Workshop participants will learn techniques for assessing ash trees for emerald ash borer damage, collecting branch samples for EAB detection surveys, and branch peeling to detect EAB larvae. Basic diagnostics for other causes of ash tree decline will also be covered

Draw knives will be provided, but please feel free to bring your own. Other important safety equipment will be available in limited quantities, but participants are encouraged to bring their own, such as sturdy gloves and chaps. A sharp pocket knife and tweezers or forceps are also helpful for extracting larvae.

**\*RSVP required. Please note that because space in each workshop is limited, sign ups will be limited to one workshop per individual.**
