

New Data

* Population estimates for earlier years were revised in July 2017. Fertility rates shown here may differ slightly from previous versions of this graph.

Number of births and fertility rates, ages 20-24, Colorado, 2007-2016*

* Population estimates for earlier years were revised in July 2017. Fertility rates shown here may differ slightly from previous versions of this graph.

The rapid increase in LARC adoption in Colorado Title X clinics that occurred during the initiative did not appear to be associated with increased Chlamydia rates.

Chlamydia rates were lower for Title X LARC users than for nonusers between 2003 and 2016.

After the Colorado Family Planning Initiative became established, Chlamydia rates among Title X Family Planning female clients fell among LARC users and nonusers. Young women under age 25 drove the decline.
