

# Mine Waste Remediation and Sediment Control for Operable Unit 4

The Church Placer repository

**Operable Unit 4, Phase III** focuses on consolidating waste rock piles at the Church Placer Repository near South Willis Gulch. McCollum's Excavating, LLC of Black Hawk is moving 26,200 cubic yards of waste rock to the site, and implementing erosion-control measures at the mine waste piles. Reducing sediment volume will improve water quality in the north fork of Clear Creek.
