Tours to EAB Infestation Sites in Boulder

The Colorado Emerald Ash Borer Response Team will host four van tours in August. We will visit infested sites around the City of Boulder to give attendees experience diagnosing EAB in the field by learning to assess symptomatic trees.

Management considerations, biology, and regulation will also be discussed. Space is limited and RSVPs are required.

Who should attend: City officials, municipal foresters, tree care professionals and anyone involved in the detection effort or in making management decisions regarding EAB.
