

180 Day Waste Tank Checklist (Small Quantity Generators)

- **Is the tank marked with the words “Hazardous Waste?”**
- **Has the tank held waste for less than 180 days (270 days if the waste is shipped more than 200 miles away) since the last time it was emptied?**
 - Have you clearly marked the accumulation start date on the tank or on a log sheet that is available for inspection?
- **Do you ensure that you never have more than 6000 kilograms (about 13,200 pounds) of hazardous waste and no more than 1 kilogram of acutely hazardous waste on site at any one time?**
(for liquids, specific gravity x 8.3 = lbs/gal)
- **Have you conducted weekly inspections of the tank looking for leaks or deterioration?** (complete the inspection log)
 - Is the tank in good condition and not leaking?
 - Is the tank maintained in a manner to prevent rupture or leakage?
 - Is the waste compatible with the type of tank it is stored in and won't cause it to rupture, leak or corrode?
 - Are wastes that could react together kept separated by a dike, berm, or wall?
 - Do you have adequate aisle space around the tank to allow unobstructed movement of emergency response personnel and equipment?
- **Have you conducted daily inspections of the level of waste in the tank, data gathered from tank monitoring equipment and ensured that any discharge control equipment is working?** (complete the inspection log)
 - If the tank is uncovered, does it have at least two feet of empty space at the top of the tank, or is it in a containment structure that can hold at least the volume of the top two feet of the tank?
 - Is waste continuously fed into the tank? If so, is the waste feed cutoff or bypass system working?

Tank Inspection Log Sheet (SQG)
