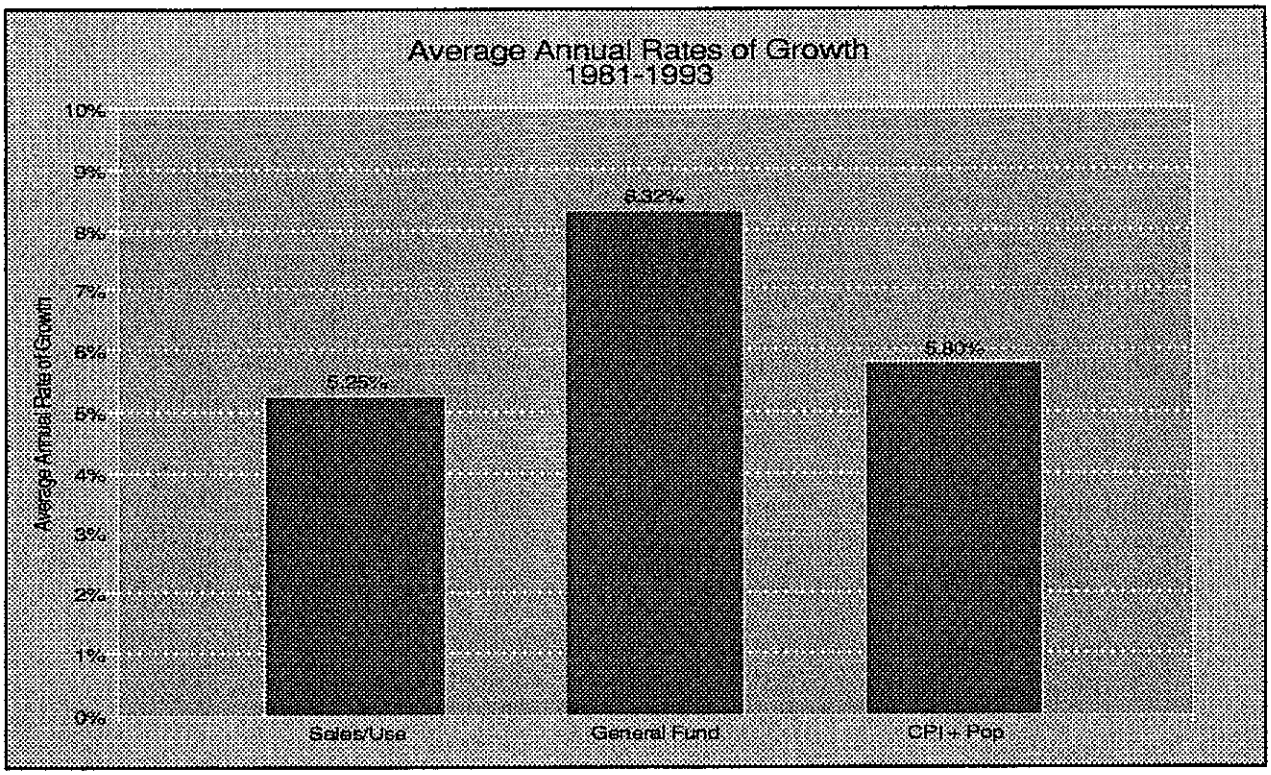

Figure 2.

Colorado lists six broad categories of taxable goods in its statutes and then lists the exemptions to the broad list. A tax is levied against (1) the purchase price paid or charged for all sales and purchases of tangible personal property, (2) against the net value of exchanged property, (3) upon telephone and telegraph services, (4) for commercial consumption of gas and electric services, (5) upon the amount paid for food or beverages served or furnished by restaurants, cafes, and similar places of business, and (6) the amount charged for the rental of lodging.

Specific exemptions to the Colorado sales tax have gradually been added over time. The greatest portion of these exemptions were added in the 1970s and 1980s when 27 exemptions were placed into Colorado law. There are currently 50 specific exemptions. (It should be noted that two other sales tax exemptions exist only in enterprise zones.) Table 1 lists these exemptions in order of their enactment.

Colorado Sales Tax Exemptions

	Date Enacted	FY 1993 Revenue Impact (millions)
Tangible property becoming an ingredient or component part of the product or service manufactured	1935	$1.1
Gasoline and special fuel	1935	58.1
Energy used for industrial, manufacturing, and similar purposes	1937	5.1
Sales to charitable organizations	1937	16.2
Sales to governmental units	1937	21.0
Printers ink and newsprint	1943	4.1
Sales of livestock for breeding	1943	< 0.1
Newspapers	1943	2.7
Sales and purchases of neat cattle, sheep, lambs, poultry, swine and goats	1943	0.0 *
Sales of feed for livestock; seeds and orchard trees	1943	0.0 *
Farm auction close-out sales	1945	NA
Cigarettes	1959	14.4
Lodging for permanent residents	1959	NA
Sales of straw for livestock bedding	1961	< .1
Sales to residents of a bordering state with twenty miles of the state border if the bordering state does not have a sales tax	1963	0.0
Sales of prescription drugs	1965	21.7
Sales to public schools	1969	NA
Sales of live fish for stocking	1970	< 0.1
New and used commercial trucks and trailers purchased in Colorado for use outside Colorado or in interstate commerce	1976	1.0
Certain sales of assets in business formation or dissolution	1977	2.8
Property brought into the state for testing, modification, or inspection if the use is outside of the state and the testing period is no longer than 90 days	1977	0.2
Sales of construction materials to a common carrier by rail	1977	0.0
Leases of personal property for three years or less if tax is paid upon original acquisition	1977	0.0
Special fuel for farm vehicles	1977	1.2
Sales of insulin (Included with prescription drugs)	1977	0.0 **
Sales of motor vehicles by nonresidents purchased for use by nonresidents outside Colorado	1977	0.1
Value of meals furnished to employees of food service establishments free or at reduced rates and considered part of their incomes	1978	0.1

* Without specific exemptions, these goods would yield very little in tax revenues: a considerable amount would be shipped out of state, used as a component in the production of food or would be sold at wholesale. If these goods could be taxed under these conditions, their value would be $59.6 million and $16.1 million respectively.

** Included in the estimate of the value of the exemption for prescription drugs.

Table 1.

Colorado Sales Tax Exemptions, (continued)

	Date Enacted	FY 1993 Revenue Impact (millions)	
Property transferred by a supplier to out of state vendors for use in selling products at wholesale by the supplier	1978	0.2	
Sales of any article, containers or bags to a retailer or vendor of food if provided to the consumer without a separate charge	1978	0.2	
Sales of construction and building materials for use by contractors on public works projects used by tax-exempt organizations	1979	NA	
Sales of straw for poultry bedding	1979	< 0.1	
Purchases of machinery or machine tools used in manufacturing process	1979	18.4	
Sales of glucose for treatment of insulin reactions and insulin measuring and injecting devices	1979	0.0	**
Sales of fuel for residential heat, light, and power	1979	29.5	
Forty-eight percent of purchase price of factory built housing	1979	0.1	
Sales of food for off-premises consumption (net of food stamps)	1979	139.8	
Certain medical supplies and equipment; eyeglasses, contacts, and hearing aids; therapeutic devices, appliances or related accessories	1980	4.3	
Property for use in food manufacturing when such property becomes part of the product or is left unfit for further use	1982	0.3	
Refractory materials and carbon electrodes used in manufacturing iron and steel, and inorganic chemicals used in processing uranium-vanadium ores	1982	0.2	
Nuclear fuel when deemed a wholesale sale	1982	0.0	
Sales of aircraft used or purchased for use in interstate commerce by commercial airlines	1984	0.0	
Newspaper advertising supplements	1985	1.3	
Sales of personal property through vending machines of 15 cents or less	1986	0.0	
Food purchased with federal food stamps or funds from the supplemental food program for women, infants, and children	1987	0.0	
Sales of precious metal bullion and coins	1990	0.2	
Direct mail advertising materials distributed by persons engaged solely and exclusively in providing cooperative direct mail advertising	1990	< 0.1	
Sales of aircraft component parts	1991	0.4	
Sale of railroad capital equipment	1992	0.7	
Sale of materials used in the printing process	1992	0.2	
TOTAL VALUE OF EXEMPTIONS		**$345.6**	

Table 1.

LOCAL SALES TAXES

Local government sales taxes started in 1948 when the City and County of Denver imposed a tax. In 1955 Pueblo became the second city to levy a sales tax. The next city waited until the 1960s to impose a sales tax. Table 2 shows the imposition of sales taxes by decade.

Imposition of Local Sales Taxes by Decade

Decade	Number of Jurisdictions
1940s	1
1950s	1
1960s	39
1970s	121
1980s	73
1990s	9
Total	244

Table 2.

The first cities to impose sales taxes were home rule cities or those not operating under state statutory authority. In 1967, the state legislature recognized "that the imposition of sales taxes . . . affects the flow the commerce within this state" and granted the power to statutory cities and counties to adopt a sales tax by ordinance and vote of the people. Currently, there are 199 cities and towns, 39 counties, and 6 special districts imposing a sales tax in Colorado.

The nationwide growth of the number of local jurisdictions imposing a sales tax is similar to the Colorado experience. Nationally, 4,893 jurisdictions imposed sales taxes in 1976. This figure increased to 6,438 in 1991, a growth rate of 32 percent.

From the late '60s on, municipalities in the majority of the states that have sanctioned municipal sales taxes since the '60s (17 of 22) have seen the share of locally produced revenue from municipal sales tax rise (from less than 7% to over 11% by 1985, on average). By 1990, municipal sales tax contributions to total locally-produced revenues had risen to 22%. Similarly, in 1990, sales tax represented 25% of Colorado local revenues.

Since 1978, 35 states have increased the state sales tax rate. Only one state lowered its rate during this period. Colorado has the same rate as it did in 1978 but did increase the rate briefly in 1983 and 1984. Fifteen states increased their tax base in 1991.

RANKING AND EQUITY

When examining the state sales tax alone, Colorado ranks low (1990 rankings) relative to the rest of the states with a 43rd ranking (of 45 states) using either tax per $1,000 of personal income or tax per capita measures. Combining state and local sales taxes leads to higher rankings: 14th using a per capita measure and 25th using a tax per $1,000 of personal income measure.

A tax is considered regressive when the tax as a percentage of income decreases as income increases. Research for 1989 shows that the sales tax is regressive. Table 3 shows the effective sales tax rate for state and local taxes.

Effective Tax Rates

	Family Money Income							
	Under $5,000	$5,000 to $10,000	$10,000 to $15,000	$15,000 to $20,000	$20,000 to $30,000	$30,000 to $40,000	$40,000 to $50,000	$50,000 and over	Total
State	2.9	1.4	1.4	1.2	1.1	1.0	0.9	0.7	1.0
Local	3.0	1.5	1.5	1.2	1.1	1.1	1.0	0.7	1.0

Table 3.

EFFICIENCY

A sound tax system is one which exhibits as little unintended interference with economic decision making whether on the part of the production, labor, or consumer sectors. It would minimize the cost of compliance with the tax laws. To some extent, tax policy decisions will alter economic decisions by favoring or not favoring certain industries. For instance, a tax on machinery or other factor inputs to a manufacturing process increases the cost of the input and hence the final product. Colorado, as well as many other states, recognize this and have repealed the sales tax on such inputs.

Varying local tax rates might affect consumer purchasing decisions on big ticket items such as furniture or apparel purchases. The existence of "tax islands" or areas of low sales tax rates may funnel such consumer spending to those areas.

MAIL ORDER SALES

State and local governments have been unable to require collection of their sales taxes by out-of-state mail order firms and home television shopping networks. The 1967 U.S. Supreme Court decision in *National Bellas Hess* held that out-of-state mail order houses could not be required to collect state and local sales and use taxes for states in which their only business presence consists of distributing catalogs and other advertising materials. Even though the out-of-state vendor cannot be required to collect the tax, the tax is still a liability to the individual customer. Under state use tax law, the individual customer is liable to report the tax. However, it is difficult to collect the tax from individual customers.

Based on estimates formulated by the Advisory Commission on Intergovernmental Relations, if Colorado could have collected sales tax on interstate mail order sales in 1992, the amount would have approximated $26.5 million. Mail order firms argue that tax collection would impose an undue burden. A de minimus exemption has been proposed to protect smaller firms from the burden. Estimates of revenue with a $5 million and $10 million exemption are $19 million and $17.5 million, respectively. The exclusion of firms with less than $5 million or $10 million in sales would exempt 93 percent and 97 percent of the firms, respectively, from compliance.

Some states have pressed the issue of collecting taxes on out-of-state mail order sales. In May 1992, the U.S. Supreme Court upheld the Commerce Clause portion of its decision in *National Bellas Hess*. The Court, in *Quill vs. North Dakota*, continued to hold that a mail order company must have substantial nexus to not violate the Commerce Clause. However, for the first time, a two prong nexus requirement was established. Under due process, a state has personal jurisdiction and clearly may tax an interstate business with only minimum contacts with the state. However, by stating clearly that the issue is strictly one with Commerce Clause implications rather than due process, the Court removed the barrier which prevents Congress from intervening in matters of due process. Congress is then free to allow states to burden interstate commerce to the extent it deems appropriate. With the passage of legislation in 1990, Colorado has positioned itself to require collection of taxes from mail order retailers. If and when passage of federal legislation authorizing states to require out-of-state retailers to collect sales or use taxes, Colorado has statutory authority in place. However, Amendment 1 issues may cloud the state's ability to collect these taxes.

State litigation since the *Quill* decision is focused on two areas. One is to determine on a case by case basis the strength of "substantial" nexus. The second is to test state statutes which create a collection obligation through "affiliate" nexus by virtue of the physical or substantial presence of an affiliated corporation. Either method has generated mixed results.

States have tried to ensure that the public is aware of its use tax obligations. One way has been to develop procedures to make it easier for consumers to comply such as including a line on the income tax form or designing a simplified use tax form. Some states have entered into a regional agreement and information sharing arrangement to promote use tax compliance by encouraging retailers to voluntarily register and collect and by auditing direct marketers and then sharing

information on purchases by consumers so that the tax can be pursued directly from the consumer. Customs declarations are also being used to identify potentially taxable purchases.

II Taxing Authorities, Collection and Distribution Mechanics

TYPES OF TAXING AUTHORITIES

As Table 1 indicates, in FY 1990-91 Colorado had 241 different governmental entities that levied a general sales and use tax. In total these taxing entities collected $1,778 million. State sales and use taxes account for just over 47 percent of total taxes levied while home rule cities comprise 36 percent of the total. The remaining 17 percent of taxes levied is divided between statutory cities and counties, and special districts (transportation and cultural facilities).

Types of Taxing Authorities, FY 1990-91

Taxing Authorities	Sales & Use Number of Authorities	Tax Revenues ($000)	Percent of Total
State of Colorado	1	$844,222	47.4%
Regional Transportation District	1	97,645	5.5
Cultural Facilities District	1	16.439	0.9
Counties	39	91,562	5.2
Statutory cities	156	93,911	5.3
Home Rule cities	43	634,200	35.7
Total	241	$1,777,979	100.0%

Table 1.

Not included in Table 1 are two special districts that levy a tax for the provision of local improvements, one non-metro area county that levies a 0.5 percent tax for the development and operation of transit services, and the Baseball Stadium District which began levying a 0.1 percent tax in the Metro Denver area for construction of a stadium in FY 1991-92. Additionally, a 0.2 percent tax levied on selected items to provide funds for the promotion of tourism terminated by statute on June 30, 1993. In FY 1990-91, levies collected for the aforementioned local improvement districts, the county transit tax and the tourism promotion tax amounted to approximately $11.7 million.

COLLECTING ENTITIES

As Tables 2 and 3 indicate, the Colorado Department of Revenue is responsible for administering and collecting the state sales and use tax, sales taxes for statutory cities and counties and sales and use taxes for special districts. With few exceptions (as noted below) all of the local taxes are redistributed within one month after collection to the respective taxing authorities on a point of sale basis. While rates differ among taxing entities, all are required to

Types of Collection Authorities, FY 1990-91

State of Colorado collections for:	Sales & Use Tax Revenues ($000)	Percent of Total
State sales and use tax	$844,222	47.5%
Statutory cities, counties, & special districts collection of sales taxes	292,124	16.4
Home rule cities collections of sales and use taxes	634,200	35.7
Statutory cities and counties use tax	7,433	0.4
Total	$1,777,979	100.0%

Table 2.

conform to the state's sales tax base with three exceptions. The state currently exempts sales of food for home consumption, sales of machinery and machine tools and the sale of residential gas and electricity. Taxing entities may elect to include or exclude these items in their sales tax base.

Types of Collecting Authorities for Local Taxes, FY 1990-91

	Sales & Use Tax Revenues ($000)	Percent of Total
State of Colorado collections of sales tax for statutory cities, counties & sales and use tax for special districts	$ 292,124	31.3%
Home rule cities collections of sales and use tax	634,200	67.9
Statutory cities and counties collection of use tax	7,433	0.8
Total	$933,757	100.0%

Table 3.

The majority of statutory cities and counties have opted to include these items in their tax base. Counties and statutory cities may also enact use taxes but their collection and administration is

left to the jurisdiction enacting the tax. Use taxes are those taxes levied on the purchase of a product bought outside of a taxing jurisdiction but used in the taxing jurisdiction. The function of a use tax can be illustrated by a scenario that shows the sales/use tax liability on the purchase of furniture bought outside of a taxpayer's local sales tax jurisdiction and delivered to their home. If a person who lives in Castle Rock buys a sofa in unincorporated Jefferson county and has it delivered to Castle Rock, the sofa is subject to Castle Rock use taxes rather than Jefferson county sales taxes. The use tax is in lieu of the sales tax that the town of Castle Rock would have received had the sofa been purchased there. Predominantly, use taxes that have been enacted are levied on motor vehicles and building materials.

As Table 1 indicated there are also 43 home rule cities that collect and administer their own sales and use taxes. For the most part these cities have elected to adopt a broader sales tax base than the state by limiting exemptions. In FY 1990-91 these 43 taxing entities accounted for just under 68 percent of all local sales and use taxes collected in the state.

SALES TAX DISTRIBUTION METHODS

As noted above, the majority of local sales taxes collected by the Department are redistributed to respective taxing jurisdictions based on point of sale. While this is true for statutory cities and special districts, several counties also redistribute part of their sales tax revenues to cities. The

County Sales Tax Distribution Methods, FY 1990-91

Distribution Method	Number of Counties	Sales Tax Revenues ($000)
Point of collection	4	$8,067
Modified point of collection -- point of collection & formula	6	7,122
Formula-based	7	6,201
Motor vehicle registrations	2	931
Population	1	402
Total	20	$22,723

Table 4.

rationale for county sharing of sales tax revenues can be traced to the statutory limitation on the combined state and local sales tax rate for statutory cities and counties. In general, the combined rate of sales tax is limited to 7 percent except that the limitation does not preclude a county from levying a sales tax rate of up to 1 percent. Given the state sales tax rate of 3 percent, this statutory limit puts a cap on the combined statutory city and county rate of either 4 or 5 percent. Thus, a county seeking to increase its sales tax rate could effectively foreclose future rate increases by many of the statutory cities within the county. As a method to compensate cities for the resulting rate limitation, some counties have agreed to share sales tax proceeds with cities.

In reviewing the rate structures of counties that share revenues with the statutory cities, it was found that the county-imposed sales tax made the statutory rate limitation binding for 60 percent of the statutory cities that received county distributions. Moreover, an additional 20 percent of these statutory cities were within 1 percentage point of the limitation.

In fiscal year 1990-91 the state collected approximately $107 million in sales tax for the 39 counties which levy a tax. Twenty of these counties in turn distributed $22.7 million in sales tax revenues to 56 cities. Table 4 summarizes the principal methods used by counties to redistribute county sales tax revenues to cities.

As Table 5 indicates, cities receiving revenue distributions from counties fall into four categories: those with no city sales tax, those which impose a sales tax at the same rate as the county, those which tax sales at a lower rate than the county and those which tax sales at a higher rate than the county.

Tax and Revenue Characteristics of Cities Receiving County Sales Tax Distributions, FY 1990-91

Tax Characteristics	Number of Cities	County Tax Revenues Distributed ($000)	Percent of Total
No city sales tax	11	$2,054	9.0%
City sales tax the same rate as the county	18	11,512	50.7
City sales tax at a lower rate than the county	6	5,679	25.0
City sales tax at a higher rate than the county	21	3,478	15.3
Total	56	$22,723	100.0%

Table 5.

Cities that tax sales at higher rates than the county receive seventy percent less county distributed revenue than cities which tax at the same rate as the county. The latter receive over 50 percent of total sales tax revenues distributed by counties. Cities with no sales tax receive the smallest distribution of revenues from counties (9 percent). Cities that tax at higher rates than the county are generally in counties that use formulas for distributing revenues which heavily emphasize counties' revenue needs.

Many of the cities that receive county sales tax distributions are small jurisdictions located in non-urban areas. Moreover, the localities receiving county revenues include both statutory and home rule cities. For cities that impose their own sales tax, some conform their base to that of the county, while others have adopted a different tax base. Given the lack of uniformity in bases

and rates among jurisdictions, it would appear that each county (and cities within that county) has adopted sales tax policies that are tailored to their local economies and revenue needs.

VENDOR REIMBURSEMENT FOR TAX COLLECTION

For most taxable transactions the statutory (legal) incidence of sales tax falls on vendors of the tangible personal property being taxed. In large part, vendors shift the tax forward by explicitly adding it to the price of the product. At the state level approximately 100,000 vendors collect and remit sales tax on a monthly, quarterly, yearly or seasonal basis. Many businesses, and indeed most large businesses, are involved with several different taxing jurisdictions. For each branch or division, and often for different transactions, businesses must ascertain which taxing jurisdictions are involved, what items are exempt in these jurisdictions, what reporting requirements are involved and what rates of tax to apply. For performing their role as collecting agents of tax jurisdictions vendors may retain a percent of the tax collected as reimbursement for their expense in collecting and remitting sales tax. This reimbursement is commonly referred to as a "vendor discount" or "service fee". The rationale for the vendor's discount stems from an explicit recognition by taxing jurisdictions that businesses, in their role as collecting agents, should be compensated for the administrative costs they incur in collecting, accounting, reporting and remitting sales tax on purchases. At the state level vendors may retain 3.33 percent of state sales taxes collected. Vendor discounts for local taxing authorities vary from 0 to 5 percent. Table 6 summarizes significant features of sales tax collections, tax rates and vendor discounts by type of taxing authority.

Sales Tax Collections, Rates and Vendor Discounts By Types of Taxing Authorities--FY 1990-91

Taxing Authorities	Gross Sales Tax Revenues ($000)*	Average Tax Rate %	Vendor Discounts ($000)	Average Vendor Discount Rate %
State of Colorado	$852,262	3.00%	$28,408	3.33%
Regional Transportation District	93,421	.60	3,114	3.33
Cultural Facilities District	15,471	.10	516	3.33
Counties	110,856	.99	3,357	3.03
Statutory cities	72,449	3.02	1,908	2.63
Home rule cities	627,905	3.11	12,338	1.97
Total	$1,772,364		$49,641	2.80%
of which:				
Local taxing jurisdictions	$920,101		$21,232	2.31%

* Does not include retailer use tax

Table 6

As Table 6 indicates, taxing authorities allowed approximately $50 million in total vendor discounts in FY 1990-91 as compensation for vendors collecting $1,772 million in gross sales tax revenues. Statewide the average vendor discount rate was 2.80 percent of all sales taxes collected. The state, special districts, and most of the counties allow a 3.33 percent vendor discount rate. The vendor discount rate for statutory cities averaged 2.63 percent while the comparable average for home rule cities was the lowest in the state at approximately 2 percent. For local taxing jurisdictions, the vendor discount allowance amounted to $21.2 million and averaged 2.31 percent. The table also lists the average tax rate for each taxing authority. For the 39 counties that have enacted a sales tax, sales tax rates average about 1 percent. Statutory cities have an average sales tax rate of 3.02 percent, and home rule cities have the highest average sales tax rate in the state at 3.11 percent.

SALES TAX ADMINISTRATION IN OTHER STATES

Up to this point the study has focused on aspects of sales and use tax collections that are unique to Colorado. It is instructive to compare these findings to general characteristics of other states in their administration of these taxes. Issues such as state versus local administration, tax base definitions, vendor discounts and fees for the administration and collection of taxes are all germane to this inquiry. Is Colorado unique in its way of doing business or does it generally conform to the practices of other states in their administration of sales taxes?

A survey of information from the Commerce Clearing House's "Multistate Tax Guide" (1992), the Final Report of the Texas Select Committee on Tax Equity ("Rethinking Texas Taxes") and other information compiled by the Department provided the basis for comparison. Including the District of Columbia, there are forty-six states that have enacted a state sales tax. Thirty-two states permit enactment of local sales and use taxes. While twelve states are similar to Colorado in allowing the option for either state or local administration of local sales tax, state-only administration of local sales taxes is predominant. Only six states--Alabama, Alaska, Arizona, Arkansas, Colorado and Louisiana--have a mixture of state and local administration of sales taxes. Twenty states formally require state administration of all state and local sales taxes. Moreover, for states where local sales taxes are levied, 24 states require taxing jurisdictions to adopt the state's tax base. Six states have varied tax bases at the local level, and two states--Alabama and Colorado--require localities to use the state-defined tax base if the state collects their local sales taxes.

In 1987 the Texas State Legislature created a 13 member panel charged with the task of reviewing the state and local tax system in detail and the available options for changing the system, and reporting its findings to the Governor and the Legislature. With respect to the issue of state versus local administration of sales taxes, the Select Committee chose centralized over local administration of sales taxes based on the experience of 15 states that permitted local sales taxes. Ultimately, Texas chose to require state administration over local sales taxes because it was widely perceived that local administration was inefficient and an unnecessary burden on taxpayers. Concerning the latter, issues of differing tax bases and duplicative tax reporting and filing requirements appeared to be preeminent considerations of policy-makers.

Of the 46 states levying a state sales tax, 27 including Colorado, allow vendors to retain a fee for collecting and remitting sales taxes. States allowing vendor discounts fall broadly into four categories in terms of the amount of discount they allow: those that allow a flat percentage of taxes collected to be retained by vendors (14 states), those that allow a flat percentage retention up to a maximum dollar amount (5 states), those that taper the rates of retention (6 states) and those that taper the rate of retention up to a maximum dollar amount (2 states). For states that taper the vendor discount, rates of retention are inverse to the amount of taxes collected; higher rates of retention are permitted for lower amounts of taxes collected (principally designed to insure that smaller vendors are adequately compensated) and lower rates of retention are permitted on greater amounts of taxes collected.

Among the states allowing vendors a flat rate allowance, Colorado ranks the highest at 3.33 percent followed by Oklahoma at 2.25 percent. Wisconsin and Texas have the lowest flat rate allowance at one-half of one percent. For states with tapered rates, Alabama has the highest percentage retention allowance on low levels of collections and the widest spread in tapered rates (5 percent retention allowed on the first $200 of taxes collected down to a 2 percent allowance on tax collections in excess of $200). For the seven states that place a maximum on dollars retained by vendors (both flat and tapered percentages), the rates of retention are effectively phased out as vendors collect greater amounts of sales tax.

STATE CHARGE FOR COLLECTION

In eleven of the twenty-six states where state governments collect local sales taxes, the state charges an administration fee for collecting the tax. A sampling of rates range from 0.82 percent of collections in California to a tiered rate structure of 5 percent up to $10,000 in collections followed by 3 percent thereafter in Alabama. In Colorado, state statutes require the Department of Revenue to recover its costs of administering sales and use taxes only for special districts. No cost recovery is permitted for the Department's expense in administering of sales taxes for statutory cities and counties. However, counties may retain a vendor's discount of 3.33 percent of state sales tax they collect on vehicle registrations.

This discussion leads to the question of whether the state should charge local taxing jurisdictions for the collection of sales tax. Just as in the private sector, the provision of collection services requires the utilization of resources. In the private sector this service is normally provided if the fees for collection adequately compensate a firm for the cost of the resources engaged in furnishing the service; i.e., charges are sufficient to cover all of the contracting firm's costs inclusive of at least a normal profit. In paying for these services, the contracting entity for the service has exclusive right to, and is the sole recipient of, the benefits of the service being provided; i.e., there are no "free riders" who share in the benefits.

Two unique attributes of some of the services provided by the public sector are that they are not readily offered by the private sector, and that the benefits from the provision of the services do not solely accrue to one group but are broadly available to all. A service meeting both of these criterion is termed a "pure public good." The first of these attributes is given the moniker

"market failure"--the market system gives no incentive (in terms of a price) for a firm to provide the service. For the latter (termed "externalities") the provision of the service confers spillover benefits to other individuals rather than just the entity for whom the service is being provided, and these individuals cannot be excluded from receiving benefits. A good or service meeting both of these criteria requires government intervention if it is to be offered.

How does the provision of collection services for local sales taxes match up to these criterion for public goods? Apart from issues of taxpayer confidentiality, the provision of these services appears to have both public and private sector attributes. The private sector does have incentive to offer these services and the market establishes a price for their provision. Thus, private sector alternatives for the service are available. Additionally, each jurisdiction or entity contracting with the private sector for the provision of these services can effectively exclude all other jurisdictions from consuming the benefits of the services being provided.

Under the current system, a taxing jurisdiction that opts for state collection of its local sales taxes receives benefits in the form of cost avoidance. Specifically, the local taxing jurisdiction does not need to replicate the resource requirements of administration and collection. Hence, funds which are made available as a result of cost avoidance are available for use in other local administrative areas, or alternatively, may be channeled back to taxpayers through lower rates of taxation.

For the private sector, the provision of these services by a centralized collection authority, such as the state, would create benefits for the entire class of taxpayers affected. Specifically, efficiencies through unified reporting and remittance of sales tax collections for several different tax jurisdictions would result in cost savings for businesses subject to the tax. Thus, centralization results in spillover benefits to businesses for which no charge is levied.

Moreover, taxpayer benefits would be greatest for larger firms faced with collecting taxes for statutory and home rule jurisdictions. These firms would avoid the cost and complexity of ascertaining on a transaction by transaction basis which taxing jurisdictions are involved, what items are exempt, what reporting requirements are relevant and what rates of tax to apply is present.

In terms of the taxpaying public, the provision of centralized collection with or without a charge to affected jurisdictions has minimal impact on the taxes paid by individual taxpayers. If the service is provided by the state at zero cost, individuals will contribute to the cost of collection through state sales and income taxes. If the service is provided by the state, but only at a fee that covers the state's cost of collection, the state's need for revenues from state sources is correspondingly less. However, individual localities would need to cover these fees with either higher taxes and/or reduced services. Thus, individual taxpayers are faced with either explicitly or implicitly covering the cost of state collection.

This same conclusion, however, does not follow for special districts' sales taxes. Since special districts encompass limited geographic areas, the provision of collection services at a zero fee

would result in non-district taxpayers subsidizing the cost of collecting district taxes. Taxpayers within the special district would pay either a reduced rate of district tax and/or receive greater district service.

Since the state currently offers these services at a subsidized price (zero) to affected jurisdictions, benefits accrue to local taxing entities. Each local jurisdiction's alternatives to centralized provision of these services is either a replication of the state's resource effort in collecting these taxes or contracting with a private entity for the provision of these services. Both of these alternatives result in higher costs of collection for the taxing entity than they now incur -- either in the form of resource costs or by paying a price for the service that recovers the full cost of collection inclusive of a normal profit. Under both of the alternatives to state collection, however, the spillover benefits to taxpayers stemming from unified reporting and remittance of sales tax collections for several different taxing jurisdictions are effectively nullified. Based on the above discussion, it appears that there is good rationale for the state to offer sales tax collection services to statutory cities and counties at a subsidized price.

III

Alternative Methods for the Collection and Administration of Sales Taxes Among Counties and Municipalities in Colorado

GUIDELINES FOR EXAMINING THE STRUCTURE OF A TAX

A 1974 study by the U.S. Advisory Commission on Intergovernmental Relations (ACIR) highlighted the structural aspects of a model state and local tax system. In general, this tax system is one which abates the reliance on property taxes and also ensures a coordinated system of local non-property taxes. The ACIR outlined a tax policy states could adopt to move toward this system. The study recommended that:

> States should provide a uniform local tax base that conforms to the state's tax base;
>
> States should collect and administer local sales taxes and specify permissible ranges for local tax rates;
>
> Local sales taxes should be based on the point of sale and local use taxes should be prohibited;
>
> Equalization formulas should be adopted to avoid fiscal disparities between taxing jurisdictions.

One might consider the ACIR's recommendations as a blueprint for an efficient tax system--one that minimizes collection and compliance costs in addition to dislocations among taxing entities. These recommendations can be used to examine Colorado's system of imposing and collecting sales and use tax.

RATIONALE FOR AND STRUCTURE OF THE LOCAL SALES TAX

This section of the report examines the characteristics of the existing structure of local sales tax. Once establishing this benchmark, alternative methods of administration (e.g., modification of the tax base) will be examined in latter sections for comparison. Local governments, in general, use non-property taxes for four major reasons. The sales tax provides localities with diversification and increased flexibility in the tax base. Sales tax revenue may allow for passive (indirect) property tax relief. Sales taxation broadens the incidence of the locality's taxation to include non-resident beneficiaries of government services. Sales taxation, further, is based on, to some extent, the taxpayer's ability to pay rather than being mostly a wealth tax as the property tax is thought to be.

While sales taxes provide a locality with some diversification of revenue source, its actual yield will depend upon the structure of the tax base, the tax rate imposed, and the level of retail activity in the area. Thus, revenue yields can vary greatly among localities. Below in Table 1 are shown the FY 1991 local sales tax base, revenues, and tax rates for some representative Colorado localities, as well as the same information for all counties, statutory cities and home rule cities. Please see Appendix 1 for additional information on the representative localities.

COLORADO LOCAL SALES AND USE TAX: MODIFYING THE TAX BASE TO THE STATE BASE

To simplify the data base itself and any comparisons among local sales taxes, all Colorado localities were placed into one of three classes: county, home rule city, or statutory city. Sales tax revenues for each jurisdiction were obtained from the 1990 and 1991 Local Government Financial Compendium, published by the Colorado Local Government Division. From this information, an implicit tax base was created -- even for localities that receive a formula distribution from their county. Department of Revenue sales tax records by locality and by SIC code of vendor were used to estimate the current (1991) taxable portion of food for off-premise consumption and residential utility purchases that would have been excluded from a locality's tax base had it been required to use the state-defined tax base. A sample of 1990 claimants of the machinery/machine tool sales and use tax exemption was used to estimate the size by locality of the state-defined reduction to the sales tax base. In addition to information for all counties, home rule cities and statutory cities, data are also presented for a representative group of localities. This format is used in Tables 1, 2 and subsequent tabular presentations. The localities were chosen to represent the diversity of Colorado taxing jurisdictions with respect to economic base, population size, geographic location, tourism characteristics and urban/rural nature.

The methodology for locality classification inherently understates the existing revenue base of the county grouping and overstates the existing revenue base of the statutory city grouping. However, if one considers the direct revenue needs of localities as opposed to the direct revenue needs plus county reallocated revenues to cities, there is no under- or overstatement.

There are several observations that can be made regarding Table 1. Although a net tax rate (tax rate net of any vendor's discount allowed) of about 1% was typical for Colorado counties and a net tax rate of around 3% typical for cities, there was a great deal of variation -- even without considering the influence of a locally-defined tax base. For all counties (Denver being considered a city for the purposes of this study), the range of net tax rates varied from 0.24% to 3.97%. For all statutory cities, the range was 0.97% to 4.00% and, for all home rule cities, from 1.90% to 4.00%. The importance of sales tax revenue to the locality varied as well. Sales tax revenue was only 10% of Jefferson County's total locally-derived revenues, but was 23% of Summit County's. Similarly, among cities, sales tax revenue was 17% of Limon's total local revenue, but was 60% of Commerce City's.

Revenue Neutral Local Tax Rates Necessary for Conformity with the State Sales Tax Base

Locality	Net Tax Rate	FY 1991 Revenue ($000)	Locally-Defined Tax Base ($000)	State-Defined Tax Base ($000)	State/Local Tax Base Percent	Tax Rate Necessary To Yield FY 1991 Revs
COUNTIES:						
Delta	1.93%	$1,625	$84,197	$54,537	64.8%	2.98%
El Paso	0.97	24,296	2,504,691	2,504,691	100.0	0.97
Jefferson	0.48	16,498	3,437,083	2,482,818	72.3	0.66
Routt	0.97	2,086	215,052	215,052	100.0	0.97
Summit	2.42	2,742	113,306	63,416	56.0	4.32
All Counties	0.96%	$91,562	$9,577,418	$8,244,674	86.0%	1.11%
HOME RULE CITIES:						
Commerce City	3.43%	$7,942	$231,545	$226,721	98.0%	3.50%
Denver	3.74	197,724	5,286,738	5,231,731	99.0	3.78
Durango	1.93	4,473	231,762	220,582	95.2	2.03
Pueblo	3.38	20,378	602,885	591,136	98.1	3.45
Vail	4.00	11,569	289,225	286,097	98.9	4.04
All Home Rule Cities	3.05%	$634,200	$20,770,443	$19,837,219	95.5%	3.20%
STATUTORY CITIES:						
Broomfield	3.50%	$5,255	$150,143	$114,123	76.0%	4.60%
Brush	2.90	758	26,121	14 ,186	54.3	5.34
Carbondale	2.90	868	29,931	22,230	74.3	3.90
Ft Morgan	2.90	2,047	70,586	66,276	93.9	3.09
Grand Lake	3.87	343	8,850	7,793	88.1	4.40
Limon	1.93	507	26,269	24,557	93.5	2.07
Loveland	2.90	8,392	289,379	250,455	86.6	3.35
Ouray	2.90	336	11,586	10,704	92.4	3.14
Platteville	1.93	100	5,181	4,317	83.3	2.32

Woodland Park	2.90	1,072	36,966	27,092	73.3	3.96
Yuma	1.93	504	26,088	25,914	96.6	2.00
All Statutory Cities	3.01%	$93,658	$3,107,809	$2,725,806	87.7%	3.44%

Table 1.

One possible reason for the existing divergence of local sales taxes and rates in Colorado may be the relative prominence of tourism as a major industry in many localities. Where the local tourism economy is strong, a sales tax emphasis for local finance not only takes some pressure off property taxation, but also allows those non-residents of the locality (and non-residents of the state) to help pay for government services in the areas they visit.

The institution of a uniform, state-defined sales tax base would have dramatically different effects -- depending upon the nature of and consumption patterns of individuals within the localities.

During the '80s, public finance analysts estimated the exemption of food consumed at home from state sales taxes reduced the yield of the average state tax by about 20%. In Colorado localities, the reduction is perhaps even more dramatic -- particularly outside of the Front Range area. (A list of the localities that exempted grocery food purchases from sales taxation are presented in Appendix 2.) In general, the more rural, less populated localities would find their tax bases eroded the most; in general, their sales tax bases are more dependent on grocery sales than are more urbanized localities. Delta County, for instance, would have lost one-third of its sales tax base, while Brush would have lost almost one-half of its taxable base. El Paso County, because it defines its current tax base in an identical fashion to that of the state definition, would have retained the same size base; most home rule cities (which tend to be the largest Colorado cities) would, on average, have lost less than 5% of their tax bases. Increasing the local tax rate to compensate for the change in revenue (and assuming no tax elasticity effect) would place many in the position of nearly or actually violating the statutory 7% limitation. In general, Amendment One would require local elections in order for localities to implement the state defined tax base, even for those with the "fiscal capacity" to increase the tax rate.

Table 2 shows the FY 1991 local sales tax burdens on a per capita basis, i.e., treating all revenues as though they were paid only by each of the locality's residents. Because the local governments tax at different rates, a "normalized sales tax" column adjusts sales tax paid to the average tax rate for each locality's group for the purpose of comparison. The wide variations between localities does not, however, support the conclusion that those that are substantially higher than average are necessarily "exporting" their taxes to non-residents. Certainly, it seems logical that some amount of tax exporting is occurring; inherent differences in types and volume of retail activity as well as differently defined tax bases will also help account for the wide differences between localities.

Sales tax studies (generally, at the state level) have found sales taxes to be more responsive to general economic growth and fluctuations than are property taxes. These income elasticity and revenue reliability issues will be more thoroughly examined in a subsequent section. Further, many public finance analysts believe that in areas where consumers can easily travel to purchase goods in jurisdictions with different tax rates, sellers in the higher tax jurisdiction may be led to partially absorb the difference in taxes in the form of reduced prices. This process may lead to changes in the degree of regressivity in the tax's burden. This mobility factor is also one reason that retailers often locate in the low taxing jurisdictions and to advertise that fact; they believe the tax rate differentials will allow them to "borrow some other jurisdiction's tax base".

INTERJURISDICTIONAL TAX POLICIES: "WARFARE" OR "COEXISTENCE"?

Public finance researchers and practitioners are divided on the question of whether competition between localities (or more generally, between states) is adverse to or beneficial to the health of their economies. Some believe that competition forces governmental authorities to produce a mix of services desired by the community, maximizes consumer-resident choice, minimizes bureaucratic "overgrowth", and generally enforces discipline.[1] Others strongly believe the

harmful effects are likely to be dramatic: inadequate spending, a reliance on taxes not based on ability-to-pay, and wastage of financial resources used to temporarily (or expensively) "lure" industrial location. The major practical questions cluster around the issues of who "gets robbed: Peter or Paul?"[2], whether governments are paying "too much" per job created, and whether

existing community businesses and individuals are treated fairly in the process of this competition.

The vast majority of studies that have been performed over the years have examined state to state rivalry; few have explored competition between localities in one state, although the principles should be the same. The Colorado localities that appear to be "competitively motivated" seem primarily to be engaged in what is called "active rivalry" (rather than implicit rivalry). That is, localities are expending money and energy to attract jobs, high income citizens and their expenditures, and/or tourists rather than working to discourage certain businesses and activities from residing in their area. Although there are several different dimensions of competition (e.g., both the level and quality of public services, infrastructure provision, capital subsidies, etc.), the remainder of this section concentrates on "tax competition". With regard to tax competition, there are at least four distinct sorts: competition in the form of special tax exemptions/abatements, competition using the level of specific taxes, competition with regard to overall tax levels, and competition in attempting to "export taxes" to other localities. This last could also be thought of as "importing revenues" without incurring the need to provide any or many services to those visiting taxpayers who consume resident services elsewhere.

One reason advanced for the greater awareness of interstate and interlocality competition by researchers, practitioners, and the general populace is that some areas are in well-publicized "races" to convince various kinds of businesses to locate in their jurisdiction. Most studies have indicated that taxation is a criteria that the CEO will consider, but that one particular tax, such as the sales tax (whether at the state or local level) is fairly irrelevant and that the business tends to evaluate taxation in terms of a total tax environment. Historically, studies placed the criterion of total taxation on a low level in terms of the decisionmaking process for business location/relocation. Some research indicates taxation may be more important than previously thought; most, however, still reaffirm the fact that the more comprehensive analytical studies cannot find a strong link between state and local tax variables and employment growth, capital investment per worker and other proxy variables. Frequently found is that various types of local spending, such as education and infrastructure, tend to be positively related to various economic growth variables, including population in-migration and retention of the property tax base. Most find individual households were more likely to move to communities with lower taxes, higher spending, and higher school quality -- all other variables held constant. Many of the most recent studies tend to indicate that state location of population has more to do with inherent differences between the states; they find the pattern of state fiscal behavior has changed in the 1980s but that the economic and demographic responses to these differences has been "quite inelastic" (i.e., small in magnitude)[3]. Several researchers imply or state outwardly that "these inducements (referring to special bonding and tax gimmicks) ... have little or no effect on location and expansion decisions to business" except at the margin, when two locations are otherwise equally attractive.[4]

In terms of tax-by-tax competition, the matter that most concerns us here, most information has been gathered by examining bordering localities in different states where the "driver" of the taxation differences was the state level excise tax or state level sales tax. Most have found the

only significant sensitivity to the differences was in big ticket purchases, such as furniture, and in apparel sales. There has been no appreciable research on sales tax differentials within one state. Those that have been performed tend to be plagued with technical weaknesses and often produce conflicting information.[5] Most analysts theorize that the effect is a "zero sum" game -- sales that would have occurred in one locality merely occur in another. For a locality with a relatively small tax and employment base, however, it is relatively easy to theorize that the locality does not approach the problem in such a neutral fashion.

The abolition of federal deductibility of local (and state) sales tax paid has eliminated one possible mechanism that allowed a portion of one's sales tax liability to be "exported to the other guy". However, it is still possible for localities (and states) to "spatially export"[6] sales tax, by passing it on to non-resident taxpayers -- either in the form of higher prices or by inducing movement of taxpayers. Most researchers have found that the average state can only modestly export its sales taxes; the exception are states with large tourism industries. Again most studies focus on state tax exporting and have found that the adoption of special taxes (e.g., tourism taxes) or inherent differences between states (differences in the presence of severance/mineral taxes) may increase a state's ability to export a portion of its tax load. Economic development "incentives" such as enterprise zones, training subsidies, property tax abatements, loan guarantees, have long been employed on a state, and often, local basis. Netzer, for one, believes the modern version of "economic development" began from the agriculture industry's distress in the 1920s and later "smokestack chasing" (1936) in Mississippi and that there was no illusion as to who was paying ... the federal taxpayer at large. He further advances the case that such "economic development incentives" may seriously damage industry efficiency and resource allocation. He also indicates that no study has or can overcome one major obstacle in "proving" the incentives' effectiveness -- that is, how to separate the incentive's effect from the other variables that affect locational decisions.[7] We suspect many of the same problems of assessment would plague any study of sales tax competition between localities which may be confounded by the existence of some of these other "economic development incentives" as well as other non-tax variables. Some researchers have found that multi-locality metro "neighbors" will tend to mimick property tax burdens of their immediate neighbors, but do not tend to do so for sales taxes in any important fashion.[8] Overall, the consensus of current research indicates that localities (and states) do compete using various forms of tax incentives, but the "real" effects of doing so are so interrelated and multifaceted that they have eluded specification and isolation using the rigor of econometric techniques.

THE EFFECTS OF A SINGLE BASE AND SINGLE RATE ON COLORADO LOCALITIES

As noted earlier wide variations exist between localities in terms of tax rates and bases. Localities that are adjacent to large population and/or high retail sales activity find a local sales tax a reasonably lucrative revenue source, while rural areas often experience low revenues on a per capita basis. In general, a uniformly-defined local sales tax, in a systematic way, could worsen the difference between the have and have-not jurisdictions, particularly when using point-of-sale as the method of distribution. Further, the level of the local sales tax may limit any

increase in the rate of state sales taxation. Thus the state may be hard pressed to increase state revenues for the purpose of financing locally consumed services or for equalizing revenues among localities.

Table 3 illustrates the problems associated with introducing a simplified local sales tax system. A single base, single rate sales tax creates vastly different "degrees of winning and losing". The single tax rate used in the analysis is that rate that will collect total revenues equal to the sum of the county, home rule city, or statutory city revenues as when each defined its base and chose its rate. The base definition is the same as that of the state: grocery food purchased for home consumption, residential utility purchases, and machinery/machine tool purchases are exempt from local as well as state tax. Localities can gain, lose, or roughly break even (relative to collecting revenues under their previous rate and base) under this regime; primarily, this phenomenon depends on relative differences in the tax rates and the extent to which the locality was dependent upon taxing food. Among counties, for instance, Jefferson County is a large "gainer", primarily because the indicated uniform tax rate is roughly double the previous rate. Under a uniform base and rate, Delta County is a large revenue "loser"; its tax base has been reduced as has the tax rate applied to it. Nearly one-half of Delta's revenue would have "disappeared" under the uniform system. For all of the home rule cities shown, with the exception of Durango, the adoption of a uniform rate and state defined tax base results in a revenue loss. The City and County of Denver experiences the greatest loss at $30.3 million.

It is possible, however, (with a built-in lag of distribution) that a state-collected, uniformly taxed base with a uniform average tax rate could collect roughly the same amount of local revenues which could thus be distributed so as to hold localities reasonably revenue neutral. That is, localities collecting more revenue than under the previous tax regime could provide excess revenues (via a transfer mechanism) to localities faced with a revenue shortfall. This could, however, create significant issues for localities that have pledged increasing amounts of local sales tax to paying off interest and principal of general obligation bonds, often approved by local voters. Additionally fast-growing localities would be chronically behind in collecting the appropriate amount of revenue.

The reallocation of revenues is clearly feasible from an administrative standpoint. Currently, the Department distributes roughly $300 million in sales tax revenues to localities and special districts; the total redistribution that would be required in the case of "holding all localities harmless" for revenues under a uniform base and tax rate would be roughly $160 million.

Despite the fact that such a system could be technically feasible, it may be politically troublesome. An equity criticism that could be advanced by high population communities is that they would be subsidizing rural, low population areas by this transfer; it is also true, however, that a uniform tax base with no redistribution would penalize the rural, the tourist-populated, and non-Front Range communities to a greater extent than the largely populated areas. As we have seen, the small population areas' effective sale tax rates would have to rise, in general, to a greater extent than in the communities of the Front Range to produce equivalent revenues in the absence of a redistribution scheme.

Table 3.

ALTERNATIVE DISTRIBUTION SYSTEMS FOR A UNIFORM BASE, AND UNIFORM TAX RATE SYSTEM

The distribution system for the vast majority of local Colorado taxes is on a "point of collection" basis. Clearly, all cities can collect their sales tax on point of sale and retain it. If localities were to institute a state-defined, state-administered local sales tax with uniformity in both tax base and tax rate, it could be possible to distribute the local sales tax revenues using another criterion than point of sale. This revenue allocation outcome might be simpler, fairer, or cheaper to administer than using a lagged point of sale basis. Tables 4 and 5 show the distributions that would occur if any of the following criteria were used to allocate the revenues: population, registered vehicles, or overall retail sales.

Tables 4 and 5 also illustrate the general problem of using another distribution system than point-of-sale. For instance, Delta County's revenue receipts would be improved over a uniform base, uniform rate system (without any additional redistribution) by using a vehicle-based system for distributing revenues. Jefferson County would gain under all of the alternative distribution mechanisms, the higher overall rate of taxation under the uniform system being the predominant factor. Denver, however, loses revenues under any of the alternative systems, and loses the most under a vehicle-based criterion. Vail, in all distribution systems loses revenue relative to the uniform system with point-of-sale distribution.

With respect to counties overall, the next best system to point-of-sale distribution under a uniform base, uniform rate system would be retail sales. Absolute deviations were calculated to indicate the system that would necessitate the least amount of revenue required to be re-distributed. In the case of counties, using retail sales would necessitate an additional $500,000 in revenue re-distributions over point-of-sale redistribution. In the case of statutory cities, a retail sales distribution system would lessen the required redistribution by some $9 million. For home rule cities, the point-of-sale distribution system would lessen the redistribution requirements by about $60 million. In short, our analysis of alternative distribution systems for sales tax revenues confirms the ACIR findings -- namely, that point-of-sale distribution is the most efficient and straightforward method of local sales tax distribution.

The major problem with revamping the system of local sales taxation in Colorado involves the belief that the local sales tax base, in particular, should conform to that of the state. As we have seen, if the tax base is made uniform, several specific localities would be faced with significant shortfalls in revenue, primarily because they tax food purchases for home consumption. We have seen that several (to maintain revenue neutrality) would be required to raise their tax rates to onerous levels often in excess of the statutory maximum. A uniform rate, that in theory, would raise the same total revenues by type of locality, has been illustrated. The tradeoff associated with the uniform rate is between tax simplification versus a lag in redistribution of revenue. The administrative portion of the tax system would be made more complicated, but the taxpayer would realize savings through simplification of reporting and remitting sales taxes.

IV Expansion of the Sales Tax Base and the Consequential Equity Implications

EXEMPTIONS

When the sales tax was first enacted in 1935, there were only 5 specific exemptions to the sales tax: wholesale sales; sales of commodities or services already subject to an excise tax amounting to more than 12.5 percent of the sale price; goods purchased by the U.S. government, the State of Colorado, its institutions and its political subdivisions; sales to charitable organizations; and sales of goods that are an ingredient or a component part of a final product. Currently, there are nearly 50 specific statutory exemptions to the sales tax. The rationale for the adoption of the various exemptions can be grouped into the following categories: avoidance of pyramiding/double taxation; avoidance of increasing the burden of essential expenditures; facilitation in the ease of administration; avoidance of the taxation of goods already subject to excise taxes, support of a fair and competitive marketplace, encouragement of economic development, avoidance of the taxation of other governmental and quasi-governmental (charitable) organizations, and compliance with reciprocal sales tax agreements with other states.

The estimated value of the majority of exemptions is relatively insignificant when compared to collected sales tax revenues. Table 1 in the first chapter shows that over half of the exemptions were valued at $1 million or less had they been subject to sales taxation. The exemptions with the greatest estimated value are the exemptions for food for off-premises consumption, gasoline and special fuel, fuel for residential heat and light, prescription drug sales, sales to governmental units, purchases of machinery or machine tools used in manufacturing processes, sales to charitable organizations, and cigarette and tobacco products sales. The total estimated value of these eight exemptions is roughly $320 million.

Pyramiding, also referred to as cascading, occurs when a tax is imposed on a product more than once. The mechanism that enables pyramiding of a tax burden on the final consumption of goods is the taxation of goods without regard for the final disposition of the good -- whether the buyer is the final consumer or if the buyer is an intermediary that incorporates the good as a direct component in a product that will be sold to a consumer and taxed. For instance, if a manufacturer purchases and pays a sales tax on an electronic circuitboard and incorporates it into a stereo amplifier, and a consumer pays a sales tax on the stereo amplifier which has incorporated into its final cost the value of the circuitboard, then the circuitboard, in effect, will have been taxed twice. Such a sales tax structure can distort the allocation of resources in an economy. Without tax policy that prevents tax pyramiding, the state could inadvertently encourage businesses to vertically integrate to avoid the additional tax costs of production. To eliminate

Classification of Exemptions

Avoidance of Pyramiding
- Sales/purchase of livestock
- Feed for livestock; seeds and orchard trees
- Energy used for industrial and/or manufacturing purposes
- Property for use in food manufacturing
- Container/bags used by retailers or vendors of food if provided to customers without charge
- Refractory materials & carbon electrodes used in manufacturing iron and steel, and inorganic chemicals used in processing uranium-vanadium ores
- Tangible property that becomes an ingredient or component part of the finished product
- Sales of livestock for breeding
- Sales of live fish for stocking
- Sales of straw for poultry/livestock bedding
- Printers ink and newsprint

Interstate Agreements
- Commercial trucks and trailers purchased in Colo for use outside Colo or in interstate commerce
- Motor vehicles purchased by nonresidents to be used outside of Colorado
- Property transferred by a supplier to out-of-state vendors for use in selling products at wholesale by the supplier
- Property brought into the state for testing, modification or inspection if the use is outside of the state and the testing period is no longer than 90 days

Regressivity
- Prescription drugs
- Glucose for insulin treatment
- Corrective medical supplies
- Fuel for residential heat, light, and power
- Food for off-premises consumption
- Food purchased w/federal food stamps or funds fm the supplemental food program for women, infants, and children

Equity Among Competitors
- Lodging for permanent residents
- 48% of purchase price of factory-built housing
- Sales of precious metal bullion and coins
- Direct mail advertising mtls distributed by persons engaged solely in providing cooperative direct mail advertising
- Newspaper advertising supplements

Interstate Agreements, cont'd
- Sales to residents of a bordering state w/in twenty miles of the state border if the bordering state does not have a sales tax
- Sales of aircraft used or purchased for use in interstate commerce by commercial airlines

Existing Excise Tax
- Gasoline and special fuels
- Cigarettes
- Special fuels for farm vehicles

Ease of Administration
- Sales of 15 cents or less through vending machines
- Leases of personal property for 3 years or less if tax is paid upon original acquisition
- Value of meals furnished to employees of food service establishments free or at reduced rates and considered part of their incomes

Economic Development
- Purchases of machinery or machine tools used in manufacturing
- Sales of aircraft component parts
- Machinery and machine tools used in mining operations located in enterprize zones
- Purchases of locomotives, freight cars, railroad work equipment, or other railroad rolling stock, and component parts of such equipment.

Governmental/Charitable Organizations
- Sales to charitable organizations
- Sales to governmental units
- Sales to public schools
- Sales of construction and building materials for use by contractors on public works projects used by tax-exempt organizations

Miscellaneous
- Farm auction close-out sales
- Sales of construction materials to a common carrier by rail
- Newspapers

Table 1.

pyramiding from a general sales tax, either the value of the component parts that have already been taxed must be subtracted from the taxable value of the final product (similar to a value added tax) or the component parts must be exempted from a sales tax. Most states exempt from sales taxation, the purchase of tangible goods by businesses that are incorporated into the final product. Some states require that the good be a component of the final product in order to qualify for exemption, while other states require only that the good be directly used in the production of another product.[1]

Twenty-six states exempt food for home consumption and utilities from their sales tax bases. Eight states provide a credit rather than an exemption for food.[2] Public finance theorists advise against exempting utility services and food for home consumption from sales taxation because of the loss of stability in, and the loss of a large share of, the sales tax base. Stability is added to the base when the sales of food for home consumption is in a tax base because food purchases are not as susceptible to economic cycles as are other more discretionary items. In fiscal year 1981, the first full fiscal year after the exemptions were enacted, state sales tax revenues went down by an estimated $97 million (although food sales tax credits would have decreased that amount to approximately $68 million). In a 1991 study, Richard Dye and Therese McGuire estimated that the inclusion of food in a sales tax base could increase a narrow base of taxable goods by up to 38 percent. Similarly, including utilities in the base could increase the base by 13.2 percent. This study also determined that the inclusion of food and/or utilities would stabilize the variability in the yield of a sales tax.[3] It is estimated that including food in the base would increase Colorado's taxable base by approximately 15%. The expected increase in the base is, of course, dependent upon what McGuire and Dye call a state's taxable core of goods and services. The divergence between the expected average increase in the base when food is added and Colorado's expected increase may be due to the exceptional amount of tourism that occurs in the state. Tourists and business travelers spend a significant amount of their travel dollars on goods, hotel and lodging expenses, rental cars, and dining out. It would be reasonable to assume that Colorado's core taxable base is proportionally larger than that of many other states. Therefore, it would be plausible to conclude that the incorporation of food into Colorado's sales tax base would increase the base, but not to the same degree as is estimated for other states. Nonetheless, due to the essential nature of both the consumption of food at home and the consumption of utilities, Dye and McGuire's assertion that the addition of food and/or utilities to a state's taxable base would add to the stability of the base, is valid.

Some public finance theorists argue that food should be taxed. Even without a specific exemption, families that purchase food with food stamps would not be subject to sales taxes on their purchases of food. Upper class income households buy luxury items, classified as food, that can not be classified as necessities. In nominal terms, families with greater incomes spend more money on groceries than families in lower income groups; therefore, a food exemption benefits families in upper income classes greater than it benefits families in the lowest income groups. Proponents of these exemptions would argue that expenditures on food and utilities should not be taxed for the following reasons: 1) household expenditures on these items are essential and cannot be avoided; 2) expenditures on food and utilities consume a significant portion of the income of low income households; 3) the sales tax is already a regressive tax -- taxing essential items that deplete the disposable incomes of low income households will make the tax even more regressive. A possible compromise between the two would be a graduated sales tax credit that is phased out at a particular income level, distributed via the administration of income taxes or the old age property and heating credits. These credits could be granted to families in the lower income classes for the sales taxes they paid on their purchases of food and utilities. The awards could be formula-driven based on income and family/household sizes. The credit would mitigate the concerns regarding the regressivity of the sales tax and would allow the state to tax a large

base of consumer expenditures. Amendment One would require Colorado voters to decide whether they agree with and would adopt these tax policy arguments for taxing food.

The Legislature enacted five of the exemptions to encourage a fair and competitive marketplace. In most cases the businesses that receive these exemptions are in direct competition with easily substitutable services that are not included in the sales tax base. For instance, vendors of metal bullion and coins made their case for exemption based on the grounds that the commodities they sell are more akin to investment instruments which are non-taxable, rather than jewelry which is taxable. Some businesses must differentiate between their customers to apply an exemption. For instance, lodging establishments must distinguish between the provision of transient lodging and long-term/residential lodging. The exemption for lodging expenses can only be applied to "permanent" residents because their expenses for housing are more like rent or mortgage payments which are not taxable than they are to transient lodging which is taxable. These types of exemptions eliminate tax incentives or disincentives that consumers would otherwise face in choosing to purchase particular taxable versus non-taxable goods and services.

The exemption for sales of manufacturing machinery and machine tools can be categorized among the exemptions with the greatest estimated value. Offering sales tax exemptions to large businesses or industries for the purpose of economic development is a contentious issue. Those who support exemptions for the purpose of economic development believe that a state must be competitive in attracting businesses to the area and that the means of achieving this goal is to offer businesses tax advantages to establish their presence in the state. Ultimately, proponents of economic development exemptions would argue the loss in sales tax revenues is gained through the direct and multiplier effects of bringing new jobs to the area. The opposition would argue that it's not tax incentives that bring businesses to Colorado but the quality of life, education, and infrastructure that ultimately attract businesses. The enactment of the machinery and machine tools exemption has an estimated value of $18 million annually.

The exemption of sales to the federal government is mandated by the Constitution of the United States. However, the rationale for exempting local government entities and non-profit charitable organizations is not required but is a matter of policy based on the premise that the state is compensated for the exemption with the money these organizations spend on services that the state government would otherwise have to provide.[4] Exemptions to charitable organizations are not as contentious as some of the other exemptions, especially because charitable organizations are perceived by the general public as efficient providers of services whose operational funds are hard-earned donations. Because much of the work is accomplished by the efforts of volunteers they are assumed to be managed by providers who are motivated strictly by their concern for others. However, John Mikesell, in his article on the taxation of nonprofit organizations, expresses skepticism about this preconceived notion of non-profits and contends that non-profit organizations include a spectrum of organizations that do not fit the traditional mold. He categorizes the non-profit realm into two types of organizations: the older philanthropic organizations who receive little money from sales -- most of it from endowments, grants, and/or gifts; and the commercial nonprofits which scarcely existed in the early 1900s but who now make up nearly two-thirds of the current non-profit sector. Mikesell regards the nonprofit sector as a

potential threat to fair competition in the marketplace due to the exemption that charitable organizations receive. The commercial non-profits make most of their money from the sales of goods or services. This industry is expected to grow in size and economic importance due to the following three factors according to Gomes and Owens: 1) states are permissive in their regulation of non-profits; 2) non-profits are concentrated in service-oriented economies; and 3) the tax advantages they receive.[5]

Besides pyramiding exemptions, another type of exemption is typically legislated to avoid the double taxation of goods. Most of these exemptions are based upon multi-state tax agreements that are drafted to resolve tax collection disputes among states. For instance, these agreements address issues such as if a good is purchased in one state but put to use in another state, which state has the right to tax the good? Current exemptions comply with the work done by the Advisory Council on Intergovernmental Relations (ACIR), the Uniformity Committee of the Multistate Tax Commission, and the Federation of Tax Administrators (FTA).[6] The purpose of these agreements is to avoid the double taxation of goods across state borders based on a general agreement among states that taxes for goods should be remitted only to the state of final use (although in terms of the taxation of services, consensus has not yet been reached -- this topic will be discussed in greater detail below). Under Amendment One, voters would have to determine which of the foregoing tax policy and economic development theories they wish to adopt before any of the above discussed exemptions could be eliminated.

ADEQUACY OF THE CURRENT SALES TAX

Without a steady growth in population and real income, the current tax on retail sales in Colorado cannot continue to be a consistent, stable source of revenues for the state given the historical and predicted trends in consumer expenditure patterns. A study by the Federation of Tax Administrators (FTA) on the taxation of services determined that in 1965 40.5 percent of total consumer expenditures were attributable to services. By 1990, 54.4 percent of the dollars spent by consumers were paid to service establishments. Consumption of services in the year 2005 is projected to be 64 percent of consumer dollars.[7] An examination of Colorado taxable sales as a percentage of personal income over the last 20 years confirms the same trend. (see Figure 1). Since the 1970s taxable sales as a percentage of personal income has trended downwards with the exception of the boom period in Colorado between the late 1970s and early 1980s in which taxable sales as a percentage of personal income actually increased. During the early 70s taxable sales were roughly 55 percent of personal income -- by the 90s taxable sales had decreased to 46% of personal income. Assuming that the percentage of household expenditures on tangible goods decreases in the future as predicted, tax revenues will continue to grow, in nominal terms, at least through the year 2005 if total personal income in the state continues to grow at a healthy pace (above 3%). However, the rate of growth of the state's sales tax revenues will fall behind the combined growth in population and personal income. If the state requires, at the very least, the maintainance of its revenue base, another source of revenues will need to supplement the revenue stream to the state or the sales tax rate will need to be increased. An additional factor in the decline of taxable sales as a percentage of personal income is the Supreme Court based exemption of mail order catalog sales from the state tax base.

ACIR estimated the fiscal year 1992 revenue potential for untaxed interstate mail order sales in Colorado was approximately $26 million. The mail order industry continues to grow, according to ACIR, at a rate, considered conservative by the organization, of 6% per year. Without the ability to tax these sales as this industry expands, taxable sales, as a percentage of personal income, will continue to shrink especially if we assume that these sales, at least to some extent, are displacing sales to Colorado-based businesses.

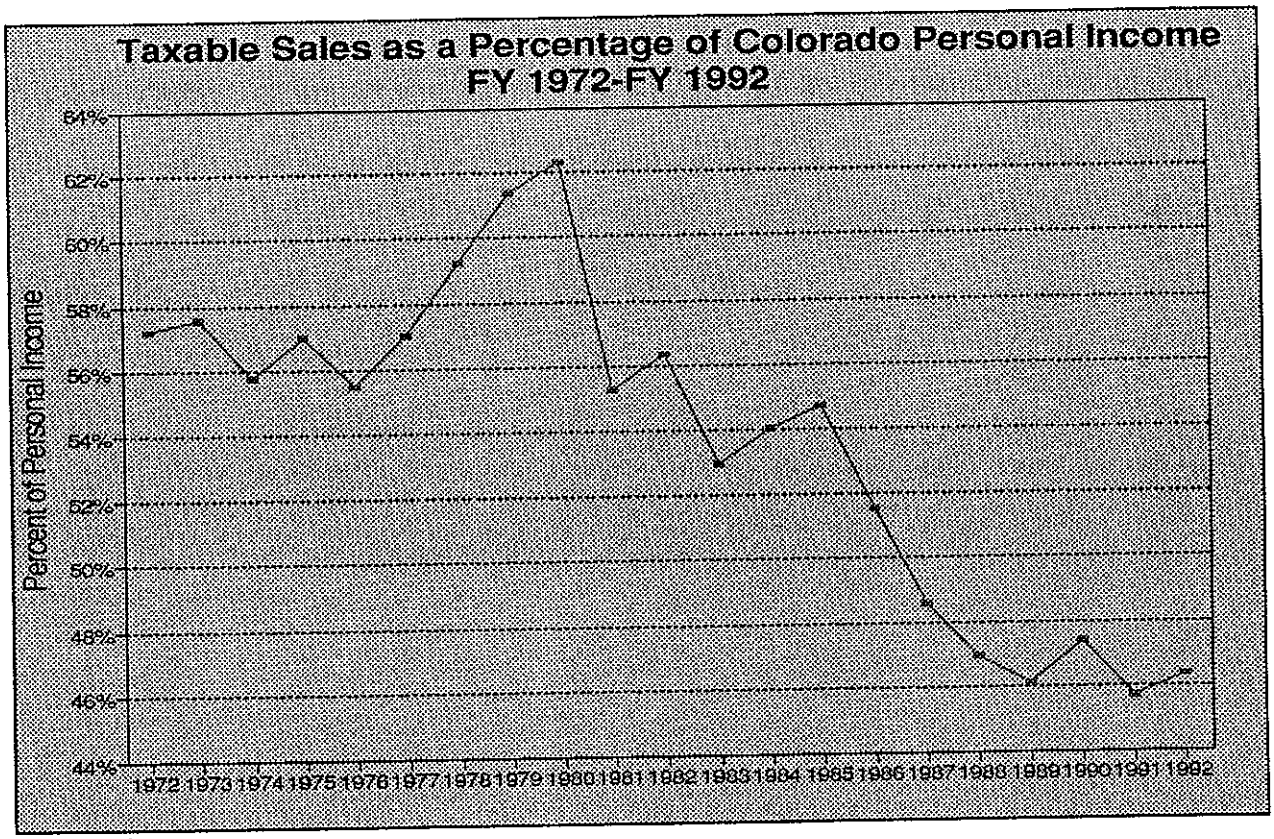

Figure 1.

The capacity of the sales tax to provide consistent revenues to the state can be determined by examining real sales tax revenues per capita over time. By controlling for the increase in population and inflation, the underlying pattern of growth in sales tax revenues can be discerned (see Figure 2). During the 1970s and early 1980s, sales tax revenues per capita increased at a rapid pace. Real personal income grew at an average annual rate of between 4 and 6 percent and population increased at an annual rate of 2.2%. Since the peak in 1980, real per capita sales tax revenues have decreased and have hovered at roughly $184. This represents a decrease in real revenues per capita of nearly 14%. Real state expenditures per capita, however have increased approximately 35% over the same period. Annual rates of growth of real sales tax revenues per capita since the boom period in Colorado have been predominantly negative. On the other hand, real state spending during the same period showed negative growth only once. In fiscal year 1980 when real sales tax collections per capita peaked, the state collected $218 per capita in real sales tax revenues and spent $775 per capita; in fiscal year 1991, real sales tax revenues per

capita had decreased to $182 while real per capita expenditures increased to $1,084. (A combination of increased revenues from income taxes, current charges, and earnings on investments, and the diversion of trust fund revenues to the general fund have allowed expenditures to continue to grow.) The growth, or in this case the decrease, in per capita sales tax revenues does not mirror the spending patterns of the state.

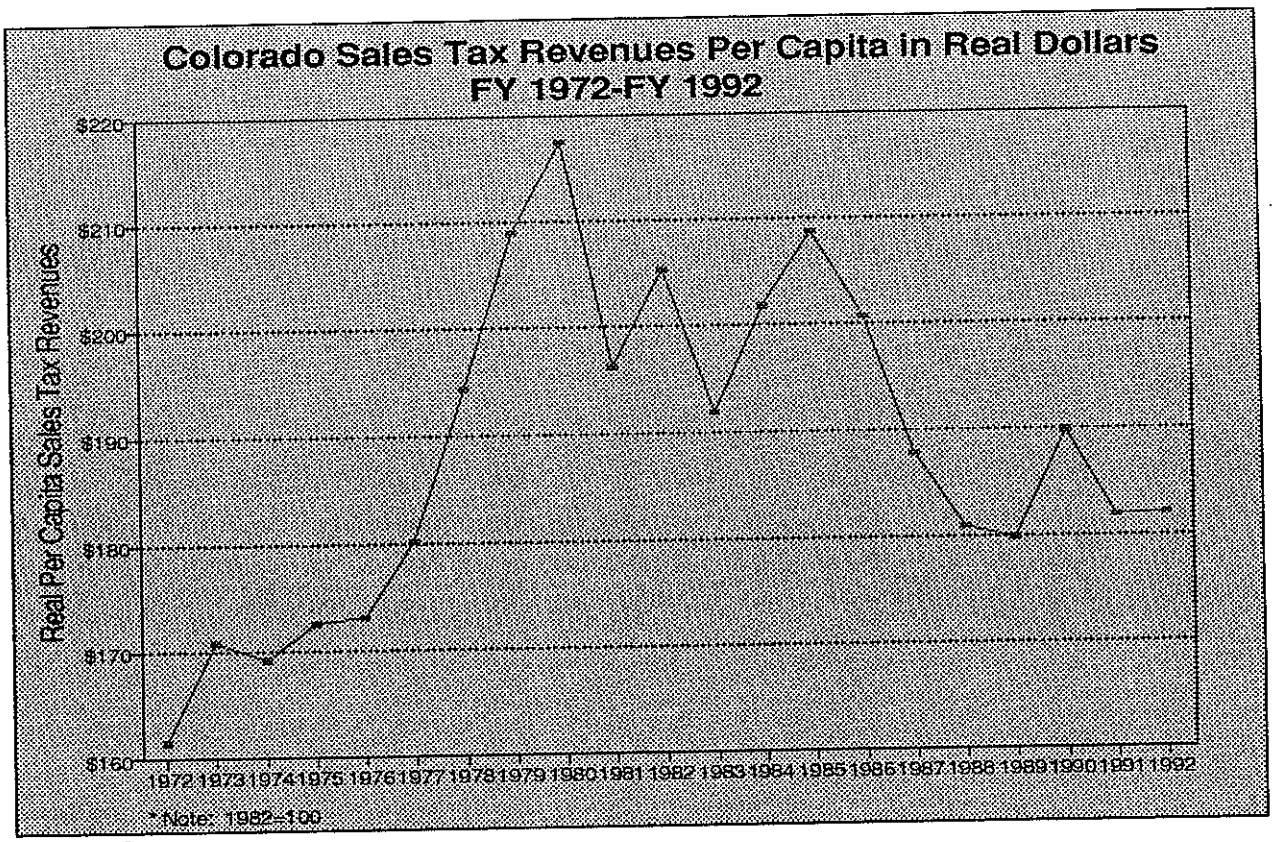

Figure 2.

In terms of variability, the adequacy of the sales tax as a source of revenues depends on the proportion of revenues that the sales tax provides to the overall state budget and the flexibility the state has in managing the fluctuations in revenues over time. Colorado's sales tax provides nearly one third of the revenues that flow into the General Fund. It contributes the second largest amount of tax revenues to the General Fund. The individual income tax, which provides over 50 percent of the revenues to the General Fund, is the single largest revenue generator for the state. Between the '70s and '90s the sales tax has had a diminishing role in funding the General Fund as the income tax has become the primary source of funding. A highly variable sales tax structure can be a problem for those states whose sales tax revenues play a dominant role in funding budgets if they do not have a mechanism for smoothing the revenue variability over economic cycles. Given that Colorado's sales tax plays a major role as a General Fund revenue source and the limited flexibility that the state has in managing its revenue resources, according to public finance theory, Colorado should either have a sales tax structure that yields a more consistent amount of revenues year-to-year or it must have an overall tax structure that

counterbalances the variability of the sales tax. Otherwise, the variability of the current sales tax structure in Colorado could contribute to budgetary difficulties.

The variability in sales tax revenues over time is derived from its dependence upon the consumption patterns of residents, businesses, and tourists. The consumption of goods by these groups is subject to, and is essentially limited by, the income that is available for them to spend (in this chapter, only the consumption patterns of households and tourists will be examined) which correlates with business cycles. A comparison of the short term rates of growth of personal income and sales tax revenues shows that the rates of growth of sales tax revenues mirror and are an amplification of the rates of growth of personal income. As the short term rates of growth of personal income increase, as is characteristic of economic recoveries, those of sales tax revenues also increase but at a greater rate. Correspondingly, declines in the short term rates of growth in personal income are matched by even greater declines in the rates of growth of sales tax revenues. This pattern indicates that consumers are sensitive to changes in personal income and adjust their levels of purchases of taxable goods based on changes in income. They react to decreases by paring their spending on taxable items (especially durable goods), and react to increases by boosting their spending on taxable goods. This pattern of behavior by consumers generates a volatile stream of sales tax revenues. The flow of sales tax receipts ebb and flow with the business cycle and therefore may run counter to the funding needs of the state. During a recession, the rate of growth of personal income declines and, consequently, the rate of growth of sales tax receipts declines. At the same time, unless the government changes or reduces its service delivery, a stable flow of revenues is needed to provide for the increased demand for support services (unemployment, job services, public welfare, etc.).

The relationship between the rate of growth in sales tax revenues to the rate of growth in personal income is the income elasticity of the sales tax. A high degree of income elasticity indicates that an incremental increase in available income will yield a proportionally larger increase in sales tax revenues. Likewise a low income elasticity means an incremental increase in income will yield a very low increase in sales tax revenues.

According to William Fox, a sales tax will be stable "if its short-run nominal income elasticity is countercyclical so that revenue growth fluctuates less than income growth."[8] In other words, elasticity must rise during recessions and fall during recoveries for the sales tax to be a stable source of revenues. The comparison of the rates of growth of revenues to personal income shows that the current sales tax responds contrary to Fox's stable sales tax paradigm. Historical data shows that the elasticity of the state sales tax rises during recoveries and falls during recessions. Given that the sales tax base consists almost entirely of tangible goods, the pattern is not surprising. Of the income that households receive, a certain portion will be allocated to consumption and the rest will go to savings. For each additional dollar that is received by a household, a portion will be allocated for consumption; this is known as the marginal propensity to consume (MPC). Likewise, the increment to household savings given an additional dollar of income is known as the marginal propensity to save (MPS). Typically during an economic downswing, consumers shift their spending out of durable goods (such as cars, furniture, and

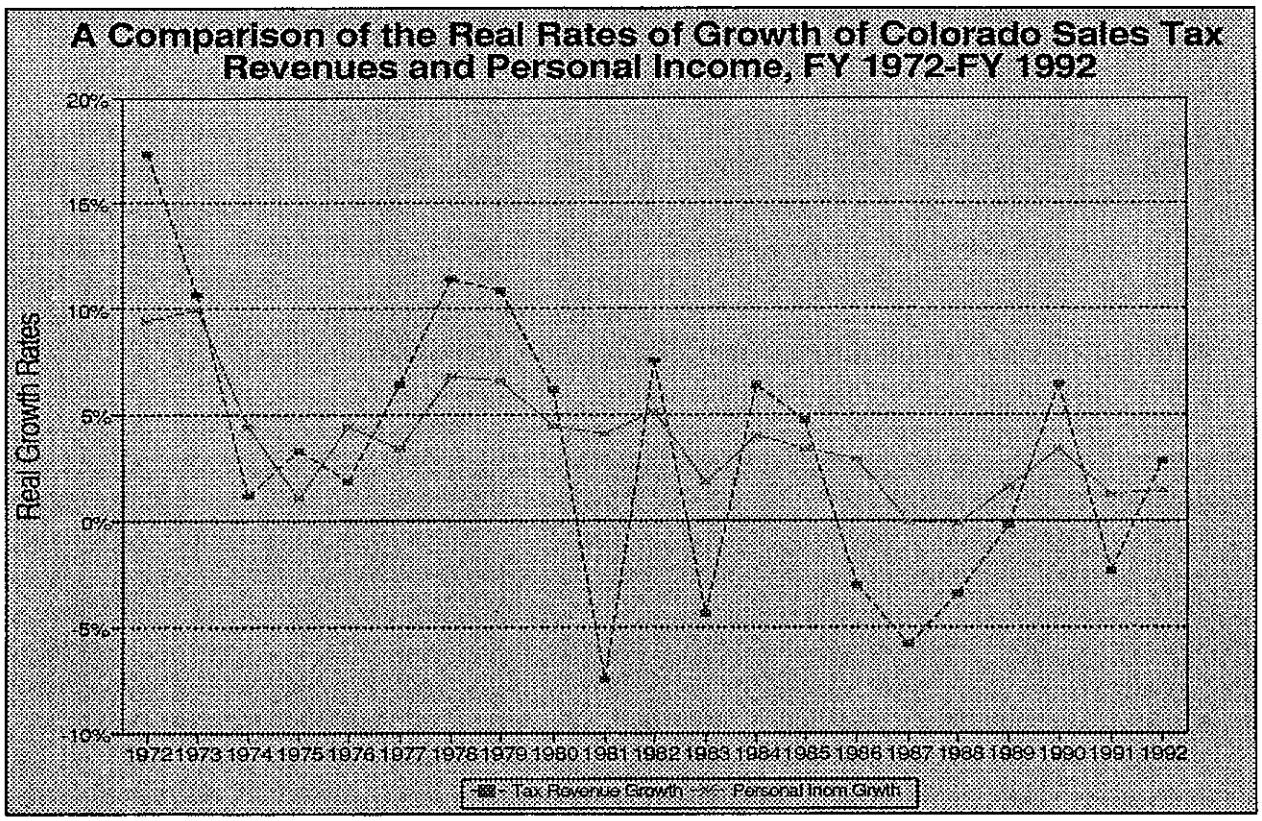

Figure 3.

appliances); given that a household's MPC and MPS must total 1, and that MPS tends to be stable, the MPC for other types of consumption must increase. For instance, during a recession a family may opt to repair a washing machine rather than buy a new one. (Another factor that is not taken into consideration under this theory is that some families decrease their debt load during recessions -- such behavior is not factored into either MPC or MPS). Most services are not taxed by the state; Fox and Campbell hypothesize that the sales tax could be made more stable if these goods were taxed. They contend that the variability of sales tax revenues is exacerbated by the selection of consumer expenditures that define the sales tax base and that the taxation of services would at least partially offset the decrease in MPC for durable goods during recessions and vice versa.

According to public finance theorists, the inclusion of services into the sales tax base could help stabilize the sales tax as a source of revenues; it may also clarify other issues and alleviate some problems associated with a base consisting primarily of tangible goods. A sales tax base that includes not only goods but also services conforms to the notion that the sales tax is a tax on consumption. Adopting such a policy would promote both horizontal and vertical equity in sales tax collections. A comparison of two families with different consumption patterns will illustrate the divergence (if the sales tax is perceived as a tax on consumption) of the current sales tax from a tax that conforms with the prototypical horizontally and vertically equitable tax structure. If family A, spends $500 on tickets to the theatre, the sales tax liability for that family is $0 --

no portion of their entertainment dollars must be earmarked for sales taxes. On the other hand, if family B spends $500 on entertainment by renting videos, the sales tax liability for that family is $15, 3% of their entertainment dollars. Each family consumes $500 worth of entertainment annually yet each bear different tax burdens. A horizontally equitable consumption tax would ensure that families that spend the same amount of money would pay the same amount of tax. Even if family A spends $1,000 on theatre tickets, their tax liability would continue to be $0. This does not conform with the model of vertical equity. A tax that displays vertical equity would impose a greater tax liability the greater the consumption by households. John Due and Loretta Fairchild wrote "The objective of a sales tax is to distribute costs of governmental services in relation to consumer spending, [and] ... acquisition of services by households constitutes consumption expenditures in the same fashion as the purchase of commodities."[9] Currently, sales tax policy in Colorado assesses taxes only on the consumption of tangible goods (there are a few exceptions such as lodging). According to tax theorists, for Colorado sales tax to be a true consumption tax, the base should include services.

Broadening the sales tax base can potentially diminish the competitive advantage that service providers have over retailers. Administering a policy that taxes only durable goods can distort the decisions of consumers. For instance, a consumer may decide to repair a VCR rather than purchase one if the tax levied on the VCR increases the price sufficient enough to make it more expensive to purchase than to repair. If a consumer chooses to repair her VCR rather than purchase a new one (repair services are not taxed) to avoid the tax, the tax has given a competitive advantage to the repair establishment. Without the tax, the consumer may have been more inclined to purchase a new VCR; this artificial incentive to purchase one good or service over another due to the imposition of a tax is called a tax distortion. Colorado's current sales tax policy may place retailers of tangible goods at a competitive disadvantage to purveyors of non-taxable, price-competitive, close substitutes. A larger base also would allow the state to assess a lower tax rate. Tax distortions such as the one described above and the one described previously (a tax incentive for firms to vertically integrate) increase more than proportionately with the increase in a tax rate. Therefore, taxing services and thereby increasing the tax base, would allow the state to decrease the tax rate which would diminish tax distortions caused by the imposition of the sales tax.

Under public finance theory, broadening the sales tax base to include services can be used as a fiscal tool to moderate the regressivity of the sales tax. The state sales tax in Colorado is a regressive tax. A 1989 study found that families in the lowest income quintile paid roughly 2.45 times more of their income on sales taxes than families in the highest income quintile. The sales tax could be made more progressive by selectively targeting those types of services used by the more affluent households such as boat docking, RV rentals, fur storage, or skiing instruction. However, restricting the base to a limited spectrum of services can mitigate the other possible benefits that would ensue from significantly broadening the base. With a narrow services tax base, the chances of significantly lowering the sales tax rate would be reduced. Without the ability to lower the sales tax rate, not only would there be less of a chance of diminishing the distortion effects of the tax but because of the specific attention to the incidence of the tax, such

exemptions could, to an even greater extent than currently realized, unintentionally encourage the purchase of untaxed versus taxed items.

TAXATION OF SERVICES

In the 1991 FTA study of state-level taxation of services, Colorado ranked 47 out of the 50 states and Washington D.C. in the number of services that are included in its sales tax base. Colorado taxes 12 out of a possible 160 services listed in the study. The two states with the most comprehensive sales tax base were Hawaii and New Mexico, both of which include 154 services in their comprehensive sales tax bases. Colorado's neighbors ranked considerably higher in the number of services included in their bases: Kansas ranked 13th; Wyoming, 16th; Arizona, 17th; Utah, 21st; Nebraska, 23rd; and Oklahoma, 28th. Oklahoma, the lowest ranked Colorado neighbor, taxed at least 32 services in comparison to the 12 services that are included in the Colorado sales tax base.

In another study, presented at a FTA Revenue Estimating and Tax Research Conference by Robert Strauss, Colorado was ranked 37th for the number of items included in its household consumption tax base among 45 states and the District of Columbia. This study focused solely on households and ranked states according to the ratio of the number of items in a state's tax base to the tax base of the state with the narrowest base (Maryland was shown to have the narrowest sales tax base). A total of 529 consumer expenditures were examined in defining the sales tax bases of the various states.

Although expansion of the sales tax base is recommended by tax theorists, most still caution against tax-pyramiding through the avoidance of taxing business services. Instead, most concentrate on expanding the base through the inclusion of personal services into the tax base. Some of the outstanding service exclusions (primarily non-statutory exclusions) from the Colorado sales tax base are listed in Table 2.

PROBLEMS WITH THE TAXATION OF BUSINESS SERVICES

Similar to the use tax issues concerning tangible goods, the state will have to take a position on the taxation of services involved in multistate transactions. Specifically, does liability occur upon the performance or upon the consumption of a service and if one or the other occurs out-of-state, would Colorado have the right or the ability to tax that transaction? For states that base their taxation of services on the performance rather than the consumption of services, the state may want to rely on its past decisions regarding the taxation of component parts involved in multi-state manufacturing. If a service is performed in another state, which state has the right to tax the product? For instance, if a personnel consulting firm provides a mailing list to another firm, and that mailing list required the expertise of several people around the country, where should the tax liability for the performance of the service be assessed and which states have the right to tax the service? If the tax structure is based instead upon the consumption of a service, the state is faced with similar problems. Unlike tangible goods, a particular service may be delivered to many locations. If a service is delivered to multiple locations within the state, the state must

Services Taxed by Ten or More States

Landscaping services
Typesetting service: platemaking for the print trade
Automotive storage
Marina services
Electricity for residential and industrial use
Water for residential and industrial use
Natural gas for residential and industrial use
Other fuel for residential use
Diaper services
Garment services (altering & repair)
Laundry and dry cleaning services (non-coin operated)
Shoe repair
Swimming pool cleaning & maintenance
Tuxedo rental
Commercial linen supply
Photocopying services
Custom software programming
Automotive washing and waxing
Automotive services (including paint and lube, excl repairs (listed separately))
Parking lots and garages
Automotive rustproofing & undercoating
Amusement park admission & rides
Billiard parlors
Bowling alleys
Cable TV services
Circuses and fairs--admission and games
Coin operated video games
Admission to school and college sports events
Membership fees in private clubs
Admission to cultural events
Pinball and other mechanical amusements
Admission to professional sports events
Custom fabrication labor
Repair labor, generally
Labor charges, aircraft repair
Labor charges, repairs to intrastate vehicles
Labor charges, repairs to motor vehicles
Labor charges, radio/TV repairs; other electronic equip
Labor charges, repairs to other tangible property
Service contracts sold at the time of sale of tangible personal property
Installation charges-other than seller of goods
Custom processing (on customer's property)
Taxidermy

Table 2.

be able to determine the liability and legal incidence of the tax. Apportioning the tax liability seems to be an appropriate way to deal with the multi-state consumption of a service but what if benefits cannot be apportioned among the consumers? Using the personnel consulting example, if the firm recommends organizational restructuring of a multistate business firm, how should the value of the service be apportioned? Whether a state bases its structure of taxation on the performance or the consumption of services, it must face the issues concerning the feasibility of apportioning and collecting the liability as well as competition with other states for the right to tax the service when the service is performed or distributed in multiple states. Goods are tangible, concrete, and substantial. Services are intangible, and sometimes exist only as they are rendered. Due to the mobility of service providers, tracking such businesses for auditing purposes could be problematic.

Another conceivable problem in the taxation of business services, although not unique to the taxation of business services, is the potential to "cascade" taxes through to the final product and artificially stimulate the vertical integration of businesses. Some would argue that business

services are similar to direct component parts used in the manufacturing process which are exempt from taxation. Both are inputs used to generate final products; therefore, they would contend, that taxing business services should be akin to taxing component parts. However, this argument is similar to those faced by tax administrators regarding the exemption of only certain goods used in the manufacturing process. The exemption of goods used in the manufacturing process is based on the component parts rule -- only those goods that are component parts of the final product are exempt from sales taxation. Similarly certain business services would qualify as direct components of the final delivery of services whereas others may be more general to the organization and therefore would not qualify for an exemption. For instance, an example of a business service that might qualify as a "component part" is personal credit checking services performed for mortgage brokers who are performing closing services for a client. The credit check is a component part in the closing services rendered to a client. Relocation services used to move an employee to another business location, however, would not be considered a component in the process of delivering financial services to a client much as office equipment, which is integral to the operation of an office, would not be considered a component part of a manufactured good. Using the component parts rule as a guideline, one would conclude that both would be taxable. To maintain consistency with current statutes, business services not directly used in the final delivery of a service, like goods purchased by manufacturers but not used as a component part of the finished product, should be taxed.

Florida's experiences in implementing (and subsequently repealing) a sales tax on a broad base of services provides a model of the types of issues that need to be addressed when attempting to adopt a sales tax on services. Florida ventured into the domain of taxing services in 1986 when the legislature passed a bill that repealed several sales tax exemptions, one of which included the exemption of professional, insurance, or personal service transactions. By April 1987 the legislature passed a full services tax package that was to generate approximately $761 million in its first year and $1.2 billion in its second.[10] The bill went into effect on July 1, 1987 and was subsequently repealed by December 1987. When the bill was introduced there was little opposition to the tax. It was presented as a series of sunset provisions that ended the exemption of over 100 exceptions to the Florida sales tax base. The bill was sold as a means to close the various loopholes that existed in the sales tax. The legislation that followed, which essentially defined the structure of the services tax, activated the special interests in opposition of the new tax. Five groups in particular, the NBC television network, Johnson and Johnson (the nation's 21st largest advertiser), the Florida Bar, the Florida Association of Broadcasters, and a coalition of advertising and other groups (STOP) were especially vocal in their opposition to the tax and are perceived as largely responsible for the repeal of the tax.

James Francis of the Florida Department of Revenue, identified five factors that led to the repeal of the services tax: 1) the legislative process; 2) the scope of the tax; 3) pyramiding; 4) a misunderstanding of the use tax on services; and 5) the failure on the behalf of the tax supporters to resolve and ride out the dissent. The main criticism Francis had of the legislative process, although he qualifies it as a shortcoming of only "marginal importance" in the whole scheme of events, was that the time between passage of the law and the implementation of the bill was too short. Although Francis points out that "the final implementing legislation was preceded by more

study and critical evaluation than any other tax bill in Florida's history," he felt that there was not enough time to inform and educate the "rank-and-file" taxpayers who don't normally follow the legislative process. The legal, administrative, and revenue implications of the tax were examined by two independent groups who discussed their findings with the legislature. Revenue department staff met with each affected service industry group and attempted to tailor the legislation to work around their particular problems or unique situations.[11] However, the amount of effort spent working with various interest groups to shore up their support was not enough to quell the dissent of the opposition. Francis says that the process may have been, in actuality, too easy for the proponents of the tax in the initial stages. Because they were able to garner the initial support of the governor and the legislature, proponents relaxed their efforts in selling the legislation to the public and therefore failed to convince the "rank and file" taxpayers of the need for this legislation.

The second element that Francis mentions as a factor in the repeal of the tax is the limited scope of the final enacting legislation. Proponents of the tax found it hard to justify the taxation of services on the basis of 1) equalizing the playing field for manufactured goods versus services and 2) lessening the regressivity of the tax by including professional services in the base, if only a small portion of the service base was subject to taxation. With the repeal of the exemptions, up to $85 billion in previously untaxed transactions was available for the legislature to tax. However, only 33.4 percent of the previously untaxed transactions made it into the new services tax base.

The third factor that Francis attributes to the demise of the tax is that the provisions to prevent pyramiding were too narrow. In Florida, a business service would be exempted only if the service was purchased by a business on behalf of a third party. A business service was not exempt if the purchaser consumed the business service, even if it was necessary in providing the final service to a customer. Businesses were concerned that this policy allowed extensive pyramiding to occur in the service sector and policymakers were concerned about the effective application of the rules of the resale principle. Without straightforward statutory criteria for determining the difference between exempt and non-exempt services, the expectations for the proper application of the tax were minimal.

The fourth factor Francis mentions is the criticism and misunderstanding of Florida's policy on the imposition of use taxes on services. Florida assesses liability on all in-state consumption of services regardless of point of sale or point of performance. Likewise, Florida exempts out-of-state consumption of services, even if the service is performed in the state. This type of policy required businesses to identify those service purchases that were subject to apportionment. Although the policy was criticized on the grounds that the administration of the tax would be costly, no alternatives that would maintain a fair playing field for multistate businesses (especially those whose state of domicile was Florida) were proposed.

The fifth and final factor that Francis identifies in the demise of the tax is the failure of a strong coalition to support the new tax. Proponents were caught off guard by the opposition; they did not sell the tax plan to the electorate since the governor and the legislature supported the tax, at

least in its initial stages. The media, with their access to the airwaves and expertise in the shaping of public opinion, voiced their opposition to the tax easily and effectively. The effort that Florida devoted to the detailed study and implemention of its sales tax on services and its positive and negative experiences in introducing the tax, serve as both a model and an example by which other states can learn.

THE IMPACT OF ADDING SERVICES TO THE TAX BASE ON EQUITY

Frequently it is assumed that adding services to a sales tax base will reduce the regressivity of a tax; however, the service components that are incorporated into the base may or may not serve to diminish the regressivity of the sales tax. A model of the tax burdens of various households by income classes was constructed to demonstrate the distribution of a sales tax burden across income classes when various components constitute the tax base. The model constructed for this study is based upon detailed national consumption patterns which are used as a proxy for Colorado consumption.

The Lorenz curve is used in this model to measure the equity of the distribution of the alternative sales tax burdens. This measure is expressed as a ratio of the proportion of income paid by families in the lowest income groups on sales tax to that proportion of income paid by families in the highest income group. A ratio or index number equal to 1.0 indicates that the tax being measured is proportional; therefore, each group would pay the same proportion of their income on the tax. If the ratio is less than 1.0, the tax is progressive, meaning families in the highest income group pay a larger share of their income on sales taxes than those in the lowest income groups. A ratio greater than 1.0 indicates that the tax is regressive; the tax would constitute a larger share of the income of families in the lowest income groups than that of families in the highest income group.

The model shows that a sales tax levied on a broad spectrum of consumer services, is actually more regressive than the current sales tax on goods. The Lorenz measure shows that families in the lowest income group would pay 2.9 times more of their incomes on the services tax than families in the highest income groups. This compares with the Lorenz measure for the current sales tax on goods which indicates that families in the lowest income groups pay 2.4 times more of their incomes on the current sales tax than families in the highest income group. Although families in the lowest income class nominally spend less on services than they do on goods, they pay a greater percentage of their incomes on services than families in the highest income class. The greatest service-related expenditures of lower income households are utility bills and maintenance and repair services for homes and vehicles (excluding fees for professional/medical services).

Because the inclusion/exclusion of elements in the sales tax base affects the overall regressivity of the sales tax, several options were examined and are presented for purposes of comparison. Table 3 shows various sales tax bases and their resulting Lorenz Curve measures of regressivity as well as the sales tax revenues that each would generate at various tax rates. The variations include 1) repealing the exemptions currently incorporated in the state sales tax statutes and

* Under this scenario families with incomes less than $15,000 would receive full credit for the sales taxes they paid on their food and utility expenditures.

Table 3.

adding a broad range of services to the base (for a detailed listing of the services included in the model, see Appendix 3); 2) taxing a broad range of consumer services; 3) taxing services with the exception of utilities; 4) taxing services and food, granting a credit for sales taxes on food and utilities for families with incomes under $15,000.[12]

Under these different scenarios, the least regressive and second largest yielding alternative was the combination of a broad sales tax on services and a repeal of the food exemption. To mitigate the regressivity of the tax, a credit for taxed food and utility expenditures would be offered to low income families. Implementation of this alternative to broaden the sales tax base would lessen the regressivity of the sales tax; families in the lowest income class would pay less than one percent more of their incomes on sales taxes for services and food than families in the highest income group. Overall, the sales tax would continue to be a regressive tax; however, the regressivity of the sales tax, as a whole, would be reduced to the extent that families in the lowest income class who currently pay 2.4 times more of their incomes on sales taxes than families in the highest income class, would pay 1.8 times more of their incomes towards sales taxes instead.

The option that would generate the greatest additional revenues is the most regressive of the four. Broadening the base to include services while repealing the current sales tax exemptions would increase the base by nearly 39%. In addition to a multitude of services, this alternative would

entail taxing food, prescription drugs, and prosthetic devices -- items that are commonly perceived as necessities or expenditures that cannot be avoided. Adding food for home consumption into the sales tax base by itself would increase the base by 14.8%. Among the previously exempted items that would be added to the tax base, the tax on prescription drugs would be the most regressive. On average, families in the lowest income group pay 9.5 times more of their incomes on prescription drugs than families in the upper income class. They pay 4.5 times more of their income on medical supplies and 3.9 times more of their income for food at home. Though the regressivity of a sales tax on food is significant, it is somewhat mitigated by the federally mandated sales tax exemption of food purchased with food stamps. The model estimates that nearly 24% of the food purchased by families in the lowest income group is paid for with food stamps, therefore partially relieving these families from the regressivity of a potential sales tax on food. Adding only services to the sales tax base would increase the overall regressivity of the sales tax somewhat, but exempting utilities from taxation would maintain the current degree of regressivity in the sales tax. Families in the lowest income group, at present, pay 2.4 times more of their incomes on sales taxes than do families in the highest income group.

By broadening the sales tax base, the state could, given the above scenarios, reduce the tax rate from 3 percent to as low as 2.15 percent and maintain revenue neutrality. The reduction in the rate would of course be dependent upon the magnitude of the increase in the base. Increasing the base to include all consumer services plus the current exemptions from the base is the largest increase in the size of the base presented. This increase would allow the state to reduce the tax rate to 2.15 percent and maintain the same level of revenues it receives from the current sales tax structure. Of the options presented, the smallest increase in the base, and subsequently the smallest reduction in the sales tax rate, would result from the alternative that included services but exempted utilities. A tax rate of 2.65 percent would be required to maintain the current level of revenues. For the least regressive alternative, a tax rate of 2.35 percent would be required to maintain the current sales tax revenue stream. Under this alternative, the base would be expanded to include services, food, and utilities while credits would be offered for food and utility expenditures by low income families. In reducing the sales tax rate by expanding the base under any of the scenarios, some of the distortional effects of the tax would be eliminated.

ADDING A SERVICES COMPONENT TO THE LOCAL TAX BASE

Chapter 3 demonstrated the effects of instituting a uniform tax base on localities' tax revenues. For illustrative purposes, food purchased for off-premises consumption, residential utilities purchases, and machinery/machine tool purchases were removed from all local tax bases. Three uniform tax rates that would probably yield revenues equivalent, in total, to those which localities had received when the tax base was set locally were derived. In order to maintain current revenue levels, it was hypothesized that the state would have to redistribute revenues to the localities based on some formula.

As discussed, the taxation of various services would increase the size of the tax base and enable a reduction of the rate. A larger tax base could allow a smaller tax rate to be imposed in an overall sense. The three data bases: counties, home rule cities, and statutory cities, were

Table 4.

modified to include a portion of services in the tax base. Because little information exists on the nature and composition of services' consumption on a finer level than that of the state, estimates were used. In CY 1991, the value of all consumed services were approximately $12 billion (relative to an estimate of roughly $24 billion in net taxable retail sales) on a statewide basis. The definition of services to be added to the tax base is "all services minus professional services" which eliminates $6 billion in services from inclusion in the tax base. Using a locality's reported tax base, the services component was estimated at roughly 24% of the reported tax base. This was then added into the existing uniform tax base and a new "breakeven" overall tax rate

computed. An area's actual services consumption component could greatly differ from its estimate. With the inclusion of the services component into the tax base, the uniform tax rates accordingly decline. Counties would require a uniform rate of 0.69%; home rule cities would require 2.14% and statutory cities would require a tax rate of 2.28%. These rates would produce revenue roughly equal to the amount in total that the locality type produced in FY 1991. The amounts produced locality by locality, however, often greatly diverge from what the locality actually produced itself in FY 1991. Table 4 shows the effects of adding a portion of services to our prototypical localities' tax bases.

The uniform tax rate primarily is the reason for the reduction of revenues from the amounts collected by each locality. The most dramatic cases of revenue reductions in Table 4 (such as the situation for most of the statutory cities) is primarily caused by the relatively low uniform tax rate. Denver, for instance, finds its tax base larger by more than $1 billion, but the lower tax rate (Denver's tax rate was 3.74% in FY 1991) causes revenues to be about 15% lower than what was actually collected in FY 1991. Delta and Summit counties lose roughly 1/2 of their revenues under the hypothesized scheme. The inclusion of a portion of services into the uniform tax base would not hold localities harmless and such a change in the tax base would necessitate redistribution.

Sales tax policy, especially with regards to base broadening, is a hot topic in the current tax literature and among organizations and professionals that monitor state tax policies. States have adopted base broadening policies as a fiscal tool to halt the gradual erosion of their sales tax revenues as consumers shift their spending out of goods and into services; and to create more equitable structures for both the taxpayer, in terms of regressivity, and for businesses, in terms of reducing the distortional effects of taxing only one type of consumption. Others are trying to alleviate the volatility of the yield of sales tax revenues because the volatility of a goods based tax structure often runs countercyclical to the spending needs of governments. The sales tax is one of the least disliked of the taxes levied by governments, and for many states, the service sector is a source of tax revenues.

APPENDIX 3
LISTING OF SERVICES INCLUDED IN THE SERVICES CATEGORY IN THE LORENZ CURVE ANALYSIS

Home maintenance/repair services
Property management/security
Parking
Natural gas
Electricity
Fuel oil & other fuels
Water & other public svcs
Babysitting services
Care for elderly, invalids, handicapped
Daycare expenses, preschools, nurseries
Housekeeping services
Gardening,lawn care services
Water softening services
Laundry/dry-cleaning services
Coin-op laundry/drycleaning
Other home services
Termite/pest control
Moving, storage, freight express
Appliance repair
Reupholstering, furniture repair
Repair/rental of tools and/or household equipment
Appliance/furniture rental
Repair of household goods
Shoe repair
Apparel altering/repair
Clothing rental
Watch & jewelry repair
Clothing storage
Auto maintenance & repairs
Parking, towing, auto service clubs
Club membership dues, fees
Social, recreational, civic organization membership
Fees for participant sports
Out-of-town participant sports
Movies, performing arts
Movie, other admission (out-of-town trips)
Sporting events
Sporting events, (out-of-town trips)
Fees for recreation lessons
Other entertainment services (out-of-town trips)
Repair of tvs/radios
Cable services
Docking and landing fees
Electronic video games/pinball machines
Personal care services for men and women

Note: These categories of service-related expenditures correspond with the U.S. Bureau of Labor Statistics Consumer Expenditure Survey classification of expenditures.

EXECUTIVE SUMMARY

This is the eighth in a series of Colorado Tax Profile Studies (CTPS) to assess the burden of state and local taxes on Colorado households. In particular, the study examines the tax burden on households at different income levels for Fiscal Year 1994.

THE ECONOMIC SETTING

The Colorado economy in 1994 was markedly stronger than in recent CTPS studies. Between 1989 and 1994, Colorado experienced an increase of 264,000 jobs and 371,000 in additional population. Personal income grew by 40 percent between 1989 and 1994 and fueled almost a 50 percent increase in retail sales over the period. A stronger economy resulted in the movement of households into higher income classes. In 1989, approximately eight percent of Colorado households received Adjusted Family Money Income (see definitition in appendix) of less than $5,000. By 1994, this percentage had dropped to 6.3 percent. In contrast in 1989, just under 16.5 percent of Colorado households received over $50,000 in Adjusted Family Money Income. By 1994, this group accounted for 26.0 percent of Colorado households.

CHANGES IN TAX LAWS

A number of tax law changes enacted between 1989 and 1994 affected state and local tax collections. In an attempt to address needed highway improvements, the Colorado Legislature in 1989 passed House Bill 1012 which increased the gasoline excise tax rate from 18 to 22 cents per gallon. The bill also added a levy to vehicle registration fees based on the age of a vehicle, and increased the cost of a driver's license.

Two new sales taxes were imposed in the metro Denver area. The Scientific and Cultural Facilities District in January 1989, and the Metropolitan Major League Baseball Stadium District in August 1991 each had a 0.1 percent levy on retail sales. In addition, several jurisdictions also raised their sales tax rate.

The Taxpayer Bill of Rights (TABOR) amendment limiting tax and expenditure increases for state and local governments became effective December 31, 1992 and affected local goverment budgets and taxes for calendar year 1993.

Several important changes affected the Colorado income tax. In tax year 1992, the tax base was broadened by adding back the federal deduction for state income tax to Colorado taxable income. Additionally, the corporate income tax rate on taxable income in excess of $50,000 was reduced from 5.5 percent in 1989 to 5 percent in 1993. At the federal level, legislation was enacted that broadened the tax base by phasing out itemized deductions and personal exemptions for higher incomes. This legislation also indexed personal exemption and standard deduction amounts to inflation, and required households who claim children over one year of age as dependents on their income tax to list the social security numbers of the children on their tax returns.

CHANGES IN TAX COLLECTIONS

Changes in Colorado's economic climate and tax laws resulted in higher tax collections. After experiencing an economic recession in 1985 and 1986 marked by a net out-migration of individuals from the state, the state economy started to recover. By 1989 the recovery was well underway. Population growth rose to pre-recessionary levels by 1991, and in 1993 reached a fifteen-year peak. Between 1978 and 1994 population grew at an average annual rate of 1.8 percent, personal income by 8.3 percent and state and local tax collections at an average annual rate of 7.5 percent. Between 1989 and 1994, the growth in state tax collections was led by gains in sales and income tax receipts. Rapid population growth and lower interest rates stimulated home building and mortgage refinancing which in turn boosted consumer spending. Per capita collections from sales by home furnishing retailers increased more than 10 percent between 1992 and 1994 while collections from building supply retailers grew by more than 20 percent in 1993 and 1994.

Between 1989 and 1994, rising incomes shifted taxpayers into higher income classes. Income from sources other than wages showed very strong gains. Income from rents and royalties increased at a robust annual rate of 69 percent on a per capita basis. Per capita pension income increased 7.7 percent annually. Part of the growth in income taxes can be attributed to the Federal Tax Reform Act of 1986 which broadened the tax base.

Between 1978 and 1994, property taxes accounted for a declining share of local taxes and total state and local taxes. In 1978 property taxes accounted for 71 percent of local taxes and almost 40 percent of total state and local taxes. By 1994 these shares were reduced to 60 percent and 30 percent, respectively.

While property taxes declined as a share of local taxes, sales taxes accounted for a larger share of the total, rising from 18 percent of all local taxes in 1978 to

over 30 percent in 1994. At the state level, the contribution of the state individual income tax to the revenue base increased from 32 percent of all state taxes in 1978 to 44.5 percent in 1994. The increase in income tax collections was caused largely by the increase in income associated with a greater population, healthy gains in personal income and by state and federal changes in tax laws.

OVERALL STATE AND LOCAL TAX BURDEN

The total state tax burden on residents in 1994 was estimated at $3.7 billion, of which $2.7 billion was paid directly by residents and $1 billion consisted of taxes levied on businesses that are ultimately borne by residents. Since businesses are intermediaries between suppliers of the factors of production (labor and capital) and consumers who purchase final products or services, it is the consumer and the supplier of resources who bear the burden of taxes levied on businesses in the form of higher prices, lower wages or reduced dividends.

Total taxes paid by residents to all local governments was approximately $3.6 billion. Residents paid $1.9 billion in local direct taxes and another $1.7 billion in indirect taxes shifted to them. An additional $586 million in state and local taxes ($277 million direct and $309 million indirect) was paid by nonresidents.

The largest single source of revenue among state and local governments is the property tax which accounted for one-third of total taxes. Sales and use taxes, both state and local, make up 28 percent of the total tax burden while income tax comprises 24 percent of the total.

PROFILE OF TAX BURDEN BY INCOME CLASS

This section examines the distribution of the state and local tax burden on Colorado residents by Adjusted Family Money Income (AFMI). Adjusted Family Money Income classes examined range from households that receive under $5,000 in AFMI to households that receive over $70,000 in AFMI.

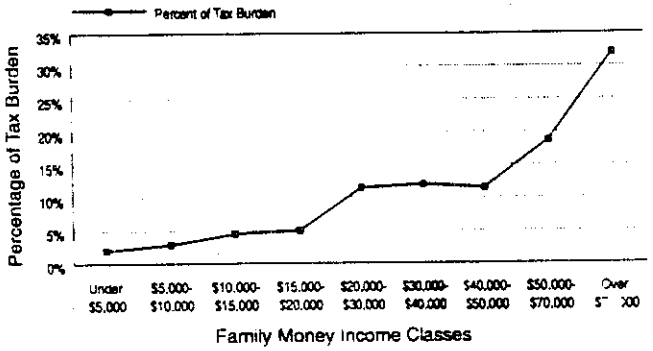
DISTRIBUTION OF INCOME

Data on the distribution of income by AFMI classes show that incomes are not proportionately distributed but tend to be concentrated in higher income groups. Households receiving $5,000 to $10,000 in AFMI represent just under 10 percent of all households examined and account for just under 2 percent of all AFMI. In contrast, households receiving $70,000 and over in AFMI represent 13 percent of all households examined and account for 37 percent of all AFMI.

DISTRIBUTION OF TAX BURDEN

As depicted in Chart 1, data on state and local taxes paid by households in different AFMI classes show that the bulk of taxes are paid by households in middle and upper income groups. The three highest income groups with AFMI of $40,000 to $50,000, $50,000 to $70,000 and AFMI of $70,000 and over paid 62 percent of the $7.4 billion total tax burden on Colorado resident households. In comparison, the three lowest income groups with AFMI of $10,000 to 15,000, $5,000 to $10,000 and AFMI of under $5,000 paid less than $700 million in total taxes. For higher income groups, the individual income tax is the largest single tax paid. Sales and use tax make up the bulk of the tax burden for lower income households.

CHART 1: COMPARISON OF TAXES PAID BY COLORADO HOUSEHOLDS BY ADJUSTED FAMILY MONEY INCOME CLASSES

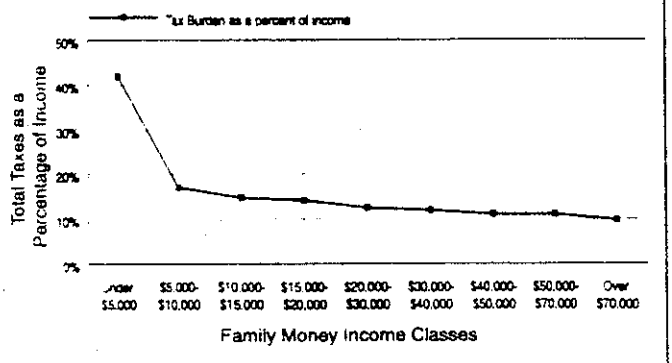


THE EQUITY OF COLORADO'S TAX SYSTE

Comparing total tax burden as a percent of Adjuste Family Money Income across income classes gives notion of the equity of Colorado's tax system; it show whether the tax system is progressive, proportiona or regressive. A progressive tax system is based o ability to pay and places a larger proportionate ta burden on higher income taxpayers than on thos with smaller incomes. In contrast, a regressive ta structure is one where taxes paid as a percentage c income declines as income increases—lower incom taxpayers pay a larger share of their income in taxe than their higher income counterparts.

As Chart 2 depicts, Colorado's overall tax system regressive. Total taxes paid as a percentage of Ad Family Money declines as income increase Households with incomes of $5,000 to $9,999 pai

CHART 2: COMPARISON OF TOTAL TAXES ON HOUSEHOLDS AS A PERCENTAGE OF INCOME BY ADJUSTED FAMILY MONEY INCOME CLASS



17.9 percent of their income in taxes. For the top adjusted household income class, $70,000 and over, households paid 10.1 percent of their income in taxes.

Comparisons with previous studies suggest that Colorado's state and local tax burden may have shifted slightly in the direction of higher income taxpayers. Comparing 1989 to 1994 data, for example, show that total taxes as a percent of AFMI dropped from 20.5 percent in 1989 to 17.9 percent in 1994 for households with incomes of $5,000 to $10,000. At the same time, total taxes as a percent of AFMI rose from 10.3 percent in 1989 to 10.6 percent in 1994 for households with incomes above $50,000. In fact over the five years, the tax burden has fallen for all households between $5,000 and $50,000 in AFMI (with the exception of a slight increase for the $20,000 to $30,000 class) and rose for those earning more than $50,000 in AFMI.

The overall structure of Colorado's tax system is to a large extent determined by three taxes: individual income, sales and use, and real property taxes. These taxes account for 87 percent of direct taxes paid by residents. The data show that while the individual income tax is progressive, sales and use and property taxes are regressive reflecting consumption patterns of households. While spending on goods in the sales tax base rises as income increases, it accounts for a lesser share of income since higher income households channel money into saving. Similarly, the value of a household's residence falls as a proportion of income as income increases.

Comparing the percentage of taxes paid to the percentage of income earned by AFMI class gives an indication of the overall structure of the tax system. The 1994 data show that households in each income class earning less than $40,000 in AFMI pay a higher percentage of total state and local taxes than the percentage of income that they earn. Each AFMI class earning more than $40,000 pays a lower percentage of taxes than their percentage of income. Households with incomes in excess of $70,000 in AFMI receive 37 percent of total Adjusted Family Money Income and paid 44 percent of total individual income taxes. All households with incomes under $50,000 in AFMI pay a larger share of sales and use taxes than their share of Adjusted Family Money Income. Among the different taxes, the largest share of the tax burden borne by the highest income class is the income tax.

Local taxes, as a whole, are much more regressive than state taxes. The lowest income group that accounts for 0.5 percent of Adjusted Family Money Income pays 1.3 percent of direct state taxes, yet pays 2.7 percent of direct local taxes. On the other hand, the $70,000 and over AFMI class accounts for 37.4 percent of total AFMI, pays 37.1 percent of direct state taxes, and 29 percent of direct local taxes. The progressivity of the state individual income tax is responsible for the greater progressivity of the state tax burden.

Examining the ratio of the percentage distribution of taxes paid to the percentage distribution of income received presents additional information on the structure of the tax system. For local taxes the data show that the under $5,000 AFMI class pays almost five times as large a share of local taxes as its share of income. The $50,000 to $70,000 AFMI class paid and received an equivalent proportion of taxes and income, respectively; the percentage share of taxes paid to the percentage share of income received is close to one. For state direct taxes, the share of taxes paid are roughly equivalent to the share of income received for all AFMI classes above $5,000. However, the ratio share of local taxes to incomes drops steadily with rising income. Direct state taxes are proportional to mildly progressive while direct local taxes are regressive.

The total tax burden as a share of income, measured by total taxes as a percent of AFMI, gradually declines as income rises. Total direct state taxes account for a relatively stable share of Adjusted Family Money Income as income rises. The percent of AFMI spent on direct local taxes declines with rising income. For example, for the $5,000 to $10,000 Adjusted Family

Money Income class, direct state and direct local taxes are 4.2 percent and 5.8 percent, respectively. For the $50,000 to $70,000 AFMI class, direct state taxes account for 4.2 percent of income while direct local taxes account for 3.1 percent of AFMI. As noted earlier, both the residential property tax and sales and use tax account for a smaller share of income as income increases.

An examination of the ratio of different taxes as a share of income for the under $10,000 AFMI class to the same taxes as a share of income for the over $70,000 AFMI class reveals further insight on the structure of individual taxes. A ratio of greater than one would indicate a regressive tax; the tax accounts for a greater share of income for the lower income group than the higher income class. The individual income tax is found to be quite progressive while cigarette and tobacco products taxes are the most regressive of the state and local taxes. Sales, property and occupation taxes are regressive.

INTRODUCTION

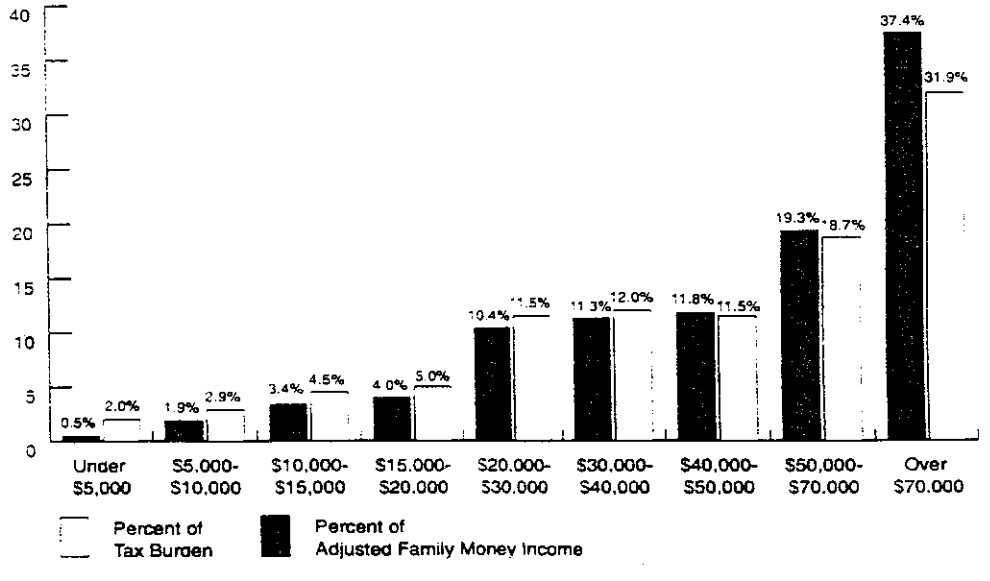
This is the eighth in the series of Colorado Tax Profile Studies (CTPS), first published in 1972. The CTPS model was developed to assess the burden of state and local taxes on Colorado households. In particular, the study examines the tax burden on households at different income levels. The analysis is a static one; it looks at the tax burden on households based on their reported income and economic situation. The study does not attempt to examine how Colorado's state and local tax structure affects households' economic situation. Nor does it attempt to assess the impacts of taxes on work incentives, economic growth, or stimulus to particular industries in the state.

The analysis and data presented in this study are, in most respects, comparable to those used in the last study covering 1988 taxes.[1] Minor changes have been made as noted. Differences with earlier CTPS studies are greater. The studies prior to 1989 were based on a different income concept. Nonetheless, the several studies provide some basis for examining changes in Colorado's state and local tax burden over time and these changes will be examined here.

In general, the findings of this study are similar to those of studies performed in earlier years. One particular finding shows that lower income households experience higher effective tax burdens relative to their income than do households in higher income classes. These results are shown in Chart 3 below. Persons or households in the lowest income group (Adjusted Family Money Income under $5,000) received 0.5 percent of income but paid 2 percent of taxes. On the other hand, those with Adjusted Family Money Income (AFMI) above $70,000 received over 37 percent of income but paid 31.9 percent of taxes. This finding should be tempered by the fact that a large number of the households in the lower income groups are young persons or retired persons whose spending patterns are affected by anticipated future incomes or higher past incomes. A comparison with the results of the 1989 CTPS suggests that higher income households now pay a slightly larger share of state and local taxes.

On Chart 3 the dark bars represent each group's percent share of Colorado Adjusted Family Money Income and the light bars represent each group's percent share of tax burden. It should be noted that for the income groups between $30,000 and $70,000 of annual income the two bars are close to even. For the income groups below $30,000 the light bar representing tax burden is larger. Only for the highest income group is the share of income markedly higher than the share of taxes paid.

CHART 3: COMPARISON OF INCOME RECEIVED BY COLORADO FAMILIES AND THE TAXES THEY PAID



[1] For the 1989 CTPS, individual income tax was reported for the 1988 tax year (essentially calendar 1988), while other state taxes were reported for the 1989 fiscal year ended June 30, 1989. Local taxes were based on data for the 1988 calendar year. In this study, income taxes are based on the 1993 tax year, other state taxes on the fiscal year ended June 30, 1994, and local taxes on the 1993 calendar year.

CHAPTER 1
STATE AND LOCAL TAX STRUCTURE OVER TIME

In this chapter, the changes in Colorado's state and local tax structure and collections will be examined. The chapter will review changes in tax laws affecting state and local taxes as well as economic factors impacting tax collections.

Changes in Colorado Economy

The Colorado economy in 1994, the year covered by this study, was markedly stronger than in recent CTPS studies. In fiscal year 1989, the year covered by the last study, the state economy was beginning to emerge from the regional recession of the middle and late 1980s. By 1994, the recovery was well underway and the state economy was into the boom of the early and middle 1990s. Between 1989 and 1994, Colorado employers added 264,000 jobs, the largest five-year job gain since 1981. By contrast, the 1985 to 1989 period saw only 64,000 new jobs. By 1990, more people were moving into Colorado than moving out. This reversed the trend of the previous several years. The five years ending in 1994 showed a Colorado population gain of 371,000 compared to 71,000 in the previous four years. Personal income also grew faster as shown in Table 1 below. With a higher level of personal income, a larger population, and increased confidence in the strong economy, spending increased dramatically.

TABLE 1: Colorado Economic Indicators
Calendar Years 1985 to 1994

	Change 1985-89	Change 1989-94
Jobs (000)	64	264
Population (000)	71	371
Personal Income	23%	40%
Retail Stores Sales	7%	47%

The changed economic climate affected the tax burdens reported in this study. With fast income and population growth, tax receipts also increased. In particular, sales and income tax revenues increased. Property values also increased, but the impact on property taxes was moderated by legislation affecting assessments and levies and by increased state contributions to schools. A stronger economy also resulted in the movement of households into higher income classes. In 1989, 7.7 percent of Colorado households received less than $5,000 in income. In 1994, only 6.3 percent of Colorado households received less than $5,000 in Adjusted Family Money Income.

Changes in Tax Laws

A number of tax law changes were enacted between 1989 and 1994 which affected state and local tax collections. The more important of these are outlined below:

In 1989 an extraordinary session of the state legislature raised highway user taxes. Motor vehicle registration fees were approximately doubled July 1, 1989. The fee changed from one based on weight to one based on both weight and age of the vehicle. The gasoline excise tax was raised from 18 cents per gallon to 22 cents per gallon on July 1, 1989. The driver's license fee was also increased from $6.50 for a four-year license to $15 for a five-year license. The additional fees were dedicated to highway improvements.

The authority for counties to levy a lodging tax was extended. Several counties imposed a lodging tax between 1989 and 1994.

Two new sales taxes were imposed in Metro Denver. The Scientific and Cultural Facilities District sales tax of 0.1 percent was enacted, effective January 1, 1989 and the Metropolitan Major League Baseball Stadium District sales tax of 0.1 percent went into effect in August 1991.

Several small changes were made in business taxes or fees. The Colorado Wine Act imposed a 1 cent per liter tax on wine effective July 1, 1990. An underground storage tank fee was imposed on fuel shipments effective July 1, 1989. An emergency medical services registration fee was levied on intrastate and Colorado-based IRP vehicles. A $2.00 surcharge on automobile air conditioning was enacted July 1, 1993.

Two important changes affected the Colorado income tax. The individual income tax base was changed. In tax year 1992, the federal deduction for state income tax was added to Colorado taxable income. The corporate income tax rate on taxable income over $50,000 was reduced from 5.5 percent in 1989 to 5 percent in 1993. Two changes in the Federal income tax, enacted in 1991 and in 1993, affected Colorado income taxes, as Federal taxable income is the basis

for the Colorado individual income tax. The 1991 act reduced, and in some cases phased out, itemized deductions and personal exemptions for higher income taxpayers and indexed to inflation personal exemptions and the standard deduction for households. Additionally, households were required to list the social security numbers of each child over 1 year old to claim them as dependents. The 1993 legislation, which raised rates on higher incomes, caused some high income taxpayers to report income in calendar year 1992 rather than 1993. This reduced 1993 Federal taxable income and, therefore, Colorado income tax for these taxpayers. A U.S. Supreme Court case and subsequent action by the state eliminated an exclusion of the first $2,000 of military retirement pensions from Colorado taxable income for persons under 55.

The Taxpayer Bill of Rights (TABOR) amendment, limiting tax and expenditure increases for both state and local governments became effective December 31, 1992. The amendment applied to local government budgets and taxes for the 1993 calendar year. Changes in the public school finance act affected property tax levies for school districts.

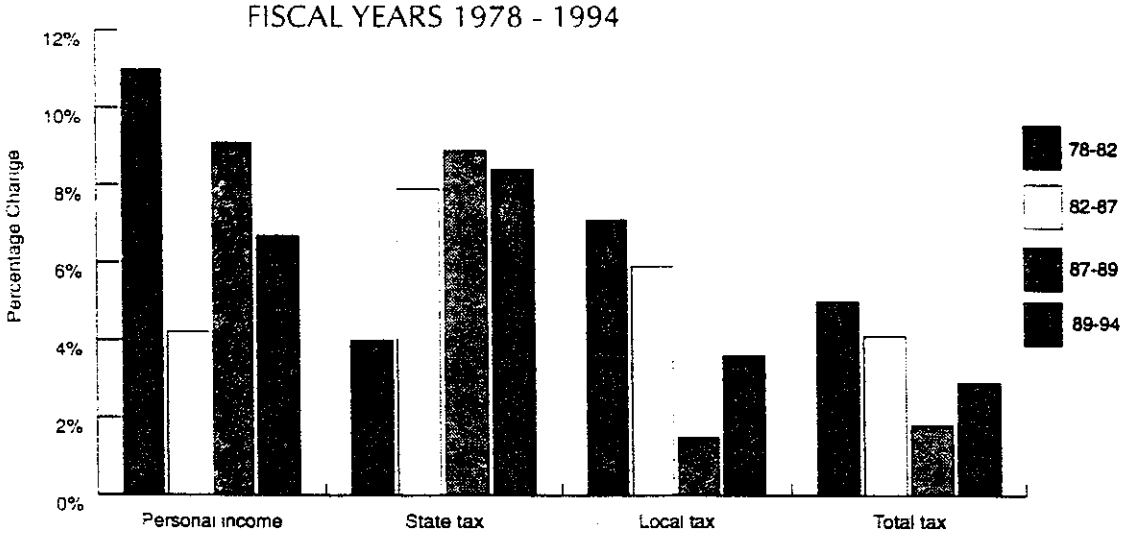
Changes in Tax Collections

Chart 4 and Table 2 track the changes in tax collections from 1978 to 1994. The earlier years' figures are those reported in previous Colorado Tax Profile studies. Table 2 shows reported collections while Chart 4 illustrates changes in per capita income and taxes, which reflect changes in the state's economy, and in state and local tax collections.

Chart 4 shows that the 1978 to 1982 period experienced the fastest gain in per capita personal income as a result of a strong Colorado economy and a high rate of inflation. State taxes grew relatively slowly during this period as large state budget surpluses permitted sizable tax reductions. However, local taxes grew rapidly during this period, with total local government collections rising from $1.1 billion in 1978 to $1.8 billion in 1982. Local sales tax led the growth, with per capita collections increasing at an average annual rate of 15.6 percent. A part of this increase can be explained by increased spending; per capita retail sales increased 10.7 percent per year. In addition, 36 more tax jurisdictions were added during these four years and many municipalities and counties raised their sales tax rates. In 1978, four municipalities levied a 4 percent tax rate; by 1982 this number had risen to 14. Similarly the number of municipalities taxing sales at 3 percent increased from 16 to 34. Over these four years, the number of counties with sales tax rates greater than 1 percent increased from 3 to 12.

The period between 1982 and 1987 saw the largest increase in total per capita state and local taxes of any period examined here, although the rate of increase in personal income waned. Total state and local collections in 1987 amounted to $5.3 billion, up from $3.3 billion in 1982. This period was one of dramatic economic and demographic changes in Colorado. Through 1984, the state experienced the expansive effects of a construction and resources

CHART 4: CHANGES IN COLORADO PER CAPITA INCOME AND TAXES
FISCAL YEARS 1978 - 1994



boom. However, 1985 and 1986 was a period of economic recession, leading to net out-migration of individuals lasting through 1990, although the economy began to show signs of recovery in 1987.

Between 1982 and 1987 income tax collections doubled with per capita collections rising 12.1 percent annually. Continued strength in income tax collections despite slower income growth was due, in part, to strategic choices of individuals in the face of changes in Federal taxes. The Federal Income Tax Reform Act of 1986, which first affected the 1987 tax year, put into place important changes in tax law. The most significant change in this act for Colorado taxpayers was the elimination of the 60 percent capital gains deduction, making most capital gains fully taxable at the same rate as ordinary income. This encouraged taxpayers to realize capital gains in the 1986 tax year (covered by the 1987 Tax Profile Study). Capital gains are not included in personal income. Another factor raising income tax payments during this period was the movement of taxpayers into higher tax brackets. Income tax data show that between tax years 1982 and 1986 the number of returns filed reporting Colorado Adjusted Gross Income (CAGI) over $35,000 increased by 11 percent per year and the taxes paid by this these taxpayers increased 18 percent per year.

Taxes at the local level also rose, propelled by continued proliferation of local government taxing jurisdictions and rising assessed valuation of property. Local governments added 36 new taxing jurisdictions during this period and several raised their sales tax rates. The number of jurisdictions with tax rates over 3 percent increased from 14 to 28 over the five-year period. Between 1982 and 1987 the per capita assessed value of all property in the state rose 14.7 percent per year resulting in a lower but parallel increase in property tax collections.

By 1987, the state economy had begun to show the first signs of recovery. Due to the very slow rate of

TABLE 2: Summary of Resident State and Local Tax Collections Over Time
Fiscal Years 1978, 1982, 1987, 1989 and 1994 (Dollars in Millions)

	1978 Taxes	1982 Taxes	1987 Taxes	1989 Taxes	1994 Taxes

per capita income growth during the 1985 to 1986 recessionary period, growth in per capita income between 1987 and 1989 seemed large in comparison. But tax collections increased only modestly as legislative action curbed the growth in property tax collections, and consumer spending slowed as Colorado residents exercised caution in making new expenditures.

By 1989, the state's economic recovery was well underway. Population growth recovered to pre-recessionary levels by 1991 and, in 1993, reached a fifteen-year peak. Although it appears that per capita income growth slowed somewhat during the 1989 to 1994 period, the growth over this period reflected a stronger economy in comparison to the growth over the 1987 to 1989 period. Per capita income growth from 1989 to 1994 reflected growth from a higher level of income. Between 1989 and 1994, state tax collections grew at a slightly faster rate than personal income, led by gains in sales tax receipts. Rapid population growth and lower interest rates stimulated home building and refinancing of mortgages which, in turn, stimulated consumer spending. State per capita sales tax increased 8.8 percent annually over this period. Per capita collections from sales by home furnishing retailers increased more than 10 percent per year between 1992 and 1994, and collections from building materials retailers grew more than 20 percent in 1993 and 1994. Consumers also increased spending in other areas. Per capita taxes from the automotive category increased more than 8 percent in 1991, 1993 and 1994 and taxes from general merchandise stores grew more than 9 percent per year between 1992 and 1994.

Rising incomes shifted taxpayers into higher income classes. In 1989, 15.4 percent of households were in the over $50,000 CAGI class. By 1994, the share of households in this group had risen to 21.3 percent. Income from sources other than wages showed very strong gains. Per capita pension income increased 7.7 percent annually; Schedule C (Proprietors Income) increased 9.1 percent per year on a per capita basis; and Schedule E (Rental and Royalty Income) increased by a robust annual rate of 69 percent on a per capita basis. Part of the growth in income tax collections over this period can be attributed to the Federal Income Tax Reform Act of 1986 which broadened the taxable income base and Colorado legislation which adopted Federal Taxable Income as the base for determining Colorado income tax liability.

Table 3 shows changes in the distribution of state taxes, local taxes, and the combined state and local tax burden among the different tax sources. The most striking change is the reduced role of property taxes, even though they still are the largest single source of revenues and account for 60 percent of local taxes. Property taxes accounted for 71 percent of all local taxes in 1978 and almost 40 percent of all state and local taxes. By 1989 property taxes had fallen to 67 percent of local taxes and 38 percent of all Colorado taxes. Over the next four years, the prominence of property taxes as a source of revenue diminished. Property taxes, as a share of local taxes in 1994, fell to 60 percent of local taxes and 30 percent of all taxes. While property taxes diminished, local sales taxes accounted for a larger share of the total, rising from 18 percent of all local taxes in 1978 to over 30 percent in 1994. On the other hand, sales taxes dropped as a share of total state revenues between 1978 and 1989, but increased again by 1994. Much of the drop after 1978 was accounted for by changes in the tax base in 1979 when food for off-premises consumption, residential heating and lighting expenses, and machinery and machine tools used in manufacturing were removed from the sales tax base. The state sales tax rate and base have not changed significantly since the 1979 changes. Thereafter, fluctuations in the proportion of state sales tax collections reflect changes in other taxes as well as changing spending patterns over the business cycle. The contribution of the state individual income tax to the revenue base also increased, rising from 32 percent of all state taxes in 1978 to 44.5 percent in 1994. The increase in income tax collections was caused largely by the increase in income from a larger population and by state and federal changes in tax laws in which the income tax base was broadened. Highway user taxes, as a share of all taxes paid, rose only slightly. The share of corporate income taxes fell, reflecting reductions in corporate income tax rates.

CHAPTER II

THE OVERALL STATE-LOCAL TAX BURDEN

The focus of this study is the tax burden upon Colorado citizens. In this chapter, estimates of the total amount of this burden will be examined. The allocation of the burden between direct taxes, those which are paid by individuals, and indirect taxes, those initially levied upon businesses but ultimately borne by consumers, workers, or business owners will also be analyzed. In the next chapter, the allocation of the direct and indirect tax burden among households with different income levels will be addressed.

Taxes and the Tax Burden

Taxes, for purposes of this study, are funds collected by Colorado's state or local governments from individuals or businesses. Charges by government entities for services, such as tuition at state colleges or universities or charges to riders of local transit systems, are excluded. However, licenses and fees for activities such as those for drivers licenses or liquor licenses are included.

Taxes are levied on individuals and businesses. Taxes are paid directly to governments or, in the case of sales taxes or income tax withholding, to sellers or employers who in turn remit the taxes they have collected to the government. The purpose of taxation is to provide government with the resources needed to provide public goods and services. These are resources which would otherwise be available to private citizens, including resources used by businesses to meet customer needs. The burden of taxation falls on those whose resources are reduced because of the tax. This is called the "incidence" of taxation. Since businesses are intermediaries between suppliers of the factors of production such as labor and capital and consumers who purchase final products or services, it is the consumers and the suppliers of resources who bear the burden of taxes levied on businesses, or upon whom the incidence falls. To determine the incidence of taxes levied on businesses, it is necessary to make some assumptions based on economic theory to describe how businesses shift their taxes, either forward to consumers, by raising prices, or backward to workers or suppliers of capital, by reducing wages or profits and dividends.

In this study, the following assumptions are made concerning the shifting of business taxes. These are consistent with accepted public finance theory. Taxes on land, capital goods or materials used by the businesses are shifted to the consumer. Fees paid by business for the privilege of operating such as liquor licenses, are also shifted to the consumer. Taxes on labor, such as unemployment insurance tax, are borne by the worker. Finally, the tax on corporate income is partly shifted to consumers and partly to the stockholders of the corporation.

State Tax Collections, Taxes Paid and Tax Burden

State and local governments receive funds from a number of sources including transfers from the Federal government, charges for services, and taxes. This study focuses upon the tax burden, or that portion of the government revenue which results in a direct or indirect tax upon Colorado residents. This and the following sections explain the derivation of estimates of the tax burden.

State and local governments receive revenues from numerous sources in addition to taxes. The State of Colorado Comprehensive Annual Financial Report for the year ended June 30, 1994 shows that the state received $6.9 billion in revenues.[2] Of this amount, more than $2.5 billion are not attributable to tax collections and are excluded from this study. Among such exclusions are Federal grants and contracts, interest, and charges for goods and services. The remaining $4.4 billion includes taxes, licenses, permits and fines. For this study, some taxes were not included. For example, gaming taxes and pari-mutuel taxes are considered levies on voluntary activities and therefore were excluded. Estate taxes were also excluded on the grounds that they were not borne by living individuals. As a result of the above adjustments, approximately $4.0 billion dollars were received by the state government from all other taxes.[3]

Further adjustments were necessary to arrive at taxes actually paid. The individual income tax was adjusted to reflect the tax liability of full year residents for the 1993 reporting period rather than taxes actually

---

[2] Total state government revenue figures will vary depending upon definitions used and source of data. The 1993 ***U.S. Bureau of Census Annual Survey of Government Finances*** reports total state general revenues of $7.8 billion for the year ending June 30, 1993.

[3] This is the amount reported as taxes collected in Table A-1 in the appendix to this study.

collected in calendar year 1993. Individual income taxes are paid through the year in the form of withholding or estimated payments with a final payment or refund when the return is filed. The burden of the individual income tax, for purposes of this study, is the liability reported for the 1993 tax year.[4] Approximately $38 million paid by buyers in state taxes were not remitted to the state but kept by retailers to compensate the vendor for costs of collection. These amounts are known as vendor discounts and are shown in Tables A-1 and A-2. The remainder, just under $4 billion, was paid by individuals and businesses to state government. It is estimated that almost $156 million of this total was paid directly by nonresident individuals. This consisted of sales taxes, highway user taxes, and alcohol and tobacco taxes paid by visitors.

Businesses paid more than $1.1 billion in taxes to the state. Taxes on businesses are ultimately borne by individuals. Approximately $91 million in state business taxes were estimated to have been shifted to individuals living outside the state of Colorado. The total state tax burden on residents for the period covered by this study is estimated at $3.7 billion of which $2.7 billion was paid directly by residents and the remainder consisted of taxes levied on businesses.

Local Tax Collections, Taxes Paid and Tax Burden

Total general revenues for all local governments in Colorado for calendar year 1993 were almost $9 billion.[5] Of this amount $2.5 billion were intergovernmental transfers from the state or federal government and another $2.5 billion were charges for such items as government owned utilities or earnings from interest or sales of property. Total local taxes collected for the 1993 calendar year are estimated at just under $4 billion.[6] This figure includes taxes paid to counties, municipalities, school districts, and special districts. Special districts, as the term is used here, includes local improvement and service districts which levy property taxes as well as such entities as the Regional Transportation District, which levy sales taxes. After adjusting for vendors discounts and property tax credits the total taxes paid to all local governments is approximately $4 billion. Of this amount, $122 million was paid directly by nonresidents. Local taxes paid by businesses amounted to just under $2 billion of which almost $218 million[7] was shifted to nonresidents. Residents directly paid $1.9 billion in local direct taxes. Total resident local taxes amounted to $3.7 billion with the total state and local resident tax burden amounting to just under $7.4 billion.

Distribution of Tax Burden, Direct and Indirect Taxes

In this section the distribution of the tax burden between direct and indirect taxes and between residents and nonresidents is examined. The total state and local tax burden on residents is estimated to be $7.4 billion. Another $586 million is paid, directly or indirectly, by nonresidents. Chart 5 shows the distribution of the $8.0 billion in tax collections by the type of taxpayer upon whom the tax is levied. Resident individuals directly paid $4.6 billion and nonresident individuals paid $277 million. These direct taxes included the state individual income tax, individuals' share of state and local sales taxes, excise taxes, and residential property tax. The remaining $3.1 billion were levied on businesses.

---

[4] These are full year resident returns reporting income received during the 1993 calendar year.

[5] Local governments in Colorado report revenues on a calendar year basis while the state government reports on a fiscal year basis with the year ending June 30. Thus the tax burden described in this study covers two overlapping but different 12-month periods. Local government collections were derived from the 1993 Local Government Financial Compendium (county and municipal taxes except property taxes), the 1992 Report of the Colorado Division of Property Taxation (property taxes going to all levels of local government), and the 1994 Annual Report of the Colorado Department of Revenue (sales taxes collected for special districts).

[6] This is amount reported as taxes collected in Table A-1 in the appendix to this study.

[7] The largest contributor to indirect local taxes shifted to non-residents was the non-residential property tax.

Chart 5 shows the impact of Colorado taxes. The largest tax burden falls directly on residents. Non-residents paid four percent of taxes directly while the remaining 38 percent of the tax impact was paid by businesses.

CHART 5: DISTRIBUTION OF STATE AND LOCAL TAXES PAID

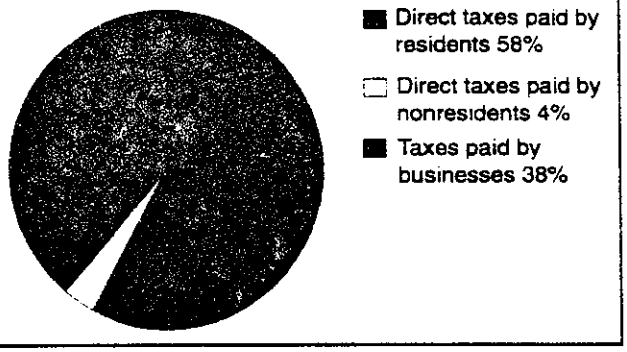

Chart 6 shows the distribution of the $7.4 billion of direct and indirect taxes paid by residents. Local taxes were divided almost evenly between direct and indirect taxation while over 70 percent of state taxes were directly levied on residents. The higher proportion of direct taxes in state government is accounted for by heavy reliance on the individual income tax. Local governments depend more on sales and property taxes, a significant proportion of which are levied on businesses.

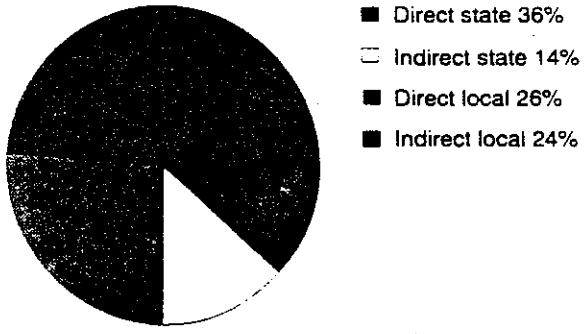
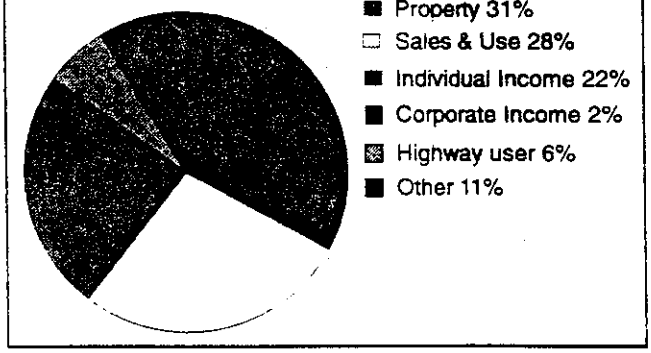
CHART 6: TAX BURDEN BY TYPE AND LEVEL OF GOVERNMENT



State government in Colorado is heavily reliant on the individual income tax for revenues while local governments are more dependent on sales and property taxes. Chart 7 shows the distribution of the $7.4 billion 1994 tax burden by type of tax. The largest single source of revenue among state and local governments is the property tax which accounted for roughly one-third of total taxes. Property taxes include levies by county treasurers on real and personal property along with the specific ownership tax on automobiles. The property tax contributes to Colorado's relatively high amount of local taxation. Compared to other states, Colorado collects a relatively low amount of state tax revenues, but a relatively high amount of local tax revenues. Sales and use taxes, both state and local, make up 28 percent of the total tax burden while individual income taxes comprise 22 percent of the total. Highway user taxes, including excise taxes on fuels and drivers license and auto registration fees were 6 percent of the total. State corporate income taxes in 1994 were less than $150 million or 2 percent of the tax burden on Coloradans. Other taxes, which included a variety of taxes and fees on businesses made up 11 percent of the total.

CHART 7: RESIDENT TAX BURDEN BY TYPE OF TAX
FISCAL YEAR 1994



The next set of tables and charts shows the breakdown of the tax burden in greater detail. Table 4, and Charts 8, 9 and 10 show the distribution of Colorado's state and local tax burden between direct taxes on households and indirect taxes. In addition Table 4 also shows the indirect taxes on nonresidents. Individual income taxes make up the largest share of direct taxes on households, amounting to 36 percent of all direct taxes paid. Sales and property taxes are the two other large items in this group. Among indirect taxes, property and sales taxes are the largest sources of revenues.

TABLE 4: Distribution of State and Local Taxes Between Businesses and Households
Fiscal Year 1994 (Dollars in Millions)

	Total Resident Taxes	Percent of Sub-group Total	State Taxes	Percent of State Taxes	Local Taxes	Percent of Local Taxes	Percent Resident Total
DIRECT TAXES ON HOUSEHOLDS							
Property (Residential & Specific Ownership)	$1,224.3	26.4%	—	—	$1,224.3	63.7%	16.5%
Sales and Use	$1,299.8	28.0%	$625.8	23.0%	$674.0	35.1%	17.6%
Individual Income	$1,661.6	35.8%	$1,661.6	61.2%	—	—	22.5%
Highway User	$345.0	7.4%	$345.0	12.7%	—	—	4.7%

Cigarette and Liquor	$83.2	1.8%	$83.2	3.1%	—	—	1.1%
Total Direct Taxes	**$4,637.4**	**100.0%**	**$2,715.6**	**100.0%**	**$1,921.8**	**100.0%**	**62.7%**
INDIRECT TAXES ON HOUSEHOLDS							
Non-Residential Property	$1,162.8	42.2%	—	—	$1,162.8	67.1%	15.7%
Specific Ownership	$56.8	2.1%	—	—	$56.8	3.3%	0.8%
Sales and Use	$743.7	27.0%	$358.1	35.0%	$385.6	22.2%	10.0%
Corporate Income	$139.2	5.0%	$139.2	13.6%	—	—	1.9%
Highway User	$139.2	5.0%	$139.2	13.6%	—	—	1.9%
Other Business Taxes	$514.3	18.7%	$385.7	37.7%	$128.6	7.4%	7.0%
Total Indirect Taxes	**$2,756.0**	**100.0%**	**$1,022.1**	**100.0%**	**$1,733.9**	**100.0%**	**37.3%**
Total Resident Taxes	**$7,393.4**		**$3,737.7**		**$3,655.7**		**100.0%**
INDIRECT TAXES ON NON-RESIDENTS							
Non-Residential Property	$140.9	45.6%	—	—	$140.9	64.6%	
Specific Ownership	$7.9	2.6%	—	—	$8.0	3.6%	
Sales and Use	$104.1	33.7%	$50.1	55.2%	$54.0	24.8%	
Corporate Income	$9.1	2.9%	$9.1	10.0%	—	—	
Highway User	$19.5	6.3%	$19.5	21.5%	—	—	
Other Business Taxes	$27.3	8.8%	$12.0	13.2%	$15.3	7.0%	
TOTAL INDIRECT TAXES	**$308.8**	**100.0%**	**$90.6**	**100.0%**	**$218.1**	**100.0%**	

Chart 8 shows the distribution of the state and local tax burden between direct and indirect taxes for different categories of taxation. The property tax burden is distributed almost evenly between direct and indirect taxes. This means that property taxes levied on households and business are almost the same. About two-thirds of sales and use taxes as well as highway user taxes are initially levied on households. More than 90 percent of the impact of income taxes is on households.

Chart 8 shows only direct cigarette and liquor taxes because there are no indirect cigarette and liquor taxes. Charts 9 and 10 show the composition of the direct and indirect tax burden. At 36 percent, income tax makes up the largest share of direct taxes while property taxes dominate the indirect tax burden making 44 percent of the total. Property es an sales and use taxes are also significant contributor to the direct tax burden. Sales and use taxes paid b businesses make up a significant share of the indirec tax burden.

Property tax is clearly the largest tax on businesses a 44 percent, although sales and use is also a larg category. Chart 10 also shows that payroll and othe miscellaneous taxes account for 19 percent of indirec taxes on residents. Individually all of thes miscellaneous taxes are small, but collectively thes small business taxes account for a significant po of the indirect tax burden.

CHAPTER III

PROFILE OF TAX BURDEN BY INCOME CLASS

This chapter covers the distribution of the state and local tax burden on Colorado residents by income. It examines the amount of taxes paid by each income class. Income classes range from households that receive under $5,000 of annual income to households that receive over $70,000 of annual income. The income concept this chapter is based on is Adjusted Family Money Income. This income concept is broadly based. It includes income earned from wages and profits of businesses, persons, and farmers along with earnings from savings or investments such as dividends, rent or interest. Capital gains from the sales of assets are also included. Transfer payments (such as public assistance with the exception of in-kind services such as public housing), pension and retirement income, and alimony are also included in Adjusted Family Money Income.[8]

The earning, spending and tax paying unit analyzed in this study is the household, which consists of all persons who occupy a house, an apartment or other housing unit. Households include families along with groups of one or more unrelated individuals.[9]

Distribution of Income

Chart 11 shows the cumulative distribution of incomes and households in Colorado. The points on the curved line show the share of households (the horizontal axis) receiving a given share of income (the vertical axis). For example, 16 percent of the households with lowest incomes received 2.4 percent of all income. The straight line connecting the corners of the chart represents an equal distribution of income. If the two lines coincided, then 40 percent of the households would have received 40 percent of the income. The further apart the two lines, the greater the inequality of income. The chart shows that 13 percent of the households in the highest income group receive 37 percent of the income. In other words, higher income households receive a larger proportionate share of income than lower income households. However, it should be kept in mind that these figures tend to overstate the extent of income inequality, as the lower income groups contain a disproportionate share of one and two-person households. The 1990 Census of Population shows that in Colorado 57 percent of households in the under $5,000 income group were not families (therefore, they were mostly one or two person households). In contrast, a mere 13 percent of households in the $50,000 to $75,000 income group were not families.

CHART 11: DISTRIBUTION OF COLORADO HOUSEHOLDS AND INCOME
FISCAL YEAR 1994

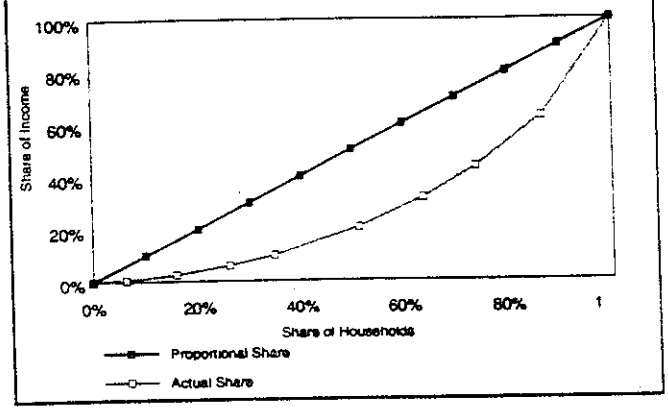

Table 5 shows the distribution of income among Colorado households, presenting in greater detail the information depicted in Chart 11. The second line in Table 5 shows the percent of households in Colorado in each income class while the bottom line shows the percent of total Colorado Adjusted Family Money Income received by households in this group. For example, the income group with incomes over $40,000 but under $50,000, contains 10.1 percent of the households and 11.8 percent of income. The $20,000 to $29,000 income class contains the largest number of households of any of the income classes. The 264,000 households that make up the $20,000 to $29,000 income class earn 10.4 percent of Colorado income and have an average income of

[8] This measure differs from adjusted gross income reported on income tax returns, in that it includes nontaxable sources such as retirement income and public assistance. (Adjusted gross income was used to measure income in CTPS studies prior to 1989.) It differs from the adjusted broad income concept used in tax profile studies prior to 1989 by including child support payments. Adjusted family income is described in more detail in the appendix to this report.

[9] The household concept is described in greater detail in the appendix to this report.

TABLE 5: Distribution of Families and Aggregate Income Among Income Classes
Fiscal Year 1994 (Dollars in Thousands)

	LESS THAN $5,000	$5,000 TO $9,999	$10,000 TO $14,999	$15,000 TO $19,999	$20,000 TO $29,999	$30,000 TO $39,999	$40,000 TO $49,999	$50,000 TO $69,999	$70,000 AND OVER	TOTAL
NUMBER OF FAMILIES	99,568	150,733	163,233	140,384	264,147	200,347	161,232	201,660	211,637	1,592,940
PERCENT OF FAMILIES IN COLORADO	6.3%	9.5%	10.2%	8.8%	16.6%	12.6%	10.1%	12.7%	13.3%	100%
ADJUSTED FAMILY MONEY INCOME	$343,878	$1,201,652	$2,131,652	$2,491,588	$6,521,921	$7,075,784	$7,384,629	$12,062,399	$23,415,393	$62,628,896
PERCENT OF COLORADO FAMILY INCOME	0.5%	1.9%	3.4%	4.0%	10.4%	11.3%	11.8%	19.3%	37.4%	100%

$24,690. The under $5,000 income class contains the fewest number of households at 99,588 and comprises a mere 0.5 percent of Colorado Adjusted Family Money Income. The highest income class, $70,000 and over, earns an average of $110,639 and accounts for 37.4 percent of all Colorado Adjusted Family Money Income.

Distribution of Tax Burden

While Table 5 and Chart 11 show the different income classes and the income they received, Table 6 shows the amount of taxes paid by households in the different income classes. Table 6 is the most detailed table in the 1994 Colorado Tax Profile Study. It shows each of the major taxes and is divided into state and local taxes as well as direct and indirect taxes. The far right column represents the total tax burden on Colorado residents for each tax, while the bottom row shows the total taxes paid by households in each income class.

The bulk of taxes are paid by households in the middle and upper income groups. The three highest income groups combined, with incomes over $40,000, pay $4.6 billion of the $7.4 billion total tax burden on Colorado resident households. The three lowest income groups, with incomes below $15,000 pay less than $700 million. As will be discussed below, the higher income groups receive even a larger share of income. Among the higher income groups, the individual income tax is the largest single tax paid. Sales and use taxes make up the bulk of the tax burden for households in the lower income groups.

Indirect taxes make up a larger share of the tax burden for households in the lower income groups. Total indirect taxes account for 43 percent of the total tax burden on households with incomes below $15,000. For households in the top three Adjusted Money Income Classes, total indirect taxes account for 35 percent of the total burden. For households with incomes over $70,000, the direct tax burden is almost twice the indirect tax burden. This is because indirect taxes are, for the most part, borne in proportion to consumption which increases at a slower rate as income increases.

The Equity of Colorado's Tax System

The concept of tax equity refers to the distribution of the tax burden among different groups of taxpayers. Society's tax equity decisions reflect values regarding who should pay for government services. For example, should government services be paid for by those who use the service in question? Should government be financed based on ability to pay? In the following sections the distribution of tax burden among taxpayers with different incomes, or vertical equity, will be examined. Discussions of vertical equity relate tax burden to ability to pay. Progressivity refers to the extent to which tax burdens are shifted toward higher incomes.[10] A proportional tax burden is one in which taxpayers with different income levels pay the same share of income in taxes. In a progressive tax system, higher income taxpayers pay a larger share of their income while in a regressive one, the share of income paid in taxes declines with increasing income.

[10] See "Important Terms and Distinctions" in the appendix to this report.

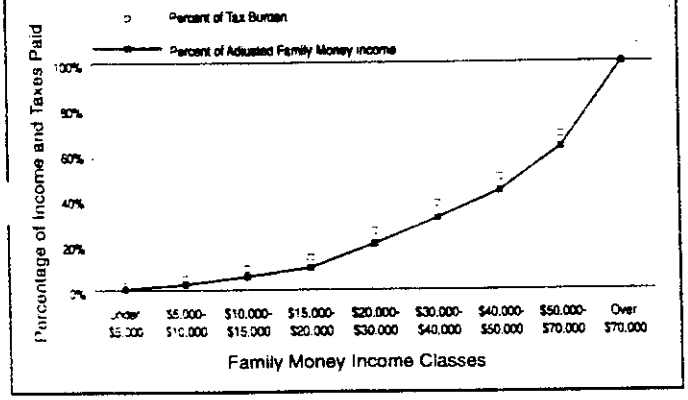
Chart 12 measures the progressivity of Colorado's state and local tax system. The solid line shows the cumulative percentage of income received by taxpayers with Adjusted Family Money Incomes represented on the horizontal axis. For example, households with Adjusted Family Money Incomes below $30,000 received a little more than 20 percent of income. The dotted line is a similar measure of cumulative share of taxes. Households with incomes below $30,000 paid more than 25 percent of taxes. If the tax burden were exactly proportional, then the two lines would coincide. If the tax burden is below and to the right of the income line, taxes are progressive. If, as is the case in Chart 12, the tax line is above and to the left of the income line then the overall tax burden is somewhat regressive. In other words, lower income taxpayers, on average, pay a somewhat higher share of their income in state and local taxes than do higher income taxpayers.

CHART 12: CUMULATIVE PERCENT OF INCOME AND TAXES PAID BY RESIDENTS

Fiscal Year 1994



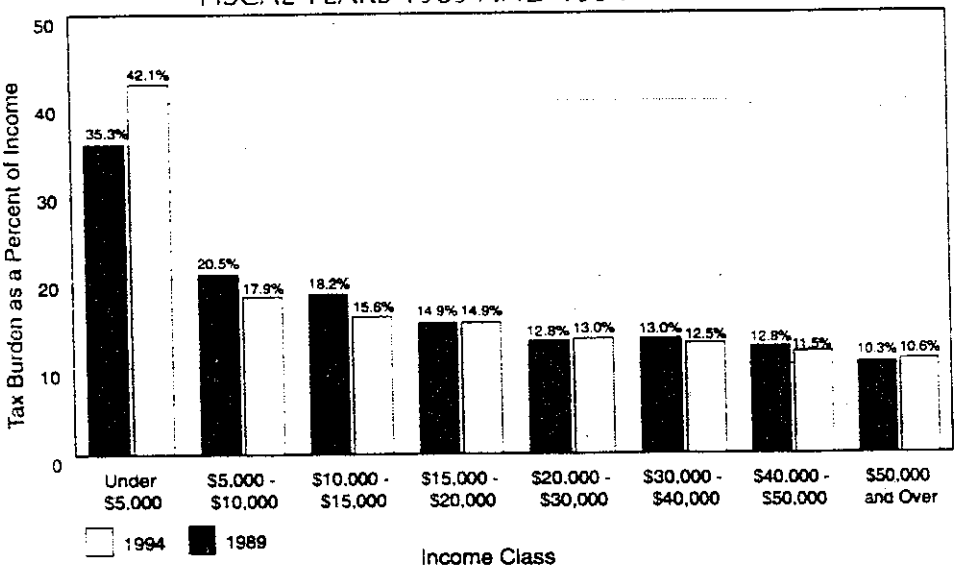
Comparisons with the previous CTPS suggest that Colorado's state and local tax burden may have shifted slightly in the direction of higher income taxpayers. Chart 13 shows the total tax burden, direct and indirect, as a percentage of AFMI for different income groups in 1989 and in 1994. The 1994 study shows a higher tax burden for the lowest income group. However, the tax burden has fallen for all income groups between $5,000 and $50,000 with the exception of a slight increase for the $20,000 to $30,000 group. Taxes as a share of income rose slightly for those earning more than $50,000 per year.

The increased tax burden as a percent of income for the under $5,000 group is misleading. A small change in either taxes paid or Adjusted Family Money Income causes a seemingly large change in taxes paid as a percentage of income. Also it is important to keep in mind that this income group includes retired people who pay a large amount of taxes relative to their income because their incomes are small and their expenditures and the value of their property are relatively high.

The vertical equity of Colorado's tax system is, to a great extent, determined by three taxes: the individual income tax, the sales and use tax, and the property tax. These three taxes accounted for 55 percent of the total tax burden and 87 percent of direct taxes.

CHART 13: TOTAL TAX BURDEN AS A PERCENT OF INCOME

FISCAL YEARS 1989 AND 1994



The individual income tax is progressive while the sales and use and the property tax are somewhat regressive. The regressivity of sales and property taxes reflects family consumption patterns. While spending on goods in the sales tax base rises as incomes increase, it does so more slowly than income. The value of a family's residence, similarly falls in proportion to income. Changes in the progressivity of Colorado's state and local tax system result from shifts among these three tax sources. For example, if state policymakers chose to finance property tax relief with funds raised through the individual income tax, the overall tax burden would shift toward higher income households.

Table 7 shows the percentage of the total tax burden paid by residents in each income class. Comparing the percentage of taxes paid to the percentage of income earned shows that households in each income class earning less than $40,000 pay a higher percentage of total state and local taxes tha[illegible]e percentage of income that they earn. Each income class earning more than $40,000 pays a lower percentage of the total taxes than their percentage of income. Among the largest tax sources (individual income, sales and use, and property), the largest share is paid by the highest income group. Households in the $50,000 to $70,000 income group pay 19.4 percent of individual income taxes, which is 0.1 percent higher than their share of income while households in the over $70,000 group who receive 37 percent of total Adjusted Family Money Income pay 44 percent of individual income tax. With the

exception of income taxes, households in the lower income groups pay a greater share of taxes than their share of income. All households with incomes under $50,000 pay a larger share of sales and use taxes than their share of income. Households with incomes under $30,000 account for a greater share of residential property taxes than of income.

Table 7 is useful for examining the share of taxes that Colorado income classes of different levels are paying as well as the progressivity or regressivity of these taxes. Local taxes, as a whole, are much more regressive than state taxes. The lowest income group accounts for 0.5 percent of AFMI and pays 1.3 percent of direct state taxes, but pays more than twice as large a proportion of direct local taxes, 2.7 percent. On the other hand, the $70,000 and over group pays 37.1 percent of direct state taxes, or nearly the same as their share of income, compared to 29 percent of direct local taxes. The progressivity of the state individual income tax, 44 percent of which is paid by the $70,000 and over income class, makes state taxes as a whole more progressive than local taxes.

Table 8 presents the distribution of income and direct taxes in greater detail. It compares the percentage of income in each class with that of total direct taxes paid. The last three columns show the ratios of the percent of taxes paid to percent of income for state, local and combined direct taxes. For example, the column labeled "Local Taxes to Income" shows that the under $5,000 income class pays almost five times as large a share of local direct taxes as its share of income. On the other hand, the $70,000 and over income class pays a smaller percentage of taxes than its share of income. For state direct taxes, the share of taxes are roughly equivalent to the share of income for all income groups over $5,000. However, the ratio share of direct local taxes to income drops steadily with rising income. In other words, direct state taxes are proportional to mildly progressive for households receiving more than $5,000 in income, while direct local taxes are regressive throughout the income range. It is also worth noting that for the households in the middle income classes, with incomes between $20,000 to $70,000, the ratio of the percent of combined state and local taxes to the percent of income is close to one. This suggests that the direct tax burden is roughly proportional in the middle income range.

Table 8: Comparison of Income Distribution Among Households
Fiscal Year 1994

Another meaningful perspective on how the burden of Colorado taxes affects households can be obtained by looking at the average amount of tax each household pays. Table 9 shows average income and average taxes paid by income class. The average Colorado household received almost $40,000 in income in 1993 and paid almost $3,000 in direct state and local taxes. More than 87 percent of this amount was accounted for by the three largest taxes—individual income, sales, and property taxes. For the average household, more than one-third of the total direct tax burden was paid in individual income tax

and over $800 was paid in direct sales tax to state and local governments. Nearly $700 was paid in residential property taxes. The average household paid approximately $1,700 in indirect taxes in the form of higher prices or lower wages or dividends. The composition of average taxes paid varied by income. For households in the over $70,000 group, the largest tax burden was the individual income tax which amounted to almost $3,500. Combined state and local sales and use taxes accounted for $1,760 while the residential property tax paid was $1,533. For households in the middle income groups, nearly equal amounts were paid in each of the three largest taxes. Households making $30,000 to $40,000 paid almost $900 in income taxes, $825 in sales and use taxes and $605 in residential property taxes. For households in the lower income groups, the individual income tax was relatively small. Households earning $5,000 to $10,000 paid only $67 in income tax, but over $300 in sales and use taxes and a little less than that in property taxes.

Table 10 measures the progressivity of various stat and local taxes by comparing average taxes paid b the approximately 250,000 households with income below $10,000, with that paid by 211,000 household with incomes over $70,000. The right column in th table shows the ratio of average taxes in the lowes income group to that in the highest income group For example, average income in the lowest group 6 percent of that in the highest group. A tax proportional if the amount paid by the lowest incom group is approximately 6 percent of the highes income group. If the number in the column is greate than 6 percent, then the tax is regressive while a figur less than 6 percent indicates a progressive tax. B this measure, the individual income tax is quit progressive while state direct taxes, as a whole, ar approximately proportional. Residential property taxe and sales and use tax are somewhat regressive Indirect taxes, assumed to be shifted to household through consumption, are also somewhat regressive Excise taxes, especially the cigarette and tobacc are highly regressive.

TABLE 10: Average Income and Taxes Paid by Residents in the Lowest and Highest Income Classes
Fiscal Year 1994

	Income Classes		Lowest Income Class as a Percent of the Highest Class
	Under $10,000	Over $70,000

TOTAL TAXES ON HOUSEHOLDS	**$1,435**	**$11,156**	**13%**

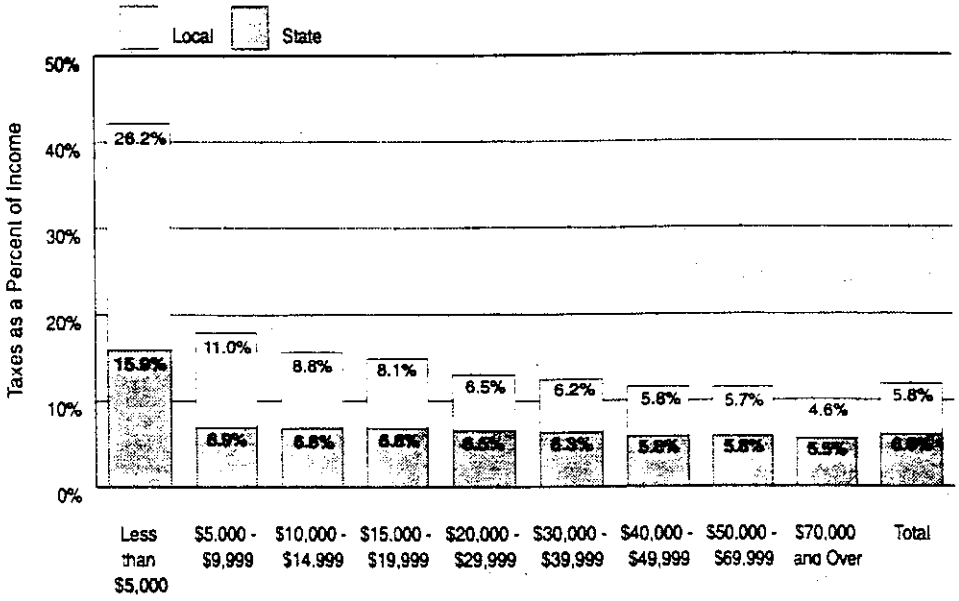
The final two tables in this section show taxes as a percentage of income by income class. Table 11 and Chart 14 show state and local taxes as a percentage of Adjusted Family Money Income.

Table 11 shows that the total tax burden as a share of income is greatest for the lowest income class, in part reflecting that some households in this group have temporarily low incomes in that year. For households with income above $5,000, the total tax burden as a share of income gradually declines. Total direct state taxes account for a relatively stable share of income as income rises, as the progressive state individual income tax offsets the effects of the more regressive sales and excise taxes. The percentage of income spent on direct local taxes declines with rising income. Both the residential property tax and the sales and use taxes account for a smaller share of taxes as income increases. Indirect taxes, both state and local, are somewhat regressive. This finding reflects the assumption that the bulk of these taxes are shifted to consumers in proportion to their spending. Spending as a share of income falls with rising incomes, especially on taxable items.

Table 12 is similar to Table 10, comparing taxes as a share of income for the lowest income group with that in the highest. The right hand column is a measure of the progressivity of the various taxes, showing the ratio of the tax as a share of income for the lowest income group, under $10,000, to that in the highest, over $70,000. A ratio of one would indicate a

CHART 14: EFFECTIVE STATE AND LOCAL TAX RATES

FISCAL YEAR 1994



proportional tax. A ratio greater than one is a regressive tax, while a ratio less than one indicates a progressive tax. The individual income tax is quite progressive while the cigarette and tobacco taxes are the most regressive of the state and local taxes. Sales, excise property, and occupation taxes are also regressive.

TABLE 11: State and Local Taxes as a Percentage of Adjusted Family Money Income by Income Classes

Fiscal Year 1994

APPENDIX

The appendix to this study contains four sections. In the first, important terms and distinctions used in the body of the study are outlined in greater detail. The second describes in detail the data sources and assumptions used to estimate taxes and tax burdens for the different state and local taxes covered in the study. The third section traces the estimates from tax collections reported by various government entities to the tax burden figures used in the study. The final section of the appendix contains a bibliography of reference materials and data sources used in this study.

SECTION 1

Important Terms and Distinctions

The 1994 Colorado Tax Profile Study uses some of the basic concepts of public finance to describe the relationships between taxes paid by individuals, businesses and non-residents. In order to understand the tables and text of the Tax Profile Study it is important to be familiar with these terms and what they mean. For this reason, we have included a short list of the important terms, along with their definitions, used in the Tax Profile Study. These are the terms:

IMPACT: The impact of a tax describes who pays the tax. When an individual pays sales tax, the impact of the tax falls on that individual. When a business pays for unemployment insurance, the impact of the tax is on that business.

INCIDENCE: The incidence of a tax is the ultimate effect of the tax. Ultimately all taxes fall on individuals. When an individual pays sales tax, the incidence of the tax falls on that individual. In this case the impact of the tax and the incidence of the tax fall on the same person. When a business pays unemployment insurance tax, the impact of the tax is on the business, but the incidence of the tax is shifted to individuals, either in the form of lower wages, higher prices or lower profits for the individuals who own the business. This would be an *indirect* tax.

DIRECT TAX: A direct tax is a tax paid by households and individuals directly. Using the above terminology, a direct tax is a tax for which the *impact* and the *incidence* are the same. Examples of direct taxes include: income tax, sales tax paid by consumers, and residential property tax.

INDIRECT TAX: An indirect tax is a tax paid by businesses but shifted to individuals in the form of higher prices, lower wages or lower profits for business owners. Using the above terminology an indirect tax is a tax for which the *impact* falls on business but the *incidence* is really on individuals. A good example of an indirect tax is the corporate income tax. A portion of the corporate income tax is shifted to consumers in the form of higher prices and a portion is shifted to stockholders in the form of lower dividend income. Other indirect taxes include the sales tax paid by businesses, the highway user taxes paid by business and non-residential property taxes.

TAX COLLECTIONS: Tax collections are the revenues collected by state and local governments from taxes. Tax collections show cash that the state received as payment for taxes. Tax collections will not show taxes still owed or vendor discounts.

TAXES PAID: Taxes paid are the total taxes paid including the allowance for the vendor discount. Taxes paid makes no distinction between households and businesses.

TAX BURDEN: The tax burden on Colorado residents is the sum of all taxes paid minus the taxes paid by non-residents (both direct and indirect). It includes both direct taxes on individuals and indirect taxes shifted to Colorado residents. The Tax Profile Study is aimed primarily at studying the tax burden for Colorado residents and how it affects different income classes.

The other important set of distinctions applies to Tables A-1 and A-2 (on pages 31 and 32) which reconcile the difference between taxes collected by the state and the tax burden on residents. Tax collections are the dollars collected by the state. Tax collections are then adjusted for the vendor discount, a fee paid to vendors as compensation for collecting a tax, to find total taxes paid. Total taxes paid is the total tax burden on individuals. However, the Colorado Tax Profile Study focuses on taxes paid by Colorado residents. Thus taxes paid by non-residents are excluded from total taxes paid, and the result is the tax burden on Colorado residents.

SECTION 2

Methodology and Data Sources for Taxes

Estimates of Adjusted Family Money Income

HOUSEHOLD: A household for the purpose of this study consists of all persons who occupy a house, an apartment, or other housing unit that, for taxation purposes, act as a group entity. Therefore, persons living together in the same house or apartment bu

earning their own income and paying their own taxes would not be considered a single household. Related individuals are counted as households. Unrelated individuals living together are each counted as a household. The count of households excludes persons living in group quarters, such as rooming houses, military barracks, and institutions (mental hospitals, rest homes, correctional institutions, etc.).

ADJUSTED FAMILY MONEY INCOME (AFMI), the income concept used in this study is a broadly based one which includes the following components:

- Wage and salary income
- Self employment income
- Farm and non-farm proprietors' income
- Social security and other pension or retirement income
- Supplemental security income
- Public assistance and welfare payments
- Food stamps
- Interest income
- Dividend, rent, royalty and trust income
- Unemployment and workers' compensation
- Payments to veterans
- Alimony
- Child support payments
- Capital gains

The estimates of income by income class are based on the consolidated federal and state income tax data base for the 1993 tax year and the Bureau of Labor Statistics Current Population Survey 1993 (CPS). The income tax data base does not include all sources of income included in AFMI. Specifically, income tax filers are not required to report veteran's payments, public assistance, supplemental security, workers compensation, or child support income that they have received. In the absence of this information, the database understates the amount of income received by some households. For instance, summing all of the income components on the consolidated database may show that a household receives $10,000 in income. However, if this household receives $5,000 in supplemental security payments and an additional $15,000 in child support payments, the database would understate the household's income by $20,000. The income components missing from the consolidated database are, however, included in the income measure used in this study, Adjusted Family Money Income.

To reduce the potential for understating the amount of income received by households, the consolidated data were adjusted using the CPS. The CPS data were converted to taxable money income classes and average amounts of the missing income elements were derived for each taxable money income class. The proportion of households receiving these other types of income were also derived using the CPS data and were used to apportion the average amounts of the income to the consolidated database. Adding the missing income elements to the consolidated database enables the data to be divided into Adjusted Family Money Income classes.

Estimates of Tax Receipts

The estimates of total tax payments were obtained from various state agencies. Corporate income, sales and use, cigarette, tobacco, alcohol, highway user, and severance taxes were obtained from the Department of Revenue's 1994 Annual Report. All these figures represented cash collections for the 1993-94 fiscal year. The estimate of individual income tax was based on tax liability for the 1993 tax year and was obtained from the Office of Tax Analysis. Figures for insurance premiums tax and unemployment insurance tax were obtained from the Comprehensive Annual Financial Report of the State Controller for 1993-94. Other business taxes were from the Fiscal Year 1993-94 Fiscal Year Spending Detail Report issued by the State Controller's Office.

Most local tax estimates were reported in the 1993 Local Government Financial Compendium. All property taxes were obtained from the Annual Report of the Division of Property Taxation. (This report shows taxes levied on 1992 assessed values but payable in 1993.) Sales taxes for special improvement districts were reported by the Department of Revenue in its Annual Report.

Direct Taxes

INDIVIDUAL INCOME: The individual income tax burden by income class was estimated using a consolidated federal and state income tax database for tax year 1993. This consolidated database reports the amount of state income taxes paid by full-year Colorado residents for the 1993 income tax year. The database includes those returns for income tax year 1993 filed through April 1995 but does not take into account amended returns or short checks.

The amount of income taxes paid by full-year Colorado residents for income tax year 1993 as reported by the database will be different than the amount shown on the Department's annual report. The annual report shows the amount of net cash

collections for individual income taxes received by the department during fiscal year 1994 (during which most returns for 1993 are filed). These collections include estimated payments and withholdings (of which almost half are for the following income tax year), adjustments due to amended filings, late payments as well as the balance of cash payments for income tax year 1993, payments for previous years and pre-payments for income tax year 1994. Additionally, it does not include the amount of 1993 income taxes paid by late filers.

STATE SALES AND USE: Direct taxes were calculated using data from the Bureau of Labor Statistics' Consumer Expenditure Survey (CES) and the Current Population Survey (CPS) income data to determine expenditures by income class. Adjustments have been made to the 1993 Consumer Expenditure Survey to make the sales tax results more consistent with previous years.

It was found that certain categories in the Consumer Expenditure Survey were largely underestimated. The following categories were adjusted upward: vehicles, apparel, food away from home, and entertainment expenditures. The method for determining the magnitude of adjustments was as follows: The year-to-year increase in consumer expenditures according to the survey were compared to the increase in retail sales according to the Center for Business and Economic Forecasting. The consumer expenditures were then increased until the percent change between the 1988 survey and the 1993 survey matched the change in retail sales. For example, the CES data showed a two percent increase in vehicle purchases between 1988 and 1993 while the retail sales data for vehicle purchases showed a 35 percent increase. The expenditures on the 1993 survey were increased to show a 35 percent increase over 1988.

Once expenditures were adjusted, income by group was multiplied by the percentage of income spent on sales taxable items. Expenditures by group were then multiplied by the state tax rate of three percent. Non-resident spending on sales and use items was derived using data from the Longwoods International Study "Denver Travel Year 1993," and by extrapolating to the state level using data from the Colorado Tourism Board.

HIGHWAY USER: The gasoline, MTBE, and gasohol portion of the highway user tax was spread across income classes using expenditures on motor fuels from the Consumer Expenditure Survey. Businesses registered 13.8 percent of all vehicles in Colorado therefore, 13.8 percent of the gas tax was attributed to businesses. The remaining $311 million was the amount of direct gas taxes on residents and on residents. Using the Consumer Expenditure Survey and an average gasoline price of $1.173 per gallon resident consumption would be 1,265.4 million gallons costing $1,484.3 million. The resulting gasoline excise tax paid would be $278.4 million. The remainder, $32 million, would be paid by non residents.

Motor vehicle registration and license fees were distributed proportionately to businesses and individuals: 13.8 percent to businesses and 86.2 percent to individuals. Non-residents were assumed to have paid no license or registration fees. Special fuels were reserved for business and will be discussed as an indirect tax.

ALCOHOLIC BEVERAGES: The excise tax on alcohol was distributed based on expenditures on alcohol from the Consumer Expenditure Survey. Both alcoholic beverages consumed at home and alcoholic beverages consumed away from home were included in the calculation. Non-resident expenditures on alcohol were calculated using the Longwoods study. Expenditures on alcohol by non-residents in Denver amounted to 1.7 percent of total non-resident expenditures in Denver. For reasonablity, the figure was adjusted downward to one percent to measure non-resident expenditures in Colorado.

CIGARETTE AND TOBACCO: The excise tax on tobacco was distributed based on expenditures on tobacco products from the Consumer Expenditure Survey. Non-resident expenditures were calculated by multiplying the amount of time spent in Colorado by the number of non-residents by annual average per capita packs of cigarettes per year times the price of cigarettes. (Data were obtained from "The Tax Burden on Tobacco".)

RESIDENTIAL PROPERTY: The total tax liability for residential property tax was calculated by multiplying the total property tax by a ratio of residential assessed valuation over total assessed valuation. Residential property tax was distributed using the following methodology. In the first step, census data were used to calculate the value of owner-occupied property by income class. Secondly, the Consumer Expenditure Survey was used to determine expenditures on by income class. The third phase incorporated the "Twenty-Second Annual Report (1992) by the Divisi

of Property Taxation" to form a rough calculation of the distribution of value between owner-occupied and renter-occupied property. Single-family homes were assumed to be owner-occupied while multi-family homes were assumed to be rented. Of the total value of single-family and multi-family homes, 82 percent was apportioned to single-family and 18 percent was apportioned to multi-family homes. These percentages were used to represent owner-occupied and renter-occupied homes. Eighty-two percent of the property tax was distributed among owners using the census data. Eighteen percent of the property tax was distributed among renters using the consumer expenditure data. The two different groups were then added together to form residential property tax by income class. Non-residents were assumed to pay no residential property tax. The old age property tax credit of approximately $12 million was allocated among income groups using income data submitted by applicants for this credit. Property taxes were reduced by the amount of credits claimed in the lowest three income classes.

LOCAL SALES AND USE: Direct local sales and use taxes were calculated using data from the Consumer Expenditure Survey to determine expenditures by income class and multiplying by an average local tax rate of 3.23 percent. (See State Sales and Use section for adjustments to the CES.) The average local tax rate was calculated by using the ratio of state tax collections to local tax collections. The calculation was as follows: local rate/local collections = state rate/state collections. Non-resident spending on sales and use items was derived using data from the Longwoods International Study "Denver Travel Year 1993," and extrapolating to the state level using the data from the Colorado Tourism Board.

SPECIFIC OWNERSHIP: The specific ownership tax was spread across income classes by new and used vehicle purchases by income class from the Consumer Expenditure Survey.

OCCUPATION: The occupation tax was allocated to households based on information from the Bureau of Census publication, "Money Income of Households, Families, and Persons in the U.S." and the Colorado Department of Labor and Employment publication, "Colorado Employment and Wages, Annual Averages." The Census publication reports the average number of wage earners per household by income class. This information was used to determine the number of wage earners per household by income class. Because a substantial portion of the occupation taxes are collected by the city and county of Denver, only that portion of the state's workforce in Denver were considered to be subject to the tax. The Labor and Employment publication, which reports the proportion of the state's labor force working in the city and county of Denver, was used to determine the number of workers in each household working in the city and county of Denver. Each household was classified into a designated income class and the amount of occupation taxes paid by households was aggregated to determine the burden by income class.

Indirect Taxes

CORPORATE INCOME: Corporate income is divided into two parts. Half of the tax is allocated based on expenditures and half is allocated based on dividend income. Both parts are treated as indirect business taxes. The portion allocated by expenditures is distributed based on general expenditures according to the Consumer Expenditure Survey. An amount is therefore allocated to non-residents. The second portion is distributed by dividend income earned by each income class. None of this portion is allocated to non-residents. Although it is likely that a portion of stock in Colorado companies is owned by non-residents, there is no feasible way to account for it.

STATE INDIRECT SALES AND USE: State sales tax collections were split into direct and indirect burdens. The indirect burden was calculated by subtracting the direct taxes, described above, from the total. The remainder is indirect tax. The indirect tax was distributed among income classes by general expenditures according to the Consumer Expenditure Survey.

HIGHWAY USER: A portion (13.8 percent) of the gas tax, and a portion (13.8 percent) of the license and registration fees and all of the special fuels tax collections were included in the indirect portion of the highway user tax. The indirect tax was then spread among income classes by general expenditures according to the Consumer Expenditure Survey.

UNEMPLOYMENT INSURANCE: To determine the unemployment insurance (UI) tax burden on households by income class, both the number of workers per household and the wage income of households had to be determined. The number of workers per household was calculated in the same way that it was calculated for the occupation tax. Wage income information was determined using the

Bureau of Labor Statistics' Current Population Survey. Only the first $10,000 of a person's wage income is subject to UI taxation; therefore, if a household has two wage earners, it was assumed that $20,000 of a household's wage income was subject to UI taxation. The unemployment insurance tax burden was apportioned based on the percentage of total UI taxable income that was earned by each household. Households were classified into income classes and unemployment taxes paid by households were aggregated to determine the unemployment insurance tax burden on households by income class.

STATE OTHER BUSINESS TAXES: This category includes aviation fuel, severance, insurance premium taxes and other regulatory taxes and fees from the "Controller's Report." The aviation fuel tax is distributed by expenditures on out-of-town trips from the Consumer Expenditure Survey. The severance tax is distributed by general expenditures. The insurance premium tax is distributed based on expenditures by income class on insurance. The miscellaneous taxes from the "Controller's Reports" are distributed based on general expenditures from the Consumer Expenditure Survey.

LOCAL OTHER BUSINESS TAXES: Franchise fees make up a large portion of local other business taxes in addition to some miscellaneous small items. Local business taxes are spread among income classes by general expenditures from the Consumer Expenditure Survey.

Vendor Discounts

STATE VENDOR DISCOUNT: The state vendor discount for sales tax was obtained through the Department of Revenue Annual Report 1994. It was added to total collections to measure the total tax paid by residents.

The vendor discount for the following taxes were also obtained through the Department of Revenue Annual Report:

CIGARETTE AND TOBACCO
GASOLINE AND MTBE
GASOHOL
SPECIAL FUELS

LOCAL SALES [illegible]SE VENDOR DISCOUNT: The local vendor discount is a weighted average of all of the vendor discounts for the major municipalities in the state using sales tax collections to assign weights. Statewide it is about 2.8 percent. Data came from the Local Sales Tax Clearing House Report, and the Colorado Department of Revenue Annual Report.

SPECIAL DISTRICT VENDOR DISCOUNT: The vendor discount for special districts is the same as the state vendor discount, 3 1/3 percent.

Non-Resident Collections

Non-resident collections have two components Domestic non-resident spending and foreign non resident spending. Domestic non-resident spending was obtained from the "Colorado Tourism Fact Sheet of the Colorado Tourism Board. Foreign non-resident spending was estimated by multiplying foreign tourism expenditures in the U.S. by Colorado's tourism market share of 1.9 percent and adding expenditures by foreign students. Domestic non-resident spending totaled approximately $6 billion, while foreign non resident spending totaled approximately $1 billion. The study by Longwoods International was used to calculate spending in each category: general merchandise spending for sales taxes; alcohol, cigarette and tobacco spending for excise taxes and rental spending for highway user taxes.

SECTION 3

Detail on Tax Collections, Taxes Paid and Tax Burden

Tables A-1 and A-2 trace the development of the estimates of tax burden used in this study. Table A-1 shows taxes collected by source and taxes paid. Table A-2 shows direct and indirect taxes paid by residents and nonresidents.

TABLE A-1: Tax Collections Compared to Tax Revenues
Fiscal Year 1994 (Dollars in Thousands)

TAX	Taxes Collected	Vendors Discount	Total Taxes Paid	Non-Resident Taxes Paid (Direct and Indirect)	Resident Taxes Paid (Direct and Indirect)

Source of State Tax Revenues

- Coloradans pay nearly 30 percent of their income in federal, state, and local income taxes.

- Two-thirds of the taxes are paid to the federal government, primarily in the form of individual income and Social Security taxes.

- General Fund revenues comprise more than half of state revenues.

- The state has become more reliant on income taxes and more dependent upon sales taxes in the last twenty years.

- Colorado's tax burden compares favorably with other states, ranking lowest among the contiguous states, and third lowest in the nation as a whole. The low ranking is the result of relatively low sales taxation. The state's individual income tax rank is high compared with the contiguous states.

General Fund Revenue Forecast and Overview

- The General Fund experienced rapid growth in the last two fiscal years. This growth is expected to slow during the forecast period.

- **Individual income tax receipts** will advance at a more moderate pace because of defense and military layoffs, weakness in the utility and transportation industries, and work force reductions in the residential and public works construction sectors.

- **Corporate tax receipts** will slow, but not decline.

- **Sales tax** growth will slow dramatically because of:

  - slower in-migration
  - the wind-down in public works construction
  - less mortgage refinance activity
  - declining home building
  - slower home value appreciation

- The General Fund is in excellent financial shape, with the year-end reserve expected to exceed $1 billion by fiscal year 2000-01.

- Nonetheless, a $250 million annual reduction of revenues beginning in fiscal year 1996-97, as outlined in the case study, would render a deficit by fiscal year 1997-98. This deficit would persist through the remainder of the decade.

Totals may not sum due to rounding.
NA: Not Applicable.

/A S.B. 95-228 increased the transfer to the Fire and Police Pension Fund to $26.6 million annually through FY 08-09 and made a one-time additional $25.5 million transfer to the Fund in FY 95-96. Additional transfers to this fund are made for the death and disability account (up to a maximum of $7.5 million) and death and disability insurance payments for volunteer fire fighters. The payment to the Fire and Police Pension Fund for the death and disability account ceases after December 31, 1996.

/B Limited gaming receipts are reported net of revenues that are credited to the Contiguous County Limited Gaming Impact Fund (which also includes monies distributed to counties contiguous to Indian lands on which gaming occurs), assuming the FY 94-95 distribution proportion. It also assumes the current tax rate structure, implemented on October 1, 1994. In addition, the receipts are net of transfers to the state Highway Fund (as enacted by S.B. 94-60) and to the Municipal Limited Gaming Impact Fund (as established by S.B. 94-79).

/C The figures include money from voluntary hospital payments and intergovernmental transfers that are used to leverage Federal Funds, then are reappropriated.

/D FY 94-95 other revenues include $18.04 million of reversions of unspent FY 93-94 Medicaid revenues. Given that this type of reversion has occurred for two consecutive years, we now include an estimated $6.0 million adjustment in FY 1995-96 revenues, then anticipate that such reversions will end.

/A S.B. 95-228 increased the transfer to the Fire and Police Pension Fund to $26.6 million annually through FY 08-09 and made a one-time additional $25.5 million transfer to the Fund in FY 95-96. Additional transfers to this fund are made for the death and disability account (up to a maximum of $7.5 million) and death and disability insurance payments for volunteer fire fighters. The payment to the Fire and Police Pension Fund for the death and disability account ceases after December 31, 1996.

/B Limited gaming receipts are reported net of revenues that are credited to the Contiguous County Limited Gaming Impact Fund (which also includes monies distributed to counties contiguous to Indian lands on which gaming occurs), assuming the FY 94-95 distribution proportion. It also assumes the current tax rate structure, implemented on October 1, 1994. In addition, the receipts are net of transfers to the state Highway Fund (as enacted by S.B. 94-60) and to the Municipal Limited Gaming Impact Fund (as established by S.B. 94-79).

/C The figures include money from voluntary hospital payments and intergovernmental transfers that are used to leverage Federal Funds, then are reappropriated.

NA: Not Applicable.
Totals may not sum due to rounding.

/A In FY 94-95, $75 million of the $109.7 million transfer to the Capital Construction Fund comes from the reserve. Meanwhile, in FY 95-96, $25 million of the $50 million transfer comes from the reserve.

/B S.B. 93-7 allows a transfer of 50 percent of the revenues in excess of expenditures and the statutorily required reserve to the Controlled Maintenance Trust Fund (CMTF), up to $50 million, in January of the following fiscal year, beginning in January 1995. H.B. 95-1359 transfers $176 million to the Controlled Maintenance Trust Fund in addition to the 50% excess funds transfer in FY 95-96. Beginning in FY 96-97, the principal of the CMTF may serve to fulfill some portion of the emergency reserve required by the State Constitution and may only be spent for emergency purposes as cited by statute.

/C Rebates and expenditures (including Old-Age Pension Fund expenditures) are appropriated from the General Fund, but are not subject to the provisions of Section 24-75-201.1, C.R.S. (the appropriations limit and the calculation of the reserve).

/D H.B. 95-1352 transferred money to the Capital Construction Fund for the building of prisons through FY 95-96. The bill also states that it is the intent of the General Assembly to transfer the funds noted in FY 96-97 and FY 97-98, but does not specifically direct said transfers be made. Nonetheless, these figures are included in the analysis.

/E Includes $3.4 million in appropriations that were exempt from the statutory appropriations limit. A court order was the primary reason for the exemption.

/F H.B. 95-1174 transfers $75 million to the Capital Construction Fund on July 1, 1995 for the purpose of state highway maintenance and construction.

/G Includes $24.4 million in appropriations that are exempt from the statutory appropriations limit because they represent court settlements.

/H In FY 94-95, the General Assembly designated $108.8 million from various funds to satisfy the emergency reserve requirement. This was a sufficient reserve for such purposes at the time of planning. Upon closure of the books, the amount necessary for the reserve increased, but the state had ample funds to meet the requirement. In the Long Bill for FY 95-96 appropriations, the General Assembly designated $176.9 million as the emergency reserve. Based upon the current estimates, the state will need more money for the emergency reserve in FY 95-96 than designated but there are sufficient funds to meet such needs. In addition, the General Assemby directed that a transfer of $176 million be made from the General Fund to the Controlled Maintenance Trust Fund (CMTF) on June 30, 1996. Beginning in FY 96-97, the principal of the CMTF may be used as full or partial satisfaction of the constitutional emergency reserve requirement for Cash and General Funds. Thus, starting in FY 95-96, the principal of the CMTF is reported as the reserved amount. It is assumed that the General Assembly makes the transfers to the CMTF that are allowed, but not specifically directed, by statute.

NA: Not Applicable.
Totals may not sum due to rounding.
Note: These figures are based upon Legislative Council staff's September 1995 revenue forecast, adjusted $250 million lower beginning in fiscal year 1996-97 for federal tax changes.

/A In FY 94-95, $75 million of the $109.7 million transfer to the Capital Construction Fund comes from the reserve. Meanwhile, in FY 95-96, $25 million of the $50 million transfer comes from the reserve.

/B S.B. 93-7 allows a transfer of 50 percent of the revenues in excess of expenditures and the statutorily required reserve to the Controlled Maintenance Trust Fund (CMTF), up to $50 million, in January of the following fiscal year, beginning in January 1995. H.B. 95-1359 transfers $176 million to the Controlled Maintenance Trust Fund in addition to the 50% excess funds transfer in FY 95-96. Beginning in FY 96-97, the principal of the CMTF may serve to fulfill some portion of the emergency reserve required by the State Constitution and may only be spent for emergency purposes as cited by statute

/C Rebates and expenditures (including Old-Age Pension Fund expenditures) are appropriated from the General Fund, but are not subject to the provisions of Section 24-75-201.1, C.R.S. (the appropriations limit and the calculation of the reserve).

/D H.B. 95-1352 transferred money to the Capital Construction Fund for the building of prisons through FY 95-96. The bill also states that it is the intent of the General Assembly to transfer the funds noted in FY 96-97 and FY 97-98, but does not specifically direct said transfers be made. Nonetheless, these figures are included in the analysis.

/E Includes $3.4 million in appropriations that were exempt from the statutory appropriations limit. A court order was the primary reason for the exemption

/F H.B. 95-1174 transfers $75 million to the Capital Construction Fund on July 1, 1995 for the purpose of state highway maintenance and construction.

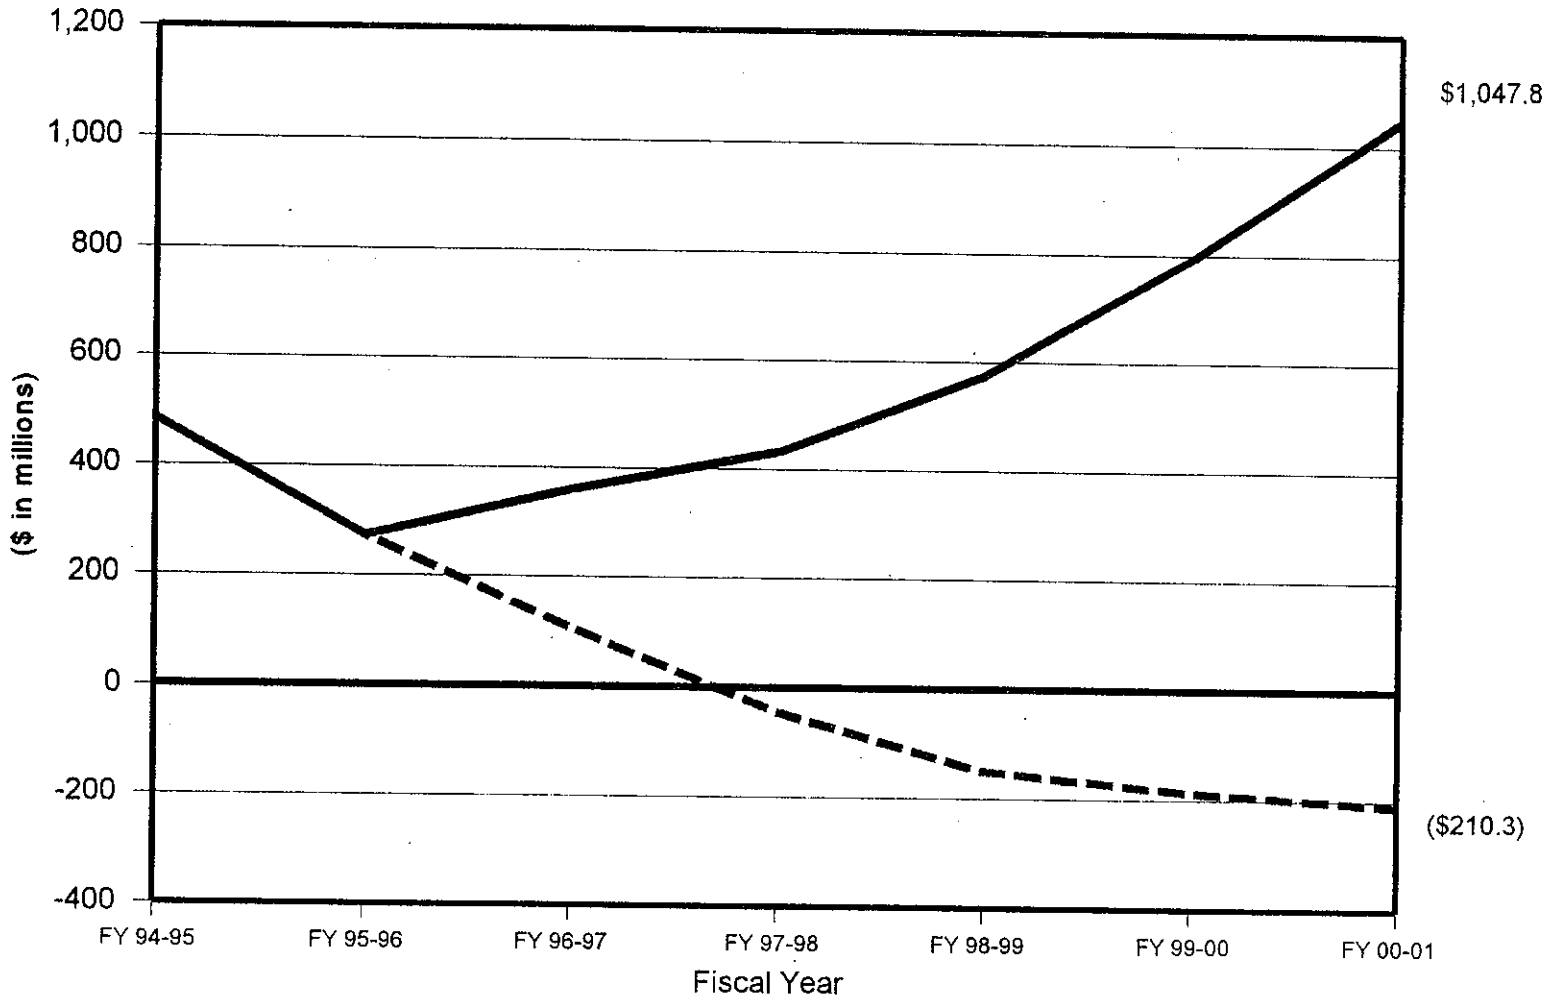
/G Includes $24.4 million in appropriations that are exempt from the statutory appropriations limit because they represent court settlements.

/H In FY 94-95, the General Assembly designated $108.8 million from various funds to satisfy the emergency reserve requirement. This was a sufficient reserve for such purposes at the time of planning. Upon closure of the books, the amount necessary for the reserve increased, but the state had ample funds to meet the requirement. In the Long Bill for FY 95-96 appropriations, the General Assembly designated $176.9 million as the emergency reserve. Based upon the current estimates, the state will need more money for the emergency reserve in FY 95-96 than designated, but there are sufficient funds to meet such needs. In addition, the General Assemby directed that a transfer of $176 million be made from the General Fund to the Controlled Maintenance Trust Fund (CMTF) on June 30, 1996. Beginning in FY 96-97, the principal of the CMTF may be used as full or partial satisfaction of the constitutional emergency reserve requirement for Cash and General Funds. Thus, starting in FY 95-96, the principal of the CMTF is reported as the reserved amount. It is assumed that the General Assembly makes the transfers to the CMTF that are allowed, but not specifically directed, by statute.

Graph 2

Pre- vs. Post-Federal Tax Reform Year-End General Fund Reserves

FY 1994-95 through FY 2000-01



Prepared by Legislative Council Staff, October 1995.

General Fund Appropriations Limit

CHART 1

CALCULATION OF FY 1995-96 STATUTORY APPROPRIATIONS LIMIT:
($ in millions)

$3,626.5	FY 1994-95 General Fund Appropriations
1.06	Allowable General Fund Appropriations Increase
$3,844.1	FY 1995-96 General Fund Appropritions Limit
$3,859.3	FY 1995-96 General Fund Approriations
(24.4)	Less exemptions to the limit
$3,834.9	FY 1995-96 GF Appropriations Subject to Limit
($9.2)	Over (under) FY 1995-96 General Fund Limit

CHART 2

CALCULATION OF FY 1996-97 ALLOWABLE GENERAL FUND APPROPRIATIONS:
($ in millions)

$3,859.3	FY 1995-96 General Fund Appropriations
1.06	Allowable General Fund Appropriations increase
$4,090.9	FY 1996-97 Allowable General Fund Appropriations
$231.6	Allowable General Fund Increase in FY 1996-97

CHART 3

POTENTIAL GENERAL FUND INCREASES IN FY 1996-97:
($ in millions)

$80.7	Medicaid - based on current program
73.2	K-12 - assumes 2% inflation; $19.0 million with no inflation
42.3	Higher Education - assumes 6% increase over FY 1995-96
10.0	Salary Survey - based on historical average
27.1	Corrections - additional facilities coming on line
0.7	Office of Youth Services - based on population
22.8	Child Welfare and Child Care - based on current program
13.0	HUTF off-the-top buyout - second of three years
$269.8	Total potential increases
($38.2)	Remaining for appropriation under the limit

Cash Funds

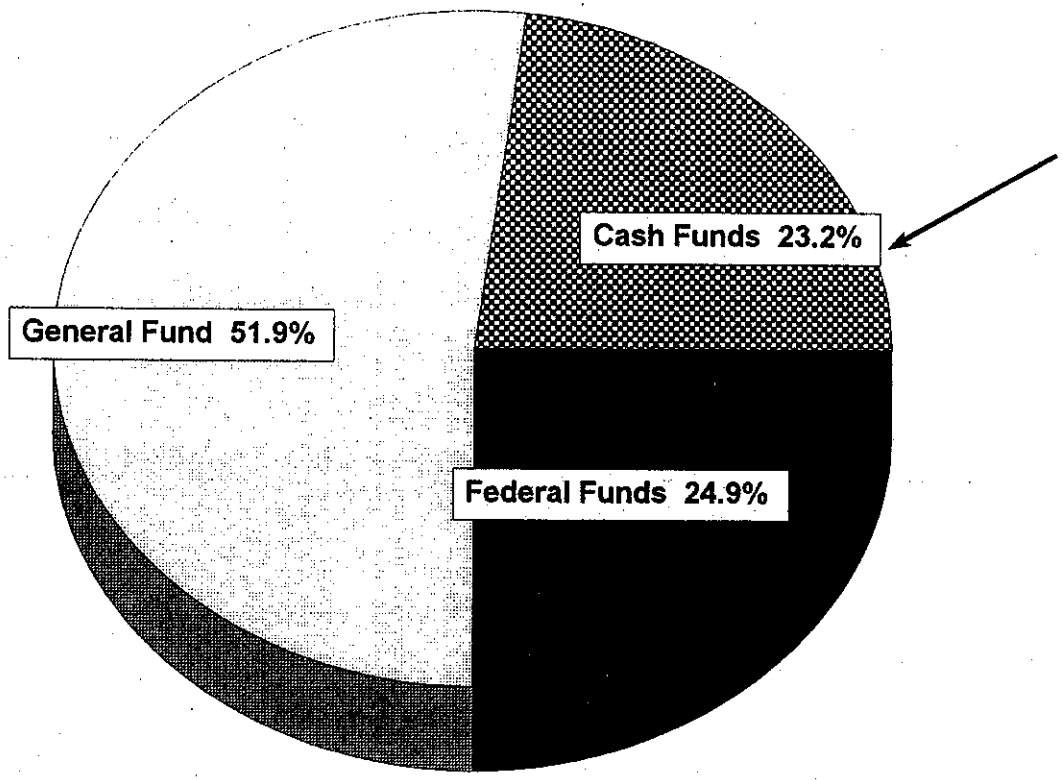
- Cash Fund revenues subject to the constitutional spending limit totalled $1,814.8 million in fiscal year 1994-95.

- 76% of these revenues come from four main categories:

Higher Education	$527.2 million
Transportation-Related Cash Funds	$579.1 million
Unemployment Insurance Trust Fund	$231.9 million
Wildlife Cash Fund	$59.7 million

Graph 1

Colorado State Budget
Revenue Sources by Fund Type, FY 1995-96



Cash Fund Components:

Transportation	7.5%
Higher Education	6.9%
Unemployment Insurance	2.7%
Wildlife	0.8%
All Other	5.3%

Estimated Fiscal Year 1995-96 Revenues: $7,945.5

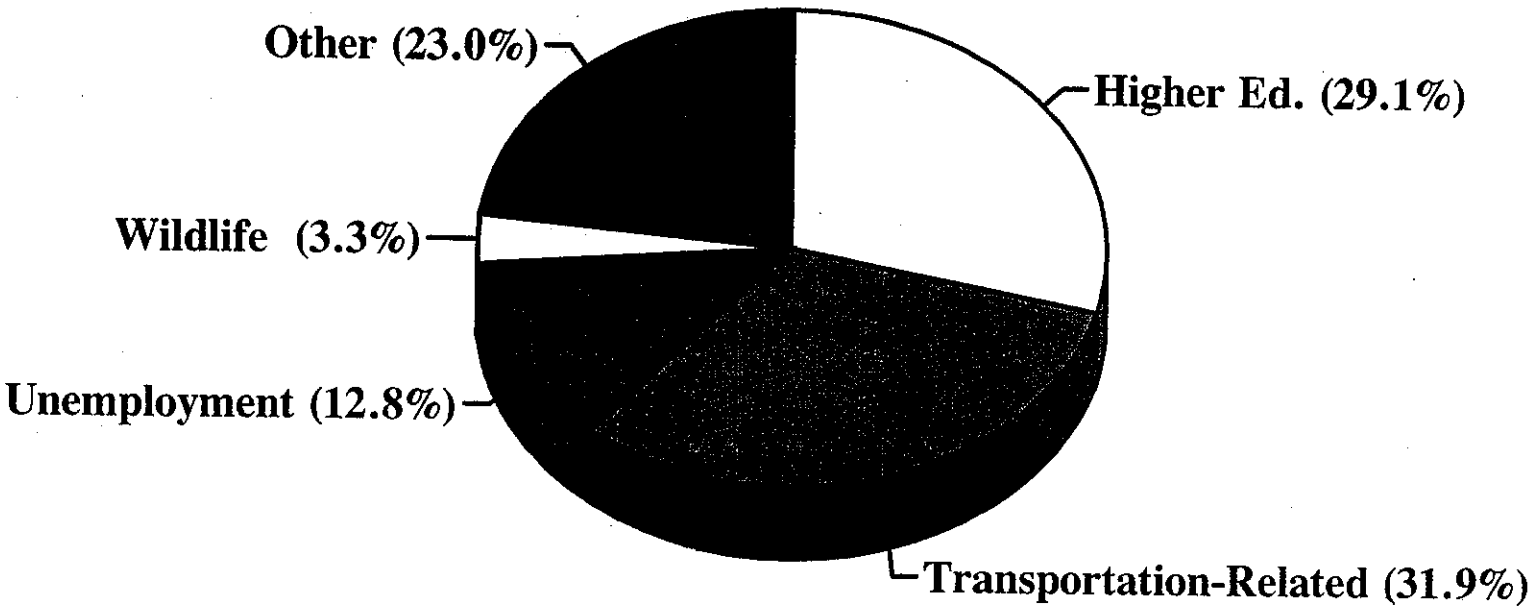
Note: These proportions reflect the September 1995 revenue forecast, the final proportions may differ slightly. This figure will not equal appropriations because it excludes some revenues not subject to Article X, Section 20 of the Constitution and because some appropriations come from reserves.

Source: Joint Budget Committee and Legislative Council Staff.

Prepared by Legislative Council Staff, October 1995.

Graph 2

Cash Fund Revenues By Source
Fiscal Year 1994-95



Total Revenue: $1,814.8 Million

Prepared by Legislative Council Staff, October 1995.

Higher Education

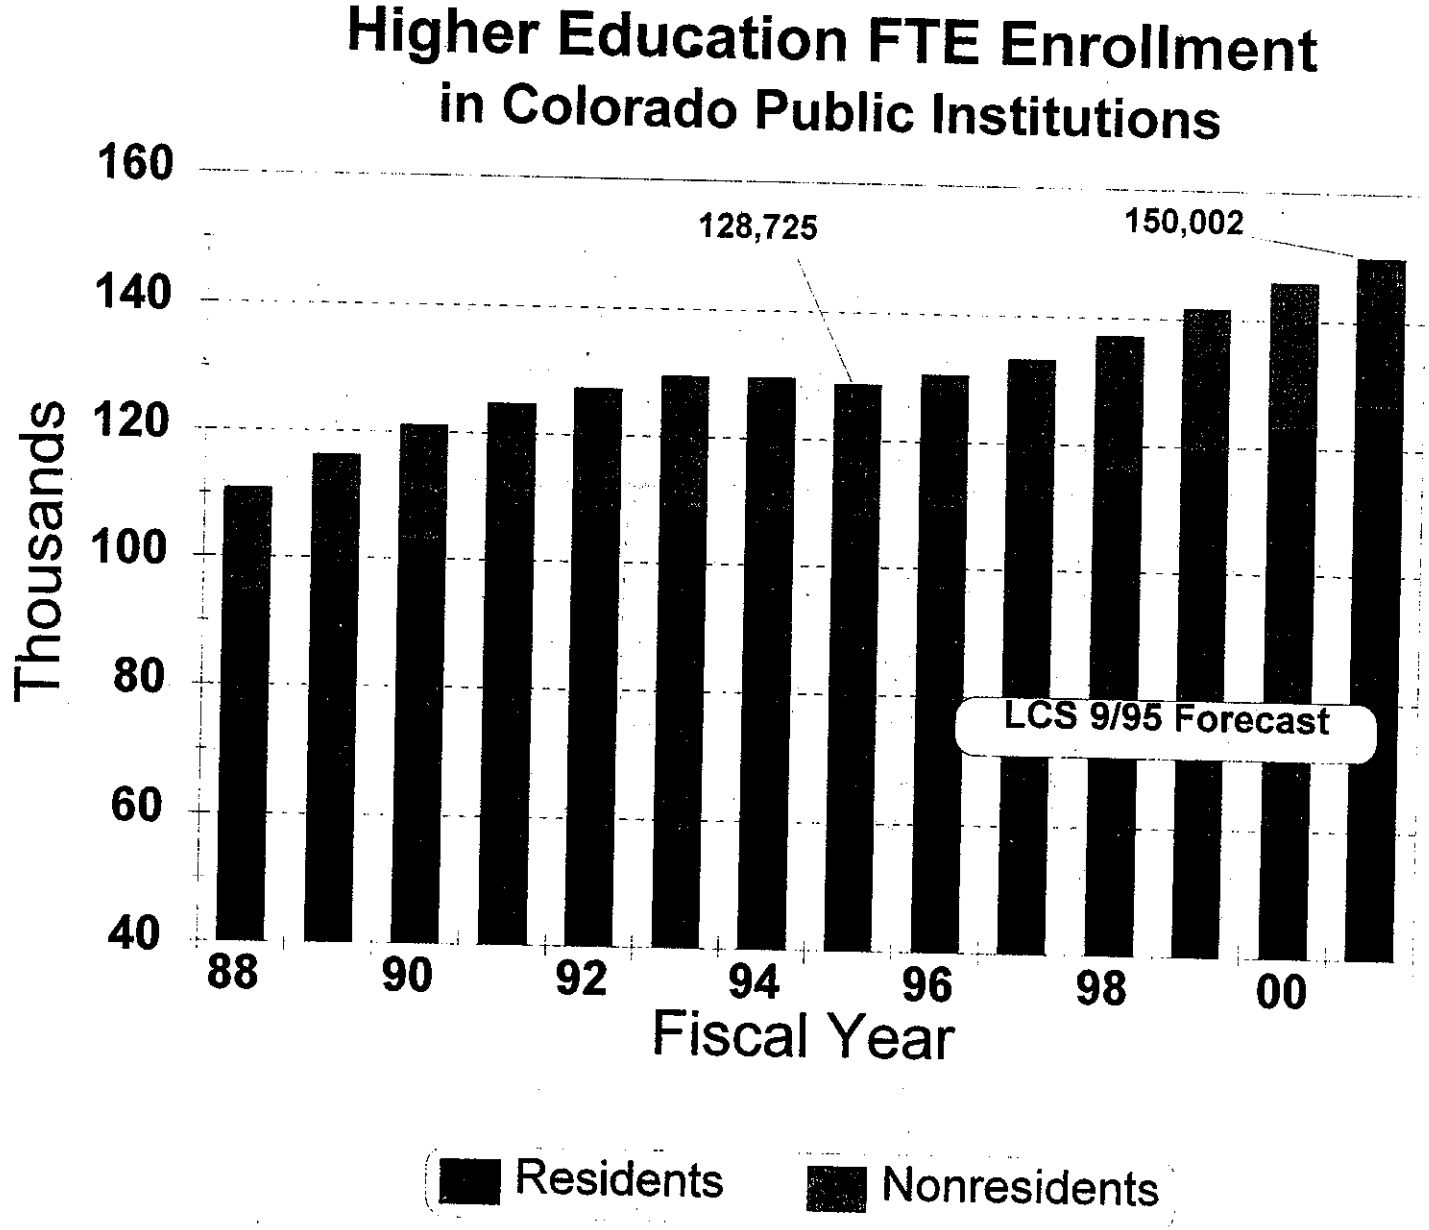
- Tuition revenue accounts for over 81% of higher education cash fund revenue subject to the constitutional spending limit.

- Fiscal year 1994-95 tuition revenue totalled $428.7 million.

- Colorado's higher education system caters to a largely resident student population. In fiscal year 1994-95, resident full-time-equivalent (FTE) students made up 84% of the total FTE enrollment.

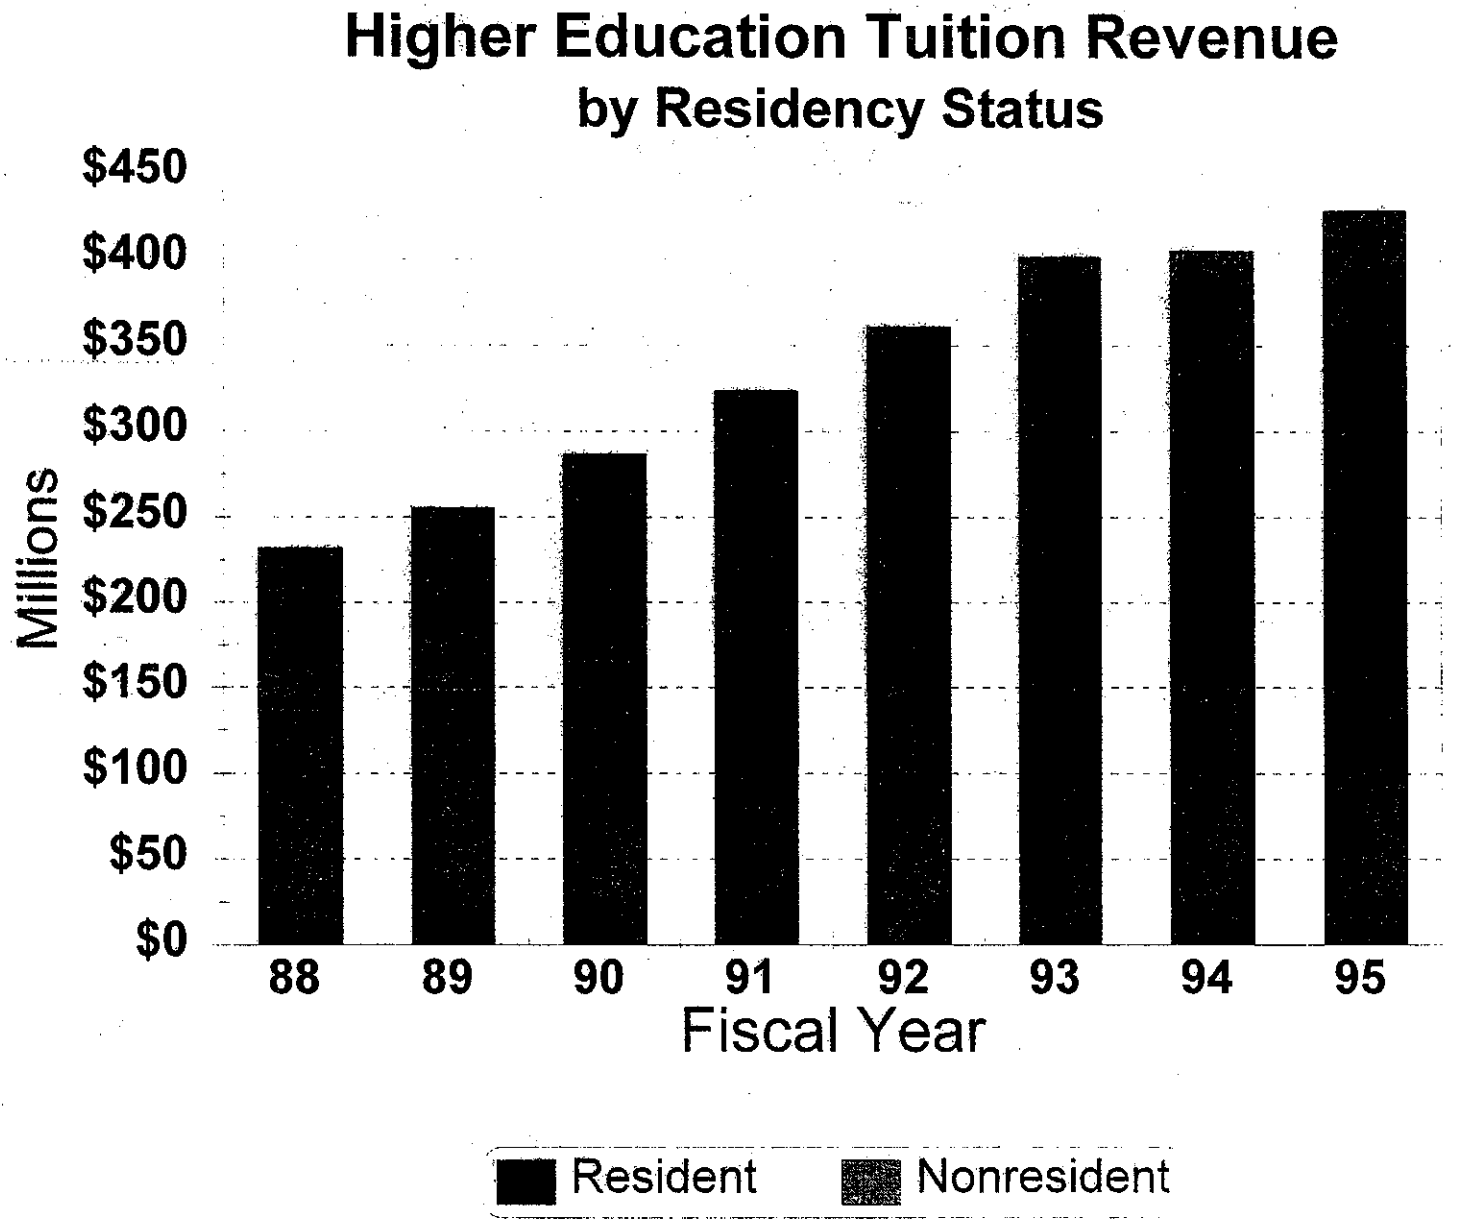
- However, resident students contributed only 54% of tuition revenue because they pay lower tuition rates than nonresident students.

Graph 3



Prepared by Legislative Council Staff, October 1995.

Graph 4



Prepared by Legislative Council Staff, October 1995.

Transportation-Related Cash Funds

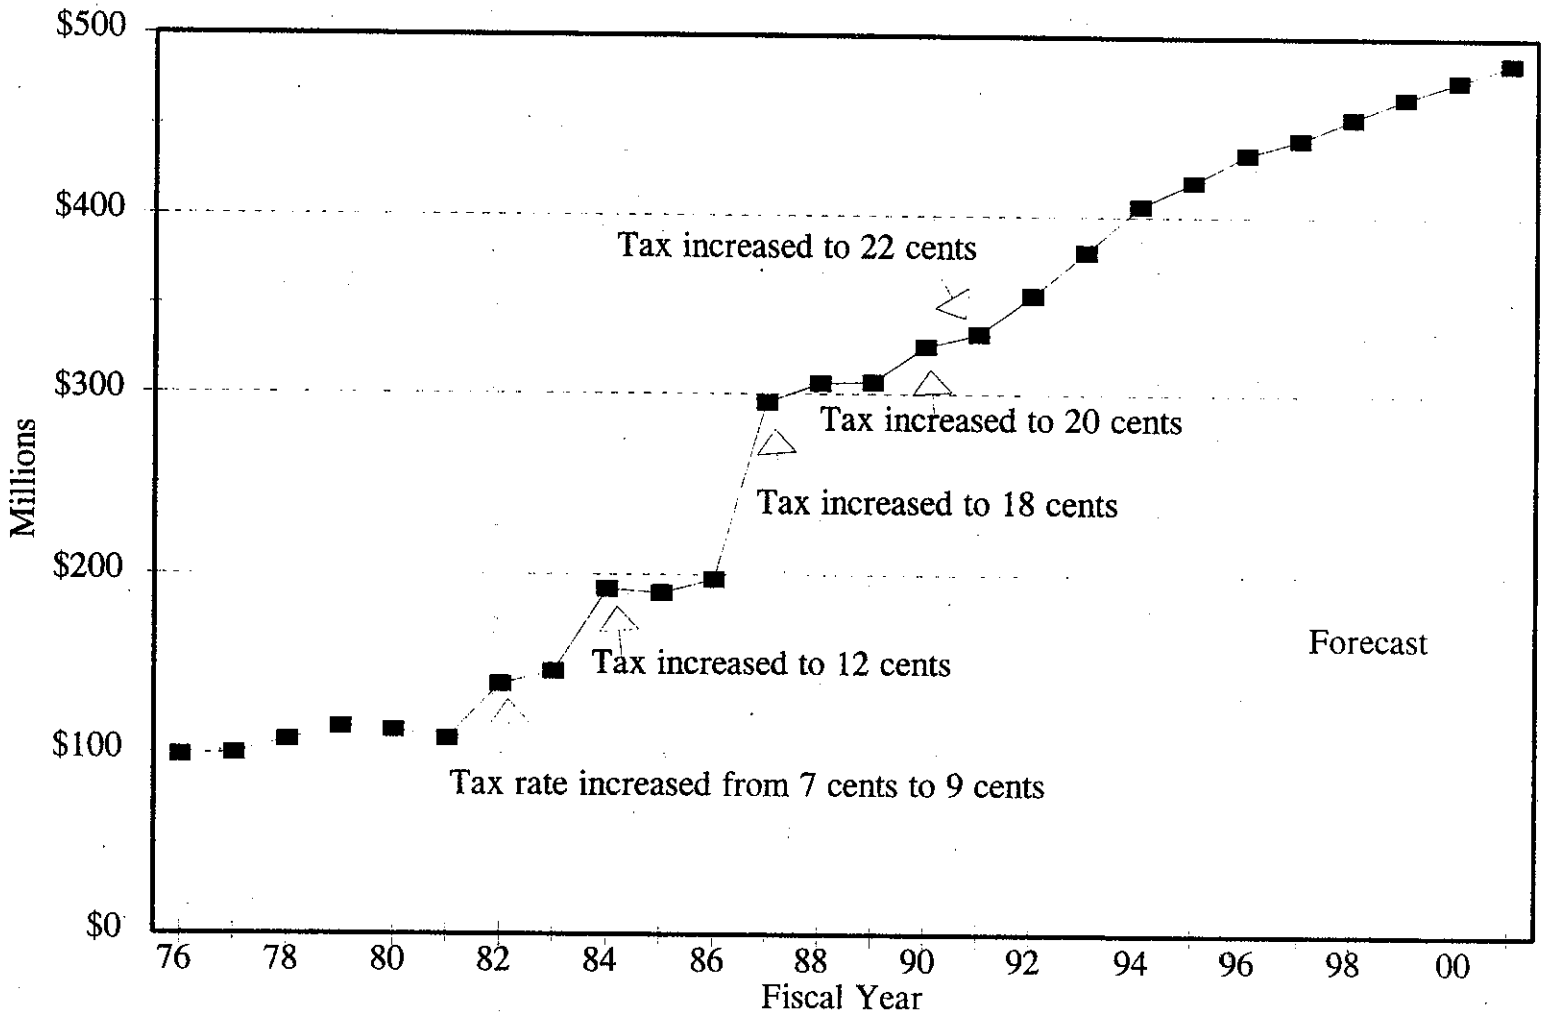
- Five cash funds make up this group. The largest of these is the Highway Users Tax Fund (HUTF).

- In fiscal year 1994-95, total revenue to these funds totaled $579.1 million. Motor and special fuel sales accounted for 73% of this total. Registration receipts comprised 17%.

- The remainder of the revenues in these cash funds come from the sale of drivers' licenses, emissions fees, and interest receipts, among other items.

Graph 5

Motor Fuel Taxes
Fiscal Years 1975-76 through 2000-01



Prepared by Legislative Council Staff, October 1995.

Unemployment Insurance Trust Fund

- Income to the Unemployment Insurance (UI) Trust Fund is mainly comprised of taxes and interest (earned on the UI Trust Fund Balance).

- Employers pay unemployment insurance taxes on the first $10,000 in wages paid to an employee in a given year.

- Tax rates are a function of: 1) the UI Trust Fund balance, and 2) employer's benefit rating.

- The tax rate schedule was reduced in January 1995, because the UI Trust Fund balance reached a threshold specified in statute in June of 1994. This past June, the balance surpassed the $450 million level, which will trigger another tax rate schedule reduction in January 1996.

- Current statute does not provide for further reductions, regardless of the UI Trust Fund's level.

ARTICLE X, SECTION 20 AND STATE TAXES

THE FISCAL YEAR SPENDING LIMIT

- **Fiscal Year Spending** (FYS) - All state revenues whether spent or saved
- **Fiscal Year Spending Limit** = Prior year FYS + Inflation + Change in state population
- **Emergency Reserves** - 3% of FYS

VOTER APPROVAL REQUIREMENTS

- **Tax Increases** - Any new tax, tax rate increase, extension of an expiring tax, or tax policy change directly causing a net tax revenue gain to any district
- **Revenue Changes** - Voters may approve revenues in excess of FYS limit
- **Weakening of other limits**

BALLOT REQUIREMENTS

- **Timing** - Section 20 issues may be submitted in any November
- **Form** - Substantial compliance with the prescribed language for tax increases is required

OTHER PROVISIONS

- Refunds required if the FYS limit is exceeded, may be done in any reasonable method
- New real estate transfer taxes prohibited
- New state real property tax prohibited
- Any income tax rate increase or new definition of taxable income can only apply in future years
- State income tax to remain at a flat rate, with no added tax or surcharge

The Constitutional Spending Limit v.s. Revenues

- The state is expected to remain below its constitutional spending limit through fiscal year 1997-98. Thereafter, revenues are expected to exceed the limits.

- In fiscal years 1998-99 through 2000-01, the General Assembly will need to either rebate revenues, ask the voters to keep excess revenues, and/or adjust fees and policies for Cash Funds in order to comply with the constitutional spending limit.

- The reduction of revenues proposed by the case study will not alleviate the situation. The state will still have revenues in excess of its limits for fiscal years 1998-99 and beyond.

Totals may not sum due to rounding

Note: Article X, Section 20 of the State Constitution broadly defines spending such that expenditures are equal to revenues. The statutory 6 percent limit applies to the General Fund appropriations only. Thus, the two concepts are not directly comparable.

/A In FY 94-95, the General Assembly designated $108.8 million from various funds to satisfy the emergency reserve requirement. This was a sufficient reserve for such purposes at the time of planning. Upon closure of the books, the amount necessary for the reserve increased, but the state had ample funds to meet the requirement. In the Long Bill for FY 95-96 appropriations, the General Assembly designated $176.9 million as the emergency reserve. Based upon the current estimates, the state will need more money for the emergency reserve in FY 95-96 than designated, but there are sufficient funds to meet such needs. In addition, the General Assemby directed that a transfer of $176 million be made from the General Fund to the Controlled Maintenance Trust Fund (CMTF) on June 30, 1996. Beginning in FY 96-97, the principal of the CMTF may be used as full or partial satisfaction of the constitutional emergency reserve requirement for Cash and General Funds. Thus, starting in FY 95-96, the principal of the CMTF is reported as the reserved amount. It is assumed that the General Assembly makes the transfers to the CMTF that are allowed, but not specifically directed, by statute.

/B In years where the projected revenues exceed the amount allowed by the Constitution, the reserve is calculated based on the limit, rather than on projected receipts. Given that the state will only spend the maximum allowed by the Constitution, it need only reserve three percent of such amount.

/C These figures differ from the General Fund revenues reported in previous tables because they net out revenues that are already in the Cash Funds to avoid double counting. For instance, the gaming revenues, unexpended prior-year Medicaid expenditures that are booked in "other revenue," and transfers of unclaimed property are netted out.

Note Article X, Section 20 of the State Constitution broadly defines spending such that expenditures are equal to revenues. The statutory 6 percent limit applies to the General Fund appropriations only. Thus, the two concepts are not directly comparable. These figures are based upon Legislative Council staff's September 1995 revenue forecast, adjusted $250 million lower beginning in fiscal year 1996-97 for federal tax changes.

/A In FY 94-95, the General Assembly designated $108.8 million from various funds to satisfy the emergency reserve requirement. This was a sufficient reserve for such purposes at the time of planning. Upon closure of the books, the amount necessary for the reserve increased, but the state had ample funds to meet the requirement. In the Long Bill for FY 95-96 appropriations, the General Assembly designated $176.9 million as the emergency reserve. Based upon the current estimates, the state will need more money for the emergency reserve in FY 95-96 than designated, but there are sufficient funds to meet such needs. In addition, the General Assemby directed that a transfer of $176 million be made from the General Fund to the Controlled Maintenance Trust Fund (CMTF) on June 30, 1996. Beginning in FY 96-97, the principal of the CMTF may be used as full or partial satisfaction of the constitutional emergency reserve requirement for Cash and General Funds. Thus, starting in FY 95-96, the principal of the CMTF is reported as the reserved amount. It is assumed that the General Assembly makes the transfers to the CMTF that are allowed, but not specifically directed, by statute.

/B In years where the projected revenues exceed the amount allowed by the Constitution, the reserve is calculated based on the limit, rather than on projected receipts. Given that the state will only spend the maximum allowed by the Constitution, it need only reserve three percent of such amount.

/C These figures differ from the General Fund revenues reported in previous tables because they net out revenues that are already in the Cash Funds to avoid double counting. For instance, the gaming revenues, unexpended prior-year Medicaid expenditures that are booked in "other revenue," and transfers of unclaimed property are netted out.

Sources of Revenue for Colorado Local Governments

- There are a total of 1,994 units of government in Colorado:
  - 1 state government
  - 63 counties
  - 268 municipalities
  - 176 school districts
  - 1,486 special and other districts

- Local governments are the recipients of "own-source" revenue as well as intergovernmental transfers.

- Taxes are the primary generator of own-source revenues (46.2 percent of total revenues), and property taxes are the single largest contributor with 28.2 percent of total revenues.

- Intergovernmental transfers are payments between governments, and state aid is the single largest intergovernmental transfer and the second largest contributor to local government revenues.

- The importance of sources of revenue differs among the various types of local governments:
  - The property tax is the most important source of revenue for **counties**, with 34.8 percent of total revenues. State aid follows with 30.5 percent of county revenues.
  - Property taxes (11.3 percent) and state aid (10.7 percent) are relatively small components of **municipal** revenues. The sales tax is the primary revenue source for cities, with 43.8 percent of total revenues.
  - As with counties, property taxes are a significant source of revenue for **school districts**, but state aid is equally important. The two sources of revenue provide equal shares of about 79 percent of school district revenue.
  - Taxes and intergovernmental transfers are relatively less important to **special districts**. User fees, charges for services, and other revenues comprise almost 66 percent of total revenues.

THREE APPROACHES TO VALUE

Market Approach Definitions:

Colorado Supreme Court:
"The price a property will bring if sold on the open market under ordinary circumstances for cash to a willing buyer from a willing seller, neither being under pressure or obligation to do so."

International Association of Assessing Officers:
"...most probable price expressed in terms of money that a property would bring if exposed for sale in the open market in an arm's-length transaction between a willing seller and a willing buyer, both of whom are knowledgeable concerning all the uses to which the property is adapted and for which it is capable of being used."

Cost Approach Definition:

A value indication derived by estimating the current cost to construct a reproduction of, or replacement for, the existing structure; deducting accrued depreciation from the reproduction or replacement cost; and adding the estimated land value.

Income Approach Definition:

A method of estimating value which converts anticipated net income into an estimate of value. It is based on the premise that an informed purchaser would not pay more for a property than the present worth of its expected future net income.

DATA GATHERING PERIOD

Assessment year: **1995 and 1996**

Level of value: **1994**

Data gathering: **1/1/93 - 6/30/94**
(18 months prior to 7/1/94)

Insufficient sales: **7/1/89 - 6/30/94**
(6-month intervals)

Adjustment date: **6/30/94**

Assessment year: **1997 and 1998**

Level of value: **1996**

Data gathering: **1/1/95 - 6/30/96**
(18 months prior to 7/1/96)

Insufficient sales: **7/1/91 - 6/30/96**
(6-month intervals)

Adjustment date: **6/30/96**

ASSESSMENT METHODS AND ASSESSMENT RATES

Residential

Statutory level of value at 10.36%

Vacant Land

Natural Resources

Commercial

Statutory level of value at 29%

Industrial

Producing Mines

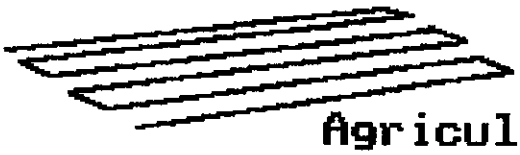
25% of gross proceeds or 100% of net, whichever is greater from the previous calendar years value.

Oil and Gas

87.6% sold/transported from prenise for primaty production; 75% sold/transported from prenise for secondary and tertiary recovery.

State Assessed

Statutory level of value at 29%.



Agricultural

20% of actual value which is based on a 10 year average of the net income and expenses, capitalized at 13%.

Exempt

Assessed at appropriate assessment rate, but not taxed.

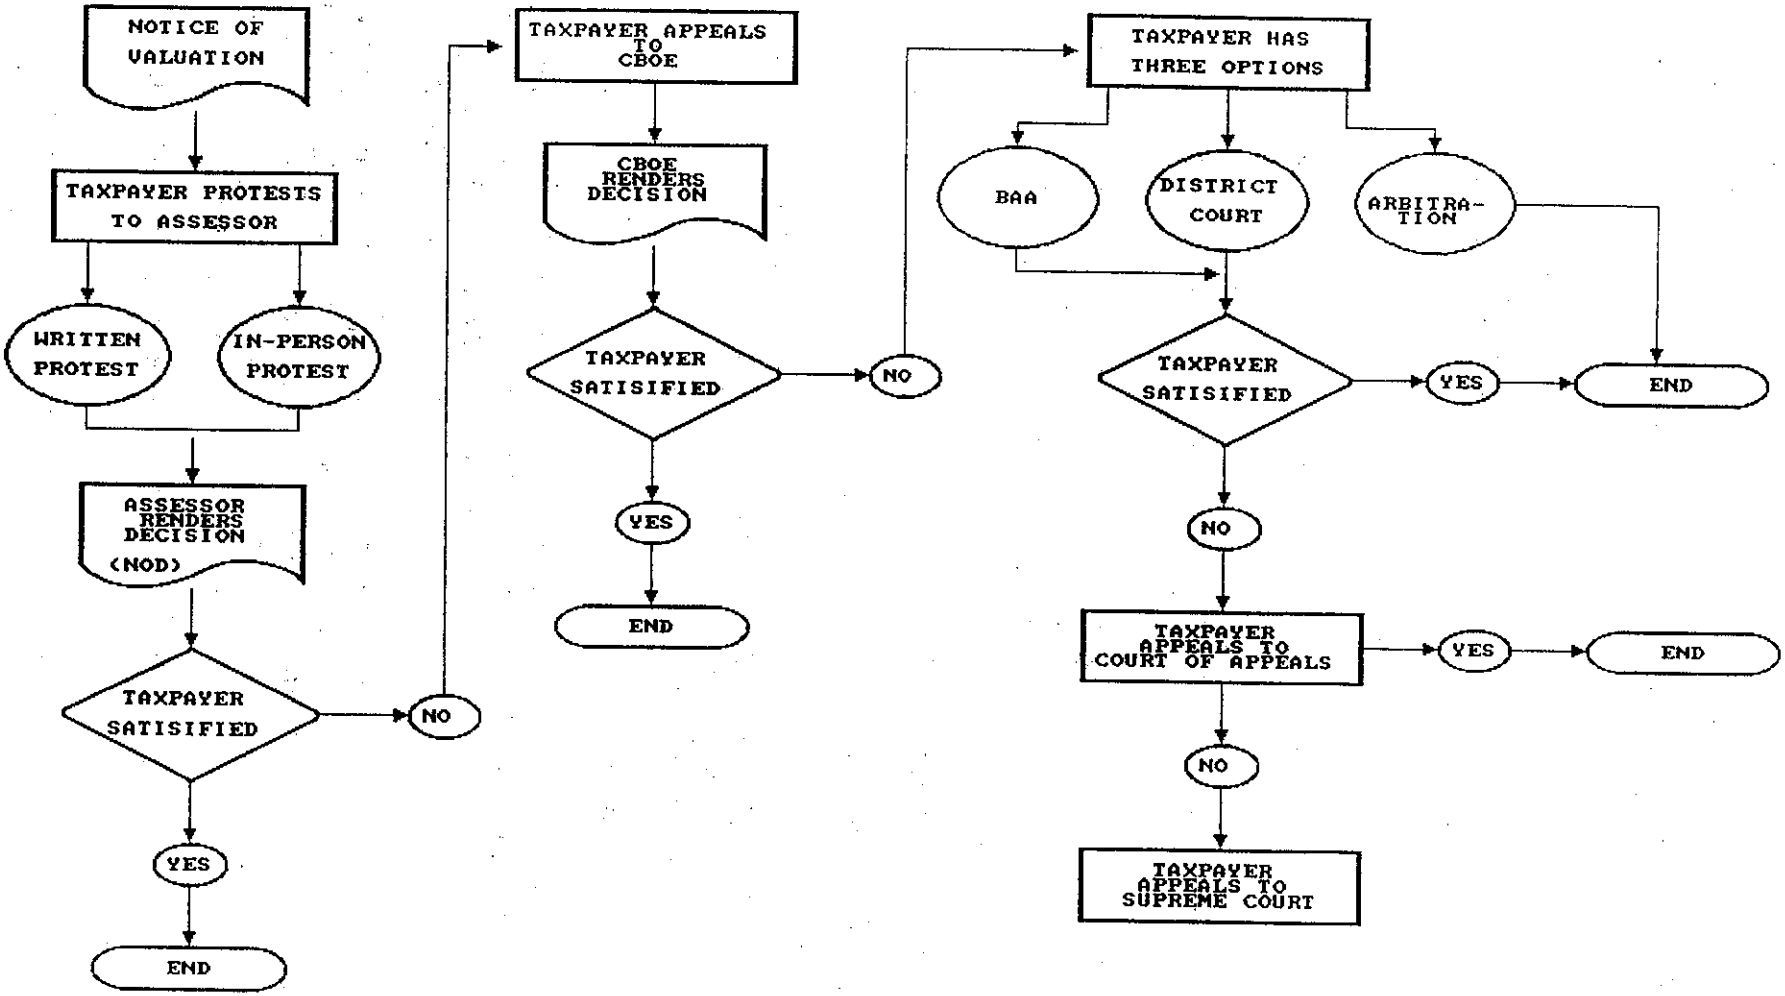
TAXPAYER APPEALS PROCESS



Division of Property Taxation
October, 1995

CERTIFICATION OF VALUES TO TAXING ENTITIES

WHAT IS THE PURPOSE OF CERTIFICATION

The assessed values certified to a taxing entity by the county assessor are utilized to determine the amount of revenue that can be generated from the taxable property within the boundary of the taxing entity. Other information certified by the assessor such as new construction, and destroyed property is utilized to determine the legal revenue and spending increase over the prior year's revenue and spending.

A. Budget functions of taxing entity's governing board

1. Each year, taxing entities are required to develop a budget, 29-1-301, C.R.S.

2. Taxing entities conduct public hearings where the budget is reviewed and finalized, 29-1-108 C.R.S. Once finalized, non-school taxing entities must file a copy of the budget with the Division of Local Government, 29-1-113 C.R.S.

3. Once total projected expenses have been determined, matching revenues must be generated. Most taxing entities derive some or all of the operating revenue from property tax. Taxing entities are restricted both in the revenue they can generate and in the revenue they can spend.

B. Spending and revenue limitations

1. Spending limitations

"The maximum annual percentage change in each local district's fiscal year spending equals inflation in the prior calendar year plus annual local growth, adjusted for revenue changes approved by voters after 1991 and (8)(b) and (9) reductions," Article X, Section 20, (7)(b) Colorado Constitution.

2. Revenue limitations

a. "The maximum annual percentage change in each district's property tax revenue equals inflation in the prior calendar year plus annual local growth, adjusted for property tax revenue changes approved by voters after 1991 and (8)(b) and (9) reductions," Article X, Section 20, (7)(c) Colorado Constitution.

b. Taxing entities are also restricted by the 5.5 percent property tax revenue limitation described in 29-1-301, C.R.S. This limitation allows taxing entities to increase revenue by 5.5 percent over the prior year's revenue. There are exceptions to this limitation. New construction, increase in the production of a producing mine, and new oil and gas production are a few of the exceptions.

3. The Attorney General issued an opinion, dated August 27, 1993, stating that the more restrictive of the two limitations prevails.

C. Under the constitution, the mill levy cannot be increased without approval from the majority of the voters at an election, Article X, Section 4, Colorado Constitution. The Colorado Supreme Court ruled in Bolt vs Littleton Public Schools that voter approval is not required to increase mill levies to recoup revenue lost due to abatements and refunds.

We have not succeeded in answering all your problems. The answers we have found only serve to raise a whole set of new questions. In some ways we feel we are as confused as ever, but we believe we are confused on a higher level and about more important things.

ARTICLE X, SECTION 20 AND PROPERTY TAXATION

PROPERTY TAX REVENUE LIMIT

- Annual Percentage Change = Inflation + Local Growth

VOTER APPROVAL REQUIREMENTS

- New Tax
- Mill Levy Higher Than Prior Year's Mill Levy
- Valuation For Assessment Ratio Increase For A Property Class
- Extension Of An Expiring Tax
- Tax Policy Change Directly Causing A Net Tax Revenue Gain To District
- Weakening Of Other Limits On District Revenue, Spending, and Debt

NO EMERGENCY PROPERTY TAXES

ASSESSMENT PROCEDURES

- Residential Property - Market Approach To Appraisal Only
- Annual NOVs And Appeals - No Presumption In Favor Of Valuation
- Actual Value Stated On NOVs And Tax Bills
- Sales By Lendors And Government - Comparable Market Sales

BUSINESS PERSONAL PROPERTY TAXES

- Districts May Enact Cumulative Uniform Exemptions and Credits

DRP 1002 (07/95)
COLORADO DEPARTMENT OF REVENUE
TAXPAYER SERVICE DIVISION
1375 SHERMAN STREET
DENVER CO 80261

Colorado Sales/Use Tax Rates

This publication, which is updated on January 1 and July 1 each year, lists Colorado Sales/Use Tax rates throughout the state. The total tax rate for any jurisdiction must be computed by adding all taxes applicable to that jurisdiction. Requests for new listings should be directed to Taxpayer Service: 534-1208.

State and Regional Sales Taxes

State Sales Tax

The state sales/use tax rate is 3% with exemptions on food for home consumption; machinery and machine tools used in manufacturing; gas, electricity, etc., for home use. A service fee, also known as vendor's fee, of 3 1/3% is allowed. Tax is remitted on Form DR 0100, "Retail Sales Tax Return."

RTD/CD/BD Tax

The RTD/CD/BD Tax total is .8%.

The Regional Transportation District (RTD) levies a sales/use tax of 0.6%, with exemptions on food for home consumption, and gas, electricity, etc., for home use. Service fee: 3 1/3%. The RTD includes the counties of Denver, Boulder, Jefferson, Adams (west of Box Elder Creek), Arapahoe (roughly, one mile east of Gun Club Road and south of Quincy including Arapahoe Park), and Douglas (northeast portion plus Highlands Ranch). Tax is remitted on Form DR 0100 in RTD/CD/BD column.

A sales/use tax of 0.1% applies to all sales that are subject to the RTD tax for the Scientific and Cultural Facilities District (CD). Service fee: 3 1/3%. Tax is remitted on Form DR 0100 in RTD/CD/BD column.

A sales/use tax of 0.1% applies to all sales that are subject to the RTD tax for Baseball Stadium District (BD). Service fee: 3 1/3%. Tax is remitted on Form DR 0100 in RTD/CD/BD column.

County Lodging Tax

The following counties have a tax of 1.9% on lodging services including hotels, motels, condominiums, and camping spaces: Alamosa, Archuleta, Chaffee, Clear Creek, Costilla, Conejos, Delta, Gunnison, Hinsdale, Lake, La Plata (Durango omitted), Logan, Mineral, Moffat, Montezuma (Cortez omitted), Morgan, Rio Blanco, Rio Grande and Saguache. The rate is 0.9% in Bent County, 1.8% in Grand (Winter Park omitted) County and 2% in San Miguel County. Tax is remitted quarterly on Form DR 1485, "County Lodging Tax Return".

Local Improvement District Tax

A sales tax of 0.5% within designated areas of southeast Jefferson and Boulder (Old Town Niwot and Cottonwood Square) Counties. Exemptions include utilities, and telephone and telegraph services. Service fee of 3 1/3% is allowed for southeast Jefferson County. Boulder County does not allow a service fee. Tax is remitted on form DR 0100 in City/SP Dist Column.

Mass Transit District Tax

A sales tax of 0.5% in Pitkin and Summit Counties. Service fee: 3 1/3%. Tax is remitted on Form DR 100 in the RTD/CD/BD column. Exemptions are the same as the county sales tax.

Short-term Rental Tax

Douglas county has a tax of 1% on property rented for thirty days or less (excluding MV). Tax is remitted on Form DR 1480.

TAXPAYER SERVICE DIVISION

FYI – For Your Information

Guidelines for Determining When to Collect State-Collected Local Sales Tax

GENERAL INFORMATION

The Colorado Department of Revenue is responsible for collecting and administering local sales taxes for all counties, statutory cities and special districts that impose a sales tax. Sales taxes collected by vendors in such areas are to be reported on the "Combined Retail Sales Tax Return" (DR 0100) and remitted to the Colorado Department of Revenue.

In some cases, home-rule city sales tax is administered and collected locally rather than by the state. The Colorado Department of Revenue has no jurisdiction over sales and use taxes imposed by home-rule cities when the state does not administer its local taxes. Taxes collected for such areas must be remitted directly to the home-rule jurisdiction. **This FYI does not address the local taxes of self-administered home-rule cities. You must contact a home-rule jurisdiction directly to obtain its tax regulations.** For information on local sales tax rates, request "Colorado Sales/Use Tax Rates" (DR 1002). This DOR publication is updated each January and July.

SALES TAXES ON TANGIBLE PERSONAL PROPERTY (EXCEPT MOTOR VEHICLES)

A retailer of tangible personal property with a business presence in a city, county, and/or the Regional Transportation District/Cultural and Scientific Facilities District/Metropolitan Baseball Stadium District (RTD/CD/BD) must collect **all** applicable local sales taxes on transactions consummated within the boundaries of that area.

Deliveries of Goods

Local sales taxes and RTD/CD/BD taxes are **not** collected when the retailer or his agent delivers the tangible personal property, via the retailer's company vehicle, to a destination outside the boundaries of the vendor's local taxing jurisdiction(s) or to a common carrier for delivery outside the boundaries of the vendor's local taxing area(s). Delivery of the tangible personal property into another local taxing area does **not** require the vendor to collect the local sales taxes of the delivery area if the vendor does not have a business presence there. However, sold goods that are turned over to a contractor/subcontractor or other agent who is not primarily a common carrier for delivery outside the local taxing jurisdiction (for example, a carpet store turning over sold carpet to an independent installer who then installs the carpet for the purchaser), does **not** constitute delivery to another taxing area under this rule. The goods are taxable in the local jurisdiction where the contractor/subcontractor picks up the goods.

Excise Tax: (303) 534-1805

PAGE 1 OF 3
SALES 62 (07/95)
DRP 1873

Vendors making retail sales which are exempt from local sales tax due to the delivery location bear the burden of proving that delivery took place outside the taxing area. For audit purposes, retailers should maintain invoices showing specifics of such deliveries by common carriers. For deliveries with the retailer's own vehicle, the DOR recommends maintaining delivery invoices signed by the purchaser upon delivery which show date, time, place, and vehicle used.

RTD/CD/BD Use Tax

Because the RTD/CD/BD has a use tax, businesses that are not located in the RTD/CD/BD but make regular shipments into the district or have otherwise established nexus (a sales presence) in the district should collect the RTD/CD/BD tax and remit it on the "Combined Retail Sales Tax Return" (DR 0100). If the RTD/CD/BD tax is not collected by the vendor, the consumer located within the district must pay the tax on the "Consumer Use Tax Return" (DR 0252).

Mobile Vendors

Those retailers who carry their inventory with them and make sales from that inventory directly to customers are classified as mobile vendors, and all local taxes must be collected. If you have not made sales in a particular taxing area previously, list the amount of sales and compute the tax for the city and/or county on a separate sheet of paper and staple it to the front of your sales tax return. Be sure to write your account number and identify the city and/or county on the separate sheet. You will then begin receiving returns for this jurisdiction.

Out-of-State Retailers

Out-of-state retailers who file Colorado retailer use tax returns (DR 0173) are responsible for collecting state sales/use taxes (and RTD/CD/BD taxes, if applicable) but are not required to collect sales taxes for any state-collected city or county, provided the retailer has no place of business in such state-collected city or county. For further information, request FYI Sales 5 "General Sales Tax Information for Out-of-State Businesses" (DRP 1890).

Building Materials

Local sales tax is not due on building materials if the purchaser presents a building permit or other documentation acceptable to the local jurisdiction where the materials are purchased showing that a local use tax has been paid or is required to be paid to another local entity [§29-2-105(2) C.R.S.]. City and county use taxes on building materials are remitted directly to the local jurisdiction, not to the Department of Revenue.

Independent Distributors

These distributors are not required to have a sales tax license if the company itself has a license and remits all applicable sales taxes. The local tax liability is determined by the address of the independent distributor. If you feel you fall into this category, you may contact the Department of Revenue at (303) 534-1208 for more information.

Boats

Vendors of boats, boat motors and boat parts must collect all applicable state and local sales taxes. Boats are not treated as motor vehicles. However, boat trailers which require licensing and registration **are** treated as motor vehicles and are taxed as such (see below).

SALES TAXES ON MOTOR VEHICLES

When the motor vehicle dealer and the purchaser reside in the same local taxing area, the dealer **must** collect all applicable local sales taxes (RTD/CD/BD, other special districts, county and city) in addition to the state sales tax. The state-administered taxes are to be paid to the Department of Revenue on the "Combined Retail Sales Tax Return" (DR 0100).

RTD/CD/BD taxes apply to all purchasers living within the boundaries of this district. In order to facilitate titling procedures, dealers not located in the district should collect the tax from residents of the district and send the tax directly to the motor vehicle department of the purchaser's county of residence along with the title application. RTD/CD/BD taxes are **not** applicable to purchasers buying within the district but **not residing** in the district.

Purchasers buying a motor vehicle outside the limits of the local taxing entity where they reside will be required to pay any locally-imposed use tax when registering the motor vehicle. As with RTD/CD/BD tax, dealers should collect local use taxes and send them directly to the motor vehicle department of the purchaser's county of residence along with the title application.

Motor vehicles must be registered in the local jurisdiction of residence of the purchaser. For a private individual, this means the county and town where he/she is registered to vote. For a business purchaser, this means the business address from which the vehicle is principally operated and maintained. [§1-2-102 and 31-10-201 C.R.S.]

Motor vehicle sales or trades between unlicensed, private individuals **are** subject to sales/use tax. The purchaser must pay the tax on the purchase price when registering and titling the vehicle.

A NOTE ON USE TAX

Use tax must be paid by the purchaser of goods for the purchaser's own use in cases where the seller did not or could not collect sales taxes. [§39-26-202 C.R.S.] This would include, for example, purchases by mail from an out-of-state firm which is not collecting Colorado sales tax. It would also include goods and equipment purchased tax-exempt by a business and used by the business rather than being placed in inventory for re-sale. Merchandise that is purchased tax free for resale but later removed from inventory and used by the business must be reported on line 10 of the "Combined Retail Sales Tax Return" (DR 0100) and all applicable taxes remitted.

Except for certain special districts which levy a sales tax, state-administered local jurisdictions do not have a use tax except that, at local jurisdictions' election, they may impose a use tax on building materials and/or motor vehicles. The RTD/CD/BD (a combined special district which levies a sales/use tax) requires a use tax be paid on all taxable goods in situations where sales tax is not collected.

An order form is contained in FYI General 1 (DRP 1810), or call the State Forms Center, (303) 321-4164, for ordering information.

TAXPAYER SERVICE DIVISION

FYI – For Your Information

Guidelines for Determining Sales Tax Rates for Taxable Food Items

The following guidelines should be used to determine whether a food item is exempt from sales tax. Colorado's principal sales tax exemption guideline is based upon what can be purchased with food stamps and WIC vouchers. (WIC is the federal supplemental food program for women, infants and children.) Colorado statute also imposes other criteria, in addition to the food stamp/WIC guidelines.

WHAT CAN BE PURCHASED WITH FOOD STAMPS OR WIC VOUCHERS AND IS TAX EXEMPT?

All food purchased with food stamps or WIC vouchers is exempt from all sales taxes. Food is defined in Department of Agriculture guidelines 7 U.S.C. section 2012 (g). Items eligible for purchase with food stamps include:

1. Foods for human consumption at home.
2. Seeds and plants which produce food for human consumption.

The Department of Agriculture guidelines prohibit the use of food stamps or WIC vouchers for the purchase of the following items. These items are sales taxable:

1. Nonfood items such as pet foods, soaps, paper products and household supplies, grooming items and cosmetics.
2. Alcoholic beverages. (Cooking wine and wine vinegar are exempt.)
3. Tobacco and tobacco products. (Cigarettes are sales tax exempt under §39-26-114 C.R.S.)
4. Food to be eaten in the store, hot foods ready to eat and any food marketed to be heated in the store.
5. Food preservation equipment and items.
6. Vitamins and medicines. (Prescription drugs are exempt under §39-26-14 C.R.S.)

FOR OTHER FOOD PURCHASERS, WHAT IS TAX EXEMPT?

Any food item not purchased with food stamps or WIC vouchers is either taxable or tax exempt according to the guidelines listed in the above section with the following exceptions. The following items, if purchased with food stamps are exempt from the 3 percent state sales tax, but are taxable if purchased with cash:

1. Carbonated water marketed in containers.
2. Chewing gum.
3. Prepared salads and salad bar items.

Excise Tax: (303) 534-1805

PAGE 1 OF 2
SALES 4 (03/95)
DRP 1892

4. Cold sandwiches.

5. Deli trays.

Also subject to state sales tax are food or drink purchased from vending machines and food used by a business or commercial entity, such as coffee served to customers or employees.

In addition, all food and drink sold by the following establishments are taxable: restaurants, snack shops, carryout shops, pushcarts and other sellers of food and drink as specified in §39-26-104 (1) (e) C.R.S.

DETERMINING WHETHER LOCAL TAX AND RTD/CD/BD TAX ARE DUE ON FOOD

Cities and counties have the option of taxing food. However, if they exempt food from sales tax they must use the same criteria as the state in determining which items are taxable and which are exempt. This includes home-rule cities that administer their own sales tax. Localities that elect to tax food still must exempt purchases made with food stamps or WIC vouchers.

To find out whether a governmental entity taxes food, retailers should refer to "Colorado Sales/Use Taxes" (DRP 1002), published by the Department of Revenue. This publication, updated every January and July, lists tax rate information for Colorado cities and counties and also indicates which counties and statutory cities have a sales tax exemption for food. The publication can be obtained at any Taxpayer Service Center statewide or by calling (303) 534-1408. You must contact home-rule cities directly to find out if they exempt food from sales tax.

Regional Transportation District (RTD) tax of 0.6 percent, Scientific and Cultural Facilities District (CD) tax of 0.1 percent and Metropolitan Baseball Stadium District (BD) tax of 0.1 percent are due on any food item sold within RTD/CD/BD boundaries that is subject to the state sales tax. (The boundaries of these three special districts are identical and encompass most of the 6-county Denver metropolitan area.) If the item is not subject to state sales tax, no RTD/CD/BD tax is due.

All state sales tax and, if applicable, state-collected local and/or RTD/CD/BD taxes must be reported and remitted with the "Combined Retail Sales Tax Return" (DR 0100).

They may be obtained at any statewide Taxpayer Service Center; or by writing to the Colorado Department of Revenue, 1375 Sherman St., Denver, CO 80261; or by calling the DOR Forms Hotline at (303) 534-1408. Please use the DR or DRP number when ordering publications or tax forms.

For a complete set of FYIs (approximately 125, on sales, income, excise and withholding taxes), you may purchase ***The Complete Book of FYIs*** at low cost from the State Forms Center, Division of Correctional Industries, 4200 Garfield St., Denver, CO 80216. An order form is contained in FYI General 1, or call the State Forms Center, (303) 321-4164, for ordering information.

JUNE 1995

CITY COUNTY CONNECTIONS

A Quarterly Newsletter for Colorado City and County Governmental Officials

Some sales by charitable organizations now tax exempt

Signed by Gov. Romer, House Bill 1145 becomes effective July 1, 1995. The new law states that charitable organizations holding infrequent fundraising events are not liable to collect state sales, Regional Transportation District, Cultural and Baseball District taxes on those sales. To qualify, the organizations must hold IRS section 501(c)(3) qualification letters and have a Colorado exemption certificate.

If local jurisdictions wish to be consistent with the new state law and grant a similar exemption, they must pass a local ordinance or resolution allowing the special exemption. If not, charitable organizations will continue to be liable for collecting and remitting local tax and must obtain a state sales tax license. Local jurisdictions may refer to the statute §29-2-105 (1)(d) C.R.S. The legislation does not affect home rule cities.

If the charitable organization conducts sales for a total of 12 days or less during a calendar year, the sales are not subject to state sales tax. Proceeds from these events cannot exceed $25,000 in a calendar year. Otherwise, all sales *are* subject to sales tax. For example, if an organization raises $30,000 during its fundraising events, the entire amount is subject to state sales tax.

Funds raised through these events must be retained by the charitable organization and used in the course of the organization's charitable service to qualify for the exemption.

Colorado wins EFT Award

The Rocky Mountain Automated Clearing House Association (RMACHA) has named the State of Colorado as winner of the association's annual Payments System Excellence Award for its work with Electronic Funds Transfer (EFT). The Department of Revenue, the State Treasurer's Office and the Division of Accounts and Control are co-winners of the award.

RMACHA is a non-profit regional trade association for electronic payments in the Rocky Mountain area. Its member corporations and financial institutions are in Colorado, Wyoming and northern New Mexico.

RMACHA cited the state for its many uses of the ACH system and its leadership in implementing programs. DOR is involved with EFT wage withholding and other tax payments; lottery collections from retailers; city and county sales tax distributions; International Fuel Tax Agreement (IFTA) distributions to other states; and gaming tax payments in conjunction with Electronic Data Interchange (EDI), where the tax return is filed electronically.

There's help for Colorado entrepreneurs

If you have customers with questions on how to open a business in Colorado, there is help for you and them. The Department of Revenue has information specifically aimed at those who need a little extra assistance in starting a business.

The four-page publication addresses questions regarding trade name registrations, sales tax license requirements, special event licenses, basic wage withholding information and where to attend free sales tax classes.

To obtain free copies of the publication for your customers, call the Colorado Department of Revenue Forms Line at (303) 534-1408 and request ***For Your Information (FYI) General 14 "Opening A Business In Colorado" (DRP 1921).***

New Publication

A new quarterly publication on motor vehicle sales is available through the Colorado Department of Revenue's Tax Analysis office. The report, entitled ***"Colorado Front Range Motor Vehicle Sales,"*** contains information regarding rate of growth and sales of new and used motor vehicles for six Denver metro area counties. The information also covers Larimer, El Paso, Weld and Pueblo counties.

To be added to the mailing list for a free copy, call **Bennie Catuccio**, Tax Analysis, (303) 866-3089. Or, send your written request to:

Colorado Department of Revenue
Office of Tax Analysis
Attention: **Bennie Catuccio**
1375 Sherman St., Room 422
Denver CO 80261

Reminder . . .

Boat dealers are required to collect state and local sales tax at the time a boat is purchased. Anyone who purchases a boat from an individual who is not a dealer must submit Colorado use tax with a consumer use tax return (Form DR 252) to the Department of Revenue. The tax is computed on the purchase price of the boat. If use tax is not paid, the Department of Parks and Recreation notifies the DOR's Fair Share Unit. The Fair Share section sends written notification to the individual who has registered the boat that tax is due. However, keep in mind that a boat trailer is taxed like any other registered motor vehicle.

City & County Connections is published quarterly and mailed to city and county governmental officials. Questions and comments are welcome and should be sent to: City & County Connections, Colorado Department of Revenue, Room 242, 1375 Sherman St., Denver, CO. 80261.

Executive Editor, Dorothy Delquist
Editor, Terri Livingston

1995 Tax Seminars

The Department of Revenue has set its schedule for 1995 tax seminars. "New and improved" seminars will be offered to contractors and retailer/contractors; hotel/motel/eating and drinking establishments. Business tax and income tax seminars will also be held for tax practitioners. Sessions feature topics never before presented, as well as updates on problem areas. To reserve a place at any of the seminars, complete the registration form below. Cost for each seminar is $45. See the Calendar below for locations. If you have any questions about the seminars, contact **Judy Campbell, (303) 866-2421.**

Contractors Seminar

July 18	Grand Junction

Hotel/Motel & Eating/Drinking Establishments Seminars

July 11	Denver Metro North
July 13	Estes Park
July 21	Denver Metro South
July 25	Colorado Springs
July 28	Frisco

Business Tax Practitioners Seminars

Aug. 4	Denver Metro South
Aug. 10	Denver Metro North
Aug. 16	Denver Metro

Colorado Income Tax Seminars

Aug. 23	Denver Metro South
Aug. 29	Denver Metro North
Sept. 7	Denver Central
Sept. 12	Fort Collins
Sept. 22	Pueblo
Sept. 27	Colorado Springs

Motor Vehicle Notes

■ The "Lease and Rental Exempt" list, comprised of active leasing companies, updated monthly and sent out every six months by the Deparment of Revenue, is now available on Motor Vehicle's Colorado Registration Information System (CRIS) file for easy on-line access. For more information call your Distributed Data Processing (DDP) trainer.

■ Trucking businesses that have an Interstate Commerce Commission (ICC) number can qualify for a state sales tax exemption for long-distance and for hire vehicles. The exemption applies if possession of the vehicle is taken outside of Colorado and the vehicle is involved in continuous ICC activities such as hauling for hire. If possession of the vehicle is taken in Colorado, and a Colorado registration is requested, the sales tax exemption will **not** apply. If delivery of a vehicle is taken in Colorado, and the vehicle is removed within 45 days and registered outside Colorado to be used exclusively outside Colorado or in interstate commerce, the sale is not taxable. Information must be verified to a dealer through an affidavit from the buyer. The exemption applies only to the vehicles, not parts.

■ Under a new law, House Bill 95-1236 (§42-3-103 (4)(c) C.R.S.), effective March 31, 1995, nonresidents employed in Colorado will **not** have to re-register their motor vehicle here if their state extends the same policy to Colorado employees who work in their state. If a state does not follow the same guidelines as Colorado, nonresident workers will still have to re-register their motor vehicles here. According to Colorado Motor Vehicle law, a legal resident is a person who resides in the state for more than 90 days and is employed or owns a business here. Prior to the new law, anyone considered a resident had to re-register a vehicle that was used in the state.

City & County Tax EFT Transmission Due Dates

Electronic Funds Transfer (EFT) of taxes to local governments will occur on **Friday, June 9; Wednesday, July 12;** and **Wednesday, August 9.**

More than 150 local jurisdictions receive tax payments from the state via EFT each month. If your office is currently receiving payments by mail you may want to change to the EFT method for faster payment. Contact **Corky Lopez, (303) 866-4359** for more information.

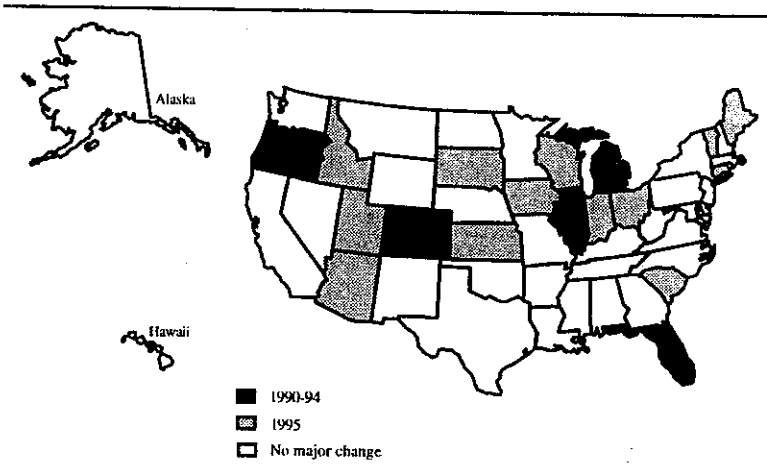
Property Tax Relief Programs

Interim Conference on
State and Local Tax Policy
October 5-6, 1995

Scott Mackey
Fiscal Affairs Program
National Conference of State Legislatures

National Conference of State Legislatures

Property Tax Relief in the 1990s



National Conference of State Legislatures

Property Tax Relief Programs

- Many variations in the states
- Fiscal structure dictates for programs
  - Local option tax alternatives
  - School finance system
  - Degree of Local Service Funding Responsibility
  - Low tax or high tax state

National Conference of State Legislatures

Property Tax Relief Programs

- Direct relief programs
  - Relief provided directly to taxpayer
- Indirect relief programs
  - Relief provided to local governments, reducing property tax burden

National Conference of State Legislatures

Direct Property Tax Relief Programs

- Circuitbreaker programs
- Homestead exemptions and credits
- Tax deferral programs

National Conference of State Legislatures

Circuitbreaker Programs

- Direct state payment to taxpayer, based upon income and property tax burden
- 31 states (most for elderly & disabled only)
- Cost to states ranges from $0.18 per capita to $42 per capita ($154 million in Colorado)

National Conference of State Legislatures

Circuitbreaker Programs

- Pros
  - Relief targeted to low-income households, including renters
  - No local government revenue loss
- Cons
  - General fund cost can be high
  - May increase local spending
  - Relief not provided to middle class

Homestead Exemptions

- Exempt portion of home value from taxation
- Most targeted to elderly and disabled
- Income tested (17 states)
- Non-income tested (22 states)

Homestead Exemptions

- Pros
  - Automatic (taxpayer doesn't need to apply)
  - No state revenue loss
  - Shift burden to non-residential property
- Cons
  - Erode local tax base
  - Non income tested programs provide relief to wealthy and poor alike
  - No relief for renters

Deferral Programs

- Defer tax liability until death or sale of home
- Targeted to low income elderly (16 states)
- No income cap in 5 states

- Private sector: reverse mortgages

Deferral Programs

- Pros
  - Cost effective, tax relief cost recouped
  - Solves problem of elderly losing homes
- Cons
  - Low participation rates

Indirect Property Tax Relief

- Property tax classification
- Earmarking/tax sharing
- Assume local service responsibility
- Structural tax shift/ K-12 finance reform

Property Tax Classification

- Set differential ratios for determining assessed value
- 16 states (Colorado: Gallagher Amendment)
- Used to shift tax burden to non-residential property; utility property generally faces highest rates

National Conference of State Legislatures

Property Tax Classification

- Pros
  - Protects residential property owners
- Cons
  - Confusing to taxpayers
  - Shifts burden to businesses
  - Relief not targeted to need

National Conference of State Legislatures

Earmarking / Tax Sharing

- 46 states earmark for local governments
- 30 states earmark for education
- Alternative to local option taxation

Earmarking/Tax Sharing

- Pros
  - Distribution can be equalized
  - Interjurisdictional competition minimized
  - Administrative efficiency
- Cons
  - Taxing divorced from spending
  - Reduces local control

Assume Local Funding Responsibility

- Iowa -- 1995 -- assumed mental health costs
- Minnesota & Maryland- early 1990s -- assumed additional court system costs

Structural Tax Shift / School Finance Reform

- Pros
  - Equalize funding (court pressure)
  - Reduce property tax reliance
- Cons
  - State tax sources less stable
  - Sales tax not deductible
  - Local control

Recent State Reforms: Michigan

- Sales tax increased (4% to 6%)
- Cigarette tax up 50 cents
- Repealed local school taxes on residential (mandatory 18 mills on non-residential)
- Imposed statewide property tax (6 mills)
- Capped assessment growth at 5%

Michigan Tax Reform (cont)

	Est. FY 1993-94	Est. FY 1994-95 (after Proposal A)
Local property tax revenue	$ 6,175	$ 2,053
State revenue		
Statewide education property tax	0	1,061
Other state funds	3,644	7,130
Subtotal state revenue	$ 3,644	$ 8,191
Total school revenue*	$ 9,819	$ 10,244

*Excludes federal funds, local revenues levied for capital projects, and transitional payments.
Source: MI Senate Fiscal Agency, 10/94.

Recent Changes: South Carolina

- 1995 Homestead Exemption
  - Voter anger over assessment increases
  - Residential homestead exemption of $100,000 for school taxes only
  - $200 million cost from general fund
  - No new taxes
  - County, municipal spending limited

Recent Changes: Wisconsin

- Capped school district revenue
- Increased state K-12 funding share from 45% to 67% ($900 million)
- Cut state spending by $250 million
- No tax increase

Conclusion

- Many options available
- Most will require new state $
- Public consensus necessary due to voter approval requirement

State Actions to Provide Property Tax Relief
1995 Legislative Sessions
(as of July 10, 1995)

Arizona	Appropriated $214 million for property tax relief in 1996, with specifics to be determined later; adopted a $31 million cut in personal property taxes paid by businesses.
Connecticut	Continued 5-year phase out of personal property tax on automobiles.
Georgia	The legislature approved a major income tax credit for property taxes paid, capped at 10% of property tax or at $250, whichever is smaller, on residential property. **Vetoed by Governor.**
Idaho	Adopted governor's proposal to reduce property taxes ($40M) by assuming more local school levy costs. The relief represents an approximate 6% cut in property taxes and will be spread out among all property tax payers. Because homeowners account for 30 percent of the total property taxes paid annually, $12 million of the relief will be allocated to them.
Indiana	Began six-year phase out of automobile excise tax, effective 1/96; first year tax cut of ($25.2) million in FY96 and full impact of ($133.7) million when fully phased-in in FY2001
Iowa	Repealed machinery and equipment property tax on property first assessed after 1/95. Phased out tax on existing equipment as follows: through FY2000, 30% of net acquisition cost (current law); FY2001, 22%; FY 2002, 14%; FY 2003, 6%; FY2004 and thereafter, 0%. State to replace local revenue at estimated cost of $200 million over 10 years. State assumed 50% of mental health costs from counties, reducing county costs by $61 million in FY 1996, $78 million in FY 1997, and $95 million in FY 1998.
Kansas	Approved a phased reduction in personal property tax on automobiles.
Maine	Expanded eligibility for circuitbreaker program
Ohio	Increased the maximum income levels for eligibility for homestead exemption; full year cost of $26 million.
South Carolina	Appropriated $195 million for property tax relief; provision creates a homestead exemption for school taxes that will average $100,000
South Dakota	Governor signed the bill raising cigarette excise taxes by 10 cents per pack and placing a 10% tax on the wholesale purchase of other tobacco products (rev=$5-6M FY96) and to reduce the number of sales tax exemptions (rev=$22.5M) in order to fund property tax relief this session. Property taxes will be frozen at 1995 levels and a fund created to reduce residential and farm property taxes in the state through payments to local units of government (provision included in HB 1352).
Utah	The legislature approved a $90M property tax cut that would raise the homeowner s exemption from 32 to 45 percent and reduce the rate of the statwide property tax to avoid a windfall from rising property values.
Vermont	Increased maximum income and maximum benefit for state circuitbreaker program
Wisconsin	Increased state share of school spending from 54% in FY1995 to 67% in FY1997 by cutting state spending by $200 million and putting another $300 million in revenue growth entirely into state aid; also continued caps on school district spending

Maine (program 2)*	■	■	$25,800	$500
Maryland	■	■	*	
Michigan	■	■	$82,650	$1,200
Minnesota	■	■	$59,999	$400
Missouri		■	$15,000/$17,000	$750
Montana		■	None	$400
Nevada		■	$19,100	$500
New Jersey (program 1)		■	$100,000	$500
New Jersey (program 2)	■	■	$40,000	$90
New Mexico		■	$16,000	$250
New York	■	■	$18,000	$75/$375*
North Dakota		■	$13,000	$2,000
Oklahoma		■	$10,000	$200
Pennsylvania		■	$15,000	$500
Rhode Island		■	$12,500	$200
South Dakota		■	$12,000	*
Utah*		■	$18,400	$475
Vermont	■	■	$45,000	$1,350
West Virginia		■	$5,000	$125
Wisconsin	■	■	$19,154	$1,160

**Notes:*

California—96 percent of tax on first $34,000.

Kansas—All households with dependent children under 18 qualify.

Maine—If a taxpayer qualifies for both programs, the larger benefit applies.

Maryland—Homeowners with net assets of less than $200,000 qualify for the program. The credit may not exceed taxes paid on the first $60,000 assessed valuation.

New York—Elderly homeowners may qualify for the maximum benefit of $375; others receive up to $75.

South Dakota—100 percent of taxes due for paraplegic veterans; tax reduction based upon income for paraplegic non-veterans.

Utah—Each county determines the number of relief programs available to eligible taxpayers.

*Notes:

Alaska—Benefit and income guidelines vary depending upon local mill levy.

Hawaii—The renter credit is $50 per qualified exemption; the credit is doubled for renters age 65 and older.

Kansas—All households with dependent children under 18 qualify.

Maryland—Renters with net assets of less than $200,000 qualify.

Minnesota—Landlords submit estimates of property tax rent equivalent paid by tenants.

New York—The maximum benefit of $375 is for elderly taxpayers; all others qualify for up to $75.

Utah—Property tax rent equivalent ranges from 95 percent for incomes below $5,600 to 25 percent for incomes between $14,801 and $18,400.

Wisconsin—25 percent if heat is included in the rent.

Table 4.4
State Homestead Credit and Exemption Programs Without Income Eligibility Guidelines: 1994

State	Dollar Value of Exemption for Elderly Homeowners	Dollar Value of Exemption for All Homeowners
Alaska	$150,000	$10,000(L)
Arizona (school)*	35% of tax	35% of tax
California*	$7,000	$7,000
District of Columbia	$30,000	$30,000
Florida	$25,000	$25,000
Hawaii	*	$40,000
Idaho	*	*
Illinois	$16,500	$16,500
Indiana*	4% of tax	4% of tax
Iowa	$4,850	$4,850
Kentucky	$21,800	—
Louisiana (all taxes except municipal)	$75,000	$75,000
Massachusetts	$2,000	—
Minnesota	*	*
Mississippi	Up to $240 tax and $60,000	Up to $240 tax
New Mexico	$6,000	$6,000
Ohio*	12.5% of tax	12.5% of tax
Oklahoma*	$8,333	$8,333
South Carolina	$20,000	—
Texas (school)	$15,000	$5,000
Texas (other local)*	$3,000	$3,000
West Virginia	$33,300	—
Wisconsin (school)	$5,900	$5,900

(L) = Local option program

**Notes:*

Arizona—Maximum tax rebate is $500.

California—The exemption can increase up to $150,000 if household income is less than $24,000.

Hawaii—Age 55 to 59-$60,000; age 60 to 64-$80,000; age 65 to 69-$100,000; age 70 and over-$120,000.

Idaho—Exemption is lesser of $50,000 or 50 percent of value for residential improvements.

Indiana—Local option to increase homestead credit to 8 percent of tax. See table 4.5 for additional exemption. Available to low income elderly and disabled.

Minnesota—Minnesota's homestead exemption program is integrated with its property tax classification system.

Ohio—Additional exemptions for qualifying elderly and disabled homeowners are listed in table 4.5.

Oklahoma—An additional $1,000 assessed value exemption is available for households with incomes below $10,000.

Texas—Additional local option of up to 20 percent assessed value.

Source: NCSL survey, summer 1994.

Table 4.5
State Homestead Credit and Exemption Programs
With Income Eligibility Guidelines: 1994

State	Dollar Value of Exemption for Elderly Homeowners	Dollar Value of Exemption for All Homeowners	Income Cap
Alabama (state)	Full	$40,000	$12,000*
Alabama (local)	$50,000	$20,000	$12,000*
Delaware (non-school)	$5,000 (L)	—	$3,000
District of Columbia	Up to 50% of tax	—	
Georgia (local)	$10,000	$5,000	$10,000
Georgia (school)	$25,000	$5,000	$10,000
Indiana*	$9,000	$6,000	$15,000
Montana	Up to $80,000	Up to $80,000	$16,034
Nebraska*	80% of AV	—	$23,000
New Hampshire	$5,000	—	$6,000*
New Jersey	$250 tax	—	$10,000
New York	Up to 50% AV (L)	—	$16,500
North Carolina	$13,000	—	$11,000
North Dakota	$44,000	—	$13,500
Ohio*	$14,285		$16,500
Tennessee	$15,000	—	$10,000
Utah	50% of tax up to $300 (L)	—	$18,400
Virginia	Up to 100% AV(L)	—	$30,000
Washington (local)*	$34,000	—	$18,000

(L) = Local option program
AV = Assessed value

**Notes:*

Alabama—Income cap applies to full exemption for elderly. Elderly with adjusted gross income less than $7,500 receive full exemption from local taxes.

Indiana—See table 4.4 for homestead credit program available for all homeowners.

Nebraska—Exemption varies with income and is capped at $40,000.

New Hampshire—Elderly homeowners receive $5,000 exemption if income is below $6,000 and asset value is below $35,000.

Ohio—Elderly receive the $14,285 exemption plus the 12.5% homestead credit available to all homeowners (see table 4.4).

Washington (local)—Exemption varies with income; amounts shown are the maximum benefit and the maximum qualifying income level.

Table 4.9
Property Tax Deferral Programs for Elderly Homeowners: 1994

State	Income Cap	Amount of Deferral
California	$24,000	All tax due.
Colorado	None	All tax due; market value cannot exceed liens.*
District of Columbia	None	Taxes above 110 percent of prior year liability.
Florida	None	Taxes exceeding 5 percent of income (elderly, 3% of income). Full deferral for incomes below $10,000.
Georgia	$15,000	Taxes on first $125,000 market value.
Illinois	$25,000	All tax due.
Iowa	*	All tax due.
Maine	$32,000	All homestead property taxes due.
Maryland*	None	Local option program. Full deferral for disabled elderly.
Massachusetts	$20,000	Taxes on first 50 percent of applicants' interest in the property.
Michigan	$15,000	Special assessments over $300 are eligible for deferral.
New Hampshire	None	Local option program; defer 85 percent of tax.
North Dakota	$13,000	All special assessments.
Oregon*	$19,500	All special assessments and homestead property tax.
South Dakota	None	All tax due.*
Tennessee	$12,000	Local option program. Taxes on first $60,000 market value. For homes under $50,000 market value, defer all tax above 1979 levels.
Texas	None	All tax due.
Utah	$17,850	Local option program.
Virginia	$30,000 (L)	All tax due.
Washington	$30,000	Tax on first 80% of equity value.
Wisconsin	$20,000	Up to $2,500.
Wyoming	150% of poverty level	50 percent of tax.

(L) = Local option program, 1994.

**Notes:*

Colorado—Additional local option deferred if tax is 130% or greater than prior year liability. Additional local option program to work to pay off tax liability.

Iowa—Must meet federal SSI eligibility guidelines or local option income guidelines.

Maryland—Applicants must meet local income eligibility guidelines and have lived in their home for five years or more.

Oregon—Maximum income for new applicants is $19,500. Once in the program, federal adjusted gross income must be below $24,000. Special assessment deferred limit is $17,500 for new applicants and no income limit once in the program.

South Dakota—Applicants must be age 70 and over and have owned their home for at least 3 years and have lived in the state for at least 5 years to qualify. A lien must be paid, together with 6 percent interest, when home is sold or transferred.

Notes:

a. General revenue sharing of 6.1% combined sales and income tax revenue was delayed until FY 1994.
b. Amount earmarked will not fall below 45.0%, but is capped at $9.8 million.
c. Distributed among levels of local government by some method such as share of property value.

Case Study for the State Tax Structure

Case Study Problem

Assume that Congress enacts certain income tax changes that reduce the state's taxable income base (which is based on federal taxable income with some Colorado modifications) and thus result in $250 million less in Colorado income taxes beginning in fiscal year 1996-97. The revenue loss is expected to increase by seven percent annually. The reduction in the tax base could result from a number of proposals currently under consideration: adopting a liberalized treatment of capital gains income; moving toward a flat tax concept that increases the personal exemption and/or standard deduction; or adopting a liberalized IRA, for example. Although the state is currently projected to have healthy general fund surpluses, the $250 million ongoing revenue reduction would quickly put the state in a difficult position. Table 1 indicates that the state would be unable to meet its statutory reserve requirement in fiscal year 1996-97, then would have revenue shortfalls that would build to $210.3 million by fiscal year 2000-01. By Constitution, the state is not allowed to go into deficit. Meanwhile, as Table 2 shows, Colorado would need to rebate revenues under the provisions of Article X, Section 20 of the Constitution starting in fiscal year 1998-99. What action, via reductions in expenditures and/or increases in revenues, should the General Assembly take to avoid a deficit?

Background

The state individual income tax comprised 53.1 percent of gross General Fund revenues in fiscal year 1994-95. The income tax had the highest growth rate of any revenue source during the past ten years. Increasing demands to fund prison construction and operations, kindergarten-12 education, and, possibly, highway needs fall heavily upon the ability of the state income tax to reliably provide the funds. Meanwhile, a number of federal proposals may shift further cost burdens to the state to provide increased welfare and Medicaid benefits.

The Linkage

The Colorado individual income tax is linked to the federal income tax via its definition of taxable income. The state starts with the federal definition of taxable income and makes some modifications in order to derive its income tax base for both individuals and corporations. Thus, any Congressional changes that alter the definition of federal taxable income also affect Colorado revenues. The advantages of such a link to the federal system are the provision of consistency in the treatment of income and deductions in Colorado and federal tax laws, the simplification of compliance for the state's taxpayers, the increased ability to assure compliance with the tax, and ease of administration of the tax by the Department of Revenue. However, the disadvantage of such a system is that the federal

government frequently tinkers with federal tax law; thus, the predictability and reliability of state income tax revenue is diminished. Simple changes at the federal level may cause significant impacts on state revenues. Therefore, this lessens the state's control over its tax policy.

Past Federal Tax Changes

There have been a number of federal tax law changes that affected state tax revenues in the last fifteen years. The **Economic Recovery Tax Act of 1981** (ERTA) lowered federal income tax rates and thus federal taxes over a four-year period. At that time, Colorado allowed federal taxes as a deduction on the state tax return. The lower federal taxes after passage of ERTA increased taxable income (by reducing the value of its deductibility) and therefore bolstered Colorado income tax receipts. Colorado has not allowed the federal tax as a deduction since 1987; thus, changes in federal tax rates no longer directly affect Colorado income taxes. It should also be noted that federal tax credits have no direct impact on Colorado income taxes. Another portion of ERTA established the deductibility of individual retirement accounts (IRAs) up to $2,000 per individual. Conformity to the federal tax base on deductibility of IRAs alone caused an estimated $25 million annual revenue loss to the General Fund through fiscal year 1985-86.

The **Federal Tax Reform Act of 1986** had a much larger impact on state revenues. The base-broadening provisions of the Act would have created windfall revenues to the state of $300 million annually if no action had been taken to change the state tax code. In response, the General Assembly enacted the Colorado Income Tax Act of 1987. The Act kept approximately $100 to $110 million of the windfall revenues, enacted a single rate of taxation on individual income and phased-in a single rate of taxation on corporate income, and further simplified Colorado income tax laws.

Annual **indexation** of the federal personal exemption and standard deduction values to the national inflation rate, which began in 1988, affects our income tax collections in a number of ways. Indexation lowers the tax base and negatively impacts revenues to a slight degree. In addition, if the national inflation rate is higher than the Colorado inflation rate, the growth rate of inflation-adjusted state individual income revenues will be lower than otherwise would be the case. This is because the base would be reduced via exemptions and deductions at a greater rate than local inflation. In nine of the last 15 years, the Denver-Boulder inflation rate has been below the national rate of price increases.

Since the 1986 Act, federal government income tax changes have affected state revenues to a much smaller degree. Tax policy changes in 1991 primarily dealt with liquor, cigarette, gas, and other excise taxes. However, high income taxpayers had limitations placed

on the values of their itemized deductions and personal exemptions. These limitations increased state income tax receipts. Meanwhile, in 1993, changes in income tax policy primarily revolved around higher tax rates, rather than changes in the base. There were some base changes however — reduction of business-related travel and entertainment deductions and taxation of Social Security benefits for upper income retirees — that altered the taxable income base.

Current Proposals

Congress is currently discussing many income tax code changes that may significantly alter the state's tax base and revenues. For example, provisions of the House version of tax reform would reduce state tax revenues by an estimated $57 million in fiscal year 1999-00 and by $128 million when fully implemented in fiscal year 2004-05. Meanwhile, one of the flat tax proposals currently in Congress has been estimated to reduce the state's income tax revenues by as much as 50 percent. A proposal to repeal the federal income tax and replace it with a national sales tax or a value-added tax would completely remove the state income tax as a source of revenue.

The situation today is different from that of 1987 in two ways:

- In 1987, the General Assembly was faced with federal tax law changes that increased revenues absent any action, whereas current proposals would reduce revenues, perhaps significantly.

- Today, Section X, Article 20 of the State Constitution requires a vote of the people in the event that tax policy is altered to increase revenues. Thus, any action to shore up revenues by the General Assembly would likely need approval by voters.

Article X, Section 20

Under Article X, Section 20 of the State Constitution, state government revenue growth is restricted to the combination of inflation and population growth from the prior year. The September 1995 Legislative Council revenue forecast estimates that state revenues will exceed their limits in fiscal years 1998-99 through 2000-01. This situation is not alleviated by the annual $250 million reduction in revenues. The initial revenue reduction lowers the base from which growth is allowed in the first year. Thereafter, revenue growth will be similar to that which existed prior to the revenue reduction, and thus will still outpace its constitutional limit in fiscal years 1998-99 through 2000-01. Excess revenues will reach $152.1 million by fiscal year 2000-01. The constitutional spending limitation requires that excess revenues be returned to the taxpayers or that the state ask the voters to keep these funds.

NA: Not Applicable.
Totals may not sum due to rounding.
Note: These figures are based upon Legislative Council staff's September 1995 revenue forecast, adjusted $250 million lower beginning in fiscal year 1996-97 for federal tax changes.

/A In FY 94-95, $75 million of the $109.7 million transfer to the Capital Construction Fund comes from the reserve. Meanwhile, in FY 95-96, $25 million of the $50 million transfer comes from the reserve.

/B S.B. 93-7 allows a transfer of 50 percent of the revenues in excess of expenditures and the statutorily required reserve to the Controlled Maintenance Trust Fund (CMTF), up to $50 million, in January of the following fiscal year, beginning in January 1995. H.B. 95-1359 transfers $176 million to the Controlled Maintenance Trust Fund in addition to the 50% excess funds transfer in FY 95-96. Beginning in FY 96-97, the principal of the CMTF may serve to fulfill some portion of the emergency reserve required by the State Constitution and may only be spent for emergency purposes as cited by statute.

/C Rebates and expenditures (including Old-Age Pension Fund expenditures) are appropriated from the General Fund, but are not subject to the provisions of Section 24-75-201.1, C.R.S. (the appropriations limit and the calculation of the reserve).

/D H.B. 95-1352 transferred money to the Capital Construction Fund for the building of prisons through FY 95-96. The bill also states that it is the intent of the General Assembly to transfer the funds noted in FY 96-97 and FY 97-98, but does not specifically direct said transfers be made. Nonetheless, these figures are included in the analysis.

/E Includes $3.4 million in appropriations that were exempt from the statutory appropriations limit. A court order was the primary reason for the exemption.

/F H.B. 95-1174 transfers $75 million to the Capital Construction Fund on July 1, 1995 for the purpose of state highway maintenance and construction.

/G Includes $24.4 million in appropriations that are exempt from the statutory appropriations limit because they represent court settlements.

/H In FY 94-95, the General Assembly designated $108.8 million from various funds to satisfy the emergency reserve requirement. This was a sufficient reserve for such purposes at the time of planning. Upon closure of the books, the amount necessary for the reserve increased, but the state had ample funds to meet the requirement. In the Long Bill for FY 95-96 appropriations, the General Assembly designated $176.9 million as the emergency reserve. Based upon the current estimates, the state will need more money for the emergency reserve in FY 95-96 than designated, but there are sufficient funds to meet such needs. In addition, the General Assembly directed that a transfer of $176 million be made from the General Fund to the Controlled Maintenance Trust Fund (CMTF) on June 30, 1996. Beginning in FY 96-97, the principal of the CMTF may be used as full or partial satisfaction of the constitutional emergency reserve requirement for Cash and General Funds. Thus, starting in FY 95-96, the principal of the CMTF is reported as the reserved amount. It is assumed that the General Assembly makes the transfers to the CMTF that are allowed, but not specifically directed, by statute.

Totals may not sum due to rounding.

Note: Article X, Section 20 of the State Constitution broadly defines spending such that expenditures are equal to revenues. The statutory 6 percent limit applies to the General Fund appropriations only. Thus, the two concepts are not directly comparable. These figures are based upon Legislative Council staff's September 1995 revenue forecast, adjusted $250 million lower beginning in fiscal year 1996-97 for federal tax changes.

/A In FY 94-95, the General Assembly designated $108.8 million from various funds to satisfy the emergency reserve requirement. This was a sufficient reserve for such purposes at the time of planning. Upon closure of the books, the amount necessary for the reserve increased, but the state had ample funds to meet the requirement. In the Long Bill for FY 95-96 appropriations, the General Assembly designated $176.9 million as the emergency reserve. Based upon the current estimates, the state will need more money for the emergency reserve in FY 95-96 than designated, but there are sufficient funds to meet such needs. In addition, the General Assemby directed that a transfer of $176 million be made from the General Fund to the Controlled Maintenance Trust Fund (CMTF) on June 30, 1996. Beginning in FY 96-97, the principal of the CMTF may be used as full or partial satisfaction of the constitutional emergency reserve requirement for Cash and General Funds. Thus, starting in FY 95-96, the principal of the CMTF is reported as the reserved amount. It is assumed that the General Assembly makes the transfers to the CMTF that are allowed, but not specifically directed, by statute.

/B In years where the projected revenues exceed the amount allowed by the Constitution, the reserve is calculated based on the limit, rather than on projected receipts. Given that the state will only spend the maximum allowed by the Constitution, it need only reserve three percent of such amount.

/C These figures differ from the General Fund revenues reported in previous tables because they net out revenues that are already in the Cash Funds to avoid double counting. For instance, the gaming revenues, unexpended prior-year Medicaid expenditures that are booked in "other revenue," and transfers of unclaimed property are netted out.

Case Study for the Local Tax Structure

Case Study Problem

Property revenues in Roosevelt County have decreased about 1.35 percent since 1991. During the time of the decrease in property taxes, inflation increased 12.9 percent and the county's population grew by one-third. Projections for the future indicate that the assessed value of the county will remain relatively stable, even with the construction of new homes. The county commissioners have maintained a lean budget and spent reserves to compensate for the decrease in revenue, but now believe additional revenues are necessary to maintain services, both those required by the residents of the county and those mandated by the state.

The county commissioners are in a dilemma. While property taxes are the mainstay of the county budget and an election to increase the mill levy would be an option, a survey of the county residents indicated that a mill levy increase would be unpopular. The county would also be competing with a school district that is holding an election for additional mills in one portion of the county. Roosevelt County has the ability to request voter approval for a county sales tax, but, because of the lack of a retail sales base, a high rate (at least 2 percent) would be required to fund outstanding needs. Because of the statutory limit on sales tax rates, Roosevelt County would only be allowed 1.5 percent, however. In addition, the cities and businesses in the county are balking at a county sales tax. The city councils believe the county would be infringing on their revenue source, while both the cities and businesses fear that the rate increase will make purchases in their areas more expensive relative to a neighboring city in the adjoining county.

The county commissioners, believing that only the state can solve this conundrum because of constitutional and statutory provisions, come to you as a member of the General Assembly for relief. What action should the General Assembly take?

Background — Property Taxes

The State Constitution governs both the valuing of property for taxation purposes and the maximum amount of property taxes that can be collected without voter approval. Constitutional provisions related to the former are contained in Article X, Section 3, which includes the so-called Gallagher Amendment, while tax rates are addressed in Article X, Section 20, which was adopted by the electorate in 1992 as Amendment 1. To some extent, Amendment 1 also addresses valuation procedures. Both of these constitutional sections are discussed in the following paragraphs in conjunction with the Roosevelt County situation.

Valuation of Property

Unless specifically exempted by the Constitution, all real and personal property in the state is taxable. The market approach to valuing property is used to determine the *actual* value of residential property; the cost, market, and income approaches, as appropriate, are used to determine the actual value of most other property. Once the value of property is ascertained, an assessment rate is applied to compute the *taxable value* of property. The taxable value is referred to as the assessed value.

Article X, Section 3 of the State Constitution established the initial assessment rate for residential property at 21 percent of its market value. The assessment rate for most other property (excluding oil and gas and producing mines) is 29 percent of value. However, this section of the constitution also contains a provision, frequently referred to as the Gallagher Amendment, which requires the General Assembly to adjust the residential assessment rate, after accounting for new construction and changes in oil and gas production, to maintain the proportionate shares of residential and nonresidential property. As a result of this requirement, the residential assessment rate has been reduced from the previously mentioned 21 percent to 10.36 percent in 1995.

Roosevelt County

The effect of the reduction in the residential assessment rate differs depending upon the circumstances of a taxing jurisdiction. Roosevelt County is experiencing growth in the market value of its residential property tax base. Since 1987, the market value of residential property has almost doubled. While the value of existing homes has certainly increased, the tax base has also grown with new home construction. The expansion of residential development is evidenced by the increase in the county's population over the last seven years. However, although the *market* value of Roosevelt County's residential tax base has almost doubled since 1987, the *taxable* value of homes has increased only one-third because of the decline in the residential assessment rate. In three of the years since 1987, the taxable value of residential property actually decreased.

In conjunction with the construction of new homes in the county, the taxable value of nonresidential property has decreased one-third. New homes in the county are displacing vacant lands which are assessed at the higher, 29 percent rate. Interestingly, in 1987 when the market value of residential and nonresidential property was approximately equal, nonresidential property had almost two times the taxable property as residential property. In 1994, residential property is almost three-quarters of the market value but just over one-half of the taxable property.

The result of the interactions between the residential assessment rate, the growth in residential property, and the decline in nonresidential property has been a decrease in the county's taxable value in five of the years since 1987. The total taxable value is now about 10 percent less than what it was seven years ago. Table 1 illustrates these facts.

Table 1
Historical Perspective of Roosevelt County's Tax Base

(1)	(2)	(3)	(4)	(5)	(6)	(7)
Year	Residential Market Value *($ in millions)*	Residential Assessment Rate	Residential Assessed Value *($ in millions)*	Nonresidential Assessed Value *($ in millions)*	Total Assessed Value *($ in millions)*	Percent Change
1987	180.2	18.00%	32.4	62.6	95.0	N/A
1988	194.2	16.00%	31.1	58.0	89.0	-6.30%
1989	204.2	15.00%	30.6	57.1	87.8	-1.43%
1990	215.2	15.00%	32.3	57.5	89.8	2.34%
1991	219.7	14.34%	31.5	55.2	86.7	-3.42%
1992	228.0	14.34%	32.7	51.3	84.0	-3.13%
1993	303.5	12.86%	39.0	42.6	81.6	-2.91%
1994	342.3	12.86%	44.0	41.5	85.6	4.89%
Change						
Actual	162.1	-5.14%	11.6	(21.0)	(9.4)	N/A
Percent	89.94%	-28.56%	35.70%	-33.60%	-9.94%	N/A

The projected trend for the residential assessment rate is a continued decrease: from the current 10.36 percent to 9.82 percent in 1999. Section 20 of Article X of the State Constitution (Amendment 1) requires voter approval for any increase in an assessment rate.

Maximum Property Tax Collections

Article X, Section 20 of the State Constitution includes both a tax rate and revenue limitation on property taxes. This section of the constitution prohibits a mill levy increase without prior voter approval, and it restricts changes in property tax revenue to inflation plus the percentage change in the tax base (actual value). As with the tax rate limitation, a taxing jurisdiction may exceed the revenue limit with voter approval. The net effect of the two provisions is that the lesser property tax amount prevails. In taxing jurisdictions where the prior year's levy would produce less revenue than the property tax revenue limit, the taxing entity would levy the prior year's rate. In a jurisdiction in which the prior year's levy would generate more revenue than allowed under the property tax revenue limit, a taxing entity would be required to reduce its levy. These limitations on property taxes were effective with the 1992 mill levy certifications for property taxes collected in 1993.

Roosevelt County

Since Roosevelt County has experienced relatively stable or declining assessed value since the passage of Amendment 1, the mill levy limitation has been controlling in determining the county's property tax revenues. Table 2 illustrates the impact of maintaining a constant levy in a declining assessed value environment.

Table 2
Assessed Value and Property Tax Collections
in Roosevelt County

Year	Assessed Value *($ in millions)*	County Mill Levy	County Property Taxes	Percent Change
1987	$95.0	25.763	$2,447,794	N/A
1988	89.0	29.572	2,632,766	7.56%
1989	87.8	30.051	2,637,065	0.16%
1990	89.8	29.936	2,688,552	1.95%
1991	86.7	32.305	2,802,103	4.22%
1992	84.0	32.305	2,714,525	-3.13%
1993	81.6	32.305	2,635,571	-2.91%
1994	85.6	32.305	2,764,339	4.89%
	$ change since 1991		($37,764)	
	% change since 1991		-1.35%	

As Table 2 illustrates, Roosevelt County levied its 1991 millage in the three years since enactment of the constitutional amendment. In two of the three years, assessed value declined and so did property taxes. Prior to the adoption of Amendment 1, Roosevelt County had the option of increasing its mill levy to maintain or increase property tax revenues. In 1988 and 1989, the county increased its levy in the face of declining assessed value. In 1994, property taxes increased in conjunction with an increase in the assessed value. However, even with the increase in property taxes in 1994, 1994 collections remained below those of 1991 by 1.35 percent.

Background — Local Sales Tax Limitations

With certain specified exceptions, state law limits the total sales tax rate imposed in any jurisdiction to 7 percent. This 7 percent rate includes the state and any city or county sales tax rates. The percentage limitation cannot preclude a county from having a sales tax of up to 1 percent.

Roosevelt County

Two cities in Roosevelt County impose a sales tax: the City of Franklin imposes 2.5 percent, while Theodore levies a tax of 1.5 percent. The combination of the higher city sales tax rate (2.5 percent in Franklin) and the state rate (3.0 percent) results in a current rate of 5.5 percent in Franklin. Thus, Roosevelt County is limited to a tax of 1.5 percent.

MEMORANDUM

October 19, 1999

TO: Senator Ron Teck

FROM: Ron Kirk, Research Assistant, (303) 866-4785

SUBJECT: Governor's Local Affairs Study Commission

This memorandum provides information on the 1963 study of local governments. In 1963, House Bill 63-466 directed Governor John A. Love to appoint a 100-member commission to study the organizational and fiscal problems of local governments. Both urban and rural governments were studied along with their relationship to each other. The study was performed by the Governor's Local Affairs Commission and interim reports were provided to the legislature in 1964 and 1965. The final report and recommendations were submitted in June 1966.

Governor's Local Affairs Study Commission

Three main committees made up the 100-member commission. The three committees that made up the commission were the Metropolitan, State-Wide, and Finance committees. Each committee focused on a specific area of study and organized its own approach to its task.

The Metropolitan Committee directed its attention toward the Denver urban community and looked at how well local governments worked together. The committee also evaluated the provision of services by interviewing citizens to find out what they expected from their governments. For the communities that were evaluated, the commission based its recommendations on growth projections and demographic trends.

A State-Wide Committee studied local governments outside the Denver area and solicited input from citizens by holding regional hearings throughout Colorado. Committee members evaluated the structure and operations of local governments. The Final Report of the commission stated that the committees developed proposals for solutions that quickly became law. For example, the Municipal Annexation Act of 1965 gives municipalities with comprehensive governments the ability to extend their boundaries to provide more services to urban and rural communities.

The third committee of the commission was the Finance Committee. The first task of the committee was to review all local government budgets during a specified period preceding the study. Originally, the committee intended to evaluate the most logical sources of revenue for local

governments, but it became evident that citizens must first decide what they need from government before the source of funds and methods of spending could be recommended.

Each of the three committees worked under a set of rules developed and adopted by its members. For example, when a committee completed a portion of its study, a preliminary report would be written on the facts and findings for a specific area of study. This report would also contain a specified course of action found in the committee's recommendations. According to the commission, the study on the structure of local governments was built on a foundation of factual information based on public input.

The final report looked at the organization of municipalities, counties, special districts, and other government structures and how growth impacted the provision of services. On the fiscal side, the Finance Committee gathered data on population, property taxes, tax bases, revenues, expenditures, local highway financing, public welfare, and other tax-related data. Table 1 summarizes the structure of the commission and the different areas of study evaluated by each committee.

Table 1
Structure of Commission and Areas of Study

Committee	Metropolitan	State-Wide	Finance*
Structure	100 members		
Plan	interim reports provided in 1964 and 1965, final report and recommendations submitted in June 1966		
Study	3 years		
Cost	approximately $1.4 million (in 1999 dollars)		
Areas of Study	organizational problems of municipalities and urban growth	structure of local governments; services provided by special districts; home rule cities; intergovernmental relations; powers and limitations of local governments; state responsibility to local governments; and cooperation between state and local governments	population; property taxes; tax bases; revenue and expenditures; local highway financing; public welfare; per capita income and taxes; tax incidence; federal and state aid to schools; taxes paid by citizens to federal, state, and local governments; and federal grants-in-aid

*** Note: The Finance Committee compiled data but did not analyze it nor were any conclusions drawn from the data. It was primarily collected for the commission's use and factual purposes.**

Commission results and legislation. Each of the proposals directed to the General Assembly from the commission was reviewed by all 100 members of the commission. The commission reported that the General Assembly was very responsive to the acceptance of the study results. In 1965, of 13 commission proposals, 10 were adopted by the legislature. In 1966, the legislature adopted both of two proposals recommended by the commission.

According to the commission, as a result of the study, individual legislators became more aware of the problems in their districts and the related problems of other communities. Representatives of rural areas gained a new insight into urban problems. Input from citizens gave local government officials the opportunity to examine their own governments. Some communities benefitted by using commission data to develop their own community studies. Table 2 summarizes the 1965 and 1966 commission proposals and identifies those that were and were not adopted by the General Assembly.

Table 2
1965 and 1966 Commission Proposals

1965 and 1966 Commission Proposals	Adopted	Not Adopted
HB 65-1056, special district control act	x	
HB 65-1057, speed regulation on county roads	x	
HB 65-1059, repeal of authorization for police protection districts	x	
HB 65-1060, local government audit law	x	
HB 65-1061, local government uniform accounting law	x	
HB 65-1284, continuance of county services to new municipalities	x	
HB 65-1288, police courts in statutory municipalities	x	
HB 65-1289, capital improvement fund authorization for statutory municipalities	x	
SB 65-367, provision of municipal water service to unincorporated areas	x	
SB 65-122, municipal annexation act of 1965	x	
HB 65-1058, county authority to regulate road excavations		x
HB 65-1273, countywide local option sales tax		x
HB 65-1321, prevention of illogical municipal incorporations		x
HB 66-1023, regulating municipal incorporations	x	
SB 66-23, creating the division of local government	x
