CAD#	

09/12/2013 Boulder Community Hospital is pre-planning for Coroner overflow needs. Good Sam does not have any capacity, Longmont United does not have a morgue and Avista has 1 spot. Heath will contact Jeff Co and see if they can provide back-up morgue assistance. There isnt an immediate need at this time; just pre-planning.

Record: 416

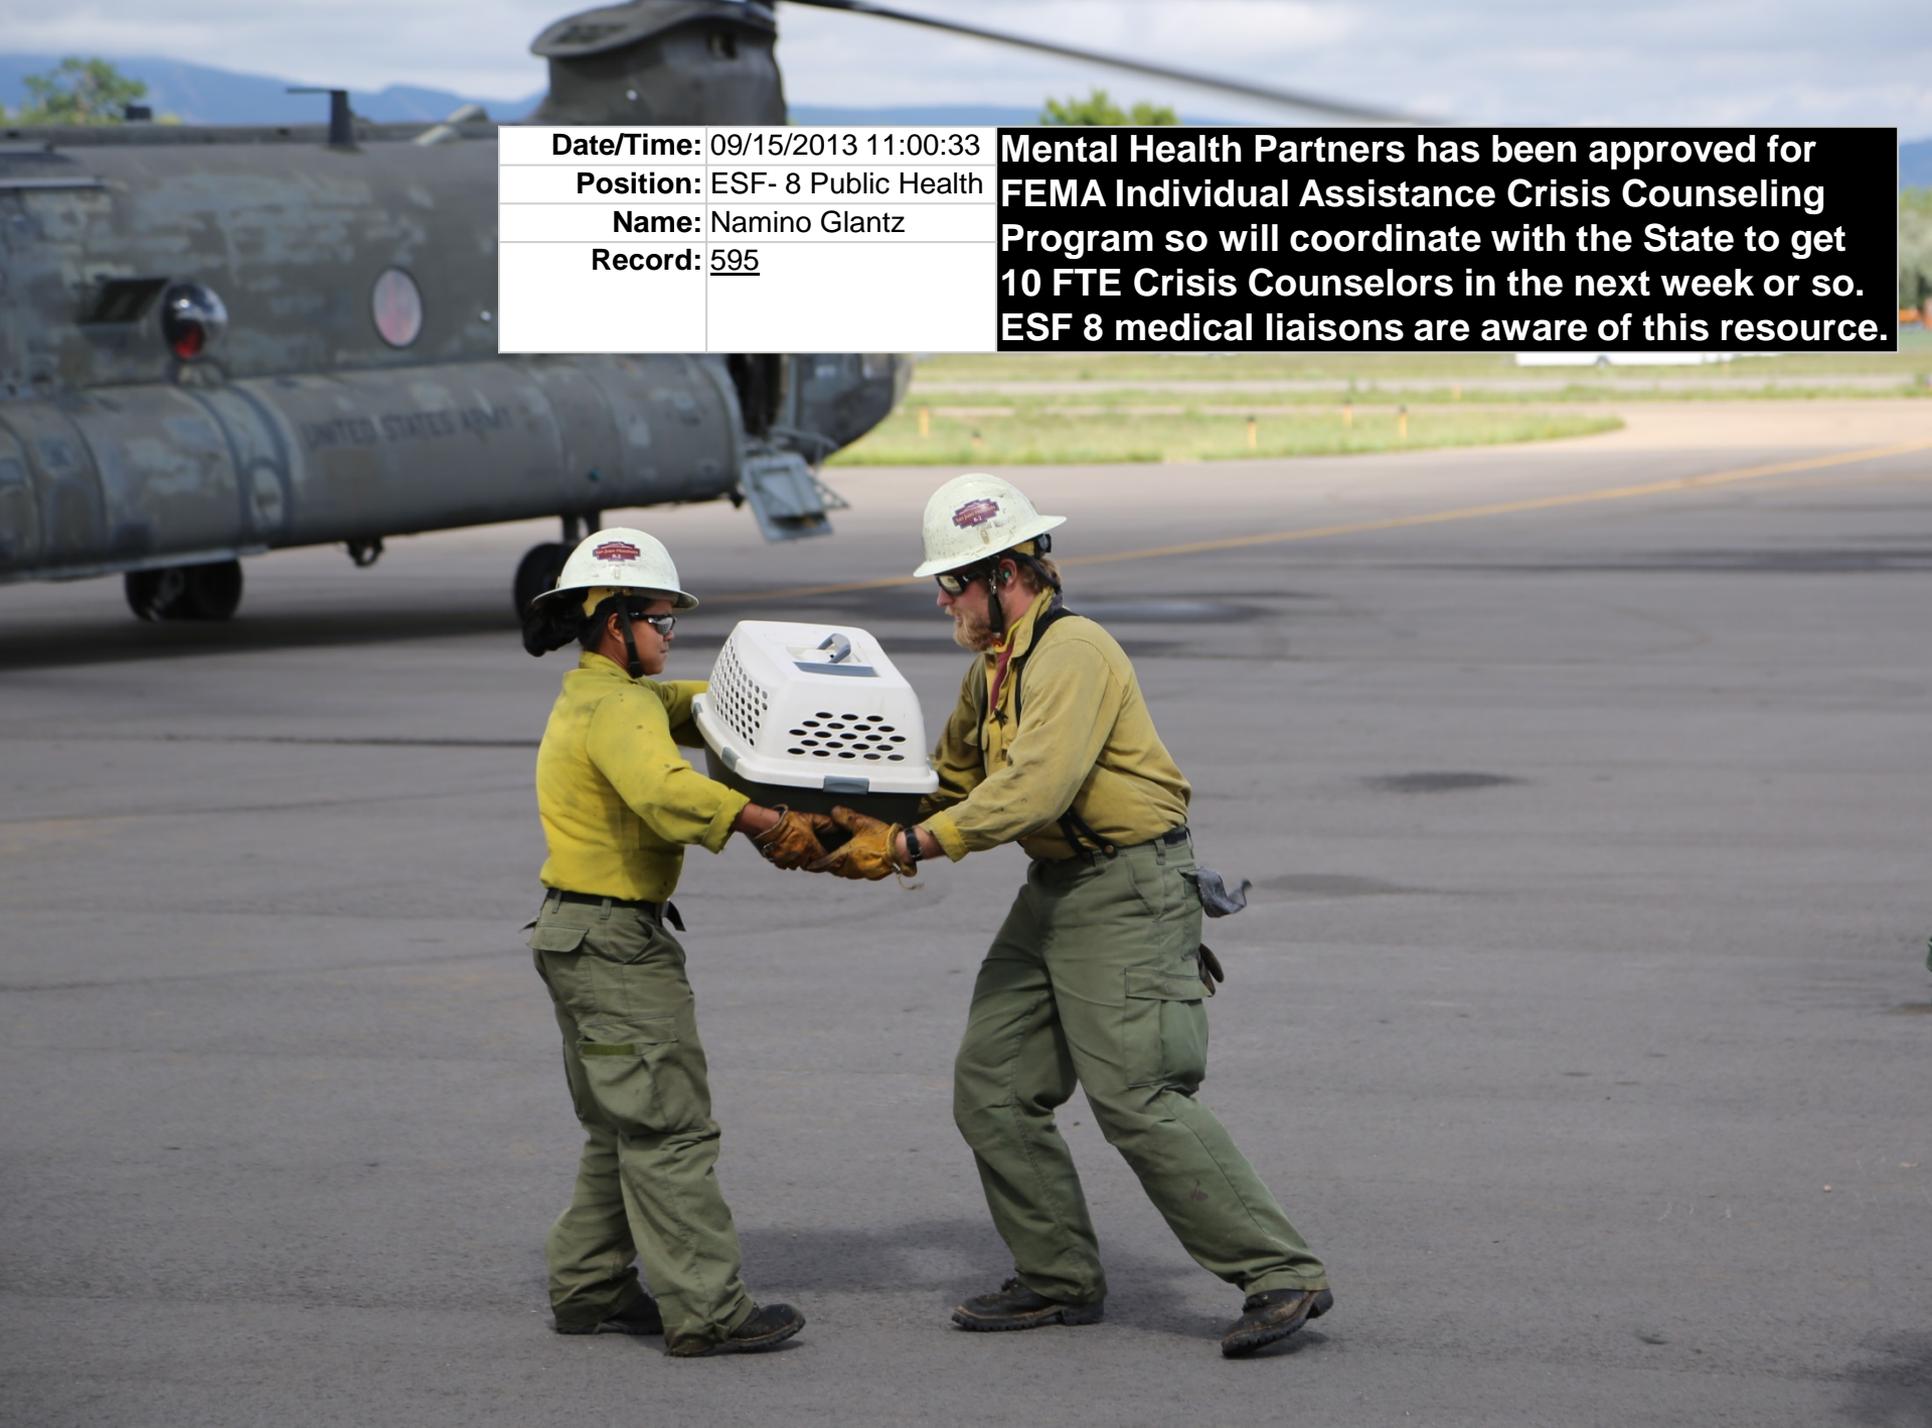

Frasier Meadows Update

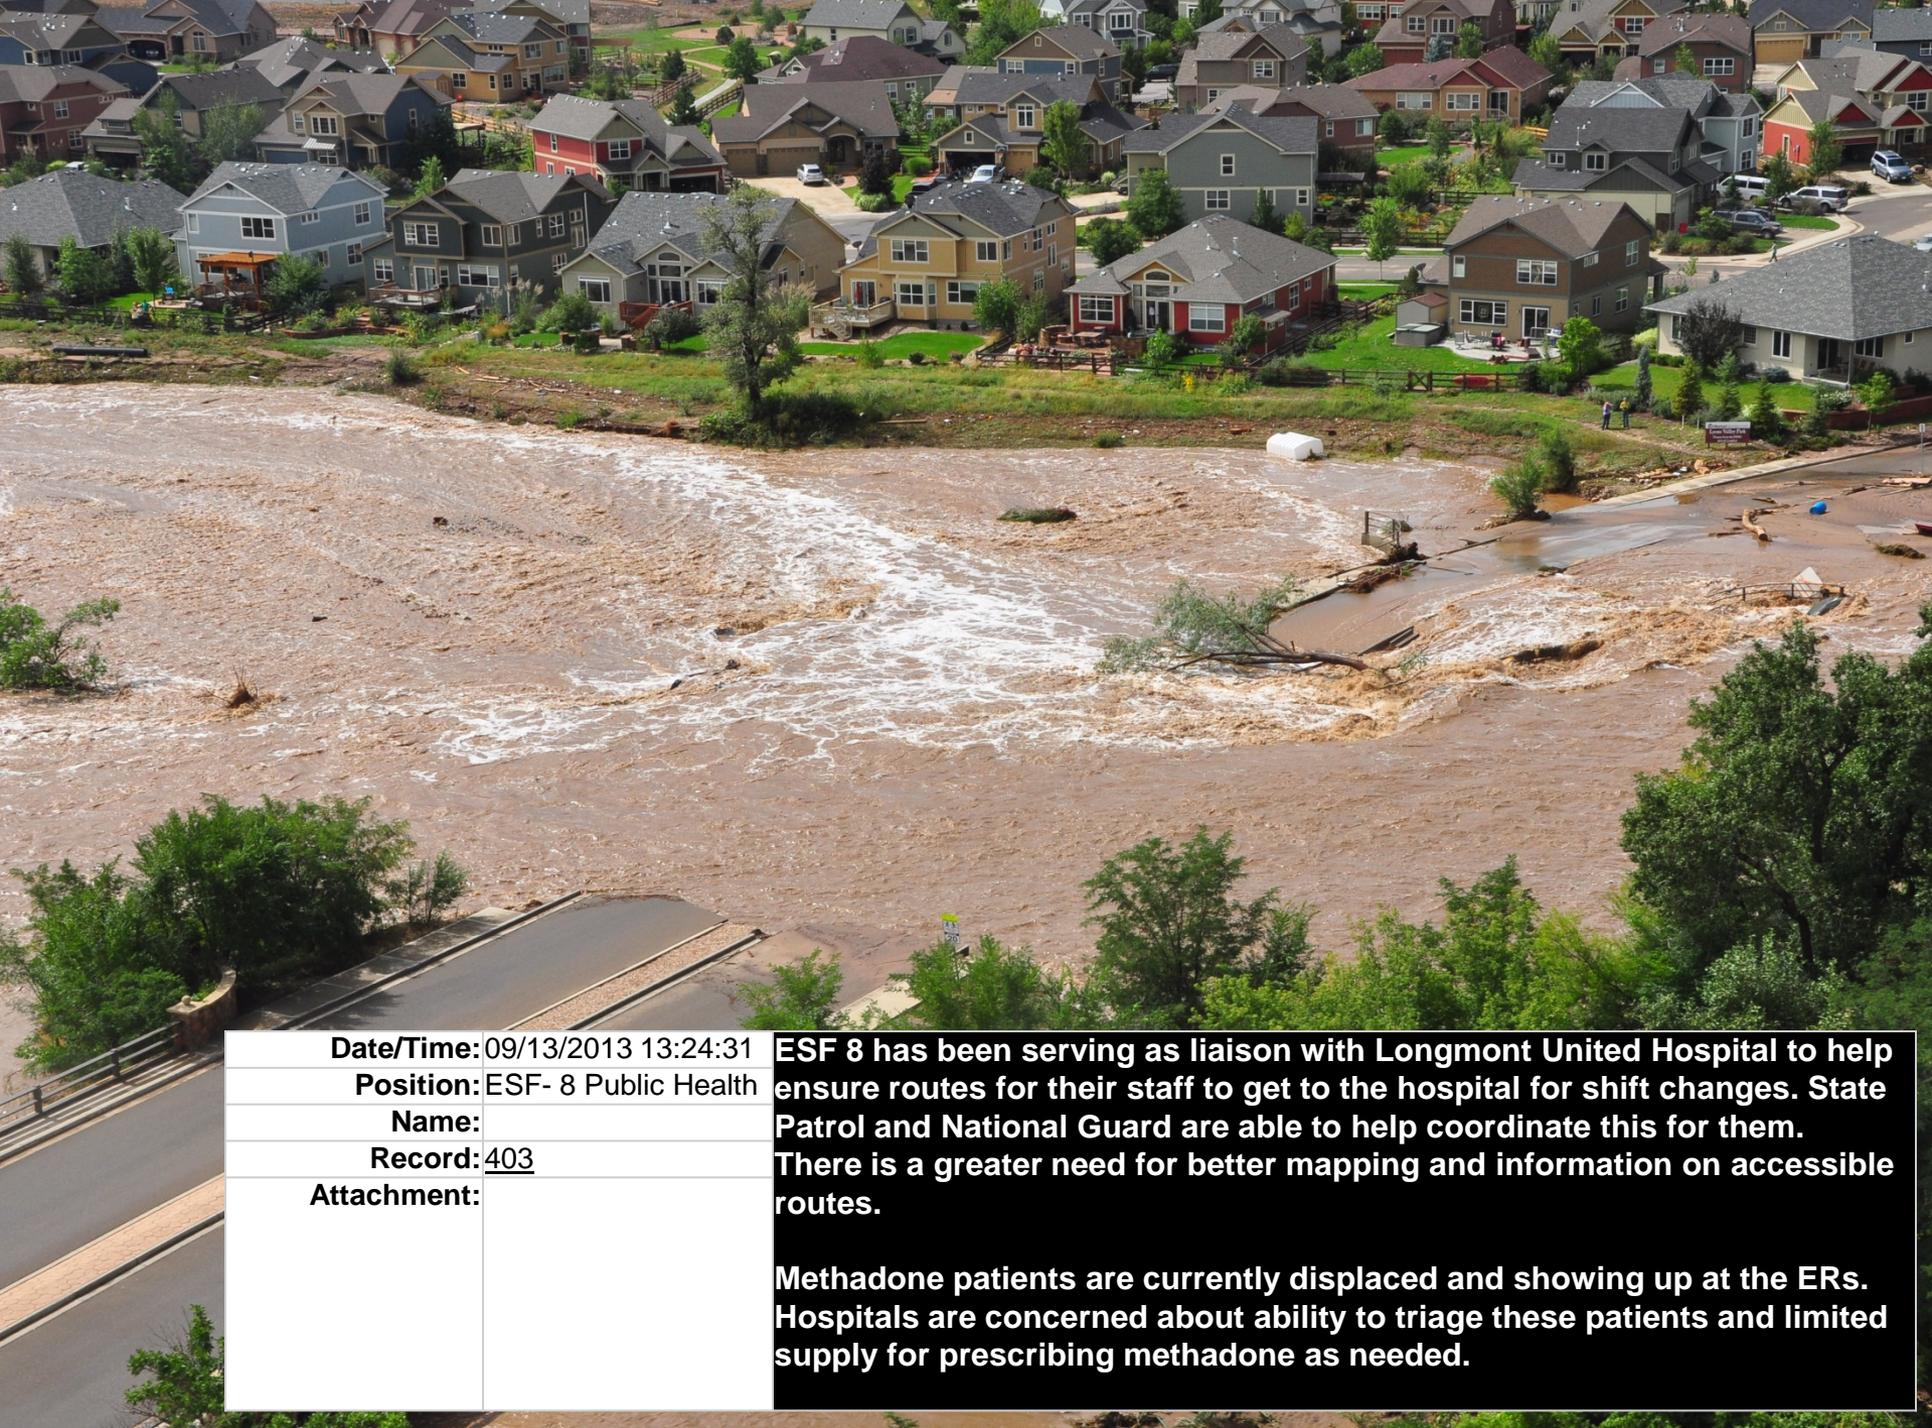

They will be evacuating 54 skilled nursing patients and 35 assisted living patients. Patients will be going to a number of regional facilities in other counties. Assisted living staff will be accompanied by staff to new locations. Frasier Meadows will be maintaining other patients on the second floor.

Name: Namino Glantz
Record: 595

Mental Health Partners has been approved for FEMA Individual Assistance Crisis Counseling Program so will coordinate with the State to get 10 FTE Crisis Counselors in the next week or so. ESF 8 medical liaisons are aware of this resource.

Date/Time: 09/13/2013 13:24:31	ESF 8 has been serving as liaison with Longmont United Hospital to help ensure routes for their staff to get to the hospital for shift changes. State Patrol and National Guard are able to help coordinate this for them. There is a greater need for better mapping and information on accessible routes. Methadone patients are currently displaced and showing up at the ERs. Hospitals are concerned about ability to triage these patients and limited supply for prescribing methadone as needed.

CO Highway Patrol is ensuring that medical personnel are allowed to pass through restricted areas on their way to and from work. It helps if they say where they work and show ID. This has been very important to ensure that LUH and Good Sam employees can get to their shifts.

Date/Time:	09/14/2013 05:52:38
Position:	ESF- 8 Public Health
Name:	Nick Kell
Record:	<u>462</u>

GIS map of all open routes to and from Longmont United sent to Mary Pancheri for further distribution to LUH staff during shift change.

Record: 469

1. Public Health is dispatching nursing staff to support at Memorial.

2. There will be more heli evacs today out of Pinebrook Hills.

3. Hospitals are doing good, will coordinate getting some extra water to Good Sam and LUH today. Not urgent.

4. LUH is sheltering 4 evacuees with medical needs. They are not admitted, just sheltering them.

5. 45 inch sewer line in Boulder broke. Has not impacted drinking water.

6. Need to address mental health needs of shelters.

7. Life Bridge has more supplies than need. We can redistribute if needed (sleeping bags, blankets).

Emergency Support Function #8

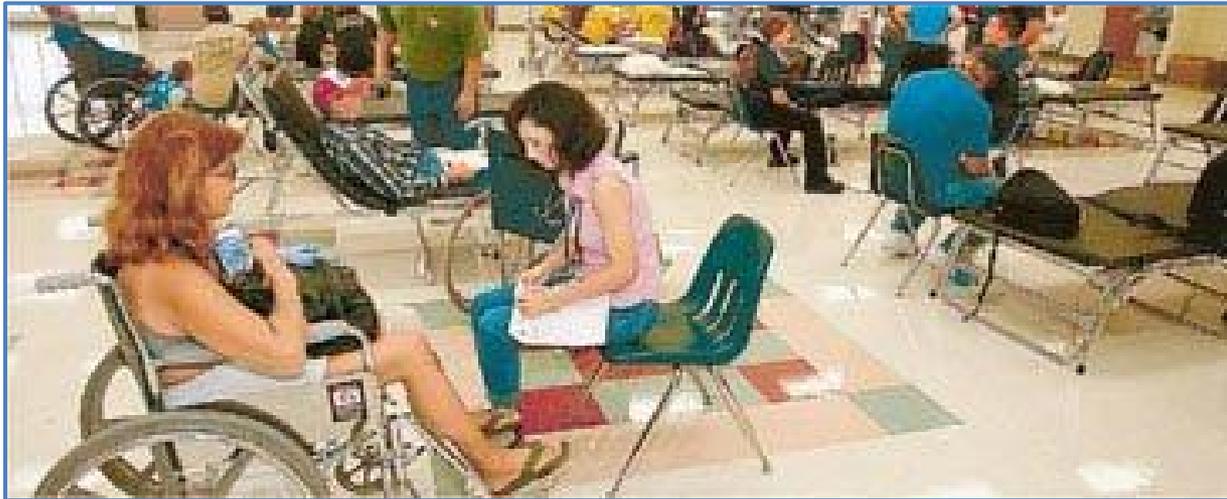

- Overarching Purpose
- Activation
- Initial Assessment and Situational Awareness
 - Sources of information vs. types of information
 - Push and pull

Get out in front by
assessing access &
functional needs as early
as possible.

Three Needs are Key During an Evacuation

- Medical
- Behavioral Health
- Case Management

Assessment Tool

Quickly Identifies Needs

Assessment conducted by: _____ Date: _____ Time: _____

Report Given to: _____ Date: _____ Time: _____

Approximate Number of Evacuees: _____

Access and Functional Needs Rapid Assessment Tool - Summary

Communication Issues	Red	Yellow	Green	Notes
<input type="checkbox"/> Unable to make needs known <input type="checkbox"/> Unable to carry on a conversation <input type="checkbox"/> Reduced ability to speak, see, or hear <input type="checkbox"/> Limitations in understanding current situation <input type="checkbox"/> Language barriers(reduced or no ability to speak/read/understand English)				
Total Communication Issues

<input type="checkbox"/> Medication concerns, intravenous (IV) therapy, tube feeding, monitoring of vital signs <input type="checkbox"/> Experiencing some physical symptoms like shortness of breath, chest pain, or other potentially life or limb threatening signs or symptoms <input type="checkbox"/> Dialysis, oxygen, suction administration <input type="checkbox"/> Operating power-dependent equipment to sustain life				
Total Medical Issues				
Functional Independence Needs	Red	Yellow	Green	Notes

Name of Individual: _____

Date: _____ Time: _____

Access and Functional Needs Individual Assessment Tool

In any assessment, it is important to engage individuals to accurately assess their normal living situations. Many people with issues that fall in the following categories do function well on a day-to-day basis so it is important to avoid assuming they are impaired without collecting additional information.

The biggest issue will be if individuals rely on a support system and/or adaptive equipment that is no longer available. An assessment of the impact of that loss is critical. Many frail and/or disabled individuals are capable of being independent. It is important, however, to observe for signs of deterioration in status as a result of the emergency situation. Some individuals in the community maintain with a fragile balance and it may not take much to upset that balance.

Most individuals bring strengths to situations and it is important to assess, recognize and validate these strengths while assessing for access and functional needs.

Use of this tool: Please do a quick assessment of each of the designated areas and rank as red, yellow, or green.

Red = immediate attention needed with first hour

Yellow = needs attention within first three hours

Green = will need to be addressed if sheltered

Communication Issues	Red	Yellow	Green	Notes
<input type="checkbox"/> Unable to relate current living situation and details of getting to evacuation site <input type="checkbox"/> Unable to make needs known <input type="checkbox"/> Unable to carry on a conversation <input type="checkbox"/> Description of status does not match what is observed.
