The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every

inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Permanent Impairment

A rating physician must rate impairment in accordance with the provisions of the AMA Guides. Section 8- 42-101(3.7), C.R.S.; § 8-42-107(8)(c), C.R.S.; *see also, Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003). Impairment is to be determined as of the date of MMI. The burden of proof pertinent to a dispute concerning the impairment rating of a scheduled injury is a preponderance of the evidence. *Maestas v. American Furniture Warehouse*, W.C. No. 4-662-369 (June 5, 2007); *Ortiz v. IngersollRand Co*., W.C. No. 4-981-218-04 (January 25, 2018); *Gagnon v. Westward Dough Operating Co*., W.C. No. 4-971-646-03 (February 6, 2018).

Respondent argues Claimant's permanent impairment is limited to a 12% upper extremity impairment based on range of motion deficits to the right wrist. Respondent contends Claimant is not entitled to an impairment rating for her hand, as there is no ratable pathology in Claimant's fingers, and any range of motion deficits are likely not permanent. Respondent further argues that Dr. Rossi's impairment rating for crepitation is duplicative and erroneous.

As found, Claimant has proven by a preponderance of the evidence that she sustained a 30% scheduled right upper extremity impairment. Dr. Rossi assigned a 14% impairment rating for range of motion deficits in the wrist, which is similar to Dr. Cebrian's 12% impairment rating. Claimant's right wrist range of motion limitations are consistently documented throughout the medical records, with some improvement noted at times, but not sustained. There is no contention Dr. Rossi performed the wrist range

of motion measurements incorrectly, or that her wrist range of motion calculations under the AMA Guides are incorrect. Accordingly, the ALJ is persuaded Claimant sustained a 14% range of motion impairment of the right wrist.

Regarding the impairment rating for crepitation, Dr. Cebrian specifically found no crepitation, while Drs. Davis and Ogin did not mention either the presence or absence of crepitation in their medical notes. Dr. Rossi, who examined Claimant on several occasions, noted crepitus of the right wrist during all but 1 of 12 examinations of Claimant from June 23, 2017 to the date of the impairment evaluation, December 13, 2017. Claimant credibly testified that she experiences crepitus on a daily basis, but not at every minute of the day. While the AMA Guides emphasize avoiding duplicative ratings, the AMA Guides specifically state that rating the disorders separately is within the discretion of the examiner. The ALJ is persuaded Dr. Rossi properly exercised her discretion under the AMA Guides and correctly assigned Claimant a 20% impairment rating for moderate joint crepitation.

Lastly, with respect to the Claimant's hand impairment, Dr. Rossi credibly opined that Claimant's fingers were affected by the surgery. Claimant consistently reported stiffness in her fingers subsequent to the surgery up to the time of the impairment evaluation. On multiple occasions, Dr. Rossi noted restricted finger range of motion and issues with pinch and grip testing on physical examination. Claimant credibly testified she continues to experience stiffness in her hand. While Dr. Cebrian opined that Claimant's hand stiffness is not permanent, Dr. Cebrian acknowledged that permanent impairment is determined as of the date of MMI. Accordingly, the ALJ is persuaded Claimant sustained a 12% impairment of the hand, as provided by Dr. Rossi.

Based on the totality of the evidence, Claimant has proven it is more probably true than not she sustained a combined 30% scheduled impairment of the right upper extremity, as assigned by her ATP, Dr. Rossi.

Medical Maintenance Benefits

To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

As found, Claimant has established by a preponderance of the evidence that she is entitled to maintenance medical benefits. Claimant credibly testified that she continues to experience crepitus in her wrist, and limited motion in her hand and wrist. Dr. Rossi suggested that, as maintenance, Claimant may follow-up with Dr. Rossi, as needed. Claimant has proven by a preponderance of the evidence that she is entitled to a general award of medical maintenance benefits. The ALJ is persuaded Claimant is entitled to a general award of maintenance medical benefits, subject to Respondent's right to contest the compensability, reasonableness and necessary of specific treatments.

ORDER

It is therefore ordered that:

1. Respondent shall pay Claimant permanent partial disability benefits based on a 30% scheduled right upper extremity impairment rating.

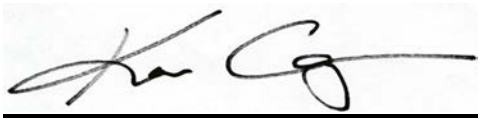
2. Respondent is responsible for maintenance medical benefits reasonably necessary to relieve the effects of Claimant's March 28, 2017 industrial injury or prevent further deterioration of her condition.

3. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 21, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she sustained a compensable work injury to her right hip on July 22, 2107?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to medical treatment which is reasonable, necessary, and related to her work injury of July 22, 2017?

III. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability benefits from 8/13/2017 through 9/2/2017 as a result of a compensable work injury which occurred on July 22, 2017?

STIPULATIONS

At hearing, the parties stipulated that Claimant's Average Weekly Wage for her employment at Marshalls is $183.48. The ALJ accepted this stipulation. The issue of concurrent wages and concurrent wage loss is reserved for future determination.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following Findings of Fact:

Claimant's Concurrent Workers Compensation Claim

1. On January 17, 2017, Claimant reportedly suffered substantial injuries as a result of an altercation with a student at her former place of employment. Claimant sought treatment on the date of injury. An excerpt from that initial visit describes the January 17, 2017 incident as follows (emphasis added) (Ex. 3):

> She states that earlier today she was seated and attacked from behind by a student who started hitting her on her back and the top of her head. **She was kicked in the L lateral hip off of her seat and landed on her R hip/side** and caught herself with her R hand.

2. On June 13, 2017 (one month before this alleged incident), Claimant underwent a Division sponsored IME (DIME) for her concurrent claim. The DIME physician, Dr. Timothy Hall, MD. reported the following (emphasis added) (Ex. H):

> The patient states a student pushed her out of her chair and hit her in the head, neck, and back…She was kicked, left lateral hip off the seat and **landed on her right hip**/side and caught herself with her right hand….There was a history of a **previous head injury** she sustained….A

note 1/31/17, rescheduled her appointment a week early as she is having **bilateral hip aching** as well as stiffness/tightness in her lower back.

Notes from 03/13/17, overall feeling a little better…..She does continue to have pain, mainly left sided lower back as well as **lateral hip** and thigh pain.

There is a 5/09/17 note with Theodore Stringer where the patient was complaining of **right hip pain,** left hip, mid back, and low back…..She represents with persistent posttraumatic pain best localized to the lateral aspect, **bilateral lower hips, pain rated from 5 to 9** depending on position and activity. Her diagnosis included **pain in the right hip** and pain in the left hip. (Ex. H, p.1)

I met with Margaret Hicks, who calls herself Peggy……she was hit on the head on her back with the student's fist, kicked in the left hip, and **landed on her right hip** and right hand…..She complains of pretty much daily pain in her low back, radiating out into the SI area, **out towards the hips,** and laterally into the trochanteric area….She reports that ***both*** **of her hips now "pop".**

She has had her left hip replaced. She has had both her knees replaced, all with Dr. Stringer. She has seen Dr. Stringer recently and I have reviewed his note from 05/09/2017, where she is discussing an **aching right hip,** left hip, mid back, and low back radiating into the lower extremity and back of both legs. He describes her history with him including surgeries for **arthritis of the right hip** with arthroplasty in July 2004 and bilateral knee arthroplasty….(Ex. H, p. 2)

I asked about any other symptoms that she has noted since the accident and she had quite a list of what sounds like post concussive symptoms. She reports the following issues:

1. **Word-finding difficulties**
2. Being more **forgetful**
3. **Losing things regularly**
4. Difficulty multitasking
5. **Impaired memory**
6. **Balance issues** including trouble walking……

She tells me before this event in January, she was quite proud of her somewhat exceptional memory.(Ex. H, p. 3)

Compensability/Instant Claim

3. Claimant has worked for employer, Marshalls, for approximately 19 years as a dressing room associate. Claimant issues numbers to customers corresponding with the number of items they carry into the dressing room. Claimant then collects the unsold items, and puts them back on the sales racks.

4. Claimant testified at hearing that after a break around 2:00 p.m., she was walking back to the dressing room area, when she tripped over a "lifetime" table which was lying flat on the floor. At that time, she alleges that she injured her knees and right hip in this fall.

5. At various points in the hearing, Claimant testified to four different dates of injury for this same alleged incident: July 29, 2017; July 22, 2017; July 17, 2017 (via interrogatories), or another unknown date occurring some weeks after July 22, 2017.

6. Claimant reported the alleged incident to assistant manager, Pam Porter, within minutes of it occurring. Claimant told Ms. Porter that she fell and bumped her head. Claimant testified that she reported no physical injuries and no pain to any body parts. On the same day, Ms. Porter reported the incident to Marshalls' insurer, Zurich American Insurance Company. (Ex. A).

7. Pam Porter testified at hearing. Ms. Porter testified that Claimant reported the alleged incident to her on July 22, 2017. Ms. Porter testified that she observed no visible injury at the time Claimant reported the alleged incident. Additionally, she observed no difference in Claimant's ability to walk after the alleged incident. Ms. Porter testified that Claimant never communicated that she needed a break due to any physical discomfort. At some point, Claimant appeared at work using a cane. Ms. Porter recalls that to have been "around holiday time" (November/December, 2017). Prior to this, she had not observed Claimant to be displaying any physical symptoms.

8. Claimant testified that a few days following the alleged incident, she spoke with Robert Singleton, store manager at Marshalls, about what allegedly happened. Claimant testified that she told Mr. Singleton that she fell and bumped her head. Claimant testified that she did not mention any other physical injuries, nor any pain to any body parts as a result of the alleged incident.

9. Robert Singleton testified at hearing. Mr. Singleton testified that a few days after the alleged incident, Claimant told him that she was fine. She explained to him that she tripped over a table, and bumped her head. Mr. Singleton testified that at that time (a few days after the alleged incident) he did not observe any difference in Claimant's ability to walk. Mr. Singleton testified that Claimant never communicated that she needed a break due to any physical discomfort. He also began to note that Claimant began to use a cane at work, around "the holiday season…December."

10. Debra Gibbs, assistant manager at Marshalls, also testified at hearing. Ms. Gibbs testified that after Claimant reported the alleged incident to Ms. Porter, she asked Claimant if she was okay. Ms. Gibbs testified that Claimant responded by saying she was "fine" and "dandy." Ms. Gibbs testified that Claimant did not mention any injuries nor any pain as a result of the alleged incident. Ms. Gibbs testified that Claimant never communicated that she needed a break due to any physical discomfort. The first time Claimant told her of any pain was in mid-August, when she was referred to Emergicare.

11. Claimant testified that on the date of the alleged incident (which the ALJ finds actually occurred on July 22, 2017), she was working with a fellow fitting room associate, Sue Andrews. Claimant testified that when she returned to the fitting rooms after the alleged incident, she told Ms. Andrews that she just fell and bumped her head. Claimant testified that she did not mention any pain to any body parts to Ms. Andrews.

12. Claimant testified that the First Report of Injury, repeatedly indicating no physical injury, is truthful.

13. Claimant testified that an entire family, including a mother, father, and two children, witnessed her fall. They reported to her that one of the daughters had tripped over this same table moments prior. Claimant testified that she wrote down the names and contact information of the alleged witnesses on a paper towel. Claimant went on to explain that her disabled daughter threw away the alleged contact information by accident. In doing so, the alleged contact information "got garbage on it, so you couldn't read it." As a result, Claimant then threw it away herself.

14. Claimant testified that Allen Hecker of Zurich Insurance conducted a recorded interview of Claimant on August 17th, 2017.

15. Claimant subsequently verified an excerpt from the transcript of this interview, regarding the alleged witnesses' contact information in which Claimant told Mr. Hecker: "I should have kept it. You could have called them. But I pitched it." (Ex. E p. 4)

16. Ms. Gibbs also testified regarding Claimant's story that a family witnessed her alleged fall and that a child had tripped over the same table right before she allegedly tripped. Ms. Gibbs offered the following:

> If that is -- had happened, management is to be informed immediately and we file an accident report. Any accidents inside that building, there are signs throughout the building and in the break room, everywhere else that lets people know we have to call Zurich and let them know that something's happened. Even if it's something that the customer doesn't

want to give us information, we still report it to Zurich.
(transcript p. 119**)**

17. Ms. Gibbs testified that no witnesses to Claimant's alleged incident were listed in the accident report and that no report was made to her about a child falling over the same table as Claimant asserted.

18. During hearing testimony, within a few minutes, Claimant provided the following answers regarding her alleged fall:

Q: …..So, I want to talk about your fall again, but more specifically on how you supposedly landed. Now, the only point of impact mentioned in the first report of injury is you head, correct?
A: That's right. (transcript, p. 50)

Q: And during your recorded interview with Alan Hecker, when you described your accident you said you fell smack dab on both knees?
A: On my knees, Uh-huh.
Q: okay.
A: And over to the side. I did not say that, I just said smack dab on my knees.
Q: Okay. So just to clarify—
A: Uh-huh. That's what I said.
Q: You told Alan Hecker that you—you fell smack dab on your knees?
A: That's right.
Q: Okay. Now I'm looking at your November 15th, 2017, medical report from Colorado Rehabilitation Occupational Medicine, Respondent's Exhibit I. Did you tell Dr. Primack that you fell on your hands and knees and that you remember hitting your head?
A: I did hit my head and when I fell down I fell, knees, over.
Q: Ms. Hicks, did you tell Dr. Primack that you fell on your hands and knees and that you remember hitting your head?
A: I don't recall, but if that's what it says that would be what I said.
Q: Okay. ….Well , when you went in for your IME on March 22nd did you tell Dr. Rook that you landed on the ground with the weight of the—of your body on the side of your right hip?
A: Yep. Because—
Q: Okay
A: Never mind. (transcript, pp. 51-52).

19. The first time Claimant sought treatment for this incident was on August 13, 2017. Claimant's explanation for this delay was due to a series of personal issues, including supporting her husband and disabled daughter, being laid off from a teaching class, and setting up interviews for a possible CNA position. Claimant stated she could not afford to miss work. Despite her high pain tolerance, she self-medicated over the counter. At some point, Claimant asserts,

"It got to the point of just through the time….I couldn't walk. I mean, I could not walk. And I was just forcing myself to work." (transcript, p. 30). Claimant eventually reported this to Deb Gibson, and was then referred to Emergicare.

20. At this initial visit to Emergicare on 8/13/17, Claimant was treated by Dr. Erik Ritch (Ex. 7, pp 83-86). Based upon the history provided and the symptoms then noted, Dr. Ritch took Claimant off of work until MRIs of both knees could be performed.

21. Claimant followed up at Emergicare on 8/16/17, and was seen by Dr. Robert Hamilton (Ex. 7, pp 87-90). No mention in her medical history is made of her treatment which had occurred 5 days prior with UC Health. Claimant complained at this time of right "sciatic" pain along with lower leg and foot numbness. The same work restrictions remained in place, pending bilateral knee MRIs.

22. Claimant returned to EmergiCare on August 29, 2017 and saw another physician, Dr. George Johnson. Claimant described to him the same mechanism of injury. (Ex. 7, pp. 91-93). Claimant was specifically complaining of bilateral knee, bilateral hip, and lower back pain at this time. She reported having minimal pain prior to the fall and did not take any medications. Dr. Johnson noted that Claimant remained out of work and was set to return back to work on Sunday, which would have been September 3, 2017. Examination of the right hip revealed generalized tenderness. Dr. Johnson placed Claimant at MMI at her next visit on September 12, 2017, indicating that although he felt Claimant did sustain a work injury, he felt most of Claimant's present symptoms were due to past problems.

23. Although there was an MMI determination by Dr. Johnson, Claimant continued to treat through EmergiCare and receive physical therapy for pain in her right anterior thigh and hip. (Ex. 7, pp. 99-102). Claimant also saw Dr. Ritch again on October 6, 2017. He documented that Claimant's left knee was getting better while the right knee was getting worse. Claimant's back remained quite painful and the right hip was described to him as feeling "unbearable at most times…." *Id.* at 103.

24. On 9/27/17, Claimant returned to her treating surgeon, Dr. Theodore Stringer, who had performed Claimant's bilateral knee replacements and left hip replacement in the past. (Ex. 9, pp. 127-132). He indicated that Claimant was doing well when he last saw her in May of 2017, but she had significant ongoing problems since her fall at work in late July. He reported that Claimant had tripped over a piece of furniture on the floor and fell forward landing on both knees and her right side. Dr. Stringer preliminarily diagnosed Claimant with post-traumatic hip and bilateral knee pain and hip trochanteric bursitis. Dr. Stringer performed an injection into Claimant's right hip.

25. Claimant returned to Dr. Stringer on October 6, 2017 and reported to him that she received a minimal therapeutic response to the injection. He felt that

Claimant's symptoms might be coming from her lower back, and recommended a lumbar MRI. The lumbar MRI was performed on November 21, 2017 and revealed the following: 1.) At L5-S1 there is apparent bulging of the left facet joint capsule with fatty tissue or complex cyst formation with mild displacement and impingement of the left S1 nerve anteriorly; 2.) At L4-5 there is severe facet arthropathy, chronic degenerative disc disease, grade 1 spondylolisthesis, and moderately severe spinal canal stenosis with moderate right foraminal stenosis; and 3.) At L2-3 and L3-4, there is chronic disease and disc bulging without nerve impingement or disc protrusion. (Ex. 8, p. 122).

26. Claimant was referred to Dr. Michael Sparr to consider injections in the lumbar spine. Her first evaluation with him occurred on January 18, 2018. (Ex. 11, pp. 143-147). Claimant described to Dr. Sparr that her greatest pain at that time was in her right lateral hip with pain in the right central and lateral buttock. Dr. Sparr was concerned that Claimant had a labral tear based on the history taken and physical examination of Claimant. He recommended an MR Arthrogram of the right hip.

27. The MR Arthrogram was performed on January 30, 2018 and revealed significant pathology. (Ex. 8, pp. 123-25). The imaging showed marked degenerative changes of the right hip articulation, prominent bone marrow edema, a probable healing fracture of the right posterior superior acetabulum and a probable fracture of her sacrum, right greater than left.

28. Dr. Ritch evaluated Claimant again on March 16, 2018. (Ex. 7, pp. 117-120). Claimant reported to Dr. Ritch that she was going to have her right hip replaced, but it would be covered under her private insurance as her claim remained denied. Dr. Ritch specifically opined on the work-relatedness of this condition: "In my opinion, this is directly a result of her fall and should be covered. We were slow to diagnose her true problem as her initial complaints were more in her knees and, only after some time, did problems localize more to her legs." *Id.* at 117. Claimant continued to report to him severe hip and groin pain.

29. Claimant underwent an IME with Dr. Jack Rook on March 22, 2018 to address the compensable nature of her fall. (Ex. 13). She described to Dr. Rook the following mechanism of injury: "The injury occurred while she tripped on a display table whose legs were folded so that its surface was only a few inches above the floor. Her left foot got caught under the table causing her to fall forwards and to the right." *Id.* at 156. Claimant continued to work for financial reasons, but eventually sought treatment due to the increasingly severe pain.

30. Dr. Rook diagnosed Claimant with a permanent aggravation of her right hip osteoarthritis, a fracture of the acetabulum that likely occurred when she fell at work in July of 2017, and a probable fracture of the sacrum that also likely occurred when she fell at work. Dr. Rook addressed the fact that Claimant had a separate injury earlier in the year on January 17, 2017 with a separate employer.

Id. at 169. According to Dr. Rook, the records from that injury show that Claimant did have some right hip complaints, but the records suggested it was nothing more than trochanteric bursitis and the records from the ATP, Dr. Dean, documented a normal right hip examination. Claimant underwent a DIME for her January 17, 2017 injury and was not assigned an impairment rating for her right hip.

31. Claimant initially testified that prior to initially seeking treatment for this claim on August 13, 2017, the last time she had seen a doctor for any reason was for a routine physical at the beginning of June of 2017. Claimant then verified at hearing the following excerpts from her UC Health medical report dated August 11th, 2017 (two days before she initially sought treatment related to the instant claim) (Ex. L):

> "Patient comes to clinic for scheduled follow-up work injury visit, **she is here for follow-up of R hand, hip, back pain**. She was seated and attacked from behind by a student who started hitting her on her back and the top of her head. **She was kicked in the L lateral hip off of her seat and landed on her R hip/side and caught herself with her R hand.** She states she is mildly sore everywhere else but is most worried about her R hand, since she fractured it 7 weeks ago and it required percutaneous pinning, casting and splinting. She had her splint removed last week."
>
> "Today she presents after having an IME and having her case reopened. She states that after discharge, her head symptoms started getting worse – ***her headaches and forgetfulness intensified*** and **her back and hip pain worsened**. (emphasis added).

32. Claimant acknowledged that on August 11th, 2017, she was treated for injuries she sustained for her concurrent worker's compensation claim. Claimant further admitted that on August 11th, 2017 she received treatment to the same body parts and for the same conditions she alleges are related to the instant claim.

33. Claimant testified that, during her recorded interview with Mr. Hecker on August 17, 2017 (Ex. E), she did not inform him about her concurrent claim when he asked her about any prior work injuries. Claimant reasoned that she did not do so because at the time of the interview "my pain was so bad that day, the pain was unbearable, that I didn't even -- it didn't even come into my head." (transcript, pp. 57-58)

34. Claimant then verified the following excerpt from the transcript of the recorded interview, in which Claimant described other worker's compensation claims from many years ago, but did not mention her concurrent claim (Ex. E, p. 10):

> AH: Any prior work injuries in the past?

MH: Um, I had a Marshalls' injury years and years ago but it was, it was minor. And 2004, I was going to school and there was a very, very cracked sidewalk that was about 60 years old and my right toe caught on a piece of raised concrete *(inaudible)* and that's what, and I fell and that's what led to hip replacements, both knees and both hands being operated on.

35. Claimant subsequently admitted that during the recorded interview with Mr. Hecker, she omitted information that had anything to do with her concurrent claim. She admitted that when Mr. Hecker asked her if she had any prior work injuries, she mentioned other worker's compensation claims, but not her concurrent claim. She admitted that when Mr. Hecker asked about any recent medical attention, she did not inform him about the treatment she had been receiving relating to her concurrent claim. Claimant further admitted that she did not mention to Mr. Hecker the fact that on June 13, 2017 (about one month before she allegedly tripped at Marshalls), she had received a 20% impairment rating from the DIME physician for her concurrent claim. (Ex. H) (transcript, pp. 58-59).

36. Claimant testified that she does not recall what she told Mr. Hecker during her recorded interview when he asked her about the condition of her hips and knees *prior to* the date she allegedly tripped at Marshalls. Thereupon, Claimant verified the following excerpt from the transcript of the recorded interview (Ex. E page 8)(emphasis added):

AH: Okay, alright. And you said he took x-rays of both your knees and the hip back when you saw him?

MH: Yes, he did, mm hmm.

AH: And everything checked out okay?

MH: **Everything was great, mm hmm**.

AH: Okay. And, um, but he didn't do an MRI? He just did x-rays?

MH: Yeah, he just did x-rays.

AH: Okay.

MH: In their, in their orthopedic group.

AH: Okay. And any problems with your knees prior to the fall at work?

MH: **No. They've been good.**

37. Claimant verified the following excerpts of her DIME report, relating to her concurrent claim, dated June 13, 2017: (Ex. H, with emphasis added):

> She complains of pretty much daily pain in her low back, **radiating out into the SI area, out toward the hips**, and laterally into the trochanteric area. **She has posterior radiating thigh pain, usually not past the knees**. **She reports that both of her hips now "pop."**
>
> She has seen Dr. Stringer recently and I have reviewed his note from 05/09/17, where **she is discussing an aching right hip,** left hip, mid-bad and low back **radiating into the lower extremity and back of both legs.**

38. Claimant was asked if the above instance was the only time she failed to mention symptoms relating to her concurrent claim. Claimant replied "I-- I--you know, I really do not know. (transcript, p. 62).

39. Thereupon Claimant verified with the following excerpt from her January 18, 2018 Accelerated Recovery Specialist report, in which Dr. Michael Sparr wrote (emphasis added) (Ex. J):

> **She reports that she is never experienced left hip pain and denies any previous history of low back pain** with the exception of what she described as muscle spasms in September 2016 and November 2016.

40. Claimant testified that Dr. Sparr's report reads the way that it does because of what she told Dr. Sparr at her appointment.

41. Next, Claimant verified an excerpt from her September 1, 2017 Emergent Care report, relating to treatment for her concurrent claim, stating (emphasis added) (Ex. N):

> **PT states that she did not mention to MD's that she was attacked by a student in January.** She states that the student attacked her and hit her repeatedly on her head and "at least 30 times in her back."

42. Claimant initially testified that she has only had three other Colorado Worker's Compensation claims, outside of the instant claim. Claimant subsequently admitted that the instant claim is her seventh worker's compensation claim. (transcript, pp. 65-67).

43. Claimant testified that she did not disclose all of her prior claims in discovery because "they must have been so minor that I just didn't think about them." Claimant further explained "…I really do not remember what the other ones were because they must have been so simple and so long ago that I just don't think about it." Claimant subsequently admitted that she would not consider her 2004 worker's compensation claim which settled for about $70,000 a minor claim. Claimant also testified that she had suffered a *traumatic brain injury* during this incident "not major, minor to moderate I…guess I would say."(transcript, p. 34).

44. Claimant was asked if she has had any subsequent injuries or accidents since the date she allegedly tripped at Marshalls. Claimant testified that she only "fell on the steps just at home, just landed, but that's all. That's the only thing." (transcript, p. 67)

45. Thereupon Claimant verified with the following excerpt from her August 18, 2017 Emergent Care medical report, (Ex. M):

> Patient notes that her knees were hurting enough yesterday
> that she actually fell going down some stairs.

46. Claimant next verified the following excerpts from her November 21st, 2017 MRI reports authored by Dr. Sherman, (Ex. Q):

> Right-sided low back, hip, and leg pain for three months post fall.
>
> History of fall and hitting head three months ago.

47. Dr. Sherman's reports reference a date of injury within the same timeframe that Claimant initially sought treatment for the instant claim on August 13, 2017. (Ex. Q) When asked to confirm this fact, Claimant replied: "You know what, I honestly do not know." (transcript, p. 70)

48. Claimant then verified the following excerpt from her January 9th, 2018 medical report from Dr. Lauren Halby, MD., (Ex. O):

> First week of Dec, walked up 4-5 steps, right hip
> and knee gave way and fell onto buttocks on the wall
> and steps, now with pain in right groin and down right
> leg which is different than before.

49. Claimant then verified the following excerpt from her January 9th, 2018 medical report from Dr. Farrel VanWagenen, MD., (Ex. P):

> Fall on 12/03/17. Increased right hip and groin pain.

50. Claimant was asked if her right hip injury is related to her January 2017 concurrent claim. Claimant testified “not that I recall.” (transcript, p. 85)

51. Claimant again verified the following excerpts from her June 13, 2017 DIME report relating to her concurrent claim (emphasis added) (Ex. H p.2):

> **Her diagnosis included pain in the right hip and pain in the left hip**.
>
> **She complains of pretty much daily pain in her low back, radiating out into the SI area, out toward the hips**, and laterally into the trochanteric area. She has posterior **radiating thigh pain, usually not past the knees. She reports that both of her hips now “pop.” It is usually when she is walking and it is audible and concerning.**
>
> She has seen Dr. Stringer recently and I have reviewed his note from 05/09/17, where **she is discussing an aching right hip, left hip, mid-back and low back radiating into the lower extremity and back of both legs**.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers’ Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers’ compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Credibility/Generally

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

Credibility/ Pamela Porter, Robert Singleton, Debra Gibbs

D. In this case, the ALJ finds the witnesses called by Respondents to be credible and reliable. They have no issues of secondary gain; indeed, it appears they like Claimant personally. They are consistent in their accounts of what they saw, and what they didn't. They appear to have followed proper protocol in complying with all Workers Comp procedures once notified of this alleged incident. Had Claimant notified her of the alleged fall by the customer (as required), Debra Gibbs would have taken a statement and notified Zurich. Claimant failed to so notify her as required. If Claimant's version of events is to be believed, she would have just handed the alleged contact information on the paper towel to Ms. Gibbs at the time. There was no reason to take it home at all, where it was allegedly damaged and thrown away.

E. None of these witnesses saw evidence of the alleged fall. None of them heard Claimant complain of injuries, until she reported pain weeks later. She told Debra Gibbs right afterwards that she was "fine and dandy". None of these witnesses noticed any signs of pain or disability, until Claimant showed up at work using a cane during the holiday season- three to four months after Claimant indicates she could "no longer walk". Claimant never complained to them, nor even asked for extra break time or modified duty.

Compensability

F. The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the

accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. City of Boulder v. Payne, 162 Colo. 345, 426 P.2d 194 (1967). Soto-Carrion v. C & T Plumbing, Inc., WC 4-650-711 (ICAO February 15, 2007).

G. The mere fact that a Claimant experiences pain at work does not necessarily require a finding of a compensable injury. In Miranda v. Best Western Rio Grande Inn, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition."

H. However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of a natural progression of a pre-existing condition that is unrelated to the employment. See F.R. Orr Construction v. Renta, 717 P.2d 965 (Colo. App. 1995).

I. In this case, while Claimant might have tripped over this table, no compensable injury occurred. Claimant was "fine and dandy" when she got right back up, and the ALJ so finds. From that moment on, Claimant has simply been an unreliable historian in connection with this alleged incident. Perhaps some of this is through no fault of her own, due to her extensive self-reported post-concussive symptoms from her January, 2017 case. Nonetheless, the ALJ simply cannot rely upon what Claimant has reported, either in hearing testimony, or to her medical providers along the way.

J. The severe pain Claimant now reports would have manifested itself far sooner than she reports. Her coworkers would have noticed it. Claimant says that by August, she essentially could not walk, yet she only appeared using a cane at work in November or December-even then, not complaining of pain. Claimant's alleged mechanism of injury is not internally consistent, nor is any version consistent with the injuries she now complains of. The only reason the date of this alleged fall could be ascertained is the incident report prepared by Marshalls. Claimant's reasons for delaying treatment for nearly a month are not persuasive. Claimant was already familiar with the Workers Compensation process, having been down that road a number of times already.

K. Claimant has serious pre-existing conditions to her right hip, regardless of any lack of impairment rating for it. Her lack of condor in failing to simply report this during the discovery process, and during her recorded interview, renders much of what she now says highly suspect. Examining her hearing testimony, her excuse for not disclosing her prior Workers Comp cases during discovery goes beyond mere "forgetfulness". It is clear that Claimant actually recalled it, unilaterally decided on her own what she thought was relevant, and purposefully failed to disclose this information. That was not her call to make. A total of seven Workers Compensation cases in her lifetime would teach her that much. Tell the truth, then let your attorney advocate for you.

L. The ALJ is also not persuaded by the theory of compensability put forth by Dr. Rook. To the extent that Claimant might not be exaggerating her current right hip symptoms, more likely than not, they are due to her past injuries and degenerative conditions. Neither her past injuries, nor her degenerative conditions were aggravated by this fall, and the ALJ so finds.

Medical Treatment

M. As the ALJ has found this claim not compensable, no medical treatment is ordered through this Workers Compensation claim.

Temporary Total Disability

N. On one hand, several credible co-workers do not recall Claimant missing any work while she sought treatment for her alleged injury. On the other hand, available records from Marshalls suggest Claimant missed work for about three weeks. As this claim is not compensable, this issue need not be addressed further by the ALJ.

ORDER

It is therefore Ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 22, 2018

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable shoulder, elbow and wrist injuries during the course and scope of her employment with Employer on June 5, 2017.

2. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive causally related, reasonable and necessary medical treatment for her June 5, 2017 injuries.

3. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period June 13, 2017 until terminated by statute.

4. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant was responsible for her termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving indemnity benefits.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $549.37.

FINDINGS OF FACT

1. Claimant began working for Employer on May 6, 2013 as a Vinyl Technician. Her job duties involved working at a computer and applying thin layers of film lettering to plexiglass boards to create posters and signs for Employer.

2. In April of 2017 Claimant's job duties increased with the temporary addition of operating the CNC router. The CNC router was used to cut large pieces of aluminum and steel for making signs. The router was located at ground level but the computer used for programming the machine was located approximately six feet above the router in the "crow's nest." The crow's nest was only accessible through a makeshift ladder.

3. Claimant testified that on June 5, 2017 she was lifting a large piece of aluminum that weighed approximately 87 pounds onto the router table with co-worker Damon Shields. She felt a "pop" in her left shoulder and immediately experienced pain in both shoulders. Claimant described her arms as tired and heavy after the incident. She acknowledged that she did not mention her injuries to Mr. Shields.

4. Mr. Shields testified that he worked as a Sign Builder in the same area as Claimant. Although he acknowledged lifting a piece of aluminum with Claimant on June 5, 2017, he had no information that she was injured.

5. Claimant explained that she immediately reported her accident to her direct supervisor Randy Flores. However, she did not seek medical assistance because she was hopeful that her symptoms would improve with time. Claimant completed her June 5, 2017 shift and worked for the next couple of days. However, she noted that she completed her job duties in a modified capacity because of her continued shoulder and neck pain.

6. Mr. Flores denied that Claimant reported a specific injury on June 5, 2017. Instead, he noted that Claimant was involved in a yelling incident with another employee. Claimant received a write-up and underwent a performance review on June 7, 2017. Claimant did not mention the June 5, 2017 incident at the performance review.

7. On June 8, 2017 Claimant submitted a written notice to Mr. Flores regarding her inability to perform her job duties involving the CNC router. She specifically explained that she had been helping to run the router since April 15, 2017. However, she remarked that she was "physically unable to continue to climb up and down the perch area safely without causing serious or permanent injuries to myself. My arms feel like they are going to fall off even on the days I don't run the router. I wake up multiple times during the night with pain and throbbing in both of my elbows, wrists and shoulders. I think it would be a good idea to let them heal for a week and if pain and night throbbing still persist then I will have to visit a workers comp doctor to fix." Claimant did not mention any June 5, 2017 lifting incident.

8. Business Development Manager Bill O' Gorman testified at the hearing in this matter. He explained that he helped Claimant complete an Employer's First Report of Injury on June 8, 2017. Claimant reported that she had pain in her shoulders, elbows and wrists. In describing the cause of her symptoms Claimant noted that she had experienced pain for several weeks as a result of "repeatedly climbing in and out of the crow's nest." Claimant did not mention any acute injury while lifting a sheet of aluminum on June 5, 2017.

9. Employer referred Claimant for medical care. Claimant chose Colorado Urgent Care for treatment.

10. On June 8, 2017 Claimant visited Bethany Wallace, D.O. for an evaluation. Claimant reported pain in her shoulders, elbows and wrists. She noted that at work she was required to lift heavy objects and pull herself up four feet. Claimant also remarked that she had fallen at work previously and injured her left shoulder. However, her left shoulder had healed. Claimant commented that she had been performing her job for two months but did not delineate a specific accident or injury on June 5, 2017. Dr. Wallace referred Claimant to an occupational medicine physician and assigned work restrictions until June 22, 2017 of no lifting in excess of 10 pounds, no reaching away from the body and no lifting above shoulder level.

11. As part of the initial evaluation for a work-related incident, Claimant underwent a toxicology screening on June 8, 2017. Claimant tested positive for cannabinoids/THC.

12. On June 9, 2017 Claimant returned to restricted work duties. She continued working in a restricted capacity through June 12, 2017.

13. On June 13, 2017 Claimant was terminated because of her positive drug screening for cannabinoids/THC. At the termination meeting Claimant was advised that her Workers' Compensation claim was distinct from her termination. Employer emphasized that Claimant should follow-up with an occupational medicine physician for treatment. However, Claimant failed to obtain additional medical treatment for the period June 8, 2017 until November 14, 2017.

14. On November 14, 2017 Claimant visited Authorized Treating Physician (ATP) Brian Beatty, D.O. for an evaluation. Claimant reported pain in her shoulders, elbows and wrists. Claimant remarked that she had been using a hammer and nails at work for four years and had to pull her whole body weight up to a work area. She detailed that she was using a hammer and nails and running a router at work on June 5, 2017 when she developed pain in her shoulders, elbows and wrists. Claimant did not report any injuries while lifting a sheet of aluminum on June 5, 2018. After conducting a physical examination, Dr. Beatty diagnosed Claimant with strains/sprains of the shoulders, elbows and wrists.

15. Dr. Beatty continued to provide medical treatment to Claimant. He referred Claimant for an orthopedic evaluation with Mark Failinger, M.D. and a consultation with Barry Ogin, M.D.

16. On December 28, 2017 Claimant underwent an independent medical examination with David W. Yamamoto, M.D. Claimant reported that she injured her shoulders, elbows and wrists while lifting a piece of aluminum onto a table at work. However, she explained that the main problem was pulling herself up to a workstation that was four feet above the floor. She noted that, although there was a ladder to access the workstation, the ladder did not reach high enough and she thus had to pull herself up on vertical bars. Claimant commented that the elevated workstation had been taken down but she took photos before it was removed. After conducting a physical examination Dr. Yamamoto concluded that Claimant "likely injured herself while having to pull herself up to a work platform. She stated that she did not usually do this and that it was difficult for her to get up on the platform." Dr. Yamamoto diagnosed Claimant with bilateral shoulder strains "from pulling herself up on the platform," a cervical strain and bilateral upper extremity myofascial pain. He recommended bilateral shoulder MRI's and evaluation by an orthopedic surgeon.

17. On March 7, 2018 Claimant visited Dr. Failinger for an orthopedic evaluation. Claimant reported bilateral shoulder pain that began approximately one year earlier while lifting at work. Dr. Failinger determined that Claimant suffered from right shoulder impingement syndrome but did not recommend surgery.

18. On April 9, 2018 Claimant visited Barry A. Ogin, M.D. for a follow-up consultation. Dr. Ogin noted that he had initially seen Claimant in December 2017 for diffuse pain complaints in her shoulders, upper back and arms. Claimant recounted that her symptoms began when she had to climb up and down a short ladder at work. She explained that there were two bars on top of the ladder that she was required to hold in order to climb to the upper level. Claimant specifically noted an incident in May 2017 when she fell off a step after her arms gave out and an accident in June 2017 when she was lifting a large piece of aluminum with a coworker. Dr. Ogin determined that it was "difficult to attribute any of [Claimant's] current complaints to her occupational insult." He remarked that walking up and down while grabbing bars would not cause diffuse myofascial complaints in Claimant's upper extremities. Dr. Ogin commented that Claimant's failure to improve despite being laid off from work for approximately 10 months suggested there was no relationship between her occupational activities for Employer and her physical symptoms.

19. On May 15, 2018 the parties conducted the post-hearing evidentiary deposition of Dr. Beatty. He recounted that Claimant had reported bilateral shoulder pain as a result of using a hammer and power tools at work. She specifically noted that she was required to pull herself into an "unsafe workplace" and was also running a router. Dr. Beatty determined that Claimant's symptoms were not caused by her occupational activities but instead were related to her underlying anatomy.

20. In addressing whether Claimant may have aggravated pre-existing arthritis in her shoulder by lifting a heavy piece of aluminum weighing 70 to 80 pounds, Dr. Beatty felt that it was a possibility but did not believe that the arthritis had anything to do with her symptoms. He also testified that it was possible, but not probable, that Claimant could have injured her bilateral shoulders, elbows and wrists with one act of reaching out holding a sheet of aluminum. Furthermore, Dr. Beatty testified that, after evaluation and treatment including the consultation with Dr. Failinger, the MRIs, EMG and Dr. Ogin's evaluations, Claimant suffers from more of an anatomic body habitus issue as opposed to any ongoing problem related to a work injury. He summarized that Claimant's treatment beginning in November 2017 was unrelated to the work-related incidents either recorded in his history or based on Claimant's hearing testimony about lifting a sheet of aluminum.

21. Claimant has failed to demonstrate that it is more probably true than not that she suffered compensable shoulder, elbow and wrist injuries during the course and scope of her employment with Employer on June 5, 2017. Initially, Claimant testified that on June 5, 2017 she was lifting a large piece of aluminum that weighed approximately 87 pounds onto the router table with co-worker Mr. Shields. She felt a "pop" in her left shoulder and immediately experienced pain in both shoulders. However, the record is replete with contrary evidence that Claimant did not suffer an acute injury on June 5, 2017. Notably, Claimant repeatedly informed Employer and medical providers that she had difficulties performing her job duties operating the CNC router because the computer used for programming the machine required her to access the crow's nest using a makeshift ladder.

22. Claimant's supervisor Mr. Flores denied that Claimant reported a specific injury on June 5, 2017. In fact, on June 8, 2017 Claimant submitted a written notice to Mr. Flores regarding her inability to perform her job duties involving the CNC router. She specifically explained that she had been helping to run the router since April 15, 2017. However, she remarked that she was "physically unable to continue to climb up and down the perch area safely without causing serious or permanent injuries to myself. My arms feel like they are going to fall off even on the days I don't run the router." Furthermore, Claimant reported to Mr. O'Gorman that she had pain in her shoulders, elbows and wrists. In describing the cause of her symptoms Claimant noted that she had experienced pain for several weeks as a result of "repeatedly climbing in and out of the crow's nest." Claimant did not mention any acute injury while lifting a sheet of aluminum on June 5, 2017.

23. In her initial evaluation with Dr. Wallace Claimant noted that at work she was required to lift heavy objects and pull herself up four feet. Claimant commented that she had been performing her job for two months but did not delineate a specific accident or injury on June 5, 2017. In her initial visit with Dr. Beatty Claimant reported pain in her shoulders, elbows and wrists. Claimant remarked that she had been using a hammer and nails at work for four years and had to pull her whole body weight up to a work area. She detailed that she was using a hammer and nails and running a router at work on June 5, 2017 when she developed pain in her shoulders, elbows and wrists. Claimant did not report any injuries while lifting a sheet of aluminum on June 5, 2018. After conducting a physical examination, Dr. Beatty diagnosed Claimant with strains/sprains of the shoulders, elbows and wrists. In her independent medical examination with Dr. Yamamoto Claimant reported that she injured her shoulders, elbows and wrists while lifting a piece of aluminum onto a table at work. However, she explained that the main problem was pulling herself up to a workstation that was four feet above the floor. She noted that, although there was a ladder to access the workstation, the ladder did not reach high enough and she thus had to pull herself up on vertical bars. Dr. Yamamoto concluded that Claimant "likely injured herself while having to pull herself up to a work platform." Finally, Claimant recounted to Dr. Ogin that her symptoms began when she had to climb up and down a short ladder at work. She explained that there were two bars on top of the ladder that she was required to hold in order to climb to the upper level. Claimant's reports to Employer and medical providers thus reflect that she did not suffer an acute injury at work on June 5, 2017.

24. The records of Drs. Ogin and Beatty also reflect that Claimant's symptoms were not caused by her work activities on June 5, 2017. Dr. Ogin determined that it was "difficult to attribute any of [Claimant's] current complaints to her occupational insult." He remarked that walking up and down while grabbing bars would not cause diffuse myofascial complaints in Claimant's upper extremities. Dr. Ogin commented that Claimant's failure to improve despite being laid off from work for approximately 10 months suggested there was no relationship between her occupational activities for Employer and her physical symptoms. Furthermore, in addressing whether Claimant may have aggravated pre-existing arthritis in her shoulder by lifting a heavy piece of aluminum weighing 70 to 80 pounds, Dr. Beatty felt that it was a possibility but did not believe that Claimant's arthritis had anything to do with her symptoms. He also testified that it was

possible, but not probable, that Claimant could have injured her bilateral shoulders, elbows and wrists with one act of reaching out holding a sheet of aluminum. Dr. Beatty concluded that Claimant suffers from more of an anatomic body habitus issue as opposed to any ongoing problem related to a work injury. Accordingly, based on the persuasive testimony and medical records, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical

treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered compensable shoulder, elbow and wrist injuries during the course and scope of her employment with Employer on June 5, 2017. Initially, Claimant testified that on June 5, 2017 she was lifting a large piece of aluminum that weighed approximately 87 pounds onto the router table with co-worker Mr. Shields. She felt a "pop" in her left shoulder and immediately experienced pain in both shoulders. However, the record is replete with contrary evidence that Claimant did not suffer an acute injury on June 5, 2017. Notably, Claimant repeatedly informed Employer and medical providers that she had difficulties performing her job duties operating the CNC router because the computer used for programming the machine required her to access the crow's nest using a makeshift ladder.

8. As found, Claimant's supervisor Mr. Flores denied that Claimant reported a specific injury on June 5, 2017. In fact, on June 8, 2017 Claimant submitted a written notice to Mr. Flores regarding her inability to perform her job duties involving the CNC router. She specifically explained that she had been helping to run the router since April 15, 2017. However, she remarked that she was "physically unable to continue to climb up and down the perch area safely without causing serious or permanent injuries to myself. My arms feel like they are going to fall off even on the days I don't run the router." Furthermore, Claimant reported to Mr. O'Gorman that she had pain in her shoulders, elbows and wrists. In describing the cause of her symptoms Claimant noted that she had experienced pain for several weeks as a result of "repeatedly climbing in and out of the crow's nest." Claimant did not mention any acute injury while lifting a sheet of aluminum on June 5, 2017.

9. As found, in her initial evaluation with Dr. Wallace Claimant noted that at work she was required to lift heavy objects and pull herself up four feet. Claimant commented that she had been performing her job for two months but did not delineate a specific accident or injury on June 5, 2017. In her initial visit with Dr. Beatty Claimant reported pain in her shoulders, elbows and wrists. Claimant remarked that she had been

using a hammer and nails at work for four years and had to pull her whole body weight up to a work area. She detailed that she was using a hammer and nails and running a router at work on June 5, 2017 when she developed pain in her shoulders, elbows and wrists. Claimant did not report any injuries while lifting a sheet of aluminum on June 5, 2018. After conducting a physical examination, Dr. Beatty diagnosed Claimant with strains/sprains of the shoulders, elbows and wrists. In her independent medical examination with Dr. Yamamoto Claimant reported that she injured her shoulders, elbows and wrists while lifting a piece of aluminum onto a table at work. However, she explained that the main problem was pulling herself up to a workstation that was four feet above the floor. She noted that, although there was a ladder to access the workstation, the ladder did not reach high enough and she thus had to pull herself up on vertical bars. Dr. Yamamoto concluded that Claimant "likely injured herself while having to pull herself up to a work platform." Finally, Claimant recounted to Dr. Ogin that her symptoms began when she had to climb up and down a short ladder at work. She explained that there were two bars on top of the ladder that she was required to hold in order to climb to the upper level. Claimant's reports to Employer and medical providers thus reflect that she did not suffer an acute injury at work on June 5, 2017.

10. As found, the records of Drs. Ogin and Beatty also reflect that Claimant's symptoms were not caused by her work activities on June 5, 2017. Dr. Ogin determined that it was "difficult to attribute any of [Claimant's] current complaints to her occupational insult." He remarked that walking up and down while grabbing bars would not cause diffuse myofascial complaints in Claimant's upper extremities. Dr. Ogin commented that Claimant's failure to improve despite being laid off from work for approximately 10 months suggested there was no relationship between her occupational activities for Employer and her physical symptoms. Furthermore, in addressing whether Claimant may have aggravated pre-existing arthritis in her shoulder by lifting a heavy piece of aluminum weighing 70 to 80 pounds, Dr. Beatty felt that it was a possibility but did not believe that Claimant's arthritis had anything to do with her symptoms. He also testified that it was possible, but not probable, that Claimant could have injured her bilateral shoulders, elbows and wrists with one act of reaching out holding a sheet of aluminum. Dr. Beatty concluded that Claimant suffers from more of an anatomic body habitus issue as opposed to any ongoing problem related to a work injury. Accordingly, based on the persuasive testimony and medical records, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

ORDER

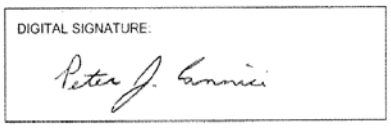
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20)

days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 25, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-019-091-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 7, 2018, in Denver, Colorado. The hearing was digitally recorded (reference:) 6/7/18, Courtroom 5, beginning at 8:30 AM, and ending at 9:05 AM).

Claimant's Exhibits 1 through 3 were admitted into evidence, without objection. Respondents' Exhibits A through G were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUES

The sole issue to be determined by this decision concerns whether the Claimant has overcome the Division Independent Medical Examiner's (DIME's) opinion that the Claimant reached maximum medical improvement (MMI) on January 4, 2017, with permanent medical impairment of 9% whole person. The Claimant's position was that the DIME opinions were erroneous as a whole because Dr. Green allegedly **did not** evaluate all body parts requested in the DIME request. This is the only point of contention. The DIME physician was Justin D. Green, M.D. In their Case Information

Sheet (CIS), Respondents did not designate the issue of "overpayment of $2,217.99, listed on the Final Admission of Liability (FAL).

The DIME challenger (in this case the Claimant) bears the burden of proof, by clear and convincing evidence.

Respondents claimed an overpayment of $2,217.99, in the FAL, based upon the differential in the rating of 10% whole person by authorized treating physician (ATP) Paul Raford, M.D., and the admitted 9% whole person rating in the FAL, based on the DIME physician's opinion.

Because the Claimant's challenge to the DIME was placed on controversy, the entire DIME became inoperative and the FAL is hereby superseded by the evidence, or lack thereof, and the decision based on the evidence. Consequently, the Respondents bear the burden of proof on their affirmative defense of "overpayment."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant was an employee of the Employer at the time of the injury.

2. On May 13, 2016, during the course and scope of her employment, the Claimant sustained an injury to her back, buttocks, and reportedly right groin. The Claimant visited the emergency room (ER) that day and was subsequently referred to a primary worker's compensation physician including both Paul Raford, M.D., and Martin Kalevik, D.O.

3. The Claimant applied for a DIME on August 10, 2017 requesting evaluation of her right lower extremities, back, and "any and all other body parts the DIME physician believes were injured in the work injury." (Claimant's Exhibit 1). In addition, the Claimant requested that the DIME physician address maintenance treatment and permanent restrictions.

4. Following the DIME conducted on December 19, 2017, Respondents filed a FAL on February 1, 2018, admitting for post-MMI medical maintenance treatment at the hands of ATPs (Dr. Raford and Dr. Kalevik); an MMI date of January 4, 2017; and, 9% whole person permanent medical impairment, pursuant to DIME Dr. Green's opinions.

5. On February 23, 2018, the Claimant filed an Objection to the FAL and Application for Hearing on the issue of overcoming the DIME.

6. On May 4, 2018, Respondents filed their Response to the Claimant's Application for Hearing, requesting to add the issue of overpayment and to add additional witnesses. The Claimant opposed the Respondents response on the grounds that it was beyond filed after the 15-day period required in Office of Administrative Courts Rules of Procedure (OACRP), Rule 8(G).

7. A pre-hearing conference was held on May 22, 2018 before Pre-Hearing Administrative Law Judge (PALJ) Laura Broniak, who denied the Respondents request to file a late response.

Medical Examination

8. Following the injury and initial visit to the ER at St. Joseph's Hospital on May 13, 2016, the Claimant had an initial evaluation with a nurse practitioner (NP) at Healthone Occupational Medicine and Rehabilitation on May 16, 2016 (Respondents' Exhibit E). The Claimant was subsequently referred to a primary workers' compensation physician including Dr. Raford and Dr. Kalevik. In relevant part, the Claimant sought medical assistance numerous times over the course of this claim, complaining of spinal, lower back, and pelvic pain. The Claimant was also referred to physical therapy (PT) and massage therapy over the course of the claim.

9. On January 4, 2017, Authorizing Treating Physician (ATP) Dr. Raford examined the Claimant and declared that the she had reached MMI. Dr. Raford noted that the Claimant could not accomplish range of motion (ROM) tests, and offered that the Claimant could return at a later date to reassess ROM. The Claimant declined, and Dr. Raford assigned a total of 5% whole person permanent impairment rating for the Claimant's spine. Dr. Raford also assigned an additional 5% whole person-impairment rating "for her otherwise consistent reports of pain and severe impact on her ADLs [(Activities of Daily Living)]." (Claimant's Exhibit 2).

10. On December 19, 2017, DIME physician Dr. Green evaluated the Claimant. Dr. Green conducted a motor exam for lumbar flexion and extension, and straight leg raising to find that the Claimant exhibited tenderness over the thoracic and lumbar parspinals, SI joints, gluteal notches and midline, but that passive ROM of the right hip did not provoke groin pain. Dr. Green concluded in his report that the Claimant was at MMI with 5% specific lumbar disorders impairment and 4% ROM impairment. Regarding Dr. Raford's 10% whole person impairment rating, Dr. Green stated that the rating was "of unknown reference" (Claimant's Exhibit 3).

Overpayment

11. The ALJ takes administrative notice of the fact that the differential between 10% whole person, under the particular circumstances of this case, and 9% whole person, is $2,217.99. Therefore, the Respondents have proven an overpayment of $2,217.99, by preponderant evidence.

Ultimate Findings

12 The opinions of DIME Dr. Green are presumed persuasive and credible. The Application for the DIME requested was in broad language, the DIME physician's professional medical opinion to examine any other body parts he saw relevant to the injury in addition to the Claimant's right lower extremities and back. In his medical opinion, DIME physician Dr. Green did not find it necessary to further examine the Claimant's reported groin injury. The fact that Dr. Green did not directly deal with the Claimant's reported groin injury does not negate the findings in his report. In fact, it implies that Dr. Green did not consider the groin complaints germane, or serious enough, to deal with in his DIME. DIME Dr. Green's opinions were credible and dealt with the issues with which he was requested to deal.

13. The Claimant presented no persuasive, additional evidence to establish that it is highly likely, unmistakable and free from serious and substantial doubt that Dr. Green's opinions are in error. Therefore, the Claimant has failed to prove that it is highly likely, unmistakable, and free from serious and substantial doubt that Dr. Green's DIME opinions are in error. Therefore, Claimant has failed to prove, by clear and convincing evidence that Dr. Green's DIME determinations were incorrect.

14. Respondents have proven, by a preponderance of the evidence that they overpaid the Claimant in the amount of $2,217.99.

15. The Claimant has proven, by preponderant evidence that post-MMI medical treatment at the hands of ATPs Dr. Raford and Dr. Kalevik is causally related to the compensable injury and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, DIME Dr. Green's opinions were credible and dealt with the issues with which he was requested to deal.

Overcoming Dr. Green's DIME

b. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office***,** 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's

determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Claimant failed to overcome Dr. Green's DIME by clear and convincing evidence.

Overpayment

c. Recovery of overpayments, based on mistake and on a retroactive basis, was previously prohibited by *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). In 1997, the General Assembly amended the re-opening statute to include overpayments as a ground for re-opening as to overpayments only. § 8-43-303 (1) and (2) (a), C.R.S. Now, employers have a statutory right to review and recalculate payments if an insurance carrier made a mistake in previous payments. *Simpson v. Indus. Claim Appeals Office,* 2009 Colo. App. LEXIS 576 (No. 07CA1581, April 16, 2009) (NSOP). Previously, an admission of liability could only be withdrawn retroactively on the basis of fraud. *Vargo v. Indus. Comm'n,* 626 P.2d 1164 (Colo. App. 1981). To the extent that a case may be re-opened, based on mistake and not fraud, if there were overpayments, the *Vargo* grounds for retroactively modifying a previously admitted award has been altered to include employer mistakes in calculations. In the present case, Respondents paid PPD benefits to the Claimant, based on the ATP's (Dr. Raford) of 10% whole person PPD. A DIME occurred and DIME physician, Dr, Green

rated the Claimant's PPD at 9% whole person, the differential being $2,217.99. As found, the Respondents made a clerical mistake in paying the Claimant PPD benefits, based on 10% whole person. Rather than elevating form over substance and requiring the Respondents to file a petition to re-open to correct the clerical error, the ALJ herewith allows the correction, which Respondents have proven by preponderant evidence by virtue of the ALJ taking administrative notice of the differential.

d. Because the Claimant failed to overcome the DIME and no further disability benefits are due and payable, the provisions of § 8-42-113.5, C.R.S., concerning the reduction of disability benefits is not applicable and the Respondents have no practical remedy within the workers' compensation system.

Post-MMI Medical Maintenance Care

e. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the injury. As found, the Claimant is entitled to post-MMI medical maintenance care at the hands of ATPs Dr. Raford and Dr. Kalevik.

Burden of Proof on Post-MMI Medical Maintenance Care

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v.*

Clark, 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with respect to post-MMI medical maintenance care at the hands of ATPs Dr. Raford and Dr. Kalevik.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant, having failed to overcome the Division Independent Medical Examination, the Final Admission of Liability, is hereby approved and adopted as if incorporated herein by reference.

B. Because the Claimant failed to overcome the DIME and no further disability benefits are due and payable, the provisions of § 8-42-113.5, C.R.S., concerning the reduction of disability benefits is not applicable.

C. Respondents shall pay the costs of post maximum medical improvement maintenance medical care at the hands of authorized treating physicians, Paul Raford, M.D., and Martin Kalevik, D.O., subject to the Division of Workers' Compensation Medical Fee Schedule.

DATED this_____day of June 2018.

ISSUES

The parties noticed the following issues for hearing:

- Whether Claimant established by a preponderance of the evidence that she was entitled to additional reasonably needed medical care.
- Whether Claimant established by a preponderance of the evidence that she was entitled to temporary partial disability ("TPD") benefits.
- Whether Claimant established by a preponderance of the evidence that she was entitled to temporary total disability ("TTD") benefits.
- A determination of Claimant's average weekly wage.
- Whether Respondents overcame by clear and convincing evidence the DIME report of Dr. Kristen Mason on the issue of maximal medical improvement ("MMI").

STIPULATIONS

After the hearing concluded, Claimant stipulated to the following:

- Claimant reached MMI on October 25, 2017 based upon Dr. Ethan Moses' IME report of the same date.
- Dr. Moses noted that Claimant had completed the treatment recommended by DIME Dr. Kristen Mason, including cognitive/behavioral therapy, biofeedback, imaging, trigger point injections, Biofreeze, and myofascial release.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant experienced an admitted work injury on January 9, 2015, while working for Employer.

2. Claimant underwent treatment for her symptoms and Dr. Wakashema, one of her authorized treating physicians, placed her at MMI on June 2, 2016. Respondents paid for Claimant's treatment related to her work injury.

3. Claimant received additional medical treatment after Dr. Mason's DIME. Respondents paid for that treatment as well. Claimant stipulates that she reached MMI on October 25, 2017. Claimant presented no persuasive evidence that Insurer denied her any recommended care or that any payment for such care remains outstanding.

4. Claimant has not met her burden of proving entitlement to additional medical treatment.

5. Employer paid Claimant for Friday, January 9, 2015, the day she sustained her injury and sought medical treatment from Dr. Updike. Claimant did not work the next two days, Saturday and Sunday, as scheduled. On Monday, January 12 Claimant met with Mr. Pody Hunnicutt, Employer's Safety and Training Manager, to discuss Dr. Updike's restrictions placing Claimant on light duty. He informed Claimant that Employer could accommodate with light duty work within her restrictions. Mr. Hunnicutt needed time to put Claimant's official letter together, and he called her on Tuesday, January 13 after he had done so asking her to come in the next day. Mr. Hunnicutt met with Claimant on Wednesday, January 14 to offer her light duty within her restrictions.

6. Mr. Hunnicutt credibly and persuasively testified that he went over the details of the offer at length with Claimant. He explained that for the four hours she was restricted to sitting, she would be folding laundered uniforms that employees had turned in, cleaning wheelchairs, and sorting and filing paperwork in the maintenance office. For the other four hours of light duty, Claimant would be on light duty janitorial work that meant picking up papers and helping empty some of the lighter, smaller trashcans in the office area. Mr. Hunnicutt testified that he explained to Claimant that she would have a two-wheeled small cart to put trash in and Employer would give her a reaching tool so she would not have to bend when picking up trash. Mr. Hunnicutt showed Claimant a diagram showing the wheeled cart and reaching tool. Mr. Hunnicutt testified that not only did he explain the task of picking up trash; he also demonstrated how to do it.

7. Claimant testified that the light duty Employer offered was only picking up trash, which she assumed involved bending and hauling bags of trash. This is highly unlikely given that her restrictions required her to sit for four hours per eight-hour shift. She further testified that she thought light duty was "sitting at a desk putting envelopes into envelopes." Although Claimant's restrictions only called for sitting for four hours, Claimant wanted light duty that involved sitting for her entire shift. Claimant testified that she did not know that Employer would pay her for her light duty work and did not know where she would be working. Claimant testified that she did sign the modified work offer; however, she did not read it. She also testified that she told Mr. Hunnicutt that she wanted "to rest up" and chose to stay home.

8. Claimant declined to do the light duty work that Employer offered her. Mr. Hunnicutt explained to Claimant that her decision could jeopardize her workers' compensation benefits and her employment status. At the January 14, 2015 meeting, Claimant asked Mr. Hunnicutt if she could use her accrued sick and vacation time instead of working light duty. He advised Claimant that he thought she could and would confirm with Employer's corporate office. On Friday, January 16, 2015, Mr. Hunnicutt notified Claimant that corporate had approved her request to use her accrued time off. Claimant used the eight hours of accrued vacation and the 20 hours of accrued sick leave. When Claimant exhausted her accrued leave, she asked Employer if she could take unpaid leave while she continued her medical treatment, and Employer allowed her to do so.

9. The ALJ finds Mr. Hunnicutt's version of the events to be more likely true than Claimant's version for the following reasons, among others:

- Claimant is a poor historian. For example, when asked the date of her injury, she provided an incorrect date. She also gave an incorrect date for the last day she worked for Employer even though it was only ten days prior to testifying. She did not remember how much time she took off, receiving spinal injections, whether she had asked Dr. Updike to send her back to work, or what body part she injured in a work-related injury that occurred one year prior to her injury in this claim.

- Claimant's testimony tested the limits of credulity. For example, she testified at hearing that she felt immediate pain of 5/10 in her back at 9:30 a.m., the time she sustained her work injury. Employer requires the immediate reporting of a work injury; however, Claimant did not report her injury for a number of hours. When Employer disciplined her for late reporting, Claimant appealed arguing that she did not report the injury immediately because she did not experience immediate pain. Claimant answered "None" to the interrogatory, "List all workers' compensation claim made by Claimant up through the present (other than the instant claim)." Claimant, though, had filed a claim against a past employer arising from a work-related auto accident that occurred on January 14, 2014, and possibly another claim in 2011. In addition, she filed a complaint in Denver District Court against the other driver in the 2014 accident alleging permanent injuries to her neck, shoulders, and back – the same body parts she claims were injured in this claim. However, she testified in this claim that she did not remember what body parts were injured. She treated briefly and then was "fine." While Claimant identified Drs. Updike and Wakeshima as the only medical providers who had treated her neck, upper back, and shoulder; in her tort case, she claimed past reasonable medical expenses as an element of her damages in the 2014 case. In responses to interrogatories in the District Court case, which Claimant answered a few months before her injury in the instant claim, she complained of ongoing pain in her back and left shoulder.

- Claimant's testimony was often unreasonable and illogical. For example, when Respondents' counsel inquired about Claimant mowing her lawn in surveillance video, she testified, "I did it to get my vitamin D." Claimant testified that her shoulder was hurting before her work injury, and that she did not seek treatment because she "thought [her] passengers would have to take care of [her]."

10. Dr. Updike released Claimant from her restrictions on March 10, 2015. She returned to full-time, full-duty the following day. Claimant has worked full-time, full-duty from that time until Employer terminated her employment on March 13, 2018.

11. The ALJ finds that Claimant received regular pay through and including January 14, 2015. Employer allowed Claimant, per her request, to use her accrued time off for time she missed from work. After Claimant exhausted her accrued time off, she

voluntarily chose to remain off work, unpaid, rather than work available light duty within her restrictions.

12. Claimant has not met her burden of proving entitlement to TTD or TPD benefits. Thus, the issue of Claimant's AWW is moot.

13. Given Claimant's stipulation that she reached MMI on October 25, 2017, and the fact that Respondents provided her with appropriate medical treatment when she was arguably not at MMI, the issue of overcoming the DIME on MMI is moot.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation is decided on its merits. Sections 8-43-201, *supra*.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. ICAO*, 43 P.3d 637 (Colo. App. 2001). The ALJ's factual findings concerns only evidence that is dispositive of the issues involved. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P. 3d 385 (Colo. App. 2000). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. ICAO*, 183 P. 3d 684 (Colo. App. 2008).

The ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Claimant stipulated that she reached MMI on October 25, 2017, and that she had completed the treatment recommended by DIME Dr. Kristen Mason, including cognitive/behavioral therapy, biofeedback, imaging, trigger point injections, Biofreeze,

and myofascial release. Claimant has presented no persuasive evidence that she is entitled to additional medical treatment.

As found, Employer paid Claimant for the first three days of work Claimant missed. Then Employer accommodated Claimant's request to use accrued time off and then unpaid leave rather than accept Employer's available, appropriate light duty work assignment. Claimant returned to full-time, full-duty when her ATP removed her work restrictions. Claimant has presented no persuasive evidence that she is entitled to TPD or TTD benefits.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for additional medical treatment is denied and dismissed.

2. Claimant's claim for TPD benefits is denied and dismissed.

3. Claimant's claims for TTD is denied and dismissed.

4. Claimant's claim for a determination of Claimant's average weekly wage is denied and dismissed as moot.

5. Whether Respondents overcame by clear and convincing evidence the DIME report of Dr. Kristen Mason on the issue of maximal medical improvement is denied and dismissed as moot.

6. Issues not expressly decided herein are reserved to the parties for future determination.

DATED: June 25, 2018, 2018

/s/ Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after the mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your Petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms - WC.htm.

ISSUES

I. Whether Claimant produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinions of Dr. Brian Mathwich regarding causation and maximum medical improvement (MMI). Concerning MMI, Claimant agrees that he is presently at maximum medical improvement, but disagrees with the date assigned by Dr. Mathwich.

II. Whether Claimant established, by clear and convincing evidence, that Dr. Mathwich's impairment rating opinions are highly probably incorrect and if so, a determination of the correct impairment rating to be awarded in this case given the various ratings assigned and whether apportionment applies to the rating.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to maintenance medical benefits.

IV. Whether Claimant suffered permanent disfigurement to a part of the body normally exposed to public view entitling her to additional benefits pursuant to C.R.S. §8-42-108(1).

V. Whether Respondents have proven by a preponderance of the evidence that they are entitled to recovery of a stipulated $2,407.50 overpayment of indemnity benefits if Claimant is determined to be at MMI as of the date found by Dr. Mathwich.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

A. Claimant's Prior Low Back Injuries and Pre-Existing Back Condition

1. Claimant has a significant history of prior injury to the lumbar spine. In 1993, he injured his low back in a non-work related incident when he pulled a tuna fish off a boat in Puerto Vallarta, Mexico. Epidural shots, physical therapy, and other conservative measures failed to produce lasting pain relief. Consequently, Claimant underwent a partial discectomy performed by Dr. Illig, to address his ongoing pain complaints.

2. Claimant recalls a full recovery from his 1993 injury; however, in 1995 he lifted a television out of a car at his then-employer's request. Claimant reinjured his low back and underwent a second partial discectomy by Dr. Illig. Although this was a work

related injury, Claimant did not file a workers' compensation claim. The evidentiary record fails to demonstrate that Claimant was assigned any work restrictions or impairment as a consequence of this injury.

3. Claimant was hired by Respondent-Employer on October 20, 2004 and currently works as a store manager. On May 13, 2009, Claimant injured his low back for a third time while lifting a box of paper weighing 30-35 pounds at work. Dr. Anjmun Sharma treated Claimant for this injury. On May 20, 2009, Claimant underwent an MRI of the lumbar spine. The MRI demonstrated a "posterior desiccated disc bulge contributing to marked thecal sac effacement without evidence of cauda equine compression" at the L4-L5 segmental level. Also noted at the L4-L5 level was bilateral neural foraminal narrowing, worse on the left, without evidence of nerve root impingement. At the L5-S1 spinal segment, post-surgical changes were noted along with moderate degenerative changes and "posterior osteophyte formation causing moderate to severe bilateral neural foraminal narrowing, worse on the left, with at least mild chronic left foraminal L5 nerve root compression." No evidence of "recurrent or residual" disc herniation was observed. Claimant responded to conservative treatment for this injury and was placed at maximum medical improvement (MMI) by Dr. Sharma without permanent impairment on June 3, 2009. In his closing report of June 3, 2009, Dr. Sharma imposed a permanent 30-pound lifting, carrying, pushing/pulling restriction noting that these restrictions were "due to previous back surgery." The ALJ finds from the evidence presented that the aforementioned lifting and pushing/pulling restrictions were likely imposed as a consequence of Claimant's prior surgeries necessitated by his 1993 and 1995 low back injuries rather than his 2009 injury.

B. Claimant's Current Claim

4. In addition to the above outlined injuries, Claimant alleged an injury to his lower back while performing job related functions on December 27, 2013. Respondents denied liability for this injury and a hearing was set to commence before ALJ Donald Walsh on July 8, 2015.

5. Prior to the scheduled hearing, Claimant underwent an MRI of the lumbar spine on March 22, 2014. The March 22, 2014 MRI was compared to Claimant's previous exam and read as signifying "no change" except for high signal intensity in the posterior annulus consistent with an associated annular tear at the L4-L5 disc level.[1]

6. Claimant also requested an independent medical examination (IME) with Dr. Timothy Hall prior to the July 8, 2015 hearing. The IME was completed on December 12, 2014, after which Dr. Hall noted that Claimant was not having any significant ongoing back problems leading up to the December 2013 injurious event. According to Dr. Hall's IME report, Claimant did not require medication and was not missing time from work prior to the December 27, 2013 incident. The record evidence also fails to establish that Claimant was receiving treatment directed to the lumbar spine

[1] Repeat MRI performed December 8, 2015, after Claimant's July 8, 2015 hearing also demonstrated annular tearing at L4-L5 and L5-S1.

between his June 3, 2009 release by Dr. Sharma and his presentation to ExpressCare Plus on March 20, 2014 for back pain he associated with the December 27, 2013 injurious event. Dr. Hall provided a diagnosis of moderate-to-severe lumbar spinal stenosis exacerbated by the December 27, 2013 work injury. Dr. Hall concluded, that Claimant's "December 2013 event [had] led to a permanent aggravation of these previous issues, which [had] not responded to conservative intervention", noting further that Claimant would likely require surgery to "return him to pre-accident levels of function and comfort."

7. Respondents sought an opinion from Dr. Kathleen D'Angelo and she performed the same on March 29, 2015, prior to the compensability hearing. At the outset of the IME, it was asked if Claimant had gradual or delayed effects, to which he responded, "I dealt with the pain as it intensified until it became unbearable. After 3 months I went to see a physician." Claimant told Dr. D'Angelo that after he "babied" his back over the weekend with ibuprofen, heat, and rest, the pain "kind of subsided." Dr. D'Angelo revisited Claimant's original complaints of pain after the injurious event. Again, Claimant explained the pain was "tolerable" for the first two weeks with ibuprofen, but it just continued to get worse, despite attempting his own therapy based on techniques he learned after his 2009 back injury. At no point did Claimant report a resolution of his symptoms.

8. Following her IME, Dr. D'Angelo concluded that Claimant's symptoms were a consequence of the natural progression of pre-existing lumbar degenerative disc disease, despite the existence of a specific traumatic event causing his symptoms. Dr. D'Angelo "strongly urged" against surgery as she did not believe it would result in a favorable outcome for Claimant.

9. A compensability hearing was held on July 8, 2015 before ALJ Walsh. Following the aforementioned hearing, ALJ Walsh issued a Summary Order on September 14, 2015. In his Summary Order, ALJ Walsh found that Claimant experienced an immediate onset of low back pain while assisting a coworker move 20-25 pound boxes of stationary from an upper shelve in Employer's warehouse. As the co-worker was passing the boxes down from a ladder, Claimant reached over his head with both arms, took the boxes and lowered them to the ground. After moving a few boxes, Claimant felt a tremendous amount of pain in his lower back above his left buttock and down his left leg. The pain caused Claimant to collapse to the warehouse floor where he remained for an estimated 15 minutes waiting for the pain to subside before attempting to stand up.

10. Claimant was eventually able to get off the floor, take some ibuprofen and rest for about an hour before returning to work, albeit in a "very limited" manner. As a manager for Employer, Claimant was able to sit in a chair in front of a computer and verbally direct his staff for the duration of his shift.

11. On the evidence presented, ALJ Walsh concluded that Claimant's "condition did not abate over the next several months at which time [he] sought medical

care." In his order, ALJ Walsh found that Claimant had "established by a preponderance of the evidence that he suffered an industrial injury to his back on December 27, 2013 in the course and scope of his employment at the respondent-employer."

12. ALJ Walsh also found that the evidence "established by a preponderance . . . that [a] back surgery recommended by Dr. [Orderia] Mitchell [was] reasonable, necessary, and related" to the December 27, 2013 industrial injury. Consequently, ALJ Walsh ordered Respondents to "approve and cover the costs for the back surgery recommended by Dr. Mitchell."

13. Claimant underwent a lumbar decompression for the L5 disc herniation and a fusion at L4-5 with Dr. Mitchell on April 13, 2016. The record evidence documents significant pain relief following Claimant's surgery with Dr. Mitchell. These records coupled with Claimant's testimony persuasively establishes that Dr. D'Angelo's reported concern over proceeding with surgery was overstated and incorrect. Indeed, the ALJ finds that Claimant had a favorable outcome from his April 13, 2016 surgery, the need for which was determined to be related to Claimant's December 27, 2013 industrial injury.

14. After the injury was determined to be compensable, Claimant's medical care was transferred to Dr. Miguel Castrejon. Claimant continued his post-surgical treatment with Dr. Castrejon who placed him at MMI on September 22, 2016. Dr. Castrejon assigned 19% whole person impairment for Claimant's lumbar spine. The 19% impairment rating was based on 12% for range of motion loss and 8% specific disorder rating according to Table 53 and the combined values chart of the AMA Guides to the Evaluation of Permanent Impairment, Third Edition (*Revised*).

15. Respondents challenged the findings of Dr. Castrejon by filing a request for a Division Independent Medical Examination (DIME). Dr. Brian Mathwich was selected to perform the DIME and the same took place on January 31, 2017. Dr. Mathwich documented a mechanism of injury (MOI) consistent with that contained in the Summary Order of ALJ Walsh. He also documented that following the injury Claimant presented to an Urgent Care Clinic but was not seen because he decided not to wait to see a provider. According to Dr. Mathwich's report, Claimant reportedly took "ibuprofen occasionally" and his low back pain "began" to subside, though his radicular symptoms persisted. Dr. Mathwich documented that the pain became "much less" over the next several weeks and that it was not until three months later that Claimant began having increasing pain throughout the entire low back, his bilateral legs into the arms. According to the DIME report, Claimant even reported that his "eyeballs hurt." Claimant testified that he did not recall saying that, but if he did, it was obviously hyperbole to express the amount/severity of pain he was experiencing.

16. Upon thorough review of the DIME report, the ALJ finds that Dr. Mathwich took Claimant's reference to eyeball pain at face value to conclude that Claimant was reporting eye pain as a consequence of his lifting injury. Dr. Mathwich would

subsequently reference this statement to focus attention on Claimant's credibility and in turn raise questions concerning the legitimacy and severity of Claimant's December 27, 2013 injury. Indeed, Dr. Mathwich documented as follows: "Diffuse pain throughout [the] entire body to include bilateral legs arms and 'eyeballs' is not consistent with a lifting injury." The undersigned ALJ credits Claimant's testimony to find that if he made a reference to "eyeball pain", it was a misguided attempt to describe the amount of pain he was feeling as a consequence of his low back injury rather than the contrary conclusion reached by Dr. Mathwich that he actually had pain in his eyes as a consequence of his lifting injury.

17. Dr. Mathwich ultimately concluded that Claimant suffered a minor exacerbation of his underlying pre-existing spinal disease. He opined that the MOI was inconsequential and that Claimant's condition resolved "very quickly." He opined further that the "pain episode which prompted [Claimant's] presentation to a physician 3 months after the original injury was not directly related to the 12/27/13 incident rather it was due to and part of the natural course of his underlying pre-existing spinal disease." Because he did not believe that Claimant suffered an "acute" spinal injury nor did he manifest a permanent aggravation of his pre-existing disease, Dr. Mathwich concluded that Claimant suffered no permanent physical impairment related to the December 27, 2013 incident. Finally, Dr. Mathwich concluded that while the surgery performed by Dr. Mitchell was "necessary and warranted", this procedure and Claimant's previous care was not related to the December 27, 2013 incident, but rather Claimant's pre-existing spinal condition.

18. The ALJ finds Dr. Mathwich's DIME report to conclude that Claimant suffered a temporary work-related exacerbation of a pre-existing condition, which subsequently completely resolved and thereafter a non-work related return of low back/leg pain due to the natural progression of a pre-existing spinal condition.

19. Dr. Mathwich also stated in his report that, "[h]ad the patient presented to his occupational medicine physician initially after the injury, it is [his] opinion that he would have been placed at MMI within 6 weeks of his injury. Therefore, [he] would consider [Claimant] at MMI on 2/15/14 or approximately 6 weeks after his original injury."

20. Claimant was examined, at the request of his attorney by Dr. Jack Rook on July 17, 2017. Dr. Rook authored an IME report and testified at hearing. In his report, Dr. Rook addressed Dr. Mathwich's opinion that Claimant's low back pain was due to the natural course of his underlying pre-existing spinal disease rather than the December 27, 2013 incident. In doing so, Dr. Rook documented as follows: "[I]t is important to note that [Claimant] was not having problems with his back at the time of the December 27, 2013 on-the-job injury." Dr. Rook also noted that "[t]here is no medical documentation between his recovery from the 2009 occupational injury (at which time it was noted by his physical therapist and ATP that his low back condition had completely resolved and there was no permanent impairment) and the on-the-job injury of December 27, 2013, which would suggest that he was experiencing clinical or

functional problems with this 'pre-existing spinal disease'". As noted above, independent review of the record supports Dr. Rook's observation.

21. At hearing, Dr. Rook explained that Claimant was asymptomatic prior to December 27, 2013. He became symptomatic after that event. Dr. Rook noted that the MOI described by Claimant is the type of mechanism that can either cause or significantly aggravate spinal stenosis. He opined that Dr. Mathwich gave his ultimate opinion concerning the cause of Claimant's symptoms on mistaken § of the medical history in this case. He also explained that Dr. Mathwich's opinion that Claimant's symptoms "should have" resolved in six weeks if he had seen a physician was pure speculation and contrary to the reported medical history provided by Claimant.

22. Dr. Rook agreed with the MMI date assigned by Dr. Castrejon; however, he disagreed with Dr. Mathwich that Claimant had no impairment as a result of this injury. He also noted that Dr. Castrejon erred concerning Claimant's overall impairment. While Dr. Rook adopted the 12% range of motion impairment as assigned by Dr. Castrejon, he pointed out that Dr. Castrejon should have taken into account the fact that Claimant had a two-level fusion surgery with some residuals, which warrants a 13% table 53 rating rather than the 8% assigned by Dr. Castrejon. These figures combine to equal a 23% whole person rating not 19% as stated by Dr. Castrejon. During his testimony, Dr. Castrejon admitted he erred in the completion of the impairment rating in this case. He agreed with Dr. Rook's methodology in completing the impairment rating in this case. Based upon the evidence presented, the ALJ finds that Claimant's 23% impairment is causally related to the December 27, 2013 injury.

23. Dr. Rook also addressed the question of whether any impairment rating assigned in this case should be apportioned. He explained why apportionment is improper in this case. In analyzing the apportionment instructions contained in the Division of Workers' Compensation Desk Aids, (submitted as Respondents' Exhibit N) Dr. Rook clarified that under paragraph 2, it states, "For injuries that occurred on or after July 1, 2008: if you determine that the *previous* injury is (1) non-work related, and (2) was not independently disabling at the time of the current injury, do *not* continue with this process. Noting that Claimant's 2009 injury was not only work related but also resulted in no impairment and was non-disabling at the time of the 2013 injury, Dr. Rook opined that the apportionment principals outlined in Respondents Exhibit N would not apply to the 2009 injury. Respondents countered by arguing that after Claimant's 2009 work injury, Dr. Sharma alternatively imposed permanent restrictions for the 1993, 1995 or 2009 injuries. Respondents ostensibly contend that Dr. Sharma's imposition of restrictions as part of the 1993, 1995 or 2009 injuries supports a finding that these injuries were independently disabling at the time of the 2013 injury. Accordingly, Respondents assert that the apportionment principals set forth in Respondents Exhibit N should apply to any of Claimant's prior spinal injuries. Based upon the evidence presented, the ALJ is not persuaded.

24. While it is clear that Claimant has suffered both prior work and non-work related injuries to the same body part involved in the current claim, the evidence

presented persuades the ALJ that none of these prior injuries were independently disabling at the time of the 2013 injury. In this case, the evidence presented supports a finding that Claimant's 1993, 1995 and 2009 injuries were not disabling because he sustained no permanent impairment, had returned to full duty work, did not lose time from work and otherwise enjoyed full functional capacity within the year prior to 2013 injury. Moreover, he was not actively pursuing medical treatment for either the 1993, 1995 or 2009 injuries in the 12 months leading up to his 2013 injury. In short, none of the prior injuries adversely affected Claimant's capacity to function independently nor did they impair his ability to perform his job.

25. Claimant's 1993 injury was non-work related but was not independently disabling at the time of Claimant's 2013 injury. Consequently, under §8-42-104(5)(b) and paragraph 2 of the instructions to apportionment of spinal injuries/conditions contained at Respondents' Exhibit N, the ALJ finds that apportionment of any impairment to Claimant's prior 1993 non-work related injury is unwarranted.

26. Moreover, while Claimant's prior 1995 and 2009 injuries were work related; there is a paucity of evidence to support a finding that either injury resulted in impairment entitling Claimant to an award or settlement under the Workers' Compensation Act of Colorado or a similar act from another state. As set forth in §8-42-104(5)(a), apportionment of any "permanent medical impairment rating applicable to [a] previous injury to the same body part, is appropriate when that impairment is established by an award or settlement. In this case, no evidence of any such award or settlement was presented for either the 1995 or the 2009 injuries. Claimant's 2009 injury resulted in approximately one month of treatment followed by a full recovery without evidence of permanent impairment as opined by his authorized treating physician assigned to the claim. Because the 2009 injury was not disabling at the time of the 2013 injury and did not result in an impairment award or a settlement, the ALJ finds that apportionment does not apply to the 2009 injury. While Claimant's 1995 injury arguably could have resulted in impairment, this injury was also not disabling at the time of the 2013 claim. Furthermore, no workers' compensation claim was filed, no impairment was assigned and no award/settlement was effectuated for this injury. Consequently, the ALJ is not persuaded that apportionment applies in the case of Claimant's 1995 injury.

27. Dr. D'Angelo authored a supplemental report in Response to the DIME opinions of Dr. Mathwich and the opinions expressed by Dr. Rook. She indicated in her report, "[W]hen Claimant's first visit at Express Care is review (sic); the patient's evaluation involved his upper back, neck, arms, and shoulders, NOT his lumbar spine" (Claimant's Exhibit 17, pg. 173). In reviewing the report from Claimant's initial evaluation at ExpressCare Plus (ExpressCare) on March 20, 2014, the ALJ notes the following history: "50 y o male presents to clinic with complaints of severe neck and lumbar pain." Moreover, directed physical examination revealed "mid lumbar bony tenderness at L3-L4 and L4-L5." Finally, a pain diagram completed during this evaluation depicts pain in the low back and bilateral legs. Based upon the content of the report from Claimant's initial evaluation, the ALJ finds that he reported low back and

leg pain. The evidence presented also persuades the ALJ that Claimant's low back complaints were addressed as part of the initial evaluation based upon the results of the physical examination. Consequently, the ALJ finds Dr. D'Angelo's comments that Claimant did not report low back pain until his second visit to ExpressCare and that his low back was not part of the initial evaluation erroneous and unpersuasive.

28. Dr. Castrejon testified that Dr. Mathwich erroneously opined in his report that the MRI of Claimant's lumbar spine after the December 2013 injury showed no significant acute changes or pathology, which would be considered pain generators. Dr. Mathwich summarized the May 20, 2009 MRI in his report, focusing on the L4-5 and L5-S1 levels. The L4-5 level showed bilateral neural foraminal narrowing with no evidence of nerve root impingement and a posterior disc bulge. The March 22, 2014 MRI showed "diffuse" annular disc bulging at the L4-5 level with central disc protrusion along with posterior annular tearing. As noted above, the December 8, 2015 MRI showed the L4-5 annular tearing centrally and left subarticular with extension into the neural foramen. It further showed that there was annular tearing near the exiting L4 nerve root. There is no annular tearing noted in the 2009 MRI. According to Dr. Castrejon, Dr. Mathwich failed to recognize these particular changes. Dr. Castrejon opined that Claimant's MOI caused these changes and that the annular tears were likely the cause of Claimant's severe pain.

29. Citing Claimant's need to lay on the floor for approximately 20 minutes until the pain subsided sufficiently enough for him return to his feet, Dr. Castrejon disagreed with Dr. Mathwich's opinion that Claimant's injury was a "very minor" type of event.

30. Dr. Castrejon also disagreed with Dr. Mathwich's opinion that Claimant did not experience a permanent aggravation of a pre-existing condition. Dr. Castrejon testified he did not feel that Dr. Mathwich really looked at the MOI and take into consideration how that had resulted in an aggravation of a pre-existing condition in a man who had been working full-duty, full-time up until the event of December 27, 2013 and, who thereafter required spinal surgery.

31. Dr. Castrejon was asked about Dr. Mathwich's conclusion that had Claimant presented to an occupational medicine physician initially after the injury, he would have been at MMI within six weeks. Dr. Castrejon disagreed as there was no supporting documentation for this opinion and it is not consistent with the credible history provided by Claimant and the content of the existing medical records. Dr. Castrejon opined the appropriate date of MMI would have to be after Claimant's surgery. He reiterated that his original MMI date of September 22, 2016 was appropriate.

32. Dr. Castrejon testified that he reviewed both the impairment rating he provided and Dr. Rook's report. He agreed that he used an incorrect Table 53 rating. He also agreed that Claimant's rating should have been 23% whole person as explained by Dr. Rook.

33. Dr. D'Angelo testified as an expert in internal medicine and occupational medicine. Dr. D'Angelo continued to express concerns that Claimant has diabetes and that his symptoms are consistent with and caused by complications from this disease. The ALJ has carefully reviewed the existing records and is unable to find any medical record documenting that Claimant has been diagnosed with diabetes. While the ALJ finds that diabetes may produce lower extremity symptoms similar to those reported by Claimant, the ALJ finds that his lower extremity symptoms likely would not have been relieved, as they were in this case by a lumbar fusion, if they were related to a peripheral neuropathy caused by diabetes. Based upon the totality of the evidence presented, Dr. D'Angelo's suggestion that Claimant's symptoms are explained by the potential that he has diabetes is unpersuasive.

34. Claimant testified that his lower back was never completely pain free from December 27, 2013 through March 20, 2014. Claimant was specifically asked about his use of the term "subsided" which Dr. D'Angelo and Dr. Mathwich interpreted to mean "resolved." Claimant explained that when he mentioned to Dr. D'Angelo that his pain had "subsided," he meant that it initially "eased up" with his home remedies. A full reading of Claimant's statement wherein he uses the term "subsided" supports his claim. Indeed, Claimant stated: "And then you know a couple of days since, I didn't get in to see anybody, I just kinda babied it with Ibuprofen, didn't do too much that weekend and the pain just kind of subsided. You know I knew it was there and I know what it feels like so I just kinda went with it you know, maybe it's just kinda a fluke and go away." (Claimant's Exhibit 17, p. 178) (emphasis in original). It is evident that Claimant's pain merely "eased up" temporarily with ibuprofen, heat, and rest per his report.

35. Claimant further testified that he modified his work activities between December 27, 2013 and March 20, 2014. He was extremely careful with his work activities and, as a manager, simply had his staff perform the activities he was physically incapable of performing. According to Claimant, he sat at his desk for three months because "a lot of my business is electronic and digital, so I'm able to work that a lot."

36. Claimant testified regarding his previous 2009 lumbar injury. He explained that he was at work, lifted a box, and twisted the wrong way. He was prescribed medications, underwent physical therapy, and that was the extent of the injury. Claimant testified that his symptoms resolved fully by the time he was released at MMI by Dr. Sharma on June 3, 2009. He did not sustain any new injuries to his lower back between June 3, 2009 and December 27, 2013. He had no back pain during this interim period. Careful review of the record evidence supports this testimony as demonstrated by the following: Claimant's injury occurred on May 12, 2009. As of May 28, 2009, Claimant was experiencing a 1 out of 10 level of pain and on June 3, 2009, he was experiencing no back pain at all. Consequently, Dr. Sharma released him at MMI without impairment. Claimant's intake form from his March 20, 2014 ExpressCare visit further supports his testimony. During the March 20, 2014 evaluation, Claimant

documented that he did have previous injuries to the same body part; however, he also noted the following in response to the question of whether his previous injuries caused problems for him: "If yes, has this [previous] injury caused problems for you up to the time of this injury" to which he responded, "No."

37. The ALJ finds the Claimant to be credible and a reliable historian.

38. Based upon the evidence presented, The ALJ finds Dr. Mathwich's conclusion that Claimant's symptoms resolved "very quickly" contrary to the evidence presented at hearing and the decision reached by ALJ Walsh following the July 8, 2015 hearing during which similar evidence was, more probably than not, presented. During the hearing in the current case, Claimant vehemently denied that his symptoms had ever resolved, testifying credibly that he continued to self-medicate and manage the pain for "weeks and weeks" by modifying his activity and work duties. Based upon the evidence presented, the ALJ finds that Claimant's symptoms may have waxed and waned but they never fully resolved as suggested by Dr. Mathwich. Instead, the ALJ is persuaded that the condition of Claimant's low back slowly regressed while the symptoms associated with it intensified.[2] While Claimant modified his duties and took medication to manage his pain, the discomfort eventually became intolerable necessitating formal medical intervention, including surgery performed by Dr. Orderia Mitchell on April 13, 2016. This finding is supported by the totality of the evidence presented. It mirrors the findings/conclusions reached by ALJ Walsh who, after hearing found Dr. Mitchell's recommendation for back surgery "reasonable, necessary and related" to Claimant's December 27, 2013 work related injury and ordered Respondent's to approve and cover the attendant costs associated with this surgery. Accordingly, the ALJ is persuaded that Dr. Mathwich's opinion that the MOI in this case caused a "minor exacerbation" of pre-existing spinal disease, which "resolved very quickly" is erroneous and highly probably incorrect.

39. As noted above, the undersigned ALJ credits Claimant's testimony to find that his symptoms, while manageable shortly after his accident, never completely resolved and his condition progressively regressed over time despite activity modification. The ALJ credits Dr. Castrejon's testimony to find that Dr. Mathwich probably failed to account for specific changes on Claimant's 2014 and 2015 MRI studies, including the extent of annular tearing and its contribution to Claimant's need for surgery, when he placed Claimant at MMI. The evidence presented, including Claimant's April 13, 2016 surgery and response thereto persuasively refutes and disproves Dr. Mathwich's opinion that Claimant's condition had stabilized to the point that no further treatment would reasonably be expected to improve it by February 15, 2014. Consequently, the ALJ finds Dr. Mathwich's assignment of a February 15, 2014 MMI date arbitrary and highly probably incorrect.

[2] During his original interview with Dr. D'Angelo at the IME requested by Respondents, Claimant explained that his symptoms were "continually getting worse and worse and about the second week of March, first week of March, [he] started having spasms . . . from [his] lower back all the way up [the] back into [his] shoulder, in [the] neck, down [the] arms to where [he] had to go see somebody it was to the point where [he] couldn't . . . work."

40. The ALJ finds the opinions and analyses of Drs. Castrejon and Rook to be more reliable and persuasive than those of Dr. D'Angelo and Dr. Mathwich.

41. The ALJ finds that as a result of his December 27, 2013 work injury, Claimant has a visible disfigurement consisting of a roughly 10 inch long by 1/8 inch wide, rough appearing and variously pigmented scar located in the midline of lumbar spine. There are multiple pairs of small, slightly raised, suture/staple scars running the entire 10-inch length of the above-described scar lending to its roughened appearance.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2013, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215, C.R.S. 2013, this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). As found here, the ALJ concludes that the Claimant is a reliable witness. His testimony is consistent with and supported by the

content of the record evidence, including the medical reports from ExpressCare Plus, Front Range Orthopedics and Dr. Castrejon's Office.

D. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Drs. Rook and Castrejon are credible and supported by Claimant's testimony, the medical record as a whole and the apportionment principals set forth in Desk Aid 10 and §8-42-104(5), C.R.S. 2013. When the evidentiary record is considered in its totality, the opinions of Dr. Rook and Dr. Castrejon are more persuasive than contrary opinions of Dr. D'Angelo and Dr. Mathwich.

Overcoming the DIME regarding Causation, MMI and Permanent Medical Impairment

E. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* W.C. No. 4-782-625 (ICAO, May 24, 2010).

F. The question of whether the Claimant has overcome the DIME physician's findings regarding causality, MMI and impairment is one of fact for the ALJ's determination. *Metro Moving and Storage Co. v. Gussert*, *supra*. In deciding whether Claimant has met his burden of proof, the ALJ is empowered, "[t]o resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). Moreover, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). In this case, the issue of whether Claimant was properly placed at MMI by Dr. Mathwich involves a complex medico-legal question regarding the cause of Claimant's low back symptoms and his need for a spinal fusion

surgery. Claimant, through Dr. Rook, contends that Dr. Mathwich erred when he "took it upon himself to re-write the legally determined compensability issues in this case, essentially doing his own causation analysis for a case that had already been litigated in front of an administrative law judge, who ruled that the patient's low back spinal condition was compensable and related to the injury that occurred at his workplace on December 27, 2013." The ALJ agrees with Respondent's position that, as part of the DIME process, Dr. Mathwich is permitted to address causation, regardless of the prior decision of ALJ Walsh. See, *Nunnally v. Eastman Kodak Co.*, W.C. No. 4-720-435 (ICAO, May 28, 2009); see also, *Holcomb v. FedEx Corp*., W.C. No. 4-824-259-05 (ICAO, March 24, 2017)(doctrine of issue preclusion inapplicable where the burdens of proof in two adjudications are not the same). While the ALJ agrees that Dr. Mathwich was permitted to address causation as part of the DIME completed in this case, the evidence presented is convincing that his conclusion that Claimant's MOI caused a "minor exacerbation" of pre-existing spinal disease, which "resolved very quickly" is erroneous and highly probably incorrect. To the contrary the ALJ is convinced that Claimant's MOI, more probably than not, caused additional traumatic injury to Claimant's lumbar spine which never completely resolved and simply regressed with time despite attempts at activity modification. Indeed, the MRI of 2014 and 2015 reveal previously undisclosed annular tearing which Dr. Castrejon persuasively testified that Dr. Mathwich failed to completely account for in addressing causality and before placing Claimant at MMI.

G. Because the question of whether Claimant attained MMI inherently requires a determination of the cause of Claimant's medical condition and his need for medical treatment and the evidence presented convincingly persuades the ALJ that Dr. Mathwich erred in his causality determination, the ALJ finds/concludes that his opinions regarding MMI are also fatally flawed. Here, the evidence presented persuades the ALJ that Dr. Mathwich's opinion concerning MMI is highly probably incorrect because it is based upon erroneous conclusions regarding the cause of Claimant's medical condition and his need for spinal surgery. As found above, the evidence surrounding Claimant's April 13, 2016 surgery and response thereto persuasively contradicts the speculative nature of Dr. Mathwich's opinion that Claimant's condition had stabilized by February 15, 2014. Based upon the evidence presented, the ALJ agrees with Dr. Castrejon that Claimant's condition had stabilized to the point that no further treatment would reasonably be expected to improve it by September 22, 2016. Accordingly, the ALJ concludes that Claimant reached MMI on September 22, 2016. Because Claimant has proven by clear and convincing evidence that Dr. Mathwich erred in his MMI determination, Respondents claimed overpayment for temporary total disability (TTD) benefits collected from April 13, 2016 through April 29, 2016 and temporary partial disability (TPD) benefits collected April 30, 2016 through May 13, 2016, totaling $2,407.50 is moot and need not be addressed further.

H. To the extent that Dr. Mathwich's opinions concerning causality, and therefore, MMI diverge from those expressed by Dr. Rook and Dr. Castrejon, the ALJ concludes those discrepancies constitute more than a professional difference of opinion. A mere difference of opinion between physicians fails to constitute error

pursuant to well-settled case law. See, *Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000). As noted, the undersigned ALJ finds/concludes that Dr. Mathwich's opinions regarding causality and MMI are contrary to the evidence presented tending to establish that Claimant's symptoms did not resolve after the December 27, 2013 incident, that Claimant suffered additional injury (annular tearing) to the lumbar spine and that this injury directly caused Claimant's need for surgery. Indeed, ALJ Walsh concluded similarly. Consequently, while there is a difference of opinion between Drs. Mathwich, Rook and Castrejon, the evidence presented persuades the ALJ that Dr. Mathwich's opinions are simply wrong.

I. Where the ALJ determines that the DIME physician's opinion has been overcome, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ. The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols. Thus, once the ALJ determines that the DIME's opinion has been overcome in any respect, the ALJ is free to calculate a claimant's impairment rating based upon the preponderance of the evidence. *Garlets v. Memorial Hospital,* W.C. No. 4-336-566 (September 5, 2001). The ALJ adopts the unrefuted testimony of Dr. Castrejon that he erred in the completion of his impairment rating. Accordingly, the ALJ finds that Claimant's impairment rating was properly calculated at 23% working unit by Dr. Rook as part of his IME.

Apportionment

J. As found above, the ALJ concludes that apportionment of Claimant's current impairment rating to any of his prior low back injuries is not warranted in this case. Pursuant to the instructions offered into evidence at Respondents' Exhibit N, paragraph 2, it states, "For injuries that occurred <u>on or after July 1, 2008</u>: if you determine that the *previous* injury is (1) non-work related, and (2) was not independently disabling at the time of the current injury, do *not* continue with this process." As found, none of Claimant's previous lower back conditions were independently disabling at the time of the December 27, 2013 incident. Consequently, apportionment of the rating in this case to Claimant's 1993 non-work related injury is not appropriate. Moreover, while Claimant did have two previous work-related injuries to his back, these injuries were not independently disabling at the time of the 2013 injury. Furthermore, in the case of Claimant's 1995 injury no work injury claim was filed, no impairment was assigned and no impairment related award/settlement was effectuated. While Claimant filed a work related injury claim as part of the 2009 injury, the evidence presented persuades the ALJ that after approximately one month of treatment Claimant was released from care without permanent impairment. Because neither the 1995 nor the 2009 injury was independently disabling or resulted in impairment established by award or settlement, the ALJ concludes that Respondents request to deduct from the current rating, impairment associated with the 2013 claim must be denied and dismissed.

Maintenance Care

K. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo.App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents retain the right to dispute whether the need for medical treatment is reasonable, necessary and related to the compensable injury. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo.App. 2003) (a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

L. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo.App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, the ALJ concludes that Claimant has met his burden to establish entitlement to maintenance medical treatment. Dr. Castrejon recommended maintenance care at the time of maximum medical improvement to include follow up visits with the orthopedic surgeon and additional x-rays and Claimant credibly testified that he remains symptomatic despite extensive treatment. Here, substantial persuasive evidence demonstrates that although Claimant enjoyed significant pain relief following surgery he is only 90% pain free. There is an ongoing need to treat Claimant's persistent pain caused the injuries sustained in the December 27, 2013 accident. Without ongoing treatment, including follow-up visits with his surgeon, the ALJ concludes that Claimant's present condition will likely deteriorate.

Disfigurement

M. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement" as used in the statute, contemplates that there be an "observable impairment of the natural person." As found in this case, Claimant has surgical scarring located on the left leg on either side of the knee, which alters the natural appearance of skin in these areas. Consequently, the ALJ concludes that Claimant has suffered a visible disfigurement entitling her to additional benefits as provided for by Section 8-42-108 (1), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME opinion of Dr. Mathwich regarding maximum medical improvement is GRANTED. Claimant is found to have reached MMI effective September 22, 2016 as originally assigned by Dr. Castrejon.

2. Claimant's request to set aside the DIME opinion of Dr. Mathwich regarding permanent impairment is GRANTED. The 0% whole person impairment assigned by Dr. Mathwich is set aside and replaced by the 23% impairment rating assigned by Dr. Rook which is supported by Dr. Castrejon.

3. Respondents' request to apportion Claimant's 23% whole person impairment is denied and dismissed.

4. Claimant is entitled to maintenance care, including, but not limited to follow-up visits with Dr. Mitchell subject to Respondents right to challenge any future request for treatment on the grounds that it is not reasonable, necessary or related to Claimant's December 27, 2013 industrial injury.

5. Claimant is entitled to and Respondents shall pay disfigurement benefits in the amount of $3,500.00.

6. Respondents' request to recoup a stipulated $2,407.50 overpayment of indemnity benefits is denied and dismissed as moot since the MMI determination of Dr. Mathwich has been overcome and set aside.

DATED: June 26, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory

reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- When Claimant filed his Application for Hearing on December 6, 2017, this was a contested claim. At the commencement of the June 5, 2018 hearing, Respondents' counsel stipulated that the claim is compensable and Respondents intend to file a General Admission of Liability. That stipulation narrowed the remaining issues to:

- What is Claimant's average weekly wage (AWW)?

- Is Claimant entitled to TTD benefits from October 25, 2016 ongoing?

- Should Claimant's TTD benefits be reduced as a "late reporting" penalty?

- What is the proper offset for Social Security disability benefits?

FINDINGS OF FACT

1. Claimant worked for Employer as a cement pump operator. He was stationed in Brighton Colorado, but also worked in many neighboring states, including New Mexico and Texas.

2. Claimant developed coccidioidomycosis (a.k.a. "valley fever") because of work-related exposure to coccidioides spores between mid-August and mid-October 2016.[1] Due to the relative rarity of the condition, Claimant was misdiagnosed for many months and did not receive a proper diagnosis until February 2017.

3. Claimant started having flulike symptoms in mid-October 2016. The symptoms persisted for several days, and on October 23 he told his manager he needed to see a doctor because he was "sick with the flu or something." At the time, Claimant did not suspect that his condition was work-related. The supervisor did not refer Claimant for medical care and he pursued treatment on his own.

4. Claimant went to Advanced Urgent Care in Brighton, Colorado on October 24. He was diagnosed with pneumonia and given a prescription for antibiotics.

5. Claimant responded marginally to antibiotics, and he sought further evaluation at the Memorial Hospital emergency department on November 16, 2016. Chest x-rays and a CT scan showed pneumonia and a mass in the right lung, which the radiologist thought was probably malignant.

[1] It is impossible to determine the exact date Claimant was exposed to coccidioides spores. The parties have designated October 24, 2016 the date of injury for this claim, which corresponds to the last day Claimant worked.

6. Claimant was referred to Dr. Ronald Rains, a pulmonologist, for further evaluation of lung cancer. He underwent a battery of tests which eventually ruled out cancer.

7. A lung needle biopsy on February 9, 2017 showed coccidioidomycosis and Dr. Rains referred Claimant to Dr. Brookmeyer, an infectious disease specialist.

8. Claimant saw Dr. Brookmeyer on February 22, 2017. Dr. Brookmeyer confirmed the diagnosis of coccidioidomycosis and prescribed itraconazole, an anti-fungal medication.[2]

9. Claimant returned to Dr. Rains on March 6, 2017 to discuss Dr. Brookmeyer's findings. Dr. Rains opined the coccidioidomycosis was "very likely" due to work-related exposure in August or September 2016.

10. Approximately "four or five days" later, Claimant contacted Employer to report the diagnosis. He spoke with "Rachel" in Employer's HR department, and told her his doctor believed it was probably work-related. Rachel advised Claimant to consult with an attorney for assistance with this matter. Employer did not refer Claimant to a physician and he continued with the physicians he was already seeing. Claimant's testimony regarding reporting the potentially compensable condition in early-to-mid-March is credible and persuasive.

11. Employer took no immediate action based on Claimant's verbal report of injury. The earliest written report in evidence is an Employer's First Report of Injury, completed by Respondents' claims adjuster on April 12, 2017.

12. Claimant has been off work due to his medical condition since October 25, 2016. He suffers from ongoing symptoms including fatigue and shortness of breath which prevent him from meeting the physical demands of his pre-injury work.

13. The last pay period before the date of injury ended October 22, 2016. In the forty-four (44) weeks before the date of injury (12/20/2015 through 10/22/2016), Claimant earned gross wages of $63,488.60. That equates to an average weekly wage of $1,442.92 ($62,488.60 ÷ 44 = $1,442.92). The ALJ finds this period provides a fair approximation of Claimant's injury-related wage loss and diminished earning capacity.

14. With an AWW of $1,442.92, Claimant is entitled to compensation based on a weekly rate of $939.82, the maximum TTD rate in effect on his date of injury.

15. Claimant was found disabled and awarded Social Security Disability Insurance (SSDI) benefits in late 2017. The SSDI Notice of Award shows an initial

[2] Claimant later developed hypertension as a side effect of the itraconazole.

entitlement amount of $1,802 per month,[3] commencing April 1, 2017. Claimant was represented by an attorney in his SSDI claim and paid an attorney's fee of $3,604.

16. Claimant proved by a preponderance of the evidence he suffered a wage loss proximately caused by his compensable injury commencing October 25, 2016.

17. Respondents failed to prove a basis for imposition of a "late reporting" penalty. Claimant verbally reported the injury to Employer within a reasonable time after realizing the nature, seriousness, and probable compensable character of his condition. Although his verbal report did not strictly comply with the requirement to report the injury in writing, the ALJ finds a penalty is not warranted under these circumstances. Employer received actual notice shortly after Claimant learned he might have a compensable injury, and there is no persuasive evidence of any prejudice to Respondents caused by lack of written notice. It appears both parties were confused about how to proceed given the unusual circumstances surrounding Claimant's injury.

18. Respondents are entitled to offset Claimant's SSDI benefits at the rate of $207.93 per week ($1,802 x 12 ÷ 52 = $415.85 x 50% = $207.93). After accounting for the SSDI offset, Claimant's weekly TTD rate is $731.89 ($939.82 – $207.93 = $731.89).

19. The SSDI offset must be reduced by $3,604 to account for the attorney's fees Claimant incurred to obtain his SSDI award. The attorney's fee equates to two (2) months of benefit payments ($1,802 x 2 = $3,604). The easiest way to account for the attorney's fee is simply to delay the effective date of the offset by two months, to June 1, 2017. Accordingly, the ALJ finds Respondents are entitled to an SSDI offset commencing June 1, 2017.

CONCLUSIONS OF LAW

A. Average weekly wage:

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity as a result of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

Claimant proposes averaging his earnings from the start of 2016 through the date of injury, which is reasonable because it encapsulates a broad swath of earnings. Claimant's wages generally fluctuated based on the amount of work available. He

[3] Although Claimant's benefit amount is technically $1,802.50, as the Notice of Award explains, SSA rounds the payment "down to the nearest dollar." Section 8-42-103(1)(c)(I) refers to disability benefits "payable" to a claimant, so the offset is properly calculated based on the disability payments he actually receives after rounding, *i.e.*, $1,802.00.

commonly worked overtime, but the number of overtime hours varied greatly. The ALJ agrees it is most appropriate to average the 44 weeks before the date of injury, using pay periods covering 12/20/2015 through 10/22/2016. As found, during that period Claimant earned gross wages of $63,488.60, which equates to an average weekly wage of **$1,442.92** ($62,488.60 ÷ 44 = $1,442.92).

Claimant's average weekly wage of entitles him to compensation based on the maximum TTD rate of **$939.82** in effect on his date of injury.

B. TTD benefits commencing October 25, 2016:

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

As found, the persuasive evidence shows that Claimant was disabled by the effects of his admitted injury and suffered a wage loss commencing October 25, 2016, as a direct and proximate consequence of his injury.

C. Late reporting penalty:

Section 8-43-102(1)(a) requires a claimant to report his injury to the employer in writing within four days of its occurrence, and failure to strictly comply with this requirement subjects the claimant to a potential penalty. *Postlewait v. Industrial Claim Appeals Office*, 905 P.2d 21 (Colo. App. 1995). The statute further provides that the claimant "*may* lose up to one day's compensation for each day's failure to so report." (Emphasis added). Use of the term "may" signifies that imposition of a penalty is not mandatory, but is left to the ALJ's discretion. *E.g., Johnson v. United Airlines*, W.C. No. 4-490-900 & 4-642-480 (December 7, 2006). A late reporting penalty is an affirmative defense which the respondents must prove by a preponderance of the evidence.

As found, Respondents failed to prove that Claimant's TTD benefits should be reduced for "late reporting." The claimant's duty to report an injury is only triggered when he, as a reasonable person, recognizes the nature, seriousness, and probable compensable nature of the injury. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Here, Claimant did not reasonably appreciate a connection between his medical condition and his job until his March 6, 2017 appointment with Dr. Rains. He verbally reported the injury to Employer soon after that. His verbal report did not strictly comply with the requirement to report the injury in writing, but it gave Employer actual notice, and there is

no persuasive evidence of any prejudice to Respondents caused by lack of written notice. Both parties were reasonably confused about how to proceed given the unusual circumstances surrounding Claimant's injury.

D. Social Security offset:

Section 8-42-103(1)(c)(I) allows Respondents to offset their liability for TTD benefits by one-half of Claimant's SSDI benefits. The offset is based on the claimant's initial entitlement amount and does not include any subsequent cost of living adjustments. *Englebrecht v. Hartford Accident and Indemnity Co*., 680 P.2d 231 (Colo. 1984) (COLAs do not constitute "periodic disability benefits" under the offset statute). As found Claimant's initial entitlement was $1,802, which produces a weekly offset of **$207.93** per week ($1,802.00 x 12 ÷ 52 = $415.85 x 50% = $207.93). After accounting for the SSDI offset, Claimant's weekly TTD rate is **$731.89** ($939.82 – $207.93 = $731.89).

Claimant was represented by an attorney in his SSDI claim and paid an attorney's fee of $3,604 out of his past-due SSDI benefits. Respondents may only offset SSDI benefits paid to a claimant, and cannot offset the amount withheld from his benefits to pay his attorney. *See St. Vincent's Hospital v. Alires*, 778 P.2d 277 (Colo. App. 1989); *Jones v. Industrial Claim Appeals Office*, 892 P.2d 425 (Colo. App. 1994); *Schramek v. Chico's Fas*, W.C. No. 5-601-867 (December 3, 2009). Thus, the total amount of Respondents' SSDI offset must be reduced by $3,604 to account for the attorney's fee Claimant incurred to obtain his SSDI award. The attorney's fee equates to two (2) months of benefit payments ($1,802 x 2 = $3,604). The easiest way to account for the attorney's fee is to delay the effective date of the offset by two months, to June 1, 2017. [4] Accordingly, the ALJ concludes Respondents are entitled to an SSDI offset commencing June 1, 2017.

ORDER

It is therefore ordered that:

1. Claimant's claim in W.C. No. 5-042-777 is compensable per the parties' stipulation.

2. Insurer shall cover all reasonably necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's compensable injury.

3. Claimant's average weekly wage is $1,442.92

4. Insurer shall pay Claimant TTD benefits at the rate of $939.82 per week from October 25, 2016 through May 31, 2017.

[4] This methodology is also consistent with the procedure SSA uses to account for the attorney's fee when calculating the so-called "windfall offset" in cases where a claimant is eligible for both SSDI and SSI benefits. See 20 C.F.R. § 416.1123(b)(3); POMS SI 02006.200.C.1.

5. Insurer shall pay Claimant TTD benefits at the rate of $731.89 per week from June 1, 2017 and continuing until terminated by law.

6. Insurer shall pay Claimant statutory interest in the amount of 8% per annum on all indemnity benefits not paid when due.

7. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 26, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

deemed submitted for decision on June 8, 2018, upon the lodging of the written transcript of Katie Montoya's evidentiary deposition.

ISSUES

The issues to be determined as a result of the May 7, 2018, hearing concern permanent total disability (PTD) and post-maximum medical improvement (MMI) ancillary medical care, consisting of: the reasonable necessity of home-based care services as prescribed by treating physician David Yamamoto, M.D., on October 2, 2017; bodily disfigurement; penalties for Respondents' alleged failure to timely pay the medical bills of Dr. Brown; penalties pursuant to § 8-43-304 for Respondents' alleged violation of Workers' Compensation Rules of Procedure (WCRP), Rule 16-11(B) because Respondents allegedly did not meet the requirements of the rule to contest authorization of injections requested by Dr. Brown; and penalties pursuant to § 8-43-304 for Respondents' alleged violation of WCRP, Rules 16-10(G) and 16-11(B) with respect to Dr. Yamamoto's prescription for home-based care.

The Claimant bears the burden of proof, by a preponderance of the evidence on both of the above issues.

PROCEDURAL HISTORY.

This matter was previously heard by ALJ Felter, who determined that the Division Independent Medical Examination (DIME) had been overcome and the Claimant was found to be at MMI as of July 21, 2015. In the ALJ's decision, dated November 18, 2015, a trial spinal cord stimulator trial was also found to be reasonably necessary. A new DIME was also ordered for the sole purpose of determining the degree of the Claimant's permanent medical impairment.

The above-mentioned decision was appealed to the Industrial Claim Appeals Office (ICAO). The ALJ's decision was affirmed except the portion of the decision regarding a new DIME, which was reversed. The case was remanded for further proceedings and a new decision on the issue of the Claimant's permanent impairment rating. The Court of Appeals affirmed ICAO on January 26, 2017 2017and the Supreme Court denied *certiorari* on July 3, 2017.

Therefore, the above-captioned matter is back on remand for the determination of a permanent impairment rating. In the meantime, the Claimant filed an Application for Hearing on the issues as designated herein above.

The remand regarding permanent partial disability and the issues endorsed in Claimant's Application for Hearing were combined into one hearing. At the commencement of the latest hearing, the Claimant withdrew the issue regarding the reasonable necessity of transforaminal epidural steroid injections at L5-S1 as requested

by treating physician Dr. Brown on October 24, 2017; penalties pursuant to § 8-43-304 for Respondents alleged violation of. § 8-43-503(3) for dictating care by refusing to pay Dr. Brown who subsequently refused to treat Claimant and penalties pursuant to § 8-43-401(2)(a) for Respondents' failure to timely pay the medical bills of Dr. Robert Brown. A hearing proceeded on May 7, 2018, on the issues set forth below.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. This matter concerns an admitted low back injury of September 9, 2010.

2. The Findings of Fact, Conclusions of Law and Order, dated November 18, 2015, are incorporated herein by reference as if fully restated and not inconsistent with the herein decision.

3. Since 2015, the Claimant has undergone a trial spinal cord stimulator (TNS Unit) and the subsequent implantation of a permanent spinal cord implant on March 22, 2016.

4. The TNS Unit provided relief to Claimant by reducing his sciatica to the point where he can now sit down for short periods of time.

5. L. Barton Goldman, M.D., is of the opinion that the TNS Unit also led to a 37.5% reduction in the fentanyl Claimant needs to take to manage his pain.

6. The Claimant continues treating with David Yamamoto, M.D. He also sees licensed, treating clinical psychologist Lupe Ledezma, Ph.D.

7. Twice a week, the Claimant personally pays for acupuncture treatment, which he credibly testified provides some relief from his symptoms.

8. The Claimant continues to have low back pain and pain in his legs, right more than left.

Permanent Impairment Ratings

9. Prior to the implantation of the TNS Unit, Dr. Yamamoto calculated an impairment rating of 32% whole person. The rating was calculated on October 28, 2014, at the same time Dr. Yamamoto placed the following work restrictions on Claimant: a

10 lbs. maximum lifting restriction and a 5 lbs;.occasional lifting restriction; carrying limited to 5-10 lbs; pushing and pulling limited to 10 lbs; a recommendation that Claimant should do no repetitive lifting; Claimant should avoid bending and twisting at the waist; walking and standing should be limited to 1-2 hours per day; Claimant may sit up to 6-8 hours but he will likely need to lie down for 1-2 hours per 8 hour period; he will need to change positions every 15-20 minutes as needed.

10. After the implantation of the TNS Unit, Dr. Yamamoto calculated additional impairment on February 14, 2018. He calculated an additional impairment of 6% whole person. In regard to permanent restrictions, Dr. Yamamoto wrote in his February 14, 2018, report, "He had a recent functional capacity evaluation by Sherry Young, OTR (occupational therapist). The report was submitted on 06/16/2017. [Claimant] performed poorly on the examination including failing to lift 7 pounds from floor level to overhead in a safe manner. He was also limited in sitting and spent much of the time lying down or walking around. It was noted that sedentary jobs which best suited to his lifting abilities require substantial sitting which he is unable to do. It was her conclusion that **[Claimant] is totally disabled from his typical occupation sales as well as any occupation for which he would be reasonably qualified. I concur with this opinion"** (emphasis supplied).

11. On April 23, 2018, Dr. Yamamoto's deposition was taken. He testified that the combined impairment rating in this case is 37% whole person (Yamamoto Depo. Tr. p. 13, ln. 4-20).

Functional Capacity Evaluations (FCEs)

12. The Claimant underwent a 3-day FCE at Starting Point on May 15th, 16th and 17th, 2017. Sherry Young, an occupational therapist, performed the evaluation.

13. Sherry Young determined there were no signs of symptom exaggeration in the evaluation. She wrote:

> [Claimant] demonstrated the ability to lift 7 pounds from knee to shoulder height on an occasional basis. He was unable to demonstrate a lift with the empty box (7 pounds_ from floor level or to overhead in a safe manner. His maximum safe carry was also 7 pounds. When more weight was attempted, his pain increased and he felt (and looked) more unstable. These findings are very consistent with the physical therapist's findings of higher risk for falls due to decreased balance and decreased strength in the core muscles as well as lower extremities. Bilateral moderate to severe lymphedema compound this safety issue. There will be times when he is unable to lift any weight at all.

(Claimant's Exhibit 2, p. 45).

14. . Young testified that what is more problematic for the Claimant is his positional tolerance. She credibly opined that the Claimant cannot sit long enough to be employable and that his need to lie down during the work day excludes him from the competitive labor market. She wrote:

> Positional tolerances were greatly restricted during this 3-day evaluation. He was most limited in sitting (causing the most pain). He sat for a total of 65 minutes over a 7-hour day. The rest of the time was lying down (100 minutes), or standing/walking around, trying to control pain levels. Sedentary jobs (which best suits lifting abilities) all require substantial sitting. Even if allowed the opportunity to sit and stand using an adjustable table, he would still need frequent breaks to walk around (1-3 minutes with every position change) to try and control pain levels. Frankly, his positional limitations were his primary barrier to completing any activity in a competitive, dependable, or reliable fashion which would be expected in any work environment.

(Claimant's Exhibit 2, p. 45).

15. Based on her 3-day FCE, Young is of the opinion that the Claimant could not sustain employment.

16. On February 15, 2018, the Claimant underwent A FCE at O.T. Resources (Claimant's Exhibit 1), under the direction of Doris Shriver, OTR. As a result of the FCE, it was determined that the Claimant could do a one-time lift of a maximum of 10 lbs. and should avoid occasional lifting with the exception of incidental items. As for work posture, tit was observed in the FCE that the Claimant could sit for a maximum of 39 minutes at one time and could stand for a maximum of 43 minutes. The Claimant laid down during the evaluation at O.T. Resources, in order to complete his questionnaire and academic testing. Overall, he was laying down for 111 minutes of the 288-minute evaluation.

17. According to Doris Shriver, although Starting Point (Sherry Young) and O.T. Resources use different methodologies in their FCEs, the results in Claimant's case came out the same regarding his lifting abilities and positional tolerances.

18. Sherry Young also testified that the results of the O.T. Resources and the Starting Point evaluations were essentially the same.

19. Doris Shriver is of the opinion which is, essentially undisputed, that Claimant’s pain causes sleep deprivation which results in cognitive difficulties.

20. On the November 13, 2017, Claimant underwent a FCE at Peak Form. (Respondents' Exhibit E). The Peak Form report states that, "The client failed to give maximum voluntary effort during today's FCE. Therefore, it is undeterminable at this time safe, maximum lifting capabilities and/or other functional capabilities." The ALJ infers and finds that Peak View has rendered a non-FCE opinion that is highly subjective and not subject to verification, *i.e.* "failed to give maximum voluntary effort…."

21. The Peak Form report relies on a lever or system entitled, "XRTS." According to Sherry Young, the system is a proprietary system to determine validity of the evaluation.

22. Claimant credibly testified that the XRTS lever was not working during his evaluation. He testified that staff hit the lever and restarted the computer program in an attempt to get the lever to work. Peak View did not contradict the Claimant's testimony in this regard. Consequently, Peak View's statement that the Claimant "failed to give maximum effort" is invalid and lacking in credibility.

23. Sherry Young credibly testified that a malfunction of the XRTS would make sense given the grip strength scores related in the Peak Form report.

24. When the Claimant used unmarked steel bars, as opposed to the XRTS lever, at the Peak Form evaluation, the lifting results were consistent with the evaluations done by O. T. Resources and Starting Point (Respondents' Exhibit E, p. 157). The Peak Form FCE did not test positional tolerances.

David Yamamoto, M.D., Authorized Treating Physician (ATP) and L. Barton Goldman, M.D.

25. Dr. Yamamoto testified that based on the evaluation at Starting Point, he would increase Claimant's lifting restriction from 5 to 7 pounds, but other than that his restrictions would remain the same as those imposed on October 28, 2014.

26. Dr. Goldman, Respondents' expert, determined that **if Claimant was able to find a job it would have to be accommodated.** Dr. Yamamoto was questioned about Dr. Goldman's report and stated:

> Q. Okay. If [Claimant] were able to find work, do you agree with him that it would have to be accommodated work?
>
> A. Well, if there was a job that he could do, he would have to be accommodated. He would have to accommodate, in my opinion, the restrictions that I've outlined, like lying down for one to two hours,

changing positions and not lifting. But the main thing is not being able to really tolerate a workday because he would have to lie down.

Q. Well, even if he could tolerate one work day, do you think he could come back and do it again the next day?

A. No.

Q. Or the day after that?

A. No.

(Yamamoto Depo. Tr. p. 31, ln. 18 to p. 32, ln. 8).

Respondents' IME by Barton Goldman, M.D.

27. Dr. Goldman was retained by Respondents and has evaluated the Claimant multiple times. In his report dated April 12, 2018, Dr. Goldman wrote regarding jobs submitted by Katie Montoya, Respondent's vocational expert:

> All of these jobs would need to accommodate the patient's (and most individuals') need to change static positioning every 5-10 min/h and would ideally provide the patient the ability to complete his tasks in standing, seated, and partially seated (stool height) positions throughout the day.

(Respondents' Exhibit B, p. 57).

28. Dr. Goldman last examined the Claimant on December 22, 2017. In his report of that date, he notes the Claimant's need to lie down:

> He did not need to be supine or lying down for as extended a time as on our prior evaluations. However, he did lay on his left side with the stimulator turned off for approximately 44 minutes through the 1.75hours was spent face-to face.

(Respondents' Exhibit B, p. 86).

29. Concerning the Claimant's lifting abilities, Dr. Goldman testified that he relied on the results of the Peak Form evaluation and surveillance video and the ALJ finds that Dr. Goldman speculated that the Claimant could lift more than 10 pounds.

30. Dr. Goldman also testified that Claimant needed additional therapy to reach his maximum functional capability. The ALJ finds and concludes that this opinion does not negate the established date of MMI as July 22, 2015.

Vocational Specialists

31. Vocational specialist Doris Shriver credibly testified that Claimant is unable to earn a wage. According to Shriver, the Claimant would be unable to sustain employment based on the FCE and the determinations of Dr. Yamamoto.

32. Vocational specialist Katie Montoya admitted that under Dr. Yamamoto's restrictions, THE Claimant is unable to earn a wage. Montoya relied on the restrictions provided by Dr. Goldman for her assessment that Claimant is able to earn a wage. Because Dr. Goldman admitted that a job would have to be accommodated in order for the Claimant to do the work, then Montoya's assessment is based on the assertion that jobs would have to be accommodated or modified for the Claimant to do them. A modified job is not an open market job in the competitive labor market.

33. Montoya's testimony at the hearing was not completed. Consequently, her evidentiary deposition, post-hearing, was taken on May 23, 2018, and a written transcript thereof was lodged on June 8, 2018. Montoya testified that she did not complete any analysis based on Dr. Yamamoto's opinion that Claimant "was unable to work (Montoya Depo., pp 6: lns. 23-25, p. 7, lns: 1-7). The ALJ infers and finds that Montoya indicated that she was not interested in Dr. Yamamoto's opinion that the Claimant could not work (Montoya Depo., p. 7: lns 1-7).

34. Montoya indicated that "modified sedentary-type classification with consideration of positional tolerances," with a consideration of Dr. Yamamoto's subsequent restrictions, could be feasible for the Claimant (Montoya Depo., p. 10: lns 8-16). With the additional need of the Claimant to lie down, "part-time work, four to six hours per day, might be reasonable (Montoya Depo., p. 10: lns.16-21).

35. For sedentary desk work, the Claimant would need a Varidesk (a special desk that raises up and down), which some employers have. Otherwise, an employer would have to make the Varidesk accommodation (Montoya Depo., p. 20: lns 14-23).

36. Montoya noted that Dr. Yamamoto was of the opinion that the Claimant needed to lie down for one to two-hours in a six to eight-hour shift (Montoya Depo., p. 30: lns10-17). She also noted that Claimant was with Dr. Goldman for 1.75 hours and laid down for 44 minutes (Montoya Depo., p. 30:lns 18,19). During the hearing of May 7, 2018, the ALJ observed that the Claimant laid down for a substantial part of the hearing

Permanent Total Disability

37. The Claimant is 57 years old. He is college educated and worked his entire career in sales and training. He was working as a branch manager for the Employer when he was injured. The job he was working at the time he was injured was

not sedentary because he was doing job fairs and trade shows where he would have to carry equipment to set up. He worked for the Employer from 2004 to the date he was injured in 2010. He has not worked at all since Dr. Yamamoto took him off work in December of 2010. Based on Dr. Yamamoto's restrictions and the reports and testimony of Sherry Young and Doris Shriver, the ALJ finds that the Claimant is unable to earn wages in the open, competitive job market on a reasonably sustainable basis and this has been so since he reached MMI on July 21, 2015. Therefore, the Claimant is permanently and totally disabled. Indeed, Dr. Goldman and Katie Montoya, the Respondents' experts, do **not** support the proposition that the Claimant can earn wages in the open, competitive job market, on a reasonably sustainable basis, without accommodations and modifications of a part-time job being made. The ALJ infers and finds that these opinions essentially support the idea that Claimant could work at "sheltered" employment if the right community-minded employer is found. This amounts to speculation on the parts of Dr. Goldman and Katie Montoya.

Permanent Total Disability Benefit/Social Security Disability Offset

38. As admitted on the Final Admission of Liability (FAL), dated August 8, 2014, the Claimant is entitled to the maximum permanent total disability compensation rate in effect for FY 2010/2011, for his date of injury (September 8, 2010) which is $810.67. As stated in the decision, dated November 18, 2015, the Claimant received an SSDI (Social Security Disability) award which reduced his weekly benefit rate to $576.28 per week. After SSDI offset, Claimant's permanent total disability rate is $576.28, or $82.33 per day.

Home-Based Health Care

39. On October 2, 2017, Dr. Yamamoto wrote a prescription for Claimant to have help cleaning his house, etc., 4 to 8 hours a week.

40. Dr. Yamamoto testified that he thought the request for help with cleaning Claimant's house was reasonable because cleaning a house is not easy.

41. The Claimant testified that physical activity he does has later repercussions. For instance, if he goes to the doctor and/or gets groceries one day then he is resting the next day.

42. Sherry Young addressed Claimant's daily activities and wrote:

> He attends acupuncture, which he states is exhausting,
> twice a week on top of other doctors' appointments,
> pharmacy trips, and performs his physical therapy exercises.
> He attempts to do chores but seems to keep falling further

> and further behind stating that laundry and bed making are the worst as severe pain shoots through him. He is able to tend to his house with moderate to severe pain for activities such as linens, laundry, dusting, picking up objects from the floor or upper/lower cabinets, food preparation, dishes, and sweeping. However, he is no longer able to vacuum or move furniture due to severe pain. Tending to his lawn causes moderate pain as he takes extreme care with his movements, except mowing the lawn which he is no longer able to do due to severe pain. He is no longer able to drive, attend church, engage in physical intimacy, and can only go grocery shopping with moderate to severe pain.

(Claimant's Exhibit 2, p. 50).

43. The Claimant argues that the provision of 4 to 8 hours a week help with cleaning his house will help him keep his appointments for his medical care. If Claimant does too much activity, he has to rest the next day. According to the Claimant, home-based house-cleaning services will reduce his pain and help him maintain his medical appointments. The ALJ infers and finds that these arguments are a "stretch," and provision of these services are not indispensable to the Claimant's medical care and treatment.

Bodily Disfigurement

44. The Claimant walks with an altered gait due to his compensable work injury. He testified that if he takes too big of a step, it sends pain through his body. Therefore, the Claimant walks with a stiff body posture, taking short steps. As evidenced in the courtroom, he looks awkward because he does not move fluidly as a healthy person moves.

45. The Claimant also has scars on his body from the surgeries. He has had: 2 fusion surgeries, a hardware removal surgery, a surgery to implant a spinal cord stimulator, and a surgery for a battery implant. Claimant Exhibits 17, 18, 19 and 20, which are pictures of the scars, illustrate the Claimant's scarring. The photos show 13 inches of surgical scars on Claimant's back and stomach.

Penalties

46, Dr. Yamamoto prescribed home-based cleaning services for help cleaning Claimant's house on October 2, 2017. As found, the Claimant is not entitled to these services because they are not indispensable to the Claimant's medical care and treatment. Consequently, the Claimant has failed to prove, by preponderant evidence, entitlement o penalties regarding this issue.

47. Dr. Brown requested prior authorization for injections, Bilateral L5-S1 TFESI, on October 25, 2017 (Claimant's Exhibit 7, p. 116).

48. On October 26, 2017, Respondents faxed Dr. Brown's office a letter stating that the request was denied and stated that an IME (Independent Medical Examination) had been scheduled with Dr. Goldman but did not attach a copy of Goldman's credentials. The ALJ takes administrative notice of the fact that Dr. Goldman is well known in the workers' compensation community as a Level II accredited physician, and failure to attach his credentials amounts to a curable technical defect. Therefore, Claimant has failed to prove, by a preponderance of the evidence, entitlement to penalties on this issue.

49. Because the IME had been scheduled, WCRP, Rule 16-11 (E) excuses Respondents if they did not fully comply with Rule 16-11 (B).

Ultimate Findings

50. Based on the totality of the evidence, the ALJ finds the opinions of ATP Dr. Yamamoto, vocational expert and OTR Doris Shriver plus OTR Sherry Young, more credible and persuasive than all opinions to the contrary. Indeed, Dr. Goldman and Vocational Specialist Katie Montoya, agree, in part, with Dr. Yamamoto, Doris Shriver and Sherry Young, *i.e.,* that if the Claimant could be employable, accommodations would have to be made. The ALJ infers and finds that the need to make accommodations would render the employment as "sheltered employment." Also, the ALJ finds the Claimant's testimony and behavior to be credible.

51. Between conflicting opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Yamamoto, Doris Shriver and Sherry Young, and to reject all opinions to the contrary, other than the opinions of Dr. Goldman and Katie Montoya that accommodations would be required for any job, including part-time work.

52. The Claimant has proven that his medical impairment rating is 37% whole person as assessed by ATP Dr. Yamamoto.

53. The ALJ has considered the Claimant's "human factors," including his age (58), work history, general physical condition, education, mental ability, prior training and experience, and the feasible availability of work, if any, could perform. After such a consideration, the ALJ ultimately finds that the Claimant is permanently and totally disabled.

54. The Claimant has proven, by a preponderance of the evidence that he is incapable of earning a wage in the open, competitive job market, on a reasonably

sustainable basis. As found, if accommodations/modifications must be made and if the Claimant could perform part-time work at best, it is speculation and these options do not amount to open, competitive work Therefore, the Claimant is permanently and totally disabled, having reached MMI on July 22, 2015.

55. The Claimant reached MMI on July 22, 2015. His AWW was at the maximum for 2010/2011 (the time frame within which the date of injury occurred), thus entitling the Claimant to a weekly PTD benefit of $576.28, after the SSDI Offset is taken, or $82.33 per day net PTD benefits

56. The period from July 22, 2015, through the last hearing date, May 7, 2018, both dates inclusive, is 1,021 days. For this period of time, Respondents are liable for past due PTD benefits in the aggregate amount of $82, 058.93.

57 The Claimant has failed to prove, by a preponderant evidence, that the home-based healthcare services prescribed by Dr. Yamamoto are reasonably necessary for the Claimant to receive medical care and treatment, as contemplated by the case law relative thereto.

58. The Claimant has proven, by a preponderance of the evidence that he has sustained bodily disfigurement, consisting of a limp and scars as herein above described. The disfigurement does **not** affect the Claimant's face, is **not** comprised of extensive body scars or burns, **nor** does it manifest itself as stumps due to loss or partial loss of limbs. In the present case, the Claimant's disfigurement affects his gait, and his scars are unpleasant looking and plainly visible to public view in swimming trunks. It is not among the listed schedule disfigurements in § 8-42-108 (2), with an $8,608 maximum award for FY 2010/2011. It is within the purview of a maximum $4,304 for FY 2010/2011.

59. The Claimant has failed to prove by a preponderance of the evidence that Respondents did not comply with the Workers' Compensation Rules of Procedure in their response to Dr. Brown regarding injections. Claimant failed to show that there was **no** reasonably colorable argument to support a delay in treatment or a delay in payment of medical bills.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences

from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, based on the totality of the evidence, the opinions of ATP Dr. Yamamoto, Vocational Expert and OTR Doris Shriver plus OTR Sherry Young, were more credible and persuasive than all opinions to the contrary. Indeed, Dr. Goldman and Vocational Specialist Katie Montoya, agree, in part, with Dr. Yamamoto, Doris Shriver and Sherry Young, *i.e.,* that if the Claimant could be employable, accommodations would have to be made. As inferred and found, the need to make accommodations would render employment to be "sheltered employment." Also, as found, the Claimant's testimony and behavior was credible.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a

particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Yamamoto, Doris Shriver and Sherry Young, and to reject all opinions to the contrary, other than the opinions of Dr. Goldman and Katie Montoya that accommodations would be required for any job, including part-time work.

Grover Medicals

c. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care at the hands of ATPs, which is reasonably necessary to address the injury.

Ancillary Home-Based Services Prescribed by Dr. Yamamoto

d. To be a compensable medical benefit, the service requested must be medical in nature or incidental to obtaining such medical or nursing treatment. *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). Services that are "medical in nature" include home health services in the nature of "attendant care," if reasonably needed to cure or relieve the effects of the industrial injury. *Atencio v. Quality Care, Inc.*, 791 P.2d 7 (Colo. Ct. App. 1990). As found, the house-cleaning services are not **indispensable** to the Claimant obtaining medical care. The Claimant argues that if he cleans his house, he's tired the next day and may miss a medical appointment. This argument is tenuous and speculative.

e. The prescribed services must directly treat a claimant's physical condition and injury. *See Jacobs v. Ed Bozarth Chevrolet Company*, W.C. No. 4-222-373 [Indus. Claim Appeals Office(ICAO), June 26, 1997] (holding that housekeeping and lawn care were **not** necessary to treat or cure and relieve the claimant's symptoms and therefore, **not** reasonable or necessary). If the attendant care is simply for household chores, it is not medically necessary. *See Edward Kraemer & Sons, Inc. v. Downey*, 852 P.2d 1286 (Colo. Ct. App. 1992) [holding that "compensation is not awarded to a spouse if the only services being rendered to the claimant are ordinary household services"]. Furthermore, the mere fact that a treating physician has prescribed the attendant care does not make the care medically necessary. *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. Ct. App. 1995). As found, the house cleaning services prescribed by Dr. Yamamoto are not reasonably necessary.

Permanent Total Disability

f. An employee is permanently and totally disabled if he is unable to earn any wages in the same or other employment. § 8-40-201(16.5) (a) C.R.S. The "full responsibility rule," applicable to claims for permanent total disability benefits, provides that the industrial injury need not be the sole cause of a claimant's permanent total disability. Under the rule, when an "employer hires an employee who, by reason of a pre-existing condition or by reason of a prior injury, is to some extent disabled, he takes the man (person) with such handicap," and the employer is liable for a "full award of benefits" if a subsequent industrial injury combines with the pre-existing disability to produce permanent total disability. See *United Airlines, Inc. v. Indus. Claim Appeals Office,* 993 P.2d 1152, 1154-1155 (Colo. 2000). The only exception to the established rule is where the industrial injury is not a significant causative factor in the claimant's disability. See *Seifried v. Indus. Comm'n,* 736 P.2d 1262 (Colo. App. 1986) [the claimant suffered from several pre-existing ailments, and the treating physician opined that the claimant had reached maximum medical improvement, and concluded that the claimant remained disabled because of non-occupational factors].; *Lindner Chevrolet v. Indus. Claim Appeals Office,* 914 P.2d 496 (Colo. App. 1995). *See also Holly Nursing Care Center v. Indus. Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). As found, the admitted injury of September 8, 2010, ultimately caused the Claimant to be permanently and totally disabled.

g. In determining whether a claimant is permanently and totally disabled, an ALJ may consider the claimant's "human factors," including the claimant's age, work history, general physical condition, education, mental ability, prior training and experience, and the availability of work that the claimant could perform. *Weld County School District RE-12 v. Bymer,* 955 P.2d 550 (Colo. 1998*); Joslin's Dry Goods Co. v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). The term "any wages" means more than zero wages. *See Lobb v. Indus. Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Indus. Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). The critical test is whether employment exists that is reasonably available to a

claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. This means whether employment is available in the competitive job market, which a claimant can perform on a reasonably sustainable basis. *See Joslins Dry Goods Company v. Indus. Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001). As found, the Claimant has proven that he is incapable of earning wages in the competitive labor market, on a reasonably sustainable basis, and there is no work reasonably available to him. Permanent total disability does not need to be proven by medical evidence. *See Baldwin Construction, Inc. v. Indus. Claim Appeals Office,* 937 P.2d 895 (Colo. App. 1997). *Calvert v. Roadway Express, Inc.,* W.C. No. 4-355-715 [Indus. Claim Appeals Office (ICAO), November 27, 2002]; *In re Claim of Randy Blocker v. Express Personnel,* W.C. No. 4-622-069-04 (ICAO, July 1, 2013). As further found, the Claimant has proven permanent total disability by medical and expert vocational evidence.

Bodily Disfigurement

h. Section 8-42-108 (1), C.R.S., provides for a disfigurement award up to $4,304 for a first-tier bodily disfigurement with an injury date in FY 2010/2011, and $8,608 for a Tier-2 disfigurement in FY 2010/2011. Bodily disfigurement is assessed according to appearance not loss of function. *Arkin v. Indus. Comm'n. of Colorado,* 145 Colo. 463, 358 P.2d 879 (1961). Compensation beyond $4,304 for FY 2010/2011 is only appropriate if the disfigurement affects the face, is comprised of extensive body scars or burns, or manifests itself as stumps due to loss or partial loss of limbs. § 8-42-108 (2). Because facial deformities "are presumed to impact on an individual's social and vocational functioning." the statutory maximum award is appropriate. *See Gonzales v. Advanced Component Systems*, 949 P.2d 569 (Colo. 1997). As found, in the present case, the Claimant's disfigurement affects his gait and his scars, which are unpleasant looking and plainly visible to public view in swimming trunks. It is not among the listed schedule disfigurements in § 8-42-108 (2), with an $8,8,608 maximum award for FY 2010/2011. It is within the purview of a maximum $4,304. Therefore, an award of $3, 500 is appropriate.

Penalties

i. The imposition of penalties is governed by an objective standard of negligence. *See Pueblo School Dist. No. 70 v. Toth,* 924 P. 2d 1094, 1097 (Colo. App. 1996); *Miller v. Indus. Claim Appeals Office,* 49 P. 3d 334 (Colo. App. 2001); *City Market, Inc. v. Indus. Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Jimenez v. Indus. Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). There must be a reasonably colorable argument to support a delay in treatment or a delay in payment of medical bills. *See Miller v. Industrial Claim Appeals Office,* 49 P. 3d 334 (Colo. App. 2001). As found, Respondents had a reasonably colorable argument for delaying full payment until correct and appropriate bills with the correct measurement of Tubigrip were rendered. *Also see Carson v. Industrial Claim Appeals Office,* ___P. 3d____(Colo. App. No. 03CA0955, October 7, 2004), *cert. denied,* February 22, 2005.

As found, by any objective standard of negligence, Respondents were **not** negligent in delaying prior authorization of injections by Dr. Brown during the pendency of an IME by Dr. Goldberg.

Overcoming the DIME

j. Overcoming the DIME is moot by virtue of the fact that it is hereby determined that the Claimant is permanently and totally disabled.

Burden of Proof

k. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits, beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to PTD and post-MMI medical maintenance care at the hands of Dr. Yamamoto and Dr. Brown, ATPs. The Claimant has failed to meet his burden with respect to home-based cleaning services and penalties.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of Claimant's post-maximum medical improvement maintenance care and treatment at the hands of authorized treating physicians, David Yamamoto, M.D., and Robert Brown, M.D., subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Based on the Claimant's average weekly wage as of the date of injury, Respondents shall pay the Claimant permanent total disability benefits of $576.28 per week, after the Federal Social Security Disability Offset is taken, or $82.33 per day. For

the period from July 21, 2015, the date of maximum medical improvement, through the last hearing date, May 7, 2018, both dates inclusive, a total of 1,021 days, Respondents shall pay the Claimant past due permanent total disability benefits in the aggregate amount of $84, 058.93, which is payable retroactively and forthwith.

C. From May 8, 2018 for the rest of the Claimant's natural life, Respondents shall pay the Claimant $576.28 per week in net permanent total disability benefits (after the Social Security Offset).

D. For the bodily disfigurement as herein above described, in addition to other benefits due and payable, Respondents shall pay the Claimant the sum of $3,500, payable in one lump sum.

D. Respondents shall pay the Claimant statutory interest at the rate of eight per cent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

E. Respondents may take credit for any indemnity benefits paid after the date of maximum medical improvement, July 21, 2015.

F. Any and all claims for home cleaning services and penalties are hereby denied and dismissed.

DATED this_____day of June 2018.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-017-566-01 and 5-042-920-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

SELF-INSURED,

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 24, 2018 and June 4, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 4/24/18, Courtroom 1, beginning at 1:30 PM, and ending at 4:30 PM; and, 6/4/18, Courtroom 5, beginning at 1:30 PM, and ending at 3:15 PM). The official Punjabi/English Interpreter was Ken Singh.

W.C. No. 5-017-566-01 concerns an admitted and closed right lower extremity (RLE) and low back injury f June 1, 2016. W.C. No. 5-042-920-01 concerns a fully contested back injury of February 6, 2017.

Claimant's Exhibits 1 through 14 were admitted into evidence, without objection. Respondent's Exhibits A through O were admitted into evidence, without objection. Respondent's Exhibit P was rejected.

A written transcript of the evidentiary deposition of Scott Primack, D.O., taken on April 16, 2018, was lodged at the commencement of the first session of the hearing on April 24, 2018.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. It was filed, electronically, on June 11, 2018. Respondent was given two working days within which to file objections. None were timely filed. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether or not W.C. No. 5-017-566-01 should be re-opened based upon a change in condition; and, whether the Claimant suffered a new work-related injury on February 6, 2017, in W.C. No. 5-042-920-01. Additional issues, if W.C. No. 5-017-566-01 is re-opened and/or W.C. No. 5-042-920-01 is determined compensable, concern medical benefits, average weekly wage (AWW), and temporary total disability (TTD) benefits from June 1, 2016, through May 31, 2017, and from March 28, 201`7, and continuing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant's AWW was $616.70 from June 1, 2016 through May 31, 2017, with an applicable TTD rate of $411.13.

2. The Claimant's AWW is $871.24 beginning June 1, 2017 with an applicable TTD rate of $580.83.

3. If Claimant it is determined that W.C. No. 5-017-566 should be reopened, or that W.C. No. 5-042-920 is compensable, the Claimant is owed TTD benefits from March 28, 2017 and continuing.

4. All medical care and eatment received by Claimant, beginning June 1, 2016 andf continuing is authorized and reasonably necessary.

5. The Claimant was born on March 15, 1956. She was 62 years old as of the dates of both sessions of the hearing.

6. The Claimant was employed by the Employer in the Produce Department for approximately 10 years.

7. The Claimant's duties included stocking produce, slicing produce, and sometimes pricing produce. She was required to lift the produce and produce boxes. The boxes sometimes weighed up to 50 lbs. She would bend and squat to complete her tasks.

W.C. No. 5-017-566-01/Re-Opening and/or New Injury (W.C. No. 5-042-920-01)

8. On June 1, 2016, the Claimant suffered an admitted, work related injury to her low back when she bent over a produce ben to lift out a watermelon. She felt immediate pain in her low back. She was treated conservatively for less than two months. She was placed at maximum medical improvement (MMI) on September 15, 2016, with no permanent impairment and no permanent work restrictions.

9. The Claimant returned to her job in the Produce Department doing her regular job without restrictions after she was released from care for her June 1, 2016 injury.

10. The Respondent filed a Final Admission of Liability (FAL) in W.C. No. 5-017-566 on February 17, 2017.

11. The Claimant suffered a worsening of her condition at the beginning of February 2017. She was doing her regular job duties that included lifting heavy boxes. She suffered an increase in low back pain and an increase in right radicular pain. Her pain was so severe that she sought medical treatment on February 8, 2017 from her primary care physician, Dr. Baker. She was prescribed medications that allowed her to continue to work despite the increasing back pain.

12. On March 28, 2017, the Claimant was examined by a workers' compensation physician, Robert Broghammer, M.D. Dr. Broghammer took her off of work, referred her for EMG nerve conduction studies of the RLE and prescribed medications.

13. On April 13, 2017, the Claimant had an MRI (magnetic resonance imaging) that showed a large extruded disc fragment with radiating symptoms going into the RLE. It demonstrated some fairly significant compression at the L5 nerve root.

14. Dr. Broghammer and Angela Elizabeth Downs, D.O., both found that THE Claimant's symptoms correlated with the MRI study.

15. Dr. Broghammer referred the Claimant to Scott Primack, D.O., who examined Claimant on April 26, 2017 and found she was a reasonable candidate for surgical intervention. Claimant was also examined by Dr. Reiss who recommended surgery.

16. On May 13, 2017, the Claimant's pain became so extreme that she reported to the emergency room (ER). She underwent a surgical repair on May 13, 2017, performed by Michael Rauzzino, M.D. Despite the surgical intervention, the Claimant continued to have back pain and it was determined she had a recurrent disc herniation. The Claimant had a second surgery on June 7, 2017, again performed by Dr. Rauzzino.

17. Dr. Primack found that the Claimant's herniated disc had a direct correlation to a work injury. "One would not have such a large disk herniation without an acute/subacute load. There was quite a large right paracentral disk extrusion superimposed on the bulge." Dr. Primack was of the opinion that given the history and the lifting, this would be work-related. Dr. Primack was of the opinion that the Claimant should not have been released back to her regular duties after her June 1, 2016.

18. The ALJ finds the Claimant's testimony credible that she reported her pain to her Employer. The ALJ infers and finds that the Claimant was confused as to whether or not her pain was from her old injury or a new incident. The ALJ also finds the testimony of Paula Mane and Kandice Taylor credible. English is not the Claimant's first language. Due to some problems in communication and understanding, the Employer was unaware until March 28, 2017 that the Claimant had a condition that should have been addressed as a workers' compensation matter.

Ultimate Findings

19. The ALJ finds the Claimant's testimony to be persuasive and credible. Also, the ALJ finds the opinions of Dr. Primack concerning work-relatedness persuasive and credible.

20. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence to accept the testimony of the Claimant and the opinions of Dr. Primack; and, to reject any testimony and opinions to the contrary.

21. The Clamant has proven, by a preponderance of the evidence that she experienced a worsening (change) of her condition, related to the admitted injury of June 1, 2016, after the finality of the FAL therein. Therefore, she has proven that a re-opening of W.C. No. 5-017-566-01 is warranted.

22. There was no persuasive evidence that the Claimant aggravated or accelerated her June 1, 2016 injury in either a new event or over time. Moreover, the totality of the evidence supports the proposition that the injury of June 1, 2016 naturally progressed and got worse. Therefore, the Claimant has failed to prove, by preponderant evidence that she sustained a new, aggravating and accelerating injury on February 6, 2017. Consequently, a dismissal of W.C. No. 5-042-920-01 is warranted.

23. Based on the stipulations of the parties, accepted and found as fact by the ALJ, the Claimant's AWW from June 1, 2016 through May 31, 2017, was $616.70, this yielding a TTD benefit rate $411.13 per week OR $58.73 per day; and, beginning on June 1, 2018, her AWW is $871.24, thus yielding a TTD benefit rate of $580.83 per week, or $82.98 per day; the Claimant was and is temporarily and totally disabled from March 28, 2017 and continuing; and, all medical care for the Claimant's admitted work-related injury of June 1, 2016 was authorized, reasonably necessary and causally related.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found,

the Claimant's testimony was persuasive and credible. Also, the opinions of Dr. Primack concerning work-relatedness were persuasive and credible.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence to accept the testimony of the Claimant and the opinions of Dr. Primack; and, to reject any testimony and opinions to the contrary.

Re-Opening W.C. No. 5-017-566-01

c. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Where a claimant seeks to re-open based on a worsened condition, she must demonstrate a change in condition that is "causally connected to the original compensable injury." *Chavez v. Indus. Comm'n,* 714 P.2d 1328 (Colo. App. 1985). As found, the cause of the Claimant's worsening condition stems from the June 1, 2016 admitted injury. As found, the Claimant established a worsening condition stemming from the june 1, 2016, admitted compensable injury.

W.C. No. 5-042-920-01 (February 6, 2017 Alleged New Injury

d. II an industrial injury leaves the body in a weakened condition, and that weakened condition is a proximate cause of further injury to the injured worker, the additional injury is a compensable consequence of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, there was no persuasive evidence that the Claimant aggravated or accelerated her June 1, 2016 injury in either a new event or over time. Moreover, the totality of the evidence supported the proposition that the injury of June 1, 2016 naturally progressed and got worse. Therefore, the Claimant failed to prove that she sustained a new, aggravating and accelerating injury on February 6, 2017. Consequently, a dismissal of W.C. No. 5-042-920-01 is warranted.

Medical Benefits, AWW AND TTD

e. As found, all medical care and treatment for the admitted June 1, 2016 injury was and is authorized, causally related, and reasonably necessary to cure and relieve the effects thereof.

f. As found, the Claimant's AWW from June 1, 2016 through May 31, 2017, was $616.70, this yielding a TTD benefit rate $411.13 per week or $58.73 per day; and, beginning on June 1, 2018, her AWW is $871.24, thus yielding a TTD benefit rate of $580.83 per week, or $82.98 per day; the Claimant was and is temporarily and totally disabled from March 28, 2017 and continuing; and, all medical care for the Claimant's

admitted work-related injury of June 1, 2016 was authorized, reasonably necessary and causally related. The period from June 1, 2016, through May 31, 2017, both dates inclusive, equals 365 days. The period from June 1, 2017, through the hearing date, June 4, 2018, both dates inclusive, equals 368 days. Based on the AWW through May 31, 2017, retroactive, past due TTD benefits in the aggregate amount of $21, 436.45. Based on the AWW from June 1, 2017, through the hearing date, June 4, 2018, retroactive, past due TTD benefits in the aggregate amount of $30,536.64, are due. The grand total of retroactive, past due TTD benefits through the hearing date is $51,973.09.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury, the right to re-open a claim and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven a worsening of her condition stemming from the June 1, 2016, admitted injury. The Claimant has failed to prove a new aggravation and acceleration of the June 1, 2016 injury as opposed to a natural progression thereof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims in W.C. No.5-042-920-01 (February 6, 2017 claim) are hereby denied and dismissed.

B. The Claim in W.C. No. 5-017-566-01 (June 1, 2016) is hereby re-opened.

C. The Respondent shall pay all of the costs of medical care and treatment for the admitted and re-opened injury of June 1, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

D. . For the period from June 1, 2016, through May 31, 2017, both dates inclusive, equals 365 days, Respondent shall pay the Claimant retroactive, past due temporary total disability benefits in the aggregate subtotal amount of $21, 436.45. For the period from June 1, 2017, through the hearing date, June 4, 2018, both dates inclusive, equals 368 days, Respondent shall pay the Claimant retroactive, past due temporary total disability benefits in the aggregate subtotal amount of $30,536.64. Respondent shall pay the Claimant a grand total of retroactive, past due temporary total disability benefits of $51,973.09, which is payable retroactively and forthwith.

E. From June 5, 2018, and continuing until cessation or modification of benefits is warranted by law, Respondent shall pay the Claimant $580.83 per week in temporary total disability benefits.

E. Respondent shall pay the Claimant statutory interest of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

F. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Whether Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on October 14, 2017 and his non-medical benefits should thus be reduced by fifty percent.

2. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant's injury resulted from the use of a controlled substance in violation of §8-42-112.5(1) C.R.S. on October 14, 2017 and his non-medical benefits should thus be reduced by fifty percent.

FINDINGS OF FACT

1. On March 1, 2016 Claimant was hired by Employer as a maintenance worker at a hotel. Claimant's job duties involved performing routine maintenance activities and repairs. He was also required to observe and promote workplace safety and environmental practices as well as comply with all OHSA, state and local safety and regulatory requirements relating to maintenance functions and activities. Furthermore, Claimant had to possess the "ability to read and interpret technical manuals and mechanical and electrical documents and specifications."

2. In early September 2017 Claimant also assumed night laundry duties for Employer. He was the only employee who worked the night laundry position. Claimant worked two days per week performing maintenance duties and two nights per week completing night laundry duties.

3. Claimant explained that on October 14, 2017 he was working the night laundry shift. He started a load of laundry in Employer's commercial washing machine at about 3:50 a.m. Claimant then folded towels in the backroom area. He remarked that, after the washing machine had been running for approximately 30 minutes, he heard a "thumping sound" coming from the machine. He stopped folding towels to determine the origin of the sound.

4. Peering through a small glass window in the front of the washing machine, Claimant believed he observed a partially full Coca-Cola bottle spinning inside the machine. Claimant was concerned that the soda bottle might explode and damage the sheets that he was washing. Although the machine was spinning at a high rate of speed, Claimant opened the washing machine door.

5. Claimant reached inside the machine basket with his right arm while it was still spinning at a high rate of speed. However, Claimant's right arm became wrapped in a sheet and he "flipped up like a cartwheel" and landed with his back towards the washing

machine. Although Claimant initially believed he had broken his arm, his right arm was instead severed at the elbow. Claimant subsequently called 9-1-1 for medical assistance.

6. Sergeant Justin Baumgartner arrived on the scene in approximately 1-2 minutes. He applied a tourniquet to Claimant's right arm to diminish blood loss. The Denver Fire Department arrived approximately five to ten minutes later. Firefighters found Claimant's severed right arm in the washing machine and gave it to Denver Health. No other foreign objects were found in the washing machine.

7. Claimant was subsequently transported to Denver Health for medical treatment. He was diagnosed with a total amputation of the right mid-forearm and partial amputation of the proximal elbow.

8. Employer's District Manager Amar Patel testified at the hearing in this matter. He explained that the washing machine that Claimant operated on October 14, 2017 was "a Unimark Commercial Industrial style washer." Mr. Patel noted that "it's a 65-pound washing unit…It goes about 550 rpm's…It's a pretty big, pretty powerful unit." He noted that the machine proceeded through various cycles in completing a load of laundry. They included a soak cycle, multiple spin cycles, a rinse cycle and the final spin cycle. While on spin cycle, the machine's basket runs about 550 rpm's or 75 miles per hour.

9. Mr. Patel explained that Claimant received the proper training, documentation and guidance to properly operate the washing machine. He remarked that Employer provided employees with safety training. The training consisted of "employees being shown how to visually operate the machine, how to turn the machine on, how to turn the machine off…Certain safety features…How to pull laundry out of the washing machine…How to put it into the dryer." Mr. Patel emphasized that a district manager would not allow anyone to operate the washing machine without proper training.

10. Mr. Patel commented that the washing machine could only be stopped mid-cycle by pushing the "stop" button on the machine or moving the emergency switch to "off" on the breaker box. Once the stop button was pressed, approximately two minutes elapsed before the spin cycle would come to a complete stop. Opening the washing machine door before the machine came to a complete stop constituted a violation of safety protocol.

11. A poster on the washing machine provided the following notice: "warning, machine may be hot and cause burns, attempt no entry until basket has stopped, serious injury may result." The warning sign is located directly above the front door of the washing machine. The poster is not obscured in any way. Mr. Patel emphasized that the warning sign was enforced to ensure that employees were not opening the door while the basket was spinning.

12. A circuit breaker that controlled power to the washing machine was located on the wall to the left of the machine. The circuit breaker could be turned "on" or "off" by the flip of a switch. Once the circuit breaker was switched "off," power to the machine immediately ceased.

13. Although Claimant testified that he did not receive any training regarding the operation of Employer's washing machines, he acknowledged that he "had someone to kind of show me the door lock mechanisms, how to program and open doors." He also received training for the night laundry position from Sandy Smith that included correctly folding linens and sheets.

14. Claimant explained that he did not have the time to "unfold and inspect every sheet" before placing them in the washing machine. Housekeeper Tiffany Springer testified that she would remove sheets from beds in guest rooms, roll them into a ball and throw them into a laundry bag. She remarked that foreign objects, including small liquor bottles and utensils, were thus often inadvertently placed in the washing machine.

15. Claimant remarked that he believed it was an emergency to pull the Coke bottle out of the washing machine but did not utilize the nearby emergency switch to cut power to the device. He specified that he had reached his arm into the washing machine while it was still spinning on numerous previous occasions.

16. Mr. Patel noted that the proper protocol to follow if an employee suspects a foreign object is inside the washing machine included the following: (1) pressing the stop button; (2) waiting for the cycle to stop; (3) pressing the door unlock button; and (4) removing the foreign object from the washer. Mr. Patel testified further that it was never justifiable to pull open the door without going through the proper protocol.

17. Claimant acknowledged that there was a warning sign directly above the washing machine. He also recognized that placing his arm into the spinning basket of the machine constituted a dangerous situation. Claimant agreed that the warning sign constituted a safety rule and by reaching his arm into the machine he intentionally disregarded a safety rule. He summarized that he "went against the posted safety code" by inserting his arm into the washing machine while it was on spin cycle.

18. Claimant explained that he has an extensive history of illicit drug use. He commented that he began using heroin daily approximately four to five years ago as a substitute for prescription pain medications. Claimant also receives treatment and counseling from a local methadone clinic called Behavioral Health Group. Methadone acts as a replacement for heroin. It is designed to allow Claimant to function through an entire day without using heroin or feeling the effects from heroin withdrawal. However, Claimant noted that by midnight the effects of the methadone would wear off. Once this occurred, Claimant would experience opiate withdrawal symptoms including uncontrollable sneezing, diarrhea, vomiting and shaky hands. To avoid experiencing withdrawal symptoms while at work, Claimant used heroin during his night laundry shifts. He could thus remain functional until his morning visit with the Behavioral Health Group.

19. Claimant remarked that he used heroin at about 12:00 a.m. on October 14, 2017. He noted that he used only a small amount of heroin or about 1/10 of a gram. Heroin that belonged to Claimant and found at the scene of the accident weighed 2.7 grams.

20. When Claimant arrived at Denver Health at approximately 4:45 a.m. physicians took a blood sample. The Colorado State University Analytic Toxicology Laboratory, through a facility called Chematox, conducted laboratory testing. The qualitative and quantitative findings from the Colorado State University analysis were positive for methadone, morphine, codeine, EDDP and amitriptyline.

21. Dr. Dooley was the laboratory physician at the Colorado State University Analytic Toxicology Laboratory noted in the Chematox record. He determined that "the substances that were detected, the quantity that was detected from the blood draw indicate that whether it (the heroin) was used 24 hours earlier or four hours earlier or just before the injury, that under any of these conditions, [Claimant] was absolutely not normal… and he would have been adversely affected by the use of heroin."

22. On May 11, 2018 the parties conducted the post-hearing evidentiary deposition of Kathey Verdeal, Ph.D. Dr. Verdeal testified that heroin could have the following effects on a person's behavior: impulsivity, clouding of consciousness, disturbed cognitive effects, sedation, drowsiness, blurred vision, altered perception, illusions and auditory and visual hallucinations. She remarked that individuals who are high on heroin have a disregard for their own safety. She concluded that to a reasonable degree of forensic toxicology Claimant's October 14, 2017 injury was the result of drug usage.

23. Respondents have proven that it is more probably true than not that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on October 14, 2017 and his non-medical benefits should thus be reduced by 50%. Initially, Claimant explained that while working the night laundry shift for Employer he reached inside a commercial machine basket while it was still spinning at a high rate of speed. However, Claimant's right arm became wrapped in a sheet and was severed at the elbow.

24. The record establishes that Claimant received basic training on compliance with safety rules and how to use the washing machine through employee handbooks, job analysis forms and job descriptions. Training also occurred through physical demonstrations from fellow employees or managers. Moreover, the record reveals the danger of the washing machine while in the spin cycle because it rotated at about 550 rpm or 75 miles per hour. Furthermore, the washing machine had a written warning notice in unobstructed, plain view on the front that instructed against attempting to open the machine while the basket was still moving because serious injury could result. Claimant was also aware of a circuit breaker to the left of the machine. The circuit breaker could be turned on or off by the flip of a switch and cause immediate termination of power to the machine.

25. Claimant also acknowledged that placing his arm into the spinning basket of the machine constituted a dangerous situation. He agreed that the warning sign constituted a safety rule and by placing his arm into the machine he intentionally violated a safety rule. Claimant summarized that he "went against the posted safety code" by inserting his arm into the washing machine while it was on spin cycle. Claimant's action of inserting his right arm into a commercial washing machine during the spin cycle ignored the obviousness of the risk. His conduct lacked a plausible purpose because his action

in ostensibly removing a Coca-Cola bottle from the washing machine while the basket was spinning was an attempt to speed the completion of his job duties. Claimant also disregarded multiple safety warnings and violated protocol for removing foreign objects. His activities demonstrate that he deliberately violated Employer's safety rule regarding operation of the washing machine. Accordingly, Claimant's actions constituted a willful failure to obey a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. and warrant the reduction of his non-medical benefits by fifty percent.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re Alverado,* W.C. No. 4-559-275 (ICAP, Dec. 10, 2003). Willful conduct may be proven by circumstantial evidence including "evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimant's conduct." *Id.*

5. Respondents need not establish that an employee had the safety rule in mind and decided to break it. *In re Alverado,* W.C. No. 4-559-275 (ICAP, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* However, willfulness will not be established if the conduct is the result of thoughtlessness or negligence. *In re Bauer*, W.C. No. 4-495-198 (ICAO, Oct. 20, 2003). "Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez,* W.C. No. 4-561-352 (ICAP, Apr. 29, 2004). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc.*, 907 P.2d at 719.

6. Generally, an employee's violation of a rule to facilitate the accomplishment of the employer's business does not constitute willful misconduct. *Grose v. Rivera Electric*, W.C. No. 4-418-465 (ICAP, Aug. 25, 2000). However, an employee's violation of a rule to make the job easier and speed operations is not a "plausible purpose." *Id.*; *see* 2 *Larson's Workers' Compensation Law*, § 35.04.

7. As found, Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on October 14, 2017 and his non-medical benefits should thus be reduced by 50%. Initially, Claimant explained that while working the night laundry shift for Employer he reached inside a commercial machine basket while it was still spinning at a high rate of speed. However, Claimant's right arm became wrapped in a sheet and was severed at the elbow.

8. As found, the record establishes that Claimant received basic training on compliance with safety rules and how to use the washing machine through employee handbooks, job analysis forms and job descriptions. Training also occurred through physical demonstrations from fellow employees or managers. Moreover, the record reveals the danger of the washing machine while in the spin cycle because it rotated at about 550 rpm or 75 miles per hour. Furthermore, the washing machine had a written warning notice in unobstructed, plain view on the front that instructed against attempting to open the machine while the basket was still moving because serious injury could result. Claimant was also aware of a circuit breaker to the left of the machine. The circuit breaker could be turned on or off by the flip of a switch and cause immediate termination of power to the machine.

9. As found, Claimant also acknowledged that placing his arm into the spinning basket of the machine constituted a dangerous situation. He agreed that the warning sign constituted a safety rule and by placing his arm into the machine he intentionally violated a safety rule. Claimant summarized that he "went against the posted safety code" by inserting his arm into the washing machine while it was on spin cycle. Claimant's action of inserting his right arm into a commercial washing machine during the spin cycle ignored the obviousness of the risk. His conduct lacked a plausible purpose because his action in ostensibly removing a Coca-Cola bottle from the washing machine while the basket was spinning was an attempt to speed the completion of his job duties. Claimant also disregarded multiple safety warnings and violated protocol for removing foreign objects. His activities demonstrate that he deliberately violated Employer's safety rule regarding operation of the washing machine. Accordingly, Claimant's actions constituted

a willful failure to obey a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. and warrant the reduction of his non-medical benefits by fifty percent.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents may reduce Claimant's non-medical benefits by fifty percent for his violation of a safety rule pursuant to §8-42-112(1)(b), C.R.S. on October 14, 2017.

2. Because Respondents have established that Claimant committed a safety rule violation pursuant to §8-42-112(1)(b), C.R.S., it is unnecessary to address whether Claimant's injury resulted from the use of a controlled substance in violation of §8-42-112.5(1) C.R.S. on October 14, 2017.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 28, 2018.

ISSUES

1. Whether Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on October 14, 2017 and his non-medical benefits should thus be reduced by fifty percent.

2. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant's injury resulted from the use of a controlled substance in violation of §8-42-112.5(1) C.R.S. on October 14, 2017 and his non-medical benefits should thus be reduced by fifty percent.

FINDINGS OF FACT

1. On March 1, 2016 Claimant was hired by Employer as a maintenance worker at a hotel. Claimant's job duties involved performing routine maintenance activities and repairs. He was also required to observe and promote workplace safety and environmental practices as well as comply with all OHSA, state and local safety and regulatory requirements relating to maintenance functions and activities. Furthermore, Claimant had to possess the "ability to read and interpret technical manuals and mechanical and electrical documents and specifications."

2. In early September 2017 Claimant also assumed night laundry duties for Employer. He was the only employee who worked the night laundry position. Claimant worked two days per week performing maintenance duties and two nights per week completing night laundry duties.

3. Claimant explained that on October 14, 2017 he was working the night laundry shift. He started a load of laundry in Employer's commercial washing machine at about 3:50 a.m. Claimant then folded towels in the backroom area. He remarked that, after the washing machine had been running for approximately 30 minutes, he heard a "thumping sound" coming from the machine. He stopped folding towels to determine the origin of the sound.

4. Peering through a small glass window in the front of the washing machine, Claimant believed he observed a partially full Coca-Cola bottle spinning inside the machine. Claimant was concerned that the soda bottle might explode and damage the sheets that he was washing. Although the machine was spinning at a high rate of speed, Claimant opened the washing machine door.

5. Claimant reached inside the machine basket with his right arm while it was still spinning at a high rate of speed. However, Claimant's right arm became wrapped in a sheet and he "flipped up like a cartwheel" and landed with his back towards the washing

machine. Although Claimant initially believed he had broken his arm, his right arm was instead severed at the elbow. Claimant subsequently called 9-1-1 for medical assistance.

6. Sergeant Justin Baumgartner arrived on the scene in approximately 1-2 minutes. He applied a tourniquet to Claimant's right arm to diminish blood loss. The Denver Fire Department arrived approximately five to ten minutes later. Firefighters found Claimant's severed right arm in the washing machine and gave it to Denver Health. No other foreign objects were found in the washing machine.

7. Claimant was subsequently transported to Denver Health for medical treatment. He was diagnosed with a total amputation of the right mid-forearm and partial amputation of the proximal elbow.

8. Employer's District Manager Amar Patel testified at the hearing in this matter. He explained that the washing machine that Claimant operated on October 14, 2017 was "a Unimark Commercial Industrial style washer." Mr. Patel noted that "it's a 65-pound washing unit…It goes about 550 rpm's…It's a pretty big, pretty powerful unit." He noted that the machine proceeded through various cycles in completing a load of laundry. They included a soak cycle, multiple spin cycles, a rinse cycle and the final spin cycle. While on spin cycle, the machine's basket runs about 550 rpm's or 75 miles per hour.

9. Mr. Patel explained that Claimant received the proper training, documentation and guidance to properly operate the washing machine. He remarked that Employer provided employees with safety training. The training consisted of "employees being shown how to visually operate the machine, how to turn the machine on, how to turn the machine off…Certain safety features…How to pull laundry out of the washing machine…How to put it into the dryer." Mr. Patel emphasized that a district manager would not allow anyone to operate the washing machine without proper training.

10. Mr. Patel commented that the washing machine could only be stopped mid-cycle by pushing the "stop" button on the machine or moving the emergency switch to "off" on the breaker box. Once the stop button was pressed, approximately two minutes elapsed before the spin cycle would come to a complete stop. Opening the washing machine door before the machine came to a complete stop constituted a violation of safety protocol.

11. A poster on the washing machine provided the following notice: "warning, machine may be hot and cause burns, attempt no entry until basket has stopped, serious injury may result." The warning sign is located directly above the front door of the washing machine. The poster is not obscured in any way. Mr. Patel emphasized that the warning sign was enforced to ensure that employees were not opening the door while the basket was spinning.

12. A circuit breaker that controlled power to the washing machine was located on the wall to the left of the machine. The circuit breaker could be turned "on" or "off" by the flip of a switch. Once the circuit breaker was switched "off," power to the machine immediately ceased.

13. Although Claimant testified that he did not receive any training regarding the operation of Employer's washing machines, he acknowledged that he "had someone to kind of show me the door lock mechanisms, how to program and open doors." He also received training for the night laundry position from Sandy Smith that included correctly folding linens and sheets.

14. Claimant explained that he did not have the time to "unfold and inspect every sheet" before placing them in the washing machine. Housekeeper Tiffany Springer testified that she would remove sheets from beds in guest rooms, roll them into a ball and throw them into a laundry bag. She remarked that foreign objects, including small liquor bottles and utensils, were thus often inadvertently placed in the washing machine.

15. Claimant remarked that he believed it was an emergency to pull the Coke bottle out of the washing machine but did not utilize the nearby emergency switch to cut power to the device. He specified that he had reached his arm into the washing machine while it was still spinning on numerous previous occasions.

16. Mr. Patel noted that the proper protocol to follow if an employee suspects a foreign object is inside the washing machine included the following: (1) pressing the stop button; (2) waiting for the cycle to stop; (3) pressing the door unlock button; and (4) removing the foreign object from the washer. Mr. Patel testified further that it was never justifiable to pull open the door without going through the proper protocol.

17. Claimant acknowledged that there was a warning sign directly above the washing machine. He also recognized that placing his arm into the spinning basket of the machine constituted a dangerous situation. Claimant agreed that the warning sign constituted a safety rule and by reaching his arm into the machine he intentionally disregarded a safety rule. He summarized that he "went against the posted safety code" by inserting his arm into the washing machine while it was on spin cycle.

18. Claimant explained that he has an extensive history of illicit drug use. He commented that he began using heroin daily approximately four to five years ago as a substitute for prescription pain medications. Claimant also receives treatment and counseling from a local methadone clinic called Behavioral Health Group. Methadone acts as a replacement for heroin. It is designed to allow Claimant to function through an entire day without using heroin or feeling the effects from heroin withdrawal. However, Claimant noted that by midnight the effects of the methadone would wear off. Once this occurred, Claimant would experience opiate withdrawal symptoms including uncontrollable sneezing, diarrhea, vomiting and shaky hands. To avoid experiencing withdrawal symptoms while at work, Claimant used heroin during his night laundry shifts. He could thus remain functional until his morning visit with the Behavioral Health Group.

19. Claimant remarked that he used heroin at about 12:00 a.m. on October 14, 2017. He noted that he used only a small amount of heroin or about 1/10 of a gram. Heroin that belonged to Claimant and found at the scene of the accident weighed 2.7 grams.

20. When Claimant arrived at Denver Health at approximately 4:45 a.m. physicians took a blood sample. The Colorado State University Analytic Toxicology Laboratory, through a facility called Chematox, conducted laboratory testing. The qualitative and quantitative findings from the Colorado State University analysis were positive for methadone, morphine, codeine, EDDP and amitriptyline.

21. Dr. Dooley was the laboratory physician at the Colorado State University Analytic Toxicology Laboratory noted in the Chematox record. He determined that "the substances that were detected, the quantity that was detected from the blood draw indicate that whether it (the heroin) was used 24 hours earlier or four hours earlier or just before the injury, that under any of these conditions, [Claimant] was absolutely not normal… and he would have been adversely affected by the use of heroin."

22. On May 11, 2018 the parties conducted the post-hearing evidentiary deposition of Kathey Verdeal, Ph.D. Dr. Verdeal testified that heroin could have the following effects on a person's behavior: impulsivity, clouding of consciousness, disturbed cognitive effects, sedation, drowsiness, blurred vision, altered perception, illusions and auditory and visual hallucinations. She remarked that individuals who are high on heroin have a disregard for their own safety. She concluded that to a reasonable degree of forensic toxicology Claimant's October 14, 2017 injury was the result of drug usage.

23. Respondents have proven that it is more probably true than not that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on October 14, 2017 and his non-medical benefits should thus be reduced by 50%. Initially, Claimant explained that while working the night laundry shift for Employer he reached inside a commercial machine basket while it was still spinning at a high rate of speed. However, Claimant's right arm became wrapped in a sheet and was severed at the elbow.

24. The record establishes that Claimant received basic training on compliance with safety rules and how to use the washing machine through employee handbooks, job analysis forms and job descriptions. Training also occurred through physical demonstrations from fellow employees or managers. Moreover, the record reveals the danger of the washing machine while in the spin cycle because it rotated at about 550 rpm or 75 miles per hour. Furthermore, the washing machine had a written warning notice in unobstructed, plain view on the front that instructed against attempting to open the machine while the basket was still moving because serious injury could result. Claimant was also aware of a circuit breaker to the left of the machine. The circuit breaker could be turned on or off by the flip of a switch and cause immediate termination of power to the machine.

25. Claimant also acknowledged that placing his arm into the spinning basket of the machine constituted a dangerous situation. He agreed that the warning sign constituted a safety rule and by placing his arm into the machine he intentionally violated a safety rule. Claimant summarized that he "went against the posted safety code" by inserting his arm into the washing machine while it was on spin cycle. Claimant's action of inserting his right arm into a commercial washing machine during the spin cycle ignored the obviousness of the risk. His conduct lacked a plausible purpose because his action

in ostensibly removing a Coca-Cola bottle from the washing machine while the basket was spinning was an attempt to speed the completion of his job duties. Claimant also disregarded multiple safety warnings and violated protocol for removing foreign objects. His activities demonstrate that he deliberately violated Employer's safety rule regarding operation of the washing machine. Accordingly, Claimant's actions constituted a willful failure to obey a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. and warrant the reduction of his non-medical benefits by fifty percent.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of the evidence that a claimant acted with "deliberate intent." *In re Alverado,* W.C. No. 4-559-275 (ICAP, Dec. 10, 2003). Willful conduct may be proven by circumstantial evidence including "evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimant's conduct." *Id.*

5. Respondents need not establish that an employee had the safety rule in mind and decided to break it. *In re Alverado,* W.C. No. 4-559-275 (ICAP, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* However, willfulness will not be established if the conduct is the result of thoughtlessness or negligence. *In re Bauer*, W.C. No. 4-495-198 (ICAO, Oct. 20, 2003). "Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez,* W.C. No. 4-561-352 (ICAP, Apr. 29, 2004). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc.*, 907 P.2d at 719.

6. Generally, an employee's violation of a rule to facilitate the accomplishment of the employer's business does not constitute willful misconduct. *Grose v. Rivera Electric*, W.C. No. 4-418-465 (ICAP, Aug. 25, 2000). However, an employee's violation of a rule to make the job easier and speed operations is not a "plausible purpose." *Id.*; *see* 2 *Larson's Workers' Compensation Law*, § 35.04.

7. As found, Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on October 14, 2017 and his non-medical benefits should thus be reduced by 50%. Initially, Claimant explained that while working the night laundry shift for Employer he reached inside a commercial machine basket while it was still spinning at a high rate of speed. However, Claimant's right arm became wrapped in a sheet and was severed at the elbow.

8. As found, the record establishes that Claimant received basic training on compliance with safety rules and how to use the washing machine through employee handbooks, job analysis forms and job descriptions. Training also occurred through physical demonstrations from fellow employees or managers. Moreover, the record reveals the danger of the washing machine while in the spin cycle because it rotated at about 550 rpm or 75 miles per hour. Furthermore, the washing machine had a written warning notice in unobstructed, plain view on the front that instructed against attempting to open the machine while the basket was still moving because serious injury could result. Claimant was also aware of a circuit breaker to the left of the machine. The circuit breaker could be turned on or off by the flip of a switch and cause immediate termination of power to the machine.

9. As found, Claimant also acknowledged that placing his arm into the spinning basket of the machine constituted a dangerous situation. He agreed that the warning sign constituted a safety rule and by placing his arm into the machine he intentionally violated a safety rule. Claimant summarized that he "went against the posted safety code" by inserting his arm into the washing machine while it was on spin cycle. Claimant's action of inserting his right arm into a commercial washing machine during the spin cycle ignored the obviousness of the risk. His conduct lacked a plausible purpose because his action in ostensibly removing a Coca-Cola bottle from the washing machine while the basket was spinning was an attempt to speed the completion of his job duties. Claimant also disregarded multiple safety warnings and violated protocol for removing foreign objects. His activities demonstrate that he deliberately violated Employer's safety rule regarding operation of the washing machine. Accordingly, Claimant's actions constituted

a willful failure to obey a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. and warrant the reduction of his non-medical benefits by fifty percent.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents may reduce Claimant's non-medical benefits by fifty percent for his violation of a safety rule pursuant to §8-42-112(1)(b), C.R.S. on October 14, 2017.

2. Because Respondents have established that Claimant committed a safety rule violation pursuant to §8-42-112(1)(b), C.R.S., it is unnecessary to address whether Claimant's injury resulted from the use of a controlled substance in violation of §8-42-112.5(1) C.R.S. on October 14, 2017.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that medical treatment recommended by Dr. Brittany Matsumura and Dr. Kenneth Lewis constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted April 19, 2017 work injury.

FINDINGS OF FACT

1. The claimant was employed with the employer as a paramedic and clinic nurse. The claimant suffered an injury at work on April 19, 2017. The injury occurred when the claimant was seated at her desk, and stood and turned to walk away from the desk. While the claimant was turning, her right foot became caught in a floor mat. The claimant's right foot remained facing forward, while the rest of the claimant's body turned to the right. The claimant then turned quickly to the left and attempted to catch herself on the desk with her arms. While the claimant's body was twisting in this manner she heard or felt a pop in her right knee.

2. The claimant testified that immediately following the incident her right knee became quite swollen. The claimant self-treated her knee with ice, elevation, and ibuprofen. The claimant also testified that the following morning she had pain in her right knee, low back, right hip, and right groin. These symptoms continued to worsen over the course of that day.

3. Due to this worsening of the claimant's symptoms, on April 21, 2017, she sought medical treatment at the emergency room at the direction of the employer. The claimant described the twisting incident to emergency room staff as described above. The claimant complained of pain and swelling in her right knee with clicking and pain into her right calf. At that time, the claimant did not report pain in her low back, hip, or groin. The claimant credibly testified that she did not tell the emergency room staff about these body parts because she did not feel those symptoms warranted emergency treatment.

4. The claimant's authorized treating physician (ATP) for this claim is Dr. Brittany Matsumura. Claimant was first seen by Dr. Matsumura on April 27, 2017. At that time, the claimant reported pain in her right knee, with some tingling and numbness in her right leg. In addition, the claimant reported soreness in her left shoulder, her low back, right hip, groin, and gluteals. In her physical exam of the claimant's lumbar spine, Dr. Matsumura noted tenderness of the gluteus medius, the inguinal ligament, and the piriformis. Dr. Matsumura opined that the claimant's back pain, hip pain, and groin pain were likely secondary to muscle strain from the act of attempting to catch herself on April 19, 2017.

5. Thereafter, the claimant continued to treat with Dr. Matsumura. The claimant testified that she had ongoing pain in her low back, right hip, and right groin, but that the focus of treatment was on her right knee because that was the area of greatest pain and swelling. Throughout the claimant's initial treatment, Dr. Matsumura opined that the claimant's pain in her low back, right hip, and right groin was likely due to the change in the claimant's gait caused by her right knee pain.

6. Subsequently, the claimant was referred to Dr. John Knutson for surgical consultation regarding her right knee. On October 27, 2016, Dr. Knutson performed an arthroscopic partial debridement and partial synovectomy of the claimant's right knee. The claimant continued to experience pain and instability in her right knee and on July 11, 2017, Dr. Knutson performed a right total knee replacement.

7. Following the total knee replacement, the claimant returned to Dr. Matsumura on August 9, 2017. At that time the claimant complained of severe right low back, gluteal, groin, and hip pain. Dr. Matsumura opined that the claimant's low back and gluteal pain was likely either low back etiology, sacroiliac (SI) joint, or sciatic nerve and ordered physical therapy and a magnetic resonance image (MRI) of the claimant's lumbar spine.

8. On October 13, 2017, the MRI of the claimant's lumbar spine showed moderate canal stenosis at the L4-L5 level, possible slight impingement of the right L4 nerve root, and a minimal disc bulge at the L1-L2 level without significant impingement on the neural elements.

9. On October 18, 2017, the claimant returned to Dr. Matsumura and reported continued pain in her low back, right hip, and right groin. Based upon the claimant's symptoms and the MRI results, Dr. Matsumura diagnosed lumbar radiculopathy and referred the claimant to Dr. Kenneth Lewis for consultation and treatment of her low back pain.

10. On November 7, 2017, the claimant was first seen at Dr. Lewis' practice by Chelsea Olson FNP-C. At that time, the claimant described her low back pain as mostly on her right, but at times traveling to the left side as well. The claimant also reported to Ms. Olson that the pain traveled down her right buttock and down the back of her right leg to her knee. The pain also traveled down the lateral side of the claimant's right leg to her knee, with numbness and tingling in her right thigh. On examination Ms. Olsen noted midline pain from L2 to L5 with moderate tenderness over the zygapophysial/facet joints, and tenderness over the right SI joint.

11. Ms. Olson listed possible diagnoses as nerve root impingement, internal disc disruption, SI joint dysfunction, and facet arthropathy. At that time, Ms. Olsen recommended that the claimant undergo an epidural steroid injection (ESI) at the L4-5 level, and a selective nerve root block at the right L4 level.

12. On January 2, 2018, Dr. Lewis administered a right L4-L5 transforaminal epidural steroid injection (TFESI). In the medical report of that same date, Dr. Lewis noted that the claimant has lumbrosacral degenerative arthritis with right L4 radiculopathy symptomology, with possible right L4 nerve impingement.

13. On January 30, 2018, the claimant returned to Ms. Olson and reported that she had 80% relief from the injection for approximately three weeks. However, the claimant was beginning to have pain in her right groin that she described as achy spasmodic, and sharp. At that time, Ms. Olson recommend that the claimant undergo a repeat right L4-L5 TFESI. Thereafter, the claimant was seen by Dr. Lewis. Dr. Lewis agreed that further injections would be helpful to the claimant, but recommended that the claimant undergo a right L2-L3 TFESI. The respondents have denied the recommended injections.

14. On January 24, 2018, the claimant was again seen by Dr. Matsumura. On that date the claimant reported continuing pain in her right groin with a pain of 5 out of 10. At that time, Dr. Matsumura noted that the claimant's symptoms had persisted for several months and then exacerbated. As a result, Dr. Matsumura recommended that the claimant undergo x-rays of her right hip and pelvis. The respondents have denied the recommended x-rays.

15. At the request of the respondents, the claimant attended an independent medical examination (IME) with Dr. Frederick Scherr on February 9, 2018. In connection with the IME, Dr. Scherr reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Scherr opined that the incident on April 19, 2016 did not result in an injury to the claimant's low back, hip, and groin. Dr. Scherr also noted that if there was any injury to the claimant's low back it was "a very mild strain" to the lumbar spine that resolved within a month or two of the incident.

16. With regard to the injections recommended by Dr. Lewis and the x-rays recommended by Dr. Matsumura, Dr. Scherr opined that the recommended treatment is reasonable to treat the claimant's underlying degenerative lumbar spine condition. However, Dr. Scherr again reiterated his opinion that the claimant's low back symptoms are not related to the April 19, 2016 work injury. Dr. Scherr's testimony at hearing was consistent with his IME report.

17. Dr. Lewis testified at hearing that the claimant has radiculopathy at the L4 level. Therefore, it is Dr. Lewis' opinion that the recommended repeat TFESI at L4-L5 would be beneficial to the claimant. In support of this opinion, Dr. Lewis noted the dermatomal pattern of the claimant's pain symptoms and the success of the previous injection at L4-L5.

18. Dr. Matsumura testified by deposition in this matter and confirmed her opinion that initially she believed that the claimant's right knee injury and related altered gait was the cause of the claimant's low back, hip, and groin pain. Dr. Matsumura also testified that following the claimant's total knee replacement, she began to suspect that

the claimant's issues were in fact a lumbar spine issue and not caused by the altered gait. This is why Dr. Matsumura recommended physical therapy treatment for the claimant's low back and made the referral to Dr. Lewis. Dr. Matsumura testified that the recommended x-rays will assist in determining if there are any other pain generators that require treatment. Dr. Matsumura also testified that an individual with previously asymptomatic degenerative disc disease could become symptomatic as a result of the claimant's mechanism of injury and the resulting altered gait.

19. The claimant testified that she continues to experience low back pain that begins on the right side, wraps around her right hip and into her right groin. This pain also travels down the outside of the claimant's right thigh into her knee. The claimant describes her current pain symptoms as deep and sharp aches that wax and wane. In addition the claimant has numbness and pain from the top of the thigh down into her right buttock and into the top of her right knee.

20. The claimant testified that prior to the April 19, 2017 work injury she did not have back, hip, or groin pain. The claimant believes that these symptoms were caused by the April 1, 2017 work injury. In addition, the claimant testified that following the TFESI in January 2018, she experienced "huge improvements" in her function. Specifically, the claimant was able to stand and walk longer, and complete housework. The claimant's spouse also testified at hearing. His testimony was consistent with the claimant's testimony.

21. The ALJ credits the medical records, the claimant's testimony, and the opinions of Drs. Lewis and Matsumura over the conflicting opinion of Dr. Scherr and finds that the claimant has demonstrated that it is more likely than not that her low back, right hip, and right groin symptoms are related to the admitted April 19, 2017 work injury. The claimant experienced these symptoms following the injury and reported them to her providers throughout this claim. It was reasonable for the medical treatment to focus on the claimant's right knee as it was causing her the greatest level of pain. It was also reasonable for Dr. Matsumura to opine that the claimant's altered gait was the cause of the pain her low back, right hip, and right groin. Once the claimant underwent the total knee replacement, and her low back, right hip, and right groin symptoms persisted, it was further reasonable to turn to other treatment modalities, such as TFESIs, to address these symptoms.

22. The ALJ credits the medical records, the claimant's testimony, and the opinion of Dr. Lewis over the conflicting opinion of Dr. Scherr. The ALJ finds that the claimant has demonstrated that it is more likely than not that the repeat L4-L5 TFESI recommended by Dr. Lewis constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the April 19, 2017 work injury.

23. The ALJ credits the medical records, the claimant's testimony, and the opinion of Dr. Matsumura over the conflicting opinion of Dr. Scherr. The ALJ finds that the claimant has demonstrated that it is more likely than not that the x-rays recommended by Dr. Matsumura constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the April 19, 2017 work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, the claimant has demonstrated by a preponderance of the evidence that her low back, right hip, and right groin symptoms are related to the admitted April 19, 2017 work injury. As found, the medical records, the claimant's testimony, and the opinions of Drs. Lewis and Matsumura are credible and persuasive.

5. As found, the claimant has demonstrated by a preponderance of the evidence that the repeat L4-L5 TFESI recommended by Dr. Lewis constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records, the claimant's testimony, and the opinion of Dr. Lewis are credible and persuasive.

6. As found, he claimant has demonstrated by a preponderance of the evidence that the x-rays recommended by Dr. Matsumura constitute reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records, the claimant's testimony, and the opinion of Dr. Matsumura are credible and persuasive.

ORDER

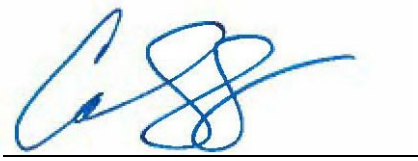
It is therefore ordered that:

1. The respondents shall pay for the recommended repeat L4-L5 TFESI, pursuant to the Colorado Medical Fee Schedule.

2. The respondents shall pay for the recommended x-rays of the claimant's right hip and pelvis, pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined herein are reserved for future determination.

Dated: June 29, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The following issues were raised for consideration at hearing:

1. Whether Claimant proved, by a preponderance of credible evidence, that she is entitled to a disfigurement award;

2. Whether Claimant proved, by a preponderance of credible evidence, that she is entitled to an award of permanent total disability benefits (PTD); and

3. Whether Respondents are entitled to an offset based on Claimant's receipt of social security retirement benefits.

FINDINGS OF FACT

1. Claimant is 70 years old female and resides in Ault, Colorado. The town is approximately 17 miles north of Greeley and the drive between those towns takes Claimant approximately 25 minutes to accomplish.

2. Claimant is left handed and a high school graduate. She provided transportation and administrative services for Employer between June 2007 and February 2017. The Employer's business operations were located in Fort Collins, Colorado, a trip of approximately 25 minutes from Claimant's home.

3. Prior to driving a shuttle for Employer, Claimant worked as a bus driver from 1995 or 1996 through 2006. Before becoming a bus driver, Claimant held a variety of positions in assembly and security with IBM in San Jose, California for approximately 16 years.

4. Claimant sustained an injury on November 28, 2014 while operating as a shuttle driver for Employer. She fell while inspecting her vehicle, injuring her left hand, left wrist, and left knee. Her primary treating physicians were Drs. Rosalinda Pineiro at Concentra, David Conyers, and Dirk Dolbeare.

5. After her injury, Claimant was able to return to driving for Employer with her duties modified so she would not have to lift heavy objects. Otherwise, she performed office duties as a dispatcher, a position which required occasional standing or walking and sitting for at least eighty percent of the time. Claimant was terminated during February 2017 when Employer sold its Fort Collins business operations to another company.

6. At hearing, Claimant reported left knee symptoms consisting of pain, instability, and swelling after thirty minutes to two hours. She complained of pain and problems grasping with the left hand.

7. Claimant has a 12 year old grandson who requires speech and OT therapy once a week in Loveland. Claimant drives her grandson to those appointments,

a journey of approximately 45 minutes in duration. She spends a great deal of her time helping her grandson doing his school work, easing his frustration and coaching him to improve his focus.

8. Claimant was treated at Concentra by several physicians, primarily Dr. Pineiro, a board certified family medicine specialist and level II accredited physician.. As of Claimant's March 3, 2015, visit with Dr. Shimon Blau, Claimant reported intermittent left wrist pain. On examination, her upper and lower extremities were observed as being normal in sensation, and symmetrical. She exhibited normal gait.

9. Claimant presented to Concentra on December 12, 2016. With respect to her left lower extremity, she had a pain level of 1/10 without decreased range of motion, no tenderness, no weakness and no decreased weight bearing. She was released for modified duty with restrictions.

10. Claimant returned to Dr. Pineiro on January 6, 2017. Claimant was released to modified duty of no more than five hours per day, three days per week, a restriction imposed by Dr. Keith Meier on February 3, 2017.

11. Claimant visited Dr. Pineiro on March 8, 2017. Dr. Pineiro found a left wrist and left knee which were normal in appearance with some limited range of motion. She continued the modified duty restrictions of sitting at least 75% of the time, push/pull no more than three pounds, no squatting, no kneeling, and limiting work activities to five hours per day, three days per week.

12. Dr. Pineiro saw Claimant on March 31, 2017. On page 3 of her transcription from that date, Dr. Pineiro identified permanent restrictions as three pounds lifting and push/pull, sitting as needed, no kneeling or squatting, and limiting activities to five hours per day, three days per week. In the final page of her report and in the M-164 Physician's Report of Worker's Compensation Injury, she listed the permanent restrictions as maximum lifting/pushing/pulling of between three and five pounds with the left hand, no kneeling or squatting, and sitting 75% of the time. There was no reference to a durational restriction on Claimant's activities. Dr. Pineiro placed Claimant at maximum medical improvement (MMI) on March 31, 2017. Dr. Pineiro opined that Claimant had sustained permanent partial disability of 22% of the upper extremity and 21% of the lower extremity.

13. Dr. Pineiro testified via deposition on March 16, 2018. She clarified her opinions as to Claimant's restrictions. Specifically, she said that the limitation of Claimant to work no more than five hours per day, three days per week was a temporary restriction and not a permanent one. She also stated that she had not reviewed a February 27, 2017, report from Dr. Conyers when she authored her final report. After considering that report, Dr. Pineiro testified that she would not have imposed any restrictions on Claimant's lifting or pushing/pulling. Ultimately, Claimant's only permanent restrictions were no kneeling, no squatting, and that she should try sitting 75% of the time.

14. Dr. David Conyers began treating Claimant's left upper extremity on May 1, 2015, on referral from Dr. Pineiro. Dr. Conyers is an orthopedic specialist who specializes in upper extremity complaints. He performed a left wrist arthroscopy with triangular cartilage and dorsal capsular debridement and a small finger carpometacarpal arthrodesis on September 16, 2015, and a fluoroscopic left localization with excision on January 5, 2016. He performed a third procedure on December 20, 2016, an "extensor digit minimi, abductor digit minimi tenosis, scar revision, and lysis of the dorsal sensory branch of the ulnar nerve". Dr. Conyers last saw Claimant on February 27, 2017. At that time, he noted full range of motion, improved sensation and a self-report as "doing very well." Dr. Conyers discharged her from care and placed no specific restrictions on her activities.

15. Dr. Dolbeare performed a left arthroscopic partial lateral menisectomy on September 23, 2016. He last examined Claimant on March 9, 2017. At that time, Claimant reported occasional stiffness which Dr. Dolbeare felt was more related to arthritic pain under the knee cap. Claimant reported no locking, catching or sense of instability. Dr. Dolbeare observed full extension.

16. Respondents filed a final admission of liability consistent with Dr. Pineiro's opinion. Claimant objected to the final admission and requested a Division of Workers' Compensation sponsored independent medical examination (DIME). A DIME was performed by Dr. Gary Zuehlsdorff on August 31, 2017. Dr. Zuehlsdorff agreed with Dr. Pineiro's opinion as to MMI and work restrictions, but disagreed with the impairment ratings. Dr. Zuehlsdorff did not comment on the February 27, 2017, report of Dr. Conyers and it is not known whether he reviewed it.

17. Claimant retained the services of Rodney Wilson. Wilson is a certified vocational evaluator and rehabilitation counselor. He obtained a master's degree from the University of Northern Colorado, has worked in the area of vocational evaluations since 1986, and has previously been qualified as a vocational expert in workers' compensation proceedings. Wilson authored a January 24, 2018, report in which he described Claimant's treatment with Drs. Pineiro, Conyers, and Dolbeare. He did not mention the February 27, 2017, note of Dr. Conyers. He noted restrictions from Dr. Pineiro of three to five pounds lifting, pushing and pulling with no squatting or kneeling and sitting 75% of the time. He also relied on Dr. Pineiro's statement as to a durational limitation of five hours per day, three days per week. He concluded that Claimant could not perform any of her prior jobs and did not possess marketable transferable skills that would allow her to re-renter the labor market, concluding Claimant was permanently and totally disabled.

18. Wilson testified at hearing on February 16th. He understood Claimant as having an upper extremity lifting restriction imposed by Dr. Pineiro and believed that Claimant was prohibited from squatting, kneeling or working more than five hours per day for no more than three days per week. In his opinion, Claimant could not return to shuttle or school bus driving. Likewise, she could not perform assembly work because of repetitive movement required by such jobs. On testing, Claimant had no problem with reading comprehension, and had some difficulty with math. He gave her two tests which

demonstrated that she performed poorly for clerical positions. In his view, those tests reflected that she did not have specific transferable skills to re-enter the labor market in clerical jobs. The final test Wilson administered was the Purdue Pegboard. Claimant scored poorly and Wilson felt that reflected poorly on her ability to perform assembly jobs. Wilson felt that Claimant's age was "vocationally relevant" and weighed against her ability to find employment.

19. Wilson conducted labor market research using the Dictionary of Occupational Titles (DOT), O-Net, and the Connecting Colorado website. Based upon those sources, he concluded she did not have the skills to perform the ten types of jobs he identified for her. Wilson felt that job categories identified by Dr. Zierk were not feasible. Ultimately, he concluded Claimant was incapable of earning any wages.

20. On cross examination, Wilson admitted that receipt of social security retirement on account of age does not disqualify Claimant from earning any wages. Claimant has general transferable skills such as punctuality and dressing appropriately for work. He agreed that the commutable labor market for Claimant would be a triangle between Ault, Greeley and Fort Collins. He also agreed that she would have some advantages as an older employee in terms of kindness, caring and patience.

21. Wilson did not review a discharge report from Dr. Conyers prior to the February 16th hearing. He agreed that an opinion as to the absence of permanent upper extremity restrictions might affect his opinion. He had Claimant perform the Purdue Pegboard only once instead of multiple times to validate the result.

22. The DOT and O-Net are not specific to Colorado. Connecting Colorado is a website operated by the Colorado Division of Employment and Training which only encompasses those who affirmatively contact it.

23. Dr. David Zierk is a licensed clinical psychologist and board certified professional counselor. He is a Qualified Rehabilitation Consultant with the State of Colorado. He has worked with more than two thousand disabled individuals to return them to work or provide evaluation services since 1985. He has lectured on the subjects of psychological evaluation, vocational evaluation and disability management at the University of Denver, College of Law.

24. Dr. Zierk evaluated Claimant on January 18, 2018, and authored a report dated January 24, 2018. He identified the relevant commutable labor market as the area between Ault, Greeley, and Fort Collins. The unemployment rate in that market ran between 1.8 and 2.2%. In addition to Claimant's medical records, he conducted a comprehensive review of Claimant's discovery responses, employer records, and his interview notes.

25. Dr. Zierk found Claimant to be initially defensive in nature, but a person who warmed to interpersonal communication, presenting a strong, likeable presence. He opined that based on the functional parameters listed by Dr. Pineiro, Claimant

retained the ability secure and sustain sedentary work. As she has unrestricted use of her nondominant upper extremity and retained the ability to walk and stand for up to 25% of a work day, she was also capable of modified light duty work.

26. Dr. Zierk found that Claimant had transferable work skills which included social perceptiveness, active listening, critical thinking, judgment, decision making, monitoring and social orientation. Dr. Zierk administered a battery of psychosocial tests which revealed a somatic symptom disorder and some paranoid traits, but no major impediment to employment.

27. In his report, Dr. Zierk found that Claimant was not a realistic candidate for light, heavy, or very heavy work. She did retain residual functional capacity for sedentary and modified light duty work. The absence of prescription medication for pain management was seen as a positive factor favoring employment. Her high school diploma contributes favorably to her ability to secure entry level employment.

28. Unlike Mr. Wilson, Dr. Zierk saw Claimant's continued employment beyond a normal retirement age as suggestive of reliability, dependability and maturity to prospective employers. Moreover, the markedly low unemployment rate in Claimant's commutable labor market favored job seekers.

29. Given Claimant's educational background, transferable skills, and commutable labor market, Dr. Zierk felt she could work as a bus monitor, library associate, security monitor, information clerk, sales demonstrator, front office worker, hotel desk clerk, receptionist, movie theater cashier, cafeteria cashier, bank teller and some sales associate positions. He concluded his report with the expert opinion that she remained capable of earning wages in her local labor market.

30. Dr. Zierk testified at hearing on May 21st in Denver. He was present on February 16th when Claimant and Mr. Wilson testified. He reviewed Dr. Pineiro's deposition testimony. It is his understanding that Claimant has no restrictions in terms of days or hours and has, per Dr. Conyers, no upper extremity restrictions.

31. Dr. Zierk recognized that there are differences between Claimant's self-reported limitations and those found by medical providers. He looks to the credentials of the providers and the extent of treatment to determine whether the medical providers are offering an informed opinion as to a claimant's restrictions or limitations. In his view, Drs. Conyers and Pineiro are long time providers with a "good longitudinal understanding" of Claimant's capabilities.

32. Dr. Zierk's methodology involves a review of the medical records for a historical perspective and a meeting with the individual to understand demographic and human factors. He then looks to the local economy to see if there is an opportunity for the person based on medical and human factors.

33. Here, Dr. Zierk considered the clarified medical restrictions to establish the work parameters as sedentary or modified light. Within those areas, he looked for work within her educational background and concluded there was "a plethora of entry level" jobs. He did not consider Claimant's age as an insurmountable obstacle, particularly in light of her personality, communication skills, reliability, and the demands of the commutable labor market.

34. Dr. Zierk disagreed with the specific physical testing conducted by Mr. Wilson, but particularly noted that the tests had to be repeated and compared to the unaffected extremity for validity purposes. With respect to the labor market tools cited by Mr. Wilson, Dr. Zierk thought were starting points for career counseling and not designed to clarify whether a person was capable of working. In his opinion, Claimant remains "fully capable" of earning any wages within the commutable labor market in which she resides.

35. Claimant has a visible disfigurement to the body consisting of a left and/wrist scar. Claimant's scar is one and ½ inches long causing a left hand indentation on the outside of the hand.

CONCLUSIONS OF LAW

General Principles

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Disfigurement

Section 8-42-108 (1), C.R.S. states that if a claimant "is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view, in addition to all other compensation benefits provided in this article and except as provided in subsection (2) of this section, the director may allow compensation not to exceed four thousand dollars to the employee who suffers such disfigurement."

Claimant had several surgeries to her left upper extremity and left knee during the course of her claim. While Claimant had surgery on her knee, no permanent scars were observable during the viewing on February 16th. The upper extremity surgeries resulted in permanent scars to a part of the body normally exposed to public view and, consequently, Claimant is entitled to a disfigurement award in the amount of $2,000.00.

Permanent Total Disability

Generally, Claimant has the burden of proving her entitlement to benefits by a preponderance of credible evidence. Section 8-43-201, C.R.S.*; City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). Specifically, the burden of proof rests with a claimant to prove an inability to earn any wages in the same or other employment by a preponderance of credible evidence. Section 8-40-201(16.5)(a), C.R.S.

An ALJ must look to whether a claimant remains capable of earning any wages within a commutable labor market*. Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). This determination involves consideration of both medical conditions and human factors. *Id.; Best-Way Concrete Co. v. Baumgartner,* 908 P.2d. 1194 (Colo. App. 1995).

Claimant sustained an injury to her left wrist and was found to have sustained permanent medical impairment to which Respondents have already admitted. Dr. David Conyers, an orthopedic specialist who treated her for two years and who specializes in upper extremity complaints placed no specific restrictions on her upper extremity activities in his last report of February 27, 2017. Dr. Pineiro initially imposed lifting and push/pull weight restrictions on Claimant. When she imposed those restrictions, she was unaware of Dr. Conyers' closing report. When presented with that report in deposition, Dr. Pineiro conceded that she would not impose upper extremity restrictions on Claimant. Dr. Dolbeare did not address upper extremity restrictions. Dr. Zuehlsdorff did not independently opine as to the presence or extent of upper extremity restrictions. The most reasonable interpretation of his report is that he deferred to Dr. Pineiro and would likely defer to her on any clarification of her prior statement of upper extremity limitations.

Claimant testified that she experienced pain and a loss of grip strength with prolonged upper extremity use. That is in conflict with the opinions of Drs. Conyers and

Pineiro. In resolving that conflict, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Here, the medical providers have no demonstrable motive to minimize Claimant's restrictions. Claimant does have an interest, pursuit of her claim for permanent total disability benefits. Moreover, Claimant's complaints of pain with upper extremity use are inconsistent with and effectively undermined by the fact that Claimant doesn't use prescription pain medication. A preponderance of credible evidence supports the proposition that Claimant has no identifiable upper extremity restrictions.

Claimant relied, in part, on a durational restriction in that a portion of Dr. Pineiro's final report stated that Claimant should not work more than five hours per day and not more than three days per week. This conflicted with the conclusion of Dr. Pineiro's report and a separate form in which the durational restrictions were omitted. Based on that conflict, a deposition of Dr. Pineiro was taken and submitted. In her deposition, Dr. Pineiro did not impose any durational restrictions on Claimant's work activities. Drs. Conyers, Dolbeare and Zuehlsdorff did not impose any durational restrictions on Claimant. Claimant did not state she could not work more than three days per week for five hours per day. A preponderance of credible evidence supports the proposition that Claimant has no durational restrictions.

A preponderance of credible evidence does, however, support the proposition that Claimant is restricted from any kneeling or squatting and that she should sit at least 75% of the work day. Claimant has not shown, by a preponderance of credible evidence, that the lower extremity restrictions, by themselves, render her permanently and totally disabled. Accordingly, she must prove the parameters of a commutable labor market and that the medical restrictions combine with human factors preclude her from any wages within that labor market.

Claimant and Mr. Wilson did not identify a commutable labor market. Dr. Zierk identified a triangular area of Ault-Greeley and Fort Collins as such a market in his report. Claimant, by her testimony, testified as to her driving tolerances and the duration of commutes from her home in Ault to both Greeley and Fort Collins, supporting Dr. Zierk's formulation. On cross examination, Mr. Wilson agreed with an Ault-Greeley-Fort Collins labor market. That area is an appropriate labor market to consider Claimant's ability to earn any wages.

Mr. Wilson considered Claimant's age to be a negative human factor as the commutable labor market encompasses at least two universities within which a large number of younger workers can be found. Dr. Zierk disagreed, noting the exceptionally low unemployment rate in the market and felt that Claimant's age would either be a neutral factor given the demand for workers or a positive factor given her reliability and

good work ethic, an analysis supported by Claimant's long tenure with her two most recent employers and positive performance appraisals.

Mr. Wilson administered a single version of the Perdue Pegboard test and concluded that Claimant would not be proficient at jobs involving upper extremity use. He did not perform validity testing and did not consider the opinion of Dr. Conyers. He administered written tests to determine Claimant's suitability for unspecified clerical positions and concluded that Claimant did not have the skills for those unspecified clerical positions. He looked at Claimant's job history and determined that Claimant's skills were outdated and that she could not find work.

In contrast, Dr. Zierk administered a number of psychosocial tests and determined that Claimant retained the capacity to dedicate herself to potential new employers, present herself as a responsible and serious job candidate, and to obtain entry level employment with the ability to grow within a job.

There is a substantial contrast between the backgrounds, methodology and ultimate opinions of Mr. Wilson and Dr. Zierk. Both have been accepted as expert witnesses and have worked in their respective fields for many years. Mr. Wilson is a vocational expert. Dr. Zierk is a vocational expert and a licensed clinical psychologist. Dr. Zierk has been retained by claimants and respondents alike. Mr. Wilson's record in this regard is unknown. Dr. Zierk quickly identified a commutable labor market. Mr. Wilson did not. Dr. Zierk identified inconsistencies within the medical statements of restrictions and between those statements and Claimant's self-reporting. Mr. Wilson had difficulty incorporating new information, Dr. Conyers' final report, when it conflicted with his preconceived opinion. In short, Dr. Zierk's methodology and opinions are more credible than those of Mr. Wilson. As Dr. Zierk's opinions as to human factors are more credible and persuasive, Claimant has failed to sustain her burden of proving, by a preponderance of credible evidence, that she is incapable of earning any wages.

Offset

At the start of the hearing on February 16th, the parties stipulated that Claimant is receiving social security retirement benefits and that her first year on entitlement amounted to $16,537.80.

Section 8-42-103(1)(c)(II) and (IV), C.R.S. addresses Respondents entitlement to an offset under certain circumstances. Here, Claimant reached sixty six years of age at the time of her injury. Based on the stipulation of the parties, a potential offset would amount to $159.02 per week. As Claimant is not permanently and totally disabled, the request for an offset is moot.

Order

It is therefore ordered that:

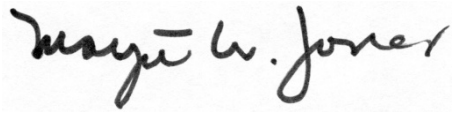
1. Respondents shall pay Claimant disfigurement benefits of $2,000.00 in a lump sum.

2. Claimant's request for permanent total disability benefits is denied and dismissed.

3. Respondents' request for an offset based upon Claimant's receipt of social security retirement benefits is denied as moot.

4. All matters not herein determined are reserved for future determination.

DATED: June 27, 2018



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

1. Whether Claimant proved, by a preponderance of credible evidence, that she is entitled to a disfigurement award;

2. Whether Claimant proved, by a preponderance of credible evidence, that she is entitled to an award of permanent total disability benefits (PTD); and

3. Whether Respondents are entitled to an offset based on Claimant's receipt of social security retirement benefits.

FINDINGS OF FACT

1. Claimant is 70 years old female and resides in Ault, Colorado. The town is approximately 17 miles north of Greeley and the drive between those towns takes Claimant approximately 25 minutes to accomplish.

2. Claimant is left handed and a high school graduate. She provided transportation and administrative services for Employer between June 2007 and February 2017. The Employer's business operations were located in Fort Collins, Colorado, a trip of approximately 25 minutes from Claimant's home.

3. Prior to driving a shuttle for Employer, Claimant worked as a bus driver from 1995 or 1996 through 2006. Before becoming a bus driver, Claimant held a variety of positions in assembly and security with IBM in San Jose, California for approximately 16 years.

4. Claimant sustained an injury on November 28, 2014 while operating as a shuttle driver for Employer. She fell while inspecting her vehicle, injuring her left hand, left wrist, and left knee. Her primary treating physicians were Drs. Rosalinda Pineiro at Concentra, David Conyers, and Dirk Dolbeare.

5. After her injury, Claimant was able to return to driving for Employer with her duties modified so she would not have to lift heavy objects. Otherwise, she performed office duties as a dispatcher, a position which required occasional standing or walking and sitting for at least eighty percent of the time. Claimant was terminated during February 2017 when Employer sold its Fort Collins business operations to another company.

6. At hearing, Claimant reported left knee symptoms consisting of pain, instability, and swelling after thirty minutes to two hours. She complained of pain and problems grasping with the left hand.

7. Claimant has a 12 year old grandson who requires speech and OT therapy once a week in Loveland. Claimant drives her grandson to those appointments,

a journey of approximately 45 minutes in duration. She spends a great deal of her time helping her grandson doing his school work, easing his frustration and coaching him to improve his focus.

8. Claimant was treated at Concentra by several physicians, primarily Dr. Pineiro, a board certified family medicine specialist and level II accredited physician.. As of Claimant's March 3, 2015, visit with Dr. Shimon Blau, Claimant reported intermittent left wrist pain. On examination, her upper and lower extremities were observed as being normal in sensation, and symmetrical. She exhibited normal gait.

9. Claimant presented to Concentra on December 12, 2016. With respect to her left lower extremity, she had a pain level of 1/10 without decreased range of motion, no tenderness, no weakness and no decreased weight bearing. She was released for modified duty with restrictions.

10. Claimant returned to Dr. Pineiro on January 6, 2017. Claimant was released to modified duty of no more than five hours per day, three days per week, a restriction imposed by Dr. Keith Meier on February 3, 2017.

11. Claimant visited Dr. Pineiro on March 8, 2017. Dr. Pineiro found a left wrist and left knee which were normal in appearance with some limited range of motion. She continued the modified duty restrictions of sitting at least 75% of the time, push/pull no more than three pounds, no squatting, no kneeling, and limiting work activities to five hours per day, three days per week.

12. Dr. Pineiro saw Claimant on March 31, 2017. On page 3 of her transcription from that date, Dr. Pineiro identified permanent restrictions as three pounds lifting and push/pull, sitting as needed, no kneeling or squatting, and limiting activities to five hours per day, three days per week. In the final page of her report and in the M-164 Physician's Report of Worker's Compensation Injury, she listed the permanent restrictions as maximum lifting/pushing/pulling of between three and five pounds with the left hand, no kneeling or squatting, and sitting 75% of the time. There was no reference to a durational restriction on Claimant's activities. Dr. Pineiro placed Claimant at maximum medical improvement (MMI) on March 31, 2017. Dr. Pineiro opined that Claimant had sustained permanent partial disability of 22% of the upper extremity and 21% of the lower extremity.

13. Dr. Pineiro testified via deposition on March 16, 2018. She clarified her opinions as to Claimant's restrictions. Specifically, she said that the limitation of Claimant to work no more than five hours per day, three days per week was a temporary restriction and not a permanent one. She also stated that she had not reviewed a February 27, 2017, report from Dr. Conyers when she authored her final report. After considering that report, Dr. Pineiro testified that she would not have imposed any restrictions on Claimant's lifting or pushing/pulling. Ultimately, Claimant's only permanent restrictions were no kneeling, no squatting, and that she should try sitting 75% of the time.

14. Dr. David Conyers began treating Claimant's left upper extremity on May 1, 2015, on referral from Dr. Pineiro. Dr. Conyers is an orthopedic specialist who specializes in upper extremity complaints. He performed a left wrist arthroscopy with triangular cartilage and dorsal capsular debridement and a small finger carpometacarpal arthrodesis on September 16, 2015, and a fluoroscopic left localization with excision on January 5, 2016. He performed a third procedure on December 20, 2016, an "extensor digit minimi, abductor digit minimi tenosis, scar revision, and lysis of the dorsal sensory branch of the ulnar nerve". Dr. Conyers last saw Claimant on February 27, 2017. At that time, he noted full range of motion, improved sensation and a self-report as "doing very well." Dr. Conyers discharged her from care and placed no specific restrictions on her activities.

15. Dr. Dolbeare performed a left arthroscopic partial lateral menisectomy on September 23, 2016. He last examined Claimant on March 9, 2017. At that time, Claimant reported occasional stiffness which Dr. Dolbeare felt was more related to arthritic pain under the knee cap. Claimant reported no locking, catching or sense of instability. Dr. Dolbeare observed full extension.

16. Respondents filed a final admission of liability consistent with Dr. Pineiro's opinion. Claimant objected to the final admission and requested a Division of Workers' Compensation sponsored independent medical examination (DIME). A DIME was performed by Dr. Gary Zuehlsdorff on August 31, 2017. Dr. Zuehlsdorff agreed with Dr. Pineiro's opinion as to MMI and work restrictions, but disagreed with the impairment ratings. Dr. Zuehlsdorff did not comment on the February 27, 2017, report of Dr. Conyers and it is not known whether he reviewed it.

17. Claimant retained the services of Rodney Wilson. Wilson is a certified vocational evaluator and rehabilitation counselor. He obtained a master's degree from the University of Northern Colorado, has worked in the area of vocational evaluations since 1986, and has previously been qualified as a vocational expert in workers' compensation proceedings. Wilson authored a January 24, 2018, report in which he described Claimant's treatment with Drs. Pineiro, Conyers, and Dolbeare. He did not mention the February 27, 2017, note of Dr. Conyers. He noted restrictions from Dr. Pineiro of three to five pounds lifting, pushing and pulling with no squatting or kneeling and sitting 75% of the time. He also relied on Dr. Pineiro's statement as to a durational limitation of five hours per day, three days per week. He concluded that Claimant could not perform any of her prior jobs and did not possess marketable transferable skills that would allow her to re-renter the labor market, concluding Claimant was permanently and totally disabled.

18. Wilson testified at hearing on February 16th. He understood Claimant as having an upper extremity lifting restriction imposed by Dr. Pineiro and believed that Claimant was prohibited from squatting, kneeling or working more than five hours per day for no more than three days per week. In his opinion, Claimant could not return to shuttle or school bus driving. Likewise, she could not perform assembly work because of repetitive movement required by such jobs. On testing, Claimant had no problem with reading comprehension, and had some difficulty with math. He gave her two tests which

demonstrated that she performed poorly for clerical positions. In his view, those tests reflected that she did not have specific transferable skills to re-enter the labor market in clerical jobs. The final test Wilson administered was the Purdue Pegboard. Claimant scored poorly and Wilson felt that reflected poorly on her ability to perform assembly jobs. Wilson felt that Claimant's age was "vocationally relevant" and weighed against her ability to find employment.

19. Wilson conducted labor market research using the Dictionary of Occupational Titles (DOT), O-Net, and the Connecting Colorado website. Based upon those sources, he concluded she did not have the skills to perform the ten types of jobs he identified for her. Wilson felt that job categories identified by Dr. Zierk were not feasible. Ultimately, he concluded Claimant was incapable of earning any wages.

20. On cross examination, Wilson admitted that receipt of social security retirement on account of age does not disqualify Claimant from earning any wages. Claimant has general transferable skills such as punctuality and dressing appropriately for work. He agreed that the commutable labor market for Claimant would be a triangle between Ault, Greeley and Fort Collins. He also agreed that she would have some advantages as an older employee in terms of kindness, caring and patience.

21. Wilson did not review a discharge report from Dr. Conyers prior to the February 16th hearing. He agreed that an opinion as to the absence of permanent upper extremity restrictions might affect his opinion. He had Claimant perform the Purdue Pegboard only once instead of multiple times to validate the result.

22. The DOT and O-Net are not specific to Colorado. Connecting Colorado is a website operated by the Colorado Division of Employment and Training which only encompasses those who affirmatively contact it.

23. Dr. David Zierk is a licensed clinical psychologist and board certified professional counselor. He is a Qualified Rehabilitation Consultant with the State of Colorado. He has worked with more than two thousand disabled individuals to return them to work or provide evaluation services since 1985. He has lectured on the subjects of psychological evaluation, vocational evaluation and disability management at the University of Denver, College of Law.

24. Dr. Zierk evaluated Claimant on January 18, 2018, and authored a report dated January 24, 2018. He identified the relevant commutable labor market as the area between Ault, Greeley, and Fort Collins. The unemployment rate in that market ran between 1.8 and 2.2%. In addition to Claimant's medical records, he conducted a comprehensive review of Claimant's discovery responses, employer records, and his interview notes.

25. Dr. Zierk found Claimant to be initially defensive in nature, but a person who warmed to interpersonal communication, presenting a strong, likeable presence. He opined that based on the functional parameters listed by Dr. Pineiro, Claimant

retained the ability secure and sustain sedentary work. As she has unrestricted use of her nondominant upper extremity and retained the ability to walk and stand for up to 25% of a work day, she was also capable of modified light duty work.

26. Dr. Zierk found that Claimant had transferable work skills which included social perceptiveness, active listening, critical thinking, judgment, decision making, monitoring and social orientation. Dr. Zierk administered a battery of psychosocial tests which revealed a somatic symptom disorder and some paranoid traits, but no major impediment to employment.

27. In his report, Dr. Zierk found that Claimant was not a realistic candidate for light, heavy, or very heavy work. She did retain residual functional capacity for sedentary and modified light duty work. The absence of prescription medication for pain management was seen as a positive factor favoring employment. Her high school diploma contributes favorably to her ability to secure entry level employment.

28. Unlike Mr. Wilson, Dr. Zierk saw Claimant's continued employment beyond a normal retirement age as suggestive of reliability, dependability and maturity to prospective employers. Moreover, the markedly low unemployment rate in Claimant's commutable labor market favored job seekers.

29. Given Claimant's educational background, transferable skills, and commutable labor market, Dr. Zierk felt she could work as a bus monitor, library associate, security monitor, information clerk, sales demonstrator, front office worker, hotel desk clerk, receptionist, movie theater cashier, cafeteria cashier, bank teller and some sales associate positions. He concluded his report with the expert opinion that she remained capable of earning wages in her local labor market.

30. Dr. Zierk testified at hearing on May 21st in Denver. He was present on February 16th when Claimant and Mr. Wilson testified. He reviewed Dr. Pineiro's deposition testimony. It is his understanding that Claimant has no restrictions in terms of days or hours and has, per Dr. Conyers, no upper extremity restrictions.

31. Dr. Zierk recognized that there are differences between Claimant's self-reported limitations and those found by medical providers. He looks to the credentials of the providers and the extent of treatment to determine whether the medical providers are offering an informed opinion as to a claimant's restrictions or limitations. In his view, Drs. Conyers and Pineiro are long time providers with a "good longitudinal understanding" of Claimant's capabilities.

32. Dr. Zierk's methodology involves a review of the medical records for a historical perspective and a meeting with the individual to understand demographic and human factors. He then looks to the local economy to see if there is an opportunity for the person based on medical and human factors.

33. Here, Dr. Zierk considered the clarified medical restrictions to establish the work parameters as sedentary or modified light. Within those areas, he looked for work within her educational background and concluded there was "a plethora of entry level" jobs. He did not consider Claimant's age as an insurmountable obstacle, particularly in light of her personality, communication skills, reliability, and the demands of the commutable labor market.

34. Dr. Zierk disagreed with the specific physical testing conducted by Mr. Wilson, but particularly noted that the tests had to be repeated and compared to the unaffected extremity for validity purposes. With respect to the labor market tools cited by Mr. Wilson, Dr. Zierk thought were starting points for career counseling and not designed to clarify whether a person was capable of working. In his opinion, Claimant remains "fully capable" of earning any wages within the commutable labor market in which she resides.

35. Claimant has a visible disfigurement to the body consisting of a left and/wrist scar. Claimant's scar is one and ½ inches long causing a left hand indentation on the outside of the hand.

CONCLUSIONS OF LAW

General Principles

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Disfigurement

Section 8-42-108 (1), C.R.S. states that if a claimant "is seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view, in addition to all other compensation benefits provided in this article and except as provided in subsection (2) of this section, the director may allow compensation not to exceed four thousand dollars to the employee who suffers such disfigurement."

Claimant had several surgeries to her left upper extremity and left knee during the course of her claim. While Claimant had surgery on her knee, no permanent scars were observable during the viewing on February 16th. The upper extremity surgeries resulted in permanent scars to a part of the body normally exposed to public view and, consequently, Claimant is entitled to a disfigurement award in the amount of $2,000.00.

Permanent Total Disability

Generally, Claimant has the burden of proving her entitlement to benefits by a preponderance of credible evidence. Section 8-43-201, C.R.S.*; City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). Specifically, the burden of proof rests with a claimant to prove an inability to earn any wages in the same or other employment by a preponderance of credible evidence. Section 8-40-201(16.5)(a), C.R.S.

An ALJ must look to whether a claimant remains capable of earning any wages within a commutable labor market*. Weld County School District RE-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). This determination involves consideration of both medical conditions and human factors. *Id.; Best-Way Concrete Co. v. Baumgartner,* 908 P.2d. 1194 (Colo. App. 1995).

Claimant sustained an injury to her left wrist and was found to have sustained permanent medical impairment to which Respondents have already admitted. Dr. David Conyers, an orthopedic specialist who treated her for two years and who specializes in upper extremity complaints placed no specific restrictions on her upper extremity activities in his last report of February 27, 2017. Dr. Pineiro initially imposed lifting and push/pull weight restrictions on Claimant. When she imposed those restrictions, she was unaware of Dr. Conyers' closing report. When presented with that report in deposition, Dr. Pineiro conceded that she would not impose upper extremity restrictions on Claimant. Dr. Dolbeare did not address upper extremity restrictions. Dr. Zuehlsdorff did not independently opine as to the presence or extent of upper extremity restrictions. The most reasonable interpretation of his report is that he deferred to Dr. Pineiro and would likely defer to her on any clarification of her prior statement of upper extremity limitations.

Claimant testified that she experienced pain and a loss of grip strength with prolonged upper extremity use. That is in conflict with the opinions of Drs. Conyers and

Pineiro. In resolving that conflict, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). Here, the medical providers have no demonstrable motive to minimize Claimant's restrictions. Claimant does have an interest, pursuit of her claim for permanent total disability benefits. Moreover, Claimant's complaints of pain with upper extremity use are inconsistent with and effectively undermined by the fact that Claimant doesn't use prescription pain medication. A preponderance of credible evidence supports the proposition that Claimant has no identifiable upper extremity restrictions.

Claimant relied, in part, on a durational restriction in that a portion of Dr. Pineiro's final report stated that Claimant should not work more than five hours per day and not more than three days per week. This conflicted with the conclusion of Dr. Pineiro's report and a separate form in which the durational restrictions were omitted. Based on that conflict, a deposition of Dr. Pineiro was taken and submitted. In her deposition, Dr. Pineiro did not impose any durational restrictions on Claimant's work activities. Drs. Conyers, Dolbeare and Zuehlsdorff did not impose any durational restrictions on Claimant. Claimant did not state she could not work more than three days per week for five hours per day. A preponderance of credible evidence supports the proposition that Claimant has no durational restrictions.

A preponderance of credible evidence does, however, support the proposition that Claimant is restricted from any kneeling or squatting and that she should sit at least 75% of the work day. Claimant has not shown, by a preponderance of credible evidence, that the lower extremity restrictions, by themselves, render her permanently and totally disabled. Accordingly, she must prove the parameters of a commutable labor market and that the medical restrictions combine with human factors preclude her from any wages within that labor market.

Claimant and Mr. Wilson did not identify a commutable labor market. Dr. Zierk identified a triangular area of Ault-Greeley and Fort Collins as such a market in his report. Claimant, by her testimony, testified as to her driving tolerances and the duration of commutes from her home in Ault to both Greeley and Fort Collins, supporting Dr. Zierk's formulation. On cross examination, Mr. Wilson agreed with an Ault-Greeley-Fort Collins labor market. That area is an appropriate labor market to consider Claimant's ability to earn any wages.

Mr. Wilson considered Claimant's age to be a negative human factor as the commutable labor market encompasses at least two universities within which a large number of younger workers can be found. Dr. Zierk disagreed, noting the exceptionally low unemployment rate in the market and felt that Claimant's age would either be a neutral factor given the demand for workers or a positive factor given her reliability and

good work ethic, an analysis supported by Claimant's long tenure with her two most recent employers and positive performance appraisals.

Mr. Wilson administered a single version of the Perdue Pegboard test and concluded that Claimant would not be proficient at jobs involving upper extremity use. He did not perform validity testing and did not consider the opinion of Dr. Conyers. He administered written tests to determine Claimant's suitability for unspecified clerical positions and concluded that Claimant did not have the skills for those unspecified clerical positions. He looked at Claimant's job history and determined that Claimant's skills were outdated and that she could not find work.

In contrast, Dr. Zierk administered a number of psychosocial tests and determined that Claimant retained the capacity to dedicate herself to potential new employers, present herself as a responsible and serious job candidate, and to obtain entry level employment with the ability to grow within a job.

There is a substantial contrast between the backgrounds, methodology and ultimate opinions of Mr. Wilson and Dr. Zierk. Both have been accepted as expert witnesses and have worked in their respective fields for many years. Mr. Wilson is a vocational expert. Dr. Zierk is a vocational expert and a licensed clinical psychologist. Dr. Zierk has been retained by claimants and respondents alike. Mr. Wilson's record in this regard is unknown. Dr. Zierk quickly identified a commutable labor market. Mr. Wilson did not. Dr. Zierk identified inconsistencies within the medical statements of restrictions and between those statements and Claimant's self-reporting. Mr. Wilson had difficulty incorporating new information, Dr. Conyers' final report, when it conflicted with his preconceived opinion. In short, Dr. Zierk's methodology and opinions are more credible than those of Mr. Wilson. As Dr. Zierk's opinions as to human factors are more credible and persuasive, Claimant has failed to sustain her burden of proving, by a preponderance of credible evidence, that she is incapable of earning any wages.

Offset

At the start of the hearing on February 16th, the parties stipulated that Claimant is receiving social security retirement benefits and that her first year on entitlement amounted to $16,537.80.

Section 8-42-103(1)(c)(II) and (IV), C.R.S. addresses Respondents entitlement to an offset under certain circumstances. Here, Claimant reached sixty six years of age at the time of her injury. Based on the stipulation of the parties, a potential offset would amount to $159.02 per week. As Claimant is not permanently and totally disabled, the request for an offset is moot.

Order

It is therefore ordered that:

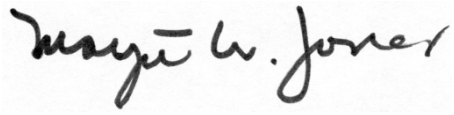
1. Respondents shall pay Claimant disfigurement benefits of $2,000.00 in a lump sum.

2. Claimant's request for permanent total disability benefits is denied and dismissed.

3. Respondents' request for an offset based upon Claimant's receipt of social security retirement benefits is denied as moot.

4. All matters not herein determined are reserved for future determination.

DATED: June 27, 2018



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that medical treatment for his right wrist is causally related to his February 2, 2016 work injury.

STIPULATIONS

1. if treatment for Claimant's right wrist is found causally related to the February 2, 2016 work injury, Respondents agree that treatment for the wrist including the surgery recommended by Dr. Yi is reasonable and necessary.

FINDINGS OF FACT

1. Claimant is a 49-year-old right hand dominant male who is employed by Employer as a heavy equipment operator.

2. On February 2, 2016 Claimant sustained an admitted work related injury to his bilateral knees after slipping on ice. Respondent admitted liability for the injury.

3. As a result of his injury Claimant has undergone bilateral total knee replacements. Claimant's right knee was replaced on June 30, 2016 and his left knee was replaced on November 15, 2016.

4. From the date of his injury and until his right knee was replaced on June 30, 2016 Claimant required the use of crutches. Records show that on February 3, 2016 when evaluated at Denver Health Center for Occupational Safety and Health (COSH), Claimant was prescribed crutches with instructions to be non-weight bearing on his left leg. *See* Exhibit D.

5. Between the February 2, 2016 injury and the eventual total knee replacements, Claimant underwent a course of conservative care including medications and physical therapy.

6. Claimant testified that while using crutches from early February and until June of 2016 he had no issues or problems, including problems with his right wrist. Claimant testified that he began having right wrist pain in June and reported it to his COSH physician.

7. Claimant testified that directly after his June 30, 2016 right knee replacement, he did not experience symptoms in his wrist, but that he was on pain medication at the time and that as he weaned off the pain medications following knee surgery he felt the right wrist pain more.

8. After his right knee replacement, Claimant used a walker to help him ambulate.

9. On August 23, 2016 Claimant was evaluated by Hyeongdo Kim, M.D. Dr. Kim noted that Claimant was almost two months post op for his right knee surgery. Claimant reported that he was progressing well and happy with his right knee. Claimant reported, however, that his chief complaint was right wrist pain that started about two weeks prior to his right knee surgery. Claimant believed his right wrist pain may have been caused by the use of crutches and reported that the pain worsened when he had to use the walker to ambulate post operation. Claimant reported that the pain was at 2-3/10 when at rest and at 7-8/10 when he bore weight on the wrist to stand up or when using crutches. Dr. Kim found limited active flexion and extension at the wrist joint and point tender to palpation on the lateral aspect of the wrist. Dr. Kim suspected a subacute strain due to change in ergonomics of having to use a walker for 2-3 months. *See* Exhibit 4.

10. On September 13, 2016 Claimant was evaluated by Alisa Koval, M.D. Claimant's right wrist was noted to be swollen and painful. Claimant was fitted for a wrist brace and his crutches were adjusted so that he was leaning over on his wrists less. Dr. Koval found swelling and tenderness to palpation as well as decreased strength on wrist flexion, extension, radial deviation, and ulnar deviation. *See* Exhibit 5.

11. On September 19, 2016 Claimant was evaluated by Steven Kitchen, M.D. Claimant reported that he had a slip injury in February of 2016 and that he started having more problems with his wrist after having to use crutches for a prolonged period of time. Claimant reported a prior history of problems with his right wrist including difficulties 20 some years ago where he underwent a surgery for what he termed a ligament repair. Claimant reported that after physical therapy and recuperation he went back to all of his normal activities including bowling, golfing, and working with heavy equipment. Claimant reported really having no other major problems with his right wrist until recently. Dr. Kitchen found Claimant's right wrist to be swollen on examination with tenderness over the mid and radial portion and crepitation with flexion and extension. Dr. Kitchen also found decreased range of motion in all directions and diminished grip strength. *See* Exhibits 6, F.

12. Dr. Kitchen had Claimant undergo x-rays of the right wrist. The x-rays showed: bony alignment with evidence of scapholunate disassociation with a significantly widened scapholunate interval and some mild dorsal tilting of the lunate; extensive arthritic change at the radial scaphoid joint grade 4; and some changes of the scapha capitate joint grade 3 to grade 4. Dr. Kitchen opined that Claimant had significant synovitis in the right wrist due to a scapholunate dissociation and significant secondary osteoarthritic changes of the radius scaphoid joint. Dr. Kitchen opined that the grade 4 change noted on the x-ray correlated with Claimant's history of a previous wrist problem, surgery, current pain, swelling, and loss of motion. Dr. Kitchen performed a corticosteroid injection in the wrist and noted that Claimant would be fitted for a short arm cast brace. *See* Exhibits 6, F.

13. On October 11, 2016 Claimant was evaluated by Dr. Koval. Dr. Koval noted a left knee replacement was pending for November 15, 2016 and that rehab for the right knee was going fairly well. Dr. Koval noted that Claimant had attributed the pain in his right wrist to extended crutch use and that he had not engaged in any other activities that required forceful grabbing/pushing/pulling. Claimant reported mild on/off right wrist pain for several weeks prior to his right knee replacement and that the pain was a nuisance until he had the right knee replaced and then had to use a walker which aggravated the right wrist pain to the point where he felt it was appropriate to mention it. Claimant was worried that with the next knee replacement and required walker use after surgery, his right wrist would continue to be aggravated. Dr. Koval opined that, in the absence of another mechanism of injury, she was inclined to believe that Claimant's right wrist pain was related to both long-term crutch use significantly aggravated by use of the walker and would require ongoing monitoring as he underwent left knee replacement. *See* Exhibit 5.

14. On June 16, 2017 Dr. Koval answered questions posed to her in a letter from Claimant's counsel. Dr. Koval opined that the crutches started Claimant's right wrist problem and that use of the walker after surgery made it worse. Dr. Koval noted that Claimant used crutches or a walker for a total of 5-6 months in 2016. *See* Exhibit 5.

15. On July 14, 2017 Claimant was evaluated by In Sok Yi, M.D. Claimant reported having an injury in February of 2016 when he slipped and that he essentially underwent bilateral total knee replacements sequentially and that he was basically on either crutches or a walker from February of 2016 until February of 2017. Claimant reported that during this time, he developed increasing pain in his right wrist and that an injection performed by Dr. Kitchen did not give him relief. Claimant reported that his pain started in about August of 2016, that he had an injury to the right wrist and surgery about 15 years prior, and that he did not have any problems until he got to weight bear on his wrist after his knee surgeries. Dr. Yi opined that Claimant had a prominent exacerbation of an underlying scapholunate diastasis with arthritis in the wrist. Since Claimant had failed non operative treatment with activity modification, splints, and injections, Dr. Yi recommended proceeding with a right wrist proximal row carpectomy with posterior interosseous neurectomy and radial styloidectomy. *See* Exhibits 7, G.

16. On August 6, 2017 Wallace Larson, M.D. performed a medical records review. Dr. Larson reviewed and summarized records from the injury through the surgical recommendation made by Dr. Yi. Dr. Larson diagnosed pre-existing scapholunate ligamentous injury with subsequent development of degenerative arthritis known as the scapholunate advanced collapse (SLAC) deformity. Dr. Larson opined that the radial graphic findings were completely typical of what is known as SLAC wrist and that it was not caused or aggravated by Claimant's occupational exposure or by the use of crutches or a walker. Dr. Larson noted that with a pre-existing arthritic wrist, it would be completely understandable that Claimant would notice pain from the pre-existing wrist arthritis but that it was not caused or aggravated by the occupational injury, use of crutches, or the use of a walker after the knee arthroplasties. Dr. Larson opined that the need for surgery

recommended by Dr. Yi was completely related to Claimant's previous wrist ligamentous injury and subsequent development of posttraumatic arthritis. Dr. Larson opined that Claimant's degenerative arthritis of the right wrist followed the typical course of wrist arthritis seen after a scapholunate ligament injury with no documented information in the medical records indicating any recent traumatic change within the right wrist. *See* Exhibit H.

17. On August 7, 2017 Respondent sent a letter to Dr. Yi noting that the surgery request had been denied. Respondent attached a copy of the medical records review report from Dr. Larson. *See* Exhibits 7, G.

18. Claimant testified at hearing. Claimant reported a prior right wrist injury approximately 20 years ago and that he underwent surgery including what he described as a ligament repair surgery. Claimant testified that afterwards he had no continuing pain. Claimant reported he was able to return to his normal activities following the injury and surgery including bowling, golf, basketball and his work in heavy labor.

19. Records show that on October 30, 2012 Claimant was evaluated at Aspen Family Medicine for a chief complaint of right wrist pain and swelling. Claimant reported that he was pulling himself up into his semi-truck the week prior and messed up his right wrist while using the grub handle. Claimant reported that he thought it was a gout flare-up and started taking gout medicine but it didn't seem to help much. Claimant reported reduced movement of his right wrist and hand and some numbness in the top of his right thumb as well as weakness and swelling. On exam, Clamant had limited range of motion at the right wrist/hand and reduced grip strength. X-rays of the right hand and wrist were performed and showed widened scapholunate interval with a question of scapholunate ligament tear. It was noted that Claimant would get an MRI of his right wrist. Claimant was offered a wrist brace but declined so an ace wrap was applied. *See* Exhibit J.

20. Claimant testified at hearing that due to his bilateral knee surgeries he had to push up on his right wrist every time he needed to get up because he couldn't bear weight on his knees. Claimant testified that the pain in his right wrist now was much different than the ligament injury pain he had 20 years prior. Claimant reported that until this injury he had been bowling on a regular basis. Claimant also reported that he had no symptoms in his right wrist from his first right wrist surgery and until he used crutches for this knee injury.

21. Dr. Larsen testified at hearing consistent with his medical records review report. Dr. Larson is an orthopedic surgeon with a subspecialty in hand and upper extremity surgery. Dr. Larson noted that he had reviewed the 2012 x-ray reports of Claimant's right wrist and opined that the 2012 x-rays showed a chronic condition of post traumatic arthritis and widening and that the recent 2016 x-rays showed essentially the same problem as shown by the 2012 injuries but with worsening over time and grade 3-4 changes. Dr. Larson agreed with the diagnoses made by Dr. Kitchen and Dr. Yi. Dr. Larson testified that Claimant's injury 20 years prior with a ligament that was torn between the scaphoid bone and lunate bone involved a ligament that is supposed to keep the

bones from widening and that degeneration after such injury is expected. Dr. Larson testified that the surgery described by Claimant that Claimant underwent 20 years prior is a surgery that is now known not to work. Dr. Larson also testified that the surgery is known to cause post degenerative arthritis.

22. Dr. Larson testified that Claimant had SLAC wrist deformity with a rupture of the scaphoid lunate ligament and osteoarthritis that started to degenerate with the ruptured ligament. Dr. Larson testified that x-rays show Claimant has bone rubbing on bone with no joint space and no cartilage as the cartilage had worn out and opined that it was a painful and progressive condition. Dr. Larson opined that crutch use did not exacerbate or worsen Claimant's condition. He testified that it might have caused pain but that it would not damage or change Claimant's underlying condition because Claimant's ligament was already gone and Claimant's bone was already rotated. Dr. Larson opined that it couldn't get much worse or be made worse and that Claimant had complete loss of cartilage already. Dr. Larson agreed that Claimant needed surgery and that the procedure recommended by Dr. Yi was appropriate. Dr. Larson opined that Claimant had no anatomical change and no change to his underlying condition due to the crutch or walker use. Dr. Larson opined that the grade 4 changes shown by imaging in 2016 started years prior and showed that Claimant's cartilage had already disappeared. Dr. Larson testified that the lengthy crutch use didn't cause anatomic arthritic worsening but that a person using crutches who has arthritis will feel pain using crutches but that the arthritis causes the pain not the crutches.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Causation and Relatedness

To be a compensable benefit, medical treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish, by a preponderance, of the evidence that treatment for his right wrist is causally related to his February 2, 2016 work injury. Claimant, overall, is not found credible or persuasive. Although Claimant reported having no right wrist issues following an injury 20 years ago and until he started using crutches in recovery for his bilateral knee surgeries, this is not consistent with the medical records. Significantly, in 2012 Claimant had such significant right wrist pain at an evaluation that x-rays were performed. At that 2012 evaluation both a right wrist brace and a right wrist MRI were recommended. Instead, Claimant's right wrist was wrapped and Claimant did

not follow up on treatment recommendations for an MRI or wrist brace. The x-rays performed in 2012 showed widened scapholunate interval concerning for scapholunate ligament tear. They also demonstrated post-traumatic arthritis. Dr. Larson is found credible and persuasive. The new right wrist x-rays in 2016 show a continued degeneration naturally expected from the condition shown in the 2012 x-rays. Claimant's SLAC wrist deformity and the diagnoses made by Dr. Larson, Dr. Kitchen, and Dr. Yi involves an abnormal rotation of Claimant's scaphoid against the distal radius bone leading to the development of an arthritic wrist. As shown by 2016 x-rays, Claimant's arthritic condition was bone on bone, stage 4, which took years to develop. Dr. Larson is credible and persuasive that Claimant's condition was not caused, accelerated, or exacerbated by his use of crutches and that Claimant had a complete loss of cartilage which would not have been further degenerated by crutch use. Dr. Larson opined that although Claimant had pain, Claimant had no additional damage or change in the anatomical condition and simply had symptoms of his underlying degenerative condition.

Claimant's reports to Dr. Kitchen in September of 2016 that he had no other major problems with his right wrist following his injury 20 years prior until recently is discredited by the medical records from 2012. Dr. Kitchen noted that the condition from the x-rays with significant osteoarthritis correlated with the history of a previous wrist problem 20 years prior. As found above, Dr. Koval's opinion on the right wrist pain being related to long term crutch use was given in the absence of another mechanism of injury. Dr. Koval does not reference the significant injury from 20 years prior nor does she reference the findings and treatment recommendations from 2012. Here, there is another mechanism of injury with a prior significant injury, surgery, and demonstrated arthritic changes and pain in the 2012 imaging. Dr. Koval indicated that the use of crutches started Claimant's right wrist problem which that ALJ finds not to be accurate based on a totality of the evidence. Claimant had right wrist problems prior to crutch use in 2016. Further, Claimant's reports to Dr. Yi that he did not have any problems following his right wrist surgery years prior until he got to weight bear on his wrist after his knee surgeries is not accurate. Overall, Claimant is not credible or persuasive given the 2012 records. Dr. Larson is found credible, persuasive, and his opinions are consistent with the weight of the evidence.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that treatment for his right wrist, including surgery recommended by Dr. Yi, is reasonable, necessary, and causally related to his February 2, 2016 injury.

2. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-055-527-001 and 5-065-822-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 5, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 6/5/18, Courtroom 5, beginning at 1:30 PM, and ending at 4:30 PM).

Claimant's Exhibits 1 through 17 were admitted into evidence, without objection. Respondents' Exhibits A through O were admitted into evidence, without objection.

W.C. No. 5-055-527-001 concerns an admitted left shoulder injury of December 21, 2016. W.C. No. 5-065-822-001 concerns a fully contested left shoulder injury of March 21, 2017.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. The proposed decision. Was filed, electronically, on June 12, 2018. No timely objections were filed. Therefore, the proposed decision was deemed submitted for decision on June 15, 2018. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a new, compensable injury on March 21, 2017 (W.C. No. 5-065-822-001); or, whether the Claimant's continuing left shoulder problems are related to the admitted injury of December 21, 2016, on which a filed Admission of Liability (FAL) was filed on March 23, 2017 and the Claimant thereafter filed a timely objection; medical benefits; average weekly wage (AWW); temporary total disability (TTD) benefits from August 27, 2017 and continuing; and, Respondents entitlement to a Federal Social Security Disability Benefit offset from February 1, 2018 and continuing.

The Claimant bears the burden of proof on all issues, other than Federal Social Security Disability offset, in which case Respondents bear the burden of proof. Both sides burden is by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of hearing the parties stipulated that: (1) should this case be found compensable James Ferrari, M.D. and Braden Reiter, D.O., are authorized; (2) the Claimant's last day worked was August 26, 2017; (3) at the time of the injury the Claimant's average weekly wage (AWW) was $1,238.65; and, (4) the Claimant was awarded SSDI commencing on February 1, 2018. The ALJ accepts these stipulations and so finds as fact.

2. The Claimant (date of birth January 20, 1956), a thirty-two-year employee of the Employer was a credible witness. His testimony was both persuasive and consistent with the medical records in the case, although his recollection of certain events was limited.

The Injury of December 21, 2016 (W.C. No. 5-055-527-001)

3. The evidence establishes that the Claimant suffered a left shoulder injury when he fell on December 21, 2016, while working as a beer delivery driver for the Employer. He reported his injury to his Employer and the Employer completed an Injury

Notification (Claimant's Exhibits 4 and 16, BS 109) The Employer's First Report of Injury states that the Claimant "slipped on ice and fell in the employee parking lot. At the time of the incident, he sustained cuts and bruises. He claims he has been suffering left shoulder pain since the accident" (Claimant's Exhibit 16, BS 109).

4. According to the Claimant, and it is undisputed, that following this event he returned to work but was given a "helper" for his delivery work. The Claimant continued to work full duty as a delivery driver with a "helper" driver through March 24, 2017, when he suffered a further left shoulder strain when he was taking a beer keg downstairs using a dolly (Claimant's Exhibit 3, BS 11).

5. Both events of December 21, 2016 and the event of March 24, 2017, were timely reported to the Employer.

6. The Claimant continued working with vacation breaks, through early August 2017, when he complained of worsening left shoulder pain and he was sent to authorized treating physician (ATP) Dr. Reiter by his Employer. On August 24, 2017, ATP Dr. Reiter restricted the Claimant to no lifting, pushing, or pulling with he left arm (Claimant's Exhibit 7, BS 32 and 33).

7. ATP Dr. Reiter referred the Claimant for an MRI (magnetic resonance imaging), which found that the Claimant had a complete full thickness supraspinatus tear, AC joint arthropathy, glenohumeral arthropathy, as well as moderate infraspinatus and subscapularis tendinopathy (Claimant's Exhibit 8, BS 35) ATP Dr. Reiter also referred the Claimant to ATP surgeon Dr. Ferrari on August 28, 2017. *Id*., BS 34. Thereafter, ATP surgeon Dr. Ferrari recommended that the Claimant undergo a left arthroscopic cuff repair with distal clavicle resection and decompression (Claimant's Exhibit 5, BS 26). The Claimant credibly testified that he is prepared to undergo the surgery recommended by ATP surgeon Dr. Ferrari.

8. Respondents issued a letter authorizing surgeon ATP Dr. Ferrari's surgery on September 5, 2017 (Claimant's Exhibit 5, BS 30 and 31). The surgery, however, has not yet been performed to date because Respondents are challenging the compensability of the Claimant's left shoulder injury.

9. In disputing whether the Claimant suffered a left shoulder injury requiring surgical intervention, Respondents rely on the fact that in multiple records from 2017, the Claimant did not tell medical providers about his left shoulder exacerbation in March 2017. Thus, the medical records from ATPs Dr. Reiter or Dr. Ferrari, or from DIME (Division Independent Medical Examiner) Jade Dillon, M.D., right shoulder, DIME, unrelated to the present claim, and IME (independent Medical Examiner) Allison Fall, M.D. (right shoulder) indicate that the Claimant failed to mention or emphasis the event of March 24, 2017, as causing additional medical problems or suggesting that this was in intervening event.

10. ATP surgeon Dr. Ferrari was of the opinion that the Claimant's left shoulder problems started with his December 2016 fall and were likely aggravated (exacerbated) as he continued heavy work. This included the 165 lb. keg event of March 2017, which the ALJ finds to be an exacerbating event along the natural progression of the left shoulder problems set in motion by the traumatic event of December 21, 2016.

11. ATP surgeon **Dr. Ferrari described the Claimant's left shoulder problems as a natural progression from the December 2016 left shoulder injury due to the Claimant's continued heavy work.**

12. ATP surgeon Dr. Ferrari testified:

A I mean, pure speculation, but it probably started with the December fall.

Q All right. And let's say it did start with the September (sic) fall. Would the - - if he continued to work, would the events of March 21 be essentially a natural progression if he continued to do heavy work?

A Yes. Yes.

Q All right. So we could use the December fall as the event that triggered this problem, but the events of March 21 constituted a natural progression which would eventually require him to have surgery?

A Yes.

Q Am I - - did I state that correctly? Because I don't want to overstate my case. All right.

A Okay.

Q So you would still - - I mean, what we're still working on is an assumption that the December 21, 2016, event was the

triggering event and that ironically despite whatever happened on March 21, that was a natural progression from that injury, correct?

A Yes.

[Evidentiary Deposition of ATP James Ferrari, MD (January 29,2018) p. 36, lns11 – 25 though p. 37; lns 1 – 11—also Claimant's Exhibit 10, BS 52)]

13. Subsequent to his injury of December 21, 2016, the Employer provided the Claimant with a "helper" due to his left shoulder limitations. This continued throughout the remainder of 2016 and through the early summer of 2017. This supports ATP surgeon Dr. Ferrari's opinion that it was the Claimant's December 21, 2016 injury which caused both the Claimant's disability and his need for surgery.

14. Prior to the Claimant's left shoulder injury on December 21, 2016, he had returned to work full duty after recovering from an admitted right shoulder injury occurring earlier on March 23, 2016.

15. The Claimant was evaluated at the request of the Respondents by Dr. Fall in connection with his previously admitted right shoulder injury. Dr. Fall issued a report on November 15, 2017. She stated that she was unclear of how the injury of December 21, 2016, occurred. Consequently, she could not render an opinion about the events occurring on that date, although she did acknowledge that the Claimant has lifting restrictions on his left shoulder (Claimant's Exhibit 9, BS 39). Dr. Fall notes that the Claimant described the event of December 21, 2016, as well as a follow-up event occurring when he was taking a keg downstairs, but without specifying a date. *Id.*, BS 37.

16. Respondents argue that the Claimant failed to comply with the requirements of § 8-43-102(1)(a), C.R.S. by not providing a written report of injury for either the December 21, 2016 or the March 2017 events. An award of penalties against an injured worker for a violation of this statute is requires the Employer to display a regulation notice required in paragraph (b) of subsection (1). Respondents presented **no** evidence of such a displayed sign. Consequently, the Claimant's failure to report the events in writing did not serve as a trap for the unwary injured worker.

Medical

17. The parties stipulated that the ATPs for the Claimant's December 21, 2016, claim are ATP Dr. Reiter and ATP surgeon Dr. Ferrari. The treatment rendered by these doctors and the surgery recommended by ATP surgeon Dr. Ferrari is found to be

authorized, reasonably necessary and causally related to the admitted December 21, 2016, injury.

Temporary Total Disability

18.. The Claimant's last day worked was August 26, 2017. At that time, he was under restrictions preventing his return to work. He demonstrated that he has been temporarily and totally disabled from August 27, 2017 and ongoing. He has earned no wages, not been declared to be at MMI and the Employer has not offered him modified work.

19. The Claimant has proven that the admitted injury of December 21, 2016, has caused a "disability," and that he has suffered a wage loss which, "to some degree," is the result of that I injury. The Claimant's testimony alone, along with ATP Dr. Reiter's report establishes the Claimant's "disability."

Penalties for Claimant's Failure to Report in Writing

20. Respondents argue that they are entitled to a penalty due to the Claimant's failure to file a written report of injury, pursuant to § 8-43-102(1)(a), C.R.S., despite the evidence that they were on notice of the December 21, 2016, and the March 21, 2017 events.

21. The imposition of a penalty reducing an employer's liability for disability benefits is in the nature of an affirmative defense. Thus, the employer bares the initial burden of proving it did not receive written notice from the employee. See *Postewiat v. Midwest Barricade*, 905 p.2d 21 (Colo. App. 1995). § 8-43-102, imposes an additional burden on the employer to show that it posted a "reporting notice" in compliance with § 8-43-102(1)(b), C.R.S. The Respondents failed to produce evidence that the notice required by statute was posted.

Ultimate Findings

22. The ALJ finds the Claimant's testimony persuasive and credible. Also, the ALJ finds the opinions of Dr. Reiter and Dr. Ferrari more credible and persuasive than the opinions of Dr. Fall.

23. Between conflicting testimony and opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's testimony, the opinions of Dr. Reiter and Dr. Ferrari, and to reject any opinions to the contrary.

24. The Claimant has proven, by a preponderance of the evidence that he sustained a compensable injury to his left shoulder on December 21, 2016 (W.C. No. 5-055-527-01).

25. The Claimant has failed to prove that he sustained a compensable aggravating and accelerating injury to his left shoulder on March 21, 2017 (W.C. No. 5-065-822-01).

26. The Claimant has proven, by preponderant evidence that all medical care and treatment for his left shoulder, at the hands of Dr. Reiter and Dr. Ferrari, including the surgery recommended by Dr. Ferrari, was and is authorized, causally related to the December 21, 2016 injury, and reasonably necessary to cure and relieve the effects thereof.

27. The Claimant's AWW is $1,238.65, which yields a TTD benefit rate of $825.76 per week, or $117.97 per day, which is less than the maximum rate for FY 2016/2017.

28. As stipulated, the Claimant was temporarily and totally disabled, without Federal Social Security Disability (SSDI) benefits, from August 26, 2017, through January 31, 2018, a total of 159 days, with a TTD benefit of $825.76 per week, or $117.97 per day. Aggregate TTD benefits equal $18, 757.23.

29. As stipulated, the Claimant was awarded SSDI benefits of $2,372 per month, effective February 1, 2018, which equates to $547.38 per week, 50% of which is subject to offset, thus, establishing an allowable offset of $273.69 per week. Consequently, the Claimant's net TTD benefit after offset is $552.07 per week, or $78.87 per day. The period from February 1, 2018, through the hearing date, June 5, 2018, both dates inclusive, is 125 days. Aggregate TTD benefits for this period equal $9,858.75. Grand total past due TTD benefits as of June 5, 2018, the hearing date equal $28,615.98.

30. As stipulated, the Claimant continues to be temporarily and totally disabled after June 5, 2018.

31. Respondents failed to prove, by preponderant evidence that the Employer met the requirements for penalizing the Claimant for not reporting his injury in writing, pursuant to § 8-43-102 (1) (a), C.R.S.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was persuasive and credible. Also, as found, the opinions of Dr. Reiter and Dr. Ferrari were more credible and persuasive than the opinions of Dr. Fall.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005).

Also see Martinez v. Indus. Claim Appeals Office, 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimony and opinions, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's testimony, the opinions of Dr. Reiter and Dr. Ferrari, and to reject any opinions to the contrary.

Compensability of W.C. No. 5-055-527-001

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** (essentially creating a presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant has demonstrated that he suffered a left shoulder injury on December 21, 2016.

Compensability of W.C. No. 5-065-822-001

d. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-**

existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, the incident of March 21, 2017 did **not** amount to an aggravation/acceleration of the Claimant's pre-existing left shoulder condition. Moreover, it amounts to an exacerbation during the natural progression set in motion by the compensable injury of December 21, 2016.

Average Weekly Wage (AWW)

e. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, Claimant lost 100% of his wages from August v26, 2017 and continuing.

Medical, Temporary Total Disability

f. As stipulated and found, all medical care and treatment for the Claimant's left shoulder, at the hands of Dr. Reiter and Dr. Ferrari, including the surgery recommended by Dr. Ferrari, was and is authorized, was and is causally related to the December 21, 2016 injury, and reasonably necessary to cure and relieve the effects thereof.

g. The Claimant was temporarily and totally disabled, without Federal Social Security Disability (SSDI) benefits, from August 26, 2017, through January 31, 2018, a total of 159 days, with a TTD benefit of $825.76 per week, or $117.97 per day. Aggregate benefits for this period of time equal $18, 757.23.

Federal Social Security Disability Benefit Offset (SSDI) and Net TTD Benefits

h. As stipulated and found, the Claimant received Federal Social Security Disability (SSDI) benefits, effective February 1, 2018. Consequently, the Respondents are entitled to the statutory offset, pursuant to § 8-42-103(1)(c), C.R.S. The offset amount is 50% of the initial entitlement award, pursuant to *Englebrecht v. Hartford Acc. & Indem. Co.*, 680 P.2d 231 (Colo. 1984). The Claimant was awarded SSDI benefits of

$2,372 per month, effective February 1, 2018, which equates to $547.38 per week, 50% of which is subject to offset, thus, establishing an allowable offset of $273.69 per week. Consequently, the Claimant's net TTD benefit, after offset, is $552.07 per week, or $78.87 per day. The period from February 1, 2018, through the hearing date, June 5, 2018, both dates inclusive, is 125 days. Aggregate TTD benefits for this period equal $9,858.75. Grand total past due TTD benefits as of June 5, 2018, the hearing date equal $28,615.98.

i. After, June 5, 2018, the Claimant continues to be temporarily and totally disabled, with a net TTD benefit of $552.07 per week.

Penalties for Claimant Not Reporting Injury in Writing

j. As found, Respondents argue that they are entitled to a penalty due to the Claimant's failure to file a written report of injury, pursuant to § 8-43-102(1)(a), C.R.S., despite the evidence that they were on notice of the December 21, 2016, event.

k. The imposition of a penalty reducing an employer's liability for disability benefits is in the nature of an affirmative defense. Thus, the Employer bears the initial burden of proving it did not receive written notice from the employee. See *Postewiat v. Midwest Barricade*, 905 p.2d 21 (Colo. App. 1995). §8-43-102, imposes an additional burden on an employer to show that it posted a regulation notice in compliance with § 8-43-102(1)(b), C.R.S. As found, the Respondents failed to prove that the notice required by statute was posted.

Burden of Proof

l. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven the compensability of the December 21, 2016 (W.C. No. 5-055-527-001) left shoulder injury. He has failed to prove the compensability of the March 21, 2017 event

(W.C. No. 5-065-822-001). The Claimant has further proven entitlement to medical benefits as herein above described; AWW; and, TTD benefits from August 27, 2017 and continuing.

m. The Respondents have proven entitlement to an SSDI offset of $273.69 per week, this reducing the Claimant's net TTD benefit to $552.07 per week. Respondents failed to prove entitlement to a penalty for the Claimant's failure to report his injury in writing.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims for workers' compensation benefits in W.C. No. 5-065-822-001, are hereby denied and dismissed.

B. Respondents are liable for benefits in W.C. No.5-055-527-001.

C. Respondents shall pay the costs of all authorized, causally related and reasonably necessary medical care and treatment for the Claimant's left shoulder injury of December 21, 2016, subject to the Division of Workers' Compensation Medical Fee Schedule.

D. Respondents shall pay the Claimant temporary total disability benefits, without the Federal Social Security Disability (SSDI) offset, from August 26, 2017, through January 31, 2018, a total of 159 days, with a benefit rate of $825.76 per week, or $117.97 per day. Respondents shall pay the Claimant subtotal aggregate benefits for this period of time of $18, 757.23.

E. The allowable SSDI offset is $273.69 per week, thus, the net temporary total disability benefit after offset is $552.07 per week, or $78.87 per day. For the period from February 1, 2018, through the hearing date, June 5, 2018, both dates inclusive, a subtotal of 125 days. Respondent shall pay the Claimant aggregate subtotal net temporary total disability benefits of $9,858.75.

F. Respondent shall pay the Claimant grand total past due temporary total disability benefits as of June 5, 2018, the hearing date, of $28,615.98, which is payable retroactively and forthwith.

G. From June 6, 2018 and continuing until cessation or modification of indemnity benefits is warranted by law, Respondents shall pay the Claimant net temporary total disability benefits of $552.07 per week.

H. Any and all claims for the Claimant **not** reporting his injury in writing are hereby denied and dismissed.

I. Respondents shall pay the Claimant statutory interest of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

J. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable industrial injury arising out of and in the course of her employment for Employer on April 21, 2017.

II. If Claimant proved she suffered a compensable injury, whether Claimant established by a preponderance of the evidence that the medical treatment she received is reasonable, necessary and related to the April 21, 2017 industrial injury.

III. If Claimant proved she suffered a compensable injury, whether Claimant established by a preponderance of the evidence that she is entitled to temporary partial disability ("TPD") and temporary total disability ("TTD") benefits.

IV. If Claimant proved she suffered a compensable injury, Claimant's average weekly wage ("AWW").

V. If Claimant proves she suffered a compensable injury, whether Respondent proved, by a preponderance of the evidence, that Claimant is responsible for her termination of employment.

FINDINGS OF FACT

Prior 2013 Work Injury

1. Claimant is a 52-year-old woman with a prior history of back pain, neck pain, lower extremity paresthesia and headaches.

2. On July 11, 2013, Claimant suffered a work injury while working for a different employer. Claimant complained of cervical spine pain, secondary cephalalgia, low back pain, left lower extremity paresthesia, and thoracic pain. Claimant was diagnosed with cervical and thoracic spine strains.

3. Claimant underwent an EMG, which returned normal. A lumbar spine MRI revealed degenerative disc disease at T11 and L4-5, no evidence of a herniated disc, and hypertrophic degenerative change posterior facets at L5-S1. A cervical spine MRI revealed mild facet hypertrophy at several levels, mild right neural foraminal stenosis at C4-5 on the right and C6-7 on the left, and degenerative disc disease, with no herniation.

4. Dr. Walter Torres performed a psychological evaluation of Claimant on October 29, 2013 and diagnosed Claimant with adjustment disorder with depression/anxiety. Claimant underwent psychological counseling and took Zoloft and then Lexapro.

5. Claimant underwent several modalities of treatment, including epidural steroid injections, physical therapy, pool therapy, chiropractic treatment, and acupuncture, without improvement in her pain complaints.

6. Claimant underwent a Functional Capacity Evaluation on May 28, 2014 that placed Claimant in the sedentary physical demand category due to low back pain, neck pain and decreased endurance. The examiner noted that Claimant tested positive on "all four Waddell's non-organic signs," and that pain was her primary limiting factor, not maximum effort or a breakdown in mechanics.

7. On June 20, 2014, occupational therapist Susan Hernandez questioned whether Claimant was malingering, noting findings that were inconsistent with functional abilities demonstrated earlier in the therapy session.

8. On August 20, 2014, a different therapist, Betsy Kyle, also noted that Claimant's results were inconsistent with observations of her functional mobility. As part of her discharge summary on the same date, physician assistant Adam Olson opined that Claimant's anxiety appears to be "strongly contributive to her overall symptoms," of chronic back pain and leg weakness related to the 2013 injury, and noted "inconsistent weakness suspicious for Waddell's sign."

9. On July 17, 2014, Caroline Gellrick, M.D. placed Claimant at maximum medical improvement ("MMI") for her July 11, 2017 work injury. Dr. Gellrick assigned 20% whole person impairment, consisting of 8% cervical spine impairment, 12% lumbar spine impairment, and 1% psychiatric impairment. Her final diagnoses were lumbar strain, cervical spine strain with secondary cephalalgia, and reactive adjustment disorder with anxiety.

10. On August 21, 2015, Claimant filed for social security disability insurance ("SSDI"), alleging an inability to work due to the July 2013 work injury. She filled out a questionnaire, stating that prior to her 2013 injury she was able to "work, run, go to the gym, dance, live my life, clean my house properly." She wrote that since the 2013 she is "not able to move" like she used to, and is unable to run, dance, or go to the gym. She reported that her social life is not existent, and she only spends time with her children at home. Claimant was denied SSDI.

11. On September 20, 2015, Claimant reported to Salud Health with "complete body pain," and was diagnosed with chronic pain syndrome, depression and anxiety. She was prescribed hydroxyzine for her depression with anxiety.

12. On January 28, 2016, Meredith Campbell, Psy.D. performed a psychological assessment of Claimant. Dr. Campbell noted that, while Claimant believed her depression began with her physical issues, Claimant did indicate feeling depression and anxiety during her abusive 25-year marriage with her ex-husband. Dr. Campbell opined

that Claimant had some symptoms of depression and anxiety, but did not clearly meet the criteria for major depression, generalized anxiety, or PTSD. She noted that Claimant chronic pain was primary and caused her to feel helpless, which likely aggravated her symptoms of anxiety and depression.

13. On January 29, 2016, Laura Moran, D.O. performed an examination of Claimant to assess her work restrictions. Claimant presented with constant back pain since 2013 which radiated to her left leg. On examination, Dr. Moran noted normal cervical and thoracic spine range of motion, decreased lumbar spine range of motion, "near absence" of range of motion in both knees, no evidence of radiculopathy or neuropathy, and no pain significant behaviors. Dr. Moran remarked that there were several inconsistencies on Claimant's physical exam. Dr. Moran opined that Claimant was unable to bend or squat, but could alternate between sitting, standing and walking, and was able to lift and carry about 20 pounds.

14. Claimant underwent a lumbar spine x-ray on February 1, 2016 that revealed "very mild levoscoliosis," which the radiologist noted may be positional.

Alleged April 21, 2017 Work Injury

15. Claimant worked for Employer cleaning chicken coops. Claimant testified that she began working for Employer 2-4 months prior to the alleged work injury on April 21, 2017. However, employment records indicate a start date of April 18, 2017. Claimant's supervisor, Rigoberto Jacobo, testified that Claimant only worked for Employer approximately 1 ½ to 2 days prior to the alleged injury.

16. Claimant alleges she suffered a work injury while working for Employer on April 21, 2017. Claimant testified that she was going up stairs at work holding a bucket of water in her left arm, slipped on egg yolk, and fell. Claimant testified she fell backwards and her low back hit the ground, followed by her head, which bounced like a ball. Claimant testified that when she attempted to get up, she slipped again and landed on her right knee. Claimant testified that after falling backwards, her co-workers, Manuel Gutierrez and Sergio Gonzalez, looked over and saw her. She testified they then attempted to help her up by grabbing her arms and pulling her up. Claimant testified that she felt pain in her low back, right knee, and left shoulder. She testified she later developed neck pain. Claimant testified she was not sure how her left arm got injured.

17. Claimant's co-workers retrieved Mr. Jacobo. Claimant testified that she explained to Mr. Jacobo what happened and then worked the remainder of her shift.

18. Mr. Jacobo testified that he investigated the scene of the accident and found no broken eggs. Mr. Jacobo testified that Claimant initially said her left knee was hurt, but the following day she was grabbing her right knee and alleging it was hurt.

19. Mr. Gonzalez testified at hearing that he was approximately 3-4 feet away from Claimant at the time she fell. He testified that he did not see Claimant fall. He stated he heard a sound, looked, and saw Claimant on the floor. He demonstrated that Claimant's

arms were outstretched in front of her. He testified he went to assist Claimant in standing up but she refused his help. When he saw Claimant she was face forward, and demonstrated that Claimant's arms were outstretched in front of her. Mr. Gonzalez testified that he tried to help Claimant up, but she refused the help. He testified that he did not observe any broken eggs in the area where Claimant fell.

20. Mr. Gutierrez testified at hearing that he was facing Claimant as she walked up the stairs, and that he saw Claimant fall forward onto her hands and knees. He testified that she did not fall backwards onto her back. Mr. Gutierrez testified that there were no broken eggs where Claimant fell. He testified that after the fall, she got up by herself, and refused help from Mr. Gonzalez.

21. On April 22, 2017, Mr. Jacobo took Claimant to Advanced Urgent Care. Claimant presented to Mary Louder, D.O., with complaints of low back, right knee and left shoulder pain after slipping and falling at work. On physical examination, Dr. Louder noted tenderness to palpation at the left and right paracervical muscles, right SI joint, and left greater trochanter, restricted left shoulder range of motion, diffuse and nonspecific tenderness about the hip and knee joints, no bruising, and normal gait and station. Dr. Louder diagnosed Claimant with a low back strain, shoulder strain, and hip contusion, and recommended Naproxyn, and temporary restrictions of no lifting, carrying, pushing, pulling more than five pounds, and limit walking, standing and sitting up to two hours.

22. On April 27, 2017 Claimant returned to Advanced Urgent Care and was seen by Katie Krueger, PA-C. Claimant reported slipping and falling on yolk, then falling again when attempting to stand up, causing right knee pain. Claimant complained of pain in the low back radiating up the back and neck, along with pain in her left shoulder and right knee. Claimant denied bruising or swelling of the right knee. On physical examination, PA-C Krueger noted tenderness of the right knee with normal range of motion, tenderness at L1-3 and paraspinal region, and tenderness at the left deltoid muscle and trapezius, with abnormal shoulder range of motion. PA-C Krueger diagnosed a low back strain, left shoulder sprain, right knee contusion, right knee strain, low back pain, shoulder joint pain, and pain in right knee. She ordered x-rays of left shoulder, lumbar spine and right knee, which were negative for acute bony abnormality or fracture. She continued Claimant on Naproxen and temporary restrictions of no lifting, carrying, pushing, or pulling more than five pounds.

23. On April 28, 2017 the Employer's First Report of Injury prepared by the adjuster Brandon Behanish notes on April 21, 2017, "Employee was walking and slipped and fell causing injury to her left shoulder, right knee strain and lower back strain." He notes her employer was notified on April 21, 2017 and that she had a "Contusion-bruise with intact skin surface-hematoma."

24. On May 11, 2017, Claimant was seen by Julie Parsons, M.D. at Advanced Urgent Care. On physical examination, Dr. Parsons noted musculoskeletal tenderness and limited range of motion, with 5/5 Waddell signs. Dr. Parsons assessed Claimant with an accidental fall, headache, neck sprain, strain of thoracic region, and low back

strain. She referred Claimant for physical therapy, prescribed Cyclobenzaprine, and placed Claimant under temporary restrictions of no lifting, pushing or pulling more than 10 pounds. On May 15, 2017, Dr. Parsons referred Claimant for a pain management consultation.

25. On May 22, 2017, Claimant presented to Ryan Mansholt, PA-C at Ascent Medical Consultants, under the supervision of Roberta Anderson-Oeser, M.D. Claimant reported slipping on broken egg and falling on her outstretched left upper extremity, as well as slipping and falling on her right knee while getting up from the first fall. Claimant complained of cervical pain, left shoulder pain, lumbar spine pain, headaches, and radicular symptoms and paresthesia throughout her left upper extremity. She denied any previous history of pain or injuries to these areas. On exam, PA-C Mansholt noted myofascial spasm and limitation with range of motion in the lumbar spine, radicular symptoms down Claimant's left lower extremity with some paresthesia through her left upper extremity with weakness, and pain in the anterior aspect of the left shoulder with painful popping, grinding, and limited range of motion. He reviewed Claimant's April 27, 2017 lumbar spine and left shoulder x-ray reports and noted the lumbar x-ray revealed degenerative changes with endplate osteophyte and disc space narrowing at L5-S1, and the left shoulder x-ray revealed slight degenerative changes. PA-C Mansholt diagnosed Claimant with cervical sprain/strain with spondylosis and myofascial pain headache and left upper extremity radiculopathy, lumbar sprain/strain with myofascial pain spondylosis and left lower extremity radiculopathy, sacroilitis, left shoulder sprain/strain with cuff tendinopathy, partial tear possible, biceps tendinopathy, depression and anxiety. He recommended that Claimant begin Celebrex, baclofen, tramadol and lidopro cream and patch, and physical therapy. He referred Claimant to Dr. Esparza for pain psychology evaluation and treatment.

26. On June 19, 2017, Dr. Anderson-Oeser noted palpable spasms in the lumbar spine and gave the following impression: cervical strain, thoracic strain, lumbar strain, left shoulder strain, left shoulder impingement, left sacroiliac joint strain, and muscle spasms. She continued to recommend medication and physical therapy.

27. On July 10, 2017, Clamant underwent a psychological assessment with Ricardo Esparza, Ph.D. Claimant reported slipping and falling on broken eggs and slipping again with attempting to stand up. Dr. Esparza diagnosed Claimant with adjustment disorder with depression and anxiety. He noted there was no indication of malingering.

28. On July 17, 2017, Dr. Anderson-Oeser recommended Claimant undergo an MRI of the lumbar spine. She continued her recommendations for medications, physical therapy, and restrictions.

29. On July 19, 2017, Dr. Esparza completed his initial psychological assessment of Claimant. Claimant told Dr. Esparza she can do minor activities such as performing hygiene, meal preparation, and assisting with laundry. She also reported that, prior to the April 21, 2017 accident, she enjoyed hiking, swimming, and dancing, but has now withdrawn from these due to her pain. Dr. Esparza opined that Claimant is experiencing depression and anxiety due to these changes in her health, mobility, activity level, and

competency as a result of the April 21, 2017 injury. He further opined that psychological factors were influencing Claimant's pain management and stress resiliency. He recommended six sessions of psychological counseling. Claimant continued to treat with Dr. Esparza on July 24, July 31, August 8 and August 14, 2017. Despite containing detailed information about Claimant's past, Dr. Esparza's records do not contain any indication that Claimant informed him of her 2013 injury and her resulting physical and psychological impairments.

30. On July 31, 2017, Claimant underwent a lumbar spine MRI that revealed:

> 1. L4-5 central and left disc protrusion. Subtle effacement of the left and abutment of the right L5 roots in the lateral recesses. 2. L5-S1 broad slightly superiorly migrated disc protrusion and annular rent. S1 root abutment in the lateral recesses and L5 root abutment in the root foramina. 3. No acute vertebral fractures.

31. On August 3, 2017, PA-C Mansholt noted on physical exam severe mid-line pain at L4-5 and L5-S1, moderate of severe bilateral sacroiliac pain and lumbar facet pain from L3-4 through L5-S1, and positive seated straight leg raise bilaterally left greater than right. He reviewed Claimant's July 31, 2017 lumbar MRI and recommended bilateral L5 and S1 transforaminal epidural steroid injections.

32. On August 21, 2017, Claimant underwent another lumbar spine MRI that revealed:

> 1. L4-5 annular fissure and small posterior central disc extrusion. Mild lateral recess narrowing bilaterally, left more so than right. 2. L5-S1 annular fissure and irregular disc bulge. Left greater than right neural foraminal narrowing, with compression of the exiting L5 nerves. Mild left lateral recess narrowing, potentially affecting the descending left S1 nerves.

33. Dr. Anderson-Oeser administered left L5 and S1 transforaminal epidural steroid injections on August 21, 2017.

34. On August 23, 2017, Claimant reported experiencing a flare-up of pain with some paresthesia and weakness to the lower extremities following the injections. PA-C Mansholt recommended that Claimant be off of work until August 25, 2017, and then return to work light duty lifting no more than 15 pounds and no bending and twisting.

35. On September 5, 2017, Claimant continued to complain of neck and low back pain with bilateral upper and lower extremity weakness. On exam, Claimant reported pain with all movements. Dr. Anderson-Oeser noted that Claimant had giveway weakness, "making it difficult to assess if she truly has any weakness in the lower extremities, or is this psychological overlay."

36. On September 13, 2017, Dr. Anderson-Oeser recommended Claimant undergo an EMG and a cervical spine MRI, referred Claimant to Dr. Gutterman and Dr. Esparza, and continued medications and the same work restrictions.

37. On September 29, 2017, Laura Clark, PA-C at Salud Family Health noted that she assumed Claimant's medical care. She recommended that Claimant be off of work for the next four weeks.

38. On October 19, 2017, PA-C Clark recommended that Claimant be off of work until November 13, 2017.

39. On October 25, 2017, Respondents sent Dr. Anderson-Oeser a questionnaire regarding Claimant's work restrictions. Dr. Anderson-Oeser opined that Claimant required the following work restrictions: "Seated work primarily with ability to stand/walk as needed for comfort. Max lift 15 lbs; max carry 15 lbs; max push/pull 20 lbs. No repetitive or frequent lifting, bending, twisting."

40. On October 26, 2017, PA-C Mansholt recommended Claimant undergo an EMG, MRI of her cervical spine, and referred Claimant to Dr. Gutterman and Dr. Esparza. He continued Claimant on medications and recommended Claimant be off of work from October 26 to November 26, 2017.

41. On October 27, 2017, Stephen A. Moe, M.D. performed a psychiatric independent medical examination ("IME") at the request of Respondents and issued a report dated October 30, 2017. Dr. Moe interviewed Claimant and reviewed Claimant's medical records, including Dr. Gellrick's July 17, 2014 report. Claimant reported that she was experiencing no physical problems whatsoever in the lead-up to her employment with Employer, nor was she taking any medications in the months leading up to the work injury. Claimant acknowledged having one prior work injury but could not remember what injuries she suffered. Claimant reported undergoing some treatment for the prior work injury and reaching a full recovery. Claimant could not recall if she received a settlement for that work injury. Dr. Moe noted that Claimant provided unreliable information on a variety of topics, which he stated could either be attributed to an intentional effort to influence his evaluation, or to unconscious psychological factors. He concluded that, Claimant's statements to him were, to some degree, a product of the former. Dr. Moe opined that Claimant's post-injury physical complaints were significantly influenced by psychological factors unrelated to the April 21, 2017 injury or/and by intentional exaggeration, and that her current psychiatric symptoms are not due to the alleged work injury of April 21, 2017.

42. Dr. Moe was present at hearing and observed Claimant, and testified by post-hearing deposition on as an expert in psychiatry. Dr. Moe testified consistent with his IME report. In discussing Claimant's memory loss about her prior workers' compensation injury, Dr. Moe opined that he found no cognitive issues to explain her memory loss, and that she was cognitively intact. Dr. Moe opined that an explanation for her selective memory loss is impression management, defined as manipulating her physicians to reach a certain conclusion. Dr. Moe continued to opine that Claimant's

current psychiatric symptoms are not related to the April 21, 2017 injury. Dr. Moe opined that Claimant's non-work related psychological factors, and/or intentional exaggerations, are influencing the physical symptoms she reports. Dr. Moe noted that potential causes of Claimant's psychological issues and depression include her history of abuse and life of missing opportunities she wanted for herself.

43. Dr. Moe reviewed Dr. Meredith Campbell's psychiatric evaluation from 2016, which documented Claimant's pre-injury condition. Dr. Moe noted that this report suggests that if Dr. Esparza is correct in finding that Claimant's physical condition has been causing her depression, then it has been doing so for years, since her 2013 injury. Dr. Moe opined that if Claimant is suffering from somatization, as found by Dr. Hughes, then the most probable explanation for her unconscious amplification of symptoms is that it took root years ago, and not from the work injury. Dr. Moe opined that Claimant's injury was objectively mild and not sufficient to initiate somatization.

44. On October 31, 2017, Douglas C. Scott, M.D. performed an IME at the request of Respondents and issued an IME report dated November 7, 2017. Dr. Scott interviewed Claimant, performed a physical examination, and reviewed Claimant's medical records, including Dr. Gellrick's July 17, 2014 report. He noted that Claimant "had difficulty recalling her past worker's compensation injury." Regarding the mechanism of the April 21, 2017 injury, Claimant reported that she slipped on egg yolk, fell backwards, and struck her right knee and left shoulder. Claimant reported again slipping forward upon attempting to get up. Claimant reported neck, head, and low back pain, rare pain in her right knee, and some popping in the left shoulder. Claimant reported having bruising over the right knee. Claimant reported that the only treatment that helped thus far was the pool therapy. Dr. Scott noted that the first examination by Dr. Louder indicated no findings of acute trauma.

45. On physical examination, Dr. Scott noted tenderness to touch over the bilateral L5-S1 junction, no neck or lumbar spine muscle spasms, multiple Waddell's signs, and no tenderness to palpation of the left shoulder. Dr. Scott opined that Claimant had pre-existing depression and anxiety with permanent impairment, along with pre-existing permanent impairment of the neck and lumbar spine. He opined that, as a result of the April 21, 2017 injury, Claimant suffered a low back strain, right knee strain and left shoulder strain, which should have resolved within six weeks of the injury. He further opined that Claimant's ongoing pain complaints are not physiologic and her current reported symptoms are either psychological or related to secondary gain. He placed Claimant at MMI as of October 31, 2017 with no permanent impairment, restrictions or need for further treatment.

46. Dr. Scott was present during hearing and observed Claimant, and testified by post-hearing deposition as an expert in occupational medicine. Dr. Scott testified consistent with his IME report. Regarding his observations of Claimant at hearing, Dr. Scott testified that Claimant walked without a limp, had a quick gait, sat at counsel's table without appearing in any distress, did not require help getting out of her chair, and demonstrated no observable pain behaviors. Dr. Scott testified that observable pain

behaviors would be expected with a physiological injury, and particularly with an individual reporting pain at 7/8 out of 10.

47. Dr. Scott testified that Claimant does not have a physiological or anatomic basis for her current pain complaints, noting that Claimant tested positive for all five Waddell's signs on his examination. Dr. Scott testified that his diagnoses of low back, right knee and left shoulder strains were based on Claimant's complaints to him, and the complaints as documented in the medical records contemporary to the work injury. He stated that his diagnoses are dependent on the truthfulness of Claimant's complaints. Dr. Scott testified that a mild strain is expected to resolve within six weeks. He testified that he questions whether Claimant's problem is psychological, or related to secondary financial gain, and testified that Claimant may need further treatment for psychological issues outside of the workers' compensation system.

48. Dr. Scott acknowledged that Claimant's MRI findings prior to April 21, 2017 were different than the MRI findings after the April 21, 2017 work injury. He further acknowledged that Claimant's more recent MRI could cause Claimant's pain, yet testified that, if so, it would be expected that the treatment would have improved Claimant's symptoms. Dr. Scott testified that Claimant's MRI findings could be degenerative. He further stated that Claimant's neck and back complaints were the same complaints from Claimant's 2013 work injury.

49. On December 6, 2017, John S. Hughes, M.D. performed an IME at the request of Claimant. Dr. Hughes interviewed Claimant, reviewed medical records, and performed a physical examination. He noted that medical records prior to April 21, 2017 were not made available for his review. Claimant reported "essentially whole body pain," and constant neck and low back pain rated 8/10, radiating into her arms and legs, worst in the left leg. When asked about prior injuries, Claimant "vaguely and evasively" answered that she fell, but could not recall what body part was injured or whether it was work related. Dr. Hughes' report makes no mention of Claimant's history of chronic pain or depression and anxiety. Dr. Hughes opined that Claimant had a work-related fall with multiple injuries sustained on April 21, 2017 which includes left shoulder sprain, right knee strain, lumbar spine strain, and adjustment disorder with depression and anxiety meriting further psychiatric evaluation with Dr. Gutterman as recommend by Dr. Anderson-Oeser. He opined that Claimant sustained progressive somatization as a result of an adjustment disorder with depression and anxiety, which he concluded stemmed from Claimant's April 21, 2017 work injury. Dr. Hughes recommended proceeding with cervical spine MRI and EMG, and restrictions of lifting, pushing or pulling a maximum of 10 pounds. He further recommended reviewing Claimant's past medical records prior to the assignment of a permanent impairment rating. He opined that Claimant's medical evaluation and treatment had been reasonable, necessary and related to the April 21, 2017 injury.

50. On January 4, 2018, Claimant returned to Dr. Anderson-Oeser with continued complaints of diffuse pain in the cervical and low back with numbness and tingling in upper and lower extremities. Dr. Anderson-Oeser noted that she received the IME reports of Dr. Scott and Dr. Moe and briefly reviewed the IME report of Dr. Scott. She

noted she had been unaware of Claimant's 2013 injury and the resulting impairment and restrictions. She stated, "The patient initially informed us that she had no prior history of low back symptoms; therefore, I question how much of her current back pain is related to a more recent injury versus her prior back injury." Dr. Gellrick noted that she would review the IME reports and determine if additional treatment was warranted. She continued Claimant on pool therapy and medications. She placed Claimant on the work restrictions given to her by Dr. Gellrick in 2014.

51. Dr. Anderson-Oeser reevaluated Claimant on February 12, 2018. Claimant rated her pain 9/10, despite also reporting that her medications were 50-75% effective in controlling her symptoms. Dr. Anderson-Oeser opined that Claimant was quickly approaching maximum medical improvement ("MMI"), and that additional treatment other than medication management would not be of benefit to Claimant due to her limited response to treatments rendered to date. Dr. Anderson-Oeser refilled Claimant's prescriptions and continued the work restrictions given to her by Dr. Gellrick. Dr. Anderson-Oeser did not further discuss the IME reports.

52. At her most recent visit with Dr. Anderson-Oeser, on March 14, 2018, Claimant reported 7-8/10 pain with no significant improvement of her symptoms. Dr. Anderson-Oeser opined that there was "not much more to offer this patient other than continuing with her independent program." She suggested Claimant continue with medication management for several months. Claimant's diagnoses were cervical, left shoulder, and lumbar strains, cervicalgia, lumbar radiculitis, chronic low back pain, lumbar degenerative disc disease, and major depressive disorder. Dr. Anderson-Oeser noted that she would place Claimant at MMI after receiving and reviewing Dr. Gellrick's report. She recommended that Claimant remain on the same permanent work restrictions given to her by Dr. Gellrick after her 2013 injury.

53. Claimant testified at hearing that she did not remember what she was doing when she was injured in 2013, her symptoms, the specifics of her past treatment, or if she had any permanent restrictions resulting from the 2013 injury. Claimant stated that she perhaps received an impairment rating for her prior injury. Claimant testified that she does not recall having chronic low back or neck pain prior to the alleged April 21, 2017 work injury. Despite testifying she had no recollection of her prior symptoms, Claimant also testified that the pain from her prior injury was "very different" and "entirely different" than her current pain and symptoms. She also testified that, while her symptoms from the 2013 work injury did not resolve completely, they resolved enough such that she was able to live her life and work. Claimant initially testified that her depression and anxiety began after the alleged April 21, 2017 injury, then later testified that she had received prior treatment for her depression and anxiety, improved, and was not experiencing either prior to beginning her employment with Employer. When asked about the hydroxyzine, Zoloft, and Celexa she was prescribed prior to her current injury, Claimant testified that she did not think she ever took medication before.

54. Claimant testified that did not feel the need to apply for SSDI in connection with the 2013 work injury, but did so pursuant to the insurance carrier's instruction. Claimant later testified that she felt like she could not work at the time she filed for SSDI and that

she completed her SSDI application truthfully. On the SSDI application, Claimant reported that prior to her 2013 injury she was able to work, run, go to the gym, dance, live her life, and clean her house properly, and that by the time of her application for disability on 8/21/2015, she could no longer do those activities. When asked about this on cross-examination, Claimant said that she actually did do these activities and was capable of doing them.

55. Claimant further testified that, between the date of MMI for the 2013 injury and when she began her employment with Employer, she worked in a restaurant kitchen, as well as performed cleaning duties and arranging boxes through a temporary employment agency. Claimant testified at hearing that, prior to being hired by Employer, she underwent and passed a physical evaluation. She testified that she felt capable of performing the job duties when hired by Employer.

56. Despite testifying that she did not remember whether or not she had permanent restrictions from the 2013 injury, Claimant also testified that she informed Employer of her permanent restrictions, and which she claimed Employer disregarded. Claimant testified that she did not tell Dr. Anderson-Oeser of her prior conditions when asked because she forgot. She later testified that she did not tell her providers of her prior condition because she was focusing on the current moment and not the past.

57. Claimant testified that her primary ongoing issue is neck and low back pain radiating to her left leg. Claimant testified that her pain started at 10/10 and now is 6-7/10 because of the medications. Claimant testified that none of the treatments have improved her symptoms.

58. Claimant testified that she worked approximately 45 hours per week at $14.00 per hour. Claimant later testified she was hired at $12.00 per hour, and in June 2017 all employees received a raise to $14.00 per hour. She testified she worked modified duty, approximately 30-35 hours per week, from April 23 to September 23, 2017. Claimant testified she did not work at all from September 24, 2017 to January 21, 2018 because Employer could not accommodate her work restrictions. She testified that from January 22 to February 21, 2018 she worked a modified job at ARC, which was arranged by Employer. Claimant testified she was paid $14.00 an hour and worked 9:00 a.m. to 4:00 p.m. five days a week at ARC.

59. Claimant testified that while working at ARC, her manager, Victoria Olivas, told her that she could not talk to her coworkers. Claimant testified that she questioned why she was prohibited from talking to co-workers, which caused Ms. Olivas to become upset. She testified that Ms. Olivas told her she should no longer work there. Claimant testified that two days later she received a letter from Employer stating she was no longer employed. Claimant denied that another employee told her she was “pulling clothes” wrong. Claimant testified that there were no issues with her job performance. Claimant testified that she did not do anything to cause her termination.

60. Maria Avalos, Assistant Store Manager at ARC, testified by post-hearing deposition. Ms. Avalos testified that Claimant was given various job duties, including

"ragging out," which entails pulling clothing items of a certain size or color to be recycled. Ms. Avalos testified that Claimant would clock-in late but want credit for clocking in on time. Ms. Avalos testified that Claimant's employment came to an end when she decided to leave. Ms. Avalos testified that Claimant left because she was not ragging out correctly, and did not want others telling her what to do, so she became upset. She testified that Claimant said she felt like she was being treated like she was in the military.

61. Victoria Olivas, Store Manager at ARC, testified by post-hearing deposition. On the date Claimant's volunteer assignment ended, Ms. Olivas testified that a co-worker, Martha, reported that Claimant was upset for being told she was doing her ragging out work incorrectly. Ms. Olivas called Claimant into the office to discuss the issue, and also called in Martha and Ms. Avalos. Ms. Olivas testified that she told Claimant she sensed she was not happy, and Claimant then began crying and asked if she should leave. Ms. Olivas testified that she told the Claimant no, and that she was not being fired, but that if she wanted to leave that was up to her. Ms. Olivas testified that Claimant then asked for copies of her paperwork and left.

62. Claimant's testimony is found incredible and unpersuasive.

63. The ALJ finds the opinions of Drs. Scott and Moe more credible and persuasive than the opinions of Drs. Anderson-Oeser, Esparza and Hughes.

64. The ALJ finds the testimony of Mr. Gutierrez, Mr. Gonzalez, Mr. Jacobo, Ms. Avalos and Ms. Olivas credible and persuasive.

65. The ALJ finds that Claimant slipped and fell onto her knees and hands at work on April 21, 2017. The ALJ further finds that this minor accident did not cause any disability or need for treatment. Claimant's physical and psychological conditions were pre-existing, and the employment did not aggravate, accelerate or combine with such conditions to cause disability or the need for treatment.

66. Claimant failed to prove, by a preponderance of the evidence, that she suffered a compensable injury arising out of and in the course of her employment on April 21, 2017.

67. As Claimant failed to meet her burden to prove that she suffered a compensable injury, the other designated issues are moot.

68. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the alleged injury he was performing service arising out of and in the course of the employment, and that the alleged injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-

existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO February 15, 2007). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes Claimant failed to prove, by a preponderance of the evidence, she suffered a compensable injury on April 21, 2017. Although Claimant's July and August 2017 MRIs evidenced disc herniations that were not present on the MRI taken in connection with the 2013 injury, such findings are not irrefutable proof of a back injury. Dr. Scott credibly testified that the MRI findings could be degenerative. Moreover, even if the MRI findings were considered irrefutable proof of an injury, there is insufficient credible and persuasive evidence establishing such injury occurred during the course and scope of Claimant's employment.

Claimant's testimony regarding the mechanism of injury, her symptoms, her limitations, and her termination was not credible. Claimant's testimony regarding the mechanism of injury was refuted by the credible and persuasive testimony of Mr. Gutierrez, who personally observed the incident and testified that he saw Claimant going up the stairs and fall forward onto her knees and hands. Mr. Gutierrez credibly testified that Claimant did not fall onto her back, as Claimant alleges, nor did he testify that there was a second slip and fall.

Claimant has a documented history of pre-existing cervical and lumbar pain, left lower extremity pain and paresthesias, headaches, complete body pain, and adjustment disorder with anxiety and depression. As a result of the 2013 injury, Claimant was deemed to have permanent physical impairments to her cervical and lumbar spine, as well as a psychiatric impairment. In filing for SSDI in 2015, Claimant purported to be unable to work as a result of the 2013 injury. Medical records reflect that Claimant continued to experience "complete body pain," including chronic low back pain, left leg paresthesias, as well as symptoms of anxiety and depression in 2015 and 2016. Claimant's current primary complaints she attributes to the alleged April 21, 2017 injury are longstanding, pre-existing issues for Claimant. Her testimony that these physical

and psychological conditions improved prior to her employment with Employer and that her current symptoms are "entirely different" are incredible and unpersuasive.

Claimant, from both her 2013 and current injuries, has consistently presented with non-physiologic exams that indicate her pain is psychologically driven. From the 2013 claim, three physical therapists and one physician assistant found inconsistent non-physiologic findings including: signs of malingering, positive Waddell findings, and anxiety induced pain and weakness. The same non-physiologic findings and positive Waddell findings have been found in her current claim, by her treating physician, Respondents' experts, and Claimant's expert.

In her reports to physicians, Claimant repeatedly withheld information regarding the 2013 injury. Despite undergoing over a year of treatment for her 2013 neck and back injury and being assigned permanent physical and psychological impairments, Claimant failed to divulge such conditions to her physicians. Claimant either specifically denied any history of pain or injury to the areas at issue, or withheld such information entirely from certain providers. When each IME physician specifically questioned Claimant about the 2013 injury, they all noted Claimant could not recall specifics, and noted Claimant was unreliable, vague and evasive. Dr. Moe credibly opined that there are not any cognitive issues explaining Claimant's memory loss and concluded she was, in part, attempting to manipulate his evaluation. At hearing, Claimant contradicted herself by testifying that her current symptoms are entirely different than her prior symptoms, which she simultaneously alleged she did not remember.

Dr. Anderson-Oeser was unaware of Claimant's 2013 injury until January 4, 2018, at which time she questioned the relatedness of Claimant's back symptoms. While Drs. Esparza and Hughes opined that Claimant's condition is work-related, both doctors make no reference to Claimant's pre-existing physical and psychological conditions. While Dr. Scott opined that Claimant sustained strains of the low back, right knee and left shoulder, Dr. Scott testified that his opinion was based on the truthfulness of Claimant's statements. The opinions that Claimant sustained a work-related injury are based on Claimant's reported mechanism of injury, symptoms and limitations, which have been found incredible.

Based on the totality of the evidence, Claimant failed to prove it is more probable than not she sustained a compensable injury on April 21, 2017. While Claimant slipped and fell at work, the ALJ is persuaded such incident did not cause any disability or need for treatment. Claimant's physical and psychological conditions were-pre-existing, and the employment did not aggravate, accelerate or combine with such conditions to cause the need for treatment.

As Claimant failed to meet her burden to prove she sustained a compensable injury on April 21, 2017, the remaining issues of medical benefits, temporary indemnity benefits, AWW, and responsibility for termination are moot.

ORDER

It is therefore ordered that:

1. Claimant failed to establish, by a preponderance of the evidence, that she suffered a compensable injury on April 21, 2017. Claimant's claim for workers' compensation benefit is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-058-502-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer, and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 19, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 6/19/18, Courtroom 4, beginning at 1:30 pm, and ending at 3 pm).

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection. Respondents' Exhibits A through J were admitted into evidence, without objection, with the exception of Respondents' Exhibit I. Claimant objected on the basis that there was inadequate foundation to introduce the evidence. The ALJ reserved judgment on the foundation objection, and admitted Exhibit I after testimony.

At the conclusion of the hearing, the ALJ took the matter under advisement, and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether or not the Claimant sustained a compensable right shoulder injury on September 21, and, if compensable, medical benefits. The Claimant bears the burden of proof by a preponderance of the evidence on these issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Posture

1. Respondents filed a Notice of Contest on October 7, 2017, denying coverage based upon the need for "Further investigation for compensability" (Claimant's Exhibit 6, p. 27).

2. Respondents filed a Notice of Contest on October 18, 2017, denying coverage based upon the reason: "Injury/Illness Not Work Related" (Respondents' Exhibit B).

3. A hearing took place on June 19, 2018, where testimony was presented before the undersigned ALJ.

Preliminary Findings

4. At the commencement of the hearing, the parties stipulated, and the ALJ finds, that if the claim is compensable: (a) the time period for TTD benefits is September 26, 2017, through September 29, 2017, both dates inclusive, and October 5, 2017, for a total of five days, and (b) Michael Ladwig, M.D. and Gary Childers, M.D., are the Claimant's authorized treating physicians (ATP).

5. At the commencement of the hearing, the parties disagreed on Claimant's average weekly wage (AWW). Respondent reported the AWW as $1,155 on the Employer's First Report of Injury form (Respondents' Exhibit A). There is no further explanation to how this number was reached. Claimant reported his AWW as $1,529.06. This number was calculated by taking the average of the pay he received each week for the 8 weeks leading up to the injury (Claimant's Exhibit 8, p. 29). This calculation is allegedly supported by a copy of his payroll information, but it is illegible (Claimant's Exhibit 8, p. 30).

6. Claimant was born on November 11, 1962, and was 55 years old on the date of hearing.

7. Claimant has worked in construction for 38 years; 3 of those years were spent discontinuously employed by GTH Excavating.

The Injury

8. Claimant arrived at Dakota Ridge job site on September 21, 2017, around 6:30 am He waited in his car, drinking coffee, until approximately 6:45 am, at which time he left his car to use the on-site port-a-potty.

9. In order to access the port-a-potty, Claimant had to remove a pole from a temporary fence. This involved grasping the pole above the fence, pulling the pole upwards, and twisting the pole from left to right. While making this motion, Claimant felt a "sharp pain in the joint of [his] shoulder but nothing debilitating." Ex. 4 p. 25.

After the Injury

10. On the day of the injury, Claimant continued his work of operating an excavator despite a "dull ache in the right shoulder." Ex. 4 p. 25. He applied a heating pad during the evening of September 21, 2017, and continued work on September 22, 2017 with the aid of Advil and Tiger Balm patches.

11. Claimant worked Monday, September 25, 2017, but informed his supervisor Jesus "BC" Morales of his shoulder pain. Mr. Morales procured a stand-in operator for the rest of the week, allowing Claimant to take off of work September 26 through September 29, 2017, inclusive.

12. Claimant is unclear if he visited a medical doctor between September 21 and September 29, 2017. On the Employee's Report of Injury Form, submitted October 3, 2017, Claimant lists he saw "Dr. Bill" on September 29, 2017; there is no surname listed for Dr. Bill (Claimant's Exhibit 4, p. 24).

13. Mr. Morales told Claimant he needed to be cleared to work by a doctor before returning to work. On October 4, 2017, Dr. Lisa Winkler of Clinica Family Health authorized Claimant to return to work that day (Respondents' Exhibit D).

14. Claimant was told by Respondent he needed a doctor authorized by Employer's insurance to sign off on his return to work, so he visited Dr. Michael Ladwig of Aviation and Occupational Medicine on October 5, 2017 (Claimant's Exhibit 2 pp. 1-4). Aviation and Occupational Medicine is an approved medical provider under Employer's insurance. Ex. H. Dr. Ladwig found that Claimant had a sprain of his right shoulder joint, and in his medical opinion "that there is greater than a 51% probability that this is a work related injury or condition." (Exhibit E). At that appointment, Dr. Ladwig signed off on Claimant's return to full duty with no restrictions, and scheduled a follow-up appointment for October 12, 2017 (Respondents' Exhibit E).

15. On October 12, 2017, Claimant saw Dr. Gary Childers, another doctor at Aviation and Occupational Medicine. Ex. 2 p. 17-18. Dr. Childers prescribed Claimant an anti-inflammatory steroid, and scheduled a follow up appointment on October 18, 2017.

16. On October 18, 2017, Dr. Childers referred Claimant to Health Images for an MRI (magnified resonance imaging) exam on October 25, 2017, based on the diagnosis of shoulder strain (Respondents' Exhibit F). There is nothing on the record to indicate Claimant had the MRI done.

17. On November 8, 2017, Claimant saw William Van Eimeren, M.D., a doctor at Clinica Family Health (Claimant's Exhibit 1, pp. 5-7). Dr. Van Eimeren ordered an MRI from Health Images.

18. On November 13, 2017, Claimant had an MRI performed at Health Images by Patrick O'Malley, M.D., on the basis of Dr. Van Eimeren's referral (Claimant's Exhibit 3, pp. 22-23). The results were discussed in an appointment between Claimant and Dr. Van Eimeren on November 30, 2017; at that appointment, Dr. Van Eimeren recommended orthopedic surgery on Claimant's right shoulder. (Claimant's Exhibit 1, pp 8-10).

19. Claimant has continued working since being cleared to return to work; according to Mr. Morales' testimony, Claimant doesn't seem to have trouble or experience shoulder pain while working. Claimant has not visited a doctor for his shoulder injury in 2018, and has continued his normal work duties in 2018.

Ultimate Findings

20. Claimant credibly testified that he injured his right shoulder, while in the course of his employment. Claimant's testimony is corroborated by the medical records, which demonstrate a consistent pattern of complaint. The ALJ finds that Claimant presented in a straight-forward and credible manner. The medical records of a right shoulder injury are undisputed. Although there was some dispute about the date of the injury, whether Claimant had seen a doctor on September 29, 2017, and whether Claimant told Mr. Morales the injury was a manifestation of a preexisting injury, the ALJ finds that his testimony does not detract from the Claimant's credibility.

21. Further, the Claimant's testimony regarding the mechanism of injury is credible. The Claimant notified a supervisory individual with the Employer of his injury in a timely manner on September 25, 2017, and again, on October 1, 2017. The medical records following Claimant's date of injury corroborate Claimant's testimony concerning the mechanism of injury. Claimant's testimony was persuasive and credible.

22. Based on the totality of the evidence, the ALJ infers and finds that the event of September 21, 2017 constituted an aggravation and acceleration of a dormant preexisting fragility of the Claimant's right shoulder and the incident, which arose out of the course and scope of the Claimant's employment, required medical treatment and was temporarily disabling.

23. The care and treatment for the Claimant's compensable right shoulder injury at Aviation Occupational Medicine Clinic was authorized, causally related to the September 21, 2017 injury, and reasonably necessary to cure and relieve the effects thereof. Medical treatment at Clinica and its doctors was **not** authorized. The Employer

promptly referred the Claimant to the Aviation Occupational Medicine Clinic; and, there were no authorized referrals to Clinica.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See Prudential Insurance Co. v. Cline, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). Moreover, the ALJ, as the fact finder, is allowed to use reason and common sense in drawing inferences from other facts that have been proved. *Venetucci v. City of Colorado Springs*, 99 Colo. 389, 63 P.2d 462 (1936); *Independence Coffee & Spice Co. v. Kalkman*, 61 Colo. 98, 156 P. 135 (1916). *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As found, there is inconsistency on whether or not Claimant visited a doctor on September 29, 2017; however, Claimant is not asking for compensation for this visit and several medical professionals confirmed the shoulder injury after September 29, 2017. Therefore, Claimant is credible. The medical evidence is virtually undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the medical opinions are undisputed.

Compensability

b. A compensable injury is one that arises out of and in the course of employment. Section 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the

industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury **if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought.** § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, based on the totality of the evidence, the event of September 21, 2017 caused an injury to the Claimant's right shoulder arising out of and in the course and scope of his employment with the Employer. Therefore, the Claimant sustained a compensable injury on September 21, 2017.

Medical Benefits

c. Under the provisions of § 8-43-404 (5) (a) (I) (A), C.R.S. an "employer or insurer shall provide a list of at least two physicians or two corporate medical providers or at least one physician and one corporate medical provider, where available, in the first instance, from which list an injured employee may select the physician who attends said injured employee." Rule 8-2 (A) (1) – (2) of the Workers' Compensation Rules of Procedure (WCRP), 7 CCR 1101-3, provides for the written list in compliance with § 8-43-404 (5) (a) (I) (A). As found, the Employer provided this list and Aviation and Occupational Medicine was authorized. Clinica was **not** authorized.

d. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, the Claimant's medical treatment is causally related to the shoulder injury sustained on September 21, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment at Aviation Occupational Medicine was reasonably necessary to cure and relieve the effects of the September 21, 2017 injury.

e. Authorization refers to the physician's legal authority to treat the injury at Respondents' expense, and not necessarily the reasonableness of the particular

treatment. *Popke v. Indus. Claim Appeals Office*, 944 2d 677 (Colo. App. 1997). § 8-43-404(5), *supra*, allows an employer the right in the first instance to designate the authorized treating physician (ATP); the right to select however passes to claimant where the employer fails to designate in the first instance. *Rogers v. Indus. Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). An employer's right to select the treating physician is triggered when the employer receives oral or written notice from the employee or has:

> [S]ome knowledge of accompanying facts connecting the injury or illness with the employment and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim.

Jones v. Adolph Coors Co., 689 P.2d 681 (Colo.App. 1984). Where the right to select passes to a claimant, treatment from the physician the claimant selects after that date is authorized. *See Grove v. Denver Oxford Club*, et al., W.C. No. 4-293-338 [Indus. Claim Appeals Office (ICAO), November 14, 1997]. A physician may become authorized to treat a claimant as a result of a referral from a previously authorized treating physician made in the normal progression of authorized treatment. *Greager v. Indus. Commi'n*, 701 P.2d 168 (Colo. App. 1985). As found, Respondents are liable for all medical services rendered by Aviation Occupational Medicine related to the Claimant's compensable right shoulder, injury and are not liable for medical services rendered by Clinica Family Health.

Average Weekly Wage (AWW)

f. An AWW calculation is designed to compensate for temporary total wage loss. *Pizza Hut v. Industrial Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). An ALJ has the discretion to determine a claimant's AWW, based not only on a claimant's wage at the time of injury, but also on other relevant factors when the case's unique circumstances require, including a determination based on increased earnings and insurance costs at a subsequent employer. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). § 8-42-102 (2) (d), C.R.S. sets forth the method for calculating the AWW. The overall purpose of the statutory scheme is to calculate "a fair approximation of a claimant's wage loss and diminished earning capacity." *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). Because the payroll information offered by Claimant is illegible, the AWW provided by Employer will be used. As found, the Claimant's AWW is $1,155 per week. Based on this AWW, a TTD benefit rate of $769.99 per week, or $110 per day, which is less than the maximum for FY 2017/2018.

Temporary Total Disability (TTD)

g. To establish entitlement to temporary disability benefits, the Claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss

necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). Claimant's time off from work in this case was not his fault but as a result of the shoulder injury sustained September 21, 2017. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant was temporarily and totally disabled for five days: September 26 – 29 and October 5, 2017.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on compensability, medical benefits, AWW and TTD.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all of the causally related and reasonably necessary costs of medical care provided by Aviation and Occupational Medicine, subject to the Division of Workers Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits at the rate of $769.99 per week, or $110 per day, from September 26, 2017, through September 29, 2017, both dates inclusive, and October 5, 2017, a total of 5 days, in the aggregate amount of $550, which is payable retroactively and forthwith.

C. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

D. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of June 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury to his lower back on May 18, 2017?

II. If Claimant suffered a compensable injury, are Aspen Creek Medical Associates, and Ronald Hammers, MD, now Claimant's Authorized Treatment Providers?

III. If Aspen Creek Medical Associates and Ronald Hammers, MD are Claimant's ATPs, has Claimant shown, by a preponderance of the evidence, that the spinal surgery performed by Dr. Hammers- and all related treatment- is reasonable, necessary, and related to Claimant's work injury?

IV. If Claimant suffered a work injury as noted above, is he entitled to Temporary Total Disability payments from May 23, 2017, until terminated by operation of law?

V. If Claimant is entitled to TTD benefits, was Claimant responsible for his own termination by resigning his employment with Employer?

PRELIMINARY MATTERS

During the hearing, the ALJ found that the issue of Average Weekly Wage was not ripe for determination at this hearing, due to unresolved, good faith issues with discovery process.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Claimant testified at hearing that he worked for the Employer beginning November 14, 2007 until the employment relationship ended effective August 24, 2017. Claimant testified that he sustained an injury to his back while working the Employer on May 18, 2017.

2. Claimant characterized his work for the Employer as being "heavy duty construction." He explained that in the weeks prior to the May 18, 2017 injury, he was hanging 12-foot and 8-foot sheets of drywall. He estimated, based on his experience in this field that a 12-foot, ½" sheet of drywall weighs approximately 80 pounds. In addition to the heavy lifting, Claimant testified that he routinely had to climb ladders, bend, squat, crawl, move scaffolding, load and unload equipment.

3. Claimant was involved in a motorcycle accident on September 9, 2014. Claimant testified that he underwent treatment for his lumbar spine, including

chiropractic care, pain management, and injections. Claimant recalled finishing treatment for that condition within a year of the accident. Claimant testified that his symptoms were much better after he finished his treatment.

4. During Claimant's March 20, 2015, examination with Dr. Kleiner, (one-month prior to Claimant settling this motorcycle accident claim) Claimant complained of "severe pain with position change, and is unable to find a comfortable position for longer than 10 to 15 minutes at a time." (Ex. M, p.179). Claimant was recommended to undergo fusion surgery as this would allow Claimant his "best chance for being able to resume an active lifestyle." It was Dr. Kleiner's hope that Claimant would discontinue cigarette consumption and schedule the recommended surgery.

5. Additional medical records show Claimant attended an examination with his PCP in March 2016, where he complained of significant back pain and received a referral for pain management and further injections. (Ex.G, pp. 33-35).

6. Claimant did continue to report ongoing lower back pain. He explained that he had been working as a carpenter for the last thirty plus years. He described as "average" the pain for the type of career he was in. He no longer required any sort of narcotic pain medication after conclusion of this treatment.

7. Claimant returned to work for the next few years performing his full job duties for Employer after recovering from the motorcycle accident. Claimant reviewed an "Employee Details Report" (Ex. 12), and was asked about the work he was performing prior to May, 2017. Claimant could not recall the specific job tasks being performed, but he knew that it was "construction oriented" and "definitely labor intensive."

8. At the time of the incident, Claimant was performing a fire station remodel at "617 Arrawana" in Colorado Springs, CO. Claimant had been working on this particular jobsite for several weeks prior to the incident, while performing his usual duties. Claimant testified that he performed all of the steel stud framing and all of the drywall hanging. Shortly before the injury occurred, Claimant was moving all of the furniture into one room so that work could be done. He moved office furniture, a large industrial stove and shelving units with no help.

9. Claimant was moving two full sized desks, stacked upon each other, which were roughly three feet tall, three feet wide, and six feet long. He described the desks as being "very dense" and "very heavy." Claimant described that he was just attempting to "muscle" the desks out of the way and was attempting to lift and push when he felt a "snap and a pop" in his back, at which time he knew he injured himself.

10. He experienced pain in his lumbar region and his buttocks with shooting pains and tingling immediately. Claimant testified that, just prior to the work incident, his lower back was at the point where he was feeling like himself again, with no lingering effects from the previous motorcycle accident. He testified that he was able to lift 12

foot sheets of drywall by himself. It was revealed at hearing that Claimant did not elect to go forward with a lumber fusion surgery from this 2014 accident, instead settling the case and terminating his medical care. After fees and accrued medical expenses to date, Claimant netted $34,081.05. (Ex. E, p. 14).

11. Claimant testified that he sent a text to his brother and supervisor the night he was injured to inform him that he would likely be unable to work the next day. He did not ask to see a workers' compensation doctor at that time, because he did not know the extent of the injury. He testified that he didn't want to cause any problems for the family owned business. There were no witnesses to this incident other than Claimant.

12. Claimant was referred to Concentra by employer, and was first seen on 6/6/2017 by Nicholas Kurz, MD. (Ex. J). X-rays were performed, but not an MRI. During this visit, Claimant acknowledged having chronic back pain from his 2014 motorcycle accident. He also told Dr. Kurz that he had recently been referred by his PCP for an MRI and given gabapentin. Based upon this examination, Dr. Kurz felt that Claimant's injuries were unlikely (less than 50%) to be related to his work activities. He then referred Claimant to his primary care physician (Ex. J, p. 116, p. 120), Dr. Jeffrey Kent with Aspen Creek Medical Associates, for further treatment. Claimant's providers at Aspen Creek Medical then completed the referral process for Claimant to receive an MRI.

13. Based on the MRI results, Aspen Creek referred Claimant to Dr. Ronald Hammers for surgical evaluation. Claimant did undergo surgery and reported good relief initially; however, Claimant testified at hearing that his back has regressed to the point of being in more pain than he had been prior, and that he must use narcotic pain relievers daily.

14. On June 12, 2017, Claimant was medically recommended to be restricted from performing any work at all by his provider at Aspen Creek until after his evaluation with the surgeon. (Ex. 4, p. 39) Claimant testified that he has never been released to work again since that date.

15. Claimant did not work on Friday, May 19, 2017. He attempted work on Monday, May 22, 2017, despite his pain. Claimant testified that his ability to work was limited essentially to give instruction and provide tools. Claimant has not worked for Employer again since May 22, 2017.

16. Claimant testified that his anniversary was on May 21, and is wife's birthday was on May 22. He went to Manitou Springs to take "old timey" photos with his family, but described the entire ordeal as grueling. He testified that wife and son had to assist him back to the car. Claimant also performed some painting activities for his father beginning August 11, 2017. Claimant explained that he did perform some light painting for his father after his savings was entirely depleted, as Claimant had been out of work for almost three months at this point. Claimant testified he performed painting for perhaps 2 hours per day, while in extreme pain.

17. Claimant testified that he ultimately quit his job on August 24, 2017 due to his inability to perform the physical demands of his construction job. He never would have quit this job if it was not for the injury. With it being a family business, he did not want them to have to wait around for him forever. Claimant testified that he was never offered modified employment by the employer.

18. At hearing, Claimant was asked about a note from Aspen Creek Medical dated March 7, 2016 which indicated that Claimant "Still has a lot of pain from accident years ago. Injections in back have ended." (Ex. 4, p. 27). Claimant was unable at hearing to specifically recall what he was feeling on that date, but he was certain that pain was nowhere near the level of pain he has experienced after the May 18, 2017 incident.

19. The "Employee Details Report" from Employer notes that the only single, full-days off work for "illness" for 2016 occurred on 1/6/16, 1/7/16, 3/9/16, and 4/18/16. (Ex. 12, p. 159).

20. On May 23, 2017, Claimant went to see his personal chiropractor for evaluation of his new back pain. (Ex. 5, pp. 100-01). Dr. Becco did not document a mechanism of injury; however, he did document that Claimant was presenting with an acute problem to his lumbar, sacral, right buttock, and mid-to-upper thoracic spine. Claimant was tender in his mid-thoracic, lower lumbar, and lower sacral areas.

21. Claimant was sent to Concentra for evaluation and treatment. Claimant reported to Dr. Kurz that on May 18, he was at work moving furniture in order to be able to paint behind it when he felt like he pulled a muscle. (Ex. 7, p. 104). Claimant also mentioned that he had recently been seen by his PCP, who had requested an MRI and prescribed gabapentin. Dr. Kurz placed Claimant at MMI on June 6, 2017 and released Claimant from care, as noted.

22. The MRI was performed on June 9, 2017. The pertinent **Findings** noted were:

> L4-L5: Moderate broad-based disc herniation but with *superimposed large fragment* that his *likely* extruded, measuring approximately 2.9 cm in craniocaudal dimension and 1.8 cm in AP dimension. There is *severe* spinal stenosis. There is *significant mass effect* on the nerve roots within the spinal canal. *Moderate-to-severe* left foraminal stenosis as this extends into the left foramen.
>
> Under **Impression**, the MRI narrative notes:
>
> 1. *Severe* L4-L5 spinal stenosis from broad-based disc herniation but with *significant contribution from a large probably extruded fragment. Significant* mass effect on the nerve roots within the spinal canal. This also extends into the

left foramen causing *severe* left foraminal stenosis proximally. (Ex. 8, p. 112)(emphasis added).

23. Dr. Ronald Hammers concluded that the findings on the MRI were "quite significant" and corresponded with Claimant's history of two months of bilateral lower extremity symptoms after the May 18, 2017 work injury. (Ex. 9, p. 115). Claimant had reported to Dr. Hammers that he had had "a strenuous day at work, followed by the onset of symptoms the next morning." Dr. Hammers felt the pain generator was coming from the L4-L5 level due to the imaging. Although Claimant had chronic spondylosis, he felt those findings were chronic and not contributing to Claimant's current symptoms. Dr. Hammers recommended surgery right away due to the significant bilateral stenosis and recommended an L4-5 laminectomy and discectomy.

24. Claimant underwent surgery on June 29, 2017. In Dr. Hammers' **Description of Procedure**, he noted:

> ……This revealed the underlying dura, which was *severely shifted* to the patient's left, and there was a large mass on the right side in the entire lateral recess, nearly from pedicle to pedicle, as well as essentially dorsal to the thecal sac. *Indeed, as interpreted on the MRI, this was a very large extruded disk fragment which had migrated to that particular location.* This disk herniation was initially entirely adherent to the dura, and so I simply opened it and took disk out from within it, at which point the dura became nicely decompressed. I then reached up to the L4 nerve root and pedicle region and decompressed fragments of *disc herniation* from that region as well as the foramen, until the foramen and the nerve were nicely decompressed and the nerve was clearly identified…..(Ex. 10, p. 132)(emphasis added).

25. Claimant underwent an IME with Dr. Jack Rook on October 9, 2017. (Ex. 11). Claimant disclosed his previous back injury and reported that he has had some degree of chronic low back pain and discomfort as a result of his lengthy career in the construction business. *Id.* at 139. However, he reported no physical limitations on his ability to perform his job leading up to May 18, 2017, and had reported hanging over 200 sheets of 12-foot drywall in the two weeks prior to the work incident. *Id.* It was while Claimant was in the act of moving the desks that caused a sudden, sharp stabbing pain in Claimant's lower back. Dr. Rook acknowledged that he did not have Claimant's medical records from any times before this May 18, 2017 incident, including from his 2014 motorcycle accident.

26. Dr. Rook diagnosed Claimant with claim-related diagnoses of Status post L4-5 laminectomy and discectomy for treatment of an acute disc herniation and associated disc fragment with lumbar radiculopathy involving both lower extremities. (Ex. 11, p. 143). He outlined the reasons for believing that Claimant had suffered an acute on-the-job injury on May 18, 2017:

● Prior to the on-the-job injury the patient was able to perform physically demanding labor for a sustained period of time after his motorcycle accident that occurred three years earlier;

● He did not have any physical restrictions prior to the occupational injury;

● He was not experiencing lower extremity symptoms at the time of his on-the-job injury;

● It is the patient's history that he developed severe acute pain that immediately radiated into his legs associated with numbness, tingling, and weakness on the right side. This history is consistent with the development of an acute disc herniation (as was seen on this MRI scan) with acute nerve root compression;

● It is unlikely that the patient would have been able to perform heavy labor, such as hanging 12 foot sheets of drywall in the weeks prior to the on-the-job injury, with a large disc fragment compressing multiple nerve roots;

● The patient was performing excessive lifting and pushing of desks that he estimates weighed more than 400 pounds when he developed the acute low back and lower extremity pain. This type of activity greatly increases intra-abdominal pressure and places great stress on low back structures including intervertebral disc tissue;

● It is the patient's history that although he had a long history of chronic low back pain associated with the rigors of this job and the 2014 motorcycle accident that he remained functional with respect to the performance of the physical demands required of his work. (Ex. 11, p. 144).

27. Claimant underwent an IME *at Respondents' request* with Dr. Rachel Basse on October 19, 2017. (Ex. 14). Dr. Basse took a history from Claimant regarding the mechanism of injury and his medical history. Dr. Basse reviewed records from September 10, 2014 and up through the date of the incident. Dr. Basse indicated that Claimant did have a long history of waxing and waning lower back pain related to his years of heavy work in construction. However, Dr. Basse recognized that Claimant was able to return to work without restriction after recovery from his 2014 motorcycle accident.

28. Dr. Basse opined that, *assuming Claimant's history was accurate,* that he did sustain a substantial aggravation of his pre-existing lower back pain at work on May 18, 2017. Dr. Basse felt that if Claimant's symptoms did not improve with the surgery he already underwent, he may prove to be a candidate for a two-level fusion.

29. At hearing, Respondents called Mr. Scott Palmer, a supervisor for the Employer, and brother of Claimant. Mr. Palmer recalled that he, Claimant, and a man named "Terry" were all working at the Arrawana job on May 18, 2017, finishing the

inside of the building. Mr. Palmer left the Arrawana job for several hours to handle an issue with another tenant, returning at approximately 2:00 to 3:00pm. Mr. Palmer did not recall seeing Claimant exhibit any outward symptoms of pain when he returned to the job site for the next thirty to forty-five minutes. Mr. Palmer also did not recall seeing Claimant have any symptoms the next day (May 19, 2017).

30. Mr. Palmer did remember seeing Claimant again at work on Monday, May 22, and that Claimant was holding his back in pain, and Claimant told him he had hurt himself at work the prior week and was in a lot of pain over the weekend. Nor did Mr. Palmer recall Claimant texting him around the date of this incident to inform him of his injury, or that he would be absent from work.

31. Mr. Palmer testified that after the motorcycle accident, but prior to this incident he would have conversations with Claimant where Claimant would stop talking mid-sentence, wrinkle up his face, and jump a little, due to shooting pains he was experiencing in his back and legs.

32. Mr. Palmer confirmed that Claimant was hanging drywall, and in the week before this incident, he was hanging doors, trimming, and painting. Mr. Palmer testified that they hired an outside company to do the taping and texturing because Claimant "couldn't do the taping and texturing."

33. Claimant then explained that he was physically capable of performing the taping and texturing; it was simply his recommendation to hire this particular work out to save money. He explained it made financial sense to hire it out to cheaper labor than to have Claimant perform simply taping and texturing at $25 per hour. Claimant estimated the doors he had hung before this incident to weigh approximately 200 lb. each, and he had to lift them numerous times himself.

34. Mr. Palmer testified that his brother, Claimant, "very rarely complains" and agreed it would be consistent with Claimant's character to not want to file a Workers' Compensation claim or complain of back pain to him. Mr. Palmer testified that the Employer offers no sort of "light duty" which Claimant may have been able to perform after the May 18, 2017 injury. There is no documentation of any modified job offer in the record.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden

of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).*

2. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*.

3. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

4. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

5. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

6. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App.2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

7. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment

relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976).

8. In this case, Claimant has not been a totally consistent historian. His reporting of symptoms, including from his prior 2014 motorcycle accident and the incident at issue, has not been fully and internally consistent. They symptoms reported do not follow a linear progression. There is some conflict between what Claimant reports, and what Scott Palmer has credibly testified to.

9. However, the ALJ finds that what Claimant has reported right before and right after May 18, 2017 is sufficiently accurate to find this injury compensable. The MRI taken less than three weeks afterwards makes it clear that Claimant had recently suffered a recently debilitating injury to his L4 L5 disc. This was confirmed by Dr. Hammers' real-time surgical observations, and vindicates his advice to proceed without undue delay. No plausible alternative mechanism of this severe injury has been put forth.

10. For the reasons set forth by Dr. Rook-which the ALJ finds persuasive, and incorporates by reference-Claimant would not have been able to function with the disc in the condition it was in during the weeks preceding the injury. This was more than a natural progression of a preexisting condition-degenerative or otherwise; it was an *event* which occurred on 5/18/17, and the ALJ so finds, by a preponderance of the evidence. Even Respondents' IME physician agrees, assuming Claimant provided a sufficiently accurate history.

Authorized Treatment Provider/Right of Selection

11. The ALJ has concluded that Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his thoracic and lumbar spine on May 18, 2017. The ALJ disagrees with Dr. Kurz, as it does not appear that Dr. Kurz reviewed any records in conjunction with his opinion and prematurely dismissed Claimant's injury as being pre-existing. Dr. Kurz's refusal to treat for non-medical reasons, to wit: his belief that Claimant's injury was not work related, resulted in the right of selection passing to Claimant, at which time he chose Aspen Creek Medical Associates. Aspen Creek Medical Associates is now deemed to be Claimant's ATP, and all referrals made from Aspen Creek Medical, and any referrals within the chain of referrals, including, but not limited to, Dr. Hammers. Dr. Kurz's MMI determination is found to be invalid. *See* *Zolman v. Pinnacol Assurance,* W.C. No. 4-636-044 (ICAO, November 3, 2010). The *Zolman* court explains that § 8-43-404(5)(a)—the ATP designation statute—implicitly contemplates that the respondent will designate a physician who is willing to provide treatment. This is an issue of fact for resolution by the ALJ. See also, *Cabela v. Industrial Claims Appeals Office*, 198 P. 2d 1277 (Colo. App. 2008). A referral by an ATP [under an erroneous causation/compensability analysis] to a Claimant's personal physician (and further referral to surgeon) is valid, and employer is responsible for costs of surgical treatment.

Medical Benefits

12. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101 (1)(a), C.R.S. (2009); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997); *Country Squire Kennels v. Tarshis*, 899 P. 2d 362 (Colo. App. 1995). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo.App. 1997). Whether the claimant sustained his burden of proof is generally a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P .2d 496 (Colo.App. 1997).

13. The ALJ has found that Claimant sustained a compensable injury. All treatment Claimant has had to date, including the surgery performed by Dr. Ronald Hammers, is found, by a preponderance of the evidence, to be reasonable, necessary, and related. Respondents have not challenged this aspect of Claimant's claim and relied on the defense of compensability, as opposed to a defense of specific medical benefits.

Temporary Total Disability

14. To receive temporary disability benefits, the Claimant must prove the injury caused a disability. C.R.S. § 8-42-103(1); *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d). Claimant is not required to prove that the industrial injury is the "sole" cause of his wage loss to recover temporary disability benefits. *Jorge Saenz Rico v. Yellow Transportation, Inc*. W.C. No. 4-547-185 (ICAO December 1, 2003), citing *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209 (Colo. App. 1996).

15. Claimant has been found to have sustained significant injuries at work. Claimant was medically restricted from working from May 22, 2017 through the present and ongoing as a matter of law. Dr. Kurz did not address formal restrictions at his initial evaluation, as he opined Claimant's present symptoms were solely related to his pre-existing condition; however, the ALJ finds based on the evidence of record that Claimant was medically restricted from May 22, 2017 through June 12, 2017, when his ATP/PCP at Aspen Creek restricted Claimant from all work. Claimant has not been given any new restrictions since being taken out of all work completely beginning June 12, 2017.

Claimant Responsible for his Own Termination with Employer

16. Claimant argues that Respondents have waived the affirmative defense of "Claimant responsible for termination" to terminate TTD benefits. Ordinarily, an affirmative defense must be explicitly pled and is deemed waived if not raised at a point in the proceedings which affords the opposing party an opportunity to present rebuttal evidence. *See* C.R.C.P. 8(c); *Kersting v. Industrial Commission, supra; Terry v. Terry*, 154 Colo. 41, 387 P.2d 902 (1963); *Lewis v. Scientific Supply Co.*, 897 P.2d 905 (Colo. App. 1995). This principle protects the parties' due process rights to notice and an opportunity to be heard. *Hendricks v. Industrial Claim Appeals Office*, 809 P.2d 1076 (Colo. App. 1990); *see also* Rule of Procedure VIII(A)(5), 7 Code Colo. Reg. 1101-3 at 21 (a party may not add an "issue" after the filing of the application or response, "except on agreement of all parties, or approval of an administrative law judge for good cause shown"). This affirmative defense was not pled in the Response to Claimant's Application for Hearing. It was not endorsed in the Case Information Sheet. It was not announced as an issue at the outset of the hearing, not addressed in opening statements. In this case, however, the ALJ finds that, read as a whole, the transcript shows that this issue was essentially *tried by consent*- including questions and answers elicited by Claimant's counsel.

17. Even though Respondents may therefore raise this argument, Claimant remains entitled to ongoing TTD benefits after his resignation. A claimant found to be responsible for his or her own termination is barred from recovering temporary disability benefits under the Act. §§ 8-42-103(1)(g), 8-42-105(4). *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). Because the termination statutes constitute an affirmative defense to an otherwise valid claim for temporary disability benefits, the burden of proof is on the Respondents to establish the Claimant was "responsible" for the termination from employment. *Henry Ray Brinsfield v. Excel Corporation,* W.C. No. 4-551-844 (ICAO July 18, 2003).

18. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo.1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo.App. 1996)(unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C.no. 4-676-410 (ICAO April 9, 2008). "Fault" can include poor job performance, but Claimant is not at fault if the termination is due to claimant's physical or mental inability to perform assigned duties, *Johnston v. Deluxe/Current Corporation*, W.C. No. 4-376-417 (Industrial Claim Appeals Office, June 7, 1999).

19. In this case, the evidence presented persuades the ALJ that Claimant voluntarily resigned his position with the company due to his work injury. Nevertheless,

Blair v. Art C. Klein Construction Inc., W.C. No. 4-556-576 (Industrial Claim Appeals Office, November 3, 2003), held that Claimant's voluntary resignation is not dispositive of the issue of whether he is responsible for termination of his employment. *Blair, supra,* held that the pertinent issue is the reason the claimant quit because the claimant is not "responsible" where the termination is the result of the injury. *See Colorado Springs Disposal v. Industrial Claim Appeals Office, supra; Gregg v. Lawrence Construction Co.,* W.C. No. 4-475-888 (ICAO, April 22, 2002); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (ICAO April 24, 2002). According to *Blair, supra,* "if the claimant was compelled to resign from this employment such that it can be said the termination was a necessary and natural consequence of the injury, rather than the claimant's subjective choice, the claimant would not be at fault for the termination."

20. The ALJ finds that Claimant was essentially compelled to resign from his employment as a natural consequence of his injury, as it was evident given his condition that he would be unable to perform the full duties of his job. The Employer witness testified that he is unaware of any light or modified duty that Claimant may have been able to perform, thus precluding him from any ongoing employment with the Employer. There is no evidence to suggest the Employer had offered Claimant modified duty in attempt to bring him back to work. Although Claimant voluntarily resigned in this matter, the facts are similar to those in *Blair* that warrant ongoing TTD benefits paid to Claimant after his resignation. The sole cause of Claimant's ongoing wage loss since May 22, 2017 has been the May 18, 2017 work injury.

Unresolved Issues

21. The record as it currently stands does not show when, or if, Claimant might have returned to MMI status in the interim. The issue of Average Weekly Wage is not ripe for determination, due to evidentiary and discovery issues. While the record contains references to unemployment benefits being payable to Claimant, the periods of payout are unclear. While plainly subject to offsets to TTD payments, these unemployment benefits, and commensurate offsets, cannot be ascertained at this time.

ORDER

It is therefore Ordered that:

1. Claimant suffered a compensable injury to his back on May 18, 2017.

2. Claimant's ATPs are now Aspen Creek Medical Associates and Ronald Hammers, MD.

3. Respondents are responsible for the surgery provided by Dr. Hammers, as well as all treatment and referrals associated therewith.

4. Claimant is entitled to TTD benefits from May 23, 2017, until terminated by operation of law.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-059-710-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on April 19, 2018 and June 25, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 4/19/18, Courtroom1, beginning at 8:30 AM, and ending at 12:00 PM; and, 6/25/18, Courtroom 3, beginning at 8:30 AM, and ending at 11:00 AM). The official Spanish/English Interpreter for the April 19, 2018 hearing was Nina Izqiuerdo. The official Spanish/English Interpreter for the June 25, 2018 hearing was Silvina Irimia.

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondent's Exhibits A through P were admitted into evidence, without objection.

Written transcripts of the evidentiary depositions of Christopher James Hood and Ivan Herrera Rodriguez, taken on June 14, 2018 in lieu of live testimony, were filed in advance of the second hearing, which took place on June 25, 2018.

At the conclusion of the second session of the hearing on June 25, 2018, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether Claimant suffered a compensable injury to his low back while in the course and scope of his employment on October 5, 2017; if compensable, whether he is entitled to reasonably necessary and causally related medical benefits to cure and relieve him from the effects of his low back injury; and, whether he is entitled to temporary total disability (TTD) benefits from October 9, 2017 thru October 17, 2017; for October 23, 2017, and from October 27, 2017 and continuing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated, and the ALJ finds, that (a) the Claimant's average weekly wage (AWW) was $711.16, with an applicable TTD rate of $474.11 per week (which equates to $67.73 per day); and (b) that James Rafferty, M.D., and Robert Benz, M.D., are the authorized treating physicians (ATPs) for this claim.

2. The Claimant was born on August 25, 1992, and was 35 years old as of the dates of both sessions of the hearing.

3. The Employer employed thye Claimant as a stone fabricator and polisher for 5 years.

4. The room where Claimant worked always had a wet floor from the water used for grinding and polishing.

The Injury

5. On Thursday, October 5, 2017, the Claimant was working as a stone fabricator and polisher for the Employer.

6. The Claimant was carrying a piece of granite stone, weighing approximately 50 pounds. As he was walking on the wet floor with the stone, he slipped

and twisted his back. He began to feel pain in his lower back, and went home shortly thereafter [Transcript (hreinafter "Tr.") , p. 30].

After The Injury

7. The Claimant worked on Friday, October 6, 2017 but continued to feel pain in his lower back (Tr., p. 30 and Respondent's Exhibit I, p. 123). The Claimant continued to feel pain which worsened throughout the next few days (Tr., p. 30)

8. The Claimant reported the injury to Christopher Hood, Claimant's supervisor, on Monday, October 9, 2017. Hood called Erin Woodyard (who was reponsible for making workers compensation claims) to handle the Claimant's report.

9. On October 9, 2017, Woodyard documented the report, provided the Claimant with the necessary paperwork, and gave him directions to visit UCHSC (University of Colorado Health Sciences Center).

10. On Monday, October 9, 2017, Claimant visited Dwayne Strong , PA-C (Certified Physician's Assistant) at UCHSC, who ordered an x-ray on THE Claimant's lower back. PA-C Strong noted mild degenerative change at L4-L5 (Respondents' Exhibit E, pp. 44-46)

11. PA Strong discharged the Claimant and put him on work restrictions (Respondent's Exhibit E, p. 47.

12. The Claimant returned to UCHSC and was examined by Dr. Rafferty on Thursday, October 19, 2017. Dr. Rafferty ordered an MRI (magnetic resonance imaging) to be taken for Claimant's lower back (Respondents' Exhibit E, p. 50).

13. On Thursday, October 26, Dr. Rafferty determined that the Claimant had a lubar disc extrusion at L4-L5, and disc protrusion at L5-S1 (Respondents' Exhibit E, p. 53). The Claimant began treating for this injury with Dr. Rafferty, who became one of the Claimant's ATPs.

14. The Claimant was referred to Orthopaedic & Spine Center of the Rockies and visited Dr.Benz on November 3, 2017. Dr. Benz also became an ATP. Dr. Benz diagnosed the Claimant with L4-L5 disc herniation (Respondents' Exhibit H, pp. 96, 97). Dr. Benz determined different options for treatment of the Claimant, including injections, spine surgery, or just leaving it alone (Respondents' Exhibit H, p. 97).

15. The Claimant's claim was denied due to the allegation that he suffered a previous lower back injury while working for the same employer and the present claim was not compensable.

16. Christopher James Hood, co-owner of the Emplyer, testified in his deposition that the Claimant reported the slipping incident on October 5 or 6, 2017, and the Claimant clarified the work-relatedness of his back injury on Monday, October 9, 2017. Hood also testified that he had **no** knowledge of prior back problems on the part of the Claimant (Hood Depo., p. 11).

17. Ivan Herrera Rodriguez worked with the Claimant.as his direct supervisor. He denied that Claimant had reported injuring his back on Ocrtober 5, 2017. Herrera Rodriguez furrther testified that the slab of granite in the back of the Claimant's truck was work-related ---to install a kitchen, but Heera Rodriguez did not know how it got there (Herrera Rodriguez Depo., pp. 1 – 12).

18. The Claimant visited the Salud Family Health Center three times between October 9, 2015 and November 31, 2015, complaining of lower back pain. Additionally, it is noted in the Claimant's visit to Salud Family Heatlh Center on January 17, 2017 that he experienced lower back pain (Respondents' Exhibit B, pp. 10-16, 23).

19. After the injury of October 5, 2017, the Claimant worked for the Employer within his restrictions between October 18, 2017 thru October 20, 2017, and October 24, 2017 thru October 27, 2017 (Respondents' Exhibit I, p. 124).

20.. The Claimant has been unable to work full duty and the Employer has not made modified work available to the Claimant from October 6, 2017 through October 17, 2017, both dates inclusive, a subtotal of 12 days; from October 21, 2017 through October 23, 2017, both dates inclusive, a subtotal of 3 days; and, from October 28, 2017 and continuing. The period from October 28, 2017 through June 25, 2018, the date of the last session of the hearing, both dates inclusive, is a subtotal of 241 days. During all of these times the Claimant has experienced a 100% temporray wage loss and he has not been declared to be at MMI.Through the date of the last session of the hearing, June 25, 2018, the Claimant has been temporarily and totally disabled for an aggregate of 256 days. Fromj June 26, 2018 and ciontinuing, he remains temporarily and totally disabled.

Independent Medical Examination (IME) by Wallace K. Larson, M.D.

21. Dr. Larson performed an IME of the Claimant, at the request of the Respondents, He reviewed medical records and examined the Claimant. In his report and live testimony, Dr. Larson stated: "Whether or not this was aggravated at work canniot be determined with a high degree of certainty…It (*sic*) was no way on the MRI scan to date when thwe estruded fragment occurred at L4-5." Dr. Larson felt that the Claimant's history was not accurate. He was of the opinion that the Claimant had a pre-existing back condition. Ultimately, Dr. larson stated: "It is my opinion his ruptured disc and need for surgery does not rise to the level of probability related to his occupational

exposure." The ALJ infers and finds that Dr. Larson's opinions are somewhat equivocal, however, his "fail-safe" position is "does not rise to the level of reasonable probability."

22. In the present case, the ALJ finds the opinions of the ATPs more creible and persuasive than the opinions of IME Dr. Larson.

Ultimate Findings

23. Claimant credibly testified that he injured his back, while in the course of his employment. Claimant's testimony is corroborated by the medical records, which demonstrate a consistent pattern of his report of lower back pain. The ALJ finds that the Claimant presented in a credible manner. Although there is some dispute about the time the injury occurred, and whether it actually occurred in the scope of employment, the ALJ finds that none of the evidence detracts from the Claimant's credibility. Additionally, although there is evidence that there was a piece of granite stone in the back of Claimant's truck around the time of the injury, there has been no credible evidence that the Claimant was involved in the lifting or installing of this piece of granite. Also, the ALJ finds the opinions of Dr. Rafferty and Dr. Benz concerning work-relatedness, causation, and appropriate treatment more persuasive and credible than the opinions of IME Dr. Larson.

24. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the testimony of the Claimant and the opinions of Dr. Rafferty and Dr. Benz; and, to reject any testimony and opinions to the contrary.

25. The Claimant has proven, by a preponderance of the evidence that the event of October 5, 2017 constituted an aggravation and acceleration of a pre-existing condition of the Claimant's lower back, which arose out of the course and scope of the Claimant's employment, required medical treatment, and was temporarily disabling.

26. The care and treatment for the Claimant's compensable lower back injury at UCHSC and Orthopaedic & Spine Center of the Rockies was authorized, casually related to the October 5, 2017 injury, and reasonably necessary to cure and relieve the effects thereof.

27. It was stipulated, and the ALJ found that the Claimant's AWW IS $711.16, which yields a TTD benefit of $474.11 per week, or $67.73 per day.

28. As found in Finding No. 18 hereinabove, as of the date of the last session of the hearing, June 25, 2018, the Claimant has been temporarily and totally disabled for aggregate of 256 days. The Claimant continues to be temporarily and totally disabled.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was persuasive and credible. Also, the opinions of Dr. Rafferty and Dr. Benz and concerning work-relatedness, causation, and reasonably necessary treatment were more persuasive and credible than the opinions of IME Dr. Larson. As further found, the Claimant's testimony that he has been unable to work and has not been offered modified employment for the dates specified in Finding Nos. 18 and 25 herein above, concerning TTD was persuasive, credible and, essentially, undisputed. *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005).

Also see Martinez v. Indus. Claim Appeals Office, 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by substantial evidence which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence, to accept the testimony of the Claimant and the opinions of Dr. Rafferty and Dr. Benz; and, to reject any testimony and opinions to the contrary, including the IME opinions of Dr. Larson. The Claimant's testimony concerning TTD was credible and virtually undisputed.

Compensability

c. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of" test is one of causation. If an industrial injury aggravates or accelerates a pre-existing condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals Office,* 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). An injury resulting from the concurrence of a preexisting condition and a hazard of employment is compensable. *H & H Warehouse v. Vicory*, *supra*. *Duncan v. Indus. Claims App. Office*, 107 P.3d 999 (Colo. App. 2004). Even where the direct cause of an accident is the employee's preexisting disease or condition, the resulting disability is compensable where the conditions or circumstances of employment have contributed to the injuries sustained by the employee. *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989). *Also see* § 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225-334 (ICAO, April 7, 1998). As found, based on the totality of the evidence, the event of October 5, 2017 caused an injury to the Claimant's lower back arising out of and in the course and scope of his employment with the Employer, aggravating and accelerating dormant pre-

existing back conditions. Therefore, the Claimant sustained a compensable injury on October 5, 2017.

Medical and Average Weekly Wage

d. As stipulated and found, Dr. Raffery and Dr. Benz were authorized, their medical care and treatment was causally related to the Claimant's low back injury of October 5, 2017, and it was reasonably necessary to cure and relieve the effects of that injury. Also, the Claimant's AWW is $711.16, thus yielding a TTD benefit rate of $74.11 per week, or $67.73 per day.

Temporary Total Disability (TTD)

e. To establish entitlement to temporary disability benefits, the Claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). Claimant's time off from work in this case was not his fault but as a result of the back Injury sustained on October 5, 2017. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant has established entitlement to TTD benefits during the times he was unable to work and modified work was not offered to him specifically, as found in Finding No. 18 hereinabove, as of the date of the last session of the hearing, June 25, 2018, the Claimant has been temporarily and totally disabled for aggregate of 256 days. As of the date of the last session of the hearing, June 25, 2018, past due TTD benefits equal an aggregate amount of $17,338.88.

f. From June 26, 2018, the Claimant continues to be temporarily and totally disabled until at ATP releases him to return to full duty, without restrictions; until he is declared to be at MMI; or until he earns wages in the open, competitive labor market.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on compensability, medical benefits, AWW and TTD benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all of the causally related and reasonably necessary costs of medical care, including the costs of James Rafferty, M.D., and Robert Benz, M.D., subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits at a rate of $474.11 per week, or $67.73 per day, for 256 days, past due, in the aggregate amount of $17, 338.88, which is payable retroactively and forthwith.

C. From June 26, 2018, Respondents shall continue paying the Claimant temporary total disability benefits of $474.11 per week, until cessation or modification thereof is warranted by law.

D. Respondent shall pay the Claimant statutory interest of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of July 2018.

Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury to his cervical region, upper back, or upper extremities on or about April 5, 2017?

II. If Claimant suffered a compensable work injury, what medical treatment is reasonable, necessary, and related to treat said injury?

III. If Claimant suffered a compensable work injury, is he entitled to Temporary Total Disability payments? If so, for what period of time?

STIPULATIONS

The parties stipulated that if a compensable injury occurred, Claimant's Average Weekly Wage is $1304.64. Further, if compensable, Indemnity benefits would commence on 5/3/2017. Further, that the amount of Temporary Total Disability is not ripe for determination by the ALJ, as factual issues remain regarding subsequent employment of Claimant. The ALJ accepted these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Pre-existing Cervical Radiculopathy

1. On September 4, 2015, Claimant obtained flexion and extension x-rays of his cervical spine. These studies established "moderate to advanced degenerative findings from C3-T1" and some "slippage" or retrolistheses at C3-C5. (Ex. K, p. 171)

2. On June 24, 2016, Claimant sought treatment with Dr. Scott Stanley at Denver Vail Orthopedics for a four-year history of cervical, thoracic, and lumbar pain. The Claimant reported pain levels at 7-8/10 that increased to 9-10/10 "when it is severe". He specifically described the character of his pain to be constant pain between his shoulder blades and constant burning, numbness, and tingling down his arms. (Ex. I, p. 143).

3. In his intake forms for the June 24, 2016 evaluation, Claimant documented stabbing pain in his cervical spine, with burning and aching symptoms in his bilateral arms, shoulders, and upper back, and pins and needles in his digits. (Id at p. 149).

4. Claimant testified at hearing that at the time of the June, 2016 evaluation, he was experiencing burning sensations down both arms and into his hands. For this symptom, he took Lyrica.

5. Dr. Stanley had recommended that Claimant undergo a cervical MRI (among other tests), but initially diagnosed the claimant with degeneration of a cervical disc without myelopathy based on x-rays obtained of the cervical spine. Lyrica was recommended for pain management. (Ex. I, pp. 145-146).

6. On June 28, 2016, Claimant underwent a MRI of the cervical spine, which established discogenic changes at C3-C7 and degenerative facet changes-left greater than right-at C3-C7. Foraminal stenosis-left greater than right-was noted at C5-C7. (Ex. K, pp. 167-168).

7. On July 15, 2016, Claimant returned to Denver Vail Orthopedics. He reported cervical pain that *radiates into both shoulders*. After reviewing the MRI, Dr. Knight opined that Claimant had the following diagnoses: cervical spondylosis with radiculopathy, displacement of cervical intervertebral disc, degenerative cervical disc, and cervical radiculopathy. She prescribed tramadol, and recommended a C7/T1 cervical epidural injection. (Ex. I., pp. 137-140)(emphasis added).

8. Claimant obtained a translaminar epidural steroid injection at C7/T1 on August 4, 2016. Thereafter, he reported minimal pain relief. (Ex. J, pp. 160-161). Claimant also testified that his symptoms returned after the first injection.

9. Claimant obtained a second translaminar epidural steroid injection at C7/T1 on September 22, 2016, due to his recurrent symptoms. Once again, Claimant reported no pain relief post-injection. (Ex. J, pp.155-156).

10. Claimant testified that the June 2016 treatment was for a prior work injury in February 2016 which he had reported to his immediate supervisor, Fred Platt. Fred Platt testified at hearing that no such injury was ever reported to him.

11. Claimant originally testified on direct examination that he had returned to baseline after his second injection in 2016. However Claimant indicated on cross-examination that the he had no relief after the second injection.

12. Mr. Platt testified that in late January 2017, Claimant had requested time off in early February of 2017, to obtain injections. Mr. Platt was unable to grant this time off due to scheduling issues. Mr. Platt testified that Claimant had informed him that he needed time off to get some shots in his neck. Specifically, Mr. Platt testified that Claimant told him that "he was getting a cortisone shot in his neck for a bulging disc."

Claimant's Incident of April 5, 2017

13. Claimant now alleges that on April 5, 2017, he sustained an injury to his neck and left upper extremity, when he slipped on the track of an excavator and had to catch his fall with his left arm. There were no witnesses to this injury.

14. The claimant testified he felt a pop in his neck and that he knew something was "immediately wrong."

15. Despite this, Claimant completed his 11.1 hour shift on April 5, 2017 and did not report any injury to his employer on that date. (Ex. L, p. 183).

16. The Claimant also completed a 10.7 hour shift on April 6, 2017 and a 10.4 hour shift on April 7, 2017. Claimant did not report any injury to Employer during either the April 6 or April 7 shifts. (Ex. L, p. 183).

17. Claimant's job tasks (which were performed on April 5-7, 2017) can require heavy lifting of over 50 pounds. (Ex. L, p. 178).

Claimant's First Report of Injury

18. Despite knowing something was "immediately wrong" Claimant did not seek out medical treatment until Monday, April 10, 2017. (Ex. F). Claimant explained at hearing that he waited that amount of time because he wanted to try to work through the injury to see if it would go away.

19. Mr. Platt testified he saw Claimant periodically between April 5 and April 10. Claimant never informed him of any work incident or injury. Mr. Platt testified that, had Claimant sustained an injury, it should have to be reported to him per employer policy.

20. Mr. Platt also testified that Claimant was able to complete all job tasks in the days between the alleged injury on April 5 and the reporting of the alleged injury on April 10, as evidence by company transportation logs. (Ex. L, pp. 189-194).

21. Mr. Platt testified the Claimant's job was a "very physical job" that required lifting heavy objects and sometimes contorting one's body into various positions, including lifting arms overhead.

22. Mr. Platt testified that if an injury was reported to a dispatcher by Claimant, he should have known, because the dispatcher was trained to tell employees to report injuries to Mr. Platt. Claimant testified he did not timely report the injury, because he thought he would try to work through the pain.

23. Claimant testified that he met with Fred Platt on Monday, April 10. In that meeting Mr. Platt informed Claimant that it would be best to put any treatment for injuries under his own personal insurance. Mr. Platt said "that is what the rest of the guys do." Claimant testified that Mr. Platt told him that if he put this under Workers' Compensation, they would deny the whole thing and Claimant would end up having to pay for all of the doctor bills. Claimant testified that he was nervous and didn't want that type of problem and bills. Claimant testified that he had an issue in his lower neck and upper back and instead of running it through Workers' Compensation, 'they' decided (he and Fred Platt) that he go to a chiropractor and pay for treatment with his own personal insurance.

24. Claimant testified that in his nearly 5 years at Wagner Equipment, he never knew of an employee who filed a Workers' Compensation claim. Claimant testified that he believes that was the case because Fred Platt likes to keep a zero incident rate at the branch.

25. Fred Platt testified that Wagner does like to minimize Workers' Compensation claims at Wagner Equipment for the management group. Mr. Platt testified that bonuses are paid to the management team if Workers' Compensation claims are low. No such bonuses were paid out in 2017; he was uncertain if any were paid for 2016.

26. At hearing, Mr. Platt denied ever encouraging any employee to not file a Workers Compensation claim, including Claimant.

Claimant's Failure to Report Pre-existing Conditions to Medical Providers

27. On April 10, 2017, Claimant presented to Chiropractor Bradley Hennen for an initial appointment and evaluation. Claimant testified he found this chiropractor on the internet.

28. In Dr. Hennen's intake form, Claimant reported he "learned about [Hennen's] office" because he was "referred by Dr. Boykins office." Despite filling this out in his own handwriting, Claimant testified this was not correct.

29. In the intake form, Claimant was asked to check a box in the intake form if various symptoms, including pain in back or neck, were "new in the past 3 months." Despite the boxes appearing prominently on the form, Claimant did not check this box. (Ex. F, p. 116).

30. Claimant also left blank a section of the intake form where it asked for any prior x-rays or MRIs. Claimant had had x-rays in 2015 and a MRI in 2016. (Ex. F, p. 119; K, pp. 167-68, 171).

31. At hearing, Claimant then testified this was a mistake, and that he misread the intake form when filling it out. He testified he should have marked that his symptoms were new pain within the past three months. Specifically, he testified "obviously marked the wrong ones, 'cause, even at this point, ***I didn't even realize those boxes were down on that right side. I didn't even notice them." The ALJ notes that Claimant specifically marked an "X" in the "New in past 3 months" box for the question: "Are you having trouble performing your daily activities?"*** (Ex. F, p. 115)(emphasis added).

32. In this intake form filled out on April 10, 2017, Claimant indicated he was seeing this chiropractor because he had a "pinched nerve in center of back between shoulder blades, numbness, tingling." (Ex. F, p. 112).

33. Claimant then testified he told Chiropractor Hennen he had a pinched nerve because it "burn[ed] like crazy all the way down [his] arm" and because he couldn't feel his fingers." Claimant testified he did not have these symptoms previously.

34. However, Claimant's intake form for the June 24, 2016 with Denver Vail Orthopedics appointment states his symptoms were "between shoulder blades a lot of pain, make the nerves down my arms burn and hands go numb." (Ex. I, p. 151).

35. On May 3, 2017, Claimant presented to Centura for an initial evaluation. In his intake form, Claimant specifically responded "no" to the question "have you been treated in the past for this?" (Ex. B, p. 80).

36. On June 27, 2017, Claimant reported to Dr. Finn that, in response to a question of whether he had "any previous injuries or problems to areas that we are seeing you for today" that he only had "slight arthritis above injury." (Ex. D, p. 90).

37. On September 7, 2017, PA Mark Stafford (working with Dr. William Lippert, MD) documented that the Claimant had *"no surgeries or injections to date".* (Ex. C, p. 82). Claimant now denies making such statement to Dr. Lippert's office.

Claimant's Treatment, Post-Reporting

38. Claimant testified that he went to the ER at UC Health in late April because he was in agonizing pain and he couldn't take it any longer due to burning, stabbing pain in his neck and all the way down his arm, down to his last two fingers and the inside of his arm, and up into his armpit. Claimant testified that it was swollen up like crazy and it was the worst pain that he had ever had. Claimant testified that he never had that type of pain prior to this accident.

39. He treated at the ER at UC Health due to this accident on April 29, 2017. (Ex. 4). At this time, the tentative diagnosis was cervical radiculopathy and foraminal stenosis.

40. Claimant then started treating at CCOM. (Ex. 5). Dr. Jay Neubauer is the Authorized Treating Physician in this claim. CCOM, has served as the ATP for over 13 months. Dr. Neubauer opined that the following diagnosis applies due to the April 5, 2017 injury: (1) Injury of brachial plexus, (2) Sprain of cervical spine, (3) Cervical radiculopathy, and (4) Strain rotator cuff, Left Shoulder. (Ex. 5, pp. 163 – 164).

41. Dr. Neubauer opined that based upon his "knowledge of the mechanism of injury (slipping while exiting an excavator and grabbing a handle to catch himself with his left arm) it is more likely than not that the injuries Mr. Mills sustained on 4/5/2017 were caused by the work place accident." (Ex. 5, pp.163 – 164).

42. Dr. Neubauer opined that the following treatment and referrals are recommended to treat the work place injuries in this claim: (1) Pain management specialist recommends cervical injection, and (2) EMG. *Id.* He further opined that his

proposed treatment/referrals are reasonable, necessary, and related to the work place accident. *Id.*

Claimant's Commercial Driving Examination

43. On August 7, 2017, Claimant underwent a medical examination for his commercial driving certification. (Ex. M). In his application, when asked *"Do you have, or have you ever had"* Claimant marked the "NO" box for the following questions:

19. Missing or *limited use* of *arm,* hand, finger, leg, foot, toe

20. *Neck* or back problems

21. Bone, muscle, joint, or *nerve problems* (emphasis added).

44. After filling the questionnaire out, Claimant signed the document "certifying" that the information is "accurate and complete" and that "submission of fraudulent or intentionally false information may subject [him] to civil or criminal penalties." Claimant testified at hearing that he understood that intentionally false information could subject him to civil or criminal penalties. (Ex. M, p. 204).

45. Further, the CDL physical examination conducted by Elizabeth Stroh, FNP-C, MSN, on August 7, 2017 noted that the *Claimant had a **"normal"** exam, including boxes to check for **back/spine, extremities/joints,** and **neurological system.*** (Ex. M, p. 203) (emphasis added). Claimant testified at hearing that the examiner "put me through some tests and I was able to pass it."

Claimant's Testimony Regarding Omissions

46. Claimant testified he made a mistakes on the intake forms for Chiropractor Hennen, stating his injuries were not new in the past 3 months. He also made a mistake by signing the CDL paperwork stating he had no neck or back injuries as of August 7, 2017 (even though this mistake would subject him to civil and criminal penalty).

Objective Testing / Pre- and Post- Injury

47. Claimant underwent a post- injury x-ray of his cervical spine on April 18, 2017. This study was compared against the prior extension/flexion x-ray performed on September 4, 2015. The findings in the 2017 x-ray established there were *"no definitive interval change compared to the exam dated September 4, 2015."* (Ex. K, p. 164)(emphasis added).

48. Chiropractor Chad Abercrombie documented that the April 2017 x-ray showed "a few mm retrolisthesis of C3-C5 *that had not changed from a previous x-ray performed in 2015."* (Ex. G, p. 123)(emphasis added). It was also noted that Claimant "*does not list ever having pre-existing neck* or back problems." *Id.*

49. Dr. Lesnak (Respondent's IME physician) testified the 2016 cervical MRI showed multi-level degenerative disc changes, with multiple areas of narrowing and foraminal stenosis. He testified the 2016 findings were "*moderately severe."*

50. The MRI from 2016 states that Claimant had foraminal narrowing and stenosis C3-C7, left worse than right. (Ex. K, pp. 167-168).

51. The 2017 MRI indicated there were "moderate-to-severe left neuroforaminal stenosis at C3/C4 and C4/C5." This study does not indicate whether it was compared to the 2016 study by the radiologist. (Ex. K, pp. 162-163).

52. In addition to testifying that Claimant's MRI findings were already "moderately severe" in 2016, Dr. Lesnak testified that the 2017 MRI is "the same MRI that was done in 2016. Same findings." Dr. Lesnak concluded there was no objective evidence of an acute injury in those records.

53. Dr. Lesnak testified there was no objective evidence that an injury occurred on April 5, 2017 based on the diagnostic testing. He specifically testified "the diagnostic testing is … unchanged from pre- and post-April 5th, 2017."

54. Further, while Claimant underwent an EMG to evaluate for abnormalities associated with his nervous structures, that examination established no evidence of acute cervical radiculopathy or plexopathy. (Ex. D, p. 86).

55. Dr. Lesnak testified that Claimant had progressive neck pain and bilateral upper extremity symptoms for years, and that Claimant had significant enough pain in 2016 (reported as 7-10 out of 10) that he warranted both a MRI and injections.

Respondents' IME of Claimant

56. Dr. Lawrence Lesnak, DO, performed an IME on Claimant on 8/3/2017 (Ex. A). This IME was four days prior to Claimant's Commercial Driving exam. Dr. Lesnak was qualified as an expert in physical medicine and rehabilitation. Dr. Lesnak testified that Claimant's physical examination at his IME was "quite difficult." He indicated that Claimant would not move his neck or back at all, due to reported pain, and that Claimant had very limited left shoulder motion. Dr. Lesnak opined that this was evidence of 'submaximal effort.'

57. Since Claimant's objective testing status had not changed, Dr. Lesnak testified that he performed psychosocial screening to evaluate the reliability of the claimant's symptom complaints. The screening found the Claimant had an "extremely high level [of] somatic pain complaints" which Dr. Lesnak testified was evidence that Claimant's complaints were not caused by any anatomic or physiologic abnormality. He also testified a somatic disorder typically causes an individual to embellish or exaggerate symptoms, making those reported symptoms unreliable. In this case, Dr. Lesnak testified that in somatic screening, a high level of pain complaints is a 12. Claimant scored a "19"-way above high levels.

58. At hearing, Dr. Lesnak testified that during the IME, Claimant refused to move his neck or back at all, alleging it would hurt him too much:

> …when I saw him, I mean, even when I gently touched the back of his neck, he's jumping off my—stool in pain, yelling and moaning. That's a non-physiologic finding….an abnormal, aberrant pain response….touching one's skin—unless there's an obvious, you know, burn or a deep wound, that shouldn't cause someone to jump off a chair or table.

Surveillance Video of Claimant from 8/15/2017

59. Dr. Lesnak also testified that he had reviewed the surveillance video taken of Claimant on 8/15/2017, and recognized him from this video. He noted that Claimant was "walking around parked cars, getting in and out of cars, driving vehicles on that day." Specifically, he notes that Claimant "reaches behind his head with both arms…sitting up against….the chair of his front seat for a period of time.

60. The ALJ notes that, upon his own review of this video, Claimant, while engaged in apparent routine activities, demonstrates no visible signs of distress at any time; indeed at one point, Claimant places both palms behind the back of his head/neck and appears to lounge back in the driver's seat of his car.

Claimant's IME

61. Dr. Jack Rook performed an Independent Medical Examination on the Claimant on March 19, 2018. (Claimant's Exhibit 7). Dr. Rook reviewed all medical records in this claim and performed a physical examination on the Claimant at that time. *Id.*

62. Rook diagnosed Claimant with the following:

1. Permanent aggravation of cervical degenerative disc disease;

2. Left upper extremity neurogenic pain;

    a. Cervical radiculopathy

    b. Rule out secondary to brachial plexus traction injury.

3. Sleep disturbance secondary to pain. (Ex. 7, p. 191)

63. Dr. Rook opined that based upon his knowledge of the mechanism of injury, after review of the medical records, and after examination of Mr. Mills, that it is more likely than not that the injuries sustained on April 5, 2017 were caused by the workplace accident. He rendered that opinion for the following reasons:

"This patient sustained a significant traumatic event when he fell off of the excavator. He sustained a traction injury to his left arm associated with an acutely painful popping sensation in his neck, following which he developed left upper extremity burning pain and paresthesias, suggestive of nerve injury;

The patient has had unrelenting symptoms since April 5, 2017 that have been of a markedly different quality and intensity as compared to any similar problems that he was having at the time of, and prior to his on-the-job injury;

Based on the patient's history and my review of his medical records, it appears that the cervical symptoms he was experiencing prior to the April 5, 2017 occupational injury was more than likely related to another work injury event that occurred in February 2016 while he was working for the same employer, when he slipped outside of his snowplow;

Mr. Mills was able to work without the need for physical restrictions prior to the occupational injury event of April 5, 2017. He was performing his job (which was in a heavy physical demand level) without the need for any restrictions when he sustained the April 2017 occupational injury;

He had never missed work due to the cervical condition prior to the April 2017 on-the-job injury; and

He was not involved in active medical treatment for his neck at the time of the occupational injury event in 2017." (Ex. 7, pp. 191 – 192).

64. Dr. Rook opined, based on his review of the medical records and after his examination of Mr. Mills, that the work place injury of April 5, 2017 caused/brought about the need for the current treatment. Specifically, Dr. Rook opined that if not for that event, Mr. Mills would not currently require treatment for his neck and left upper extremity. (Ex. 7, p. 192).

65. Dr. Rook further stated:

"This patient has sustained a permanent aggravation of his pre-existing cervical degenerative disc disease and he also likely has a new injury involving his left brachial plexus. The permanent aggravation of the cervical condition has resulted in an immediate need for treatment. The current need for this treatment is the work event that occurred on April 5, 2017. His need for treatment at this time is not representative of a natural progression of a condition that was stable and non-impairing on that date." (Ex. 7, pp. 192 – 193).

Claimant's Need for Treatment

66. Dr. Rook stated the following regarding recommended treatment:

> I believe the patient should proceed with spinal injection therapy. This might include an epidural steroid injection, selective nerve root blocks, or other diagnostic and possibly therapeutic cervical injections. I would recommend a repeat MRI of the cervical spine, as well as a neurosurgical evaluation. If there is no improvement with conservative treatment, I believe that surgical intervention will be needed to treat Mr. Mills' neck and left upper extremity symptoms." (Ex. 7, p. 193).

67. Dr. Lesnak testified that the need for treatment and medical evaluations after the alleged incident was not caused by the reported April 5, 2017 incident. Rather, Dr. Lesnak testified that any need for treatment was related to the progressive symptoms that had existed pre-incident.

68. Dr. Lesnak opined that, even if an incident occurred on April 5, 2017, there was no evidence that the incident caused any acceleration of his pre-existing symptomatic symptoms or pathology.

69. Dr. Rook, opined that Claimant sustained a permanent aggravation of his pre-existing condition and sustained a new injury to his brachial plexus. However, Dr. Lesnak persuasively testified that EMG testing specifically ruled out any injury to the brachial plexus and there was no changes in the x-rays, MRIs or reported symptomology to support either a temporary or permanent aggravation of the underlying pre-existing condition. (Ex. 7, pp.191-192).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the LAJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A Claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on the merits. *Id.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Credibility

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

4. The ALJ finds Claimant to be a patently unreliable historian, both to his medical providers, and at hearing. The ALJ finds that Claimant, despite claims to the contrary, reports pain levels not according to actual pain experienced, but according to the context of his ad hoc circumstances. Despite alleging an immediate, serious injury on the job, Claimant continued to work several days in a demanding position. Once Claimant decided to enter the Workers Comp system (despite Claimant's less-than-credible assertions of being dissuaded by Mr. Platt), he knowingly failed to disclose his history of pre-existing complaints and treatment for similar pain to Chiropractor Hennings, Denver Vail Orthopedics, Centura Health, Dr. Finn's Office, and Dr. Lippert's Office. One omission might be an honest mistake; two omissions becomes careless- and counterproductive to effective treatment. Claimant herein displayed a pattern of nondisclosure which the ALJ finds to be both knowing and self-serving.

5. Claimant also knowingly filled out a Commercial Driver questionnaire, after voluntarily quitting his job, denying any relevant medical issues. He then passed the physical examination. At his IME four days prior, he had been jumping off a stool upon being touched, and refused to move his neck, due to the unbearable pain. Eleven days after his IME, surveillance video shows Claimant engaging in activities wholly inconsistent with his reported pain and disability. Despite all of this, Claimant testified at hearing that his condition had then *worsened* after being forced by the pain to resign his position on 7/17/17. The ALJ finds that Claimant's subjective complaints of pain, without objective evidence in support, renders an accurate medical diagnosis and causation analysis untenable.

Compensability, Generally

6. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *Wherry v. City and City of Denver*, W.C. No. 4-475-818 (I.C.A.O., March 7, 2002). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). A compensable injury is an injury which "arises out of" and "in the course and scope of employment." §8-41-301(1)(b) C.R.S. The term "in the course and scope of employment" refers to the time, place and circumstances

under which the injury occurred. The injury must have occurred in the time and place limits of the employment, and during an activity having connection with the employee's job functions. Additionally, the term "arising out of" establishes that there must be a causal relationship between the employment and the injury. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). Claimant must establish by a preponderance of the evidence that the condition for which he seeks medical treatment for was proximately caused by an injury arising out of and in the course and scope of employment. §8-41-301(1) C.R.S. Claimant also must prove a causal nexus between the disability and the work-related injury. *Singleton v. Kenya Corp*., 961 P.2d 571 (Colo. App. 1998).

7. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates, accelerates, or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse,* 805 P.2d at 1167*.*

Claimant's Pre-existing Condition

8. Claimant had a significant pre-existing condition to his cervical spine and upper extremities that required progressive treatment over the six years prior to the reported incident. Significantly, Claimant's pre-existing condition required a MRI and two epidural steroid injections mere months prior to the reported event. There is insufficient indication in the totality of the record that any incident of April 5, 2017 aggravated, accelerated, or combined with Claimant's ***(significant, and knowingly undisclosed)*** pre-existing conditions to cause the need for medical care or disability. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949).

9. The ALJ also finds persuasive the testimony of Dr. Lesnak that the 2016 and 2017 MRIs were substantially similar, and without evidence of an acute injury. Insufficient diagnostic evidence exists which would establish the presence of an acute injury or aggravation of a prior injury. The objective testing has eliminated an injury to Claimant's brachial plexus. Taken as a whole, the ALJ finds Dr. Lesnak's analysis more persuasive than that of Dr. Rook, and Claimant's ATP. Both were in the unfortunate circumstance of having to rely upon Claimant's subjective complaints of symptoms, without any supporting objective data, in reaching their conclusions.

10. Consequently, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury or aggravation on April 5, 2017 in the course and scope of his employment with the employer.

Medical Benefits/Temporary Total Disability

11. Claimant has not suffered a compensable injury. His claim for medical benefits and Temporary Total Disability benefits is denied and dismissed.

ORDER

It is therefore Ordered that:

1. Claimant's claim for workers compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury on September 14, 2017.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical treatment for her September 14, 2017 injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability indemnity benefits from September 14, 2017 and ongoing until terminated by law.

4. Determination of Claimant's average weekly wage.

5. Whether the treatment provided by the Medical Center of Aurora on October 16, 2017 was reasonable, necessary, and causally related to the September 14, 2017 work injury.

6. Whether the right to select an authorized treating provider has passed to Claimant.

FINDINGS OF FACT

1. Claimant is a 21-year-old female who was employed by Employer as a baker/caterer. Claimant traveled to sites to perform catering work and also worked at Employer's business location baking goods. Claimant began employment on May 6, 2017 and went through training for several weeks. Claimant was paid hourly and overtime for her work. From May 29, 2017 through September 10, 2017 she earned gross wages of $8,542.51.

2. On September 14, 2017 while so employed, Claimant was involved in a motor vehicle accident while on her way to a catering event in Employer's company van.

3. Claimant was in the front passenger seat at the time of the motor vehicle accident. Her sister, also employed by Employer, was the driver. Claimant was wearing her seatbelt and was looking down at her cell phone and over at her sister when the company van they were in was rear ended by another driver.

4. Air bags did not deploy and Employer's van had no damage from the accident.

5. Claimant contends that she was thrown forward and almost hit the dash and that she immediately had neck pain, back pain, and later had headaches, dizziness, and blackouts.

6. The owner of Employer Company, Bob Graham, arrived on scene shortly after the accident. He testified that there was no damage to Employer's van and that there was no damage to the other vehicle involved. He drove Claimant to US Healthworks for evaluation.

7. On September 14, 2017 Claimant was evaluated at U.S. Healthworks by Michael Malmgren, PA. Claimant reported that she was wearing her seatbelt and looking down at a cell phone while the vehicle she was a passenger in was stopped at a light. Claimant reported that another vehicle hit the van she was in from behind. Claimant reported noticing some discomfort but that in 2-3 minutes she had pain, tingling, and numbness in the lower neck on the left and that when she exited the car she noted her lower back to be stiff and sore on the left as well. Claimant reported pain at a level of 8/10. On examination PA Malmgren found no evidence in the neck of ecchymosis, hematoma, deformities, open wounds, or swelling. PA Malmgren found an abnormal posture with neck stiffness or splinting and posterior cervical tenderness, neck muscle tenderness in the paracervical, sternocleidomastoid, and trapezius, he found a positive nerve root cervical compression test, spasms of the thoracolumbar spine on the right, tenderness of the thoracolumbar spine and paravertebral musculature, and restricted range of motion of the back. PA Malmgren diagnosed whiplash injury to neck and lumbar sprain. PA Malmgren expected maximum medical improvement October 30, 2017. PA Malmgren recommended physical therapy and no work through September 18, 2017. *See* Exhibits 10, M.

8. On September 19, 2017 Claimant was evaluated by PA Malmgren. Claimant reported that her pain was at a 7/10 since the motor vehicle accident and that the neck pain was the worst part and the lower back was much less of a problem. PA Malmgren performed a physical examination noting exaggerated head tilt to the left, neck stiffness or splinting, posterior cervical tenderness, paracervical and trapezius neck muscle tenderness, and restricted neck range of motion. PA Malmgren noted that Claimant had scoliosis postural only and that she had no spasms in the thoracolumbar spine or paravertebral musculature. He diagnosed: cervical myofascial strain, and sprain of low back. PA Malmgren continued the restriction of unable to work from September 19, 2017 to September 25, 2017. *See* Exhibits 10, M.

9. On September 25, 2017 Claimant was evaluated by PA Malmgren. Claimant reported that she was really no better since the date of the accident. Claimant reported that dry-needling caused her more pain in the lower back. Claimant reported sharp and dull pain/stiffness in her lower back and limited back motion. Claimant also reported numbness in her neck. Claimant reported pain at a 7/10. PA Malmgren opined that Waddell signs for symptom magnification were positive and that Claimant had the appearance of exaggerated dermal sensitivity not associated with neural anatomical

distribution. PA Malmgren found no spasms of the thoracolumbar spine or paravertebral musculature but tenderness in these areas. He again anticipated maximum medical improvement October 30. He noted that he performed a careful examination the areas of complaint and found a head tilt to the left with an elevated left shoulder. He noted that Claimant was wearing the stay-put heat pack that was supplied to her on her left lower back and that after removal, Claimant presented with a bending to the left side. PA Malmgren noted that very light stroking of the cervical and lumbar area caused a flinching motion and complaints of pain that were out or proportion to the mechanism reported to have caused the injury. PA Malmgren released Claimant to modified duty work noting that she had to take a 3-5 minute break away from standing every hour and that she was limited to lifting, repetitive lifting, and carrying at 5 pounds, standing for 4 hours per day, and pushing/pulling 0 pounds. *See* Exhibits 10, M.

10. On October 4, 2017 Claimant was evaluated by Lori Rossi, M.D. Claimant reported that she was in a catering van that was rear ended by an SUV and that the SUV had front end damage and the van had mild damage. Claimant reported her injury was worse and that she had neck and low back pain. On examination Dr. Rossi found ecchymosis of the left side of the neck, and ecchymosis and scars- bilateral multiple areas of healing subQ abrasions and ecchymosis in the thoracolumbar spine and/or adjacent tissues. Dr. Rossi noted an abnormal posture with stiff neck, loss of cervical lordosis, and minimal active range of motion. Dr. Rossi found spasms of the neck muscles in the paracervical, sternocleidomastoid, and trapezius. Dr. Rossi also found spasms in the thoracolumbar spine and paravertebral musculature with tenderness in those areas. Dr. Rossi opined that it was difficult to assess due to Claimant's pain. Dr. Rossi opined that Claimant had an extremely rigid cervical spine and lumbar spine posture with minimal active range of motion due to pain and stiffness. Dr. Rossi noted multiple left neck and back abrasions to the sub Q areas with white discoloration. Dr. Rossi ordered x-rays for the neck and low back. Dr. Rossi noted that given the degree of splinting, size, number, and extent of abrasions and contusions now present twenty days out, she felt the complaints were legitimate. Dr. Rossi provided work restrictions of 3-5-minute break away from standing every hour, and maximum lifting, repetitive lifting, and carrying of 5 pounds. She also continued the restriction provided by PA Malmgren of standing 4 hours per day. *See* Exhibits 10, M.

11. On October 3, 2017 Claimant was mailed a Notice of Contest indicating that her claim had been contested/denied for the reason that the injury/illness was not work related. *See* Exhibit F.

12. On October 16, 2017 Claimant went to the emergency department of the Medical Center of Aurora. Claimant reported diffuse back pain from her upper back all the4 way down to her lower spine following a car accident on September 14. On exam, Claimant was found to have diffuse tenderness of the thoracic and lumbar spine with diffuse midline tenderness and paraspinous muscle tenderness. Claimant was noted to have full range of motion of her neck without pain or difficulty and full flexion and extension of her spine. It was noted that Claimant and her mother wanted x-rays done since they had not been done since the accident. X-rays of the cervical spine, thoracic spine, and

lumbar spine were performed and were negative. Claimant was referred for further care as an outpatient and Claimant was found to not have an acute medical emergency requiring further emergency management. The clinical impression provided was thoracic spine strain and lumbar strain. *See* Exhibit 11.

13. On October 18, 2017 Employer mailed Claimant a letter noting that the claim had been denied and noting that the restrictions she was given included a 5-pound lift limit and a required 3-5 minute break every hour. Employer indicated they had no position that would comply with those restrictions. Employer encouraged Claimant to consult her own physician to examine her and certify that her condition had improved and that the restrictions had been lifted and indicated that her job would be held open for another ten-day period. *See* Exhibit Q.

14. Claimant's restrictions were not removed and she was terminated from employment with Employer as they could not accommodate her restrictions.

15. On December 22, 2017 Lawrence Lesnak, D.O. performed an independent medical evaluation. Claimant reported that she was the restrained front seat passenger traveling in a GMC box truck company vehicle that was stopped in traffic. Claimant reported that she was looking down at her phone when the car was rear ended by another GMC box truck. Claimant reported that no airbags deployed and that she was able to get out of the vehicle under her own power and developed acute neck pain. Claimant reported that she currently had a constant pinching sensation in her left mid back/interscapular region diffusely with frequent muscle spasms in that same region Claimant denied any specific neck or low back symptoms. Claimant reported occasional very mild left lateral arm numbness. Claimant reported her pain level of 75/100. Dr. Lesnak reviewed medical records and performed a physical examination. *See* Exhibit K.

16. Dr. Lesnak opined that on musculoskeletal examination Claimant exhibited numerous pain behaviors and non-physiologic findings throughout his evaluation and that she provided very poor effort with active cervical spine range of motion and that Claimant was unwilling to perform any range of motion of the cervical spine greater than approximately 10 degrees because of complaints of left upper back pain. Dr. Lesnak opined that when Claimant was distracted she appeared to exhibit essentially normal motion of her neck and right upper extremity but that during attempts at formal range of motion testing, Claimant was only willing to perform minimal active range of motion in these regions which was completely non-physiologic. Dr. Lesnak provided the impression of: subjective complaints of constant diffuse upper back and mid back pains with frequent muscle spasms; possible mild cervical/thoracic strain/sprain injury that occurred as a result of a motor vehicle accident during work hours on 9/14/17; no current objective findings that correlate with subjective complaints; possible residual left sided trapezius myalgias without clinical findings. Dr. Lesnak opined that the examination was frequently inconsistent and severely effort dependent. Dr. Lesnak noted that Claimant's psychosocial screening tests were at a very extremely high level of depressive symptoms and a very extremely high level of somatic complaints strongly suggestive of the

possibility of an underlying somatic disorder/somatoform disorder; likely conversion disorder. *See* Exhibit K.

17. Dr. Lesnak opined that Claimant did not require any further diagnostics or treatment for her neck or back region and the occupational incident of 9/14/17. He strongly recommended Claimant undergo a formal psychologic evaluation for a likely conversion disorder and likely somatic disorder/somatoform disorder but opined that the likely psychologic/psychiatric disorders were completely unrelated to the occupational incident of 9/14/17. *See* Exhibit K.

18. On February 1, 2018 John Hughes, M.D. performed an independent medical examination. Claimant reported that she was a restrained front passenger of a vehicle that was slowed and coming to a full stop when it was hit from behind and that she had neck and low back pain immediately after the collision. Claimant reported being taken to a medical facility where she was examined and given medications. Claimant reported that after evaluation by Dr. Rossi on October 4, further medical evaluation and treatment were denied and that the only other treatment she had was an emergency department assessment in October. Claimant reported continued symptoms of dorsal and left posterior neck pain that was constant at a 6/10 pain level and that it radiated into her left arm. Claimant reported that when she turned her head to the left, it felt like her neck wants to pop. Claimant reported low back constant mid and lower lumbar pain at a 6/10. Claimant's mother reported a history of scoliosis but no other family history of spine injuries or diseases. Claimant reported that she used marijuana 2-3 days per week and that it was kind of helpful for her pain. Dr. Hughes noted some exaggerated pain behaviors, particularly a guarded posture tilting her head to the left. He noted that Claimant's posture was remarkable for a left lateral flexion of 13 degrees and extremely hypertonic posterior trapezius musculature on the left with palpation. Dr. Hughes also found other cervical spine ranges of motion limited. Dr. Hughes found no palpable paraspinous muscular hypertonicity in the thoracolumbar spine and found active ranges of motion near normal. Dr. Hughes assessed: motor vehicle collision with multiple injuries; lumbosacral spine sprain/strain, essentially resolved over time; and cervicothoracic spine sprain/strain with persistence of left paracervical hypertonicity and scapular dyskinesis meriting further medical evaluation and treatment. See Exhibits 12, L.

19. Dr. Hughes opined that Claimant had a rather straightforward history of primarily cervicothoracic spine injuries sustained as a result of a motor vehicle collision. He opined that was a fairly typical mechanism of injury and noted the left trapezius hypertonicity and postural abnormalities were noted in Claimant's case and documented in the medical records from fairly immediately subsequent to the motor vehicle collision. He opined that the treatment so far had been reasonable, necessary, and related to the motor vehicle collision but opined that Claimant was not yet at maximum medical improvement. Dr. Hughes recommended further medical evaluation before a course of treatment including cervical spine and lumbar spine MRIs and that further treatment may be directed based on the findings of the MRIs. He anticipated Claimant would need 2-3 months of prescriptive care and non-surgical care. See Exhibits 12, L.

20. Dr. Lesnak testified by deposition. Dr. Lesnak testified that during his examination of Claimant she was barely willing to move her head or cervical spine in any plane but that when Claimant was talking to her sister in the exam room, Claimant was turning her head to the side to talk with her sister and functioning fairly normally. Dr. Lesnak noted that although Claimant reported muscle spasms, he did not identify any type of specific trigger points or muscle spasms on exam. Dr. Lesnak noted that based on the descried mechanism of the incident and the reports from the providers who saw Claimant initially on the same day as the motor vehicle accident, it was possible that Claimant may have had a mild sprain/strain of the cervical/thoracic region. Dr. Lesnak testified that the reports from October 16, 2017 showed Claimant had full range of motion of her neck and spine without any pain, two months before he evaluated her and closer in proximity to the motor vehicle accident.

21. Dr. Hughes also testified by deposition. He opined that Claimant's history seemed consistent with a spine injury with persistence of symptoms. Dr. Hughes noted that Claimant had some exaggerated pain behaviors, particularly including a left lateral flexion posture of her head. Dr. Hughes opined that Claimant had sustained multiple injuries in the motor vehicle collision including a lumbosacral spine strain/sprain that had resolved over time and a cervical spine injury with persistence of left paracervical hypertonicity and movement disorder of the left scapula, scapular dyskinesis, meriting further medical evaluation and treatment. Dr. Hughes testified that Claimant had objective findings of really, really tight musculature in the left posterior trapezius. Dr. Hughes opined that Claimant's cervical spine injury made sense in terms of a motor vehicle collision. Dr. Hughes testified that a cervical spine strain or sprain can resolve itself without any treatment but opined that it did not in Claimant's case. Dr. Hughes opined that Claimant could not have volitionally tensed up her posterior trapezius muscle like what he found on examination. Dr. Hughes testified that despite perceiving Claimant's pain behaviors as exaggerated, he still was able to make a diagnosis and believed Claimant was actually injured

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even

if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established, by a preponderance of the evidence that she sustained a work related injury on September 14, 2017 when she was involved in a work related motor vehicle accident while traveling from Employer’s place of business to a client’s location to provide catering services. Immediately after the accident Claimant had pain in her neck and back. Although Claimant appears to have some non-physiologic findings and some subjective reports out of proportion to objective findings, Claimant also has objective findings consistent with the mechanism of injury. The testimony of Dr. Hughes is found credible and persuasive and consistent with the overall weight of the evidence. Claimant has established that she sustained a compensable injury.

Reasonable and Necessary Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and

necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury on September 14, 2017. Thus, Respondents are liable for reasonable, necessary, and related medical treatment to cure and relieve her from the effects of the injury. As found above, after Claimant's claim was denied she sought x-rays and treatment at the Medical Center of Aurora. The x-rays were part of the imaging requested by Dr. Rossi prior to the denial of the claim and the treatment received at the Medical Center of Aurora is specifically found to be reasonable, necessary, and related to her September 14, 2017 injury.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). Temporary total disability benefits continue until the first occurrence of Claimant reaching maximum medical improvement, the attending physician giving the claimant a written release to return to regular employment, or the termination of employment for which the claimant is responsible. *See* § 8-42-105(3), C.R.S.

As found above, Claimant was unable to return to work and was placed on a no work restriction for 11 days following the accident. Once she was released to return to work with restrictions, Employer was unable to accommodate Claimant's restrictions and Employer failed to offer Claimant modified duty work within her restrictions. Claimant was terminated from employment shortly thereafter. Claimant has not yet been placed at maximum medical improvement, has not been released to regular duty, and was terminated because of her medical restrictions and was not responsible for termination. Thus, Claimant has established an entitlement to temporary total disability benefits from the date of injury and ongoing until terminated pursuant to law.

Authorized Treating Provider

Respondents have the right in the first instance to select the physician who attends an injured employee. *See* § 8-43-404(5)(a)(I)(A). Respondents are required to provide a list of designated providers from which the claimant may select a physician within seven days of notice of injury. If respondents fail to do so, the injured worker may select an authorized treating physician of the workers' choosing. *See* W.C.R.P. 8-2(A), 8.2(D).

As found above, on the date of the motor vehicle accident, the owner of Employer arrived to the scene and drove Claimant to a clinic for evaluation. Claimant is credible and persuasive that she was never provided with a list of designated providers, and that one was not provided within seven days of the notice of injury to Employer. As such, Claimant has demonstrated that the right to select an authorized treating physician has passed to her.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Avalanche Industries, Inc. v. Clark, supra*; *Campbell v. IBM Corp.*, *supra*.

Wage records show that between May 29, 2017 and September 10, 2017 Claimant earned gross wages of $8,542.51. This was during a period of 15 weeks and amounts to an average weekly wage of $569.50. The ALJ finds that this is a fair approximation of Claimant's wage loss and diminished earning capacity. The ALJ removed two pay periods that were substantially lower pay that reflected Claimant's initial training period. Using the remaining pay periods is a fair way to approximate Claimant's wage loss and diminished earning capacity given that her schedule and hours varied.

ORDER

It is therefore ordered that:

1. Claimant has established, by a preponderance of the evidence, that she sustained a compensable work related injury on September 14, 2017.

2. Claimant has established, by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical treatment to treat her September 14, 2017 work injury including, but not limited to, the treatment provided at the Medical Center of Aurora.

3. Claimant is entitled to TTD benefits from the date of injury and ongoing until terminated pursuant to law.

4. Claimant's average weekly wage is $569.50.

5. The right to select an authorized treating provider has passed to Claimant.

6. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Respondent's request for recoupment of overpayment in the amount of $6,967.54.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted injury on February 4, 2014.
2. The authorized treating physician (ATP) placed Claimant at maximum medical improvement (MMI) on April 13, 2017. The ATP assigned a 23% scheduled rating. Claimant had been receiving temporary total disability (TTD) benefits, which terminated due to MMI. Thereafter, Respondent commenced permanent partial disability (PPD) benefits. (R's Ex. B.) Respondent's filed a Final Admission of Liability on May 2, 2017, consistent with the date of MMI and rating provided by the ATP. (R's Ex. B.)
3. Claimant requested a Division-sponsored independent medical examination (DIME). The DIME physician agreed that Claimant reached MMI, but assigned an earlier MMI date of March 14, 2017. The DIME physician also assigned a lower scheduled rating of 9%. Respondent admitted consistent with the DIME physician's opinions. (R's Ex. A.) Because Respondent paid TTD through April 12, 2017, the DIME physician's opinion resulted in an overpayment of TTD from March 14, 2017 through April 12, 2017, in the amount of $3,751.79. Because Respondent paid the 23% scheduled rating, subject to the statutory cap, Respondent overpaid PPD benefits as well, in the amount of $3,215.75. (R's Ex. A.)
4. The combined overpayment equals $6,967.54, which Respondent asserted on the FAL dated December 21, 2017. Claimant did not object to the FAL.
5. At hearing, Respondent requested recoupment of the overpayment. Counsel for Claimant agreed that the overpayment calculation is correct.
6. Claimant testified regarding his current financial situation and Respondent's submitted Claimant's wage records: Claimant's testimony and wage records (R's Ex. C.) established the following:

- Claimant remains employed with Employer;
- Claimant earns approximately $75,000 annually;
- Claimant earns gross wages of approximately $2,983.52 every two weeks;
- After deductions for taxes, insurance, 401(k), and his FSA, Claimant's total net pay every two weeks is approximately $1,796.80, which equates to approximately $3,893.07 per month.
- Claimant's mortgage is approximately $1,500 per month;
- Claimant does not have car payments;
- Claimant lives with his wife, who is two months retired, along with a 25 year old son;
- Claimant pays approximately $3,000 per semester for his son's education, which equates to approximately $500 per month;
- Claimant has $34 in his bank account;
- Claimant has approximately $106,000 in a 401k;
- Claimant has a pension from a previous employer;
- Claimant testified that he has no other assets other than those listed above;
- Claimant did not testify regarding any additional liabilities or expenses.

7. There was no testimony elicited regarding Claimant's ability to access the funds contained in his 401k at this time.
8. Claimant's 401k is not an available liquid asset to be considered in fashioning a repayment schedule.
9. Based on Claimant's testimony and wage records, Claimant's net monthly income is approximately $3,893.07 and his monthly expenses for his mortgage and son's education total approximately $2,000 per month. Therefore, Claimant has approximately $1,893.07 remaining each month to pay other expenses.

10. Although Claimant did not testify as to the amount of his other expenses, the ALJ infers from the limited available assets of $34.00 in his bank account that Claimant has limited resources available to pay back the overpayment in either a lump sum or at a rate of $1,000.00 per month as requested by Respondent.

11. However, Claimant's failure to testify about additional monthly expenses such as food, utilities, car expenses, or minimum payments on any other liability, etc., hinders the ability of this ALJ to consider Claimant's complete financial

picture in fashioning a repayment schedule different from the one outlined below.

12. Claimant was overpaid $6,967.54.

13. Based on the evidence submitted at hearing, the ALJ finds Claimant has the ability to repay the overpayment.

14. Claimant shall repay the overpayment at a monthly rate of $300 until the overpayment has been fully repaid.

15. Claimant shall pay Respondent's $300 per month for 23 consecutive months and then a final payment of $67.54 in the 24th month.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

Unless stated otherwise, the burden of proof is a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Overpayment

The meaning of the statutory definition of "overpayment" in § 8-40-201(15.5), C.R.S. is clear and unambiguous. *Simpson v. Indus. Claim Appeals Office*, 219 P.3d 354 (Colo. App. 2009), *rev'd on other grounds*, 232 P.3d 777 (Colo. 2010). Section 8-40-201(15.5) states:

> "Overpayment" means money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which results in duplicate benefits because of offsets that reduce disability or death benefits payable under said articles. For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received disability or death benefits under said articles.

"Generally, an 'overpayment' is anything that has been 'paid' but is not 'owing as a matter of law.'" *Cooper v. ICAO*, 109 P.3d 1056 (Colo. App. 2005). Further, in *Simpson*, the Court considered the statutory definition of "overpayment" in § 8-40-201(15.5) and found it provided for three distinct categories of overpayment:

> The statute makes clear that the phrases are disjunctive such that three categories of possible overpayment are included in the statutory definition: one category is for overpayments created when a claimant receives money "that exceeds the amount that should have been paid"; the second category is for money received that a "claimant was not entitled to receive"; and the final category is for money received that "results in duplicate benefits because of offsets that reduce disability or death benefits" payable under articles 40 to 47 of Title 8. § 8-40-201(15.5).

See *Simpson*, 219 P.3d at 359.

In *Marquez v. Americold Logistics*, W.C. No. 4-896-504-04 (ICAO August 7, 2014), the ATP assigned a 12% whole person rating. Respondent admitted and paid PPD benefits totaling $19,213.82. Thereafter, a DIME assigned a zero impairment rating. Respondent admitted to the zero rating and asserted a $19,213.82 overpayment. Claimant objected. The ALJ concluded Respondent correctly asserted an overpayment. The ICAO affirmed.

In *Turner v. Chipotle Mexican Grill*, W.C. No. 4-893-631-07 (ICAO February 8, 2018), Respondent admitted and paid TTD beginning July 16, 2012. A 24-month DIME

took place on October 20, 2014. The DIME physician opined that Claimant reached MMI on June 14, 2012. Respondent admitted consistent with the DIME opinion, which resulted in $97,614.12 in TTD being paid after MMI. Accordingly, Respondent asserted an overpayment and sought recoupment. The ALJ granted Respondent's request. The ICAO affirmed.

The same reason and result applies here. The overpayment results from (1) an earlier MMI date and (2) a lower impairment rating. The ICAO concluded in both instances that such payments constitute on "overpayment". Claimant's argument to the contrary must be rejected as contrary to law.

Claimant asserts that Respondent is only entitled to prospective relief. Claimant is mistaken. Sections 8-43-303(1) and (2), C.R.S., expressly provide for the recovery of overpayments, even as to "moneys already paid." In *Haney v. Shaw, Stone & Webster*, W.C. No. 4-796-763 (ICAO, July 28, 2011), the ICAO held that in the case of an overpayment an ALJ has the authority to remedy the situation by ordering repayment. The ICAO explicitly rejected the claimant's argument that an ALJ was prohibited from requiring a retroactive reimbursement of admitted benefits, citing to the *Simpson* case.

As noted by Respondent's, recoupment of overpayments can be pursued via the reopening procedure in §§ 8-43-303(1) and (2), and repayment is mandatory upon a prima facie showing of an overpayment. While the statute states "No such reopening shall affect the earlier award as to moneys already paid," it goes on to say "except in cases of fraud **or overpayment**." Sections 8-43-303(1) and (2), C.R.S. (Emphasis added). Thus, in the case of a reopening on the issue of overpayment, a judge may order a claimant to pay back such moneys, even if it affects an earlier award. Respondent persuasively contends that if repayment can be required under these circumstances on reopening, it can certainly be required during the pendency of the claim, as is the case here.

Further, once the existence of an overpayment is proven, an ALJ can issue an order requiring repayment. Section 8-43-207, C.R.S. states:

> (1) Hearings shall be held to determine any controversy concerning any issue arising under articles 40 to 47 of this title. In connection with hearings, the director and administrative law judges are empowered to:
>
> [. . .]
>
> (q) Require repayment of overpayments.

Claimant refers to *United Airlines v. Industrial Claim Appeals Office*, 312 P.3d 235 (Colo. App. 2013), arguing that the opinion in that case supports her position. However, that case had a uniquely different set of facts that distinguish it from the matter at hand. The *United Airlines* case involved an injured worker who received over $99,000 in TTD benefits before she was assigned an impairment rating that would limit her indemnity benefits to $75,000 pursuant to § 8-42-107.5, C.R.S. In affirming there was no overpayment, the Court of Appeals relied heavily on § 8-42-105(3), C.R.S., which states that TTD payment "shall continue" until one of four qualifying events occurs. Since TTD payments could not be stopped pursuant to the statute, they

continued, and the court held that there was no provision in the Workers' Compensation Act requiring TTD benefits exceeding the statutory cap to be repaid.

The ALJ concludes Respondent has proven the existence of an overpayment in this case and Respondent is entitled to recover the overpayment. Respondent has proven Claimant was overpaid TTD from March 14, 2017 through April 12, 2017, in the amount of $3,751.79, and that Clamant was overpaid PPD benefits in the amount of $3,215.75. Therefore, the ALJ concludes Claimant was overpaid $6,967.54

Overpayment Repayment Terms

The ALJ has the discretion to determine repayment terms. *See Louisiana Pacific Corporation v. Smith*, 881 P.2d 456 (Colo. App. 1994) (holding that the ALJ did not abuse his discretion by prorating the repayment over claimant's expected life span where the recovery rate was not mandated by statute and the ALJ's order was supported by substantial evidence and plausible inferences drawn from conflicts in the record); *Smith, supra* ("Concerning claimant's assertion that the recoupment schedule in onerous, the ALJ has discretion to fashion a remedy, and claimant has not demonstrated any abuse of that discretion*"); In re Claim of Schramek,* W.C. No. 4-601-867 (2001); *In re Claim of Reekstin-Martinez*, W.C. No. 4-832-902 (May 9, 2013).

The ALJ found that Claimant's 401k is not an available or liquid asset which this ALJ can consider - or require Claimant to use – to satisfy the overpayment. There was no testimony regarding Claimant's ability to access his 401k retirement account. Moreover, a request for such is tantamount to a request for an order to circumvent the protection of pension and retirement plans from creditors as set forth in § 13-54-102(1)(s), C.R.S., and circumvent the non-alienation provisions of the Employee Retirement Income Security Act (ERISA), 29 U.S.C. § 1001, et seq. (1994). See also 26 U.S.C. § 401, et seq. (1994). Therefore, the ALJ concludes that Claimant's 401k is not an available liquid asset which can be considered in fashioning the terms of repayment.

The ALJ found that based on Claimant's testimony and wage records, Claimant's net monthly income is approximately $3,893.07 and his monthly expenses for his mortgage and son's education total approximately $2,000 per month. Therefore, Claimant has approximately $1,893.07 remaining each month to pay other expenses.

Although Claimant did not testify about other expenses, the ALJ inferred from the limited available assets of $34.00 in his savings account that Claimant has limited resources available to pay back the overpayment in either a lump sum or at a rate of $1,000.00 per month as requested by Respondent.

However, Claimant's failure to testify about additional monthly expenses such as food, utilities, car expenses, and any minimum payments for any other liabilities, etc., hinders the ability of the ALJ to consider Claimant's complete financial picture in fashioning a repayment schedule other than the one set forth in this Order. Although Claimant contends in his position statement that he is the sole breadwinner, because his wife recently retired, there was no testimony elicited from Claimant as to whether she pays any of the other monthly expenses, such as food, utilities, and car expenses, etc., from her own savings, retirement, or other resources.

Therefore, based on the evidence presented at hearing, the ALJ concludes Claimant shall repay the overpayment at a rate of $300 per month.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has been overpaid $6,967.54.
2. Claimant shall pay Respondent's $6,967.54 at the rate of $300 per month for 23 consecutive months and then a final payment of $67.54 in the 24th month.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 25, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Bennett Machanic, M.D. that she reached Maximum Medical Improvement (MMI) on January 19, 2017.

II. Whether Claimant has proven entitlement to the L5-S1 fusion surgery recommended by unauthorized providers.

III. Whether Dr. Machanic's report should be set aside and a new IME physician panel issued given Claimant's prior success in overcoming Dr. Machanic's April 15, 2015, DIME opinions.

IV. If Claimant failed in overcoming the DIME, whether Claimant proved entitlement to the L5-S1 fusion surgery as maintenance care.

V. Whether Claimant has proven entitlement to a change in authorized provider.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant suffered an accepted injury to her mid-low back when she slipped on ice while working on February 3, 2014. (Respondents' Exhibit (hereinafter "R. Ex." A)

2. On February 3, 2014, Julia Balderson, PA-C of Concentra evaluated Claimant and noted Claimant had lower back and mid back pain. Claimant was tender to palpation over the bony processes of the spine in the mid thoracic and the lumbar region. She was also tender to palpation over the paraspinal musculature on the back. Ms. Balderson specifically noted Claimant denied any radiation of pain into her legs, denied any numbness or tingling in the back of the legs, denied any saddle anesthesia, and denied any bladder or bowel dysfunction. Ms. Balderson reviewed x-rays and stated that she questioned a thoracic compression fracture. She ordered a CT scan to rule out further injury. Ms. Balderson assessed Claimant as having a back contusion and questionable compression fracture of thoracic vertebrae.

3. On February 3, 2014, Dr. Bao Nguyen read Claimant's thoracic spine x-rays as showing no vertebral fracture, compression deformity or focal kyphosis.

4. On February 4, 2014, Claimant returned to Conentra and was evaluated by Nickolas Curija, PA-C. Claimant continued complaining of back pain, but denied having any numbness, tingling, or weakness into her lower extremities. There is also no mention of any neck pain.

5. On February 10, 2014, Claimant returned to Concentra and saw PA-C Balderson. The assessment remained lumbar and thoracic back contusion and strain. Claimant still denied having any radicular symptoms into her lower extremities and denied having any neck pain and symptoms into her upper extremities.

6. On March 7, 2014, Dr. Sarah Harvey released Claimant to modified duty with restrictions. On March 19, 2014 Nickolas Curcija, PA-C noted Claimant was having more pain since she had been back to work. Claimant had pain in the lumbar spine with all range of motion, and was reduced in all directions. He provided Claimant work restrictions. During subsequent visits to P.A. Curcija and Dr. Don Aspegren, they noted that Claimant continued to report discomfort in the thoracic, lumbosacral and hip region.

7. On April 9, 2014, Claimant returned to see PA-C Curcija. Claimant was working within her restrictions and felt that the restrictions helped her back. She continued to deny any radicular symptoms into her lower extremities. PA-C Curcija's assessment at that time was lumbar contusion and anterolisthesis at L5/S1.

8. On April 23, 2014, Claimant was again evaluated by PA-C Curcija. At this visit, Claimant complained of some pain radiating into her right buttock and right thigh. PA-C Curcija did, however, note Claimant did not have any leg weakness, numbness, saddle paresthesia, fecal or urine incontinence, etc.

9. On May 14, 2014, Claimant returned to PA-C Curcija. She did not complain of any symptoms radiating into her lower extremities. She did, however, begin to complain of neck pain.

10. On May 22, 2014, Claimant was evaluated by Dr. Robert Kawasaki. His impression of Claimant's condition included lumbar and sacral contusions. He also noted that the patient appears to be doing well, even though she said she was not improving. He noted only minimal findings and anticipated a quick recovery and return to full duty work within about 4 weeks.

11. On May 28, 2014, Ms. Ziomek noted that Claimant's low thoracic and lumbar area felt worse. On July 18, 2014, P.A. Curcija noted that Claimant had tenderness in the thoracic spine and that she had some cervical pain.

12. On June 27, 2014, Claimant was evaluated at Concentra. Claimant complained of back pain and neck pain. She also completed a pain diagram and noted neck and back pain. She did not, however, note any symptoms going into her upper or lower extremities.

13. On August 6, 2014, Claimant completed another pain diagram and noted only mid back and back pain. She did not note any neck pain or symptoms in her upper or lower extremities.

14. On September 16, 2014, Dr. Ericson Tentori evaluated Claimant and noted she had tenderness with palpation at the upper thoracic region and lower lumbar/lumbosacral region. Dr. Tentori assessed Claimant as having lumbar and sacral region contusions, myofascial pain/irritation involving the thoracic spine/shoulder girdles, and development of chronic back pain. Dr. Tentori

recommended Claimant be reevaluated by Dr. Kawasaki prior to consideration of case closure.

15. On November 17, 2014, Dr. Kawasaki performed an EMG/NCV to rule out lumbosacral radiculopathy, plexopathy, and compression neuropathy. The testing was normal.

16. On December 4, 2014, Dr. Kawasaki placed Claimant at maximum medical improvement. He also determined Claimant had a 5% whole person impairment for specific disorders of the lumbar spine. (R. Ex. E, Bates 49).

17. Based on Claimant being placed at MMI, Respondents filed a Final Admission of Liability and Claimant requested a Division IME.

18. On January 6, 2015, Dr. Tentori noted Claimant was frustrated with Dr. Kawasaki because a thoracic spine MRI was never obtained during the course of her claim. Dr. Tentori stated it was reasonable to obtain a thoracic spine MRI to ensure Claimant did not sustain a compression fracture as a result of the original work injury, as an explanation for Claimant's ongoing thoracic spine regional pain.

19. On February 5, 2015, Dr. J. Raschbacher stated that it would be reasonable to obtain a thoracic MRI and see if it had any clear objective findings that would mandate further care or evaluation or other change in her previously delineated MMI date.

20. On March 3, 2015, Dr. Tentori referred Claimant for a thoracic MRI to rule out disc pathology. Dr. Tentori stated that if the MRI revealed any significant pathology, then it would be potentially conceivable that Claimant's claim would not be at MMI and that Claimant may require additional treatment and/or provision of permanent physical impairment based on thoracic spine-related issues.

21. An MRI of Claimant's thoracic spine, taken on March 9, 2015, revealed subtle rightward disc displacement at T7-8, and a T8 remote compression fracture deformity, about 50%. There was also a tiny hemangioma associated with T8.

22. In March 2015, Claimant underwent a follow-up x-ray of the thoracic spine, which demonstrated a T8 remote compression fracture of about 50%. Dr. Kawasaki opined this was not related, especially given the original films of the thoracic spine were negative for compression fracture. (R. Ex. E, Bates 49)

23. On March 19, 2015, Dr. Kawasaki noted Claimant had a thoracic compression fracture at T8. Dr. Kawasaki stated, "Thoracic CT scan revealed the compression fracture seen at this point, and there may be evidence to help determine acuity. With the patient's mechanism of injury and initial evaluation suspecting thoracic fracture, this would be significant." However, Dr. Kawasaki also stated: "At this point, there would not be any specific treatments to perform for the thoracic fracture." He also noted that Claimant had tenderness to palpation in the mid-thoracic region and the lower lumbar segments into the lumbar region of the lumbosacral junction. He also noted that she had tenderness to palpation most significantly over the sacroiliac joint region. She noted her pain level was 4/10. There was no mention of a pain radiating into her lower extremities. Dr. Kawasaki did recommend a sacroiliac joint injection.

24. Claimant disagreed with Dr. Kawasaki's opinions and applied for a Division IME (DIME). Dr. Bennett Machanic ultimately performed the DIME exam.

25. On April 15, 2015, Dr. Machanic issued his DIME report, which agreed with Dr. Kawasaki's opinions. Dr. Machanic assigned Claimant a 9% whole person impairment rating for the lumbar spine, with 4% of the impairment being for lost range of motion. Dr. Machanic opined that as the original thoracic films did not demonstrate a compression fracture, that the compression fracture was new and unrelated to the subject injury. (R. Ex. E)

26. On June 22, 2015, in an addendum report, Dr. Nguyen reviewed the x-rays a second time and stated, "In retrospect, there is a shallow wedge deformity of the superior endplate of a mid-thoracic vertebral body, possibly T8, visible only on the lateral view."

27. On October 1, 2015, Claimant was evaluated by Dr. Kawasaki. Dr. Kawasaki noted that Claimant was seen for a follow up evaluation. He noted that:

> She has some continued pain. She has had primarily low back pain; however, now is increasing her pain complaints, expanding into the bilateral lower extremities. The patient is reporting burning sensations and numbness in her feet. ***Looking back through her chart and pain diagrams, which the patient fills out at every visit, the patient did not have bilateral lower extremity burning and pins-and-needles sensation and reported numbness in her feet until the last visit. At the last visit, on 09/08/15, she had a mark for some burning sensation in her buttock and an ache in her right knee.*** (Emphasis added.)
>
> The patient is also indicating that she is having increased pain in the mid-thoracic region. Also reporting pain in her neck and shoulder girdles and some pain, numbness, tingling, and paresthesias in her upper extremities. The upper extremity symptoms are all new.

Regarding Claimant's expanding and worsening symptomology, Dr. Kawasaki noted:

> ***They appear to be expanding at this point. She is now reporting some radicular-type symptoms, which are new, in both the arms and legs. It would be unlikely for new symptoms to develop at this point related to the Workers' Compensation Claim.*** (Emphasis added.)

(C. Ex. 27, Bates 252)

28. Claimant subsequently filed an Application for Hearing to overcome Dr. Machanic's opinions and proceeded to hearing before ALJ Margot Jones. At hearing, Claimant called an expert, Dr. Edwin Healey. Dr. Healey testified that he spoke with Dr. Bao Nguyen, the radiologist who originally read Claimant's February 3, 2014 thoracic x-ray, who agreed there was a T8 compression fracture present on the films. As found above. Dr. Eduardo Seda re-reviewed the films on June 22,

2015, which was after the DIME, and agreed that there was a T8 compression fracture present on the February 3, 2014 thoracic spine x-ray. Dr. Kawasaki also stated that if there was a T8 compression fracture on the February 3, 2014 x-rays, that the condition was likely work related. Given this evidence, Judge Jones found Dr. Machanic's opinions were based on the radiologist's erroneous readings of the February 3, 2014 thoracic spine x-rays. Therefore, she found Claimant had successfully overcome Dr. Machanic's opinions and Claimant was not at MMI for her February 3, 2014 injury. Judge Jones, however, denied Claimant's request to change her authorized provider (R. Ex. B, *See* Specific Findings of Fact, Conclusions of Law, and Order, dated August 17, 2016.)

29. Respondents accepted ALJ Jones's findings and returned Claimant to treat with Dr. Kawasaki.

30. On the first visit with Dr. Kawasaki after ALJ Jones issued her findings, Claimant received trigger point injections and Dr. Kawasaki recommended subsequent massage therapy. Dr. Kawasaki reviewed imaging Claimant obtained on her own while in Mexico. The brain MRI was normal, and a CT scan of the thoracic spine showed evidence of the compression fracture at the T8 level. Claimant also underwent an MRI of the cervical spine in Mexico, which demonstrated mild degenerative changes. (R. Ex. F, Bates 161)

31. Claimant returned to Dr. Kawasaki for follow-up trigger point injections on October 13, 2016. Claimant indicated "improvement overall, although she reports her pain level is a 9/10. She reports pain in the neck, mid back, low back, and numbness and tingling in both of her arms, more on the left side, and numbness and tingling in her left leg." (T. Ex. F, Bates 172)

32. Following a referral from Dr. Kawasaki, Claimant saw Dr. Bryan Castro, an orthopedic surgeon.

33. On October 5, 2016, Claimant was evaluated by Dr. Castro. Claimant described falling and hurting her back. She indicated that her pain was initially 10/10. She indicated that she underwent physical therapy, massage therapy, and SI joint injections, which were all helpful, but that her pain at this time is largely unchanged. Dr. Castro performed a comprehensive physical examination, reviewed her imaging, and noted the following:

> Neck: Good range of motion to flexion, extension, lateral bending, and rotation. He also noted her lumbar spine had full range of motion with flexion, extension, lateral bending, and rotation.
>
> Upper Extremities: Good function and strength to all motions of the shoulders, elbows, wrists, and intrinsicts. Grip strength is 5/5 and symmetric. Deep tendon reflexes at the brachioradialis, biceps, and triceps are within normal limits. Hoffman signs is negative, sensory dermatomes are intact.
>
> Lower extremities: Good function and strength to all motions of the hips, knees, ankles, EHLs, and peroneals bilaterally. Deep tendon reflexes of the patellae and ankles are within normal limits. Downgoing toes on

Babinski testing. No clonus is elicited bilaterally. Sensory dermatomes are grossly intact. Nontender active/passive ROM to hips bilaterally.

Dynamic Exam: The patient can stand and walk on her toes, stand and walk on her heels, squat down, and arise from a squatted position. No appreciable gait disturbance is noted. She is able to squat down and walk on her heels and toes. Straight leg raising test is negative bilaterally. There is some mild pain in the hip and buttocks area.

X-Rays/MRI: Having overall good alignment. No coronal or sagittal plane deformities. No severe neural encroachment is appreciated. There is some radiculopathy at L4-L5 having moderate stenosis, but I do not see any severe nerve impingement.

Impression: This is a 49-year old female. She has degenerative changes in her lumbar spine. Her symptoms are fairly diffuse. She does have some isthmic spondylosis and a grade 1 listhesis; however, I believe this is an incidental finding. Certainly, the slip and fall did not cause the isthmic spondylolysis. She is not having any referable L5 radiculopathy and the back pain is although significant, I do not believe it is brought on by the isthmic spondylolysis. Again, she does have a good range of motion to extension, and loading the pars fracture does not seem to be exacerbating her pain and her pain is rather nonanatomic and somewhat diffuse.

(See R. Ex. D)

34. Dr. Castro concluded Claimant was not a surgical candidate and that he would see her back on an as needed basis. He recommended continued physical therapy and possibly an epidural injection. The ALJ finds Dr. Castro's opinions as set forth in his report to be credible and persuasive.

35. On October 18, 2016, Claimant was evaluated outside of the workers' compensation system by Dr. Lonnie Loutzenhiser. He diagnosed Claimant as suffering from spondylolisthesis at L5/S1, 8mm, Grade 1; Radiculitis; Pars L5, bilateral; and Spondylosis of the lumbar spine. He evaluated Claimant and reviewed her radiographs. He concluded that Claimant would benefit from an L5/S1 anterior lumbar interbody fixation minimally invasive posterior spine fusion which would include a decompression. He also stated that continuation of non-operative treatment includes many options such as activity modification, physical therapy, short term analgesics, NSAIDS, Medrol dose pack, lumbar epidural steroid injections, selective nerve root blocks for diagnostics and/or therapeutic purposes, oral medications for neurogenic pain such as Nuerontin and Lyrica, and observation. Then, despite listing a litany of conservative treatment options, he indicates that despite conservative treatment options, he recommends surgery. There is no indication in his report that he has any idea regarding the actual onset and progression of Claimant's pain complaints and symptoms as documented in her medical records.

36. After her consultation with Dr. Castro and Dr. Loutzenhiser, Claimant followed up with Dr. Kawasaki and provided Dr. Kawasaki with Dr. Loutzenhiser's evaluation and surgical recommendation. Dr. Kawasaki stated:

> I believe that a lumbar fusion in this case has very little hope of success. The patient has diffuse spinal pain that does not specifically localize to the L5-S1 level. She also has sacroiliac joint dysfunction, which has improved, at least for a few months after the sacroiliac joint injections. She has pain certainly above the L5-S1 level. Post-fusion at L5-S1, she will likely have increased motion through the sacroiliac joint, likely making her SI joint pain worse. There are also adjacent level stresses that will occur moving up the spine, and she has diffuse spinal pain. I believe that an L5-S1 fusion is ill-advised.

(R. Ex. F, Bates 176-177)

Dr. Kawasaki recommended further injections at the L5-S1 area. (R. Ex. F, Bates 176-177)

37. On November 18, 2016, Dr. Kawasaki administered a right sacroiliac joint injection and Claimant tolerated the procedure well.

38. On December 7, 2016, Claimant returned to Dr. Loutzenhiser. She stated that she wanted to undergo the surgery. She also stated that "her symptoms began on 02/03/14 when she fell on ice and hit her back on the truck that she was getting out of while at work." He also noted that she was complaining of right buttock and posterior thigh radicular pain, which has not improved, despite physical therapy, massage therapy, and over the counter medications. He again recommended surgery.

39. On January 17, 2017, Claimant underwent further injections with Dr. Scott Bainbridge. Dr. Bainbridge performed a sacroiliac lateral branch block, which demonstrated a non-diagnostic pain response. (R. Ex. H, Bates 219-220)

40. Claimant returned to Dr. Kawasaki on January 19, 2017 with a desire to receive a rhizotomy procedure. Dr. Kawasaki advised Claimant that, given her non-diagnostic response to the lateral branch blocks, that a rhizotomy procedure was not indicated. (R. Ex. F, Bates 184-1186)

41. Dr. Kawasaki also outlined in his February 2, 2017 note that he believed Claimant again reached MMI as of January 19, 2017. He opined her thoracic spine fracture had healed and a majority of her other issues were unrelated to the subject claim. He opined Claimant should return to the DIME physician for follow-up evaluation. (R. Ex. F, Bates 190)

42. Prior to the follow-up Division IME with Dr. Machanic, the parties conducted depositions of Dr. Loutzenhiser, Dr. Castro, and Dr. Kawasaki. Transcripts of these depositions along with additional medical records, including records from Dr. Loutzenhiser, were sent to Dr. Machanic for his evaluation and consideration in forming his opinions. (R. Ex. E)

43. Dr. Machanic performed a follow-up DIME examination on April 12, 2017. He notes "a multitude of pain complaints, predominately however over the middle and lower back areas." Following examination of Claimant from "top to bottom," an analysis of the new medical documentation, and a thorough analysis of the depositions of Drs. Castro, Kawasaki, and Loutzenhiser, Dr. Machanic stated:

> At this point in time, I have carefully evaluated the patient's clinical state and have reviewed the medical records. I am extremely reluctant to recommend surgery for the patient's condition as I do think the risk-benefit ratio is not favorable and indeed at this point, I think there is a very high probability that the patient not only will not respond to surgery but will develop significant posteroperative complications and I would fully agree with Dr. Kawasaki and respectfully disagree with Dr. Loutzenhiser regarding his approach.

(R. Ex. E, Bates 65)

44. In Dr. Machanic's April 14, 2017 DIME report, he agreed with Dr. Kawasaki that Claimant reached MMI on January 19, 2017. He assigned Claimant a combined 20% whole person impairment rating for her injuries to the thoracic and lumbar spine. (R. Ex. E)

45. On July 5, 2017, Respondent filed an amended FAL consistent with Dr. Machanic's April 14, 2017 DIME report.

46. Claimant timely objected to the July 5, 2017 FAL and filed the subject Application for Hearing.

47. After filing the subject Application for Hearing, Claimant began to treat with another series of physicians outside of the workers' compensation system.

48. After Claimant filed the subject Application for Hearing, Claimant sought treatment with Drs. Tobey, Rajpal, and Dr. Patel.

49. On April 16, 2018, Dr. Tobey performed a lumbar facet injection at the L5-S1 level. He noted that immediately after the injection Claimant had 0% pain relief. (C. Ex. 43, Bates 702-703.) He also performed an intralaminar epidural injection at the L5-S1 level. Dr. Tobey did not, however, document Claimant's response to the intralaminar injection at the L5-S1 level. *Id*.

50. On May 7, 2018, Dr. Rajpal, and his assistant, evaluated Claimant. They noted that Claimant said her pain went from 9 to a 2 after she underwent the intralaminar epidural steroid injection, but that "not all of her pains improved with the injection and she continued to have gluteal pain and burning in the bottom of her feet." Despite Claimant's continuing pain complaints following the injection, Dr. Rajpal recommended a "L5/S1 gill decompression/laminectomy, TLIF, L5-S1 PSF." Dr. Rajpal did not outline why Claimant's condition as outlined on the MRI warranted the fusion surgery. (C. Ex. 40, Bates 674-676)

51. Claimant's response to any of the injections is subjective. Moreover, neither Dr. Tobey nor Dr. Rajpal documented the expected time frame(s) for a diagnostic response from each injection and whether Claimant's subjective response was

consistent with the expected time frame(s). In other words, neither Dr. Tobey nor Dr. Rajpal analyzed and documented how Claimant's subjective response to each injection compared to the expected duration of the local anesthetic phase of each injection.

52. At hearing, Claimant's attorney indicated Claimant wanted the surgery recommended by Dr. Rajpal.

53. Dr. Castro also testified at hearing. Since he was an authorized treating physician/surgeon, Respondents had not discussed with him the most recent surgery recommended by Dr. Rajpal. However, at hearing, Dr. Castro was provided updated medical records and reviewed those records before testifying. Dr. Castro credibly testified at hearing that neither the surgery recommended by Dr. Loutzenhiser nor the surgery recommended by Dr. Rajpal, which was different, but still a fusion, were reasonable and necessary. Dr. Castro testified that based on his physical examination and findings, review of the imaging and medical records, as well as Claimant's reported pain complaints, surgery was not reasonable and necessary. The ALJ finds Dr. Castro's testimony and opinions to be credible and persuasive.

54. Dr. Loutzenhiser testified via deposition. He testified that he believes Clamant suffers from a pars defect, i.e., a stress fracture at the L5 level, and isthmic spondylolisthesis – and such condition is causing Claimant's symptoms. Dr. Loutzenhiser testified that although the pars defect – stress fracture – has probably been present since Claimant was a teenager, and was not caused by the accident at work, the fall probably caused the stress fracture to loosen up the bone or scar tissue and resulted in slippage/instability which in turn caused Claimant's pain and symptoms. (Dep. Tran., Pg. 14.) He also testified that the fact that the MRI showed 3 mm of slippage and the standing x-rays showed 8 mm of slippage establishes there is slippage/instability and such slippage/instability is causing her symptoms. (Dep. Tran., Pg. 14-15.) The ALJ does not find Dr. Loutzenhiser's opinions to be persuasive. Dr. Loutzenhiser attempts to correlate Claimant's fall with her back pain and radicular plain. In essence, he opines that the fall caused the slippage/instability and the slippage/instability is aggravated or accentuated when Claimant stands and is causing Claimant's back and radicular pain. He appears to be basing his opinion on Claimant's contention that she developed back and radicular pain right after the accident. However, the ALJ finds that the medical records do not support the contention upon which he bases his opinion. Claimant did not have radicular symptoms immediately after the accident. Claimant did not complain of radicular pain or symptoms to Dr. Kawasaki until about September of 2015. As noted by Dr. Kawasaki on October 1, 2015:

> She has had primarily low back pain; however, now is increasing her pain complaints, expanding into the bilateral lower extremities. The patient is reporting burning sensations and numbness in her feet.

At the same appointment of October 1, 2015, Dr. Kawasaki commented further about Claimant's expanding symptoms: Dr. Kawasaki commented about Claimant's radicular symptoms and stated:

> ***They appear to be expanding at this point. She is now reporting some radicular-type symptoms, which are new, in both the arms and legs. It would be unlikely for new symptoms to develop at this point related to the Workers' Compensation Claim.*** (Emphasis added.)

(C. Ex. 27, Bates 252)

Had the fall aggravated Claimant's underlying pars defect and caused additional slippage by breaking or loosening up the scar tissue or bone, which in turn caused Claimant's radicular symptoms, it seems like Claimant would have developed and reported to Dr. Kawasaki radicular pain and symptoms at the time of the accident, or shortly thereafter, and consistently thereafter, and not over a year later. Moreover, once the radicular pain was reported by Claimant, her alleged radicular pain complaints should have followed a specific dermatomal pattern, which according to Dr. Castro, they did not. Therefore, the ALJ does not find Dr. Loutzenhiser's opinions to be persuasive.

55. Dr. Castro testified that although the imaging he reviewed did not demonstrate 8 mm of slippage, even if such slippage existed, such slippage would still be graded as a grade 1, and surgery would not be appropriate based on Claimant's physical examination and complete clinical picture. He also testified that slippage is only one factor, and other factors, such as Claimant having well maintained disc space, supported his conclusion that surgery was not reasonable and necessary.

56. Dr. Castro also testified by deposition. He testified that Claimant's pain was non-anatomic in that her pain complaints did not seem to be related to one individual nerve root system. He indicated that "typically with a pars fracture, the only nerve root involved is L5, and that's a different area where she was having leg pain." (Dep. Tran., Pg. 14). Dr. Castro was also asked whether there was anything objective that he found which would substantiate or explain the seemingly high levels of pain Claimant was complaining about. Dr. Castro indicated there was not. (Dep. Tran., Pg. 16.) Dr. Castro also testified that Claimant's MRI did not demonstrate any findings or markers of instability such as gapping or fragments, with the pieces pulling apart. (Dep. Tran., Pg. 52.) Dr. Castro ultimately concluded that based on Claimant's clinical presentation, the surgery recommended by Dr. Loutzenhiser has a high risk of making claimant worse. (Dep. Tran., Pg. 61)

57. Dr. Castro also testified at hearing that the surgery recommended by Dr. Rajpal had an even a greater risk to cause Claimant additional problems due to the likelihood of increased scar tissue resulting in increased leg and buttocks pain.

58. The ALJ finds Dr. Castro's opinions in his report, deposition testimony, and hearing testimony to be credible and persuasive.

59. The ALJ does not find that there is credible and persuasive evidence which establishes Dr. Machanic erred when he agreed with Dr. Kawasaki and Dr. Castro and found Claimant was not a surgical candidate and that she was at MMI as of January 19, 2017.

60. The ALJ is persuaded by the opinions of Dr. Castro - an authorized provider - as set forth in his report, deposition testimony and hearing testimony, that Claimant is not a surgical candidate for an L5-S1 fusion based on her imaging, his examination of Claimant, her reported response to the various injections, and review of her medical records.

61. The ALJ is also persuaded by the opinion of Claimant's authorized provider, Dr. Kawasaki, who has opined Claimant is at MMI and is not a surgical candidate.

62. The ALJ is not persuaded by the medical documentation from Drs. Tobey, Rajpal, and Loutzenhiser, as well as Dr. Loutzenhiser's deposition testimony, that lumbar surgery is reasonable and necessary.

63. The ALJ finds that the back surgery recommended by Dr. Loutzenhiser and Dr. Rajpal is not reasonable and necessary to cure or relieve Claimant from the effects of her industrial injury.

64. The ALJ finds the discrepancies in opinions as to whether Claimant should undergo surgical intervention for the lumbar spine constitutes a difference in opinion, at most.

65. Although suffering an injury, Claimant has been returned to modified duty, and is working modified duty. Claimant testified at hearing regarding some of her job duties such as doing laundry and mopping. The ALJ finds that the degree of pain and disability alleged by Claimant is inconsistent with her ability to perform modified duty. The ALJ also finds that Claimant's pain complaints are diffuse and non-anatomic. Therefore, the ALJ finds Claimant's representations to her medical providers and her testimony in court regarding the extent and location of her pain as well as her degree of disability is not an accurate indication of such matters. The Judge is mindful that Claimant complained of thoracic pain, and a fracture was ultimately diagnosed, however, such fact does not cloak all of Claimant's reported pain complaints and symptoms with an unassailable degree of reliability.

66. Claimant has been receiving adequate and proper medical care from her authorized treating physicians, which includes Drs. Kawasaki and Castro. Dr. Kawasaki has provided Claimant extensive treatment and referred Claimant to other specialists such as Dr. Catsro and Dr. Bainbridge for additional evaluations and treatment. Moreover, Dr. Castro's evaluation and recommendation against surgery is found to be credible and persuasive and evidence that Clamant is being provided adequate and proper care. There is no indication that a change of physician is required in order for Claimant to obtain additional reasonable and necessary medical care to treat her work injury.

67. Claimant contends in her post hearing position statement that her subjective response to the diagnostic injections which were performed in 2018 after Dr. Machanic performed his DIME provides sufficient evidence to establish that the back surgery is reasonable and necessary to cure or relieve her from the effects of her industrial injury and that she is not at MMI. The ALJ is not persuaded by this argument. As previously stated, Claimant's response to the injections were subjective. Moreover, this additional information was presented to Claimant's

authorized treating physician/surgeon Dr. Castro – at hearing – and it did not alter his opinions.

68. Claimant failed to present clear and convincing evidence that Dr. Machanic erred in determining she reached MMI on January 19, 2017.

69. Claimant reached MMI on January 19, 2017.

70. Lumbar surgery is not reasonable and necessary to cure or relieve Claimant from the effects of her work injury.

71. Claimant has not established that a change of physician is appropriate.

72. There is no credible and persuasive evidence that Claimant objected to Dr. Machanic performing a follow up DIME before Claimant underwent the follow up DIME and Dr. Machanic issued his report. Regardless, the ALJ finds Claimant has failed to establish that Dr. Machanic should have been precluded from performing a follow up DIME merely because his prior opinion was overcome by clear of convincing evidence.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion

of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I-II Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Bennett Machanic, M.D. that she reached Maximum Medical Improvement (MMI) on January 19, 2017.

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of Claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of Claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that Claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Patterson v. Comfort Dental East Aurora,* WC 4-874-745-01 (ICAO February 14, 2014); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The ALJ did not find the opinions of Dr. Loutzenhiser and Dr. Rajpal, each of whom recommended lumbar surgery, to be persuasive. As found, the surgery recommended by Dr. Loutzenhiser and Dr. Rajpal is not reasonable and necessary to treat Claimant's work related injury. The ALJ credited the opinions of Dr. Kawasaki and Dr. Castro that Claimant is not a surgical candidate. The fact that Claimant underwent additional injections in 2018 and subjectively reported an 80% decrease in her pain does not alter this conclusion. Therefore, the ALJ concludes Claimant failed to present clear and convincing evidence that Dr. Machanic erred when he determined Claimant reached MMI on January 19, 2017.

III. Whether Dr. Machanic's report should be set aside and a new IME physician panel issued given Claimant's prior success in overcoming Dr. Machanic's April 15, 2015 DIME opinions.

Claimant argues that due to her prior success in overcoming Dr. Machanic's April 15, 2015 DIME opinions, that the entire DIME process should be restarted with an issuance of a new physician panel after Dr. Kawasaki again placed Claimant at MMI on January 19, 2017. Claimant correspondingly argues that the April 14, 2017 DIME report from Dr. Machanic is void and instead, a new DIME physician panel should be issued and a physician from a new panel should perform the exam.

It is undisputed that Claimant succeeded in overcoming Dr. Machanic's April 15, 2015 opinion that Claimant was at MMI. This was due to imaging reports that were erroneously read on initial review by the radiologist.

Neither party asserts the DIME process was erroneously commenced when the Division of Workers' Compensation DIME Unit issued the original physician panel which ultimately yielded Dr. Machanic as the examining physician.

Neither party could locate authority which directly addresses the issue brought forth by Claimant.

Workers' Compensation Rule of Procedure (W.C.R.P.) 11-7 states, "[s]ections of this Rule 11 apply to follow-up procedures, as appropriate. If a Level II IME physician determines a claimant has not reached MMI and recommends further treatment a follow-up IME examination shall to the extent possible be schedule with the original IME physician." Here, Dr. Machanic was able to perform the follow-up DIME without delay.

W.C.R.P. 11-7 goes on to state, "[a] new IME physician (for a follow-up IME examination) may be selected only if agreed upon by both parties. Here, the parties did not reach an agreement to select a different physician for the follow-up exam.

W.C.R.P. 11-7 also allows for an ALJ to order "a new physician and designate which party shall pay the examination fee." The record is void of any credible and persuasive evidence suggesting good cause. This ALJ finds ALJ Machanic was not biased due to Claimant's prior success in overcoming his original opinions. Dr. Machanic's prior opinions were only erroneous in that he relied on a radiologist's erroneous reading of imaging.

This ALJ is also persuaded by the Director's Bulletin dated February 24, 2004 as outlined by the ICAO panel in *Nancy Sanchez-Ortega v. Central Uniform & Linen* W.C.

No. 4-358-716 (March 12, 2004). The *Sanchez-Ortega* panel stated, “we agree with the Director that…once the DIME is conducted, there is an “open DIME” after the DIME determines the claimant is not at MMI and there is no need to repeat the selection process to designate a “new” DIME physician…..the *Sanchez* panel went on to state, the February 24, 2004 bulletin states the "Division has construed this language as a directive" that there be "one case, one DIME." *Id*. The ALJ finds that although the scenario at hand is factually distinguishable from the factual scenario addressed in *Sanchez-Ortega*, the same principles apply. The “one case, one DIME” rule along with W.C.R.P. required Claimant to return to Dr. Machanic for a follow-up DIME as he performed the prior exam and was available to perform the follow-up exam. Further, the record is void of any credible and persuasive evidence to support a finding of good cause to support a ruling requiring the issuance of a new panel or a new physician to replace Dr. Machanic.

Therefore, Dr. Machanic’s DIME examination on April 14, 2017 was appropriate and is binding unless overcome by clear and convincing evidence. Claimant’s request for a new DIME panel or DIME physician is denied.

IV. If Claimant failed in overcoming the DIME, whether Claimant proved entitlement to the L5-S1 fusion surgery as maintenance care.

Respondents are liable to provide such medical treatment “as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury.” Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995); *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992).

In cases where Respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When Respondents challenge Claimant’s request for specific medical treatment, Claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether Claimant proved that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

The fact that the post MMI treatment in question involves surgery does not necessarily require that the treatment be considered as aimed at significant improvement of the claimant's condition. *Chism v. Walmart*, W.C. No. 4-809-103-3 (January 9, 2017) and (July 10, 2017). As the Panel stated in *Hayward v. Unisys Corp*.,

W.C. No. 4-230-686 (July 2, 2002), aff'd, Colo. App. No. 02CA1446 (Jan. 9, 2003), "surgery is not as a matter of law 'curative' treatment." The Hayward panel instead explained that medical treatment "which does not tend to cure or improve the claimant's condition may nevertheless be ordered under Grover upon the presentation of substantial evidence that such treatment 'will be reasonably necessary to relieve a claimant from the effects of the injury or to prevent further deterioration of his or her condition' after MMI." *Id.* (knee surgery may be curative or may be a form of Grover-style maintenance treatment designed to alleviate deterioration of the claimant's condition); see also *Grover v. Industrial Commission, supra*.

Whether medical treatment is provided to cure or merely to relieve Claimant's condition does not depend on the type of treatment, but rather the reason for the treatment. Therefore, if the evidence in a particular case establishes that, but for a particular course of medical treatment, a claimant's condition can reasonably be expected to deteriorate, so that he will suffer a greater disability than he has sustained thus far, such medical treatment, *irrespective of its nature*, must be looked upon as treatment designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition. (emphasis added) *Milco* at 542.

The question of whether Claimant carried his burden of proof regarding post-MMI medical treatment is one of fact for resolution by the ALJ. *See Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Here, as noted above, Claimant is at maximum medical improvement per Dr. Machanic. This means Claimant must prove, by a preponderance of the evidence, that the recommended surgery is appropriate maintenance care and that it is necessary to prevent further deterioration of her current condition and to keep her at maximum medical improvement or relieve her from the effects of her injury. The record is void of credible and persuasive evidence that the surgeries recommended by Dr. Loutzenhiser or Dr. Rajpal are reasonably necessary to prevent further deterioration of her work-related condition or to relieve her from the effects of her injury and have been proposed as maintenance treatment. Dr. Castro credibly opined that Claimant is not a surgical candidate and the ALJ found that surgery is not reasonably necessary. So, even if the surgery was proposed as maintenance treatment, the surgery is not indicated in Claimant's instance. For these reasons, Claimant's request for a lumbar fusion at L5-S1 is not reasonably necessary maintenance medical treatment and her surgical request is denied.

V. Whether Claimant has proven entitlement to a change in authorized provider.

Upon a proper showing to the division, the employee may procure its permission at any time to have a physician of the employee's selection attend said employee. Section 8-43-404(5)(a)(VI), C.R.S. Because the statute does not contain a specific definition of a "proper showing," the ALJ has broad discretionary authority to determine whether the circumstances justify a change of physician. *Loza v. Ken's Welding,* WC 4-712-246 (ICAO January 7, 2009). Claimant may procure a change of physician where he/she has reasonably developed a mistrust of the treating physician. *See Carson v.*

Wal-Mart, W.C. No. 3-964-07 (ICAO April 12, 1993). The ALJ may consider whether the employee and physician were unable to communicate such that the physician's treatment failed to prove effective in relieving the employee from the effects of his/her injury. *See Merrill v. Mulberry Inn, Inc.*, W.C. No. 3-949-781 (ICAO November 1995). But, where an employee has been receiving adequate medical treatment, courts need not allow a change in physician. *See Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (ICAO December 5, 1995) (ICAO affirmed ALJ's refusal to order a change of physician when the ALJ found claimant receiving proper medical care); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (ICAO August 23, 1995) (ICAO affirmed ALJ's refusal to order a change of physician where physician could provide additional reasonable and necessary medical care claimant might require); and *Guynn v. Penkhus Motor Co.*, W.C. No. 3-851-012 (ICAO June 6, 1989) (ICAO affirmed ALJ's denial of change of physician where ALJ found claimant failed to prove inadequate treatment provided by claimant's authorized treating physician).

In this case, it was found that Claimant has been receiving proper medical treatment by Drs. Kawasaki and Dr. Castro. As found, Dr. Kawasaki has provided extensive treatment and made appropriate referrals for additional evaluations and treatment. It was also found that Dr. Castro's opinion that Claimant is not a surgical candidate was appropriate. Claimant has failed to establish that her authorized treating physicians are providing inadequate treatment. Therefore, the ALJ Concludes Claimant has failed to establish by a preponderance of the evidence that she is entitled to a change of physician.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome the opinion of the DIME physician, Dr. Machanic, that she reached MMI on January 19, 2017. Claimant is at MMI for her February 3, 2014 work injury per Dr. Machanic as of January 19, 2017.
2. Claimant's request for L5-S1 fusion surgery as recommended by Dr. Loutzenhiser and/or Dr. Rajpal is denied and dismissed.
3. Claimant's request for a new DIME panel or DIME physician is denied and dismissed. Claimant's follow-up DIME appointment with Dr. Machanic was appropriate.
4. Claimant's request for a change in authorized provider is denied and dismissed.
5. Any and all issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 27, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-056-371

ISSUES

- Whether Claimant proved, by a preponderance of the evidence, he sustained an injury in the course and scope of his employment on August 29, 2017.

- Whether Claimant proved, by a preponderance of the evidence, an average weekly wage in the amount of $1,526.87, which would increase on November 5, 2017 to $1,942.44, based on Claimant's loss of health insurance benefits.

- Whether Claimant proved, by a preponderance of the evidence, he is entitled to temporary partial disability benefits between August 29, 2017 and October 31, 2017, to the extent he did not earn his average weekly wage.

- Whether Claimant proved, by a preponderance of the evidence, he is entitled to ongoing temporary total disability benefits since November 1, 2017.

- Whether the treatments provided by Advanced Urgent Care, where Claimant was treated by PA-C Christopher Wright and Julie Parsons, M.D., and their referrals, including Cherry Creek Imaging and Western Orthopaedics are reasonable, necessary and related to the August 29, 2017 injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is 54 years old, and has worked as a delivery driver for Employer for approximately eleven years.

2. Claimant testified that as a delivery driver he averages 130 to 150 stops a day, delivering at those stops approximately 200 to 300 packages. Claimant credibly testified that he also picks up approximately 200 to 250 packages a day. The packages delivered and picked up vary in size and weight, ranging from a letter to a package weighing up to 150 pounds.

3. Prior to August 29, 2017, the Claimant suffered an admitted right shoulder injury on April 27, 2016 and credibly testified that prior to April 27, 2016 he had no symptoms, limitations or pain complaints in either shoulder.

4. Claimant requests an average weekly wage ("AWW"), based on his earnings prior to his admitted April 27, 2016 right shoulder injury of $1,526.87. Employer previously accepted this amount on Claimant's right shoulder claim. The

ALJ finds this amount appropriate given that Claimant worked for approximately ten weeks prior to his left shoulder injury of August 29, 2017.

5. Claimant received a COBRA letter stating that he lost his employee paid health insurance on November 5, 2017. Claimant was eligible for COBRA coverage at $415.57 a week. The ALJ finds that the cost of his COBRA benefits should be added to his requested AWW of $1,526.87, effective after November 5, 2017.

6. Claimant credibly testified, and the records support, that his ATP released him to full-duty on April 17, 2017 for his admitted right shoulder injury.

7. Claimant credibly testified he was unable to return to his position as a delivery driver for Employer on April 17, 2017, as he was unable to pass his Colorado Department of Transportation ("CDOT") exam, due to hypertension, a non-work-related condition. Claimant eventually controlled that condition with medications and returned to work on June 23, 2017.

8. Claimant credibly testified that upon returning to work his right shoulder was only 90% of where it should have been. It was Claimant's opinion that he had been released to work earlier than he should have been following his right shoulder injury, in part based on comments his surgeon made. He testified that since returning to his job in June 2017 with Employer, he overused his left upper extremity to compensate for remaining weakness in his right shoulder.

9. Claimant worked full-duty without restrictions from June 23, 2017 until the events of August 29, 2017.

10. On August 29, 2017, in the course and scope of his employment, Claimant was moving packages on a truck when he felt pain in his left upper extremity. One occasion in particular being when he was moving a 100-pound BBQ grill onto a porch. Claimant testified he did not inform his supervisor the night of his injury, because his supervisor was not on the premises, nor did he call his supervisor because he believed that with ice and heat his left upper extremity symptoms would go away.

11. Claimant testified that he was unable to sleep the night following his August 29, 2017, injury due to pain in his left extremity. He reported his injury to his supervisor the following morning and Employer provided a list of four designated treating providers to choose from for medical care.

12. Claimant indicated he did not desire to return to John Ogrodnick, M.D., who had been the designated provider on his right shoulder case. Instead, he selected Advanced Urgent Care and commenced treatment with PA-C Christopher Wright. On August 31, 2017, PA-C Wright took a history of injury as follows:

> *Location/Where on body?:* upper extremity; left (Shoulder, neck, wrist, elbow)
> *Quality/Description of Symptom (i.e. burning, cramping, constant):* Pain to left shoulder, elbow, neck. Numbness and tingling in left wrist, Pt. sts he has pain with gripping motion. Pain with ROM of left arm. Pt. describes shoulder as constant ache, elbow and wrist pain is sharp upon movement.
> *Severity/Pain Level*: pain level 6/10
> *Duration/How long?* Date of injury (08/29/17)
> *Context/How did it occur?* Work injury (UPS)
> *Modifying Factors/what makes feel better? Worse?* Ice; OTC medication (ibu); Easton maching
> *Notes***:** Pt. was moving packages on truck, felt pain in left shoulder during four occasions, One occasion pt. was moving a 100lb BBQ grill onto porch.

13. PA Wright concluded that Claimant suffered a "work-related mechanism of injury" by "moving oversized packages and felt a sharp pain." He placed Claimant on temporary work restrictions of 10 pounds on the left arm and assigned Claimant "light-duty" work.

14. Claimant credibly testified that Employer has a policy of placing injured workers on light-duty work called temporary alternative work "TAW." Employer did not permit Claimant to work overtime hours and limited him to a 40-hour week following PA-C Wright's assignment of temporary work restrictions. Claimant requested temporary partial disability benefits while on TAW, to the extent he did not earn his preinjury AWW of $1,526.87.

15. On September 12, 2017, Claimant returned to Advanced Urgent Care and Julie Parsons, M.D. evaluated him. Dr. Parsons diagnosed a "neck sprain, shoulder strain - left, and injury of the elbow," and instructed Claimant to begin physical therapy, to use heat, and to return to the clinic in two weeks. Dr. Parsons concluded that Claimant had suffered "a work-related mechanism of injury" to his "cervical, left shoulder strain, and left elbow." Dr. Parsons maintained Claimant on temporary work restrictions of 25 pounds.

16. On September 13, 2017, Claimant began physical therapy at Dr. Parson's direction. His physical therapist noted his primary concern and chief complaint as follows:

> L neck/shoulder/elbow/hand pain. He has both numbness and tingling that goes down the outside of his upper arm, around the lateral aspect of the elbow and into the forearm. One of his biggest restrictions is shooting pain with gripping, starting around the elbow and shooting into the dorsal aspect of the forearm. He

> also gets increased pain with reaching above the shoulder. He gets increased pain with holding his arm in position or turning when driving – he feels pain in the posterior neck. He wakes up 4-5 times/night due to pain. He has had to sleep on his back, but he prefers sleeping on his R side or his stomach. He has less pain at rest, increased pain with activities. Ice and heat both help. Ibuprofen also helps with increased pain.

17. Claimant testified he did not have the symptoms in his left upper extremity described in the physical therapy report of September 13, 2017 prior to the events of August 29, 2017. While certain medical records contradicted this testimony, the ALJ finds that his left upper extremity symptoms became more appreciable with his August 29, 2017 work injury.

18. On September 26, 2017, Claimant returned to Dr. Parsons who continued physical therapy, kept Claimant on a 25-pound temporary work restriction, and requested that he return in three weeks.

19. On October 10, 2017 Claimant underwent a fluoroscopic – guided left shoulder aspiration and arthrogram which had the following findings:

> Moderate infraspinatus tendinopathy with mild/moderate partial articular tear of the myotendinous junction on series 6, images 7-9 of 30% thickness. Moderate subscapularis tendinopathy and mild/moderate partial articular surface tear of 30% thickness.
>
> * * *
>
> Impressions:
> 1. Postoperative left shoulder status post rotator cuff repair. No recurrent full-thickness tear. Attenuated supraspinatus tendon with mild/moderate tendinopathy.
> 2. **Moderated infraspinatus tendinopathy and mild/moderate partial interstitial tear at the myotendinous junction.**
> 3. Moderate subscapularis tendinopathy and mild/moderate **partial articular surface tear.**
> 4. Mild to moderate intra-articular long head biceps tendinopathy. Medial subluxation at the bicipital grove is consistent with biceps pulley mechanism dysfunction.
>
> Thank you for this referral. Study was interpreted by a Fellowship trained musculoskeletal radiologist.

20. On October 12, 2017, Claimant continued physical therapy with the physical therapist noting:

> Pt notes had MRA so L shoulder is really sore from that. Pt notes had Monday off so was able to rest the arm so it is feeling better today in the forearm. Pt notes his grip is very weak and fatigues very quickly with just picking clothes and laundry the forearm gets painful and tired and tingling.

21. On October 17, 2017 Claimant returned to ATP Parsons who kept Claimant on restrictions, instructed him to continue physical therapy and directed him to specialist Armodios Hatzidakis, M.D., at Western Ortopaedics. *See* Claimant's Submission Tab 6, BS 33 and 36.

22. On October 19, 2017, Claimant continued physical therapy as at Dr. Parson's direction. The physical noted:

> the elbow is still what is bothering him the most with driving, lifting, reaching and event buttoning the buttons on his shirt.

23. On October 23, 2017, Claimant's next physical therapy visit, the therapist noted:

> David is a 47 year old male with L shoulder/neck/elbow pain. He was sliding 100# boxes to the back of a truck and felt an increase in pain. He later moved a BBQ grill up some stairs and felt the pain again. He has had intermittent shoulder pain but nothing very irritating.
>
> * * *
>
> Current Complaints/Gains: 10/23/17: Pt notes elbow is still the same the pain and functional tolerance has not changed since starting therapy. Pt notes arm just hurts with gripping, lifting, even just getting dressed and doing daily activities around the house. Pt is still has same numbness tingling with activity. Pt notes the shoulder is slightly better. Pt notes neck pain is about the same.
>
> L Neck/shoulder/elbow/hand pain. He has both numbness and tingling that goes down the outside of his upper arm, around the lateral aspect of the elbow and into the forearm. One of his biggest restrictions is shooting pain with gripping, starting around the elbow and shooting into the dorsal aspect of the forearm. He also gets increased pain with reaching above the

> shoulder. He gets increased pain with holding his arm in position or turning when driving – he feels pain in the posterior neck. He wakes up 4-5 times/night due to pain. He has had to sleep on his back, but he prefers sleeping on his R side or his stomach. He has less pain at rest, increased pain with activities. Ice and heat both help. Ibuprofen also helps with increased pain.

24. On October 31, 2017, the physical therapist made the following notations with regard to Claimant's end of light-duty work and the fact that Claimant's care was denied on the left shoulder injury as a work related injury stating:

> 10/31/17: Pt notes yesterday was last day of 29 days of light duty. Pt is now off work until further notice. Pt notes the insurance is denying his L shoulder claim. Pt will be seeing Dr. Parsons tomorrow. Pt notes his elbow and shoulder are really bothering him today because of work yesterday.

25. Claimant's last physical therapy appointment occurred on October 31, 2017. His treatment provider discharged him from physical therapy "due to lack of authorization from insurance. Pt's physical therapy goals were not met and still has ongoing symptoms."

26. On November 1, 2017, Claimant returned to Advanced Urgent Care where Dr. Parsons had the opportunity to review the MRI report, concluding that Claimant had suffered a "partial RCT IFS and subscap with bicep pulley dysfunction." Claimant was instructed to follow up with Dr. Hatzidakis and was kept on restrictions.

27. On November 22, 2017 Claimant returned to Dr. Parsons who changed her diagnosis from that of shoulder strain to "partial thickness rotator cuff tear; lateral epicondylitis." Dr. Parsons kept Claimant on temporary work restrictions of 25 pounds and continued to opine that Claimant's "related mechanism of injury/illness" was consistent with a work-related event.

28. On December 11, 2017, Claimant was evaluated by PA-C Rose G. Christensen at Western Orthopaedics under the direction of Dr. Armodios Hatzidakis, who took a history of present illness as follows:

> Mr. Sedillos is a well-established patient in our clinic, who is here today specifically to discuss his left upper extremity. **He had a previous left shoulder arthroscopic rotator cuff repair back in 2014, was doing very well up until recently, when he re-injured it around the date of August 29, 2017.** It had

been getting more painful, as well, as he had been rehabbing his right shoulder, which was recovering from a work-related injury with associated arthroscopic rotator cuff repair on date of surgery of October 4, 2016. **His shoulder and elbow pain were exacerbated from an injury, again, that he sustained on August 29, 2017,** while at work, where he was pushing a heavy piece of furniture and sliding it cross-body. He states it weighed approximately 100 pounds, and since then he has been having neck, shoulder and elbow pain that has been worsening. He feels overall that the function of the upper extremity is 70% of normal. He describes pain in the front of the shoulder that radiates down into the biceps. He also experiences pain over the lateral and medial aspect of the elbow, which can radiate into the extensor tendon. He has been taking ibuprofen for pain management and has been experiencing numbness and tingling in bilateral hands.

* * *

Left shoulder MRI over-read from Cherry Creek Imaging shows previous rotator cuff repair to be intact. There does appear to be medial subluxation of the long head of the biceps with partial articular sided subscapularis tearing, notes previous decompression of subacromial space, and possible partial-thickness articular sided tearing of the posterior rotator cuff at the junction of the **supraspinatus**; however, I believe this is more artifact than postoperative surgical findings. No significant arthritic change seen within the AC joint.

ASSESSMENT:

1. Left shoulder strain with associated pain, medial subluxation of long head of biceps, with subscapularis tearing.
2. Left elbow strain with lateral epicondylitis and mild medial epicondylitis.

* * *

We discussed conservative versus surgical treatment options. The former consisting of activity modification, physical therapy, anti-inflammatories, cortisone injection. We also discussed more definitive treatment for arthroscopic biceps tenodesis with possible repair of the rotator cuff,

if required, with intraoperative biopsies for culture, given his history of previous surgery.

29. Claimant testified at hearing that Insurer has not authorized the cortisone injections and that he would like to pursue that treatment.

30. Following Claimant's August 29, 2018 injury, after his TAW ended, on October 31, 2017, Claimant received a COBRA Continuation Coverage Election Notice. It informed him that his health insurance for himself and his family ended on November 4, 2017 and that if he wished to continue paying for health insurance from November 5, 2017, he had to pay the amount of $415.57 per week. Claimant requested that his AWW from November 5, 2017 moving forward be increased by the weekly amount of $415.57 for the loss of his health insurance.

31. At hearing, Respondents limited their presentation of evidence to the cross-examination of Claimant and the Respondent-requested medical evaluation report authored by Kathleen D'Angelo, M.D., on January 27, 2018. Dr. D'Angelo opined that Claimant's left upper extremity symptoms were not new, but rather "demonstrate the anticipated natural history of degenerative changes to the left shoulder."

32. Respondents' expert opined: "I believe [Claimant] is at MMI for his left shoulder claim of August 29, 2017. He required no permanent work restrictions or permanent impairment for his left shoulder. No further active or maintenance treatment is warranted or appropriate through the workers' compensation system." He should return to "his PCP, to rule out arthropathy and/or connective tissue abnormalities."

33. Dr. D'Angelo's report does not address whether Dr. Parsons or PA-C Wright's conclusions of an on-the-job injury are appropriate, nor does it address whether the cortisone injection recommended by Dr. Hatzidakis is appropriate. The majority of Respondent expert's report addresses Claimant's admitted right shoulder claim. The ALJ infers from Dr. D'Angelo's report that the assignment of temporary work restrictions by PA-C Wright and Dr. Parsons was inappropriate based on her opinion that Claimant was at MMI for his left shoulder.

34. The ALJ finds it more likely than not, that Claimant suffered a left upper extremity injury at work on August 29, 2017, which resulted in symptoms in his cervical spine, left upper extremity, and left wrist requiring medical care. These symptoms are still present. The ALJ is not persuaded by the report of Respondents' expert and finds the reports of Claimant's treatment providers at Advanced Urgent Care and Western Orthopedics, in connection with the MRI, more persuasive.

35. Thus, the ALJ finds the claim is compensable.

36. The persuasive evidence in the record regarding Claimant's employment is that Employer would not permit Claimant to work overtime hours

after this August 29, 2017 injury, when he was placed on TAW until October 31, 2017. After October 31, 2017, Claimant was not permitted to work, based upon the temporary work restrictions assigned by the designated medical providers at Advanced Urgent Care. Accordingly, Claimant is entitled to temporary partial disability ("TPD") from August 29, 2017 through October 31, 2017 and temporary total disability ("TTD") benefits from November 1, 2017 ongoing until terminated pursuant to statute.

37. The ALJ finds that Claimant's AWW at the time of injury was $1,526.87, as there is no other documentation submitted challenging that wage. On November 5, 2017, Claimant's AWW shall be increased by $415.57 to $1,942.44 to reflect the loss of his health insurance benefits. Two-thirds of either AWW, however, exceeds the statutory maximum temporary total disability rate in place for Claimant's date of injury, which is $948.15.

38. The ALJ finds that all medical care rendered by Employer's designated physicians at Advanced Urgent Care, including PA-C Wright and Dr. Parsons, as well as their referrals to FIT Physical Therapy, Western Orthopaedics, and Cherry Creek Imaging are reasonable, necessary and related. This includes Western Orthopaedics' request for cortisone injections.

39. Any determination concerning other issues is premature at this time.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion. The ALJ may reject evidence contrary to the findings above as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

In order to recover benefits a claimant must prove that he sustained a compensable injury. A compensable injury is one which arises out of and in the course of employment. Section 8-41-301(1)(b), C.R.S. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work-related functions. *Finn v. Indus. Comm'n,* 165 Colo. 106, 437 P.2d 542 (1968). It is the claimant's burden to prove by a preponderance of the evidence that there is

a direct causal relationship between the employment and the injuries. *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

Based on the totality of the evidence, the ALJ concludes that Claimant has sustained his burden of proving by a preponderance of the evidence that he sustained a cervical strain, left shoulder and left upper extremity injury on August 29, 2017 and, therefore, is entitled to benefits under the Workers' Compensation Act.

Once compensability is established, Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. *See Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ, and an ALJ's resolution should not be disturbed if supported by substantial evidence in the record.

Authorized providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Kilwein v. Industrial Claim Appeals Office*, 198 P.3d 1274 (Colo. App. 2008); *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002). Respondents designated Advanced Urgent Care as the authorized provider.

The question of whether medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002); *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999). The ALJ concludes the medical care rendered by Advanced Urgent Care and its referrals to FIT physical therapy, Cherry Creek Imaging and Western Orthopaedics, are reasonable, necessary and related, as well as Western Orthopaedics requested for Claimant to have a cortisone injection.

Claimant has established by a preponderance of the evidence that his earnings plus overtime at the time of injury equate to an AWW of $1,526.87, and that on November 5, 2017 he lost is Employer paid health insurance benefits, increasing his wage by $415.57 to $1,942.44.

Claimant has established by a preponderance of the evidence that, due to restrictions assigned by the ATP at Advanced Urgent Care, he was placed on TAW for the period of time from August 29, 2017 to October 31, 2017 and was unable to earn his preinjury wage. Claimant has been on TTD since November 1, 2017 when he was not permitted to return to work, due to his workplace restrictions. Accordingly, Claimant is entitled to TPD benefits for the period of time from August 29, 2017 and October 31, 2017 and to TTD benefits from November 1, 2017 ongoing, subject to termination pursuant to statute.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has established by a preponderance of the evidence that he suffered a compensable injury on August 29, 2017.

2. Claimant has established by a preponderance of the evidence an average weekly wage off $1,526.87 at the time of his on-the-job injury and that he lost his health insurance on November 5, 2017, raising his AWW to $1,942.44.

3. Claimant established by a preponderance of the evidence he is entitled to temporary partial disability benefits from August 29, 2017 to October 31, 2017, to the extent he did not earn his preinjury wage of $1,526.87.

4. Claimant established by a preponderance of the evidence he is entitled to temporary total disability benefits from November 1, 2017, ongoing, based on an average weekly wage prior to November 5, 2017 of $1,526.87 and, thereafter, at an average weekly wage of $1,942.44, but subject to the statutory temporary total disability limitation of $945.15, ongoing and subject to applicable offset.

5. Respondents shall pay for all medical care rendered to date by the medical providers at Advanced Urgent Care, including their referrals for physical therapy at FIT Physical Therapy, an MRI of Claimant's left shoulder on October 10, 2017 at Cherry Creek Imaging, and treatment with the medical providers at Western Orthopaedics, including PA-C Rose G. Christensen and Armodios M. Hatzidakis, M.D., as reasonable, necessary and related, including Western Orthopaedics request for a cortisone injection.

6. Respondent shall pay to Claimant interest at the rate of 8% per annum on all amounts of compensation not paid when due.

7. Issues not expressly decided herein are reserved to the parties for future determination.

8. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when

filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he suffered an injury in the course and scope of his employment on February 1, 2018; and

2. Whether Claimant proved by a preponderance of the evidence that he is entitled to an order awarding related, reasonable and necessary medical benefits.

FINDINGS OF FACT

1. Claimant is a 73-year-old male employee who was employed by Employer. Claimant was injured in a motor vehicle accident in the course and scope of his employment. Claimant is employed by Employer as a sales associate selling commercial contract furniture. Claimant has 231 accounts covering a large geographic area.

2. Claimant's job required him to make sales presentations to clients and new customers. Claimant's sales pitches involved a personal appearance, producing packets of literature and live demonstration of samples. A significant, daily component of Claimant's employment included Claimant doing sales pitches to current and prospective clients. Claimant's job in sales is found to be a job in the business world. Claimant's personal dress code, requiring a starched white dress shirt, is consistent with business attire. Claimant credibly testified that he always meets new clients dressed neatly, with a starched white dress shirt, tie, creased pants and a jacket.

3. Claimant's employment history includes 34 years in the U.S. military and 45 years in the business world. At 73 years of age, Claimant believed his traditional business attire was important to a successful sales presentation for Employer.

4. On February 1, 2018, Claimant's work day began by traveling to Greeley, Colorado from his Denver home office in order to check on a current client and confirm the furniture the client ordered would fit in the intended space. From Greeley, Claimant drove to Tabernash, Colorado to service another client. Following the visit to the Tabernash client, Claimant traveled to Fort Collins, Colorado for the same purpose. Following his business visit with the Fort Collins client, Claimant began traveling south back towards Denver. Claimant first stopped for lunch before continuing on in order to visit a client in the Stapleton neighborhood in Denver. This client was 1 Point Furniture.

5. 1 Point Furniture had contacted Claimant earlier in the week and scheduled to meet with Claimant in Colorado Springs, Colorado on February 2, 2018. The meeting with 1 Point Furniture on February 2, 2018, was originally set to take place in the afternoon. Upon arriving at 1 Point Furniture, Claimant was informed

that the 1 Point Furniture representatives could not meet in the afternoon on February 2, 2018, and the meeting would have to be in the morning instead.

6. Claimant prepared presentation materials for the morning meeting in Colorado Springs with 1 Point Furniture. The meeting concerned furniture sales worth one million dollars. To prepare for the sales meeting, Claimant needed presentation binders from Home Depot and a clean dress shirt from the dry cleaners.

7. After leaving 1 Point Furniture, Claimant traveled to his home office in order to drop off a sample stool that he had with him in his car. After dropping the stool off, Claimant planned to go to the dry cleaner and Home Depot.

8. Claimant left his home and drove approximately two blocks to an intersection. Claimant elected to pick up his dry cleaned dress shirts first and then planned to continue on to Home Depot. Claimant started through an intersection onto Smokey Hill Road when another vehicle collided with Claimant's front, driver-side door causing severe injury to him.

9. Claimant's injuries included a pulverized pelvis on the left side, injury to a left hip replacement, three broken ribs, a broken left clavicle and right wrist.

10. It is found that Claimant's work injuries occurred in the course and scope of his employment for Employer. It is found that Claimant's activities on February 1, 2018, going to the dry cleaners, was in furtherance of the Employer's work activities, provided service to the Employer and was not a substantial deviation.

CONCLUSIONS OF LAW

General Principles

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

4. In this case, Claimant contends that he was in the course and scope of his employment when he was injured in a MVA. Claimant argues that his duties in service of the Employer included the stop he made to pick up a laundered shirt for work from the drycleaners. Claimant contends that any deviation to go to the drycleaners was not substantial. Respondents contend that Claimant's testimony was not credible and that Claimant deviated from his job duties taking Claimant outside the course and scope of his employment when the MVA occurred. Respondents contend therefore that Claimant failed to prove a compensable injury.

5. To be compensable, an employee's injury must have been sustained while performing services arising out of and in the course of the employment at the time of the injury. Section 8-41-301(1)(b), C.R.S.; *Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). An injury "arises out of employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's services to the employer in connection with the contract of employment. *Id.* An employee whose work requires travel away from the employer's premises is held to be within the course of employment continuously during the trip, except when the employee makes a distinct departure on a personal errand and is therefore engaged in a substantial, personal deviation. *Employer's Liability Assurance Corp. v. Industrial Commission,* 147 Colo. 309, 363 P.2d 646 (1961); *Alexander Film Co. v. Industrial Commission,* 136 Colo. 486, 319 P.2d 1074 (1957); *Phillips Contracting, Inc. v. Hirst,* 905 P.2d 9 (Colo. App. 1995). The existence of a substantial, personal deviation are generally questions of fact for resolution by the ALJ. *Roache v. Industrial Commission,* 729 P.2d 991 (Colo. App. 1986).

6. Moreover, the court in *Hirst, supra,* explained that when a personal deviation is asserted, the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship. A claimant's deviation is considered substantial when that deviation is for his sole benefit. *See Kater v. Industrial Commission*, 728 P.2d 746 (Colo. App. 1986).

7. Here, Claimant was retrieving laundered shirts needed for an early morning business meeting. The ALJ cannot find this deviation to be so substantial as to take Claimant outside of the course and scope of his employment. It is uncontested that Claimant's work required extensive driving and that his duties required sales presentations to customers and prospective customers. It is further uncontested that there was a last minute change in Claimant's February 2 work appointments and he was required to be in Colorado Springs early in the morning. Claimant's job in sales is found to be a job in the business world and Claimant's personal dress code, requiring a starched white dress shirt, is consistent with business attire.

8. Claimant established by a preponderance that his injury in the MVA occurred in the course and scope of his employment and any deviation taken was insubstantial. The totality of the circumstances exposes an employment relationship in which Claimant drove extensively. Claimant's itinerary earlier in the day on February 1 evidenced the breath of his travel. He credibly testified to a code of dress consistent with his professional obligations and he credibly described a valuable sales opportunity in Colorado Springs on February 2 which had been rescheduled to first thing in the morning. It is concluded that Claimant's actions on February 1 going to the drycleaners was within the course and scope of his employment and any deviation was not substantial.

Medical benefits

9. Respondents are not liable for medical treatment unless it is rendered for an injury "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Section 8-41-301(1)(c), C.R.S. Similarly, the statute provides respondents are liable for reasonable and necessary medical treatment to cure or relieve the employee "from the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

10. Once causation is established, respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. Section 8-42-101(1)(a), C.R.S.*; Colorado Comp. Ins. Auth. v. Nofio,* 886 P.2d 714 (Colo. 1994).

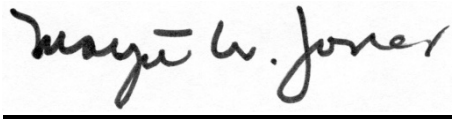
11. Here, Claimant established by a preponderance of the evidence that he suffered a work related injury in the course and scope of his employment for Employer on February 1, 2017. Respondents shall be liable for all reasonably necessary and related medical expenses.

ORDER

1. Claimant proved by a preponderance of the evidence that he was injured in the course and scope of his employment on February 1, 2018.

2. Claimant has proven his entitlement to medical benefits that are reasonable, necessary, and causally-related.

DATED: July 17, 2018



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Respondents have established an entitlement to a 50% reduction in Claimant's temporary total disability (TTD) indemnity benefits due to a safety rule violation.

2. Whether Respondents established that Claimant's injury was a result of Claimant's willful failure to obey a reasonable safety rule.

3. Whether Respondents established that Claimant's industrial injury was a result of Claimant willfully misleading Employer concerning Claimant's physical ability to perform the job of over the road truck driver.

4. Whether Respondents have established that Claimant was responsible for the termination of his employment.

STIPULATIONS

1. A duplicate sample of Claimant's urine that was tested and positive for illegal substances while he was hospitalized following the March 14, 2017 motor vehicle accident was not preserved for purposes of a second sample.

2. At hearing, the parties stipulated to an average weekly wage of $1,043.72. Subsequent to hearing, the parties recalculated the correct average weekly wage and stipulated to an average weekly wage of $1,133.14.

FINDINGS OF FACT

1. On December 14, 2016 Claimant was hired by Employer as a commercial over the road truck driver. On his employment application Claimant was asked if he had previously failed any employment-related drug screenings and he responded in the negative. Claimant also was asked on the application if he had ever been terminated from any prior employment due to failing employment related drug screenings and he again responded in the negative. Prior to his hire, his employment history was verified by Employer and none of his prior employers indicated he had been fired for drug related problems.

2. Prior to his employment with Employer, Claimant underwent a pre-employment drug screen that was negative.

3. Claimant had several years of commercial truck driving experience when he was hired by Employer. Claimant had worked for a driving company used by Employer on occasion and was known to Employer before they hired him as an employee.

4. Employer did not perform a background check on Claimant before hiring him or at any time while Claimant worked for them before his March 14, 2017 motor vehicle accident.

5. For Employer, Claimant's primary route involved delivering the U.S. mail from Denver to Grand Junction and usually required Claimant to work and drive at night. Claimant worked between 40 and 70 hours per week. Claimant was able to perform his job duties between December and March.

6. Employer has a "Drug, Alcohol, and Controlled Substances Policy" and a zero tolerance for the use of drugs, alcohol or controlled substances by drivers while in a company vehicle or while performing company business. The policy was made known to all employed in orientation and in safety meetings and is strictly enforced. The policy prohibits the presence of an amount of any controlled substance that results in a positive test of any employee while in a company vehicle or while performing company business. The policy outlines screening processes to prevent the hiring of individuals who use illegal drugs or whose use indicates a potential for impaired or unsafe job performance. The policy provides that a positive drug test will lead to immediate termination. *See* Exhibit H.

7. Employer also has a policy prohibiting the presence of any illegal drugs or drugs not sold by prescription or over the counter in company vehicles with any employee violating the policy being subject to termination. *See* Exhibit H.

8. Employer additionally has a driver safety policy precluding its drivers from operating a company vehicle while ill or fatigued. *See* Exhibit H.

9. Claimant signed and acknowledged that he received and had full understanding and agreement to abide by Employer's policies. *See* Exhibit H.

10. On March 14, 2017 Claimant was involved in a serious motor vehicle accident when the semi-tractor he was driving while delivering mail for Employer was traveling eastbound on Interstate 70 and traveled off the right side of the road, colliding with a fence, traveling through the fence, and eventually colliding with the mountain.

11. Claimant was found around 4:30 a.m. slumped over in the semi-tractor. It is unclear what time the actual accident occurred.

12. Claimant was severely injured and transported to St. Anthony's Hospital. Claimant's injuries included a fractured lumbar spine and multiple brain hemorrhages.

13. A Trooper with the Colorado State Patrol arrived to the scene of the accident at 5:55 a.m. after Claimant had already been transported away to the hospital. The Trooper estimated the time of accident at 4:30 a.m. and based on the travel pattern of the vehicle believed it probable that the accident had been due to fatigue. Trooper McDowell testified at hearing and explained it was not probable the accident was caused by distracted driving as there was no indicia of distraction such as immediate braking or jerking. Trooper McDowell also indicated that Claimant was not at the scene and he did not speak to Claimant and had no indication that drugs/alcohol were at play at the time he was doing the on scene investigation. Claimant was cited for careless driving.

14. A urine screen was performed at St. Anthony Hospital. The results were positive for amphetamines and MDMA.

15. It is unclear when Claimant used drugs or if Claimant was under the influence of drugs at the time of his motor vehicle accident. No values or expert extrapolation evidence was presented. Claimant could have used drugs in the days prior to the accident or could have been under the influence of drugs at the time of the accident. The evidence only shows a positive test.

16. Trooper McDowell later learned of the positive urine drug screen and believed that driving under the influence was the cause of the accident. Trooper McDowell did not amend the citation of careless driving to driving under the influence because of a determination made regarding burden of proof.

17. At some point later, the tractor-trailer was towed back to Employer's facility. While Claimant's co-workers were cleaning it out, they found a clear glass pipe with burn marks and white residue. This pipe was turned over to Trooper McDowell.

18. Respondents filed a general admission of liability and began paying Claimant temporary total disability benefits starting the day after the accident. Respondents reduced Claimant's benefits by 50% pursuant to § 8-42-112, C.R.S.

19. After the accident, and while in recovery, Claimant reported that he regularly used illicit substances, specifically crystal meth, and that he believed he could function well while under the influence. It was found that Claimant had an acute on chronic substance abuse problem and a history of jail time due to his substance abuse problems including heavy drinking, methamphetamine use, and cocaine abuse. Claimant reported that he had never been able to maintain sobriety despite past participation in abuse treatment.

20. Prior to being hired by Employer, Claimant had been incarcerated multiple times in the past four years for drug related issues. Claimant did not disclose his incarceration periods on his employment application.

21. Employer had no serious issues with Claimant's performance while he was an employee and until the accident at issue occurred.

22. Just prior to the March 14, 2017 serious motor vehicle accident, Claimant had an incident where his tractor-trailer went off the road but with no injury and minor damage to the vehicle. The tractor-trailer was pulled out, and Claimant continued to drive it. Claimant reported to Employer that he had swerved to avoid deer/elk on the roadway but later reported to others that he had fallen asleep.

23. On April 24, 2017 Employer terminated Claimant's employment. Claimant was terminated due to the positive drug urine screen after the March 14, 2017 accident and due to the paraphernalia found in the tractor trailer.

24. Both the general manager and safety and compliance manager for Employer indicated that if they had known of Claimant's substance abuse problems or prior history of incarceration they would not have hired Claimant. After the investigation of the accident and information came to be known by Employer, Employer decided to terminate Claimant's employment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations,

the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

SAFETY RULE VIOLATION

Sections 8-42-112(1)(b) and (d), C.R.S. provide for a 50% reduction in compensation when an injury results from an employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee or a 50% reduction when an employee willfully misleads an employer concerning the employee's physical ability to perform the job, and the employee is subsequently injured on the job as a result of the physical ability about which the employee willfully misled the employer.

The safety rule penalty is only applicable if a violation is willful. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Violation of a rule is not willful unless the claimant did the forbidden act with deliberate intention. *Bennett Properties Co. v. Industrial Commission*, 437 P.2d 548 (Colo. 1968); *Stockdale v. Industrial Commission*, 232 P. 669 (Colo. 1925); *Brown v. Great Peaks, Inc.*, W.C. No. 4-368-112 (Industrial Claim Appeals Office, July 29, 1999). A violation which is the product of mere negligence, forgetfulness or inadvertence is not willful. *Johnson v. Denver Tramway Corp.*, 171 P.2d 410 (Colo. 1946). Willfulness does not require that the claimant have the "rule in mind" and then determine to break it. Rather willfulness may be inferred from various circumstances including the frequency of warnings and the obviousness of the danger. However, mere negligence is not sufficient to show willful conduct. *Bennett Properties Co. v. Industrial Commission,* 165 Colo. 135, 437 P.2d 548 (1968); *Johnson v. Denver Tramway Corp.,* 171 Colo. 214, 171 P.2d 410 (1946). The question of whether the respondents proved willful violation of a safety rule is one of fact for the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office, supra.*

Respondents have failed to establish an entitlement to a 50% reduction in any owed compensation in this matter. The evidence is insufficient to establish that Claimant's injury resulted from his willful failure to obey a safety rule. Further, the evidence is insufficient to establish that Claimant's injury was as a result of Claimant misleading Employer about his physical ability to perform the job.

Employer has a policy/safety rule prohibiting the use, sale, purchase, transfer, manufacture, or possession of a controlled substance by any employee while in a company vehicle or while performing company business. Their policy prohibits being under the influence of a controlled substance while in a company vehicle or while performing company work. The policy also indicates that the presence of an amount of any controlled substance that results in a positive test of any employee while in a company vehicle or while performing company business is prohibited. Although these

rules are aimed at the safety of the employees, Respondents have failed to establish that Claimant's motor vehicle accident or his injury resulted from a willful failure to obey these rules.

The urine screen at the hospital was positive for illegal drugs. However, there is insufficient evidence to establish that Claimant was actually under the influence of the drugs found in his system at the time of his motor vehicle. Similarly, there is insufficient evidence to establish that the drugs or violation of the drug policy caused the motor vehicle accident or caused his injuries. There was insufficient evidence that Claimant was under the influence of drugs at the time he was driving and there was insufficient evidence that the drugs impaired his ability to operate a vehicle thus causing injury.

Employer additionally has a rule that requires drivers to not operate a company vehicle while ill or fatigued. Although Claimant possibly may have been fatigued, there is insufficient evidence to establish that Claimant willfully violated this safety policy/rule or that he intentionally drove while fatigued, thus causing injury.

Although it is possible the accident and injuries were caused by Claimant driving under the influence of drugs and although it is also possible the accident and injuries were caused by Claimant driving while fatigued, there is insufficient evidence to establish by a preponderance of the evidence that either is the case or that a violation of a safety rule caused the injury. There is insufficient evidence that the drug screen showed levels indicating Claimant was intoxicated or under the influence while driving (versus having used the illegal drugs days prior). There is also insufficient evidence showing Claimant was fatigued and willfully decided to drive anyways in violation of the safety rules. Although the injuries sustained possibly could be related and connected to a safety rule violation, Respondents have failed to show by a preponderance of the evidence that the injuries resulted from Claimant's willful violation of a safety rule.

Further, Respondents have failed to establish that Claimant was injured on the job after misleading Employer about his physical ability to perform the job. As found above, Claimant worked for Employer for several months without issue and was physically able and capable of driving a commercial motor vehicle. Respondents have failed to show that the injury was due to Claimant's inability physically to perform the job duties. Someone who uses and is addicted to drugs may very well be able to physically perform the job of commercial driver and may then abuse drugs on their off hours. It has not been established that Claimant misled Employer about his ability to perform the job.

TERMINATION

In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury. *See* § 8-42-103(1)(g), C.R.S.; 8-42-105(4)(a), C.R.S. In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Consequently, the concept of fault used in the

unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.*

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). However, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*. This is true even if the claimant is not specifically warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office, supra.*

Respondents have established that Claimant was responsible for the termination of his employment on April 24, 2017. The evidence establishes, more likely than not, that Claimant's termination was not due to his injuries as a result of the motor vehicle accident but was due to the results of a drug urine screen that he completed and due to the drug related paraphernalia found in the truck after it was towed back to Employer's facility. The positive urine drug screen showed that Claimant had violated Employer's policies. Although there was insufficient evidence to establish that a violation of a safety rule caused Claimant's injury, there is ample evidence that Claimant violated Employer's policy by testing positive for drugs shortly after the motor vehicle accident. As found above, Employer has a policy to drug test potential employees and to randomly screen current employees. Claimant acted volitionally when he used drugs at some point in time close to the motor vehicle accident knowing it was against Employer's policies. The positive urine drug screen provides sufficient evidence that Claimant acted volitionally and violated Employer's policy on drug usage justifying his termination. Claimant was not terminated due to his severe injuries as a result of the motor vehicle accident. Rather, he was terminated after Employer learned he had tested positive for drugs in violation of policy. It is found credible and persuasive that Employer was unaware of Claimant's drug usage and that they would not have hired or continue to employ him had they been aware of his drug history. When Employer became aware of the positive urine drug screen and of the pipe found in Claimant's tractor-trailer, they made the determination in April to terminate Claimants' employment which was justified for violation of Employer's policies.

ORDER

1. Respondents have failed to establish that Claimant's injuries resulted from his willful failure to obey a reasonable safety rule.

2. Respondents have failed to establish that Claimant's injuries resulted from him willfully misleading Employer concerning his ability to perform the job.

3. Respondents have failed to establish a 50% reduction in benefits due to the alleged safety rule violation.

4. Respondents have established that Claimant was terminated for cause and that any lost wages after April 24, 2017 were due to Claimant's at fault termination and not due to his injury.

5. Temporary indemnity benefits are thus owed from March 15, 2017 through Claimant's termination. Any lost wages after April 24, 2017 not due to Claimant's injury.

6. All matters not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that her low back condition is related to her August 15, 2016 admitted work related injury.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits, including but not limited to lumbar steroid injections, for her low back condition.

STIPULATIONS

1. Claimant's average weekly wage is $790.16.

FINDINGS OF FACT

1. Claimant is employed by Employer as a nurse. In August of 2016 Claimant was working as a home health nurse and traveled to visit clients in their homes to provide nursing services.

2. On August 15, 2016 Claimant was at a home and went into a room to call a physician to discuss orders. Claimant sat in an office chair at a desk.

3. As Claimant leaned back in the chair the tilt part of the chair opened/broke and Claimant fell backwards. Claimant hit her head, her left elbow, and landed half way on the chair and half way off with the arm of the chair hitting her lower back.

4. Claimant had severe pain in her head and elbow and felt as though everything was stiff. Claimant was taken by ambulance to the hospital.

5. Emergency medical services records indicate that emergency medical technicians arrived on scene and found Claimant laying on the floor in minor distress. Claimant reported a severe headache with hematoma to the back left side of the head and that she hit her had on the hard wood floor. Claimant was found to be alert and oriented x4 and denied loss of consciousness, cp, nvd, shortness of breath, neck pain, back pain, blurry vision, or dizziness. Claimant reported pain at 9/10. Claimant reported her head felt "swimmy like." They transported her to the emergency department of Medical Center of the Rockies. *See* Exhibit J.

6. At the Medical Center of the Rockies emergency department, Claimant reported that she was sitting in a chair when it went over backwards and that she struck the posterior aspect of her head and had a sense of fullness, a sense of being

unbalanced, and a severe headache. Claimant reported a sense of feeling like she was in a fish bowl. Claimant reported no tingling or numbness in her arms or legs. Claimant's psychiatric status was noted to be negative for confusion. A CT of the brain was done with the impression of left parietal scalp soft tissue contusion and no evidence of acute intracranial pathology. X-rays of the left elbow were done and read as having mild soft tissue swelling and no fracture or osseous abnormality. Claimant was discharged in stable condition and advised to follow up with workers' compensation. *See* Exhibits G, H, I.

7. On August 18, 2016 Claimant was evaluated by Bruce Cazden, M.D. Claimant reported that she was working as a home care nurse when she leaned back in a chair and the chair back seemed to fall causing her to fall backwards striking her head and left elbow on the ground. Claimant reported a diagnosis of mild concussion and that this was her fifth head injury with her last one being four years prior. Claimant reported having a headache, some ongoing mild nausea, and feeling slightly woozy. Claimant did not appear to have cognitive difficulty and had good recall of recent and remote events. Claimant reported primarily pain in the head and left elbow. On exam Claimant was able to walk without antalgia, got in and out of a chair easily and on the exam table without difficulty. Claimant had a small lump on the back of the head. She had mild tenderness and reduced range of motion in the cervical spine and no tenderness in the thoracolumbar spine. Dr. Cazden diagnosed concussion without loss of consciousness, postconcussional syndrome, and sprain of ligaments of cervical spine. He recommended she return to work her next scheduled shift and provided medications. *See* Exhibits 2, K.

8. On August 26, 2016 Claimant was evaluated by Nurse Practitioner Bill Ford. Claimant reported continued headache and tenderness over the crown of her scalp where she struck the floor. Claimant also reported some elbow pain and tenderness. NP Ford found some mild range of motion deficits in the cervical spine. Claimant appeared to be cognitively intact. NP Ford recommended physical therapy 2x per week for 8 total visits and opined that Claimant would benefit from her neck stiffness and headache pain by attending physical therapy. *See* Exhibits 2, K.

9. On August 30, 2016 Claimant underwent an initial physical therapy evaluation. Claimant reported her primary problem as a sprain to her cervical spine, a contusion, and a headache in the head and neck that was severe and constant. Claimant reported pain with pressure to her elbow accompanied by tingling and numbness down the medial forearm to the wrist. Claimant reported memory loss for 3 days after her incident. Claimant was noted to have a flattened thoracic kyphosis and flattened lumbar lordosis. Therapeutic exercises were performed to the cervical and thoracic spine to decrease tension and increase range of motion. Hot packs were applied to the thoracic spine, lumbar spine, and cervical spine to decrease pain and increase blood flow. Claimant was educated on the cervical spine and thoracic spine. The therapist noted that Claimant was status post thoracic, cervical, and head contusions with associated sprain/strains and that she had tenderness to palpation, swelling/edema, lumbopelvic asymmetry, limited functional tolerance, limited work tolerance, numbness/tingling,

decreased range of motion, strs, postural insufficiency, and postural mal-alignment. *See* Exhibits 6, F.

10. On September 2, 2016 Claimant returned to physical therapy. Claimant reported no new complaints and that she received massage after her prior session which reduced the tension in the base of her neck. Therapeutic exercises were provided for the cervical and thoracic spine. Hot packs were applied to the cervical and thoracic spine. The therapist noted that after physical therapy Claimant had improved tissue quality in the upper back and improved neck extension. The therapist noted that he focused on the SI joint and the low back first to create a stable base for Claimant's mid back and neck to sit on. *See* Exhibits 6, F.

11. On September 6, 2016 Claimant underwent physical therapy. Claimant reported improvement since the last session and that she could extend her neck much better. Therapeutic exercises were provided to the cervical and thoracic spine. Hot packs were applied to the cervical and thoracic spine. The therapist noted that Claimant's cervical extension and mid thoracic tension were improving. *See* Exhibits 6, F.

12. On September 6, 2016 Claimant was evaluated by NP Ford. Claimant reported headache and mild improvement in her neck stiffness. Claimant reported continued pain with her left elbow contusion. Claimant reported that she had been working regular duty. Claimant reported some fogginess intellectually with memory. Claimant had some tenderness on exam in her neck area. NP Ford recommended she continue physical therapy and in home exercise program and noted he would consider a consultation with Dr. Boyd if Claimant continued to complain of intellectual/cognitive issues. *See* Exhibits 2, K.

13. On September 13, 2016 Claimant underwent massage therapy. Claimant reported pain and stiffness with reduced range of motion in the cervical spine. Claimant also reported that she had been having low back pain. The therapist noted the objective would be to focus massage therapy for iliolumbar and SMR technique. *See* Exhibits 6, E.

14. Claimant also underwent physical therapy on September 13, 2016. Claimant reported her tension headache was much better with mainly stiffness and soreness in the base of the skull. Therapeutic exercises were provided to the cervical and thoracic spine and hot packs were applied to the cervical and thoracic spine. The therapist noted that he got Claimant's SI joint aligned and worked on the lumbar region. He noted he would recheck those regions next session and work up through the thoracic spine to the neck where Claimant had a cervicothoracic junction/upper cervical compensation that still needed to be corrected. *See* Exhibits 6, F.

15. On September 16, 2016 Claimant underwent massage therapy. Claimant reported that after her last massage and physical therapy she felt sore in the hips for about a day but had relief of her low back pain. Claimant reported that she was continuing to have low back pain when standing for long periods of time and also with going from a

sitting position to standing position. Claimant also reported that her neck felt better after the last physical therapy visit but that now she felt tightness when rotating cervical. *See* Exhibits 6, E.

16. On September 16, 2016 Claimant was evaluated by Brian Mathwich, M.D. Claimant reported continued neck stiffness and low back discomfort improved from the original injury but still very problematic. Claimant reported working full duty without problems and that she was seeing physical therapy and massage therapy with good results. Dr. Mathwich found slight upper thoracic kyphosis with an enlarged C7-T1 area and increased pain on palpation of the left trapezius with trigger point. He also found decreased range of motion of the cervical spine due to stiffness and pain. Dr. Mathwich found positive pain on palpation in the low back along the right side of the sacrum with trigger points in the gluteus muscles medially. Claimant had full range of motion and was able to bend over and touch her toes but it was quite uncomfortable for her to stand back up. *See* Exhibits 6, K.

17. On September 30, 3016 Claimant was evaluated by NP Ford. Claimant reported that physical therapy and deep tissue massage seemed to be helping and that she was working normal duty. Claimant reported other health issues going on over the weekend. Claimant reported taking a muscle relaxer at bedtime, Tylenol during the day, and occasional Vicodin at bedtime. Claimant reported decreased cervical range of motion. On exam Claimant had some limitations in cervical range of motion. NP Ford recommended 6 additional physical therapy and deep tissue massage visits. NP Ford also recommended a consultation with Dr. Oeser for treatment guidance and noted Claimant was still struggling with stiffness and occasional headache. *See* Exhibits 2, K.

18. On October 11, 2016 Claimant underwent physical therapy. She reported that her left low back had been very tender lately with soreness at the base of the neck and right ribcage. Therapeutic exercise was performed on the cervical spine and lumbar spine. Hot packs were applied to the lumbar spine and thoracic spine. *See* Exhibits 6, F.

19. On October 18, 2016 Claimant was evaluated by Roberta Anderson Oeser, M.D. Claimant reported cervical pain, headaches, left shoulder girdle pain, and low back pain. Claimant reported she fell on her left side at the time of the injury and that she had low back pain and left hip and lateral thigh pain and felt as though physical therapy had helped with her low back pain. On examination, Claimant had tenderness in the lumbar spine over the L5-S1 facet joints, bilateral SI joints, and left piriformis muscle. Dr. Oeser noted that Claimant's hip height was asymmetrical and that Claimant had mild decreased motion in the SI joints, mildly restricted extension and rotation, and increased discomfort in the lower lumbar region with the maneuvers. Dr. Oeser provided the impression of concussion without loss of consciousness, post concussive syndrome, cervical strain, muscle spasms, and lumbar strain. Dr. Oeser recommended x-rays of the cervical and lumbar spine. *See* Exhibit 3.

20. X-rays of the lumbar spine performed on October 18, 2016 showed lumbar vertebral body height and alignment maintained with mild disc height loss at L4-5, advanced disc height loss at L5-S1, and advanced bilateral facet arthrosis at L4-5, and advanced bilateral facet arthrosis at L5-S1. The impression was degenerative disc disease and facet arthrosis at L4-5 and L5-S1. *See* Exhibits 4, I.

21. On October 21, 2016 Claimant was evaluated by Terrel Web, M.D. Claimant reported she had a head injury, cervical spine injury, and low back strain/sprain and that x-rays of her neck and low back had recently been obtained. Dr. Web found mild loss of lumbar lordosis in the lumbar spine as well as tenderness to palpation over the lower paraspinous muscles. *See* Exhibits 2, K.

22. On November 1, 2016 Claimant was evaluated by Dr. Oeser. Claimant reported cervical pain, headaches, low back pain, and cognitive problems. Dr. Oeser noted that the s-rays showed multilevel degenerative disc disease and facet arthropathy. Dr. Oeser recommended chiropractic treatment and dry needling to address the cervical and lumbar pain and muscle spasms. Dr. Oeser also recommended Claimant be seen by Dr. Boyd for a neuropsychological evaluation. *See* Exhibit 3.

23. On December 28, 2016 Claimant was evaluated by Dr. Oeser. Claimant reported shooting spasming pain in the neck with numbness and tingling radiating to the left elbow and occasionally past the elbow. Claimant reported an aching burning pain in the left low back, buttocks, and hip. Dr. Oeser noted that a cervical MRI had been completed and reviewed the findings and recommended transforaminal epidural steroid injections for the cervical spine. *See* Exhibit 3.

24. On January 31, 2017 Claimant was evaluated by Dr. Oeser. Claimant was quite concerned that she continued to have ongoing low back, buttocks, and hip pain and also reported pain and intermittent paresthesias in her left lower extremity. Dr. Oeser noted that Claimant had been through a course of physical therapy and chiropractic treatment without resolution of her low back or hip symptoms and recommended an MRI of the lumbar spine to rule out a disc lesion with nerve root compromise and facet arthrosis in addition to an MRI of the left hip to rule out trochanteric bursitis versus internal derangement of the hip. *See* Exhibit 3.

25. On February 1, 2017 Claimant underwent an MRI of her lumbar spine. The findings included a minimal disc bulge at L3-L4, a mild disc bulge at L4-L5 with moderate bilateral facet arthrosis and no significant spinal canal or foraminal stenosis, and a disc bulge with midline annular fissure and moderate bilateral facet arthrosis at L5-S1. At L5-S1 it was noted that there was moderate left foraminal stenosis with disc abutting the undersurface of the exiting left L5 nerve root. The impression provided was lower lumbar degenerative disc disease with no spinal canal stenosis and moderate left L5-S1 foraminal stenosis. *See* Exhibits 4, I.

26. On February 1, 2017 Claimant also underwent an MRI of her left hip. The impression provided was mild degenerative osteoarthrosis of the hip and otherwise the findings were negative. *See* Exhibits 4, I.

27. On February 9, 2017 Claimant was evaluated by Dr. Oeser. Dr. Oeser noted that the left hip MRI revealed mild degenerative osteoarthritis and that the MRI of the lumbar spine revealed degenerative disc disease with no spinal canal stenosis as well as moderate left L5-S1 foraminal stenosis with disc abutment of the exiting L5 nerve root. Dr. Oeser opined that the disc bulge with annular fissure and moderate left foraminal stenosis with a disc abutting the exiting left L5 nerve root may be accounting for Claimant's left lower extremity symptoms and recommended a diagnostic/therapeutic left L5 transforaminal epidural steroid injection. *See* Exhibit 3.

28. On April 10, 2017 Dr. Oeser performed a left L5 transforaminal epidural steroid injection. Dr. Oeser noted Claimant had degenerative disc disease and facet arthropathy most notably in the lower lumbar region in the epidurogram. *See* Exhibit 3.

29. On April 27, 2017 Claimant was evaluated by Dr. Oeser. Claimant reported minimal improvement in her lumbar symptoms with the injection. Dr. Oeser recommended an EMG/Nerve Conduction study of the lower extremities to rule out a definitive lumbar radiculopathy. *See* Exhibit 3.

30. On May 18, 2017 the EMG/NCS was performed by Dr. Oeser. It was found to be a normal study. Dr. Oeser again reviewed Claimant's lumbar spine MRI and noted it had a disc bulge with midline annular fissure at L5-S1 and disc material abutted the undersurface of the exiting left L5 nerve root that may or may not be accounting for the ongoing left lower extremity symptoms. Dr. Oeser recommended a referral to spine surgeon Dr. Janssen to see if Claimant could be considered a surgical candidate versus continuing with conservative care. *See* Exhibit 3.

31. On May 25, 2017 Claimant was evaluated by Michael Janssen, D.O. He noted that he did not have an extensive amount of medical records and would summarize the information Claimant gave him. Claimant reported falling off of a defective chair landing directly on her back and that she had terrible pain in her neck, left arm, and low back and had a concussion. Claimant reported injections in the lower back did not improve her condition. Claimant also reported injections in her cervical spine and that she did not get substantial relief. Dr. Janssen performed a physical examination and found no sacroiliac joint restriction, positive stretch root sign to the left lower extremity with reproduction of leg pain. Dr. Janssen reviewed the MRIs of the cervical and lumbar spine. He found modic changes and disc incompetency with vertical instability at L5-S1 with a small disc protrusion eccentering to the left. He assessed nonspecific low back pain with symptoms for 10+ months with disc pathology and vertical instability of L5-S1. Dr. Janssen noted that Claimant complained that her low back was much more symptomatic than her neck and that if the primary pathology was the low back he recommended an L4-5 and L5-S1 lumbar discogram. *See* Exhibits 8, D.

32. On June 7, 2017 Albert Hattem, M.D. issued a report indicating that Claimant did not complain of low back pain to any of her treating practitioners until October 18, 2016 when she reported low back pain to Dr. Oeser. Dr. Hattem noted that Claimant did not report low back pain when initially presented to the emergency department and did not report low back pain to Dr. Cazden prior to October of 2016. Dr. Hattem opined that due to the interval of time between the injury and Claimant's first complaint of low back pain, it was unlikely the condition was claim related. *See* Exhibit C.

33. On June 13, 2017 Claimant was evaluated by NP Ford. Claimant reported authorization for a lumbar discogram was denied by Insurer. NP Ford reviewed Claimant's initial presentation and pain questionnaire from Claimant's first visit and noted that Claimant had complained of head pain, elbow pain, and some cognitive issues. NP Ford noted that in review, Claimant's complaints of back pain began when Claimant visited Dr. Oeser. However, NP Ford opined that Claimant was not thinking clearly and her cognitive issues were beginning to clear up somewhat at that time. *See* Exhibit 2.

34. On July 6, 2017 Claimant was evaluated by Dr. Oeser. She reported that Dr. Janssen had recommended a L4-5 and L5-S1 discogram but that it was denied by Insurer due to a question over when Claimant reported low back pain. Claimant told Dr. Oeser that she had severe head and neck pain at the time of her injury which was far more pressing and painful than her low back pain. Dr. Oeser reviewed a September 16, 2016 note from Dr. Mathwich where Claimant reported continued low back discomfort and noted in exam pain to palpation in the low back. Dr. Oeser noted that Claimant reported low back and left lateral thigh pain at the first visit with her in October of 2016. Dr. Oeser noted that she did not have physical therapy notes to determine whether or not Claimant was complaining of low back pain at the first physical therapy visit. However, Dr. Oeser opined that based on the mechanism of injury, Claimant's current low back symptoms were related to her work injury and mechanism of falling off the chair landing on her left side. *See* Exhibit 3.

35. On July 13, 2017 Claimant was evaluated by Dr. Janssen. Claimant reported that the discogram of the lumbar spine had been denied. Dr. Janssen noted that his recommendation was only that if the primary pathology was truly low-back and had been going on for 10 months than a discogram was reasonable based on the morphological anatomy. Claimant reported that she wanted to focus on her upper extremity and pain. Dr. Janssen recommended Claimant follow up with Dr. Oeser and was not 100% convinced that the C5-6 pathology and morphological changes on the MRI correlated with Claimant's clinical findings and the absence of electrophysiological findings. Dr. Janssen noted that surgery may be needed but only if all the cards lined up and the diagnostic indicates clearly suggested surgery. He indicated at the time, he was somewhat confused. *See* Exhibit 8.

36. On August 16, 2017 Allison Fall, M.D. performed an independent medical examination of Claimant. Claimant reported that she was injured when sitting in a chair on the phone taking orders from a doctor and leaned back in her chair. Claimant reported

that when she tilted back, the chair did not hold and she fell backwards and landed hitting her left posterior head on the ground and that she was half on and half off the chair more to the left side. Claimant reported severe pain in her neck, head, and left elbow and that she did not remember a lot around that time. Claimant reported not remembering anything until seeing a provider at Workwell on Friday. Claimant reported that she was having severe headache, spasms in her neck and shoulders predominantly on the left side. Claimant reported that she had low back pain from the "get-go." Claimant reported neck pain with radiculopathy into the shoulder and left arm and hand. Claimant also reported low back pain with numbness and pain down the left leg and foot as well as extremely achy pain in the left hip to the outer left leg. Dr. Fall reviewed medical records and performed a physical examination. *See* Exhibit B.

37. Dr. Fall opined that Claimant had lumbar spondylosis and that her low back condition was not directly related to the August 15, 2016 work injury. Dr. Fall opined that Claimant's low back symptoms were related to somatic reactivity or were related to Claimant's underlying degenerative condition. Dr. Fall opined that given the absence of symptoms in the initial timeframe after the work related incident, she was unable to relate the low back complaints to the fall. Dr. Fall noted that Claimant had reported that she had low back pain from the "get-go" but that it was not reported in any of the medical records. *See* Exhibit B.

38. On September 19, 2017 Claimant was evaluated by NP Ford. He opined that Claimant's symptoms were a direct result of her fall at work. He opined that Claimant had some degenerative changes present, but that Claimant had no symptoms prior to her work related fall which led him to believe that the fall precipitated the radicular symptoms in the neck and the lower back. *See* Exhibit 2.

39. On October 2, 2017 Claimant was evaluated by Dr. Cazden. He noted that over the initial 2 months of Claimant's treatment, she complained of mostly headache with cognitive symptoms along with some neck pain and some mild symptoms in the left upper extremity. He noted that 2 months post injury, Claimant mentioned that her back was hurting and that her symptoms had since escalated. He noted Claimant had an MRI of the lumbar spine that showed degenerative disc disease and moderate left L5-S1 foraminal stenosis but that Claimant had a normal EMG of the left lower extremity. Dr. Cazden opined that it was less clear whether the lumbar spine was part of the work related claim or not and that Claimant did not seem to have any symptoms or complaints of lower back pain for 2 months post injury. Dr. Cazden noted that it did not appear that Claimant had a strong claim for causality with regard to her lower back pain and that the ongoing neck pain appeared more appropriate related but he also noted some inconsistency with her left upper extremity symptoms and the pathology in the neck and opined it was not clear that surgery would be a good option for Claimant. *See* Exhibit 2.

40. On November 21, 2017 Claimant was evaluated by Dr. Oeser. Dr. Oeser noted that Claimant may be a candidate for injection therapy in the future for her low back, left buttocks, and trochanteric bursal pain. Dr. Oeser explained to Claimant that it would be difficult to prove that the low back and buttocks symptoms were work related if

Claimant was not complaining of any symptoms within the first one to two weeks. Dr. Oeser opined that if the medical records documented that Claimant was having low back pain or left hip pain in the first one to two weeks, then she would recommend Claimant be allowed further treatment for those areas. *See* Exhibit 3.

41. Dr. Fall testified at hearing consistent with her report. She noted that since her report she had reviewed additional records but had not changed her opinion. Dr. Fall opined that there was no suggestion of an acute injury to Claimant's low back in this case. Dr. Fall opined that there was no change, temporary or permanent, to Claimant's underlying degenerative condition. Dr. Fall opined that the temporal relationship is extremely important and typically is immediate. Dr. Fall agreed that if there was a severe injury, you could see the focus elsewhere but that in Claimant's case the spine was examined early on with no tenderness or indication of acute injury. Dr. Fall opined that if Claimant had an extremely painful low back as a result of the fall, she would have expected pain reports in the EMS or ER records. Dr. Fall noted that the first pain complaints to a provider were over a month after the incident. Dr. Fall pointed out Claimant's neuropsych testing that showed an unusual combination of responses and opined that maybe Claimant's subjective reports of symptoms could not be relied upon. Dr. Fall opined that it was highly unlikely Claimant's back pain was related to the August 15, 2016 incident.

42. Dr. Fall testified that she had not reviewed physical therapy records from August 30, September 2, or September 13 but that if the first subjective complaints of back pain were earlier her opinion would not change. Dr. Fall opined that low back pain was not reported to EMS, to the ER, or to Workwell at the first visit. Dr. Fall opined that Claimant has stenosis and that a nerve root is abutted but that the MRI findings are not what are causing Claimant's lumbar spine symptoms and were ruled out by EMG and epidural steroid injection. Dr. Fall opined that she was not sure what was causing Claimant's pain. Dr. Fall opined that a modic change is a chronic and longstanding change. Dr. Fall opined that it was not physiologic that Claimant's symptoms have gotten worse and worse with more treatment.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet her burden by a preponderance of the evidence to establish that her low back complaints are causally related to the August 15, 2016 injury. She has failed to establish that medical treatment, including epidural steroid injections, is reasonable, necessary, and causally related to her August 15, 2016 injury.

As found above, initially when transported by EMS to the medical center, Claimant reported no low back pain. At the emergency department she also reported no low back pain. Claimant did not report low back pain at her initial visit with the workers' compensation provider on August 18, 2016. She did not report low back pain at a visit with the workers' compensation provider on August 26, 2016. At her initial physical therapy evaluation on August 30, 2016 Claimant did not report low back pain. Although the therapist noted on August 30, 2016 that Claimant had a flattened lumbar lordosis, lumbopelvic asymmetry, and postural mal-alignment, there are no opinions supporting that her flattened lumbar lordosis, lumbopelvic asymmetry and postural mal-alignment were due to the August 15, 2016 fall. The evidence shows that these postural deficits were noted by the physical therapist on August 30, 2016 but also shows Claimant reported no low back pain on that date. At her next physical therapy visit on September 2, 2016 Claimant reported no new complaints and again failed to report any low back pain. As found above, the therapist noted that he focused on the SI joint and the low back not due to any pain complaints in those areas but ***in order to*** create a stable base for Claimant's mid back and neck to sit on. The decision on how to effectively treat her complaint areas of the neck by focusing lower and on the SI joint and the low back in order to create a stable base were treatment decisions made by the therapist. There is no report by Claimant on September 2, 2016 that she had low back pain. On September 6, 2016 at physical therapy Claimant reported improvement and that she could extend her neck better. The therapist noted improvement in cervical extension and mid thoracic tension. No mention of low back pain is in the September 6, 2016 records. Claimant was again evaluated by the workers' compensation provider NP Ford on September 6, 2016 and she did not report any low back pain.

The first report Claimant provided of low back pain was on September 13, 2016 at a massage therapy visit. This is approximately one month following her work related injury. At prior evaluations Claimant had articulated various areas of concern and it is not credible or persuasive that her head injury or confusion caused her to fail to report low back pain that she claims existed immediately following the August 15, 2016 incident.

Dr. Fall's opinions are overall consistent with the medical records which document an absence of any reported low back pain until September 13, 2016. The opinions regarding the lack of temporal relationship between the August 15, 2016 fall and the low back pain are found credible and persuasive. Claimant has failed to establish that she sustained a low back injury on August 15, 2016. This is consistent overall with the opinion of Dr. Cazden who noted that Claimant did not have a strong claim for causality with regard to her low back pain (although he believed the first symptoms/pain complaints were 2 months post injury when they were 1 month post injury). Dr. Hattem also came to a similar conclusion. Additionally, as found above, by November of 2017 Dr. Oeser opined that she would recommend Claimant be allowed treatment under workers' compensation for her low back pain or left hip pain ***if*** the medical records documented that Claimant was having low back pain or left hip pain in the first one to two weeks following the August 15, 2016 fall. The medical records do not document any low back or left hip pain complaints in the first one to two weeks. Further, Dr. Janssen noted specifically at his July 13, 2017 evaluation (after finding out that the requested discogram had been denied due to questions of causation) that his recommendation for discogram

was ***only*** an opinion that a discogram was reasonable based on the morphological anatomy and low back pain for 10 months. Dr. Janssen qualified his recommendation as only being that the discogram was reasonable and provided no opinion on whether or not it was causally related to the August 15, 2016 fall after finding out the discogram had been denied. Claimant, overall, is not found credible or persuasive that she had low back pain immediately following the August 15, 2016 incident. Claimant did not report low back pain with EMS, at the ER, at her first visit with Dr. Cazden, during her first two visits with NP Ford, or during her first three visits with physical therapy. This is inconsistent with someone who has sustained an acute injury/aggravation to the low back and who has immediate pain following the incident.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that her low back condition is related to her August 15, 2016 work injury.

2. Her claim for medical benefits related to her low back is denied and dismissed including, but not limited to, injections performed by Dr. Oeser.

3. All matters not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 27, 2018

Denver, CO 80203

ISSUES

1. Whether Claimant has overcome by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician Clarence Henke M.D. regarding Claimant's permanent impairment rating.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a disfigurement award, and if so, the amount of award.

STIPULATIONS

1**.** Respondents admitted to and are not disputing a left upper extremity impairment rating of 9% scheduled impairment.

2. The parties agree Claimant is entitled to a general award for maintenance medical care (general Grover admission).

FINDINGS OF FACT

1. Claimant is a 62-year-old female who is employed by Employer as a Security II Supervisor with Employer's police department. Claimant has worked for Employer since approximately 2007.

2. On January 21, 2015 Claimant responded to a call where a student was stuck in an elevator. On her way back from responding to that call, it was snowing.

3. As claimant stepped off a sidewalk, she slipped and fell on black ice. Claimant fell quickly forward but more to the left side and her left hand landed under her body. Claimant sustained a laceration over her left eye.

4. Claimant continued walking to the police station and went to the restroom to clean up. When cleaning up her laceration Claimant noticed pain in her left hand and wrist while washing her hands.

5. Claimant went to Boulder Community Hospital for emergency treatment and received sutures for her left eyebrow laceration and splinting for a left wrist fracture.

6. Claimant denied neck or back pain while at the hospital. Claimant testified that she developed worsening symptoms of neck pain, left hip pain, and hand pain over the next few days.

7. Two weeks prior to the January 21, 2015 slip and fall injury, Claimant had undergone a Division Independent Medical Examination (DIME) for a 2012 work related injury.

8. On January 7, 2015 Claimant was evaluated by DIME physician John Hughes, M.D. for her 2012 injury. Dr. Hughes noted that Claimant had developed progressive arthritis involving her left and right hip, leg problems, cervical spine problems, and back problems. Claimant had reported knots in her neck and tension beginning on September 26, 2013 and bilateral posterior hip pain. Claimant reported that she was still symptomatic with constant neck pain of an aching quality at a magnitude of 8/10 that radiated into her shoulders. Claimant also reported bilateral hip pain, right greater than left, with right hip pain at 5/10 and left hip pain at 3-4/10. Dr. Hughes measured cervical spine and bilateral hip range of motions. He assessed: right hip sprain with aggravation of underlying osteoarthritis due to her February 2012 fall, cervical spine sprain/strain due to her February 2012 fall resolved by April 2012, progressive bilateral hip osteoarthritis, and cervical spinal spondylosis. He rated Claimant's right hip impairment at 6% lower extremity and opined that she sustained a right hip injury with aggravation of right hip osteoarthritis, as arthritis due to trauma. Dr. Hughes opined that Claimant did not sustain a work related injury to the left hip. He also opined that Claimant did not require any additional treatment directed to her right hip that could be attributed to the work related injury per se. He opined that Claimant clearly required treatment directed to her progressive arthritis. *See* Exhibit H.

9. On January 22, 2015 Claimant was evaluated by Richard Shouse, PA. Claimant reported slipping on some black ice and breaking her fall with her outstretched left hand and striking her eyebrow. Claimant reported getting 9 sutures to the eyebrow and a splint to her left wrist with a non-displaced fracture of the distal radius. On examination, Claimant had no neck pain. PA Shouse diagnosed laceration of the eyebrow and fractured left wrist. He referred Claimant to Dr. Conyers for follow up to the wrist fracture. *See* Exhibit 11.

10. On January 26, 2015 Claimant was evaluated by Lori Long, M.D. Dr. Long noted that Claimant was there for a follow up on her facial laceration and contusion and her left distal radius fracture. Claimant reported some tightness in her left neck and some bruising on her left thigh. Claimant reported no left hip pain or thigh pain and that the bruise was resolving. Dr. Long removed 9 sutures from Claimant's left eyebrow laceration and noted it was well healed. On neck examination, Dr. Long found slight restriction in range of motion and marked increased tone in the left paracervical musculature. Dr. Long noted normal gait and normal left hip mobility. Dr. Long assessed: left facial laceration with suture removal, left facial contusion, left cervical strain, left distal radius fracture, and left hip contusion. *See* Exhibit 5.

11. On February 2, 2015 Claimant was evaluated by Dr. Long. Claimant reported having a great deal of neck pain with no headaches from the cervical strain. Claimant reported ecchymosis was still present on her left hip and that she had a great deal of discomfort at night. Dr. Long found decreased range of motion in all planes of the

neck particularly with right rotation and right flexion and also found marked increased tone in the paracervical musculature on palpation. Dr. Long observed an 8 cm by 3 cm resolving ecchymosis on the left hip and thigh starting at the greater trochanter and extending distally that was tender to palpation. *See* Exhibit 5.

12. On February 15, 2015 Claimant was evaluated by Dr. Long. Claimant reported her neck pain was pretty significant with difficulty sleeping at night and left sided neck muscle tightness causing headaches. Claimant reported her hip pain was worse at night but that she felt like the bruising was resolving. Dr. Long noted that they may need to proceed toward imaging of the hip and that they knew Claimant did not have a fracture or bony injury but that the possibility of hip labral tear should be considered. On exam, Dr. Long found spasm of the left paracervical musculature including the sternocleidomastoid and that those muscles were very tender to palpation limiting range of motion significantly. Left hip mobility was noted to be full. Dr. Long assessed: severe left cervical strain and spasm, left distal radius fracture, and left hip injury. *See* Exhibit 5.

13. On March 6, 2015 Claimant was evaluated by Dr. Long. Claimant reported 8/10 neck pain without radicular symptoms and that the pain was localized to the paracervical musculature with pain while turning her head. Dr. Long noted that given the severity of Claimant's pain and the lack of options for treatment, a cervical MRI was needed to direct treatment. Claimant continued to report left hip pain particularly at night and no left hip pain with mobility. On exam, Dr. Long found restricted range of motion of the neck in all planes, marked increased tone throughout the paracervical muscles, scalene, superior traps, and levators. Dr. Long noted that it was difficult to treat Claimant because Claimant was unable to tolerate most medications and did not find benefit from most treatments. Dr. Long suspected the cervical pain was all muscle related. *See* Exhibit 5.

14. On March 11, 2015 Claimant underwent an MRI of her cervical spine.

15. On March 19, 2015 Claimant was evaluated by Dr. Long. Claimant reported still having a lot of neck pain with a slight bit of improvement with massage therapy. Claimant reported her left hip pain waxed and waned. Dr. Long reviewed the cervical MRI. Dr. Long opined that the inflammatory osteoarthropathy of the C3-4 facet joints with bone marrow edema and effusion and surrounding soft tissue swelling was likely the pain generator for Claimant's neck pain. Dr. Long again found increased tone throughout the paracervical musculature slightly improved from last visit and found range of motion restrictions in all planes. Dr. Long assessed: left C3-4 facet arthropathy, severe, with surrounding soft tissue inflammation; small central to left foraminal disc protrusion with left disc osteophytes at C5-6 with mild to moderate left neuroforaminal narrowing and moderate left facet hypertrophy, improving left distal radius fracture, and left hip pain. *See* Exhibit 5.

16. On April 15, 2015 Claimant was evaluated by Sander Orent, M.D. He titled the report follow up report and noted claimant had ongoing severe pain in her hips and that Claimant had a recent fall. He noted on examination some changes in pain with

internal and external rotation. Dr. Orent opined that the only thing they could do would be to get an image of the hip to make sure there was no labral tear. Dr. Orent noted that Claimant had been complaining bitterly of both hips for some period of time and that both had at various times caused her pain and seemed to have been related to her injury but that Claimant also had severe early onset osteoarthritis. Dr. Orent opined that the severe early onset osteoarthritis was probably substantially aggravated by her 2012 fall and that there was really nothing further to offer Claimant. *See* Exhibit 8.

17. Claimant continued to treat with Dr. Long. Dr. Long noted she was at a loss for what additional therapy they could offer Claimant who didn't want pain management medications. Claimant also indicated that she was not interested in a facet injection for the inflamed facet in the neck that was the pain generator. Dr. Long noted during this time that nothing had provided lasting benefit to Claimant including massage, physical therapy, chiropractic care, acupuncture, traction, or topicals. Dr. Long noted she was out of options to treat Claimant's continued pain but recommended physical therapy with a therapist who had expertise in hips. *See* Exhibit 5.

18. On June 22, 2015 Claimant was evaluated by Dr. Long. Claimant did not follow through with the hip specialist physical therapist. Claimant reported continued neck pain and cervicogenic headaches. Claimant reported her left hip hurt with inactivity and not with range of motion or walking. Dr. Long opined that Claimant was approaching MMI. Dr. Long noted that Claimant would have an impairment rating for the neck but that she saw no impairment for the hip pain and opined that the changes on MRI were chronic and degenerative. Dr. Long also opined that she saw no impairment for the eyebrow laceration of the left distal radius fracture. *See* Exhibit 5.

19. On July 24, 2015 Claimant was evaluated by Dr. Long. Claimant again reported left neck pain and left hip pain. Claimant indicated again that she was not open to a steroid injection even though they knew her neck pain was facetogenic from an inflamed facet on the left side. Dr. Long thus opined Claimant was at MMI for the neck. Claimant reported not being interested in orthopedic evaluation or injections for her left hip pain either and that it was worse when she was at rest. Dr. Long performed cervical and hip range of motion measurements on the left side. Dr. Long noted significant range of motion restrictions on the left hip and thought at that point in time that she could do an impairment on the left hip. Dr. Long opined that the range of motion impairments for the left hip equaled 26% lower extremity impairment, with flexion at 75 degrees, extension of 10 degrees, abduction of 25 degrees, adduction of 15 degrees, internal rotation of 20 degrees, and external rotation of 30 degrees. Dr. Long wanted Claimant to come back after using the occi pivot on her neck before determining neck impairment. *See* Exhibit 5.

20. On August 20, 2015 Claimant was evaluated by Dr. Long. Dr. Long noted that Claimant was there to follow up on her neck pain, cervicogenic headaches, and left hip pain and that Claimant's left distal radius fracture had healed as had Claimant's eyebrow laceration. Claimant reported that her hip pain was flaring upon the left side periodically. Dr. Long noted that the MRI showed primarily a tendinitis and some

degenerative fraying of the labrum on the left hip. Claimant reported that she had changed her mind and now wanted to follow up with an orthopedist regarding her hip. Dr. Long also noted that Claimant's cervical MRI showed left C 3-4 facet inflammation and was fairly confident that Claimant's neck pain was facetogenic pain from the inflamed facet causing reactive neck muscle tightness and resultant cervicogenic headaches. Dr. Long noted that other than obtaining an orthopedic evaluation Claimant was pretty much at MMI. Dr. Long opined that Claimant had a hip impairment rating of 27% lower extremity and that she had made an error in the prior rating. Dr. Long performed cervical spine range of motion and found flexion at 5 degrees, extension at 20 degrees, right lateral cervical flexion of 8 degrees, left lateral cervical flexion of 8 degrees, cervical rotation on the right of 20 degrees and cervical rotation on the left of 25 degrees for a total of 20% whole person cervical spine rating. Dr. Long opined that Claimant's whole person impairment including the cervical spine and left hip was 29% whole person. *See* Exhibits 5, 3.

21. On September 3, 2015 Claimant was evaluated by Clint Blackwood, M.D. Claimant reported left hip pain after a fall 3.5 years ago and again in January of 2015 with pain worse at night and while sitting. Claimant reported a right hip torn labrum due to a fall with a right hip injection that didn't help. On the left hip Claimant reported symptoms for 7 months. X-rays of the left hip and pelvis were performed and showed a small inferior femoral head osteophyte. Dr. Blackwood opined that Claimant had mild left hip arthritis, recommended a left hip injection for treatment, and opined that Claimant may need a future total hip arthroplasty but not for an expected 3-5 years. *See* Exhibit B.

22. On September 9, 2015 Claimant was evaluated by Dr. Orent. He noted that Claimant hip symptoms were progressively worsening and he agreed with dr. Blackwood that Claimant would someday require a hip replacement. Dr. Orent provided the impression of severe and aggressive osteoarthritis. He opined that Dr. Long was handling Claimant's January 2015 injury and that for what he had been doing for her 2012 injury, he had nothing to offer Claimant but that it would be advantageous for Claimant to do water exercises. *See* Exhibit 8.

23. On September 28, 2015 Claimant returned to Dr. Long. Dr. Long opined that since Claimant did not want injections, Claimant was at MMI. Dr. Long continued her opinion that Claimant's impairment was 29% whole person. *See* Exhibits 4, 5.

24. On February 17, 2016 Claimant was evaluated by Dr. Orent. Claimant reported progressively worse hip pain especially on the left and that she could not sleep at night. Claimant reported bilateral hip pain since her injuries and neck pain since her injuries. Dr. Orent noted that it appeared the osteoarthritis was accelerating in Claimant's hips and that her pain was becoming worse. Claimant made it clear to Dr. Orent that she never had any of these problems prior to her falls and that she was highly functional and could do just about everything. Dr. Orent explained to Claimant that the osteoarthritis took years to develop and that when she was traumatized it flared the underlying osteoarthritis and that they had not been able to get her back to her asymptomatic

baseline. Dr. Orent provided the impression of bilateral hip pain, residual from the fall with underlying osteoarthritis. *See* Exhibit 23.

25. On April 20, 2016 Claimant underwent a Division Independent Medical Examination with Clarence Henke, M.D. Claimant reported slipping on ice in a parking lot, falling forward, and striking her forehead and both hands. Claimant reported aching in the thorax and cervical spine, throbbing and stiffness in the neck and bilateral shoulders, aching burning numbness and pain in the bilateral wrists and hands, and aching burning stabbing in the bilateral hips with pain levels varied from a 4 to a 9 out of 10 increased with any hand gripping, movement, or prolonged walking or standing. Dr. Henke noted the division instructions were to evaluate distal forearm fracture, cervical sprain/strain, facial lacerations, and pre-existing severe osteoarthritis in hips, spine, and thumb. Dr. Henke noted that other concerns to be addressed were prior claims and ratings for hips and thumbs. Dr. Henke noted that medical records provided by Integrated Medical Evaluations, Inc. and a comprehensive patient medical history form and pain diagram completed by Claimant were reviewed. A letter from Respondents to Dr. Henke noted the records enclosed for review included the emergency department record from January 21, 2015, multiple records from Dr. Long and Dr. Orent, multiple records from Dr. Conyers, multiple records from alpha rehabilitation, and multiple records from Dr. Cahn as well as some records from Claimant's prior injury including the DIME performed by Dr. Hughes. Dr. Henke noted that the medical records covered the period from July 17, 2012 through April 5, 2016 and that they would be discussed in chronological order when possible. *See* Exhibits 13, F, H.

26. Dr. Henke specifically discussed a record from the January 21, 2015 date of injury from Boulder Community Hospital, two records from before this injury including a January 2, 2015 record from Dr. Conyers and a January 7, 2015 DIME from Dr. Hughes, as well as three records from after the date of injury including a February 17, 2015 record from Arbor Occupational Medicine, a February 17, 2015 record from Dr. Conyers, and an April 5, 2015 record from Dr. Conyers. *See* Exhibits 13, F.

27. On physical examination, Dr. Henke noted Claimant's symptoms of neck stiffness, occasional headaches, and bilateral hip symptoms but that her greatest concern was her left wrist and fingers. Dr. Henke found a well healed scar over the left eyebrow, decreased left wrist active ranges of motion due to pain, and scar tissue of palm of hand with bowstringing of the flexor tendon of the left long finger. Dr. Henke diagnosed left upper eyebrow laceration and left wrist and long finger tenosynovitis caused by palmar scar formation. *See* Exhibits 13, F.

28. Dr. Henke opined that based on the two reports from prior to this injury from Dr. Conyers on January 2, 2015 and the DIME from Dr. Hughes on January 7, 2015 as well as due to the emergency room report on January 21, 2015 his opinion was that that Claimant did not aggravate or cause any injuries to her neck, lower back, or bilateral hips in this fall. Dr. Henke agreed with Dr. Hughes that Claimant reached maximum medical improvement on April 10, 2013 for her right upper extremity, left upper extremity, and left lower extremity and opined the impairment rating of 19% whole person was correct. He

opined, however, that Claimant was not at MMI for the left wrist fracture and aggravation of the left long finger contracture deformity aggravated by the January 21, 2015 injury and that Claimant needed a continued follow up examination with Dr. Conyers for the left wrist and digit conditions of radial styloid tenosynovitis and contracture of the long finger flexor tendon. *See* Exhibits 13, F.

29. On June 22, 2016 Claimant was evaluated by Dr. Orent. He noted that Claimant had a DIME with Dr. Henke and noted that Dr. Henke did not consider Claimant's hips or neck or low back to be injured in the January 2015 fall. Dr. Orent took exception and noted that the medical records reviewed by Dr. Henke were incomplete and that it was quite obvious that Claimant had injuries to these structures, specifically the hips well documented by the medical records where a hip contusion was diagnosed in February and pain in the neck noted in February when the injury was in January. Dr. Orent noted that an MRI of the neck was done as early as March 2015 due to ongoing neck pain that was new. Dr. Orent indicated that it should be clear that Claimant had none of these problems before this event occurred. Dr. Orent opined that the Claimant had edema in the hip MRI and facet inflammation in the cervical MRI, signs of acute injuries. Dr. Orent noted that it was hard for him to understand how Dr. Henke could dismiss notes and findings and he strongly disagreed with Dr. Henke that Claimant's hip, neck, and low back were not involved in the January 2015 injury. Dr. Orent noted that while Claimant had an extensive history of osteoarthritis these areas were not symptomatic until Claimant fell. *See* Exhibit 22.

30. On August 16, 2016 Claimant underwent an MRI of her left hip with a history noted of left hip pain, remote fall, and history of labral tear. The impression was: mild-moderate bilateral hip osteoarthritis including extensive labral degeneration and presumed degenerative labral tearing within the left hip; tendinopathy and low grade partial thickness tearing of the gluteus minimus tendon, no full thickness tendon rupture or tendon retraction, mild edema and fluid adjacent to the left greater trochanter suggesting mild trochanteric bursitis, and 9 mm focus of sclerosis within right iliac bone statistically most like a bone island. *See* Exhibit G.

31. On August 17, 2016 Claimant was evaluated by Dr. Orent. He noted that in this most recent fall, Claimant fell directly on her left hip and that the MRI showed extensive labral degeneration and tearing on the left side. He noted a cortisone injection in the past had failed and was certainly not going to be successful now given that there was re-trauma. He noted the MRI showed pre-existing osteoarthritis but that Claimant was never symptomatic like she was now until she took the most recent fall and that the obligation was to get her back to baseline and the only way to do so would be with a hip replacement. *See* Exhibit 23.

32. On October 13, 2016 Claimant was evaluated by Dr. Blackwood. Claimant reported left hip pain for about two years. Claimant reported acute and chronic onset after multiple falls and that her pain was exacerbated by physical activity. Dr. Blackwood noted that an MRI of the left hip showed moderate osteoarthritis and a labral tear. Dr.

Blackwood opined that Claimant would likely need a total hip arthroplasty due to the progression of the osteoarthritis and labral tear. *See* Exhibit B.

33. On November 30, 2016 James Lindberg, M.D. performed a record review. Dr. Lindberg reviewed records from 2011 through October of 2016. Dr. Lindberg opined that Claimant was a 60-year-old female with aggressive osteoarthritis. Dr. Lindberg opined that it was difficult based on the mechanism of injury to attribute any impairment or injury to the hips and that it would be difficult to say that the mechanism of injury caused Claimant's hip arthritis or aggravated her hip arthritis. Dr. Lindberg opined that Claimant's activities of daily living would definitely aggravate her bilateral underlying mild osteoarthritis but that it was unlikely that the slip and fall caused any injury to Claimant's hip. Dr. Lindberg opined that although Claimant may have contemporaneously had pain in her hip it was not caused by the slip and fall and was caused by Claimant's underlying osteoarthritis and femoral acetabular impingement syndrome. He opined that any further treatment of the hips should be done under Claimant's own insurance. *See* Exhibit C.

34. In January of 2017, Dr. Mars responded to a letter from Respondents' attorney. Dr. Mars noted that he agreed with Dr. Lindberg that Claimant's need for a hip replacement was not related to her occupational injury. Dr. Mars also pointed out that Dr. Blackwood commented that a hip arthroplasty was not indicated. *See* Exhibit E.

35. On May 17, 2017 Claimant was evaluated by Dr. Mars. Claimant reported restrictive range of motion of her left middle finger postoperatively and some problems with her left hip with some degenerative changes. Dr. Mars opined that Claimant was at maximum medical improvement and provided an impairment rating of 47% of the left middle finger digit, that converted to a 9% hand impairment, that converted to an 8% upper extremity impairment, that converted to a 5% whole person impairment. Dr. Mars also recommended maintenance treatment with occupational therapy and a gym pass. *See* Exhibits 12, E.

36. On August 8, 2017 Claimant returned to DIME physician Dr. Henke. Claimant reported aching, burning, and stabbing sensations in her left hand and fingers. Claimant reported restricted range of motion of her left long finger following surgery as well as problems with her left hip with some degenerative changes. Claimant reported no pain in the left hand just restricted rang e of motion of the long finger. Dr. Henke examined the left hand. Dr. Henke opined that Claimant had reached MMI on May 17, 2017 and that her permanent impairment rating was 8% upper extremity impairment. He recommended maintenance treatment. *See* Exhibits 13, F.

37. On March 9, 2018 Claimant underwent a return independent medical examination performed by Dr. Hughes. He noted that he had previously evaluated Claimant on January 7, 2015 through a DIME evaluation for a February 9, 2012 injury. He noted that at the time of his DIME he had diagnosed a cervical spine sprain/strain (resolved), cervical spinal spondylosis, and progressive bilateral hip osteoarthritis. He attached Claimant's pain diagram from the January 7, 2015 DIME that showed she related constant aching neck pain at an 8/10 radiating into her shoulders, and bilateral

hip pain in with the left hip at 3-4/10. Dr. Hughes noted that he had performed hip range of motion testing on January 7, 2015 for the left hip with some impairment in extension at 19 degrees, external rotation at 46 degrees and internal rotation at 30 degrees. Dr. Hughes noted that he was re-evaluating Claimant for a new injury that occurred on January 21, 2015 just two weeks after his prior DIME. *See* Exhibit 1.

38. Claimant reported to Dr. Hughes that she slipped on ice and fell on January 21, 2015 and that she immediately had left hand and wrist symptoms and a cut over the left eyebrow. Claimant reported that she developed worsening symptoms of neck pain and left hip pain and worse hand pain. Dr. Hughes noted that on January 26 Claimant was diagnosed with left sided cervical spine strain and left hip contusion. Dr. Hughes noted that cervical spine and left hip pain and symptoms continued until Claimant was placed at MMI for the cervical spine in August 2015 and assigned permanent impairment for the cervical spine by Dr. Long. Dr. Hughes also noted that in April of 2016 Claimant had undergone a DIME for this injury performed by Dr. Henke. He was surprised by the appearance that Dr. Henke did not review many medical records and did not make mention in his report of cervical spine or left hip problems. He noted that in August of 2017 Claimant had a follow up DIME with DR. Henke and again noted that Dr. Henke did not appear to have reviewed medical records he missed previously. Dr. Hughes also noted that Dr. Henke again did not mention Claimant's left hip and cervical spine injuries and agreed with the MMI regarding Claimant's left hand. *See* Exhibit 1.

39. Claimant reported that she continued to be symptomatic with left neck and shoulder pain at an 8/10, left worse than right hip pain at a 5/10, and burning pain in her left hand centered on the ring finger that locked up and difficulty flexing her left middle finger. Dr. Hughes performed a physical examination. He found positive facet joint loading on the left cervical spine with asymmetric losses of left lateral flexion and rotation of the head and neck measured at 14 and 32 degrees and active flexion and extension of the cervical spine at 38 and 43 degrees. Dr. Hughes also found left hip flexion at 81 degrees, extension at 7 degrees, abduction at 25 degrees, adduction at 25 degrees, external rotation at 20 degrees, and internal rotation at 22 degrees. The left hip range of motions, overall, were worse than the right hip range of motions. *See* Exhibit 1.

40. Dr. Hughes opined that Claimant sustained a slip and fall on January 21, 2015 with multiple injuries including: left hand contusion and nondisplaced left distal radial fracture with healing of fracture but persistence of scarring post complex surgical treatment; cervical spine sprain/strain with development of symptomatic left facet joint arthropathy of C3-4; and left hip contusion/sprain with worsening of pre-existing osteoarthritis. Dr. Hughes opined that it appeared fairly clear that Dr. Henke did not reference the rather substantial documentation of Claimant's cervical spine and left hip symptoms that emerged shortly after her fall on January 21. Dr. Hughes also noted that he had a perspective of having had just evaluated Claimant on January 7, immediately prior to her January 21 fall. He noted that he had found pre-existing cervical spine and left hip symptoms. He opined, however, that her cervical spine at his DIME was diffuse, bilateral and of an "aching" quality whereas after the January 21, 2015 injury Claimant had localizing signs and symptoms of left sided neck pain that had persisted with MRI

findings of left sided facet joint arthropathy at C3-4 considered to be the primary pain generator. Dr. Hughes opined that Claimant sustained a substantial and permanent aggravation of her cervical spine degenerative condition as a result of the January 21 fall and that permanent impairment of the cervical spine was appropriate. Dr. Hughes also opined that Claimant had left hip range of motion deficits he identified in the January 7 DIME and had a baseline impairment that could be used compared to her findings now. He opined that Claimant now had worsened range of motion in the left hip. He opined that Claimant sustained both cervical spine and left hip injuries when she fell on January 21, 2015 and that the injuries appeared not to have either been reviewed or addressed by the DIME physician Dr. Henke in either of his reports. *See* Exhibit 1.

41. Dr. Hughes testified at hearing consistent with his report. He testified he was perplexed by Dr. Henke's report and opined that Claimant had sustained injuries to her left hip and neck in the January 2015 fall. He noted a change in the neck pain generator and pattern of neck pain symptoms and the left hip pain that went from a 3-4/10 to a 5/10 and had worse range of motion following the January 2015 fall. Dr. Hughes agreed Claimant had neck pain at 8/10 before the January 2015 fall and also agreed that Dr. Henke probably had the opportunity to review all the records but noted Dr. Henke only listed a few records. Dr. Hughes agreed Claimant had aggressive pre-existing bilateral osteoarthritis.

42. Claimant testified at hearing and demonstrated disfigurement as a result of this injury. Claimant has a 1-inch scar above her left eyebrow that is slightly lighter than her normal skin tone. Claimant also has a scar on the inside of her left palm measuring approximately 3.5 inches. Claimant cannot completely close her left hand into a fist and her middle finger and ring finger lock up and cannot completely close as normal.

43. Claimant testified that before her falls at work she never had problems with her hips or neck. She testified that Dr. Henke appeared disorganized at the DIME appointments.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even

if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

OVERCOMING DIME ON IMPAIRMENT

The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim*

Appeals Office, 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Here, Claimant has failed to meet her burden to overcome the opinion of DIME physician Dr. Henke regarding her permanent impairment rating by clear and convincing evidence. As found above, Dr. Henke opined that Claimant did not aggravate or cause any injuries to her neck, lower back, or bilateral hips in the January 21, 2015 fall. He did not fail to address the neck or hips, rather, he opined that Claimant did not aggravate her neck and left hip in the January 21, 2015 fall. This opinion has not been overcome by clear and convincing evidence.

As found above, the opinion of Dr. Henke is consistent with the opinions of orthopedic surgeon Dr. Lindberg. Dr. Lindberg opined that it was difficult based on the mechanism of injury to attribute any impairment or injury to the hips and that it would be difficult to say that the mechanism of injury caused Claimant's hip arthritis or aggravated her hip arthritis. Additionally, it is noted that Dr. Long on June 22, 2015 indicated that Claimant would not have impairment for her hip pain because the changes to on MRI were chronic and degenerative. At the next appointment on July 24, 2015 Dr. Long found significant range of motion restrictions in the left hip and indicated she thought she could do an impairment of the left hip and rated it at 27% lower extremity. Dr. Long appears to believe the hip is not ratable, then changes her opinion without further explanation other than significant range of motion restrictions.

Dr. Orent places a heavy emphasis on his belief that Claimant sincerely did not have any prior neck or hip issues prior to her falls (plural) and that the falls aggravated her underlying osteoarthritis. As found above, after her first fall and during treatment for her 2012 injury, Claimant reported pretty severe neck and left sided hip problems. These pre-dated her January 21, 2015 fall in this case. Her symptoms and diagnoses prior to January 21, 2015 included neck pain at 8/10, left hip pain at 3-4/10, cervical spondylosis, and severe aggressive osteoarthritis. Although she may or may not have been symptomatic prior to her 2012 fall in a different claim, it is well documented that she was highly symptomatic in her neck and left hip prior to the January 21, 2015 fall in this claim. The opinion of Dr. Henke that the January 21, 2015 fall did not aggravate or cause any new injury to her neck or left hip is supported by the overall weight of the medical records and evidence and has not been overcome by clear and convincing evidence.

Dr. Hughes has a difference of opinion from Dr. Henke. Dr. Hughes acknowledged that Claimant had degenerative arthritis that was progressive in nature in her cervical spine as well as in her bilateral hips. Two weeks prior to the January 21, 2015 fall Dr. Hughes noted Claimant's reports of constant neck pain at 8/10 radiating into the shoulders and bilateral stabbing hip pain. Although he believes her symptoms and range of motion measurements after the 2015 fall and measured by him at his March 2018 evaluation were objectively worse or different than the measurements he obtained just prior to the fall in January of 2015, he agreed that her pre-existing conditions were

progressive. Claimant has failed to establish that the condition or symptoms were due to a new acute injury or acute aggravation on January 21, 2015 versus being due to the natural progression of Claimant's severe pre-existing conditions in both her neck and left hip that are well documented as existing prior to January 21, 2015.

Claimant's argument that Dr. Henke either forgot to review all the medical records or ignored the cervical and hip complaints throughout the records are not supported by the record. Dr. Henke indicated he reviewed the contents of all the medical records provided to him and specifically opined that Claimant had no permanent cervical or hip impairment due to the January 21, 2015 injury. Dr. Henke outlined specific reports prior to the January 21, 2015 injury that show the pre-existing pain symptoms and diagnoses Claimant had in her neck and left hip. Although Dr. Hughes has a difference of opinion the difference of opinion does not rise to the level of clear and convincing evidence that Dr. Henke erred. The weight of the overall evidence supports Dr. Henke's determination that Claimant had no permanent impairment to her cervical spine or left hip as a result of her January 21, 2015 injury.

DISFIGUREMENT

As a result of her January 21, 2015 work injury, Claimant has visible disfigurement to the body. The disfigurement includes a 1-inch scar above her left eyebrow that is slightly lighter than her normal skin tone. Claimant also has a scar on the inside of her left palm measuring approximately 3.5 inches. Claimant cannot completely close her left hand into a fist and her middle finger and ring finger lock up and cannot completely close as normal. Claimant has therefore sustained serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. § 8-42-108(1), C.R.S.

Insurer shall pay Claimant $2,750.00 for the disfigurement outlined above. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore ordered that:

1. Claimant has failed to overcome by clear and convincing evidence the DIME opinion of Dr. Henke regarding Claimant's permanent partial disability impairment rating.

2. Insurer shall pay Claimant $2,750 for the disfigurement outlined above.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 20, 2018,

/s/ Michelle E. Jones

1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Faulkner is causally related to his January 5, 2017 work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a journeyman plumber. Claimant began working for Employer in June of 2015. In June of 2016 Claimant became a test crew foreman.

2. Claimant's job duties involve testing piping that is installed in buildings, determining the type of piping required for a job, and repairing any breaks in piping lines. When installing piping, it can weigh up to 200 pounds. Claimant is required to carry ladders, hoses, bundles of pipe, and to lift as needed.

3. On January 5, 2017 Claimant sustained an admitted work related injury when he slipped on a patch of ice in the roadway at his worksite. As he stepped on ice, Claimant's feet came out from underneath him and he reached out with his right arm to catch himself. Claimant described that as he and his right arm hit the ground, it threw him to the left and he tried to catch himself with his left arm and that his left elbow hit the ground. Claimant testified that his left elbow got jammed into his shoulder and that he felt a lot of pain in his left shoulder.

4. Claimant testified that he felt a lot of pain in his left shoulder, some pain in his right shoulder, and that he could hardly move his left arm.

5. Claimant reported the injury to Employer and was referred for treatment.

6. On January 5, 2017 Bruce Cazden, M.D. evaluated Claimant. Claimant reported that he slipped and fell jamming his left elbow and shoulder and that he had significant immediate pain and was unable to move the arm in a forward position. Claimant reported his primary pain was in the left shoulder and was worse by working overhead and improved with laying on his side. On examination, Dr. Cazden found no gross deformity, swelling, erythema, or heat. Dr. Cazden found tenderness at the anterior aspect of the glenohumeral joint and over the bicipital groove as well as in the proximal bicep. Dr. Cazden found profoundly decreased range of motion with active flexion and significant weakness. Dr. Cazden noted that x-rays showed no fracture or dislocation and he diagnosed unspecified sprain of left shoulder joint and acute pain due to trauma. Dr. Cazden recommended ice, decreased activity, gentle range of motion exercises, and naproxen every 12 hours. Dr. Cazden opined that Claimant would likely need physical

therapy at the very least and that if Claimant was not making any progress, an MRI would probably be needed to rule out a rotator cuff tear. *See* Exhibit 4.

7. On January 5, 2017 John McDonald, M.D. provided an interpretation of left shoulder x-rays. Dr. McDonald found no acute findings and chronic changes. The chronic changes found on x-ray included a corticated bone density along the superior lateral margin of the clavicle that Dr. McDonald opined may be from old trauma as well as a 2x1 mm faint density along the lateral aspect of the acromion which he also believed to be chronic and perhaps from an old injury. *See* Exhibits 5, C.

8. On January 9, 2017 Elizabeth Otto, NP evaluated Claimant. Claimant reported that he was a lot better and that his shoulder was not 100% improved because if he moved it wrong it still "twinges" but that it was "so much better." Claimant reported that at rest his pain was a 0/10 and with twinges the pain was a 6-7/10. Claimant reported that he was working and taking naproxen every 12 hours. NP Otto fond slight tenderness with palpation over the acromioclavicular joint and normal range of motion on exam with slight pain in the deltoid on internal rotation and slight pain with resisted flexion and resisted abduction. *See* Exhibit 4.

9. On January 18, 2017 Kevin Keefe, D.O. evaluated Claimant. Claimant reported that initially his left shoulder had improved significantly but that the improvement had leveled off. Claimant reported that he was able to do his regular work duties although lifting heavy items bothers him. Claimant reported no history of shoulder problems. Dr. Keefe did not place restrictions on Claimant and noted that Claimant was able to limit his duties. Dr. Keefe found range of motion in abduction and flexion to be normal but internal rotation to be limited. Internal rotation reproduced Claimants pain in the lateral shoulder. Dr. Keefe diagnosed unspecified sprain of the left shoulder joint and recommended physical therapy. *See* Exhibit E.

10. On February 6, 2018 NP Otto evaluated Claimant. Claimant reported continuing soreness in his left shoulder with a pain level at 1-2/10 when at rest and at a 5-6/10 when he reached overhead or behind him. Claimant reported that he was taking naproxen every 12 hours and that he believed it was helpful. Claimant reported that he was working regular duty but that he was the supervisor and could limit any painful activities. NP Otto recommended Claimant continue with physical therapy and begin massage therapy and chiropractic. *See* Exhibits 4, F.

11. On Feb 20, 2017 NP Otto evaluated Claimant. Claimant reported that his left shoulder hurt in the upper bicep and deltoid with pain at a 3/10 with movement and pain when holding his arm straight out to the side and reaching for his wallet. Claimant reported the pain had improved and did not last as long as it did before. NP Otto found tenderness over the glenohumeral joint, superior bicep, and deltoid on left shoulder examination. NP Otto noted pain in range of motion maneuvers. Claimant reported problems with his right shoulder and imaging of the right shoulder was completed and an MRI of the right shoulder was recommended due to the elevated humorous suggesting a rotator cuff tear shown by the right shoulder imaging. *See* Exhibit 4.

12. On March 6, 2017 Dr. Keefe evaluated Claimant. Claimant reported that initially he thought his left shoulder was improving but it was now giving him more problems. Claimant reported no prior history of problems with his left shoulder. Dr. Keefe recommended an MRI of the left shoulder and that Claimant continue physical therapy. Dr. Keefe found pain with range of motion and pain with the empty can test. *See* Exhibit 4.

13. On March 17, 2017 Claimant underwent an MRI of his left shoulder interpreted by Peter Koplyay, M.D. Dr. Koplyay provided the impression of: large full thickness rotator cuff tear involving the supraspinatus and infraspinatus tendons which are retracted 4 to 5 cm medially with mild atrophy of the muscle bellies; full thickness tearing of the upper fibers of the distal subscapularis with minimal tendon retraction and severe atrophy of the muscle belly; torn biceps tendon retracted into the proximal arm; truncation and degenerative tearing of the superior labrum with underlying cystic change in the supraglenoid tubercle; moderate to severe AC joint hypertrophy with subacromial spurs present; and a high riding humeral head that articulates with the undersurface of the acromion with secondary degenerative changes present. *See* Exhibits 8, D.

14. On March 20, 2017, Dr. Keefe evaluated Claimant. Dr. Keefe noted that significant rotator cuff tears were found on the MRI of the left shoulder. Dr. Keefe referred Claimant to orthopedics and provided a work restriction of no use of the left arm. *See* Exhibit 4.

15. On April 4, 2017 David Beard, M.D, an orthopedic specialist, evaluated Claimant. Claimant reported a slip and fall at work and pain in his left shoulder. Claimant reported that due to persistent symptoms he underwent an MRI of the left shoulder and was there for surgical evaluation. Claimant reported that prior to the work slip and fall he had no problems with his left shoulder. Dr. Beard noted that the MRI showed a chronic and massive rotator cuff tear involving the entire supraspinatus and infraspinatus with retraction of approximately 4.5 to 5 cm back to the level of the superior glenoid. Dr. Beard opined that there was significant atrophy of the supraspinatus, infraspinatus, and subscapularis muscle bellies and elevation of the humeral head with respect to the glenoid such that the humeral head was articulating with the undersurface of the acromion. Dr. Beard also opined that there was severe AC joint osteoarthritis and also a torn biceps tendon. Dr. Beard diagnosed: chronic massive rotator cuff tear, left shoulder, with rotator cuff arthropathy; and left shoulder acromioclavicular joint osteoarthritis. Dr. Beard opined that it appeared to be more of an acute-on-chronic type of injury. Dr. Beard opined that the rotator cuff was not surgically repairable given the amount of retraction and that represented likely that the rotator cuff tear had been present for much longer than just the last three months. Dr. Beard discussed an intraarticular steroid injection to decrease pain but opined that Claimant's final option would be a reverse shoulder arthroplasty. *See* Exhibit 9.

16. On April 7, 2017 NP Otto evaluated Claimant. Claimant reported that Dr. Beard had told him the only two options were arthroplasty or steroid injections and that

he wanted to have an arthroplasty so that he could use his arm. Claimant reported pain at rest of 2-3/10 and with movement at 5-6/10 and that he had continued pain, loss of function, and reduced range of motion. Claimant reported that he stopped physical therapy and was not using his left arm per restrictions. NP Otto referred Claimant for a second opinion. *See* Exhibit 4.

17. On April 11, 2017 Dr. Beard performed a steroid injection in Claimant's left shoulder and injected the subacromial space and the glenohumeral joint. *See* Exhibit 9.

18. April 24, 2017 Dr. Keefe evaluated Claimant. Claimant reported that a recent cortisone injection had helped but that he still had a fair amount of pain in his left shoulder. Dr. Keefe noted that it seemed like Claimant would not be able to return to unrestricted duty for his job that involved heavy lifting often above his head and they discussed the job and whether or not Claimant wanted to proceed with a shoulder replacement. Dr. Keefe recommended Claimant restart physical therapy and referred Claimant to an orthopedic surgeon who would actually do the shoulder replacement so that Claimant could ask questions and to determine if Claimant was a candidate. *See* Exhibit 4.

19. On May 15, 2017 Michael Hewitt, M.D. evaluated Claimant for the purpose of a second opinion. Claimant reported night pain, decreased range of motion, and weakness in his left shoulder. Dr. Hewitt reviewed the imaging and noted Claimant's chronic rotator cuff tear with rotator cuff atrophy and a high riding humeral head. Dr. Hewitt opined that Claimant sustained an acute on chronic injury. Dr. Hewitt noted that Claimant understood that the surgical prognosis for a chronic rotator cuff tear was poor and that the final treatment option would be a reverse shoulder replacement. *See* Exhibit 11.

20. On June 7, 2017 Timothy O'Brien, M.D., an orthopedic specialist, evaluated Claimant for purposes of an independent medical examination. Claimant reported that when he slipped on ice he fell backwards, put his right arm out, rolled to the left side, and hit his left elbow against the ground and that it loaded his left arm and really hurt his left shoulder. Claimant reported also having right shoulder pain. Claimant reported that he had immediate pain and sought immediate attention. Claimant reported that his right shoulder started to hurt more than his left and that his right shoulder continues to hurt more severely, but that his left shoulder is not far behind. Claimant reported pain at a 2 to an 8-9 on a scale of 0 to 10. Claimant reported that an MRI scan demonstrated a significant retracted tear that the doctors did not feel they could repair, except for one doctor who thought he might be able to repair it. Claimant reported that all doctors had indicated he might need a shoulder replacement and that he just wanted to get back to work. Dr. O'Brien reviewed medical records and performed a physical examination. *See* Exhibit A

21. Dr. O'Brien diagnosed a left shoulder strain/sprain from the January 5, 2017 and opined that the work injury temporarily aggravated pre-existing and longstanding degenerative tearing in Claimant's left shoulder rotator cuff. Dr. O'Brien opined that the

work injury did not accelerate the pre-existing condition beyond its normal rate of progression and that Claimant's pre-existing and longstanding rotator cuff tear had undergone retraction and atrophy. Dr. O'Brien opined that an end of healing was reached on or before February 6, 2017 when Claimant had a normal left shoulder range of motion, no significant weakness, and no significant pain with provocative testing. Dr. O'Brien opined that Claimant's course of healing between the injury date of January 5 and the end of healing date of February 6 was progressive and rapid regarding the return of Claimant's range of motion, strength, and the reduction in his pain. Dr. O'Brien opined that by February 6, Claimant had returned to his pre-injury level of function. Dr. O'Brien opined that Claimant had an incurable and relentlessly progressive left shoulder condition with an onset predating the January 5, 2017 minor work incident by years. Dr. O'Brien opined that Claimant's rotator cuff failed because of Claimant's age and genetic makeup, accelerated by his addiction to nicotine. Dr. O'Brien noted that after the failure of the rotator cuff, and over time, the muscle continued to pull on the tendon and pulled the tendon away over the course of time causing increased retraction for years. *See* Exhibit A.

22. On July 28, 2017 Dr. Hewitt evaluated Claimant. Claimant reported relatively unchanged symptoms with persistent night pain, decreased range of motion, and weakness. Claimant denied prior left shoulder restrictions or symptoms and that he had been unable to return to his previous level of function. Dr. Hewitt noted that Claimant understood that attempted repair of the rotator cuff had a poor prognosis and that the final treatment option was a reverse shoulder. Dr. Hewitt noted that he performed arthroscopic shoulder surgeries and that Claimant would be referred to a shoulder specialist to discuss a reverse shoulder replacement. Dr. Hewitt opined that Claimant had not reached maximum medical improvement and that Claimant had not returned to his baseline status. *See* Exhibit 11.

23. On August 21, 2017 Nathan Faulkner, M.D. evaluated Claimant. Claimant reported continued deep/lateral shoulder pain but fairly good range of motion. Dr. Faulkner noted that Claimant had a massive rotator cuff tear on the left but had been able to maintain fairly good range of motion. Dr. Faulkner reiterated that the rotator cuff repair would be difficult and associated with a high likelihood of re-tear but noted that due to Claimant's age he was not an ideal candidate for a shoulder replacement. Dr. Faulkner recommended proceeding with left shoulder superior capsular reconstruction to prevent further progression of the arthropathy and to give Claimant a stable fulcrum for overhead motion. *See* Exhibit 11.

24. On August 22, 2017 Dr. Pinero evaluated Claimant. Claimant reported that he wanted the surgery offered by Dr. Faulkner and that he was told that the procedure would help his pain and buy time before a total shoulder replacement down the road. *See* Exhibit 12.

25. On October 17, 2017 Dr. Hughes evaluated Claimant for an independent medical examination. Claimant reported that he had fallen at work backwards, catching himself with his outstretched right arm and lurching over as he fell to strike his left elbow

that jammed up into his left shoulder. Claimant reported initially pain and problems moving his left arm that was centered in his left shoulder. Claimant reported starting physical therapy and that he had globalization of his symptoms to include problems with his right shoulder blade and neck and that with overall non-improvement he underwent an MRI of his left shoulder and surgical assessment by Dr. Beard. Claimant reported a cape distribution of aching quality pain extending over the posterior trapezius musculature bilaterally with bilateral lateral shoulder burning pain at a 3/10. Claimant reported no history of left shoulder problems or injuries. Claimant reported that he had worked following his injury until he was laid off in May of 2017. Dr. Hughes noted in the medical records Claimant's improved ranges of motion of the left shoulder but significant restrictions in the right shoulder motion at a February 6 evaluation.

26. Dr. Hughes assessed: occult bilateral shoulder osteoarthritis with no documentation of symptoms or functional limitations prior to January 5, 2017; slip and fall with multiple injuries sustained on January 5, 2017; left shoulder sprain/strain with progression of left shoulder osteoarthritis and development of irreparable rotator cuff tears meriting surgical treatment; and early post-fall onset of right scapular dyskinesis meriting further evaluation. Dr. Hughes opined that it appeared clear that Claimant had occult and probably end stage arthritis in the bilateral shoulders prior to his January 5, 2017 fall. He opined, however, that there was no documentation that it was symptomatic or limited Claimant's function prior to the date of the fall. Dr. Hughes endorsed the surgery recommended by Dr. Faulkner. Dr. Hughes opined that Claimant was not yet at maximum medical improvement and that Claimant had aggravated his previously occult left shoulder arthritis. *See* Exhibit 13.

27. Dr. O'Brien testified at hearing consistent with his independent medical examination report. Dr. O'Brien opined that the work injury did not accelerate Claimant's pre-existing left shoulder condition beyond its normal rate of progression and that Claimant had end-stage rotator cuff pathology which had resulted in such massive tearing of the rotator cuff that the humeral head rode up and literally could not go any higher because it rested on the bone that's the roof of the shoulder. Dr. O'Brien testified that the MRI scan performed eight weeks after the incident did not demonstrate any evidence of an acute injury or acute acceleration. Dr. O'Brien testified that the full thickness rotator cuff tear retracted as far as Claimant's, 5 to 5 centimeters medially takes years to manifest on an MRI scan. Dr. O'Brien opined that there was a zero percent likelihood that someone with Claimant's chronic, massive rotator cuff tears experienced no symptomatology. Dr. O'Brien testified that the proposed surgery would address a pre-existing and longstanding condition that should not be pinned on Claimant's fall.

28. Dr. O'Brien's is found credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to

injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d

786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet his burden to establish that the surgery requested by Dr. Faulkner is reasonable and necessary to cure and relieve the effects of his industrial injury. Here, the effects of the industrial injury included a left shoulder strain and a temporary aggravation of pre-existing and longstanding degenerative tears in Claimant's left shoulder. Within a short time after the fall at work, Claimant was much improved and back to baseline. Dr. O'Brien is credible and persuasive that the MRI done eight weeks after the fall at work showed no acute injury or acute acceleration but showed changes that take years to develop. Dr. O'Brien is credible and persuasive that the requested surgery is not causally related to the January 5, 2017 work incident.

Prior to his fall at work, Claimant had non-work end stage rotator cuff tearing and massive tears of his rotator cuff that had retracted significantly over the course of several years. As found above, Dr. Beard noted chronic and massive rotator cuff tears, significant atrophy, and severe osteoarthritis. Dr. Hughes also noted Claimant's probable end stage osteoarthritis of the bilateral shoulders and opined that it existed before the fall on January 5, 2017. Although Dr. Beard characterized the injury as appearing to be more of an acute on chronic type of injury, and although Dr. Hughes believes the pre-existing condition was aggravated or accelerated by the January 5, 2017 fall, the ALJ does not find this persuasive. Dr. Hughes opinion was based, in part, on information provided to him by Claimant that is inaccurate. Claimant reported to Dr. Hughes that he had pain after the fall and pain moving his left arm centered in his shoulder, globalization of his symptoms, and overall non-improvement that led to an MRI being done on his left shoulder. This is not consistent with the medical records which show great improvement immediately after the fall and that Claimant's range of motion was much improved in the left shoulder after the fall. Dr. O'Brien is credible and persuasive that by February 6, 2017 Claimant was back to his baseline level of function given his chronic and significant pre-existing tears in the left shoulder. The testimony and reports of Dr. O'Brien are found the most persuasive and most consistent with the weight of the overall evidence. The surgery proposed is to cure and relieve the effects of Claimant's pre-existing condition in his left shoulder.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that the left shoulder surgery recommended by Dr. Faulkner is causally related to his January 5, 2017 work injury. The request for left shoulder superior capsular reconstruction is denied.

2. All matters not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-057-193-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on June 27, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 6/27/18, Courtroom 2, beginning at 1:30 PM, and ending at 2:45 PM).

Claimant's Exhibits 1 through 11 were admitted into evidence, without objection. Respondents' Exhibits A through G were admitted into evidence, without objection.

The evidentiary depositions of Timothy O'Brien, M.D., taken on May 3, 2018; and Cary B. Motz, M.D., taken on the same date, were filed, and read by the ALJ prior to the hearing.

ISSUES

The issues to be determined by this decision concern the causal relatedness and reasonable necessity of an arthroscopy surgery for the Claimant's compensable injury on her left shoulder from August 2, 2017. The Claimant takes the position of the authorizing treating physicians (ATPs) Cary Motz, M.D. and Michael Hewitt, M.D. that the surgery is reasonably necessary to treat her work-related injury. Respondents take the position of Independent Medical Examiner (IME) Timothy O'Brien, M.D. that the Claimant's symptoms are magnified, making surgery irrelevant and unnecessary for the Claimant's healing.

The Claimant bears the burden of proof, by a preponderant evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Procedural Posture/Findings

1. On March 7, 2018, the Respondents filed an Application for Hearing endorsing the issue of medical benefits, specifically, whether left shoulder surgery is reasonably necessary and causally related to the Claimant's admitted August 2, 2017 injury as issues for hearing (Claimant's Exhibit 1, pp. 001).

2. On March 8, 2018, the Claimant filed a Response to the Respondents' Application for Hearing, endorsing as an issue that the request for shoulder surgery was reasonably necessary and causally related to the Claimant's injury; and, that it was the desire of the Claimant to undergo the surgery recommended by Dr. Hewitt (Claimant's Exhibit 2, pp. 005).

3. On March 27, 2018, the Respondents filed a General Admission of Liability (GAL), admitting for medical benefits and temporary partial disability (TPD) benefits (Claimant's Exhibit 3, pp. 007).

4. On April 24, 2018, pursuant to a second request of the Respondents, the Claimant was again examined by IME Dr. O'Brien, whose medical opinion that the Claimant's injury was minor and nonorganic did not change (Claimant's Exhibit 11, pp. 141).

Preliminary Findings

5. The Claimant was employed as a parcel handler and trainer for the Employer at the time of the injury.

6. On August 2, 2017, during the course and scope of her employment, the Claimant sustained an injury to her left shoulder when she was pulling a bag of boxes and parcels weighing around 50 pounds off a shelf. The injury occurred around 7:30 PM after the Claimant's lunch break.

7. The Claimant is right-handed and does not have any prior history of left shoulder pain or injury prior to August 2, 2017. She made visits to her primary care physician Julia Jung, M.D. from January 4, 2013 through November 30, 2017 for non-work related physical abnormalities such as a rash and a cough. (Respondents' Exhibit

A). The ALJ infers and finds that medical reports from the Claimant's primary care physician detailing complaints unrelated to the August 2, 2017 work injury do **not** disprove her work-related injury. The ALJ finds that he Claimant suffered a work-related injury on August 2, 2017 to her left shoulder.

Medical History

8. After the end of her work shift at 11:30 PM on August 2, 2017, the Claimant attempted to obtain medical attention at Urgent Care. Because Urgent Care was closed, the Claimant was not examined by any medical professional and returned home.

9. The Claimant returned to work on August 3, 2017 and reported to her manager on duty, Michael Carapella, that she was not feeling any better. Carapella had the Claimant apply ice to her shoulder and "told [her] just to give it a bit of time to see if it would resolve", and then told the Claimant to go see a doctor when the pain persisted. (Respondents' Exhibit E, pp. 045).

10. On August 4, 2017, the Claimant visited Jerald Solot, D.O. who assessed the Claimant with a rotator cuff disorder at her left shoulder. Dr. Solot prescribed oral pills, referred the Claimant for Physical Therapy (PT), ordered a shoulder sling for her and placed her on work restrictions that she could return to work for her entire work shift, and could not use her left upper extremity (LUE) (Claimant's Exhibit 4, pp. 016).

11. On August 8, 2017, the Claimant, complaining of severe pain, had a follow up examination with Dr. Solot, who assessed the Claimant with a rotator cuff disorder at her left shoulder and a left shoulder strain. Dr. Solot further restricted the Claimant's work movements requiring her to wear a shoulder splint constantly as needed, use her left hand only for fingering/grasping light objects, and not to reach outward or overhead with her LUE (Claimant's Exhibit 4, pp. 021). The Claimant is still performing her work duties with the Employer within these restrictions.

12. The Claimant had further follow up appointments biweekly to monthly with Dr. Solot through November 15, 2017, with little or no change in the severity of pain complained of or work restrictions prescribed (Claimant's Exhibit 4). Throughout this time, the Claimant was advised to wear the shoulder sling and given conservative treatment including Ibuprofen and a cortisone injection (Respondents' Exhibit E, pp. 048).

13. The Claimant received PT at the hands of physical therapist Abigail Bruger and physical therapist assistant Natashal Shkrobor from August 7, 2017 to October 25, 2017 at which point the Claimant still reported pain with little improvement, and was discontinued because she was determined to no longer benefit from PT (Claimant's Exhibit 5, pp. 084). The PT included therapeutic exercises such as stretching and strengthening, manual therapy such as joint and soft tissue mobilization,

and modalities such as heat/cold to address localized pain and inflammation (*Id.* at pp. 060). On October 3, 2017, Abigail Bruger, PT, noted the need to seek a second opinion from Michael S. Hewitt., M.D., *Id.* at pp. 070.

14. On September 6, 2017, the Claimant underwent an MRI (magnetic resonance imaging) upon referral from Dr. Solot. The MRI revealed distal supraspinatus tendinosis, a nondisplaced anteroinferior labral tear, moderate AC joint osteoarthritis with hypertrophy, and subchondral cyst formation of the greater tuberosity humeral head, but no muscle atrophy. The MRI also suggested signs of a type III SLAP tear to the superior labrum (Claimant's Exhibit 6, pp. 086-087).

15. On September 20, 2017, the Claimant was seen by ATP Cary B. Motz, M.D., who diagnosed the Claimant with having left shoulder rotator cuff strain and impingement syndrome, and that it was unlikely the Claimant had a SLAP tear given her age. Dr. Motz also noted the Claimant's MRI exhibited "the expected degenerative changes of the joint consistent with a 58-year-old patient" (Claimant's Exhibit 7, pp. 089). It was Dr. Motz's opinion at the time that the Claimant's stiffness in her shoulder had developed due to her continued use of the sling. Dr. Motz did not advise surgery at that time because nothing on the MRI suggested the need for it, and out of concern that the Claimant would not be able to successfully rehabilitate after surgery (Claimant's Exhibit 9, pp. 105). The Claimant was also not interested in surgery at that time (Claimant's Exhibit 7, pp. 089).

16. On October 9, 2017, the Claimant was seen by ATP Dr. Hewitt for a second medical opinion (Claimant's Exhibit 8, pp. 098). Dr. Hewitt found that the Claimant suffered mild rotator cuff tendinopathy, tearing of the superior labrum, and moderate acromioclavicular athropathy (*Id.* at 097). It was Dr. Hewitt's opinion at the time that "[g]iven the nature of the superior labral tear… arthroscopy is medically reasonable" (*Id.* at pp. 098).

17. On February 19, 2018, the Claimant was seen again by Dr. Hewitt. He reported that the Claimant had active range of motion (ROM)100 degrees of forward flexion, 130 degrees passively, and external rotation of 45 degrees. Dr. Hewitt discussed treatment options, including the risks and benefits of surgery, with the Claimant, who expressed her desire to proceed with arthroscopy. Because of the Claimant's prolonged symptoms and failure to respond to conservative treatment, Dr. Hewitt recommended that arthroscopy was appropriate (Claimant's Exhibit 8, pp. 093).

18. When questioned at the deposition conducted on May 3, 2018. after reviewing Dr. Hewitt's medical examination reports of the Claimant, Dr. Motz agreed with Dr. Hewitt's February 19, 2018 recommendation for arthroscopy. Dr. Motz agreed that because the Claimant had not responded to six months of conservative treatment and still exhibited limited ROM and pain, surgery was appropriate (Claimant's Exhibit 9, pp. 113).

Respondents' Independent Medical Examination by Timothy O'Brien. M.D.

19. On December 14, 2017, at the request of the Respondents, the Claimant was examined by Independent Medical Examiner (IME) Dr. O'Brien, who expressed the opinion that the Claimant suffered a minor injury on August 2, 2017 because she did not seek medical attention until two days later on August 4, 2017, and her behavior was inconsistent with a worker who suffered a significant injury (Claimant's Exhibit 10, pp.132). In Dr. O'Brien's medical opinion, greater than 95% of minor injuries heal within four weeks' time, Dr. O'Brien reported that the Claimant reached maximum medical improvement (MMI), on September 2, 2017, and that her "ongoing subjective complaints of pain were a manifestation of her personal health," and that surgery was not reasonable (*Id.* at pp. 133). Dr. O'Brien has no demonstrated credentials in psychiatry or the behavioral sciences, yet his opinions rely heavily on these disciplines. Consequently, the ALJ infers and finds that Dr. O'Brien's opinions are based on speculation, without a full appreciation of the actual facts. Therefore, the ALJ.accords minimal weight to Dr. O'Brien's opinions in this regard.

Ultimate Findings

20. The ALJ finds the opinions of Dr. Motz and Dr. Hewitt on reasonable necessity and causal relatedness highly persuasive and credible. The ALJ further finds the opinions of Dr. O'Brien lacking in credibility on the reasonable necessity and causal relatedness of the August 2, 2017 incident, primarily because they were based, heavily, on the Claimant's alleged two-day delay in seeking immediate medical attention. The ALJ finds that the Claimant's inability to seek immediate medical services was reasonable given that Urgent Care was closed the night of the injury, and that the Claimant made a reasonable attempt to return to work the next day on the advice of her manager. Therefore, the Claimant did not reach MMI on September 2, 2017, and has a continuing need for medical treatment for her left shoulder injury. Consequently, the ALJ

21. Between conflicting medical and lay opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of ATPs Dr. Motz and Dr. Hewitt, on the reasonable necessity and causal relatedness of arthroscopy shoulder surgery, and to reject opinions to the contrary. Both Dr. Motz and Dr. Hewitt established the work-relatedness of the left shoulder injury of August 2, 2017, from which the Claimant suffered continued pain and limited ROM despite conservative treatment.

22. The left shoulder injury of August 2, 2017 necessitated medical care and treatment, and was, therefore, a compensable event. Also, the medical care and treatment for the injury was authorized, causally related to the injury, and reasonably necessary to cure and relieve the effects of the August 2, 2017incident.

23. The Employer referred the Claimant to an authorized medical provider, whereupon the Claimant saw Jerald Solot, D.O., at Concentra (an Employer authorized

medical provider). Thereafter all left shoulder related referrals emanated from Dr. Solot and were in the authorized chain of referrals.

24. The Claimant has proven, by preponderant evidence that the medical care for her left shoulder and the arthroscopy shoulder surgery, recommended by the ATPs, is causally related to the compensable injury and reasonably necessary to cure and relieve the effects thereof.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* §8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Motz and Dr. Hewitt on reasonable necessity and causal relatedness of the medical treatment and recommended surgery are highly persuasive and credible. As further found, the opinions of Dr. O'Brien were lacking in credibility on the reasonable necessity and causal relatedness of the August 2, 2017 incident, primarily

because they were based, heavily, on the Claimant's alleged two-day delay in seeking immediate medical attention. As found, the Claimant's inability to seek immediate medical services was reasonable given that Urgent Care was closed the night of the injury, and the Claimant made a reasonable attempt to return to work the next day on the advice of her manager. As found, Dr. O'Brien had no demonstrated credentials in psychiatry or the behavioral sciences, yet his opinions relied heavily on these disciplines. As found, inferentially, Dr. O'Brien's opinions were based on speculation, without a full appreciation of the actual facts. Therefore, the ALJ accorded minimal weight to Dr. O'Brien's opinions in this regard.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical and lay opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ATPs Dr. Motz and Dr. Hewitt, on the causal relatedness and reasonable necessity of arthroscopy for the Claimant's shoulder injury; and, to reject opinions to the contrary.

Causal Relatedness of the Claimant's Compensable Injury for Which Surgery is Reasonably Necessary

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, a claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). In order for an injury to be compensable under the

Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** A manner of conceptualizing the matter is, essentially, that a presumption of work-relatedness may arise when an unexplained injury occurs during the course of employment. However, it is incumbent to show that non-work related factors caused the injury to avoid compensability. Nonetheless, proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant has proven that there was a causal link between her left shoulder injury and the work related incident on August 2, 2017. Therefore, she suffered a compensable injury and received authorized, reasonably necessary and causally related medical care and treatment for the injury since August 4, 2017 with little improvement and she has not reached MMI.

Medical

d. The employer's initial right to select the treating physician is triggered once the employer has some knowledge of the facts concerning the injury or occupational disease with the employment and indicating "**to a reasonably conscientious manager**" that a **potential** workers' compensation claim may be involved. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). As found, The Employer referred the Claimant to an authorized medical provider, whereupon the Claimant saw Jerald Solot, D.O., at Concentra (an Employer authorized medical provider). Thereafter

e. All referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, all left shoulder related referrals emanated from Dr. Solot and were in the authorized chain of referrals.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the entitlement to benefits beyond those admitted. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus.*

Claim Appeals Office, 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven the causal relatedness and compensability of the left shoulder injury on August 2, 2017, and the reasonable necessity of medical treatment and the left shoulder arthroscopy to treat said injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of authorized, causally related and reasonably necessary medical care and treatment, including the recommended arthroscopy surgery for the Claimant's left shoulder injury, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. The general Admission of liability, dated February 27, 2018, remains in full force and effect.

C. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of July 2018.

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a compensable injury on June 9, 2016?

- If Claimant suffered a compensable injury, does the ALJ have jurisdiction to consider medical benefits after June 15, 2016 or August 12, 2016, when Dr. Larimore declared Claimant at MMI?

- If Claimant suffered a compensable injury, was treatment he received from his personal providers reasonably necessary, authorized, and causally related to the injury?

- The parties stipulated to an average weekly wage of $1,215.

FINDINGS OF FACT

1. Claimant works for Employer as a field technician, installing and repairing cable TV and telephone service. On June 9, 2016 he was walking in a shady location on what appeared to be level ground, but there was a step he did not see. He unexpectedly stepped down and jarred his low back.

2. Claimant had a history of low back problems before the June 2016 incident. He had prior worker-related low back injuries, including an injury in September 2009. The last treatment note relating to that claims is from Dr. Neil Pitzer who saw Claimant at Concentra on June 9, 2010. Dr. Pitzer documented that Claimant had been given oral steroids which were "significantly beneficial," although he still had some numbness. He was working full duty with no apparent difficulty. His lumbar range of motion was "excellent," and he had only "mild" tenderness over the sciatic area. Claimant was "not terribly interested" in injections or medications and Dr. Pitzer concluded, "I think we can just watch this problem resolve." Claimant did not return for further care, and Concentra closed his file in August 2010. The ALJ infers from the lack of follow-up Claimant was doing well and did not perceive a need for additional treatment.

3. Claimant hurt his back again when he slipped and fell at home in May 2013. X-rays showed a nondisplaced coccyx fracture. He also suffered a lumbar strain with symptoms of left leg "sciatica." His PCP, Dr. DeMuth, referred Claimant for physical therapy, prescribed naproxen and hydrocodone-acetaminophen 5/325 (Norco or Vicodin), and instructed Claimant to "follow-up if no improvement."

4. Claimant did not see Dr. DeMuth again regarding his back until June 30, 2014, although it appears he continued to refill the medications periodically. Dr. DeMuth's June 30, 2014 report noted "the patient does have a long history of lower back pain . . . . He works as a technician for a communication company and spends many hours of his

day in tight spaces and on ladders doing installations. Associated with this he has ongoing complaints of lumbosacral pain doubt[1] radicular symptoms. In the last couple of months he has had worsening discomfort and has been taking hydrocodone twice-daily." On examination, Claimant had mild lumbosacral paraspinous tenderness and limited flexion. He had negative straight leg raising bilaterally with normal heel walk, normal toe walk, and intact reflexes. Dr. DeMuth refilled the Norco, referred for Claimant for physical therapy, and stressed the need for strength and conditioning to help his back pain.

5. In March 2015, Claimant reported ongoing pain in his low back, shoulders, and knees, which he attributed to his "work as a technician for a cable company he spends many hours on his knees and crawling on the floor." Physical exam revealed no significant abnormalities. Dr. DeMuth noted, "I have given him written prescriptions to last until July to take 1-2 hydrocodone daily and I told [him] that I will not increase the dose of this medication and intend to transition him to just nonsteroidal anti-inflammatory medications." On June 22, 2015, Dr. DeMuth documented "he has ongoing complaints of low back pain for which he has been taking hydrocodone once or twice daily. He continues to work in a physically demanding job." Claimant asked about weight loss medication to help with his low back and knee pain. On July 20, 2015, Dr. DeMuth documented "I have written him a prescription for hydrocodone to last for the next 2 months and I discussed the need for tapering and discontinuing his medication in the near future." Dr. DeMuth's records indicate the last prescription for hydrocodone was issued in September 2015. There was no further mention of low back pain in his primary care records before the June 9 incident.

6. There was indication of lower extremity symptoms related to Claimant's low back for at least three years before June 9, 2016.

7. When the incident occurred at work on June 9, 2016, Claimant felt a "pull" in his back but no severe pain and finished his shift. His pain steadily increased over the next few days. He saw his primary care physician, Dr. Patrick DeMuth, on June 13, 2016. He described 10/10 low back pain radiating down his right leg. He said the "symptoms started after missing a step the other day." He was taking OTC ibuprofen which was not helping. Dr. DeMuth further documented, "[h]e reports he missed a step 4 days ago and tweaked his back. He has a long history of back pain, with x-rays taken and 2013. He was taken off hydrocodone about a year ago and has been using Robaxin and ibuprofen which has been minimally efficacious. He would like a referral to pain management today." Physical examination showed Claimant to be "limping, pain with toe walk, unable to sit long, positive SLR." Dr. DeMuth prescribed a five-day supply of OxyContin and referred Claimant for "pain management."

8. Claimant saw Dr. Walter Larimore at Concentra Medical Centers, Employer's designated provider, on June 15, 2016. He described 8/10 pain in his back radiating into the right leg. Regarding the onset of symptoms, Dr. Larimore documented:

[1] The ALJ infers the word "doubt" is likely a transcription error, and was intended to read "without."

> [He] was at work on an installation of the customer's home on Thursday, 6/9/16. He was walking and did not see a step. He continued as if the surface was flat and upon stepping down did not fall but jerked his lower back. He felt a pull but no pain and was able to finish that shift and his regular work on Friday. However, Friday evening through the weekend he developed increasing low back pain with radiation down the right lateral leg to the anterior thigh to the knee. . . . His PCP at CSHP takes care of him for chronic recurrent LBP and he has a RX for 800 mg IBU that is helpful. He has been seen here in the past (he thinks 2-3 years ago) for a low back injury with right-sided sciatica for which he has had 2 or 3 ESI injections which helped relieve his sciatica completely. He went to his PCP on Monday and was told to continue[2] the IBU and OxyContin and referred to a physiatrist, but when his private insurance found out this started at work, they had him have his employer send him here for evaluation.

9. Dr. Larimore ordered x-rays which showed bone spurring at multiple lumbar levels. The report concludes with:

> We had a long discussion that his low back pain with radiation is most likely an exacerbation of pre-existing, non-work-related, degenerative disease. . . . I'll close his case with no IR or PWR so he can have this cared for by his PCP. The patient is to continue the meds and/or any restrictions recommended by his PCP. [ ] The patient is released from care as maximum medical improvement was reached for the patient's injur(ies).

10. Claimant returned to Dr. DeMuth on June 23, 2016, as instructed by Dr. Larimore. Dr. DeMuth's report states:

> Patient has a long history of lumbar spondylosis and recurrent low back pain. He had been taking narcotic analgesics on a fairly regular basis until last fall when he discontinued this medication. . . . Approximately one month ago the patient had a misstep while he was home visiting his family in Trinidad. Since then he has had low back pain with radiation of pain to both lower extremities. Two weeks ago while at work he had another misstep without an actual fall and now complains of ongoing low back pain with intermittent numbness in his right lower extremity which is worse with walking and with pain in his left posterior thigh. He complains of numbness and tingling in his right lower extremity radiating into his foot.

11. Dr. DeMuth prescribed a 12-day course of prednisone to treat the back pain and leg symptoms.

---

[2] It appears Dr. Larimore misunderstood Claimant's history, because Dr. DeMuth did not advise Claimant to "continue" OxyContin on June 12. Claimant was first prescribed OxyContin on June 12, *after* the accident at work. In the past he had been prescribed hydrocodone, but that prescription was last renewed in September 2015.

12. At hearing, Claimant disputed that he had a misstep while at home in Trinidad. He credibly testified he had gone home to help his mother who had fallen and injured herself. He did not recall any incident in Trinidad, nor did he recall telling Dr. DeMuth about an incident in Trinidad.

13. Claimant developed vision problems after taking the prednisone for several days. His vision became blurry, he saw brief flashes of light, and developed "floaters." He called Dr. Demuth's office, and was told the steroids likely raised the pressure in his eyes. He discontinued the steroids, but the vision issues did not resolve.

14. Claimant continued to have severe low back pain, prompting him to seek treatment the Memorial Hospital emergency department on the morning of July 29, 2016. He saw Della Lane, a nurse practitioner, at the ER. He told Ms. Lane "he walked on uneven ground at work and somehow injured his back 1 month ago." Ms. Lane noted his neurological exam was normal with no worrisome deficits such as loss of bowel or bladder control. Claimant was working full duty which helped "keep his mind off the pain." Ms. Lane concluded "no work restrictions applied at this time. He is advised to schedule with occupational medicine first available for further evaluation of sx in light of injury occurring at work."

15. After leaving the ER, Claimant contacted Respondent's claims adjuster and requested permission to return to Concentra for further treatment. The adjuster obliged and he went to Concentra later than morning. Claimant saw Dr. Randall Jones instead of Dr. Larimore. Dr. Jones noted the case was "reopened per ins adj tallisa reed who is requesting the MRI of spine ? neck and lumbar." Claimant explained his PCP had prescribed steroids "which elevated pressure in left eye and [caused] 'floaters.'" Dr. Jones ordered cervical and lumbar MRIs, referred him to a pain specialist, and recommended three weeks of physical therapy.

16. Claimant saw Dr. Ripp, a pain specialist, on August 3, 2016. Dr. Ripp noted "he reinjured himself 06/09/2016 and has had difficulty obtaining treatment with pain management. He has had recent oral steroids which caused significant visual difficulty with floaters. His pain has persisted . . . ." Dr. Ripp diagnosed lumbar pain with intermittent left sciatica due to DDD and facet arthrosis clinically. He recommended medications and "consider injections; however he has had SE with steroids."

17. Claimant retuned to Concentra on August 12, 2016. This time he saw Dr. Larimore, who opined:

> I've reiterated to the patient . . . my opinion is that both the December 2015 and June 2016 injuries were clearly exacerbations of pre-existing, non-work-related, degenerative disease. Through the years he has had ongoing workup and therapy by his PCP. In the past he has had ESI of the L/S spine which helped. Given the chronicity of his symptoms, their exacerbation by work, but their not being caused by work, and his return to baseline after appropriate therapy, in my opinion, he is still at MMI for both of these claims

and should have his future care for these pre-existing, non-work-related, degenerative changes managed by his PCP.

18. Respondents authorized no further care after August 12, 2016. Apparently Claimant's health insurance carrier agreed to provide coverage, because he resumed evaluation and treatment in January 2017.

19. On January 23, 2017, Claimant saw Dr. Scott Smetana at Colorado Eye Associates, for evaluation of his vision problems. Dr. Smetana diagnosed a retinal tear and referred Claimant to the "first available retina doctor for further workup and/or treatment."

20. Claimant saw Dr. Ramin Sarrafizadeh, a retinal specialist, later that day. Dr. Sarrafizadeh confirmed Dr. Smetana's impressions and noted a horseshoe retinal tear in the left eye. He diagnosed a retinal tear, epiretinal membrane, and posterior vitreous detachment, and referred Claimant for cryotherapy. The ALJ finds the vision issues were likely related to the oral steroids Dr. DeMuth prescribed.

21. On January 30, 2017, Claimant had the MRIs that were originally ordered by Dr. Jones on July 29, 2016. The lumbar MRI showed multilevel degenerative changes, including L4-5 and L5-S1 stenosis "crowding" multiple nerve roots.

22. Claimant saw Dr. Timothy O'Brien on March 18, 2018 for an IME at Respondents' request.[3] Dr. O'Brien concluded Claimant sustained no work-related injury on June 9, 2016, and his symptoms merely represented a natural progression of his pre-existing underlying degenerative disc disease. Specifically, Dr. O'Brien opined:

> [Claimant] did not sustain a work-related injury and the history provided to Dr. DeMuth clearly establishes that fact. Even if a work-related injury did occur, in my opinion it did not, an end of healing was reached on or before August 12, 2016 when Dr. Larimore's evaluation demonstrates normal exam findings. [Claimant] does have an incurable and relentlessly progressive lumbosacral multilevel spondylosis. This is expected to result in episodic pain due to no injury. These episodes of pain wax and wane in their severity and duration. They are often associated with innocuous daily activities such as sweeping or prolonged sitting or "misstep." Just because the daily activities are associated with pain it does not mean that an injury has occurred or any new tissue breakage or yielding has occurred to causes pain. The arthritic condition in and of itself causes pain and that is what [Claimant] experienced on June 9, 2016.

23. Dr. O'Brien testified at a deposition on May 8, 2018 consistent with the opinions expressed in his IME report.

[3] Dr. O'Brien's IME report dated March 26, 2018 was not included in Respondents' Exhibit packet but was attached to the deposition transcript as Exhibit A.

24. Claimant was a credible witness.

25. Dr. Larimore's opinions that Claimant required no further injury-related treatment as of June 15, 2016 or August 12, 2016 are not persuasive.

26. Dr. O'Brien's opinion that Claimant sustained no injury on June 9, 2016 and that his symptoms are entirely the product of his pre-existing condition is not persuasive.

27. Claimant proved by a preponderance of the evidence he suffered a work-related low back injury on June 9, 2016. Although Claimant had pre-existing degenerative changes in his lumbar spine, the June 9, 2016 accident aggravated the pre-existing condition and proximately caused a need for treatment.

28. There is no persuasive evidence Claimant missed time from work or is entitled to TTD or other indemnity compensation because of this injury.

29. The treatment Claimant received from Concentra, Dr. DeMuth, Dr. Smetana, Dr. Sarrafizadeh, and Dr. Ripp after June 9, 2016 was reasonably necessary and causally related to his industrial injury.

30. Dr. DeMuth was authorized after June 15, 2016.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A claimant does not have to present expert opinion evidence regarding causation and may rely on lay testimony, medical records, or any other admissible evidence to sustain his burden of proof. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). Each case is decided on its merits, and the facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201.

If an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-91-616-03 (September 9, 2016).

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not necessarily establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

Even a "minor strain" or a "temporary exacerbation" of a pre-existing condition can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment*. Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

As found, Claimant proved he suffered a work-related injury on June 9, 2016. Although Claimant had a history of low back problems, the symptoms were stable and easily managed with relatively low doses of pain medication before the June 9 accident. The narcotics had been stopped nearly nine months before the accident. After the accident, Claimant's pain was bad enough that his physician prescribed OxyContin, whereas Vicodin/Norco had previously been sufficient to manage his pain. Additionally, he was prescribed oral steroids, which caused him to develop vision problems. There is no persuasive evidence that Claimant's pre-existing low-level back pain substantially limited his ability to perform vocational or recreational activities, as evidenced by his ability to work without limitation in a physically demanding occupation. Claimant credibly testified he developed new pain radiating to his legs that he did not have immediately before the accident. Although Claimant had right leg radicular symptoms in 2009 and 2010, and a brief episode of left leg "sciatica" in May 2013, there is no documentation of ongoing leg symptoms for several years before his June 2016 accident. Since the work accident, his back symptoms were more persistent and severe, causing him to seek more aggressive treatment.

The most troublesome piece of evidence is Dr. DeMuth's June 23, 2016 note stating Claimant reported a different "misstep" occurring when he was in Trinidad two weeks before the work accident. If credited, that note would entirely undermine this claim because it would mean Claimant's testimony at hearing was false. But the ALJ found Claimant to be a credible witness who appeared forthright and sincere in his testimony. Claimant seemed genuinely perplexed as to how that information came to be in Dr. DeMuth's report. The ALJ does not believe Claimant's testimony was fabricated. Rather, the ALJ concludes Dr. DeMuth's report is likely erroneous, probably due to miscommunication or misunderstanding.

As for the opinion evidence, the ALJ is not persuaded by Dr. Larimore or Dr. O'Brien's opinions that Claimant's condition is strictly a manifestation of his pre-existing underlying degenerative spine condition. Dr. Larimore conceded the June 9 incident "exacerbated" Claimant's condition but failed to appreciate the legal standard regarding

compensable aggravations of pre-existing conditions. Furthermore, Dr. Larimore had no access to Claimant preinjury medical records and based his opinions on erroneous assumptions regarding the severity of Claimant's condition before the accident. Dr. Larimore was under the impression Claimant was regularly using OxyContin before the accident, when in fact, he previously only used low doses of Norco or Vicodin, and stopped those medications more than six months before the accident. The persuasive evidence shows Claimant had not returned to "baseline" by June 15 or August 12, 2016.

Nor is the ALJ persuaded by Dr. O'Brien's opinions that Claimant's symptoms arose spontaneously and coincidently due to natural "waxing and waning" of his underlying condition. Rather, the persuasive evidence shows the June 9, 2016 accident triggered Claimant's increased symptoms. As found, the June 9 accident aggravated Claimant's pre-existing condition, causing him to seek medical treatment he would not have otherwise required but for the accident. Thus, he sustained a compensable injury on June 9, 2016.

B. Jurisdiction to consider medical benefits after June 15, 2016 or August 12, 2016.

Before considering liability for treatment Claimant received from his personal physicians after June 15, 2016, the ALJ must first resolve a jurisdictional issue. Dr. Larimore placed Claimant at "MMI" with no impairment on June 15, 2016, and reaffirmed that opinion on August 12, 2016. As a general rule, a declaration of MMI by an ATP precludes an ALJ from awarding further medical benefits intended to "cure" a claimant's condition absent a DIME. *E.g., Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995); *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (January 27, 2006); *Eby v. Wal-Mart Stores Inc*., W.C. No. 4-350-176 (February 14, 2001) *Cass v. Mesa County Valley School District*, W.C. No. 4-69-69 (August 26, 2005).

But in *Harman-Bergstedt v. Loofbourrow*, 320 P.3d 327 (Colo. 2014), the Supreme Court held that a determination of MMI has no legal significance if it occurs before the claimant suffers a compensable *disability* because of the injury. The court explained:

> "Maximum medical improvement," as a statutory term of art, therefore has no applicability or significance for injuries insufficiently serious to entail disability indemnity compensation in the first place. . . . The statutory consequences of a finding of "maximum medical improvement" can only apply to injuries as to which disability indemnity is payable.

Loofbourrow used the term "compensable" strictly in reference to claims in which disability indemnity benefits are payable. In practice, the parties in the workers' compensation system (including ALJs, the ICAO, and the courts) frequently use the term "compensable" more broadly, to include cases or issues involving liability for medical benefits only.[4] *E.g., Gianzero v. Wal-Mart Stores*, W.C. No. 4-669-749 (July 14, 2009) (recognizing that the courts have "used the terms compensability and causation somewhat interchangeably"); *Hanna v. Print Expediters, Inc*., 77 P.3d 863 (Colo. App.

[4] This ALJ has used the term "compensable" to refer to Claimant's injury, which as this time is a "medical only, no lost time" claim.

2003) (employer retains the right to contest "compensability," reasonableness, or necessity of medical benefits after MMI); *Rodriguez v. Pueblo County*, W.C. No. 4-911-673-01 (January 21, 2016); *Reekstin-Martinez v. City and County of Denver*, WC. No. 4-832-902-03 & 4-891-828 (December 17, 2015); *Montoya v. Kaiser-Hill Company, LLC*, W.C. No. 4-633-835 (April 26, 2006); *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2004); *Conry v. City of Aurora*, W.C. No. 4-195-130 (April 17, 1996).

Common parlance notwithstanding, a line of cases recognizes a distinction between "compensation" and medical benefits, and it was in that sense that *Loofbourrow* used the term "compensable." *E.g., Royal Globe Insurance Co. v. Collins*, 723 P.2d 731 (Colo. 1986); *Wild West Radio Inc. v. Industrial Claim Appeals Office*, 886 P.2d 304 (Colo. App. 1984); *Support Inc. v. Industrial Claim Appeals Office*, 968 P.2d 174 (Colo. App. 1998); *Racon Construction v. Industrial Claim Appeals Office*, 775 P.2d 61 (Colo. App. 1989); *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981). *Loofbourrow* is clear that MMI only deprives the ALJ of jurisdiction where the claimant has become entitled to disability indemnity benefits before the declaration of MMI.

Relying on *Loofbourrow*, the ICAO has repeatedly held a DIME is not a prerequisite to adjudicating medical benefits in a non-*indemnity*-compensable claim. *See, e.g., Trujillo v. Elwood Staffing*, W.C. No. 4-957-118-02 (June 22, 2017) (ATP and DIME findings of MMI did not preclude the claimant from requesting further medical benefits since he had not missed more than three days of work or suffered permanent disability); *Kazazian v. Vail Resorts*, W.C. No. 4-915-969-03 (April 24, 2017) (determination of MMI was of no consequence in claim where no disability indemnity was payable); *Cross v. Genuine Parts Co*., W.C. No. 4-961-489-01 n.1 (September 20, 2016) ("claims that do not feature liability for temporary or permanent indemnity benefits are not affected by the concept of MMI is that finding is only germane to the issue of indemnity benefits."); *Thibault v. Ronnie's Automotive Services*, W.C. No. 4-970-099-01 (August 2, 2016) ("FAL premised on a finding of MMI, in which found that no disability indemnity was payable, does not preclude the claimant from requesting further medical benefits."); *Sanchez v. Denver Water*, W.C. No. 4-978-703-01 (June 10, 2016) ("Because the claimant's injury was a non-lost time claim when MMI was determined, the question of whether the claimant's alleged back injury was a compensable component of the [ ] injury was a question of fact for the ALJ and not a Division Independent Medical Examiner (DIME)").

Until Claimant's injury becomes "compensable" in the *Loofbourrow* sense of entitlement to indemnity benefits, the concept of MMI is inapplicable and the ALJ retains jurisdiction to decide all issues involving medical benefits. When Dr. Larimore issued his MMI opinions on June 15 and August 12, 2016, Claimant had not yet suffered a compensable disability. Claimant continued working despite his symptoms, and there is no persuasive evidence of lost time to entitle him to disability indemnity compensation. Although the ALJ has found Claimant's claim is "compensable" in the sense that Respondents are liable for medical benefits, the claim was not "compensable" by June 15 or August 12, 2016 as that term is defined in *Loofbourrow*. Dr. Larimore's declarations of MMI are of no special significance, but are merely additional opinions to consider when evaluating the totality of evidence. Therefore, Dr. Larrimore's findings of MMI do not

preclude the ALJ from considering Claimant's entitlement to medical treatment after that date.

C. Reasonably necessary medical benefits after June 15, 2016

The mere fact that a claimant suffered a compensable injury does not require an ALJ to find that all subsequent treatment was caused by the industrial injury. The compensable consequences of an industrial injury are only those which flow proximately and naturally from the injury. Therefore, even where a claimant suffers a compensable injury, an ALJ must deny specific medical treatment that was not proximately caused by the injury. The claimant must prove a causal relationship between the industrial injury and the medical condition for which he seeks benefits. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, the Claimant proved the treatment he received from Dr. DeMuth, Dr. Smetana, Dr. Sarrafizadeh, and Dr. Ripp after June 9, 2016, was reasonably necessary and causally related to his industrial injury. This includes treatment for eye problems, including a retinal tear and posterior vitreous detachment proximately caused by prednisone prescribed to treat his work-related injury.

D. Dr. DeMuth was authorized after June 15, 2016

Besides proving that medical treatment was reasonable, necessary, and causally related to the injury, a claimant must prove the treatment was "authorized." "Authorization" refers to a physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Section 8-43-404(5) gives the employer the right to select the claimant's treating physician "in the first instance." Once the respondents have exercised their right of selection, the claimant may not change physicians without permission from the insurer or an ALJ. *Giannetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). A physician who treats a claimant on referral from an ATP in the "normal progression of authorized treatment" becomes authorized. *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

In *Cabela v. Industrial Claim Appeals Office*, 198 P.3d 1277 (Colo. App. 2008), the Court of Appeals held that if an ATP determines that a claimant's condition is not work-related and instructs the claimant to pursue treatment with personal physicians, the treatment will be deemed authorized if it is later determined the condition was compensable. The court held that "the risk of mistake by an ATP in concluding that an injury is noncompensable lies with the employer" rather than the claimant. Dr. Larimore released Claimant on June 15, 2016 because he believed Claimant had no work-related condition. He thought Claimant still required care and advised him follow-up with his primary care provider. Thus, Dr. DeMuth was authorized as of June 15, 2016.

E. Respondents are liable for all injury-related treatment Claimant received after June 15, 2016

Section 8-42-101(6)(a) provides:

> If an employer or, if insured, the employer' insurance carrier . . . fails to furnish reasonable and necessary medical treatment to the injured worker for a claim that is admitted or found to be compensable, the employer or carrier shall reimburse the claimant, or any insurer or governmental program that pays or related medical treatment, for the cost of reasonable and necessary treatment that was provided.

Claimant's case is the type of scenario that § 8-42-101(6)(a) was intended to address. In light of the ALJ's determination that Claimant's injury is compensable, Respondents are liable for injury-related all medical care he has received.

ORDER

It is therefore ordered that:

1. Claimant's claim in W.C. No. 5-048-517 is compensable.

2. Respondents shall provide all reasonably necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's June 9, 2016 injury.

3. Respondent shall cover all injury-related medical treatment Claimant received to date, including, but not limited to, charges from Concentra, Dr. DeMuth, Dr. Smetana, Dr. Sarrafizadeh, Dr. Ripp, Memorial Hospital, and Colorado Springs Imaging.

4. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 5, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUE

Whether Claimant has established by a preponderance of the evidence that the cervical surgeries requested by J. Paul Elliott, M.D. in the form of a C5-C6, C6-C7 anterior cervical discectomy and fusion (ACDF) or anterior cervical fusion and disc replacement are reasonable, necessary and causally related to her October 19, 2016 admitted industrial injury.

FINDINGS OF FACT

1. Claimant worked as an underground utility locator for Employer. On October 19, 2016 Claimant was bent over with her head down working on her computer. A tractor on the site dislodged two sections of fence. A fence panel struck Claimant on the top of her head, knocked her to the ground and landed on top of her. Claimant completed her shift but on the following day suffered neck stiffness, upper back pain and arm pain.

2. Claimant initially received medical treatment through Concentra Medical Centers. Claimant reported pain in her head, neck and both shoulders. Physicians ordered a cervical MRI.

3. On November 30, 2016 Claimant visited John Aschberger, M.D. for an examination. Dr. Aschberger noted that the cervical MRI demonstrated severe foraminal stenosis at C6-C7. However, a physical examination did not reveal any spinal cord signal abnormalities.

4. On December 21, 2016 Claimant returned to Dr. Aschberger for an examination. Claimant continued to report pain across her upper back that radiated into her extremities. She also noted pain in her thoracic and lumbar regions. Dr. Aschberger ordered an EMG to ascertain the origin of Claimant's symptoms.

5. On January 9, 2017 Claimant underwent an EMG/NCS. The diagnostic testing revealed bilateral Carpal Tunnel Syndrome (CTS), no cervical radiculopathy and reduced ulnar sensory amplitude on the left. Dr. Aschberger thus diagnosed a cervical strain, unrelated bilateral CTS and upper back myofascial pain. He subsequently recommended a surgical consultation and referred Claimant to B. Andrew Castro, M.D.

6. On February 17, 2017 Claimant underwent a surgical evaluation with Dr. Castro. Claimant reported that she periodically experiences numbness and tingling in her arms, neck and shoulders. After reviewing the November 14, 2017 MRI and x-ray images Dr. Castro determined Claimant suffers multilevel degenerative changes from C4 through C7. He noted that the most significant findings were located at the C6-C7 level and

included disc bulging that contributed to central canal stenosis. Dr. Castro also remarked that there was no cord signal abnormality and Claimant did not exhibit symptoms consistent with a myelopathy. He thus did not recommend surgical intervention but referred Claimant for epidural steroid injections.

7. On February 21, 2017 Claimant visited John Burris, M.D. for an examination. Claimant reported diffuse pain symptoms in her neck, down the back of both upper extremities, in the middle and lower back, and down the back of both legs. After conducting a physical examination Dr. Burris concluded that Claimant's diffuse symptoms did not follow a neurologic, anatomic pattern.

8. In February 2017 Claimant's care was transferred to Authorized Treating Physician (ATP) Kristin D. Mason, M.D. In Dr. Mason's initial evaluation and several follow-up examinations she did not find any signs of myelopathy. On February 17, 2017 Dr. Mason specifically diagnosed Claimant with a cervical disc protrusion impinging on the foramina at C6-C7. She noted no signs of myelopathy but Claimant exhibited some radiculopathy.

9. On March 3, 2017 Claimant underwent a second MRI. The MRI reflected decreased disc height, bilateral facet hypertrophy, posterior disc osteophyte complex, central stenosis and bilateral foraminal stenosis at C6-C7.

10. On July 7, 2017 Claimant visited Gary Ghiselli, M.D. for a spinal evaluation. Claimant reported neck pain that radiated into her upper back and shoulders since her October 19, 2016 industrial accident. Imaging studies of Claimant's cervical spine revealed degenerative changes including central and foraminal stenosis from C4-C7. Dr. Ghiselli determined that Claimant did not exhibit any "true weakness and is not myelopathic." He diagnosed Claimant with cervical spondylosis with radiculopathy, disc degeneration and spinal stenosis. Dr. Ghiselli emphasized that Claimant should "maximize all non-operative treatment" and avoid surgery. He determined that Claimant's "main problem" was neck pain.

11. Claimant subsequently received conservative treatment that included physical therapy. An August 11, 2017 MRI revealed disc space narrowing and osteophytes at C6-C7.

12. On October 2, 2017 Claimant visited J. Paul Elliott, M.D. for a surgical consultation. Dr. Elliott remarked that Claimant's symptoms were progressively worsening and diagnosed her with cervical spinal stenosis. He commented that Claimant had not responded to conservative care and was exhibiting signs of myelopathy. Dr. Elliott also remarked that Claimant exhibited axial neck pain and bilateral upper extremity radiculopathy that he attributed to C6-C7 and C5-C6 stenosis. He recommended surgical intervention in the form of an anterior C5-C6 and C6-C7 cervical discectomy and fusion (ACDF).

13. On October 26, 2017 Claimant underwent an MRI. The imaging reflected severe canal stenosis at C6-C7 with mild cord compression and mild cord signal

abnormality. The study also revealed severe bilateral foraminal stenosis at C6-C7 that could result in nerve root impingement.

14. On January 3, 2018 Claimant underwent an independent medical examination with Brian Reiss, M.D. Dr. Reiss reviewed Claimant's medical records and conducted a physical examination. He issued his report on February 20, 2018. He determined that Claimant had spinal stenosis at the C6-C7 level that he attributed to a degenerative process instead of an acute injury. Dr. Reiss detailed that Claimant's cervical stenosis was probably not caused, aggravated or accelerated by her October 19, 2016 industrial accident. He explained that cervical stenosis is not likely the cause of neck pain and the proposed cervical fusion did not constitute reasonable treatment for axial neck pain. Dr. Reiss summarized that Claimant's work accident simply caused a cervical strain that led to myofascial pain.

15. On March 13, 2018 Claimant returned to Dr. Mason for an evaluation. Dr. Mason reviewed Dr. Reiss' independent medical examination report. She remarked that Dr. Reiss determined that cervical stenosis was not the cause of Claimant's problems. However, she did not "really know how to respond to it because it makes no sense to me whatsoever." Dr. Mason diagnosed Claimant with C6-C7 stenosis with gradually progressing myelopathy. She recommended continued physical therapy and medications.

16. On April 23, 2018 Dr. Elliott issued a follow-up report. He recommended surgery in the form of a C5-C6, C6-C7 anterior discectomy and disc replacement.

17. On April 25, 2018 Dr. Castro issued a letter addressing the proposed surgery. After reviewing additional medical records, he agreed with Dr. Reiss that the proposed surgery "would not be helpful in treating axial neck pain."

18. Dr. Reiss testified at the hearing in this matter. He maintained that the surgeries proposed by Dr. Elliott were not causally related to Claimant's October 19, 2016 industrial accident. In reviewing Claimant's initial medical records Dr. Reiss noted that when Claimant was struck by a section of fence she suffered a myofascial neck and upper back injury. The accident did not aggravate, accelerate or worsen her pre-existing spinal stenosis. Moreover, Claimant did not suffer myelopathy. In fact, Claimant did not develop symptoms consistent with myelopathy for at least one tear after her industrial accident. If Claimant had suffered acute or sudden damage to the spinal cord she would have immediately reported symptoms consistent with myelopathy. The late development of the symptoms suggested that Claimant's current condition is instead related to the natural progression of her pre-existing spinal stenosis.

19. The medical records reveal that numerous physicians had not identified symptoms of myelopathy prior to Dr. Elliott's report of October 2, 2017. The temporal proximity of the development of symptoms consistent with myelopathy suggests a tenuous connection between Claimant's October 19, 2016 industrial injury and current condition. Dr. Reiss summarized that the surgical indications for either surgery proposed by Dr. Elliott involve the presence of myelopathy. However, because the myelopathy was

not caused by Claimant's industrial accident, the proposed surgeries are not causally related to the October 19, 2016 work accident. Instead, the recommended surgeries constitute prophylactic procedures designed to prevent future deterioration of Claimant's pre-existing condition.

20. Claimant testified at the hearing in this matter. She explained that she suffers from neck pain, headaches and arm numbness. She remarked that her symptoms have gradually worsened since her industrial accident. Claimant noted that she did not suffer any neck, shoulder, upper back or radicular symptoms prior to her date of injury.

21. Claimant has failed to establish that it is more probably true than not that the cervical surgeries requested by Dr. Elliott in the form of a C5-C6, C6-C7 ACDF or an anterior cervical fusion and disc replacement are causally related to her October 19, 2016 admitted industrial injury. Initially, on October 19, 2016 Claimant suffered an admitted industrial injury when a fence panel struck her on the top of her head. Claimant completed her shift but on the following day suffered neck stiffness, upper back pain and arm pain. After diagnostic testing and conservative treatment Dr. Elliott recommended surgical intervention in the form of a C5-C6, C6-C7 ACDF procedure. Dr. Elliott subsequently recommended surgery in the form of a C5-C6, C6-C7 anterior discectomy and disc replacement. ATP Dr. Mason agreed with Dr. Elliott that Claimant was suffering from gradually progressing myelopathy.

22. Despite Dr. Elliott's surgical requests, the bulk of the persuasive medical evidence reveals that Claimant's current symptoms and necessity for surgery are not causally related to her October 19, 2016 industrial accident. Instead, Claimant's current condition is likely related to the natural progression of her pre-existing spinal stenosis. As noted by Dr. Castro, imaging studies reveal that Claimant suffers from multiple degenerative changes in her cervical spine from the C4 through C7 levels. Dr. Castro noted that the most significant findings were located at the C6-C7 level and included disc bulging that contributed to central canal stenosis. He also remarked that there was no cord signal abnormality and Claimant did not exhibit symptoms consistent with a myelopathy. Moreover, Dr. Ghiselli agreed that Imaging studies of Claimant's cervical spine revealed degenerative changes including central and foraminal stenosis from C4-C7. Dr. Ghiselli determined that Claimant did not exhibit any "true weakness and is not myelopathic." He diagnosed Claimant with cervical spondylosis with radiculopathy, disc degeneration and spinal stenosis.

23. After conducting an independent medical examination Dr. Reiss determined that Claimant had spinal stenosis at the C6-C7 level that he attributed to a degenerative process instead of an acute injury. Dr. Reiss detailed that Claimant's cervical stenosis was not caused, aggravated or accelerated by her October 19, 2016 industrial accident. He explained that cervical stenosis is not likely the cause of neck pain and the proposed cervical fusion did not constitute reasonable treatment for axial neck pain. Dr. Castro agreed that the proposed surgery "would not be helpful in treating axial neck pain." Moreover, Claimant did not develop symptoms consistent with a myelopathy for at least one tear after her industrial accident. Dr. Reiss reasoned that if Claimant had suffered acute or sudden damage to the spinal cord she would have immediately reported

symptoms consistent with myelopathy. The late development of the symptoms suggested that Claimant's current condition is instead related to the natural progression of her pre-existing spinal stenosis. Dr. Reiss explained that the temporal proximity of the development of symptoms consistent with myelopathy suggests a tenuous connection between Claimant's October 19, 2016 industrial injury and current condition. Based on the diagnostic studies, medical records and persuasive opinions of Drs. Castro, Ghiselli and Reiss, Claimant has failed to demonstrate that the surgeries proposed by Dr. Elliott are causally related to her October 19, 2016 work injury. Accordingly, Claimant's surgical requests are denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has failed to establish by a preponderance of the evidence that the cervical surgeries requested by Dr. Elliott in the form of a C5-C6, C6-C7 ACDF or an anterior cervical fusion and disc replacement are causally related to her October 19, 2016 admitted industrial injury. Initially, on October 19, 2016 Claimant suffered an admitted industrial injury when a fence panel struck her on the top of her head. Claimant completed her shift but on the following day suffered neck stiffness, upper back pain and arm pain. After diagnostic testing and conservative treatment Dr. Elliott recommended surgical intervention in the form of a C5-C6, C6-C7 ACDF procedure. Dr. Elliott subsequently recommended surgery in the form of a C5-C6, C6-C7 anterior discectomy and disc replacement. ATP Dr. Mason agreed with Dr. Elliott that Claimant was suffering from gradually progressing myelopathy.

6. As found, Despite Dr. Elliott's surgical requests, the bulk of the persuasive medical evidence reveals that Claimant's current symptoms and necessity for surgery are not causally related to her October 19, 2016 industrial accident. Instead, Claimant's current condition is likely related to the natural progression of her pre-existing spinal stenosis. As noted by Dr. Castro, imaging studies reveal that Claimant suffers from multiple degenerative changes in her cervical spine from the C4 through C7 levels. Dr. Castro noted that the most significant findings were located at the C6-C7 level and included disc bulging that contributed to central canal stenosis. He also remarked that there was no cord signal abnormality and Claimant did not exhibit symptoms consistent with a myelopathy. Moreover, Dr. Ghiselli agreed that Imaging studies of Claimant's cervical spine revealed degenerative changes including central and foraminal stenosis from C4-C7. Dr. Ghiselli determined that Claimant did not exhibit any "true weakness and is not myelopathic." He diagnosed Claimant with cervical spondylosis with radiculopathy, disc degeneration and spinal stenosis.

7. As found, after conducting an independent medical examination Dr. Reiss determined that Claimant had spinal stenosis at the C6-C7 level that he attributed to a degenerative process instead of an acute injury. Dr. Reiss detailed that Claimant's cervical stenosis was not caused, aggravated or accelerated by her October 19, 2016 industrial accident. He explained that cervical stenosis is not likely the cause of neck pain and the proposed cervical fusion did not constitute reasonable treatment for axial neck pain. Dr. Castro agreed that the proposed surgery "would not be helpful in treating axial neck pain." Moreover, Claimant did not develop symptoms consistent with a myelopathy for at least one tear after her industrial accident. Dr. Reiss reasoned that if Claimant had suffered acute or sudden damage to the spinal cord she would have immediately reported symptoms consistent with myelopathy. The late development of the symptoms suggested that Claimant's current condition is instead related to the natural progression of her pre-existing spinal stenosis. Dr. Reiss explained that the temporal proximity of the development of symptoms consistent with myelopathy suggests a tenuous connection between Claimant's October 19, 2016 industrial injury and current condition. Based on the diagnostic studies, medical records and persuasive opinions of Drs. Castro, Ghiselli and Reiss, Claimant has failed to demonstrate that the surgeries proposed by Dr. Elliott are causally related to her October 19, 2016 work injury. Accordingly, Claimant's surgical requests are denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's requests for the cervical surgeries recommended by Dr. Elliott are denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

- Did Respondents prove by a preponderance of the evidence Claimant suffered no compensable injury on June 11, 2017, entitling them to withdraw their admissions of liability?

- If the claim remains compensable, Claimant requests a general award of reasonably necessary medical benefits.

FINDINGS OF FACT

1. Claimant worked for Employer as a hydraulic fracturing ("fracking") operator assistant. Her claim arises out of an incident on June 11, 2017 when she was exposed to vapors from BE-7, a chemical biocide used in the fracking process.

2. Before being hired in May 2017, Claimant completed a medical questionnaire, underwent a physical examination, and participated in functional capacity testing. In her pre-employment questionnaire, Claimant denied any history of pulmonary problems including shortness of breath, coughing, wheezing, or chest pain. A physical exam on April 27, 2017 found her lungs, chest, and cardiovascular system to be "normal." She denied any "lung disease" or "chronic (long-term) cough, shortness of breath, or other breathing problems." Claimant was issued a two-year CDL medical certificate with no restrictions. An FCE on May 4, 2017 demonstrated the ability to work at the heavy physical demand level. Although her performance during the FCE was somewhat limited by "general deconditioning," there is no persuasive indication of any pulmonary issues.

3. The ALJ adopts the following findings from Employer's post-incident investigation: Claimant went to open the prime up line at approximately 8:30 AM; Claimant was wearing a half-face respirator when she bent over to open the prime valve; she did not remove her respirator but may have lost the seal when bending over; Claimant waved her hand in front of her face to indicate a smell in the air; her supervisor came up the missile and smelled a chemical; the source of the smell was a leak of a chemical called BE-7; a bucket was being used to hold a pump and BE-7 was flowing into the bucket; approximately 2 gallons of BE-7 had spilled over; the wind was moving in the direction toward where Claimant smelled the BE-7.

4. Claimant felt ill within 1-2 hours after inhaling the BE-7 vapor and went to the shower trailer to rest. At the time, she thought she might be suffering from heat exhaustion. She eventually resumed work and finished her shift despite feeling poorly. That evening, Claimant's supervisor, Joshua Spendlove, sent her a text message stating, "Matt left me a message that you are still not feeling better. Do not worry about it one bit if you are not well enough to come in tomorrow. . . . I'm concerned inhaling that strong

chemical smell may have caused some of what you're feeling." Claimant rested the next day because she did not feel well enough to work.

5. On June 14, 2017, Claimant texted Mr. Spendlove stated, "I hate to bother you on your day off but what was that chemical I inhaled … I'm still having problems with my chest and stomach." Mr. Spendlove later replied that "the chemical is called biocide, it kills microorganisms in the water."

6. Later that night, Claimant went to the Memorial Hospital emergency room for ongoing symptoms including chest pain and difficulty breathing. The triage note indicates, "Pt states she works for oil fracking and inhaled chemicals at work on Sunday causing nausea and chest pain, worse tonight." The medical history portion of the report states, "The patient is a 46 .y.o. female who presents for evaluation of difficulty breathing with chest discomfort. She works as an oil fracture [sic] and was at work on Sunday. She walked by some pipes that had some gas blowing out of them. She accidentally inhaled it. About a half hour later she got sick and ever since then she has had some difficulty breathing. Her chest feels tight. . . . It is not coming and going; it is constant." Claimant also reported ongoing nausea and abdominal pain. The ER physician opined, "Diagnostic considerations included . . . pneumonitis secondary to chemical exposure, reactive airway disease, viral syndrome, [and] upper respiratory infection . . . ." She was given prednisone and an albuterol inhaler.

7. Claimant returned to the emergency department on June 16, 2017. She reported she "was feeling much better after an albuterol nebulizer here in the emergency department on Wednesday. Patient states that over the last 24 hours, however, patient has been experiencing increased shortness of breath." The report noted, "She has had these symptoms ever since she inhaled a chemical called Biocide while at a job site." Testing was negative for any acute coronary issues or urinary tract infection. The provider opined "[it] is very possible the patient is having some continued reaction to pesticide. I did personally review MSDS regarding the pesticide called BIOCIDE and inhalation of the substance can cause lung irritation . . . ." She was discharged with diagnoses of acute chemical pneumonitis and acute dyspnea.

8. Claimant saw Dr. Julie Parsons, Employer's designated physician, on June 19, 2017. Dr. Parsons noted a history of "inhaled chemical exposure Biocide." She reviewed the ER records, the MSDS sheet and "discussed [the matter] with Lonie" (presumably Lonnie Farris of Employer). Dr. Parsons diagnosed "chemical pneumonitis" and "injury due to chemical exposure," and opined the objective findings were consistent with a work-related mechanism of injury. Dr. Parsons prescribed prednisone and recommended Claimant continue using the albuterol inhaler.

9. On June 22, Dr. Parsons referred Claimant to a pulmonologist, Dr. Marc Voelkel.

10. Claimant went back to the emergency room on July 3, 2017 complaining of "a dry cough since the chemical exposure. She has posterior lung pain, and right anterior

lung pain. She has pain with breathing, she does not have increased work of breathing right now." The discharge diagnoses were "pneumonitis," and "inhalation injury."

11. Respondents filed General Admissions of Liability on July 11 and July 13, 2017. The first GAL was for "medical only" and the second GAL admitted for TPD benefits.

12. Claimant had her first appointment with Dr. Voelkel on July 13, 2017. She described "severe cough, bronchospasm and pain, dyspnea, worse with exertion, and chest tightness." She reported improvement since starting the inhaler but was still having difficulty tolerating certain activities. He reviewed the MSDS sheet for BE-7 and noted it contains "sodium hypochlorite and sodium hydroxide. . . . [T]he substance seems to be an aqueous based skin irritant/corrosive (and seems to probably have alkali burn character)." Dr. Voelkel obtained spirometry, which was "improved" compared to the initial testing.[1] He diagnosed "inhalation injury" and "restrictive lung disease." He ordered full pulmonary function testing and a high-resolution chest CT.

13. Claimant returned to Dr. Voelkel on August 10, 2017 to review the test results. Dr. Voelkel diagnosed reactive airways dysfunction syndrome ("RADS"), and opined "patient has an inhalational injury with chlorate/chloride containing gas. Likely significant RADS although improving on PFTs and spirometry, DLCO is normal as are lung volumes. Cough and dyspnea are the main problems at this point, and we will need to clean up her inhaler regimen, and find appropriate ways to deal with cough." He also recommended nocturnal oximetry "to verify that she gets enough oxygen at night to treat her inhalational injury, lung damage and oxygen needs."

14. Dr. Pia Schalin took over as Claimant's primary ATP on August 29, 2017. She noted Claimant "continues feeling very unwell, has difficulty functioning, feels exhausted, SOB, with burning chest pain & HA." On physical exam, Dr. Schalin noted "LUNGS: have some scattered hint of wheezes & dry crackles in lower posterior lung fields. Air movement is fair. Has no visible retractions. No definite dullness. Breath sound has a slightly raspy quality diffusely, more in lower lobes." Dr. Schalin diagnosed "toxic inhalation with chest pain, RDS, COPD & headaches."

15. Dr. Lawrence Lesnak performed an IME for Respondents on October 3, 2017. Dr. Lesnak noted Claimant only had "possible brief (several seconds) exposure" to BE-7 and did not develop symptoms until approximately 60-90 minutes later. He opined any acute reaction would have occurred "within several seconds" and "would have been clearly visible on chest x-ray and clinical exam." He opined any condition related to noxious gas exposure would show "evidence of obstructive pathology rather than restrictive pathology." He thought the progression of symptoms over three days before going to the ER was "nonanatomic" and her condition was most likely the result of anxiety. Dr. Lesnak concluded Claimant's symptoms were "completely unrelated to the occupational incident that allegedly occurred on 06/11/17."

[1] Multiple providers, including Dr. Voelkel, Dr. Schalin, and Dr. Schwartz, have questioned the quality of the initial spirometry results. Consequently, Claimant's treating physicians have placed greater emphasis on subsequent testing and clinical findings in reaching their conclusions.

16. On October 16, Dr. Voelkel reviewed the nocturnal oximetry results and concluded, “Patient likely has nocturnal hypoxemia as a result of other airways disease. She was asymptomatic prior to her inhalation exposure, and has since then been having morning headaches, tiredness, and afternoon somnolence. She may have underlying sleep apnea, although asymptomatic prior, this is likely if at all exacerbated by her lung disease.” He recommended Claimant use supplemental oxygen at night.

17. Dr. Jeffrey Schwartz, a pulmonologist, performed an IME for Respondents on October 30, 2017. Dr. Schwartz interpreted Claimant’s history as manifesting no respiratory complaints “until the third day after her exposure,” which he believed was inconsistent with an exposure-related diagnosis. He disagreed with Dr. Voelkel’s interpretation of the test results and opined “there has been no evidence [Claimant] suffered an acute respiratory illness as a result of her possible work-related exposure on 06/11/2017 and no evidence she has any ongoing respiratory disorder as a result of this possible exposure.” Dr. Schwartz opined Claimant does not have asthma, so by definition cannot have irritant-induced asthma. He concluded Claimant’s symptoms were more likely related to cardiovascular deconditioning, “psychogenic dyspnea,” and anxiety.

18. Dr. Schalin wrote to Respondents’ counsel on November 29, 2017 to address Dr. Schwartz’ opinions. She opined, “I agree that [Claimant’s] inhalation exposure was unlikely in the ‘very high concentration,’ however both the sodium hypochlorite & sodium hydroxide in BE-7 gas are strong alkaline compounds, with pH 11 & 13 respectively, both caustic & being capable of causing lung damage, and alkaline compounds continues [sic] to be corrosive over time, as opposed to an acid . . . .” Dr. Schalin opined Claimant has at least “lower-level” RADS, and occupational chemical bronchitis.

19. Dr. Schalin has authored several reports and clinic notes outlining her opinion that Claimant’s current pulmonary problems are causally related to the June 11, 2017 BE-7 exposure.

20. On December 30, 2017, Dr. Schalin ordered a methacholine challenge test and recommended Claimant go to National Jewish for a cardiopulmonary stress test, if deemed necessary.

21. Claimant saw Dr. Silpa Krefft, a pulmonologist at National Jewish, on January 9, 2018. Dr. Krefft met with Claimant for approximately 90 minutes to obtain details regarding her clinical history, occupational exposure, and symptoms. Dr. Krefft ordered pulmonary function testing, which showed no significant bronchodilator response but some abnormalities of flow volume loop and FEV1/FVC ratio. Dr. Krefft opined:

> Based on the information that is available to me there is certainly concern for [Claimant] having occupational irritant-induced asthma as evidenced by some of the airflow limitation that is notable on her flow volume loop and her FEV1/FVC ratio that is borderline at 71.9%, with lower limits of normal being 70.9%. In order to obtain diagnostic clarity it would be helpful to refer her for a methacholine challenge and laryngoscopy to both look for asthma

as well as vocal cord dysfunction that may also be contributing to her clinical symptoms.

22. Claimant underwent a methacholine challenge test on January 10, 2018 at Dr. Voelkel's office. She had a second methacholine challenge test and a laryngoscopy at National Jewish on January 11, 2018.

23. Dr. Schalin formally referred Claimant to Dr. Krefft for evaluation and treatment on January 16, 2018.

24. Claimant returned to Dr. Krefft on January 17 to review the test results. Dr. Krefft opined:

> [The] recent methacholine challenge demonstrated airways hyperresponsiveness, and her laryngoscopy did not demonstrate any vocal cord dysfunction. Based on my review of her medical history, account of the workplace exposure, and review of diagnostic data, it is my reasoned medical opinion that [Claimant's] clinical presentation is due to a work-related irritant-induced asthma.

25. On February 9, 2018, Dr. Voelkel noted the methacholine challenge test performed at his office was also positive for "airways hyper-reactivity." He opined the etiology was "unclear," although "presumably this was secondary to inhalational injury." He further stated:

> I continue to be assured that: A) patient reports being asymptomatic prior. B) She had manifest airways symptoms after the event documented 3 days after . . . and was so symptomatic she was treated with inhalers and lidocaine nebs. C) She presented to my clinic still wheezing, coughing, miserable, with chest tightness and pain, as well as borderline normal spirometry. D) She was treated for RADS with Symbicort + Flovent, and has had interval improvement, with time, rehab, and medical therapy. E) Methacholine was positive. F) She had nocturnal hypoxemia (new). This is likely from her injury.

26. Dr. Lesnak and Dr. Krefft testified via pre-hearing depositions. Dr. Schwartz and Dr. Schalin testified at the May 1 hearing. Each physician testified to opinions and conclusions consistent with their respective reports.

27. The opinions of Claimant's treating physicians are more persuasive than those of Respondents' IMEs. The ALJ was particularly persuaded by Dr. Krefft's opinions regarding diagnosis and causation as discussed in her deposition testimony.

28. Respondents failed to prove they should be permitted to withdraw their admissions of liability. The persuasive evidence shows the BE-7 exposure more likely than not caused Claimant to develop irritant-induced asthma. She was exposed to BE-7 vapors, at least briefly, and developed symptoms including chest pain and difficulty breathing shortly thereafter. Mr. Spendlove, who is familiar with BE-7, described the smell as "strong" and immediately became concerned the exposure had caused Claimant to

become sick. Claimant's symptoms persisted and worsened over several days prompting her to seek emergent treatment. By the time she arrived at the emergency department, her condition was severe enough to warrant prescriptions of prednisone and albuterol. Claimant has no pre-injury history of asthma or other symptomatic airway disease, and a pre-employment physical exam showed no evidence of pulmonary problems. She underwent an FCE on May 4, 2017 which demonstrated the ability to work at the heavy physical demand level. Although her performance during FCE was somewhat limited by "general deconditioning," there was no persuasive indication of any pulmonary issues. It is not plausible that the development of symptoms was merely coincidental or the result of anxiety. Rather, her condition was more likely than not caused by exposure to BE-7.

CONCLUSIONS OF LAW

Respondents are seeking to withdraw their admissions based on their experts' opinions that Claimant suffered no compensable injury. The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. Rather, a compensable injury requires medical treatment or causes a disability. *Montgomery v. HSS, Inc.*, W.C. No. 4-989-682-01 (Aug. 17, 2016).

By filing an admission of liability, the respondents have "admitted that the claimant has sustained the burden of proving entitlement to benefits." *City of Brighton v. Rodriguez*, 318 P.3d 496, 507 (Colo. 2014). If the respondents seek to withdraw the admission of liability, they must prove by a preponderance of the evidence that the claimant suffered no compensable injury. *See* § 8-43-201(1) ("a party seeking to modify an issue determined by a general or final admission … shall bear the burden of proof for any such modification.").

As found, Respondents failed to prove a basis to withdraw their admissions of liability. The persuasive evidence shows Claimant more likely than not developed irritant-induced asthma because of exposure to BE-7 vapors on June 11, 2017. She was exposed to the vapors, at least briefly, and developed symptoms including chest pain and difficulty breathing shortly thereafter. The ALJ sees no other likely explanation for the onset of Claimant's symptoms other than the work exposure. She has no pre-injury history of asthma or other symptomatic airway disease, and a pre-employment physical exam showed no evidence of pulmonary problems. Claimant's treating providers have persuasively attributed her condition to the vapor exposure at work, and the ALJ was particularly impressed with Dr. Krefft's expert opinions regarding diagnosis and causation discussed in her deposition testimony. After reviewing all the evidence, the ALJ is convinced Claimant suffered a compensable injury on June 11, 2017 because of exposure to BE-7. The claim was appropriately admitted and shall remain so.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury on June 11, 2017. Respondents' request to withdraw their admissions of liability is denied and dismissed.

2. Respondents shall cover all reasonably necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's compensable injury.

3. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 6, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable work injury to his cervical region, upper back, or upper extremities on or about April 5, 2017?

II. If Claimant suffered a compensable work injury, what medical treatment is reasonable, necessary, and related to treat said injury?

III. If Claimant suffered a compensable work injury, is he entitled to Temporary Total Disability payments? If so, for what period of time?

STIPULATIONS

The parties stipulated that if a compensable injury occurred, Claimant's Average Weekly Wage is $1304.64. Further, if compensable, Indemnity benefits would commence on 5/3/2017. Further, that the amount of Temporary Total Disability is not ripe for determination by the ALJ, as factual issues remain regarding subsequent employment of Claimant. The ALJ accepted these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

Pre-existing Cervical Radiculopathy

1. On September 4, 2015, Claimant obtained flexion and extension x-rays of his cervical spine. These studies established "moderate to advanced degenerative findings from C3-T1" and some "slippage" or retrolistheses at C3-C5. (Ex. K, p. 171)

2. On June 24, 2016, Claimant sought treatment with Dr. Scott Stanley at Denver Vail Orthopedics for a four-year history of cervical, thoracic, and lumbar pain. The Claimant reported pain levels at 7-8/10 that increased to 9-10/10 "when it is severe". He specifically described the character of his pain to be constant pain between his shoulder blades and constant burning, numbness, and tingling down his arms. (Ex. I, p. 143).

3. In his intake forms for the June 24, 2016 evaluation, Claimant documented stabbing pain in his cervical spine, with burning and aching symptoms in his bilateral arms, shoulders, and upper back, and pins and needles in his digits. (Id at p. 149).

4. Claimant testified at hearing that at the time of the June, 2016 evaluation, he was experiencing burning sensations down both arms and into his hands. For this symptom, he took Lyrica.

5. Dr. Stanley had recommended that Claimant undergo a cervical MRI (among other tests), but initially diagnosed the claimant with degeneration of a cervical disc without myelopathy based on x-rays obtained of the cervical spine. Lyrica was recommended for pain management. (Ex. I, pp. 145-146).

6. On June 28, 2016, Claimant underwent a MRI of the cervical spine, which established discogenic changes at C3-C7 and degenerative facet changes-left greater than right-at C3-C7. Foraminal stenosis-left greater than right-was noted at C5-C7. (Ex. K, pp. 167-168).

7. On July 15, 2016, Claimant returned to Denver Vail Orthopedics. He reported cervical pain that *radiates into both shoulders*. After reviewing the MRI, Dr. Knight opined that Claimant had the following diagnoses: cervical spondylosis with radiculopathy, displacement of cervical intervertebral disc, degenerative cervical disc, and cervical radiculopathy. She prescribed tramadol, and recommended a C7/T1 cervical epidural injection. (Ex. I., pp. 137-140)(emphasis added).

8. Claimant obtained a translaminar epidural steroid injection at C7/T1 on August 4, 2016. Thereafter, he reported minimal pain relief. (Ex. J, pp. 160-161). Claimant also testified that his symptoms returned after the first injection.

9. Claimant obtained a second translaminar epidural steroid injection at C7/T1 on September 22, 2016, due to his recurrent symptoms. Once again, Claimant reported no pain relief post-injection. (Ex. J, pp.155-156).

10. Claimant testified that the June 2016 treatment was for a prior work injury in February 2016 which he had reported to his immediate supervisor, Fred Platt. Fred Platt testified at hearing that no such injury was ever reported to him.

11. Claimant originally testified on direct examination that he had returned to baseline after his second injection in 2016. However Claimant indicated on cross-examination that the he had no relief after the second injection.

12. Mr. Platt testified that in late January 2017, Claimant had requested time off in early February of 2017, to obtain injections. Mr. Platt was unable to grant this time off due to scheduling issues. Mr. Platt testified that Claimant had informed him that he needed time off to get some shots in his neck. Specifically, Mr. Platt testified that Claimant told him that "he was getting a cortisone shot in his neck for a bulging disc."

Claimant's Incident of April 5, 2017

13. Claimant now alleges that on April 5, 2017, he sustained an injury to his neck and left upper extremity, when he slipped on the track of an excavator and had to catch his fall with his left arm. There were no witnesses to this injury.

14. The claimant testified he felt a pop in his neck and that he knew something was "immediately wrong."

15. Despite this, Claimant completed his 11.1 hour shift on April 5, 2017 and did not report any injury to his employer on that date. (Ex. L, p. 183).

16. The Claimant also completed a 10.7 hour shift on April 6, 2017 and a 10.4 hour shift on April 7, 2017. Claimant did not report any injury to Employer during either the April 6 or April 7 shifts. (Ex. L, p. 183).

17. Claimant's job tasks (which were performed on April 5-7, 2017) can require heavy lifting of over 50 pounds. (Ex. L, p. 178).

Claimant's First Report of Injury

18. Despite knowing something was "immediately wrong" Claimant did not seek out medical treatment until Monday, April 10, 2017. (Ex. F). Claimant explained at hearing that he waited that amount of time because he wanted to try to work through the injury to see if it would go away.

19. Mr. Platt testified he saw Claimant periodically between April 5 and April 10. Claimant never informed him of any work incident or injury. Mr. Platt testified that, had Claimant sustained an injury, it should have to be reported to him per employer policy.

20. Mr. Platt also testified that Claimant was able to complete all job tasks in the days between the alleged injury on April 5 and the reporting of the alleged injury on April 10, as evidence by company transportation logs. (Ex. L, pp. 189-194).

21. Mr. Platt testified the Claimant's job was a "very physical job" that required lifting heavy objects and sometimes contorting one's body into various positions, including lifting arms overhead.

22. Mr. Platt testified that if an injury was reported to a dispatcher by Claimant, he should have known, because the dispatcher was trained to tell employees to report injuries to Mr. Platt. Claimant testified he did not timely report the injury, because he thought he would try to work through the pain.

23. Claimant testified that he met with Fred Platt on Monday, April 10. In that meeting Mr. Platt informed Claimant that it would be best to put any treatment for injuries under his own personal insurance. Mr. Platt said "that is what the rest of the guys do." Claimant testified that Mr. Platt told him that if he put this under Workers' Compensation, they would deny the whole thing and Claimant would end up having to pay for all of the doctor bills. Claimant testified that he was nervous and didn't want that type of problem and bills. Claimant testified that he had an issue in his lower neck and upper back and instead of running it through Workers' Compensation, 'they' decided (he and Fred Platt) that he go to a chiropractor and pay for treatment with his own personal insurance.

24. Claimant testified that in his nearly 5 years at Wagner Equipment, he never knew of an employee who filed a Workers' Compensation claim. Claimant testified that he believes that was the case because Fred Platt likes to keep a zero incident rate at the branch.

25. Fred Platt testified that Wagner does like to minimize Workers' Compensation claims at Wagner Equipment for the management group. Mr. Platt testified that bonuses are paid to the management team if Workers' Compensation claims are low. No such bonuses were paid out in 2017; he was uncertain if any were paid for 2016.

26. At hearing, Mr. Platt denied ever encouraging any employee to not file a Workers Compensation claim, including Claimant.

Claimant's Failure to Report Pre-existing Conditions to Medical Providers

27. On April 10, 2017, Claimant presented to Chiropractor Bradley Hennen for an initial appointment and evaluation. Claimant testified he found this chiropractor on the internet.

28. In Dr. Hennen's intake form, Claimant reported he "learned about [Hennen's] office" because he was "referred by Dr. Boykins office." Despite filling this out in his own handwriting, Claimant testified this was not correct.

29. In the intake form, Claimant was asked to check a box in the intake form if various symptoms, including pain in back or neck, were "new in the past 3 months." Despite the boxes appearing prominently on the form, Claimant did not check this box. (Ex. F, p. 116).

30. Claimant also left blank a section of the intake form where it asked for any prior x-rays or MRIs. Claimant had had x-rays in 2015 and a MRI in 2016. (Ex. F, p. 119; K, pp. 167-68, 171).

31. At hearing, Claimant then testified this was a mistake, and that he misread the intake form when filling it out. He testified he should have marked that his symptoms were new pain within the past three months. Specifically, he testified "obviously marked the wrong ones, 'cause, even at this point, ***I didn't even realize those boxes were down on that right side. I didn't even notice them." The ALJ notes that Claimant specifically marked an "X" in the "New in past 3 months" box for the question: "Are you having trouble performing your daily activities?"*** (Ex. F, p. 115)(emphasis added).

32. In this intake form filled out on April 10, 2017, Claimant indicated he was seeing this chiropractor because he had a "pinched nerve in center of back between shoulder blades, numbness, tingling." (Ex. F, p. 112).

33. Claimant then testified he told Chiropractor Hennen he had a pinched nerve because it "burn[ed] like crazy all the way down [his] arm" and because he couldn't feel his fingers." Claimant testified he did not have these symptoms previously.

34. However, Claimant's intake form for the June 24, 2016 with Denver Vail Orthopedics appointment states his symptoms were "between shoulder blades a lot of pain, make the nerves down my arms burn and hands go numb." (Ex. I, p. 151).

35. On May 3, 2017, Claimant presented to Centura for an initial evaluation. In his intake form, Claimant specifically responded "no" to the question "have you been treated in the past for this?" (Ex. B, p. 80).

36. On June 27, 2017, Claimant reported to Dr. Finn that, in response to a question of whether he had "any previous injuries or problems to areas that we are seeing you for today" that he only had "slight arthritis above injury." (Ex. D, p. 90).

37. On September 7, 2017, PA Mark Stafford (working with Dr. William Lippert, MD) documented that the Claimant had *"no surgeries or injections to date".* (Ex. C, p. 82). Claimant now denies making such statement to Dr. Lippert's office.

Claimant's Treatment, Post-Reporting

38. Claimant testified that he went to the ER at UC Health in late April because he was in agonizing pain and he couldn't take it any longer due to burning, stabbing pain in his neck and all the way down his arm, down to his last two fingers and the inside of his arm, and up into his armpit. Claimant testified that it was swollen up like crazy and it was the worst pain that he had ever had. Claimant testified that he never had that type of pain prior to this accident.

39. He treated at the ER at UC Health due to this accident on April 29, 2017. (Ex. 4). At this time, the tentative diagnosis was cervical radiculopathy and foraminal stenosis.

40. Claimant then started treating at CCOM. (Ex. 5). Dr. Jay Neubauer is the Authorized Treating Physician in this claim. CCOM, has served as the ATP for over 13 months. Dr. Neubauer opined that the following diagnosis applies due to the April 5, 2017 injury: (1) Injury of brachial plexus, (2) Sprain of cervical spine, (3) Cervical radiculopathy, and (4) Strain rotator cuff, Left Shoulder. (Ex. 5, pp. 163 – 164).

41. Dr. Neubauer opined that based upon his "knowledge of the mechanism of injury (slipping while exiting an excavator and grabbing a handle to catch himself with his left arm) it is more likely than not that the injuries Mr. Mills sustained on 4/5/2017 were caused by the work place accident." (Ex. 5, pp.163 – 164).

42. Dr. Neubauer opined that the following treatment and referrals are recommended to treat the work place injuries in this claim: (1) Pain management specialist recommends cervical injection, and (2) EMG. *Id.* He further opined that his

proposed treatment/referrals are reasonable, necessary, and related to the work place accident. *Id.*

Claimant's Commercial Driving Examination

43. On August 7, 2017, Claimant underwent a medical examination for his commercial driving certification. (Ex. M). In his application, when asked *"Do you have, or have you ever had"* Claimant marked the "NO" box for the following questions:

19. Missing or *limited use* of *arm,* hand, finger, leg, foot, toe

20. *Neck* or back problems

21. Bone, muscle, joint, or *nerve problems* (emphasis added).

44. After filling the questionnaire out, Claimant signed the document "certifying" that the information is "accurate and complete" and that "submission of fraudulent or intentionally false information may subject [him] to civil or criminal penalties." Claimant testified at hearing that he understood that intentionally false information could subject him to civil or criminal penalties. (Ex. M, p. 204).

45. Further, the CDL physical examination conducted by Elizabeth Stroh, FNP-C, MSN, on August 7, 2017 noted that the *Claimant had a **"normal"** exam, including boxes to check for **back/spine, extremities/joints,** and **neurological system.*** (Ex. M, p. 203) (emphasis added). Claimant testified at hearing that the examiner "put me through some tests and I was able to pass it."

Claimant's Testimony Regarding Omissions

46. Claimant testified he made a mistakes on the intake forms for Chiropractor Hennen, stating his injuries were not new in the past 3 months. He also made a mistake by signing the CDL paperwork stating he had no neck or back injuries as of August 7, 2017 (even though this mistake would subject him to civil and criminal penalty).

Objective Testing / Pre- and Post- Injury

47. Claimant underwent a post- injury x-ray of his cervical spine on April 18, 2017. This study was compared against the prior extension/flexion x-ray performed on September 4, 2015. The findings in the 2017 x-ray established there were *"no definitive interval change compared to the exam dated September 4, 2015."* (Ex. K, p. 164)(emphasis added).

48. Chiropractor Chad Abercrombie documented that the April 2017 x-ray showed "a few mm retrolisthesis of C3-C5 *that had not changed from a previous x-ray performed in 2015."* (Ex. G, p. 123)(emphasis added). It was also noted that Claimant "*does not list ever having pre-existing neck* or back problems." *Id.*

49. Dr. Lesnak (Respondent's IME physician) testified the 2016 cervical MRI showed multi-level degenerative disc changes, with multiple areas of narrowing and foraminal stenosis. He testified the 2016 findings were "*moderately severe."*

50. The MRI from 2016 states that Claimant had foraminal narrowing and stenosis C3-C7, left worse than right. (Ex. K, pp. 167-168).

51. The 2017 MRI indicated there were "moderate-to-severe left neuroforaminal stenosis at C3/C4 and C4/C5." This study does not indicate whether it was compared to the 2016 study by the radiologist. (Ex. K, pp. 162-163).

52. In addition to testifying that Claimant's MRI findings were already "moderately severe" in 2016, Dr. Lesnak testified that the 2017 MRI is "the same MRI that was done in 2016. Same findings." Dr. Lesnak concluded there was no objective evidence of an acute injury in those records.

53. Dr. Lesnak testified there was no objective evidence that an injury occurred on April 5, 2017 based on the diagnostic testing. He specifically testified "the diagnostic testing is … unchanged from pre- and post-April 5th, 2017."

54. Further, while Claimant underwent an EMG to evaluate for abnormalities associated with his nervous structures, that examination established no evidence of acute cervical radiculopathy or plexopathy. (Ex. D, p. 86).

55. Dr. Lesnak testified that Claimant had progressive neck pain and bilateral upper extremity symptoms for years, and that Claimant had significant enough pain in 2016 (reported as 7-10 out of 10) that he warranted both a MRI and injections.

Respondents' IME of Claimant

56. Dr. Lawrence Lesnak, DO, performed an IME on Claimant on 8/3/2017 (Ex. A). This IME was four days prior to Claimant's Commercial Driving exam. Dr. Lesnak was qualified as an expert in physical medicine and rehabilitation. Dr. Lesnak testified that Claimant's physical examination at his IME was "quite difficult." He indicated that Claimant would not move his neck or back at all, due to reported pain, and that Claimant had very limited left shoulder motion. Dr. Lesnak opined that this was evidence of 'submaximal effort.'

57. Since Claimant's objective testing status had not changed, Dr. Lesnak testified that he performed psychosocial screening to evaluate the reliability of the claimant's symptom complaints. The screening found the Claimant had an "extremely high level [of] somatic pain complaints" which Dr. Lesnak testified was evidence that Claimant's complaints were not caused by any anatomic or physiologic abnormality. He also testified a somatic disorder typically causes an individual to embellish or exaggerate symptoms, making those reported symptoms unreliable. In this case, Dr. Lesnak testified that in somatic screening, a high level of pain complaints is a 12. Claimant scored a "19"-way above high levels.

58. At hearing, Dr. Lesnak testified that during the IME, Claimant refused to move his neck or back at all, alleging it would hurt him too much:

> …when I saw him, I mean, even when I gently touched the back of his neck, he's jumping off my—stool in pain, yelling and moaning. That's a non-physiologic finding….an abnormal, aberrant pain response….touching one's skin—unless there's an obvious, you know, burn or a deep wound, that shouldn't cause someone to jump off a chair or table.

Surveillance Video of Claimant from 8/15/2017

59. Dr. Lesnak also testified that he had reviewed the surveillance video taken of Claimant on 8/15/2017, and recognized him from this video. He noted that Claimant was "walking around parked cars, getting in and out of cars, driving vehicles on that day." Specifically, he notes that Claimant "reaches behind his head with both arms…sitting up against….the chair of his front seat for a period of time.

60. The ALJ notes that, upon his own review of this video, Claimant, while engaged in apparent routine activities, demonstrates no visible signs of distress at any time; indeed at one point, Claimant places both palms behind the back of his head/neck and appears to lounge back in the driver's seat of his car.

Claimant's IME

61. Dr. Jack Rook performed an Independent Medical Examination on the Claimant on March 19, 2018. (Claimant's Exhibit 7). Dr. Rook reviewed all medical records in this claim and performed a physical examination on the Claimant at that time. *Id.*

62. Rook diagnosed Claimant with the following:

1. Permanent aggravation of cervical degenerative disc disease;

2. Left upper extremity neurogenic pain;

    a. Cervical radiculopathy

    b. Rule out secondary to brachial plexus traction injury.

3. Sleep disturbance secondary to pain. (Ex. 7, p. 191)

63. Dr. Rook opined that based upon his knowledge of the mechanism of injury, after review of the medical records, and after examination of Mr. Mills, that it is more likely than not that the injuries sustained on April 5, 2017 were caused by the workplace accident. He rendered that opinion for the following reasons:

"This patient sustained a significant traumatic event when he fell off of the excavator. He sustained a traction injury to his left arm associated with an acutely painful popping sensation in his neck, following which he developed left upper extremity burning pain and paresthesias, suggestive of nerve injury;

The patient has had unrelenting symptoms since April 5, 2017 that have been of a markedly different quality and intensity as compared to any similar problems that he was having at the time of, and prior to his on-the-job injury;

Based on the patient's history and my review of his medical records, it appears that the cervical symptoms he was experiencing prior to the April 5, 2017 occupational injury was more than likely related to another work injury event that occurred in February 2016 while he was working for the same employer, when he slipped outside of his snowplow;

Mr. Mills was able to work without the need for physical restrictions prior to the occupational injury event of April 5, 2017. He was performing his job (which was in a heavy physical demand level) without the need for any restrictions when he sustained the April 2017 occupational injury;

He had never missed work due to the cervical condition prior to the April 2017 on-the-job injury; and

He was not involved in active medical treatment for his neck at the time of the occupational injury event in 2017." (Ex. 7, pp. 191 – 192).

64. Dr. Rook opined, based on his review of the medical records and after his examination of Mr. Mills, that the work place injury of April 5, 2017 caused/brought about the need for the current treatment. Specifically, Dr. Rook opined that if not for that event, Mr. Mills would not currently require treatment for his neck and left upper extremity. (Ex. 7, p. 192).

65. Dr. Rook further stated:

"This patient has sustained a permanent aggravation of his pre-existing cervical degenerative disc disease and he also likely has a new injury involving his left brachial plexus. The permanent aggravation of the cervical condition has resulted in an immediate need for treatment. The current need for this treatment is the work event that occurred on April 5, 2017. His need for treatment at this time is not representative of a natural progression of a condition that was stable and non-impairing on that date." (Ex. 7, pp. 192 – 193).

Claimant's Need for Treatment

66. Dr. Rook stated the following regarding recommended treatment:

> I believe the patient should proceed with spinal injection therapy. This might include an epidural steroid injection, selective nerve root blocks, or other diagnostic and possibly therapeutic cervical injections. I would recommend a repeat MRI of the cervical spine, as well as a neurosurgical evaluation. If there is no improvement with conservative treatment, I believe that surgical intervention will be needed to treat Mr. Mills' neck and left upper extremity symptoms." (Ex. 7, p. 193).

67. Dr. Lesnak testified that the need for treatment and medical evaluations after the alleged incident was not caused by the reported April 5, 2017 incident. Rather, Dr. Lesnak testified that any need for treatment was related to the progressive symptoms that had existed pre-incident.

68. Dr. Lesnak opined that, even if an incident occurred on April 5, 2017, there was no evidence that the incident caused any acceleration of his pre-existing symptomatic symptoms or pathology.

69. Dr. Rook, opined that Claimant sustained a permanent aggravation of his pre-existing condition and sustained a new injury to his brachial plexus. However, Dr. Lesnak persuasively testified that EMG testing specifically ruled out any injury to the brachial plexus and there was no changes in the x-rays, MRIs or reported symptomology to support either a temporary or permanent aggravation of the underlying pre-existing condition. (Ex. 7, pp.191-192).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the LAJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A Claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S. A workers' compensation case is decided on the merits. *Id.*

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Credibility

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline*, 57 P.2d 1205 (Colo. 1936).

4. The ALJ finds Claimant to be a patently unreliable historian, both to his medical providers, and at hearing. The ALJ finds that Claimant, despite claims to the contrary, reports pain levels not according to actual pain experienced, but according to the context of his ad hoc circumstances. Despite alleging an immediate, serious injury on the job, Claimant continued to work several days in a demanding position. Once Claimant decided to enter the Workers Comp system (despite Claimant's less-than-credible assertions of being dissuaded by Mr. Platt), he knowingly failed to disclose his history of pre-existing complaints and treatment for similar pain to Chiropractor Hennings, Denver Vail Orthopedics, Centura Health, Dr. Finn's Office, and Dr. Lippert's Office. One omission might be an honest mistake; two omissions becomes careless- and counterproductive to effective treatment. Claimant herein displayed a pattern of nondisclosure which the ALJ finds to be both knowing and self-serving.

5. Claimant also knowingly filled out a Commercial Driver questionnaire, after voluntarily quitting his job, denying any relevant medical issues. He then passed the physical examination. At his IME four days prior, he had been jumping off a stool upon being touched, and refused to move his neck, due to the unbearable pain. Eleven days after his IME, surveillance video shows Claimant engaging in activities wholly inconsistent with his reported pain and disability. Despite all of this, Claimant testified at hearing that his condition had then *worsened* after being forced by the pain to resign his position on 7/17/17. The ALJ finds that Claimant's subjective complaints of pain, without objective evidence in support, renders an accurate medical diagnosis and causation analysis untenable.

Compensability, Generally

6. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. *Wherry v. City and City of Denver*, W.C. No. 4-475-818 (I.C.A.O., March 7, 2002). Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. 2009). A compensable injury is an injury which "arises out of" and "in the course and scope of employment." §8-41-301(1)(b) C.R.S. The term "in the course and scope of employment" refers to the time, place and circumstances

under which the injury occurred. The injury must have occurred in the time and place limits of the employment, and during an activity having connection with the employee's job functions. Additionally, the term "arising out of" establishes that there must be a causal relationship between the employment and the injury. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). Claimant must establish by a preponderance of the evidence that the condition for which he seeks medical treatment for was proximately caused by an injury arising out of and in the course and scope of employment. §8-41-301(1) C.R.S. Claimant also must prove a causal nexus between the disability and the work-related injury. *Singleton v. Kenya Corp*., 961 P.2d 571 (Colo. App. 1998).

7. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates, accelerates, or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse,* 805 P.2d at 1167*.*

Claimant's Pre-existing Condition

8. Claimant had a significant pre-existing condition to his cervical spine and upper extremities that required progressive treatment over the six years prior to the reported incident. Significantly, Claimant's pre-existing condition required a MRI and two epidural steroid injections mere months prior to the reported event. There is insufficient indication in the totality of the record that any incident of April 5, 2017 aggravated, accelerated, or combined with Claimant's ***(significant, and knowingly undisclosed)*** pre-existing conditions to cause the need for medical care or disability. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949).

9. The ALJ also finds persuasive the testimony of Dr. Lesnak that the 2016 and 2017 MRIs were substantially similar, and without evidence of an acute injury. Insufficient diagnostic evidence exists which would establish the presence of an acute injury or aggravation of a prior injury. The objective testing has eliminated an injury to Claimant's brachial plexus. Taken as a whole, the ALJ finds Dr. Lesnak's analysis more persuasive than that of Dr. Rook, and Claimant's ATP. Both were in the unfortunate circumstance of having to rely upon Claimant's subjective complaints of symptoms, without any supporting objective data, in reaching their conclusions.

10. Consequently, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury or aggravation on April 5, 2017 in the course and scope of his employment with the employer.

Medical Benefits/Temporary Total Disability

11. Claimant has not suffered a compensable injury. His claim for medical benefits and Temporary Total Disability benefits is denied and dismissed.

ORDER

It is therefore Ordered that:

1. Claimant's claim for workers compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 9, 2018

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries to his low back and neck during the course and scope of his employment on February 10, 2017.

II. If Claimant proved that he sustained a compensable back/neck injury, whether he also established, by a preponderance of the evidence, that he is entitled to receive reasonable, necessary and causally related medical benefits for these industrial injuries.

III. If Claimant established that he sustained compensable injuries on February 10, 2017, whether he also proven by a preponderance of the evidence that he is entitled to temporary total disability (TTD) and temporary partial disability (TPD) benefits.

IV. A determination of Claimant's Average Weekly Wage (AWW).

Because the ALJ concludes that Claimant failed to prove that he sustained compensable injuries, this order does not address issues II-IV above.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant claims to have suffered an injury to his low back on February 10, 2017 after falling 20-25 feet with a ladder off the side of a building owned by Fred Gonzales, a long-time customer of Employer. According to Claimant, he was working alone to service blower motors on a couple of swamp coolers located on the roof when the accident occurred.

2. Claimant testified that he finished the job and unhooked the fasteners of an extension ladder that had been raised up two stories to the roof and secured at the top of the building. Claimant testified that as be began to descend the unsecured ladder, a gust of wind blew him and the ladder from the side of the building and he fell 20 to 25 feet to the pavement below. Claimant reportedly landed on both feet. He testified that he immediately felt pain in his back and a sensation that his brain had struck the bottom of his skull. Claimant's alleged fall was unwitnessed.

3. Claimant testified that a co-employee, whom he had been assigned to work with and whom had left the job-site to retrieve parts, returned shortly after he had

fallen. Claimant reported his fall to his work partner and was subsequently driven to Employer's business office a block or two away.

4. Claimant testified that he reported his fall to Daniel Boyd, the President of Respondent-Employer immediately upon arriving at the office. Claimant admitted that there was neither a request for medical assistance, nor was he referred to any physician upon reporting the incident.

5. Claimant testified that he provided written notice of his injury to Employer on February 11, 2017. He testified that he placed his hand written notice of injury, identified as Claimant's Exhibit 4, on Mr. Boyd's desk rather than handing it to him directly. Mr. Boyd testified that he never saw/received Claimant's hand written report of injury. He testified that Claimant had never left written messages (notes) for him because they had a close working relationship. Claimant agreed that he had a close working relationship with Mr. Boyd and could "tell him anything."

6. Claimant continued to work, what he described was sporadic hours after February 10, 2017. He testified that he performed a full range of duties including lifting, bending and crawling in, out and around in attics and crawl spaces.

7. Claimant testified that although his back hurt, he did not report a need to see a doctor, as he was afraid that his employment would be terminated.

8. Claimant testified that he continued to work full duty for Employer until October 24, 2017. Claimant testified that between the date of injury and October 24, 2017, he worked on projects requiring heavy labor. Occasionally he worked in the presence of Mr. Boyd. He testified that on his last day of work he was involved in a job that required the lifting of heavy ductwork. Claimant testified that he tweaked his back during this job. He did not make a claim for this incident. Claimant testified that he never tried to return to work after October 24, 2017, because he could not perform the physical duties associated with his job. According to Claimant, he relied on the charity of family and friends to survive after October 24, 2017. While Claimant asserted that he never tried to return to work for Employer, he did admit that he returned to Employer's offices to retrieve his tools in December 2017.

9. Claimant also admitted that he never requested a referral for medical care for his alleged February 10, 2017 work injury despite having knowledge on how to secure treatment because of having prior workers' compensation claims.

10. Both Claimant and Mr. Boyd, as owner and operator of Employer, testified that they have known each other for years, dating back to the 1990s. As noted above, they testified that they had a good working relationship with one another. Mr. Boyd referred to the Claimant has a "friend."

11. Despite his good working relationship and his testimony that he could tell Mr. Boyd anything, Claimant filed a workers' compensation directly with the Insurer without informing Mr. Boyd. Insurer notified Mr. Boyd about the claim and filed a "Notice of Contest" on January 9, 2018. Insurer contested liability on the grounds that Claimant's injury/illness was not work related. Upon be notified of the claim, Mr. Boyd filed an Employer's First Report of Accident identified as Respondents' Exhibit "A".

Employer's first report of injury was filed on January 12, 2018. Claimant testified that he was aware that the Employer had workers' compensation insurance.

12. On February 9, 2018, one year after his alleged 20-25 foot fall and one month after his claim was denied, Claimant presented to the Southern Colorado Clinic where he was evaluated by Dr. Sergio Murillo-Herrera "because he [needed] his back checked." During his clinic appointment, Claimant relayed to Dr. Herrera that he "[h]ad to jump off a ladder as it was falling from 25 feet." According to Dr. Herrera's report, Claimant had not had any imaging and had not seen a physician for his back in the year preceding his February 9, 2018 visit due to a lack of health insurance coverage. By the time of his February 9, 2018 appointment, Claimant had secured Medicaid coverage and was seen under that program. At his initial evaluation, Claimant described sharp back pain "going down to his hips" and "associated neck pain" with radiation into the shoulders. He also complained of lateral thigh numbness. Claimant was assessed with having somatic lumbar dysfunction and lumbar radiculopathy. Dr. Herrera ordered an MRI and instructed Claimant to return to the clinic for a follow-up appointment.

13. The MRI of the lumbar spine was completed on March 16, 2018. It revealed mild lumbar scoliosis, a desiccated degenerative bulging, disc and 4 mm broad-based right paracentral disc protrusion and osteophyte at L5-S1 with mild to moderate foraminal narrowing, right greater than left and a dehydrated bulging disc and broad-based posterior disc protrusion at L4-5 with mild foraminal stenosis on the left.

14. Claimant returned to the Southern Colorado Clinic for a follow-up visit to "discuss his MRI findings" on March 21, 2018, where he was once again seen by Dr. Herrera. Dr. Herrera assessed Claimant with lumbar disc disease, osteophyte formation and lumbar radiculopathy.

15. Mr. Boyd testified that Claimant told him that he had fallen from the ladder, but did not request any medical assistance. Upon hearing about Claimant's fall, Mr. Boyd called Mr. Gonzales' and asked whether they had any report of an injury or video evidence recording the fall. Mr. Gonzales' owns a marijuana growing operation and maintains a high-level of security. He badges individuals checking in/out of his business and employs a video security system operating on multiple cameras covering the building.

16. At the request of Mr. Boyd, Mr. Gonzales reviewed the security video from February 10, 2017 and found no evidence to establish that Claimant fell from the ladder. Mr. Boyd testified that he confronted Claimant with this information to which Claimant reportedly told Mr. Boyd he simply could not perform the heavy nature of his job and needed to find some other way to make money. Mr. Boyd interpreted Claimant's statement to indicate that the fall did not occur and that Claimant was being deceitful about being injured so he could collect workers' compensation benefits.

17. Mr. Boyd testified that because he believed that no fall had occurred and Claimant continued to work regular duties with the Respondent Employer, he took no action to report the incident to his workers' compensation insurance carrier. He testified further that Claimant appeared to acknowledge that no incident had occurred and they continued their good working relationship for several months until October 24, 2017, after which Claimant stopped appearing for work. Mr. Boyd testified that he did not

know that the Claimant had filed for workers' compensation until January of 2018 when he heard from his insurance company that a claim had been made. Once he was aware that a claim had been made, Mr. Boyd testified he filed his first report of injury. He also authored a letter to Insurer, entitled "To Whom It May Concern", which was introduced into evidence as the Claimant's Exhibit "5." This letter recounts the events surrounding Claimant's alleged February 10, 2017 fall, including the fact that Mr. Boyd contacted Mr. Gonzales asking him to review the security camera video. According to the letter, Mr. Boyd called Mr. Gonzales requesting the video check and after about five minutes he received a call back from Mr. Gonzales who reported that the video demonstrated that the "[w]ind blew the ladder over, but [Claimant] was not on [it] at the time."

18. Mr. Boyd testified that he had personally worked with Claimant on construction jobs after February 10, 2017 and that these jobs occasionally required heavy physical labor. According to Mr. Boyd, Claimant was able to perform the physically demanding duties associated with his position after February 10, 2017, without difficulty.

19. Mr. Boyd testified that October 24, 2017 was the last day Claimant worked for Employer. Although Claimant testified that he called numerous times after October 24, 2017 to inquire about the availability of work, Mr. Boyd testified that he heard nothing from the Claimant until December 2017. According to Mr. Boyd, Claimant simply showed up to work when as he (Mr. Boyd) was preparing to pass out Christmas bonuses. Mr. Boyd testified that Claimant inquired about available employment during his December 2017 visit, noting that Claimant reported that he was having a hard time financially and needed to make some money. Mr. Boyd testified that he informed Claimant that he had failed to show up for work for an extended period of time and had also failed to call in to inform Employer that he would not be showing up for work. Mr. Boyd testified that Employer had a policy that employees had to call in and inform someone in the office that they would not be working. Mr. Boyd testified that the Claimant had generally called in previously to explain his absences from work but that after October 24, 2017, he failed to call in or show up for work until his December, 2017 visit. Mr. Boyd testified that although he had worked with Claimant through personal problems and absences from work before, he informed Claimant that his extended period of not showing up or calling to explain his failure to show up for work was unacceptable and he had no work for him.

20. Claimant testified that he was fired from his position after Thanksgiving. He also claimed that he presented to Employer's offices in December to retrieve his tools, not to work. Claimant filed a claim for unemployment benefits, claiming that he was fired. Both Claimant and Employer testified about the unemployment claim. Claimant acknowledged that it was Employer's position that he failed to show up for work. Claimant also admitted that he was not awarded any unemployment benefits.

21. Fred Gonzales testified by telephone. Mr. Gonzales testified that his company could not provide the requested video tape in this case because security video is only kept for 40 days before it is subsequently recorded over. Because the request for the tape came outside of this 40-day period, Mr. Gonzales reiterated that he could not provide the camera records form February 10, 2017. He testified that he has 10-15

employees on site and if something like Claimant described had happened someone would have seen or heard about it. According to Mr. Gonzales, he has 56 security cameras on location. He testified that in reviewing the video before any re-recording had taken place, none of the various angles from any of the 56 cameras caught an individual falling from a ladder on February 10, 2017.

22. Ian Shatford testified that he was a co-employee of Claimant's when he worked for Employer. Mr. Shatford was one of the technicians who, along with Claimant, responded to Mr. Gonzales' business on February 10, 2017. He testified that he was pulled off the job and left Claimant alone for approximately 10 minutes while he went to get parts for another job at Mr. Gonzales' business. When he returned, he testified that Claimant was sitting in the truck. He made contact with Claimant who reported that he had fallen with the ladder 20 to 25 feet. He noticed that the Claimant had lifted and secured the 50 to 60 pound ladder to the top of the work truck. Mr. Shatford testified that Claimant appeared uninjured. He questioned how someone could have fallen 20 to 25 feet and not have any visible injuries. Nonetheless, he acknowledged Claimant's reported fall and drove him back to Employer's offices.

23. Mr. Shatford testified that he had worked with the Claimant in the months following his alleged February 10, 2017 fall through October 2017. He testified that during this period, Claimant did not have any difficulty in performing the physical duties associated with his position. According to Mr. Shatford, Claimant was able to lift ductwork, move furnaces and other equipment, and work in tight places, such as attics and crawl spaces.

24. Mr. Boyd testified that he and his employees would often get together in the mornings before work and have coffee. He testified that before February 10, 2017, they discussed their concern that Claimant would claim an injury based on an unwitnessed event. Mr. Boyd testified that on February 10, 2017, before Claimant and Mr. Shatford had returned to the office, he received a telephone call from Mr. Shatford who reported, "Well, it happened," which Mr. Boyd understood to mean that the anticipated unwitnessed claim of injury had occurred.

25. Mr. Boyd testified that the notice of how to report a workers' compensation injury along with the identification of Employer's designated medical provider were published on the premises on the Respondent Employer.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-

of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

Claimant's Credibility and Compensability

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). Although there is conflicting evidence in this case, the ALJ finds Claimant's testimony regarding the events leading up to his alleged injury unreliable and unpersuasive. The overwhelming evidence presented at hearing belies Claimant's assertion that he sustained a work related injury. Here, the evidence presented persuades the ALJ that Claimant probably did not fall as he alleges. Review of security video failed to capture any fall involving Claimant and the fall was otherwise unwitnessed. Moreover, the ALJ finds/concludes it improbable that Claimant could have fallen 20-25 feet onto pavement without sustaining some obvious disabling injuries. In this case, Claimant asserts that he hit the pavement so hard that he felt his brain hit the bottom of his skull. While this description regarding the severity of his impact with the pavement is likely hyperbole and improbable, it does constitute some evidence concerning the force with which Claimant alleges he hit the ground. Based upon the height from which Claimant asserts he fell, the ALJ agrees with Respondents that he probably would have hit the pavement hard enough to cause serious bodily injury, including injuries to his feet/legs if the fall occurred. No visible injuries were observed and Claimant requested no medical attention. Furthermore, Claimant's asserted injuries, as serious as he contends there were/are, did not prevent him from lifting a 50-60 pound ladder, securing it to his work truck and returning to work. Indeed,

the evidence presented is convincing of the fact that Claimant worked without limitation, in a physically demanding position, for over 8 months after his alleged fall. Consequently, even if Claimant's fall did occur he required no medical treatment and suffered no disability for almost a year before he filed his claim for benefits.

D. A "compensable" injury is one that requires medical treatment or causes disability. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; §8-41-301, C.R.S. While the ALJ is convinced that Claimant likely has pain in his back, the evidence presented is persuasive of the fact that pain 11 months after his alleged fall is probably related to the natural progression of his pre-existing degenerative lumbar disc disease. This is especially true when one considers that Claimant worked in a physically demanding position without limitation and without treatment needs in excess of 8 months following his alleged fall. The ALJ does not believe it credible that the Claimant would forego medical treatment for 11 months if he suffered a significant and disabling injury as a consequence of a 20-25 foot fall. As presented, the evidence does not support that Claimant sustained an injury, including a compensable aggravation of an underlying pre-existing condition of the lumbar spine. Because Claimant failed to establish he suffered a compensable "injury", his claim must be denied and dismissed and his remaining claims need not be addressed further.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is hereby denied and dismissed.

DATED: July 9, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues set for determination included:

- Did Respondents overcome the opinions of the physician who performed the DOWC Independent Medical Examination ("DIME") [Gregory Reichhardt, M.D.] regarding maximum medical improvement by clear and convincing evidence?

- If so, what was Claimant's medical impairment rating?

- Did Respondents prove by a preponderance of the evidence an overpayment existed with regard to temporary total disability benefits?

FINDINGS OF FACT

1. Claimant was employed as a delivery driver for Employer, starting in April 2016. This job involved delivering plants and other materials to retailers.

3. There was no evidence in the record that prior to May 2016, Claimant suffered an injury to his left ankle or required treatment for the left ankle. Claimant previously suffered an injury to his right foot/ankle for which he received treatment.

4. Claimant received Social Security benefits, beginning in December, 2014. Claimant testified he received these benefits related to a low back fusion. Claimant's monthly benefit was $686.90.[1] This document shows $67.00 was withheld to recover an overpayment. The basis of the overpayment was not explained in the letter. The record was unclear (including Claimant's testimony) whether Claimant received SSDI benefits during the entire time he received TTD benefits.

5. On May 5, 2016, Claimant sustained an admitted industrial injury when a vehicle drove over his left foot and ankle while he was unloading his truck.

6. Claimant was evaluated in the Emergency Department at the University of Colorado Medical Center (Poudre Valley) on May 6, 2016. He complained of left

[1] A letter from the Social Security Administration was admitted into evidence which showed this as Claimant's monthly Social Security benefit.

foot/ankle pain and was evaluated by Kevin Perotti, PA-C. An x-ray showed no evidence of fracture. PA-C Perotti's clinical impression was: contusion of left ankle; sprain of deltoid ligament. Ibuprofen was prescribed.

7. On May 9, 2016, Claimant was evaluated by Robert Schulte, DPM. Claimant had pain on palpation all around the ankle, but his tendons were intact. Dr. Schulte's assessments included: unspecified injury of the left ankle, initial encounter; unspecified injury of the left foot, initial encounter; pain in joint, foot-left; pain in left ankle and joints of left foot. Claimant returned to Dr. Schulte for follow-up evaluations on May 16, 25, and June 10, 2016 during which he was advised to wear a walking boot and referred for physical therapy ("PT").

8. Claimant received treatment for his work injury from Mark-Andres Chimonas, M.D. at Workwell. On August 17, 2016, Dr. Chimonas diagnosed a sprain of unspecified ligament in the left ankle and pain in the left ankle and joints of left foot. Dr. Chimonas oversaw Claimant's treatment, including PT.

9. Claimant underwent an MRI of his left ankle on September 7, 2016. The films were read by Samuel Fuller, M.D. Dr. Fuller's impression was: short segment full-thickness longitudinally oriented intrasubstance split tear of the peroneous brevis tendon, extending from approximately the level of the inferior tip of the fibula to the peroneal tubercle; evidence of previous moderate to high-grade partial tearing of talofibular ligament. After the MRI, Claimant was referred for an orthopedic evaluation. The ALJ inferred Dr. Chimonas concluded there were objective findings from the MRI, which warranted the orthopedic referral.

10. On October 6, 2016, Claimant was evaluated by Wesley Jackson, M.D. Claimant had pain in the lateral area of his ankle and around the peroneal tendon. Dr. Jackson's diagnoses were: left lateral ankle pain and soft tissue impingement; peroneal tendon tearing. Dr. Jackson opined Claimant would probably benefit from a left ankle arthroscopy, debridement and peroneal tendon repair. Nonoperative modalities recommended by Dr. Jackson included a brace and a cortisone shot, which Claimant chose. Claimant received a cortisone shot in the anteromedial portal of the left ankle at this appointment.

11. On November 3, 2016, Claimant returned to Dr. Jackson and noted minimal relief from the cortisone shot. No swelling was noted on examination, but he had pain with resistance and tenderness over the peroneal tendons and anterolateral gutter. Dr. Jackson opined Claimant had exhausted almost all nonoperative options and recommended surgery.

12. Claimant was referred by Dr. Chimonas on November 10, 2016 for a second opinion. On November 28, 2016, Claimant was evaluated by Gregg Koldenhoven, M.D. Claimant was complaining of persistent pain since his injury. Localized swelling was noted in the lateral aspect of his left ankle, as well as tenderness at the medial malleolus. Dr. Koldenhoven reviewed the MRI report and based on the

physical exam, concluded Claimant had laxity in the ankle. Dr. Koldenhoven issued a prescription for PT and Claimant was to continue to work within his restrictions.

13. On December 27, 2016, Claimant was evaluated by Brian Mathwich, M.D. at Workwell. Claimant had pain at the medial aspect of the ankle. Dr. Mathwich found near normal range of motion ("ROM"), with point tenderness just anterior to the lateral malleolus. Claimant was kept on modified duty and his PT was continued. Dr. Mathwich noted that if Claimant did not want to undergo surgery, he would be at MMI.

14. Claimant returned Dr. Koldenhoven on January 9, 2017. Claimant had continued ankle complaints which were on the front, sides and back of his ankle. On examination, localized swelling was noted, along with tenderness at the medial malleolus. Tenderness was found at the peroneal tendons, along with decreased ROM. Dr. Koldenhoven administered a cortisone injection.

15. On January 16, 2017, Claimant was evaluated by Kevin Keefe, D.O. at Workwell. Dr. Keefe noted Claimant underwent a repeat cortisone injection, which did not offer significant benefit. Surgery was discussed, but Claimant decided not to proceed. Dr. Keefe placed Claimant at MMI and assigned a 4% lower extremity impairment, which converted to a 2% whole person impairment. Permanent restrictions were assigned, which included: no lifting over 20 pounds; no squatting or climbing, no driving with clutch/stick shift; limit walking or standing to 30 minutes per hour.

16. On January 24, 2017, a Final Admission of Liability ("FAL") was filed on behalf of Respondents. The FAL admitted for the 4% extremity rating issued by Dr. Keefe. Respondents admitted for temporary total disability benefits from May 28, 2016 through January 15, 2017 (33 2/7 weeks) at a rate of $320.00 per week, with a total of $10,651.43 paid in TTD benefits. An overpayment of $220.57 was noted. Respondents admitted for reasonable, necessary post-MMI medical treatment and medications.

17. Claimant testified he had decided to put off surgery, as he wanted to see if his ankle got better. The pain improved in his ankle, but it did not go away. Claimant then decided to undergo surgery.

18. Claimant returned to Dr. Keefe on March 17, 2017 and advised he had changed his mind regarding pursuing the surgery. He presented with a slight limp and with diffuse pain over his entire ankle. Dr. Keefe's diagnoses were: sprain of unspecified ligament left ankle, subsequent encounter; pain in left ankle and joints of left foot. Dr. Keefe noted he would see Claimant pre-operatively.

19. The ALJ found Claimant presented to the ATPs with symptoms consistent with the industrial injury in his left ankle. There were objective findings made by these physicians, including swelling and reduced ROM in the left ankle. This led to conservative treatment, as well as a recommendation for surgery by Dr. Koldenhoven.

20. Dr. Koldenhoven reexamined Claimant on April 3, 2017 and noted Claimant's abnormal pathology was on the lateral side of his ankle, but a lot of his reported symptoms were on the medial and anterior side of the ankle. Dr. Koldenhoven was concerned about proceeding with surgery in light of this discrepancy and mentioned there could be CRPS involvement. He also requested a CT scan to evaluate degenerative joint disease before making any recommendations.

21. Surveillance video of Claimant was admitted into evidence.[2] This covered April 13, 19, 22, and 24, 2017. The video depicted the following:

- April 13, 2017 10:46 a.m.: Claimant is seen outside operating a remote-controlled helicopter. He walks on pavement and grass, forward and backward, with no evidence of a limp.

- April 19, 2017 8:53 a.m.: Claimant is seen walking into and out of a store. At one point he is caring a package in each hand and walking without difficulty. He then carries a large plastic bin out of the store and places it in in his vehicle, and walks with a slight limp, favoring the left leg. He also favored the left leg when getting in the truck.

- April 22, 2017 8:53 a.m.: Claimant is observed walking up a small flight of stairs into a car dealership office, walking around a car dealership looking at cars. Claimant walks slowly. Claimant is seen at a campground and walks around with a mild limp.

- April 24, 2017 10:34 a.m.: Claimant is seen walking in and out of two stores. He pushes a cart without difficulty and exhibited no significant altered gait or no sign of discomfort.

22. ALJ concluded Claimant's ankle condition did not limit him from performing the aforementioned activities. The ALJ noted the video was evidence of Claimant's activity level on the date and time the video was taken. While the video was evidence of Claimant's ability to perambulate, it was not dispositive on the question of maximum medical improvement.

23. On or about May 10, 2017, Dr. Koldenhoven sent a request for authorization of surgery. The procedure identified was left ankle peroneal tendon repair, lateral ankle reconstruction and excision of medial ankle osteophytes, with removal of dorsal talar and navicular osteophytes.

24. On August 22, 2017, Claimant underwent a DIME, which was performed by Dr. Reichhardt. At that time, Claimant complained of 7/10 pain throughout the ankle, with some pain in the heel. On examination, Dr. Reichhardt noted the assessment was limited by pain. Claimant's reflexes were 2/4 at the patella and Achilles, but no

[2] Exhibit N.

diminished sensation was present on the left foot. Diffuse tenderness to palpation was noted about the left ankle, but no effusion was present.

25. Dr. Reichhardt's impression was: left ankle pain-mechanism of injury, a 5/6/16 work-related injury in which an SUV drove over his foot; 5/6/16 left ankle x-ray no acute fracture; 9/7/16 left ankle MRI which showed short segment, full thickness longitudinally oriented intrasubstance tear over the peroneus brevis tendon starting from the tip of the fibula to the peroneal tubercle; evidence of previous moderate to high-grade partial tear of the anterior tibiofibular ligament. No evidence of focal osteochondral lesion or other significant pathology of the talar dome or cartilage. 4/8/17 CT scan showed mild osteoarthritis of the left tibiotailar joint with soft-tissue ossifications about the joint space suggesting prior deltoid ligaments, anterior talofibular ligament and anterior tibiofibular ligament sprains. Prominent dorsal spurs along the lateral margin of the patella navicular joint, likely seqelae of old joint capsular injury; mild first metatarsophalangeal joint osteoarthritis. Rule out CRPS and psychological factors affecting physical condition. Dr. Reichhardt diagnosed a left ankle injury with underlying degenerative changes noted above.

26. Dr. Reichhardt noted Claimant was recently placed at MMI on January 16, 2017, as he was declining surgical intervention. He later decided to proceed with surgical intervention and by May 3, 2017 had decided to proceed with surgery. Dr. Reichhardt concluded Claimant was not at MMI by that date and required further treatment, specifically the surgery. The ALJ found Dr. Reichhardt's conclusion that Claimant was not at MMI was based on the proposed surgical procedure. Dr. Reichhardt gave a provisional impairment rating of 14% for the range of motion loss in Claimant's ankle and toes. The ALJ was persuaded that Dr. Reichhardt was correct when assessing Claimant's impairment.

27. Scott Resig, M.D. evaluated Claimant on November 7, 2017 at the request of Respondents. Claimant walked with an antalgic gait and had tenderness throughout his entire ankle. Dr. Resig noted he had 2/5 strength with dorsiflexion, plantar flexion, inversion, and eversion testing. Dr. Resig viewed the surveillance video submitted by Respondents. Dr. Resig stated Claimant's gait during the examination and as documented by the DIME with Dr. Reichhardt did not correlate with the functions he was able to perform in the surveillance video. Dr. Resig opined Claimant would not improve with surgery. There was nothing to explain Claimant's weakness, nor did Dr. Resig believe the weakness could be solved with surgery. The ALJ credited this opinion expressed by Dr. Resig. Dr. Resig agreed with the January 16, 2017 MMI date and Dr. Keefe's 4% lower extremity impairment rating.

28. Dr. Koldenhoven authored a letter, dated January 10, 2018, after reviewing the surveillance tape. Dr. Koldenhoven noted Claimant was able to walk forward and backward without a limp. He expressed a different opinion with regard to the severity of Claimant's symptoms and need for surgery. Dr. Koldenhoven opined surgery was no longer needed for this patient. He concluded Claimant was at MMI and did not anticipate surgical management. Dr. Koldenhoven noted, although Claimant

had abnormalities on both the MRI scan and CT scan, he was tolerating these quite well.

29. Dr. Resig testified as an expert witness. He is a board-certified orthopedic surgeon, whose practice focused on lower extremity issues, including hip and knee replacements, as well as surgeries on the foot and ankle. He is Level II accredited pursuant to the WCRP. Dr. Resig noted Claimant had a small peroneal tendon tear, an injury to his ATFL and mild arthritic changes in the ankle joint. Claimant's tendon was still intact, although it had a longitudinal tear. Dr. Resig noted he could not explain the basis for Claimant's pain complaints and thought he was not honest in his presentation of his symptoms.

30. Dr. Resig testified that CRPS testing was not indicated, because Claimant's exam was not typical of CRPS, including swelling, color changes or temperature changes. Dr. Resig reiterated he believed Claimant was at MMI as of January 16, 2017. Dr. Resig noted Claimant had a fairly pronounced limp and expressions of pain during the examination, which were not demonstrated on the video. Dr. Resig reiterated his conclusion that surgery was not necessary for Claimant, as the requested surgery would not address the pain and weakness exhibited by Claimant on exam. He stated fixing ligaments does not fix pain or weakness. The ALJ credited Dr. Resig's opinions with regard to Claimant's need for surgery.

31. Dr. Reichhardt's conclusion that Claimant was not at MMI was overcome by clear and convincing evidence.

32. Claimant was at MMI as of January 16, 2017.

33. Claimant suffered a permanent medical impairment as a result of his May 5, 2016 work injury.

34. The ALJ determined Dr. Reichhardt's medical impairment rating of 14% was the most complete assessment of Claimant's permanent impairment.

35. Respondents are entitled to an offset for Claimant's receipt of SSDI benefits.

36. Evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be

interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Respondents overcame Dr. Reichhardt's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence". § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. The elevated burden is evidence of the Colorado Legislature's intent to limit overcoming the DIME physician's

opinion to those cases where it is more probable than not that the opinion was incorrect. In the case at bar, the ALJ determined Respondents met this burden.

The ALJ's rationale was twofold; first, there was sufficient evidence introduced by Respondents to overcome Dr. Reichhardt's conclusion that Claimant was not at MMI. (Finding of Fact 31). Dr. Reichardt's conclusion with regard to MMI was predicated on the fact Claimant was to undergo the surgery recommended by Dr. Koldenhoven. The fact Claimant required the surgery was based upon his ongoing symptoms and this was the *conditio sine qua non* of Dr. Reichhardt's opinion. As found, there was no evidence Dr. Reichhardt was aware Dr. Koldenhoven retracted that opinion, as that occurred at a later time. (Finding of Fact 26). Since Claimant was not undergoing that procedure, the basis for Dr. Reichhardt's conclusion regarding MMI was no longer present. The ALJ determined concluded Respondents introduced sufficient evidence to overcome the opinion on MMI.

Second, the evidence from other medical providers, including Claimant's ATPs, Dr. Keefe and Respondents' IME (Dr. Resig) supported the conclusion Claimant was at MMI. This provided additional support for the ALJ to conclude that Respondents met their burden of proof to overcome Dr. Reichhardt's conclusion on the subject of MMI.

In coming to this conclusion, the ALJ considered Claimant's argument that because there was a possible diagnosis of CRPS, he was not at MMI. Claimant averred Respondents did not meet the clear and convincing evidentiary standard, as there were conflicting medical reports and Dr. Koldenhoven raised the possibility of CRPS. The ALJ found in his latter reports Dr. Koldenhoven did not believe Claimant required CRPS testing and concluded Claimant was at MMI. As the DIME examiner, Reichhardt discussed CRPS, as it related to the possible surgery. There was no evidence in the record Dr. Reichhardt diagnosed Claimant with CRPS. In this regard, the ALJ was persuaded by Dr. Resig's testimony that Claimant's symptoms did not meet the criteria for a CRPS diagnosis. (Finding of Fact 30). Based upon the totality of the evidence the ALJ was persuaded that Claimant was at MMI. (Finding of Fact 32).

Claimant's Medical Impairment Rating

The ALJ was persuaded that Dr. Reichhardt's opinion concerning Claimant's permanent medical impairment was the most accurate assessment of Claimant's permanency. (Finding of Fact 34). Dr. Reichhardt took into account the lost ROM in the ankle, as well as other parts of the foot. The ALJ was persuaded this was a correct and accurate evaluation of permanent impairment, as Claimant had symptoms and received treatment for not only his ankle, but other parts of the foot. Respondents did not dispute this fact and there was medical evidence in the form of the treatment records from Claimant's ATPs which showed treatment to other parts of the foot. In addition, Dr. Reichhardt's role as an independent examiner was persuasive. No evidence was admitted to that Dr. Reichhardt's rating was not valid and this independent assessment of Claimant's impairment was persuasive to the ALJ.

Therefore, Claimant sustained a 14% scheduled impairment rating to his lower extremity. Claimant is entitled to PPD benefits based upon the 14% extremity rating assessed by Dr. Reichhardt. Respondents shall pay PPD benefits based upon Dr. Reichhardt's impairment rating. They will be entitled to a credit for permanency previously paid.

Offset

As found, Claimant received SSDI benefits in 2014 in the amount of $686.90 per month. The offset for Respondents totals $79.26 per week. ($686.90 × 12 months = $8,232.80 per year divided by 52 weeks= $158.52 per week x 50% equals $79.26 per week). Respondents are entitled to offset Claimant's indemnity benefits by 50% of SSDI benefits he received. Claimant did not dispute that Respondents are entitled to this offset.

However, the ALJ was unable to conclude when Claimant received these benefits while receiving TTD and PPD benefits. There was evidence introduced regarding Claimant's receipt of SSDI benefits. (Finding of Fact 4). However, Claimant's testimony did not definitively show that he received SSDI benefits at all times he was receiving indemnity benefits under the Act. Under these circumstances, additional evidence is needed regarding the offset issue. Accordingly, counsel for the parties will be requested to confer to attempt the reach an agreement on the offset.

ORDER

It is therefore ordered:

1. Respondents met their burden to overcome the DIME physician's findings with regard to MMI by clear and convincing evidence. Claimant was at MMI as of January 16, 2017.

2. Claimant sustained a 14% medical impairment of his left lower extremity as a result of his industrial injury.

3. Respondents shall pay PPD benefits based upon a 14% scheduled impairment rating. Respondents are entitled to a credit for PPD benefits previously paid.

4. Respondents shall pay 8% statutory interest on all benefits not paid when due.

5. Respondents are entitled to a $79.26 weekly offset for Claimant's receipt of SSDI benefits. Counsel for Claimant and Respondents shall confer regarding the issue of what period Claimant received SSDI benefits vis a vis the time Claimant was receiving indemnity benefits. If no agreement is reached, either Claimant or Respondents may file an Application for Hearing regarding the offset issue.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that she developed an occupational disease that arose out of and in the course and scope of her employment with the employer.

- If the claimant proves a compensable occupational disease whether the claimant has demonstrated by a preponderance of the evidence that medical treatment she has received is reasonable medical treatment necessary to cure and relieve he claimant from the effects of the occupational disease.

FINDINGS OF FACT

1. The claimant testified that she was employed with the employer as a medical assistant. The claimant described her job duties as being those of a registered nurse, but with more supervision.

2. The claimant testified that in September 2016 she developed a cough and sought medical treatment with her primary care provider, who prescribed antibiotics. The claimant also testified that a chest x-ray taken at that time showed "nothing".

3. The claimant testified that approximately one year after the start of her cough she reported this cough to Amy Allen, Administrator with the employer. The claimant further testified that Ms. Allen sent her to Centura Center for Occupational Medicine (CCOM) for medical treatment.

4. Based upon the medical records entered into evidence, the claimant was first seen at CCOM by Dr. Randall Jernigan on November 15, 2017. At that time, Dr. Jernigan determined that the cause of the claimant's cough was unclear and placed the claimant on mometasone.

5. The claimant returned to Dr. Jernigan on November 30, 2017. At that time, Dr. Jernigan noted that the claimant had a chest x-ray in March that showed no lung issues and a tuberculosis test was negative. Dr. Jernigan also noted that two rounds of antibiotics and a two week trial of steroid inhalers were not helpful to the claimant. Dr. Jernigan noted that the cause of the claimant's symptoms was unclear, but it was possible that it was an allergic aggravation to mold, or underlying COPD. On that date, Dr. Jernigan referred the claimant to Dr. Barry Holcomb for a pulmonology consultation.

6. The claimant was first seen by Dr. Holcomb on December 26, 2017. The claimant testified that Dr. Holcomb diagnosed her with occupational asthma. In a medical record dated March 16, 2018, Dr. Holcomb diagnosed the claimant with

"chronic cough secondary to occupational asthma/reactive airways dysfunction syndrome" and "intermittent occupational/mild intermittent asthma". In that same report, Dr. Holcomb opined that the claimant does not have COPD.

7. The records entered into evidence demonstrate that a mold analysis of the claimant's work location was performed at the request of the employer. The mold analysis dated November 15, 2017 shows that samples were collected at the claimant's workplace on November 6, 2017. The mold analysis indicates that mold levels were "not elevated". The claimant testified that she understood the mold analysis to show that there was mold present at her workplace, but it was "within normal limits".

8. Dr. Jernigan was asked to review the mold analysis report. In response, Dr. Jernigan noted that he is not specifically trained in air analysis or mold analysis. However, based upon his review of the report, Dr. Jernigan noted that it appears that there was very minimal mold in the claimant's workplace, and that the total scores were less than outdoor exposure. Dr. Jernigan also opined that the claimant's symptoms were not related to the molds tested.

9. The claimant testified that her cough resolved after she left her employment with the employer. The claimant testified that February 27, 2018 was her final day of employment with the employer.

10. The ALJ credits the medical records and the opinion of Dr. Jernigan over the conflicting opinion of Dr. Holcomb and finds that the claimant has failed to show that it is more likely than not that she suffered an occupational disease that arose out of and in the course and scope of her employment with the employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and

actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo.

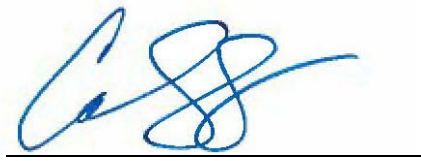
App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, April 10, 2008). Simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. See *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, October 27, 2008)

7. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she suffered a compensable occupational disease arising out of and in the course of her employment with the employer. As found, the medical records and the opinion of Dr. Jernigan are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated: July 10, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the respondent has demonstrated by a preponderance of the evidence that on August 24, 2016 the claimant was an independent contractor and not an employee of the employer.

- Whether the claimant has demonstrated by a preponderance of the evidence that his compensation should be increased by 50% pursuant to Section 8-43-408, C.R.S.**,** for the respondent's failure to obtain and maintain worker's compensation insurance.

STIPULATIONS

The parties have stipulated that if the claimant is found to have been an employee of the employer:

1. The claimant suffered a compensable injury at work on August 24, 2016.

2. The medical treatment the claimant received (including treatment from Yampa Valley Emergency Room and related ambulance transport; Dr. Alexander Meininger; Swedish Hospital; and Sports Med Physical Therapy); was reasonable and necessary to cure and relieve the claimant from the effects of the work injury.

3. The claimant's average weekly wage (AWW) for this claim is $1,100.00.

4. The claimant is entitled to temporary total disability (TTD) benefits from August 25, 2016 through January 31, 2017.

5. The employer did not carry workers' compensation insurance at the time of the claimant's injury on August 24, 2016.

6. The parties have also agreed that the issue of temporary partial disability (TPD) benefits beginning February 1, 2017 is held in abeyance.

FINDINGS OF FACT

1. The claimant testified that he previously worked in maintenance at a condominium development, The Phoenix (TP). While employed at TP, the claimant met Denis Marchbanks, owner of the respondent. Thereafter, the claimant left employment with TP and obtained a full time position with Alpine Fireplace and Appliance (AFA). The claimant's positon with AFA involves repairing fireplaces and appliances in customer homes.

2. Subsequently, the respondent offered the claimant work with respondent's company, Straight Up Construction. At that time, the claimant was in the process of purchasing a house and was interested in a part-time position with the respondent. The claimant testified that the respondent offered to pay the claimant $15.00 per hour to perform carpentry work. The claimant's carpentry experience is limited to framing.

3. In July 2016, the claimant began working for the respondent on his days off from AFA. The parties did not enter into a written contract.

4. The claimant testified that during the time he provided services to the respondent he hung doors, completed plumbing and electrical tasks, and installed a skylight. The claimant further testified that he had no prior experience performing these types of tasks. As a result, in each instance the respondent provided the claimant with instruction and training in the completion of the work. The ALJ finds no persuasive evidence on the record that the claimant has provided the same or similar services to others.

5. The respondent asserts that the claimant was paid a fixed rate for each job, and not hourly. However, based upon the checks and related invoices entered into evidence, the ALJ finds that the claimant was paid $20.00 per hour. In addition, the claimant was paid in his own name and not in any business name.

6. The invoices entered into evidence were not prepared by the claimant. Instead, Mr. Marchbanks prepared the invoices to "teach" the claimant how to issue an invoice. The ALJ finds this to be another instance of the respondent providing the claimant with training.

7. While providing services for the respondent, the claimant completed time cards. The respondent testified that he has workers complete time cards to ensure proper bidding on future jobs. The claimant testified that he was instructed to complete time cards because he was often working at different job locations throughout the work day.

8. Mr. Marchbanks testified that he has no employees and requires all contractors to provide him with proof of liability insurance. These contractors include his son, Nick Marchbanks, and his nephew, Matt Marchbanks. However, the claimant was allowed to perform work for the respondent without proof of insurance. The claimant testified that Mr. Marchbanks knew that he did not have liability insurance.

9. The claimant testified that he brought hand tools to work. These hand tools included a tool bag, hammer, and square. The claimant also testified that the respondent provided him with all other tools necessary to complete his assigned tasks.

10. The claimant testified that he was expected to arrive at the job site at 8:00 a.m. on the days he was scheduled to work. Mr. Marchbanks would arrive and give instructions on the tasks to be completed. Mr. Marchbanks would also tell Nick and Matt what time to finish for the day. Nick and Matt would communicate this information

to the claimant. The claimant was also told when to take lunch breaks and how long of a break he was allowed.

11. Nick Marchbanks, son of Denis Marchbanks, testified at hearing on behalf of the respondent. He testified that he provides services to the respondent as an independent contractor. He also testified that he has his own company, Twisted Pines Construction.

12. On August 24, 2016, the claimant and Nick Marchbanks were instructed to install two skylights. As part of this process, the respondent specifically instructed the claimant to place plastic sheeting on the floor under the ladder he was to use to install the skylight. The claimant disagreed with placing plastic in this way, but followed the respondent's instructions. While the claimant was on the ladder, the ladder slipped on the plastic and the claimant fell.

13. The medical records entered into evidence indicate that the claimant suffered a right calcaneal fracture, which required surgery. On September 7, 2016, Dr. Wade Russell Smith performed an open reduction and internal fixation (ORIF).

14. On May 3, 2016, the claimant filed Articles of Incorporation for "Evans Construction LLC" with the Colorado Secretary of State. Thereafter on July 27, 2017, the claimant filed a Periodic Report with the Colorado Secretary of State. The claimant testified that he established Evans Constriction LLC to use "someday", but has not been paid as Evans Construction LLC, nor has he obtained any jobs as Evans Construction LLC. The claimant does not advertise his LLC and has not submitted bids on any projects as the LLC.

15. The parties offered conflicting testimony about the nature of the relationship between the claimant and the respondent, which the ALJ resolves in favor of the claimant. The ALJ finds no persuasive evidence on the record to indicate that the claimant intended to be treated as an independent contractor while performing services for the respondent. The ALJ credits the claimant's testimony and the records entered into evidence and finds that the respondent has failed to overcome the presumption that the claimant was an employee of the respondent/employer.

16. Mr. Marchbanks agrees that the respondent did not have workers' compensation coverage on August 24, 2016 when the claimant fell and was injured.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation

case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

1. "Employee" includes "every person in the service of any person, association of persons, firm or private corporation. . . under any contract of hire, express or implied." Section 8-40-202(b), C.R.S.

2. Under Section 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed."

3. As found, the claimant provided services to the respondent and was paid for his services. Therefore, claimant is presumed to be an employee of respondent.

4. The respondent has the burden of proving that the claimant was an independent contractor rather than an employee. Section 8-40-202(2)(b)(II), C.R.S., sets forth nine factors to balance in determining if claimant is an employee or an independent contractor. *See Carpet Exchange of Denver, Inc. v. Industrial Claim Appeals Office*, 859 P.2d 278 (Colo. App. 1993). Those nine factors are whether the person for whom services are provided:

- required the individual to work exclusively for the person for whom services are performed; (except that the individual may choose to work exclusively for that person for a finite period of time specified in the document);

- established a quality standard for the individual; (except that such person can provide plans and specifications regarding the work but cannot oversee the actual work or instruct the individual as to how the work will be performed);

- paid a salary or hourly rate but rather a fixed or contract rate;

- may terminate the work during the contract period unless the individual violates the terms of the contract or fails to produce results that meet the specifications of the contract;

- provided more than minimal training for the individual;

- provided tools or benefits to the individual; (except that materials and equipment may be supplied);

- dictated the time of performance; (except the completion schedule and range of mutually agreeable work hours may be established);

- paid the individual personally, instead of making checks payable to the trade or business name of the individual; and,

- combined their business operations in any way with the individual's business, or maintained such operations as separate and distinct.

5. A document may satisfy the requirement to prove independence, but a document is not required. Section 8-40-202(2)(b)(III), C.R.S, provides that the existence of any one of those factors is not conclusive evidence that the individual is an employee. Consequently, the statute does not require satisfaction of all nine criteria in Section 8-40-202(2)(b)(II) in order to prove by a preponderance of the evidence that the individual is not an employee. See *Nelson v. Industrial Claim Appeals Office*, 981 P.2d 210 (Colo. App. 1999).

6. In *Industrial Claim Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014) the Supreme Court revised the standard previously used to analyze whether or not an employee is customarily engaged in an independent trade or business. The previous standard had sought to simply ask if the employee had customers other than the employer. If not, it was reasoned the employee was not "engaged" in an independent business and would necessarily be a covered employee. However, in *Softrock* the Court stated "we also reject the ICAO's argument that whether the individual actually provided services for someone other than the employer is dispositive proof of an employer-employee relationship." 325 P.3d at 565. Instead, the fact finder was directed to conduct "an inquiry into the nature of the working relationship." Such an inquiry would consider not only the nine factors listed in Section 8-202(2)(b)(II), but also any other relevant factors. *Pierce v. Pella Windows & Doors*, W.C. No. 4-950-181, May 4, 2015.

7. The *Softrock* Court pointed to *Long View Systems Corp. v. Industrial Claim Appeals Office,* 197 P.3d 295 (Colo. App. 2008) in which the Panel was asked to consider whether the employee "maintained an independent business card, listing, address, or telephone; had a financial investment such that there was a risk of suffering a loss on the project; used his or her own equipment on the project; set the price for

performing the project; employed others to complete the project; and carried liability insurance." 325 P.3d at 565. This analysis of "the nature of the working relationship" also avoided a second problem presented by the single-factor test disapproved by the *Softrock* decision. That problem involved a situation where, based on the decisions of the employee whether or not to pursue other customers, the employer could be subjected to "an unpredictable hindsight review" of the matter which could impose benefit liability on the employer. See *Pierce v. Pella Windows & Doors*, W.C. No. 4-950-181, May 4, 2015.

8. Section 8-40-202(b)(IV), C.R.S., provides that a written document may create a rebuttable presumption of an independent contractor relationship if it meets the nine criteria listed in Section 8-40-202(b)(II), C.R.S. and includes language in bold faced font or underlined typed that the worker is not entitled to workers' compensation benefits and is obligated to pay all necessary taxes. Additionally, the document must be signed by both parties. Here there was no written contract.

9. The ALJ has considered the nine factors listed in Section 8-40-202(2)(b)(II), C.R.S. and the totality of the circumstances of the relationship of the parties and concludes that the claimant was an employee of the respondent. The respondent has failed, by a preponderance of the evidence, to overcome the presumption of an employee-employer relationship.

10. In reaching this conclusion the ALJ notes that the claimant was paid an hourly rate and was paid in his own name. The respondent provided the claimant with instruction, training, and tools. These facts indicate that the respondent exercised direction and control over the claimant in the performance of the work. Although the claimant did establish Evans Construction, LLC in 2016, the ALJ finds that this is not dispositive of the relationship between the parties. The ALJ finds that the claimant did not engage in an independent trade or business providing similar services to others, nor did he intend to do so at the time of the injury. For all of the foregoing reasons, the ALJ concludes that the claimant was an employee of the respondent and was not an independent contractor.

11. Section 8-43-408(1) C.R.S., provides that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits provided in said articles shall be increased fifty percent (50%).

12. As found, the claimant has proven by a preponderance of the evidence that the respondent was not insured for workers' compensation at the time of the claimant's August 24, 2016 injury. Therefore, the claimant's compensation and benefits shall be increased by fifty percent pursuant to Section 8-43-408(1), C.R.S.

ORDER

It is therefore ordered that:

1. The claimant was an employee of the employer at the time of the August 24, 2016 injury.

The ALJ adopts the stipulation of the parties and further orders:

2. The claimant suffered a compensable injury at work on August 24, 2016.

3. The medical treatment the claimant received (including treatment from Yampa Valley Emergency Room and related ambulance transport; Dr. Alexander Meininger; Swedish Hospital; and Sports Med Physical Therapy); was reasonable and necessary to cure and relieve the claimant from the effects of the work injury.

4. The claimant's average weekly wage (AWW) for this claim is $1,100.00.

5. The claimant is entitled to temporary total disability (TTD) benefits from August 25, 2016 through January 31, 2017.

6. The employer did not carry workers' compensation insurance at the time of the claimant's injury on August 24, 2016. Therefore, the claimant is entitled to a 50% increase in any compensation he receives during this claim.

7. The respondent shall pay interest to the claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

8. By agreement of the parties the issue of temporary total disability (TPD) benefits is held in abeyance.

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as

long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Is this claim closed by a Final Admission of Liability dated November 15, 2017?

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury on December 6, 2016. He was placed at MMI by his ATP on August 28, 2017, with a 10% lower extremity rating.

2. Respondents filed Final Admission of Liability (FAL) on November 15, 2017 based on the ATP's MMI report. The FAL was addressed to all parties and the Division of Workers' Compensation (DOWC) on November 15. The FAL was sent to Claimant at his home address and to Claimant's counsel addressed to: "Wes Hassler, 616 West Abriendo Ave., Pueblo, CO 81004." Claimant is represented by Stephen Johnston, Esq., with the same mailing address as Mr. Hassler.

3. Claimant received PPD payments based on the FAL via direct deposit. No persuasive evidence was presented to suggest Claimant did not receive a copy of the FAL sent to him on November 15, 2017.

4. Claimant's counsel did not receive the copy of the FAL mailed to his office. Counsel's paralegal, Sarah Malouff, testified credibly to the office's procedures for processing and distributing incoming mail. Based on the evidence presented, the ALJ finds Claimant's counsel's copy of the FAL was likely "lost in the mail."

5. Claimant's counsel was unaware an FAL had been filed until he received a Motion to Withdraw filed by Respondents' counsel on January 8, 2018. Claimant's counsel was puzzled by the Motion to Withdraw because he believed the claim was ongoing. Ms. Malouff contacted the claims adjuster and was told Respondents had filed an FAL on November 15. Ms. Malouff requested a copy of FAL from Respondents, and also requested a copy from the DOWC.

6. Respondents' counsel emailed Claimant's counsel a copy of the FAL on January 8, 2018.

7. The FAL contained all required attachments, including the objection forms and the ATP's MMI report. The ALJ appreciates no technical errors or omissions on the FAL, and the only defect alleged by Claimant is late receipt by his attorney.

8. Claimant's attorney applied for a hearing on January 11, 2018, endorsing the sole issue of: "the Final Admission of Liability dated November 15, 2017 should be void ab initio." Claimant did not file an Objection to Final Admission of Liability or a Notice and Proposal to Select an Independent Medical Examiner.

9. Claimant indicated at hearing he may wish to pursue a DIME depending on the outcome of this litigation.

10. The time to object to the November 15, 2017 FAL commenced on January 8, 2018 when Claimant's attorney received it via email. Claimant was required to perfect his objection no later than February 7, 2018.

11. Although Claimant's application for hearing served as a timely objection to the FAL, it only preserved the single issue that was specifically endorsed.

12. This claim is closed as to all issues admitted in the November 15 FAL.

13. This claim is closed with respect to the DIME process.

CONCLUSIONS OF LAW

An FAL provides a statutory mechanism for the respondents to initiate closure of a claim. Once an FAL is filed, the claimant must take certain actions within thirty days or the claim will "automatically close." A claimant has two options to prevent their claim from closing. The claimant can object to the FAL and request a hearing on any ripe and disputed issues, or initiate the DIME process by filing a "notice and proposal." If the claimant files a DIME notice and proposal, he does not have to apply for a hearing until the DIME process is complete. *See* §§ 8-43-203(2)(b)(II)(A); 8-42-107.2(2)(b).

The purpose of an FAL is to notify the claimant of the exact bases on which benefits have been admitted or denied so the claimant "can make an informed decision whether to accept or contest the final admission." *Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). If a claimant is represented by counsel, due process requires that a claimant *and his attorney* must receive actual notice of an FAL before it can close a claim. *Hall v. Home Furniture Co*., 724 P.2d 94 (Colo. App. 1986).

An application for hearing can serve as a constructive objection to an FAL. *Mitchell v. Office Liquidators*, W.C. No. 4-409-905 (December 29, 2000). But the application only preserves issues that are specifically endorsed. *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261 (Colo. App. 2004); *Cortez v. Minco Manufacturing Inc*., W.C. No. 4-596-318 (March 20, 2008). Furthermore, an application for hearing cannot substitute for a DIME notice and proposal, which is a "jurisdictional" prerequisite to a DIME. *Williams v. Devereux Cleo Wallace*, W.C. No. 4-620-507 (August 10, 2006).

In this case, there was nothing defective about the FAL itself. It contained all the required information and attachments, and was properly mailed to all parties on November 15, 2017. The problem here relates solely to delayed *receipt* of the FAL by Claimant's counsel. But the lack of receipt by a claimant or his attorney does not automatically vitiate an otherwise valid FAL or render it "void ab initio." Rather, unless the lack of receipt is attributable to the respondents, it merely tolls the objection period until all parties receive the FAL. *E.g., Hall v. Home Furniture Co., supra* (time limitation did not commence running "until claimant's attorney first received notification . . . that the

admission had been filed"); *Henriquez v. K. R. Swerdfeger Construction, Inc*., W.C. No. 4-439-726 (May 5, 2003) (time to object was triggered when claimant's attorney received the FAL); *cf*. *Tenorio v. Poudre Valley Hospital*, W.C. No. 4-162-954 (March 18, 1999) (FAL was invalid because it was not mailed to the claimant's correct address); *Koehler v. United Parcel Service*, W.C. No. 4-597-912 (June 14, 2011) (FAL was invalid because it was not sent to claimant's counsel).

The critical distinction in the above-cited cases hinges on whether the lack of receipt by the claimant or their attorney was due to factors within the respondents' control. When the FAL is not properly addressed and served in the first instance, it is void and cannot close a claim, even though the parties may receive it later. But when the FAL is properly addressed and sent, any delays in receipt due to the vagaries of the mail system or other external factors only toll the objection period.

Under the circumstances presented here, the time to object to the November 15, 2017 FAL was tolled until January 8, 2018 and expired on February 7, 2018. The DIME process is closed because Claimant filed no DIME notice and proposal within the window. Although Claimant timely objected to the FAL by requesting a hearing, he endorsed no substantive issues other than the validity of the FAL. Consequently, all issues admitted in the November 15, 2017 FAL are closed.

ORDER

It is therefore ordered that:

1. Claimant's claim is closed as to all issues admitted in the November 15, 2017 FAL, subject to statutory reopening.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 12, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Respondents have overcome by clear and convincing evidence Division Independent Medical Examination (DIME) physician James Regan, M.D.'s opinion that Claimant is not at maximum medical improvement (MMI) for her left wrist/thumb and for her left knee.

2. If Respondents overcome the DIME opinion and establish that Claimant is at MMI, determination of Claimant's correct permanent partial disability (PPD) rating for Claimant's left wrist/thumb and her left knee.

3. If Respondents overcome the DIME opinion and establish that Claimant is at MMI, determination of whether or not medical maintenance care is reasonable, necessary, and causally related to Claimant's July 27, 2014 injury.

4. If Respondents fail to overcome the DIME opinion and Claimant is determined not to be at MMI for her left wrist/thumb and for her left knee, whether or not the surgeries Claimant underwent in August of 2017 for her left wrist/thumb and in March of 2017 for her left knee were authorized and the responsibility of Respondent.

5. If Respondents fail to overcome the DIME opinion and Claimant is determined not to be at MMI, whether or not an overpayment exists due to Claimant's receipt of social security disability insurance benefits.

6. Determination of disfigurement for Claimant's bilateral wrists/thumbs.

PRELIMINARY MATTERS

1. If the ALJ find that Respondents have overcome the DIME opinion and that Claimant is at MMI with the correct impairment ratings being those provided by Dr. Cebrian and Dr. Broghammer, and if maintenance care is denied, Respondents will not seek an overpayment.

2. The issues of temporary total disability and permanent total disability indemnity benefits were held in abeyance. The period of disability indemnity benefits for future determination that Claimant is seeking depending on the outcome of this proceeding would be October 26, 2016 and ongoing and the parties stipulate to that period.

3. Determination of disfigurement for Claimant's left knee was not addressed and Claimant did not pursue it in this proceeding.

FINDINGS OF FACT

1. Claimant began employment with Employer on July 9, 2014. She was in training to become an assistant manager.

2. On July 27, 2014 Claimant sustained an admitted work related injury to her left knee and bilateral hands when she slipped and fell on a grease spot in a parking lot of Pep Boys in Highlands Ranch. At the time, as part of her job duties and training for Employer, Claimant was comparison shopping and was in the course and scope of her employment.

3. Claimant reported the injury to Employer and began treatment through the workers' compensation system. The issues for hearing focus on Claimant's bilateral wrists/thumbs and her left knee. The remaining areas that she may have treated or mentioned during her extensive treatment are not evaluated in this case.

4. Claimant treated extensively for her **left knee**.

5. On August 14, 2014 Claimant was evaluated by Richard Lotspeich, PA-C. Claimant reported new left knee pain and instability after a slip and fall on the job. Claimant reported since the fall she had pain, swelling, and instability of the left knee. Claimant reported that she did not note any instability prior to the fall. PA Lotspeich noted that Claimant had her left knee ACL reconstructed in 2008 and he assessed new left knee injury with likely re tear of her ACL. He recommended MRI and follow up with Dr. Loucks. *See* Exhibit 2.

6. On August 19, 2014 Claimant underwent an MRI of her left knee. The impression provided was: ACL graft appearing to be contiguous but with secondary signs of ACL insufficiency; chondral degeneration of the medial tibial plateau with some chondral fissuring and reactive subcortical bone marrow edema; postoperative removal of the body and a portion of the posterior horn of the medial meniscus presumed; chondral degeneration of the lateral joint compartment grade 1/grade II and a small area of grade III/minimal grade IV change in the posterior aspect of the lateral femoral condyle; small joint effusion with synovitis change. The findings included osteophytic ridging of the medial femoral condyle and lateral femoral condyle. *See* Exhibits 4, A.

7. On September 10, 2014 Claimant was evaluated by D. Craig Loucks, M.D. Dr. Loucks reviewed the MRI of the left knee and noted there were some questions about the integrity of the ACL graft and some changes suggestive of instability that fit the clinical exam. Dr. Loucks noted chondral degeneration in the posterior aspect of the lateral femoral condyle as well as some subcortical bone marrow edema. Dr. Loucks found some laxity in the ACL clinically and Claimant reported her knee felt unstable. Dr. Loucks was suspicious that the ACL was clinically incompetent. Dr. Loucks planned to have Claimant see Dr. Fitzgerald for a second opinion to determine whether a revision ACL reconstruction was in order. *See* Exhibit 2.

8. Claimant saw Dr. Fitzgerald the next day, September 11, 2014, for a second opinion on the left knee. Dr. Fitzgerald noted that Claimant had significant symptoms of subjective instability but that she had an intact ACL radiographically. Dr. Fitzgerald noted that he had a lengthy discussion with Claimant about risks and benefits of a surgical revision ACL reconstruction. Claimant wished to proceed with revision ACL reconstruction. *See* Exhibit 2.

9. On October 3, 2014 Claimant underwent left knee surgery performed by Dr. Fitzgerald. He noted that he performed a left knee revision, complex ACL reconstruction with patella tendon harvest, notchplasty, patellofemoral chondroplasty, and partial medial meniscectomy. In the indications for procedure, Dr. Fitzgerald noted that Claimant had been complaining of progressive left knee instability and that Claimant had a history of prior hamstring auto graft ACL reconstruction in 2008 and had noticed progressive instability since that time. Dr. Fitzgerald noted that the MRI scan showed signs of graft instability with a lax appearing graft. In surgery, Dr. Fitzgerald found grade 3 chondromalacia with multiple loose chondral flaps that were debrided and he found a degenerative tear of the body and posterior horn of the medial meniscus that was debrided. When Dr. Fitzgerald entered the notch to examine the ACL he found it was in a very vertical position with the femoral tunnel in the 12 o'clock position and found the graft to be lax in tendon appearance. He removed the residual hamstring fibers from the 2008 surgery and performed the graft seating. Dr. Fitzgerald noted bone spurring in the intercondylar notch and performed a notchplasty as well. *See* Exhibits 2, 6.

10. On November 28, 2014 Claimant underwent an MRI of her left knee. The impression was: sequelae of ACL reconstruction identified with apparent moderate tearing of the proximal graft fibers of about 70% thickness near the femoral tunnel origin; high grade partial medial meniscectomy without discrete recurrent tear noted and mild/moderate medial compartment chondromalacia with moderate subchondral edema of the medial tibial plateau; focal moderate chondral defect of the central to posterior junction lateral femoral condyle; mild patellofemoral chondromalacia; extensive post-operative findings of the patella and proximal to mid patellar tendon due to graft harvesting; small left knee effusion with synovitis. *See* Exhibit 7.

11. On December 4, 2014 Claimant was evaluated by Dr. Fitzgerald. Claimant reported increasing medial sided pain and pain over her patellar tendon. Dr. Fitzgerald noted that a recent MRI scan demonstrated continued inflammation around the graft harvest site of the patella tendon but no recurrent meniscal tear or tear of the ACL graft. He noted the MRI scan demonstrated medial tibial plateau edema which would be consistent with Claimant's medial compartment chondromalacia and opined that this was the main source of Claimant's symptoms. He recommended and performed an intraarticular injection. *See* Exhibit 2.

12. On June 2, 2015 Claimant was evaluated by Heather Cresmen, PA-C for Dr. Fitzgerald. Claimant reported continuing to have significant pain in her left knee along both the medial and lateral joint lines that did not respond to injections. Images of the left

knee were taken and showed some progressive joint space narrowing when compared to January 2015 and August 2014 films and showed gradual progression of the medial more than the lateral compartment and were still being reported as Kellgren Grade III. PA Cresmen provided the impression of: stable status post left knee revision ACL reconstruction with bone patella bone; left knee degenerative arthritis; and snapping tendon syndrome. PA Cresmen noted that Claimant requested a second opinion with Dr. Hugate and that Claimant's files would be transferred with a medical release. PA Cresmen recommended Claimant consider viscosupplementation to help reduce Claimant's pain due to her arthritis. *See* Exhibit 2.

13. On June 29, 2015 Claimant was evaluated by Dr. Hugate for her left knee issues. Dr. Hugate noted that Claimant had a complex history but essentially underwent a revision ACL reconstruction a few months ago and continued to have popping on the medial aspect of the knee and a feeling of instability. Dr. Hugate reviewed the MRI and x-rays of the left knee and noted that Claimant had moderate arthritis of her knee, tri compartmental. He noted the ACL was attenuated somewhat proximally. Dr. Hugate opined that Claimant was probably heading down the road of a knee replacement at some point on the left side. He noted that Claimant was 5'6'' and 220 pounds and that her weight would be an issue for both of her knees. He noted he had revised Claimant's right knee a few months ago and that it was doing reasonably well but that neither knee would do well if she maintained her current weight. Dr. Hugate recommended bariatric procedure. He opined that if he replaced Claimant's knees now they would fail if she maintained her current weight. *See* Exhibit 10.

14. On September 16, 2015 Dr. Hugate noted that Claimant had recently undergone a small left knee arthrotomy medially with resection of osteophytes and femoral chondroplasty. He noted that the surgery was done after a dynamic ultrasound showed her pes tendon snapping over the medial knee osteophyte which was causing pain. He wanted Claimant to wean off crutches and see a doctor for bariatric surgery. He encouraged physical therapy. *See* Exhibit 10.

15. On December 26, 2015 Claimant was evaluated by Jared Michalson, M.D. for a second opinion regarding continued treatment of her left knee. Dr. Michelson noted that Claimant had extensive soft tissue related tenderness to even light tough a significant distance away from her knee. Dr. Michalson opined that the vast majority of Claimant's discomfort was soft tissue and not related to osteoarthritis. Given that as well as Claimant's current pain management situation and less than satisfactory results from the contralateral knee replacement, Dr. Michalson strongly discouraged Claimant from seeking any surgical intervention on her left knee. He felt that attempted knee replacement would lead to an almost certainly poor outcome. He opined that if the extraordinary amount of soft tissue pain in the lower extremity unrelated to the knee joint were to dissipate in the future and if her examination was more telling for pain related to osteoarthritis, then she may be a candidate in the future for a total knee replacement. *See* Exhibit 15.

16. On January 7, 2016 Claimant underwent an MRI of her left knee. The findings showed that her ACL graft was intact without evidence of re-tear or cystic degeneration and the posterior cruciate ligament was intact. The impression was: previous ACL reconstruction with intact graft; previous partial medial meniscectomy with resultant significant chondromalacia and osteoarthritis of the medial femoral tibial compartment; post-surgical changes of the medial collateral ligament and patellar tendon with no acute tear; and moderate sized knee joint effusion. *See* Exhibit 17.

17. Claimant continued to be evaluated by Dr. Hugate and eventually underwent bariatric surgery losing a significant amount of weight. On November 7, 2016 Claimant returned to Dr. Hugate. Claimant reported continued left knee pain globally and snapping around the medial condyle and wanted to move ahead with a total knee replacement. Dr. Hugate opined that Claimant would benefit from a knee replacement, but he was concerned based on Claimant's multiple past histories where she had not been happy with the results of numerous surgeries except for a right thumb surgery. *See* Exhibit 10.

18. On March 21, 2017 Claimant underwent a left total knee arthroplasty performed by Dr. Hugate. He noted the pre-operative diagnoses as: end stage arthritis of the left knee with pain; snapping pes of the medial left knee; and painful nodular scar left medial knee. *See* Exhibit 21.

19. Claimant also treated extensively for her **bilateral wrists/thumbs.**

20. On August 11, 2014 Claimant was evaluated by orthopedic hand specialist Davis Hurley, M.D. Claimant reported bilateral wrist pain with most of the pain over the volar aspect of the palm. Dr. Hurley recommended split immobilization and follow up with x-rays if the pain persisted. *See* Exhibit 1.

21. On September 5, 2014 Claimant underwent bilateral x-rays of the wrists that showed no discrete fractures within either the right or left wrist. *See* Exhibit 5.

22. On September 8, 2014 Claimant was evaluated by Dr. Hurley. Claimant reported persistent pain at the right and left thumb base. Dr. Hurley noted that previous x-rays demonstrated a small avulsion fracture off the tip of the trapezium volarly and that x-rays that day demonstrated normal bony alignment. Dr. Hurley found maximum tenderness at the right and left wrist in the volar trapezium. Dr. Hurley opined that Claimant had significant thumb CMC arthritis, left worse than right and suspected the arthritis was aggravated by the fall and injury. He recommended a splint for comfort and opined that it should resolve over time. *See* Exhibit 1.

23. On October 24, 2014 Claimant was evaluated by In Sok Yi, M.D. Claimant reported falling at work and landing on her outstretched left hand with pain in both of her hands since. Claimant reported pain at the base of her thumb and that she had seen Dr. Hurley but wanted a second opinion. Claimant reported that her right hand bothered her as much as the left. Claimant denied any previous history of trauma or history to her hand

and denied a previous history of pain prior to the onset of pain after the fall. Dr. Yi reviewed x-rays of both hands that revealed Eaton Stage II bilateral thumb carpal metacarpal arthritis. Dr. Yi provided the impression of CMC arthritis and proceeding with a right thumb CMC joint injection. *See* Exhibit 2.

24. On November 17, 2014 Claimant was evaluated by Dr. Yi. Claimant reported the injection had helped her symptoms on the right CMC joint by greater than 50% but reported that her left thumb continued to be painful. Dr. Yi injected Claimant's left thumb CMC joint. *See* Exhibit 2.

25. On January 20, 2015 Claimant was evaluated by Dr. Yi. Claimant was in tears with pain and reported difficulty pinching and grasping. Claimant reported only short term relief with injections. Dr. Yi discussed leaving it alone versus surgical treatment and Claimant indicated she wanted to get it surgically treated. Dr. Yi noted that Claimant would be scheduled for a right thumb CMC arthroplasty with ligament reconstruction tendon interposition and de Quervain's release. *See* Exhibit 2.

26. On February 11, 2015 Sean Griggs, M.D., an orthopedic surgeon specializing in fingertips to shoulder, performed a medical records review. Dr. Griggs diagnosed bilateral thumb joint arthritis aggravated by a fall in which Claimant had contusions to her bilateral hands. Dr. Griggs opined that Claimant had no medical records indicating that she had trouble with her CMC joints prior to her fall in July of 2014 and that following her injury she developed pain from her bilateral CMC joint arthritis that was not improved with conservative management. Dr. Griggs opined that the fall did not cause the CMC joint arthritis but aggravated the arthritis to the point that Claimant required management surgically. Dr. Griggs opined that if Claimant proceeded with surgical management of her CMC joint arthritis he would apportion part of her final impairment to a pre-existing condition. See Exhibit 8.

27. On April 17, 2015 Claimant underwent right thumb CMC arthroplasty with ligament reconstruction, tendon interposition, and de Quervain's release, and a left thumb CMC joint injection performed by Dr. Yi. Dr. Yi noted the pre and post-operative diagnosis was right thumb CMC arthritis. *See* Exhibits 2, 9.

28. On December 11, 2015 Claimant was evaluated by Dr. Yi. Dr. Yi noted that Claimant was able to do most things but had some soreness in her right thumb with prolonged activity. Dr. Yi opined that it should continue to improve with time. Dr. Yi opined that Claimant could use her right hand as tolerated. Dr. Yi noted that the left continued to be very painful with pain in the thumb CMC grind test. Dr. Yi noted that Claimant would be scheduled for a left thumb CMC arthroplasty with ligament reconstruction, tendon interposition, and de Quervain's release. *See* Exhibit 2.

29. On January 8, 2016 Claimant underwent left thumb CMC arthroplasty with ligament reconstruction, tendon interposition, and de Quervain's release performed by Dr. Yi. Dr. Yi noted the pre and post-operative diagnosis as left thumb CMC arthritis and de Quervain's tendinitis. *See* Exhibits 2, 18.

30. On September 2, 2016 Claimant was evaluated by Dr. Yi. Claimant reported having more pain and crepitus in her left thumb which was not resolving. On exam, Dr. Yi found crepitus with axial loading the thumb with load transferred to the second metacarpal. Dr. Yi felt as though there might be some impingement at the base of the first metacarpal to the second metacarpal and recommended a CT scan to better evaluate. *See* Exhibit 2.

31. A CT scan of the left wrist was performed on September 13, 2016. It showed the tendon reconstruction with interposition with focal advanced degenerative changes where the first metacarpal base abuts the trapezoid and mild to moderate widening of the scapholunate interval. *See* Exhibit 19.

32. On October 7, 2016 Dr. Yi evaluated Claimant. Dr. Yi noted that the CT scan revealed Claimant's first metacarpal base was abutting the trapezoid. Claimant reported continued clicking and pain. Dr. Yi recommended a left thumb CMC revision arthroplasty with tendon interposition and pinning with slight distraction to prevent impingement within the base of the first metacarpal and the trapezoid with increase resection of the base of the first metacarpal. Dr. Yi anticipated it would be about four to six months for Claimant to be at maximum medical improvement. *See* Exhibit 2.

33. On August 31, 2017 Claimant underwent a left thumb carpometacarpal revision arthroplasty with tendon graft and pinning of the carpometacarpal joint performed by Dr. Yi. *See* Exhibit 25.

IME'S/MEDICAL OPINIONS

34. On December 23, 2015 Levi Miller, D.O. performed a medical record review and dictated records of Claimant's visits. Dr. Miller did not provide any opinions or causation analysis. *See* Exhibit 16.

35. On December 16, 2016 Claimant underwent an independent medical evaluation performed by Carlos Cebrian, M.D. Claimant reported that she was injured on July 27, 2014 when she slipped on grease and fell forward landing on her hands and knees with her body twisted to the left. Claimant reported that at the time she had been working out regularly and walking up to 6 miles per day. Claimant reported pain in her left hand with difficulty gripping objects. Claimant reported a feeling like there was a knife in her left knee and that her left knee would give out. Claimant reported that the most she could walk was a couple of aisles at Costco. Dr. Cebrian reviewed medical records and performed a physical examination. *See* Exhibit B.

36. Dr. Cebrian assessed claim related diagnoses to include left ACL graft tear and bilateral wrist contusions. Dr. Cebrian assessed Claimant with having non claim related diagnoses of right knee problems with 3 prior surgeries, bilateral CMC osteoarthritis left worse than right, chronic pain disorder, gastric sleeve surgery, obesity,

gastrointestinal complaints, right foot surgery, and left knee problems with a prior ACL surgery and tri compartmental arthritis. *See* Exhibit B.

37. Dr. Cebrian opined that Claimant had an extensive past medical history including her prior right knee replacement with two revisions, her prior left knee ACL reconstruction, her bilateral CMC osteoarthritis, and her obesity. He noted that her claim had been complicated by the non-claim related surgeries to the right knee and bariatric surgery. Dr. Cebrian opined that from the beginning of the claim, Claimant's subjective complaints had been out of proportion to the objective findings. Dr. Cebrian noted Dr. Reilly's opinion that non organic factors were contributing to symptom production and/or maintenance in the form of compensation/litigation factors which appeared to be contributing to delayed recovery/chronic pain syndrome. Dr. Cebrian opined that Dr. Reilly's opinions explained why Claimant's subjective complaints have been out or proportion. Dr. Cebrian pointed to a January 2016 visit where it was noted that Claimant's narcotics had increased and that she still rated her pain at 10/10. He also noted that Claimant continued to utilize crutches long after her medical providers recommended she do so. *See* Exhibit B.

38. Regarding her left knee, Dr. Cebrian opined that Claimant sustained a tear of her prior ACL graft due to the July 27, 2014 claim that was surgically treated on October 3, 2014. Dr. Cebrian opined that Claimant's ongoing left knee complaints were due to non-claim related osteoarthritis of the left knee. Dr. Cebrian opined that any osteoarthritic changes were due to the underlying natural history of the condition and were not due to anything causally related to Claimant's July 27, 2014 injury and opined that the injury did not change Claimant's underlying disease process. Dr. Cebrian opined that no further treatment under the claim was indicated for the left knee as the injury was no longer the proximate cause of the left knee complaints. He opined that the current complaints were due to osteoarthritis not caused by or aggravated by the July 27, 2014 claim. *See* Exhibit B.

39. Regarding the bilateral wrists, Dr. Cebrian opined that Claimant sustained contusions to her bilateral wrists as a result of the injury on July 27, 2014. He noted that Claimant was diagnosed with Eaton Stage II bilateral thumb CMC arthritis in October of 2014 and that in October of 2014 Dr. Broghammer opined it was not reasonable to proceed with any overly aggressive treatment for Claimant's CMC arthropathy given that she merely had evidence of contusions to the bilateral hands. Claimant underwent the bilateral surgeries for her CMC osteoarthritis in April of 2015 for the right and in January of 2016 for the left. Dr. Cebrian opined that the need for the bilateral surgeries was not causally related to Claimant's July 27, 2014 injury. He opined that at most, Claimant had a temporary aggravation to her pre-existing CMC osteoarthritis and that a contusion related aggravation was a medical event of limited duration which did not change Claimant's underlying chronic problem. He noted, nevertheless, that Claimant underwent surgeries under the claim accepted as compensable and that an additional left CMC surgery has been requested and Dr. Cebrian recommended against any additional surgeries. *See* Exhibit B.

40. Dr. Cebrian opined that Claimant was at maximum medical improvement. He opined that Claimant's impairment for the left knee would be 16% lower extremity. He opined that Claimant did not have an impairment for the right wrist or thumb or left wrist. Dr. Cebrian opined that Claimant's impairment for the left thumb would be 7% upper extremity. Dr. Cebrian opined that the final impairments were 16% lower extremity and 7% upper extremity and that if they were combined they would be 10% whole person. *See* Exhibit B.

41. On January 25, 2017 Dr. Broghammer responded to questions from Respondents. Dr. Broghammer agreed with Dr. Cebrian that Claimant was likely at maximum medical improvement as of October 26, 2016. Dr. Broghammer opined that Claimant's need for a left knee replacement was due to personal genetic factors and that unless a fracture to the articular cartilage had occurred or there was some other significant injury (as opposed to a contusion and/or tear of the meniscus or ligament) then a knee replacement would not be related to an injury. Dr. Broghammer also opined that Claimant's need for CMC arthroplasty was related to personal factors and not due to the contusions to Claimant's bilateral wrists. Dr. Broghammer opined that unless a fracture to the articular cartilage had occurred or there was some type of other significant injury that occurred (as opposed to simple contusions with no evidence of damage to the bone) then he was of the opinion that the work injury did not accelerate beyond normal progression Claimant's CMC arthritis. Dr. Broghammer opined that Claimant likely did not need maintenance treatment and he agreed with Dr. Cebrian's impairment ratings of 16% lower extremity and 7% upper extremity. *See* Exhibit C.

42. On February 3, 2017 Respondents filed a final admission of liability and attached the reports of Dr. Cebrian and Dr. Broghammer. Respondents admitted to a 7% upper extremity impairment and a 16% lower extremity impairment. *See* Exhibit G.

43. Claimant objected to the final admission of liability and requested a division independent medical examination.

44. On March 6, 2017 Claimant was evaluated by Dr. Hurley. He noted that Claimant was there for follow up of hand pain on the left greater than right with pain at the base of the thumbs. Dr. Hurley noted that he had seen Claimant in 2014 after a fall and that there was some confusion regarding possible fractures at the time of the injury. Dr. Hurley reviewed the x-rays of the wrists from August of 2014. He opined that the left carpal tunnel viewed showed a lucency at the volar tubercle of the trapezium consistent with a fracture and that the right carpal tunnel view showed a lucency in the volar aspect of the scaphoid consistent with an injury. He noted that the x-rays also showed right and left thumb CMC arthritis with the left side being more significant in the 2014 x-rays. He opined that the fall exacerbated the underlying arthritis. *See* Exhibit 1.

45. On June 6, 2017 Claimant underwent a division independent medical examination (DIME) performed by James Regan, M.D. Dr. Regan noted that Claimant had a mammoth record and that he would record visits that represented a material change in complaints, diagnosis, therapeutics, consultations, procedures, etc. Claimant reported

to Dr. Regan that prior to the July 27, 2014 work injury she was fine left-knee wise and that the 2008 ACL work had been quite successful. Claimant also reported that prior to the event she had no hand issues whatsoever. Dr. Regan noted that MRI imaging showed progressive changes over the months from August of 2014 until January of 2016 and that **the last imaging identified the October 2014 surgical procedure as contributing to Claimant's osteoarthritis**. Dr. Regan noted that Claimant had four left knee surgeries, the first in 2008 and the next three following the July 2014 accident with the most recent being the March 2017 total knee arthroplasty. He noted on exam that Claimant had a warm left knee with a healing total knee arthroplasty wound. He opined that Claimant's impairment of the left knee was 30% lower extremity that translated to a 12% whole person impairment. Dr. Regan opined that Claimant's impairment of the left and right thumbs were 6% upper extremity bilaterally which translated to 4% whole person for each upper extremity. He opined that combining 12% whole person for the knee and 8% whole person for the thumbs resulted in a 19% whole person impairment rating. *See* Exhibits 22, D.

46. Dr. Regan opined that although the imaging showed degenerative changes at Claimant's bilateral CMC joints, Claimant had no wrist issues prior to the fall and was asymptomatic with no restrictions prior to her work related injury. He opined therefore that the thumbs were work related and the proposed follow up surgery on the left thumb should be covered as part of the claim. Dr. Regan also opined that Claimant's left knee was sound after her 2008 ACL repair and that Claimant's July 2014 injury clearly led to her debility and need for left knee surgery. Dr. Regan opined that the MRI's showed progressive deterioration of the knee. Dr. Regan noted that the **January 2016 MRI report had a remark "previous partial medial meniscectomy (10/3/14) with resultant significant chondromalacia and osteoarthrosis of the medial femoral tibial compartment**" which indicated that the surgery in October, necessitated by the July 2014 injury, hastened Claimant's degenerative joint disease at the left knee. Dr. Regan opined that the work related injury resulted in such degeneration of the left knee that a left knee total arthroplasty was subsequently necessary. Dr. Regan opined that the left knee total arthroplasty should be considered a direct consequence of the work injury of July, 2014. Dr. Regan concluded that Claimant was not at maximum medical improvement and that Claimant had no prior thumb issues and that her left knee was sound so no apportionment was necessary. *See* Exhibits 22, D.

47. On August 28, 2017 Dr. Hugate wrote a letter answering specific questions raised by Claimant's attorney. Dr. Hugate opined that Claimant had sustained a permanent injury to her left knee and had undergone numerous surgeries in an attempt to improve her pain and function but opined that her knee would never be normal again. Dr. Hugate opined that the condition of Claimant's left knee was related to the slip and fall that occurred on July 27, 2014 as she had been doing well after her prior 2008 ACL reconstruction prior to the slip and fall. Dr. Hugate opined that the slip and fall aggravated a pre-existing condition in her knees, created new instability, and exacerbated her arthritis. See Exhibit 10.

48. On September 1, 2017 Claimant underwent an independent medical evaluation performed by orthopedic surgeon Robert Messenbaugh, M.D. Claimant reported that following her 2008 left ACL surgery she was 100% back and she also reported that she never knew that she had any arthritis. Dr. Messenbaugh reviewed medical records. He noted that in March of 2014 prior to her work injury, Claimant reported that she had pain in the medial side of her right knee radiating down her shin occasionally going into the bottom of her right foot and that Claimant had recently noticed some similar pains in the medial aspect of her left knee. He also noted that at another evaluation in March of 2014 Claimant reported some ongoing bilateral medial knee pain with radiation down the left into the foot at times. Dr. Messenbaugh also performed a physical examination. *See* Exhibits 23, E.

49. Dr. Messenbaugh opined that as a result of her July 27, 2014 slip and fall incident Claimant had sustained right and left basilar palmar contusions without confirmed evidence of wrist fractures; a resolved lumbar strain; and a contusion of the left knee without tearing of the ACL. Dr. Messenbaugh opined that Claimant had pre-existing degenerative arthritis involving her thumb metacarpal joints and although she sustained contusions to her left and right palms as a result of the fall, Claimant did not sustain injury, fracture, dislocation, or aggravation to her pre-accident thumb arthritis. Dr. Messenbaugh noted that on August 11, 2014 hand surgeon Dr. Hurley made no mention of any thumb pain or issues as a result of the fall and that on that date Claimant's Finkelstein's test was negative with no mention that the test caused Claimant any thumb discomfort. Dr. Messenbaugh opined that if an individual had an injury to their thumbs, the Finkelstein test proves to be very provocative causing thumb pain. Dr. Messenbaugh opined that the surgeries to Claimant's left and right thumbs were for thumb arthritis that predated Claimant's accident and were not necessitated by or related to her July 2014 fall. Dr. Messenbaugh also opined that Claimant, at most, sustained a contusion to her left knee as a result of the July 2014 fall and did not sustain a tear of her ACL. Dr. Messenbaugh noted that the August 2014 MRI of the left knee showed the ACL graft from her 2008 surgery was still intact. He noted that there was not tearing on the MRI 3 weeks after her fall but there was evidence of degenerative arthritis within the left knee on that MRI and showed signs of chronic ACL insufficiency. *See* Exhibits 23, E

50. Dr. Messenbaugh noted the signs on the MRI 3 weeks after the July 2014 fall along with Dr. Fitzgerald's operative summary reporting degenerative tearing of the medial meniscus and finding of the ACL graft vertical within the foraminal canal in the 12 o'clock position that was lax in tendon appearance, Dr. Messenbaugh opined that Claimant's original 2008 ACL graft was in all probability not properly positioned (too vertical). Dr. Messenbaugh opined that this caused Claimant to experience some degree of cruciate instability thereby causing Claimant to experience progressive arthritic wear within her left knee long before her July 2014 accident. Dr. Messenbaugh noted that in surgery Dr. Fitzgerald described the ACL as lax but not as torn and not as acutely torn. Dr. Messenbaugh opined that a left knee total arthroplasty was due to degenerative issues within Claimant's left knee that predated her July 2014 fall and were not due to any tearing of the ACL or other injuries sustained in the July 2014 fall. Dr. Messenbaugh opined that Claimant would have required left knee surgeries and thumb surgeries due to

her pre-accident pathology involving her left knee and thumbs even had she not experienced a fall on July 27, 2014. *See* Exhibits 23, E.

51. On November 16, 2017 Dr. Cebrian provided a supplemental report to his October 2016 independent medical evaluation. Dr. Cebrian noted that he had received and reviewed additional medical records since his October 2016 IME. Dr. Cebrian noted that in November of 2016 Dr. Hugate was concerned that Claimant would not do well with additional surgery as Claimant had multiple surgeries and was not pleased with the results. Dr. Cebrian noted that a body mass index above 25 is a significant risk factor for eventual knee replacement and that there is good evidence that obesity increases the risk of symptomatic knee osteoarthritis resulting in knee replacement eleven fold in women. Dr. Cebrian opined that Claimant had multiple risk factors for left knee osteoarthritis including: her prior ACL surgery in 2008, her obesity (before her bariatric surgery) where her weight had been well over 200 pounds with a BMI up to 36.8. Dr. Cebrian opined that any aggravated osteoarthritis and need for left knee replacement surgery is due to Claimant's pre-existing left knee pathology and her obesity. Dr. Cebrian opined that Dr. Regan erred by ignoring information in the medical treatment guidelines. *See* Exhibits 20, B.

52. Claimant has extensive pre-existing degenerative arthritis that pre-dated her July 27, 2014 injury.

53. In January of 2014 Claimant underwent a right total knee replacement. Claimant underwent a revision of the right total knee replacement on May 9, 2014. While treating for her right knee and in March of 2014, Claimant reported having bilateral knee pain and that she was having pain in the medial aspect of her left knee. *See* Exhibit E.

54. Claimant had previously undergone a left knee ACL surgery in 2008. Evidence shows that the ACL graft was placed improperly and that a partial medial meniscectomy was also performed at that time.

55. On August 14, 2015 Claimant underwent a psychological consultation with Kevin Reilly, Psy.D. Dr. Reilly opined that Claimant had features of anxiety and strong somatic focus and that there also appeared to be non-organic factors contributing to symptom production and/or maintenance in the form of compensation/litigation factors. Dr. Reilly opined that all of those factors appeared to be contributing to delayed recovery/chronic pain syndrome. *See* Exhibit 12.

HEARING/DEPOSITION TESTIMONY

56. On November 28, 2017 Dr. Broghammer testified by deposition. Dr. Broghammer opined that Claimant's 2014 MRI showed that her prior ACL graft was stretched. Dr. Broghammer noted that he had in August of 2017 opined that Claimant's need for a left total knee arthroplasty was a direct result and consequence of her work injury because he believed the medical records indicated that Claimant had re-torn her ACL graft. Dr. Broghammer testified that Claimant had actually not re-torn her ACL graft

and that it was just lax. Dr. Broghammer testified that the stretched tendon could have happened when Claimant fell and that it also could have stretched as a result of time or degeneration since it was repaired in 2008 and over the period of six years prior to the 2014 MRI. Dr. Broghammer opined that the left total knee replacement surgery was more likely than not for Claimant's pre-existing condition based on the most recently provided medical records he had reviewed. Dr. Broghammer opined that the need for a total knee replacement surgery was not related to the claim.

57. Dr. Broghammer also opined that the thumbs and surgery to the thumbs were more likely than not unrelated to Claimant's July 27, 2014 fall. Dr. Broghammer testified that he had opined that Claimant had contusions to her bilateral palmar areas and didn't agree that the fall had aggravated her pre-existing arthritic condition since there was no fracture, thumb dislocation, or other significant injury and that he only deferred to the opinions of Dr. Yi and Dr. Griggs who both felt Claimant had aggravated her pre-existing CMC joint arthritis when she fell. He disagreed with the two hand surgeons who felt Claimant aggravated her pre-existing arthritis. Dr. Broghammer opined that the fall did not result in a material aggravation or acceleration beyond the normal progression of Claimant's pre-existing arthritis. Dr. Broghammer noted that there was no evidence of damage to the articular cartilage as a result of the fall and noted that the subsequent workup demonstrated a pre-existing degenerative condition.

58. Dr. Cebrian and Dr. Messenbaugh testified at hearing consistent with their prior medical evaluation reports.

59. Dr. Cebrian opined that after the July 2014 fall, Claimant had no signs of an acute tear of her left knee ACL and had looseness or laxity and wearing away of her chondral surface. Dr. Cebrian opined that Claimant's left knee was at maximum medical improvement and that a total left knee replacement was not related to the work injury. Dr. Cebrian also opined that the bilateral wrist/thumb injury sustained in July 2014 involved contusions and temporary aggravation to Claimant's underlying condition but caused no permanent change. Dr. Cebrian pointed out that Claimant was not asymptomatic in her left knee from her 2008 surgery until the July 2014 fall like she reported and pointed out her reports of left knee pain four months prior to the July 2014 fall. He also pointed out Claimant's reports of progressive instability since 2008 in her left knee. Dr. Cebrian testified that DIME physician Dr. Regan did not comment on the records showing Claimant's reports of left knee pain before the July 2014 fall. Dr. Cebrian testified that treatment had been based on Claimant's subjective complaints yet Claimant was shown by Dr. Reilly to have anxiety, somatic focus, non-organic factors, and delayed recovery. Dr. Cebrian opined that Claimant's subjective complaints had been out of proportion to objective findings.

60. Dr. Cebrian opined that Claimant had pre-existing degenerative arthritis in both her knee and her bilateral thumbs. He opined that Claimant had no objective acceleration. He opined that Claimant was not asymptomatic in the left knee as she reported and that Claimant would have needed a total knee replacement regardless of her work related fall. Dr. Cebrian noted Claimant's body mass index over 30 was a

significant accelerator for the need for a total knee replacement. Dr. Cebrian also testified that Claimant had no acute fracture or exam findings of acute swelling in her bilateral hands and opined that if the July 2014 fall had accelerated her underlying arthritis in both CMC joints, she would have had acute swelling and more prominent findings on examination other than just her pain. He opined that Claimant's total knee replacement was not work related and was related to Claimants' pre-existing degenerative osteoarthritis and obesity and prior ACL repair from 2008. He opined that the bilateral wrists/thumbs were not work related and that surgery needed was due to the natural progression of Claimant's underlying degeneration.

61. Dr. Messenbaugh testified that Claimant did not sustain a tear of her ACL in the July 2014 fall and testified that was significant because there was no evidence of an acute injury or acute ACL tear. He testified that multiple degenerative changes were shown on MRIs after the fall and that osteophytes (bone spurs) were also found which take a long time to develop. He also pointed out the chronic changes shown in the patellofemoral joint. Dr. Messenbaugh opined that although the ACL was not torn there were signs of ACL insufficiency and that the 2008 ACL graft had not been properly placed. Dr. Messenbaugh pointed out that the imaging and later surgery showed the 2008 ACL graft had been placed at the noon position and not the 2:00 position and that the goal in a surgery is to put it in the exact right position for total stability. He testified that because Claimant's 2008 ACL graft was not put in the right position, it was not providing stability for Claimant and could lead to degenerative tearing and chondral changes. He opined that her 2008 surgery left her ACL lax because they drilled in the wrong spot and attached at 12:00 when it should have been attached at 2:00. He pointed out Claimant's left knee pain reports in the months before her July 2014 fall. Dr. Messenbaugh also opined that in the October 2014 left knee surgery they didn't find an ACL tear but took out the bad positioned graft from the 2008 surgery and replaced it with a patellar graft in a good position and that in surgery there was no evidence of acute injury but multiple chondral and degenerative changes. Dr. Messenbaugh opined that there was no injury to any left knee ligaments identified on the MRIs following the July 2014 fall. Dr. Messenbaugh pointed out that DIME physician Dr. Regan did not note Claimant's left knee symptoms that existed prior to her July 2014 fall

62. Dr. Messenbaugh opined that Claimant suffers from an arthritic condition at the base of her thumbs and that the two surgeries were due to her pre-existing arthritis and not due to her July 2014 fall. Dr. Messenbaugh opined that he would have expected objective findings after the fall and that there were none other than abrasions on her hands and no fractures. Dr. Messenbaugh pointed out that after the fall and immediately Claimant had pain at the base of her palms but no pain at the base of her thumbs and noted she was given a wrist splint and not a thumb splint. He opined that she sustained no injury to the base of her thumbs at the time of the fall and that her surgeries were due to her osteoarthritis. Dr. Messenbaugh testified that lucency and bony cyst shown in imaging was created by chronic arthritis and a hole in the bone and that no fracture was found on MRI or in surgery when Claimant was opened up. Dr. Messenbaugh noted that in the second left thumb/wrist surgery Dr. Yi removed prominent bone spurs which were created by Claimant's osteoarthritis. Dr. Messenbaugh testified that he reviewed the MRI

report which showed no fracture and significant arthritis at the base of the thumb. Dr. Messenbaugh opined that the surgery at the carpometacarpal was not related to Claimant's July 2014 fall and was related to her arthritis.

63. Claimant testified at hearing that prior to her July 2014 fall she had never gone to a doctor for any kind of hand or wrist injuries or arthritis and did not suspect that she had arthritis in her wrists. Claimant also testified that she did not feel that her left knee was unstable at all between 2009 and July of 2014. Claimant testified that prior to her July 2014 fall she was walking and riding a stationary bike up to 6 miles per day and was working full time. Claimant testified that between July 9, 2014 and her fall July 27, 2014 while working for Employer, she worked 50+ hours per week and was climbing ladders, unloading semis, putting the merchandise from the semis away, and doing several physical manual labor jobs and was able to do them.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME on MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment ***as a result of injury*** has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

As found above, DIME physician Dr. Regan opined that Claimant was not at MMI for her left knee and her left wrist/thumb. Respondent have overcome this opinion by clear and convincing evidence. Respondents have shown, and the overall evidence establishes, that it is highly probable Dr. Regan is incorrect. Claimant's physical impairment ***as a result of her injury*** was stable at the time of the DIME and further treatment would not reasonably have been expected to improve her work related condition at the time the DIME was performed.

Left knee:

Dr. Regan did not appreciate that Claimant had symptoms of left knee pain and instability prior to her July 2014 fall. Claimant denied these problems to multiple providers despite them being documented in the medical records. Additionally, as found above, Claimant did not tear her ACL in the July 2014 fall. Rather, the ACL was lax due to being improperly positioned during her 2008 surgery. Claimant reported progressive instability following her 2008 surgery to Dr. Fitzgerald. Claimant reported left knee pain to a provider just months before her July 2014 fall. Claimant, overall, is not credible or persuasive that her left knee was fine before the fall and that her instability was "new." Further, Dr. Regan erred when he misinterpreted the January 2016 left knee MRI. He quoted it as saying that the October 2014 left knee surgery of partial medial meniscectomy caused resultant significant chondromalacia and osteoarthritis of the medial femoral tibial compartment. However, the actual MRI impression provides, "previous partial medial meniscectomy with resultant significant chondromalacia and osteoarthritis of the medial femoral tibial compartment..." This is significant because Dr. Regan concluded that the January 2016 MRI showed that the October 2014 surgery had hastened Claimant's degenerative joint disease at the left knee resulting in such degeneration that a total left knee arthroplasty was necessary and should be considered a direct consequence of the July 2014 work injury. However, Dr. Regan appears to miss the impression of the August 2014 left knee MRI that indicated Claimant had the finding of postoperative removal of the body and a portion of the posterior horn of the medial meniscus presumed. The radiologist noted postsurgical change of the body and posterior horn of the medial meniscus. The January 2016 MRI found lack of substance of the medial meniscus consistent with a previous partial meniscectomy which is a very similar finding to the August 2014 MRI. Thus, Dr. Regan erred by assuming that the reference to previous partial medial meniscectomy with resultant significant chondromalacia and osteoarthritis was due to the October 2014 surgery since the previous partial medial meniscectomy had taken place prior to the August 2014 MRI and certainly prior to the October 2014 surgery.

Claimant had significant degeneration in her left knee, prior reports of pain, prior reports of instability, and bone osteophytes that take significant time to develop. Dr. Regan erred by failing to consider the prior left knee pain and instability reports and by relying on Claimant's own subjective reports that her left knee was fine prior to the July 2014 fall. Dr. Regan also erred by assuming the January 2016 MRI related the significant chondromalacia and osteoarthritis to the October 2014 left knee surgery when findings of medial meniscus removal were found prior to the October 2014 surgery. Dr. Regan's opinion that the October 2014 surgery hastened Claimant's degenerative joint disease in

the left knee is not credible or persuasive and is in error based on the totality of the medical records and evidence. Dr. Fitzgerald, as found above, opined credibly that the medial compartment chondromalacia was the main source of Claimant's symptoms.

The opinions of Dr. Cebrian, Dr. Broghammer, and Dr. Messenbaugh are credible and persuasive. Claimants left knee complaints and issues at the time of the DIME were not due to her work related injury and were due to non-claim related osteoarthritis of the left knee and due to the underlying natural history and progression of her disease process. The July 2014 injury did not change, aggravate, or accelerate her significant pre-existing disease process. Claimant would have required a total left knee replacement whether or not she fell at work and the fall did not contribute to or accelerate her need for the total knee replacement. Respondents have established by clear and convincing evidence that Dr. Regan erred and that Claimant is at maximum medical improvement for her left knee.

Left wrist/thumb:

Respondents have also established by clear and convincing evidence that Dr. Regan erred in opining that Claimant's left wrist/thumb was not at MMI. The opinions of the medical providers, and the overall evidence, establishes that Claimant's need for further treatment of the left wrist/thumb is due to her underlying osteoarthritis that was not aggravated or accelerated by her July, 2014 injury. The opinions of Dr. Cebrian and Messenbaugh are found credible and persuasive.

Dr. Messenbaugh testified that lucency and bony cyst shown in imaging was created by chronic arthritis and a hole in the bone and that no fracture was found on MRI or in surgery when Claimant was opened up. Dr. Messenbaugh noted that in the second left thumb/wrist surgery Dr. Yi removed prominent bone spurs which were created by Claimant's osteoarthritis. Dr. Messenbaugh testified that he reviewed the MRI report which showed no fracture and significant arthritis at the base of the thumb. Dr. Messenbaugh opined that the surgery at the carpometacarpal was not related to Claimant's July 2014 fall and was related to her arthritis. Additional surgery to Claimant's left wrist is also related to her arthritis and not to her work injury.

Claimant's subjective reports cannot be relied upon to any degree of certainty and Dr. Regan based his opinion on the left wrist/thumb mainly on Claimant's reports that she had no problems with her left wrist/thumb prior to the July 2014 fall. Although true that no medical records exist, Claimant is not found credible or persuasive. She misled and reported no prior left knee issues when medical records demonstrate otherwise. She has had subjective reports throughout that have been out of proportion to objective findings. Her subjective reports are unreliable and Dr. Regan erred by relying on them.

The objective evidence of significant arthritis and the opinions of Dr. Cebrian and Messenbaugh are credible and persuasive. The need for left wrist/thumb treatment and/or further surgery is due to her underlying disease process not aggravated or accelerated by the work injury. Claimant is at MMI for the left wrist/thumb as any physical impairment from the injury is stable with no further treatment reasonably expected to

improve it. Although treatment may improve her underlying and non-related disease process of arthritis, as a result of the injury, Claimant is stable and at MMI.

Permanent Impairment

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has stated in this respect that: Scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. In particular, the procedures of § 8-42-107(8)(c), which states that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

Claimant has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (2007); *Burciaga v. AMB Janitorial Services, Inc. and Indemnity Care ESIS Inc*., W.C. No. 4-777-882 (2010). Respondents are not required to overcome the scheduled impairment rating assigned by the DIME and the usual preponderance of the evidence burden of proof applies for Claimant to prove entitlement to benefits. *Id.*

As found above, Claimant's significant underlying degeneration in her left knee and bilateral wrists/thumbs was not aggravated or accelerated by her work injury and Claimant reached maximum medical improvement on October 26, 2016. Despite this, Respondents accepted and paid for multiple surgeries during the course of the claim. As a result, Claimant is entitled to and Respondents admitted to an impairment rating in the final admission of liability. After review the medical records as whole, the ALJ finds the appropriate rating to be 7% upper extremity and 16% lower extremity as opined by Dr. Cebrian and Dr. Broghammer. Although Dr. Regan gave a slightly lower rating on the left upper extremity and a higher rating on the left lower extremity, Dr. Regan's lower extremity rating was performed while Claimant was notably still tender from her non work related total left knee replacement and is not an accurate reflection of her impairment as a result of the injury. The evidence, overall, establishes that the ratings provided by Dr. Cebrian and Dr. Broghammer accurately reflect Claimant's impairment as a result of the claim.

Medical Maintenance

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

As found above, Claimant's continued need for treatment is due to her underlying and pre-existing degenerative conditions. There is insufficient evidence that there is a future need for medical treatment reasonably necessary to relieve Claimant from the effects of the injury or to prevent her further deterioration. Medical maintenance benefits for her left knee and left wrist/thumb is thus denied.

Disfigurement

As a result of her July 2014 injury, Claimant underwent a right wrist/thumb surgery and a left wrist/thumb surgery performed by Dr. Yi that was authorized by Respondents. Claimant has visible disfigurement as a result of the surgeries. The disfigurement includes a scar on her left hand that measures approximately 2'" in length, a scar on her right hand that measures approximately 1.5" two scars measuring approximately ½ ", and areas where grafts were taken measuring approximately 2" x 1.5." The ALJ was able to visually appreciate the demonstrated areas of scarring presented by Claimant at hearing and concludes that Claimant sustained permanent disfigurement as a result of this claim to her left and right wrists/thumb.

ORDER

1. Respondents have overcome by clear and convincing evidence DIME physician Dr. Regan's opinions on MMI. Claimant reached MMI for her left knee and her left wrist/thumb as of October 26, 2016. Claimant's subsequent March 2017 left total knee replacement and her August 2017 left wrist/thumb surgery are not related to the claim.

2. Claimant's correct PPD rating for the left knee is 16% scheduled lower extremity. Claimant's correct PPD rating for her left wrist/thumb is 7% scheduled upper extremity.

3. No further medical maintenance care is reasonable, necessary, or casually related to Claimant's July 27, 2014 injury.

4. Respondents waive any outstanding overpayment.

5. Claimant is entitled to disfigurement in the amount of $3,500 for her bilateral wrists/thumbs.

6. All matters not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 12, 2018

/s/ Michelle E. Jones

Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on September 16, 2017.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to reasonable, necessary, and causally related medical treatment for his September 16, 2017 injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) indemnity benefits.

FINDINGS OF FACT

1. Claimant was employed by Employer as an electronic technician with duties that included troubleshooting oil field equipment, maintenance, repair, monitoring satellite systems, etc.

2. As part of his job duties, Claimant often had to move and monitor electronics systems and often had to lift items.

3. On September 16, 2017 Claimant had been assigned a project to rearrange and move some equipment with co-workers. Claimant and co-worker Nick Canavan attempted to carry a Pelican box loaded with computers weighing approximately fifty to 60 pounds. As Claimant attempted to lift the box, he felt his right side give way and his knee give out and he fell to the ground.

4. Claimant alleges that he injured his right shoulder and right knee in this incident. Claimant alleges that after he fell, he sat on the ground for a few minutes dazed and that his co-workers Nick and David came over to see if he was okay. He also testified that he reported the incident to his supervisor Reese within minutes of the injury. Claimant testified that he worked until September 26, 2017 and then made a short term disability claim.

5. Claimant was paid short term disability from September 26, 2017 until January of 2018. Claimant testified that his workers' compensation doctors kept telling him his injuries were work related so he decided to file a claim.

6. On May 22, 2018 Nicholas Canavan testified by deposition. Mr. Canavan worked as a technician with Claimant. Mr. Canavan testified that on September 16, 2017 he and Claimant were moving Pelican cases together which are plastic cases that hold electronics. Mr. Canavan testified that one of the cases they were attempting to move

was known to be heavy because it usually housed computers so he asked Claimant to help him move it. He testified that he and Claimant were going to take the box from the top of another metal box about 3 feet high, move it to the ground, then move it inside. Mr. Canavan testified that there was a handle on each side of the box that you could grab and that he went to one side while Claimant went to the other side. He testified that they moved the box toward the edge of the table and then lifted it off. Mr. Canavan testified that immediately once the weight was off the table/box, Claimant fell and he pulled his end of the box so it wouldn't land on Claimant and it didn't. He testified that the box fell to the ground and Claimant fell to the ground. Mr. Canavan testified that Claimant got up and said he was okay and that it was just an injury he had from the Army. Mr. Canavan testified that Claimant brought up his Army injury frequently and would say he had bad knees, couldn't run, had little movement and looseness in his knees and that it happened during a training exercise in the Army. Mr. Canavan testified that Claimant popped back up after falling down and said he was fine and that they proceeded to finish lifting and moving the box and finished the rest of the tasks outside. Mr. Canavan testified that after they were done moving stuff, he believed both he and Claimant went inside to their work benches to work on electronics. Mr. Canavan testified that they probably brought in 15-20 Pelican boxes that day. Mr. Canavan testified that Claimant didn't complain about being injured or anything and wasn't walking any different than he normally did. Mr. Canavan testified that Claimant's normal walk looked like something was wrong with his knees and that Claimant's normal gait was not very fluid.

7. Reese Batiste, a surface department manager for Employer, testified at hearing. Mr. Batiste recalled Claimant reporting that they had dropped a box outside on the day in question. Mr. Batiste asked Claimant if he was okay and Claimant said he was fine and was going to complete his day as normal. Mr. Batiste testified that the leave tracking system showed Claimant worked a complete day on the date in question. Claimant also worked September 17, 2017. Mr. Batiste also talked to Claimant on Monday September 18, 2017 to see if Claimant was okay and Claimant said he was. Mr. Batiste testified that the next week on September 25, 2017 Claimant said he was not feeling well and not able to complete tasks and that he couldn't type with his right arm. Claimant did not say it was because of the fall the week prior. Mr. Batiste directed Claimant to human resources. Mr. Batiste testified that he did not learn Claimant had filed a workers' compensation claim until January of 2018. After he found out, Mr. Batiste interviewed Claimant's co-workers who corroborated that Claimant reported he was fine after falling down on September 16, 2017.

8. David Martin testified at hearing. Mr. Martin worked on a crew with Claimant and was present on September 16, 2017 when Claimant fell down. Mr. Martin testified that it was a slow work day and they were tasked with straightening up and reorganizing the electronics and boxes from an overflowing supplies and electronics storage area. He testified that he was driving a tugger while Nick and Claimant were putting boxes on the tugger. Mr. Martin testified that Nick and Claimant lifted a rack mount, a box with basically 3 pc units in it, and that Claimant took a few steps back and a side step and went down. He testified that Nick got the rack mount off Claimant and guided it. Mr. Martin testified that Claimant's fall was not a hard fall, that Claimant was controlled going down, and that

Claimant popped up within seconds and said his knees had given out. Mr. Martin testified that Claimant brushed himself off and said he was fine and that his knee just gives out sometimes. Mr. Martin testified that he drove the tugger off and that they kept doing cleanup and work. He testified that Claimant worked the rest of the day at the bench and didn't make any complaints about any injury that he was aware of the rest of the day.

9. Claimant initially sought treatment at the VA before reporting the injury as a workers' compensation injury.

10. On December 29, 2017 Claimant underwent a right shoulder MRI. The impression provided was rotator cuff tendinosis. AC joint arthrosis was found, cystic foci likely degenerative was found, infraspinatus and supraspitantus tendinosis with equivocal partial thickness interstitial tear versus severe tendinosis was found. No full thickness rotator cuff tear was found. *See* Exhibit 6.

11. On January 22, 2018 Claimant was evaluated at the VA. Physical therapy was ordered for Claimant's right shoulder pain based on a right shoulder tendinosis diagnosis with goals of strengthening, increasing motion, and decreasing pain. John Maynard, PA opined that Claimant's pain was exaggerated per the reports of imaging and noted that Claimant walked as if his arm was broken. *See* Exhibit 6.

12. On February 13, 2018 Claimant was evaluated by John Sacha, M.D. Claimant reported that he was at work lifting a computer, turning to the side, and that he collapsed. Claimant reported no specific injury, no specific pain, and was noted to be a poor historian. Dr. Sacha noted that per his family, he fell on the side landing and hitting his right shoulder and right knee and started developing neck and low back pain. Claimant reported diffuse right anterior superior shoulder pain worse with overhead activity, pain in the neck with radiation into the right periscapular area, pain in the low back and buttocks, and right knee pain. Claimant reported a service connected disability of his right knee pain at 20%. Dr. Sacha noted on examination pain behaviors in the severe category with 5/5 positive on Waddell testing. Dr. Sacha provided the impression of: non physiologic presentation; right shoulder complaints; low back complaints; neck complaints; long pre-existing psychological history; and long pre-existing history of closed head injury. Dr. Sacha opined that causality was a significant issue and that it was hard for him to find anything that would be work related. *See* Exhibit 1.

13. On February 19, 2018 Claimant was evaluated by Michael Hewitt, M.D. Claimant reported injuring his right knee on September 16, 2017 when picking up a heavy computer with a coworker and reported that his body gave way and he fell to the ground. Claimant reported previous history of right knee patellar dislocation in the 1990s without surgery related to military service. Claimant reported pain involving the entire knee with instability. Claimant reported a prior left knee arthroscopy in 2002. X-rays were performed and showed small osteophytes from the superior patella. Dr. Hewitt noted Claimant's relatively diffuse knee complaints and history of patellofemoral instability and opined there was no evidence of ligamentous laxity. Dr. Hewitt recommended conservative treatment. *See* Exhibit 2.

14. On February 27, 2018 Claimant was evaluated by Dr. Sacha. Dr. Sacha noted that since the last visit he had reviewed Claimant's prior medical records from the VA hospital. Dr. Sacha noted a long complex history of psychological dysfunction and some evidence in the records of exaggerated pain. Dr. Sacha noted that Claimant continued to have diffuse complaints and that it did not appear that many of the areas would be work related. Dr. Sacha also noted that Claimant was not a surgical candidate and opined that the MRI of the right shoulder showed evidence of some mild tendinopathy but no full-thickness tear. *See* Exhibit 1.

15. On March 9, 2018 Claimant underwent a psychological consultation with Joel Cohen, Ph.D. Claimant reported lifting a piece of equipment transferring it from one box to another and that his body collapsed and he went to the ground. Clamant reported remaining on the jobsite for an hour but then leaving due to pain in his right shoulder, right knee, and low back. Claimant was late to the March 9 appointment and returned on March 12 to complete the consultation. Dr. Cohen opined on Claimant's high anxiety level, somatization, and pre-existing history. *See* Exhibit 4.

16. On March 21, 2018 Claimant was evaluated by Dr. Sacha. Claimant reported continued symptoms especially in the right knee and Dr. Sacha opined that a one-time corticosteroid injection was reasonable, but opined that it was unclear whether the right knee was truly a work related issue. Dr. Sacha also noted that it was unclear if the neck and low back were work related either but that chiro and acupuncture had worked great. Dr. Sacha injected Claimant's right knee two days later. *See* Exhibit 1.

17. On April 18, 2018 Claimant was evaluated by Dr. Sacha. Claimant reported about 50% lasting relief to the injection for about two weeks but then the pain returned. Claimant reported that about two weeks after the injection, his right knee gave out and he fell and landed on his right side which flared up his right knee pain, low back pain, and shoulder pain. Dr. Sacha recommended continued injection, chiro, and acupuncture and opined that Claimant would likely be at maximum improvement in approximately 3 weeks. Dr. Sacha noted that at that time he would have a discussion of causality and impairment ratings and would discuss the shoulder and knee at the final follow up visit. *See* Exhibit 1.

18. Claimant testified and reported that he had no prior right shoulder problems before the September 16, 2017 incident at work and that he had no right knee issues following a right knee surgery in 2002. The medical records show otherwise.

19. On May 8, 2017 Claimant underwent an annual physical with his primary care provider, Larry Doehring, D.O. Dr. Doehring diagnosed chronic right shoulder pain and post-traumatic stress disorder. Claimant reported back pain and chronic right shoulder pain. *See* Exhibit A.

20. On June 3, 2014 Claimant was evaluated by Catherine Corsello, M.D. Claimant reported that he enjoyed being in the military but blew out his knee and was

sent home. Claimant reported past psychological treatment and PTSD. Dr. Corsello recommended restarting Luvox medication. *See* Exhibit B.

21. On July 1, 2013 Claimant underwent bilateral knee x-rays. Claimant was diagnosed with knee joint pain right greater than left, with a history of right patellar dislocations and left knee arthroscopy for loose bodies. The findings and impression from x-rays were negative. *See* Exhibit B.

22. On September 1, 2017 Claimant was evaluated by Randy Drechsel, M.D. In the primary care provider note, Dr. Drechsel noted that Claimant had a service connected disability of 20%, 10% for tinnitus and 10% for knee condition. Claimant reported to Dr. Drechsel that he had periodic knee pain bilaterally and that he had a prior arthroscopy. *See* Exhibit C.

23. On September 12, 2017 Claimant underwent a mental health initial evaluation performed by Mary McEnany, M.D. Dr. McEnany took a comprehensive history from Claimant. Claimant reported a prior right knee scope surgery in 2002. Claimant reported that he couldn't meet PT standards for the Army due to his knee and shoulders. On review of symptoms, Claimant reported knee and shoulder degenerative joint disease form what he had been told. Dr. McEnany diagnosed (among other diagnoses) knee/shoulder pain. Dr. McEnany noted a 20% service connected disability (knee, hearing, tinnitus) and that Claimant had been discharged as unable to complete physical requirements. *See* Exhibit C.

24. Claimant's testimony, overall is not found credible or persuasive. The medical records document several pre-exiting issues with his knee and shoulder prior to his September 16, 2017 work place fall. Additionally, the testimony of Claimant's co-workers is consistent that immediately after the incident, Claimant popped up, said he was fine, and related it to his knees giving out due to an old Army injury.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ

to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the

accident causes a compensable "injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Wherry v. City and County of Denver,* W.C. No. 4-475-818 (ICAO March 7, 2002).

Claimant has failed to establish by a preponderance of the evidence that he sustained a work related injury on September 16, 2017. Although an incident occurred at work where he fell down when attempting to lift a Pelican box, Claimant has failed to establish that he sustained an injury at that time. Rather, the testimony of his co-workers that he popped back up, said he was fine, and continued working immediately after the incident is credible and persuasive. Claimant's medical records also contradict his reports that his right shoulder and right knee were fine before the September 16, 2017 incident. Rather, he had significant pre-existing issues in both the right knee and right shoulder and has failed to show that the work incident caused new injury or aggravated/accelerated his underlying pre-existing conditions. As found above, Claimant underwent bilateral knee x-rays in 2013, in September of 2017, just prior to his fall at work, reported that he had bilateral knee pain and degenerative joint disease of the knee and shoulder. Claimant also reported prior to this fall that he couldn't meet the physical testing requirements for the Army due to his knee and his shoulders. Further, as found above, Dr. Sacha noted and opined that Claimant had severe pain behaviors and that causality was a significant issue. Dr. Sacha opined initially that it would be hard for him to find anything that would be work related. Dr. Sacha's final evaluation noted that he would discuss causality of the shoulder and knee at the final follow up visit. Overall, the preponderant evidence does not support that Claimant sustained a work related injury on September 16, 2017 and his claim is denied and dismissed.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work related injury on September 16, 2017. His claim is denied and dismissed.

2. As he has failed to establish a compensable injury, his claim for medical benefits and temporary total disability is also denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 13, 2018

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STIPULATION

At the commencement of hearing, the parties stipulated that Claimant received unemployment insurance (UI) benefits after being placed at maximum medical improvement (MMI) by Dr. Terrance Lakin on November 2, 2018. The parties agreed that any offset against any awarded retroactive temporary total (TTD) due to Claimant's receipt of UI benefits may be calculated and addressed by the parties. If the parties cannot resolve any such overpayment issue amongst themselves, either party may file an application for hearing to address the issue before the OAC.

REMAINING ISSUES

I. Whether Respondents produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinions of Dr. Brian Mathwich regarding causation and maximum medical improvement (MMI).

II. If Respondents established that Dr. Hall's opinion regarding MMI is clearly erroneous, whether Claimant established, by a preponderance of the evidence, that the need for additional low back/hip treatment is causally related to his admitted June 17, 2015 industrial injury.

III. Whether Respondents are entitled to an overpayment for temporary total disability (TTD) benefits paid between October 16, 2017 and November 1, 2017.

III. Whether Dr. James Massey is an authorized treating provider for this claim.

IV. Whether Claimant is entitled to TTD benefits from October 16, 2017 to November 2, 2018.

V. Whether Claimant is entitled to TTD benefits from October 16, 2018 and ongoing.

VI. If Respondents are successful in overcoming the Division IME opinion of Dr. Hall that Claimant is not at MMI, whether Claimant is entitled to PPD benefits.

FINDINGS OF FACT

Based upon the evidence presented, including the deposition testimony of Dr. Lakin, the ALJ enters the following findings of fact:

1. Employer operates a home health care company. As part of their mission, Employer sends its employees into the community to provide home health care services

to contracted patients. Claimant is a registered nurse (RN) who was often called upon to travel to client's homes to provide direct patient care. She is a long time employee having worked for Employer for approximately 14 years.

2. On June 21, 2017, Claimant was driving a sport utility vehicle (SUV) in the course and scope of her employment when she was rear-ended by another driver. Claimant was wearing her seat belt. The accident occurred at approximately 11:18 a.m., after Claimant entered a construction zone, came to a stop at a stoplight and was struck from behind by the other driver.

3. Photographs of the damage to Claimant's automobile were entered into evidence. Based upon descriptions of the accident in the medical records and the pictures admitted into evidence, the ALJ finds that the collision was bumper-to-bumper, was low speed in nature and the resultant damage to Claimant's SUV was minimal.[1]

4. Emergency personnel were dispatched to the accident scene. Upon contact with the paramedic, Claimant reported neck and hip pain along with numbness in her extremities. The ambulance record indicates that assessment of Claimant's back revealed "no crepitus, deformity [or] pain." Claimant was transported to Parkview Medical Center for emergency treatment.

5. The emergency room (ER) records from the Parkview Medical Center document that Claimant was evaluated at 12:40 p.m. Upon evaluation by the triage nurse, Claimant reported left sided back and neck pain, left arm numbness from her shoulder to the fingers, and left hip pain, which she described as "achy" in nature. Claimant was provided with pain medication and advised that things would be more painful the following day. She was then discharged from the ER with instructions to follow-up with her primary care physician (PCP) within 24-48 hours.

6. A workers' compensation claim was filed on behalf of Claimant and she was directed to the Southern Colorado Clinic, Employer's designated health care provider, for treatment.

7. Claimant presented to the Southern Colorado Clinic for her initial evaluation on June 22, 2017. She was seen by physician assistant (PA-C) Terry Schwartz. During her evaluation, Claimant reported that she "was in the construction on the blvd when she was hit from behind when she was stopped at a red light and immediately felt pain to her neck, left shoulder, bilateral hips, and left leg." She was reportedly told in the ER that she was suffering from "muscular pain." Physical examination revealed lumbar paraspinal tenderness at L1-L5, S1. Claimant had a positive straight leg raise test on the left. She also complained of frontal headaches, which were "different from [her] migraines." She complained of marked tenderness in the left paraspinal muscles from the base of the skull to T1. X-rays were obtained which

[1] The emergency medical personnel who responded to the accident scene documented an impact speed of 5 mph, noting further that the damage to Claimant's vehicle was minor, consisting of paint damage but no vi8sible deformity.

revealed cervical spine straightening, degenerative disc disease at C4-C6 and lumbar disc narrowing at L5-S1. Concerning the accident Claimant reported: "I seen (sic) the guy coming and it looked like he sped up." She expressed considerable anger toward the other driver as if he purposefully hit her. She also claimed that her vehicle sustained "extensive damage" all the way into the wheel wells. Claimant was noted to be "very" emotionally liable and had difficulty tolerating the x-rays. Consequently, she was given an injection of Toradol, referred to physical therapy and taken off work.

8. Claimant's next visit to Southern Colorado Clinic occurred on June 26, 2017. On this occasion, Claimant was seen by Dr. Terrance Lakin. The medical records from this visit document that Claimant had not yet been set up with physical therapy. Claimant stated that her low back was the most painful and that the shot of Torodol had provided her some pain relief. Dr. Lakin recommended MRI's of the cervical and lumbar spine. Dr. Lakin also referred Claimant to Dr. Dwight Caughfield for pain management and nerve conduction studies. Dr. Lakin kept Claimant off work due to her injuries.

9. Claimant began physical therapy (PT) with Southern Colorado Clinic on June 28, 2017. Examination revealed objective findings in both the cervical and lumbar spinal areas. Additionally, Claimant was noted to have diminished flexibility in the "bilateral hamstrings, hip flexors, and piriformis." Palpation revealed the "greatest point tenderness over L5-S1 and [the] bilateral SIJ and piriformis." The ALJ finds "SIJ" to refer to the sacroiliac joints. Claimant was found to be extremely guarded but felt to have "excellent rehabilitation potential" as she tolerated initial activities well.

10. Between June 28, 2017 and September 8, 2017, Claimant participated in sixteen (16) sessions of PT. Although the records document minimal improvement in Claimant's condition, they do document specific exercises Claimant performed at each session. As such, it appears from the record that Claimant was able to participate in physical therapy.

11. Claimant was next seen by PAC Schwartz on July 6, 2017. Claimant conveyed to PAC Schwartz that her cervical spine complaints were improved. However, she was still experiencing significant low back and lower extremity issues. PAC Schwartz noted that Claimant's left leg feels like it will give out and that she had a positive bilateral straight leg raise test result. Among the list of problems included in the note form, this date of visit is an indication that Claimant was suffering from a "WC sprain of unspecified parts of the lumbar spine and pelvis" (emphasis added). PAC Schwartz continued the recommendations made by Dr. Lakin and Claimant remained off work.

12. During a physical therapy appointment on July 7, 2017, Claimant reported that she was still in pain but "trying to walk more." She expressed continued "intermittent trouble with her left leg giving out."

13. On July 11, 2017, Claimant underwent lumbar and cervical MRI's. The lumbar MRI showed:

- Desiccated bulging disc and broad-based posterior disc protrusion at L5-S1 without stenosis.

- Bulging disc and moderate facet arthropothy towards the left at L4-5 with mild left foraminal narrowing on the left.

- A 5 mm left far lateral disc protrusion at L3-4 with mild foraminal narrowing on the left.

- Desiccated bulging disc with left paracentral disc protrusion at L12-L1 with mild foraminal narrowing on the left.

14. On July 12, 2017, Claimant reported to her physical therapist that her right hip was locking up and that she could not move consistently without pain.

15. Claimant returned to PT on July 14, 2017. She reported continued hip locking while walking. She also reported that when she would feel random sharp pain when standing and with some movements. The physical therapist documented that Claimant's pain appeared to center in the right psoas with pain across sacroiliac joints bilaterally (SIJ B) with additional pain being focused at the anterior hip at the insertion of psoas on hip. Based upon the evidence presented, the ALJ is persuaded that Claimant's physical therapy findings are consistent with SI joint dysfunction. The therapist recommended continuing the "current plan of care to restore joint mobility, strength and function. She also noted that "dry needling" would be added to Claimant's treatment protocol at her next scheduled visit.

16. Claimant followed-up with PT on July 17, 2017. At the outset of her therapy session, Claimant reported that she was "really sore across the lower back and especially on the right side . . ." The therapist performed a brief reassessment, noting that Claimant had a "large right pelvic upslip and rotation. Palpation revealed "increased tone and trigger points in bilateral quadratus lumborum, glutes, piriformis and paraspinals. The therapist proceeded with work on Claimant's pelvic alignment and performed trigger point dry needling. Therapy was successful in correcting Claimant's pelvic alignment; however, this caused increased pain lowering Claimant's tolerance to trigger point dry needling (TDN). Consequently, dry needling was limited.

17. At a July 19, 2017 PT session, Claimant reported that dry needling helped for "about a day." Nonetheless, she reported that she was "still getting sharp pain with random motion." Claimant had similar complaints during a follow-up PT appointment on July 21, 2017 when she reported that she was still getting unpredictable extreme pain and sharp catching in my right low back. During this visit, it was noted that Claimant had poor tolerance for all exercise secondary to pain.

18. On July 25, 2017, Claimant was examined by Dr. Dwight Caughfield at Southern Colorado Clinic. Dr. Caughfield took a very detailed history of the present illness, which included a description of the accident. Dr. Caughfield was able to perform a physical examination and recommended lumbar and ESI's as well as low extremity EMG's. Dr. Caughfield also recommended a psychosocial consult for pain management.

19. On July 27, 2017, Claimant was examined by PA-C Schwartz. PA Schwartz documents that Claimant indicated that physical therapy helps a little and he went ahead and requested additional sessions. He also noted that treatment recommended by Dr. Caughfield.

20. Claimant followed up with Dr. Lakin on August 17, 2017. Dr. Lakin notes no improvement and recommended an "IME from WC Carrier to assist with outside opinion regarding this constellation of symptoms and suggestions for delayed recovery."

21. Claimant returned to Dr. Caughfield on August 23, 2017, for EMG testing. The EMG did not reveal any radiculopathy or polyneuropathy. Dr. Caughfield recommended referral to Dr. Benjamin Massey for ESI's. Based upon the evidence presented, the ALJ finds that Dr. Massey is within the chain of referrals from an authorized provider.

22. On August 9, 2017, Claimant was seen by Dr. Herman Staudenmayer. Dr. Staudenmayer performed a psychological evaluation. After a lengthy report, Dr. Staudenmayer opined that Claimant:

> . . . suffered injuries from an MVA with residual chronic pain. She is defensive about discussing or acknowledging psychosocial issues. She denies emotional dysfunction. However, she is somatazing her stress and emotional dysfunction. She is focused on her pain symptoms and amplifying them consistent with somatization. Her multisystem somatic complaints are not supported by multisystem physiological pathology. She manifests and acknowledges significant neuromuscular stress, which can be addressed with biofeedback.

23. Consistent with the recommendations made by Dr. Staudenmayer, Claimant began biofeedback with William Beaver, M.A. Claimant treated with Mr. Beaver from August 31, 2017 to November 2, 2017. Mr. Beaver consistently notes that Claimant's affect is normal, that her participation is satisfactory, and that she generally exhibits moderate pain behaviors. Mr. Beaver would continue to treat Claimant up until November 2, 2017, when she was placed at MMI by Dr. Lakin. Following the MMI determination, all treatment within the workers compensation system was terminated.

24. On October 16, 2017, Claimant was examined by Dr. Wallace Larson as part of an IME at the request of Insurer. Upon review of Claimant’s medical records and after completing his examination, Dr. Larson opined that Claimant sustained no physical

injuries as part of the June 21, 2017 MVA. Rather, Dr. Larson opined that Claimant was suffering from a psychiatric problem based upon his assessment that she had “multiple nonphysiologic symptoms and subjective complaints that could not be explained in the absence of anatomic deficits. Ultimately, Dr. Larson concluded that Claimant "[had] not sustained any physical injury to her spine. She [was] therefore at maximum medical improvement without any ratable condition."

25. On October 20, 2017, Dr. Lakin noted that Claimant was “[u]nable to work from 10/20/17 to 11/10/2017.

26. On October 30, 2017, the IME Report of Dr. Larson was sent to Dr. Lakin for review/comment. Dr. Lakin provided a response on November 2, 2017. Dr. Lakin essentially agreed with the opinions Dr. Larson expressed in the IME Report, including his opinion regarding Claimant’s capacity to work without restriction. Nonetheless, he fixed the date of MMI as of November 2, 2017. He then released Claimant from care.

27. On November 3, 2017, Respondents filed a FAL. The FAL used an MMI date of October 16, 2017 (the date of Dr. Larson's IME Report) instead of November 2, 2017 (the date of MMI given by Claimant’s authorized treating provider, Dr. Lakin). Consistent therewith, Respondents claimed an overpayment of $3,087.98 due to the fact they paid TTD benefits up to November 2, 2017. The FAL is otherwise consistent with Dr. Lakin's November 2, 2017 letter.

28. Claimant objected to the FAL and requested a Division Independent Medical Examination (DIME). Dr. Timothy Hall was selected to complete the requested DIME. The Division IME was completed on January 15, 2018. Dr. Hall reviewed relevant medical records, including medical records that predate Claimant date of injury. He also performed a physical examination of Claimant. Dr. Hall noted on physical examination that Claimant exhibited some significant pain behaviors. However, Dr. Hall was able to complete this physical examination and noted his findings in his Report. Dr. Hall assessed Claimant with “Low back/SI injury with pelvic obliquity, SI joint dysfunction, Piriformis syndrome resulting in lower extremity symptoms, doubt radiculopathy and Myofascial pain, cervicothroacic area.” He concluded that Claimant’s ongoing back/hip/leg symptoms were likely unrelated to the degenerative findings demonstrated on MRI because those findings were predominately left-sided while her ongoing symptoms primarily affected the right side. Consequently, he opined that Claimant’s symptoms were more likely related to a “piriformis/sciatic nerve problem” which he concluded was common in the presence of pelvic obliquity and SI joint dysfunction. According to Dr. Hall, Claimant’s locking episodes are likely emanating from her SI dysfunction and a “big” part of her ongoing problem was stemming from postural distortion and persistent psoas muscle spasm. While Dr. Hall noted that Claimant's reported symptoms were a bit extreme, he has seen the same presentation numerous times in this setting. He went on to opine that Claimant is not at MMI and suggested a “SI joint guided injection for diagnostic/therapeutic purposes.” He also recommended, “[n]euromuscular therapies/massage therapy focusing on psoas, quadratus lumborum, piriformis, and IT band, primarily right sided twice a week for six

weeks" and "[c]oncomitant chiropractic work for mobilization of sacroiliac joint to work on pelvic positioning." Dr. Hall provided a provisional impairment rating including a 5% table 53.2B rating and a 9% for range of motion deficit. When combined these values equal 14% whole person impairment. Finally, Dr. Hall provided physical restrictions that would preclude Claimant from returning to her pre-injury job.

29. Respondents filed an Application for Hearing endorsing the issue of overcoming the DIME opinions of Dr. Hall as to MMI.

30. On March 14, 2018, Respondents requested opinions from Dr. Eric Ridings. Dr. Ridings performed an independent medical examination (IME) opining that, in his lay opinion, the forces generated by the collision of the automobiles in this case was not sufficient to cause injury. Dr. Ridings further opined that, because the EMG was negative for radiculopathy or polyneuropathy, there was no injury. He further opined that because the lumbar MRI did not show an abnormality that explained Claimant's symptoms, there was no injury. Concerning Dr. Hall's DIME findings of SI joint dysfunction, pelvic obliquity, and piriformis syndrome, Dr. Ridings stated that "[n]o one else had documented those findings throughout her course . . ."

31. Dr. Hall testified consistent with his report. He testified that his diagnoses of SI joint dysfunction, pelvic obliquity, and piriformis syndrome, are not medical conditions that would show up on an EMG or a lumbar MRI. Dr. Hall disagrees the opinion of Dr. Larson and Dr. Ridings that Claimant suffered no injuries in this case. Dr. Hall testified that spasms were present on Claimant's DIME examination and she had pelvic asymmetry. He explained that SI joint dysfunction represents laxity in the sacroiliac joint, which in turn causes unpredictable movement precipitating pain, and a sensation that the joint is locking. He testified that Claimant's ongoing symptoms are likely related to the diagnoses he assessed in this case based on the assessment/treatment of prior patients with similar presentation/conditions. Dr. Hall reaffirmed his position that Claimant is not at MMI.

32. According to Dr. Hall, a diagnosis of somatization disorder does not mean that Claimant did not suffer injuries in this case. Indeed, Dr. Staudenmayer opined that Claimant suffered injuries and resultant chronic pain because of the MVA in this case.[2] He also opined that because Claimant has maladaptive coping mechanisms, she amplifies and focuses disproportionately on her pain complaints consistent with somatization. While the ALJ is persuaded that Claimant is probably unconsciously magnifying her symptoms, the evidence presented supports a finding that she sustained injuries to her low back, SI joints (hips) and legs despite the low speed nature of the

[2] During his deposition, Dr. Lakin was asked whether he agreed with Dr. Hall that Claimant had suffered an injury in this case. While clearly concerned about the magnitude of injuries Claimant may have suffered as a consequence of her MVA, the ALJ finds it would be erroneous to conclude that Dr. Lakin's testimony supports a conclusion that Claimant suffered no injury as a result of the crash. Indeed, Dr. Lakin testified: "I seriously doubt whether there was the magnitude of injury that would not have resolved with just time and normal healing and some conservative care." The ALJ interprets the testimony of Dr. Lakin to indicate that Claimant suffered injuries but psychological conditions, including somatization are playing a role in her perceived magnitude of those injuries.

accident in question. Consequently, the ALJ finds Claimant's ongoing low back, SI and leg symptoms related to her MVA.

33. Dr. Ridings testified. He agreed that the diagnoses of SI joint dysfunction, pelvic obliquity, and piriformis syndrome, are not medical conditions that would show up on an EMG or a lumbar MRI. However, Dr. Ridings went on to testify that because Claimant had a normal EMG, and a lumbar MRI that did not show an obvious explanation for Claimant's pain complaints, she did not suffer any injury in the motor vehicle accident. Dr. Ridings also testified that no one, during Claimant's course of treatment, had documented findings consistent with the diagnoses of SI joint dysfunction, pelvic obliquity, and piriformis syndrome. Careful review of the medical records summarized in Dr. Ridings report supports a finding/conclusion that he did not include a review of the physical therapy notes from the Southern Colorado Clinic. When asked about this on cross-examination, Dr. Ridings eluded to the fact that these types of records are not what he relies upon when conducting an IME. Based upon a review of the physical therapy records, the ALJ finds Dr. Ridings testimony that no one other than Dr. Hall documented findings consistent with the diagnoses of SI joint dysfunction, pelvic obliquity, and piriformis syndrome incorrect. Contrary to Dr. Ridings' testimony, the PT records document the presence of physical findings consistent with the diagnoses reached by Dr. Hall. Indeed, Claimant's PT records contain references to pelvic upslip (obliquity) and rotation, increased muscle tone in musculature of the low back and hip, including the piriformis along with trigger points requiring dry needling and complaints of locking in the back/hip with movement and walking.

34. Both Dr. Hall and Dr. Ridings testified that SI joint dysfunction can cause low back pain, pain that spreads into the hips or buttocks, sciatic like pain, and stiffness. Both testified that this condition can cause the feeling of instability and cause the lower extremity to feel as if it is going to buckle. Based upon the evidence presented, the ALJ finds that Claimant has reported similar symptoms throughout her treatment in this case.

35. Both Dr. Hall and Dr. Ridings testified that piriformis syndrome is a neuromuscular disorder that is caused when the piriformis muscle compresses the sciatic nerve. Both testified that the symptoms associated with this condition usually start with pain, tingling, or numbness in the buttocks. Both testified that this pain can be severe and extend down the length of the sciatic nerve. The ALJ finds that the medical records entered into evidence, which include the physical therapy notes, document that Claimant complained of these types of symptoms throughout her treatment.

36. This ALJ finds that Respondents have failed to overcome the Division IME opinions of Dr. Hall by clear and convincing evidence. Based upon the evidence presented, the ALJ is persuaded that Dr. Ridings was probably unaware of the content of the physical therapy records when he concluded that no one outside of Dr. Hall documented findings consistent with SI joint dysfunction or piriformis syndrome. Perhaps Dr. Ridings was not provided the records or maybe he chose not to review them because they are not the type of records he relies upon when completing an IME.

Regardless, the ALJ finds the physical therapy records to contain objective medical findings supporting the opinions of Dr. Hall. Crediting the content of the PT records in this case, the ALJ finds the opinions of Dr. Ridings unconvincing. Moreover, to the extent that the opinions of Dr. Larson and Dr. Ridings deviate from those of Dr. Hall, the evidence presented persuades the ALJ that their conclusions simply represent a difference of opinion between them and Dr. Hall.

37. Consistent with the above referenced findings, Claimant is not at MMI. Claimant left work in this case due to her work-related medical condition. She has not been able to return to full duty work as evidence by the medical record of Dr. Cheryl Cavalli who is Claimant's primary care physician and no evidence was presented that Claimant has been offered modified duty. Furthermore, Dr. Hall, in his January 15, 2018 IME report provided Claimant with physical restrictions that will not allow her to return to her pre-injury job. Based upon the evidence presented, the ALJ credits the opinions of Dr. Hall regarding Claimant's need for work restrictions to find that she is incapable to returning to full duty work. The contrary opinion of Dr. Lakin, whose opinion regarding Claimant's work capacity was based largely on the unpersuasive opinions of Dr. Larson, is equally unconvincing. Because Claimant is not at MMI and she has proven that she is unable to return to full duty work, she has proven her entitlement to TTD benefits from November 2, 2017 and ongoing.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40- 101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of Claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Dr. Hall are credible and supported by the medical record as a whole. When the evidentiary record is considered in its totality, the opinions of Dr. Hall are more persuasive than contrary opinions of Dr. Lakin, Dr. Larson and Dr. Ridings.

Overcoming the Division IME

D. A DIME physician's findings of causation and MMI are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo.App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI or the cause of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo.App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. The question of whether the Claimant has overcome the DIME physicians findings regarding MMI and/or causality, are one of fact for the ALJ's determination. *Metro Moving and Storage Co. v. Gussert*, *supra*. Because the question of whether Claimant attained MMI inherently requires a determination of the cause(s) of Claimant's medical condition and need for medical treatment, the ALJ concludes that an analysis of whether Claimant's need for an SI joint injection, neuromuscular therapies and chiropractic care are causally related to the MVA is fundamental to the question of whether she Claimant is at MMI. Here, the evidence presented establishes that Dr. Hall opined that Claimant was not at MMI because she has not been adequately

evaluated/treated for conditions he concludes are related to her MVA. As found above, the record evidence supports Dr. Hall's opinion, that Claimant's SI joint condition and suspected piriformis syndrome are related to her MVA despite its low speed nature and her tendency to magnify her symptoms.

F. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if a course of treatment has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990). Additionally, a finding that a claimant is not at MMI may rest solely upon recommendations for further diagnostic evaluation if such procedures have a reasonable prospect of diagnosing or defining the claimant's condition to suggest a course of further treatment. *E.g., Soto v. Corrections Corp*., W.C. No. 4-813-582 (ICAO, October 27, 2011). Because Dr. Hall's recommended treatment represents a reasonable prospect for curing and relieving Claimant of the ongoing effects caused by her industrial injury, she is not at MMI. See *Eby v. Wal-Mart Stores, Inc.*, W.C. No. 4-350-176 (February 14, 2001), *aff'd. Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, (Colo.App. No. 01CA0401, February 14, 2002)(*not selected for publication)* (citing PDM *Molding v. Stanberg*, 898 P.2d 542 (Colo. App. 1995) *and Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995)]; *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (August 11, 2000).

G. After considering the totality of the evidence presented, the ALJ concludes that Respondents have failed to produce unmistakable evidence establishing that Dr. Hall's determination regarding MMI is highly probably incorrect. In this case, the persuasive medical evidence establishes that Claimant likely suffers from SI joint dysfunction, pelvic obliquity, and piriformis syndrome. The record contains multiple references to symptoms throughout Claimant's course of treatment that are consistent with these diagnoses. Furthermore, the trial testimony of Dr. Hall and Dr. Ridings make it clear that these diagnoses do not show up on either an EMG or an MRI. As such, the opinion that Claimant did not suffer an injury because her EMG was negative and her lumbar MRI was not revealing, is simply insufficient to support a conclusion that Dr. Hall was highly probably incorrect in his determination that Claimant had not reached MMI for all conditions related to her June 21, 2017 MVA. Here, the evidence presented supports a conclusion that there is difference of opinion between the DIME physician and Respondents' retained medical experts. A professional difference of opinion does not rise to the level of clear and convincing evidence that is required to overcome Dr. Hall's opinion concerning MMI. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000),* Consequently, Respondents have failed to meet their required legal burden to set the MMI determination aside.

Medical Benefits

H. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However,

the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo.App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

I. Section 8-43-404(5)(a), C.R.S. gives the respondents the right in the first instance to select the authorized treating physician (ATP). Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office,* 944 P2d. 677 (Colo. App. 1997). In this case, the Southern Colorado Clinic was designated by Respondents as the primary authorized treating provider for this claim. Claimant was seen at Southern Colorado Clinic by Dr. Lakin and Dr. Caughfield. Dr. Caughfield referred Claimant to Dr. Massey for ESI injections. Here, the ALJ agrees with Claimant that the ESI injection provided by Dr. Massey in this case was authorized because Dr. Caughfield, an authorized provider at the Southern Colorado Clinic, referred her to him for this treatment, which was otherwise reasonable, necessary and related to Claimant's MVA. The ALJ finds and concludes that this constitutes a valid referral for authorization purposes under *Cabela v. ICAO*, 198 P.3d 1277 (Colo. App. 2008). In *Cabela*, the designated ATP had concluded that a knee condition was not causally related to her employment, and recommended that the claimant follow-up with her personal physician. Subsequently, the claimant established compensability for her knee condition at hearing. In concluding that all treatment received through the claimant's primary care providers was considered authorized, the Court held:

> As the ALJ found, the employer's physician, an ATP, referred claimant to her personal primary care physician. The referral reflects no purpose other than treatment for claimant's knee problems, and claimant's testimony indicates that she understood the referral to be for treatment of her knee. Indeed, the ALJ found that claimant sought medical attention for her knee from her primary care doctor. Thus, even if the employer's physician provided the referral under the mistaken belief that the knee condition was not work-related, we perceive no factual basis for the ALJ's conclusion that the referral was made outside the ordinary course of treatment. Instead, ***we hold that the risk of mistake by an ATP in concluding that an injury is noncompensable lies with the employer***. We thus conclude the referral made here was in the ordinary course of treatment. *Id*. at 1281. (Emphasis added).

Accordingly, Respondents are liable for this treatment.

TTD Benefits and Overpayment

J. To establish entitlement to temporary disability benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions, which impair the Claimant's ability effectively, and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). In this case, Claimant was taken off work on June 22, 2017, due to her work-related medical condition. Claimant has not returned to work since. Claimant was placed at MMI by her ATP on November 2, 2017. However, Respondents filed an FAL in this case stopping TTD benefits as of October 16, 2017. October 16, 2017 is the date Claimant was seen by Dr. Wallace Larson as part of an IME requested by Respondents. Dr. Larson opined Claimant was at MMI but did not provide an MMI date. Nevertheless, Colorado workers compensation law does not recognize, for termination of temporary disability benefits, the MMI determination of an independent medical examiner retained outside the DIME process. Consequently, the ALJ concludes that Claimant is entitled to TTD benefits from October 16, 2017 to November 2, 2017. Because Claimant is entitled to this period of TTD benefits, Respondents request for an overpayment for TTD paid beyond October 16 through November 2, 2017 must be denied and dismissed.

K. The evidence presented persuades the ALJ that Claimant has remained "disabled" within the meaning of section 8-42-105, C.R.S. since November 2, 2017. This disability has been continuous based upon the opinion of her primary treating physician, Dr. Cheryl Cavalli. Dr. Cavalli has opined that Claimant is physically incapable of performing her pre-injury employment. This opinion is supported by Dr. Hall's DIME opinion, which found Claimant not to be at MMI and provided physical restrictions that will not allow Claimant to perform her pre-injury job. Consequently, Claimant is entitled to TTD benefits from the erroneous MMI date (11/2/17) to the present.

PPD Benefits

L. As Claimant is determined not to be at MMI, issues concerning permanent impairment are premature and need not be addressed further.

ORDER

It is therefore ordered that:

1. Respondents request to set aside the DIME opinions of Dr. Hall regarding MMI is denied and dismissed.

2. Dr. Massey is an authorized treating provider for this claim and Respondents are liable for the medical treatment he provided Claimant on December 8, 2017.

3. Claimant is entitled to TTD benefits from October 17, 2017 to November 1, 2018.

4. Respondents request for an overpayment of TTD paid between October 16, 2017 and November 2, 2017 is denied and dismissed.

5. Claimant is entitled to TTD benefits from November 2, 2017 and ongoing.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

DATED: July 13, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, Co 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Is Claimant's claimed psychological injury based in part on circumstances common to all fields of employment?

II. Did Claimant prove by a preponderance of the evidence that he endured psychologically traumatic event(s) generally outside of a worker's usual experience that would have evoked significant symptoms of distress in a similarly situated worker?

III. Did Claimant's claimed psychological injury arise from a work evaluation, disciplinary action and/or job promotion taken in good faith by Respondent-Employer?

Because the ALJ concludes that Claimant failed to prove the elements required to establish a claim of mental impairment as required by § 8-41-301(2)(a), his claim must be denied and dismissed.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant has been working for the State of Colorado, Department of Corrections, since August 15, 2005. (Exhibit A) Claimant testified that around March 1, 2017, he was promoted to the Program Management I position for the Canon Minimum Centers, a facility complex within the Colorado Department of Corrections. As the Program Manager, Claimant acts as the head of custody and control. With his promotion, Claimant became responsible for, among other things, the safety and security of the approximate 200 staff members and 1300 inmates working and housed in the complexes three facilities.

2. On January 15, 2018, Claimant reported that beginning around February 2017; he was the subject of a "pattern" of harassing treatment by his supervisor, which resulted in mental stress manifesting itself in the form of insomnia, diarrhea, and headaches. He reported increased anxiety and depression. Claimant did not elaborate on what types of "harassment" he was subjected to. He simply indicated that he was "harassed" as defined by Respondent-Employers policies.

3. Claimant was seen by Dr. Daniel Olson on January 19, 2018 after reporting his stress as a worker's compensation injury. (Exhibit F) Claimant reported insomnia, anxiety, depression, and diarrhea as a result of job stress beginning in February 2017. Dr. Olson opined that Claimant did not experience a psychologically traumatic event that would qualify him for workers' compensation benefits under the

statute. (Exhibit F, bate stamp 43) Claimant was released to return to work full duty with no restrictions and no follow-up. (Exhibit F, bate stamp 43)

4. Claimant testified generally that since receiving his promotion, he had noticed increased stress. He testified that as a result of that stress, he was off work for three (3) weeks from January 15, 2018 through February 5, 2018. During that time, Claimant reported that he participated in three (3) counseling sessions through the Colorado State Employee's Assistance Program (CSEAP) where he learned coping skills and stress management techniques. Claimant testified that his condition was only temporary and that he returned to work full duty with no additional/persistent symptoms.

5. Claimant had two performance evaluations following his promotion in which he received positive remarks and feedback for his performance as a Program Manager. (Exhibit C) Nonetheless, the evidence presented establishes that by January 18, 2018, Claimant was not meeting the "expectations set forth by the Appointing Authority" for his position and "this was being addressed through private meeting and Performance Management." According to Major Ryan Flores, the Appointing Authority had very high expectations for the position. Nonetheless, he never witnessed the appointing authority harass Claimant. (Exhibit C, bate stamp 23)

6. While other non-work related medical conditions and Claimant's decision to quit smoking may have contributed to his alleged stress as suggested by Respondent, the evidence presented persuades the ALJ that Claimant's stress, as reported in January 2018 and stretching into February 2018, was probably emanating principally from his inability to completely meet the expectations of a new job following his promotion. Indeed, the evidence includes a convincing statement from a similarly situated co-worker indicating that the position was highly demanding, that Claimant was not meeting the expectations for the position and was involved in performance management counseling. To the extent that performance-counseling amounts to a disciplinary action, the content of Claimant's performance evaluations persuades that ALJ that such action was taken in good faith to assist a new but highly motivated and promising employee succeed in a very challenging position.

Claimant failed to establish that she was subjected to psychologically traumatic events generally outside her employment that would evoke significantly distress in a worker in similar circumstances and/or that the corrective action issued June 21, 2017, was taken in bad faith, i.e. "vindictively."

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. To receive compensation or medical benefits, a claimant must prove that he/she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *see also, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985);

Pacesetter Corp. v. Collett, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

B. "Mental-mental" injuries are injuries in which mental impairment follows a solely emotional stimulus. *Oberle v. Indus. Claim Appeals Office,* 919 P.2d 918, 920 (Colo. App. 1996). "An injury that is 'the product of purely an emotional stimulus that results in mental impairment' requires a 'heightened standard of proof' to 'help prevent frivolous or improper claims.'" *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205–06 (Colo. App. 2012) (internal citations omitted). This is true because "[c]ases in which a claimed disability is based on emotional or psychological cause and in which physical injury is absent are less subject to direct proof and more susceptible to being frivolous in nature." *Dushane v. Beneficial Colorado, Inc.,* W.C. No. 4-218-217 (ICAO July 17, 1996).

C. Section 8-41-301(2)(a), C.R.S., addresses this heightened burden of proof and provides the conditions of recovery for claims of mental impairment. According to § 8-41-301(2)(a), the claim "must be proven by evidence supported by the testimony of a licensed physician or psychologist." Moreover, the mental injury must "consist of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances." *Id.* "This interpretation of the statute serves the legislative purpose of weeding out frivolous claims predicated on alleged idiosyncratic responses to non-stressful, or mildly stressful, occurrences which would not have produced significant distress in a reasonable worker." *Gaudett v. Stationers Distributing Company,* W.C. No. 4-135-027 (ICAO April 5, 1993). Finally, "a mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement or similar action taken in good faith by the employer." Section 8-41-301(2)(a), C.R.S. Good faith personnel actions are those which are reasonable under an objective standard. The question of whether employer discipline is objectively reasonable is a question of fact to be determined by examining the surrounding facts and circumstances. *Spencer v. Synthes USA,* W.C. No. 4-370-762 (ICAO, Dec. 28, 2000).

D. Section 8-41-301(2), C.R.S. applies to claims of multiple, allegedly traumatic events, as well as claims alleging a single traumatic event. "When multiple stressors are alleged, that determination must include a separate analysis of each event to ascertain whether the claim is based in whole or in part upon facts or circumstances common to all fields of employment." *Pub. Serv. of Colorado v. ICAO,* 68 P.3d 583, 585 (Colo. App. 2003). If a claim is based on one or more incidents that are common to all

fields of employment, it should be denied. *Trujillo v. ICAO,* 957 P.2d 1052, 1054 (Colo. App. 1998).

E. In this case, the ALJ agrees with Respondents that Claimant failed to present the testimony or a report from a licensed physician or psychologist that he suffered a mental impairment on or about January 15, 2018. Accordingly, his claim must be denied and dismissed under the current version of the statute, See *Kieckhafer v. Industrial Claim Appeals Office*, 284 P.3d 202 (Colo. App. 2012); §8-42-301(2), C.R.S. 2017.

F. Even if Claimant had presented the testimony of a licensed physician or psychologist the ALJ concludes that Claimant's stress claim is based at least in part on incidents common to all fields of employment, specifically routine conflict and stress related to managing and being managed by others at work. Conflict between employees and supervisors over unpopular directives, job performance, schedules, budgetary concerns, personality differences and perceived lack of support is not isolated to correctional facilities, but rather widespread and shared with all fields of employment. Here, the evidence presented convinces the ALJ that Claimant's allegation that he was repeatedly harassed which in turn caused conflict and stress beyond the level common to all fields of employment is most probably overstated. While Claimant alleged a "pattern" of harassment, he presented no specifics on what he alleged was an escalating campaign to belittle him in front of other people. Based upon a totality of the evidence presented, the ALJ concludes that none of the conflict that Claimant alleges he had with his appointing authority constitutes a psychologically traumatic event that would be considered outside of a correctional facility manager's usual working experience.

G. In concluding that Claimant's claim involves incidents common to all fields of employment and that Claimant was not subjected to conflict which was so unusually intense that it was outside the normal conditions of her employment as a principal, the ALJ finds the case of *Spencer v. Synthes USA,* W.C. No. 4-370-762 (ICAO, Dec. 28, 2000) instructive. In *Spencer*, the claimant's relationship with her supervisor became "quite strained" when the supervisor disciplined her for failure to keep her radio and keys in her possession. Analogous to the instant case, the claimant in *Spencer* alleged that her supervisor "set out on a course of behavior with the sole intent of harassing and belittling her" and that his conduct caused her anxiety and depression. The ALJ ruled, "claimant presented insufficient evidence to demonstrate that her conflict with her supervisor, and the results which flowed from that conflict, were so unusually intense that they were outside of the normal conditions of employment." *Id.* The ICAO upheld the ALJ's dismissal of the claim stating: "We agree with the ALJ's conclusion that some level of conflict between employees and supervisors is 'objectively common' to all fields of employment." *Id.* Because the ALJ finds/concludes that Claimant's conflict with his appointing authority is based in part upon facts and circumstances common to all fields of employment, it must be denied under the principals announced in *Trujillo, supra.*

H. Even if Claimant had established that the incidents he asserts exposure to were so unusually intense that they would be considered to be outside of the normal conditions of his employment, he failed to establish that those events would evoke significant symptoms of distress in a worker whose experience, training, and duties are similar to his, i.e. an experienced correctional facility manager in charge of the management of 200 staff persons and 1300 inmates. Here, the persuasive evidence persuades the ALJ that none of Claimant's allegations meets this standard. As noted above, Claimant's allegedly traumatic events simply include a general allegation that he was harassed and belittled in front of others and felt unsupported by the Warden who gave him lists of things to do and whom sent him text messages at night and on weekends. The ALJ finds/concludes, as did Dr. Olson that Claimants perceived lack of supervisor support and the aforementioned events likely did not a specific psychologically traumatic event that would cause significant emotional distress in a similarly situated worker possessing the same training and work experience as Claimant.

I. In this case, the ALJ finds Claimant's allegations similar to those where certain behavior/events were not found to be outside a worker's usual experience or so abusive as to cause significant distress in a similarly situation worker. Those events/circumstances include, enforcing polices regarding overtime and the length of lunch breaks (*Davis v. Minnequa Bank of Pueblo,* W.C. No. 4-506-911 (ICAO Jan. 17, 2002); not taking claimant's ideas seriously at meetings (*Trujillo,* 957. P.2d at 1053); minor harassment by coworkers including kicking and shoving (*Gaudett, supra)*; departure of subordinate due to problems with claimant; and a telephone conversation regarding claimant's job performance. (*McCallum v. Dana's Housekeeping,* W.C. No. 4-211-605 (ICAO Feb. 22, 1996). By contrast, the following work place events have been found to be objectively traumatizing to a similarly situated worker resulting in a claim for psychological trauma, sabotage of equipment for which claimant was responsible, puncturing claimant's car tire with a knife, rumors that claimant traded his testimony for money and sexual favors, and threats that claimant's wife would be informed he was allegedly engaged in extramarital affairs. *Pub. Serv. of Colorado v. ICAO,* 68 P.3d 583 (Colo. App. 2003). As noted above, the evidence presented persuades the ALJ that Claimant's reaction to the perceived harassment he alleges is probably an idiosyncratic response to non-stressful or mildly stressful events that are unlikely to evoke significant symptoms of distress in a similarly situated worker called upon to address said behavior. *See generally*, *Brown v. Family Inn of Colorado Springs*, W.C. No. 4-271-351 (November 12, 1996); *Gaudett, supra.*

J. Finally, as required by § 8-41-301(2)(a), claims for mental impairment "shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer." In this case, it is probable that Claimant filed his claim for mental impairment following his need to participate in performance management, as he was not meeting all of the expectations of his new position after his promotion. To the extent that Claimant asserts that he suffered mental impairment as a consequence of the stress created by

having to participate in individual meetings and performance management sessions, the evidence presented fails to establish that Respondent-Employer took such action in bad faith.

ORDER

It is therefore ordered that:

1. Claimant has failed to meet the statutory requirements set forth in §8-42-301(2), C.R.S. to establish a claim of mental impairment. Accordingly, his claim must be denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the motorized scooter recommended by her authorized treating physician is reasonable, necessary, and related to her May 17, 2012 work injury.

2. Whether Respondents are entitled to reimbursement for a missed appointment fee for Claimant's failure to attend a properly noticed Respondent Independent Medical Examination (IME).

FINDINGS OF FACT

1. Claimant is a female with a date of birth of August 19, 1975.

2. On May 17, 2012 Claimant sustained a work related injury after she crouched down, stood up, and heard a pop in her right knee while in the course and scope of her employment. Claimant ultimately was diagnosed with a meniscus tear and underwent right knee surgery.

3. While recovering from surgery on her right knee, Claimant fell and hurt her left knee. Claimant ultimately underwent left knee surgery.

4. Following her left knee surgery, Claimant was diagnosed with chronic regional pain syndrome (CRPS) in her lower extremities. Claimant has been treating for chronic pain since.

5. Her chronic pain treatment has been extensive and has included implantation of a spinal cord stimulator with revision surgeries.

6. Claimant has also been undergoing physical therapy since her knee surgeries.

7. In 2014 Claimant's physical therapist recommended pool therapy rather than regular therapy and Claimant independently obtained a pool pass in order to complete pool therapy strengthening.

8. Despite the spinal stimulator and therapy, Claimant continues to have severe chronic pain symptoms on a regular basis and finds it difficult to maintain an average quality of life.

9. Claimant testified at hearing that she can walk 10-15 minutes and sometimes farther but that she uses a motorized scooter if she knows she will be shopping

for a while or going longer distances. Claimant testified that some stores like Walmart have them up front and that if the scooters are not there or are being used by other customers, she knows she will have to make the trip short. Claimant testified that she has also rented motorized scooters at venues when they are available and that they help her to make it farther than she would otherwise be able. Claimant testified that she also has used a wheelchair before but that a scooter would require only her to operate it and she wouldn't need anyone to push her.

10. Claimant testified that she wants her legs to work better and doesn't want her legs to atrophy. Claimant testified that she would only use the scooter when she needed it but that it would allow her on those occasions to do a lot more. Claimant is found credible.

11. On May 9, 2017 Claimant was evaluated by Dr. Fox. Dr. Fox noted that Claimant was still seeing Dr. Wernick for pain management and that there were talks about a revision spinal stimulator but that the procedure was delayed by Claimant's motor vehicle accident on February 23, 2017. Dr. Fox noted that Claimant was having quite a bit of difficulty walking, suggesting a motorized scooter. Claimant reported that she had been having significant difficulty with ambulating recently and had used a wheelchair on several occasions. Dr. Fox discussed getting a motorized scooter and Claimant requested a prescription but Dr. Fox advised her she should probably discuss it with her attorney to see if the insurance company would over it or not. At some point, Dr. Fox filled out a prescription for a motorized scooter dated May 9, 2017. *See* Exhibits 3, 4, B.

12. On June 12, 2017 Claimant was evaluated by Dr. Wernick. He assessed CRPS type I of the left lower extremity. Dr. Wernick recommended against routine use of a motorized scooter but noted that it could be considered for occasional use for mobility on long days. *See* Exhibits 5, C.

13. On June 27, 2017 Claimant underwent an evaluation with O.T. resources. Claimant reported that all tasks take longer, cause pain, and/or that she needed assistance. Claimant reported that she usually had assistance for grocery shopping and would use the scooters in the store and shop with her son or mother. Claimant was found to have poor balance throughout the evaluation and a weight distribution evaluation showed her to distribute her weight on the right at 120 pounds and the left at 30 pounds. Claimant was unable at the evaluation to tolerate even light tough to her bilateral lower extremities due to pain. Claimant had an awkward limping wide gait pattern and tended to lean to the right when sitting. The opinion was that there was a high correlation between subjective and objective measures with over 30 tests given to assess consistency of Claimant's performance. *See* Exhibit 6.

14. On August 15, 2017 Claimant was evaluated by Dr. Fox. Claimant reported severe pain in her lower extremities and back with quite a bit of pain along the lateral side of the foot. Dr. Fox noted that Claimant had previously requested a motorized scooter and that Dr. Wernick wrote a prescription for that. Dr. Fox noted on examination moderate

diffuse swelling in the lower extremities with extreme tenderness to even light touch. *See* Exhibits 4, B.

15. Respondents scheduled Claimant for an independent medical evaluation with Joseph Fillmore, M.D. On February 15, 2018 Dr. Fillmore's office sent a reminder email to Claimant's former attorney regarding the upcoming Rule 8-IME appointment. This was forwarded to Claimant by her former attorney on February 15, 2018. *See* Exhibit I.

16. On February 16, 2018 Claimant replied to her former attorney by email. Claimant indicated that Dr. Fox was trying to cancel that appointment and that he was tired of whomever was scheduling appointments behind his back. Claimant indicated that Dr. Fox had already set up her MMI appointment with another doctor and that she would keep her former attorney posted. *See* Exhibit I.

17. Claimant failed to attend the February 20, 2018 IME with Dr. Fillmore. His office noted that she had failed to keep the appointment and they sent an invoice reflecting the charge for the missed appointment. The invoice showed a charge of $734.00 for 2 units of a now show IME rule 8 appointment. *See* Exhibit H.

18. Claimant testified that she was aware of the appointment with Dr. Fillmore but thought it was for an MMI determination and testified that she thought she didn't have to go. Claimant testified that she later learned it was an IME appointment because of the new surgery request and that once she learned what it was, she attended the newly scheduled appointment.

19. Claimant testified that her former attorney never told her that she needed to attend the February 20, 2018 appointment after she emailed him believing it was an MMI appointment.

20. On March 2, 2018 Claimant was evaluated by Dr. Fox. Claimant reported severe and constant pain. Claimant reported that Dr. Barolet advised her that she had type II CRPS and not type I. On examination, Claimant's legs had moderate diffuse tenderness to even light tough, mottling, and swelling. They also had pain with ambulation and motion. Dr. Fox noted that Claimant would like to be able to walk for more than 5-10 minutes without significant leg and knee pain but opined that given her condition, that goal was unlikely to be met. *See* Exhibit 4.

21. On March 20, 2018 Claimant underwent an independent medical evaluation performed by Joseph Fillmore, M.D. Dr. Fillmore issued a report on March 29, 2018. Dr. Fillmore opined that the recommendation for a motorized scooter was related to Claimant's workplace injury but opined that a motorized scooter was not a reasonable treatment option. Dr. Fillmore opined that for CRPS an individual should use the affected extremities as much as possible and weight bear as much as possible to aid in desensitizing them and to improve function. Dr. Fillmore opined that a motorized scooter may very well foster dependence and hamper improvement. *See* Exhibits 9, D.

22. Dr. Fillmore testified at hearing. He noted that Claimant had undergone significant treatment without significant improvement in function. He opined that for the treatment of CRPS it is better to use the affected limb. He opined that the motorized scooter was not reasonable or necessary because the treatment for Claimant should be the use of her extremity and that it is better to continue with other treatment rather than immobilize a person.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Motorized Scooter

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Section 8-42-101(1)(a), C.R.S., provides as follows:

> Every employer, regardless of said employer's method of insurance, shall furnish such medical, surgical, dental, nursing, and hospital treatment, medical, hospital, and surgical supplies, crutches, and ***apparatus*** as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury."

Claimant has established by a preponderance of the evidence that the motorized scooter apparatus is reasonable, necessary, and causally related to her May 17, 2012 work injury. As a result of her work injury, Claimant developed CRPS and remains limited in the amount and distance that she is able to walk without pain. Claimant is credible and persuasive that a motorized scooter will help cure and relieve her of the effects of her injury. The effects of her injury include severe limitations on how far and long she can walk and interfere with her ability to shop, recreate, travel, and perform other normal daily activities where walking distances might be involved. The motorized scooter and the ability to use it when Claimant wishes to shop, recreate, travel, or perform daily activities that involve traveling more than minimal distances will cure and relieve her from the effects of her limited ability to otherwise be mobile due to her injury.

The ALJ appreciates concern from Dr. Fillmore that if Claimant becomes reliant on the motorized scooter it will be harmful to her and that using the affected extremity is part of treatment. However, the ALJ finds Claimant credible that she wants to avoid atrophy and maintain the best possible function and that she intends to only use the motorized scooter as needed and intends to continue with therapy and use of her extremities as much as possible. Claimant has requested a motorized scooter up to the amount of $1,200 and that ALJ finds that Claimant has met her burden by preponderant evidence that this request and medical apparatus is reasonable, necessary, and causally related to her work injury.

Reimbursement of IME fee

Respondents have requested the ALJ order Claimant to reimburse them for the missed IME fee in the amount of $734.00. As found above, Respondents scheduled Claimant for an IME with Dr. Fillmore on February 20, 2018. Claimant was aware of the appointment but was under a mistaken belief that it was an appointment for MMI and that Dr. Fox had already set up a different appointment for MMI for her. Claimant was unaware that the appointment was an IME with Respondents' expert. Claimant testified that as soon as she knew it was a Respondent IME, she attended the next set appointment. Claimant's testimony is credible and consistent with an email to her former attorney where she indicated that Dr. Fox was trying to cancel the February 20, 2018 appointment and had already set up an MMI appointment with another doctor. Claimant is credible and

persuasive that her former attorney did not respond to her email and did not advise her it was a Respondent IME or that she had to attend. Although the IME was properly noticed in writing, Claimant mistakenly believed she did not have to attend the appointment.

Respondents had the right to suspend Claimant's compensation and could have sought an order compelling Claimant's attendance at a rescheduled IME under statute. However, Respondents did not seek that remedy and, as found above, Claimant attended the rescheduled March 20, 2018 IME with Dr. Fillmore once she knew it was a Respondent IME. Respondents have failed to show that a penalty in the form of requiring Claimant to pay the missed IME fee is appropriate in this case. Claimant, although mistaken, did not intentionally cancel a Respondent IME or attempt to thwart the IME process. She mistakenly believed the February 20, 2018 IME with Dr. Fillmore to be an MMI appointment that she did not need to attend because she already had an MMI appointment set up by her authorized treating provider. She attended the Respondent IME one month after the missed IME after realizing it was a different appointment. Once she was aware, she cooperated with the process requiring her to attend Respondents' scheduled IME. Respondents have failed to establish that Claimant should be subject to the missed IME fee.

ORDER

1. Claimant has established by a preponderance of the evidence that a motorized scooter, up to the amount of $1,200, is reasonable, necessary, and causally related to her May 17, 2012 work injury.

2. Claimant is not required to reimburse Respondents for the February 20, 2018 missed IME fee.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 17, 2018 /s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Have Respondents overcome, by clear and convincing evidence, the DIME opinion of Dr. Michael Volz, that Claimant was not at MMI as a result of his September 28, 2014 work injury?

II. Have Respondents shown, by a preponderance of the evidence, that Dr. Volz in fact made a valid MMI determination during his DIME examination.

ISSUES NOT RIPE FOR DETERMINATION

In his position statement (and in his Response to Respondent's Application for Hearing), Claimant now seeks relief, to wit: Dr. Silpa Krefft to be designated an ATP, Reimbursement for treatment to date by Dr. Krefft and National Jewish Hospital; TTD and TPD benefits. The ALJ concludes that such issues are not ripe for determination, based upon the totality of the hearing record, including this exchange:

> THE COURT: So right now, before we get to the exhibits, Mr. Biddle, are there any additional issues besides the fact that Respondents are challenging the DIME, that you think are at issue today?
>
> MR. BIDDLE: No, your honor. (Hearing Transcript, pp. 13, 14)

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant was employed as a Millwright. His job requires that he complete routine, general maintenance projects, to include welding. On September 28, 2014, the Claimant was assigned to weld a broken rail in the steel mill. On that date, a water hose became trapped underneath the Ladle Refinery Furnace (LRF) ladle. The water travelled underneath the slag contained in the LRF. The steam trapped underneath the LRF caused a steam explosion. (Ex. C at pp. 4-5).

2. The steam explosion shattered the outside glass panel of the LRF, and knocked off a considerable amount of dust which had been accumulating on the rafters. The steel mill became dark. Claimant described the situation as dark, chaotic and difficult to navigate; nonetheless, he was able to leave the building without assistance. The Employer's emergency response team arrived at the scene shortly thereafter. Claimant initially alleged multiple injuries as a result of the explosion, including a neck injury, right shoulder injury, various head injuries, and a chest inhalation injury.

3. Claimant was immediately treated following the incident at St. Mary's Corwin Hospital. The initial record from St. Mary's Corwin on the date of injury stated that Claimant presented with a Chief Complaint of "Inhalation of particles."

> …..a hot oven…exploded, and the room was filled with the power particles from the burning brick. The patient presents complaining of some shortness of breath and the fact that he's been coughing up dust-like material. He denies any smoke inhalation or exposure to extreme heat…The patient was made a level II trauma due to mechanism of action. (Ex. N, p. 113).

4. It was documented that "the patient was given a DuoNeb, he was in absolutely no respiratory distress." upon discharge. (Ex. N, p. 116). Physical Examination failed to reveal any physical injuries, including abrasions, burns, contusions, wounds or lacerations. The hematological blood test, chest x-ray, and respiratory tests were all normal. Claimant was discharged and told to return to the ER with additional complaints.

5. Claimant went on his own to the emergency room at Parkview medical center on October 24, 2014. Claimant denied chest pain, denied dyspnea on exertion, and denied shortness of breath, but did note that patient "sometimes has cough in the middle of the night". (Ex. L, p. 79). The examination revealed a normal respiratory rate. The respiratory and chest examination was normal. Respiratory examination revealed no findings of respiratory distress. Claimant underwent a second chest x-ray on October 24, 2014. The x-ray revealed that the lungs were clear with no chest abnormalities. No acute cardiopulmonary diseases were noted. (Ex. K, p. 65).

6. On November 4, 2014, Claimant underwent a psychiatric fitness for duty assessment with Dr. Robert Kleinman. Dr. Kleinman made no recommendations regarding the physical complaints of respiratory symptoms. Dr. Kleinman opined that it was not clear if he sustained an injury. Dr. Kleinman further opined that "if he does enter the workers' compensation system, it is predictable that it will be drawn out and antagonistic." (Ex. P, p. 149).

7. Claimant underwent an IME at Respondents' request with Dr. Jeffrey Schwartz on January 21, 2015. (Ex. R) Dr. Schwartz conducted an interview, medical records review, and a lung function spirometry test. He found that "my exam of the Claimant was unremarkable." In addition, his spirometry was normal and a methacholine challenge study showed he had no evidence of hyper-active airways." Dr. Schwartz noted that "the cause of his shortness of breath with exertion is unclear, given his normal breathing tests, normal chest x-ray, normal exam and normal oxygen levels." Dr. Schwartz found no evidence of a long term respiratory injury on October 28, 2014. (Ex. R, pp.173 –175).

8. On February 23, 2015, Dr. Charles Hanson reported that Claimant had reached maximum medical improvement for his alleged orthopedic injuries on February 12, 2015. Claimant then began treating with Dr. Michael Dallenbach on his own. This examination revealed equal and clear breath sounds. No tenderness was noted in the sternum or chest. Dr. Dallenbach diagnosed Claimant with questionable post concussive syndrome, headaches, cervical strain, right upper extremity strain with possible rotator cuff tear, bilateral tinnitus, and vertigo. There was no mention at this exam of any respiratory issue. (Ex. T. p. 198).

9. The initial claim was contested, and the parties went to an administrative hearing on January 25, 2016. Dr. Dallenbach testified via deposition on July 6, 2015. (See, Ex. 3, p. 52).The presiding Administrative Law Judge, Richard Lamphere, issued an Order on July 13, 2016. *Id.* The ALJ opined that, based on the opinion of Dr. Schwartz, the dust likely irritated Claimant's lungs resulting in his immediate need for treatment in the emergency room at St. Mary's. The ALJ opined that the exposure to dust caused a compensable injury to Claimant's lungs. The ALJ was not persuaded that Claimant suffered from Reactive Airways Dysfunction Syndrome (RADS). ALJ Lamphere opined that the treatment required onsite and at St. Mary's Corwin was reasonable, necessary and related to the September 28, 2014, explosion. (Ex. C, p. 19).

10. ALJ Lamphere further opined that Claimant could not be accepted as an accurate and reliable historian. He opined that Claimant failed to prove by a preponderance of the evidence that he sustained compensable injuries to his head, neck, or right shoulder. (Ex. C, p. 20). Ultimately, ALJ Lamphere opined that Claimant sustained a compensable lung injury and denied and dismissed his other claims. He further ordered that the change of treating provider to Dr. Michael Dallenbach was granted.

11. Following this Order, Claimant sought treatment with Dr. Dallenbach on August 2, 2016. The examination was essentially normal. Dr. Dallenbach diagnosed Claimant with a post inhalation injury. A referral was made for further pulmonary evaluation with Dr. Shapiro for treatment recommendations. Claimant remained at full duty with no restrictions. (Ex. T, p. 201). The available medical records do not reflect that Claimant continued to treat with Drs. Dallenbach and Shapiro.

12. Due to the perceived lack of treatment, Respondents pursued a 24-Month DIME on January 3, 2017. Dr. Michael Volz, d/b/a Advanced Allergy, Asthma, and Immunology, was selected as the DIME physician. The DIME occurred on March 6, 2017. Under "History", the following are noted:

> Symptoms began almost immediately including shortness of breath, dry throat. Since that time he has had shortness of breath upon walking up stairs, which when occurs is followed by some dizziness…..Since the DOI, the problem has neither worsened or improved although he went to National Jewish Hospital outside of

> his WC claim iniitially≈6 weeks ago, has had some tests done but has not yet had a chance to follow-up to review all of the test results. The test included various lung functions tests and a CT scan of the chest. In addition to the as needed inhaler he uses, he was given another inhaler to use twice daily. He feels these inhalers reduce his symptoms but *there is not known as of yet* objectively determined improvement due to the use of these inhalers. (Ex. X, p. 243)(emphasis added).

13. The DIME examination revealed that the respiratory effort was found to be good. Airflow was normal with no unordinary breath sounds. (Ex. X. p. 245). Dr. Volz noted that the three primary subjective complaints were for cough, shortness of breath, and chest tightness. Dr. Volz opined that "there is no **current** evidence for a respiratory disorder that might be attributed to the September 28, 2014 injury." (Ex. X, p. 249). However, he emphasized in the following sentence, that "However, there are various points I differ from Dr. Schwartz as well as I believe the ***evaluation*** and *efforts to manage are* ***incomplete*** despite my statements above. Id (emphasis added).

14. Dr. Volz further noted that "the argument that Dr. Schwartz has made that since the dust was very visible and thick, the size of particles was not small enough to be "respirable" of sufficiently small to get into the lower or smaller lung airways *cannot be substantiated." Id.*

15. Dr. Volz was quite clear in what he felt should happen next:

> There are *additional tests in my opinion justifiable to perform,* if they have not yet been performed and are not in the records provided to me. These tests would include a more detailed lung function test to include FRC, other lung volume tests, DLCO related tests, High Resolution CT scan of the chest (possibly on inspiration and expiration) and an exercise related test to see if his oxygen level drops. Some of these tests might need to be performed at the end of consecutive days of work. (Ex. X, p. 250).(emphasis added).

After citing several medical articles in support of his position, Dr. Volz mentioned a detailed treatment plan with the evidence he currently had at his disposal. He then stated:

> *Due to the above comments*, there are no restrictions recommended and no impairment. Since *no known* or suggested work related illness from the injury can be ***currently*** *identified,* **MMI** and an impairment rating are ***not determinable.*** *This opinion would change if further information is collected to reassess the idea.* (Id at p.250)(emphasis added).

16. While the DIME process was proceeding, Claimant sought treatment on his own through National Jewish Hospital. The initial evaluation by Sr. Silpa Krefft, MD, occurred on December 8, 2016. Claimant's chief complaint was for shortness of breath and a cough which he stated was present since a workplace accident on September 28, 2014. (Ex. W, p. 216) The examination revealed normal resting pulmonary function testing. (Id at 221). Dr. Krefft recommended *additional diagnostic testing* for potential airways disease.

17. Claimant returned to National Jewish on February 2, 2017. Dr. Krefft diagnosed Claimant with *probable* upper airway dysfunction. She stated that there was a concern for occupational contribution given the work place incident in 2014 and the ongoing exposure. (Ex. W, p. 232). She further opined in her report that *she would need additional information to make a causation determination.* (*Id.*)

18. Based on the DIME report, Respondents filed an Application for Hearing on April 14, 2017. The sole issue raised on the Application for Hearing was overcoming the DIME opinion regarding MMI. (Ex. D). The parties proceeded to hearing in this matter on September 12, 2017.

19. At this hearing, Dr. Eric Ridings testified as Respondents' expert. Dr. Ridings opined that Claimant was in a room where there had been an explosion, which didn't cause him any injury, although some discomfort from having to breathe in some particles to some extent, and was coughing. Dr. Ridings testified that throughout the claim Claimant never really had any findings of abnormalities. He simply had complaints. Dr. Ridings opined that in his opinion Claimant reached MMI for the pulmonary condition following the negative pulmonary examination on January 29, 2015.

20. Dr. Ridings addressed the DIME report in his testimony. Dr. Ridings opined that Dr. Volz had opined that there were no objective diagnosis of any lung condition, but then indicates that he (Dr. Volz) recommends additional tests to rule out GERD and rhinitis. Dr. Volz never addresses whether a confirmation of any diagnosis at this point would even be related. Dr. Ridings testified that Dr. Volz opined that there was no confirmed diagnosis <u>at the present time</u>. Dr. Ridings opined that Dr. Volz does not address in any way that even if he found something two and a half years after the injury, how it would be medically probable to be a direct result of the exposure over two years prior.

21. Dr. Ridings ultimately opined that Claimant was at MMI and did not require any additional medical treatment.

22. Claimant testified on his own behalf. Claimant recounted the history of his prior symptomology and treatment. Claimant stated to Dr. Krefft that the reported pulmonary symptoms have been present since the date of injury. Claimant had initially complained of shortness of breath and a cough. During his testimony, the first thing he recalled right after the explosion was an inability to breathe. He was

coughing while making his way to the outside, and noticed that what he was coughing up was black. Emergency responders cleaned out his eyes, whereupon he noticed he was covered in soot. Once he was released from the ER, he still felt nauseous that day.

23. Currently, Claimant testified that he still is short of breath upon exertion. He still has issues with his voicebox. He reports no pulmonary issues prior to this workplace accident.

24. Dr. Silpa Krefft testified at a post-hearing deposition on February 8, 2018. Dr. Krefft outlined her professional training and experienced to date, including pulmonary and critical care training, and board certifications in internal medicine, pulmonary medicine, and occupational and environmental medicine. She also holds a master's degree in public environmental and occupational health. The purpose of her training was to train in occupational lung disease, including military deployment and mining related diseases.

25. Dr. Krefft opined (after performing some of the tests which had been recommended in Dr. Volz' DIME report- high –resolution CT scan, repeat methacholine challenge. a laryngoscopy, and a consult with an ear, nose, and throat physician) that she was able to diagnose Claimant with *probable* vocal cord dysfunction:

> So with all those test results, what I was able to diagnose Mr. Rodriguez with was *probable* vocal cord dysfunction of this inducible laryngeal obstruction.
>
> That I could say to a reasonable degree of medical certainty, that I believe that he has that condition *and that it was directly related to his workplace exposure,* and he *likely* had an *aggravation* of that condition with his continued employment with the Ervaz facility (Krefft Depo, p. 14).(emphasis added).

26. Dr. Krefft also addressed concerns that Claimant may have been inconsistent in describing his symptoms to various medical providers:

> So I would say that he has not had complete resolution of his symptoms, but has waxing and waning symptoms that seem to be triggered.
>
> But he also, I would say, *is* ***not at Maximum Medical Improvement*** *because his management has not been optimized.* He has not really been able to complete speech therapy consultation with some reinforcement in like a short period of time, which I think would benefit from. (Krefft Depo, p. 53)(emphasis added).

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

C. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

DIME Procedure, Generally

D. Section 8-42-107(8)(b)(II) and (III), C.R.S. provide as follows regarding the twenty-four-month DIME procedure:

(II) If either party disputes a determination by an authorized treating physician on the question of whether the injured worker has or has not reached maximum medical improvement, an independent medical examiner may be selected in accordance with section 8-42-107.2; except that, if an authorized treating physician has not determined that the employee has reached maximum medical improvement, the employer or insurer may only request the selection of an independent medical examiner if all of the following conditions are met:

(A) At least twenty-four months have passed since the date of injury;
(B) A party has requested in writing that an authorized treating physician determine whether the employee has reached maximum medical improvement;
(C) Such authorized treating physician has not determined that the employee has reached maximum medical improvement; and
(D) A physician other than such authorized treating physician has determined that the employee has reached maximum medical improvement.

(III) Notwithstanding paragraph (c) of this subsection (8), if the independent medical examiner selected pursuant to subparagraph (II) of this paragraph (b) finds that the injured worker has reached maximum medical improvement, the independent medical examiner shall also determine the injured worker's permanent medical impairment rating. The finding regarding maximum medical improvement and permanent medical impairment of an independent medical examiner in a dispute arising under subparagraph (II) of this paragraph (b) may be overcome only by clear and convincing evidence. A hearing on this matter shall not take place until the finding of the independent medical examiner has been filed with the division. (Emphasis added.)

E. The purpose of a DIME under § 8-42-107(8)(b)(II) is to make an independent determination of whether the claimant reached MMI Consequently, pursuant to § 8-42-107(8)(b)(II) and (III), C.R.S, once a twenty-four-month DIME physician reaches a finding regarding MMI and permanent impairment and the finding has been filed with the Division of Workers' Compensation, a hearing may take place. The twenty-four-month DIME physician's finding on MMI and permanent impairment is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *York v. Manpower International*, Inc., W.C. No. 4-837-612-04 (May 4, 2016), aff'd 16CA0877 (Jan. 26, 2017)(NSOP). “Clear and convincing” evidence has been defined as evidence which demonstrates that it is highly probable the DIME physician's opinion is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether a party has overcome the DIME by clear and convincing evidence is one of fact for the ALJ's determination. Id. The standard of review is whether the ALJ's findings of fact are supported by substantial

evidence in the record. Section 8-43-301(8), C.R.S; *Metro Moving & Storage Co. v. Gussert, supra*.

F. Maximum Medical Improvement (MMI) is defined as "a point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. 2004; *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002).

Ambiguity of the DIME Report

G. If a physician issues ambiguous or conflicting reports concerning whether or not the claimant has reached maximum medical improvement, the ALJ may resolve the issue as a matter of fact by determining the doctor's true position. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2003). Similarly, the question of whether the authorized treating physician has issued conflicting or ambiguous opinions on maximum medical improvement is itself a question of fact. *See Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385, 388 (Colo. App. 2000). An ALJ must resolve ambiguities in DIME physician's report regarding whether claimant is at MMI. *MGM Supply Co. v. Indus. Claims Appeals Office*, 62 P.3d 1001, 1005 (Colo.App. 2002). In determining the DIME physician's opinion, the ALJ may consider all of the DIME physician's reports and testimony. *See Lambert & Sons, Inc..v. Industrial Claim Appeals Office*, 984 P.2d 656 (Colo. App. 1998).

H. When assessing whether a Claimant is at MMI, and whether the Claimant has suffered injury-related impairment, it is the DIME physician's responsibility to determine the cause or causes of the claimant's reported condition(s). *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). In some cases, the medical records and other information submitted to the DIME physician may prove inadequate to resolve the issues and the DIME physician may request that additional tests or procedures be performed to clarify causation. Indeed, Rule of Procedure XIV (L)(4)(a), 7 Code Colo. Reg. 1101-3 at 58-59, contemplates that the DIME physician's functions may require additional tests and establishes a mechanism for performance of "non-routine procedures." Thus, we have held that if the DIME physician recommends additional testing to complete the DIME process an ALJ <u>may</u> conclude that such testing is not inconsistent with MMI because it is not primarily performed for the purpose of treatment or diagnosis, but to assist the DIME physician in performing his evidentiary role. *See Mandel v. Sears*, W.C. No. 4-575-413 (January 24, 2005); *Beede v. Allen Mitchek Feed & Grain*, W.C. No. 4-317-785 (April 20, 2000).

I. The issue in this instant case is whether Dr. Volz unambiguously rendered an MMI determination. The ALJ finds that Dr. Volz *unambiguously found Claimant <u>not</u> to be at MMI.* The testing that Dr. Volz believed was warranted was squarely for diagnosis, and ergo for subsequent treatment, of Claimant. It was not to simply assist the DIME physician in performing his evidentiary role. Dr. Volz either wanted the following tests done, **or** wanted to see the results if they had been already performed: FRC, other lung volume tests, DLCO related tests, High Resolution CT

chest scan, and exercise related tests to see if Claimant's oxygen levels dropped. Of course there was not yet an objective diagnosis related to this industrial accident. Claimant was refused testing. As things turned out, Dr. Volz was largely vindicated, as Dr. Krefft-trying to conserve resources for Claimant through his private insurance-ordered a battery of tests, including a high-resolution CT scan. A chest X-ray would not provide sufficient resolution. Since an accurate diagnosis was not yet possible, of course MMI was not yet determinable. Since MMI was not determinable, *the DIME report cannot possibly be interpreted to mean that Claimant was at MMI.*

Overcoming the DIME Report / MMI

J. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A mere difference of opinion between physicians fails to constitute error. *See Gonzales v. Browning Farris Indust. of Colorado*, W.C. No. 4-350-356 (ICAO March 22, 2000).

K. At most, what Respondents have presented is a good faith difference in medical opinions between Drs. Schwartz and Ridings on the one hand, and Drs. Volz and Krefft on the other. Given their respective expertise and time commitment, the ALJ finds Dr. Volz' report, along with Dr. Krefft's report and testimony to be ***more persuasive*** than the report of Dr. Schwartz, along with the report and testimony of Dr. Ridings. Neither Claimant's shortcomings as a medical historian, nor his occasional penchant for exaggeration do not invalidate the medical conclusions they have drawn. Other medical providers along the way-on this respiratory issue-do not play significantly in this analysis. Given that, it certainly cannot be said that Dr. Volz' DIME report is highly probably incorrect. Respondents have failed to overcome this DIME report.

L. Claimant is not at MMI. He cannot be said to be at MMI until the DIME physician has had sufficient information to make an accurate diagnosis of his condition, then Claimant must receive the needed treatment by his ATP. Only then can one determine when MMI might be reached.

Claimant's Other Requests for Relief

M. In his position statement, Claimant also seeks to have Dr. Krefft designated as an ATP, costs reimbursed for his treatment at National Jewish Hospital, and TTD and TPD benefits. While perhaps meritorious, these claims are not ripe for determination in this Order. Both parties at hearing clearly delineated the sole issue to overcoming the DIME report on determining MMI. The ALJ finds, based upon the entire record, that these other issues were not subsequently tried by consent. Further,

Respondents only addressed the two DIME issues in their position statements. To order further relief at this time would be patently inequitable, without the opportunity to fully litigate these issues.

ORDER

It is therefore Ordered that:

1. Dr. Volz DIME report is unambiguous; he found that Claimant is not yet at MMI.

2. The DIME report of Dr. Volz has not been overcome on the issue of MMI.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 19, 2018

Colorado Springs, Colorado 80906

ISSUES

- Did Respondents overcome the DIME by clear and convincing evidence regarding MMI and impairment?

- If Respondents did not overcome the DIME, have Respondent shown they complied with the DIME's recommendations and Claimant should return for a follow-up DIME?

- Has Claimant proven by a preponderance of the evidence he is entitled to a change of physician to Dr. Phillip Engen or Dr. Jeffrey Kesten?

FINDINGS OF FACT

1. Claimant worked for Employer as a "repo man." He suffered admitted injuries to his bilateral upper extremities on August 26, 2015 while lifting dollies.

2. Claimant's treatment has been managed and directed by providers at Concentra Medical Centers, including Dr. Bryan Counts and Dr. Albert Hattem.

3. Claimant was initially diagnosed with bilateral "sprains," and treated with medication and therapy. When he did not improve, he was referred to Dr. Kulvinder Sachar for a surgical evaluation. Bilateral upper extremity MRIs ordered by Dr. Sachar were normal, except for a small area of subchondral marrow edema across the left anterolateral radial head. Dr. Sachar saw no indication for surgery and suggested referral to a physiatrist. He injected Claimant's left radial tunnel, which was not helpful.

4. Claimant next saw Dr. McCranie, who diagnosed bilateral epicondylitis and recommended EMG/NCV testing. The testing showed no abnormalities, so Dr. McCranie recommended additional occupational therapy and acupuncture. Neither modality provided significant relief.

5. Claimant saw Dr. In Sok Yi for a second surgical opinion on May 3, 2016. Dr. Yi injected Claimant's left elbow, which did not help. He ordered repeat MRIs, which showed mild to moderate chronic common extensor tendinopathy. Dr. Yi did not recommend surgery. He recommended a platelet-rich plasma (PRP) injection in the left elbow, which was ineffective.

6. Claimant started seeing Dr. Hattem in November 2016. Claimant reported ongoing severe pain and limitation of his upper extremities. Dr. Hattem opined Claimant had significant pain behaviors and minimal objective findings but recommended testing for possible complex regional pain syndrome (CRPS).

7. A thermogram conducted in February 2017 by Dr. George Schakaraschwili was consistent with bilateral CRPS. Dr. Schakaraschwili then performed QSART testing, which showed a "high probability" of bilateral CRPS. Dr. Schakaraschwili opined Claimant met the criteria for confirmed CRPS per the MTGs. He recommended bilateral stellate ganglion blocks and medications such as gabapentin (Neurontin), pregabalin (Lyrica), or duloxetine (Cymbalta).

8. Dr. Hattem referred Claimant to Dr. Ronald Carbaugh for a psychological evaluation and treatment. Dr. Carbaugh evaluated Claimant in April 2017 and diagnosed an injury-related adjustment disorder. He recommended biofeedback and cognitive behavioral therapy for "better pain and frustration management."

9. Claimant attended one additional session with Dr. Carbaugh but complained about the distance between Dr. Carbaugh's office and his home. Dr. Carbaugh recommended he discuss the issue with Dr. Hattem, but Claimant never returned for further treatment. He testified that he had no "rapport" with Dr. Carbaugh.

10. Claimant saw Dr. John Sacha in May 2017, who recommended a stellate ganglion block and a skin desensitization program. Dr. Sacha opined if Claimant declined stellate ganglion blocks he would be at MMI.

11. Claimant returned to Dr. Hattem on July 13, 2017 and said he did not want to pursue sympathetic blocks. Dr. Hattem inferred Claimant was not interested in psychological follow-up given that he not returned to Dr. Carbaugh. Since Claimant was unwilling to try stellate ganglion blocks, Dr. Hattem placed him at MMI with a 15% whole person impairment. Dr. Hattem recommended maintenance care, primarily relating to medication management.

12. On August 21, 2017, Respondents filed a Final Admission of Liability (FAL) based on Dr. Hattem's report. Claimant timely objected and requested a DIME.

13. Respondents obtained video surveillance of Claimant in December 2017 eating at a restaurant, getting into a vehicle, and entering his home. Claimant's appearance in the video was incongruous with his presentation at the hearing, which raises concern Claimant may be exaggerating the severity of his condition. But the video was brief and filmed from poor angles, making it difficult to draw definitive conclusions from these few isolated snapshots.

14. Claimant underwent a DIME with Dr. David Yamamoto on January 17, 2018. Dr. Yamamoto found Claimant was not at MMI due to "significant anxiety and depression as a result of the injury" which "have not been adequately addressed." He noted Claimant was "not comfortable" with Dr. Carbaugh but was not referred to aother psychologist for counseling. Dr. Yamomoto recommended an evaluation with a different psychologist and a referral to a psychiatrist "to help with the medication management." Dr. Yamamoto agreed with the recommendation for a stellate ganglion block, and thought Claimant may be more receptive to blocks if his anxiety and depression were better controlled. Dr. Yamamoto noted Claimant tried gabapentin with limited benefit and

suggested a trial of pregabalin or duloxetine. He also recommended evaluation by a surgeon or specialist familiar with implanting spinal cord stimulators. He assigned advisory ratings of 15% whole person for the CRPS and 8% for injury-related depression and anxiety.

15. Dr. Joseph Fillmore performed an IME for Respondents on April 5, 2018. Dr. Fillmore's practice includes evaluating patients for spinal cord stimulators and performing stimulator trials. He disagreed with Dr. Yamamoto that claimant is not at MMI. He reviewed the video which "clearly supports that [Claimant] is capable of more activity and function then was demonstrated to Dr. Yamamoto or myself." Dr. Fillmore opined Claimant was not a candidate for spinal cord stimulation but concurred with Dr. Yamamoto's recommendation for a psychiatric evaluation. Dr. Fillmore agreed with Dr. Hattem that Claimant was at MMI as of July 13, 2017.

16. Dr. Gary Gutterman performed a psychiatric IME for Respondents on May 7, 2018. Dr. Gutterman noted Claimant was experiencing significant distress relating to the disintegration of his marriage.[1] Dr. Gutterman opined Claimant's presentation at the IME was "strikingly in contrast to how the patient appeared in videotapes." Dr. Gutterman diagnosed adjustment disorder with mixed features, which he opined is "primarily related to nonemployment injury factors." Specifically, Dr. Gutterman believes Claimant's mental health issues are related to his marital difficulties and long-standing personality features. Because of the activities he viewed in the video footage, Dr. Gutterman opined Claimant was consciously embellishing his symptoms and limitations "to make himself appear more impaired."[2] Dr. Gutterman disagreed with Dr. Yamomoto that Claimant is not at MMI from a psychiatric perspective.

17. Dr. Schakaraschwili reviewed Dr. Fillmore's and Dr. Gutterman's IME reports on May 16, 2018. He opined "(1) Pt. declined stellate ganglion blocks, the most appropriate next step in treatment for CRPS, therefore at MMI. (2) Poor candidate for SCS, a much more invasive treatment than stellate ganglion blocks, due to psych factors, expanding symptoms, and what appears to be symptom magnification."

18. Respondents proved by clear and convincing evidence Claimant is at MMI for his physical condition.

19. Respondents failed to prove by clear and convincing evidence Claimant is at MMI for his psychological condition.

[1] Claimant's marital problems became prominent in late 2017.

[2] Dr. Fillmore and Dr. Gutterman observed more extensive footage than was submitted at hearing. Although the ALJ has considered the doctors' impressions of the video in evaluating their opinions, the ALJ is not inclined to give substantial weight to secondhand descriptions of video without personally viewing the source material. While concerning, the brief video tendered into evidence is not sufficient to convince this ALJ that Claimant is consciously misrepresenting his symptoms. The ALJ also notes Claimant does have objective evidence of CRPS, including positive QSART and thermography.

20. Respondents failed to prove they complied with Dr. Yamamoto's recommendations regarding treatment to bring Claimant to psychological or psychiatric MMI. A follow-up DIME is premature.

21. Claimant failed to prove he is entitled to a change of physician.

CONCLUSIONS OF LAW

A. Did Respondents overcome the DIME regarding MMI?

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). In determining whether a claimant is at MMI, the DIME "inherently" must decide whether further treatment is causally related to the industrial injury, and the DIME's determination that a particular condition is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A "mere difference of medical opinion" does not constitute clear and convincing evidence that the DIME is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Respondents overcame the DIME regarding Claimant's physical condition. The ALJ agrees with Dr. Hattem, Dr. Schakaraschwili and Dr. Fillmore that Claimant's refusal to consider stellate ganglion blocks renders him at MMI from a *physical* standpoint. *E.g., Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080 (Colo. App. 1990) (a claimant's unwillingness to submit to reasonably necessary treatment supports a determination of MMI). The ALJ credits Dr. Schakaraschwili's opinion that Claimant's unwillingness to pursue stellate ganglion blocks due to fear of complications forecloses more aggressive procedures such as neurostimulation. Although all invasive procedures carries some risk, stellate ganglion blocks are a well-accepted and relatively routine intervention for CRPS, and far less risky than a neurostimulator trial or permanent implant. Dr. Yamamoto did not actually recommend neurostimulation but merely recommended an evaluation. Since Claimant is not an appropriate candidate for a spinal cord stimulator, an evaluation is pointless and not a persuasive basis for a finding of not-at-MMI.

Nor does the need to adjust Claimant's medications support Dr. Yamamoto's opinion Claimant is not at MMI. Medications are unlikely to be "curative" and are primarily intended to "relieve" Claimant's symptoms. The recommendations to try Lyrica and Cymbalta are reasonable but do not preclude a finding of MMI. Based on the evidence

presented, the ALJ finds Dr. Yamamoto's determination Claimant is not at MMI for his physical condition is highly probably incorrect.

But that is not the end of the analysis, because the ALJ is persuaded by Dr. Yamamoto's opinion Claimant is not at MMI from a *psychological* perspective. Dr. Carbaugh previously opined Claimant would benefit from biofeedback and cognitive-behavioral therapy to address his injury-related anxiety and depression and help manage his pain. Although Claimant did not follow through with Dr. Carbaugh's recommendations, the ALJ gives Claimant the benefit of the doubt that he did not "connect" with Dr. Carbaugh and did not fully appreciate his need for therapy at that time. His perspective in that regard appears to have changed, as evidenced by his willingness to pay for therapy out of his own pocket.

Dr. Gutterman's opinion that Claimant's anxiety and depression are attributable to non-injury-related factors is not persuasive. Claimant had documented injury-related anxiety and depression issues well before the marital difficulties began. Dr. Hattem was concerned about Claimant's mental status in February 2017, and Dr. Carbaugh recommended treatment for an "adjustment disorder" in April 2017. Claimant did not learn of his wife's infidelity until December 2017. Depression and anxiety are understandable and predictable reactions to chronic pain. The mere fact that personal issues may contribute to Claimant's anxiety and depression does not diminish or negate the injury's causal role in his need for mental health treatment.

As found, Respondents failed to overcome Dr. Yamamoto's determination that Claimant is not at MMI for his psychological condition. Although Respondents overcame the DIME *in part*, MMI is not "divisible," and Respondents must prove Claimant is at MMI for "each component of the injury." *Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010); *Lozano v. Alvarados, Inc*., W.C. No. 4-904-266-06 (February 27, 2017).[3] It necessarily follows Respondents failed to overcome the DIME's ultimate conclusion Claimant is not at MMI.

B. Have Respondents complied with the DIME's recommendations?

Respondents argue that, if they did not overcome the DIME, they "complied" with the DIME's recommendations by referring Claimant to Dr. Fillmore and Dr. Gutterman. The ALJ disagrees. IMEs cannot substitute for evaluations on referral from ATPs in the normal progression of authorized treatment. Once the employer exercises its initial right to choose the treating physician, the respondents' ability to unilaterally choose a

[3] The ALJ acknowledges when a DIME's whole person *rating* is overcome "in any respect" the issue of *impairment* becomes a factual question for the ALJ under the preponderance standard. *E.g., Deleon v. Whole Foods Market*, W.C. No. 4-600-477 (November 16, 2008). But as explained in *Lozano, supra*, the analysis is different with respect to MMI. In any event, the burden of proof is not dispositive here. Even if the ALJ were applying the preponderance standard, Claimant would still prevail because the ALJ is persuaded Claimant is not at MMI from a psychological standpoint.

claimant's providers comes to an end, and all subsequent referrals must be under the direction of the ATPs.[4]

This principle is evident in the structure of the Act and the case law. For instance, § 8-43-404(5)(a) allows the employer to designate a treating physician in "in the first instance," but § 8-43-503(3) precludes any party from "dictating" to any ATP the type or duration of treatment. After treatment has commenced, additional physicians must be within a "chain of referrals" made "in the normal progression of authorized treatment." *E.g., Cabela v. Industrial Claim Appeals Office*, 198 P.3d 1277, 1281 (Colo. App. 2008); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985). This limitation on unilateral direction also applies where the right of first selection passed to the claimant. *E.g., Pickett v. Colorado State Hospital*, 513 P.2d 228 (Colo. 1973) (once the claimant exercises the right of selection, he cannot change physicians without permission from the respondents or the Division).

Since the ALJ has upheld the DIME's determination regarding psychological MMI, Claimant must return to Dr. Hattem to implement the DIME's recommendations, including referrals to a psychiatrist, and a psychologist other than Dr. Carbaugh. A follow-up DIME is premature.

C. Did Claimant prove entitlement to a change of physician?

Section 8-43-404(5)(a)(VI)(A) allows a claimant to obtain a change of physician "upon a proper showing" to an ALJ. The statute does not define a "proper showing," and the ALJ has discretion to decide if the circumstances justify a change of physician. *Jones v. T.T.C. Illinois, Inc*., W.C. No. 4-503-150 (May 5, 2006). The ALJ should exercise this discretion with an eye toward ensuring the claimant is receiving reasonably necessary treatment while protecting the respondents' legitimate interest in being apprised of treatment for which they may ultimately be held liable. *Landeros v. CF & I Steel*, W.C. No. 4-395-315 (October 26, 2000). The ALJ may consider a variety of factors including whether the claimant has received adequate treatment, whether the claimant trusts the ATP, the level of communication between the claimant and the ATP, the ATP's expertise and skill at managing a condition, and the ATP's willingness to provide additional treatment. *E.g*., *Carson v. Wal-Mart*, W.C. No. 3-964-07 (April 12, 1993); *Merrill v. Mulberry Inn, Inc*., W.C. No. 3-949-781 (November 1995); *Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (December 5, 1995); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (August 23, 1995). An ALJ is not obliged to approve a change of physician because of a claimant's personal reasons, including mere dissatisfaction with the ATP. *McCormick v. Exempla Healthcare*, W.C. No. 4-594-683 (November 27, 2007).

As found, Claimant failed to prove a basis for a change of physician. The treatment provided by Concentra has been reasonable and appropriate, and Dr. Hattem's hands were largely tied by Claimant's unwillingness to try sympathetic blocks. There is no

[4] Nothing prohibits the parties from mutually agreeing to other physicians without a referral, but that was not the case here.

persuasive reason to assume Dr. Hattem will refuse to refer Claimant for mental health treatment or adjust his medications as recommended by the DIME.

The primary basis for Claimant's request to change physicians is his hope another doctor will offer something that has not been previously recommended. Although Claimant is understandably hoping for treatment to resolve his condition, CRPS is notoriously difficult to treat, with few effective options. Claimant has not been evaluated by either physician he proposes, and does not know whether they would even accept him as a patient at this late stage of his claim. In any event, Claimant presented no evidence of any alternative treatment plan they might implement, and there is no persuasive evidentiary basis to conclude Dr. Kesten or Dr. Engen would provide treatment that is objectively any better — or even substantially different — than provided by Dr. Hattem.

ORDER

It is therefore ordered that:

1. Respondents' request to overcome the DIME's determination that Claimant is not at MMI is denied and dismissed.

2. Respondents provide all further treatment reasonably necessary to cure and relieve the effects of Claimant's industrial injury and bring him to MMI.

3. Respondents' request to return Claimant to Dr. Yamamoto for a follow-up DIME is denied and dismissed without prejudice as premature.

4. Claimant's request for a change of physician is denied and dismissed.

5. Any issues not determined herein are reserved for future decision.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to terminate Claimant's Temporary Total Disability (TTD) benefits effective June 23, 2017.

2. Whether Claimant has proven by a preponderance of the evidence that the medical treatment for which Yusuke Wakeshima, M.D. has requested prior authorization, including neurological evaluation by Hayley Burke, M.D., serial Doppler ultrasounds of the right upper and left lower extremities, trials of Botox injections, and a trigeminal nerve stimulator, is reasonable, necessary and causally related to Claimant's March 24, 2016 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant is a 76-year old male who worked for Employer as a Front End Manager. On March 24, 2016 he suffered admitted industrial injuries during the course and scope of his employment. When Claimant was walking with a customer to complete a propane tank exchange he slipped on an icy sidewalk, fell to the ground and struck his head.

2. After completing an Incident Report for Employer Claimant was transported by private vehicle to the North Suburban Emergency Room. He reported headaches and head pain as a result of a slip and fall at work just prior to his arrival. Claimant provided a past medical history that was significant for bile duct cancer, stroke, anemia and myocardial infarction. He also has a history of chronic kidney disease that was complicated by a right nephrectomy.

3. Following discharge from North Suburban, Claimant returned to employment until he was taken off work on June 30, 2016. On July 18, 2016 Claimant again returned to work with restrictions. However, Claimant was taken off work by Employer on March 15, 2017 due to concerns about his balance issues. On March 16, 2017 Insurer filed an Amended General Admission of Liability (GAL) acknowledging responsibility for Temporary Total Disability (TTD) benefits from March 15, 2017 until terminated.

4. On June 12, 2017 Claimant visited Authorized Treating Physician (ATP) Yusuke Wakeshima, M.D. for an examination. Dr. Wakeshima completed a WC-164 form keeping Claimant off work because "he would not be safe returning back to work with his current balance issues."

5. On March 26, 2017 the parties participated in a hearing before Administrative Law Judge (ALJ) Margot Jones. On June 23, 2017 ALJ Jones issued a Summary Order concluding that Claimant's hearing loss, dizziness and disequilibrium were not related to his March 24, 2016 industrial injuries. ALJ Jones also dismissed Claimant's request for Respondents to pay for pain medications including Oxycodone, Percocet and Norco because they were not reasonable, necessary or related to his March 24, 2016 industrial injuries.

6. On all dates subsequent to June 12, 2017 Dr. Wakeshima continued to restrict Claimant from all work activities. He commented that Claimant would be unsafe because of a "significant balance disorder."

7. On January 26, 2017 ATP Dr. Wakeshima requested prior authorization for serial Doppler ultrasound studies of the right upper extremity and left lower extremity as well as a trial of Botox injections and a trigeminal nerve stimulator. He also recommended a neurological evaluation with Hayley Burke, M.D.

8. On March 19, 2018 the parties conducted the pre-hearing evidentiary deposition of J. Carlos Cebrian, M.D. Dr. Cebrian testified that Dr. Wakeshima's referral to Dr. Burke for a neurological evaluation was not reasonable or necessary medical treatment for Claimant's March 24, 2016 industrial injuries. After conducting a physical examination and reviewing Claimant's medical records he detailed that Claimant has not had any improvement in his symptoms with any treatment. Furthermore, Claimant has already been evaluated by neurologist Fredric Zimmer, M.D. Claimant has also been evaluated and treated by Gregory Reinhardt, M.D., a physiatrist with fellowship training in brain injuries, and Kristin Mason, M.D. a physiatrist who regularly treats brain injuries. Dr. Cebrian summarized that another evaluation by another neurologist is not medically necessary.

9. Dr. Cebrian also explained that Dr. Wakeshima's request for a trial of Botox injections for Claimant was not reasonable and necessary. He remarked that Botox is used for a small subset of patients who suffer chronic migraines but have not improved with three different preventative classes of medications. Dr. Cebrian noted that Claimant has not been trialed on any preventative classes of migraine medications to warrant an attempt at using Botox. Moreover, Dr. Cebrian did not expect Claimant to obtain any benefit from Botox because of his lack of responses to prior medications.

10. Dr. Cebrian detailed that Dr. Wakeshima's request for serial Doppler ultrasounds of the right upper extremity and left lower extremity was not related to Claimant's March 24, 2016 industrial injuries. He explained that the purpose of the ultrasounds was to detect blood clots. Although physicians found a small blood clot in the brachial vein of Claimant's right arm, Dr. Cebrian reasoned that there was nothing about Claimant's March 24, 2016 mechanism of injury that would cause a blood clot in the right upper extremity or left lower extremity. Furthermore, Dr. Cebrian rejected Dr. Wakeshima's explanation that Claimant may have suffered blood clots as a result of immobility after his March 24, 2016 industrial accident. He detailed that blood clots typically occur when an extremity is completely immobilized after surgical intervention.

However, Claimant did not wear a brace after the March 24, 2016 accident and could move his right arm. Dr. Cebrian thus concluded that there was no medical reason for the serial Doppler ultrasounds recommended by Dr. Wakeshima.

11. Dr. Cebrian also addressed Dr. Wakeshima's recommendation for a trigeminal nerve stimulator. He explained that the device is similar to a TENS unit for the head. The patient places electrodes on his head and wears a halo to provide some kind of electrical stimulation and distract the brain. Dr. Cebrian noted that the trigeminal nerve stimulator is a relatively new device that has not been recognized by the Colorado Division of Workers' Compensation Medical Treatment Guidelines (*Guidelines*). Accordingly, Dr. Cebrian concluded that the trigeminal nerve stimulator does not constitute reasonable and necessary treatment for Claimant's March 24, 2016 industrial injuries.

12. Dr. Cebrian concluded that there is no additional medical treatment that would be reasonable and necessary to address Claimant's March 24, 2016 industrial injuries. He remarked that Claimant has reached Maximum Medical Improvement (MMI). Dr. Cebrian determined that Claimant was entitled to receive a 5% whole person impairment rating for his head injury and mild traumatic brain injury as a result of the March 24, 2016 accident.

13. Respondents have failed to demonstrate that it is more probably true than not they are entitled to terminate Claimant's TTD benefits. Respondents assert that Claimant's TTD benefits should be terminated effective June 23, 2017 because he suffered the subsequent intervening condition of a balance disorder that was not related to his March 24, 2016 industrial injuries. In fact, on June 23, 2017 ALJ Jones issued a Summary Order concluding that Claimant's hearing loss, dizziness and disequilibrium were not related to his March 24, 2016 industrial injury. Moreover, ATP Dr. Wakeshima restricted Claimant from all work activities because he would be unsafe based on a "significant balance disorder." Respondents reason that, because Claimant's inability to work for Employer was caused by balance issues unrelated to his industrial injuries, his TTD benefits should be terminated. However, an ALJ lacks authority to terminate TTD benefits absent one of the statutory conditions enumerated in §8-42-105(3)(a)-(d), C.R.S. Because Claimant has not reached MMI, returned to regular or modified employment, or received a written release to return to regular or modified employment by ATP Dr. Wakeshima, TTD benefits may not be terminated. Accordingly, Claimant's TTD benefits shall continue until terminated by statute.

14. Claimant has failed to prove that it is more probably true than not that the medical treatment for which Dr. Wakeshima has requested prior authorization, including a neurological evaluation by Dr. Burke, serial Doppler ultrasounds of the right upper and left lower extremities, trials of Botox injections and a trigeminal nerve stimulator, are reasonable, necessary and causally related to his March 24, 2016 admitted industrial injuries. Although Claimant has not contested Respondents denial of the preceding treatments, the prior authorization request from ATP Wakeshima reflects that the relatedness, reasonableness and necessity of the requested treatments are in dispute.

15. As outlined by Dr. Cebrian, Dr. Wakeshima's referral to Dr. Burke for a neurological evaluation was not reasonable or necessary medical treatment for Claimant's March 24, 2016 industrial injuries. Claimant has already been evaluated by neurologist Dr. Zimmer. He has also been examined and treated by Drs. Reinhardt and Mason for neurological concerns. Dr. Cebrian summarized that another evaluation by another neurologist is not medically necessary. Moreover, Dr. Cebrian persuasively explained that Dr. Wakeshima's request for a trial of Botox injections for Claimant was not reasonable and necessary. He remarked that Botox is reserved for a small subset of patients who suffer chronic migraines but have not improved with three different preventative classes of medications. Dr. Cebrian noted that Claimant has not been trialed on any preventative classes of migraine medications to warrant Botox treatment.

16. Dr. Cebrian detailed that Dr. Wakeshima's request for serial Doppler ultrasounds of the right upper extremity and left lower extremity was not related to Claimant's March 24, 2016 industrial injuries. He explained that the purpose of the ultrasounds was to detect blood clots. Although physicians found a small blood clot in the brachial vein of Claimant's right arm, Dr. Cebrian reasoned that there was nothing about Claimant's March 24, 2016 mechanism of injury that would cause a blood clot in the right upper extremity or left lower extremity. He also noted that, because Claimant's right arm was not immobilized after the March 24, 2016 accident, a blood clot was unlikely and there was thus no medical reason for the serial Doppler ultrasounds recommended by Dr. Wakeshima. Furthermore, Dr. Cebrian noted that the trigeminal nerve stimulator is a relatively new device that has not been recognized by the *Guidelines*. Accordingly, Dr. Cebrian persuasively concluded that the trigeminal nerve stimulator does not constitute reasonable and necessary treatment for Claimant's March 24, 2016 industrial injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

TTD Benefits

4. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

5. TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Section 8-42-107(8)(b)(I) & (II), C.R.S. provide that the initial determination of MMI is to be made by an ATP. If either party disputes the ATP's MMI determination, the claimant must undergo a Division Independent Medical Examination (DIME). The statute also provides that the ALJ lacks authority to determine MMI until there has been a medical determination of MMI by an ATP or DIME physician. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, W.C. Nos. 4-947-316-01&4-935-813-03 (ICAP, July 31, 2015); *see also Blue Mesa Forest v. Lopez,* 928 P.2d 831, 833 (Colo, App. 1996) (noting that "the initial determination of MMI shall be made by an authorized treating physician"). Finally, the ATP also determines whether a claimant's industrial injury prevents him from returning to work. *See Burns v. Robinson Dairy,* 911 P.2d 661 (Colo. App. 1995); *In Re Smith,* No. 4-733-532 (ICAP, Mar. 15, 2010).

6. As found, Respondents have failed to demonstrate by a preponderance of the evidence that they are entitled to terminate Claimant's TTD benefits. Respondents assert that Claimant's TTD benefits should be terminated effective June 23, 2017 because he suffered the subsequent intervening condition of a balance disorder that was not related to his March 24, 2016 industrial injuries. In fact, on June 23, 2017 ALJ Jones issued a Summary Order concluding that Claimant's hearing loss, dizziness and disequilibrium were not related to his March 24, 2016 industrial injury. Moreover, ATP Dr. Wakeshima restricted Claimant from all work activities because he would be unsafe based on a "significant balance disorder." Respondents reason that, because Claimant's

inability to work for Employer was caused by balance issues unrelated to his industrial injuries, his TTD benefits should be terminated. However, an ALJ lacks authority to terminate TTD benefits absent one of the statutory conditions enumerated in §8-42-105(3)(a)-(d), C.R.S. Because Claimant has not reached MMI, returned to regular or modified employment, or received a written release to return to regular or modified employment by ATP Dr. Wakeshima, TTD benefits may not be terminated. Accordingly, Claimant's TTD benefits shall continue until terminated by statute.

Medical Benefits

7. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

8. As found, Claimant has failed to prove by a preponderance of the evidence that the medical treatment for which Dr. Wakeshima has requested prior authorization, including a neurological evaluation by Dr. Burke, serial Doppler ultrasounds of the right upper and left lower extremities, trials of Botox injections and a trigeminal nerve stimulator, are reasonable, necessary and causally related to his March 24, 2016 admitted industrial injuries. Although Claimant has not contested Respondents denial of the preceding treatments, the prior authorization request from ATP Wakeshima reflects that the relatedness, reasonableness and necessity of the requested treatments are in dispute.

9. As found, as outlined by Dr. Cebrian, Dr. Wakeshima's referral to Dr. Burke for a neurological evaluation was not reasonable or necessary medical treatment for Claimant's March 24, 2016 industrial injuries. Claimant has already been evaluated by neurologist Dr. Zimmer. He has also been examined and treated by Drs. Reinhardt and Mason for neurological concerns. Dr. Cebrian summarized that another evaluation by another neurologist is not medically necessary. Moreover, Dr. Cebrian persuasively explained that Dr. Wakeshima's request for a trial of Botox injections for Claimant was not reasonable and necessary. He remarked that Botox is reserved for a small subset of patients who suffer chronic migraines but have not improved with three different

preventative classes of medications. Dr. Cebrian noted that Claimant has not been trialed on any preventative classes of migraine medications to warrant Botox treatment.

10. As found, Dr. Cebrian detailed that Dr. Wakeshima's request for serial Doppler ultrasounds of the right upper extremity and left lower extremity was not related to Claimant's March 24, 2016 industrial injuries. He explained that the purpose of the ultrasounds was to detect blood clots. Although physicians found a small blood clot in the brachial vein of Claimant's right arm, Dr. Cebrian reasoned that there was nothing about Claimant's March 24, 2016 mechanism of injury that would cause a blood clot in the right upper extremity or left lower extremity. He also noted that, because Claimant's right arm was not immobilized after the March 24, 2016 accident, a blood clot was unlikely and there was thus no medical reason for the serial Doppler ultrasounds recommended by Dr. Wakeshima. Furthermore, Dr. Cebrian noted that the trigeminal nerve stimulator is a relatively new device that has not been recognized by the *Guidelines*. Accordingly, Dr. Cebrian persuasively concluded that the trigeminal nerve stimulator does not constitute reasonable and necessary treatment for Claimant's March 24, 2016 industrial injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

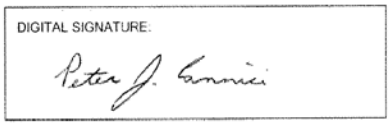
1. Respondents' request to terminate Claimant's TTD benefits effective June 23, 2017 is denied and dismissed.

2. Claimant's request for Respondents to pay for a referral to Dr. Burke, serial Doppler ultrasounds of the right upper and left lower extremities, trials of Botox injections, and a trigeminal nerve stimulator is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 23, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that the cervical surgery performed by Dr. James Gebhard on April 11, 2018 was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 18, 2015 work injury.

- Whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits beginning February 28, 2018 and ongoing until terminated by law.

FINDINGS OF FACT

1. The claimant has been employed with the employer since November 2002 as an equipment operator. While at work on November 18, 2015, the claimant slipped on ice and fell.

2. The claimant initially received medical treatment at Uncompahgre Medical Center on November 19, 2015. At that time, the claimant reported pain in his neck with lower back pain. Dr. Heather Linder diagnosed neck strain and muscle spasm. Dr. Linder prescribed Flexeril and recommended ibuprofen and ice. Dr. Linder also placed claimant on work restrictions of no lifting, pushing, or pulling over 20 pounds. Thereafter, the claimant continued to report neck and shoulder pain. The claimant testified that he underwent physical therapy, but it did not seem to help his symptoms. On December 3, 2015 claimant's work restrictions were increased to no lifting, pushing, or pulling over 50 pounds.

3. On January 8, 2016, the claimant was seen at Uncompahgre Medical Center by Robin Richards, PA-C. Ms. Richards ordered a magnetic resonance image (MRI) of the claimant's cervical spine. On January 14, 2016, the cervical spine MRI showed no acute abnormality with multilevel mild degenerative disease and canal stenosis.

4. The claimant returned to Ms. Richards on January 27, 2016. At that time, Ms. Richards noted that there were no findings on MRI to correlate to the claimant's symptoms or to warrant a referral to neurosurgery. On February 26, 2016, the claimant was released to return to full duty work with no restrictions. However, the claimant continued to report neck and shoulder pain and was referred to Spine Colorado for consultation.

5. On May 19, 2016, the claimant was seen at Spine Colorado by Dr. James Santos. On that date, Dr. Santos ordered and reviewed imaging of the claimant's cervical spine. Based upon his review, Dr. Santos noted mild degenerative disc disease

in the claimant's cervical spine. Dr. Santos recommended left medial branch blocks at C6-7. Dr. Santos also noted that if the medial branch blocks were not successful, he would recommend radiofrequency ablation.

6. The recommended medial branch blocks at left C6-7 were administered by Dr. Santos on May 27, 2016. Thereafter on June 27, 2016, Dr. Santos administered radiofrequency ablation of the left C6 and C7 medial branch nerves.

7. On August 1, 2016, the claimant returned to Dr. Santos and reported that following the ablation procedure he had 100 percent pain relief in his neck for four to five days. Although the pain had returned, it was less than the pain prior to the procedure. The claimant also reported to Dr. Santos instances of dizziness and nausea with certain movements. Dr. Santos opined that the claimant had positional vertigo and referred him for an ear, nose, and throat (ENT) evaluation.

8. On August 3, 2016, the claimant was seen by Dr. Philip Wiley for ENT consultation. Dr. Wiley determined that the claimant had some hearing loss, but no evidence of vestibular pathology causing imbalance. Dr. Wiley opined that the claimant's symptoms were due to either cervical neck or post concussive syndrome.

9. On September 26, 2016, the claimant returned to Dr. Santos and reported that he had attended physical therapy (including myofascial release, dry needling, manual therapy, and an exercise program) and he had obtained 30 percent relief in his pain symptoms. On that date, Dr. Santos administered a trigger point injection. In addition, Dr. Santos recommended that the claimant undergo left C5-6 and C7-T1 intra-articular steroid injections, for diagnostic and therapeutic purposes. On October 3, 2016, Dr. Santos administered a left C7-T1 intra-articular facet joint injection.

10. Dr. Santos referred the claimant to Dr. Mitchell Burnbaum for a neurological consultation. The claimant was first seen by Dr. Burnbaum on October 19, 2016. At that time, Dr. Burnbaum noted that the claimant had no evidence of root compression or cord injury, and no evidence of vestibular injury. Dr. Burnbaum opined that further neurological workup was not necessary. Dr. Burnbaum recommended that the claimant obtain chiropractic treatment and receive a trigger point injection to the medical scapula. Dr. Burnbaum further opined that the claimant was able to return to work at full capacity.

11. On November 14, 2016, the claimant returned to Dr. Santos and reported that he received pain relief of 50 to 60 percent following the October 3, 2016 injection, but that relief lasted only two to three hours and had returned to baseline. On that same date, Dr. Cyril Bohachevsky administered left C7-T1 and T1-2 facet joint blocks.

12. Thereafter, the claimant was seen by Dr. Brittany Matsumura on March 1, 2017. Dr. Matsumura diagnosed the claimant with neck pain, cervical facet joint pain, musculoskeletal pain, and isolated cervical dystonia and recommended Botox injections to address the claimant's neck spasms. The recommended Botox injections were

administered on March 22, 2017. The claimant testified that his neck pain was worse following the Boxtox injections.

13. Subsequently, Dr. James McLaughlin became the claimant's authorized treating physician (ATP) for this claim. The claimant was first seen by Dr. McLaughlin on May 22, 2017. The claimant reported that his balance issues had resolved, but he continued to have neck pain, fatigue, headaches, lightheadedness, and dizziness. Dr. McLaughlin opined that cervical surgery was not likely to be helpful because the claimant did not have radicular issues. At that time, Dr. McLaughlin recommended MRIs of the claimant's brain and left shoulder as well as an x-ray of the claimant's thoracic spine, and a laboratory evaluation. On June 12, 2017, Dr. McLaughlin noted that the claimant's brain MRI was normal, the left shoulder MRI was "fairly normal", and the lab work was normal.

14. On August 23, 2017, the claimant underwent a functional capacity evaluation (FCE) with Marty Haraway, OTR. Ms. Haraway opined that the claimant was able to sit for four to five hours; bend, squat, kneel, and crawl with no limits; lift up to 75 pounds occasionally; and up to 50 pounds frequently. To address the claimant's headache and neck symptoms, Ms. Haraway recommended that the claimant adjust his vehicle armrest; drop his arms at his sides; use mirrors when driving; and take Motrin at the onset of a headache.

15. On July 25, 2017, the claimant was first seen by Todd Ousley, PA-C with Rocky Mountain Orthopaedic Associates. At that time, the claimant reported fairly severe pain in his neck and into his left shoulder. Mr. Ousley noted that the claimant had no numbness or tingling in his arms. Mr. Ousley also noted that the imaging showed no significant central or spinal stenosis.

16. On January 23, 2018, an MRI of the claimant's cervical spine showed mild to moderate canal stenosis at the C3-4, C4-5, and C5-6 levels. The MRI also showed mild right foraminal narrowing at C3-4 and C4-5 with moderate left foraminal narrowing at C5-6.

17. The claimant returned to Rocky Mountain Orthopaedic Associates on February 22, 2018 and was seen by Dr. James Gebhard. At that time, the claimant reported issues with balance and "giving way" of the right knee. The claimant also reported that his neck pain was 8 to 9 out of 10 and his shoulder and arm symptoms were 7 to 8 out of 10. Dr. Gebhard noted that the most recent MRI showed that central stenosis at the C4-5 and C5-6 levels had progressed from mild to moderate. Dr. Gebhard opined that there was evidence of cervical myelopathy. Following this exam, Dr. Gebhard and Dr. McLaughlin determined that the claimant should be seen by Dr. Burnbaum for further neurological consultation and consideration of cervical decompression of the cervical stenosis.

18. On February 23, 2018, the claimant spoke with Dr. McLaughlin by telephone and reported that his right leg was giving out on him. Based upon the claimant's reports Dr. McLaughlin assessed cervical injury with concerns regarding

cervical myelopathy and placed the claimant on a no work status. The claimant testified that he has not worked for the employer, or for any other employer, since February 23, 2018. The claimant also testified that because of weakness in his right leg he began using a cane in 2018.

19. On February 26, 2018, the claimant again returned to Dr. McLaughlin. At that time, the claimant reported that his right leg was not giving out as much. In addition, the claimant reported that he felt that he has to hold his bladder "a little bit" and felt some urgency, with no bladder incontinence. This is the first report in the medical records of bladder related issues. The medical records indicate that prior to this date, the claimant repeatedly denied bladder incontinence at his medical appointments.

20. On March 1, 2018, the claimant returned to Dr. Burnbaum. At that time, Dr. Burnbaum noted that the claimant's neurological exam was "essentially normal". In addition, Dr. Burnbaum conducted (EMG) testing and noted no abnormalities. Dr. Burnbaum also noted that the MRI taken in January 2018 showed that the claimant's cervical cord was unremarkable. Although Dr. Burnbaum noted that the claimant exhibited no difference from the prior exam in October 2016, he described the claimant's gait as "very bizarre".

21. The claimant was also seen by Dr. Gebhard on March 1, 2018. At that time, Dr. Gebhard noted that the claimant's cervical stenosis was moderately severe and significant. Dr. Gebhard recommended that the claimant undergo an anterior cervical discectomy to decompress the spinal canal at C4-5 and C5-6.

22. On March 7, 2018, Dr. Wallace Larson performed a review of the claimant's medical records and opined that the claimant's need for cervical surgery is related to the natural progression of the preexisting degenerative condition in his cervical spine and not due to the work injury. Dr. Larson also noted that although the claimant's symptoms suggest myelopathy, the results of the cervical MRI and EMG testing do no support that diagnosis. Based upon Dr. Larson's opinion, the respondent denied the surgery recommended by Dr. Gebhard.

23. On March 9, 2018, Dr. McLaughlin referred the claimant to Dr. Caleb Stepan for a urological consultation. Dr. McLaughlin also recommended that the claimant's personal medical provider Kenneth Jenks, PA, evaluate the claimant for myasthenia gravis.

24. On March 13, 2018, the claimant was seen by Dr. Stepan. Dr. Stepan noted that the claimant had a normal urinalysis and opined that the claimant's pathology was neurologic.

25. At the recommendation of Dr. McLaughlin, Mr. Jenks, PA, with the Basin Clinic, performed and facilitated laboratory studies related to myasthenia gravis. On March 20, 2018, Dr. McLaughlin noted that he had received the laboratory testing results from the Basin Clinic, which were negative for myasthenia gravis.

26. Despite the respondent's denial, the claimant elected to proceed with the recommended surgery. On April 11, 2018, Dr. Gebhard performed a C4-5 and C5-6 cervical disc replacement.

27. Following the surgery, the claimant was seen by Dr. McLaughlin on May 16, 2018. At that time the claimant reported reduced neck pain, no leg weakness, no bladder incontinence, and no further need for a cane. Dr. McLaughlin opined that the claimant's need for the surgery was related to the November 18, 2015 work injury.

28. The claimant testified that following the April 11, 2018 surgery he has had improvement in his symptoms. Specifically, the claimant testified that he has reduced pain and improved balance which has resulted in him no longer needing a cane to walk.

29. At the request of the respondent, the claimant attended an independent medical examination (IME) with Dr. B. Andrew Castro on May 23, 2018. In connection with the IME, Dr. Castro reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his June 6, 2018 IME report, Dr. Castro opined that the claimant suffered a cervical sprain/strain at the time of the November 18, 2015 injury. Dr. Castro also opined that the claimant's cervical symptoms and need for surgery were not related to the work injury. In support of this opinion, Dr. Castro noted that the claimant's myelopathy symptoms did not begin until over two years after the work injury. Dr. Castro's testimony by deposition was consistent with his written report.

30. The ALJ credits the medical records and the opinions of Drs. Larson and Castro over the conflicting opinion of Dr. McLaughlin and finds that the claimant's cervical symptoms are not related to the November 18, 2015 work injury. The January 2016 cervical MRI showed no acute abnormality with only mild degenerative disease and canal stenosis. It was two years later that the claimant developed myelopathy and a progression from mild to moderate stenosis as evidenced by the January 2018 MRI. The claimant has failed to demonstrate that it is more likely than not that the claimant's cervical symptoms are related to the November 18, 2015 work injury. Therefore the ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that the surgery performed by Dr. Gebhard on April 11, 2018 cured and relieved the claimant from the effects of the work injury.

31. The ALJ credits the medical records and the opinions of Drs. Larson and Castro and finds that the claimant has failed to demonstrate that it is more likely than not that the claimant is entitled to TTD benefits. Dr. McLaughlin's placement of a "no work" restriction on the claimant on February 23, 2018 is related to the claimant's cervical myelopathy. As the myelopathy is not related to the November 18, 2015 work injury, the ALJ finds that the claimant has failed to demonstrate that wage loss beginning on that date is related to the original work injury. On the contrary, the claimant's inability to work and related wage loss beginning on February 23, 2018 is related to his cervical myelopathy.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, the claimant has failed to demonstrate that the April 11, 2018 cervical surgery is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 18, 2015 work injury. As found, medical records and the opinions of Drs. Larson and Castro are credible and persuasive.

5. To prove entitlement to temporary total disability (TTD) benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he or she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by a claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that a claimant establish physical disability through a medical

opinion of an attending physician; a claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair a claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

6. As found, the claimant has failed to demonstrate that the wage loss he has experienced since February 23, 2018 is related to his work injury. As found, the claimant is not entitled to TTD benefits. As found, the medical records and the opinions of Drs. Larson and Castro are credible and persuasive.

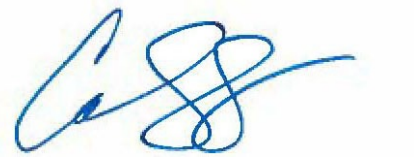
ORDER

It is therefore ordered that:

1. The claimant's request that the respondent pay for the April 11, 2018 cervical surgery is denied and dismissed.

2. The claimant's claim for temporary total disability (TTD) benefits beginning February 23, 2018 is denied and dismissed.

3. Dated: July 24, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS STATE OF COLORADO

WORKERS' COMPENSATION NO. WC 5-065-188-001

ISSUES

- Whether Claimant has proven by a preponderance of the evidence that she sustained an injury arising out of and occurring within the course of her employment with Respondent.

- Whether Claimant has proven by a preponderance of the evidence that she is entitled to an MRI of her right lower extremity.

FINDINGS OF FACT

1. At all relevant times, Claimant worked as a customer service clerk for Employer, a large grocery store. Claimant's job duties included waiting on customers at the customer service desk, selling cigarettes and lottery tickets, processing returns of grocery items, and working the cash.

2. On December 24, 2017, as the store was closing, Claimant closed out her cash register and walked around the customer service counter to give her cash register drawer to her supervisor, Mike Bemis. While she was walking, Claimant felt her right calf muscle tighten "very, very tight." She then heard a loud pop and felt a sharp pain in the back of her right knee.

3. Claimant then unlocked the office door for her supervisor and quickly walked to the back of the store to obtain a grocery item for her personal use. While walking to the "U-scan" cash register, Claimant felt discomfort to the back of her right knee and upper calf area. That evening, Claimant's right knee/upper calf began to swell and became painful.

4. Claimant reported the injury to Employer on December 26, 2017. Claimant sought treatment from Concentra Urgent Care, where a physician's assistant diagnosed a strain of her calf muscle and rupture of the right plantaris tendon.

5. An ultrasound of Claimant's right knee and right calf on January 15, 2018, showed a likely torn plantaris tendon.

6. Occupational Medicine physician John R. Burris, M.D., performed an Independent Medical Examination of Claimant on April 10, 2018. Dr. Burris testified that the plantaris muscle is a "tiny" muscle that assists with plantar flexion of the foot (pointing the toes down). The plantaris muscle is small compared to the other muscles that also control plantar flexion, and is the longest tendon in the body. The medical community sometimes refers to it as "useless" in terms of function. Further, doctors often harvest the plantaris to replace more important tendons.

7. Dr. Burris testified that Claimant's right calf ultrasound showed the proximal (closest to the bone) portion of the plantaris muscle was dystrophic, meaning that Claimant's muscle and tendon were atrophied and essentially were "dying" from disuse. Dr. Burris testified that the dystrophic changes had occurred over a period of years. The Judge finds Dr. Burris' opinion consistent with Claimant's history of a prior significant right ankle injury that required the placement of permanent hardware and resulted in a significant decrease in Claimant's physical activities.

8. Dr. Burris testified that Claimant's right plantaris tendon tore because of the dystrophy and inherent weakness of the tendon itself, and not because of Claimant's job duties required walking. Dr. Burris testified that the tear was "idiopathic" in the sense that the tendon simply "wasted away" because of Claimant's personal health condition, and that the forces generated while Claimant was walking were not the cause of the tear.

9. The Judge finds that Claimant has failed to prove it more likely than not that the plantaris muscle/tendon tear and calf muscle strain arose out of or occurred within the scope of her employment. Claimant's plantaris tendon had "wasted away" because of disuse. The cause of the muscle/tendon tear was idiopathic in the sense that it was caused by her personal health condition and not by the forces generated while walking.

10. To the extent that Claimant argues that the tear of the plantaris muscle/tendon was caused by the tightening of Claimant's calf muscle immediately before Claimant felt the pop, the Judge finds that said muscle tightening also is idiopathic to Claimant. The forces generated while walking do not cause calf muscles to tighten "very, very tight." If the tightening of the calf muscle caused Claimant's plantaris muscle/tendon to tear, Claimant's personal health condition caused the condition, not Claimant's job duties.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. § 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-42-101, C.R.S. A preponderance of the evidence is that amount which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. § 8-43-201.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

The claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any workers' compensation is awarded. § 8-41- 301(1)(c); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo.App.1997). The mere fact that an injury occurred at work does not necessarily make it compensable. *City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014).

All risks that cause injury to employees can be placed within three well-established, overarching categories: (1) employment risks, which are directly tied to the work itself; (2) personal risks, which are inherently personal or private to the employee him- or herself; and (3) neutral risks, which are neither employment related nor personal. *City of Brighton v. Rodriguez*, 318 P.3d at 502. The second category contains risks that are entirely personal or private to the employee herself. *City of Brighton*, 318 P.3d at 503. These risks include, for example, an employee's preexisting idiopathic illness or medical condition that is completely unrelated to his or her employment, such as fainting spells, heart disease, or epilepsy. *Id.*

The Administrative Law Judge finds and concludes, considering the totality of the evidence, that Claimant has failed to prove by a preponderance of the evidence that her calf muscle strain and plantaris muscle/tendon tear arose out of her employment duties with Employer. Dr. Burris testified that the plantaris tendon tore because of the dystrophy and inherent weakness of the tendon itself, and not because of Claimant's job duties requiring walking. Dr. Burris testified that the tear of the plantaris tendon was "idiopathic" in the sense that the tendon simply "wasted away" as a result of Claimant's personal health condition, and that the forces generated while Claimant was walking did not cause her the plantaris muscle/tendon tear.

ORDER

The Judge therefore orders:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

DATED: July 24, 2018

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on January 29, 2018.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a general award of medical benefits for his January 29, 2018 injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as a loader operator with duties that included moving/driving heavy pieced equipment and loading items into the vehicles of customers by operating equipment.

2. On January 29, 2018 Claimant was in Employer's office filling out paperwork when a stool that he was sitting on collapsed causing him to fall to the ground. Claimant reported that he fell backwards, landing onto his back and left side. Claimant reported that he was unable to stand up and an ambulance was called. Claimant's supervisor was in the same office and was immediately aware of the incident.

3. UC Health EMS responded to Employer's office. They noted that they found Claimant laying supine on the floor awake and alert. Claimant reported that a leg on a stool he was sitting on gave out and he fell backward onto the floor landing on his back and left side. Claimant reported 9/10 pain and was given IV fentanyl for his pain which reduced his pain to 7/10. Claimant was transported by ambulance to the emergency room. *See* Exhibit 9.

4. At UC Health emergency room Claimant reported that he was sitting on a stool at work when one of the legs gave way and he fell backwards landing on his left buttock and low back. Claimant reported low back pain at an 8/10. Claimant denied any new neurologic symptoms such as numbness, tingling, or weakness. Claimant reported some history of chronic spine issues including a previous cervical fusion. Claimant was noted to have tenderness, bony tenderness, pain and spasm in his lumbar back on examination. A CT of Claimant's lumbar spine was performed. The impression and findings included a slight convexity left scoliosis with slight retrolisthesis of L3 on L4, diminutive L5-S1 disc space, anterior endplate spurring at L3-4, and linear lucency between the anterior endplate spurring and the anterior aspect of the L4 vertebral body. The radiologist opined that the age-indeterminate linear lucency between the anterior L4 vertebral body and anterior endplate osteophyte was favored to represent a chronic incompletely fused osteophyte and was less likely an acute fracture. However, the radiologist opined that an MRI could be utilized for underlying marrow edema if there was high concern for an acute fracture at that level. The Emergency Department physician

noted that even if it represented a fracture it would be a stable fracture and that with a normal neurologic exam, additional imaging was not felt to be necessary. Claimant was discharged with pain medications and was recommended to follow up with his primary care doctor. *See* Exhibit 10.

5. On February 1, 2018 Claimant was evaluated by Kimberly Siegel, M.D. Claimant reported that he was sitting on a bar stool doing some paperwork when one of the stool legs folded causing him to fall down to the floor landing on his left low back and left hip and that he had severe pain and could not get up. Claimant reported that things were getting worse and that his left low back pain was worse and his left hip hurt. Claimant reported that he developed left leg pain 1 or 2 days after the injury and that the leg pain ran down the lateral aspect of his left leg all the way to his foot. Claimant reported that his left foot felt cold and left leg felt weak. Claimant reported two prior cervical fusions and a prior left hip arthroscopic repair. Dr. Siegel assessed: contusion of lower back and pelvis; contusion of left hip; subjective symptoms out of proportion to mechanism of injury and objective findings; and concern for possible drug seeking behavior. Dr. Siegel planned to get an MRI of the lumbar spine to rule out herniated nuclear pulposus. Dr. Siegel counseled Claimant that opioid pain medication was not indicated for his minor mechanism of injury. He asked for a referral to pain management and she told Claimant that a pain management referral for acute pain was not indicated. Dr. Siegel opined that the injury occurred out of and in the course of employment and was probably work related. *See* Exhibit 12.

6. On February 8, 2018 Claimant was evaluated by Dr. Siegel. Claimant reported that he was unchanged to somewhat worse. Claimant reported now that he was having pain all across his low back instead of just on the left side and that his left heel hurt to put weight on it. Claimant reported continued pain all the way down the back of his left leg. Claimant reported that his neck hurt and that he had a headache and that he had pain at the left low back when he coughed and that his left foot felt cold. Claimant reported that physical therapy hurt and requested to be referred to a specialist of some kind. Dr. Siegel noted that Claimant received more Norco from an urgent care center. Claimant reported prior low back pain in 2016 and that he had physical therapy, saw a neurosurgeon, and had some injections and that it resolved. Claimant also reported two prior cervical fusions. Dr. Siegel noted that the history from physical therapy also included a history of a concussion and head injury due to motor cycle crash and a left lateral temple injury in 2006. Dr. Siegel noted that upon rising to standing Claimant grimaced and vocalized pain and was unable to attain a fully erect position and stood with his lumbosacral and thoracic sine partially flexed and knees partially flexed. Dr. Siegel reviewed the MRI that showed no evidence of acute fracture in the lumbar spine and multilevel disc and facet degenerative changes with multilevel mild neural foraminal narrowing and multilevel mild lateral recess narrowing. Dr. Siegel assessed: contusion of lower back and pelvis; contusion of left hip; left leg pain; pain of left sacroiliac joint; and pain and other subjective symptoms out of proportion to mechanism of injury and objective findings. Dr. Siegel noted that greater than 50% of the encounter was spend reviewing MRI results, reassuring Claimant that there was no significant lumbosacral spine pathology, and addressing multiple subjective complaints and their inconsistency

with the mechanism of injury, and dealing with pain management issues. Dr. Siegel recommended an MRI of the left hip to rule out internal derangement and to evaluate the cause of the left leg pain given the lumbar MRI was negative for radiculopathy. *See* Exhibit 12.

7. On February 28, 2018 Claimant was evaluated by Dr. Siegel. Claimant reported he was unchanged to modestly improved but still had stabbing pain in his low back and aching down the lateral aspect of the thigh to knee level. Claimant reported a muscular headache that he felt was coming from his neck. Dr. Siegel reviewed the MRI of the left hip that showed: moderate severity left greater than right hip joint osteoarthritis; postoperative changes from prior left hip acetabular labral repair with focal areas of metal susceptibility artifact and abnormal left acetabular labrum in morphology which may be related to the prior meniscal debridement/repair and possibility of recurrent acetabular labral tear recommended for consideration; and subchondral cyst formation within the left hip superolateral acetabulum consistent with the underlying changes of osteoarthritis. The radiologist opined that the subchondral edema and cyst formation within the superolateral acetabulum may be related to the osteoarthritis. A rim of osteophytes was found at the femoral head and neck junction. The radiologist noted that the acetabular labrum was abnormal and that while It may be partially related to prior debridement, recurrent labral tearing should also be considered. Dr. Siegel opined that it was still unclear if Claimant's high level of pain was emanating from his low back or his left hip or both. She noted that Claimant's old medical records indicated pre-existing left hip osteoarthritis, chondromalacia, and labral tear for which Claimant previously had surgery. She also noted that the records indicated that Claimant had recurrent left hip symptoms after surgery and that there was discussion of total hip replacement/arthroplasty. She also noted that the records showed left leg pain and radiation of the hip pain into the low back. Dr. Siegel opined that the prior distribution of pain was similar to Claimant's current distribution of pain. *See* Exhibit 12.

8. On March 7, 2018 Claimant was evaluated by Trenton Scott, D.C. Claimant reported pain in his low back and left hip radiating down his left leg as well as neck pain and stiffness with daily headaches. Claimant reported that he fell off a stool and landed backwards hitting his head on the ground when he fell. *See* Exhibit 11.

9. On March 16, 2018 Claimant was evaluated by Arden Mahaffey, D.O. Claimant reported low back pain with radiation into his left lower limb after falling from a stool while seated. Claimant reported that he had a history of low back pain without referral but that it had been notably exacerbated and now referred into his left lower limb along the lateral posterior aspect to his ankle. Dr. Mahaffey noted that the MRI revealed no significant stenosis but that Claimant's symptoms were suggestive of a left lumbar radiculopathy with symptoms in the L5-S1 distribution. Dr. Mahaffey recommended a lumbar epidural steroid injection at L5-S1. Claimant also reported left posterior hip pain and that he had a history of left hip pain with prior surgery. Claimant reported that he had lateral hip pain postoperatively that was chronic but that now the pain had been acutely exacerbated and combined with new pain in the posterior hip and buttock. Dr. Mahaffey recommended changes to physical therapy regimen. *See* Exhibit 13.

10. On March 21, 2018 Claimant was evaluated by Dr. Siegel. Claimant reported modest improvement and that he could arch his back a bit. Claimant reported that his left lower extremity pain receded further to the buttock and proximal thigh level when it had initially been all the way to the ankle. Claimant noted that he had a previous epidural steroid injection in 2016 that benefitted him and that he had been referred for a left L5-S1 epidural steroid injection. Claimant reported that he had an opportunity to do landscape maintenance work and requested that his restrictions be modified so he could do work. Dr. Siegel noted that Claimant was able to rise smoothly without pain behaviors to a fully erect standing position and that the pronounced pain behaviors from previous exams were absent that day. On exam Claimant had no tenderness in the low back. Dr. Siegel opined that Claimant had significant objective progress evidenced by absent pain behaviors and much improved movement/position transitions. *See* Exhibit 12.

11. On April 2, 2018 Claimant underwent an independent medical evaluation performed by Brian Shea, D.O. Claimant reported that his left hip muscles hurt, that his low back pain was better and less tight with occasional left leg radiating pain below the knee to the foot, and that his headaches were less frequent. Claimant reported that he was still unable to do recreational activities because of the deep left gluteal, piriformis, IT band pain and that prior to his injury he worked out at a gym lifting weights 3-4 times per week. Dr. Shea reviewed medical records and performed a physical examination. Dr. Shea assessed: lumbar strain, improving; left hip area muscle strain especially in the gluteal, sacrotuberous ligament and IT band tensor fascia lata complex; and past medical history of significance including two cervical fusions and significant left hip joint repair. Dr. Shea opined that Claimant had sustained a lumbar strain not ratable for impairment as Claimant had low back pain for 12 years and was returning to his baseline. Dr. Shea also opined that the left hip was a new problem and injury, involving muscle skeletal issues, as opposed to the hip joint itself. Dr. Shea noted the significant left hip joint surgical history and opined that impairment for the left hip joint was not ratable. Dr. Shea opined that Claimant was not at maximum medical improvement and recommended continued physical therapy with dry needling, massage, and a program to build up more core strength. Dr. Shea also recommended considering sacrococcygeal x-rays to see if there was a misalignment of the coccyx on the sacrum, possible trigger point injections, and opioid pain medication tapering. *See* Exhibit 8.

12. On April 4, 2018 Claimant underwent an independent medical evaluation performed by Douglas Scott, M.D. Dr. Scott issued a report on May 20, 2018. Claimant reported limitation in lower back range of motion, tightness in his lower back when walking, tightness in left buttock when bending forward, and a tight ball like fist in his left buttock after sitting for a while. Claimant reported that he was sitting on a stool at a counter and one of the stool legs folded and the stool collapsed. Claimant reported that he fell and landed on his left buttocks and lower back. Claimant reported that prior to the January 29, 2018 fall he had no back pain or limitations and that he was able to perform all the duties of the job. Claimant reported that he had a low back strain in 2016 that was treated with NSAID, epidural steroid injection, and physical therapy and that one day everything “went back aligned” and that he had no permanent work restrictions and no

impairment rating. Claimant reported that he lived in Loveland on a farm and does farm chores within his activity restrictions. Dr. Scott opined that Claimant's presumptive clinical diagnoses from the injury include: contusion of the lower back and pelvis; and contusion of the left hip. Dr. Scott noted that Claimant reported to him that his low back and left leg pain were worsening but that two days prior he reported to Dr. Shea that his low back pain was improving. Dr. Scott noted the chronic history of low back pain for at least 10 years before 2016 but that Claimant reported that before the January 29, 2018 fall he had no back pain or functional limitations. Dr. Scott assessed numerous issues that pre-dated the January 29, 2018 fall. Dr. Scott assessed the following issues after the January 29, 2018 fall: probable soft tissue contusion of the low back and left buttock, resolved; possible lumbar myofascial pain significantly improved and stable; possible temporary exacerbation of his pre-existing and underlying lumbar spondylosis with nerve root radiculitis; possible left hip musculotendinous strain, significantly improved; no evidence of acute structural injury to the lumbosacral spine; no evidence of acute discopathy or radiculopathy; initial concern expressed for possible drug seeking behavior. *See* Exhibit 29.

13. Dr. Scott opined to a reasonable degree of medical probability that Claimant's' low back pain was related to his January 29, 2018 fall and strike of the low back and left buttock area and noted that the diagnoses included contusion and strain of the lumbar spine. Dr. Scott opined that Claimant's cervical spine pain was not work related. Dr. Scott opined that Claimant's headaches were not work related. Dr. Scott opined that Claimant's left hip discomfort was not work related and noted the prior diagnosis of left hip osteoarthritis requiring injection, surgery, and anticipated left hip total replacement. Dr. Scott opined that Claimant had not reached maximum medical improvement and that Claimant had possibly temporarily exacerbated his pre-existing and underlying lumbar spondylosis with nerve root radiculitis and that Claimant may not be stable, maximally improved with treatment, or back to his baseline. Dr. Scott recommended EMG/nerve conduction studies to rule out or rule in lumbar nerve rood radiculopathy vs. radiculitis; depending on results follow up with epidural steroid injection, facet joint injection, or physical therapy program, consideration for use of mobilization trigger point injection, massage therapy, or acupuncture; and consideration of non-opioid medications. *See* Exhibit 29.

14. Dr. Scott indicated under other issues he felt were relevant that his opinions were based on Claimant's report that he had no back or leg pain or dysfunction proximate to his claimed January 29, 2018 work injury. Dr. Scott also indicated that given Claimant's conflicting reports of worsening low back pain to him on 4/4/18 but improving low back pain and function to Dr. Shea on 4/2/18, he questioned Claimant's credibility or consistency of complaints. *See* Exhibit 29.

15. On April 11, 2018 Claimant was evaluated by Dr. Siegel. Dr. Siegel noted that Claimant presented for follow up to his acute on chronic low back pain and acute on chronic left hip pain with radiation to the left leg. Claimant reported some improvement in his condition. Claimant reported improvement in that he was now able to stand fully erect and could even slightly arch his back without pain. Claimant reported pain at a 5/10

level. Claimant reported he had not been working except for about 8 hours of training for a new job that he expected to start soon in yard maintenance. Dr. Siegel noted that there were no significant structural changes on Claimant's current MRI compared to a lumbar MRI from September of 2015 and opined that both studies showed mild multilevel degenerative changes. Dr. Siegel changed Claimant's work restrictions to allow heavier lifting, carrying, and pushing/pulling at up to 25 pounds. She also recommended infrequent bending and twisting at the waist with no specific limit but must be able to change positions frequently and as needed for comfort and no sustained/prolonged awkward positions, no shoveling longer than 5 minutes with at least 30 minutes of other activity between episodes of shoveling. *See* Exhibits 12, 14, D.

16. On May 3, 2018 Claimant was evaluated by Dr. Mahaffey. Dr. Mahaffey continued to recommend a lumbar epidural steroid injection and opined that if Claimant had no relief with the injection, presumably It would be irritation of the sciatic nerve at the piriformis region and that a piriformis injection would then be recommended. He wanted to await the results of the epidural steroid injection as he believed Claimant's symptoms were in an L5 distribution. *See* Exhibit 13.

17. On May 16, 2018 Claimant was evaluated by Dr. Siegel. Claimant reported that his condition was unchanged and that he believed the epidural steroid injection had not been approved because he had a settlement conference regarding his case. Claimant reported increased pain in his left buttock at about noon every day. Claimant requested that Dr. Siegel review his work activity restrictions and noted that he had been doing yard maintenance work and was quite limited by his restrictions. Claimant reasoned that he had pain with restrictions anyway so he might as well be able to earn money while putting up with the pain. Dr. Siegel released Claimant to full duty work. *See* Exhibits 12, 14.

18. On May 18, 2018 Claimant underwent the left L5-S1 transforaminal epidural steroid injection.

19. On May 31, 2018 Dr. Siegel responded to a letter from Respondents after she had reviewed surveillance video of Claimant. She opined that it appeared Claimant had exceeded his restrictions but that the restrictions were probably out of date and that his restrictions were removed on May 16. She opined that the video demonstrated that Claimant was functioning very well despite his low back/buttock pain and left leg complaints. She noted the video showed him loading and unloading items from his pickup truck, climbing into and out of the bed of the pickup truck, bending over multiple times to pick up items from the ground, using a chain saw, riding a commercial mower, using a backpack type leaf blower and sprayer, and ambulating with an easy gait. She noted that throughout all the activities Claimant's movements were non antalgic and fluid and that there was no grimacing or other pain behavior. She also noted that she saw no rolling of his left ankle which he had previously reported as a problem due to left foot numbness. Dr. Siegel opined that Claimant did not appear to be at all functionally limited by his injury and/or symptoms. Dr. Siegel noted that Claimant's left L5-S1 epidural steroid injection provided him no benefit and that his symptoms were more likely due to piriformis

syndrome and she recommended a piriformis muscle injection and opined that if it did not reduce his pain, he would be at maximum medical improvement. She also recommended a left lower extremity nerve conduction study to evaluate for possible lumbosacral radiculopathy versus piriformis syndrome. She opined that Claimant would not have permanent restrictions and that he was already working successfully without restrictions. *See* Exhibit 19.

20. Respondents hired an investigator to perform surveillance of Claimant. Video surveillance was introduced into evidence and reviewed in its entirety. The surveillance shows Claimant on April 28, 2018 performing various landscaping work without issue. Claimant fills up a pickup truck at a gas station, climbs into a trailer, climbs in and out of the bed of the pickup truck, pulls weeds, uses a chainsaw to cut down tree branches, bends multiple times, straps a container with liquid to his back and sprays plants/weeds, jumps out of the bed of the pickup truck, pulls a cord to start a lawnmower, uses a leaf blower, and operates a larger riding lawn mower. At no point in surveillance did Claimant demonstrate any outward or visible signs of his pain during the multitude of activities.

21. Claimant has a significant pre-existing history.

22. On May 21, 2015 Claimant was evaluated by Seth Nodine, M.D. Claimant reported persistent back pain in the middle back that radiates to his lower and right back. On June 3, 2015 Claimant reported worsening middle back pain. *See* Exhibit 21.

23. On September 3, 2015 Claimant was evaluated by Dr. Nodine. Claimant reported lower back pain that had been present for months but six days prior got much worse. Claimant reported the pain was aggravated by bending and lifting. *See* Exhibit 21.

24. Claimant underwent an MRI of the lumbar spine on September 18, 2015. The MRI showed bulging disks in the lumbar spine accounting for Claimant's symptoms. Dr. Nodine opined that the bulging disks can sometimes heal on their own with conservative treatment such as physical therapy and back exercises and if they worsen, an epidural steroid injection would be the next possibility and/or surgery from there if it continues to worsen. Dr. Nodine noted he would try all conservative measures first. *See* Exhibit 21.

25. On November 12, 2015 Claimant reported worsening lower back pain aggravated by ascending stairs, bending, changing positions, daily activities, etc. The assessment noted radicular pain of the left lower extremity and spondylosis with myelopathy of the lumbar region. An evaluation for epidural steroid injection and/or other treatment was recommended. Claimant was noted to have bulging disc and was taking naproxen and Norco. Claimant was referred to pain management. *See* Exhibit 21.

26. On December 10, 2015 Claimant was evaluated by Scott Anthony, D.O. Dr. Anthony noted that Claimant had degenerative disk disease at L4-5 and at L5-S1 and

that Claimant's back pain had been present for a number of years. Claimant reported no significant leg radiation other than pain into his left hip. Dr. Anthony found Claimant's lumbar spine to be painful on examination. Dr. Anthony provided the impression of persistent and chronic lower back pain syndrome due to lumbosacral spondylosis. Dr. Anthony performed an L5-S1 interlaminar epidural steroid injection due to his pre and post-operative diagnoses of lumbar radicular pain and herniated disc at L5-S1. See Exhibit 25.

27. On December 17, 2015 Claimant was evaluated by Dr. Nodine. Claimant reported persistent lower back pain and neck pain. Claimant reported that an injection in his back had helped some but that he still felt weak.

28. On January 21, 2016 Claimant was evaluated by Jeremy Thomas, D.O. Claimant reported left hip pain and that the symptoms were acute and traumatic and began on January 20, 2016 at home after he fell from a ladder and got his leg caught. Claimant reported a prior labral repair in his hip and prior physical therapy for his hip. X-rays of the left hip were performed and showed moderate femoroacetabular narrowing, early per articular osteophyte formation and subchondral sclerotic change. X-rays of the left pelvis showed moderate femoroacetabular narrowing and early peri articular osteophyte formation and subchondral sclerotic change. The assessment was moderate hip degenerative joint disease. They discussed treatment options including intra articular hip injections, surgical hip resurfacing, and total hip arthroplasty. They recommended a left intra articular hip injection be performed first. See Exhibit 21.

29. On January 22, 2016 Claimant was evaluated by neurosurgeon John Marouk, D.O. Claimant reported that he had back pain, left hip pain, and left leg pain with numbness and tingling into his feet. Claimant reported that he had back pain ongoing for 2 years and also has hip pain. Claimant reported that he had surgery for his hip and Tulsa Bone and Joint but that it did not help with his symptoms. Claimant reported that yesterday he fell off a ladder and his leg got hung up and he had increased pain since that time. Claimant also reported around Thanksgiving of 2015 that he was involved in a motor vehicle accident that also escalated his symptoms. Claimant reported that he had a lumbar epidural steroid injection a month ago. Claimant had tenderness in the paraspinal muscles around the L4-5 and L5-S1 level, a positive straight leg raise test on the left, and reproducible hip pain with internal and external rotation of the left leg. Dr. Marouk noted that a prior MRI of the lumbar spine showed an anomalous lumbosacral junction with narrowing at the L5-S1 level on the left, L3-4 and L4-5 level bilaterally, as well as a central disk bulge at the L2-3 level. Dr. Marouk opined that the L4-5 and L5-S1 appeared to be the worst of Claimant's symptoms. Dr. Marouk recommended a new updated MRI of the lumbar spine. Dr. Marouk provided the impression of: ruptured disk at L4-5 and L5-S1 level and worsening of back pain since a fall off ladder. Dr. Marouk recommended a new MRI of the lumbar spine and a second epidural steroid injection in the lumbar spine. See Exhibit 20.

30. On February 4, 2016 Claimant was evaluated by Dr. Thomas. Dr. Thomas noted that the left hip intra-articular injection performed in late January had helped about

50% but that Claimant was still having some pain and increased pain with range of motion. Claimant reported that he wanted something further done for his hip degenerative joint disease and he was recommended to see a hip subspecialist. Dr. Thomas noted that he was hopeful Claimant would be a candidate for hip resurfacing arthroplasty. See Exhibit 21.

31. On February 12, 2016 Claimant was evaluated by Dr. Marouk. Claimant reported that he had to take off work the last 3 to 4 weeks mainly due to his low back pain. Claimant reported symptoms were now in his left hip and that he had a scope of his left hip a couple of times and was recently seen by a doctor who recommended a resurfacing procedure. Claimant reported most of his symptoms to be in his hip and low back. Claimant reported that he wanted to pursue treatment of his hip as his back pain was not near as prominent as his hip and Dr. Marouk released him from care and noted he would see Claimant back if his symptoms worsened. See Exhibit 20.

32. On March 2, 2016 Claimant was evaluated by Dr. Nodine. Claimant reported moderate severe and persistent back pain. Dr. Nodine noted that Claimant's hip pain aggravated his back pain but that Claimant was too young for a hip replacement. Dr. Nodine noted that Claimant was set for pain management and that they were trying to postpone surgery at this age for hip replacement. Dr. Nodine assessed: primary osteoarthritis of the left hip; bulging lumbar disc; cervical pain; low back pain; and radicular pain of the left lower extremity. See Exhibit 21.

33. In October of 2016 Claimant moved to Colorado.

34. Claimant testified at hearing that prior to the fall at work in January of 2018 he had no pain below his hip or down his left leg. This is contradicted by his prior medical records.

35. Claimant testified at hearing that he quit treating in Oklahoma because he was done with treatment and was fine with no restrictions. This is also contradicted by the prior medical records. His last visit shows his continued report of moderately severe and persistent back pain and hip pain. His last visit also shows that Claimant would continue pain management and that they were trying to postpone a total hip replacement at Claimant's young age. The records do not support Claimant's contention that he was fine.

36. Claimant testified at hearing that after his prior left hip surgery he had no further problems other than occasional stiffness from arthritis. This is contracted by the medical records that show reports that the hip surgery did not help and that he continued to have severe left hip pain.

37. Claimant, overall, is not credible or persuasive and his subjective reports cannot be relied upon to any degree of certainty.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* W.C. No. 4-650-711 (ICAO February 15, 2007).

As found above, Claimant fell off a stool at work on January 29, 2018. However, Claimant has failed to establish by a preponderance of the evidence that this accident/incident caused a compensable work related injury. Falling off the stool at work did not cause disability or the need for medical treatment. Rather, Claimant's disability and need for treatment in his lumbar spine and left hip has been ongoing and dates back many years.

As found above, at his first visit with a workers' compensation provider, Claimant was noted to have subjective complaints out of proportion to objective findings. Despite testifying and indicting that he was unable to stand or move much after his fall from the stool, Claimant was discharged the same day from the emergency department with just pain medications. Much of the focus of treatment in this case has been based on Claimant's subjective reports to providers. However, Claimant's subjective reports cannot be relied upon to any degree of certainty.

Claimant's reports that he stopped treatment for his lower back and left hip because he was doing fine are not credible or persuasive. Rather, at his last evaluation in Oklahoma before he moved to Colorado, Claimant reported moderate severe and persistent back pain and hip pain. The plan in March of 2016 was to keep Claimant in a pain management program and attempt to delay a total hip replacement due to Claimant's young age. Claimant's assessments at this last visit included osteoarthritis of the left hip, bulging lumbar disc, low back pain, and radicular pain of the left lower extremity. Claimant's testimony that he never had pain into his left leg and that he had been fine prior to the January 29, 2018 incident at work is contradicted by the medical records and not logically credible given his severe history of reported low back pain and his recommendation to continue pain management in an attempt to delay a total hip replacement. As found above, in September of 2015 the plan for Claimant's lumbar spine

included attempting conservative treatment, then epidural steroid injection, then surgery if his pain continued to worsen. Claimant's report to Dr. Siegel that his prior low back pain from 2016 had resolved is not credible or consistent with the medical records. Although Claimant chose to focus on his most severe pain which involved his left hip, Claimant had significant low back complaints in 2016 and had a recommendation for a second epidural steroid injection and a new lumbar spine MRI made in January of 2016. The records do not demonstrate that Claimant went from reports of low back pain and a recommendation for a second epidural steroid injection and an updated lumbar spine MRI to being fine. Rather, the last treatment record from 2016 shows the lumbar spine and left leg as having ongoing complaints. Shortly after the January 29, 2018 incident Dr. Siegel attempted to reassure Claimant that there was no significant new lumbosacral spine pathology and that Claimant's subjective complaints were inconsistent with his mechanism of injury. On February 28, 2018 Dr. Siegel noted that Claimant's pre-existing issues and medical records demonstrated a prior distribution of pain similar to what Claimant was reporting as his current distribution of pain. Dr. Siegel noted that the prior medical records showed that Claimant was not better after the prior left hip surgery but continued to have symptoms and that a discussion of total left hip replacement took place. Contrary to Claimant's reports she also noted that the medical records documented Claimant's prior left leg pain. Dr. Siegel also later opined that there were no significant structural changes on Claimant's current MRI compared to a lumbar MRI from September of 2015 and opined that both studies showed mild multilevel degenerative changes.

Claimant's reports to Dr. Mahaffey that his prior low back pain did not refer and that the pain had been exacerbated and now referred into his left lower limb also are not credible or consistent with prior records. Claimant's reports to Dr. Mahaffey that his hip pain had been acutely exacerbated and combined with new pain in his posterior hip and buttock also are not found credible. As found above, after performing an independent medical evaluation and opining that Claimant had sustained a work related injury to his lumbar spine but not to other areas of the body including the hip, Dr. Scott qualified his opinion. Dr. Scott indicated that his opinions were based on Claimant's subjective reports that Claimant had no back or leg pain or dysfunction proximate to the January 29, 2018 incident. Dr. Scott also questioned Claimant's credibility.

The multiple providers, including EMS who arrived at the scene of Employer's office, have treated and made treatment recommendations based on Claimant's subjective reports of pain and injury. From the medical records it is clear that Claimant had ongoing severe low back and left hip pain prior to the January 29, 2018 incident at work. Dr. Siegel is found credible and persuasive that Claimant's pre-existing issues and medical records demonstrate a prior distribution of pain similar to what Claimant has now and that Claimant has no significant structural changes on his current MRI compared to his September 2015 lumbar MRI. Claimant argues that he was able to fully function and work without restriction prior to this January 29, 2018 incident and until the incident caused him disability and the need for medical treatment. This is not found persuasive. The only reason the incident on January 29, 2018 was viewed as possibly causing a new disability was due to Claimant's subjective reports that the pain, symptoms, and location were "new," and that he had been doing fine when he decided to stop treatment.

Claimant, as demonstrated by surveillance, is able to work a physical job at a high function without any signs of pain or discomfort. This surveillance was taken approximately three months after the January 29, 2018 incident. It is not persuasive that the January 29, 2018 incident caused a new disability or need for medical treatment or that it aggravated Claimant's severe pre-existing condition. Claimant stopped treatment in Oklahoma after he was placed in pain management and advised they would try to hold off a total hip replacement due to his young age. At the time he had low back complaints and pain into his left lower leg. Claimant continues to have the same problems and issues and has failed to establish, more likely than not, any new disability or aggravation due to the January 29, 2018 incident. Although an incident occurred on that date, Claimant has not established that an injury or aggravation to a pre-existing condition occurred. Rather, the weight of the credible evidence establishes that Claimant remains in the same condition he was prior to the January 29, 2018 incident: with low back pain and pain into his left lower leg and with left hip pain and the probable need for a total left hip replacement. For these reasons his claim is denied and dismissed.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work related injury. His claim is denied and dismissed.

2. As Claimant has not sustained a compensable injury, his request for a general award of medical benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

1. Did Respondent overcome the DIME's determination that Claimant is not at MMI by clear and convincing evidence?

2. Did Claimant prove by a preponderance of the evidence that he is entitled to a second surgical evaluation?

3. If Respondents overcome the DIME, did Claimant prove by a preponderance of the evidence that he has 11% upper extremity impairment?

FINDINGS OF FACT

1. Claimant worked as a warehouse employee for Employer. He suffered an admitted injury to his left elbow while lifting heavy shingles on September 10, 2015. He was moving bundles of shingles and experienced a pop in the left elbow with immediate pain and swelling.

2. Employer referred Claimant to Concentra Medical Centers for authorized treatment. At the initial evaluation, Dr. Lori Ross documented swelling of the left elbow, tenderness of the lateral epicondyle and reduced range of motion in all planes. Treating providers also observed swelling at several other appointments, which provides objective evidence of an injury to Claimant's left elbow.

3. Claimant received treatment through Concentra for diagnoses including left elbow strain, left radial nerve irritation, and left lateral epicondylitis. Claimant underwent conservative care including injections, pain medications, Lidoderm patches, splinting and bracing, and physical therapy, without substantial benefit.

4. An MRI of the left elbow on November 16, 2015 revealed a partial tear in the left superficial common extensor tendon.

5. An EMG performed on December 1, 2015 suggested mild left radial tunnel syndrome.

6. Claimant saw Dr. Hart, a hand surgeon, on several occasions. Dr. Hart initially thought Claimant's presentation was more consistent with radial tunnel syndrome rather than epicondylitis. He administered two radial tunnel injections which provided only short term relief. On February 4, 2016, Dr. Hart expressed concern that "we may not have the accurate diagnosis, since neither injection offered him any significant long-term relief, and I am concerned that if we undertake a radial tunnel release, it may not alleviate his symptoms." Dr. Hart recommended repeat EMG testing before making a final determination regarding surgery.

7. There was a gap in Claimant's treatment between February and August 2016 due to a dispute regarding whether he suffered an intervening injury. The issue went to hearing before ALJ Broniak on July 19, 2016, who found there was no intervening event and denied Respondents' request to terminate TTD benefits.

8. When Claimant resumed treatment at Concentra, he saw a new physician, Dr. Nicholas Kurz.

9. Dr. Kenneth Finn performed the repeat EMG on August 30, 2016. The testing was normal with no evidence of radial or ulnar nerve entrapment.

10. Claimant followed up with Dr. Hart on September 8, 2016 to review the EMG results. Dr. Hart revised his diagnosis and opined that Claimant likely has "a persistent case of lateral epicondylitis." Dr. Hart opined "it is reasonable at this point in time since we now have a normal nerve test to consider only releasing his left lateral epicondyle and debridement of the proximal origin of the ECRB tendon. Hopefully, that will alleviate some of his lateral epicondylar and proximal forearm pain." Dr. Hart estimated a 65% to 75% success rate for lateral epicondylitis surgery.

11. Claimant underwent a left lateral epicondylar release with exostectomy on October 4, 2016.

12. Claimant did not receive significant benefit from the surgery, and post-surgery medical records reflect significant ongoing pain and limitations.

13. Claimant saw Dr. Kurz on November 8, 2016, reporting severe elbow pain with light touch and minimal use of the upper extremity. Dr. Kurz recommended a second opinion with a different hand specialist, Dr. Kobayashi or Dr. Larsen. He also referred Claimant for a pain psychology evaluation with Dr. Staudenmayer.

14. The referrals were submitted to Respondents for authorization, but there is no indication they were approved.

15. Claimant returned to Dr. Kurz on November 29, 2016, and reported ongoing severe pain. Dr. Kurz opined that Claimant's pain appeared exaggerated and "out of proportion" to the physical exam. Dr. Kurz put Claimant at MMI with no impairment and released him to work without restrictions.

16. Claimant saw Dr. Thomas Higginbotham for a DIME on February 5, 2017. Dr. Higginbotham diagnosed an elbow strain/sprain with structural diagnostic evidence of partial tearing of the superficial common extensor tendon at its origin. Dr. Higginbotham also suspected subluxation of the proximal radioulnar joint with ongoing annular ligamentous sprain. Dr. Higginbotham opined Claimant is not at MMI "due to persistence of moderately severe pain and limitations and function of the left elbow. He merits a second orthopedic opinion as requested by his treating providers."

17. Respondents obtained video surveillance of Claimant in April and May 2017. A portion of the video shows Claimant entering and exiting a convenience store

and driving away. Another portion shows Claimant walking in the parking lot of a grocery-type store with a young girl, presumably his daughter. The bulk of the video footage was taken inside a nightclub where Claimant apparently works as a DJ. Most of the nightclub video is dark and shot from a distance, although there are a few segments with relatively clear views of Claimant. He appears to move his left arm freely, with no visible evidence of pain or limitation. He does not lift anything heavy or perform any forceful gripping activities.

18. Claimant saw Dr. Mark Failinger for an Independent Medical Examination (IME) at Respondents' request on May 8, 2017. Claimant reported persistent pain and weakness in the left elbow, worsened by gripping or lifting more than 6 pounds. He said the pain in the elbow was perhaps worse after the surgery. He indicated his range of motion had improved, but his functional ability remained about the same.

19. Based on his examination and review of Claimant's records, Dr. Failinger considered Claimant "very believable" and a "straightforward historian." Initially, he was inclined to agree with Dr. Higginbotham's recommendation for a second surgical opinion. But Dr. Failinger's impression changed dramatically after viewing the surveillance footage. He opined there was a "significant mismatch" between Claimant's appearance in the video and his presentation at the IME. Ultimately, Dr. Failinger agreed with Dr. Kurz that Claimant was at MMI on November 29, 2016 with no impairment.

20. Respondents failed to present clear and convincing evidence to overcome the DIME's determination that Claimant is not at MMI.

21. Claimant proved by a preponderance of the evidence that a second opinion as recommended by Dr. Higginbotham is reasonable and necessary treatment for his admitted injury.

CONCLUSIONS OF LAW

A. Respondents did not overcome the DIME's determination regarding MMI

The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c), C.R.S.; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). This is a higher standard of proof than the typical "preponderance" standard. Clear and convincing evidence is "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). Therefore, the party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). A finding of MMI is premature if a course of treatment has "a reasonable prospect of success" and the claimant is willing to submit to the treatment.

Reynolds v. Industrial Claim Appeals Office, 794 P.2d 1080, 1081-82 (Colo. App. 1990). Additionally, a finding that a claimant is not at MMI may rest solely upon recommendations for further diagnostic evaluation if such procedures have a reasonable prospect of diagnosing or defining the claimant's condition to suggest a course of further treatment. *E.g., Soto v. Corrections Corp*., W.C. No. 4-813-582 (ICAO, October 27, 2011).

As found, Respondents failed to overcome the DIME's MMI determination by clear and convincing evidence. The medical evidence consistently documents ongoing symptoms and limitations associated with Claimant's September 2015 work injury. Claimant had objective evidence of injury and ultimately underwent surgery, but remains symptomatic. The evaluation recommended by Dr. Higginbotham is essentially diagnostic, and ICAO has repeatedly held that "diagnostic procedures constitute compensable medical benefits that must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining the claimant's condition so as to suggest the course of further treatment." *E.g., Watier-Yerkman v. Da Vita*, W.C. No. 4-882-517-02 (January 12, 2015); *Soto v. Corrections Corp. of America*, W.C. No. 4-831-582 (October 27, 2011); *Jacobson v. American Industrial Service*, W.C. No. 4-487-349 (April 24, 2007).

The surveillance video is the lynchpin of Respondents' argument. Dr. Failinger initially agreed that a second opinion was reasonable, but changed his mind after viewing the video. Admittedly, the surveillance video depicts Claimant using his left arm with no apparent difficulty or pain, which gives the ALJ pause regarding the veracity of Claimant's pain complaints. But the activities Claimant performs in the video are relatively minimal, and do not require significant lifting or forceful gripping with his left arm. Furthermore, most of the video was taken from a distance in a darkened nightclub, which makes it difficult for the ALJ to draw definitive conclusions regarding Claimant's true level of function. Clear and convincing evidence must be "unmistakable and free from serious and substantial doubt," and the ALJ does not find the video sufficient to overcome the DIME's determination, particularly when juxtaposed against the persuasive medical evidence.

B. A second opinion is reasonably necessary

The respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Where the respondents dispute a claimant's entitlement to medical benefits, the claimant must prove that the requested treatment is reasonable, necessary, and causally related to the injury. Section 8-42-101(1)(a); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

A DIME's recommendation regarding specific treatment is not entitled to presumptive weight, but is simply another medical opinion to consider when evaluating all the evidence under the preponderance standard. *Goff v. Schwan's Home Services*, W.C. No. 4-947-921-03 (August 9, 2017); *Holcombe v. FedEx Corp*., W.C. No. 4-824-

259-05 (March 24, 2017); *Duplissis v. Shepard's*, W.C. No. 4-508-725 (December 3, 2002).

As found, Claimant proved by a preponderance of the evidence that a second surgical opinion is reasonable and necessary treatment for his injury. Claimant remains symptomatic despite conservative treatment and surgery. Dr. Kurz's initial decision to refer Claimant for a second opinion with a different hand specialist was reasonable and appropriate at the time. There is no persuasive justification for Dr. Kurz's decision to abruptly discharge Claimant barely three weeks later without even allowing him to complete the evaluation.

Based on the totality of evidence presented, the ALJ concludes that a second surgical opinion with Dr. Larsen or Dr. Kobayashi is reasonable and necessary.

ORDER

It is therefore ordered that:

1. Respondents' request to overcome the DIME regarding MMI is denied and dismissed.

2. Respondents shall pay for reasonable and necessary treatment to cure and relieve the effects of Claimant's injury and bring him to MMI, including a second surgical opinion with Dr. Larsen or Dr. Kobayashi.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right upper extremity injury during the course and scope of his employment with Employer on February 1, 2017 in case number 5-059-644.

2. Whether Claimant has established by a preponderance of the evidence that he suffered a compensable right upper extremity injury during the course and scope of his employment with Employer on July 25, 2017 in case number 5-068-156.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injuries.

4. Whether Claimant has established by a preponderance of the evidence that the right shoulder surgery requested by John Papilion, M.D. is reasonable, necessary and causally related to his February 1, 2017 or July 25, 2017 industrial injuries.

5. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period March 5, 2018 until terminated by statute.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $824.40.

FINDINGS OF FACT

1. Employer is a manufacturer of polyurethane foam products used for mattresses and furniture. Claimant is a 62-year-old male who worked for Employer in shipping and receiving. His job duties involved loading and unloading furniture and mattresses from semi-trailers. Claimant remarked that he loads and unloads between 500 and 1,000 pieces each day.

2. Claimant testified that on February 1, 2016 he was experiencing pain in his shoulders and neck area. He specified that the pain began near the end of 2015.

3. On February 1, 2017 Claimant visited Melissa A. Wells, M.D. at the Colorado Center for Arthritis & Osteoporosis after he completed his work shift. He was referred by personal physician Christopher Carlson, M.D. Claimant reported diffuse joint pain and had multiple tender points on examination. He noted that he had been suffering pain "for a while but things have gotten worse over the last year." Claimant's worst

shoulder and neck pain occurred around Christmas 2015. He did not mention any acute work incident on February 1, 2017 that caused his symptoms.

4. On February 7, 2017 Claimant underwent bilateral shoulder radiographs. The diagnostic testing revealed a "chronic right rotator cuff tear."

5. On March 8, 2017 Claimant returned to Dr. Wells. He reported right shoulder pain. Dr. Wells suspected that the shoulder pain was caused by "rotator cuff issues." She remarked that, if the shoulder symptoms did not improve, "we may need to consider MRI, PT or surgery." Dr. Wells performed a right shoulder injection. Claimant did not mention any acute work incident on February 1, 2017 that caused his symptoms.

6. On May 10, 2017 Claimant again visited Dr. Wells for an examination. He reported right shoulder pain. Dr. Wells noted that Claimant's shoulder had improved from the previous injection but it was "too early for another injection." She commented that Claimant had signs of "rotator cuff tendonitis." Claimant exhibited normal active range of motion in both shoulders.

7. Claimant testified that on July 25, 2017 he was unloading foam mattresses from a trailer at work. The mattresses weighed approximately 35-45 pounds. He felt a "pop" in his right shoulder and experienced immediate pain. Claimant reported his right shoulder symptoms to Employer and selected Concentra Medical Centers for treatment.

8. On July 31, 2017 Claimant visited Concentra for an examination. He reported that he was removing fairly heavy bedding materials from a trailer at work. While unloading a package from overhead it became unstable. Claimant immediately experienced a "pop" and felt pain in his right shoulder. Amanda Cava, M.D. diagnosed Claimant with a history of arthritis and a rupture of the right biceps tendon.

9. On August 4, 2017 Claimant underwent an MRI of his right shoulder. The MRI revealed a massive rotator cuff tear, complete destruction of the long head of the biceps tendon and degenerative changes.

10. On August 8, 2017 Claimant returned to Concentra and was evaluated by Jerald Solot, D.O. Dr. Solot agreed that Claimant had a rupture of the right biceps tendon. He authorized Claimant to return to modified duty and permitted Claimant to work his entire shift.

11. Claimant's work restrictions prevented him from performing his regular job duties. He began working modified duty in customer service and received his full wages. A review of Claimant's employment records reveals that he earned his regular wages from July 25, 2017 through March 4, 2018. Claimant was subsequently terminated from employment.

12. Dr. Solot referred Claimant to Cary Motz, M.D. for a surgical consultation. Claimant visited Dr. Motz on August 15, 2017. He recounted that he injured his right shoulder at work while lifting a heavy object on July 25, 2017. Dr. Motz commented that Claimant "felt a pop and developed some bruising in the arm. He has developed a

popeyes deformity." He diagnosed Claimant with a torn biceps tendon. Dr. Motz remarked that Claimant's right shoulder MRI reflected a chronic massive rotator cuff tear. He noted that Claimant's "rotator cuff does not appear repairable to me. He has a high-riding humeral head and significant atrophy, and in addition, he is diabetic. I think attempt to repair would be fruitless."

13. On September 12, 2017 Claimant again visited Dr. Motz for an examination. He determined that surgical intervention was not warranted under Claimant's Workers' Compensation claim. Dr. Motz predicted that Claimant "will eventually require a reverse shoulder replacement that in my opinion would be done outside the work comp claim."

14. On October 10, 2017 and November 7, 2017 Claimant returned to Dr. Motz for evaluations. Dr. Motz explained that Claimant had plateaued with physical therapy and did not have any additional treatment recommendations. He remarked that "if Dr. Papilion feels that reversed shoulder replacement would be reasonable, then compensability for this might be something that should be looked into given his job description. At this point I'm going to release him from my care and refer him to Dr. Papilion."

15. On November 30, 2017 Claimant visited John Papilion, M.D. for an examination. Dr. Papilion noted that Claimant has worked for 11 years in a warehouse and does not have access to a forklift. Claimant is thus regularly required to lift in excess of 75-100 pounds below shoulder and overhead. On July 25, 2017 Claimant was unloading a heavy box and felt a pop in his right shoulder. He also noticed bruising and deformity. Claimant has subsequently suffered significant loss of motion and difficulty with lifting when using his arm away from his body and overhead. He had some soreness prior to the July 25, 2017 incident but was able to work full duty without restrictions. Claimant remarked that he underwent a significant course of physical therapy and a subacromial steroid injection but only received mild, temporary relief. Dr. Papilion's assessment included a long head biceps rupture, a massive right rotator cuff tear and early rotator cuff arthropathy. Dr. Papilion detailed that "it may be that [Claimant] had some rotator cuff pathology prior to this incident on July 25, 2017, however, he has worked in this capacity for 11 years at full duty which requires constant and significant lifting away from his body and overhead. It may have been that this incident pushed him over the edge to the point where the tear completed and now he has pseudoparalysis with significant loss of function and pain." He concurred with Dr. Motz that Claimant has an irreparable rotator cuff tear and recommended a reverse total shoulder arthroplasty. Dr. Papilion concluded "beyond a reasonable doubt" that Claimant's need for surgery was "directly related to his work activities" and specifically the July 25, 2017 incident.

16. On April 10, 2018 Claimant underwent an independent medical examination with Hugh H. Macaulay, II, M.D. Claimant reported that he had worked for Employer for 11 years unloading trailers. He specifically worked with foam, bedding materials and quilting rolls that weighed up to 900 pounds. Claimant noted that he began to feel pain in his right shoulder prior to February 2017. He commented that he suffered a minor injury on February 1, 2017 and reported the incident to Employer, but his request to visit a physician was denied. He thus visited his personal physician and was diagnosed with

a right rotator cuff tear. Claimant recounted that on July 25, 2017 he was unloading a trailer and experienced a "pop" in his right shoulder. He subsequently received conservative medical treatment.

17. Dr. Macaulay performed a causation analysis pursuant to the Level II curriculum from the Division of Workers' Compensation. He diagnosed Claimant with a right rotator cuff tear and a right ruptured biceps tendon. Dr. Macaulay reasoned that Claimant had a pre-existing, asymptomatic right shoulder condition. Claimant was fully functional until he developed right shoulder symptoms on July 25, 2017. Dr. Macaulay noted that a pre-existing medical condition that may predispose a worker to an injury does not mean the case is not work related. He thus determined that Claimant suffered a right shoulder injury on July 25, 2015 while working for Employer. Dr. Macaulay agreed with Dr. Papilion that Claimant requires a reverse total shoulder arthroplasty for his condition.

18. On May 30, 2018 the parties conducted the pre-hearing evidentiary deposition of Cary R. Motz, M.D. Dr. Motz maintained that Claimant suffered a torn biceps tendon that caused a popeyes deformity on July 25, 2017 but his need for a right shoulder replacement is related to his pre-existing massive rotator cuff tear. He explained that a biceps tendon tear would not cause a significant loss of shoulder use. In fact, the biceps tendon tear would not preclude Claimant from using his right arm to lift above his waist. In contrast, the right rotator cuff tear "might limit the amount that [Claimant] would feel comfortable lifting to the waist level." Dr. Motz summarized that Claimant's request for a right shoulder replacement was caused by the massive rotator cuff tear and is unrelated to his torn biceps tendon. Although Dr. Motz acknowledged that the July 25, 2017 incident could have accelerated Claimant's pre-existing right shoulder condition, he did not know when the rotator cuff tear occurred. Moreover, he could not state to a reasonable degree of medical probability that any remaining, attached residual fibers were torn during the July 25, 2017 incident. Dr. Motz remarked that "I can't say one way or the other."

19. On January 15, 2018 Claimant underwent an independent medical examination with Wallace K. Larson, M.D. Dr. Larson also testified at the hearing in this matter. Claimant reported that on July 25, 2017 he felt a "pop" in his right shoulder while unloading a mattress from a trailer at work. After reviewing Claimant's medical records and performing a physical examination, Dr. Larson determined that Claimant ruptured the long head of his right biceps tendon while at work on July 25, 2017. He detailed that Claimant likely had "severe chronic changes to the long head of the biceps tendon such that even holding his arm at his side with some support of the product resulted in rupture of the few remaining fibers and thus the deformity of the biceps." Claimant did not require any medical treatment for his July 25, 2017 biceps tendon tear.

20. Dr. Larson commented that diagnostic testing revealed Claimant suffers from a chronic, massive rotator cuff tear. He specified that the condition degrades cartilage and causes arthritic changes. Dr. Larson noted that Claimant's high riding humoral head and the detachment of aging tendons reflects a degenerative condition. He explained that, although Claimant has performed manual labor for many years and stressed his right shoulder, "it is medically not probable that this is the cause of his rotator cuff arthropathy." Dr. Larson summarized that the work incident on July 25, 2017 did not

cause or aggravate Claimant's pre-existing rotator cuff condition. The recommendation for a total shoulder arthroplasty is thus not related to Claimant's job duties for Employer. Instead, Claimant's massive rotator cuff tear and need for surgery constitutes the natural progression of a pre-existing condition. Finally, after reviewing additional medical records from Concentra, Dr. Motz and Dr. Papilion, Dr. Larson maintained that Claimant suffered from a "long-standing, pre-existing very large rotator cuff tear." He reiterated that the July 25, 2017 injury did not cause or aggravate Claimant's right shoulder rotator cuff tear.

21. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable right upper extremity injury during the course and scope of his employment with Employer on February 1, 2017 in case number 5-068-156. Initially, Claimant testified that on February 1, 2017 he was experiencing pain in his shoulders and neck area. He specified that the pain began near the end of 2015. In a visit with Dr. Wells on February 1, 2017 Claimant reported diffuse joint pain with multiple tender points on examination. He noted that he had been suffering pain "for a while but things have gotten worse over the last year." Claimant did not mention any acute work incident on February 1, 2017 that caused his symptoms. A February 7, 2017 MRI revealed a "chronic right rotator cuff tear." Furthermore, in an April 10, 2018 independent medical examination with Dr. Macaulay Claimant commented that he suffered a minor injury on February 1, 2017. He reported that he had worked for Employer for 11 years unloading trailers containing foam, bedding materials and quilting rolls that weighed up to 900 pounds. Claimant noted that he began to feel pain in his right shoulder prior to February 2017.

22. Although Claimant worked in a strenuous position loading and unloading heavy materials from trailers for a number of years, the record is devoid of evidence that he suffered an acute injury on February 1, 2017. In fact, the record reveals that Claimant has suffered long-standing right shoulder pain and an MRI reflected a chronic right rotator cuff tear. It is thus speculative to attribute Claimant's right shoulder condition to an industrial event on February 1, 2017. Accordingly, Claimant's request for Workers' Compensation benefits in case number 5-059-644 is denied and dismissed.

23. Claimant has established that it is more probably true than not that he suffered a compensable right upper extremity injury during the course and scope of his employment with Employer on July 25, 2017 in case number 5-068-156. However, the injury was limited to a right biceps tendon tear. Initially, Claimant testified that, while unloading mattresses from a trailer at work on July 25, 2017, he felt a "pop" in his right shoulder and experienced immediate pain. On August 8, 2017 Dr. Solot diagnosed Claimant with a rupture of the right biceps tendon. Dr. Motz determined that Claimant had developed a popeyes deformity and suffered a torn biceps tendon as a result of the July 25, 2017 incident. Although Dr. Motz acknowledged that the event could have accelerated Claimant's pre-existing right shoulder condition, he did not know when the rotator cuff tear occurred. Moreover, he could not state to a reasonable degree of medical probability that any remaining, attached residual fibers were torn during the July 25, 2017 incident.

24. In contrast, Dr. Papilion concluded that Claimant suffered a long head biceps rupture, a massive right rotator cuff tear and early rotator cuff arthropathy. He detailed that Claimant may have had some rotator cuff pathology prior to the July 25, 2017 incident but "he has worked in this capacity for 11 years at full duty which requires constant and significant lifting away from his body and overhead." Dr. Papilion concluded that the July 25, 2017 incident may have completed the tear. Furthermore, Dr. Macaulay diagnosed Claimant with a right rotator cuff tear and a right ruptured biceps tendon. He reasoned that Claimant had a pre-existing, asymptomatic right shoulder condition. Claimant was fully functional until he developed right shoulder symptoms on July 25, 2018. Dr. Macaulay thus concluded that Claimant suffered a right shoulder injury on July 25, 2017 while working for Employer.

25. Although Drs. Papilion and Macaulay concluded that Claimant may have suffered a right shoulder injury or aggravated his pre-existing right shoulder condition on July 25, 2017, the record is replete with evidence that Claimant suffered from a chronic right rotator cuff tear that was not aggravated or accelerated by the biceps tendon tear on July 25, 2017. Dr. Larson persuasively explained that Claimant ruptured the long head of his right biceps tendon while at work on July 25, 2017. The condition did not require any medical treatment. He commented that diagnostic testing revealed Claimant suffers from a chronic, massive rotator cuff tear. He specified that the condition degrades cartilage and causes arthritic changes. Dr. Larson noted that Claimant's high riding humoral head and the detachment of aging tendons reflects a degenerative condition. He explained that, although Claimant has performed manual labor for many years and stressed his right shoulder, the work event on July 25, 2017 did not cause Claimant's rotator cuff arthropathy or aggravate his pre-existing condition. Accordingly, the bulk of the medical records and opinions demonstrate that Claimant's July 25, 2017 work incident caused only a biceps tendon tear. Although Claimant experienced symptoms while performing work and suffered a right biceps tendon tear, an inference that there has been an aggravation or acceleration of his pre-existing right rotator cuff tear is attenuated and speculative. Finally, as Dr. Motz noted, Claimant's right biceps tendon condition had plateaued by the Fall of 2017 with physical therapy and he did not require any additional medical treatment.

26. Claimant has failed to establish that it is more probably true than not that the right shoulder surgery requested by Dr. Papilion is reasonable, necessary and causally related to his February 1, 2017 or July 25, 2017 industrial injuries. Dr. Papilion attributed Claimant's right rotator cuff tear to the July 25, 2017 work incident and determined that Claimant has an irreparable rotator cuff tear. He recommended a reverse total shoulder arthroplasty. He concluded "beyond a reasonable doubt" that Claimant's need for surgery was "directly related to his work activities" and specifically the July 25, 2017 incident. Furthermore, Dr. Macaulay agreed with Dr. Papilion that Claimant requires a reverse total shoulder arthroplasty for his industrial right shoulder injury.

27. In contrast, Dr. Motz persuasively reasoned that Claimant suffered a torn biceps tendon that caused a popeyes deformity on July 25, 2017, but his need for a right shoulder replacement is related to his pre-existing massive rotator cuff tear. He explained that a biceps tendon tear would not cause a significant loss of shoulder use. In fact, the

biceps tendon tear would not preclude Claimant from using his right arm to lift above his waist. In contrast, the right rotator cuff tear "might limit the amount that [Claimant] would feel comfortable lifting to the waist level." Dr. Motz summarized that Claimant's request for a right shoulder replacement was caused by the massive rotator cuff tear and is unrelated to his torn biceps tendon. Dr. Larson agreed that the work incident on July 25, 2017 did not cause or aggravate Claimant's pre-existing rotator cuff condition. The recommendation for a total shoulder arthroplasty is thus not related to Claimant's job duties for Employer. Instead, Claimant's massive rotator cuff tear and need for surgery constitutes the natural progression of a pre-existing condition. Based on the medical records and persuasive opinions of Drs. Motz and Larson, Claimant's request for a reverse total right shoulder arthroplasty is denied and dismissed.

28. Claimant has failed to demonstrate that it is more probably true than not that he is entitled to receive TTD benefits for the period March 5, 2018 until terminated by statute. He has failed to establish a causal connection between the industrial injury and subsequent wage loss. Claimant has not proven that he suffered an industrial injury on February 1, 2017 and his injury on July 25, 2017 was limited to a torn right biceps tendon. As Dr. Motz explained, a biceps tendon tear would not cause a significant loss of shoulder use. In fact, the biceps tendon tear would not preclude Claimant from using his right arm to lift above his waist. Furthermore, Dr. Larson remarked that Claimant did not require any medical treatment for his July 25, 2017 biceps tendon tear. Claimant has thus failed to prove that his biceps tendon tear caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. He has not shown that he suffered a complete inability to work or that there are restrictions that impair his ability to effectively and properly perform his regular employment as a result of his torn right biceps tendon. Accordingly, Claimant's request for TTD benefits for the period March 5, 2018 until terminated by statute is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the “logical and recurrent consequence” of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant’s symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that “correlation is not causation,” and merely because a coincidental correlation exists between the claimant’s work and his symptoms does not mean there is a causal connection between the claimant’s injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable right upper extremity injury during the course and scope of his employment with Employer on February 1, 2017 in case number 5-068-

156. Initially, Claimant testified that on February 1, 2017 he was experiencing pain in his shoulders and neck area. He specified that the pain began near the end of 2015. In a visit with Dr. Wells on February 1, 2017 Claimant reported diffuse joint pain with multiple tender points on examination. He noted that he had been suffering pain "for a while but things have gotten worse over the last year." Claimant did not mention any acute work incident on February 1, 2017 that caused his symptoms. A February 7, 2017 MRI revealed a "chronic right rotator cuff tear." Furthermore, in an April 10, 2018 independent medical examination with Dr. Macaulay Claimant commented that he suffered a minor injury on February 1, 2017. He reported that he had worked for Employer for 11 years unloading trailers containing foam, bedding materials and quilting rolls that weighed up to 900 pounds. Claimant noted that he began to feel pain in his right shoulder prior to February 2017.

8. As found, although Claimant worked in a strenuous position loading and unloading heavy materials from trailers for a number of years, the record is devoid of evidence that he suffered an acute injury on February 1, 2017. In fact, the record reveals that Claimant has suffered long-standing right shoulder pain and an MRI reflected a chronic right rotator cuff tear. It is thus speculative to attribute Claimant's right shoulder condition to an industrial event on February 1, 2017. Accordingly, Claimant's request for Workers' Compensation benefits in case number 5-059-644 is denied and dismissed.

9. As found, Claimant has established by a preponderance of the evidence that he suffered a compensable right upper extremity injury during the course and scope of his employment with Employer on July 25, 2017 in case number 5-068-156. However, the injury was limited to a right biceps tendon tear. Initially, Claimant testified that, while unloading mattresses from a trailer at work on July 25, 2017, he felt a "pop" in his right shoulder and experienced immediate pain. On August 8, 2017 Dr. Solot diagnosed Claimant with a rupture of the right biceps tendon. Dr. Motz determined that Claimant had developed a popeyes deformity and suffered a torn biceps tendon as a result of the July 25, 2017 incident. Although Dr. Motz acknowledged that the event could have accelerated Claimant's pre-existing right shoulder condition, he did not know when the rotator cuff tear occurred. Moreover, he could not state to a reasonable degree of medical probability that any remaining, attached residual fibers were torn during the July 25, 2017 incident.

10. As found, in contrast, Dr. Papilion concluded that Claimant suffered a long head biceps rupture, a massive right rotator cuff tear and early rotator cuff arthropathy. He detailed that Claimant may have had some rotator cuff pathology prior to the July 25, 2017 incident but "he has worked in this capacity for 11 years at full duty which requires constant and significant lifting away from his body and overhead." Dr. Papilion concluded that the July 25, 2017 incident may have completed the tear. Furthermore, Dr. Macaulay diagnosed Claimant with a right rotator cuff tear and a right ruptured biceps tendon. He reasoned that Claimant had a pre-existing, asymptomatic right shoulder condition. Claimant was fully functional until he developed right shoulder symptoms on July 25, 2018. Dr. Macaulay thus concluded that Claimant suffered a right shoulder injury on July 25, 2017 while working for Employer.

11. As found, although Drs. Papilion and Macaulay concluded that Claimant may have suffered a right shoulder injury or aggravated his pre-existing right shoulder condition on July 25, 2017, the record is replete with evidence that Claimant suffered from a chronic right rotator cuff tear that was not aggravated or accelerated by the biceps tendon tear on July 25, 2017. Dr. Larson persuasively explained that Claimant ruptured the long head of his right biceps tendon while at work on July 25, 2017. The condition did not require any medical treatment. He commented that diagnostic testing revealed Claimant suffers from a chronic, massive rotator cuff tear. He specified that the condition degrades cartilage and causes arthritic changes. Dr. Larson noted that Claimant's high riding humoral head and the detachment of aging tendons reflects a degenerative condition. He explained that, although Claimant has performed manual labor for many years and stressed his right shoulder, the work event on July 25, 2017 did not cause Claimant's rotator cuff arthropathy or aggravate his pre-existing condition. Accordingly, the bulk of the medical records and opinions demonstrate that Claimant's July 25, 2017 work incident caused only a biceps tendon tear. Although Claimant experienced symptoms while performing work and suffered a right biceps tendon tear, an inference that there has been an aggravation or acceleration of his pre-existing right rotator cuff tear is attenuated and speculative. Finally, as Dr. Motz noted, Claimant's right biceps tendon condition had plateaued by the Fall of 2017 with physical therapy and he did not require any additional medical treatment.

Medical Benefits

12. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

13. As found, Claimant has failed to establish by a preponderance of the evidence that the right shoulder surgery requested by Dr. Papilion is reasonable, necessary and causally related to his February 1, 2017 or July 25, 2017 industrial injuries. Dr. Papilion attributed Claimant's right rotator cuff tear to the July 25, 2017 work incident and determined that Claimant has an irreparable rotator cuff tear. He recommended a reverse total shoulder arthroplasty. He concluded "beyond a reasonable doubt" that Claimant's need for surgery was "directly related to his work activities" and specifically the July 25, 2017 incident. Furthermore, Dr. Macaulay agreed with Dr. Papilion that Claimant requires a reverse total shoulder arthroplasty for his industrial right shoulder injury.

14. As found, in contrast, Dr. Motz persuasively reasoned that Claimant suffered a torn biceps tendon that caused a popeyes deformity on July 25, 2017, but his

need for a right shoulder replacement is related to his pre-existing massive rotator cuff tear. He explained that a biceps tendon tear would not cause a significant loss of shoulder use. In fact, the biceps tendon tear would not preclude Claimant from using his right arm to lift above his waist. In contrast, the right rotator cuff tear "might limit the amount that [Claimant] would feel comfortable lifting to the waist level." Dr. Motz summarized that Claimant's request for a right shoulder replacement was caused by the massive rotator cuff tear and is unrelated to his torn biceps tendon. Dr. Larson agreed that the work incident on July 25, 2017 did not cause or aggravate Claimant's pre-existing rotator cuff condition. The recommendation for a total shoulder arthroplasty is thus not related to Claimant's job duties for Employer. Instead, Claimant's massive rotator cuff tear and need for surgery constitutes the natural progression of a pre-existing condition. Based on the medical records and persuasive opinions of Drs. Motz and Larson, Claimant's request for a reverse total right shoulder arthroplasty is denied and dismissed.

TTD Benefits

15. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability.

16. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to receive TTD benefits for the period March 5, 2018 until terminated by statute. He has failed to establish a causal connection between the industrial injury and subsequent wage loss. Claimant has not proven that he suffered an industrial injury on February 1, 2017 and his injury on July 25, 2017 was limited to a torn right biceps tendon. As Dr. Motz explained, a biceps tendon tear would not cause a significant loss of shoulder use. In fact, the biceps tendon tear would not preclude Claimant from using his right arm to lift above his waist. Furthermore, Dr. Larson remarked that Claimant did not require any medical treatment for his July 25, 2017 biceps tendon tear. Claimant has thus failed to prove that his biceps tendon tear caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. He has not shown that he suffered a complete inability to work or that there are restrictions that impair his ability to effectively and properly perform his regular employment as a result of his torn right biceps tendon.

Accordingly, Claimant's request for TTD benefits for the period March 5, 2018 until terminated by statute is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for Workers' Compensation benefits with a date of injury of February 1, 2017 in case number 5-059-644 is denied and dismissed.

2. Claimant suffered a right biceps tendon tear on July 25, 2017 in case number 5-068-156. He is not entitled to receive any additional medical benefits.

3. Claimant's request for a reverse total right shoulder arthroplasty is denied and dismissed.

4. Claimant's request for TTD benefits for the period March 5, 2018 until terminated by statute is denied and dismissed.

5. Claimant earned an AWW of $824.40.

6. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 26, 2018.

ISSUES

1. Whether respondent is responsible for payment of medical bills from the Golden Autumn Care Home ("Zlotan Jesien" in Polish), the nursing home where Claimant resides and receives medical treatment in Gdansk, Poland.

2. Whether Respondent is subject to penalties pursuant to § 8-43-304, C.R.S. for failing to timely pay or deny medical bills from Golden Autumn Care Home in violation of W.C.R.P. 16-11.

FINDINGS OF FACT

1. On May 30, 2007 Claimant sustained a work related injury while operating a cab for Respondent. On that date, an unknown individual entered the rear driver's side door of Claimant's cab, pulled a gun, and shot Claimant in the back of the head and neck.

2. A hearing was held on September 17, 2010 before ALJ Cannici. The hearing addressed whether or not Claimant was an "employee" at the time of the injury and entitled to workers' compensation benefits, whether Respondent maintained workers' compensation coverage, and whether Respondent was responsible for reasonable and necessary medical benefits related to the injury.

3. On November 10, 20110 ALJ Cannici issued an Order finding that Claimant was an "employee" of Respondent and that Respondent was responsible for past medical treatment and ongoing reasonable and necessary medical benefits related to the May 30, 2007 industrial injury. *See* Exhibits 2, A, 3.

4. Both sides appealed ALJ Cannici's Order. Ultimately, after appeals, the determination that Claimant was an "employee" and that Respondent was responsible for past medical treatment and ongoing reasonable and necessary medical benefits related to the May 30, 2007 industrial injury was affirmed. *See* Exhibits 4, 5, 6, 7, 8.

5. Claimant was extensively injured in the work related injury and shooting. Following his work related injury, Claimant remained in the United States for several years residing in, and being cared for, at two separate nursing homes. *See* Exhibits 2, 3.

6. In July of 2014 Claimant moved back to Gdansk, Poland. On July 2, 2014 Claimant became resident and patient of the Golden Autumn Care Home (hereinafter Golden Autumn).

7. Respondent paid for invoices and care from Golden Autumn from the beginning of Claimant's residency in July of 2014 through an invoice for care and

residency covering April of 2017. As of April, 2017, Claimant's reasonable and necessary medical treatment related to his May 30, 2007 work related injury had been paid by Respondent.

8. On March 14, 2017 Respondent's counsel sent a letter to Claimant's counsel notifying him that Golden Autumn should direct invoices to a new billing address:

> Metro Taxi
> Attention: Mr. Kyle Brown, General Manager
> 5909 East 38th Avenue
> Denver, CO 80207 USA

See Exhibits K, 21.

9. The March 2017 and April 2017 invoices from Golden Autumn were paid for by Respondent in June of 2017. *See* Exhibit I.

10. On July 5, 2017 Respondent's counsel sent an electronic mail message to Claimant's counsel stating that Respondent was having difficulty receiving invoices from Golden Autumn which had led to corresponding difficulty in paying. Respondent requested that Claimant's counsel assist in facilitating Golden Autumn getting invoices to the proper person, Kyle Brown, so that the invoices could be paid. *See* Exhibit 22.

11. On August 18, 2017 Claimant filed an Application for Hearing endorsing medical benefits and penalties. The Application stated: penalties against Respondent pursuant to 8-43-304, C.R.S., for their failure to timely pay or deny medical treatment from Claimant's nursing home and medical providers in violation of W.C.R.P. 16-11. *See* Exhibit 9.

12. That same day, August 18, 2017, Kyle Brown the General Manager for Respondent sent an electronic mail message to Claimant's counsel. Mr. Brown apologized for any inconveniences that this may have caused Claimant. Mr. Brown indicated that Respondent had been in a low side of their business for some time now and had been juggling their expenses to just keep the doors open. Mr. Brown indicated disruption in their industry by Lyft and Uber along with market saturation of 3 new taxi companies had made it very difficult for them. Mr. Brown indicated Respondent was living week to week. Mr. Brown also indicated that last February one of the owners had suddenly passed away and that the deceased owner had been the one who took on the responsibility at the company for the management of Claimant's case. Mr. Brown stated that Respondent had been responsible for Claimant's care for many years and had met all of its requirements. Mr. Brown explained that Respondent had simply hit a bump in the road. Mr. Brown expressed that Respondent desired an opportunity to rectify the issue without adding expense. *See* Exhibit 23.

13. On August 21, 2017 Claimant's counsel sent an electronic mail message to Mr. Brown and to Respondent counsel thanking them for their recent honest

communications regarding the current situation. The electronic mail message expressed that Golden Autumn was threatening to evict Claimant and asked Mr. Brown and Respondent's counsel for a timeframe within which they intended to rectify the situation. Claimant's counsel also asked if anyone from Respondent contacted the nursing home to let them know what was going on and asked whether Respondent had an English speaking contact at the nursing home that they could discuss the situation with. Claimant's counsel indicated that if Respondent did not have an English speaking contact, he could see if he could find a contact for Respondent. *See* Exhibit 24.

14. That same day, August 21, 2017, Mr. Brown responded by electronic mail message. Mr. Brown thanked Claimant's counsel and indicated that they did not have an English speaking contact and would accept the gracious offer to help Respondent find one. Mr. Brown indicated that would be a big help because of all that he was dealing with to keep Respondent company afloat. Mr. Brown stated that he would to make it his personal responsibility to work with that person to get this back on track and that he anxiously awaited Claimant's counsel's response on who to contact. *See* Exhibit 24.

15. On August 24, 2017 Mr. Brown emailed Claimant's counsel asking if they had luck locating an English speaking contact at the nursing home and indicated that Respondent was anxious to get back on track. Claimant's counsel replied by email indicated that he had emailed Claimant's brother but had not heard back. *See* Exhibit 25.

16. On September 5, 2017 Mr. Brown sent an electronic mail message to Claimant's counsel. Mr. Brown stated that he was prepared to send payment to Golden Autumn on that day or the next. Mr. Brown also asked what the payment of $943 bi-weekly was for and indicated he was trying to get a full understanding of the matter. *See* Exhibit 25.

17. On September 18, 2017 Respondent filed a Response to Application for Hearing. The Response stated: Respondent is not denying treatment of Claimant by the Golden Autumn Nursing Home. *See* Exhibit 10.

18. In late fall of 2017 Mr. Brown left the employment of Respondent. Employer records showed that as of the May 2018 hearing, no payment had been made to Golden Autumn by Respondent for Claimant's treatment bills June 2017 or later.

19. On November 13, 2017 Claimant served discovery on Respondents.

20. On November 13, 2017 in response to the discovery propounded, Respondent claimed that they had not received bills from Golden Autumn since February of 2017. Respondent acknowledged that medical bills from March 2017 to the present likely existed, but indicated they were simply not in possession of them. Respondent indicated that at hearing Kyle Brown was expected to testify regarding Respondent's payment of medical bills for the Golden Autumn nursing home and that he had not received any bills from Golden Autumn nursing home since February of 2017. Records attached to the discovery responses show that between February 13 and June 4 2017

Respondent made no payment to Golden Autumn and on June 5, 2017 Respondent made payments for the March and April 2017 nursing home bills. Records showed that no payments had been made to Golden Autumn since the June 5, 2017 payment. Records also showed that Respondents had continually paid Claimant bi-weekly temporary indemnity benefits. *See* Exhibit 11.

21. On November 15, 2017 Claimant's counsel's paralegal sent an electronic mail message to Respondent's counsel forwarding invoices from Golden Autumn for June, July, August, September, and October of 2017. *See* Exhibit 26.

22. The June, July, August, September, and October 2017 bills from Golden Autumn to Respondent all list an address of:

Metro Taxi- CaseNet MC
2224 S. Fraser St, Suite 5
Aurora, CO 80014

See Exhibit 20.

23. On January 16, 2018 the August 18, 2017 Application for Hearing was withdrawn without prejudice. *See* Exhibit 12.

24. On January 17, 2018 Claimant submitted a new Application for Hearing again endorsing penalties under 8-43-304, C.R.S. for Respondent's failure to timely pay or deny medical bills from Claimant's nursing home and medical providers in violation of W.C.R.P. 16-11. *See* Exhibit 13.

25. On March 20, 2018 Claimant's counsel's paralegal sent a letter to Respondent's counsel forwarding invoices from Golden Autumn for June, July, August, September, October, November, and December of 2017 as well as for January and February of 2018. All the invoices from Golden Autumn had an address on the front of the invoice of:

Metro Taxi- CaseNet MC
2224 S. Fraser St., Suite 5
Aurora, CO 80014.

See Exhibit 27.

26. On April 6, 2018 Paralegal to Claimant's counsel sent an email to Respondent's counsel. The email attached the copy of an envelope sent from Golden Autumn with billing for the month of February 2018 that was stamped "not known" and "unable to forward." The paralegal asked Respondent counsel to explain what happened and asked if the address changed. The envelope shows that it was mailed to:

Metro Taxi

Attn: Mr. Kyle Brown, General Manager
5909 East 38th Ave.
Denver, CO 80207 USA

See Exhibit 28.

27. On May 15, 2018 Respondent supplemented discovery responses. Respondent again indicated that their position was that Respondent had not received bills from Golden Autumn since February of 2017. In regard to medical bills from Golden Autumn since February 2017, Respondent also indicated that Respondent counsel had been provided a few additional medical bills by counsel for Claimant and had forwarded them to Respondent. *See* Exhibit 18.

28. The last payment Respondent made to Golden Autumn was in June of 2017 covering treatment provided in April of 2017. The hearing in this matter was held on May 16, 2018. Respondent had not, as of the date of hearing, made any payments to Golden Autumn for Claimant's treatment and the bills for treatment covering June, July, August, September, October, November, and December of 2017 and January and February of 2018. As of the date of hearing the evidence shows 9 months of treatment bills from Golden Autumn that had not been paid by Respondent.

29. Respondent Employer's current Vice President testified at hearing. He indicated that no payment had been issued to Golden Autumn based on the records he had since June of 2017. He also indicated that Employer was still in business, still paying employees, and still paying their general business expenses.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony

and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reasonable and Necessary Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As found above, a prior hearing found Respondent to be liable for reasonable, necessary, and causally related medical treatment for Claimant's May 30, 2007 work related injury. Respondent is not disputing that the care provided by Golden Autumn is reasonable and necessary treatment for Claimants' work related injury. The evidence has established that Claimant was severely injured and currently requires care at a nursing home type facility due to his work related injury. Respondents do not dispute that the care provided by Golden Autumn is reasonable, necessary, and causally related to the work injury. Respondents continue to be responsible for the treatment provided by Golden Autumn and are liable for the invoices and bills issued by Golden Autumn on a monthly basis.

Penalties

Whether statutory penalties may be imposed under § 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational

argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

The question of whether the insurer's conduct was objectively reasonable ordinarily presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). A party establishes a prima facie showing of unreasonable conduct by proving that an insurer violated a rule of procedure. If the claimant makes such a prima facie showing the burden of persuasion shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra, Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

W.C.R.P. at 7 CCR 1101-3 under Rule 16-11 requires that all bills submitted by a provider are due and payable in accordance with the Medical Fee Schedule within 30 days after receipt of the bill by the payer. *See* W.C.R.P. 16-11(A)(3). It further provides that date of receipt of the bill may be established by the payer's date stamp or electronic acknowledgement date; otherwise, receipt is presumed to occur three (3) business days after the date the bill was mailed to the payer's correct address. *See* W.C.R.P. 16-11(A)(5). The Rules go on to advise that unreasonable delay in processing payment or denial of payment of medical service bills, as determined by the Director or an administrative law judge, may subject the payer to penalties under the Workers' Compensation Act. *See* W.C.R.P. 16-11(A)(6).

Here, the requirement in the W.C.R.P. to pay medical bills submitted by a provider within 30 days of receipt of the bill is a duty lawfully enjoined of Respondent. Claimant has established that Respondent violated W.C.R.P. rule 16-11 when Respondent failed to pay medical bills from Golden Autumn within 30 days of receipt of those bills.

Respondents argue that their actions were not objectively unreasonable due to the troubles with billing address, change in employees in their company, and argued that they could not pay bills that they had not received. Under W.C.R.P Rule 16-11 the date of receipt of medical bills can be established if the payer date stamps the bills or there is an electronic acknowledgment of the receipt of the bills. Otherwise, there is a presumption that the bills have been received three business days after they were mailed to the payer's correct address. Here, the bills in question all list an outdated or incorrect address for Respondent. In March of 2017 Respondent indicated that all bills from Golden Autumn should be sent to a new address. The bills themselves show the old address continued to be listed on the bills through the February 2018 invoice. As found above, Respondent communicated with Claimant surrounding the problems in receiving bills after the change of address was made. Although there is one returned mail envelope for the February 2018 invoice showing that by February 2018 Golden Autumn had mailed an invoice to the new and correct address, there is no evidence that prior invoices were sent to the payer's correct address as required by W.C.R.P 16-11. Therefore, there is no presumption that

Respondent received the bills three business days after mailing. However, the date of receipt of the bill may also be established by an electronic acknowledgement date. Here, the evidence established an electronic mail message was sent and received by Respondent counsel on November 15, 2017 with unpaid invoices from Golden Autumn for June, July, August, September, and October of 2017 attached.

Respondents were well aware of the issues of unpaid bills prior to November 15, 2017. As found above, in August of 2017 Respondent indicated problems with business downturn and that they wanted to get back on track with the payments to Golden Autumn. In September of 2017 Respondent indicated they were prepared to make payment. However, statutory penalties are only available for violation of a duty lawfully enjoined or required of Respondent. Here, Respondent certainly should have sought out copies of the bills and made earlier payment. Respondents admit in discovery that bills likely existed but that they had not received them yet. Although Respondent should have taken earlier action knowing bills likely existed, Respondent is only lawfully required to pay medical bills within 30 days of receipt. The evidence does not establish, more likely than not, that Respondents received invoices or bills from Golden Autumn until the electronic message to Respondent's counsel on November 15, 2017.

After the back and forth for several months between the parties, the ALJ finds that Respondent had actual receipt of the Golden Autumn bills on November 15, 2017. Under W.C.R.P 16-11 this makes payment due by December 15, 2017. As found above, Respondents had not paid any of the bills as of the date of hearing May 16, 2018. Claimant has established that there was a violation of W.C.R.P. 16-11 from December 15, 2017 through May 15, 2018.

After weighing the evidence and testimony, the ALJ also concludes that Respondents inaction in failing to pay invoices by December 15, 2017 was objectively unreasonable. As found above and as noted by the parties, Respondent is not denying that the treatment was reasonable, necessary, or causally related. Respondent was well aware of the issue of unpaid bills (although they didn't have actual receipt of the bills yet) as early as July 2017. Respondent knew in August of 2017 that Claimant had applied for hearing on the issue of the unpaid bills. When they finally received the actual invoices/bills on November 15, 2017 they were well aware that they had not paid bills for several months and their failure to pay within 30 days is objectively unreasonable given the circumstances and facts of this case. Respondent knew several months prior to the November 15, 2017 receipt of the invoices/bills that Claimant was potentially facing eviction from the nursing home. Respondent's failure to act within 30 days of the November 15, 2017 receipt is unexplainable and objectively unreasonable.

December 15, 2017 through May 15, 2018 (the day prior to hearing as Respondent could have paid invoices the day of hearing after it concluded), amounts to a violation period of 151 days. When assessing penalties under § 8-43-304, C.R.S. an ALJ should consider several factors including the extent of harm to a claimant, the duration and type of violation, a respondent's motivation for the violation, any mitigation attempted by a respondent, and whether or not the misconduct Is representative of pattern of misconduct. *Anderton v. Hewlett Packard*, W.C. No. 4-344-781 (November 23, 2004); *Grant v.*

Professional Contract Services, W.C. No. 4-531-613 (September 16, 2005). Although statute allows for a penalty of up to $1,000 per day or up to $151,000, the ALJ has weighed the evidence and factors in this specific case and finds a penalty of $250 per day to be appropriate. Although it appears from the evidence that Claimant was not evicted from Golden Autumn, the ALJ finds there was harm to Claimant who requires care in a nursing home facility in having unpaid bills with no timeframe or indication the bills would be paid. Further, Respondent's motivation for failing to pay bills appears most likely to be related to their downturn in business and their poor record keeping/management skills when employees left their employment and did not transmit important information about Claimant's bills. Additionally, Respondent as of the date of hearing had not paid the bills or shown significant attempts at mitigation. As found above and found in an earlier order, Respondent was uninsured on Claimant's date of injury. After weighing evidence, the ALJ orders a penalty of $250/day times 151 days for a total penalty of $37,750 against Respondent.

If a penalty is assessed under § 8-43-304, C.R.S. the ALJ must apportion payment of the penalty between the aggrieved party and the Colorado uninsured employer fund created by § 8-67-105 C.R.S. except that the amount apportioned to the aggrieved party shall be a minimum of twenty-five percent of any penalty assessed. The ALJ determines in this case that 65% of the penalty shall be apportioned and paid to Claimant and 35% shall be apportioned and paid to the Colorado uninsured employer fund.

ORDER

1. Claimant has established by a preponderance of the evidence that medical treatment at Golden Autumn for the period June, 2017 through February 2018 was reasonable, necessary, and causally related to his work injury. Respondents shall pay for the care and treatment and shall pay invoices from Golden Autumn.

2. Claimant has established by a preponderance of the evidence a violation of W.C.R.P. 16-11 from December 15, 2017 through May 15, 2018 and an entitlement to penalties for a period of 151 days.

3. Respondent shall pay a penalty of $24,537.50 to Claimant.

4. Respondent shall pay a penalty of $13,212.50 to the Colorado uninsured employer fund.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 27, 2018

Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

STIPULATION

At the commencement of the hearing, the parties agreed to reserve the issues of average weekly wage and temporary disability benefits for future determination, if applicable.

REMAINING ISSUES

I. Was Claimant's filing of her claim for compensation with the Division of Workers' Compensation outside of the time limitations set forth in § 8-43-103(2), C.R.S. accompanied by a reasonable excuse?

II. Was Claimant's filing of her claim for compensation with the Division of Workers' Compensation outside of the time limitations set forth in § 8-42-103(2) accomplished without prejudice to the rights of Respondent-Employer?

III. If Claimant's late filing was accompanied by a reasonable excuse and did not prejudice the rights of Respondent-Employer, whether Claimant established, by a preponderance of the evidence, that she sustained a compensable injury to her cervical spine on or about January 5, 2015?

IV. Whether Respondents liable for Claimant's March 13, 2015 surgery?

V. Whether Respondents are liable for reimbursement of co-payments made to Claimant's personal health insurance company?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was born December 17, 1969 and was 49 years old at the time of the hearing. (Exhibit F).

2. Claimant has been a dental hygienist for 13 years and is currently working part-time as a hygienist for a dental practice other than Employer.

3. Claimant's job duties as a dental hygienist include meeting with patients, taking any necessary x-rays, and performing cleaning procedures, including root planing and scaling on patients.

4. Claimant worked for Employer from September 27, 2010 to January 27, 2015.

5. On July 30, 2012, Claimant reported to Employer that she was experiencing mild pain and tingling running down her arm and into her hand. She also told him that her doctor informed her that this pain was likely work related.

6. Claimant has a prior workers' compensation claims history. On March 13, 2009, she filed a claim for compensation against a former employer, Ronald Cockrell DDS/New Image Dental, for a neck injury, which occurred on February 9, 2009. The February 9, 2009 claim was denied, but Claimant signed settlement documents to resolve that claim on December 3, 2010.

7. On April 12, 2010, Claimant filed a claim for compensation for an alleged work-related neck injury with an injury date of March 20, 2009. Her employer at that time was Douglas Reid, DDS. The March 20, 2009 claim was denied, but Claimant signed settlement documents to resolve that claim on January 21, 2011.

8. The evidence presented persuades the ALJ that Claimant was aware that the symptoms she was experiencing on July 30, 2012 were possibly related to her work duties and were serious in nature. Indeed, she asked Employer to initiate a workers' compensation claim.

9. Employer immediately contacted Berkley Risk Services, the company that handles all of his business-related insurances, and acquired an Employer's First Report of Injury Form, which he erroneously gave to Claimant to complete. Regardless, the claim was filed and Claimant undertook treatment for her neck.

10. Claimant's 2012 claim was Employer's first and only experience with filing an employee's workers' compensation claim.

11. Employer testified that the office break room contained signs/posters notifying employees that they must file workers' compensation claims within four working days if they are injured on the job.

12. Zurich Insurance Company (Zurich), Employer's workers' compensation carrier at the time, admitted liability for Claimant's injury and as noted, she pursued treatment. Conservative care failed to provide lasting relief. Consequently, Claimant underwent surgery with Dr. Michael Brown on March 6, 2013. Dr. Brown performed a C5-6 fusion in an effort to relieve Claimant of her persistent right sided radicular symptoms.

13. By August 1, 2013, Insurer had assumed workers' compensation coverage for Employer's dental practice.

14. After her surgery, Claimant returned to work for Employer. Her schedule consisted of four eight-hour shifts per week until December of 2013. At that time, she requested a reduction to two days per week, specifically Monday and Tuesday, because she was having residual pain and symptoms associated with her July 30, 2012 injury.

15. Claimant's requested schedule change was accommodated and Employer hired a second part time dental hygienist, Cindy McNesse who worked the remaining days the practice is open, i.e. Wednesday and Thursday. Employer's offices are closed on Friday.

16. In November of 2014, Ms. McNesse alerted Employer that her other part-time employer wanted her to quit his office to work full-time there or her part-time employment (and full-time benefits) with them would be terminated.

17. On December 16, 2014, after much discussion with both Claimant and Ms. McNesse, Employer informed Claimant that she would be terminated as of February 1, 2015, because she had informed him that she could not handle three or four full workdays. Given Ms. McNesse's situation and Claimant's inability to work full time, Employer had decided that Ms. McNesse would be given the office's hygienist job on a full time basis. Claimant then left work unexpectedly and without notice. She did not return to the office that day.

18. Claimant's alleged work-related injury occurred on Monday morning, January 5, 2015. Regarding this injury, Employer testified that Claimant called him at 6:00 am to inform him she could not work that day because she had awoken with neck pain and painful shooting sensations extending from the left shoulder down the arm. Claimant confirmed this testimony.

19. Employer testified further that during this phone call, Claimant did not ask him, as she had done previously, to file a new workers' compensation claim, nor did she alert him of anything else that would indicate that this was a new work-related injury. Based upon the evidence presented, the ALJ finds that Employer was not provided with sufficient information to lead a reasonably conscientious manager to believe the alleged injury in this case may involve a claim for compensation.

20. Claimant testified that she last worked for Employer on the previous Tuesday, i.e. six days before the January 5, 2015 phone call to Employer. She testified that she felt discomfort on Sunday leading up to the excruciating and debilitating pain she experienced Monday morning. According to Claimant, when she stood up to get out of bed, she felt pressure and an immediate onset of severe pain in her neck, left shoulder and left arm. She admitted that she did not experience this pain on Tuesday night after work, Wednesday morning or night, Thursday morning or night, nor Friday morning or night.

21. Disability certificates provided by Claimant to Employer dated January 5 and January 8, 2015, from Physician Assistant (PA-C) Stacy Concelman at Woodland Park Family Medicine refer only to an "illness." The certificates do not reference a diagnosis or contain any statement regarding the relatedness of Claimant's "illness" to her work duties.

22. By report dated January 5, 2015, PA Concelman reported, "Left neck, shoulder, arm pain for 2 days. Pain is 'excruciating'. History of C5-C6 fusion. Pain is

similar but in a different location. She denies trauma or anything that seemed to onset the pain. Onset was sudden." (Emphasis added).

23. An MRI performed January 21, 2015 revealed disc herniation at C6-C7.

24. Claimant was aware that she had bulging discs at C6-C7 prior to January 5, 2015. She testified that she had symptoms on both sides of her neck at the time of her 2012 injury. According to Claimant, the left sided symptoms she experienced during 2012 abated but the right sided symptoms persisted. Prior to her C5-6 fusion in 2013, Claimant and Dr. Brown discussed the possibility of extending the fusion to the C6-C7 levels. However, as her left sided symptoms had abated and her persistent symptoms were not consistent with C7 compression she and Dr. Brown agreed that a fusion at the C6-7 level was not necessary at that time.

25. Following her sudden onset of debilitating pain on January 5, 2015, Claimant received conservative care and injection therapy, which failed to provide sustained relief. Dr. W.L. (Larry) Lippert performed the aforementioned injections.

26. In a note dated March 27, 2015, Dr. Brown's PA Todd Luft stated that Claimant had elected to proceed with surgery at C6-C7 because her left arm symptoms had returned and her pain was severe.

27. On March 31, 2015, Dr. Brown performed surgery for a herniated disc at C6-C7 in an effort to relieve Claimant's ongoing symptoms.

28. Claimant did not request pre-authorization for her surgery from Zurich or Employer. She testified that she was in too much pain to concern herself about who may be responsible for payment.

29. By letter dated June 12, 2015, counsel for Zurich, Michelle Prince, informed Claimant's attorney that the carrier denied coverage for medical services in February and March 2015 because a note from Claimant's primary doctor dated January 14, 2015 seemed to indicate that the injections recommended were for "the new left sided arm symptoms claimant began experiencing after she returned to work and therefore would not be related to this admitted claim." In another letter dated June 12, 2015, Attorney Prince advised Claimant's counsel that Dr. Lippert's bills for injections did not relate to the admitted July 30, 2012 claim.

30. Claimant attempted to settle her July 30, 2012 claim with Zurich by participating in a settlement conference on July 18, 2017. During this conference, Claimant and her attorney discovered that the insurance company at risk for her alleged 2015 injury was not Zurich. Claimant testified that she knew Zurich would be released from further liability under the 2012 case should that case settle.

31. While Claimant participated in the settlement conference on July 18, 2017, she did not sign settlement documents for the July 30, 2012 injury until September 25, 2017. Claimant testified that she signed the documents knowing that another insurance carrier (Insurer) was on the risk to cover losses associated with her alleged January 5,

2015 injury, should that injury be found compensable. The settlement cleared Zurich Insurance of all remaining liability for the July 30, 2012 injury.

32. Between July 18, 2017 and the date that she signed the settlement documents involving Zurich (September 25, 2017), Claimant took no action to advise Employer of a claim for a January 5, 2015 injury despite knowing that another insurer covered Employer for workers' compensation injuries. Instead, Claimant filed her claim for the January 5, 2015 injury on September 25, 2017, the same day that she signed the settlement documents releasing Zurich from further liability under the 2012 claim.

33. Claimant's claim for the January 5, 2015 injury was filed 33 months (997 days), after the alleged injury date.

34. Claimant noted the injury date in the Worker's Claim for Compensation as Saturday, January 3, 2015, but she did not work that day because by this time, she was only working Mondays and Tuesdays due to the ongoing effects of her 2012 injury and the office is closed on Saturdays.

35. Insurer's first notice of a new injury or claim was October 6, 2017. Insurer filed a notice of contest on October 12, 2017, taking the position that the alleged injury was not work-related.

36. Kathy Trevino, the current adjustor for Insurer on the 2015 claim testified that Claimant's filing of the claim two years and 9 months after the alleged work-related injury precluded Respondents from efficiently and effectively preparing their defense in several respects including the following:

- Respondents could not take a statement from Claimant about this new injury.
- Respondents could not immediately collect medical records.
- Respondents could not immediately collect prior claim files.
- Respondents could not designate four doctors to attend to Claimant's alleged injuries, including a surgeon.
- Respondents could not obtain a job analysis from the same time period when Claimant worked for employer.
- Respondents could not investigate Claimant's other work or recreational activities.
- Respondents could not retain an independent medical examiner regarding causation and reasonableness of surgery before the surgery was performed.

- Respondents could not immediately hire an attorney to defend the claim.

- Respondents could not have requested a Rule 16 medical opinion, if a Rule 16 request was made.

- Respondents may have controlled where Claimant went for physical therapy, but they could not do so.

- Respondents may have retained an independent medical examiner regarding causation, restrictions, return to work, and impairment rating, but could not do so.

- Respondents could have talked to employer about light duty job possibilities.

- Respondents could have been involved in the settlement conference with Zurich, which now amounts to a lost opportunity to determine accurate liability for the surgery and the new claim.

- Respondents lost the opportunity to pool resources with Zurich Insurance to investigate and defend against the claim.

- Respondents could have talked to Dr. Brown in a SAMMS conference before he reached a final opinion regarding causation.

(Ms. Trevino Testimony, Hearing Tr. pp. 51-55).

37. Employer also raised many of the same concerns regarding his rights being prejudiced by Claimant's late filing of her 2015 claim as were enumerated by Ms. Trevino.

38. Ms. Trevino estimated the fees for defending the current claim will be around $10,000, an amount that would probably have been lower had Insurer been notified sooner, and a price that will be reflected in Employer's future premium payments.

39. Dr. Brown testified by deposition as an expert in neurosurgery. He is not Level II accredited under the Colorado Division of Workers' Compensation Rules of Procedure and has not taken/participated in a formal course offered by the Division of Workers' Compensation (DOWC) in how to perform a causation analysis. According to Dr. Brown, Claimant's work as a dental hygienist, particularly the combined lateral bending and flexion of the neck can lead to compression and aggravation of the nerve roots causing pain and weakness. Such movement creates intradiscal pressure that can result in disc herniation and exacerbation of pre-existing pathology. He testified that Claimant had degenerative problems, including bone spurs and a congenitally small spinal canal, at both C5-6 and C6-7, in addition to disc herniation, causing her

symptoms and need for surgery. He testified that the disc herniation of 2015 likely occurred "somewhere around the time of the onset of her pain." (Emphasis added).

40. Dr. Brown testified that that in 2013 Claimant's symptoms were "so clearly related to C6, that just doing that level would be appropriate for her and it did work" and at that time, he "did not see evidence of right C7 nerve root compression.

41. Dr. Brown testified that he had not seen a large number of patients come back needing surgery at adjacent spinal levels after an initial fusion surgery. He explained that questions remain as to whether the need for additional fusion surgery at adjacent levels should be considered causally related to the impact that the original fusion surgery has on adjacent levels or whether the need for such surgery simply represents the natural progression of the underlying disease process as the patient continues to age and the adjacent levels degenerate. In Claimant's case, Dr. Brown testified that there was no particular accident or injury that triggered the onset of her left arm pain in January 2015.

42. Joseph Blythe, MA, CRC reviewed Claimant's job description and performed a job demands analysis on May 10, 2018 using Dr. Bayne as a model to demonstrate the essential duties of Claimant's position at all times relevant. In his report dated May 12, 2018, Mr. Blythe concluded that none of Claimant's job duties presented with a risk factor for injury.

43. On December 22, 2017, Claimant was evaluated by Dr. Lloyd Mobley III at the request of Respondents. As part of his independent medical examination (IME), Dr. Mobley reviewed a substantial number of medical records. He would subsequently review the job demands analysis (JDA) prepared by Joe Blythe. He completed a physical examination and issued a report wherein he concluded that it was "unlikely" that Claimant's C6-7 disc herniation was "directly caused by her activities as a dental hygienist" because "her symptoms weren't related to a specific incident or injury at work."

44. Dr. Mobley testified at hearing as a neurosurgeon with 14 years of experience. After some questioning, Dr. Mobley conceded that he is not currently Level II accredited. Nonetheless, he testified that he has performed a substantial number (700-1200) of cervical spine surgeries and is familiar with the causation principals taught in the Level II curriculum. Consequently, Dr. Mobley was recognized as an expert in neurosurgery.

45. Dr. Mobley testified that his review of the JDA did not reveal job duties that would pose risk factors consistent with causing C6-7 disc herniation. Moreover, he testified that Claimant's work activities as described in Mr. Blythe's JDA report did not substantially and permanently aggravate a pre-existing progressive neck condition. In short, Dr. Mobley concluded that while awkward neck posture can cause disc herniation, there is no evidence that Claimant had any pain accompanying her work duties in the week leading up to her January 5, 2017 incident where she experienced

severe pain while getting out of bed. Without concurrent pain, Dr. Mobley testified that it is unlikely that awkward posturing at work caused Claimant's disc herniation.

46. Dr. Mobley disagreed with Dr. Brown's opinion that foraminal narrowing set Claimant up for a disc herniation at C6-C7. Rather, he cited several other non-work related risk factors, which when combined probably caused Claimant's C6-7 herniation. Specifically, Dr. Mobley testified that Claimant's age, genetics and her prior fusion at C5-C6 all played a role in causing the disc herniation at C6-7. According to Dr. Mobley, Claimant's C5-6 fusion likely caused increased stress on the adjacent C6-7 level, which was already compromised given the findings on her 2009 MRI and as previously identified by Dr. Brown at the time he fused Claimant's C5-6 level. The ALJ interprets Dr. Mobley's testimony to indicate that the likely cause of Claimant's C6-7 disc herniation is related to the natural progression of a pre-existing degenerative condition possibly hastened by the mechanical forces affecting that level because of her C5-6 fusion following her 2012 injury.

47. Claimant testified that the purpose for the hearing on the compensability issue was to provide her personal health insurance provider, Blue Cross Blue Shield, with a judicial determination concerning compensability of the asserted 2015 injury. She also testified that Blue Cross Blue Shield notified her that they had decided to "retract" their payments "to everyone for that surgery that day". She wants to avoid a negative credit report and creditor harassment.

48. Claimant submitted a summary of co-payments she had made to date to Blue Cross Blue Shield relating to her January 5, 2015 alleged neck injury. The co-payments made total $1,286.85.

49. Claimant contends that her "reasonable excuse" for late filing of her claim for compensation is that she did not know that Hanover was the carrier at risk on the date of her alleged January 5, 2015 injury until July 18, 2017 at the settlement conference, and that counsel for Zurich withheld that information until the settlement conference. In essence, Claimant contends that she assumed that Zurich was responsible for her January 5, 2015 injury, and that her assumption was reasonable under the circumstances.

50. Based upon the evidence presented, the ALJ finds that by the time of her January 5, 2015 claim, Claimant had filed three prior claims for compensation against her employers. Therefore, it is reasonable to infer that Claimant knew or should have known about the importance of, and procedures for, filing a claim for compensation when there is an alleged injury at work.

51. Claimant contends that her "reasonable excuse" for late filing of her claim for compensation is that she did not know that there had been a change in carriers on the date of her alleged January 5, 2015 injury until July 18, 2017 at the settlement conference, and that counsel for Zurich withheld that information until the settlement conference. In essence, Claimant contends that she assumed that Zurich was

responsible for her January 5, 2015 injury, and that her assumption was reasonable under the circumstances.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo.App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceedings is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). Based upon the evidence presented, the ALJ finds Claimant's testimony concerning the alleged reasons that she did not file her claim within the time frames set forth in § 8-43-103(2) unpersuasive.

D. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Dr. Mobley are credible and supported by the medical record as a whole. When the evidentiary record is considered in its totality, the opinions of Dr. Mobley are more persuasive than contrary opinions of Dr. Brown.

II. Dismissal of the Claim

E. Issue 1: Was Claimant's filing of her claim for compensation with the Division of Workers' Compensation 33 months (997 days) after the alleged injury date accompanied by a reasonable excuse?

A valid claim for compensation can be dismissed if a claimant waits too long to pursue his/her claim. *See Grant v. Industrial Claim Appeals Office*, 740 P.2d 530 (Colo. App. 1987). Section 8-43-103(2) of the Colorado Workers' Compensation Act provides in relevant part:

> [T]he right to compensation and benefits . . . shall be barred unless, **within two years after the injury** . . . a notice claiming compensation is filed with the division. **This limitation shall not apply . . . if it is established . . . within three years after the injury . . . that a reasonable excuse exists for the failure to file such notice***.*

C.R.S. § 8-43-103(2) (2017). (Emphasis added).

F. The limitation period commences when the claimant reasonably should have recognized the nature, seriousness, and probable compensable character of the injury. *City of Boulder v. Payne,* 162 Colo. 345, 426 P.2d 194 (1967); *see Intermountain Rubber Indus., Inc. v. Valdez,* 688 P.2d 1133, 1136–37 (Colo.App. 1984) (reasoning that because no treating physician diagnosed claimant with any disc or musculoskeletal disorder nor gave him any indication in 1976 that the accident predisposed him to more serious back injury, claimant did not know of the nature, seriousness, or compensable character of his injury until he was diagnosed with a herniated disc in 1980).

F. When an occupational disease is at issue, the limitation period begins to run as of the date the claimant becomes disabled. *City of Colorado Springs v. Industrial Claim Appeals Office*, 89 P.3d 504, 506 (Colo.App. 2004)(asserting that for "a claimant to recognize the probable compensable nature of an injury, the injury must be of sufficient magnitude to cause a disability that would lead a reasonable person to

recognize that her or she may be entitled to disability benefits"). In this case, the evidence presented persuades the ALJ that Claimant, by her own indication that she was unable to work, became disabled as a consequence of her alleged occupational disease on January 5, 2015. Given Claimant's assertion that she was suffering from an occupational disease, the limitation period in § 8-43-103(2), C.R.S. began to run as of that date.

G. "The statute does not require that the reasonable excuse be one that is legally watertight." *City and County of Denver, Police Dept. v. Phillips*, 166 Colo. 312, 319, 443 P.2d 379, 383 (1968). However, the Colorado Supreme Court has distinguished between a claimant's reasons for delayed filing and legally excusable reasons for so failing to act. *Armour & Co. v. Indus. Comm'n*, 149 Colo. 251, 256, 368 P.2d 798, 800 (1962); *see Monks Excavating & Redi-Mix Cement v. Kopsa*, 367 P.2d 321 (Colo. 1961). Among the most legally sound excuses are a claimant's reliance on a physician's opinions about the severity of the injury and the employer's advice, or other employer or insurer conduct that results in failure to file a claim, *e.g., Valdez*, 688 P.2d at 1137; *see Industrial Comm'n v. Newton Lumber & Mfg. Co.*, 135 Colo. 594 (Colo. 1957)(holding that the First Report of Injury form showing the employer's knowledge of the injury and its details along with employer providing the incorrect address on the form such that the claimant did not receive claim forms in the mail amounted to a reasonable excuse for claimant's untimely claim); *see also Prager v. Lakeridge Theater*, 483 P.2d 408 (Colo.App. 1971)(finding that the untimely filing of a claim may be excused because the employer or employer's insurer misled claimant into thinking he had no claim).

H. In this case, it is undisputed that Claimant failed to file a claim for compensation within 2 years as required by Section 8-43-102(3). As such, she must show that she had a reasonable excuse for filing 9 months after the 2-year deadline. Based upon the evidence presented, Claimant has failed, by a preponderance of evidence, to carry that burden for the following reasons:

- Since both Employer and Insurer had no knowledge of the alleged C6-C7 injury until over two years after it took place, it is improbable that their conduct could have influenced Claimant's actions such that reliance on any employer and/or insurer conduct was the reason for delay.

- Contrary to Claimant's assertion that she "immediately reported her claim" to Employer, the evidence presented persuades the ALJ that she merely informed Employer that she was not able to come to work on January 5, 2015 because she was having pain in her neck. Left shoulder and arm. The ALJ is not convinced that Claimant gave Employer any indication that her condition was work related. Claimant's assertion that Employer was sufficiently apprised of the work-related nature of her neck pain, left shoulder and arm after he received "communication from [her] doctor's office" equally unpersuasive, as the content of those records fails to document a work-related cause for her neck pain.

- Claimant was aware of the process for filing claims for compensation since she had filed three claims for compensation prior to the January 5, 2015 claim. Yet, the evidence presented is persuasive of the fact that she did not ask Employer, as she had previously in 2012, to file a claim despite her knowledge that her pain was either related to the 2012 injury or a new injury.

- Because Claimant discovered during the July 2017 settlement conference with Zurich Insurance that her employer's insurance coverage had changed at least once, Claimant reasonably knew or should have known the insurer at risk for her 2015 injury was not Zurich. Indeed, Claimant testified that she was aware that the carrier on the risk had changed and that her signature on the settlement documents would release Zurich from further liability under the 2012 claim. Despite this knowledge, she took no action to file her claim against Insured for an additional two months.

- Because Zurich's counsel wrote to Claimant's counsel twice on June 15, 2015 to inform her of Zurich's position on medical charges after January 5, 2015, Claimant knew or should have known by that date that Zurich denied liability for her medical bills, and that they were asserting that there was a new injury.

- In any event, Section 8-43-102(3) requires notice to **the Division of the Workers' Compensation**, not to a specific carrier, in order to avoid a statute of limitations defense. Claimant's argument that no one informed her that there was a new insurance carrier is unpersuasive because under the statute knowledge of the appropriate carrier at risk is irrelevant to the duty to file a claim for compensation with the Division. Moreover, the ALJ is unaware of and Claimant's cites no authority for the proposition that a carrier or employer has an affirmative duty to keep an allegedly injured worker apprised of policy changes. To the contrary, it is Claimant's burden to prove when the employer had sufficient knowledge to trigger the duties required by § 8-43-101(1). *See City and County of Denver v. Industrial Claim Appeals Office*, 58 P.3d 1162 (Colo. App. 2002) (burden of proof rests upon the party asserting the affirmative of a proposition). This is true because the tolling provisions create an exception to the claimant's duty to file a claim within two years of the injury. *Procopio v. Army Navy Surplus*, W. C. No. 4-465-076 (June 10, 2005). As referenced, an employer has notice of an occupational disease or lost time injury when it obtains some knowledge of facts connecting the claimant's injury or condition with the employment, and indicating to a reasonably conscientious manager that the case may involve a potential claim for benefits. See *Jones v. Adolph Coors Co*., 689 P.2d 681 (Colo. App. 1984); *Wilson v. Radisson* Hotel Denver, W.C. No. 3 839 812

> (April 8, 1998); *Procopio v. Army Navy Surplus*, W.C. No. 4-465-076 (June 10, 2005). The question of whether the employer was placed on notice sufficient to trigger its reporting duties is largely one of fact. *Doughty v. Poudre Valley Health,* W. C. No. 4 488 749 (January 13, 2003). As found, Claimant failed to carry her burden in this regard.

I. For the reasons stated above, this ALJ finds and concludes that Claimant's claim for compensation for a January 5, 2015 injury should be denied on the basis that she has not provided a reasonable excuse for her delay in filing a claim for compensation within 2 years.

J. Issue 2: Was Claimant's filing of her claim for compensation with the Division of Workers' Compensation 33 months (997 days) after the alleged injury date accomplished without prejudice to the employer?

Assuming there was a reasonable excuse; lack of prejudice to the employer is a necessary prerequisite to the acceptance of a claim. *City & Cty. of Denver (Denver Highway Unit) v. Bush*, 166 Colo. 76, 79–80, 441 P.2d 666, 667–68 (1968). Section 8-43-103(2) of the Colorado Workers' Compensation Act provides in relevant part:

> [T]he right to compensation and benefits . . . shall be barred unless, within two years after the injury . . . a notice claiming compensation is filed with the division. This limitation shall not apply . . . if it is established . . . within three years after the injury . . **. and if the employer's rights have not been prejudiced thereby**."

C.R.S. § 8-43-103(2) (2017). (Emphasis added).

K. Notice of the accident or injury is not equivalent to notice of a claim for compensation. *Monks Excavating*, 367 P.2d 321. The Colorado Supreme Court found that the employer was prejudiced by the claimant's 20-month delay in filing a claim for compensation because the employer was deprived of its statutory right to have the claimant medically examined, denied an opportunity to provide medical care that could potentially reduce the disability claim, and denied the right to consult with prior treating physicians concerning any connection between claimant's condition and the accident. *Bush*, 166 Colo. 76 at 81, 441 P.2d 666 at 668.

L. Prejudice to the employer cannot be presumed from untimely filing but must be actual and must be shown to be actual. *Newton Lumbar*, 135 Colo. at 596 (holding that untimely filing of the claim did not prejudice employer because the employer's report showed that employer knew of the accident, when it occurred, who the medical attendants of claimant were, where he was hospitalized, when admitted and when discharged from the hospital, and therefore could have taken steps to protect itself).

M. When the employer has notice that a claim for compensation will be or has been filed it can take steps to protect itself and its rights. *E.g. Armour & Co. v. Indus. Comm'n*, 149 Colo. 251, 257–58, 368 P.2d 798, 801 (1962)(reasoning that the untimely claim prejudiced the employer because the claimant suffered increasing pain and difficulty from her industrial accident without notifying the employer, and consequently the employer could not "take necessary and proper steps to protect its rights").

N. In this case, the ALJ finds and concludes that Respondents have proved, by a preponderance of evidence, that the rights of Employer have been prejudiced by Claimant's failure to report her January 5, 2015 claim within 2 years. The reasons for this conclusion are enumerated under Findings of Fact, paragraph 36 above. The ALJ also agrees with Respondents that if Claimant had filed her claim within the 2- year limitation period, the Division of Workers' Compensation would have advised her of the name of the carrier at risk for the alleged date of injury. Thereafter Insurer could have taken action to join all potential parties, and they could have participated in the defense of the case, and settlement negotiations, with all other possible Respondents. It is concerning that Claimant, despite gaining knowledge in July, 2017 that another insurance carrier was at risk, took no steps to advise Insurer of an impending settlement with Zurich, then proceeded to settle her claim with Zurich on September 25, 2017, the exact day that she filed her claim against Insurer. This ALJ finds that Claimant's behavior in this regard was likely intentional and designed to unfairly prejudice the rights of Insurer to bring Zurich into the claim as a fellow respondent regardless of the strength of any defense in pointing downstream to Zurich.

O. For the reasons stated above, this ALJ finds and concludes that, even if Claimant had provided a reasonable excuse for her delay in filing her claim, Claimant's claim for compensation for a January 5, 2015 injury should be denied pursuant to Section 8-43-103(2) on the basis that Respondents have demonstrated substantial prejudice in protecting the rights of their insured employer. Even if Claimant's claim was filed timely and did not prejudice Employer's rights, the evidence presented persuades the ALJ that she did sustain a compensable injury on January 5, 2015.

III. Compensability

P. Issue 3: Did Claimant suffer a compensable injury to her cervical spine on or about January 5, 2015?

Under the Workers' Compensation Act, an employee is entitled to compensation where the injury is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of "and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place

limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, questions exist as to whether Claimant's alleged injury/symptoms occurred in the scope of employment and whether her C6-7 disc herniation arose out of her employment.

Q. The term "arises out of" refers to the origin or cause of an injury. *Deterts v.Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957) (*mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of and in course of employment*). Rather, it is the Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between the employment and the injuries. § 8-43-201, C.R.S. 2013; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

R. The determination of whether there is a sufficient "nexus" or causal relationship between Claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). Proof by a preponderance of the evidence requires the proponent to establish the existence of a "contested fact is more probable than its nonexistence." *Page v. Clark, supra.* Whether Claimant sustained her burden of proof is a factual question for resolution by the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). In this claim, Claimant alleges that she developed neck, left shoulder and arm pain as a consequence of prolonged splinting/posturing of her neck associated with her duties as a dental hygienist. She did not allege the occurrence of a discrete injury but rather an occupational disease.

S. Section 8-40-201(14), C.R.S. defines "occupational disease" as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond that required for an accidental injury. An occupational disease is an injury that results directly from the employment or conditions under which work was performed and can be seen to have followed as a natural incident of the work. Section 8-40-201(14), C.R.S.; *Climax Molybdenum Co. v. Walter*, 812 P.2d 1168 (Colo. 1991); *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). On the other hand, an accidental injury is traceable to a particular time, place and cause. *Colorado Fuel & Iron Corp. v. Industrial Commission*, 154 Colo. 240, 392 P.2d 174 (1964); *Delta Drywall v. Industrial Claim Appeals Office*, 868 P.2d 1155 (Colo. App. 1993). An occupational disease arises not from an accident, but from a prolonged exposure occasioned by the nature of the employment. *Colorado Mental Health Institute v. Austill*, 940 P.2d 1125 (Colo. App. 1997). The failure to satisfy each element by a preponderance of credible evidence is fatal to an occupational disease claim. *Kinninger v. Industrial Claim Appeals Office*, 759 P.2d 766 (Colo. App. 1988). In this case, Claimant contends that she has proven that she sustained a compensable occupational disease. Based upon the evidence presented, the ALJ is not convinced. The ALJ bases this conclusion on the evidence outlined at Findings of Fact, paragraphs 45-46, including:

- Claimant's condition/symptoms developed suddenly over 5 days after Claimant had last worked for the employer and during an activity, i.e. standing up, that had no connection to any work-related duty.

- According to Drs. Brown and Mobley, pain associated with disc herniation is generally felt within a short period after the herniation. As noted, Claimant's debilitating pain came on suddenly. Based upon this evidence, this ALJ finds and concludes that the temporal delay in the appearance of severe pain makes it highly improbable that Claimant's work activities on the Monday and Tuesday before caused her disc herniation/symptoms.

- There is no evidence of a traumatic injury associated with any work duties in this case.

- Dr. Mobley credibly testified that the disc herniation in this case could have been caused by a number of non-work-related factors, including sleeping motions, genetics, prior bone spurring, spinal canal narrowing caused by bulging, and the presence of a previous fusion of adjoining spinal segments secondary to Claimant's 2012 injury.

- Claimant had difficulties with her cervical spine since at least 2009 when she filed her first claim for compensation. It is clear from the record that she has had a progressive cervical condition for over 5 years predating the onset of her left sided cervical pain on January 5, 2015.

T. A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

U. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). Here, the totality of the evidence presented persuades the ALJ that Claimant's current symptoms and need for treatment, including her C6-7 surgery is probably related to age, genetic predisposition and her long standing pre-existing disc disease. While the ALJ is convinced that Claimant's need for surgery was reasonable and necessary, the convincing evidence establishes that it was not related to an industrial cause. Based upon the evidence presented, the undersigned ALJ credits Dr. Mobley opinions to conclude that Claimant's alleged January 5, 2015 work injury is, more probably than not, related to the natural progression of her pre-existing degenerative cervical disc disease, which may have been accelerated, to an unknown degree, by the forces acting upon the C6-7 spinal level as a consequence of her C5-6 fusion surgery. Accordingly, even if Claimant's claim were not barred by the applicable statute of limitations, she has failed to prove by a preponderance of the evidence that she suffered a work-related injury to her cervical spine at the C6-C7 level.

IV. Claimant's Remaining Issues

V. Issue 4: Are Respondents liable for Claimant's March 13, 2015 surgery?

Since Claimant's claim for any benefits is barred by operation of Section 8-43-103(2), and because she has failed to prove that she suffered a compensable injury on or about January 5, 2015, her claim that Respondents should pay for her March 2015 surgery is denied and dismissed.

W. Issue 5: Are Respondents liable for Claimant's copayments relating to treatment after the alleged January 5, 2015 injury?

Since Claimant's claim for any benefits is barred by operation of Section 8-43-103(2), and because she has failed to prove that she suffered a compensable injury on or about January 5, 2015, her claim for reimbursement of co-payments made to her personal health insurer, Blue Cross Blue Shield is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant's claims for compensation arising out of an alleged injury date of January 5, 2015 are barred by operation of Section 8-43-103(2).

2. Claimant's request for payment of her March 2015 cervical surgery as performed by Dr. Brown is denied and dismissed since all of her claims are barred by Section 8-43-103(2), C.R.S. and because she failed to prove that she suffered a compensable injury occurring on or about January 5, 2015.

3. Claimant's request for payment of her medical co-payments is denied and dismissed since all of her claims are barred by Section 8-43-103(2), C.R.S. and because she failed to prove that she suffered a compensable industrial injury occurring on or about January 5, 2015.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 27, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

- Did Claimant prove she suffered a compensable occupational disease?
- If Claimant proved a compensable injury, is she entitled to TTD benefits commencing March 16, 2016?
- If Claimant is entitled to TTD benefits, did Respondents prove a basis to terminate those benefits?
- Did Respondents prove an offset against TTD?
- The parties stipulated to an average weekly wage of $641.43.

FINDINGS OF FACT

1. Claimant worked for Employer as a telephone sales representative, starting in September 2014.

2. Shortly after Claimant began working, she was given a headset with no independent volume control. The volume was controled by her computer, but the level adjustment was very limited.

3. Claimant perceived the headset volume to be excessively loud. In September 2015, she complained about the volume to her coworkers and team leaders. An "IT guy" checked the computer volume but could not adjust it. Claimant tried to manage the sound level by moving the earpieces partly off her ears and putting cotton in her ears.

4. In February 2016, Claimant developed ear pain and ringing in her ears. On February 28, 2018 she informed her supervisor, Sarah Kolstad, and requested a different headset. She received a new headset on March 2, 2016 with an adjustable volume control. Although this provided some relief, her symptoms of "ear pain, extreme sensitivity to loud noise and constant ringing in my ears" did not go away.

5. Claimant saw her primary care provider, Dr. Scott Trapman, on March 14, 2016 and reported "bilateral ear pain. Patient works at a call center and has been having to use headset without volume control and ears have been ringing and have now become painful." Dr. Trapman diagnosed "Tinnitus . . . hyperacusis, ringing in the ears and pain that worsens with loud noises." He further noted, "She works as a telemarketer and wears a headset that she currently cannot tolerate." Since Claimant attributed her symptoms to her headset, Dr. Trapman suggested she report it to Employer as a possible workers' compensation claim.

6. Claimant formally reported the injury later that day. She completed an injury/accident report in which stated:

> This injury occurred to me over a period of time. I have worked here for approximately 18 months and I have not had the ability to turn down the volume on my computer, it prevents you from turning down beyond a certain point. I also had a headset with no volume controls. . . . The last week of February 2016 I started experiencing ear pain as a result of customers calling me speaking loudly and not being able to turn down the volume. To describe – it was as if loud stereo bursts, blasting my ears, enough to startle me on occasion. I did complain to my sup[ervisor] about my ears hurting.

7. Ms. Kolstad completed an accident investigation report around the same time. She confirmed, "over a period of 6 months approximately [Claimant] was stating her headset was too loud. Recently on 2/28/16 became unbearable and she reported it to me [ ] for 1st time." Ms. Kolstad also noted, "when [Claimant] noticed the pain and ringing she verbally told her leaders and peers." Regarding steps Employer could have taken to prevent the injury, Ms. Kolstad stated, "in addition to having our IT support come down to help adjust volume, it should have been addressed that we needed more volume control options. I provided a new headset on 3/2/2016 with a volume control." She concluded Claimant's injury was due to "computer volume and phone headset volume."

8. Employer referred Claimant to its designated provider, Concentra. Claimant saw Dr. Randall Jones at her initial visit on March 15, 2016. Her chief complaint was "ringing in the ears." Dr. Jones documented the history of symptoms as:

> Inbound sales rep x 18 mos with tinnitus severe x 1mo approx. States when she started job she had an adjustable headset volume. After several weeks she (and others) had them replaced with nonadjustable headset as some colleagues were muting calls. Also the computer audio has minimal control audio volume. She said she would have to place ½ way across ears or stuff cotton. She reported this to her supervisors. Finally 3 days ago she received adjustable set.

9. Dr. Jones diagnosed "persistent tinnitus probably secondary to noise" and noted "in my opinion it is work-related on a >50% probability." He referred Claimant to Dr. Joseph Romett, an otolaryngologist, for further evaluation and treatment. Dr. Jones advised Claimant to avoid loud noises and restricted her from using a headset to communicate with customers. He also recommended she be allowed to use foam earplugs at work as needed.

10. Claimant did not return to work after March 15 because Employer had no work that did not require headset use. She was placed on FMLA leave in April 2016.

11. Insurer filed a Notice of Contest on March 29, 2016 "pending investigation."

12. Claimant saw Dr. Romett on April 5, 2016. Audiometric testing showed mild bilateral sensorineural hearing loss. The pattern of hearing loss was consistent with noise exposure, but also consistent with aging. Dr. Romett noted spasm of the pterygoid muscles and ear pain, which he thought was related to stress from the tinnitus. The hearing loss was not bad enough to warrant specific treatment such as hearing aids. He recommended Flexeril for the muscle spasms. He also ordered electrocochleography and otoacoustic emissions testing, which came back normal.

13. Claimant started seeing Dr. Albert Hattem on June 23, 2016. She was still suffering from tinnitus and had recently started having problems with balance and dizziness. Dr. Hattem opined it was "questionable" whether her symptoms were work-related because a large number of co-workers used the same headset with no known problems. He also opined "it is doubtful that the patient's current complaint of wobbliness that began yesterday is claim related."

14. Claimant underwent vestibular testing which showed bilateral vestibulopathy. Dr. Romett recommended vestibular therapy, but "I explained to her I did not think this imbalance was related to her noise exposure in February."[1]

15. Dr. Romett repeated the audiometric testing on July 1, 2006, which showed a slight improvement. In his deposition, Dr. Romett testified the improvement in Claimant's hearing supports a causal link to the workplace noise exposure because noise-induced hearing loss tends to "normalize" over time after the noise is removed.

16. Dr. Romett further explained Claimant requires no specific treatment for her mild hearing loss, and has probably exhausted available treatment options for tinnitus.

17. Claimant had a brain MRI on August 3, 2016 which showed no abnormalities of the internal auditory canals. The MRI showed nonspecific white matter changes, possibly related to premature microangiopathic disease or multiple sclerosis.

18. Dr. Hattem released Claimant from his care on September 8, 2016. He explained:

> I informed [Claimant] that it was my opinion that her dizziness, balance problems and tinnitus were not work-related considering the abnormal MRI. I instructed her to seek ongoing diagnostics and care for this condition outside her workers' compensation claim through her private insurance. [Claimant] protested this opinion. She insisted that her headset use was the cause of her condition. He informed her that she could discuss this with the insurance or if Dr. Romett at a different opinion she could forward that report to me.

[1] Dr. Romett reiterated and elaborated on that opinion in his deposition testimony.

19. Dr. Hattem also released Claimant to "full duty, though the patient may require restrictions secondary to a non-work-related condition.

20. Claimant saw Dr. Michael Striplin for an IME at Respondents' request on July 6, 2016. Dr. Striplin opined Claimant "has mild bilateral sensorineural hearing loss that is compatible with her age and which may be related to noise exposure." Dr. Striplin discussed NIOSH literature that identified potential noise hazards associated with working in call and dispatch centers, including acoustic trauma from a sudden spike in headset volume, headset feedback, and background noise. NIOSH found some headsets with maximum output 4 to 18 dB above the recommended limit of 85 dB. He opined "to determine whether the headset that the patient used could produce hearing loss, information regarding the actual sound level produced by the headset speaker, if available, would need to be evaluated." He noted tinnitus is often idiopathic. Dr. Striplin concluded "medically probable work-related causality cannot be established" based on the information he had.

21. Dr. Carlos Cebrian performed an IME for Respondents on October 2, 2017. Claimant told Dr. Cebrian she noticed sensitivity to telephone calls in September 2015. She explained:

> [B]ecause of the sensitivity to the telephone calls, she had to move the headset so that she would not have it on both ears of the same time. She states when she was doing the outbound sales she was able to adjust depending on her anticipation of when the customer would be speaking. She states she was able to adjust the volume a little bit on the computer but after doing that, the sound would go back to normal. She was told by a computer poerson at her work that all the computers were set up so that all the volume would be the same for everyone.
>
> In late December 2015 or early 2016 she states her department switched to inbound calls. When it was outbound calling she states there was predictability. With inbounding she had no idea what was coming in and she would be startled when the customers would speak. She states she would move her headphones regularly.

22. Claimant denied any significant noise exposure outside of work such as firearms, loud rock music, or military service.

23. Dr. Cebrian opined Claimant's hearing loss and tinnitus were not related to her work. He indicated her noise exposure was below the threshold required to cause hearing damage. He cited personal risk factors for developing tinnitus including hypertension and history of smoking.

24. Claimant saw Dr. Allison Fall for an IME on April 19, 2018. Claimant described the headset issues and onset of symptoms in a manner consistent with her description to other providers. Dr. Fall agreed with Dr. Striplin that "given the information available, there is not sufficient evidence that, within a reasonable degree of medical

probability, she was exposed to 85 or more decibels through the headset to lead to a hearing loss." Dr. Fall said knowing the exact decibel level would be "helpful" but thought it "unlikely" the noise exposure was greater than 85 dB for an eight hour day.

25. On May 6, 2018, Dr. Romett authored a report opining "it is my opinion that there is a greater than 50% probability that [Claimant]'s persistent tinnitus is due to noise exposure from loud noise and her work environment."

26. Dr. Striplin, Dr. Fall, and Dr. Romett testified in deposition and elaborated on the opinions expressed in their reports.

27. Claimant was a credible witness.

28. Dr. Romett's opinions are credible and more persuasive than opinions in the record to the contrary. The ALJ credits Dr. Romett's opinions that the bilateral hearing loss and tinnitus are work-related but the vertigo and vestibular-type symptoms are not. The ALJ further credits Dr. Romett's opinions regarding treatment reasonably needed for the compensable components of her condition.

29. The noise to which Claimant was exposed at work exceeded any nonoccupational noise exposure.

30. Claimant proved by a preponderance of the evidence she suffered a compensable occupational disease due to of noise exposure at work. Specifically, Claimant developed mild bilateral sensorineural hearing loss and bilateral tinnitus due to her work. As noted, Dr. Romett's opinions regarding causation are credible and persuasive. Dr. Hattem, Dr. Fall, and Dr. Striplin agreed Claimant's headset could have caused hearing damage depending on the volume level. The ALJ also credits Claimant's credible testimony regarding the development of her symptoms and their association with the loud headset volume. Although the exact volume of the headset is unknown, Claimant described it as akin to a stereo "blasting" in her ears, a sensation reasonably within most people's experience. The loud bursts of sound became unpredictable when she switched to outbound sales in December 2015, which lessened her ability to mitigate the noise. Claimant's supervisor concluded the hearing problems were caused by "computer volume and phone headset volume." Given all the information available, the ALJ finds a work-related etiology far more likely than a coincidental and spontaneous development of symptoms from idiopathic factors. Based on the persuasive evidence, the ALJ finds Claimant's work more likely than not caused the hearing loss and tinnitus.

31. Claimant failed to prove her vertigo and other vestibular-type symptoms were proximately caused by her work.

32. Claimant was disabled from her regular job and suffered an injury-related wage loss commencing March 16, 2016.

33. Dr. Hattem declared Claimant at MMI on September 8, 2016.

34. There is no persuasive evidence Claimant received any disability benefits or wages between March 16, 2016 and September 8, 2016 to give rise to an offset.

CONCLUSIONS OF LAW

A. Claimant proved a compensable occupational disease in the form of bilateral sensorineural hearing loss and tinnitus.

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove entitlement to benefits by a preponderance of the evidence. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, in favor of either claimant or respondents. Section 8-43-201.

The Act imposes additional requirements for liability of an occupational disease beyond the "arising out of" and "course and scope" requirements. A compensable occupational disease must meet each element of the four-part test mandated by § 8-40-201(14), which defines an occupational disease as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

The equal exposure element effectuates the "peculiar risk" test and requires that the injurious hazards associated with the employment be more prevalent in the workplace than in everyday life or other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The claimant "must be exposed by his or her employment to the risk causing the disease in a measurably greater degree and in a substantially different manner than are persons in employment generally." *Id.* at 824. The hazard of employment need not be the sole cause of the disease, but must cause, intensify, or aggravate the condition "to some reasonable degree." *Id*.

The mere fact that an employee experiences symptoms while working does not compel an inference the work caused the condition. *Scully v. Hooters of Colorado Springs*, W.C. No. 4-745-712 (ICAO, October 27, 2008). There is no presumption that a condition which manifests at work arose out of the employment. Rather, the Claimant must prove a direct causal relationship between the employment and the injury. Section 8-43-201; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989).

As found, Claimant proved she suffered a compensable occupational disease in the form of bilateral sensorineural hearing loss and bilateral tinnitus. The ALJ credits

Claimant's credible testimony regarding the development of her symptoms and their association with the loud headset volume. Although the exact volume of the headset is unknown, Claimant described it similar to a stereo "blasting" in her ears. The sound level was sufficiently bothersome that she routinely adjusted her earpieces and eventually started stuffing cotton in her ears. The loud bursts of sound became unpredictable when she switched to outbound sales in December 2015, which lessened her ability to mitigate the noise. Claimant's supervisor concluded the hearing problems were caused by "computer volume and phone headset volume." The ALJ also credits Dr. Romett's opinions regarding causation and reasonably necessary treatment. Dr. Hattem, Dr. Fall, and Dr. Striplin agreed Claimant's headset could have caused hearing damage depending on the volume level. Given all the available information, the ALJ finds a work-related etiology more likely than a coincidental and spontaneous development of symptoms from unknown factors. The persuasive evidence shows Claimant's hearing loss and tinnitus were more likely than not caused by her work.

B. Claimant is entitled to TTD benefits commencing March 16, 2016

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Once the claimant establishes temporary disability, the right to benefits is measured by the degree of the wage loss, not the claimant's willingness to seek employment or the claimant's hypothetical ability to perform modified employment. *See Black Roofing Inc. v. West*, 967 P.2d 195 (Colo. App. 1998); *Denny's Restaurant, Inc. v. Husson*, 746 P.2d 63 (Colo. App. 1987).

The persuasive evidence shows Claimant was disabled and suffered a wage loss commencing March 16, 2016 as a direct and proximate consequence of her industrial injury. Claimant was restricted from using a headset to communicate with customers and Employer had no modified work available within those restrictions. In light of these facts, Respondents' counsel agreed at the hearing Claimant is entitled to TTD benefits starting March 16, 2016 if the claim is found compensable.

C. Claimant's entitlement to TTD benefits ended on September 8, 2016 when Dr. Hattem declared her at MMI.

Once commenced, TTD benefits continue until the occurrence of one of the four terminating events specified in § 8-42-105(3). Termination of TTD is an affirmative defense that Respondents must prove by a preponderance of the evidence. *Strombitski*

v. Man Made Pizza, 4-403-661 (December 1, 2003). Section 8-42-105(3)(a) provides that TTD terminates when the claimant reaches MMI. The initial determination of MMI is made by a treating physician, and if either party disputes the ATP's determination, they must obtain a DIME. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Although the ALJ can resolve ambiguities in an ATP's opinion, the ALJ has no authority to question the ATP's MMI determination absent a DIME. *Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996).

As found, Dr. Hattem placed Claimant at MMI on September 8, 2016. Although he opined Claimant still required medical treatment he did not believe it related to any work-related condition. Assessing the cause of a claimant's condition and need for treatment is "inherent" in determining MMI. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1988); *Sinkey v. Paint Connection Plus*, W.C. No. 4-714-996 (March 2, 2009). An ATP's declaration of MMI necessarily reflects a determination that all conditions caused by the industrial injury are stable and no further treatment is reasonably expected to improve the compensable components of the injury. *Lopez v. South Valley Drywall*, W.C. Nos. 4-248-401; 4-302-144 (April 28, 1999). Dr. Hattem found Claimant's condition was not work-related and discharged her from further care. Although he did not specifically use the term "MMI," to the extent there is any ambiguity, the ALJ concludes his September 8 report constitutes a determination of MMI. If Claimant wishes to dispute Dr. Hattem's determination she was at MMI as of September 8, 2016, she must request a DIME.

ORDER

It is therefore ordered that:

1. Claimant's occupational disease claim in W.C. No. 5-010-179 is compensable.

2. To the extent not already provided, Insurer shall pay for reasonably necessary medical treatment from authorized providers to cure and relieve the effects of Claimant's bilateral hearing loss and tinnitus.

3. Claimant's request for medical benefits relating to vertigo and other vestibular-type symptoms is denied and dismissed.

4. Claimant's average weekly wage is $641.43 per the parties' stipulation.

5. Insurer shall pay Claimant TTD at the rate of $427.62 per week from March 16, 2016 through September 7, 2016.

6. Insurer shall pay Claimant interest at the statutory rate of 8% per annum on all benefits not paid when due.

7. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 30, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Claimant raised the issues of medical benefits: authorized provider and "enforcing Judge Margot Jones' order, dated January 20, 2017, awarding workers' compensation benefits for this compensable injury, 8% interest on all amounts not paid when due. The employer did not properly designate medical providers under the Act and therefore the right of physician selection transferred to the claimant."

Based upon a complete review of the evidence the Judge enters the following Findings of Fact, Conclusions of Law and Order.

FINDINGS OF FACT

1. On March 19, 2015, Claimant was involved in a motor vehicle accident.

2. Claimant's wife took him to Swedish Medical Center that same day. Swedish Medical Center HPI documents provide, "PT was the restrained driver and in an MVA, traveling at 40 m.p.h. PT hit a car head on that ran a red light, PT's airbags deployed, no LOC." Claimant underwent x-rays at Swedish that revealed no acute findings.

3. Claimant testified he reported the accident to his employer, and that Employer did not provide him with a choice of medical providers.

4. Claimant testified he retained Dianne Sawaya, Esq., for his motor vehicle accident case. Claimant testified Ms. Sawaya gave him a list of providers to choose from, and that he chose Patrick J. Noel, D.C. at Noel Chiropractic.

5. Claimant saw Dr. Noel on April 6, April 9, April 13, April 15, April 20, April 29, May 4, May 6, and May 11, 2015. Dr. Noel's records contain no mention of him referring Claimant to Dr. Allan.

6. Claimant sought care by Kenneth Allan, M.D. at Injury Solutions. The new patient evaluation indicates, "other healthcare providers: chiropractic: Patrick Noel, D.C." Dr. Allan's records do not support a finding that Dr. Noel referred Claimant to Dr. Allan. Rather, Dr. Allen's initial note provides, "The patient presented for evaluation and treatment on their own accord today with no prior scheduled appointment." In a note dated May 27, 2016, Dr. Lindenbaum recorded that "Initially, [Claimant] had been seen by Dr. Noll [sic], a chiropractor, but it was too far for him to drive; for that reason, he went to Injury Solutions."

7. Dr. Allan then referred Claimant to physical therapy and an MRI.

8. Claimant's attorney, Dianne Sawaya, referred Claimant to John Mark Disorbio, M.D. for a comprehensive psychological report.

9. Claimant later saw Robert A. Chinisci, Ph.D., a clinical psychologist and neuropsychologist. Dr. Chinisci listed "Personicare" as the referral source. Dr. Chinisci's records do not support a finding that Dr. Noel referred Claimant.

10. Claimant later saw Kevin S. Berry, DDC. Dr. Berry's records do not support a finding that Dr. Noel referred Claimant to Dr. Berry.

11. Claimant later saw cognitive therapist, Robert K. Veach, MA, C.D.M.S.. The initial intake shows the notes were sent to Personicare. The report does not support a finding that Dr. Noel referred Claimant Dr. Veach. Rather, Claimant's Initial Intake form states that "Dr. Chinisci referred [Claimant] to me."

12. Still later, Claimant saw S.D. Lindenbaum, M.D. His report does not support a finding that Dr. Noel referred Claimant to Dr. Lindenbaum. However, the report does indicate that Dr. Lindenbaum's office sent a facsimile to Claimant's lawyer, Dianne Sawaya.

13. The Judge specifically finds Claimant initially sought "emergent" treatment at Swedish Hospital and that under the emergency doctrine treatment provided at Swedish Hospital is "authorized."

14. The Judge specifically finds Claimant chose to treat with Dr. Noel. Therefore, Dr. Noel is Claimant's authorized treating provider.

15. No persuasive evidence suggests that Dr. Noel referred Claimant to Dr. Allan or to any other healthcare providers who Claimant saw during pendency of his claim. As such, the provider at Injury Solutions, Dr. Allan, Touchstone Imaging, physical therapy, the MRI, Dr. Disorbio, Dr. Chinisci, Dr. Berry, Dr. Veach and Dr. Lindenbaum are not authorized treating providers.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting

conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

In order for a Judge to find a healthcare provider to be authorized, the claimant must prove by a preponderance of the evidence either:

- the care was rendered due to an emergency,
- the care was rendered based on referral from the employer pursuant to rule 8-2 and statute,
- where no rule 8-2 choice of medical provider was timely provided, the provider the claimant chose in the first instance, or
- where in the natural progression of healthcare, care is provided by another provider on direct referral from the original authorized treating provider.

The ALJ concludes as a matter of law Claimant's treatment at Swedish was "authorized as it occurred due to an emergency.

The ALJ concludes as a matter of law that because Employer did not tender within seven (7) business days the rule 8-2 choice of providers, the choice of providers transferred to Claimant.

The ALJ concludes as a matter of law that Claimant chose Dr. Noel in the first instance, and Dr. Noel is authorized.

The ALJ concludes as a matter of law that Claimant failed to prove Dr. Noel referred him to Injury Solutions, Dr. Allan, Dr. Disorbio, Dr. Chinisci, Dr. Berry, Dr. Veach or Dr. Lindenbaum. Therefore, the ALJ concludes as a matter of law that none of these providers or their referrals are authorized or in the chain of authorized treating providers.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's emergency treatment at Swedish Hospital is authorized.

2. Claimant's authorized treating provider is Dr. Noel. Injury Solutions, Dr. Allan, Dr. Disorbio, Dr. Chinisci. Dr. Berry, Dr. Veach and Dr. Lindenbaum are not authorized treating providers.

3. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: July 30, 2018

/s/ Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
633 17th Street, Suite 400
Denver, CO 80202-3660

ISSUES

1. Whether Respondents have demonstrated by a preponderance of the evidence that they are entitled to terminate Claimant's Temporary Total Disability (TTD) benefits effective June 23, 2017.

2. Whether Claimant has proven by a preponderance of the evidence that the medical treatment for which Yusuke Wakeshima, M.D. has requested prior authorization, including neurological evaluation by Hayley Burke, M.D., serial Doppler ultrasounds of the right upper and left lower extremities, trials of Botox injections, and a trigeminal nerve stimulator, is reasonable, necessary and causally related to Claimant's March 24, 2016 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant is a 76-year old male who worked for Employer as a Front End Manager. On March 24, 2016 he suffered admitted industrial injuries during the course and scope of his employment. When Claimant was walking with a customer to complete a propane tank exchange he slipped on an icy sidewalk, fell to the ground and struck his head.

2. After completing an Incident Report for Employer Claimant was transported by private vehicle to the North Suburban Emergency Room. He reported headaches and head pain as a result of a slip and fall at work just prior to his arrival. Claimant provided a past medical history that was significant for bile duct cancer, stroke, anemia and myocardial infarction. He also has a history of chronic kidney disease that was complicated by a right nephrectomy.

3. Following discharge from North Suburban, Claimant returned to employment until he was taken off work on June 30, 2016. On July 18, 2016 Claimant again returned to work with restrictions. However, Claimant was taken off work by Employer on March 15, 2017 due to concerns about his balance issues. On March 16, 2017 Insurer filed an Amended General Admission of Liability (GAL) acknowledging responsibility for Temporary Total Disability (TTD) benefits from March 15, 2017 until terminated.

4. On June 12, 2017 Claimant visited Authorized Treating Physician (ATP) Yusuke Wakeshima, M.D. for an examination. Dr. Wakeshima completed a WC-164 form keeping Claimant off work because "he would not be safe returning back to work with his current balance issues."

5. On March 26, 2017 the parties participated in a hearing before Administrative Law Judge (ALJ) Margot Jones. On June 23, 2017 ALJ Jones issued a Summary Order concluding that Claimant's hearing loss, dizziness and disequilibrium were not related to his March 24, 2016 industrial injuries. ALJ Jones also dismissed Claimant's request for Respondents to pay for pain medications including Oxycodone, Percocet and Norco because they were not reasonable, necessary or related to his March 24, 2016 industrial injuries.

6. On all dates subsequent to June 12, 2017 Dr. Wakeshima continued to restrict Claimant from all work activities. He commented that Claimant would be unsafe because of a "significant balance disorder."

7. On January 26, 2017 ATP Dr. Wakeshima requested prior authorization for serial Doppler ultrasound studies of the right upper extremity and left lower extremity as well as a trial of Botox injections and a trigeminal nerve stimulator. He also recommended a neurological evaluation with Hayley Burke, M.D.

8. On March 19, 2018 the parties conducted the pre-hearing evidentiary deposition of J. Carlos Cebrian, M.D. Dr. Cebrian testified that Dr. Wakeshima's referral to Dr. Burke for a neurological evaluation was not reasonable or necessary medical treatment for Claimant's March 24, 2016 industrial injuries. After conducting a physical examination and reviewing Claimant's medical records he detailed that Claimant has not had any improvement in his symptoms with any treatment. Furthermore, Claimant has already been evaluated by neurologist Fredric Zimmer, M.D. Claimant has also been evaluated and treated by Gregory Reinhardt, M.D., a physiatrist with fellowship training in brain injuries, and Kristin Mason, M.D. a physiatrist who regularly treats brain injuries. Dr. Cebrian summarized that another evaluation by another neurologist is not medically necessary.

9. Dr. Cebrian also explained that Dr. Wakeshima's request for a trial of Botox injections for Claimant was not reasonable and necessary. He remarked that Botox is used for a small subset of patients who suffer chronic migraines but have not improved with three different preventative classes of medications. Dr. Cebrian noted that Claimant has not been trialed on any preventative classes of migraine medications to warrant an attempt at using Botox. Moreover, Dr. Cebrian did not expect Claimant to obtain any benefit from Botox because of his lack of responses to prior medications.

10. Dr. Cebrian detailed that Dr. Wakeshima's request for serial Doppler ultrasounds of the right upper extremity and left lower extremity was not related to Claimant's March 24, 2016 industrial injuries. He explained that the purpose of the ultrasounds was to detect blood clots. Although physicians found a small blood clot in the brachial vein of Claimant's right arm, Dr. Cebrian reasoned that there was nothing about Claimant's March 24, 2016 mechanism of injury that would cause a blood clot in the right upper extremity or left lower extremity. Furthermore, Dr. Cebrian rejected Dr. Wakeshima's explanation that Claimant may have suffered blood clots as a result of immobility after his March 24, 2016 industrial accident. He detailed that blood clots typically occur when an extremity is completely immobilized after surgical intervention.

However, Claimant did not wear a brace after the March 24, 2016 accident and could move his right arm. Dr. Cebrian thus concluded that there was no medical reason for the serial Doppler ultrasounds recommended by Dr. Wakeshima.

11. Dr. Cebrian also addressed Dr. Wakeshima's recommendation for a trigeminal nerve stimulator. He explained that the device is similar to a TENS unit for the head. The patient places electrodes on his head and wears a halo to provide some kind of electrical stimulation and distract the brain. Dr. Cebrian noted that the trigeminal nerve stimulator is a relatively new device that has not been recognized by the Colorado Division of Workers' Compensation Medical Treatment Guidelines (*Guidelines*). Accordingly, Dr. Cebrian concluded that the trigeminal nerve stimulator does not constitute reasonable and necessary treatment for Claimant's March 24, 2016 industrial injuries.

12. Dr. Cebrian concluded that there is no additional medical treatment that would be reasonable and necessary to address Claimant's March 24, 2016 industrial injuries. He remarked that Claimant has reached Maximum Medical Improvement (MMI). Dr. Cebrian determined that Claimant was entitled to receive a 5% whole person impairment rating for his head injury and mild traumatic brain injury as a result of the March 24, 2016 accident.

13. Respondents have failed to demonstrate that it is more probably true than not they are entitled to terminate Claimant's TTD benefits. Respondents assert that Claimant's TTD benefits should be terminated effective June 23, 2017 because he suffered the subsequent intervening condition of a balance disorder that was not related to his March 24, 2016 industrial injuries. In fact, on June 23, 2017 ALJ Jones issued a Summary Order concluding that Claimant's hearing loss, dizziness and disequilibrium were not related to his March 24, 2016 industrial injury. Moreover, ATP Dr. Wakeshima restricted Claimant from all work activities because he would be unsafe based on a "significant balance disorder." Respondents reason that, because Claimant's inability to work for Employer was caused by balance issues unrelated to his industrial injuries, his TTD benefits should be terminated. However, an ALJ lacks authority to terminate TTD benefits absent one of the statutory conditions enumerated in §8-42-105(3)(a)-(d), C.R.S. Because Claimant has not reached MMI, returned to regular or modified employment, or received a written release to return to regular or modified employment by ATP Dr. Wakeshima, TTD benefits may not be terminated. Accordingly, Claimant's TTD benefits shall continue until terminated by statute.

14. Claimant has failed to prove that it is more probably true than not that the medical treatment for which Dr. Wakeshima has requested prior authorization, including a neurological evaluation by Dr. Burke, serial Doppler ultrasounds of the right upper and left lower extremities, trials of Botox injections and a trigeminal nerve stimulator, are reasonable, necessary and causally related to his March 24, 2016 admitted industrial injuries. Although Claimant has not contested Respondents denial of the preceding treatments, the prior authorization request from ATP Wakeshima reflects that the relatedness, reasonableness and necessity of the requested treatments are in dispute.

15. As outlined by Dr. Cebrian, Dr. Wakeshima's referral to Dr. Burke for a neurological evaluation was not reasonable or necessary medical treatment for Claimant's March 24, 2016 industrial injuries. Claimant has already been evaluated by neurologist Dr. Zimmer. He has also been examined and treated by Drs. Reinhardt and Mason for neurological concerns. Dr. Cebrian summarized that another evaluation by another neurologist is not medically necessary. Moreover, Dr. Cebrian persuasively explained that Dr. Wakeshima's request for a trial of Botox injections for Claimant was not reasonable and necessary. He remarked that Botox is reserved for a small subset of patients who suffer chronic migraines but have not improved with three different preventative classes of medications. Dr. Cebrian noted that Claimant has not been trialed on any preventative classes of migraine medications to warrant Botox treatment.

16. Dr. Cebrian detailed that Dr. Wakeshima's request for serial Doppler ultrasounds of the right upper extremity and left lower extremity was not related to Claimant's March 24, 2016 industrial injuries. He explained that the purpose of the ultrasounds was to detect blood clots. Although physicians found a small blood clot in the brachial vein of Claimant's right arm, Dr. Cebrian reasoned that there was nothing about Claimant's March 24, 2016 mechanism of injury that would cause a blood clot in the right upper extremity or left lower extremity. He also noted that, because Claimant's right arm was not immobilized after the March 24, 2016 accident, a blood clot was unlikely and there was thus no medical reason for the serial Doppler ultrasounds recommended by Dr. Wakeshima. Furthermore, Dr. Cebrian noted that the trigeminal nerve stimulator is a relatively new device that has not been recognized by the *Guidelines*. Accordingly, Dr. Cebrian persuasively concluded that the trigeminal nerve stimulator does not constitute reasonable and necessary treatment for Claimant's March 24, 2016 industrial injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

TTD Benefits

4. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

5. TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S. Section 8-42-107(8)(b)(I) & (II), C.R.S. provide that the initial determination of MMI is to be made by an ATP. If either party disputes the ATP's MMI determination, the claimant must undergo a Division Independent Medical Examination (DIME). The statute also provides that the ALJ lacks authority to determine MMI until there has been a medical determination of MMI by an ATP or DIME physician. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, W.C. Nos. 4-947-316-01&4-935-813-03 (ICAP, July 31, 2015); *see also Blue Mesa Forest v. Lopez,* 928 P.2d 831, 833 (Colo, App. 1996) (noting that "the initial determination of MMI shall be made by an authorized treating physician"). Finally, the ATP also determines whether a claimant's industrial injury prevents him from returning to work. *See Burns v. Robinson Dairy,* 911 P.2d 661 (Colo. App. 1995); *In Re Smith,* No. 4-733-532 (ICAP, Mar. 15, 2010).

6. As found, Respondents have failed to demonstrate by a preponderance of the evidence that they are entitled to terminate Claimant's TTD benefits. Respondents assert that Claimant's TTD benefits should be terminated effective June 23, 2017 because he suffered the subsequent intervening condition of a balance disorder that was not related to his March 24, 2016 industrial injuries. In fact, on June 23, 2017 ALJ Jones issued a Summary Order concluding that Claimant's hearing loss, dizziness and disequilibrium were not related to his March 24, 2016 industrial injury. Moreover, ATP Dr. Wakeshima restricted Claimant from all work activities because he would be unsafe based on a "significant balance disorder." Respondents reason that, because Claimant's

inability to work for Employer was caused by balance issues unrelated to his industrial injuries, his TTD benefits should be terminated. However, an ALJ lacks authority to terminate TTD benefits absent one of the statutory conditions enumerated in §8-42-105(3)(a)-(d), C.R.S. Because Claimant has not reached MMI, returned to regular or modified employment, or received a written release to return to regular or modified employment by ATP Dr. Wakeshima, TTD benefits may not be terminated. Accordingly, Claimant's TTD benefits shall continue until terminated by statute.

Medical Benefits

7. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

8. As found, Claimant has failed to prove by a preponderance of the evidence that the medical treatment for which Dr. Wakeshima has requested prior authorization, including a neurological evaluation by Dr. Burke, serial Doppler ultrasounds of the right upper and left lower extremities, trials of Botox injections and a trigeminal nerve stimulator, are reasonable, necessary and causally related to his March 24, 2016 admitted industrial injuries. Although Claimant has not contested Respondents denial of the preceding treatments, the prior authorization request from ATP Wakeshima reflects that the relatedness, reasonableness and necessity of the requested treatments are in dispute.

9. As found, as outlined by Dr. Cebrian, Dr. Wakeshima's referral to Dr. Burke for a neurological evaluation was not reasonable or necessary medical treatment for Claimant's March 24, 2016 industrial injuries. Claimant has already been evaluated by neurologist Dr. Zimmer. He has also been examined and treated by Drs. Reinhardt and Mason for neurological concerns. Dr. Cebrian summarized that another evaluation by another neurologist is not medically necessary. Moreover, Dr. Cebrian persuasively explained that Dr. Wakeshima's request for a trial of Botox injections for Claimant was not reasonable and necessary. He remarked that Botox is reserved for a small subset of patients who suffer chronic migraines but have not improved with three different

preventative classes of medications. Dr. Cebrian noted that Claimant has not been trialed on any preventative classes of migraine medications to warrant Botox treatment.

10. As found, Dr. Cebrian detailed that Dr. Wakeshima's request for serial Doppler ultrasounds of the right upper extremity and left lower extremity was not related to Claimant's March 24, 2016 industrial injuries. He explained that the purpose of the ultrasounds was to detect blood clots. Although physicians found a small blood clot in the brachial vein of Claimant's right arm, Dr. Cebrian reasoned that there was nothing about Claimant's March 24, 2016 mechanism of injury that would cause a blood clot in the right upper extremity or left lower extremity. He also noted that, because Claimant's right arm was not immobilized after the March 24, 2016 accident, a blood clot was unlikely and there was thus no medical reason for the serial Doppler ultrasounds recommended by Dr. Wakeshima. Furthermore, Dr. Cebrian noted that the trigeminal nerve stimulator is a relatively new device that has not been recognized by the *Guidelines*. Accordingly, Dr. Cebrian persuasively concluded that the trigeminal nerve stimulator does not constitute reasonable and necessary treatment for Claimant's March 24, 2016 industrial injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

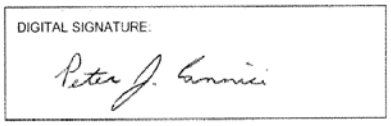
1. Respondents' request to terminate Claimant's TTD benefits effective June 23, 2017 is denied and dismissed.

2. Claimant's request for Respondents to pay for a referral to Dr. Burke, serial Doppler ultrasounds of the right upper and left lower extremities, trials of Botox injections, and a trigeminal nerve stimulator is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: July 23, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer on September 30, 2017.

2. Whether Claimant has established by a preponderance of the evidence that the medical treatment he received at South Denver Cardiology and Littleton Adventist Cardiology was reasonable and necessary to cure or relieve the effects of his September 30, 2017 industrial injuries.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period September 30, 2017 through December 7, 2017.

5. Whether Respondents have demonstrated by a preponderance of the evidence that Claimant was responsible for his termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits.

.6. Whether Respondents have established by a preponderance of the evidence that Claimant willfully failed to obey a safety rule in violation of §8-42-112(1)(b) C.R.S. on September 30, 2017 and his non-medical benefits should thus be reduced by fifty percent.

STIPULATIONS

The parties agreed to the following:

1. Video surveillance of Claimant's September 30, 2017 accident is admissible.

2. If the claim is found compensable Respondents are financially responsible for Claimant's medical care except his cardiology treatment from South Denver Cardiology and Littleton Adventist Cardiology.

FINDINGS OF FACT

1. Employer is in the business of renting trucks and equipment to customers. On September 18, 2017 Employer hired Claimant to work as a Customer Service

Representative. Claimant's job duties involved cleaning returned rental trucks. He earned $11.25 per hour.

2. On September 30, 2017 Claimant and co-workers Daniel Romero and Anthony Treo were working together to clean out the back of multiple rental trucks. Claimant testified that, after the trio had completed cleaning one of the trucks, he climbed on to the back of the truck to close the rear door. He pulled down the back door and planned to jump off the end of the truck. However, Mr. Romero started to drive the truck forward at a high rate of speed. Claimant attempted to hold on to the truck, but Mr. Romero made a sharp left turn. The motion caused Claimant to lose his grip and fall off the back of the truck on to concrete.

3. Claimant landed on the right side of his body and head. He briefly lost consciousness and was transported to Littleton Adventist Hospital. Claimant reported head, neck, right clavicle and right knee pain. Diagnostic testing revealed an intracerebral hemorrhage and an abnormal ECG. Subsequent CT scans of Claimant's head and facial bones confirmed hemorrhaging and edema. An echocardiogram was normal.

4. On October 3, 2017 Claimant was discharged from Littleton Adventist Hospital. He visited Concentra Medical Centers for additional treatment.

5. On October 11, 2017 Claimant visited South Denver Cardiology Associates for an evaluation. The physician noted that Claimant's initial electrocardiogram was abnormal and consistent with left ventricular hypertrophy. However, a subsequent echocardiogram did not reveal any evidence of hypertrophy or cardiomyopathy. There was normal left and right ventricular systolic function. After wearing an outpatient event cardiac monitor for several days he did not demonstrate any heart disease and was released from cardiac care.

6. After additional conservative care, Claimant visited Kathryn Bird, M.D. on November 16, 2017 for an examination. Dr. Bird remarked that Claimant's healing was "almost sufficient" to return to regular duty, but he required a recheck prior to discharge.

7. On December 7, 2017 Dr. Bird determined that Claimant had reached Maximum Medical Improvement (MMI). She released him to full duty employment.

8. Claimant's co-worker Mr. Romero testified at the hearing in this matter. He explained that on September 30, 2017 he was cleaning trucks with Claimant and Mr. Treo. After finishing one truck the trio was talking behind the vehicle. The back door of the truck was closed. Mr. Romero told the others that he was going to move the truck into a parking space. He climbed into the cab of the vehicle while Mr. Treo walked away to begin work on another truck. Mr. Romero started the truck, honked the horn and drove to a parking space in another area of Employer's lot.

9. Claimant testified that he climbed on to the back of the truck to close the door to the vehicle. However, Mr. Romero and Mr. Trio completed witness statements

shortly after Claimant's September 30, 2017 fall. The statements confirm that the truck had been cleaned and the back door was closed.

10. Contrary to Claimant's testimony, Mr. Romero commented that the rear door of the truck could only be fully open or closed. The back door will not remain partly open. Mr. Romero specified that there was no legitimate work reason for Claimant to be on the back of the truck when it started moving.

11. Videotape surveillance confirms Mr. Romero's testimony and the witness statements. The video shows Claimant climb up on the back of a truck and face away from the vehicle. The surveillance does not depict Claimant pulling down the door of the vehicle because it is already closed. Claimant did not attempt to signal the driver, waive his arms or jump from the vehicle when it began moving. His position of facing away from the truck while standing on the bumper reflects that he was attempting to ride on the vehicle until it reached another area of Employer's parking lot. In fact, Claimant acknowledged that he was aware the truck was only traveling a short distance within Employer's lot in order to be parked.

12. Claimant has failed to demonstrate that it is more probably true than not that he suffered compensable injuries during the course and scope of his employment with Employer. The record reflects that Claimant was injured on September 30, 2017 while engaging in horseplay by riding on the bumper of a rental truck. Claimant and co-workers Mr. Romero and Mr. Treo were cleaning rental trucks at Employer's facility. After finishing one truck the trio was talking behind the vehicle. Mr. Romero credibly testified that he told the others that he was going to move the truck into a parking space. He climbed into the cab of the vehicle while Mr. Treo walked away to begin work on another truck. Mr. Romero started the truck, honked the horn and drove to a parking space in another area of Employer's lot. Although Claimant testified that he climbed on the back of the truck to close the rear door before it drove away, Mr. Romero and Mr. Treo completed witness statements confirming that the truck had been cleaned and the back door was closed. Mr. Romero specified that there was no legitimate work reason for Claimant to be on the back of the truck when it started moving. Furthermore, video surveillance shows Claimant climb up on to the back of a truck and face away from the vehicle. The surveillance does not depict Claimant pulling down the door of the vehicle because it is already closed. Claimant did not attempt to signal the driver, waive his arms or jump from the vehicle when it began moving. His position of facing away from the truck while standing on the bumper reflects that he was attempting to ride on the vehicle until it reached another area of Employer's parking lot.

13. Riding on the bumper of the rental truck after the vehicle was cleaned constituted a deviation from employment so substantial as to remove it from the employment relationship. The deviation from employment was significant because Claimant and his co-workers had finished cleaning the vehicle and closed the rear door. The activity of riding on the bumper did not constitute an employment duty but was instead a distinct activity designed to reach another area of Employer's parking lot. The deviation was brief, but Claimant had ceased working when he climbed on to the truck. He engaged in an activity outside of his employment duties for his sole benefit that

caused his injuries. Therefore, Claimant's deviation constituted horseplay and thus removed the activity from the employment relationship. Accordingly, Claimant's injuries did not arise out of his duties for Employer on September 30, 2017.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991).

5. Regardless of the theoretical framework that is applied, the issue is whether the "claimant's conduct constitutes such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing activity for his sole benefit." *In Re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1,

2010); *see Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). It is thus not essential that the activities of an employee emanate from an obligatory job function or result in a specific benefit to the employer for a claim to be compensable. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

6. When the employer asserts a personal deviation from employment activities "the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship." *Roache v. Industrial Commission,* 729 P.2d 991 (Colo. App. 1986); *In Re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010). If an employee substantially deviates from the mandatory or incidental duties of employment so that he is acting for his sole benefit at the time of injury, his claim is not compensable. *Kater v. Industrial Commission,* 729 P.2d 746 (Colo. App. 1986). However, ministerial actions for an employee's personal comfort do not constitute a substantial deviation from employment unless the personal need being met or the means chosen by the employee to satisfy his personal comfort is unreasonable. *In Re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008); *see Larson's Workers' Compensation Law,* §21.00. In *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715, 718 (Colo.App. 1995), the court announced the following four part test to analyze whether an activity constitutes a deviation or horseplay: (1) The extent and seriousness of the deviation; (2) the completeness of the deviation; (3) the extent to which the practice of horseplay had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay. The question of whether a deviation is significant enough to remove the claimant from the course and scope of employment is a factual determination for the ALJ. *Id.*

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered compensable injuries during the course and scope of his employment with Employer. The record reflects that Claimant was injured on September 30, 2017 while engaging in horseplay by riding on the bumper of a rental truck. Claimant and co-workers Mr. Romero and Mr. Treo were cleaning rental trucks at Employer's facility. After finishing one truck the trio was talking behind the vehicle. Mr. Romero credibly testified that he told the others that he was going to move the truck into a parking space. He climbed into the cab of the vehicle while Mr. Treo walked away to begin work on another truck. Mr. Romero started the truck, honked the horn and drove to a parking space in another area of Employer's lot. Although Claimant testified that he climbed on the back of the truck to close the rear door before it drove away, Mr. Romero and Mr. Treo completed witness statements confirming that the truck had been cleaned and the back door was closed. Mr. Romero specified that there was no legitimate work reason for Claimant to be on the back of the truck when it started moving. Furthermore, video surveillance shows Claimant climb up on to the back of a truck and face away from the vehicle. The surveillance does not depict Claimant pulling down the door of the vehicle because it is already closed. Claimant did not attempt to signal the driver, waive his arms or jump from the vehicle when it began moving. His position of facing away from the truck while standing on the bumper reflects that he was attempting to ride on the vehicle until it reached another area of Employer's parking lot.

8. As found, riding on the bumper of the rental truck after the vehicle was cleaned constituted a deviation from employment so substantial as to remove it from the employment relationship. The deviation from employment was significant because Claimant and his co-workers had finished cleaning the vehicle and closed the rear door. The activity of riding on the bumper did not constitute an employment duty but was instead a distinct activity designed to reach another area of Employer's parking lot. The deviation was brief, but Claimant had ceased working when he climbed on to the truck. He engaged in an activity outside of his employment duties for his sole benefit that caused his injuries. Therefore, Claimant's deviation constituted horseplay and thus removed the activity from the employment relationship. Accordingly, Claimant's injuries did not arise out of his duties for Employer on September 30, 2017.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on October 5, 2017.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to medical benefits for his October 5, 2017 injury and specifically whether he has established that the right knee scope, meniscectomy, and chondroplasty recommended by Mark Failinger, M.D. is reasonable, necessary, and causally related to an October 5, 2017 injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability benefits and temporary total disability benefits.

4. Determination of Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is a 43-year-old man who is employed by Employer.

2. Claimant has worked for Employer for over ten years with job duties that include preparing food orders for delivery, lifting/moving heavy boxes of food items, and performing deliveries. Claimant typically worked Monday through Friday and overtime hours.

3. Claimant had concurrent employment at a Mexican restaurant and typically worked Friday evenings, and all day shifts on Saturday and Sunday.

4. On October 5, 2017 Claimant was working as a food delivery driver. Claimant alleges that on that date he sustained an acute work related injury to his right knee. Claimant testified that he was performing deliveries that day and carrying some produce to put on a two-wheel dolly and that he twisted his right knee. Claimant testified that he was running behind with the truck and driving that day and that he continued work and finished his route but that the next day he had heavy swelling and made a report of injury.

5. On October 6, 2017 Claimant was evaluated by Valerie Skvarca, PA. Claimant reported that he was delivering and carrying heavy 60 pound cases of food at work and twisted his right knee while carrying the cases in and out of his truck. Claimant reported pain in his right anterior and posterior knee at a level of 8/10. Claimant was noted to have a body mass index of 38.62. Claimant reported no prior injury and that he played soccer occasionally with his last game more than 1 month ago. PA Skvarca noted

swelling in the medial and lateral aspect of the right knee, tenderness diffusely over the anterior knee and posterior knee, crepitus with palpation, and limited range of motion in all planes with pain. PA Skvarca assessed right knee strain. *See* Exhibits 3, D.

6. Claimant also underwent physical therapy on October 6, 2017. Claimant reported that he had a normal day at work making deliveries and doing some work in the warehouse afterwards with about 10 hours of work. Claimant reported he noted pain in his right knee as he was working but that he was able to continue. Claimant reported constant pain with diffuse swelling. Claimant reported a prior right knee injury 17 years prior while playing soccer and that he had no knee issues since then. *See* Exhibit C.

7. On October 9, 2017 Claimant was evaluated by Kathy Okamatsu, NP. Claimant reported that he had been wearing tennis shoes and was in the process of lifting and carrying a case of food weighing approximately 60 pounds from the inside of his delivery truck when he twisted his right knee. Claimant reported continued pain that was not getting better. Claimant was noted to have no joint swelling or stiffness and tenderness over the lateral and medial joint lines. *See* Exhibit 3.

8. On October 24, 2017 Claimant underwent an MRI of his right knee. The impression provided was: undersurface horizontal tear of the medial meniscus, tri compartmental osteoarthritis with moderate knee joint effusion and synovitis, lateralization of the patella within the trochlear groove with bone on bone in the lateral patellofemoral compartment, and .8x1.6 cm near full thickness cartilage defect to the neutral weight bearing surface medial femoral condyle and a region of grade 3 cartilage fissuring within the flexion weight bearing surface of the lateral femoral condyle. *See* Exhibits 5, F.

9. On November 9, 2017 Claimant was evaluated by Mark Failinger, M.D. Claimant reported that he injured his right knee on October 5 when he was carrying things and twisted his knee. Claimant reported that he had pain, discomfort, and swelling. Claimant reported pain on the inner side of the knee and that he had pain with squatting, stairs, and ladders. Claimant declined to provide his height and weight. Claimant had some discomfort in the medial joint line of his right knee and no pain in the lateral joint line. Dr. Failinger noted some retropatellar crepitus and range of motion lacking a few degrees on full extension and flexion. Dr. Failinger noted that an MRI of the right knee showed medial meniscus tear and severe loss of the articular cartilage in the femoral trochlea and patella. Dr. Failinger provided the impression of: right knee medial meniscus tear; right knee patellofemoral degenerative joint disease; and some medial compartment chondromalacia. *See* Exhibits 6, D, E.

10. Dr. Failinger went through the pathology with Claimant and explained the risks, alternatives, and benefits of surgery versus injections and recommended Claimant undergo injections. Claimant declined injections and said he wanted to get his knee "fixed." Dr. Failinger explained in great detail that there was no fix for Claimant's knee as his cartilage was gone and his meniscus was torn. Dr. Failinger opined that if Claimant really wanted surgery the only thing they could do would be to clean things up. Dr.

Failinger noted that Claimant knew he would likely need a knee replacement and that they would hopefully buy Claimant some time before a knee replacement. Dr. Failinger again recommended injections and also viscosupplemenation. Claimant declined and indicated he wanted the surgery. Dr. Failinger noted that Claimant knew there were no guarantees given his arthritic condition. Dr. Failinger noted they would try to get approval and put in a request for surgery. *See* Exhibits 6, D, E.

11. On December 1, 2017 Jon Erickson, M.D. performed a physician review. Dr. Erickson noted that Claimant had sustained a form of twisting injury to his right knee when loading 60 pound bags of product into the back of a truck. Dr. Erickson noted that the right knee MRI showed advanced chondral damage in the medial femoral condyle, advanced bone on bone arthritic changes in the patellofemoral joint, and tri compartmental periarticular osteophytes consistent with advanced tri compartmental osteoarthritis. Dr. Erickson noted that Dr. Failinger had discussed the poor results usually seen with arthroscopic debridement. Dr. Erickson noted that the American Academy of Orthopedic Surgeons had issued a position letter indicating that arthroscopic debridement in the face of advanced end-stage osteoarthritis was not recommended. Dr. Erickson opined that the clinical results with the procedure are less than good and usually result in eventually a total knee replacement and opined that a total knee replacement appears to be what Claimant requires. Dr. Erickson recommended a denial of the surgical request. Dr. Erickson recommended vigorous non operative treatment with possible steroid injection and opined that if Claimant did not note substantial improvement and continued to be severely symptomatic, Claimant would have to address issues with his private healthcare insurance. Dr. Erickson opined that on the MRI report it was clear that there was no evidence of aggravation or worsening of Claimant's severe pre-existing condition. *See* Exhibits 2, A.

12. On December 21, 2017 Claimant was evaluated by Dr. Failinger. Claimant reported that surgery was denied because they told him his arthritis caused his meniscal tear. Claimant reported sometimes having a little discomfort around the kneecap but that his pain was mostly in the inner side of the knee particularly with loading his knee and weight bearing and turning, twisting, squatting. Dr. Failinger opined that it was incorrect that Claimant's arthritis caused a meniscus tear. Dr. Failinger opined that Claimant had meniscus pain and that it was likely caused by his work injury and appeared as though the meniscus pathology was work related. Dr. Failinger opined that Claimant's arthritis was not work related. Claimant underwent a cortisone injection to see if it would settle down his right knee complaints and Dr. Failinger continued to recommend the meniscectomy surgery. *See* Exhibit E.

13. On January 4, 2018 Claimant was evaluated by Dr. Failinger. Dr. Failinger opined that Claimant's arthritis was pre-existing but was probably flared up. Dr. Failinger opined that the biggest problem was the meniscus where Claimant hurts and opined that it appeared to be an extension of a previous tear and/or a new tear. Dr. Failinger noted that Claimant was not doing well and suggested surgery to try to rectify Claimant's condition since Claimant had not done well with conservative measures. Dr. Failinger noted that he would submit the request again for surgery. *See* Exhibit E.

14. On January 16, 2018 Peter Weingarten, M.D. reviewed the surgery request. Dr. Weingarten opined that Claimant had a complex degenerative tear of the meniscus which was not acute or traumatic. Dr. Weingarten opined that Claimant had advanced tri compartmental osteoarthritis. He concurred with Dr. Erickson's prior denial of the meniscectomy and opined there was a poor prognosis for arthroscopic surgery to treat advanced arthritis. Dr. Weingarten opined that Claimant's problem was basically arthritis and not the degenerative meniscus. *See* Exhibit B.

15. On February 12, 2018 Claimant was evaluated by Keith Cook, M.D. Claimant walked in due to pain that started the day prior and reported that his pain increased a lot the day prior and was almost back to the level at the time of the initial injury in October. Claimant indicated he wanted to try being off work for a couple of days and wanted to get another injection. Claimant's knee was injected and he was taken off work that day and February 13. *See* Exhibit D.

16. On March 8, 2018 Claimant was evaluated by Dr. Failinger. Dr. Failinger noted again that Claimant's pain seemed to be coming from the medial meniscus and not the patellofemoral region and again recommended surgery for resection of the meniscus. Dr. Failinger noted that Claimant was on hold for surgery pending an independent medical evaluation. *See* Exhibit E.

17. On March 21, 2018 Claimant underwent an independent medical evaluation performed by Dr. Erickson. Claimant reported that he was working full duty but that he had persisting and moderate knee pain primarily medial parapatellar following a twisting work injury to the right knee. Claimant reported that on the date of injury he was in the back of a delivery truck loading supplies onto a two-wheel dolly. Claimant reported that on one occasion his tennis shoe got stuck and he twisted his right knee and had some pain but no pop. Claimant reported that he did not pay attention and worked through the remainder of the day and overtime and closed the shop. Claimant reported that the next morning, his knee was swollen and painful and he went to work and reported the injury and was referred for treatment. Dr. Erickson noted that he had previously reviewed a surgery request and found no evidence on the MRI of any acute trauma that would herald aggravation or worsening of Claimant's underlying condition. Dr. Erickson noted that after his prior review, Dr. Failinger had opined that Claimant's meniscus tear was not caused by arthritis and that Claimant had meniscal symptoms caused by the work injury. He noted that Dr. Failinger also found very little pain in the patella and felt that most of the discomfort was along the medial joint line and that Claimant's pre-existing osteoarthritis had likely been flared up and that the pre-existing medial meniscal tear had been re-torn or complicated by a new tear and had re-submitted a surgical request. *See* Exhibit A.

18. Dr. Erickson noted that the new surgical request was reviewed by Peter Weingarten, M.D. and that Dr. Weingarten opined that the medial meniscal tear was not acute or traumatic and that Claimant suffered from advanced pre-existing right knee osteoarthritis. Dr. Weingarten also recommended denial of the surgical request. Dr. Erickson noted that Claimant had never stopped working after his injury and that although

Claimant reported an increase in pain, Claimant was able to tolerate his work activities including his second job at a Mexican restaurant in Denver. Claimant reported that he had no symptoms or difficulties before October of 2017 and that now he has popping and swelling in the right knee joint and pain in the patella. *See* Exhibit A.

19. Dr. Erickson reviewed medical records and performed a physical examination. Dr. Erickson opined that Claimant was very severely obese with a body mass index of 40.72. Dr. Erickson provided the impression of tri compartmental osteoarthritis of the right knee, severe in the medial and patellofemoral compartments, with no evidence of aggravation or worsening following a minor knee injury on October 5, 2017. Dr. Erickson noted that Claimant's immediate symptoms were not severe and did not require immediate medical attention and that imaging studies failed to show evidence of any acute trauma and only showed severe pre-existing osteoarthritis. Dr. Erickson opined that the history of a twist accompanied by pain with negative acute imaging dictated a minor sprain/strain which was appropriately treated with modification of work activities, anti-inflammatory medication, and appropriate rehabilitation program. He opined that he would assume that in relatively short order, the minor injury resolved with no disability. Dr. Erickson noted Dr. Failinger's opinion that Claimant had an acute meniscal tear on October 5, 2017 but disagreed and noted that an expert radiologist opined that the meniscal tear was degenerative, atraumatic, and without evidence of an acutely displaced flap and therefore he opined that the proposed surgery was wholly and solely directed at Claimant's pre-existing condition. Dr. Erickson also opined that the proposed surgery would not be prudent given Claimant's severe patellofemoral symptomatic arthritis and that a total knee arthroplasty under Claimant's private healthcare insurance would be a more appropriate plan. *See* Exhibit A.

20. Dr. Erickson disagreed with Dr. Failinger's opinion on the cause of the medial meniscal tear. Dr. Erickson noted there was substantial research documenting that advancing arthritis can cause degenerative meniscal tears without the necessity of trauma. Dr. Erickson opined that when a traumatic meniscal tear occurs, it is readily evident on imaging studies with a displaced flap or bucket handle and surrounding soft tissue edema. Dr. Erickson opined that the injury on October 5, 2017 did not cause any objective evidence of aggravation or worsening of Claimant's pre-existing advanced osteoarthritis and that the most likely non occupational risk factors for the development of Claimant's condition are his age, pre diabetic condition, and most significantly his body habitus. Dr. Erickson opined that Claimant's pre-existing advanced osteoarthritis became symptomatic not because of an injury but because his disease is progressive. *See* Exhibit A.

21. Dr. Erickson testified at hearing consistent with his reports. He testified that he evaluated Claimant and went over the history with Claimant in great detail. He concluded that Claimant sustained no acute injury and that Claimant had advanced bi-compartmental osteoarthritis and a degenerative medial meniscus tear. Dr. Erickson testified that it was easy to tell if a meniscus tear was acute or degenerative and that there was no question that Claimants' meniscus tear was a degenerative tear. He opined that Claimant sustained no injury or a relatively minor injury. Dr. Failinger opined that the

condition on the MRI of Claimant's knee takes years to develop and that the meniscal tear did not occur on October 5, 2017 and was there prior to October. Dr. Failinger testified that the 17-year-old knee injury Claimant mentioned in physical therapy would make sense since it was a little unusual to see someone with Claimant's right knee condition at Claimant's young age but with a prior injury, pounding, and slamming with soccer it made sense. Dr. Failinger opined that nothing in Claimant's knee changed due to the October 5, 2017 injury and opined that the surgery recommended was not likely to help Claimant. Dr. Failinger opined that Claimant had some pain in the medial area on examination but that most of his pain was in the patellofemoral compartment which is where Claimant's arthritis is the worst. He opined that Claimant certainly would have needed treatment even without the October 5, 2017 incident.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish, by a preponderance of the evidence, that he sustained a compensable work related injury on October 5, 2017. The opinions of Dr. Erickson are found credible and persuasive. Claimant has a severe pre-existing degenerative condition in his right knee. Claimant's meniscal tear is degenerative and not acute. Claimant's need for surgery and/or any treatment is due to his underlying and pre-existing condition. Claimant has failed to establish a causal connection and has failed to show that his employment aggravated or accelerated his severe underlying condition. Rather, Claimant had symptoms at work as would be expected in a severely degenerative knee. Claimant's pain got better and swelling went down and then he had another flare up later on in treatment. This is the expected course for a severely damaged and arthritic knee with expected periods of pain flare-ups. Dr. Erickson is credible and persuasive that the meniscus tear is clearly a degenerative tear and that it predated October 5, 2017. The weight of the overall evidence does not support Claimant's contention that he sustained an acute work related injury on October 5, 2017. The claim is denied and dismissed.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable work related injury. His claim is denied and dismissed.

2. As Claimant has not sustained a compensable injury, the remaining issues are not addressed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 23, 2018

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven, by a preponderance of evidence, that he sustained a compensable injury or occupational disease to his left foot.

II. Whether Claimant has proven, by a preponderance of evidence, that he is entitled to reasonable and necessary medical benefits for his left foot.

III. Whether Claimant has proven, by a preponderance of evidence, that he is entitled to temporary partial and temporary total disability benefits.

IV. Whether Dr. Robert S. Anderson is an authorized treating provider.

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage is $1,722.11.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a thirty-nine-year-old package car driver for United Parcel Service, who alleged an injury to his left foot stemming from a June 1, 2016 incident. (Hearing Transcript from June 14, 2018 "Tr." at 18). Claimant alleged that while entering the package car he grabbed the handrail to climb in. When he went to climb in the truck he allegedly let go of the handrail and fell back. When he went to jump back in he felt a "pop" in his foot. (Tr. at 21-22).
2. Claimant stated that approximately three to four days later he noticed a bump on the bottom of his left foot. (Tr. at 22). Claimant stated that he showed the bump to his supervisor Dan Kelly. According to Claimant, no report was ever filed as the parties agreed to see how it went. (*Id.*)
3. Claimant did not seek treatment or report the alleged injury for over a year. Claimant continued to work full duty from June 1, 2016 through August 3, 2017. On June 20, 2017, Claimant sought treatment with his primary care physician. Claimant complained of pain in his left foot. The examination revealed a palpable nodule to the left plantar foot near the heal. Claimant was diagnosed

with plantar fascial fibromatosis. (Respondents Hearing Exhibits ("RHE") RHE I at 36-37).

4. Claimant initially treated at Concentra on June 22, 2017. Claimant stated that he was working approximately one year ago when he felt a "pop" in his foot with immediate pain. (RHE J at 53). Claimant stated that a bump grew on the arch of his foot and the pain progressed throughout the past year. Claimant was diagnosed with a sprain of the left foot and plantar fasciitis. (*Id.*)

5. On July 11, 2017, Claimant underwent an MRI on his left foot. The MRI revealed plantar fibromatosis at the mid portion of the medial band of the plantar fascia. (RHE K at 113).

6. On August 11, 2017, Claimant was examined, at the referral of his primary care physician, by Dr. Dan Mallet at Front Range Foot and Ankle. Claimant complained of a lump which formed under the foot in the arch on his left foot. (RHE N at 138). Claimant stated that the lump was very painful and had been present for approximately one year. Claimant was diagnosed with plantar fascial fibromatosis. (RHE N at 139).

7. On September 27, 2017, Claimant was referred to Colorado Orthopedic Consultants through the workers' compensation system. The record indicated that Claimant complained of sharp pain in his left foot. (RHE P at 150). The records revealed the examination consisted of focal swelling consistent with plantar fibroma along the medial aspect of the plantar fascia underneath the midfoot. The diagnosis was consistent with the previous medical providers. (*Id.*) An injection was administered during this examination.

8. Claimant underwent an Independent Medical Examination (IME), with Dr. Paul Stone, on October 6, 2017. (RHE H). Dr. Stone is an expert in podiatric medicine and has been practicing in the field for over thirty-five years. Dr. Stone is currently the residency director for Presbyterian St. Luke's Hospital. Dr. Stone noted that Claimant presented to the IME with symptoms consistent with Ledderhose disease of the central band medial aspect of the left plantar fascia. Dr. Stone pointed out that this is the typical place for a hereditary plantar fibromatosis to occur. (RHE H at 16).

9. Dr. Stone examined Claimant and performed a complete medical records review. *Id.* The record noted that Claimant discovered a bump on the left arch of his foot in 2016. Approximately, one year later the pain became more severe and he went to see his primary care physician. Claimant was initially diagnosed with a neuroma. (*Id.*) Claimant stated that the lesion became larger and more painful as time progressed. Claimant further noted the left arch pain is aggravated when he gets in and out of his vehicle at work. The record indicated that Claimant is very active in his daily life running 5k's, hiking, and riding his motorcycle. (*Id.*)

10. Dr. Stone agreed with the prior medical history in this claim and agreed with the diagnosis of plantar fibromatosis of the central midportion of the central band of the plantar fascia and not the medial band. (RHE H at 17). Dr. Stone diagnosed

Claimant with Plantar fasciitis of the left foot, also known as Ledderhose's disease.

11. Dr. Stone noted that Claimant was of German decent which is common ancestry for the development of Claimant's condition in this claim. (RHE H at 18). Dr. Stone credibly opined that Claimant's condition is not a work-related injury. (*Id.*) Dr. Stone elaborated that once someone develops a plantar fibroma especially if it becomes large and painful, placing the arch of the foot on a step repetitively can certainly be aggravating to an already enlarged mass in the arch. (*Id.*) Dr. Stone reiterated in his testimony that walking, or stepping on a step, is not aggravating the condition, but simply causing pain from the condition being present. Dr. Stone opined that in his expert opinion he did not believe that the current case resulted from an actual injury. (*Id.*)

12. Dr. Stone ultimately opined that the based on a degree of medical probability, Claimant did not sustain a work-related injury or aggravation to his left foot on June 1, 2016. It is Dr. Stones' opinion the current complaints of left foot pain are a natural progression of a hereditary and naturally occurring condition. Dr. Stone concluded that from his discussion with the patient, from the mechanism of the alleged injury described, the diagnosis, and his thirty-five years of podiatry experience that Claimant did not sustain a work-related injury.

13. On December 26, 2017, Claimant underwent an examination with a podiatrist Dr. Robert Anderson. Dr. Anderson examined Claimant and noted a very firm enlargement subcutaneous mass involving the medial aspect of the central band of the plantar fascia. Dr. Anderson noted that plantar fibroma is a benign lesion, but due to the irregularity if the collagen fibrils as a result of this mass it leads to discomfort. Dr. Anderson did not provide his opinion regarding the work-relatedness of the condition. (RHE Q at 172).

14. Dr. Anderson issued an addendum to his report on December 27, 2017. (RHE Q at 177) Dr. Anderson stated in the second report that a plantar fibrous tumor occurs naturally in the plantar fascia. They are slow growing and get to a size where they can be aggravated by activity. Dr. Anderson opined that certainly walking, standing, and job duties are enough to aggravate and cause chronic discomfort to this pre-existing benign fibrous tumor of the plantar fascia. (*Id.*) Dr. Stone testified at hearing that he trained Dr. Anderson. Dr. Stone credibly testified that he agreed with Dr. Anderson that the tumor occurs naturally, he agreed that they are slow growing, and he agreed with Dr. Anderson that they can get to a size where they can be aggravated by activity. Dr. Stone testified that in his expert opinion, Dr. Anderson is referring to aggravation in the same way he is. When the growth becomes big enough, anything you do, even walking down the stairs at home will aggravate it in the sense that it hurts. It is the growth that is uncomfortable. (Tr. at 55-56). Dr. Stone opined that the activity does not cause the growth to grow, but simply causes pain. (Tr. at 56).

15. The parties proceeded to hearing on June 14, 2018, over the issues of compensability, temporary indemnity benefits, and ongoing medical benefits.

16. Claimant testified on his own behalf. Claimant recounted the history of his prior symptomology and treatment. Claimant testified that on June 1, 2016, he began to enter the package car and grab the handrail when he slipped and fell back. He allegedly felt a pop in his left foot and felt a burning and irritation in the foot. (Tr. at 21-22). Claimant stated that he initially did not report the injury and did not think much of it as everyone is sore at work. A couple days later he showed the bump on his foot to his supervisors. Claimant stated that no formal report was filed. He stated that it was "one of those let's see how it turns out." (Tr. at 22).

17. Claimant testified that after the pain increased in 2017, he reported the alleged injury and was instructed to go to Concentra. (Tr. at 24). Claimant testified that he does not have any other health conditions and that he was "a pretty healthy guy." (Tr. at 26).

18. Dan Kelly testified at the hearing as an employer witness. Mr. Kelly was subpoenaed to hearing at the request of Claimant. Mr. Kelly testified that he remembered speaking with Claimant back in 2016. He testified that Claimant came into his office and showed him a bump on his foot. (Tr. at 39-40). Mr. Kelly testified that he always asks employees if the injury occurred at work. He further testified that he did not recall Claimant stating that the foot pain happened at work. (Tr. at 40). Pursuant to Mr. Kelly, Claimant never approached him regarding his foot at any point between 2016 and his retirement in 2017. (*Id.*)

19. Dr. Stone testified as Respondents expert at hearing. He credibly testified that Claimant has a condition known as plantar fibromatosis or Ledderhose disesae, which is a hereditary proliferation of the fibrous tissue in the plantar fascia. (Tr. at 46). Dr. Stone testified that the fibrosis grows by the proliferation of cells known as fibrocytes, which Dr. Stone explained is essentially a benign tumor which grows. (Tr. at 47). Dr. Stone testified that fibromas, as seen in this case, are more common in males between the ages of 20-40, and most common in males of Scandinavian descent. Dr. Stone testified that Claimant meets the general indicators for the condition. (Tr. at 48).

20. Dr. Stone testified that when the Claimant stepped down and felt a pulling on the alleged date of injury, that he likely felt the bump that was present at the time of the injury. (Tr. at 49). Dr. Stone noted that fibromatosis is an actual hyperproliferation, it is a physiologic turning on of the fibrocytes. This is why there is a hereditary component because there is a genetic predisposition to develop this abnormal growth. (*Id.*)

21. Dr. Stone credibly testified at hearing that repeated trauma to the foot is not a factor in causing a person to develop plantar fibromatosis. Dr. Stone credibly testified that Claimant's contention that he stepped down, felt a "pop," and noticed a bump almost immediately, does not correlate with a traumatic onset of plantar fibromatosis. Dr. Stone testified that following a traumatic event it would take months for the bump to develop. Additionally, Claimant's ability to continue working full-duty, without treatment or complaints following the alleged date of injury for over a year, suggests that he did not suffer an acute injury as serious as a tear in the foot which would ultimately result in a plantar fibromatosis.

22. Dr. Stone testified that the effect of walking, standing, wearing certain shoes, can aggravate the pain and cause the patient to be aware of the symptomatology but the growth is not affected. The fact that patients are walking makes them more aware of the pain, but does not increase the size of the mass. (Tr. at 52). The tumor grows at its natural course and simply walking on the mass does not accelerate the condition it is just the feeling of pain as a symptom of the condition. (Tr. at 53).

23. Dr. Stone credibly testified that to a reasonable degree of medical probability that Claimant did not sustain a work-related injury to his left foot. (Tr. at 50). He testified that in his expert medical opinion, the mass in Claimant's foot began to grow at some point, but was never recognized until Claimant became aware of it. The growth has continued to grow by its natural course, it became more and more symptomatic to the point where it now hurts with every step. Dr. Stone credibly testified this is natural course of Ledderhose Disease - plantar fibromatosis. (Tr. at 50 – 51).

24. Claimant did not suffer an injury to his left foot on June 1, 2016, while getting into his delivery truck.

25. Claimant suffers from Ledderhose Disease - plantar fibromatosis – which is a hereditary condition and occurred spontaneously.

26. Claimant's work activities did not cause or aggravate his Ledderhose Disease - plantar fibromatosis. The condition has naturally progressed to where the mass has increased in size and has become more symptomatic to the point where it now hurts with every step. Such progression in size and symptoms is the natural course of Ledderhose disease – plantar fibromatosis.

27. The mass is painful when Claimant puts pressure on it by getting into his work truck or by walking, but such activities have not aggravated or accelerated the underlying condition.

28. Claimant has pain when he walks, regardless of whether he is working.

29. Claimant's symptoms at work merely represent the result and progression of his pre-existing Ledderhose disease – plantar fibromatosis - that is unrelated to his employment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. §

8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has proven, by a preponderance of evidence, that he sustained a compensable injury or occupational disease to his left foot.

a. Whether Claimant has proven, by a preponderance of the evidence, that he sustained a compensable injury.

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.

Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

It is Claimant's position that he sustained an acute injury to his left foot while attempting to reenter his truck on June 1, 2016. Claimant stated that he felt a "pop" in his foot followed by pain. He testified that two days later he noticed a bump on his left foot, which he showed to his supervisors at UPS. No report of injury was filed and no mention of the injury occurring at work was provided. No action to pursue the claim was taken by Claimant for over one year. In June of 2017, the pain in his foot progressed and Claimant sought treatment with his primary care physician. At this time, Claimant reported the injury as a work-related injury.

This court first must address whether Claimant sustained an acute injury on June 1, 2016. Based on medical evidence and expert testimony of Dr. Stone, this Court finds Claimant did not sustain an acute injury to his left foot on June 1, 2016. Dr. Stone credibly testified at hearing that repeated trauma to the foot is not a factor in causing a person to develop plantar fibromatosis. Dr. Stone credibly testified that Claimant's contention that he stepped down, felt a "pop," and noticed a bump almost immediately, does not correlate with a traumatic onset of plantar fibromatosis. Dr. Stone testified that following a traumatic event it would take months for the bump to develop. Additionally, Claimant's ability to continue working full-duty, without treatment or complaints following the alleged date of injury for over a year, suggests that he did not suffer an acute injury as serious as a tear in the foot which would ultimately result in a plantar fibromatosis.

Claimant's current complaints are a natural and probable progression of his preexisting condition. Dr. Stone credibly testified that it would be farfetched for an individual to sustain a traumatic injury to his left foot and never have symptoms prior until 2016. Additionally, both expert physicians in this claim, Drs. Stone and Anderson, opined that the current condition is a benign fibrous tumor which occurred naturally in the plantar fascia. Therefore, the ALJ concludes Claimant did not suffer an acute injury to his left foot on June 1, 2016.

Claimant also contends that his work duties caused an aggravation to his naturally occurring condition. The primary evidence Claimant relies on is the fact that he walks nearly 15 miles a day at work. This evidence does not constitute sufficiently reliable evidence in this case to carry Claimant's burden in proving the work-relatedness of his left foot condition. Dr. Stone credibly testified that individuals who have had a documented injury to the plantar fascia, such as a rupture, may develop a bump within six months to a year. The bump in these injuries will consist of some scar tissue. Dr. Stone credibly testified that Claimant had no additional injury, such as scar tissue, to the plantar fascia.

Dr. Stone opined in his IME, that the medical records in this claim and his examination revealed a natural progression of Ledderhose disease. Dr. Stone opined that the mass in the foot began to grow at some point naturally. At some point, Claimant became aware of it, the mass then continued to grow by natural course, to where it became more symptomatic to a point where it hurts with every step. Dr. Stone credibly testified that the effect of walking and standing with this condition can aggravate the amount of pain one feels. However, walking on the mass itself does not accelerate the condition, it is just feeling pain as a symptom of the condition.

Claimant's testimony that he felt a "pop" in his foot on June 1, 2016, and developed a bump two days later, has no bearing on the relatedness of this condition. Claimant testified that he continued to work for the following year which aggravated his condition to cause greater pain. Claimant believes that his job duties, specifically getting into his truck and walking 15 miles a day, is the cause of the mass in his left foot. Even taking Claimant's testimony to be true, his testimony is not probative and persuasive to the ALJ as to the cause of Claimant's left foot condition and pain. To the contrary, the medical evidence and expert testimony of Dr. Stone strongly supports a finding that Claimant's condition is naturally occurring and progressing and would have occurred regardless of his occupation. Specifically, both expert physicians in the field of podiatry opined that it was a naturally occurring condition. Dr. Stone credibly testified that Claimant's walking and being on his feet at work did not have any effect on the condition or its growth. Dr. Stone credibly opined that the condition is a naturally occurring progression of the preexisting condition. The ALJ concludes Claimant failed to demonstrate by credible and persuasive evidence that his condition was aggravated by his employment.

Therefore, the ALJ concludes Claimant failed to establish by a preponderance of the evidence that he suffered a compensable injury to his left foot on June 1, 2016. The ALJ also concludes that Claimant failed to establish by a preponderance of the evidence that his work aggravated his preexisting and naturally occurring plantar fibromatosis - Ledderhose disease.

b. Whether Claimant has proven, by a preponderance of the evidence, that he sustained an occupational disease.

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v.*

IBM Corporation, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* Claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, Claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

Claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether Claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once Claimant makes such a showing, the burden shifts to Respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

Based on the testimony from Dr. Stone, Claimant did not sustain a compensable occupational disease. Claimant's assertion is that the increased walking at work either caused or aggravated his left foot condition. Dr. Stone testified that once someone develops a plantar fibroma or Ledderhose's disease - especially if it becomes large and painful, placing the arch of the foot on a step repetitively can certainly be aggravating, i.e., elicit pain, to an already enlarged mass in the arch. Dr. Stone reiterated in his testimony that walking or stepping on a step, is not aggravating the condition, but simply causing pain from the condition being present. Dr. Stone credibly testified that walking, standing, hiking, etc., does not cause the injury or increase the size of the growth. Dr.

Stone credibly opined that in his expert opinion he did not believe that the current case resulted from an actual injury or Claimant's work activities.

As found and stated above, Claimant's work activities did not cause or aggravate Claimant's underlying non-work related condition. Claimant's work activities did not cause or aggravate his Ledderhose Disease - plantar fibromatosis. The condition has naturally progressed to where the mass has increased in size and is painful when Claimant puts pressure on it. Claimant's work activities simply elicited reactionary pain when stepping into his work truck or when walking for work. Therefore, the ALJ concludes that based upon the credible and persuasive evidence, which includes the testimony of Dr. Stone, Claimant has failed to establish by a preponderance of the evidence that he suffered an occupational disease regarding his left foot or that his work activities aggravated or accelerated his preexisting and naturally occurring plantar fibromatosis – Ledderhose disease – in his left foot.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 25, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues set for determination included:

- Did Claimant sustained a compensable injury on August 21, 2016?
- If Claimant suffered a compensable injury, is she entitled to TTD benefits commencing November 26, 2016, ongoing, subject to an offset for unemployment compensation in the amount of $489.00 per week, commencing March 14, 2017 through July 24, 2017?
- If Claimant suffered a compensable injury, is her medical treatment reasonable, necessary, and related?

STIPULATIONS

The parties stipulated to the following: (1) Claimant's average weekly wage was $765.00 per week; (2) if the claim was found compensable, Anthony Euser, D.O. and his referrals are authorized under the Act; (3) Claimant received unemployment compensation from March 14, 2017 to July 24, 2017, paid at the rate of $489.00 per week.

The Stipulations were accepted by the Court and are incorporated by reference in this Order.

FINDINGS OF FACT

1. Claimant was employed as a deli clerk for Employer, starting in December 2015. Her job duties in this job involved assisting customers in the deli department.

2. There was no evidence in the record that Claimant suffered an injury to her low back prior to August 2016.

3. Claimant previously required treatment for various conditions immediately before the August 21, 2016 incident. On August 2, 2016, Claimant treated at Advanced Urgent Care, LLC. She was evaluated by Jill Postell, PA-C, whose assessment was vaginitis and acute urinary tract infection. Claimant received prescriptions for Diflucan, doxycycline hyclate and Tramadol.

4. Claimant returned to Advanced Urgent Care, LLC on August 10, 2016. She complained of continued vaginal symptoms, flu-like symptoms, migraines, nausea, cold sweats, chills, and back pain. She was evaluated by Linda Smith, M.D., who

administered an injection of ceftratriaxone and ketorolac, as well as prescribing oxycodone-acetominophen and diazepam.

5. Claimant treated at the Little Clinic for left upper eyelid swelling on August 14, 2016. She was diagnosed with septal cellulitis in the right upper eyelid. She was prescribed Bactrim and cephalexin. The ALJ noted there was no evidence of back symptoms reported by Claimant at the evaluation.

6. On August 21, 2016, Claimant was working for Employer and went into the freezer to get a box of chicken for another store. Claimant testified she pulled the top box from a stack of three and the remaining two stuck, which pulled her arms and back. The ALJ found the evidence support the conclusion that an incident occurred. Claimant testified she not feel immediate pain after the incident occurred and when she began experiencing back pain, thought it could be related to her kidney infection. Claimant stated the increased pain caused her to go to the emergency room.

7. A video of Claimant's work in the deli department on the date and time in question was admitted into evidence.[1] The video does not show the boxes falling in the freezer, but rather it shows Claimant walking through the deli, as well as a co-employee walking through the deli. Claimant was then seen walking out of the walk-in freezer. The ALJ found the video confirmed Claimant was working that day, but did not assist in the determination whether an injury occurred on the date and time in question.

8. Claimant was evaluated in the Emergency Department of the Platte Valley Medical Center on August 22, 2016. She complained of severe right flank pain and was initially evaluated by Ashlie Reuscher, R.N. who recorded the above complaint of pain and documented there was no injury. Claimant reported unresolved symptoms from a UTI and yeast infection. In the nursing assessment, Bridget Dwyer, R.N. noted Claimant complained of severe right flank pain and occurred at home. Claimant was evaluated by Erick Anderson, PA-C. PA-C Anderson stated Claimant's lower back pain onset was sudden and occurred 12 hours before. She had no sensory motor deficits. Claimant had right flank pain which and was concerned about a kidney stone. A CT was negative for kidney stones and PA Anderson thought the pain could be due to a herniated disc. The ALJ found it was significant Claimant did not describe the incident at work when she was evaluated in the Emergency Department.

9. An in-store investigation report was prepared by supervisor, Lori Plouff on August 23, 2016. Ms. Plouff noted Claimant was unsure when the incident happened, but stated Claimant requested to go to the doctor because of a kidney infection and denied it was work-related. Claimant texted Ms. Plouff the next day and reported she had a herniated disc and initially did not indicate it was a work-related injury. The following day, Claimant then related an incident occurred on Sunday (August 21) when she was lifting a box of chicken. Deli department manager Alan Herrera confirmed Claimant reported the incident to him.

[1] Exhibit S.

10. On August 24, 2016, Claimant sent an e-mail to Ms. Plouff describing the incident. She stated she went into the walk-in cooler to get a box of chicken and went to grab the top box at the end of the shelf. The whole stack of boxes fell, which caused her to reach and grab all the boxes. Claimant said initially her back did not hurt, but it was aching later, which she thought was related to kidney infection. The next day she could barely walk or bend and Claimant described her pain as excruciating. When she went to the ER, she was told she had a herniated disk.

11. A statement was given by Larry Michael, dated August 26, 2016.[2] Mr. Michael noted that it was a Sunday and a worker from Store 81 dropped by to pick up frozen chicken. Claimant went back to get the chicken and he followed to help. Mr. Michael went in and found her with three boxes on her.

12. An undated statement was given by Debbie Tom (culinary clerk) regarding what happened on the date of the incident. Ms. Tom indicated she was assisting an associate from another store who came by to borrow product. She heard the sound of boxes falling while in the deli walk-in and saw Claimant was attempting to catch the cases of chicken, as the boxes fell to the floor. She described Claimant as being in an awkward position as she twisted around and got up slowly. Ms. Tom was an independent witness to the incident on August 21, 2016 and the ALJ found this supported Claimant's description of what happened.

13. Claimant signed an Injury Review Form on August 28, 2016 said the injury occurred when she was lifting a box of chicken and the stack of boxes fell.

14. Claimant was referred to Julie Parsons, M.D. by Employer, who evaluated her on August 24, 2016. Dr. Parsons diagnosed Claimant with a low back strain. Dr. Parsons referred Claimant for an MRI of the lumbar spine, prescribed Soma and Tramadol, along with massage therapy and gave her lifting restrictions of 10 lbs. In the M-164, Dr. Parsons checked the box that her objective findings were consistent with history and/or work-related mechanism of the injury/illness.[3] That opinion was persuasive to the ALJ on the issue of compensability.

15. On August 28, 2016, Claimant underwent an MRI of the lumbar spine. The films were read by David Cosper, M.D., whose conclusions included: shallow disc displacement at T11-T12 and L4-L5, without substantive spinal canal stenosis, neural foraminal stenosis or nerve root compression; mild loss of intervertebral disc space height at T11-T12 and L4-L5; bilateral facet capsulitis at L4-L5 and L5-S1; general dextroconvex curvature of the lower lumbar spine which may be positional related to mild scoliosis.

16. Dr. Parsons oversaw Claimant's treatment through October 5, 2016. In the follow-up evaluations which occurred on August 29, September 1, 8, 22 and

[2] Exhibit C, p. 13.

[3] Exhibit N, p. 175.

October 5, 2016, Dr. Parsons' diagnoses remained the same: lumbar strain and radiculopathy. Claimant's restrictions were extended by Dr. Parsons.

17. Dr. Euser examined Claimant on October 12, 2016 at which time she reported muscle aches and swelling, along with neurologic pain down the right leg. She also complained of depression. Dr. Euser noted an irregular gait on examination, along with abnormal motor strength in the right leg. The assessment was: neuropathy of the lower limb; low back pain. Dr. Euser referred Claimant for physical therapy ("PT") and continued the 10 lb. restriction.

18. Claimant returned to Dr. Euser on October 24, 2016, with similar complaints. She also reported trouble sleeping. Dr. Euser's assessment was low back pain, neuropathy of the lower limb and difficulty sleeping. Claimant was referred for pain management.

19. On November 15, 2016, Claimant was evaluated by Dr. Euser, complaining of muscle aches and swelling, gait disturbance, along with numbness in both lower extremities. She had no relief from prednisone or gabapentin and continued to experience pain down right leg, along with depression. Claimant's mental status was described as depressed and agitated. On examination, Dr. Euser noted hypertonicity and abnormal motor strength in the right leg. Claimant was to continue taking medications and establish care with a pain management specialist.

20. Records from Employer admitted at hearing included a series of e-mails exchanged by Fred Woodward, the talent manager and Nate Judkins, assistant store manager regarding Claimant's return to work. Mr. Woodward stated on November 25, 2016, Claimant could not return to work because of her restrictions.

21. On December 7, 2016, Claimant underwent a bilateral facet injection at L4-5 and L5-S1, which was administered by Lief Sorenson, M.D.

22. On December 9, 2016, Claimant was transported by ambulance to the Emergency Department of the Platte Valley Medical Center. She was complaining of dizziness and lightheadedness, as well as a syncopal episode earlier that day. Claimant had another syncopal episode while at the hospital. She was evaluated by Erick Anderson, PA-C who diagnosed with low back pain and syncope. Claimant had subsequent syncope episodes and remained in the hospital until December 21, 2016.

23. On December 11, 2016, Claimant was evaluated by David Risher, M.D. He described her episodes of unresponsiveness as inconsistent with typical stupor or coma. Pseudoseizure seemed most likely. The MRI of the brain was unremarkable and she had a gag reflex, with no convincing seizure activity. Dr. Risher noted Claimant's lumbar spine MRI was normal, with no evidence of disc herniation. The results of the MRI constituted objective evidence of the condition of Claimant's lumbar spine at this point in time.

24. Claimant was evaluated by Hua Judy Chen, M.D. on December 11, 2016. Dr. Chen opined Claimant's unresponsiveness did not fit either a seizure or syncope, given the normal MRI of her brain and EEG. Her symptoms were non-physiologic. Dr. Chen agreed to a tilt-table test to look for a cardiac source of the blackout. If this test was normal, Dr. Chen recommended a psychological evaluation or prolonged EEG study. Dr. Chen issued a supplemental report on December 12, 2016, after the tilt-table test was negative and her impression was: episodic non-neurological unresponsiveness, question of syncope. Dr. Chen stated Claimant's episodes did not behave like seizures.

25. On December 16, 2016, Nicole Clements, R.N. completed a nursing note related to the hospitalization and noted Claimant had a consult with a psychiatrist to rule out possible psychosomatic causes of the syncopal episodes. Claimant was referred to a therapist.

26. Claimant was discharged on December 21, 2016 and the treatment note was completed by Arjune Patel, M.D. Claimant was noted to have no prior medical history of adrenal insufficiency and underwent an extensive workup, with the adrenal insufficiency likely related to previous systemic steroid use and a recent ESI. Claimant's MRI of the lumbar spine had no acute abnormality to explain her pain. Claimant was to follow-up with Dr. Rothman and her PCP.

27. Claimant was reevaluated by Dr. Euser on December 30, 2016. Claimant reported similar physical complaints. Dr. Euser diagnosed Claimant with severe adrenal insufficiency, low back pain, neuropathy of lower limb, and spasm of back muscles. He referred Claimant for an endocrinology and continued her medications for the back pain. The ALJ noted Dr. Euser did not offer an opinion regarding the cause of Claimant's adrenal insufficiency.

28. On January 13, 2017, Claimant returned to Dr. Euser. She was complaining of muscle aches and swelling, along with pain down the right leg, along with depression. Dr. Euser's assessment included: low back pain, neuropathy of lower limb, prolapsed lumbar intervertebral disc[4], and adrenal cortical hypofunction. Claimant was to continue PT and was prescribed Percocet, as well as advised to follow up with him an endocrinologist. Dr. user's assessment remained the same and follow-up evaluations which occurred on February 17, March 3 and April 14, 2017.

29. Dr. Roth was called as an expert witness by Respondent. He was qualified as an expert in Internal Medicine, the specialty in which he is board-certified. He is Level II accredited pursuant to the WCRP. Dr. Roth testified consistently with the conclusions expressed in his report, dated August 14, 2017. Dr. Roth testified that Claimant's back pain, including the degree of her pain, as well as the distribution of pain were not consistent with any mechanism described, nor was it physiologic. Dr. Roth

[4] It was not clear from the record whether Dr. Euser had the results of the MRI done on December 11, 2016.

opined Claimant did not sustain the lumbar spine injury on August 21, 2016.[5] Dr. Roth stated the MRI showed ordinary age-related degenerative changes to the lumbar spine. The ALJ credited the opinions of Claimant's ATPs over those expressed by Dr. Roth with regard to the lumbar spine strain.

30. Dr. Roth testified adrenal insufficiency symptoms would include fatigue, anxiety, static hypertension, loss of appetite, abdominal pain, nausea, and generalized weakness. Dr. Roth opined Claimant's adrenal insufficiency was not caused by the use of steroids after the incident on August 21, 2016. There was an insufficient quality and duration of steroids given to cause the adrenal insufficiency. Dr. Roth stated Claimant would have required a period of at least three weeks of a "super physiologic dose" of steroids. Dr. Roth opined the incidents when Claimant passed out on December 9-10, 2016 was not a result of the injection she received on December 7, 2016. This was caused by the adrenal insufficiency. Dr. Roth's expert testimony was credible with regard to the adrenal insufficiency.

31. A record review was performed by Howard Kerstein, M.D. (endocrinologist), who issued a report dated September 10, 2017. After reviewing Claimant's course of treatment, Dr. Kerstein opined that Claimant's secondary adrenal insufficiency was not related to her intermittent use of corticosteroids from August to December 2016. He opined the intermittent use of steroids did not cause secondary adrenal insufficiency associated with the multiple symptoms experienced by Claimant. This opinion was persuasive to ALJ.

32. On July 31, 2017, Dr. Parsons agreed the Medrol Dosepak and prednisone did not cause Claimant's adrenal insufficiency.

33. Claimant proved by a preponderance of the evidence she sustained an industrial injury on August 21, 2016.

34. No ATP placed Claimant at MMI.

35. Based upon the evidence in the record, the ALJ concluded Claimant's adrenal insufficiency was not caused by the incident at work, including the post-injury treatment she received.

36. Claimant's health issues related to adrenal insufficiency and/or periods of unresponsiveness (syncope) constituted a subsequent intervening event, which terminated Respondent's liability to pay wage and medical benefits for her work injury.

37. The ALJ concluded Claimant's need for medical treatment after December 9, 2016 was caused by her adrenal insufficiency, non-physiologic issues and/or periods of unresponsiveness (syncope). Claimant's need for treatment was related to these conditions.

[5] Deposition of Dr. Roth, page 22:18-23.

38. Claimant's wage loss after December 9, 2016 was the result of her adrenal insufficiency, non-physiologic issues and/or periods of unresponsiveness (syncope) which caused her to be hospitalized.

39. Evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Sections 8-41-301(1)(b) & (c), C.R.S. (2016). Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). However, no compensability exists if the disability and need for treatment was caused as the direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002). The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As a starting point, the evidence admitted at hearing led the ALJ to conclude that an incident occurred on August 21, 2016. (Finding of Fact 6). Specifically, Claimant traversed to the freezer to get a box of frozen chicken and as she lifted the top box, two other boxes of chicken fell. (Findings of Fact 6, 12). This pulled on her arms and back. As determined in Findings of Fact 11-13, this incident was witnessed by co-employees and was reported to Employer by Claimant. As found, statements were taken from employees who worked with Claimant on that day she alleged she was injured that corroborated her version of events. Respondent did not dispute the fact that an incident occurred that day.

Second, there was evidence in the form of medical records, which supported the conclusion that Claimant suffered an injury at work. Dr. Parsons opined Claimant's symptoms were consistent with the reported mechanism of injury. (Finding of Fact 14). In his treatment of Claimant, Dr. Euser also indicated there were findings made at his evaluations which supported the conclusion Claimant was injured at work.

In coming to this conclusion, the ALJ considered Respondent's argument that Claimant proffered insufficient evidence to support her claim she suffered a compensable injury. Respondent also pointed to the fact that Claimant failed to specifically identify the incident at work as the cause of her back pain when she was treated in the emergency department. While true, this latter argument did not outweigh the other evidence before the Court.

Based upon the totality of evidence, the ALJ concluded there was factual support for Claimant's contention that she suffered a compensable injury. In this regard, Claimant's testimony, as well as the statements of her co-employees led the Judge to conclude that she sustained an injury to her low back at work. The ALJ concluded when the boxes fell in the deli freezer, this caused an injury to the Claimant, which was diagnosed by Drs. Parsons and Euser. Therefore, Claimant satisfied her burden of proof by a preponderance of the evidence to establish he suffered a compensable work-related while working for Employer on August 21, 2016.

Temporary Disability Benefits

Claimant had work restrictions issued by Dr. Parsons and Dr. Euser. These restrictions were not lifted and there was no finding by an ATP that Claimant reached MMI. (Finding of Fact 34). From the records admitted at hearing, the ALJ determined Claimant lost time from work after August 22, 2016 and therefore would potentially be entitled to temporary partial disability ("TPD") benefits.[6] However, there was insufficient evidence in the record for the ALJ to determine the amount of TPD benefits to which Claimant would be entitled. Therefore, counsel for the parties will be ordered to confer on this issue to see if it can be resolved. If no resolution is reached, either party can file an Application for Hearing on this issue.

[6] Claimant initially requested TPD benefits in her AFH. However, in the statement of issues at the beginning hearing, only TTD was requested.

Claimant did not return to work after November 25, 2016. Records from Employer confirmed Claimant could not return to work with restrictions. (Finding of Fact 22). Accordingly, Claimant is entitled to TTD benefits from November 26 through December 9, 2016, payable at the rate of $510.00 per week (based upon the stipulated AWW of $765.00 per week).

Subsequent Intervening Event

Results flowing "proximately and naturally from an industrial injury are compensable". However, no compensability exists when a later accident or injury occurs as a direct result of an independent intervening cause. Whether a particular condition is a result of an independent intervening cause is a question of fact for resolution by the ALJ. *Owens v. Industrial Claim Appeals Office,* supra, 49 P.3d at 1188-1189.

As found, Claimant's adrenal insufficiency was not caused by the incident at work, including the treatment she received for said injury. (Finding of Fact 36). The ALJ's conclusion was based on the medical evidence, including the opinions expressed by Dr. Roth, Dr. Kerstein and Dr. Parsons. (Findings of Fact 31-33). In addition, Claimant was hospitalized in December 2016 due to a syncopal episode and received an extensive work-up at that time. There was a divergence of opinions by evaluating physicians as to the cause of Claimant's symptoms. The ALJ determined this hospitalization was not causally connected to Claimant's work injury. As found, the objective testing done when Claimant was hospitalized in December 2016 in connection with Claimant's low back pain was negative. (Finding of Fact 25). The ALJ found Claimant sustained a wage loss and required medical treatment for the adrenal insufficiency and other medical problems. (Findings of Fact 38-39). This was not related to her work injury. The ALJ concluded that this constellation of symptoms, her hospitalization and the treatment Claimant received for the adrenal insufficiency/syncope constituted an intervening event.

Under the standard articulated by the Court in *Owens v. Industrial Claim Appeals Office,* supra, the intervening event (Claimant's hospitalization and treatment for multiple symptoms) severs the chain of causation in this case. Claimant's need for treatment was related to these conditions and not the condition caused by her work injury. Thus, Respondent was not liable for medical benefits. The ALJ also determined that Claimant's adrenal insufficiency and periods of unresponsiveness constituted an independent intervening cause and the ALJ concluded this served to terminate Respondent's liability for wage benefits.

ORDER

It is therefore ordered:

1. Claimant suffered a compensable low back strain on August 21, 2016.

2. Respondent shall pay medical benefits pursuant to the Workers' Compensation Fee Schedule to cure and relieve the effects of Claimant's injury through December 9, 2016. This includes treatment provided by Dr. Parsons, Dr. Euser and their referrals.

3. Claimant may be entitled to recover TPD benefits from August 22, 2016 through November 25, 2016. There was insufficient evidence in the record to calculate the amount due and owing, as records through November 5, 2016 were admitted. Counsel for Claimant and Respondent are ordered to confer with regard to the TPD issue. Either Claimant or Respondent may file an Application for Hearing on the issue of TPD benefits.

4. Respondent shall pay TTD benefits to Claimant at the rate of $510.00 per week from November 26, 2016 through December 9, 2016. These benefits are subject to the offset for Claimant's receipt of unemployment benefits, at the rate of $489.00 per week.

5. Claimant's claim for wage and medical benefits after December 9, 2016 is denied and dismissed.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant's Workers' Compensation case numbers 4-973-089 and 4-973-090 remain open because he timely objected and filed an application for hearing on each of the claims.

PROCEDURAL BACKGROUND AND FINDINGS OF FACT

1. Claimant has the following two Workers' Compensation claims against Employer: (1) W.C. No. 4-973-089 with a date of injury of September 17, 2014; and (2) W.C. No. 4-973-090 with a date of injury of January 12, 2015. Claimant reached Maximum Medical Improvement (MMI) and sought a Division Independent Medical Examination (DIME) in both cases. On January 10, 2017 Claimant underwent a DIME with Allison M. Fall, M.D. On February 13, 2017 Respondents filed Final Admissions of Liability (FAL's) on each of the claims.

2. On March 8, 2017 Claimant timely objected and filed an application for hearing on each of the cases. The applications for hearing endorsed the issues of overcoming the DIME, Permanent Partial Disability (PPD) benefits and Permanent Total Disability (PTD) benefits. Hearings were scheduled for July 6, 2017.

3. Claimant obtained a new attorney. The parties agreed to allow Claimant to withdraw his applications for hearing and re-file to permit new counsel to prepare for hearing. On June 23, 2017 the Office of Administrative Courts entered orders on both claims memorializing the agreement. The orders also stated, "Claimant must re-file his application for hearing within ten (10) days of the date of this order." Claimant was thus required to re-file the applications for hearing on or before July 3, 2017. Claimant did not re-file the Applications for Hearing until August 30, 2017.

4. Respondents filed a motion to strike and dismiss Claimant's applications for hearing. Respondents asserted that Claimant's failure to comply with the extended deadline established by the June 23, 2017 orders closed the issues admitted in the FAL pursuant to §8-43-203(2)(b)(II)(A), C.R.S. Moreover, Respondents contended the ALJ lacked jurisdiction over the issues endorsed by Claimant. In an Order dated September 15, 2017 ALJ Cannici granted Respondents' motion and struck the applications for hearing in both claims.

5. Claimant filed a motion for reconsideration. On September 26, 2017 the ALJ denied the motion. On September 28, 2017 Claimant filed a petition to review and a request for Specific Findings of Fact, Conclusions of Law and Order. ALJ Cannici denied the motion for reconsideration on October 4, 2017.

6. Claimant appealed the September 15, 2017 order to the Industrial Claim Appeals Office (ICAP). He asserted that the ALJ erred as a matter of law in striking the applications for hearing. Relying on *Del Ramirez v. ConAgra Beef Company*, W.C. No. 4-478-614 (ICAP, June 19, 2003) and *Gerchman v. Wal-Mart Stores, Inc.* W.C. No. 4-525-960 (July 23, 2004), the ICAP concluded that Claimant satisfied the requirement to file an application for hearing and the jurisdictional requirements of §8-43-203(2)(b)(II)(A), C.R.S. Accordingly, the ICAP set aside ALJ Cannici's September 15, 2017 order and remanded the matters for further proceedings.

7. Workers' Compensation case numbers 4-973-089 and 4-973-090 remain open because Claimant timely objected and filed an application for hearing on each of the claims. By timely filing applications for hearing, Claimant satisfied the jurisdictional requirements of §8-43-203(2)(b)(II), C.R.S. The June 23, 2017 order memorializing the agreement to cancel the scheduled hearing did not eliminate the effectiveness of the timely filed applications for hearing. Furthermore, Claimant's failure to set the hearings did not constitute a jurisdictional defect. Claimant's failure to comply with the extended deadline established by the June 23, 2017 orders thus did not close the issues admitted in the FAL. Accordingly, Claimant's claims in W.C. Nos. 4-973-089 and 4-973-090 remain open.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-43-203(2)(b)(II)(A), C.R.S. provides, in relevant part:

> An admission of liability for final payment of compensation must include a statement that this is the final admission by the workers' compensation insurance carrier in the case, that the claimant may contest this admission if the claimant feels entitled to more compensation, to whom the claimant should provide written objection and notice to the claimant that the case will be automatically closed as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing included in the selection of an independent medical examiner pursuant to section 8-42-107.2, C.R.S., if an independent medical examination has not already been conducted.

5. In *Del Ramirez v. ConAgra Beef Company*, W.C. No. 4-478-614 (June 19, 2003), the ICAP determined that §8-43-203(2)(b)(II)(A), C.R.S. only requires filing an application for hearing within 30 days of the FAL. The failure to set the hearing in accordance with a rule of procedure did not constitute a jurisdictional defect. The panel noted that §8-43-203(2)(b)(II), C.R.S. does not establish a time limit for setting a hearing to contest a FAL and declined to read a nonexistent provision into the jurisdictional requirements of the statute. *See Kraus v. Artcraft Sign* Co., 710 P.2d 480 (Colo. App. 1985) (statute is product of legislative action and court should not read nonexistent provisions into the Act).

6. In *Gerchman v. Wal-Mart Stores, Inc*., W.C. No. 4-525-960 (July 23, 2004), the ICAP detailed the *Del Ramirez* reasoning. The ICAP noted that §8-43-203(2)(b)(II), C.R.S. only requires filing of the application for hearing within 30 days of the FAL. The failure to set the hearing in accordance with a rule of procedure did not amount to a jurisdictional defect. Moreover, §8-43-203(2)(b)(II), C.R.S. does not delineate a time limit for setting a hearing to contest an FAL. Accordingly, in *Gerchman* the ICAP concluded that the claimant satisfied the statutory requirement to prevent claim closure by filing an application for hearing on ripe issues. The ICAP explained that "there is nothing in the statute or rules that suggests that by agreeing to cancel a hearing a party is admitting that an otherwise timely application for hearing will be treated as if it was never filed for purposes of §8-43-203(2)(b)(II)." Instead, the withdrawal and cancellation of a hearing is a procedural matter and procedural steps may occur for a variety of reasons.

7. As found, Workers' Compensation case numbers 4-973-089 and 4-973-090 remain open because Claimant timely objected and filed an application for hearing on each of the claims. By timely filing applications for hearing, Claimant satisfied the jurisdictional requirements of §8-43-203(2)(b)(II), C.R.S. The June 23, 2017 order memorializing the agreement to cancel the scheduled hearing did not eliminate the effectiveness of the timely filed applications for hearing. Furthermore, Claimant's failure to set the hearings did not constitute a jurisdictional defect. Claimant's failure to comply with the extended deadline established by the June 23, 2017 orders thus did not close

the issues admitted in the FAL. Accordingly, Claimant's claims in W.C. Nos. 4-973-089 and 4-973-090 remain open.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claims in W.C. Nos. 4-973-089 and 4-973-090 remain open.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. The amount of medical mileage to which Claimant is entitled for the period of May 21, 2012 through July 11, 2017.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on August 19, 1975 and was 42 years of age at the time of hearing.
2. Claimant currently lives at 191 Clear Creek Drive #B, P.O. Box 574, Empire, CO 80438.
3. During the relevant period, May 21, 2012 through July 11, 2017 ("relevant period"), Claimant lived at 5 addresses in Colorado. Those addresses are listed on the Excel spreadsheet. (Claimant's Exhibit 2-7.)
4. On May 17, 2012, Claimant injured her right leg while at work.
5. Respondents admitted liability for this injury and they have provided extensive medical care through the date of hearing.
6. On account of the industrial injury, Claimant currently suffers from complex regional pain syndrome (CRPS).
7. Because of extensive treatment, Claimant has necessarily had to travel from home to the location of her various medical providers, including pharmacies.
8. Prior to April 11, 2017, Claimant had not submitted a mileage log or requested reimbursement for any of her mileage expenses.
9. At no time during the pendency of her Claim did Respondents provide Claimant with information about her right to obtain reimbursement for mileage to and from medical appointments and obtain her prescriptions at the pharmacy and a suggested time frame to submit such requests.
10. On April 11, 2017, Claimant's attorney, submitted to Respondents a handwritten mileage log that was completed by Claimant. The mileage log covered almost 5 years. Although Claimant had seen multiple physicians and therapists over the years, and obtained numerous prescriptions, the mileage log she created and which was submitted by her attorney listed roundtrip mileage for only one of her physicians, Dr. Fox. Claimant's mileage log listed 68 appointments at 91 miles round trip and one trip at 94.2 miles for a total of 6,282.2 miles. Claimant's handwritten mileage log did not request reimbursement for any money and did not list an amount she alleged was owed to her. (Exhibit I)

11. On April 14, 2017, Respondents' attorney sent Claimant's attorney a letter stating they had received Claimant's mileage log reimbursement request and it appeared to contain several inconsistences since Claimant used a single address as her home address to calculate the round trip mileage, even though Claimant had moved numerous times since her date of injury and notified Respondents of her moves. Respondents stated "[a]s a courtesy, we will permit you to retract this mileage request prior to my client undertaking further steps to respond."

12. On May 8, 2017, a typed out mileage log from the Law Offices of Dianne Sawaya LLC was provided to Respondents via facsimile. Although there is a designated signature line for the submitting party to sign and certify that the mileage listed is accurate, no one signed and certified the mileage log. The log appears to be a restatement of the handwritten log written by Claimant. However, Claimant credibly testified that she did not complete the typed log and did not review the typed log before it was submitted to Respondents by someone at the Law Offices of Dianne Sawaya LLC.

13. On August 1, 2017, Claimant's attorney filed an Application for Hearing endorsing mileage reimbursement in conjunction with WCRP 18-6(E).

14. Respondents filed a Response to Application for Hearing on August 31, 2017, stating "Respondents contest Claimant's mileage request as fraudulent or misrepresentative."

15. At the first hearing, Claimant essentially testified that she created a single mileage log identifying one physician, Dr. Fox, and used the longer distance from her home in Empire, Colorado, to Dr. Fox's office in Westminster, Colorado, to simplify her mileage log. Claimant testified that she attempted to simplify her mileage log due to the chaotic nature of her life over the last five years. Claimant indicated that in addition to undergoing extensive treatment for her work injury, she has moved numerous times to be closer to her father who was in hospice and to change schools for her child. She also indicated that she did not have a historical list going back almost five years that listed each medical appointment she attended with each physician or physical therapist. She also did not have a historical list with each trip to each pharmacy. Thus, Claimant had to go through old medical records and call each medical provider's office in an attempt to create an accurate mileage log. Therefore, Claimant thought she could simplify her mileage log by merely listing the mileage to and from Empire, Colorado, to Dr. Fox's office in Westminster, Colorado, over the last five years and not include all of her other mileage for treating with other providers and getting prescriptions. In other words, Claimant thought that although she was overstating the actual mileage to and from Dr. Fox, she was approximating the actual mileage she had driven over the last five years to obtain medical treatment. The ALJ finds Claimant's testimony to be credible and persuasive and does not find Claimant completed the handwritten mileage log with the intent to misrepresent and defraud Respondents. The ALJ finds Claimant hastily completed the initial handwritten mileage log without much thought and provided it to her attorney's office so she could attend to and deal with a multitude of other difficulties in her

life. The ALJ also finds that Claimant's prior attorney, or his staff, did not help matters by forwarding the handwritten mileage log to Respondents, without getting an explanation from Claimant and/or providing one to Respondents with the mileage log, or confirming the information contained in the log, before submitting it to Respondents.

16. At hearing, Respondents asserted that Claimant's April 11, 2017, hand written mileage log and typed mileage log which overstated her roundtrip mileage to and from Dr. Fox's office was a material misrepresentation. Respondents asserted that Claimant's alleged material misrepresentation regarding her mileage should divest Claimant of her right to obtain reimbursement for any mileage expenses during her claim.

17. Although the hearing commenced on January 24, 2018, at 1:30 p.m., the hearing was not completed.

18. At the end of the first hearing, Claimant's attorney requested the record to be reopened in order to submit additional documentary evidence which purportedly set forth the amount of mileage at issue and was provided to Respondents during the discovery phase. Respondents objected. Over Respondents' objection, the ALJ allowed Claimant to reopen the record and submit additional documentary evidence in the form of the purported written mileage requests Claimant provided to Respondents in her answers to discovery since Claimant's initial attorney and Respondents' attorney each certified in their Case Information Sheet, which was filed with the court, that discovery had been completed and that they had conferred with each other within the last 30 days and had made a good faith attempt to resolve the issues set for hearing. The documents were marked as Claimant's Exhibit 9.

19. Upon further review of Claimant's Exhibit 9, the ALJ concluded that the documents contained in Exhibit 9, which were provided by Claimant's first attorney, did not comply with Colorado Workers' Compensation Rule of Procedure 18-6(E) by providing the information necessary to quickly and accurately determine the amount of medical mileage at issue. The documents did not specifically set forth the round trip mileage for each medical appointment or trip to the pharmacy. Instead, Exhibit 9 contained just the alleged date Claimant attended each medical appointment with a particular provider or the date she picked up a prescription at a particular pharmacy. There was neither round trip mileage listed for each trip nor the addresses between which Claimant traveled. In addition to the date of each appointment or trip to the pharmacy, the information provided by Exhibit 9, which consists of seven pages, can be summarized as follows:

    a. Fifty-five appointments with Dr. Wernick,

    b. Two appointments with Dr. Chan,

    c. Five appointments with Dr. Fox that were not on Claimant's initial list,

    d. Fifteen or seventeen appointments with Dr. Wertz,

    e. Thirty-two physical therapy appointments, and

f. Eighty-eight trips to various pharmacies.

20. The hearing record from the first hearing did contain Claimant's answers to discovery which set forth her various addresses over the last five years. The hearing record also contained Claimant's initial handwritten mileage log which stated the mileage between her residence in Empire, Colorado, and Dr. Fox's office in Westminster, Colorado. But, the hearing record from the first hearing did not contain the distance traveled for each medical appointment and trip to the pharmacy.

21. After reviewing Exhibit 9 submitted by Claimant's attorney, as well as the other hearing exhibits submitted by the parties, the ALJ concluded that in order to conserve judicial resources, better define the issues to be decided by the ALJ, and allow each party the opportunity to fairly make their claims and defenses, the hearing would be continued, and the parties would be required to confer and set forth the exact mileage reimbursement at issue for the entire period so the litigation would not proceed in a piecemeal fashion.

22. The ALJ issued a number of procedural orders directing the parties to confer and provide the information the ALJ needed, and the manner in which the information was to be submitted to the court, in order for the ALJ to resolve the dispute between the parties in the most efficient manner and in the most equitable manner for both parties. The ALJ reminded the attorneys that each of them certified, through the Application for Hearing and Case Information Sheet, that they completed discovery – since discovery was undertaken - and conferred and made a good faith effort to resolve the issues set for hearing before appearing at the hearing on January 24, 2018. At a minimum, the completion of discovery, and attempt to resolve the issues set for hearing, should have resulted in the parties defining the amount of medical mileage at issue – with the understanding that Respondents contended either nothing was payable or much less was payable.

23. Based on the procedural orders issued by the ALJ, the parties conferred and defined the amount of mileage at issue and defined Respondents' defenses to each mileage request. The parties then returned to complete the hearing on May 4, 2018. At the second hearing, Claimant submitted an Excel spreadsheet which purportedly reflected all known medical mileage recorded during the relevant period. The spreadsheet included the date of travel, starting location, medical provider's address, purpose, round-trip mileage, rate per mile, and total amount of mileage claimed for each travel event. Claimant's submission was organized primarily by medical provider, then secondarily by date of travel. (Claimant's Exhibit 2-7).

24. In the Excel spreadsheet submitted by Claimant and Respondents, the total requested medical mileage by Claimant was $10,755.20.

25. However, at the second hearing, Claimant testified that her previous attorney's office erroneously included charges for mileage related to treatment provided by her personal treating physician, Dr. Hilburn, and that those charges should be removed from the spreadsheet. Claimant's attorney contended that removal of

these requested medical mileage charges would reduce the requested mileage reimbursement to $10,639.83.

26. Respondents did not object to most of the spreadsheet entries on the grounds that the travel never occurred, or that the roundtrip mileage claimed was incorrect. Instead, Respondents objected to the payment of medical mileage on other grounds. Respondents contended that Claimant fraudulently misstated her mileage to and from Dr. Fox on her first mileage sheet (Ex. I) and Claimant has also submitted multiple mileage requests for the same day, that such submissions must be fraudulent, and therefore Claimant should not receive any medical mileage whatsoever. Respondents also contend that it is unreasonable for Claimant to travel between several of her residences and a Safeway pharmacy located at 7561 W. 80th Ave. Arvada, CO 80003 when she could have used a pharmacy closer to her home. Respondents further contended that many of Claimant's trips to obtain medical treatment, physical therapy, and prescriptions should have been consolidated into a single trip to minimize her travel and prevent multiple trips on the same day or on consecutive days. Therefore, Respondents argue in the alternative, the mileage she receives for her travel to and from medical appointments and pharmacies should be substantially reduced from the actual submission of mileage incurred by Claimant to a more reasonable number of miles.

27. Claimant testified that, to the best of her knowledge, all of the mileage claimed in the Exel spreadsheet presented at the second hearing, with the exception of the mileage to Dr. Hilburn, was accurate. She credibly testified that she compiled most of the data included on the Excel spreadsheet herself by reference to available medical records. She testified credibly that her prior attorney's office may have made some mistakes in the preparation of the final Excel spreadsheet. She further testified credibly that she did approve the submission by that firm of the spreadsheet for use at the second hearing, but that she did not knowingly submit any mileage that was inaccurate.

28. Claimant further testified that there were days when she traveled several times to a medical provider on the same day. Claimant credibly testified that sometimes she would go to a doctor, receive a prescription from that doctor, and then travel to the pharmacy to get the prescription filled. Sometimes the pharmacy would fill one or more of the prescriptions but then told Claimant they could not obtain authorization from the insurance carrier to fill others. This often occurred when a narcotic medication was involved. In such instances, Claimant decided that she was not going to wait around for an indefinite period of time until the insurance adjuster approved her medications. She testified that she had two school-age children who could not remain unattended for long periods of time. Instead, she testified, she would go home to wait for notice from the pharmacy that the prescription had been filled and then she would return to the pharmacy to pick it up. On some occasions she had to return to the pharmacy once or twice in one day, or on subsequent days.

29. Claimant credibly testified that she went to one specific Safeway pharmacy, located at 7561 W. 80th Ave. Arvada, CO 80003, on numerous occasions

because that was the pharmacy that was designated on her narcotics contract with Drs. Wernick and Wakeshima. She further credibly testified that no one told her that she could have changed the pharmacy location in her narcotics contract. Therefore, when she submitted a request for medical mileage, she submitted the actual mileage that she traveled from the residence where she lived at the time of each travel event, regardless of the distance.

30. Claimant credibly testified that, while she was waiting for prescriptions, she did not go to a house that she owned in Westminster, at 6331 93rd Avenue, Westminster 80031 to wait for authorization because she does not live there.

31. Claimant credibly testified that, because of Dr. Wertz' policy, she could not go directly from a Dr. Wertz appointment to physical therapy. Instead she was required to make an appointment for physical therapy later on the same day of the doctor's appointment or on a later day. She understood that the insurance carrier accused Dr. Wertz of double billing when she had previously gone directly from his appointment to physical therapy, which was at the same address. To avoid the accusation of double billing, Dr. Wertz adopted a policy that precluded attendance at physical therapy immediately after his physician visit. Because of this policy, Claimant chose to return to home before proceeding to her physical therapy appointment.

32. Connie Cridlebaugh, the insurance adjustor assigned to Claimant's case, testified that sometimes there were delays in authorizing prescriptions.

33. As set forth in Respondent's Exhibit K, Respondents were aware of Claimant's various addresses since the inception of her claim.

34. Moreover, Respondents had an adjuster who was adjusting the claim. As set forth in Respondents' exhibit F and G, Respondents' adjuster would adjust Claimant's case and schedule demand appointments, if Claimant missed a medical appointment, and indicate that Claimant's failure to attend the demand appointments either could or would affect the continuation of her benefits. The adjuster also reviewed and authorized the payment of the prescriptions.

35. Based on the evidence submitted at hearing, Claimant has been provided a significant amount of medical treatment by various medical providers. Claimant has also been prescribed and received an extensive amount of prescription medication.

36. Respondents contend in their post hearing submission that they have been prejudiced by Claimant's delay in seeking reimbursement for her mileage expenses. Respondents assert that:

> Claimant's five year delay in seeking any reimbursement has resulted in prejudice to Respondents. In delaying her request for reimbursement, Respondents did not have the ability to review the reasonableness of Claimant's alleged pharmacy and medical appointment trips in excess of 80 miles roundtrip until the end of the January 2018. Had Respondents been provided a request for reimbursement for pharmacy trips in excess of 80 miles they could

have prompted a change to a more reasonably located pharmacy provider.

37. Respondents contention of prejudice due to Claimant's delay in requesting reimbursement for her mileage expenses is not found to be persuasive for a number of reasons.

First, Respondents knew they were not providing Claimant transportation to and from her medical appointments or the pharmacy. Respondents also knew Claimant's medical providers were not treating Claimant at her home. Therefore, Respondents knew, or reasonably should have known, Claimant was probably driving to and from her medical appointments. Respondents also knew, or reasonably should have known, that Claimant was probably driving to and from the pharmacy to pick up her prescriptions. Despite this knowledge, there was a lack of credible and persuasive evidence submitted at either hearing which established Respondents requested Claimant to timely submit mileage reimbursement requests on a regular basis so the adjuster could adjust this portion of the claim. Had Respondents done so, and had Claimant complied, Respondents could have reviewed the mileage logs and then asked Claimant to consolidate her medical appointments, if possible, and change her narcotics contract, if possible, and identify a different pharmacy which was close to her new residence each time she moved.

Second, there was also no credible and persuasive evidence submitted by Respondents that the adjuster noted Claimant's address at various times and compared it to the pharmacy at which Claimant was obtaining her prescriptions in order to manage and adjust the medical mileage portion of the Claim. It is only after Claimant submitted a request going back to 2012 that Respondents objected and asserted that such mileage was not reasonable and necessary.

Third, although Respondents do not have a duty to advise Claimant of available benefits, such as mileage reimbursement, and actively manage and adjust all aspects of her claim, there can be consequences for their failure to do so. Whether Respondents chose not to timely advise Claimant about her right to obtain mileage reimbursement and manage or adjust the medical mileage portion of the claim from the beginning - with the hope that Clamant would not request reimbursement for her mileage expenses - is unknown. Nevertheless, such action, or inaction, has contributed to the extent of the mileage expenses incurred by Claimant. Therefore, Respondents' contention that they are innocent bystanders to any prejudice caused by Claimant's delay in requesting medical mileage is not found to be persuasive. In other words, if Respondents were concerned about any possible prejudice they might have incurred due to Claimant's failure to timely submit her mileage requests, they could have done something about it at any time throughout the pendency of this claim, but did not. Therefore, Respondents own conduct contributed to any prejudice to which they claim.

38. Claimant did not submit all of her mileage because she could not obtain certain medical records to be used for verification. The mileage request submitted by

Claimant at the second hearing was prepared to the best of her ability based on the lengthy time period at issue and the number of medical appointments and pharmacy trips at issue.

39. Respondents also contend Claimant is not entitled to mileage for the July 1, 2015, medical appointment that was scheduled with Dr. Fox because she did not attend the appointment. (Respondent's Exhibit O.) As demonstrated by Exhibit O, Claimant failed to attend a medical appointment with Dr. Fox and the adjuster promptly scheduled a demand appointment with Dr. Fox for July 20, 2015, and notified Claimant that if she failed to attend the demand appointment, her temporary total disability benefits would be suspended without a hearing. (Ex. O.) However, the request for mileage reimbursement for July 1, 2015, is not for Claimant receiving treatment from Dr. Fox, but for treatment with "A Fox Physical Therapy." (See Exhibit 2-7). There is no contention by Respondents that Claimant failed to attend her physical therapy appointment at A Fox Physical Therapy on July 1, 2015.

40. Claimant credibly testified that she attempts to comply with her doctors' orders whenever possible.

41. Claimant credibly testified that she would not willfully submit medical mileage requests that were inaccurate to obtain benefits she was not entitled to and the ALJ finds that she did not do so. The request and submission of accurate and complete mileage records which were submitted after the first hearing and at the second hearing were at the request of the ALJ to prevent the piecemeal litigation of Claimant's mileage reimbursement of such a long period of time and to allow each party the opportunity to fairly litigate the medical mileage matter in a manner that would also conserve judicial resources.

42. Claimant testified that the closest Safeway pharmacy to her current residence involves a 22-mile round-trip travel.

43. There was no evidence submitted at either hearing which established any of the medical treatment or prescriptions for which Claimant incurred mileage expenses was not reasonable and necessary.

44. The ALJ finds that the mileage incurred by Claimant as set forth in the Appendix of this decision was reasonable and necessary under the unique factual circumstances of this case to obtain medical treatment and prescription medications to treat her industrial accident.

45. The ALJ finds that Claimant is entitled to medical mileage reimbursement in the amount of $10,583.28 as set forth and calculated in the Appendix of this decision.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. The amount of medical mileage to which Claimant is entitled for the period of May 21, 2012 through July 11, 2017.

Where Claimant's entitlement to a medical benefit, including mileage, is disputed, Claimant has the burden to prove that the requested medical benefit is reasonable, necessary and related. See *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo.App. 1997); *Barrett v. Xcel Energy*, W.C. No. 4-991-534-01, (ICAP Jun. 22, 2016).

Medical mileage is routinely paid by insurance carriers and ordered by the courts. *See, e.g., Safeway, Inc. v. Industrial Claim Appeals Office*, 186 P.3d 103 (Colo. App.

2008) (holding that Claimant who sought mileage reimbursement for travel to medical appointments was entitled to that reimbursement as incidental to medical treatment under the Workers Compensation Act).

This ALJ was not presented with any persuasive legal authority to support Respondent's argument that Claimant's entire request for medical mileage reimbursement should be denied if any portion of her reimbursement request is found to be fraudulent. Respondents' argument is inapposite in the first place, however, because this ALJ further finds and concludes that there is no credible and persuasive evidence that Claimant willfully attempted to defraud the insurance company by submitting medical mileage requests that were inaccurate or duplicative in an attempt to obtain benefits to which she was not entitled.

On the contrary, the preponderance of the evidence supports the following conclusions: First, Claimant in good faith submitted to her attorney a hastily prepared hand written medical mileage log based on her review of available medical records, with some help from her former attorney's office staff. Although her first list of mileage overstated the mileage to Dr. Fox, Claimant did not intend at that time to submit additional requests for mileage reimbursement for the same period. She erroneously assumed it would be the easiest way to approximate her actual mileage incurred during that period and prevent her from having to spend the time to recreate her entire medical treatment and prescription mileage history since the inception of her claim for each medical appointment and trip to the pharmacy – from each of her various residences - in light of the other stressful matters she was dealing with in her personal life. Moreover, it does not appear her prior attorney, employees of his office, or the Respondents, advised Claimant of the importance in preparing a complete and precise mileage log. Claimant's prior attorney, or his office, merely submitted the handwritten log to Respondents without any evaluation and without any explanation to Respondents.

Second, neither Claimant's former attorney nor Respondents advised Claimant that she could have changed the location of the pharmacy designated in her narcotics contract in order to reduce her travel distance. Accordingly, Claimant continued to travel between her current residence to the original designated pharmacy, regardless of the distance. When submitting a request for medical mileage reimbursement, she submitted actual miles traveled rather than a negotiated or suggested compromised distance.

Third, because of problems in obtaining authorization for prescriptions it was reasonable for Claimant to choose not to wait around for authorization and she returned to her residence to wait for authorization for the prescriptions that she needed. This is especially true because she has two school age children who cannot remain unattended for long periods. Therefore, under these facts, multiple trips to medical providers on the same date were reasonable.

Fourth, because it was the policy of Dr. Wertz's office that her physical therapy appointment on the same day as an appointment with the doctor could not occur immediately after the doctor's appointment, it was reasonable for Claimant to return to

her home before traveling to the physical therapy appointment. Therefore, because of this policy, multiple trips to medical providers on the same date were reasonable.

Fifth, all of Claimant's submitted mileage as set forth in Exhibit 2-7, with the exception of the mileage to and from Dr. Hilburn, is reasonable and necessary under the unique facts of this case and should be paid to Claimant. The ALJ has reformatted the Claimant's Exhibit 2-7 and recalculated the amount of medical mileage that should be awarded in this case. The ALJ concludes that Claimant shall be paid medical reasonable and necessary mileage in the amount of $10,583.28. The calculation for the mileage being awarded is set forth in the Appendix to this Order.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay to Claimant the amount of $10,583.28 for medical mileage as set forth in the Appendix, pages 14-33, for the time period of May 21, 2012 through July 11, 2017.

2. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove she suffered a compensable work-related injury to her right shoulder on September 8, 2017?

- If Claimant had a compensable injury, did she prove entitlement to medical benefits, including treatment received at Denver Health?

- Employer stipulated Claimant was an "employee" on the alleged date of injury.

- Employer stipulated it had no workers' compensation insurance coverage on the alleged date of injury.

FINDINGS OF FACT

1. Employer is a staffing agency that places workers at marijuana grow facilities. Claimant was hired in August 2017 and assigned to a warehouse processing harvested marijuana plants.

2. Claimant alleges an injury to her right shoulder on September 8, 2017 while "de-fanning" marijuana plants. Claimant was cutting the large fan leaves off harvested plants hung upside down from the ceiling. Claimant stands five feet one inch tall, so she needed to reach over her shoulder level to cut the higher leaves.

3. Claimant performed the de-fanning task for approximately two hours on the morning of September 8, 2017. She noticed pain in her right shoulder near the end of the task. The pain progressed throughout the remainder of her shift. Claimant did not report it to a supervisor because she assumed the pain would resolve over the weekend.

4. Claimant's co-worker, Phil Long, gave her a ride home after work on September 8. Claimant told Mr. Long she was having pain in her right shoulder from de-fanning plants that day.

5. Claimant was still having significant pain on September 10, 2017, so she went to the emergency room at Denver Health Medical Center. The reason for her visit was listed as "shoulder pain." She was diagnosed with a "strain of right trapezius muscle" and prescribed Soma (a muscle relaxer). The E.R. physician took her off work for four days and opined "she may return to work on 09/14/17."

6. After Claimant left the E.R., she reported the injury by email to her manager, Barbara Acosta. Claimant told Ms. Acosta, "I injured my shoulder Friday at work and even though I rested Saturday, this morning the pain was worse! Just got back from the E.R. and they have me out until the 14th."

7. Claimant returned to the Denver Health E.R. on September 13, 2017 for persistent shoulder pain. She was diagnosed with "trapezius strain" and prescribed Flexeril, Voltaren, and Lidoderm patches to relieve pain and muscle spasms. She was referred to physical therapy and advised to remain off work until September 16.

8. Claimant went to the E.R. again on September 17, 2017 and was diagnosed with "acute pain of right shoulder." She was continued off work until September 20th and advised to follow-up with her primary care provider. Claimant had no PCP at the time but had a new patient appointment scheduled with Dr. David Elwell the following week.

9. Claimant saw Dr. Elwell on September 26, 2017 for "acute pain of right shoulder and trapezius strain." Dr. Elwell ordered x-rays of the right shoulder and prescribed tramadol for pain. He kept Claimant off work until October 2, 2017.

10. On October 3, 2017, Claimant exchanged emails with Ms. Acosta, who had just returned from out of the country:

> [Ms. Acosta]: As far as workers compensation I would have to check into it. You did nothing working for us that could cause you an injury.
>
> [Claimant]: Please check into it. The injury occurred on Friday, September 8th during the defanning. I noticed the pain at 9:15 AM that morning as I believe you were considering giving us a break but since we'd moved through the plants so quickly, you pushed the break until 10:08 that morning. By 5:30pm that afternoon, I felt it TREMENDOUSLY.
>
> [Ms. Acosta] Break time is at 11:00. If you had pain, you did not mention it. You are not fast at defanning, wondering how you hurt yourself.
>
> [Claimant]: I mentioned it to you in the email that I haven't recovered from that Friday. We took a break at 10:08 that morning because we'd cleared the intended area ahead of the schedule is what I assumed. I have the Doctor's note and the many times I went to the E.R. regarding this injury. It was due to the tight squeeze we were positioned. I'm certain I mentioned the lack of space considering the room had been partially cleared. Seems the injury is related to that muscle being confined for an extended period. I finally got a Primary Dr., who is hoping to fully determine what has occurred to this area. I have been in literal pain since that date.

11. There is no persuasive evidence Claimant suffered from right shoulder or trapezius problems before September 8, 2017.

12. Claimant's reasonably sought emergent treatment at the Denver Health E.R. on Sunday, September 10, 2017.

13. Employer did not refer Claimant for treatment after she reported the injury. The right of selection passed to Claimant and she chose to continue with Denver Health.

14. Claimant proved by a preponderance of the evidence she suffered a compensable injury to her right shoulder on September 8, 2017.

15. The treatment Claimant received at the Denver Health on September 10, September 13, September 17, and September 26, 2017, was reasonably necessary to diagnose and treat the compensable shoulder injury.

16. Physical therapy is reasonably necessary to cure and relieve the effects of Claimant's compensable injury.

CONCLUSIONS OF LAW

A. Claimant proved a compensable injury

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must prove an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201.

A compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the nature or extent of the industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000). Even a minor "strain" can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused her to seek medical treatment. The ICAO's decision in *Garcia v. Express Personnel*, *supra*, is instructive regarding the minimal extent of an injury that can satisfy the basic threshold requirement of compensability. In *Garcia*, the claimant felt pain in her abdomen and hip while lifting a piece of glass at work. The employer referred the claimant to Dr. Caughfield, who diagnosed a lumbar strain, but opined she had already reached MMI. The ALJ found that the claimant suffered a "minor back sprain," but also found the sprain had "resolved" within five days of the incident. The ALJ denied the claim on the theory that the claimant suffered no "injury." The ICAO reversed and held that the claimant had established a compensable injury as a matter of law:

> Where pain triggers the claimant's need for medical treatment, the claimant has established a compensable injury if the industrial injury is the cause of the pain. The term medical treatment includes diagnostic procedures required to ascertain the extent of the industrial injury.

> Here, the ALJ found there was an industrial accident which caused a minor lumbar strain. Further, the ALJ determined that when the injury was reported to the employer, the employer offered the claimant medical services from Dr. Caughfield, which the claimant accepted. Although Dr. Caughfield placed the claimant at MMI based upon his [ ] examination, the ALJ found with record support that Dr. Caughfield diagnosed a lumbar strain. Thus, the ALJ's findings compel the conclusion the claimant established a compensable injury which entitled her to an award of medical benefits. (Citations omitted).

As found, Claimant proved she suffered a compensable injury on September 8, 2017. The persuasive evidence demonstrates she developed right shoulder pain associated with reaching over shoulder level to de-fan marijuana plants. She mentioned the symptoms to her co-worker on the way home from work that day. When the pain persisted, she reasonably sought treatment at Denver Health and was diagnosed with acute shoulder pain and a trapezius strain. She was restricted from work and prescribed medications to relieve the symptoms. There is no persuasive evidence of any pre-existing right shoulder problems or any alternative explanation for the onset of her symptoms on September 8. Although Claimant had conflicts with Mr. Basaldua including a dispute over late-paid wages, the ALJ finds it unlikely those conflicts would lead her file a fraudulent workers' compensation claim. Based on all the evidence presented, the ALJ concludes Claimant more likely than not injured her right shoulder at work on September 8, 2017.

B. Medical benefits

The employer is liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999)

As a general rule, an employer is only liable for "authorized" medical treatment. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). Authorization refers to a physician's legal right to treat the claimant at the respondents' expense. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026 (Colo. App. 1993). Section 8-43-404(5)(a) allows the employer to choose the claimant's treating physician "in the first instance." If the employer does not tender medical treatment forthwith upon learning of the injury, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987). Treatment received on an emergency basis is deemed authorized without regard to whether the claimant had prior approval from the employer or a referral. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990); *see also* WCRP 8-2. The emergency exception is not necessarily limited to life-threatening situations, and whether a "bona fide emergency" existed is a question of fact for the ALJ to be determined based on the circumstances of the particular case. *Hoffman v. Wal-Mart Stores*, W.C. No. 4-774-720 (January 12, 2010).

As found, the evaluations and treatment Claimant received from Denver Health in September 2017 were reasonably necessary and related to her compensable right shoulder injury. The September 10, 2017 E.R. visit was authorized under the emergency treatment doctrine because Claimant was experiencing severe pain outside of normal business hours. After leaving the E.R., she gave Employer written notice of the injury via email. Employer did not refer Claimant to a doctor, allowing her to select Denver Health to provide authorized treatment. Claimant was prescribed non-narcotic medications commonly used to treat acute pain and muscle spasms. She was also referred for physical therapy, a well-recognized treatment for shoulder pain under the Medical Treatment Guidelines. *See* WCRP 17, Exhibit 4 § (F)(13). Employer is liable for these benefits, subject to the Colorado Workers' Compensation Fee Schedule.

C. Payment to Division trustee or a bond to secure payment of benefits

Employer conceded it was uninsured for workers' compensation liability at the time of Claimant's injury. Under § 8-43-408(2), Employer must pay to the trustee of the Division of Workers' Compensation ("Division") an amount equal to the present value of all unpaid compensation or benefits, computed at the rate of 4% per annum. In the alternative, Employer may file a bond with the Division signed by two or more responsible sureties approved by the Director or by some surety company authorized to do business in the state of Colorado. Claimant submitted no medical bills or other documentation of her injury related medical expenses, so no specific order regarding payment to the trustee or a bond may issue. Employer may contact the Division trustee for assistance with its obligations in this regard. The Division trustee may be contacted via telephone through the Division's customer service line at 303-318-8700, or via email to Gina Johannesman gina.johannesman@state.co.us. The Division can also help Employer calculate medical payments owed under the fee schedule.

ORDER

It is therefore ordered that:

1. Claimant's claim for a right shoulder injury in W.C. No. 5-060-411 is compensable.

2. Subject to the Workers' Compensation fee schedule, Employer shall cover reasonably necessary medical treatment to cure and relieve the effects of Claimant's compensable injury, including, but not limited to, charges from Denver Health on September 10, September 13, September 17, and September 26, 2017, and physical therapy if still recommended by Dr. Elwell or other treating providers at Denver Health.

3. Claimant did not submit any medical bills or other documentation of her injury related medical expenses, so no specific order regarding the required payment or bond may issue. Employer may contact

4. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUES

I. Whether Claimant proved, by a preponderance of the evidence, that she sustained a compensable injury.

II. If Claimant proved she sustained a compensable injury, whether Claimant proved by a preponderance of the evidence that the surgery recommended by Dr. Shah is reasonable, necessary and causally related to the compensable injury.

FINDINGS OF FACT

1. Claimant is a 32-year-old right-hand dominant woman who works as a production assistant assembling parts for firearms.

2. Claimant's regular job duties include operating large and small arbor press machines, which requires raising and lowering the lever of the arbor press to form parts. Claimant testified she worked on approximately 1,000 parts per day and, at times, it took three or four up/down motions on the arbor press to fully form a part.

3. At hearing, Claimant demonstrated the motion needed to operate the small and the large arbor presses. Claimant extended her right arm up to approximately 150 degrees when demonstrating the large arbor press motion, versus approximately 100 degrees when demonstrating the small arbor press motion.

4. Claimant testified that she first felt pain in her right shoulder while performing her regular job duties on or around May 25, 2017. She testified she felt pain around midday while using the larger arbor press. Claimant testified she informed her supervisor Barbara, of her pain, then finished her shift per her supervisor's instructions. Claimant testified she had ongoing pain overnight and took medication for the pain.

5. Claimant testified she returned to work the next day and worked on the same machine. By midday her pain worsened, and she mentioned her shoulder pain to her manager and worked the remainder of her shift. Claimant again worked the large arbor press the following day, which broke midday. Claimant was then assigned to a different job station that did not involve using her shoulder.

6. Claimant testified that she continued to work over the next two weeks and experienced intermittent pain in her right shoulder. Claimant did not seek healthcare treatment from May 25, 2017 through June 8, 2017. Claimant testified that she did not seek medical attention prior to June 8, 2017 because she was not provided clinic information by Employer and she had recently relocated from Louisiana to Colorado and did not have a family doctor at the time.

7. Claimant testified that, on June 8, 2017, she was assigned to a job station using a smaller arbor press and a hand file. Claimant testified that, after approximately 45 minutes using the press, she experienced a sudden onset of pain in her right shoulder, to the point that she could not move her right extremity. Claimant testified the pain was worse than the pain she had experienced in the days prior. Claimant reported this to her manager and was sent to U.S. HealthWorks for evaluation.

8. Employer's First Report of Injury form, dated June 9, 2017, notes, "EE stated she started having right shoulder pain due to her type of work, constant pain, not able to sleep, swelling."

9. On June 9, 2017, Donald Downs, PA-C, evaluated Claimant under the supervision of Ryan Otten, MD. Claimant reported she started experiencing right shoulder pain while working, with the pain worsening that day. Regarding Claimant's job characteristic, PA-C Downs noted, "sit down job, prolonged standing or walking, repetitive use of hands/keyboard/mouse and operating hand tools, machinery, lifting, pushing or pulling up to 25lbs." PA-C Downs documented the mechanism of injury as "repetitive use of the right shoulder. A lot of overhead work. Yesterday got sore end of day and today worse. Weakness now. There are no known prior acute trauma or cumulative trauma to the affected body part." On physical exam, PA-C Downs noted tenderness of the right trapezius muscle, right subacromial regions, and right biceps tendon, as well as restricted range of motion in the right shoulder. Impingement testing was positive on the right. PA-C Downs opined that the reported injury was more likely than not the cause of Claimant's current symptoms and findings. He diagnosed Claimant with a right shoulder strain, prescribed medication, referred Claimant to physical therapy, and released to her to work modified duty.

10. On June 19, 2017, Claimant presented to Dr. Otten. Dr. Otten remarked that he reviewed the health history and review of symptoms obtained at the June 9, 2017 evaluation. He stated,

> There was a specific event of an injury or illness. MOI: repetitive use of the right shoulder. A lot of it is overhead work. Yesterday got sore end of day and today worse. There are no known prior acute trauma or cumulative trauma to the affected body part.

On physical examination, Dr. Otten noted tenderness of the right trapezius muscle and right subacromial regions, restricted range of motion of the right shoulder, and positive impingement testing. He opined that Claimant's exam findings and diagnosis are consistent with the injury Claimant reported. He diagnosed Claimant with a repetitive strain of the right shoulder, performed a steroid injection, and released Claimant to modified duty.

11. Claimant continued to see PA-C Downs. On June 26, 2017, he noted Claimant reported having symptoms for 32 days. Claimant further reported that the steroid injection was helpful but did not resolve her symptoms. On July 10, 2017, PA-C Downs noted Claimant's injury was 50% better. Claimant reported that light duty aggravated

her shoulder. PA-C Downs placed Claimant on restrictions prohibiting the use of her right arm.

12. On July 18, 2017, Claimant saw Peter Mars, MD at U.S. HealthWorks. Claimant reported that her right shoulder pain was unchanged. Dr. Mars noted Claimant's pain developed from lifting and overhead activity on the job. On physical exam, Dr. Mars noted restricted shoulder range of motion and positive impingement testing. He diagnosed Claimant with a right shoulder strain, released Claimant to work with temporary restrictions, and ordered an MRI.

13. Claimant underwent a right shoulder MRI on August 9, 2017. Craig Stewart, MD's impression was as follows:

> Abnormal signal throughout the superior and posterosuperior labrum, suspicious for labral degeneration and probable superimposed labral tear. 8 mm cystic structure along the anterosuperior margin of glenoid may indicate a small amount of joint fluid or a paralabral ganglion cyst, with paralabral ganglion cyst felt to be more likely. No evidence of rotator cuff tear. Mild acromioclavicular joint arthrosis with adjacent bone marrow and soft tissue edema.

14. On August 11, 2017, PA-C Downs reevaluated Claimant and noted the MRI revealed some labral injury, but the rotator cuff was intact. PA-C Downs referred Claimant for orthopedic consultation and treatment.

15. On August 17, 2017, Nirav R. Shah, MD performed an orthopedic consultation. Claimant reported developing right shoulder pain on June 8, 2017 at work while lifting/pressing repetitively on a machine. Claimant complained of "popping" with movement. Dr. Shah noted, "The onset of the shoulder pain has been sudden and has been occurring in a persistent pattern for weeks. On physical exam, Dr. Shah noted decreased range of motion, positive O'Brien, impingement, and Hawkins testing, as well as cross adduction and AC joint tenderness. Dr. Shah reviewed the August 9, 2017 MRI, which he stated revealed "a superior and posterosuperior labrum tear, paralabral cyst and mild AC OA." He diagnosed Claimant with a right shoulder labral tear, arthritis of the right acromioclavicular joint, right shoulder pain, and right shoulder impingement. He recommended surgical treatment to improve Claimant's pain and function.

16. On August 31, 2017, John Douthit, MD, performed a Rule 16 medical record review for Respondents. Dr. Douthit diagnosed Claimant with work-related aggravated tendinitis/bursitis of the right shoulder. He opined that the MRI findings were not causally related to the June 8, 2017 injury. He stated,

> [t]his is a very aggressive approach to a painful shoulder condition which appears to be a tendonitis/bursitis aggravated by her work. The possibility of a labral tear was a red herring and she has minimal arthritis in acromioclavicular joint. There are no indications to do a distal clavicle excision and shoulder arthroscopy would at best be diagnostic. Her history

> is typical of aggravation of degenerative tendonitis of the rotator cuff tendon or of one with poor physical condition and is not one that will benefit from surgery. The story is likely to be prolonged with a continued poor response to medical treatment and much frustration by the claimant as well as the treating physicians. However, this is not going to be improved by aggressive and invasive methods.

Dr. Douthit recommended Claimant undergo a subacromial bursal injection with cortisone and stay off of work to rest the shoulder indefinitely, with improvement expected in approximately three months.

17. Claimant continued to treat with PA-C Downs and Dr. Otten on September 8, 2017 and October 2, 2017. They continued to note muscle tenderness, restricted range of motion and positive impingement testing.

18. Dr. Shah reevaluated Claimant on October 26, 2017, noting similar exam findings as his initial evaluation. Dr. Shah noted Claimant continued to have significant pain and dysfunction. He reiterated that the "MRI obtained previously shows findings of subacromial bursitis and labral tear with parallel labral cyst." Dr. Shah remarked,

> [Claimant] has received a denial letter which I strongly disagree with. The denial letter indicates treatment for rotator cuff tendinitis and impingement, which she has already tried and failed. She has received subacromial cortisone injection as is recommended as well as physical therapy, as is recommended…Given her failure with conservative measures and symptoms consistent with structural pathology, recommend surgical intervention. Her symptoms are more consistent with labral tear and resultant inflammation and dysfunction.

Dr. Shah continued to recommended right shoulder arthroscopy, extensive debridement, subacromial decompression, labral repair, and distal clavicle excision.

19. On November 7, 2017, Eric O. Ridings, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Ridings noted certain records indicated "two different exacerbating incidents or at least two different days about two weeks part in which [Claimant] had increased right shoulder symptoms." Claimant reported to Dr. Ridings that she first experienced right shoulder pain approximately two weeks prior to the given date of injury on the claim of June 8, 2017. She reported that the pain increased during the second day and began to feel warm inside. She reported that, after working two weeks on a different job, on June 8, 2017 she experienced unbearable pain in the right shoulder.

20. On exam, Dr. Ridings noted limited right shoulder range of motion. He noted he was unable to perform impingement testing due to Claimant's complaints of pain. Dr. Ridings opined that there was no mechanism of injury at work that would be expected to cause any significant injury to Claimant's shoulder. He concluded that the MRI findings are insufficient to explain the severity of Claimant's complaints and the labral tear is

unrelated to the mechanism of injury. Dr. Ridings opined that Claimant's primary diagnosis is voluntary guarding of the right upper extremity and, to the extent Claimant sustained a work-related injury, it would be mild tendonitis and muscular shoulder strain. Dr. Ridings further opined that there is no indication for arthroscopic surgery or a distal clavicular excision, and that surgery is more likely to worsen Claimant's condition.

21. On November 15, 2017, Respondents sent Dr. Otten a copy of Dr. Ridings' IME report and a letter with several questions regarding Claimant's status. In his response, Dr. Otten opined that Claimant is not at maximum medical improvement ("MMI") stating, "MRI confirmed labral tear, needs surgical repair (it is also clear that there were underlying, pre-existing degenerative changes that should not be treated under this claim)."

22. Dr. Ridings testified at hearing on behalf of Respondents as a medical expert in physical medicine and rehabilitation. Dr. Ridings is Level II accredited and board certified in physical medicine and rehabilitation. Dr. Ridings testified consistent with his IME Report. Dr. Ridings testified that the mechanism of injury is not consistent with causing a labral tear or aggravating, accelerating or exacerbating an underlying labral tear, as there was not enough force to cause the pathology. Dr. Ridings testified that Claimant has a work-related condition of bursitis and/or tendinitis of the shoulder, and that the surgery recommended by Dr. Shah is neither reasonable nor necessary to cure or relieve from or related to the effects of the "industrial injury.

23. Claimant testified at hearing that she had no prior issues with her right shoulder. She testified that the shoulder injection was not helpful and she remains in constant pain, with a warm sensation in her right shoulder that occasionally radiates up her neck and down her arm.

24. Dr. Otten testified by post-hearing deposition on April 23, 2018. Dr. Otten is Level II accredited and board certified in occupational medicine. Regarding the mechanism of injury, Dr. Otten testified that there was mention of repetition, but also mention of a sudden onset of pain during Claimant's work shift, which he considered an acute event. Dr. Otten testified that Claimant had pre-existing osteoarthritis of the acromioclavicular joint and bland degeneration in the glenohumeral joint, which was seen on the MRI. Dr. Otten discussed the anatomy of the glenohumeral joint, and how thinning of the labrum with degeneration would affect the mechanics of the joint, increasing the likelihood of a tear from working the arbor press in this case over a thousand times a day. Dr. Otten testified that Claimant was predisposed to injury because of the existence of pre-existing degenerative changes, stating,

> …there are these degenerative changes there that makes her shoulder function probably not as good as somebody who's healthy, and then she is doing a very labor-intensive job. And then like we were just discussing, I think it is reasonable to think that she caused an acute labral tear from the job description.

25. Dr. Otten testified that limited range of motion and strength were objective evidence of injury during his first examination of Claimant. Dr. Otten testified that Claimant is not at MMI and continues to have objective findings on examination and has not shown significant improvement.

26. Dr. Otten testified that Claimant's injury could fall under Exhibit 4 (Shoulder Injury) or Exhibit 5 (Cumulative Trauma Conditions) of the Guidelines because there was both repetitive use and a sudden onset of pain. Dr. Otten testified that there are no specific guidelines addressing a shoulder labral tear under Exhibit 5 (Cumulative Trauma Conditions) of the Guidelines. Dr. Otten testified that he performed his usual medical causation analysis in Claimant's case and reiterated his opinion that Claimant's work activities could cause a labral tear.

27. Dr. Otten testified that he would recommend Claimant undergo a limited surgical procedure focusing on the work-related labral tear, which he opined was most likely the cause of her current problems.

28. Claimant's testimony is found credible and persuasive.

29. The ALJ credits the opinions of Drs. Shah and Otten over the conflicting opinions of Drs. Douthit and Ridings on Claimant's work-related diagnosis and recommended treatment.

30. Claimant proved by a preponderance of the evidence that she suffered a compensable injury in the form of a right shoulder labral tear.

31. Claimant proved by a preponderance of the evidence that the surgical procedure recommended by Dr. Shah is reasonable, necessary and related to Claimant's compensable injury.

32. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant's treating physicians, Dr. Otten and Dr. Shah, both credibly and persuasively opined that Claimant sustained a work-related labral tear, and that the labral tear is the most likely cause of Claimant's current symptoms. Dr. Otten credibly testified that Claimant was predisposed to injury because of the existence of pre-existing degenerative changes, and her work activities likely caused her injury. Claimant was credible in her testimony that she did not have prior shoulder issues. Claimant did not become symptomatic until performing duties that required high repetition, overhead reaching, and force pressing the part into shape. Dr. Shah reviewed the MRI film and

credibly opined that there is a labral tear, and that Claimant's symptoms are more consistent with a labral tear. Accordingly, based on the totality of the evidence, the ALJ is persuaded Claimant suffered an industrial injury in the form of a labral tear to which she was predisposed because of underlying degenerative changes, causing her symptoms and the need for medical treatment.

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Dr. Shah and Dr. Otten credibly and persuasively opined that labral repair surgery is reasonable, necessary and related to Claimant's compensable injury. Claimant has failed more conservative treatment, including injections and physical therapy. Claimant credibly testified she continues to experience symptoms. Dr. Otten credibly testified Claimant continues to have objective findings on examination. As previously mentioned, Dr. Shah credibly opined that Claimant's symptoms are more consistent with a labral tear. Based on the totality of the evidence, the ALJ is persuaded it is more probable than not that the labral repair surgery recommended by her authorized treating providers is related to Claimant's compensable injury and is reasonably necessary to cure and relieve Claimant of its effects.

ORDER

It is therefore ordered that:

I. Claimant established by a preponderance of the evidence that she suffered a compensable injury.

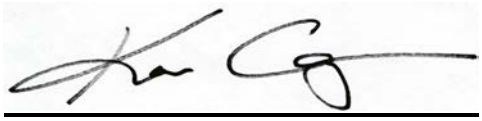
II. Claimant established by a preponderance of the evidence that the labral repair surgery of the right shoulder is to be reasonable, necessary and related to Claimant's work injury. Insurer shall authorize the proposed labral repair surgery for the right shoulder as requested by Dr. Shah.

III. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: July 31, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Is the L4/L5 fusion surgery as recommended by Claimant's treating surgeon, Dr. Ronald Hammers, reasonable, necessary, *and related* to her work injury of March 24, 2017?

II. Has the burden of proof on the above issue shifted to Respondents, by clear and convincing evidence, since the unchallenged DIME report has found that the work injury *caused* Claimant's back condition, which now requires a fusion surgery?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. The Claimant is a registered nurse who describes her job as physically demanding, with frequent bending, heavy lifting, standing and walking. At hearing, she described it as "hard on my back."

2. The Claimant testified that she has been on medications for her low back since around 2003. She concedes that her tolerance to these medications has "possibly" built up over time, but had never been told that by any of her treating physicians.

3. Claimant testified that prior to her work injury she had low back pain that she treated with daily Norco and chiropractic treatment; however, since her work injury occurred, "Now I take the Norco three times a day. I take nine ibuprofen a day and two Tylenol a day and still do not have pain control. Whereas, before I was not taking drugs like that."

4. Claimant testified that prior to her work injury, her personal care provider told her she would have flare-ups of low back pain which could cause her to miss work. Because she thought she was only permitted to miss three days of work per six-month period, the Claimant testified that she handled these flare-ups by taking FMLA leave one to two days per month. She testified that she would normally miss work after working a fifth consecutive shift.

5. The Claimant testified regarding what work functions she has had difficulty performing since her injury:

A. I have a brand-new granddaughter and it kills me to lean over to change a diaper. I can't do it. I can't like unloading my dishwasher, my dryer, get clothes out of it. Any lifting at all to carry my trash bag to the trash can….And my car kills me driving it.

Q. Did you ever had difficulties with these chores before March 24, 2017?

A. I did with the vacuuming, and vacuuming—and I had told Dr. Demechek that I did have some burning like bending over my patients, leaning, like to get their clothes on. If I had to lean over tor too long it would hurt.

6. The Claimant testified that prior to her work injury she did not have associated pain in her groin and thighs. Claimant also testified that prior to her work injury, she did not have associated loss of feeling in her legs and feet.

7. The Claimant testified that prior to her work injury her personal care providers were telling her that she may eventually need to have lumbar surgery.

8. In 2012, the Claimant was excused from jury duty by her personal physician because she could not sit for the amount of time required by the service.

9. In March 2012, the Claimant was treating for a rash. In her history, it was noted that she was usually taking one Vicodin in one day for her low back pain and radiating right buttock pain- a second one later on if needed. She reported that bending and sitting made the pain worse, and that she had trouble standing up after sitting for a while. She reported that it was painful to drive. At this time, the Claimant also reported a prior motor vehicle accident from four years prior. She was diagnosed with chronic low back pain. (Ex. B, p.10).

10. In April 2012, the Claimant reported trying to "change everything" to help Her lower back pain, including her bed, her shoes, and her car seat. She reported that she "[t]akes an hour to get going" and that her low back condition had worsened over the last year after she moved herself and began carrying her grandchild on her hip. (Ex. B., p.13).

11. In May 2012, the Claimant reported that her low back "[f]eels stiff when first gets going" and that her symptoms radiated down into her right leg. (Ex. B., p.15).

12. In August 2014, the Claimant was examined at Maple Leaf Orthopedics for bilateral hip pain, which had recently become problematic. She explained that she had pain associated with sitting because her back stiffens up causing her pain in her low back and hips. She was prescribed 2-3 Norco per day at this time for the hip pain, but reported that she had only been taking over the counter medications up to this point

for her back issues. (Ex. B., p.19-21).

13. On August 18, 2014, the Claimant had a lumbar spine MRI that confirmed Grade II anterolisthesis at L4-5 with desiccated disc and bilateral facet arthropathy with severe central spinal stenosis and severe foraminal narrowing, bilaterally. The MRI also revealed a desiccated bulging disc protrusion at L5-S1, and a bulging disc at L3-4. (Ex. B., p.22).

14. In October 2014, the Claimant reported radiation of pain from her low back into her right leg. She takes Norco 'occasionally'. (Ex. B., p.26).

15. In June 2015, the Claimant reported that a trial of physical therapy did not help her low back pain, and that she continued to have occasional flare-ups of pain, the last one in May 2015. (Ex .B p. 30).

16. In October 2015, the Claimant was examined by Maple Leaf Orthopedics, primarily for neck and upper extremity complaints. She was found to have restricted range of motion in the lumbar spine. She was given a 30 lb. lifting restriction. At this time, the Claimant's primary care provider remarked: "I am quite impressed that she is able to continue to work." (Ex. B, p.33).

17. Also, on October 25, 2015 Claimant was struck in the face twice by a patient with a closed fist that caused neck pain for which she received treatment at CCOM. (Ex. 6, p. 50). She was placed at MMI less than a month later on November 11, 2015. Dr. Richard Nanes documented that Claimant was ambulating normally and had good cervical *and lumbar range of motion.*

18. In November 2015, the Claimant reported that her low back and neck pain. She reported feeling increased depression and anxiety as a result of her pain. (Ex. B, p.35).

19. In March 2016, the Claimant's primary complaint was chest pain. She also reported pain across her low back that radiates down through her buttocks into her thighs with burning behind both knees. She reported problems picking up her right foot. (Ex. B, p.38).

20. The next mention of back pain in the notes from Dr. Danylchuk is dated April 19, 2016. (Ex. 4, p. 32). The purpose of this appointment was to discuss FMLA to allow for Claimant to take "a few days off" because of her neck and back pain, though it was again noted that Claimant continued to work taking care of geriatric patients and must perform a lot of lifting. *Id.* Claimant testified that she was only allowed to take so many days off from work without FMLA, so she went to Dr. Danylchuk to get the paperwork filled out so that she could take a day or two off work per month to rest her neck and her back. No additional treatment was discussed, recommended, or offered at this visit. *Id.*

21. In November 2016, the Claimant reported being hesitant to try epidural injections for her low back pain because her father and sister had tried them without success. Claimant at this point still expressed no interest in quitting smoking. *(Ex. B,* p.42).

22. At hearing, Claimant testified that in December 2016 her pain medication for her low back was losing its effectiveness. To combat this ineffectiveness, she requested and had administered an epidural injection on December 10, 2016.

23. Claimant did not return to Dr. Danylchuk for another 8 months until her visit on December 15, 2016. (Ex. 4, p. 34). She had undergone an epidural steroid injection of the L4-L5 interspace on December 10, 2016 with Dr. Douglas Hess. (Resp. Ex. B, p. 45). Dr. Danylchuk noted that Claimant did receive relief from the injection and indicated that Claimant was still performing a lot of bending at work for the Employer when she is helping patients. (Ex. 4, p. 34). The note reflects that Claimant remained comfortable at rest, was able to get up without difficulty, was able to ambulate without a limp, and was able to stand on her heels and toes. The plan was to follow-up with Dr. Hess for a possible second epidural steroid injection, but Claimant did not pursue a second injection, at least not until after March 24, 2017. This is the last medical record in evidence prior to Claimant's March 24, 2017 injury.

24. On March 24, 2017, around 3:30 a.m., the Claimant suffered an admitted exacerbation of her existing low back condition when she was moving a patient. She testified that she felt pain at the time but "didn't think anything of it" because "it's normal for me to feel pain sometimes."

25. The Claimant testified that the physical activity she engaged in on March 24, 2017 when moving the patient was a common and regular activity in her job. Initially, she described the pain from this incident:

> A: So I didn't think anything of it. I thought I'd go home and rest and I'll be okay. And that night after sleeping I had enough that I was in severe pain. It just….hurt and I went into work and told them, you know, I need to file Because I wasn't going to file a Workman's Comp claim, I thought I'll be okay….
>
> Q: And the severe pain that you had the following day, did you ever have the pain that severe prior to?
>
> A: Not that severe, no. No. I used to take Norco like one a day and this last year I have to take—I take Norco 7.5/325 with three up two of them and a Tylenol and it doesn't do anything for the pain. It—and then if I get any little but of help from that, it lasts maybe two or three hours…
>
> Q: All right. So have you had ongoing lower back pain every day since March 24th, 2017?

A: Constant. It's been constant, there's not been—been no relief.

Q: ..So as of today, are you still experiencing the lower back symptoms?

A: I took pain medication just before I came here and I'm still in a lot of pain.

Q: ….And these symptoms that you're having now, are they still different than the symptoms that you had prior to Mach 24th of 2017?

A: Prior to March 24th I didn't have the pain in my groin and on the inside of my things… And then when I get up I couldn't feel my legs, I'm standing there and I had no feeling whatsoever. I couldn't move my foot a fraction of an inch forward…..it felt like my legs were dead.

26. The next day, on March 25, 2017, Claimant presented to the emergency room complaining of an increase in her existing low back symptoms. She complained of pain radiating down to her lower extremities, greater on the right side. The Claimant noted that incidents of greater pain on the right side than left had occurred before. She noted that sitting made it worse. (Ex.8, p.124).

27. Claimant missed the next 45 days from work for which she was paid TTD before she returned to work on light duty. (Ex. 3).

28. On March 27, 2017, Claimant saw an occupational health provider. The Claimant reported: "She said the symptoms she has now are exactly the same as what she has had in the past when her low back pain *exacerbates*." (Ex. C, p.48)(emphasis added).

29. On March 27, 2017, the Claimant denied numbness or tingling in her lower extremities, but did report pain radiating from her right lower back down into her right knee. *Id*.

30. On March 27, 2017, the Claimant was given work restrictions: no bending, climbing, crawling, squatting, stooping, and twisting. No physical management or takedowns of patients. 5 pounds lifting with right arm, 10 pound push or pull limit. *Id.* at 50.

31. Claimant was again seen by Nurse Kuhn on March 30, 2017 complaining of ongoing, persistent low back pain. (Ex. 6, p. 58). Claimant reported improvement with the shoulder, but no difference in the back pain. At her follow up visit on April 6, 2017, her pain diagram demonstrated pain from the mid-to-lower back and down both legs with pain complaints 100% of the time with her back pain at that time being 10 out of 10 and shoulder pain being only 4 out of 10. *Id.* at 67. By April 21, 2017, Claimant continued reporting persistent ongoing lower back pain that was made worse with physical therapy, again complaining of 10 out of 10 pain in her lower back and indicating

she did not feel that she was improving. Dr. Thomas Centi documented that Claimant was having difficulty with prolonged standing and walking, complaints that were not documented prior to March 24, 2017.

32. On April 28, 2017, the Claimant reported improving pain and "no problems with function." Her physical examination, however, was the same as when she reported a pain level of 10 and a worsening of her pain on April 21. *Id.* at 79.

33. On June 2, 2017, the Claimant was placed at MMI with no restrictions and no permanent impairment, and the Respondent filed a Final Admission of Liability in response to those determinations from the ATP. (Ex. A, pp.5-6).

34. On June 6, 2017, the Claimant again reported improving pain (Ex. C, p. 89).

35. Claimant again did not return to Dr. Danylchuk until June 8, 2017, about two-and-a-half months after the March 24, 2017 work injury. (Ex. 4, p. 36). Dr. Danylchuk specifically documented that since the work injury, "Her back pain and leg pain has intensified."

36. On June 14, 2017, the Claimant had a MRI of her lumbar spine as referred by her primary care provider. Her lumbar spine was stable when compared to her August 2014 MRI, and there were no changes since the August 2014 MRI. *Id.* at 93.

37. On June 20, 2017, the Claimant objected to the Respondent's Final Admission of Liability and initiated the DIME process.

38. On June 24, 2017, the Claimant underwent an epidural injection at the L4-5 level. *Id.* at 99.

39. On August 22, 2017, the Claimant attended a neurosurgery consultation as referred by her primary care provider. The Claimant reported her history of low back pain as well as her work incident in March 2017. The Claimant's MRI films were reviewed. Ultimately, the Claimant received diagnoses for her spondylolisthesis, stenosis, neurogenic claudication and lumbar radiculopathy. "Symptoms are consistent with neurogenic claudication and lumbar radiculopathy." *Id*. at 108-109.

40. On August 29, 2017, the Claimant underwent a Division Independent Medical Examination with Dr. Timothy Hall. Dr. Hall is accredited by the Colorado Division of Workers' Compensation in physical medicine and rehabilitation. Dr. Hall is not a surgeon. The Claimant reported a history of injury to Dr. Hall that described multiple events that led to a build-up of pain as opposed to one acute incident on the date of injury. (Ex. C, p.112). Dr. Hall found her to be a good historian. Dr. Hall also stated that he did not review any records from prior to the work injury. Regardless, Dr. Hall stated there was nothing in the record to contradict that the Claimant suffered a significant worsening since her work incident. He stated that a future L4-5 fusion would be the responsibility of the workers' compensation carrier because there was nothing in

the record to imply a fusion being contemplated beforehand. Dr. Hall found the Claimant "Not at MMI." Dr. Hall also provided a provisional rating of 17% for Claimant's *permanent* aggravation of her pre-existing lumbar spine condition.

41. On September 8, 2017, the Division of Workers' Compensation issued its Notice of "Not at MMI" Determination. On September 13, 2017, the Respondent filed a General Admission of Liability in response to the DIME report with no purported limitation of conditions. The General Admission of Liability states: "Injured worker is no longer at MMI per attached DIME Dr. Hall's 8/29/17 med report."

42. On September 14, 2017, the Claimant received another epidural injection into her lumbar spine. *Id*. at 118.

43. On October 12, 2017, the Claimant returned to the ATP upon receipt of the DIME report. The ATP ordered new x-rays, physical therapy and prescribed continuing medications. He scheduled a follow-up appointment for October 19, 2017, and anticipated MMI in December 2017 *Id.* at 120-21.

44. On October 12, 2017, the Claimant had the x-rays ordered by the ATP. They found severe osteoarthritis at L4-5, degenerative disc disease and spondylolisthesis. There was no instability noted with flexion or extension. *Id*. at 122.

45. On October 19, 2017, the Claimant saw the ATP again. The Claimant reported that her condition was stable. The ATP made an orthopedic referral. *Id.* at 123-24.

46. On November 4, 2017, the Claimant had another epidural injection into her lumbar spine. *Id.* at 126.

47. On November 14, 2017, the Claimant went to her personal orthopedist for continued evaluation of her low back pain. She told him that she was not yet ready for surgery. *Id*. at 130.

48. On November 22, 2017, the Claimant had a CT scan of her lumbar spine. It revealed facet arthropathy, advanced sclerosis, degenerative disc disease, and stenosis. *Id.* at 138.

49. On November 28, 2017, the Claimant underwent an evaluation with a spinal neurosurgeon, Dr. Botolin, at the referral of her primary care provider. Dr. Botolin reviewed the Claimant's images and took her history. He diagnosed stenosis, neurogenic claudication, spondylolisthesis, and facet arthropathy. He diagnosed a progressive worsening of her condition. Dr. Botolin recommended a L4 to sacrum posterior spinal fusion with multilevel decompression. He did, however, recommend the Claimant quit smoking before surgery due to the high rate of non-union in nicotine users. (Ex. 9, p. 224)

50. On January 9, 2018, the Claimant saw Dr. Ronald Hammers, M.D. Dr. Hammers noted symptoms consistent with neurogenic claudication. Dr. Hammers reviewed the Claimant's MRI films and noted degenerative changes, particularly spondylolisthesis and stenosis at L4-5. He diagnosed spondylolisthesis, stenosis and neurogenic claudication. Because of her stenosis and spondylolisthesis, he recommended a fusion at L4-5. Dr. Hammers also advised that she quit smoking before the surgery. *Id.* at 146-148. Dr. Hammers documented: "*The worsening of her pain correspondence [sic] with a workplace incident in March of 2017*."(emphasis added).

51. Dr. Hammers concluded the following: "[Claimant] has a history of back and lower extremity symptoms consistent with lumbar stenosis and spondylolisthesis at L4-5. *These symptoms significantly affect her ADL and she has failed to improve with appropriate conservative management.* She is a good candidate for surgery, L4-5 TLIF. She would like to proceed and we will begin planning." (Ex. 12, p. 243). Part of Dr. Hammers' conclusion that Claimant was a surgical candidate was the impact of her symptoms on her activities of daily living that she did not have prior to March 24, 2017.

52. On January 15, 2018, the Respondent wrote Dr. Hammers and the Claimant informing them that the surgery request was not authorized as the "requested services" were not causally related to the admitted injury. (Ex. A, p.8).

53. On January 25, 2018, the Claimant returned to her ATP, who continued her medications, scheduled a follow-up appointment for March 1, 2018, and estimated a MMI date of March 29, 2018. (Ex. C, p.150).

54. On February 8, 2018, the Claimant field an Application for Hearing on the sole issue of "Authorization of surgery requested by Dr. Ronald Hammers. Relatedness of need for surgery." (Ex.1).

55. On February 20, 2018, the Respondent filed a Response to Application for Hearing that did not endorse the issue of causation of the Claimant's low back condition. *(Ex.2)*.

56. On March 8, 2017, the Claimant returned to her ATP, who continued her medications, scheduled a follow-up appointment for April 19, 2018, and estimated a MMI date of June 21, 2018. (Ex. C, pp. 153-154).

57. On March 12, 2018, the Claimant had another MRI of her lumbar spine. This MRI indicated spondylolisthesis and stenosis. *Id.* at 155.

58. On March 26, 2018, the Claimant saw Dr. Jack Rook for an independent medical examination. Dr. Rook is Level II accredited by the Colorado Division of Workers' Compensation in physical medicine and rehabilitation. Claimant reported that her low back pain began about four years ago with burning pain down her lower extremities, right greater than left. She told Dr. Rook that these symptoms got progressively worse between 2014 and 2017. (Ex. C, p.156).

59. The Claimant told Dr. Rook, as she did Dr. Hall, that she had not discussed *actually proceeding with* lumbar surgery with her medical providers before her work injury. (Ex. C, p.162).

60. Dr. Rook opined that Claimant's need for lumbar surgery was related to her work injury, because the Claimant was working beforehand without the need for restrictions, her clinical condition changed abruptly on the date of her work injury, there was no prior discussion of proceeding with lumbar surgery, and her sleep had deteriorated since her work injury. Dr. Rook also relied upon the DIME report and a utilization review report. *Id*. at 166-67. Dr. Rook also noted: Dr. Hall, the DIME, felt the Claimant had a permanent aggravation of her lumbar spinal stenosis which now necessitates treatment. Dr. Hall predicted this outcome and specifically opined it was causally related to the work incident, thus it should be Respondents' burden by clear and convincing evidence to prove it is not causally related.

61. On April 16, 2018, the Claimant returned to the ATP, who continued medications, scheduled a follow-up appointment for May 21, 2018 and now estimated a MMI date of December 10, 2018. *Id*. at 169-70.

62. On May 12, 2018, Dr. Jorge Klajnbart, D.O., issued an independent medical evaluation report, based upon a records review. Dr. Klajnbart has been an orthopedic surgeon for over twenty years. Ten to twenty percent of his practice is devoted to treating lumbar conditions. He has been trained in and has performed lumbar surgeries. Dr. Klajnbart is Level II accredited by the Colorado Division of Workers' Compensation in orthopedics, and that accreditation includes training in causation. Dr. Klajnbart was trained during his orthopedic residency in correlating mechanisms of injury and causes for low back pain during his education and residency.

63. Dr. Klajnbart reviewed more than three inches of medical records pertaining to the Claimant's low back from 2012, 2014, 2015, 2016, 2017 and 2018. *Id.* at 172-78. Dr. Klajnbart reviewed the lumbar MRI imaging films from August 18, 2014, June 14, 2017, and March 12, 2018. He also reviewed the imaging films from the November 22, 2017 CT scan of the lumbar spine. *Id.* at 172.

64. Dr. Klajnbart opined that no acute changes appeared on the June 14, 2017 MRI films as compared to those from August 2014.

65. Dr. Klajnbart testified that the November 22, 2017 CT scan films demonstrate longstanding spondylolisthesis at L4-5 as opposed to an acute manifestation of the condition, meaning those findings are not related to her work injury. *Id.* at 177.

66. Dr. Klajnbart opined with a high degree of medical probability that the Claimant suffered only a *temporary* aggravation to her preexisting low back condition as a result of her work injury. He said there is no objective evidence to support a *permanent* aggravation of the Claimant's low back condition as a result of the work

injury. He states: "The overwhelming evidence and medical data point to a stable MRI, which was compared to a previous MRI showing no acute changes or increase in the degenerative condition of her lumbar spine." *Id*. at 178. In his opinion, the 'temporary' nature of this aggravation was determined to be for a one year period; how this figure was arrived at was not made entirely clear from the record.

67. On June 1, 2018, the Respondent filed a General Admission of Liability. That GAL has no remarks regarding limitation of conditions. (Ex. A, p.9).

68. On June 4, 2018, the parties took the evidentiary deposition of Dr. Rook. Dr. Rook testified that the Claimant suffered a *permanent* aggravation of her preexisting low back condition that necessitated the surgery recommended by Dr. Hammers.

69. Dr. Rook testified on direct examination that *subjectively* the Claimant's condition appears to have worsened as a result of the work injury. He elaborated: "You don't have to have an objective change to have an aggravation of a condition, because an aggravation usually doesn't necessarily imply that there is new pathology."

70. When asked what objective evidence he relied upon in giving his opinions, Dr. Rook stated the diagnostic imaging and physical examination. From his physical examination, he relied upon diminished reflexes in the lower extremities. He also stated that the diminished reflexes could be caused by peripheral neuropathy, a problem in her pelvis, or a pinched nerve in her back.

71. With regard to the imaging, he relied upon its indication of severe spinal stenosis and spondylolisthesis. But he conceded that those conditions did not objectively worsen after the work injury.

72. Dr. Rook admitted that the Claimant's functional deterioration is a subjective determination based upon the accuracy of the Claimant's history. He was not aware of any objective evidence used by the Claimant's treating providers in assigning work restrictions.

73. He did testify, however, that he would have restricted the Claimant from working in heavy physical demanding jobs based upon her August 2014 MRI.

74. Dr. Rook testified that both of the recommended lumbar surgeries were aimed at curing the Claimant's preexisting conditions, but which had been aggravated by this work injury.

75. Dr. Rook testified that that the only objective evidence supporting his opinion of a permanent aggravation from the work injury is "perhaps" the Claimant's diminished reflexes from his physical exam.

76. Dr. Rook further testified that you need to look beyond simply the objective data, such as an MRI, when determining whether a surgery is related to a work injury:

> It's my understanding if there's a functional deterioration in a patient's condition to the point where they can no longer work like they did, and their symptoms are much worse than they were, they now involve both legs instead of just one leg, their ability to ambulate is deteriorated by 50 percent, and that it's had a profound changing in their life since the occupational injury, which has not changed any -- has not gone back to its baseline as suggested by Dr. Klajnbart, that you're talking about a permanent aggravation of a condition. You don't have to have an objective change to have an aggravation of a condition, because an aggravation usually doesn't necessarily imply that there is new pathology.

77. Dr. Rook acknowledged that it was certainly a possibility that Claimant may have needed this surgery at some point in the future, but if she had not had the work injury on March 24, 2017 that significantly changed her levels of pain and function, she would not be having this surgery as early as she needs it. Furthermore, Dr. Rook explained that only so much can be seen on an MRI, and with a client that already has severe stenosis, we are talking about microns of movement in the spine or additional impingement that can cause symptoms that would not necessarily be apparent on an MRI when compared to a previous MRI, hence the need to take into account pain and function.

78. On June 8, 2018, the parties took the deposition of Dr. Jorge Klajnbart, MD.

79. Based upon his training, Dr. Klajnbart testified that in his medical opinion, objective data supersedes subjective information when determining causation of the need for surgery. He cites the low back provisions of the Colorado Division of Workers' Compensation Medical Treatment Guidelines as holding that objective data such as MRI imaging and other diagnostic studies have greater validity and reliability in this regard, as opposed to a functional or subjective examination.

80. Dr. Klajnbart testified that evaluations of functional capacity lack significant credibility or reliability and therefore do not weigh significantly in performing a forensic exam on the need for surgical intervention. He testified that the Medical Treatment Guidelines give evaluations of functional capacity a low-validity quotient in this context.

81. Dr. Klajnbart testified that, with a high degree of medical probability, a significant deterioration in functional capacity should correlate with some objective data, such as visible markers on MRI imaging. He testified that visible markers indicating such a permanent aggravation would include increased uptake on the vertebral bodies, fluid around the arthritic facet joints and inflammatory changes at the ligaments and the tendons. He testified that these same markers would be possible evidence that the work injury accelerated the Claimant's preexisting lumbar condition. He testified that none of these markers exist on the Claimant's MRI imaging.

82. Dr. Klajnbart testified that, in his opinion, the Claimant's diminished reflexes during Dr. Rook's exam do not impact the question of whether the proposed lumbar fusion is related to the work injury because the Claimant's preexisting lower extremity weakness would correlate with those findings.

83. Dr. Klajnbart testified that the Claimant's mechanism of injury, a hyperflexion moment, would not narrow the spinal canal as testified to by Dr. Rook. Rather, such a motion would open up the neural foramen of the lumbar spine roots to allow them greater space. Accordingly, he opines, the Claimant's reported mechanism of injury compliments the MRI imaging in not supporting a permanent aggravation.

84. Dr. Klajnbart did testify that the Claimant needs low back surgery for her stenosis, spondylolisthesis and neurogenic claudication. Specifically, Dr. Klajnbart testified that the Claimant needs a multi-level fusion as opposed to the single-level fusion recommended by Dr. Hammers because her disease is represented at multiple levels. He testified, however, that the need for this surgery is not *related* to the work injury. Rather, the Claimant satisfied the DOWC Medical Treatment Guidelines for this procedure back in 2015. Dr. Klajnbart was unaware that Claimant missed 45 days of work in a row after the initial incident. Dr. Klajnbart further indicated that, even though Claimant was functioning well enough to be missing only one or two days of work per month, and that her pain was under control, he would have recommended Claimant undergo this surgery as of late 2015. (Klajnbart Depo, 31:3-21).

85. With regard to the lumbar fusion at issue, Dr. Klajnbart testified that the Medical Treatment Guidelines require forensic physicians to ask if the recommended treatment for the condition would be the same if the work-related exposure had never occurred. He answered 'yes' in the case of the Claimant. "This isolated injury in no way, with a high degree of medical probability, has led to her requirement or their [sic] medically reasonable acceptance, of her undergoing the surgery."

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the LAJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). The ALJ finds Claimant to be credible.

Medical Benefits: L4-5 Fusion

D. For a compensable injury, Respondents must provide all medical benefits that are reasonably necessary to cure and relieve the injury. C.R.S. § 8-42-101 (2010). Respondents are liable for reasonable and necessary medical treatment by a physician to whom a claimant has been referred by an authorized treating provider. *Rogers v. Industrial Commission*, 746 P.2d 565 (Colo. App. 1987). An aggravation of a pre-existing condition is compensable. *State v. Richards*, 405 P.2d 675 (Colo. 1965). The question of whether there has been a permanent aggravation is one of fact for determination by an ALJ. *Monfort Inc. v. Rangel*, 867 P.2d 122 (Colo. App. 1993).

E. Pursuant to WCRP 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at WCRP 17, 7 Code Colo. Regs. 1101-3 (the "Medical Treatment Guidelines") when furnishing medical aid under the Workers' Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January 25, 2011). However, the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented

in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May 5, 2006), *aff'd Jones v. Industrial Claims Appeals Office,* N. 06CA1053 (Colo. App. March 1, 2007)(not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011).

F. A DIME physician's finding of MMI is binding on the parties unless overcome by clear and convincing evidence. Because an MMI determination requires the DIME physician to ascertain the cause of the claimant's medical conditions, the DIME physician's determination of *causation* must also be overcome by clear and convincing evidence. *Cordova v. Indus. Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002)." *Brownson-Rausin v. Industrial Claim Appeals Office*, 131 P.3d 1172, 1179 (Colo. App. 2005) (internal citations included). Respondents argue (not without merit) that notwithstanding the DIME's conclusions on causation, they are free to challenge any proposed treatment modality, shifting the burden to the Claimant, even if Respondents' challenge is *solely to the relatedness component,* as here.

G. Assuming, *arguendo,* that the relatedness burden is on Claimant, the ALJ finds that the weight of the evidence supports a finding that Claimant's need for surgery is causally related to the work incident by a preponderance of the evidence. Although Claimant has a history of lower back pain which required treatment, the ALJ is persuaded that Claimant sustained a *permanent* aggravation of her underlying condition as a result of the work injury. Surgery is now needed to correct this medical condition-it is directly related to her work injury. The ALJ credits the testimony of Claimant that her condition in terms of both pain and function have been and continue to be substantially worse than prior to March 24, 2017. Claimant's testimony is supported by the medical record. The first visit to the emergency room the day after the incident documented that Claimant was complaining of lower back symptoms "over [her] baseline" after the patient at work dropped all of his weight onto her.

H. Dr. Klajnbart opined that Claimant's work injury was merely a temporary aggravation of her underlying condition that would have resolved approximately one year later. Respondents might reasonably argue that, with the passage of approximately one year, Claimant will recover with conservative care; ergo no need for surgery. This is not the case; Respondents' own expert agrees that a fusion surgery is reasonable and necessary- in fact, Dr. Klajnbart thinks a two level fusion is more appropriate for her condition. The ALJ is not persuaded by Dr. Klajnbart's opinion that Claimant's ongoing symptoms might be currently work related, but will become unrelated (to her work injury) at some indefinite point in time, approximately a full year after the work injury.

I. Dr. Klajnbart downplayed the significance of Claimant's pain and function in determining whether her need for surgery was causally related to the work injury. As explained in the General Principles section of WCRP 17, Ex. 1, at page 2 of the Low Back Pain section of the Guidelines, "Patients, with the assistance of their health care practitioner, should identify their personal and professional *functional goals* of treatment at the first visit." Moreover, in determining whether a Claimant is having positive results from treatment, the Guidelines also state, "Positive results are defined primarily as *functional gains*…." Finally, under the "Surgical Interventions" heading of the General

Principles, it states, “Surgery should be contemplated within the context of *functional outcome* and not purely for the purpose of pain relief.”

J. In review of Dr. Hammers’ notes, a critical factor in his recommendation for surgery was that Claimant’s symptoms significantly interfere with her activities of daily living: a problem that Claimant did not have prior to the work injury. The ALJ also credits the testimony of Dr. Rook that while Claimant did have significant underlying pathology, she then sustained a permanent aggravation, and her significant *functional* deterioration after the work injury is what is now necessitating surgery. Although Claimant may have been a surgical candidate under the Guidelines prior to her work accident, there was no indication that she was then, or soon to be, in need of a lumbar fusion. Claimant remained largely functional until her injury. Claimant is a nurse by training; compared with most other professionals, she is acutely aware of the downsides of a fusion surgery. She purposely avoided it during earlier consultations, preferring instead to work through some pain. The notes suggest that she was unwilling to give up smoking to facilitate the procedure. Eventually, this work injury aggravated her weakened back to the point that she had to throw in the towel. Surgery is now the lesser of the two evils for her. It is a rational decision.

Burden of Proof, in Light of the DIME Opinion on Causation

K. The ALJ has found, by a preponderance of the evidence, that the L4-L5 fusion surgery, as proposed by Dr. Hammers, is reasonable, necessary, *and related* to Claimant’s work injury. Because of this, there is no need to definitively reassess the burden of proof in light of the DIME’s causation analysis.

ORDER

It is therefore Ordered that:

1. Respondents shall pay for the L4/L5 spinal fusion surgery as proposed by Dr. Hammers, along with all related treatment.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 1, 2018

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

2. On August 25, 2017, Kathleen J. Smith, BSN, RN, completed a case report. Based upon her review of the medical records pertaining to Dr. Melton's treatment of the Claimant, Ms. Smith indicated that a medical utilization review of Dr. Melton would be appropriate.

3. Thereafter, the Director of the DOWC appointed a Utilization Review Panel (Panel) consisting of Sara Meadows, D.O., Hiep Ritzer, M.D., and Lynne Fernandez, M.D.

4. Panel member, Lynne Fernandez, M.D. issued her report on January 13, 2018 and opined that that Dr. Melton's treatment of the Claimant was reasonable and necessary to cure and relieve the Claimant from the effects of the work injury. However, Dr. Fernandez also opined that Dr. Melton's treatment of the Claimant was not reasonably appropriate according to accepted professional standards; that the treatment did not comply with the Colorado Medical Treatment Guidelines (the MTG); and deviations from the MTG were not reasonable. Finally, Dr. Fernandez noted that Dr. Melton's care was no longer reasonable beginning May 13, 2017. Dr. Fernandez opined that Dr. Melton should no longer treat the Claimant.

5. In her written report, Dr. Fernandez pointed to Dr. Melton's unclear records, and opined that it was possible that the electronic medical record (EMR) utilized by Dr. Melton was inadequate to fully document the treatment. Dr. Fernandez raised concerns related to the Claimant's continued use of opioids, and unclear records regarding whether these medications were being tapered. In addition, Dr. Fernandez raised a concern regarding the lack of documentation by Dr. Melton regarding drug screens and lab results. Dr. Fernandez also noted that Dr. Melton's records identified a lower extremity amputation that Claimant did not receive.

6. Panel member Dr. Meadows issued her report on January 25, 2018 and opined that Dr. Melton's treatment of the Claimant was reasonable and necessary to cure and relieve the Claimant from the effects of the work injury and reasonably appropriate according to accepted professional standards. However, Dr. Meadows also noted that Dr. Melton did not meet the MTG and deviations from the guidelines were not reasonable.

7. In her narrative report, Dr. Meadows noted that the management of the Claimant's opioid use as not complying with the MTG. Dr. Meadows opined that if Dr. Melton continued to treat the Claimant, it would be necessary for Dr. Melton to document the Texas equivalent of the prescription drug monitoring program (PDMP), document urine drug screens, and document improved pain and function to be able to comply with the MTG.

8. Dr. Meadows also noted that the format of Dr. Melton's medical records "are not ideal for being able to evaluate the quality of care provided." Dr. Meadows opined that there were documentation errors that may have led to questions about the care provided to the Claimant. Dr. Meadows also made reference to the mention of a lower extremity amputation in Dr. Melton's records.

9. Panel member Dr. Ritzer issued her report on February 2, 2018. Dr. Ritzer noted that although Dr. Melton's treatment of the Claimant was reasonable and necessary to cure and relieve the effects of the Claimant's work injury, she opined that the care was not appropriate under professional standards. Similarly, Dr. Ritzer noted that Dr. Melton did not comply with the MTG and that deviations from the MTG were not reasonable. Dr. Ritzer opined that Dr. Melton's care stopped being reasonable and necessary as of January 11, 2017.

10. In support of her opinions Dr. Ritzer specifically noted concerns with Dr. Melton's management of Claimant's use of opioids. These concerns included failure to regularly obtain drug screens, no discussion of functional improvements, and no referral to a psychologist. With regard to the date of January 11, 2017, Dr. Ritzer notes that this is the first date in which Dr. Melton began identifying Claimant's diagnosis as a below the knee amputation, although there is confirmation elsewhere in the records that the Claimant underwent no such amputation.

11. In his March 20, 2018 order, the Director summarized the findings of the Panel as follows. The Panel unanimously agreed that Dr. Melton's care was reasonably necessary to cure and relieve the Claimant from the effects of the work injury. By a majority, the Panel agreed that Dr. Melton's care was not reasonably appropriate according to professional standards to cure and relieve the Claimant from the effects of the work injury. The panel unanimously agreed that Dr. Melton's plan of care and treatment did not follow the MTG. The panel unanimously agreed that the deviations from the MTG were not reasonable or appropriate. By a majority the Panel recommended a change of provider.

12. Relying upon the opinions and recommendations of the Panel, the Director ordered a change of provider in accordance with Section 8-43-501(3)(c)(I), C.R.S.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. A party appealing an order specifying that a change of provider shall be made bears the burden of overcoming the MUR panel's findings by clear and convincing evidence. Section 8-43-501(5)(a), C.R.S. A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier of fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

4. The ALJ is required to give great weight to the findings of the MUR panel. Section 8-43-501(5)(a), C.R.S. Unless the assessment of the MUR panel is entirely arbitrary or based upon factors other than medical considerations, the judge my not substitute his or her judgement for the assessment of the provider's care made by the MUR panel. *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005).

5. The statutory and regulatory scheme of the MUR process contemplates that the MTG are to be regarded as accepted professional standards for care under workers' compensation law. *Hall v. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003).

6. The Claimant argues that because Dr. Melton is licensed in Texas and not Colorado, she should not be expected to comply with the MTG. The ALJ is not persuaded by this assertion. Dr. Melton availed herself to the MTG when she agreed to treat the Claimant for his Colorado workers' compensation claim and billed the Insurer for said treatment.

7. Even if the Claimant's argument is found persuasive, the ALJ notes that the Panel also agreed that Dr. Melton's treatment of the Claimant was not reasonably appropriate according to professional standards.

8. The Claimant further argues that the record keeping issues raised by members of the Panel can be explained as clerical errors. The ALJ is not persuaded by this assertion. Dr. Melton was provided with an opportunity to respond to the MUR. Based upon the ALJ's review of the DOWC file, Dr. Melton did not provide any statement regarding this process. Although the provider, Dr. Melton, is not required to provide any such statement, the ALJ notes that there is no explanation by Dr. Melton with regard to the repeated reference in Dr. Melton's records to a below the knee amputation that never occurred. Furthermore, the ALJ is unpersuaded that the repeated description of a non-existent amputation could be construed as clerical error.

9. The Claimant further argues that the MUR process is unconstitutional when applied, as here, to an out of state provider. Specifically, the Claimant raises two constitutional concerns. First, the Claimant raises an equal protection argument that Colorado claimants living outside Colorado are treated differently that those residing in Colorado. Second, the Claimant asserts that his inability to confront members of the Panel violates due process.

10. As an initial matter, the ALJ lacks jurisdiction to address the Claimant's constitutional argument. *Kinterknecht v. Industrial Commission*, 485 P.2d 721 (Colo. 1971); *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995). However, administrative agencies have the authority to determine whether "an otherwise constitutional statue has been unconstitutionally applied. *Horrell v. Department of Administration*, 861P.2d 1194 (Colo. 1993).

11. The threshold question in an equal protection challenge is whether the legislation results in dissimilar treatment of similarly situated individuals. *Pepper v. Industrial Claim Appeals Office*, 131 P.3d 1137 (Colo. App. 2005), *aff'd on other grounds sub nom. City of Florence v. Pepper*, 145 P.3d 654 (Colo. 2006). "To violate equal protection provisions, the classification must arbitrarily single out a group of persons who are similarly situated." *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261 (Colo. App. 2004).

12. Colorado courts have repeatedly held that workers' compensation claimants are not a suspect class and that workers' compensation benefits are not a fundamental right. *Sanchez v. Industrial Claim Appeals Office*, 411 P.3d 245 (Colo. App. 2017) (*citing Dillard v. Indus. Claim Appeals Office,* 134 P.3d 407, 413 (Colo. 2006); *Kroupa v. Indus. Claim Appeals Office,* 53 P.3d 1192, 1197 (Colo. App. 2002)).

13. A claimant's right to procedural due process is implicated only when a fundamental property right is threatened. *Wolff v. McDonnell*, 418 U.S. 539 (1974). A workers' compensation claimant does not have a property right to receive treatment from a particular provider. *Colorado Compensation Insurance Authority v. Nofio*, 886 P2d 714 (Colo. 1994).

14. The ALJ finds that the Claimant has failed to demonstrate that he is part of a group of persons being treated disparately from similarly situated persons. On the contrary, reliance on the MTG as part of the MUR process ensures that Colorado Claimants receive the same reasonable medical treatment regardless of whether they reside in Colorado or in another state.

15. The ALJ also finds that, pursuant to *Nofio*, the Director's order of a change in provider does not violate the Claimant's due process rights.

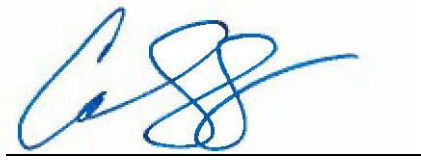
16. For all of the foregoing reasons, the ALJ concludes that the Claimant has failed to show that the Colorado Workers' Compensation Act is unconstitutional as applied in this proceeding.

17. The ALJ concludes that Claimant has failed to show that that it is highly probable and free from substantial doubt that the Director's March 20, 2018 order was incorrect and should be overturned.

ORDER

It is therefore ordered that the Director's March 20, 2018 order is affirmed.

Dated: August 2, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that his claim should be reopened pursuant to Section 8-43-303, C.R.S.

FINDINGS OF FACT

1. On February 18, 2016, the claimant sustained an admitted injury to his neck. The injury occurred when the claimant tripped on an electrical cord while carrying a table. Following the injury the claimant received medical treatment from Dr. Jenny Connery, Dr. Anne Goyette, and Dr. Joel Cohen.

2. On October 27, 2016, the claimant was seen by Dr. Connery. At that time, Dr. Connery noted that the claimant had seen shoulder surgeon, Dr. Kazemi. This medical record indicates that Dr. Kazemi informed the claimant that his symptoms were coming from his cervical spine.[1]

3. On December 1, 2016, Dr. Connery placed the claimant at maximum medical improvement and referred him to Dr. Goyette for assessment of permanent impairment. Dr. Connery recommended maintenance medical care including continuing the claimant's home exercise program, continuing Cymbalta for one year, and ongoing treatment with Dr. Cohen. Dr. Connery also recommended that the claimant continue working light duty with work restrictions of no pushing, pulling, or lifting over 10 pounds.

4. The claimant was seen by Dr. Goyette on January 10, 2017. At that time, Dr. Goyette agreed that the claimant reached MMI on December 1, 2016. Dr. Goyette assessed permanent impairment of 51% whole person.

5. Thereafter, the respondents requested a Division-sponsored independent medical examination (DIME). On June 13, 2017, the claimant attended a DIME with Dr. Robert McLaughlin. In connection with the DIME, Dr. McLaughlin reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. McLaughlin agreed with Drs. Connery and Goyette that the claimant reached MMI on December 1, 2016. However, he assessed a permanent impairment rating of 26% whole person. Dr. McLaughlin agreed with the maintenance care recommended by Dr. Connery.

[1] At hearing, neither party provided Dr. Kazemi's records as evidence.

6. In his IME report Dr. McLaughlin makes reference that Dr. Kazemi had recommended that the claimant see a spine surgeon. Dr. McLaughlin agreed that such a referral could be prudent, but with the caveat that the claimant should also receive treatment from a psychologist.

7. Following the DIME, the respondents filed a Final Admission of Liability on September 6, 2017 and the claimant's claim was closed.

8. Claimant was seen by Dr. David Miller on January 17, 2018 for evaluation of his cervical spine. Dr. Miller reviewed and compared magnetic resonance images (MRIs) of the claimant's cervical spine taken on June 24, 2016 and January 16, 2018. Both MRIs showed a fairly large disc herniation at the C6-C7 level on the right side with distortion of the spinal cord. Both MRIs also showed marked straightening of the cervical spine. Dr. Miller opined that "it will be possible that surgical intervention could help [the claimant]". Dr. Miller specifically recommended an anterior cervical microdisectomy fusion and plating at the C6-C7 level.

9. On January 29, 2018, the claimant filed a Petition to Reopen his claim with Dr. Miller's January 17, 2018 report as support. On the Petition to Reopen, the claimant indicated that the reasons for reopening were change in medical condition and error.

10. The claimant testified that prior to being placed at MMI there were discussions with his medical providers that surgery could be helpful to him. The claimant also testified that he was afraid of undergoing surgery at that time. However, the claimant testified that he would now like to undergo the recommended surgery.

11. Claimant's former supervisor, Mr. Del Rosario testified that the claimant was placed under his supervision in the laundry department because the claimant was working light duty. The claimant testified that he was working in that position in laundry both before and after being placed at MMI on December 1, 2016.

12. The ALJ credits the medical records, the claimant's testimony, and the testimony of Mr. Del Rosario and finds that the claimant has worked in a light duty position both before and after MMI. The ALJ also credits the medical records and finds that the cervical spine MRIs do not show any change to the claimant's condition. Therefore, the claimant has failed to demonstrate that it is more likely than not that he has experienced a change in his medical condition.

13. The ALJ credits the medical records and the claimant's testimony and finds that the claimant declined surgical treatment prior to MMI because he was afraid of surgery. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that there was an error in the closing of his claim.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-

102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. Section 8-43-303(1) provides that "any award" may be reopened within six years after the date of injury "on the ground of fraud, an overpayment, an error, mistake, or a change in condition." Reopening for "mistake" can be based on a mistake of law or fact. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). A claimant may request reopening on the grounds of error or mistake even if the claim was previously denied and dismissed. *E.g., Standard Metals Corporation v. Gallegos*, 781 P.2d 142 (Colo. App. 1989); *see also Amin v. Schneider National Carriers*, W.C. No. 4-81-225-06 (November 9, 2017). The ALJ has wide discretion to determine whether an error or mistake has occurred that justifies reopening the claim. *Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *Travelers Ins. Co. v. Industrial Commission*, 646 P.2d 399 (Colo. 1981).

4. A change in condition refers to "a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he has suffered a change in condition. As found, the claimant has failed to demonstrate by a preponderance of the evidence that his claim was closed due to error or mistake. As found, the claimant has failed to meet his burden of proof that his claim should be reopened. As found, the medical records, claimant's testimony, and Mr. Del Rosario's testimony are credible and persuasive.

ORDER

It is therefore ordered that the claimant's request to reopen his claim it is denied and dismissed.

Dated: August 1, 2018

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that the left total knee arthroplasty recommended by Dr. Raymond Kim is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted September 5, 2017 work injury.

FINDINGS OF FACT

1. The claimant is employed with the employer as a bartender at the employer's restaurant and bar. On September 5, 2017, the claimant was at work performing her normal duties. The claimant testified that on that date she injured her left knee when she turned to remove a beer from the beer cooler. She then turned and tripped on the fatigue mat and began to fall. The claimant testified that she was able to catch herself, but in the process of falling she her left knee pop and it felt like it "exploded" in different directions. This incident was observed by the claimant's supervisor and other employees.

2. The claimant has an extensive history of bilateral knee issues including prior surgeries. On October 13, 2010, Dr. Michael Huang performed a left knee partial medial meniscectomy, chondroplasty and shaving of the patella, with loose body removal and perimeniscal cyst decompression.

3. The claimant testified that following the 2010 surgery performed by Dr. Huang she returned to full time employment and had no issues with her left knee until the September 5, 2017 incident at work.

4. Prior to the September 5, 2017 incident at work, the claimant sought treatment with her personal physician, Dr. Susan Sayers at Primary Care Partners. On June 5, 2017, the claimant was seen by Dr. Sayers for bilateral knee pain and left foot pain. At that time, the claimant reported that she had previously received injections and hoped to have more injections. The claimant testified that she sought treatment at that time because she was experiencing pain in her left foot that caused a change in her gait.

5. On June 7, 2017, the claimant returned to Primary Care Partners and was seen by Dr. Fletcher Colwell who administered corticosteroid injections to both of the claimant's knees. On June 14, 2017, the claimant reported that following the injections she had increased function and less pain. The claimant also testified that after these injections and prior to the September 5, 2017 incident she was working full time without any issues.

6. The claimant first sought treatment related to the September 5, 2017 injury on September 6, 2017 at the emergency department at St. Mary's Hospital. An x-ray of the claimant's left knee showed moderate to severe degenerative joint disease with suprapatellar effusion, but no evidence of fracture. At that time, the claimant was diagnosed with a knee sprain. The claimant was provided a knee stabilizer and instructed to follow up with orthopedics.

7. On September 8, 2017, the employer reported the September 5, 2017 incident to the insurer. Thereafter, Dr. Robert McLaughlin became the claimant's authorized treating physician (ATP) for this claim.

8. Prior to seeing Dr. McLaughlin, the claimant sought treatment with Dr. Richard Price on September 12, 2017. At that time, Dr. Price noted that the claimant had a history of advanced osteoarthritis in her left knee, but that her left knee had been more painful and swollen since her twisting injury. Dr. Price administered a kenalog injection to claimant's left knee and aspirated that same knee. In addition, Dr. Price discussed with claimant possible total left knee replacement. Thereafter on September 19, 2017, Dr. Price authored a letter in which he opined that the claimant needed total knee replacement. The claimant testified she went to Dr. Price because she was hopeful that her left knee problem would resolve quickly without requesting workers' compensation benefits.

9. The claimant was first seen by Dr. McLaughlin on September 20, 2017. At that time, the claimant reported that she felt that her left knee would not bear any weight and it would buckle. Dr. McLaughlin opined that the claimant aggravated a preexisting degenerative condition in her left knee when she tripped on September 5, 2017. In the medical record of that date, Dr. McLaughlin indicated concern that the claimant may have disrupted the remaining meniscus in her left knee. As a result, Dr. McLaughlin referred the claimant for Dr. Mitchell Copeland for an orthopedic consultation.

10. The claimant was seen by Dr. Copeland on September 29, 2017. Dr. Copeland opined that the claimant likely had end stage arthritis in her left knee and recommended a weight bearing magnetic resonance image (MRI) of the claimant's left knee.

11. The recommended MRI of the claimant's left knee was taken on October 3, 2017. The MRI showed advanced articular cartilage loss and irregularity in the medial joint compartment with bony changes; extrusion of the middle third of the medial meniscus and prominent foreshortening of the posterior third of the meniscus; abnormal signal about the PCL, consistent with prominent strain and/or chronic tendinosis; and fairly advanced spurring about the patella and about the proximal anterior tibia in the medial compartment.

12. Following the MRI, the claimant did not return to Dr. Copeland and Dr. McLaughlin referred her to Dr. Mark Luker for orthopedic consultation. The claimant was seen by Dr. Luker on October 24, 2017. Dr. Luker noted that the claimant had severe osteoarthritis prior to the work injury and opined that the claimant's injury on

September 5, 2017 exacerbated her preexisting pain symptoms. Dr. Luker diagnosed the claimant with severe bilateral knee osteoarthritis and recommended cortisone injections, Synvisc injections, and left total knee replacement. The claimant did not return to Dr. Luker.

13. On November 15, 2017, the claimant returned to Dr. McLaughlin and reported increased knee pain. At that time, Dr. McLaughlin noted that the claimant could try further injections or consider knee replacement. In addition, Dr. McLaughlin referred the claimant to Dr. Melissa Carris for treatment of chronic pain and adjustment disorder and to Dr. Dr. Raymond Kim for orthopedic consultation.

14. On December 7, 2017, the claimant was seen by Dr. Carris. At that time, the claimant discussed her injury and Dr. Carris noted the claimant's prior knee problems. Dr. Carris noted that the claimant was "nervous about a possible surgery but is working on accepting that likelihood, given the severity of her injury."

15. The claimant was seen by Dr. Kim on January 11, 2018. On that date, x-rays of the claimant's left knee showed end stage arthritis with joint space narrowing and peri-articular osteophytes. Dr. Kim noted that the claimant had exhausted conservative treatment measures and recommended a left total knee arthroplasty. The respondents have denied authorization for the recommended left total knee arthroplasty.

16. At the request of the respondents, on March 6, 2018, the claimant attended an independent medical examination (IME) with Dr. John McBride, Jr. In connection with the IME, Dr. McBride reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. McBride opined that a left total knee replacement is reasonable treatment of the claimant's condition. However, Dr. McBride also opined that the claimant's knee condition is not related to the September 5, 2017 incident, but is the natural progression of the degenerative condition in the claimant's left knee. Dr. McBride's testimony at hearing was consistent with is IME report.

17. On March 8, 2018, the claimant was again seen by Dr. McLaughlin. In the medical record of that date, Dr. McLaughlin opined that the need for the knee replacement surgery was related to the claimant's work injury.

18. On May 7, 2018, Dr. McLaughlin responded to questions posed to him by the respondents' counsel. In his responses Dr. McLaughlin opined that the claimant had not reached maximum medical improvement (MMI) because she had not returned to her functional baseline. Dr. McLaughlin noted that he was aware that Dr. Colwell treated the claimant's left knee in the months preceding the September 5, 2017 work injury. Dr. McLaughlin noted that although the claimant had knee pain during that time, she had normal range of motion, full strength, and full function of the left knee, which changed after the work injury.

19. The ALJ credits the medical records, the claimant's testimony, and the opinions of Dr. McLaughlin over the contrary opinions of Dr. McBride and finds that the claimant has demonstrated that it is more likely than not that the left total knee arthroplasty is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the September 5, 2017 work injury.

20. The ALJ specifically credits Dr. McLaughlin's opinion that the claimant's fall on September 5, 2017 resulted in the need for total knee replacement. Although the claimant has an extensive history of issues with her left knee, the ALJ is persuaded by the claimant's testimony that between the injections she received on June 7, 2017 and the September 5, 2017 injury she was able to work full time without issue. It was only as a result of her fall at work on September 5, 2017 that the claimant required medical treatment. It was the fall on September 5, 2017 that has resulted in the need for a left total knee arthroplasty.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, the claimant has demonstrated by a preponderance of the evidence that the left total knee arthroplasty recommended by Dr. Kim is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the September 5, 2017 work injury. As found, the medical records, the claimant's testimony, and the opinions of Dr. McLaughlin are credible and persuasive.

ORDER

It is therefore ordered that:

1. The respondents shall pay for the left total knee arthroplasty recommended by Dr. Kim, pursuant to the Colorado Medical Fee Schedule.

2. All matters not determined herein are reserved for future determination.

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

EVIDENTIARY ISSUE

I. Whether Claimant's Exhibits 3 and 4 are relevant, and should therefore be admitted into evidence.

ISSUES

I. Whether Claimant has produced clear and convincing evidence to overcome Dr. Stanley Ginsburg's Division IME opinion that Claimant is at MMI as of September 15, 2016 for her December 27, 2013 admitted injury.

II. Alternatively, what is the actual opinion of Division IME physician Stanley H. Ginsburg, M.D., on the issue of whether Claimant has reached Maximum Medical Improvement?

III. Whether Claimant's concurrent earnings with Pueblo County should be factored into her average weekly wage ("AWW").

STIPULATIONS

The parties agreed on the following stipulated facts at hearing:

1. Claimant has worked for this Employer since 2001 and continues to work for the Employer.

2. Claimant has concurrent employment with Pueblo County that she began in 2006. Claimant continues to work for Pueblo County through the present.

3. If Claimant undergoes hip surgery, she will miss time from work from both employers.

4. To date, Claimant has not missed time from either employer.

The ALJ accepted these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained an admitted work injury while working for Employer on December 27, 2013. Claimant slipped and fell, landing primarily on her left side. (Ex. 14, p. 302).

2. Employer did not refer Claimant to an authorized provider, so she treated with her chiropractor, David Pool, D.C. Claimant treated with Dr. Pool for almost three years after her work injury. The first six months of Dr. Pool's records are handwritten and difficult to interpret, but typewritten notes starting on July 29, 2014 reference "left hip" pain, and later notes document pain and spasm in the "left pelvic" area. (Ex. D; Ex. 11).

3. In early January of 2014, Claimant received a call from a "workers' compensation representative" recommending Claimant present to the emergency department because "there was no actual provider associated with" her workers' compensation claim. (Ex. H, p. 157). Claimant presented to the St. Mary Corwin Hospital Emergency Department on January 9, 2014, where she stated that she "injured her left shoulder and arm, left elbow and left thigh." The Emergency Department Report documents that Claimant "ambulated into the emergency department with a steady gait and no limp." (Ex. H, p. 158). Left hip examination revealed no guarding or irritability, no increased warmth, no swelling, mild tenderness over about the lateral aspect, no evidence of residual ecchymosis, and full range of motion." (Ex. H, p. 159). The Emergency Department physician documented that "No imaging will be undertaken" and Claimant's primary diagnosis was "Fall injuries – improving."

4. On August 21, 2014, Claimant returned to the St. Mary Corwin Hospital Emergency Department with a Chief Complaint of "left buttocks pain and right jaw pain." (Ex. H, p. 150). Claimant's History of Present Illness documented that "[h]er back pain is pain in her left buttocks that radiates to her left lateral thigh." Physical examination again revealed a normal gait. (*Id* at p. 151).

5. In July of 2015, the parties attempted to agree on CCOM in Pueblo as the ATP; however, CCOM refused to accept Claimant as a new patient. (Ex. 11, p. 283).

6. On July 27, 2015, David L. Reinhard, M.D., opined that continued chiropractic was not reasonably necessary. (Ex. 6, pp. 13-14).

7. Respondents scheduled Claimant for an Independent Medical Examination with John J. Raschbacher, M.D., on November 30, 2015. As part of that IME, Claimant completed a pain diagram. On the back of the body, Claimant marked pain from the back of the left knee to the top of the left shoulder and the left neck. On the front of the body, Claimant marked pain along the lateral left thigh from the waist to the knee. (Ex.G, p. 144).

8. Dr. Raschbacher's report states that "[o]n physical examination, her area of greatest tenderness is at the lateral left hip at the greater trochanter area. This raises the question of the possibility of a trochanteric bursitis being the pain generator." (Ex. G,

p. 141). Dr. Raschbacher opined that the "examination was not very suggestive of intrinsic hip joint pathology." (*Id* at p. 142). Dr. Raschbacher further opined that Claimant's "mechanism of injury of slip and fall on the left side would be consistent with a left trochanteric bursitis" and recommended an orthopedic referral, with consideration of a left trochanteric bursa injection.

9. Claimant began treating with orthopedist Dr. Kenneth Danylchuk of Maple Leaf Orthopedics on February 16, 2016. (Ex. 12, p. 284). She reported ongoing pain in her "lumbar region" from the fall at the end of 2013 and physical examination documented irritation of the left hip. A lumbar spine MRI was ordered.

10. Claimant returned to Dr. Danylchuk on March 22, 2016. (Ex. 12, p. 289). Dr. Danylchuk noted that the lumbar spine MRI was completely normal; however, Claimant was 'upset' that she was sent to a "spine doctor" as she discussed her ongoing hip complaints. Claimant explained that her chiropractor has simply been 'putting her hip back into place' since the accident. She further pointed to her left side buttock area as the source of the pain. Dr. Danylchuk ordered an MRI of the left hip.

11. The left hip MRI was completed on April 8, 2016 and revealed a displaced anterior superior labral tear. (Ex. 11, p. 277). Dr. Danylchuk opined that intra-articular anesthetic administration could be performed to confirm symptomatology." (Ex. F, p. 121).

12. Claimant returned to Dr. Danylchuk on April 19, 2016 to review the MRI results. (Ex. 12, p. 291). Claimant's pain at this time was globally tender around the hip joint over the greater trochanter and into the left buttock. Dr. Danylchuk performed a left hip injection into the trochanteric bursa.

13. This injection provided no relief as documented by PA-C Sloan at Claimant's next visit to Maple Leaf Orthopedics on May 19, 2016. (Ex. 12, p. 293). Claimant continued to complain of left hip pain "all over" and that sometimes it is in the buttocks, sometimes it is in the lateral aspect of the hip, and sometimes it is in the groin. Mr. Sloan again recommended intra-articular anesthetic injection of the left hip for diagnostic purposes, but Claimant declined the injection. Claimant was then referred to a hip specialist, Dr. Brian White of Western Orthopaedics, for further evaluation and treatment.

14. Dr. Raschbacher performed a follow-up examination of Claimant on September 15, 2016. When discussing the intra-articular hip injection, Dr. Raschbacher noted "she did not understand what the hip injection was. It appears she understood that this might be essentially the same as a bursa injection." Dr. Raschbacher explained that "an intra-articular hip injection is quite a bit different than a bursa injection and the two are not 'comparable.' " (Ex. G, pp. 124-125).

15. Regarding treatment, Dr. Raschbacher opined:

> I do not recommend any further treatment of any type unless [Claimant] wishes to have an intra-articular left hip injection for diagnostic and possibly therapeutic purposes. Depending on her response to that, the issue of surgery on the left hip labrum could be addressed. A diagnostic arthroscopy and possibly therapeutic arthroscopy may be in order depending on if she does an intra-articular left hip injection and what result she has with this. It appears she would possibly benefit from returning to the orthopedic physician to discuss in detail and obtain an understanding of left hip intraarticular injection. (Ex. G, p. 128).

Since Claimant had declined the intra-articular hip injection, Dr. Raschbacher opined that Claimant had reached Maximum Medical Improvement.

16. After the earlier referral, Dr. Brian White then evaluated and examined Claimant on February 1, 2017. (Ex. 13, p. 297). Claimant reported ongoing left hip symptoms, as well as her growing frustration that she continued to be in pain and that her function and activity was becoming more and more limited. Dr. White's examination of the hip documented a re-creation of her hip pain with the anterior impingement maneuver. Dr. White diagnosed Claimant with "Combined impingement with labral tear resulting from injury on December 27, 2013." Dr. White indicated that "At this point, [Claimant] is a very reasonable candidate for hip arthroscopy on the left side with femoral osteoplasty, acetabular rim trimming, [and] labral reconstruction." (*Id.* at p. 299). Dr. White requested authorization of this surgery, which was denied by Respondents.

17. Dr. Timothy O'Brien, M.D., performed an Independent Medical Examination of Claimant on March 31, 2017. Dr. O'Brien's report documents Claimant's medical records, which show "migratory" pain complaints from December 2013 through September 2016:

- "Eighty-three chiropractic visits in total were numbered. A note from July 14, 2014, indicates that there was left sacroiliac pain, right sacroiliac pain, left lumbar pain, and it was worse since the last visit. Spinal adjustments were performed. By July 23, 2014, there was left sacroiliac pain, lumbar pain, sacral pain, left temporomandibular pain, cervical pain, left buttock pain, left cervical dorsal and right cervical dorsal pain. There was waxing and waning pain in the following areas: Left sacroiliac, lumbar, left TMJ, cervical, left buttock, left cervical dorsal, right cervical dorsal, and left hip palpation of the muscles revealed spasm in the following areas: Left cervical dorsal, upper thoracic, right cervical dorsal, cervical, left sacroiliac, left buttock, left hip. By August 12, 2014, there was left and right sacroiliac, lumbar, right cervical dorsal, left cervical dorsal, upper thoracic, and mid-thoracic." (Ex. E, p. 115).

- "Based on Ms. Olguin's pain diagrams, especially by comparison to the November 30, 2015 pain diagram, versus the November (sic) 15, 2016 [ALJ infers this to mean September] pain diagram in the Midtown Occupational Health

> Services, clearly establishes the migratory nature of Ms. Olguin's symptomatology. The earlier pain diagram demonstrates the rather diffuse nonspecific nature of her pain that was noted in the chiropractor's serial exams. The pain diagram from September of 2015 has very little in common in comparison with the pain diagram that was completed immediately after the work injury. In addition to Ms. Olguin's migratory pain, she also had escalating pain, which can only be explained by implicating nonorganic factors as the etiology for that increasing pain rather than the decreasing pain that is associated with injuries that are organically based and therefore respond to the immune system's ability to orchestrate the inflammatory pathways to resolve organically-based pain." (Ex. E, p. 117).

18. Dr. O'Brien concurred with the opinions of Dr. Raschbacher and Dr. Danylchuk regarding the necessity of an intra-articular injection before consideration of surgery: "An intra-articular injection has never corroborated whether or not there would be pain relief or whether or not pain relief could be obtained with this diagnostic and potentially therapeutic intervention. If this intervention is performed, it needs to be done so in a blinded fashion… A significant component of Ms. Olguin's pain is nonorganic in nature, and therefore Ms. Olguin's blinding to the expectations of an intra-articular injection need to be firmly enforced…. In my opinion, Dr. White has not established any foundation upon which a surgical recommendation could be made. Therefore, regardless of causation, I do not feel that the surgery recommended is either necessary or reasonable." (Ex. E, p. 118).

19. Claimant filed an application for a hearing on the issue of whether the proposed surgery was reasonable, necessary, and related. This issue was heard before ALJ Patrick Spencer on May 26, 2017. (Clmt. Ex. 3). ALJ Spencer issue his Findings of Fact, Conclusions of Law, and Order dated October 19, 2017. ALJ Spencer found that Claimant had proven, by a preponderance of the evidence, that Claimant's need for left hip surgery was reasonable, necessary, and related to the work injury. (*Id.* at 15-16).

20. Respondents appealed the Order of ALJ Spencer. (Ex. 4). The ICAO affirmed the Order of ALJ Spencer on March 6, 2018. No further appeal was filed and the ICAO Order became final.

21. Respondents filed for a 24-month DIME while the aforementioned proceedings were still taking place. The DIME occurred on February 1, 2018 with Dr. Stanley Ginsburg, roughly a month prior to the final order from ICAO. (Ex. 14). Dr. Ginsburg performed a records review, examined Claimant, and took a medical history from Claimant before rendering his final opinion:

> The opinion expressed above that the hip abnormalities seen on MRI were pre-existing is an interesting concept but there is absolutely no history that suggests that this, in fact, was the case and I am not certain how the evaluator determined that the hip pathology seen on MRI was pre-existing if I understand him correctly. We are, therefore, left with a patient who

had [a] slip and fall, landed on her left side, has had proximal lower extremity discomfort, and pelvic discomfort for four years now and the only objective abnormality is the abnormality seen on [the] hip MRI. There obviously is a difference of opinion concerning the need for surgery. If the patient wanted to do that and there is a "hint" that prior to that being done, an intraarticular injection is utilized as a "test injection." Therefore, we will do hip mobility testing and suggest this as an impairment rating. *I will also declare the patient at maximal medical improvement* ***but will suggest that another surgical opinion from a "hip surgery specialist" be obtained about the advisability of surgery – prior to an intraarticular injection being accomplished.*** I also think the patient has certainly had enough chiropractic care***.***

….*I am going to state that MMI date is September 15, 2016,* at which point the attending physician declared the patient's treatment completed….. ***Again, I do recommend another opinion concerning possible injection and surgery.*** (Ex. 14, p. 311)(emphasis added).

22. Dr. Jack Rook performed an IME of Claimant on April 3, 2017, prior to the hearing before ALJ Spencer. (Ex. 15). Dr. Rook performed an analysis of the issue before him regarding Claimant's need for hip surgery. He ultimately concluded that Claimant's need for the surgery as proposed by Dr. White was reasonable, necessary, and related to the work injury. Dr. Rook reviewed additional records, including ALJ Spencer's Order and the DIME report, and authored a supplemental report on April 18, 2018. (Ex. 16, p. 322). Dr. Rook noted that Dr. Ginsburg agreed with the ALJ and essentially all the physicians of record that Claimant's MRI abnormalities did not pre-exist the fall, and therefore are related to the work injury. Dr. Rook analyzed Dr. Ginsburg's ultimate conclusions, and concluded that Claimant was not at MMI based on Dr. Ginsburg's own rationale:

Dr. Ginsburg believes the patient is at maximum medical improvement, yet at the same time he recommends that the patient be evaluated by another orthopedist described as a "hip surgery specialist" regarding the advisability of surgery. The patient has already seen a hip surgery specialist, Dr. White, who has already recommended hip surgery…. It seems Dr. Ginsburg is recommending the patient undergo a consultation to determine if surgery should be performed in lieu of an intra-articular injection. *In either scenario, the patient would not be considered at maximum medical improvement.* (*Id.* at p. 325)(emphasis added).

23. Dr. Ginsburg testified via deposition on May 31, 2018. Dr. Ginsburg maintained his opinion that the findings on the hip MRI were "most likely" caused by the fall at work on December 27, 2013.

24. When asked if Administrative Law Judge Spencer's Findings of Fact, Conclusions of Law and Order dated October 19, 2017, impacted his opinion on Maximum Medical Improvement, Dr. Ginsburg stated the following:

Q. And in reviewing the -- particularly the findings of fact in this order from ALJ Spencer, and has that impacted your opinion regarding maximum medical improvement?

A. The issue of maximum medical improvement is a somewhat strange one, because it's administrative. Rather than being medical, it has a lot of administrative kinds of considerations.

What does the term mean? Well, *the term means that everything that's been done, has been done,* and even though the patient may be still symptomatic as related to the symptoms from the incident, what's been done to improve that circumstance has already been done, even though the patient may require main—some maintenance care.

Well, what I'm saying is, ***if it's decided* that under no circumstances will this patient have hip surgery,** that's the way it is, although she may go to a private doctor and get hip surgery done, but for the consideration of workmen's compensation case, she has had what everybody says is the maximum possible to improve her symptoms, *so I'm saying, yes, she's at maximum medical improvement*, but then I add, I put in an addendum in saying, *in case I'm wrong **or** in case everybody else is wrong, get another opinion about whether or not hip surgery will help her, **and if it's determined that hip surgery would help her**, **then my Maximum Medical Improvement isn't necessarily correct.*** There's something else that can be done

… ***So if it's determined that hip surgery may help her* and *that's accepted, then my MMI designation, so to speak, can be thrown out.*** (emphasis added).

25. Later testimony by Dr. Ginsburg reiterated the following:

Q: So according to these tips, you know, it defines MMI as "a point in time when any medically determined" -- "determinable physical or mental impairment has become stable, and when no further treatment is reasonably expected to improve the condition." So based on your testimony, *if it's found that surgery could significantly improve claimant's condition, would it be your opinion that claimant remained at maximum medical improvement?*

A. No. What I just said, in wordy and probably nonunderstandable form, was ***I'm willing to say that my MMI designation,** by my own word, **would then not apply if there's an administrative decision to allow hip surgery*** to take place, because that would change the entire clinical -- the entire clinical picture, if you will.

26. Respondents filed a Final Admission of Liability dated March 9, 2018, admitting to an Average Weekly Wage of $126.53. (Ex. 5, p. 24).

27. In regard to Claimant's AWW for her concurrent employment with Pueblo County, her wage records document that she earned $37,653 from January 1, 2013 through December 31, 2013. (Ex. 17). Divided by 52, this would equate to an AWW of $724.10. However, Exhibit 17 also notes that Claimant's *monthly* gross wages for the current period are $3151.00. Pursuant to 8-42-102(2)(a), C.R.S., $3151 x 12 ÷ 52 = $727.15.

28. Combining both employers, Claimant's Average Weekly Wage is therefore $853.68.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the LAJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned

expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

Relevance of Claimant's Exhibits 3 and 4

D. Respondents challenged the admissibility of ALJ Spencer's October 19, 2017 Findings of Fact, Conclusions of Law, and Order, as well as the ICAO's March 6, 2018 Final Order affirming ALJ Spencer's determination. Relevant evidence is defined by CRE 401 as "evidence having any tendency to make the existence of any fact that is of consequence to the determination of the action more probable or less probable than it would be without the evidence." "All relevant evidence is admissible, except as otherwise provided by the Constitution of the United States, by the Constitution of the State of Colorado, by these rules, or by other rules prescribed by the Supreme Court, or by the statutes of the State of Colorado." CRE Rule 402.

E. The ALJ finds that Claimant's exhibits 3 and 4 *are relevant* to the proceedings in this matter and are accepted into evidence. This claim involves overlapping determinations of an ALJ and a DIME physician regarding the specific medical treatment ordered at the hearing before ALJ Spencer. Moreover, Dr. Ginsburg specifically testified in his deposition that his own MMI determination would not apply if there is an administrative decision allowing hip surgery to take place. The ALJ finds that Claimant's Exhibit 3 is clearly relevant under the present circumstances and takes administrative notice of Exhibit 3. The Final Order from the ICAO is merely confirmation that the Order from ALJ Spencer was affirmed and has now become final. For the same reasons stated above, the ALJ finds that Claimant's Exhibit 4 is also relevant and the ALJ takes administrative notice of Exhibit 4.

Overcoming the DIME Regarding MMI

F. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased

tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* W.C. No. 4-782-625 (ICAO, May 24, 2010).

G. Maximum Medical Improvement is defined as:

> [A] point in time when any medically determinable physical or mental impairment as a result of injury *has become stable and when no further treatment is reasonably expected to improve the condition*. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement. §8-40-201(11.5) C.R.S.(emphasis added).

H. Recommendations for future treatment have been discussed by the courts in the context of whether a Claimant is at MMI. "A recommendation for therapies which present a reasonable prospect for improving physical function may be viewed as evidence that the claimant's condition is not stable, and the resulting impairment is not measureable. Therefore, such treatment recommendations are inconsistent with MMI…." *Gebert v. Nordstrom, Inc.*, W.C. No. 4-428-645 (ICAO, June 20, 2003). The Impairment Rating Tips published by the Division of Workers' Compensation refers to the *Gebert* case in this context of a DIME physician recommending additional *curative* treatment. The Tips stress the importance of curative treatment remaining being inconsistent with an MMI finding.

I. Dr. Ginsburg himself stated that he recommended further evaluation for possible hip surgery or further injections in the hip. Dr. Ginsburg's statement that Claimant is at MMI is at odds with his recommendation for further evaluation and treatment. More importantly, Dr. Ginsburg's recommendations for further treatment and evaluation [as articulated by Dr. Rook] are inconsistent with the very definition of MMI. Even Dr. Ginsburg clearly stated: … "***So if it's determined that hip surgery may help her* and *that's accepted, then my MMI designation, so to speak, can be thrown out.***" (Finding of Fact #24). It has now been judicially determined that hip surgery is reasonable, necessary, and related to Claimant's injury by an ALJ. Ergo, even Dr. Ginsburg agrees, ipso facto, that Claimant is not at MMI.

J. The ALJ finds, by clear and convincing evidence, that Dr. Ginsburg erred in declaring Claimant at MMI. Alternatively, by clear and convincing evidence, the ALJ interprets the entire body of work of the DIME physician, to include his deposition after reviewing the ALJ's Order, to conclude that Claimant is not at MMI. Either way, ***this ALJ finds that Claimant is not at MMI.*** The Order from ALJ Spencer regarding the left hip surgery now takes effect because Claimant is not at MMI. ICAO has also issued a final order affirming ALJ Spencer's determination.

Average Weekly Wage

K. "Average weekly wages for the purpose of computing benefits provided in articles 40 to 47 of this title, except as provided in this section, shall be calculated upon the monthly, weekly, daily, hourly, or other remuneration which the injured or deceased employee was receiving at the time of the injury…." C.R.S. § 8-42-102(2). There is nothing in § 8-42-102 that indicates a Claimant must have missed time from work to calculate an AWW. "[T]he determination of a claimant's average weekly wage is based upon the claimant's wages at the time of the injury. Furthermore, [the statute] does not restrict the calculation of medical impairment benefits to claimants who actually receive temporary total disability benefits. Nor does it restrict the calculation to the actual amount of the temporary total disability benefits awarded." Broadmoor Hotel and Continental Insurance Co. v. Industrial Claims Appeals Office, 939 P.2d 460 (Colo. App. 1996) (internal citations omitted). The overall purpose of the statutory scheme is to calculate a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp.*, 867 P.2d 77, 82 (Colo. App. 1993); *see also Loofbourrow v. Industrial Claims Appeals Office*, 321 P.3d 548 (2011); *Benchmark/Elite, Inc. v. Simpson*, 232 P.3d 777 (Colo. 2010).

L. The ALJ finds that Claimant's concurrent employment with Pueblo County shall be added to her admitted AWW from Employer. Respondents assert that Claimant's concurrent earnings should not be factored into her overall AWW because Claimant has not yet been shown to have lost time from work for her concurrent employment. The ALJ is not persuaded. As indicated above, the overall purpose of the AWW scheme is to calculate a fair approximation of a claimant's wage loss *and* diminished earning capacity. It has been stipulated that Claimant will lose earnings from both of her employers *if she undergoes surgery.* Since Claimant is not at MMI, and ALJ Spencer's Order remains in effect, the issue of Average Weekly Wage is ripe for determination. How, or if, Claimant's actual benefits are to be calculated is not ripe until further events unfold. As noted by Respondents, Claimant has yet to miss work, nor has she actually undergone surgery. Nonetheless, the ALJ finds, by a preponderance of the evidence, that Claimant's Average Weekly Wage is $853.68

ORDER

It is therefore Ordered that:

1. Claimant is not at MMI. The previous Order from ALJ Spencer, dated 10/19/2017, remains in effect. Respondents shall pay for the left hip surgery as previously ordered.

2. Claimant's Average Weekly Wage is $853.68.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 2, 2018

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

STIPULATIONS

At the commencement of hearing, the parties stipulated to an average weekly wage ("AWW") of $1,711.17.

ISSUES

I. Both Claimant and Respondents challenge the maximum medical improvement (MMI) determination of the Division Independent Medical Examiner, Dr. Rosemary Greenslade. Claimant asserts that Dr. Greenslade erred in placing him at MMI. Respondents agree that Claimant is at maximum medical improvement; however, they challenge the MMI date given by Dr. Greenslade. Consequently, the issues regarding MMI are whether Claimant produced clear and convincing evidence to overcome the opinion of Dr. Greenslade that he reached MMI regardless of the date assigned and whether Respondents produced clear and convincing evidence to overcome Dr. Greenslade's determination that Claimant reached MMI on May 31, 2015.

II. If Claimant is found to be at MMI, whether Respondents have established by a preponderance of the evidence that Dr. Greenslade erred in her assignment of a 15% upper extremity rating.

III. Whether Claimant established by a preponderance of the evidence that a carpal tunnel release recommended by Dr. Dale Cassidy is reasonable, necessary and related to his September 30, 2016 industrial injury.

IV. Whether Claimant has proven by a preponderance of the evidence that he is entitled to TTD benefits beginning May 4, 2017 and continuing through June 3, 2018.

V. Whether Claimant has proven by a preponderance of the evidence that he is entitled to a disfigurement award.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. On September 30, 2016, Claimant sustained a contusion to the dorsal aspect of his hand when a metal rake struck him as he was shoveling concrete.

2. Claimant was evaluated by Dr. Miguel Castrejon on October 4, 2016. Dr. Castrejon noted swelling over the dorsum of the hand but no redness. X-rays did not reveal any acute bony abnormality. No other active treatment was provided.

3. Dr. Castrejon released Claimant at MMI without restrictions, no permanent impairment and no maintenance treatment following his evaluation on October 4, 2016. He would subsequently rescind his MMI determination on May 4, 2017.

4. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Castrejon's opinions on February 14, 2017. Claimant would subsequently object to the FAL and request a Division Independent Medical Examination (DIME).

5. On May 4, 2017, approximately seven months after his claimed injury, Claimant returned to Dr. Castrejon for what he described was persistent pain and swelling in his right hand. Claimant explained that he had waited several months the pain to subside. When it did not, he sought further evaluation with Dr. Castrejon. Claimant was unable to get back in to see Dr. Castrejon so he sought legal representation and a follow-up appointment was secured. During his follow-up appointment, Dr. Castrejon documented Claimant's reported ongoing right hand pain and swelling. Physical examination documented continued swelling of the dorsum of the hand. Wrist flexion and extension were limited by pain and grip strength decreased. Dr. Castrejon opined that Claimant was not at MMI. He imposed restrictions of no use of the right hand and ordered an MRI due to Claimant's persistent symptoms.

6. MRI of the right hand was performed on May 11, 2017. While the MRI did not reveal contusion, fracture or infiltrative process of the marrow, it did demonstrate cystic changes. Consequently, a rheumatology evaluation was suggested.

7. Claimant returned to Dr. Castrejon for follow-up after his MRI. Based upon the MRI, Dr. Castrejon referred Claimant to Colorado Springs Orthopedic Group where Dr. Dale Cassidy evaluated him on May 31, 2017. Dr. Cassidy documented that Claimant's symptoms began after his work injury and had become a chronic condition. Examination revealed a positive Phalen's with radiation to the middle finger, suggestive of carpal tunnel syndrome. Dr. Cassidy recommended that an EMG be performed. Dr. Cassidy noted that Claimant seemed to have excellent muscle bulk and tone and it did not appear as though he had been unable to use his hands normally. Dr. Cassidy indicated that someone who had very limited use of the hand would have developed some atrophy and clearly, Claimant had not. Dr. Cassidy also felt that any nerve compression in the wrist(s) was likely unrelated to the work incident, given that the median nerve is located on the volar aspect of the hand/wrist and would have been protected from a blow to the dorsal surface of the hand.

8. Dr. Castrejon performed an EMG on June 26, 2017 that was consistent with moderate to severe bilateral carpal tunnel syndrome and referred Claimant back to Dr. Cassidy.

9. Claimant returned to Dr. Cassidy on July 17, 2017. Dr. Cassidy reviewed the EMG that documented abnormal sensory changes in the bilateral wrists leading Dr. Cassidy to opine as follows: "I couldn't necessarily fault his work-related injury for this

solely because he does have evidence of carpal tunnel syndrome on the contralateral side."

10. Claimant underwent his requested DIME with Dr. Rosemary Greenslade on September 28, 2017. Dr. Greenslade reached the following conclusions:

- Bilateral carpal tunnel syndrome, worse on the right than the left symptomatically. This is NOT related to his work comp injury of September 30, 2016.
- Contusion/dorsum of his right hand, work-related and resolved.
- Primary osteoarthritis of the first carpal-metacarpal joint of his thumb, NOT work-related.
- Primary osteoarthritis of the 2nd through 5th metacarpal joints, NOT work-related.

(Respondents' Exhibit C, Bate Stamp page 9)(Emphasis in original).

11. Dr. Greenslade further concluded that Claimant reached MMI for this injury on May 31, 2017 indicating that no further surgical, medical or invasive therapeutic intervention would likely lead to significant improvement in ongoing symptoms or Claimant's current level of function.

12. Dr. Greenslade assigned a 15% upper extremity rating based on range of motion measurements. Dr. Greenslade did not provide a specific disorder of the upper extremity, which would entitle Claimant to range of motion impairment determination.

13. Dr. Timothy Hall performed an independent medical examination (IME) at the request of Claimant's counsel on January 3, 2018. Dr. Hall summarized his review of pertinent medical records and took a history from Claimant. Dr. Hall documented that Claimant continues to be symptomatic with most of his pain over the dorsum of the right hand and the right wrist with symptoms of numbness and tingling more so in the median distribution. Dr. Hall pointed out a professed flaw in Dr. Greenslade's rationale that carpal tunnel syndrome is the result of recurrent repetitive motions over a prolonged period. While this is true, Dr. Hall opined that carpal tunnel syndrome can also be caused by trauma. Given the fact that Claimant's EMG was positive on both sides, but Claimant was only experiencing the median nerve type symptoms on the right, Dr. Hall opined that Claimant's entrapment was probably occurring due to ongoing swelling. According to Dr. Hall, "[i]f the wrist joint swells and the hand swells, the carpal tunnel is where a good bit of swelling is likely to occur." He ultimately opined that Claimant was experiencing traumatic right sided CTS primarily due to diffuse swelling in the area of the carpal tunnel, which he attributed to Claimant's industrial injury. As "[Claimant's] right wrist, hand, and distal extremity were working just fine prior to this work event/injury" Dr. Hall related the two.

14. Dr. Allison Fall performed a medical records review at Respondents request. Upon completion of her review, Dr. Fall issued a report dated January 23, 2018. In her report, Dr. Fall concluded that, consistent with Dr. Castrejon's original opinion, Claimant reached MMI on October 4, 2016. According to Dr. Fall, Claimant experienced an uncomplicated contusion, which would not require any additional medical care to heal. Consequently, she opined that any complaints of increased pain and persistent swelling in May 2017 were "not likely related to the work-related injury but rather related to his underlying degenerative changes and [his] carpal tunnel syndrome, both of which were determined to not have been caused by the work-related injury, per Dr. Cassidy and the DIME physician." Because Claimant's contusion would be expected to heal without the need for additional treatment (as expressed by Dr. Castrejon on October4, 2016) and because his persistent hand pain and swelling is not attributable to work-related causes, i.e. his contusion, Dr. Fall testified that Dr. Greenslade erred in her conclusion that Claimant reached MMI on May 31, 2017.

15. Dr. Fall also opined that Dr. Greenslade erred in assigning 15% scheduled impairment of the upper extremity attributable to Claimant's right hand contusion. According to Dr. Fall, Dr. Greenslade erred in assigning impairment at the wrist because "she did not provide an explanation for how a dorsal hand contusion could lead to wrist impairment" in light of her stated opinion that Claimant's carpal tunnel syndrome (CTS) was not causally related to his industrial injury. Dr. Fall also cited as error Dr. Greenslade's failure to reconcile her opinion that Claimant's contusion "resolved" with her contrary decision to assign impairment for it. According to Dr. Fall, this internal inconsistency amounts to a clear error regarding the assignment of impairment to Claimant's admitted injury in this case.

16. At hearing, Dr. Fall testified that the act of being struck on the dorsum of the hand, distal to the wrist, is not a mechanism of injury (MOI) which would cause a traumatic carpal tunnel syndrome. Per Dr. Fall, the fact that Claimant had bilateral carpal tunnel syndrome further strengthens the argument that his CTS is not related to the incident of September 30, 2016. Dr. Fall indicated there was no industrially based MOI likely to cause the significant range of motion decrease in this case as the only work-related condition, (Claimant's contusion) had resolved. Dr. Fall reiterated her opinion that Claimant's underlying carpal tunnel or underlying rheumatological condition is the probable cause of his decreased range of motion in the hand/wrist. Accordingly, Dr. Fall repeated her conclusion that it was objectively erroneous for Dr. Greenslade to assign impairment for Claimant's contusion as the only work-related diagnosis in this case.

17. On cross-examination, Dr. Fall agreed that swelling of the wrist joint could increase pressure on the carpal tunnel causing median nerve impingement in the carpal tunnel. Nonetheless, she testified that Claimant never actually experienced swelling at the wrist by her review of the records. She never personally examined Claimant. Careful review of the medical record evidence supports Dr. Fall's assertion. Indeed

when Dr. Castrejon evaluated Claimant upon his return visit in May, he only documented swelling over the dorsum of the hand, not the wrist. Moreover, Dr. Cassidy conducted a thorough examination of the right hand and wrist on two occasions, noting that Claimant had "no visible deformity or gross abnormalities appreciated about the right wrist." Finally, when the undersigned visually inspected Claimant's right hand as part of a requested disfigurement viewing, he was unable to appreciate swelling over the volar surface of the right wrist. Indeed, visual inspection only revealed mild swelling over the dorsum of the right hand, distal to the wrist.

18. In terms of wage loss, Claimant testified that he stopped working for the Respondent employer on November 9, 2016. He then obtained new employment with a company named "Mel-Ro Construction" for which he only worked for a couple of months that came to an end before Claimant returned to Dr. Castrejon on May 4, 2017 and restrictions were imposed. Claimant did return to work for Mel-Ro Construction for the months of November and December of 2017. He also began working for Mel-Ro Construction again approximately three weeks prior to the court hearing, which would be May 29, 2017; however, he only anticipated that work lasting for another month. Claimant testified that he has not sustained any new injury to his right upper extremity since the work event on September 30, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to

resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Drs. Fall and Cassidy regarding the relatedness of Claimant's right sided CTS to his September 30, 2016 work injury are credible and supported by the medical record as a whole. When the evidentiary record is considered in its totality, the opinions of Dr. Fall and Dr. Cassidy are more persuasive than contrary opinions of Drs. Castrejon and Hall.

Overcoming the DIME regarding MMI

D. A DIME physician's findings of causation and MMI are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo.App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo.App. 1995). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* W.C. No. 4-782-625 (ICAO, May 24, 2010).

E. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo.App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo.App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo.App. 1998).

F. MMI is defined, in part, as the "the point in time . . . when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5), C.R.S. A finding of MMI is premature if a course of treatment has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990). Moreover, a finding that a claimant is not at MMI may rest solely upon recommendations for further diagnostic evaluation if such procedures have a reasonable prospect of diagnosing or defining the claimant's condition to suggest a course of further treatment. *E.g., Soto v. Corrections Corp*., W.C. No. 4-813-582 (ICAO, October 27, 2011). Here, the weight of the persuasive evidence demonstrates that Claimant's need for additional diagnostic testing/evaluation was necessary to determine the cause of Claimant's persistent right hand pain/swelling and to formulate an appropriate treatment plan for his condition. Because Claimant's ongoing symptoms were arguably related to his admitted industrial injury, the ALJ finds that Dr. Castrejon properly rescinded his prior MMI declaration of October 4, 2016. Consequently, the ALJ agrees with Claimant that he was not at MMI after he returned to Dr. Castrejon's attention on May 4, 2017. However, the evidence presented is insufficient to establish that Claimant was not at MMI prior to May 4, 2017.

G. While Claimant was not at MMI as of May 4, 2017, the additional diagnostic testing revealed that Claimant's ongoing symptoms were most likely emanating from non-work-related causes, i.e. his degenerative arthritis involving the right hand and non-work-related CTS at the right wrist. Indeed, Dr. Cassidy opined on May 31, 2017, that Claimant's right hand x-rays and MRI demonstrated degenerative changes and were "consistent with a possible arthropathy" which would not be "attributed to an injury related to work." Moreover, he noted that Claimant demonstrated evidence of compressive nerve symptoms that would likely be "unrelated" to his work injury "given that the median nerve is located on the volar aspect of the hand and would be protected from any dorsal blow." The subsequent results of Claimant's EMG would strengthen Dr. Cassidy's opinion that Claimant's work-related injury did not cause his right sided CTS in as much as the EMG study demonstrated the presence of carpal tunnel syndrome on the contralateral, i.e. left side as well.

H. Based upon the evidence presented, the ALJ concludes that neither Claimant nor Respondents have overcome the Division IME with regard to MMI. The credible evidence establishes that Claimant's ongoing symptoms are probably related to his carpal tunnel syndrome and not the work-related incident of September 30, 2016. Although Claimant remains symptomatic and that he requires ongoing treatment, the ALJ credits the opinions of Dr. Cassidy and Dr. Fall to find and conclude that his symptoms and need for treatment are causally related to non-industrially based conditions. Contrary to Claimant's assertion, the evidence presented persuades the ALJ that Claimant's work related contusion has stabilized and no further treatment is reasonably expected to improve that condition. Consequently, the ALJ agrees with Respondents that Claimant was properly placed at MMI. Nonetheless, the date by which Claimant attained MMI must be addressed given Respondents challenge to Dr. Greenslade's MMI opinion.

I. Respondents' contention that Dr. Greenslade erred in assigning an MMI date of May 31, 2017 is unpersuasive. In this case, the evidence supports Dr. Greenslade's opinion that Claimant reached MMI by this date. Indeed the diagnostics lead Dr. Cassidy to conclude that while Claimant remained symptomatic, his symptoms and need for additional treatment correlated to his non-work-related conditions. Moreover, the medical record supports Dr. Greenslade's indication that Claimant's residual dorsal hand swelling had resolved by this date. Consequently, she chose this as Claimant's date of MMI. After considering the totality of the evidence presented, the ALJ concludes that Respondents have failed to produce unmistakable evidence establishing that the DIME physician's determination regarding MMI is highly probably incorrect. Rather, the ALJ concludes that the evidence presented at hearing establishes a mere difference of opinion between the DIME physician and Respondents' retained medical expert. A professional difference of opinion do not rise to the level of clear and convincing evidence that is required to overcome Dr. Greenslade's opinion concerning MMI. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000),* Consequently, Respondents request to set aside Dr. Greenslade's MMI determination must be denied and dismissed.

Dr. Greenslade's Impairment Rating

J. While a DIME physician's opinions are entitled to special weight on issues of MMI and whole person impairment, they are not entitled to any special weight when it comes to extremity ratings. See *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App. 1998)(DIME provisions do not apply to the rating of scheduled injuries). Consequently, where permanent impairment is limited to a portion of the body included on the list of scheduled ratings in C.R.S. § 8-43-107(2)(a) a DIME opinion merely has to be rebutted by a preponderance of the evidence to be overcome. *Delaney v. Industrial Claims Appeals Office,* 30 P.3d 691, 693 (Colo.App. 2000). Based upon the evidence presented, the ALJ agrees with Respondents that Dr. Greenslade's decision to award a range of motion deficit in this case is in error. Here, Claimant's only work-related diagnosis, i.e. a contusion, more probably than not, resolved without objective pathology that would provide a basis for a rating. The evidence presented persuades the ALJ that Claimant's residual pain and range of motion loss is likely emanating from his non-work-related CTS and arthritis rather that any mild residual dorsal hand swelling

K. Non-work related conditions cannot form the basis for a permanent impairment rating based on range of motion. *See Serena v. SSC Pueblo Belmont OP Co.*, 2015 Colo. Wrk. Comp. LEXIS 120, W.C. No. 4-922-344-01 (ICAO, December 1, 2015) (holding that DIME physician's range of motion rating for the spine was overcome by clear and convincing evidence showing that the claimant's spinal condition was pre-existing and therefore non-work related).

Claimant's Entitlement to Additional Medical Benefits

L. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury or prevent further deterioration of the claimant's condition. § 8-42-101, C.R.S.; *Grover v. Industrial*

Commission, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609, 611 (Colo.App.1995). However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App. 2000). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that the need for subsequent medical treatment was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those, which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); § 8-41-301(1)(c), C.R.S. 1997. Based upon the totality of the evidence presented, the ALJ concludes that Claimant has failed to establish a causal relationship between his need for CTS surgery and his September 30, 2016 work injury, i.e. he failed to overcome the causality opinion of Dr. Greenslade. While Claimant's need for CTS surgery is reasonable and necessary, the ALJ credits the opinions of Dr. Greenslade, Dr. Cassidy and Dr. Fall to find that his need for surgery is not causally related to his September 30, 2016 industrial injury. As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship between a claimant's alleged injury and his/her work based on temporal proximity. To the contrary, as noted by the panel in *Scully* "correlation is not causation." Because Claimant has failed to establish that his need for additional medical treatment, including his need for surgery was proximately caused by an injury arising out of and in the course of the employment, his claim for additional medical benefits must be denied and dismissed.

Claimant's Entitlement to Temporary Total Disability Benefits

M. To establish entitlement to temporary disability benefits, Claimant must prove that the industrial injury caused a disability lasting more than three work shifts; that he left work as a result of the disability, and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo.App. 1997). Section 8-42-103(1)(a), C.R.S., requires Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by Claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of the earning capacity element may be evidenced by a complete inability to work, or by restrictions, which impair the Claimant's ability to effectively, and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998). In this case, the evidence presented establishes that on May 4, 2017, Dr. Castrejon rescinded MMI and imposed physical restrictions, which the ALJ concludes would have impaired Claimant's ability to effectively, and properly perform his regular work. Moreover, the record is devoid of any convincing evidence that Employer offered Claimant modified duty after May 4, 2017. Consequently, the ALJ concludes that Claimant was "disabled"

within the meaning of section 8-42-105, C.R.S. beginning May 4, 2017. Claimant did not return to work and his "disability" continued through the date that Dr. Greenslade placed him at MMI- May 31, 2017. Consequently, the ALJ concludes that Claimant is entitled to TTD benefits from May 4, 2017 through May 30, 2017.

Claimant's Entitlement to Disfigurement Benefits

N. In *Arkin v. Industrial Commission*, 145 Colo. 463, 358 P.2d 879 (1961), the Court held that the term "disfigurement" as used in the statute, contemplates that there be an "observable impairment of the natural person." As found at Finding of Fact, ¶ 17 above, visual inspection of Claimant's right hand reveals mild dorsal swelling when compared to the same area on the left hand. While the natural appearance of the right hand tissue is altered minimally, it is nonetheless perceptive. Consequently, the ALJ concludes that Claimant has suffered a visible disfigurement entitling him to additional benefits as provided for in C.R.S. §8-42-108 (1).

ORDER

It is therefore ordered that:

1. Claimant's request to set aside the DIME opinion of Dr. Greenslade regarding MMI is denied and dismissed.

2. Respondents' request to set aside the DIME opinion of Dr. Greenslade regarding MMI is denied and dismissed. Claimant is found to have reached MMI effective May 31, 2017.

3. Respondents' request to set aside the DIME opinion of Dr. Greenslade regarding Claimant's scheduled impairment is granted. The 15% scheduled impairment rating assigned by Dr. Greenslade is set aside and replaced by the 0% impairment rating originally assigned by Dr. Castrejon as supported by Dr. Fall.

4. Claimant's request for additional medical treatment, including CTS surgery, is denied and dismissed.

5. Claimant is entitled to TTD benefits from May 4, 2017 to May 30, 2017 when said benefits shall terminate based upon his being placed at MMI on May 31, 2017.

6. Claimant is entitled to and Respondents shall pay disfigurement benefits in the amount of $500.00.

7. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

8. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 2, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

1. Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Timothy O. Hall, M.D. that Claimant suffered an 18% whole person impairment as a result of his February 8, 2016 admitted industrial injury in case number W.C. 5-007-076.

2. Whether Claimant has proven by a preponderance of the evidence that he suffered a lumbar spine injury during the course and scope of his employment with Employer on December 14, 2017 in case number W.C. 5-066-360.

3. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits as a result of his December 14, 2017 industrial injury for the period December 15, 2017 until terminated by statute.

FINDINGS OF FACT

1. Claimant works for Employer as a Delivery Driver. His job duties involve delivering automobile and RV parts throughout Colorado. Claimant ears $9.40 per hour.

2. On February 8, 2016 in case number W.C. 5-007-076 Claimant suffered an admitted lumbar strain when he was involved in an automobile accident. He underwent a conservative course of treatment at Concentra Medical Centers that included injections and physical therapy.

3. On June 22, 2016 Claimant visited Authorized Treating Physician (ATP) Douglas E. Hemler, M.D. for an evaluation. Dr. Hemler diagnosed Claimant with spondylosis, radiculopathy and intervertebral disc degeneration in the lumbar region. He recounted that Claimant had "done well with the combination of physical therapy, epidural steroid injections and the course of cognitive behavioral therapy." Dr. Hemler determined that Claimant had reached Maximum medical Improvement (MMI). Relying on Table 53 of the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides)* he assigned a 7% rating for Claimant's lumbar spine. He specifically assigned the impairment for moderate to severe degeneration at the L5-S1 level. Dr. Hemler also assigned a 2% whole person impairment rating for lumbar spine range of motion deficits. Finally, Claimant received a 1% whole person rating for sensory impairment based on residual elements of radiculopathy. Combining the ratings yields a 10% whole person impairment. Dr. Hemler released Claimant to regular employment with a 50-pound independent lifting restriction.

4. On December 14, 2017 Claimant was performing his regular job duties for Employer when he re-injured his lower back. Claimant specifically testified that, while he was pushing a "grill guard" or "bumper" out of a truck, he felt a "pop" and experienced immediate pain in his lower back. He completed his work shift after the accident. Claimant reported his injury to Employer three days later on December 17, 2016.

5. On December 20, 2017 Claimant returned to Dr. Hemler for a follow-up examination. Dr. Hemler noted that Claimant was "generally doing well with persistent low back pain and occasional leg pain." He remarked that Claimant "has sustained one additional flareup but does not feel that there was a new injury." Dr. Hemler prescribed a short course of chiropractic care that focused on "active release techniques." He also recommended a few days off work so that Claimant could adequately participate in initial chiropractic care. Dr. Hemler returned Claimant to full duty employment with breaks every one to two hours and a 50-pound lifting restriction.

6. On January 9, 2018 Claimant visited Ronald Peveto, M.D. at Concentra for an examination. Claimant reported continued, radiating lower back pain since his December 14, 2017 work accident. He commented that he was pushing a bumper when he felt a "pop" in his lower back and pain in his right lower extremity. Dr. Peveto remarked that Claimant had suffered an industrial lower back injury because of a motor vehicle accident on February 8, 2016. Claimant reached MMI after receiving conservative medical treatment. Dr. Peveto diagnosed Claimant with a lumbar strain and radiculopathy of the right leg.

7. On January 10, 2018 Claimant underwent a Division Independent Medical Examination (DIME) with Timothy O. Hall, M.D. for his February 8, 2016 admitted industrial injury. After reviewing Claimant's medical records and conducting a physical examination, Dr. Hall agreed that Claimant had reached MMI on June 22, 2016. He remarked that Claimant "certainly appeared" to be stable at the time of MMI. In considering an impairment rating Dr. Hall noted that the matter was a "bit tricky" with Claimant's subsequent December 14, 2017 injury. Relying on the *Guides*, Dr. Hall assigned Claimant a 7% rating pursuant to Table 53 for severe degenerative changes at L5-S1. He also assigned Claimant an 11% rating for range of motion deficits and a 1% impairment for neurological deficits. Dr. Hall explained that the 11% range of motion rating was "quite a bit different" from the impairment assigned by Dr. Hemler. He noted that "this likely relates to this intervening event. How that might get worked out logistically is up to others."

8. On February 6, 2018 Claimant visited Randall Jones, M.D. at Concentra for an evaluation. Dr. Jones noted that Claimant had reached MMI in June 2017 for his February 8, 2016 injury. He commented that the December 14, 2017 incident "has a component of exacerbation" of the February 8, 2016 injury.

9. On February 19, 2018 Claimant visited Kirk Prochnio, P.A. at Star Spine & Sport. Claimant reported lower back pain that radiated into his right lower extremity. P.A. Prochnio recounted that Claimant suffered an industrial injury in February 2016 but completed treatment and reached MMI in June 2017. He noted that Claimant had a flare-

up at work on December 15, 2017 when he was delivering a rear bumper. While pushing the bumper Claimant felt a "pop" in his back with pain radiating into his right lower extremity. P.A. Prochnio recommended chiropractic treatment.

10. On March 9, 2018 Claimant visited Natasha Deonarain, M.D. at Concentra. Dr. Deonarain recounted that Claimant had initially suffered a lumbar spine injury on February 8, 2016 and received conservative treatment. Claimant exacerbated his symptoms in December 2017 when he suffered a "pop" while pushing a weight and leaning to his left. He continued to experience symptoms that radiated into his right lower extremity.

11. Allison M. Fall, M.D. testified at the hearing in this matter. She had conducted an independent medical examination of Claimant and issued a written report on April 5, 2017. Dr. Fall also performed a records review and issued a written report on May 22, 2018. She agreed that Claimant reached MMI on June 22, 2016 for his February 8, 2016 admitted industrial injury. Dr. Fall thoroughly reviewed Dr. Hemler's report and agreed that Claimant warranted a 10% whole person impairment rating pursuant to the *AMA Guides*.

12. However, Dr. Fall disagreed with Dr. Hall's 18% whole person impairment rating because it constituted an incorrect application of the *AMA Guides*. She explained that Dr. Hall's increase in Claimant's impairment rating was based on a subjective increase in pain complaints that was inconsistent with the *AMA Guides*. As Dr. Hall acknowledged, the 11% range of motion rating was significantly different from Dr. Hemler's rating. The increased rating was based upon the December 14, 2017 intervening event. However, as Dr. Fall remarked, an impairment rating is determined at the time of MMI and there would be no reason for Claimant's impairment to increase over time. She summarized that there was no medical reason for Claimant's range of motion to decrease from June 22, 2016 until the date of the DIME. Accordingly, Dr. Hall's 18% whole person impairment rating was clearly erroneous.

13. Dr. Fall also maintained that Claimant did not suffer a new lumbar spine injury on December 20, 2017. Considering the December 20, 2017 report from Dr. Hemler, Dr. Fall explained that Claimant suffered a flare-up or temporary increase in symptoms. Claimant's physical findings remained the same and his lumbar MRI's before and after the December 14, 2017 incident only reflected diffuse, degenerative findings and no acute changes. Dr. Fall commented that flare-ups occur with lower back conditions. She summarized that there was no objective evidence that Claimant suffered a new injury on December 14, 2017.

14. Claimant testified at the hearing in this matter. He explained that he received additional work restrictions after his December 14, 2017 injury and was unable to perform his regular job duties. Claimant commented that, because of his re-aggravation, he has been unable to return to work.

15. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Hall that Claimant suffered an 18% whole person impairment as

a result of his February 8, 2016 admitted industrial injury. Initially, on February 8, 2016 in case number W.C. 5-007-076 Claimant suffered an admitted lumbar strain when he was involved in an automobile accident. He underwent a conservative course of treatment at Concentra that included injections and physical therapy. On June 22, 2017 Dr. Hemler concluded that Claimant had reached MMI. He assigned a 7% impairment for moderate to severe degeneration at the L5-S1 level of the lumbar spine. Dr. Hemler also assigned a 2% whole person impairment rating for lumbar spine range of motion deficits. Finally, Claimant received a 1% whole person rating for sensory impairment based on residual elements of radiculopathy. Combining the ratings yields a 10% whole person impairment.

16. On January 10, 2018 Claimant underwent a DIME with Dr. Hall. Dr. Hall assigned Claimant a 7% rating pursuant to Table 53 for severe degenerative changes at L5-S1. He also assigned an 11% rating for range of motion deficits and a 1% impairment for neurological deficits. Dr. Hall explained that the 11% range of motion rating was "quite a bit different" from the impairment assigned by Dr. Hemler. Absent a causal analysis, he commented "this likely relates to this intervening event. How that might get worked out logistically is up to others."

17. In contrast, Dr. Fall persuasively disagreed with Dr. Hall's 18% whole person impairment rating because it constituted an incorrect application of the *AMA Guides*. She explained that Dr. Hall's increase in Claimant's impairment rating was based on a subjective increase in pain complaints that was inconsistent with the *AMA Guides*. As Dr. Hall acknowledged, the 11% range of motion rating was significantly different from Dr. Hemler's rating. The increased rating was based upon the December 14, 2017 intervening event. However, as Dr. Fall remarked, an impairment rating is determined at the time of MMI and there would be no reason for Claimant's impairment to increase over time. She summarized that there was no medical reason for Claimant's range of motion to decrease from June 22, 2016 until the date of the DIME. Therefore, Dr. Hall's 18% whole person impairment rating was clearly erroneous. Moreover, Dr. Hall was evaluating Claimant for the February 8, 2016 injury but assigned a range of motion impairment predicated on a separate incident that occurred on December 14, 2017. By increasing Claimant's range of motion impairment based on an event unrelated to the February 8, 2016 admitted industrial injury, Dr. Hall's evaluation was incorrect. Respondents have thus produced unmistakable evidence free from serious or substantial doubt that it is highly probable that Dr. Hall's 18% whole person impairment rating is incorrect.

18. The 10% whole person impairment rating assigned by ATP Dr. Hemler is appropriate. Dr. Hemler assigned a 7% rating for Claimant's lumbar spine. In the absence of the December 20, 2017 event, he also assigned a 2% whole person impairment rating for lumbar spine range of motion deficits. Claimant also received a 1% whole person rating for sensory impairment based on residual elements of radiculopathy. Finally, after reviewing Dr. Hemler's analysis, Dr. Fall agreed that Claimant warranted a 10% whole person impairment rating for his February 8, 2016 admitted industrial injury.

19. Claimant has failed to prove that it is more probably true than not that he suffered a lumbar spine injury during the course and scope of his employment with

Employer on December 14, 2017 in case number W.C. 5-066-360. Initially, on December 14, 2017 Claimant was pushing a "grill guard" or "bumper" out of a truck when felt a "pop" and experienced immediate pain in his lower back. The record reveals that the incident did not constitute a new injury. Instead, the medical records are replete with evidence that Claimant's December 14, 2017 symptoms were a flare-up or exacerbation of his admitted February 8, 2016 lumbar spine injury. Dr. Jones noted that the December 14, 2017 incident "has a component of exacerbation" of the February 8, 2016 injury. P.A. Prochnio remarked that Claimant had a flare-up at work on December 14, 2017 when he was delivering a rear bumper. Dr. Deonarain recounted that Claimant had initially suffered a lumbar spine injury on February 8, 2016 and received conservative treatment. However, Claimant exacerbated his symptoms in December 2017 when he suffered a "pop" while pushing a weight and leaning to his left.

20. Dr. Fall also persuasively maintained that Claimant did not suffer a new lumbar spine injury on December 20, 2017. Considering the December 20, 2017 report from Dr. Hemler, Dr. Fall explained that Claimant suffered a flare-up or temporary increase in symptoms. Claimant's physical findings remained the same and his lumbar MRI's before and after the December 14, 2017 incident only reflected diffuse, degenerative findings without any acute changes. Dr. Fall commented that flare-ups occur with lower back conditions. She summarized that there was no objective evidence that Claimant suffered a new injury on December 14, 2017. Claimant's December 20, 2017 work incident did not constitute a distinct injury but was simply a flare-up of his February 8, 2016 admitted industrial injury. Accordingly, Claimant's Workers' Compensation claim in case number W.C. 5-066-360 is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME in case number W.C. 5-007-076

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. A physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings. §8-42-101(3.7), C.R.S. Table 53(II)(B) of the AMA Guides assigns a 5% whole-person rating where an injured worker suffers an "intervertebral disc or other soft tissue lesion" in the lumbar spine which is unoperated, with a medically documented injury and, "[A] minimum of six months of medically documented pain and rigidity with or without muscle spasm." The determination of whether a claimant meets the criteria of

Table 53 II.B is made at the time of MMI and not at the time of any subsequent evaluation. *Lopez v. Cargill Meat Solutions*, W.C. Nos. 4-757-408 and 4-758-952 (Sept. 9, 2010). In order to receive a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established.

8. If a party has carried the initial burden of overcoming the DIME physician's impairment rating by clear and convincing evidence, the ALJ's determination of the correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., W.C. No. 4-600-47 (ICAP, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAP, Mar. 19, 2004); *McNulty v. Eastman Kodak Co*., W.C. No. 4-432-104 (ICAP, Sept. 16, 2002).

9. As found, Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Hall that Claimant suffered an 18% whole person impairment as a result of his February 8, 2016 admitted industrial injury. Initially, on February 8, 2016 in case number W.C. 5-007-076 Claimant suffered an admitted lumbar strain when he was involved in an automobile accident. He underwent a conservative course of treatment at Concentra that included injections and physical therapy. On June 22, 2017 Dr. Hemler concluded that Claimant had reached MMI. He assigned a 7% impairment for moderate to severe degeneration at the L5-S1 level of the lumbar spine. Dr. Hemler also assigned a 2% whole person impairment rating for lumbar spine range of motion deficits. Finally, Claimant received a 1% whole person rating for sensory impairment based on residual elements of radiculopathy. Combining the ratings yields a 10% whole person impairment.

10. As found, on January 10, 2018 Claimant underwent a DIME with Dr. Hall. Dr. Hall assigned Claimant a 7% rating pursuant to Table 53 for severe degenerative changes at L5-S1. He also assigned an 11% rating for range of motion deficits and a 1% impairment for neurological deficits. Dr. Hall explained that the 11% range of motion rating was "quite a bit different" from the impairment assigned by Dr. Hemler. Absent a causal analysis, he commented "this likely relates to this intervening event. How that might get worked out logistically is up to others."

11. As found, in contrast, Dr. Fall persuasively disagreed with Dr. Hall's 18% whole person impairment rating because it constituted an incorrect application of the *AMA Guides*. She explained that Dr. Hall's increase in Claimant's impairment rating was based on a subjective increase in pain complaints that was inconsistent with the *AMA Guides*. As Dr. Hall acknowledged, the 11% range of motion rating was significantly different from Dr. Hemler's rating. The increased rating was based upon the December 14, 2017 intervening event. However, as Dr. Fall remarked, an impairment rating is determined at the time of MMI and there would be no reason for Claimant's impairment to increase over

time. She summarized that there was no medical reason for Claimant's range of motion to decrease from June 22, 2016 until the date of the DIME. Therefore, Dr. Hall's 18% whole person impairment rating was clearly erroneous. Moreover, Dr. Hall was evaluating Claimant for the February 8, 2016 injury but assigned a range of motion impairment predicated on a separate incident that occurred on December 14, 2017. By increasing Claimant's range of motion impairment based on an event unrelated to the February 8, 2016 admitted industrial injury, Dr. Hall's evaluation was incorrect. Respondents have thus produced unmistakable evidence free from serious or substantial doubt that it is highly probable that Dr. Hall's 18% whole person impairment rating is incorrect.

12. As found, the 10% whole person impairment rating assigned by ATP Dr. Hemler is appropriate. Dr. Hemler assigned a 7% rating for Claimant's lumbar spine. In the absence of the December 20, 2017 event, he also assigned a 2% whole person impairment rating for lumbar spine range of motion deficits. Claimant also received a 1% whole person rating for sensory impairment based on residual elements of radiculopathy. Finally, after reviewing Dr. Hemler's analysis, Dr. Fall agreed that Claimant warranted a 10% whole person impairment rating for his February 8, 2016 admitted industrial injury.

Compensability in case number W.C. 5-066-360

13. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

14. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

15. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job

function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

16. As found, Claimant has failed to prove by a preponderance of the evidence that he suffered a lumbar spine injury during the course and scope of his employment with Employer on December 14, 2017 in case number W.C. 5-066-360. Initially, on December 14, 2017 Claimant was pushing a "grill guard" or "bumper" out of a truck when felt a "pop" and experienced immediate pain in his lower back. The record reveals that the incident did not constitute a new injury. Instead, the medical records are replete with evidence that Claimant's December 14, 2017 symptoms were a flare-up or exacerbation of his admitted February 8, 2016 lumbar spine injury. Dr. Jones noted that the December 14, 2017 incident "has a component of exacerbation" of the February 8, 2016 injury. P.A. Prochnio remarked that Claimant had a flare-up at work on December 14, 2017 when he was delivering a rear bumper. Dr. Deonarain recounted that Claimant had initially suffered a lumbar spine injury on February 8, 2016 and received conservative treatment. However, Claimant exacerbated his symptoms in December 2017 when he suffered a "pop" while pushing a weight and leaning to his left.

17. As found, Dr. Fall also persuasively maintained that Claimant did not suffer a new lumbar spine injury on December 20, 2017. Considering the December 20, 2017 report from Dr. Hemler, Dr. Fall explained that Claimant suffered a flare-up or temporary increase in symptoms. Claimant's physical findings remained the same and his lumbar MRI's before and after the December 14, 2017 incident only reflected diffuse, degenerative findings without any acute changes. Dr. Fall commented that flare-ups occur with lower back conditions. She summarized that there was no objective evidence that Claimant suffered a new injury on December 14, 2017. Claimant's December 20, 2017 work incident did not constitute a distinct injury but was simply a flare-up of his February 8, 2016 admitted industrial injury. Accordingly, Claimant's Workers' Compensation claim in case number W.C. 5-066-360 is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

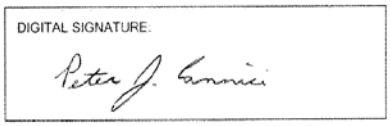
1. Claimant reached MMI on June 22, 2016 and suffered a 10% whole person impairment rating as a result of his February 8, 2016 admitted industrial injury in case number W.C. 5-007-076.

2. Claimant's Workers' Compensation claim in case number W.C. 5-066-360 is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: August 3, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Respondents established by a preponderance of evidence that they are entitled to withdraw their July 24, 2017 General Admission of Liability.

II. Whether Respondents have proven by a preponderance of the evidence that Claimant's injury was caused by a willful violation of a safety rule, entitling Respondents to a 50% reduction of benefits pursuant to Section 8-42-112(1)(b), C.R.S.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonably necessary medical benefits to cure and relieve the effects of the industrial injury.

IV. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability ("TTD") benefits from September 6, 2017 to February 17, 2018.

STIPULATIONS

The parties stipulated to an average weekly wage ("AWW") of $359.60.

FINDINGS OF FACT

1. Claimant is a 45-year-old man who worked for Employer as a campground host in the Timberline Campground. Claimant was hired to work for the summer 2017 season. Claimant was required to live on the Timberline Campsite grounds five days a week, and that during those five days a week he was on duty twenty-four hours a day.

2. Lenny Dame and Darla Dame, Area Managers, supervised Claimant.

3. At the time of hire, Claimant received Employer's Host Operating Plan and 2017 Employee Handbook, which detailed Claimant's job duties. Claimant testified he received and read both documents. The Host Operating Plan provides, "safety of visitors is paramount." It further states, "All campsites will be policed regularly and between occupancies for litter and debris. Particular attention will be paid to finding and correcting potentially hazardous situations." One of the specific safety hazards listed in the Host Operating Plan is "fire dangers."

4. The list of Campground Hosts Responsibilities notes that hosts are required to "[o]versee several responsibilities within a Campground Unit" including meeting and greeting customers, collecting fees, completing reports, performing routine cleaning, responding to emergency situations, monitoring facilities for repair and safety needs,

and reporting problems to general manager. An orientation document further provides, "If no cell coverage in campground; know exactly where cell coverage is available."

5. The Employer provided Claimant an ATV to use in the completion of his job-related duties. The "Company Property" section of the 2017 Employee Handbook provides that Employer property,

> [m]ust be maintained according to Company rules and regulations. They must be kept clean and are to be used only for work-related purposes. [Employer] reserves the right to inspect all Company property including computer or phone date or messages to ensure compliance with its rules and regulations…Prior authorization must be obtained before any
>
> Company property may be removed from the premises. Company vehicles must be maintained in a manner that ensures they are safely operating…Cell phone use is not permitted while driving company vehicles.

The handbook lists lockers, furniture, desks, computers, cell phones, data processing equipment/software, vehicles, boats, power tools, trailers, rental equipment, golf carts, and ATVs as company property. The handbook also includes a "Safety and Health" section that contains no specific rules regarding ATV usage.

6. Claimant testified that his job duties during included enforcing campsite rules, controlling camper parking, cleaning fire pits, restocking the bathrooms, patrolling the campsite premises, and performing general cleaning and maintenance of the camp property. Claimant testified that he believed he had job duties that extended beyond the campground property, including: provide safety to campers through proper cell phone connections, and fire safety, patrol the overflow parking outside of the campground, watch for burning fires and clean up dispersed campsites.

7. On June 30, 2017, Claimant was injured when he fell off of the ATV that was provided to him by Employer. Claimant testified he drove the ATV out of the Timberline Campground. He initially drove south on County Road 125, then turned right onto County Road 58 and traveled westbound to the intersection of County Road 48 and 811. Claimant turned around at that intersection, waited for a truck to pass, and then made a right-hand turn onto County Road 58 to travel back toward the Timberline Campground. Claimant testified that he likely traveled 40 or 50 yards before he lost control and rolled the ATV. Claimant testified he woke up on the ground approximately 20 to 25 feet away from the ATV.

8. Medical records from the Platte Canyon Fire Protection District note Claimant was found covered in dust and abrasions "as if he tumbled several times." Claimant was transported to St. Anthony's Hospital via Flight for Life and diagnosed with traumatic subarachnoid hemorrhage with loss of consciousness. He was released to return to work on July 5, 2017 with restrictions of no lifting.

9. Ms. Dame testified that a camp host from another campsite notified her that Claimant was taken to the hospital after overturning an ATV. Ms. Dame completed an Incident Report and an Accident Report. The Accident Report noted the accident occurred on County Road 58. The Incident Report noted Claimant "was not in the campground" at the time of the incident.

10. On July 24, 2017, Respondents filed a General Admission of Liability in this case, admitting liability for Claimant's June 30, 2017 accident. On September 1, 2017, Respondents filed a second General Admission of Liability on September 1, 2017 amending for admitted TTD, noting Claimant returned to work with full wages on July 5, 2017.

11. Claimant testified that he drove the ATV off of the Timberline Campground site on June 30, 2017 for two reasons: to check for messages on his cellular phone and to ensure that there were not any fires burning in the dispersed campsites located in the areas surrounding Timberline Campground.

12. It is undisputed Claimant did not have cellular phone service within the Timberline Campground site. Claimant also testified that the campsite grounds did not have any internet access or mail service. Claimant testified that he could find cellular phone service by traveling west on County Road 58 from the Timberline Campground. Claimant testified he hoped to obtain any available information about local fire bans and federal camp codes and to download text and voicemail messages from his supervisors and/or from his friends and family. Claimant testified he was not attempting to access cellular phone service to report any emergency at the time of the accident.

13. Claimant testified that the second purpose of his ATV ride on June 30, 2017 was to check for unattended fires burning in the dispersed campsites immediately outside of the Timberline Campground site near the intersection of County Road 58 and 811. Claimant testified that he routinely did this because an unattended fire would constitute a safety hazard that would pose a safety risk to himself and to the campers at Timberline Campground. Claimant testified that he believed that his job duties required such precautionary measures. At the time, there was a fire ban in his county. Claimant testified that he was not specifically instructed to check the dispersed campsites, but that there also were no instructions to not do so. Claimant testified that, in conversation, Mr. Dame told him to keep an eye out for burning and unattended campfires. Claimant testified that Mr. Dame mentioned in a prior conversation that he himself had checked the dispersed campsites. Claimant further testified that in conversations prior to the accident he had mentioned to the Dames that he looked for campfires in the areas of the dispersed campsites. Claimant testified that the only way he was able to observe the dispersed campsites was by traveling on County Road 58.

14. Regarding his use of the ATV, Claimant testified he was aware the ATV was to be used for job-related duties. Claimant testified that neither Mr. Dame nor Ms. Dame told him that he should not take the ATV off campsite property, or of any other restrictions regarding the use of the ATV. Claimant testified that he did not seek permission to take the ATV off campsite because he believed doing so was within his

job duties and he was unaware of breaking any rules or company policies. Claimant testified that, prior to the accident, he did not read any signs on County Road 58 prohibiting ATV use. Claimant testified that he did not believe he was violating any traffic or state laws by riding the ATV on County Road 58.

15. Claimant testified that, despite his work restrictions, he returned to work for Employer following the June 30, 2017 accident and worked in a modified capacity for Employer until the position ended on September 6, 2017. Claimant testified that, to his knowledge, he remains under his initial work restrictions. Claimant testified that, following the end of the camping season, he was still experiencing painful symptoms as a result of the June 30, 2017 accident, including pain, difficulty standing or sitting for long periods of time, and difficulty bending and lifting heavy objects. Claimant testified that he looked for work that would fit within his restrictions and physical abilities, but he was initially unable to find a position that he could complete and, as a result, he was unemployed from September 6, 2017 to February 17, 2018. Claimant began employment at a grocery store on February 17, 2018.

16. Both Mr. Dame and Ms. Dame deny the assertion that Claimant was responsible for any duties off of the campsite grounds. They testified that Claimant's job duties were to greet customers, collect fees, clean bathrooms and fire pits, keep general campground clean. Ms. Dame testified that she never told Claimant that part of his duties included taking care of areas outside Timberline Campground, nor to care for dispersed sites, nor to check for fires in other areas. According to Ms. Dame, there was no reason why Claimant would have had to check on these dispersed camp sites as part of his duties and responsibilities as a camp host. Ms. Dame testified that she has never stopped in a dispersed campsite because it is within the jurisdiction of the United States Forest Service, not Employer. Ms. Dame testified that she never gave Claimant permission to take the ATV offsite and was not aware that he was using it offsite. She stated, "We told him it was not to be used outside the campground, it was for campground use only." Ms. Dame testified that there are signs on County Road 58 prohibiting the use of ATVs.

17. Mr. Dame also testified that he never told Claimant he was supposed to go offsite to look for fires, and that it was not Claimant's responsibility to look for fires outside of the campground. He testified that there are dangers associated with maintaining outside campsites, and he did not ask his employees to assume those risks.

18. Mr. Dame further testified that there are no dispersed campsites anywhere on or off County Road 58, other than those on the same side of the road of the Timberline Campground. Mr. Dame testified that one is located no more than 500 feet from the gate of the campground, and there are two more that are a short quarter of a mile away Those campsites were within walking distance and would not have required the use of an ATV for access. Mr. Dame testified that beyond the County Road 58 turnoff, the terrain would not even support a dispersed campsite. Mr. Dame stated that, in any event, Claimant was not required to monitor any dispersed campsites. Ms. Dame confirmed there were no dispersed campsites on the opposite side of Country Road 58

from the Timberline Campground. Mr. Dame testified he was unaware Claimant was checking the dispersed sites. In regard to fire safety, the area around the campsite was managed by the Forest Service.

19. Mr. Dame testified that he also instructed Claimant that the ATV was only to be used in the campground. He testified he instructed Claimant to "keep the ATV on the dirt roads in the campground. And 5 miles per hour just like you tell your customers for the speed limit. And I told him indirectly, that this is a bonus for you, if you abuse it, or you think it's an off-road vehicle and you want to go flying around, I will take it away from you." Mr. Dame also testified that use of ATVs on County Road 58 is prohibited, stating, "There's signs all over the roads out there that says no ATV off road riding." He testified that he could read the signs before the accident. Mr. Dame testified that, after Claimant returned to work, he advised Claimant that Claimant was not supposed to take the ATV out of the campground, reminded him that they had that conversation before, and told him not to do it again.

20. Mr. and Ms. Dame acknowledged that the safety of campers should be of paramount concern to a camp host, that part of Claimant's job was to watch for safety hazards that could pose a threat to the campers at Timberline Campground, and that an unattended or uncontrolled fire could constitute a safety hazard.

21. On January 18, 2018, Claimant presented to Roman Kesler, D.O., who diagnosed Claimant with a traumatic subarachnoid hemorrhage, right hip pain and low back pain. He recommended a brain MRI, EEG and neuropsychology assessment, and orthopedics evaluation. Dr. Kesler did not address work restrictions.

22. On February 15, 2018, George Schakaraschwili, M.D., performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Schakaraschwili opined that Claimant needed to be cleared by neuropsychology and neurology for any sequel of his traumatic brain injury, and that his hip and low back pain needed to be addressed. Regarding Claimant's work status, Dr. Schakaraschwili stated that Claimant's work status could be clarified after the source of his back/hip pain was evaluated.

23. The ALJ finds Claimant's testimony more credible and persuasive than the testimony of Mr. and Ms. Dame.

24. Respondents failed to prove by a preponderance of the evidence that Claimant did not sustain a compensable industrial injury arising out of and in the course and scope of his employment on June 30, 2017. Respondents are not entitled to withdraw their July 24, 2017 General Admission of Liability.

25. Respondents failed to prove by a preponderance of the evidence that Claimant willfully violated a safety rule.

26. Claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment related to the industrial injury.

27. Claimant established by a preponderance of the evidence that he is entitled to TTD benefits from September 6, 2017 to February 17, 2018.

28. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Withdrawing an Admission of Liability

Section 8-43-201, C.R.S. provides that a Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence.

Generally, a claimant bears the burden of proving by a preponderance of the evidence that an injury occurred within the course of, and arose out of, employment with the employer. Section 8-41-301(1), C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). However, by filing an admission of liability, respondents to a workers' compensation claim admit that the injured worker has met that burden. *Rocky Mountain Cardiology v. Industrial Claim Appeals Office*, 94 P.3d 1182 (Colo. App. 2004). Once an admission of liability has been filed, the employer may not unilaterally withdraw it, but must continue making payments consistent with the admitted liability until the ALJ enters an order allowing the employer to revoke the admission in full or in part. *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001); *Arenas v. Industrial Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). A party seeking to modify or withdraw an admission of liability bears the burden of proof for such a modification or withdrawal. Section 8-43-201, C.R.S.; *Rodriguez v. City of Brighton,* W.C. No. 4-782-516 (ICAO August 23, 2011).

Here, Respondents seek to withdraw a previously filed General Admission of Liability admitting the compensability of Claimant's June 30, 2017 industrial injury. Therefore, in order to withdraw the previously filed admission of liability, Respondents bear the burden of proof to establish, by a preponderance of the evidence, that Claimant did not suffer a compensable injury arising out of and during the course of his employment.

The ALJ concludes Respondents failed to meet their burden to prove Claimant did not suffer a compensable injury arising out of and in the course of his employment. Claimant was responsible for ensuring the safety of campers and finding and correcting potentially hazardous situations. While it was not mandatory for Claimant to go outside of the campground to check for unattended fires, the ALJ is persuaded that doing so had its origin in Claimant's work-related functions and was sufficiently related to his job duties. Unattended fires in surrounding dispersed campsites could reasonably pose a threat to campers within the Timberline Campground. The injury occurred while Claimant was on his way back to the campsite, traveling on the closest road that provided visibility to observe surrounding dispersed campsites. The ALJ is persuaded Claimant was operating within the course and scope of his employment at the time of the accident. Accordingly, Respondents have failed to prove by a preponderance of the evidence that Claimant did not suffer a compensable injury, and thus are not entitled to withdraw their General Admission of Liability.

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-

101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant proved by a preponderance of the evidence he is entitled to receive reasonable and necessary medical treatment related to the June 30, 2017 industrial injury. Both Drs. Kesler and Schakaraschwili have opined Claimant requires additional medical treatment. Respondents shall be liable for reasonable and necessary treatment to cure or relieve the effects of the June 30, 2017 industrial injury.

Temporary Total Disability

To prove entitlement to TTD benefits, a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. Anderson v. Longmont Toyota, 102 P.3d 323 (Colo. 2004); PDM Molding, Inc. v. Stanberg, 898 P.2d 542 (Colo. 1995); City of Colorado Springs v. Industrial Claim Appeals Office, 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. PDM Molding, Inc. v. Stanberg, supra. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. Culver v. Ace Electric, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. Ortiz v. Charles J. Murphy & Co., 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; City of Colorado Springs v. Industrial Claim Appeals Office, supra.

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. Lymburn v. Symbios Logic, 952 P.2d 831 (Colo. App. 1997).

Claimant was assigned work restrictions immediately following the June 30, 2017 injury. No evidence was presented indicating the restrictions have been lifted. Although Claimant was able to continue working in a modified capacity for Employer until the end of the camping season, Claimant credibly testified that he was unable to secure work between September 6, 2017 and February 16, 2018 due to his inability to lift heavy objects and sit and stand for periods of time as a result of the industrial injury. The ALJ is persuaded the restrictions and continued symptoms resulting from the June 30, 2017 injury impaired Claimant's ability to effectively and properly perform his regular employment, thus resulting in wage loss. Accordingly, Claimant is entitled to TTD benefits from September 6, 2017 to February 17, 2018.

Safety Rule Violation

Section 8-42-112(1)(b), C.R.S., provides for a fifty percent reduction in benefits if the employee is injured due to a willful failure to obey any reasonable rule adopted by the employer for the safety of the employee. The respondents carry the burden of establishing all five elements of a safety rule violation, which are: 1) There must be a specific, unambiguous and definite safety rule adopted by the employer; 2) The safety rule must be reasonable; 3) The safety rule must be "brought home" to the employee and diligently enforced; 4) Violation of the safety rule must be willful; 5) The violation of the safety rule must be a cause of the claimant's injury. *Lori's Family Dining, Inc. v. Indus. Claim Appeals Office*, 907 P.2d 715, 719 (Colo. App. 1995).

Violation of a rule is not willful unless the claimant did the forbidden act with deliberate intent. A violation which is the product of mere negligence, carelessness, forgetfulness or inadvertence is not willful. *Bennett Properties Co. v. Indus. Commission*, 437 P.2d 548 (Colo. 1968); *Johnson v. Denver Tramway Corp.*, 171 Colo. 214, 171 P.2d 410 (1946). Conduct which might otherwise constitute a safety rule violation is not willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). A violation of a safety rule will not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

Respondents contend Claimant violated a safety rule when he took the Employer's ATV offsite. The ALJ is not persuaded Employer's rule regarding taking the ATV off company premises was a rule adopted for the safety of Claimant. The rule regarding taking the ATV offsite specifically refers to Employer property, including furniture, computers, cell phones, and data processing equipment/software. The rule refers to the right to inspect employer property to ensure compliance and use for business purposes. Although the handbook contains an entire section regarding safety and health, there is no other reference to the usage of ATVs. The ALJ is persuaded the rule relied on by Respondents was for the purpose of protection of company property, not the safety of the employee.

Even assuming, arguendo, the rule was adopted by Employer for the safety of the employee, Respondents failed to prove it is more likely than not Claimant willfully violated the rule. Claimant credibly testified he was not instructed by either Mr. or Ms. Dame to keep the ATV within the campgrounds. Claimant credibly testified he was aware the ATV was to be used only for work purposes, and that he did not seek permission to take the ATV offsite because he reasonably believed his use of the ATV was within his job duties. Claimant credibly testified he took the ATV on County Road 58 for the purpose of obtaining cellular telephone service and checking for unattended fires that could pose risk to the campsite, which were reasonably within Claimant's duties. Accordingly, Respondents failed to meet their burden to prove a willful violation of a safety rule.

ORDER

It is therefore ordered that:

1. Respondents' request to withdrawal the General Admission of Liability is denied.

2. Respondents failed to establish that Claimant's injury resulted from his willful failure to obey a reasonable safety rule adopted for the safety of the employees and therefore Respondents are not entitled to a reduction in benefits.

3. Respondents shall pay TTD benefits to Claimant for the period of September 6, 2017 to February 17, 2018.

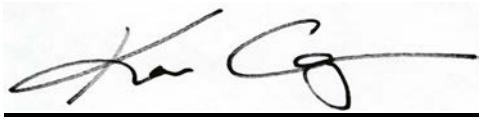
4. Respondents shall pay for reasonable and necessary medical treatment related to the June 30, 2017 industrial injury.

5. The parties' stipulation with respect to average weekly wage is hereby approved. Claimant's average weekly wage is $359.60 unless and until it is subject to adjustment pursuant to law.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 3, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Is this claim closed by a December 20, 2017 Final Admission of Liability?
- Disfigurement benefits.

FINDINGS OF FACT

1. Claimant sustained admitted injuries to her left leg and ankle on April 5, 2017 in a slip and fall accident. She suffered a complex fibular fracture and underwent an open reduction with internal fixation (ORIF) on April 10, 2017.

2. Claimant was placed at MMI by her ATP on December 5, 2017, with a 12% left lower extremity impairment rating.

3. Melissa Mcleod is the adjuster at Broadspire assigned to administer this claim for Insurer. On December 20, 2017, Ms. Mcleod filed a Final Admission of Liability (FAL) admitting for the 12% scheduled rating. The certificate of mailing indicates the FAL was sent to the Division, Employer, and to Claimant's home address. Claimant was not represented by counsel at the time.

4. Ms. Mcleod credibly explained her procedures for preparing and mailing FALs from her home office. Crediting Ms. Mcleod's testimony, the ALJ finds the FAL was properly addressed and mailed on December 20 as reflected on the certificate of mailing.

5. Consistent with her standard procedures for FALs, Ms. Mcleod also issued Claimant's first PPD check on December 20, 2017. The indemnity payments are sent from a central printing facility in Georgia.

6. Claimant received the PPD check on December 27 or 28, 2017. She did not understand what the payment was for, so she called Ms. Mcleod the next day for an explanation. Ms. Mcleod did not answer because she was out of the office for the holidays. Claimant called a few more times over the next several days.

7. Ms. Mcleod returned Claimant's call on January 4, 2018. Claimant asked about the check, and Ms. Mcleod explained it was PPD based on the ATP's rating. Claimant expressed concern about continuing with her chiropractor, but Ms. Mcleod said she could finish the sessions already scheduled. Ms. Mcleod informed Claimant she had mailed a FAL under separate cover containing detailed information regarding the status of her claim. Claimant said she had received no documents other than the check, so Ms. Mcleod agreed to send her another copy of the FAL.

8. Claimant received the second copy of the FAL on January 9 or 10, 2018.[1] She read it but did not understand the technical legal issues being addressed. A friend who is an attorney reviewed the FAL and recommended she consult an attorney who specializes in a workers' compensation claims.

9. Claimant retained Ms. Roepke on February 1, 2018. That day, Ms. Roepke objected to the FAL and filed a DIME Notice and Proposal on Claimant's behalf. Ms. Roepke also applied for a hearing endorsing medical benefits and disfigurement.

10. PALJ Barbo entered a prehearing conference order on March 8, 2018 holding the DIME process in abeyance pending the outcome of the present litigation.

11. Claimant and Ms. Mcleod were credible and persuasive regarding their respective aspects of the events in question.

12. Claimant credibly testified she and her husband have been vigilant and well-organized regarding all mail received from Broadspire during the pendency of her claim. Claimant's actions after receiving the PPD check on December 27 or 28 were consistent with an individual who had not received the FAL. Claimant acted diligently and expeditiously to protect her rights after she received the FAL.

13. Respondents proved by a preponderance of the evidence the FAL was properly addressed and mailed to Claimant on December 20, 2017.

14. Claimant proved by a preponderance of the evidence she never received the original FAL mailed to her on December 20, 2017. She received a different copy of the FAL on January 9 or 10, 2018.

15. Claimant had no meaningful opportunity to act on the FAL between the date she received it and the original objection deadline of January 19, 2018.

16. The time to object to the FAL was tolled until Claimant received a copy on January 9 or 10, 2018. Claimant's February 1, 2018 objection, DIME Notice and Proposal, and application for hearing were timely.

17. The December 20, 2017 FAL did not close this claim.

18. Claimant has injury-related disfigurement consisting of: (1) a 10-inch long by 1/8 to 1/4 inch wide, irregular, indented and discolored surgical scar on the left lower leg; (2) the primary scar is flanked along its length by many pairs of suture scars; (3) permanent swelling around the left ankle joint; and (4) a slight alteration of gait favoring the injured leg. The ALJ finds that Claimant should be awarded $4,500 for disfigurement.

[1] The ALJ finds it of no consequence whether Claimant received the FAL on January 9 or 10, because neither date afforded a meaningful opportunity to act on it. Furthermore, Claimant perfected her objection less than 30 days from either date.

CONCLUSIONS OF LAW

A. This claim is not closed

An FAL provides the primary mechanism for the respondents to initiate administrative closure of a claim. Once an FAL is filed, the claimant must take certain actions within thirty days or the claim will "automatically close." A claimant can either request a hearing on ripe and disputed issues or initiate the DIME process by filing a "notice and proposal." *See* §§ 8-43-203(2)(b)(II)(A); 8-42-107.2(2)(b).

The FAL procedure is "part of a statutory scheme designed to promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of a formal administrative determination in cases not presenting a legitimate controversy." *Leewaye v. Industrial Claim Appeals Office*, 178 P.3d 1254 (Colo. App. 2007). The purpose of an FAL is to notify the claimant of the exact bases on which benefits have been admitted or denied so the claimant "can make an informed decision whether to accept or contest the final admission." *Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). Due process requires that a claimant receive actual notice of the FAL before it can operate to close a claim. *Bowlen v. Munford*, 921 P.2d 59 (Colo. App. 1996). Due process also requires parties be afforded sufficient time to protect their rights. *Whiteside v. Smith*, 67 P.3d 1240 (Colo. 2003).

Proof that a letter was properly addressed and mailed raises a rebuttable presumption of receipt. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). If the addressee denies receipt, the ALJ must resolve the issue as a question of fact. *Trujillo v. Industrial Commission*, 735 P.2d 211 (Colo. App. 1987).

If the claimant does not receive an FAL that was properly addressed and mailed, the objection window is tolled until the claimant receives the FAL. *E.g., Hall v. Home Furniture Co.*, 724 P.2d 94 (Colo. App. 1986) (time limitation did not commence running "until claimant's attorney first received notification . . . that the admission had been filed"); *Davies v. Kindred Healthcare*, W.C. No. 4-727-298-03 (July 30, 2014); *Henriquez v. K. R. Swerdfeger Construction, Inc*., W.C. No. 4-439-726 (May 5, 2003) (time to object was triggered when claimant's attorney received the FAL in copy of DOWC file).

Although Claimant received a copy of the December 20 FAL less than thirty days after it was originally served, the remaining time was too short to give a "meaningful opportunity" to act it. *See Whiteside v. Smith, supra; Duran v. Russell Stover Candies*, W.C. No. 4-524-717 (April 13, 2004) (objection deadline not tolled despite improper address because claimant actually received the FAL five days after it was mailed). By the time Claimant received the FAL, only nine or ten days remained in the original 30-day objection window. That did not allow sufficient time to determine whether — and how — to object to the FAL. This is particularly true since Claimant was not represented by counsel, which meant she had to contact attorneys, find one willing to meet with her, schedule an appointment, and attend a consultation, before she could obtain legal advice. Despite her diligence, it took Claimant at least twenty-two days to complete that process.

Colorado has long had a "strong" public policy that "in workers' compensation cases the goal of achieving a just result overrides the interests of litigants in achieving a final resolution of their dispute." *Padilla v. Industrial Commissi*on, 696 P.2d 273, 278 (Colo. 1985). At the same time, Respondents have a legitimate interest in achieving prompt closure of claims where there is no ongoing controversy not amenable to resolution by administrative closure. *E.g., Mitchell v. Office Liquidators Inc*., W.C. No. 4-409-905 (December 29, 2000). The General Assembly balanced those competing interests by allowing claimants thirty days, less a reasonable time for transit through the mail, to evaluate their options in response to a FAL. Here, it took at least twenty days after the initial service for Claimant to receive the FAL, far in excess of customary mailing times. Strictly enforcing the original objection deadline under these circumstances would be a denial of Claimant's due process rights.

After considering all the evidence presented, the ALJ concludes the time to object to the FAL was tolled until Claimant received it on January 9 or 10, 2018. Thus, her objection was timely and the claim is not closed.

B. Disfigurement

Section 8-42-108(1) provides that a claimant is entitled to additional compensation if she is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." As found, Claimant has sustained noticeable disfigurement as a direct and proximate result of her April 5, 2017 injury. The ALJ concludes Claimant should be awarded $4,500 for her disfigurement.

ORDER

It is therefore ordered that:

1. Insurer shall pay Claimant $4,500 for disfigurement. Insurer may take credit for any disfigurement previously paid on this claim.

2. Respondents' defense that this claim is closed by the December 20, 2017 FAL is denied and dismissed. This claim remains open.

3. Claimant may proceed with the DIME process, if desired, in accordance with PALJ Barbo's March 8, 2018 prehearing conference order.

4. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: August 7, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits to treat his left upper extremity CRPS and whether the left upper extremity CRPS is causally related to his January 15, 2016 work injury.

FINDINGS OF FACT

1. On January 15, 2016, Claimant sustained an admitted work related injury while employed by Employer. On that date, Claimant was drilling through a piece of metal wall plate when a bit snagged on the metal and jerked his right wrist, causing pain and injury.

2. Claimant's right wrist was casted for three months, but he had continued symptoms and ultimately underwent surgery on June 3, 2016.

3. Following surgery, Claimant continued to have right forearm pain, hand pain, and paresthesias. In September of 2016 Roberta Anderson Oeser, M.D. noted his hypersensitivity in the forearm and hand. Dr. Oeser noted that Claimant may require further work-up to rule out CRPS and she recommended an EMG/NCS. *See* Exhibit 1.

4. On October 4, 2016, Claimant underwent an EMG test performed by Dr. Oeser that was normal. She recommended Claimant undergo a QSART study and stress thermogram to rule out CRPS of the right upper extremity with Dr. Schakaraschwili. *See* Exhibit 1.

5. On October 24, 2016, George Schakaraschwili, M.D. evaluated Claimant. Claimant reported right forearm and hand pain and paresthesias. Claimant reported that after surgery he had numbness in the right thumb and in the fourth and fifth digits with pain radiating from the hand and wrist to the elbow. Claimant reported sensitivity in the forearm and sharp pain at the medial and lateral distal wrist. Claimant reported episodes of reddish to purplish discoloration, swelling in the wrist, decreased range of motion in the wrist, and inability to make a fist. Claimant reported that his right upper extremity felt cold when compared to the left side. On examination Dr. Schakaraschwili found mild redness on the right when compared to the left, trace edema in the hand and fingers as shown by decreased skin folds in the fingers on the right, decreased range of motion at the right wrist and fingers, and the right upper limb feeling cold in some areas and warm in some areas when compared to the left side. Dr. Schakaraschwili noted that Claimant underwent an infrared stress thermographic analysis of the upper extremities followed by an autonomic testing battery (QSART). *See* Exhibit 1.

6. Dr. Schakaraschwili opined that the study was abnormal and showed paradoxical cooling of the right hand with exposure to cool ambient temperatures. He also noted that there were significant areas of temperature asymmetry between the left and right upper limbs. Dr. Schakaraschwili noted that the resting and stimulated sweat output was very symmetrical between the left and right but that the resting skin temperatures were significantly asymmetric with differences exceeding 3 degrees Celsius at some sites. *See* Exhibit 1.

7. Dr. Schakaraschwili opined that the findings were high probability for complex regional pain syndrome (CRPS). *See* Exhibit 1.

8. Claimant returned to Dr. Oeser who provided the impression of CRPS and noted the results of testing performed by Dr. Schakaraschwili. *See* Exhibit 1.

9. On January 31, 2017, Claimant first reported pain in his left wrist/lower forearm area on a pain diagram at a visit with Dr. Oeser. *See* Exhibit 1.

10. On May 2, 2017, Dr. Oeser evaluated Claimant. Claimant reported intermittent left upper extremity pain in addition to his continued right forearm and hand pain and paresthesias. Claimant reported a burning sensation in the left upper extremity. Dr. Oeser hoped that stellate ganglion blocks would better control Claimant's right upper extremity CRPS and hoped that they would also decrease the left upper extremity symptoms. *See* Exhibit 1.

11. On September 12, 2017, Dr. Oeser evaluated Claimant. Claimant reported that he had not undergone right stellate ganglion blocks due to problems with authorization when he switched facilities. Claimant reported that he was quite concerned that he was having more symptoms in his left upper extremity in addition to hypersensitivity of his left arm. He was quite worried about his future and how he would be able to provide for his family. Dr. Oeser found bilateral upper extremity hypersensitivity, numbness, and tingling. Claimant was noted to have hyperhidrosis on the right and his right hand was warmer to touch than his left. *See* Exhibit 1.

12. On September 28, 2017, Dr. Oeser evaluated Claimant. On exam, Dr. Oeser noted that both of Claimant's hands were warm to touch. Claimant was again concerned about his recent flare up in right upper extremity pain and the increasing symptoms in his left upper extremity. Dr. Oeser discussed the case with Dr. Schakaraschwili and they agreed that repeating the QSART and stress test to determine whether Claimant's CRPS had spread to the left upper extremity would be appropriate. *See* Exhibit 1.

13. On October 9, 2017 Lawrence Lesnak, M.D. performed a medical records review. Dr. Lesnak opined that Claimant had not met the diagnostic criteria for CRPS of the right upper extremity based on documented subjective complaints and clinical findings. Dr. Lesnak opined that Claimant may have sustained a right wrist strain/sprain on January 15, 2016 but noted that Claimant's right wrist MRI revealed minimal findings.

Despite the minimal findings, Dr. Lesnak noted that surgery was done and had not surprisingly failed to improve Claimant's symptoms. Dr. Lesnak opined that Claimant did not appear to qualify for the later diagnosis of right upper extremity CRPS based on the lack of difference between resting and stimulated sweat testing. Dr. Lesnak noted that since the right upper extremity CRPS diagnosis, Claimant had undergone numerous right sided stellate ganglion blocks that had reportedly provided temporary relief of symptomatology. However, Dr. Lesnak noted that Claimant's symptoms and functions seemed to have steadily progressed. Based on all the information, Dr. Lesnak opined that it appeared Claimant had significant psychosocial factors that were currently affecting his symptoms, recovery, and his perceived function. Dr. Lesnak opined that Claimant had primarily subjective complaints without any clear objective findings to support the complaints. Dr. Lesnak opined that with the lack of long-term improvement of symptoms or function, Claimant had reached a status of maximum medical improvement for his injury. Dr. Lesnak also noted that although Dr. Oeser documented recent complaints of left upper extremity symptoms, there were absolutely no documented objective findings whatsoever to support any type of diagnosis of CRPS involving the left upper extremity. *See* Exhibit B.

14. On October 20, 2017, Dr. Schakaraschwili performed testing on Claimant's left upper extremity. Dr. Schakaraschwili found 0 of 3 points on vasomotor index with no evident swelling, 1 of 3 points for slight but measurable end range of motion restriction, 0 of 3 points for visible asymmetry of skin coloration, skin appearance, or nail growth and overall 1/9 on the clinical scale. Dr. Schakaraschwili found 3 of 3 points for skin temperature asymmetry greater than or equal to 1 degree Celsius in a diffuse distribution; 0 of 3 points for resting sweat index; and 1 of 3 points for stimulated sweat output asymmetry with a total of 4/9 points on the laboratory scale. *See* Exhibit 1.

15. Dr. Schakaraschwili noted that a laboratory score of 4/9 combined with a clinical score of 1/9 was consistent with a high probability for the presences of CRPS in the left upper extremity. Dr. Schakaraschwili noted that Claimant had been seen previously one year prior for right forearm and hand pain and paresthesias. Claimant reported that he had recently been developing pain in his left upper extremity that was previously asymptomatic and that he was now having pain in his left wrist and hand similar to the pain he was experiencing on the right. Claimant also noted that when he had right stellate ganglion blocks and the nurse started an IV in his left arm, the tape used to secure the IV began to cause a burning sensation on his skin on the left. Dr. Schakaraschwili noted that Claimant's right upper extremity appearance had improved since the last examination. Dr. Schakaraschwili noted that both hands were slightly red and that at the prior exam, the right hand was warner than the left and now the left was warmer than the right. Claimant reported dysesthesias and sensitivity to touch throughout the upper extremities. Dr. Schakaraschwili noted that the prior study one year ago found the right upper extremity hyperthermic compared to the left side whereas today's study found the left upper extremity hyperthermic when compared to the right. Dr. Schakaraschwili found both upper extremities demonstrated paradoxical warming with exposure to cool ambient temperatures, which was an abnormal sympathetic autonomic response. He noted that the infrared stress thermogram was abnormal in both upper extremities with asymmetric

stimulated sweat responses and significant temperature abnormalities and temperature relationships that were reversed compared to the prior study. He opined that there was objective evidence meeting the Division Diagnostic Criteria for a diagnosis of CRPS of the left and right upper extremities. *See* Exhibit 1.

16. On October 31, 2017, Dr. Oeser evaluated Claimant. She noted the results of the stress thermogram and QSART of the upper extremities and opined that based on the results, unfortunately, Claimant's CRPS had spread to the other extremity. Dr. Oeser ordered stellate ganglion blocks on the left. *See* Exhibit 1.

17. On November 7, 2017, Dr. Lesnak performed another medical records review after reviewing the October 20, 2017 testing performed by Dr. Schakaraschwili. Dr. Lesnak reviewed the medical treatment guidelines and the diagnostic components required for a clinical diagnosis of CRPS. Dr. Lesnak opined that at least three subjective complaints in four different categories were required. Dr. Lesnak opined that at the time of the October 20, 2017 evaluation Claimant did not meet any of the criteria required for the subjective complaint component of the diagnostic criteria required for a diagnosis of CRPS. Dr. Lesnak opined that Claimant also must have documentation in two or more of four categories for clinical findings and that on the recent exam, there were no clinical findings and thus opined that Claimant did not satisfy the clinical exam criteria where you need at least two or more of four categories. Dr. Lesnak opined that it was required that a patient satisfy the criteria in the subjective complaints and clinical exam findings prior to meeting criteria for diagnostic testing. Dr. Lesnak noted that although Claimant may have had a reported positive thermogram, Claimant had at best equivocal results from sympathetic nerve blocks. Dr. Lesnak opined that Claimant did not meet the required diagnostic criteria for CRPS. He opined, therefore, that additional diagnostic testing such as a left sided stellate ganglion injection trial was therefore not medically necessary or reasonable. *See* Exhibit C.

18. On November 14, 2017, Gary Gutterman, M.D. evaluated Claimant. Dr. Gutterman opined that Claimant had experienced an adjustment disorder with mixed emotional features including anxiety and depression and that the adjustment disorder was due to Claimant's employment injury, which led to CRPS. Dr. Gutterman noted that Claimant had trouble dealing with his chronic pain and altered mobility. *See* Exhibit E.

19. On November 15, 2017, Dr. Oeser evaluated Claimant. She disagreed with many of Dr. Lesnak's findings. She opined that under the medical treatment guidelines Claimant met both the clinical and diagnostic criteria for CRPS. Dr. Oeser opined specifically for the diagnostic components of clinical CRPS, Claimant met the criteria of continuing pain disproportionate to any inciting event and met the criteria for more than one symptom in the category of sensory, vasomotor, pseudo motor/edema, and motor/trophic. Dr. Oeser opined that Claimant had hyperesthesia and allodynia in both upper extremities, temperature asymmetry, prior skin color changes and hyperhidrosis, particularly of the right hand, and hyperalgesia and allodynia to light touch, pinprick, and joint movement with no other diagnosis that better explained the signs and symptoms. She noted that Claimant also met criteria under diagnostic components with his positive

infrared stress thermography, positive QSART, and positive response to sympathetic blocks. *See* Exhibit 1.

20. On December 6, 2017, Dr. Schakaraschwili issued a report responding to Dr. Lesnak's medical records review from November 7, 2017. Dr. Schakaraschwili reviewed the clinical criteria for diagnosing CRPS per Rule 17, Exhibit 7 of the medical treatment guidelines. Dr. Schakaraschwili noted that he was usually skeptical when hearing reports that CRPS had spread to other parts of the body and noted that the physiological mechanism by which patients develop pain and sensitivity in other areas of the body after the initial diagnosis of CRPS is not understood. Dr. Schakaraschwili noted that when Claimant was examined on October 20, 2017 Claimant had some objective changes in his left upper extremity compared to the previous examination including color change, warmness in the left hand, dysesthesias and sensitivity to touch, and pain disproportionate to any inciting event. Dr. Schakaraschwili also noted that Claimant reported hyperesthesia and allodynia. Dr. Schakaraschwili noted therefore that Claimant had symptoms in two of the four categories sensory and vasomotor. Dr. Schakaraschwili noted that the objective testing in October of 2017 showed temperature asymmetries with the left upper extremity as the warmer one, pseudo motor changes, and high probability on the autonomic testing battery. Dr. Schakaraschwili noted that paradoxical warming was found on the infrared stress thermogram and on the prior testing there was no evidence of paradoxical warming on the left. Dr. Schakaraschwili opined that paradoxical warming was an abnormal sympathetic autonomic response. Dr. Schakaraschwili opined that although Claimant did not meet all the clinical criteria outlined in the treatment guidelines for the left (with two not three symptoms) he did meet criteria based on physical examination and tested positive on two objective tests. Dr. Schakaraschwili opined that he had no other explanation for the temperature abnormalities and paradoxical sympathetic responses observed in the left upper extremity on testing and concluded, more likely than not, that Claimant has CRPS of the left upper extremity. *See* Exhibit 1.

21. On December 13, 2017, Dr. Oeser evaluated Claimant. She reviewed Dr. Schakaraschwili's report and agreed that Claimant had CRPS of both upper extremities. *See* Exhibit 1.

22. On January 17, 2018, Dr. Lesnak performed another medical records review after reviewing Dr. Schakaraschwili's December 6, 2017 report. Dr. Lesnak noted that it seemed quite clear that Dr. Schakaraschwili had admitted that Claimant did not meet all the required criteria for diagnosis of CRPS in the left upper extremity. Dr. Lesnak agreed that CRPS was difficult to assess and diagnose and that therefore we must rely on the medical treatment guidelines and that since Claimant did not meet the required criteria for diagnosis of left upper extremity CRPS, proceeding with an invasive procedure such as a left sided stellate ganglion block was not appropriate or reasonable. Dr. Lesnak also believed that Dr. Schakaraschwili had failed to take into consideration the significant psychosocial factors affecting Claimant's symptoms, recovery, and perceived function. *See* Exhibit D.

23. Dr. Lesnak and Dr. Schakaraschwili testified at hearing consistent with their prior reports.

24. Dr. Lesnak testified that because CRPS is a difficult diagnosis, specific clinical criteria must be present before proceeding with that diagnosis. He testified that there had to be 3/4 categories of subjective complaints and 2/4 physical findings before considering a CRPS diagnosis. Dr. Lesnak opined that psychosocial factors were very important because physicians rely heavily on reported subjective complaints. He opined that psychosocial factors or psychiatric disorders such as anxiety or depression affect subjective complaints making the subjective complaints less reliable. Dr. Lesnak opined that the documented subjective complaints and documented clinical findings do not meet the guidelines for the diagnosis of left upper extremity CRPS. He opined that the only subjective complaint documented was some burning of Claimant's skin with tape, which did not fit any categories and noted that no other subjective complaints were listed. Dr. Lesnak also noted that the clinical findings did not meet the required criteria with no asymmetry in distal upper extremity color, no swelling, and improved range of motion. Dr. Lesnak opined with no subjective complaint criteria and only 1/4 clinical findings, Claimant did not meet the criteria and should not have proceeded with diagnosis and testing of the left upper extremity for CRPS.

25. Dr. Schakaraschwili testified and agreed that CRPS was not well understood and continued to be controversial. Dr. Schakaraschwili testified that the spread of CRPS is rare but that it makes sense in Claimant's case given the objective and subjective findings. Dr. Schakaraschwili opined that given the difficulty in diagnosis the condition of CRPS, rigid application of the abundance of available criteria was not required. Dr. Schakaraschwili testified that psychosocial issues or factors could not create the objective temperature asymmetries that Claimant had on testing.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should

consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment are proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established by a preponderance of the evidence that he is entitled to reasonable and necessary medical benefits for his left upper extremity CRPS. Claimant has established, more likely than not, that he has left upper extremity CRPS is causally related to his January 15, 2016 work injury.

Both experts in this case agree that CRPS is not well understood and difficult to diagnose. The Medical Treatment Guidelines give guidance on diagnosis and treatment of CRPS. Here, with the pain in Claimant's left upper extremity disproportionate to any inciting event, the allodynia, asymmetry in temperature, skin color changes, sweat asymmetry, weakness, and objective testing Clamant has met his burden. Although not well understood, Claimant has shown more likely than not that his CRPS has spread to his left upper extremity. The opinions of Dr. Schakaraschwili and Dr. Oeser are credible and persuasive that enough criteria exist to diagnose left upper extremity CRPS related to the work injury. Claimant's credible reports of subjective symptoms are similar to those he experiences in his right upper extremity.

The weight of the overall evidence supports the opinion of Dr. Schakaraschwili that although Claimant does not meet all the criteria under the guidelines, Claimant has

enough subjective and objective criteria for the diagnosis of left upper extremity CRPS and that his CRPS has spread. The ALJ finds Claimant has met his burden by preponderant evidence.

ORDER

1. Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits to treat his left upper extremity CRPS. Claimant has established, by a preponderance of the evidence, that his left upper extremity CRPS is causally related to his January 15, 2016 work injury.

2. All other issues are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues presented for hearing were compensability; reasonable, necessary and authorized medical providers; and Respondent's contention that the accident or injury claimed was fully compensated in W.C. No. 5-009-471.

FINDINGS OF FACT

1. On March 3, 2016, Claimant sustained a compensable injury when she struck her head on a counter in the course and scope of employment. Respondent admitted liability and Claimant's case proceeded as W.C. No. 5-009-471. Claimant treated with Dr. Brian McIntyre and several other providers in the chain of his referrals.

2. On November 9, 2016, while still treating for her March 3, 2016 injury, Claimant struck the left side of her head and neck on an x-ray machine at work. She experienced increased symptomology because of the November 9, 2016 event.

3. Claimant reported the November 9, 2016 event and her increased symptoms to Dr. McIntyre on November 15, 2016. Dr. McIntyre's note from that visit states that Claimant struck the back, left side, of her head on an x-ray machine at work. At that time, Dr. McIntyre referred to the event variably as a "re-injury" and an "injury" that caused some regression and worsening in her symptomology.

4. On November 21, 2016, claims representative Kaylee Rowe (p/k/a Kaylee Shaddy) contemporaneously documented a conversation with Claimant. The note indicates that Ms. Rowe and Claimant discussed the November 9, 2017 event and whether Respondent would open a new claim or cover Claimant under claim W.C. No. 5-009-471. Ms. Rowe's note states: *"I advised [Claimant] since it was the same body part and DMP [designated medical provider, Dr. McIntyre] opined that it was an aggravation and that it would continue to be handled under her current claim. [Claimant] expressed understanding."* Ms. Rowe testified that the note set forth the essence of the conversation and her impression that she had answered all of Claimant's questions and informed Claimant that Respondent was going to handle the November 9 event under the original workers' compensation claim, W.C. No. 5-009-471. Ms. Rowe testified that she did not have any direct conversations with Dr. McIntyre but based her decision upon a review of Dr. McIntyre's reports.

5. At hearing, Claimant contested Ms. Rowe's version of the conversation and insisted that the November 9 event was a new claim. Claimant testified that she also took contemporaneous notes of the discussion. However, Claimant did not introduce into evidence any such notes.

6. Dr. McIntyre treated Claimant for both the March 3, 2016 injury and the November 9, 2016 event as part of W.C. No. 5-009-471. Dr. McIntyre's medical reports for the next several months indicate that he was treating Claimant for post-concussive syndrome and strain of the muscle, fascia and tendon at the neck level. His reports also document Claimant's progress and her gradual ability to return to work. Claimant testified at hearing that Dr. McIntyre treated her for both the March injury and November event.

7. Dr. McIntyre testified by June 6, 2018 deposition, that he treated Claimant for over a year. Claimant had a combination of head injury symptoms, including dizziness, difficulty with concentration, fatigue, headache pains and neck pains. Dr. McIntyre indicated that he was aware of the original March 3, 2016 event, and the subsequent November 9, 2016 event. He testified that the November 9, 2016 head contusion occurred to the same general posterior aspect of the skull and that both events shared the following four elements:

- The strain of muscle, fascia and tendon at neck level,
- post concussive syndrome;
- concussion without loss of consciousness, and
- Claimant's head striking against other stationary object.

8. Dr. McIntyre testified that the diagnosis for both incidents same. He also testified that he did not treat the November 9, 2016 event as a completely new injury. Dr. McIntyre testified that they were **"**continuing the same vein of treatment from her previous injury," and that he hoped he would Claimant would not need much more treatment for the November 9, 2016 event because **"**it was just a slight increase in symptomology."

9. Claimant's treatment after November 9, 2016 included:

- Dr. McIntyre referred the Claimant to a neurological specialist, Dr. Patricia Soffer.
- Claimant underwent a CT scan to rule out any new abnormalities.
- Dr. Soffer read the scan and determined it to be normal.
- Dr. McIntyre treated the Claimant's subjective complaints until April 4, 2017.

10. Dr. Patricia Soffer's narrative report on January 27, 2017, indicated that Claimant had improved by that time. She had no further headaches, her cognitive difficulties had resolved, as had her neck pain. Dr. Soffer also found that Claimant's neck was supple with full range of motion. Dr. Soffer discharged Claimant from care on January 27, 2017.

11. Claimant returned to Dr. McIntyre's care until she eventually reached maximum medical improvement on April 4, 2017. Dr. McIntyre released Claimant to full regular activity and duty and prescribed maintenance treatment to consist of two visits with a neurologist, Dr. Patricia Soffer, within the following six (6) months and four (4) chiropractic visits within the following three (3) months of her MMI status. Dr. McIntyre testified that he felt that Claimant was at MMI from *both* the March 3, 2016 injury and November 9, 2016 event.

12. Respondent filed a Final Admission of Liability in W.C. No. 5-009-471 noting that the Claimant had reached MMI and had no impairment. The Respondent also admitted for post-MMI maintenance care with Dr. Soffer and chiropractic care.

13. On January 19, 2018, nine months after receiving the Final Admission of Liability, Claimant filed a new Workers' Claim for Compensation for the November 9, 2016 event. On February 20, 2018 Respondent filed a Notice of Contest, taking the position that the November 9, 2016 event was subsumed within W.C. No. 5-009-471 and that the case was closed.

14. At hearing, Claimant testified that her symptoms worsened because of the November 9, 2016 event and that she did not believe she had received adequate care and treatment.

15. Claimant presented no persuasive evidence that she lost any time or experienced a permanent medical impairment that the Final Admission of Liability in W.C. No. 5-009-471 did not address.

16. Claimant testified that she did not pursue any follow-up treatment with the neurological specialist, Dr. Patricia Soffer, following Dr. McIntyre's recommendation of maintenance medical care. She offered no persuasive evidence that she followed up with any authorized chiropractic care after Dr. McIntyre made those recommendations.

17. Rather, Claimant treated with her private physicians at Kaiser Permanente. She continued to complain of neck pain and headaches in those records.

18. Based on the totality of the evidence, the ALJ finds that Respondent administrated the November 9, 2016 event as a component of W.C. No. 5-009-471.

19. Based on the totality of the evidence, the ALJ finds that Respondent provided Claimant medical care and treatment for the November 9, 2016 event as a component of W.C. No. 5-009-471.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), §8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted

neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. §8-43-201, C.R.S.

In accordance with section 8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Assessing weight, credibility and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

Compensability

Compensation can be awarded only for an injury that is sufficient for the employee to miss more than three (3) days from work or to result in fatality or permanent disability. §8-41-301(1) and (2), C.R.S. Otherwise, the employee is not entitled to compensation payments even though a work-related injury has occurred. §8-42-105(1), §8-42-107(1)(a) and (b), C.R.S., and §8-42-114, C.R.S. The ALJ concludes that in the face of conflicting testimony, there is no credible evidence that the November 9, 2016 bump on the Claimant's head resulted in entitlement to benefits under the Colorado Workers' Compensation Act which were not fully compensated in W.C. No. 5-009-471. The Claimant appears to have been paid temporary benefits until April 4, 2017 when she reached MMI. Claimant presented no persuasive evidence that she was denied any care or treatment related to the November 9, 2017 incident under W.C. No. 5-009-471. The ALJ concludes that there was a work-related incident, but no benefits are due and payable for the November 9, 2016 incident that have not been previously paid and recited in the Final Admission of Liability in W.C. No. 5-009-471.

Claimant did seek unauthorized medical treatment from her personal physicians at Kaiser Permanente. However, Claimant presented no persuasive evidence to support a finding that this treatment should be considered authorized treatment. Dr. McIntyre recommended potential maintenance medical care and Respondent admitted for that maintenance care with authorized providers in W.C. No. 5-009-471.

Respondent is liable only for authorized treatment. See C.R.S. §8-42-201(1); *Pickett v. Colorado State Hospital,* 513 P.2d 228 (1973). Once an ATP has been designated, the claimant may not ordinarily change physicians or employ additional physicians without obtaining permission from the insurer or an ALJ. §8-43-404(5)(a)(i)(A), C.R.S.; WCRP 8-2(E). The ALJ concludes that Dr. McIntyre and his referrals were designated ATPs, as well as providers of authorized maintenance care. Claimant chose to treat with Kaiser Permanente physicians, rather than continue to treat with ATPs. Respondent did not agree to the change, neither did an ALJ authorize it. Therefore, Kaiser Permanente's medical providers are not ATPs.

The ALJ further concludes that Claimant and Ms. Reeves discussed whether the November 9, 2016 event should be handled as two distinct claims or continue under the original claim, W.C. No. 5-009-471. Based on conflicting testimony, the ALJ concludes that Claimant was informed in November 2016 that symptoms she developed as a result of the November 9 event would be handled under the March 3, 2016 injury (W.C. No. 5-009-471). Claimant's actions, until January 9, 2018 when she filed a new claim, are consistent with the understanding that Respondent would handle the November 9, 2016 event handled under W.C. No. 5-009-471.

The ALJ ultimately concludes that even if the two incidents had been treated as separate claims, the credible testimony of Dr. McIntyre indicates that there was no additional necessary and reasonable medical care for either incidents after April 4, 2017. The Final Admission of Liability in W.C. No. 5-009-471 recited all benefits payable for both incidents and that Claimant had no additional temporary disability or permanent impairment for either of the work-related head injuries that had not been concluded by MMI for both incidents by April 4, 2017. Claimant has failed to meet her burden of proof that she is entitled to additional benefits under the Colorado Workers' Compensation Act in this claim.

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. Claimant had an undisputed event on November 9, 2016 while she was treating for a March 3, 2016 injury which was the subject of W.C. No. 5-009-471.

2. Claimant received all reasonable and necessary medical treatment and appropriate disability and/or impairment benefits for the November 9, 2016 event as part of W.C. No. 5-009-471. Those benefits are set forth in Respondent's Final Admission of Liability dated April 5, 2017.

3. Claimant's claims for benefits not covered in W.C. No. 5-009-471 are denied and dismissed with prejudice.

4. Any medical care provided by Kaiser Permanente is not authorized medical care for which the Respondent is responsible.

DONE this 8th day of August 2018.

OFFICE OF ADMINISTRATIVE COURTS

/s/ Kimberly Turnbow
Kimberly B. Turnbow,
Administrative Law Judge

NOTE: If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-wc.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits beginning February 20, 2018 and ongoing until terminated by law.

- Whether the respondents have proven by a preponderance of the evidence that the claimant's claim for TTD is barred by the doctrine of issue preclusion; the doctrine of claim preclusion; or the law of the case.

- At hearing, the parties stipulated that if the claimant is found to be entitled to TTD benefits, the respondents are entitled to an offset for the claimant's receipt of unemployment benefits.

FINDINGS OF FACT

1. The employer operates in the oil and gas industry. The claimant sustained an admitted work injury on March 21, 2013. The injury occurred when the claimant and his coworkers were unloading a trailer full of pipe and the mechanism that held the pipe in place opened and an aluminum "cheater pipe" hit the claimant across the face.

2. The claimant's authorized treating provider (ATP) for this claim has been Work Partners. The claimant was initially seen at Work Partners by Erica Herrera, PA and Dr. Craig Gustafson. On June 25, 2013, the claimant was seen by Ms. Herrera. On that date, Ms. Herrera determined that the claimant could return to work with modified duty. The claimant's work restrictions included sedentary desk work with no strenuous lifting or work, and no safety sensitive work.

3. On August 5, 2013, the claimant returned to Ms. Herrera. On that date, Ms. Herrera released the claimant to full duty, with an instruction to avoid respirator use.

4. On June 9, 2014, Dr. Merrell performed a septoplasty with bilateral inferior turbinate reduction to address the claimant's deviated septum.

5. Thereafter, the claimant continued to treat with Work Partners. On January 7, 2015, the claimant was placed at maximum medical improvement (MMI) by Dr. Gustafson. At that time, Dr. Gustafson assessed a permanent impairment rating of 7% whole person. Dr. Gustafson opined that the claimant would likely need maintenance medical treatment including follow up treatment with Work Partners and Dr. Merrell, repeat surgeries, and medication management.

6. On January 16, 2015, the respondents filed a Final Admission of Liability (FAL) admitting for the January 7, 2015 date of MMI, the 7% whole person impairment rating, and reasonable, necessary, and related maintenance medical treatment.

7. After being placed at MMI, the claimant continued to work for employer without restrictions until he was laid off due to a work slowdown in April 2015.

8. After he was laid off by the employer, the claimant began working for Intermountain Wood Products (IWP) as a truck driver. The claimant testified that although he was able to perform all of his job duties while employed with IWP he experienced "anger fits". The claimant's employment with IWP ended when he was discharged for refusing to drive during a snow storm.

9. Subsequently, the claimant was hired by Gonzo to drive a water truck in the oil and gas industry. On June 30, 2017 while he was working for Gonzo, the claimant was operating a water truck that did not have a working air conditioner so he was driving with the windows down. With the windows down, the cab of the truck filled with dust and claimant experienced what he later learned was a panic attack.

10. On July 17, 2017, the claimant returned to Work Partners and was seen by Dr. Lori Fay. The claimant reported to Dr. Fay that he was still experiencing nosebleeds and headaches. The claimant also reported that his panic attacks seemed to be related to breathing. At that time, Dr. Fay recommended that the claimant avoid dust exposure and specifically included that recommendation as a work restriction. Dr. Fay also recommended that the claimant return to Dr. Merrell for an evaluation and referred the claimant to Dr. Joel Cohen, a psychologist.

11. On August 8, 2017, the claimant returned to Dr. Merrell's office and was seen by Dr. Mark Griffin. Dr. Griffin noted that the claimant's septum was straight and there did not appear to be any anatomical issues.

12. The claimant was first seen by Dr. Cohen on August 17, 2017. At that time, the claimant reported that he was having panic attacks two to three times per week, at a minimum. Dr. Cohen recommended that claimant see psychiatrist, Dr. David Good, for consultation regarding appropriate medication.

13. On August 29, 2017, the claimant was seen at Work Partners by Ms. Herrera. At that time, Ms. Herrera noted that the claimant's panic attacks were getting worse and he was continuing to report memory and cognitive deficits. Based upon the claimant's symptoms, Ms. Herrera opined that the claimant was no longer at MMI and agreed with Dr. Cohen's recommendation that the claimant see Dr. Good for pharmacologic management of his anxiety and depression.

14. On September 27, 2017, the claimant was seen by Dr. Good who diagnosed the claimant with major depression, panic disorder, attention deficit disorder (ADD), concussion, and panic disorder. Dr. Good recommended supportive therapy and prescribed Prozac.

15. On November 27, 2017, the claimant was seen by Dr. Stephen Moe for a psychiatric independent medical examination (IME). Dr. Moe reviewed the claimant's medical records and obtained a medical history from the claimant. In his IME report Dr. Moe diagnosed the claimant with anxiety disorder and opined that the claimant's psychiatric symptoms were related to the March 21, 2013 work injury. Dr. Moe also opined that as of June 30, 2017 the claimant was no longer at MMI.

16. On December 14, 2017, the claimant was seen by Dr. Eric Hammerberg for an IME. Dr. Hammerberg reviewed the claimant's medical records, obtained a medical history from the claimant, and performed a physical examination. In his IME report Dr. Hammerberg agreed with Dr. Moe's assessment that the claimant was no longer at MMI and the claimant's anxiety and depression symptoms were related to the work injury.

17. On February 7, 2018, the parties went to hearing on the issues of reopening the claimant's claim, medical benefits, and temporary total disability (TTD) benefits beginning June 30, 2017.

18. At the February 7, 2018 hearing, the claimant testified that following the June 30, 2017 panic attack he had not yet returned to work for Gonzo. The claimant also testified that Gonzo would not allow him to return to his job duties until he obtained a release from a physician. At the time of the February 7, 2018 hearing, the claimant understood that he was still employed by Gonzo, but was unable to report to work because of the no dust work restriction. The claimant also testified on February 7, 2018 that even if he were able to drive a truck for Gonzo with the windows rolled up, he would still be exposed to dust throughout his work day in the oil fields. The claimant testified that he had not sought employment elsewhere because he wanted to return to work for Gonzo.

19. On March 20, 2018, the undersigned ALJ issued an order reopening the claimant's claim, and ordering authorization of neuropsychological testing and treatment. In that same order, the ALJ denied the claimant's claim for TTD benefits from July 30, 2017 and ongoing. The ALJ specifically found that:

> Claimant has not worked since his panic attack that occurred on June 30, 2017. Currently claimant's only work restriction is "no dust". Claimant has failed to demonstrate that he is unable to work. On the contrary, claimant testified that he has not sought employment elsewhere because he would like to return to work for Gonzo. The ALJ finds that claimant's wage loss is due to claimant's personal preference to not seek work elsewhere, and not due to a physical disability or medical condition.

20. The ALJ's March 20, 2018 order is pending appeal with the Industrial Claim Appeals office.

21. On February 20, 2018, the claimant was seen by Ms. Herrera. The claimant testified that he did not seek treatment with Work Partners prior to February 20, 2018 because the respondents had denied treatment. On that date, Ms. Herrera noted that the triggers of the claimant's panic attacks were dust, driving semi-trucks, eating too much, and/or very stressful situations. At that time, Ms. Herrera changed the claimant's work restrictions by adding "no semi-truck driving" to the no dust exposure restriction. Since February 20, 2017, Work Partners has continued to include "no semi-truck driving" as a work restriction for the claimant. The claimant testified that "triggers" for panic attacks all include a feeling that he cannot breathe.

22. On June 14, 2018, Ms. Herrera participated in a SAMMS conference with the claimant's attorney and the respondents' attorney. At that time, Ms. Herrera clarified that the no semi-truck driving work restriction was based upon the claimant's subjective statement to her at the February 20, 2018 appointment that semi-truck driving triggered his panic attacks.

23. On June 22, 2018, Ms. Herrera responded to correspondence that confirmed information discussed at the SAMMS conference. In her response, Ms. Herrera indicated that the claimant was working on "desensitization techniques". The claimant testified that these techniques included gradually getting back into a semi-truck as a passenger, and then gradually starting to drive a semi-truck. The claimant testified that he had contacted a commercial driver's license (CDL) school to begin this desensitization process.

24. At the current hearing, the claimant reiterated that he did not return to work for Gonzo because he was unable to be exposed to dust and unable to drive a semi-truck. The claimant further testified that at the time of the prior hearing he believed that he was still employed with Gonzo. However, following the February 7, 2018 hearing, the claimant learned that he had been laid off by Gonzo in October 2017 when he received his year end tax document from Gonzo. Once he found out he was laid off by Gonzo, the claimant applied for unemployment benefits. The claimant has been receiving unemployment benefits since April 3, 2018 in the amount of $289.00 per week.

25. The claimant testified that since late February 2018, he has been following the unemployment guidelines and applying for approximately five jobs each week. The claimant testified that he did not apply for jobs before that time because he incorrectly believed that Gonzo was holding his job for him.

26. The claimant testified that since his claim was reopened by order of the ALJ, he has not been able to return to work, despite applying for approximately five jobs per week since February 2018. The claimant also testified that since beginning his job search he has been offered two positions (with Reddy Ice and United Companies). However, those job offers were retracted when the employers learned that the claimant is medically restricted from driving a semi-truck.

27. The claimant testified that all of his job duties for the employer would have violated his current work restrictions, because he was constantly exposed to dust and/or driving a semi-truck. The claimant also testified that he would be unable to return to work for Gonzo because he is unable to be exposed to dust and unable to drive semi-trucks.

28. The claimant testified that although his panic attacks are decreasing in severity, he believes that he is still unable to be exposed to dust or drive semi-trucks, because these are triggers of his anxiety and panic attacks. The claimant testified that the last time he drove a semi-truck was on June 30, 2017, at the onset of the panic attack on that date.

29. Prior to February 20, 2018, no medical records note the claimant reporting panic attacks associated with driving a semi-truck. The medical records prior to February 20, 2018 reflect that the claimant reported a number of other causes of his panic attacks. These causes include: breathing issues at work when exposed to dust; nasal congestion made worse by laying down; after he eats too much; allergic rhinitis; stressful situations; a large meal that puts pressure on his abdomen; and laying on his side.

30. The respondents assert that the issue of the claimant's entitlement to temporary total disability (TTD) benefits is barred by the doctrines of issue preclusion, claim preclusion, and/or the law of the case.

31. The ALJ agrees that the claimant litigated the issue of TTD benefits at the February 7, 2018 hearing. However, at the time of that prior hearing, Ms. Herrera had not yet amended the claimant's work restrictions. Additionally, at time of the February 7, 2018 hearing, the claimant continued to believe that he was employed by Gonzo and as a result limited his search for employment. The claimant's testimony at the current hearing addressed his job separation from Gonzo and his attempts to obtain employment. These are facts that were unknown at the time of the February 7, 2018 hearing. Therefore, the ALJ concludes that the issue of TTD benefits as presented on February 7, 2018 and July 10, 2018 are not identical. As a result, the ALJ finds that that the respondents have failed to prove that it is more likely than not that the doctrines of issue preclusion, claim preclusion, or law of the case apply to bar the claimant's claim for TTD benefits beginning February 20, 2018 and ongoing. Therefore, the claimant's current claim for TTD benefits is not barred.

32. The ALJ credits the claimant's testimony and the medical records, particularly Ms. Herrera's record of February 20, 2018, and finds that the claimant has proven that is more likely than not that he has experienced a wage loss since February 20, 2018. The ALJ also finds that the claimant has demonstrated it is more likely than not that his wage loss is the result of the March 21, 2013 work injury.

33. The claimant credibly testified that one of the triggers of his panic attacks is driving a semi-truck. While the ALJ recognizes that driving semi-trucks was not identified as a trigger until February 2018, the medical records demonstrate that the claimant previously identified "stressful situations" as a cause of his panic attacks. It is reasonable that driving a semi-truck would be a stressful situation for the claimant. This is even more persuasive given that the claimant's first documented panic attack occurred while the claimant was operating a semi-truck. It is also reasonable that this is a legitimate trigger of the claimant's panic attacks.

34. The ALJ specifically credits the claimant's testimony regarding his search for employment since learning he was layoff by Gonzo. The ALJ also credits the claimant's testimony regarding the two job offers that were retracted by potential employers when they learned the claimant was medically restricted from driving a semi-truck. For all of the foregoing reasons, the ALJ finds that the claimant has demonstrated that it is more likely than not that he is entitled to TTD benefits beginning February 20, 2018.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).
