### Public Livestock Markets Veterinary Inspection

#### 8 CCR 1201-13

## RULES PERTAINING TO PUBLIC LIVESTOCK MARKETS VETERINARY INSPECTION

### STATEMENT OF BASIS AND PURPOSE

These rules are adopted pursuant to the Public Livestock Markets provisions, specifically, § 35-55-113, C.R.S. (1996 Supp.).

The purposes of these rules are to: define applicable terms; specify the requisite notice to animal owners; establish the procedures for inspection, removal and euthanization of animals; and designate diseases and injuries which are beyond recovery.

#### 1.00 Definitions

- A. "Actinobacillosis" means the disease commonly known as woody tongue.
- B. "Actinomycosis" means the disease commonly known as lump jaw.
- C. "Animal" or "Livestock" means horses, mules, cattle, burros, swine, sheep, goats, poultry, alternative livestock as defined in § 35-41.5-102(1) and any other animal presented to the market for sale.
- D. "Body condition score" means a numerical score assigned to the animal concerning the amount of flesh the animal has on its body. Each species or class of animal has its own scoring system which is uniform within the species or class. A copy of the scoring system pertaining to the applicable species or class is included as an Appendix to these rules.
- E. "Commissioner" means the Commissioner of Agriculture, Colorado Department of Agriculture or a designated employee of the Department of Agriculture.
- F. "Department" means the Colorado Department of Agriculture.
- G. "Euthanasia" or "Euthanize" means to accomplish death of the animal: with a captive bolt pistol, with or without the use of chemical anesthesia; by transection of the posterior aorta, with the use of chemical anesthesia; by administration of euthanasia solution; or other method appropriate for the species and the location.
- H. "Metastatic" or "Metastasis" means the invasion or infiltration of other structures or tissue by a neoplasm.

- I. "Neoplasia," "neoplasm," or "neoplastic" means new, abnormal tissue growth which is deleterious to the animal's health.
- J. "Nonambulatory" means the animal is unable to rise to its feet and walk with minimal stimulus.
- K. "Owner" means the actual owner of the animal or the person who consigned the animal for sale, or the owner's or consignor's agent.
- L. "Urinary Calculi" means the disease commonly known as water belly.
- M. "Veterinarian" means a veterinarian licensed pursuant to the Colorado Veterinary Practice Act, §§ 12-64-101 through 119, C.R.S. (1991 and 1995 Supp.) and who is appointed by the Department to perform the duties of a veterinarian at a specific livestock market.

## **2.00 Notice**

- A. The following notice shall be posted:

"By consigning any animal with a public livestock market in Colorado, the owner of the animal consents as follows:

- (1) As to any animal which, in the sole discretion of the market veterinarian, is injured, disabled, or diseased beyond recovery or is permanently unfit for human consumption, the owner authorizes the market veterinarian to examine the animal and to determine whether the animal sells, is removed from the market or is euthanized, pursuant to § 35-55-113, C.R.S. (1996 Supp.) and the rules thereto.
- (2) The owner of the animal further consents to pay the costs of euthanasia and disposal.
- (3) A copy of the statute and rules is available at the market office or the Colorado Department of Agriculture. The statute and rules are enforced by the Department and not the public livestock market."

- B. This notice shall be posted at the public market office and the check-in dock.
- C. A leaflet form of this notice shall be made available upon request to the Department.

## **3.00 Procedures**

The following procedures shall apply:

- A. Veterinary inspection shall occur prior to sale, with a determination made by the veterinarian whether any of the animals presented to the public livestock market for sale possess any of the diseases or injuries specified in Sections 4.00 or 5.00 below.
- B. The veterinarian shall make a reasonable effort over a two hour period to contact the owner by phone or in person regarding an animal identified by the veterinarian pursuant to Sections 4.00 and 5.00 below.

- C. Within twelve hours of notification, the owner may remove from the livestock market any animal identified by the veterinarian pursuant to Sections 4.00 and 5.00 below, or may direct the veterinarian to euthanize such animal.
- D. If the veterinarian is unsuccessful in contacting the owner, the veterinarian shall determine whether, in the sole discretion of the veterinarian, the animal identified by the veterinarian pursuant to Sections 4.00 and 5.00 below should be euthanized to prevent further pain and suffering.
- E. Any animal identified by the veterinarian pursuant to Sections 4.00 and 5.00 below which is not removed from the livestock market 14 hours after the initial veterinary inspection may be euthanized, in the sole discretion of the veterinarian.

**4.00 Diseases which shall render livestock diseased beyond recovery**

The following diseases shall render livestock diseased beyond recovery for the purposes of these rules:

- A. Ocular neoplasia:
  - (1) Unless the neoplastic lesions show no signs of metastasis and have not destroyed the eye or eye lids;
  - (2) If the neoplastic lesions affect the eye and/or eye lids and have destroyed the affected organ to the point that the affected area is not amenable to surgery;
  - (3) If the neoplastic lesions show signs of local metastatic invasion from the primary site to the bone of the orbit; or
  - (4) If the following signs are present: abnormal swelling, discoloration, open necrotic regions with drainage, or deformation of tissue.
- B. Other forms of neoplasia:
 

Other neoplasias, regardless of tissue origin, which exhibit significant involvement, including, but not limited to, the following signs: abnormal swelling, discoloration, open necrotic regions with drainage, or deformation of tissue.
- C. Any disease process, including, but not limited to, Actinobacillosis, Actinomycosis, Pneumonia, and Urinary Calculi, which will not respond to treatment and has resulted in a body condition score in the lower 20% for the species.
- D. Any disease process which has resulted in the presentation of a nonambulatory animal.

**5.00 Injuries which shall render livestock injured beyond recovery**

The following injuries shall render livestock injured beyond recovery for the purposes of this rule:

- A. A fracture of a long bone, other fractures or dislocation of a joint that render the animal unable to bear weight on the affected limb without that limb collapsing.

The official version of these Rules is published by the Office of the Secretary of State in the Colorado Code of Regulations at 8 CCR 1202-13 and may be obtained from the following website: <http://www.sos.state.co.us/CCR/Welcome.do>.

- B. Any injury which has not responded to treatment and has resulted in a body condition score in the lower 20% for the species.
- C. Any injury which has resulted in the presentation of a nonambulatory animal.

**6.00 Euthanasia**

- A. Euthanasia shall be accomplished by or under the direction of the veterinarian.
- B. The cost of euthanasia shall be determined annually by the Commissioner and posted at the livestock sale market and the Department. Said cost shall be borne by the owner.
- C. The veterinarian will provide written notice to the owner of any euthanized animal.

**7.00 Disposal of euthanized animal carcasses**

- A. The owner may request the return of the carcass and may retrieve the carcass within six hours.
- B. Unless the owner requests return of and retrieves the carcass as set forth immediately above, the carcass shall be disposed of pursuant to law and as customary for the community. In the event that there is a disposal fee, the fee shall be borne by the owner.

CONDITION	NECK	WITHERS	LOIN	TAILHEAD	RIBS	SHOULDER
<b>1 POOR</b>	Bone structure easily noticeable	Bone structure easily noticeable	Spinous processes project prominently	Tailhead (pinbones) and hook bones projecting prominently	Ribs projecting prominently	Bone structure easily noticeable
	Animal extremely emaciated; no fatty tissue can be felt.					
<b>2 VERY THIN</b>	Faintly discernible	Faintly discernible	Slight fat covering overbase of spinous processes. Transverse processes of lumbar vertebrae foot rounded. Spinous processes are prominent.	Tailhead prominent	Ribs prominent	Faintly discernible
	Animal Emaciated					
<b>3 THIN</b>	Neck accentuated	Withers accentuated	Fat buildup halfway on spinous processes but easily discernible. Transverse processes cannot be felt	Tailhead prominent but individual vertebrae cannot be visually identified. Hook bones appear rounded, but are still easily discernible. Pin bones not distinguishable	Slight fat cover over ribs. Ribs easily discernible.	Shoulder accentuated.
<b>4 Moderately THIN</b>	Neck not obviously thin	Withers not obviously thin	Negative crease along back	Prominence depends on conformation, fat can be felt. Hook bones not discernible	Faint outline discernible	Shoulder not obviously thin
<b>5 MODERATE</b>	Neck blends smoothly into body	Withers rounded over spinous processes	Back level	Fat around tailhead beginning to feel spongy	Ribs cannot be visually distinguished but can be easily felt	Shoulder blends smoothly into body
<b>6 Moderately FLESHY</b>	Fat beginning to be deposited	Fat beginning to be deposited	May have slight positive crease down back	Fat around tailhead feels soft	Fat over ribs feels spongy	Fat beginning to be deposited
<b>7 FLESHY</b>	Fat deposited along neck	Fat deposited along withers	May have positive crease down back	Fat around tailhead is soft	Individual ribs can be felt, but noticeable filling between ribs with fat	Fat deposited behind shoulder
<b>8 FAT</b>	Noticeable thickening of neck	Area along withers filled with fat	Positive crease down back	Tailhead fat very soft	Difficult to feel ribs	Area behind shoulder filled in flush with body
	Fat deposited along inner buttocks					
<b>9 Extremely FAT</b>	Bulging fat	Bulging fat	Obvious positive crease down back	Building fat around tailhead	Patchy fat appearing over ribs	Bulging fat
	Fat along inner buttocks may rub together. Flank filled in flush.

**Swine Condition Score**

**(Swine should be maintained at a condition score of 3. Swine which are too fat have reduced libido. Shape and covering determine condition scores.)**

<b>Score</b>	<b>Condition</b>	<b>Location of H Bone</b>	<b>Shape of Body</b>
5	Overfat	No detection	Bulbous
4	Fat	No detection	Tend to buldge
3.5	Good condition	Great difficulty in locating	Tube shaped
3	Normal	Can only just be felt	Tube shaped
2.5	Somewhat thin	Easily located or with visible protrusion	Tube shaped but flat (slab sides)
2	Thin	Visible	Ribs and spine can be felt
1	Emaciated	Easily visible	Bone structure apparent (ribs & backbone)

**DESCRIPTION OF BODY CONDITION SCORING (BCS)**

Body Condition Score	
1	Severely emaciate. Bone structure of shoulder, ribs, back, hooks and pins is sharp to the touch and easily visible. Little evidence of fat deposits or muscling.
2	Emaciated. Little evidence of fat deposition but some muscling in the hindquarters. The backbone feels sharp to the touch
CAUTION 3	Very thin, no fat on ribs or brisket, and some muscle still visible. Backbone easily visible.
4	Thin, with ribs easily visible but shoulders and hindquarters still showing fair muscling. Backbone visible.
5	Moderate to thin. Last two or three ribs can not be seen unless animal has been shrunk. Little evidence of fat in brisket, over ribs or around tailhead.
6	Good smooth appearance throughout. Some fat deposits in brisket and over tailhead. Ribs covered and back appears rounded.
CAUTION 7	Very good flesh, brisket full. Fat cover is thick and spongy and patchiness is likely. Ribs very smooth.
8	Obese, back very square, brisket distended, heavy fat pockets around tailhead. Square appearance.
9	Rarely observed. Very obese. Animal's mobility may actually be impaired by excessive fat.
Spitzer, 1986

# SHEEP BODY CONDITION SCORES

*Figure 7. Body Condition Zero*  
 Sheep is extremely thin, unthrifty and weak. Skeletal features very prominent e.g. backbone, shoulder blades and ribs. Wasted muscle tissue evident. Eye socket is prominent and sunken. May be humped back and isolates self from flock.

*Figure 10. Body Condition Three*  
 Sheep are thrifty with evidence of limited fat deposits in fore rib, over top of shoulder, backbone, and tail head. Hip bone remains visible

*Figure 8. Body Condition One*  
 Sheep is extremely thin, unthrifty but agile. Skeletal features are prominent with no fat cover. No apparent muscle tissue degeneration. Has strength to remain with the flock.

*Figure 11. Body Condition Four*  
 Moderate fat deposits give the sheep a smooth external appearance over the shoulder, back, rump and fore-rib. Hip bone is not visible. Firm fat deposition becomes evident in brisket and around the tail head.

*Figure 9. Body Condition Two*  
 Sheep is thin but strong and thrifty with no apparent muscle structure wasting. No evident fat cover over the backbone, rump and ribs but skeletal features do not protrude

*Figure 12. Body Condition Five*  
 Sheep are extremely fat with the excess detectable over the shoulder, backbone, rump, and fore rib. Excess fat deposits in brisket, flank and tail head regions lack firmness. Sheep appear uncomfortable and reluctant to move about. Quality fleeces are
