2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

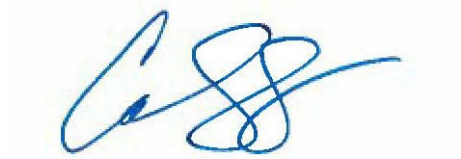
3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable work injury on September 2, 2016. As found, the September 2, 2016 incident may have caused a brief exacerbation of pain symptoms, but did not aggravate, accelerate, or combine with claimant's preexisting condition to necessitate medical treatment. As found, the medical records and the opinions of Dr. Fay, Ms. Herrera, Dr. Bird, and Dr. Hattem are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated: April 25, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant overcome the Division IME opinions of Dr. McCranie regarding MMI and Impairment.

II. Whether Claimant is entitled to curative medical benefits in the form of left shoulder surgery.

III. Whether Claimant is entitled to maintenance medical benefits to maintain his MMI status.

IV. Whether Claimant proved by a preponderance of the evidence that his admitted left upper extremity impairment rating should be converted to a whole-person impairment rating.

V. Whether the medical treatment Claimant received through Colorado Rehabilitation and Occupational Medicine ("CROM") and Spine One was reasonable, necessary, related, and authorized.

PROCEDURAL MATTERS

At the close of Claimant's case-in-chief, Respondents made motions and requests for directed verdicts dismissing Claimant's request for additional curative and maintenance medical benefits provided by, and through referrals from, Colorado Rehabilitation and Occupational Medicine ("CROM") and Spine One as unauthorized. Claimant confessed those motions. The ALJ thus entered an Order granting Respondents' motion for directed verdict denying and dismissing Claimant's requests for maintenance and curative medical benefits provided by, and through referrals from, Colorado Rehabilitation and Occupational Medicine ("CROM") and Spine One as unauthorized.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, currently 60 years-old (date of birth May 26, 1956),was hired by Ryko Solutions, Inc. ("Ryko") on March 1, 2010, as a full time chemical and parts delivery driver. He was injured on July 18, 2016, when, while making a delivery with his chemical delivery truck (a Ford F640), he stepped down while exiting the truck. He was holding a hand rail. His foot missed a step, and he struck his left heel on the curb by the truck. He did not fall to the ground or hit the truck. He reported this incident to Ryko, and selected Concentra as his medical provider.

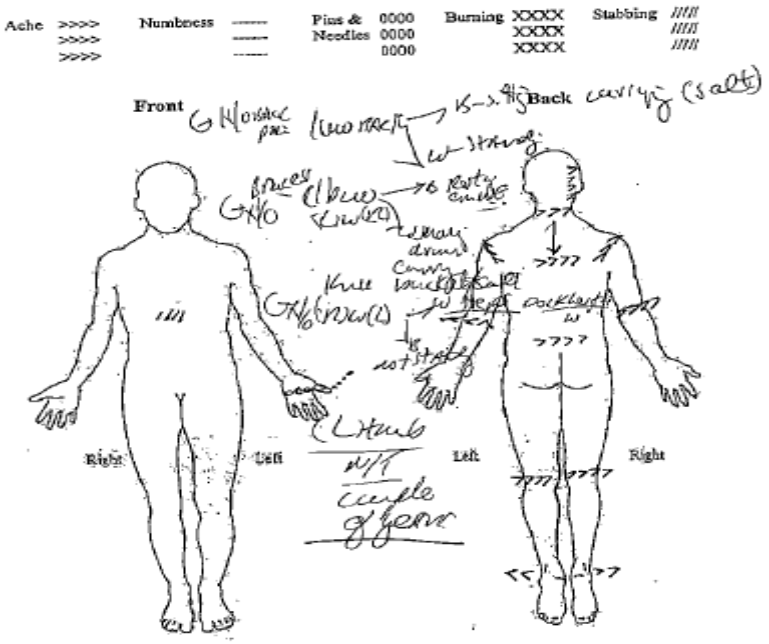
2. Claimant's first visit at Concentra was on July 19, 2016. Claimant said he had pain from his left heel up into his lower back, "[A]nd up into [his] left shoulder." Claimant reported, "No initial pop in shoulder foot or back." Claimant said most of his pain was in his left heel area. Ms. Hanna Bodkin, P.A. wrote in her report from this visit that claimant admitted to chronic, symptomatic low back and neck pain. Claimant stated he took Norco every day for his low back and neck pain, up to four a day. Ms. Bodkin did not take a further history from claimant about his pre-existing back symptoms, treatment, or diagnoses. Ms. Bodkin found no tingling or numbness on her examination. Claimant was tender in the anterior aspect of his left shoulder without crepitus, and with normal strength and tone on the left side. Claimant had tenderness in his left paraspinal muscles. Left foot x-rays taken at that visit were interpreted to be normal. Ms. Bodkin diagnosed claimant with a left shoulder strain, a lumbar strain, and a left foot injury. She put claimant in a left foot walking boot and gave him restrictions (Resp. Ex. C, pgs. 41-44).

3. Claimant testified Employer accommodated his restrictions consistently. Claimant missed no time from work at Employer due to this claim's injury and he continues to work as a full time chemical and parts delivery driver for Employer.

4. Claimant's previous left elbow and low back symptoms, medical treatment, and injuries are chronicled in the medical records from his personal medical providers at Hilltop Family Physicians. On August 5, 2013, Claimant discussed his lower back and left elbow pain. He was diagnosed with back pain, and prescribed 7.5 mg of Lortab for that pain, taking one tablet every four to six hours. (Resp. Ex. H, pgs. 213-215). On December 10, 2014, he reported chronic pain in his elbow, knee, and back. His back pain medication was being managed by Dr. Scott Primack at CROM (Resp. Ex. H, pg. 217).

5. Dr. Primack first saw claimant on November 20, 2013 (Resp. Ex. G, pgs. 115-116). Claimant complained of bilateral elbow pain and low back discomfort. "This has been ongoing over the last three years." Claimant wrote that his pain had developed over time (Id, pg. 117). His back pain was worse with motion, better when he was doing nothing. Claimant's goal was to have less pain. Claimant's, "[L]umbar flexion was 40^{o}. Lumbar extension was 15^{o}.[1] Rotation from right to left gave him as much discomfort as rotation from left to right." Claimant had central back pain, and was taking Lortab as prescribed, Claimant testified, by Hilltop Family Physicians. Claimant was diagnosed with lumbar degenerative disc disease, and was told to begin physical therapy for his lumbar spine. He was prescribed Ultram, 200 mg, in addition to the Lortab that would be for breakthrough pain. Claimant would need to use, Dr. Primack wrote, "[A] long-term medication for a 'long-term problem.'" Claimant completed a pain diagram showing pains in his left ankle, low back bilaterally, and behind both shoulders, at this appointment:

1 These are more restricted than claimant's lumbar range of motion found by the DIME Dr. McCranie on July 19, 2017 (Resp. Ex. A, pg. 18)



(Resp. Ex. G, pg. 118). This is significant as this diagram is very similar to Claimant's pain diagrams endorsing symptoms in the same areas after this claim's injury occurred. This is found to be clear and persuasive evidence Claimant had pre-existing conditions and symptoms in his left shoulder and back.

6. Claimant saw Dr. Primack for a worker's compensation injury that included an, "[E]xacerbation of his underlying multilevel degenerative disc disease . . ." on January 8, 2014 (Resp. Ex. G, pg. 122). On February 11, 2014, Claimant was taking Tramadol, and 7.5 mg of Norco 2-3 times daily, for his pain. He had low back pain with reduced range of motion in all plains (Resp. Ex. G, pg. 123). Claimant was prescribed Lortab 7.5 mg every eight hours (Resp. Ex. G, pg. 124). Claimant was using a back brace for axial low back pain on June 10, 2014 (Resp. Ex. G, pg. 130). Dr. Primack, on June 18, 2014, stated Claimant's low back symptoms were from, "[A] problem with facet syndrome and multilevel degenerative disc disease." (Resp. Ex. G, pg. 131) When Dr. Primack saw Claimant on October 24, 2014, he opined Claimant had facet syndrome with possible annular tears (Resp. Ex. G, pg. 132). Claimant had a lumbar spine MRI on October 28, 2014 (Resp. Ex. I, pg. 241) that demonstrated a disk protraction at L4-L5. Dr. Primack ordered an epidural steroid injection that was done January 23, 2015. (Resp. Ex. G, pg. 135-137). Claimant received relief from that injection and was found to have degenerative disk disease and facet oriented low back pain (Resp. Ex. G, pgs. 138-139). Dr. Primack discussed with Claimant undergoing medial branch blocks or facet injections on May 25, 2016, but Claimant declined to have those procedures (Resp;. Ex. G, pg. 150). Claimant's lumbar pain was determined to be facet-oriented on August 23, 2016 (Resp. Ex. G, pg. 154). While Claimant's attorney argued at hearing Claimant did not have these lumbar facet or disc diagnoses until after his July 18, 2016, injury, the record contains clear evidence that he did, and the ALJ finds Claimant had pre-existing lumbar facet dysfunction and degenerative disc disease that caused symptoms, including chronic pain, and required long-term medical treatment before his injury on July 18, 2016.

7. On April 17, 2015, Dr. Primack found Claimant had been fully treated for his work-related low back strain, and was back to his baseline of chronic lumbar back pain requiring medication management. Dr. Primack found, "He [Claimant] does have multilevel non-work-related lumbar spondylosis." Claimant had continued symptoms, requiring treatment, but, "Any further care would not be specific to his job, but would be more specific to non-work-related lumbar spondylosis." He took range of motion measurements, and wrote:

Today, when utilizing a two inclinometer method with validity testing, there was 43 degrees of flexion. There was 29 degrees of extension. Right lateral sidebending was 20 degrees and left lateral sidebending was 30 degrees.

Rotation did give him some discomfort. In the sitting position, internal/external rotation of the hips were within normal limits. Straight leg raising sign was 54 degrees on the left and 51 degrees on the right. Pelvic compression test was negative.

Dr. Primack indicated that Claimant was to continue taking Norco and Mobic for his non-work-related chronic low back symptoms. However, Dr. Primack did provide Claimant a 10% whole person impairment rating for his work related low back strain. (Resp. Ex. G, pgs. 141-144).

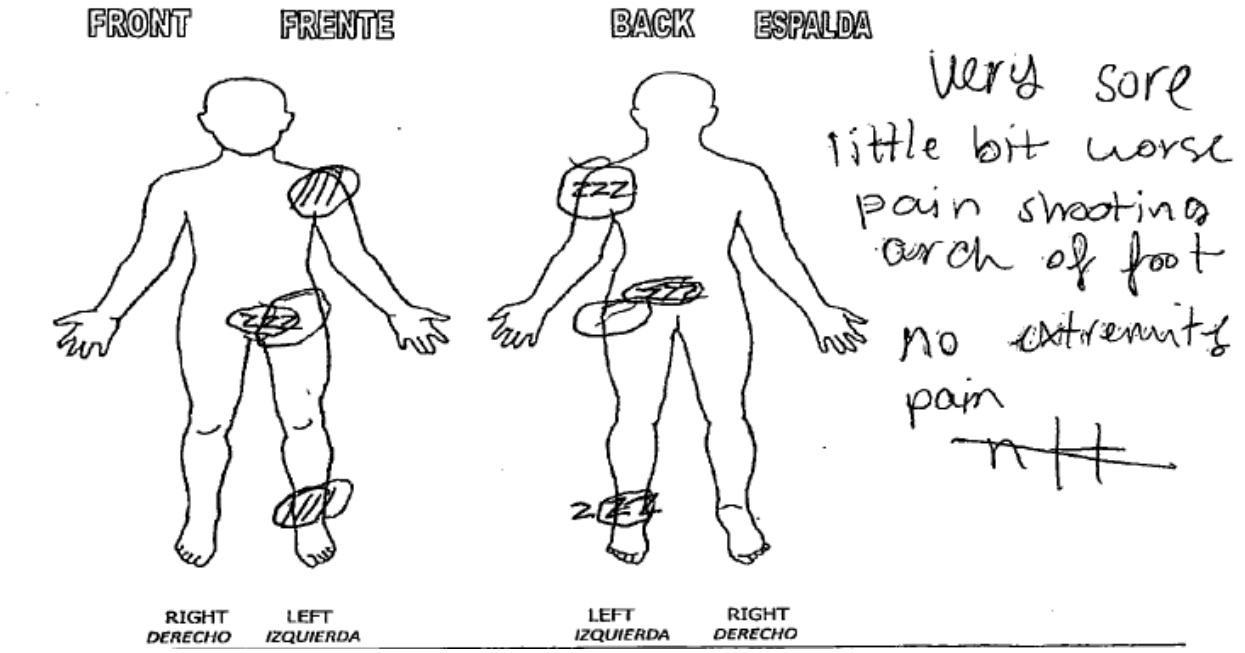
8. Claimant continued to receive treatment and prescription medication pain management with Dr. Primack after April 17, 2015. On December 15, 2015, Claimant was taking 10 mg of Norco "p.o.q.i.d.p.r.n," for, "[H]is usual back pain due to lumbar spondylosis." (Resp. Ex. G, pg. 147) He was taking the same pain medication on February 9, 2016 (Resp. Ex. G, pg. 150). Dr. Basse testified at hearing that this notation is Latin meaning claimant would take the prescribed Norco by mouth four times a day.

9. On December 15, 2015, Claimant returned to Dr. Primack due to his ongoing back pain. Dr. Primack noted Claimant had functional limitations with prolonged sitting and standing. Dr. Primack also noted Claimant's back pain was disabling and that Claimant required ongoing pain control for functionality. (Resp. Ex. G, pg. 147-148.) Claimant continued treating with Dr. Primack for chronic low back pain which required medication to increase Claimant's functioning and decrease his disability. (Resp. .Ex. G, pg. 150-151.) Therefore, before Claimant's July 18, 2016, his prior back condition was disabling.

10. Claimant testified at hearing during direct examination that his July 18, 2016, injury increased his back pain and necessitated the need for his pain medication use and dosage to be increased. As Dr. Basse credibly testified from her review of the records, and as shown in the medical records presented by Respondents at hearing, this is not true. Claimant was taking 10 mg of Norco four times daily on and before February 9, 2016 (Resp. Ex. G, pgs. 147, 150, 181-187), and continued taking the same 10 mg of Norco four times daily on and after August 23, 2016 for his stable usual low back pain (Resp. Ex. G, pgs. 154-155; 157 [November 22, 2016]; 160 [February 21, 2017]; 163 [May 18, 2017]; 166 [August 17, 2017]; 169 [November 14, 2017]). Claimant's Norco dosage increased from 7.5 mg to 10 mg on April 17, 2015 (Id. pg.

187) and remained stable at that dosage and frequency ever after. Claimant ultimately admitted during cross-examination at hearing that he did not have a clear or reliable recollection of what medication he took, the dose of the medication he took, or the frequency he took his medication, for his back pain. He admitted that because of his unreliable memory on these issues one should refer to and rely on the medical records to see what medication he took, when he took the medication, and his dosage and frequency of taking the medicine. Dr. Basse credibly testified that Claimant's medication use did not change or increase after this claim's July 18, 2016, injury.

11. Claimant returned to Concentra and Ms. Bodkin on July 27, 2016. He said he still had left heel pain that was slightly better, and pain in his left shoulder when moving it to 90 degrees. Claimant alleged that his back pain was worse than before this claim's injury. His pain diagram showed:



Claimant was, however, just taking his previously prescribed Norco for his pain. Ms. Bodkin referred Claimant to physical therapy, and continued his work restrictions. (Resp. Ex. C, pg. 52) Claimant's first physical therapy appointment was on August 2, 2016, at Concentra. By September 9, 2016, Claimant had achieved his goals in physical therapy, and was discharged to do home exercises (Resp. Ex. C, pg. 61).

12. On August 30, 2016, Claimant was evaluated by Dr. Cary Motz, an orthopedic surgeon. Dr. Motz evaluated Claimant's left shoulder. Claimant denied any prior shoulder injuries. Due to approximately 6 weeks of left shoulder discomfort with slight weakness, Dr. Motz ordered an MRI of Claimant's left shoulder. (Resp. Ex. E, pg. 105).

13. On September 20, 2016, Claimant returned to Dr. Motz. Dr. Motz reviewed Claimant's MRI of his left shoulder. Dr. Motz concluded that the MRI demonstrated degenerative changes with rotator cuff tendinitis. He did not document

an acute or traumatic rotator cuff tear. Dr. Motz felt the left shoulder required a steroid injection, and provided one at that appointment. Claimant reported a significant reduction in his left shoulder symptoms after the injection. Dr. Motz was hopeful that with some additional physical therapy, he would be able to release Claimant from his care. (Resp. Ex. E, pg. 107).

14. On October 11, 2016, Claimant returned to Concentra and was evaluated by Carrie Burns, M.D. Claimant reported his symptoms had improved, with his back now his most painful body area. Dr. Burns did not document any symptoms above Claimant's left arm at the shoulder at this appointment (Resp. Ex. C, pg. 71).

15. On October 25, 2016, Claimant returned to Dr. Motz. It was noted that although physical therapy had been authorized several weeks ago, Claimant had not attended any physical therapy appointments since they had been authorized. Dr. Motz examined Claimant's shoulder. His impression was i) impingement syndrome, and ii) degenerative labral fraying. Dr. Motz indicated that he would like to see how Claimant responds to physical therapy. Dr. Motz also opined that:

> I am not terribly optimistic that he will get better. **I certainly have some concerns regarding secondary gain issues with this patient** and concerns that surgical intervention would not have the desire [*sic*] improvement. (Emphasis added.)

(Resp. Ex. E., pg. 110).

16. At Claimant's next visit at Concentra on October 28, 2016, Dr. Aschberger reviewed Claimant's history of lumbar spine symptoms and medical treatment. He noted Claimant had findings of facet irritation before this claim's injury. He wrote that he did not see, "[S]ignificant deterioration in his overall condition." Dr. Aschberger stated, "He has a preexisting lumbar abnormality requiring opioid pain management and has been followed by Dr. Primack. I am not expecting any additional impairment given the current findings. He is not a candidate for additional opioid management." (Resp Ex. C, pg. 77).

17. On November 2, 2016, Claimant told Ms. Bodkin he was frustrated, stating, "[N]o one is addressing his pain and injuries." Ms. Bodkin listed all the referrals and treatments Claimant had received to rebut that assertion. Claimant said he was 10% improved as compared to his symptoms when his injury occurred. Claimant's left shoulder was no longer constantly painful, but he still complained of pain with range of motion measurements. There was no note made of any symptoms above his left arm at the shoulder. His heel pain had decreased, Claimant said, to 3-4/10. His physical therapy was to begin November 3, 2016. Ms. Bodkin examined Claimant, and recorded:

Left Shoulder: (forward flexion and abduction to about 90 degrees with pain, pain with lift off. TTP anterior shoulder, AC and posterior shoulder. strength 4/5. no edema. no deformity.)
Shoulder: Appearance is normal. No crepitus on palpation with no warmth. Motor tone is normal. Neurovascular function intact. Positive impingement testing.

Left Ankle: Appearance normal. No deformity. No tenderness. FROM. Strength normal.

Left Foot/Toes: (TTP calcaneus. no edema)
Foot and Toes: Appearance is normal. Palpates normal. Full range of motion. Normal tone. Neurovascular function intact.
Lumbosacral Spine:
(limited ROM all planes with pain most significant with forward flexion and left lateral bend.) Appearance with Normal. level entire tenderness in the left paraspinal and level entire tenderness in the right paraspinal, but no tenderness in the lumbar spine Palpation: no bilateral muscle spasms. Neuro/Vascular: neurovascular function intact. normal sensation.

(Resp. Ex. C, pgs. 80-83).

18. On November 29, 2016, Claimant returned to Dr. Motz after undergoing eleven physical therapy visits for his left shoulder. Claimant told Dr. Motz that the physical therapy improved his pain and function a little bit. Dr. Motz physically evaluated Claimant's left shoulder and noted mild limitation of range of motion and a positive impingement Hawkin's test. He also noted that his rotator cuff strength was 5/5 and there was no instability. Despite these findings, but due to Claimant's ongoing pain complaints, Dr. Motz recommended shoulder surgery. However, Dr. Motz opined that the surgery may not resolve Claimant's pain complaints. Dr. Motz stated in his report:

> The patient has now undergone four months of conservative treatment including physical therapy and a steroid injection without significant functional improvement. At this point, our options are to consider surgical intervention or I believe he is approaching MMI for his shoulder. He does not feel he can live with his shoulder symptoms the way they are. Therefore, I believe that we need to proceed with an arthroscopy with subacromial decompression and extensive debridement. I went over the risks and complications associated with the procedure as well as the postoperative rehabilitation and expectations. He understands these and desires to proceed. ***I certainly have some concerns given the multitude of issues that he has that he may not have resolution of his shoulder pain***, . . . (Emphasis added.)

(Resp. Ex. E, pg. 111).

19. On December 8, 2016, Dr. Peter Garcia performed a "Peer Review" evaluation. Dr. Garcia was asked to address whether the surgery recommended by Dr. Motz was reasonable and necessary and due to the July 18, 2016 work injury. Although Dr. Garcia did not appear to have any records outlining the alleged mechanism of injury, Dr. Garcia opined that the requested shoulder surgery was not reasonable, necessary, and related. Dr. Garcia noted that the procedure recommended by Dr. Motz would address the diagnosis of impingement syndrome which is an age

related disease process. He went on to indicate that conditions that predispose individuals to impingement syndrome include those that alter the normal gliding function of the shoulder such as bone spurs, osteoarthritis, shoulder injuries and degenerative diseases. In support of such opinion, Dr. Garcia noted the MRI findings which indicated Claimant had a small to moderate caliber mildly impinging subacromial spur.

(Ex. F, pg. 112).

20. Dr. Aschberger saw claimant on December 9, 2016. He reported Claimant's foot was better, but still had irritation in his lumbar spine and low back. Dr. Aschberger wrote:

> I reviewed his past history with back issues. He has had previous indications of lumbar facet irritation. He was seen at CROM on 08/23/2016. Mr. Hogan reports he has not had significant issues with back and has been able to drive. However, he has been taking opiates as prescribed for "chronic pain issues." Mr. Hogan reports medication helped control the back pain and did not have the aggravation that he is currently reporting.

(Resp. Ex. C, pgs. 94-95).

21. On December 14, 2016, Claimant saw John Burris, M.D. at Concentra. Dr. Burris stated Claimant had no complaints of left heel or foot pain at this appointment. He discussed Claimant's left shoulder's symptoms and method of injury. Dr. Burris opined, after reviewing the claim's injury mechanism, "I suspect that the left foot injury is likely the only injury that can be correlated with this mechanism. There was no specific trauma to the back and he has a significant preexisting history of low back issues requiring 40 mg of Norco daily. Likewise, this mechanism does not appear to be consistent with a left shoulder injury and subsequent workup has only revealed impingement syndrome which is a common condition and typically occurs absent trauma." He felt Claimant was at MMI without impairment. (Resp. Ex. C, pgs. 96-98) The ALJ finds Dr. Burris' opinion that Claimant reached MMI on December 14, 2016, and that Claimant's shoulder impingement problem is a common problem and typically occurs without trauma to be credible and persuasive.

22. Respondents filed a Final Admission of Liability consistent with Dr. Burris' opinions stating claimant reached MMI on December 14, 2016, that his left heel injury was the only injury covered by this claim, and that Claimant had no impairment or need for maintenance medical treatment (Resp. Ex. O). Claimant, through his attorney, objected to that admission and requested a Division IME.

23. On March 19, 2017, Claimant fell from a roof at his home, landing on a fence, and then a patio. He had abrasions and symptoms on his entire left side including his left arm, and left ribs. He was taken off of all work. By April 5, 2016, his symptoms had improved so that he was requesting a note allowing him to return to work with restrictions. Employer accommodated those restrictions beginning April 17, 2017. (Resp. Ex. H, pgs. 229-239)

24. Rachel L. Basse, M.D. saw Claimant on May 9, 2017, at Respondents' request, for an independent medical evaluation (Resp. Ex. B). Consistent with his

testimony at hearing, Claimant indicated that although he was using pain medication for his preexisting back injury before this claim, he had to use more pain medication after his work accident on July 18, 2016. In other words, Claimant alleged that his July 18, 2016, accident aggravated his preexisting back condition and caused additional pain which required additional medication to treat the increase in pain. Claimant, however, did not accurately report his medication usage history to Dr. Basse (Resp. Ex. B, pg. 30), and Dr. Basse reviewed Claimant's medical records accurately documenting his chronic opioid use for his long-standing lumbar spine diagnoses and symptoms after this appointment. When she did so, as she credibly testified at hearing, she found Claimant has used the same amount of Norco before and after his July 18, 2016 accident. (Resp. Ex. B, pgs. 36-40). Therefore, Claimant is not found to be reliable regarding the extent of his symptoms, disability, and pain that existed before and after his July 18, 2016, work accident.

25. Dr. Basse indicated in her reports, and testified at hearing, that at most, Claimant sustained a sprain/strain of his low back on July 18, 2016, and that he has returned to baseline without any additional impairment. The ALJ finds Dr. Basse's opinions to be credible and persuasive.

26. Dr. Basse wrote in her initial and addendum reports, and testified at hearing, that Claimant sustained no impairment and needs no additional medical treatment for his lumbar spine due to his July 18, 2016, sprain. (Resp. Ex. B, pgs. 35; 39-40.) Dr. Basse's testimony is founded on a review of all of Claimant's medical records, a thorough examination of Claimant, and listening to Claimant's hearing testimony. She possesses a complete understanding of Claimant's overall medical condition, making her opinions expressed in her reports and at hearing credible and persuasive.

27. The DIME examination was performed by Kathy McCranie, M.D. on July 19, 2017. Dr. McCranie's opinions and impressions are as follows:

a. Low back pain status post lumbar strain.
b. History of mild degenerative disease in the lumbar spine not aggravated or accelerated by the July 18, 2016, work accident.
c. Longstanding history of chronic back pain pre-dating the work injury.
d. History of prior work-related lumbar injury in approximately 2014 at MMI on April 17, 2015, with ten percent whole person impairment rating.
e. Left shoulder pain, status post strain.
f. Left heel pain secondary to plantar fasciitis of the left heel with calcaneal spur.

Dr. McCranie concluded Claimant reached MMI on December 14, 2016, which is the date Dr. Burris placed Claimant at MMI. She also concluded Claimant is not in need of maintenance medical treatment for his work related injuries.

Back Injury

Regarding Claimant's low back, she concluded Claimant suffered a lumbar strain as a result of the July 18, 2016, work accident. She also concluded that Claimant has a history of longstanding chronic lumbar pain and spondylosis. She further concluded that after reviewing his MRI, and performing an impairment rating, his back condition has returned to baseline. Dr. McCranie performed an impairment rating of his low back pursuant to the AMA Guides. She determined Claimant would receive five percent impairment from the Spinal Disorders Chart from Table 53 and an additional five percent impairment for loss of range of motion equaling ten percent impairment whole person. She indicated that his impairment was identical to the impairment rating given in 2015 for his previous work related back injury. Therefore, she concluded that after apportionment, his lumbar rating for his July 18, 2016, injury was zero percent.

Left Shoulder Injury

Regarding Claimant's left shoulder, injury, she determined Claimant suffered a shoulder strain and that Claimant has reached MMI. In her report, she noted that Dr. Motz recommended shoulder surgery. She also noted that Dr. Garcia performed a Peer Review and did not think the surgery was reasonable for Claimant's left shoulder strain. She noted that Dr. Garcia determined the requested shoulder procedure was addressing an age-related disease process. In the end, Dr. McCranie agreed and concluded that Claimant has non-work related underlying degenerative changes in his left shoulder that are age related and that Claimant does not require any additional medical treatment for his work related shoulder strain.

Regarding impairment, she determined that Claimant would receive seven percent impairment for loss of range of motion of the left shoulder. She then determined that two percent should be deducted from the seven percent after normalization to yield five percent impairment of the left upper extremity. She went on to conclude that the five percent impairment of the left upper extremity equals three percent whole person impairment. She did not state or provide any persuasive findings that would establish this impairment is above Claimant's arm at the shoulder.

Dr. McCranie also concluded Claimant does not require any maintenance medical treatment for his left shoulder.

Left Heel Injury

Regarding Claimant's left heel, she determined Claimant developed plantar fasciitis due to his July 18, 2016, work injury. Due to tightness in dorsiflexion of his left foot, she provided Claimant a two percent impairment of the left lower extremity which equals a one percent whole person rating. She also indicated

that no maintenance medical treatment is needed, other than the use of orthotics.

(See Resp. Ex. A)

28. Dr. McCranie found Claimant had no cervical or scapular muscle tenderness (Resp. Ex. A, pg. 11). Her report documents no left upper extremity symptoms above Claimant's arm at the shoulder.

29. She stated Claimant requires no maintenance medical treatment, "His opioid management is not work-related and he can return to Dr. Primack's office outside of Workers Compensation for continued opioid management as he was doing prior to this work injury." (Id.)

30. The ALJ finds Dr. McCranie's findings and opinions as set forth in her report to be credible and persuasive.

31. The Division of Workers' Compensation Division IME Unit issued a Notice of Completion on August 11, 2017 (Resp. Ex. P). Respondents admitted to Dr. McCranie's impairment rating, date of MMI of December 14, 2016, and denied maintenance medical treatment consistent with her opinion in Final Admissions of Liability filed August 18 and October 24, 2017 (Resp. Ex. Q and R).

32. Claimant testified that, with regard to his low back, he was suffering very bad pain prior to seeking treatment at Spine One. He contacted Spine One in response to their TV advertising. At Spine One, Claimant received a series of nerve blocks culminating in a rhizotomy (Resp. Ex. M). Claimant reported 80% improvement of his low back symptoms, and Dr. Vu assessed "excellent relief of the facet-mediated pain from the radiofrequency ablation." (Resp. Ex. M, pg. 287) Claimant testified that, since receiving treatment at Spine One, he has been able to perform his job duties without back impairment, and has reduced his use of medications. Claimant contends that the treatment he received from Spine One is responsible for the relief he is experiencing in his low back.

33. Claimant had pre-existing lumbar facet dysfunction and degenerative disc disease that caused chronic pain and required long-term medical treatment before his injury on July 18, 2016. Claimant's pre-existing lumbar facet dysfunction, degenerative disc disease, and chronic back pain was not aggravated or accelerated by his July 18, 2016, work injury which resulted in a lumbar sprain/strain. Therefore, the ALJ finds that the treatment Claimant received from CROM and Spine One, which includes the injections and radiofrequency neurotomy - ablation - was not reasonable and necessary to treat Claimant from the effects of his July 18, 2016, work accident because such condition(s) were not related to the July 18, 2016, work accident. The treatment Claimant received from CROM and Spine One was to treat Claimant's preexisting spinal problems and chronic back pain which were not caused, aggravated, or accelerated by his July 18, 2016, work injury.

34. Claimant, through his attorney, agreed that CROM and Spine One are not authorized providers. Therefore, CROM and Spine One are not authorized providers and the treatment Claimant received from CROM and Spine One was not authorized.

35. Claimant suffered a lumbar sprain/strain on July 18, 2016. Claimant's work accident did not aggravate or accelerate his preexisting degenerative disease of his lumbar spine, including his facet related back pain. Claimant's lumbar sprain/strain resolved and Claimant's back condition returned to his baseline condition as it existed before the work accident. Any need for ongoing medical treatment for his low back is not related to his July 18, 2016, work injury.

36. Claimant's medical impairment rating for his July 18, 2016, lumbar sprain/strain is zero.

37. Claimant suffered a left shoulder strain on July 18, 2016. Claimant's left shoulder strain did not aggravate or accelerate Claimant's underlying degenerative age related disease process in his left shoulder. The need for shoulder surgery is not reasonable and necessary to treat Claimant's work related shoulder strain/sprain because i) the surgery was proposed to treat his underlying degenerative age related disease process which was not caused, aggravated, or accelerated by his work injury; ii) the surgery was proposed to treat his ongoing pain complaints which have been found to not be reliable; and iii) even Dr. Motz has reservations as to whether the surgery will help Claimant's pain complaints. Therefore, the need for additional medical treatment for his left shoulder is not reasonable, necessary, or related to his work injury. There is no need for maintenance medical treatment for his work related shoulder sprain. Claimant did suffer a five percent impairment of his left upper extremity.

38. Claimant testified regarding his shoulder and that he has trouble with putting his coat on due to an inability to lift his arm above his head or out to the side without pain. He also indicated that he is restricted from working overhead and is unable to perform this task at work. He further testified that he experiences a tightness and pulling in his shoulder when over using his arm. (Audio recording from hearing, 1:33 -1:36:27). The ALJ does not find all of Claimant's pain complaints and all of his alleged restrictions regarding his left shoulder to be reliable or related to his shoulder sprain. Therefore, the ALJ does not find Claimant's symptoms and restrictions to equate to a functional impairment extending beyond his left upper extremity. Thus, Claimant's functional impairment is limited to his left upper extremity and does not extend beyond the arm at the shoulder

39. Claimant suffered an injury to his left heel and developed plantar fasciitis due to his July 18, 2016, work injury. This caused tightness in dorsiflexion of his left foot and resulted in a two percent impairment of the left lower extremity which equals a one percent whole person rating. There is no need for maintenance medical treatment for his heel injury – plantar fasciitis.

40. Claimant did not challenge the extremity rating provided by Dr. McCranie for his left shoulder and his left lower extremity.

41. Claimant did not assert that apportionment of the 10% impairment rating provided by Dr. Primack for Claimant's prior work related back injury was inappropriate. Instead, Claimant asserted that DOWC Impairment Rating Tips (Claimant's Exhibit 3) provide that a rhizotomy should be rated using part II(C) of Table 53 in the *AMA Guides*. (p.13) Specific Disorders Table 53, II.C (Exh.4), provides a 7 percent rating for the lumbar spine. Claimant further asserted that after apportionment of the prior 5% Table 53 rating, Claimant would be entitled to the net difference of 2%. As found, the treatment Claimant received through Spine One, including the neurotomy/rhizotomy, is not related to the July 18, 2016, work injury. Therefore, the ALJ does not find Claimant's argument persuasive.

42. Claimant failed to present credible and persuasive evidence that would clearly and convincingly show Dr. McCranie's impairment ratings, MMI determination, and opinions on causation and relatedness inherent in her determinations of MMI and impairment are erroneous and should be set aside. No medical provider or expert issued a report, or offered testimony, which would amount to clear and convincing evidence that Dr. McCranie erred in these determinations. Dr. Basse testified credibly and convincingly that Dr. McCranie's impairment ratings were correctly done and complied with the DOWC's impairment rating tips and Level II guidelines, as well as the AMA Guides. The ALJ finds Dr. McCranie's determinations that Claimant reached MMI on December 14, 2016, consistent with Dr. Burris' report and findings, and Dr. Basse's reports and opinions, is correct. The ALJ finds Dr. McCranie's impairment rating of 5% of Claimant's left upper extremity of the left arm at the shoulder, and 2% of his left lower extremity at the ankle, are correct and are the only impairment ratings causally related to Claimant's injury of July 18, 2016, covered by this claim.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Principles

a. The purpose of the Workers' Compensation Act of Colorado (Act), §§8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), *supra*.

b. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimant nor in favor of the rights of respondents. Section 8-43-201, *supra*.

c. When determining credibility, the fact finder should consider, among other

things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). Where a party presents expert opinions, the weight, and credibility, of the opinions are matters exclusively within the discretion of the ALJ as the fact-finder. *Cordova v. Industrial Claim Appeals Office*, P.3d (Colo. App. No. 01CA0852, February 28, 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990).

d. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

Overcoming the Division IME

I. Whether Claimant overcome the Division IME opinions of Dr. McCranie regarding MMI and Impairment.

Maximum Medical Improvement

e. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*; *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998); *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186, 189-190 (Colo. App. 2002); *Sholund v. John Elway Dodge Arapahoe,* W.C. No. 4-522-173 (ICAO October 22, 2004); *Kreps v. United Airlines,* W.C. Nos. 4-565-545 and 4-618-577 (ICAO January 13, 2005). This determination requires the DIME physician to assess, as a matter of diagnosis, whether the various components of a claimant's medical condition are casually related to the injury. *Martinez v. ICAO*, No. 06CA2673 (Colo. App. July 26, 2007). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding the cause of a particular component of a claimant's overall medical impairment, MMI or the degree of whole person impairment, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to

assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008).

f. The mere difference of medical opinion does not necessarily constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.,* W.C. No. 4-380-560 (ICAP, Nov. 17, 2000). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

g. MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Importantly, Claimant bears the burden of proof of showing that medical benefits he requests to show he was not properly placed at MMI by the DIME provider Dr. McCranie must be causally related to his work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (May 4, 2007). Claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that curative treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

h. In this case the Division Examiner Dr. McCranie found Claimant reached MMI on December 14, 2016, as did the primary treating provider John Burris, M.D. Dr. McCranie, in her DIME report, determined Claimant suffered a shoulder strain. In her report, she noted that Dr. Motz recommended shoulder surgery. She also noted that Dr. Garcia performed a Peer Review and did not think the surgery was reasonable for Claimant's left shoulder strain. She noted that Dr. Garcia determined the requested shoulder procedure was addressing an age-related disease process. In the end, Dr. McCranie agreed and concluded that Claimant has non-work related underlying degenerative changes in his left shoulder which are age related and were not aggravated or accelerated by the work injury and that Claimant does not require any additional medical treatment to cure him from the effects of his work related shoulder strain/sprain.

i. Dr. McCranie also determined Claimant reached MMI for his lumbar strain and that Claimant returned to his baseline condition which existed before his July 18, 2016, work injury. She concluded Claimant did not need any additional medical treatment to cure him from the effects of his July 18, 2016, lumbar strain.

j. Dr. McCranie also determined Claimant reached MMI for his heel injury and that he does not need any additional medical treatment to cure him from the effects of that injury.

k. Claimant did not present clear and convincing evidence to show that he did not reach MMI on December 14, 2016. Dr. Rachel Basse's report and hearing testimony that this date is Claimant's date of MMI is also persuasive and credible. The ALJ finds and concludes Claimant attained MMI on December 14, 2016. Accordingly, as curative medical benefits end when Claimant attains MMI, Claimant's request for additional curative medical benefits, including shoulder surgery, is denied and dismissed.

Impairment Rating

l. A DIME physician must apply the AMA Guides when determining the Claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8) (c), C.R.S. The finding of a DIME physician concerning the Claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

m. As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Medical impairment rating is not the equivalent of disability. *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996).

n. The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). A mere difference of

opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

o. A DIME physician is required to rate Claimant's impairment in accordance with the AMA Guides. § 8-42-107 (8) (c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). Even if the ALJ finds the DIME physician deviated from the rating protocols of the AMA Guides, the party challenging the rating must still demonstrate that the deviation casts substantial doubt on the overall validity of the rating. *Schrameck v. USA Waste Management*, W.C. No. 4-407-221 (ICAO May 18, 2001), *Rivale v. Beta Metals, Inc.*, W.C. No. 4-2655-360 (April 16, 1998), *aff'd. Rivale v. Industrial Claim Appeals Office,* (Colo. App. No. 98CA0858, January 28, 1999) (not selected for publication). For example, the mere absence of the DIME's notes on a subject does not rise to the level of clear and convincing evidence that the DIME was wrong. *Wilson v. Falcon Street School District No. 49*, W.C. No. 4-494-116 (October 7, 2002). As noted by the ICAO in *Wilson*, supra, "Implicit in the appellate rulings is the recognition that not every deviation from the rating protocols of the AMA Guides warrants the conclusion that the rating itself has been overcome by clear and convincing evidence. Rather, proof of a deviation from the AMA Guides is some evidence which must be considered in the context of all other evidence in determining whether the rating has been overcome." *Rivale v. Beta Metals, Inc.,* supra; *Sutton v. Alpen Construction,* W.C. No. 4-225-415 (April 1, 1997); *aff'd., Sutton v. Industrial Claim Appeals Office,* (Colo. App. No. 97CA0711, November 13, 1997) (not selected for publication).

p. In this case, Dr. McCranie provided Claimant a 0% lumbar spine impairment rating for this claim. Claimant failed to present clear and convincing evidence establishing this rating was incorrect. No other medical provider provided an impairment rating for Claimant's spine, which the credible evidence presented at hearing showed was symptomatic, and independently disabling and impairing, prior to Claimant's July 18, 2016, injury covered by this claim. As found, the ALJ concludes Dr. McCranie correctly and fully rated claimant's impairments causally related to this claim's July 18, 2016, injury.

q. Claimant asserted that DOWC Impairment Rating Tips (Claimant's Exhibit 3) provide that a rhizotomy should be rated using part II(C) of Table 53 in the *AMA Guides*. (p.13) Specific Disorders Table 53, II.C (Exh.4), provides a 7 percent rating for the lumbar spine. Claimant further asserted that after apportionment of the prior 5% Table 53 rating, Claimant would be entitled to the net difference of 2%. As found, the treatment Claimant received through Spine One, including the neurotomy/rhizotomy, is not related to the July 18, 2016, work injury. Therefore, Claimant's assertion does not rise to the level of clear and convincing evidence.

r. Neither party challenged the scheduled impairment ratings provided by Dr. McCranie and which were admitted to by Respondents in their FAL. Therefore, they were not addressed under any burden of proof.

s. The ALJ concludes that Claimant has failed to overcome the opinion of Dr. McCranie regarding his impairment rating. Claimant's impairment rating for his low back under this claim is zero. The ALJ also concludes that Dr. McCranie's impairment rating of 5% of claimant's left upper extremity of the left arm at the shoulder, and 2% of his left lower extremity at the ankle, are correct and are the only impairment ratings causally related to claimant's injury of July 18, 2016, covered by this claim.

Conversion of Impairment Rating

t. The party seeking to convert the impairment rating has the burden of proof of doing so by the preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

u. Claimant contends that he is entitled to a whole person impairment rating. Respondents contend that Claimant is entitled to a scheduled impairment rating. Section 8-42-107 sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and Subsection (8) provides a Division independent medical examination (DIME) process for whole person ratings. The threshold issue is application of the schedule and this is a determination of fact based upon a preponderance of the evidence. The application of the schedule depends upon the situs of the functional impairment rather than just the situs of the original work injury. *Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 803 (Colo. App. 1996); *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996).

v. Section 8-42-107(8)(a), C.R.S. states: "When an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." And, the IME provisions of Section 8-42-107(8) (c) only apply "in cases of whole body impairment." *See Mountain City Meat Co. v. Industrial Claim Appeals Office*, 904 P.2d 1333 (Colo. App. 1995). The percentage rating for scheduled benefits is determined based upon the preponderance of the evidence. Section 8-42-107(2), C.R.S. describes scheduled impairments as "loss" at or below the shoulder.

w. When reading these two statutes in concert, any "loss" that is not on the schedule found at C.R.S. 8-42-107 (2) shall be paid as a whole person impairment pursuant to C.R.S. 8-42-107 (8).

x. The evidence presented at hearing established that Claimant's functional impairment in his left shoulder is at and below Claimant's left arm at the shoulder. Claimant failed to produce credible or persuasive evidence that would show Claimant's left arm impairment should not be rated on the schedule of impairments. No medical provider credibly stated in any report, or in testimony, that Claimant's left arm functional impairment is above his arm at the shoulder. Dr. Basse testified the situs of Claimant's functional impairment is at the arm at the shoulder. Claimant has unrelated, pre-

existing degenerative shoulder joint arthritic changes that also cause shoulder symptoms. Dr. Burris found Claimant's left shoulder had no impairment when he placed claimant at MMI. Moreover, the ALJ did not find Claimant's pain complaints and stated limitations regarding his shoulder to be reliable or that they are related to his shoulder sprain. The ALJ finds and concludes Claimant has no functional impairment above his left arm at the shoulder. Claimant is entitled to the 5% left upper extremity impairment provided by Dr. McCranie on the schedule found at C.R.S. 8-42-107 (2). As Respondents have admitted to and paid that scheduled rating's PPD benefits Claimant is not entitled to additional PPD benefits.

Maintenance Medical Benefits

y. While the denial of Claimant's request for maintenance medical benefits as the requested specific medical benefits provided by and through Claimant's medical providers at CROM and Spine One alleviates Respondents from any duty to provide those benefits, Claimant continues, as the ALJ understands, to request an order finding respondents responsible for general maintenance medical benefits to maintain his MMI status. Respondents contend the need for continued medical benefits is entirely related to Claimant's pre-existing, symptomatic, impairing lumbar spine and back condition documented in Claimant's medical records submitted at hearing, specifically the medical records from CROM. C.R.S. § 8-42-101 (1) (a) provides that respondents shall furnish medical care and treatment reasonably necessary to cure and relieve the effects of the injury. Claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (May 4, 2007). Therefore, Claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

z. Respondents' obligation to provide medical benefits to cure the industrial injury terminates at MMI. Thereafter, Respondents are only responsible for medical benefits to maintain or prevent a deterioration of Claimant's condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). The need for medical treatment may extend beyond the point of maximum medical improvement where Claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Id.* An award for *Grover* medical benefits, also referred to as maintenance medical benefits, is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo.

App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

aa. The ALJ credits the opinions of Dr. McCranie and Dr. Basse that Claimant does not require maintenance medical treatment due to his work related injuries. Claimant's need for medical treatment directed towards his back relates to his preexisting back problems which were not aggravated or accelerated by his work injury. Moreover, any need for treatment directed towards Claimant's left shoulder is also due to Claimant's preexisting age related shoulder condition which was not aggravated or accelerated by his work injury. Claimant also does not need any maintenance treatment for his left heel. The ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that he is in need of maintenance medical treatment to prevent further deterioration of his work injuries or relieve him from the effects of his work injuries.

Whether the medical treatment Claimant received through Colorado Rehabilitation and Occupational Medicine ("CROM") and Spine One was reasonable, necessary, related, and authorized.

bb. A preexisting disease or susceptibility to injury does not disqualify a claim if the injury aggravates, accelerates, or combines with the preexisting disease or infirmity to produce the need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The ICAO has noted that pain is "a typical symptom from the aggravation of a pre-existing condition" and Claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.,* WC 3-998-279 (ICAO February 16, 2001).

cc. As found, Claimant had pre-existing lumbar facet dysfunction and degenerative disc disease that caused chronic pain and required long-term medical treatment before his injury on July 18, 2016. Claimant's pre-existing lumbar facet dysfunction, degenerative disc disease, and chronic back pain was not aggravated or accelerated by his July 18, 2016, work injury which resulted in a lumbar sprain/strain and returned to baseline. As found, the treatment Claimant received from CROM and Spine One, which includes injections and the radiofrequency neurotomy was not reasonable and necessary to treat Claimant from the effects of his July 18, 2016, work accident because such condition(s) were not related to the July 18, 2016, work accident. The treatment Claimant received from CROM and Spine One was to treat Claimant's preexisting spinal problems and chronic back pain which were not caused, aggravated, or accelerated by his July 18, 2016, work injury. Therefore, the treatment provided by CROM and Spine One was not reasonable and necessary to treat Claimant's July 18, 2016, work injury. Moreover, Claimant, through his attorney, agreed at hearing that the treatment provided by CROM and Spine One was not authorized.

dd. Therefore, Claimant has failed to establish by a preponderance of the evidence that the treatment he received from CROM and Spine One was reasonable, necessary, related, and authorized. Therefore, the ALJ concludes Respondents are not responsible for the treatment provided to Claimant by CROM and Spine One.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the ALJ enters the following Order:

1. Claimant has failed to overcome the Division IME opinions of Dr. McCranie regarding MMI and Impairment.

2. Claimant reached MMI on December 14, 2016.

3. Claimant's request for left shoulder surgery is denied and dismissed.

4. Claimant request for maintenance medical benefits is denied and dismissed.

5. The treatment provided by CROM and Spine One, as well as their referrals, was not reasonable and necessary to treat Claimant for his work related back sprain because the conditions treated were not related to Claimant's work injury. Moreover, the treatment provided by CROM and Spine One, as well as their referrals, was not authorized. Therefore, Respondents are not responsible for the treatment provided by CROM, Spine One, or any of their referrals.

6. Claimant sustained a 5% impairment of his left arm at the shoulder found on the schedule of impairments. Claimant failed to establish that the extremity rating for his shoulder should be converted to a whole person impairment rating. Claimant also sustained a 2% impairment of his left foot at the ankle found on the schedule of impairments. These are the only impairment ratings causally related to Claimant's July 18, 2016, injury.

7. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 11, 2018

Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The following issues were raised for consideration at hearing:

I. Reopening or withdrawal of general admission of liability dated July 21, 2017, and any other general admission of liability, which admitted and paid temporary total disability benefits from December 14, 2015 through June 11, 2017.

II. Whether Claimant was entitled to temporary total disability from December 14, 2015 through June 11, 2017.

III. Calculation of temporary partial disability owed from December 14, 2015 through June 11, 2017, and calculation of overpayment.

IV. Whether respondents may take credit for overpayment against permanent partial disability benefits.

V. Overpayment reimbursement.

VI. Whether Claimant willfully made a false statement or representation material to the claim for the purpose of obtaining benefits per CRS § 8-43-402.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. This is an admitted claim. Claimant, a Licensed Practical Nurse, was injured when she slipped and injured her left knee on December 13, 2015. *Ex. O, Bates 217.* Claimant fractured her left patella. Ex. *A*. The employer was Integrated Healthcare Staffing, who carried workers' compensation insurance with Pinnacol Assurance. Claimant worked for Integrated Healthcare Staffing part time, and had just begun that work in October 2015. Claimant worked approximately 8 hours per week for Employer.

2. Claimant's average weekly wage ("AWW") from her work with Integrated Healthcare Staffing, Inc. was $166.74. *Ex. K, attachments to GA.* [Pay from 10-18-2015 to 11-21-2015, 34 days, $810 total. $810/34 = $23.82 per day, x 7 days = $166.74.] Temporary total disability rate based upon that AWW is $111.14.

3. The claims representative handling the claim for Insurer is Ryan Saladin. Mr. Saladin was present and testified at hearing. At the time of the injury, continuing, Claimant's concurrent and full time job was with Children's Medical Center, P.C.

("Children's) Mr. Saladin was contacted by Claimant, who provided him her wage records for her full time job at Children's for inclusion in her average weekly wage. *Ex. N, Bates 240-248.* In reliance upon the representation that she was not working at either job, and based upon the wage records from Claimant, Mr. Saladin calculated AWW based upon both employments, filed a general admission of liability ("GAL"), and proceeded to pay temporary total disability benefits. *Saladin testimony HT, P. 25, L. 13-25. , Ex. K.* On January 6, 2016, Mr. Saladin emailed claimant notifying her of his AWW calculation, and letting her know that her first temporary total disability check for the period of 12-14-15 to 1-7-16 would go in the mail that night. This email asked, "Please let me know when you return to work to either employer so we can avoid overpayment." *Ex. O, Bates 254.*

4. Consistent with his email to Claimant, Mr. Saladin filed a GAL on January 7, 2016, which admitted for temporary total disability benefits at a weekly rate of $771.07 which was based on an AWW of both employments of $1,156.60. Moreover, the GAL specifically stated the AWW was based on wages from two employers and included wage statements from both employers as an attachment.

5. The AWW was revised based upon inquiry from the Division of Workers' Compensation, and a new GAL was filed on January 26, 2016. *Ex. K.* That GAL admitted for a slightly higher AWW of $1,183.86. Temporary total disability benefits were paid out at a rate of $789.24 per week beginning December 14, 2015 until June 11, 2017. *Ex. K and J.*

6. The following is a timeline of the events following the filing of the GAL of January 26, 2016:

    a. February 22, 2016: Claimant emailed Mr. Saladin on February 22, 2016, asking for mileage reimbursement for January 2016. Mr. Saladin responded, "I will submit for processing. How is everything going with your treatment? Have you returned to work for Children's?" Claimant responded, "Ryan, therapy is going okay. Have had hard time bending my knee and now it is popping. I have an e-mail out to my surgeon. No, to your second question. Thank you." The second question was, "Have you returned to work for Children's?" *Ex. N, Bates 237 – 238, Ex. O, Bates 257.*

    b. Claimant was working full time and receiving pay from Children's on February 22, 2016, and had been. Pay period beginning December 28, 2015 to January 10, 2016 from Children's shows claimant working regular and overtime hours for a total gross pay of $2,224.24. January 11, 2016 to January 24, 2016 pay records from Children's show regular and overtime with gross pay of $2,036.30. For pay period January 25, 2016 through February 7, 2016, her gross pay was $ 2,071.50. For pay period February 8, 2016 to February 21, 2016, her gross pay was $2,256.38. For

pay period February 22, 2016 to March 6, 2016, her gross pay was $2,177.70. *Ex. C, Bates 82 – 86.* Claimant's February 22, 2016 email responding "no" to the question, "Have you returned to work at Children's?" was not true.

c. March 1, 2016: Mr. Saladin received a request for mileage from Claimant. She sent this with an email. That email made no mention of returning to work for Children's. *Ex. O, Bates 257.* Wage and hour records show claimant was working at Children's during this time. *Ex. C, Bates 85, 86.*

d. March 10, 2016: Claimant emailed Mr. Saladin regarding her medical treatment. That email made no mention of returning to work for Children's. Wage and hour records show Claimant was working at Children's during this time. *Ex. C, Bates 87.*

e. As set forth below, Mr. Saladin sent Claimant a number of return to work questionnaires. Each one provides:

> Pinnacol Assurance is paying temporary total disability (TTD) benefits for your work-related injury. When you sign your TTD check, you declare you did not work for anyone during the period of time referenced on the check. If you return to work and begin earning any wage, you must notify Pinnacol.

The questionnaire also indicates the following just above the signature line:

> By my signature, I attest that I am aware that it is unlawful to receive TTD while earning any wage.

f. September 2, 2016: Claimant was sent a return to work questionnaire from Mr. Saladin. Claimant signed and returned this on September 17, 2016. This questionnaire includes the following questions: "Have you returned to work for any employer or earned any income at any time since your injury? Yes___No____" Claimant responded, "No"; and "Have you been self-employed or performed any activity for which you earned any income since your injury? Yes___No___" Claimant responded "No." She also wrote, in response to the question, "If the answer is "No." please give us your reason for not returning to work:" "Unable to work due to not able to walk for any length of time." *Ex. N, Bates 236.* Wage and hour records show Claimant was working at Children's steadily during this period. *Ex. C, Bates 87-100.* Claimant's response of "no" to questions about return to work on this form were not true.

g. October 13, 2016: Claimant was sent a return to work questionnaire from Mr. Saladin. She did not respond. *Ex. N, Bates 235, HT P. 38, l. 1-10.*

h. November 14, 2016: Claimant was sent a return to work questionnaire from Mr. Saladin. Claimant signed and returned this on November 30, 2016. This questionnaire includes the following questions: "Have you returned to work for any employer or earned any income at any time since your injury? Yes___No____" Claimant responded, "No"; and "Have you been self-employed or performed any activity for which you earned any income since your injury? Yes___No___" Claimant responded "No." She also wrote, in response to the question, "If the answer is "No." please give us your reason for not returning to work:" "Unable to walk for any amount of time, to perform my job." *Ex. N, Bate 234.* Wage and hour records show Claimant was working at Children's steadily, earning over $2,100 every pay period. *Ex. C, Bates 101-104.* She also continued to cash her checks from the Insurer for temporary total disability benefits of $ 1,578.48. *Ex. Q.* Claimant's response of "no" to questions about return to work on this form were not true.

i. December 16, 2016: Claimant was sent a return to work questionnaire from Mr. Saladin. She did not respond. *Ex. N, Bates 233, HT P. 39, l. 19 P. 40 l. 1.*

j. January 25, 2017: Claimant emailed Mr. Saladin asking for mileage reimbursement. Mr. Saladin replied, "I will re-submit to the payments team. Are you still not working for Integrated Healthcare [or] any other employer?" Claimant did not respond to this question. *HT, P. 40, l. 2-18; Ex. O, Bates 259-260.*

k. January 27, 2017: Claimant was sent a return to work questionnaire from Mr. Saladin. She did not respond. *Ex. N, Bates 232, HT P. 39, l. 9-1*

l. February 17, 2017: Claimant was sent a return to work questionnaire from Mr. Saladin. Claimant signed and returned this on February 27, 2017. This questionnaire includes the following questions: "Have you returned to work for any employer or earned any income at any time since your injury? Yes___No____" Claimant responded, "No"; and "Have you been self-employed or performed any activity for which you earned any income since your injury? Yes___No___" Claimant responded "No." She also wrote, in response to the question, "If the answer is "No." please give us your reason for not returning to work:" "Unable to stay on my feet/knee for long period of time.." *Ex. N, Bate 234.* Wage and hour records show Claimant was working at Children's and cashing her TTD checks. *Ex. C, Bates 101-112, Ex. Q.* Claimant's response of "no" to questions about return to work on this form were not true.

m. March 8, 2017: Mr. Saladin called Claimant at her phone number and left a message asking her to call him back to discuss the claim and her work status. *Ex. O, Bates 261.* Claimant did not call back. *HT, P. 41, l. 13-17.*

n. March 10, 2017: Mr. Saladin sent a letter and surveillance video of Claimant to her authorized treating physician, asking several questions, including, "Is Ms. Jaramillo working?" Claimant was copied with this letter. *Ex. O, Bates 262.* Mr. Saladin testified that the surveillance video showed Claimant going to Children's Medical Center over a several day period early in the morning, and then leaving in the evening. *HT, P. 42, l. 4-14.* Claimant did not contact Mr. Saladin about this letter, and his phone calls to her were left unanswered. *Id. L. 23-25.*

o. March 28, 2017: Claimant was sent a return to work questionnaire from Mr. Saladin. She did not respond. *Ex. N, Bates 230, HT P. 44, l. 10-15.*

p. May 5, 2017: Claimant wrote an email to Mr. Saladin, attaching her mileage from January to April of 2017, requesting reimbursement. Mr. Saladin replied "I will submit for processing. I do need to talk to you about ongoing lost wage benefits and you working. This is very important. Do you have time today we can discuss this?" Saladin also phoned Claimant at her phone number and left a message asking her to call him back to discuss the claim and her work status. *Ex. O, Bates 263.* She did not call him back. *HT, P. 45, l. 20-24.*

q. May 7, 2017: Claimant emailed Mr. Saladin back and said "My dad recently passed away and I am in Kansas helping out my mom." She made no comment in response to his questions about working. Mr. Saladin provided condolences and asked that she call him back. *Ex. O, Bates 264.* Pay records from Children's from the period of April 3, 2017 through May 14, 2017 show her working her usual full time hours. *Ex. C, Bates 116-118, see also Ex. D, Bates 136-137. Ex. C, Bates 115.* She continued to cash her TTD checks.

r. May 9, 2017: Claimant was sent a return to work questionnaire from Mr. Saladin. In his cover letter, he stated, "Pinnacol has been paying lost wages for both Integrated Healthcare Staffing and your second employer Children's Medical Center since December 14, 2015. It is very important that you send this as soon as possible." *Ex. N, Bates 229, Ex. O, Bates 265; Exhibit N, Bates 227.*

s. June 9, 2017: Mr. Saladin again called Claimant at her phone number and left a message asking for a call back to discuss the claim and work status. On that same day, he sent another return to work questionnaire to Claimant. He again included in his cover letter, "Pinnacol has been paying lost wages for both Integrated Healthcare Staffing and your second employer Children's Medical Center since December 14, 2015. It is very important that you send this as soon as possible." *Ex. O, Bates 266-267; Ex. N, Bates 228.*

t. June 12, 2017: Claimant signed and returned the May 9, 2017 return to work questionnaire on June 12, 2017. This questionnaire includes the following questions: "Have you returned to work for any employer or earned any income at any time since your injury? Yes___No____" This time, Claimant responded, "Yes"; and "Have you been self-employed or performed any activity for which you earned any income since your injury? Yes___No___" Claimant responded "No." She filed in the blanks and stated she had returned to work at full wages, in the amount of $554.05 per week for Children's Medical Center. The form asked the date Claimant returned to work, and she did not supply that information. Mr. Saladin testified that the date Claimant returned to work was important to him because "We need to know when an injured worker returns to work to properly calculate whether or not TTD is still owed, TPD is owned, or if no wages are due at all." *HT P. 50, 18-25.*

u. June 16, 2017: Mr. Saladin sent Claimant a return to work questionnaire. This questionnaire includes the following questions: "Have you returned to work for any employer or earned any income at any time since your injury? Yes___No____" Claimant again responded, "Yes"; and "Have you been self-employed or performed any activity for which you earned any income since your injury? Yes___No___" Claimant responded "No." The form asked the date Claimant returned to work, and she again did not supply that information. She stated she had returned to work at full wages, in the amount of $554.05 per week for Children's Medical Center. This is signed July 1, 2017.

v. July 11, 2017: Claimant was sent a return to work questionnaire from Mr. Saladin. In his cover letter, he stated, "Please complete and sign the attached return to work questionnaire and employment release. Please include the date you returned to work. It is very important that you send this as soon as possible." This was sent certified mail. Notice was provided to Claimant on July 15, July 20, and July 31 of the certified mail. The certified mail was unclaimed and returned to Pinnacol. *Ex. N, Bates 221-225, Ex. O, Bates 270*

w. July 14, 2017: Mr. Saladin contacted Matt Heiderich, in the investigations unit at Pinnacol. He noted that Claimant has not returned phone calls, and not responded to request for information about the date of return to work. *Ex. O, Bates 268.*

x. July 26, 2017: Claimant emailed Mr. Saladin, asking for mileage reimbursement for May, June and July, 2017. This was her first communication to Mr. Saladin since her May 7, 2017 email. She did not make any comment about her return to work and did not provide any of the information previously requested. Mr. Saladin wrote in response to Claimant with another return to work questionnaire and a request for a release for information from Children's Medical Center. *Ex. O, Bates 269.*

y. August 10, 2017: Matt Heiderich met Claimant at her medical appointment at Concentra medical facility in Denver. He took with him a copy of the return to work questionnaire and employment release for Children's Medical Center. He introduced himself to her and provided her the Pinnacol paperwork. Mr. Heiderich testified that he stood with Claimant while she completed the form in front of him. On this form, Claimant stated that she had returned to work with Children's Medical Center, at a wage of $26.52 per hour, 40 hours per week, wrote that she returned to work on January 3, 2017, and then signed and dated the form. *Ex. N, Bates 219.* After reading this, Mr. Heiderich asked Claimant directly if she had returned to work for Children's Medical Center from December 13th, 2015, to the date of January 3rd, 2017, which she had just provided on the form. *HT, P. 69, l. 2-P. 70, l. 21.* At that time, Claimant told Mr. Heiderich that she had actually returned to work for Children's Medical Center in May of 2016. When he asked her more questions about the date of return to work, she said that she did not recall the date in May of 2016, but that she had returned part time. Claimant provided Mr. Heiderich a release for records from Children's. When he obtained these records, submitted by respondents as Exhibit C, he saw Claimant had returned to work prior to May of 2016, and worked primarily on a full time basis from the date of injury until the date of their discussion. *Ex. C, HT, P. 70, l. 22 – P. 72, l. 2.* Mr. Heiderich testified that, based upon the records he received from Children's, statements written on the form for him and made to him by Ms. Jaramillo were false statements. *HT, P. 72, l. 3-8.*

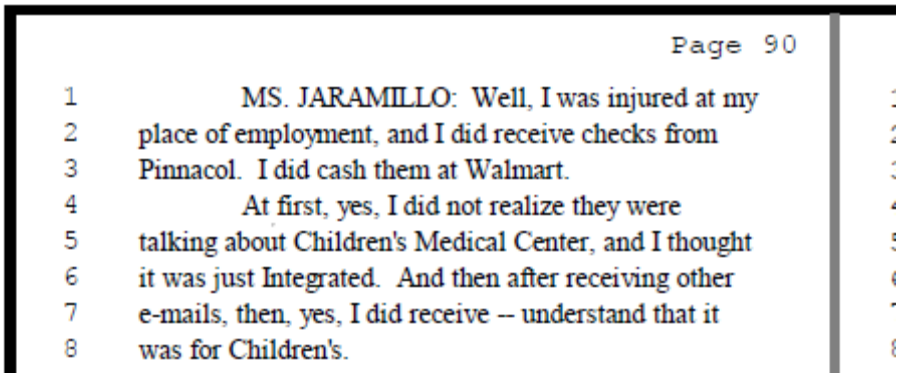
7. Mr. Saladin testified that he relied upon Claimant's representations over this time period to continue to pay temporary total disability benefits under the GAL. He testified that he made TTD payments under the GAL for wage loss from Children's Medical Center.

8. Claimant testified and confirmed her email and home address, which matched the addresses used by Pinnacol during the course of the claim. She confirmed that she earned $200 or less per week from Integrated Healthcare Staffing. She testified that she understood that the average weekly wage that was used in this claim included her wages from Children's Medical Center. She received the general admissions of liability. She admitted she was working at Children's Medical Center following December 13, 2015, and knew that she was working, at a rate of $25 per hour, with increases over time. As an example, Claimant admitted that her paystub for period beginning April 4, 2016 showed that Claimant worked 80 hours, plus 6.5 hours overtime. The temporary total disability check for this period of time was in the amount of $1,578.48. That check and all other checks to Claimant was accompanied with a check stub which provided details of the check and what the check was payment for. The check overlapping this Children's pay period included the detail, "TTD regular 4/1/16 through 4/14/16 at $789.24 per week. 14 days equals $1,578.48." *Exhibit T.* Based upon this, the ALJ concludes Claimant knew what the checks she was cashing represented. Claimant testified that all signatures endorsing the checks

sent her were her signatures. She testified that she understood she was being paid almost $800 per week, and that her loss of income at Integrated Healthcare Staffing was less than $200 per week. Claimant testified that she earned $60,193.16 at Children's in 2017.

9. For the period of December 14, 2015 through June 11, 2017, Respondents paid Claimant a total of $61,560.72 in temporary total disability benefits. *Ex. P, Ex. J, Ex. Q.* Claimant received, signed and cashed checks in the amount of $1,578.48 every two weeks, $3,156.96 per month. *Ex. Q.* Every check Claimant endorsed required her to sign on a line directly above the following statement "Read before chasing this check. If you are currently earning wages and this check is payment for temporary or permanent total disability benefits, you may not be legally entitled to this benefit. If you cash this check and are ineligible for the benefit it represents, you may be required to repay Pinnacol Assurance for the amount received." *Ex. Q, Bates 299-365. Ex. R.* Because this statement was directly below Claimant's signature on all checks cashed, the ALJ concludes that she read and understood the statement. Claimant testified that she did not deposit this money into her bank account, but instead cashed all of the checks at Walmart. There is therefore no record of what Claimant has done with that $61,560.72, and no information regarding how much of that money is still in Claimant's possession. Claimant testified that she does have a bank account with Wells Fargo Bank.

10. Claimant stated during her defense (*HT, P. 90, l. 1-8)*:



Page 90

MS. JARAMILLO: Well, I was injured at my place of employment, and I did receive checks from Pinnacol. I did cash them at Walmart.

At first, yes, I did not realize they were talking about Children's Medical Center, and I thought it was just Integrated. And then after receiving other e-mails, then, yes, I did receive -- understand that it was for Children's.

11. Mr. Saladin testified that he had calculated overpayment in this matter to be $44,570.98. *Ex. S.* This was calculated by determining if temporary partial disability was owed during each two week time frame. Claimant's hours at Children's were similar, but not always the same, for each period. Claimant did not return to her job with Employer - Integrated Healthcare Staffing - and was therefore due wage replacement, but facts show she was not due temporary total disability benefits. In some periods, no temporary partial disability benefits were due, because of the amount paid from Children's exceeded the average weekly wage. Based upon calculations provided by Respondents, total amount of

temporary partial disability owed for time lost in the relevant time period is $16,989.74. *Ex. S.*

12. Claimant was determined to have reached MMI by her authorized treating physician Dr. John Burris, on September 14, 2017. He provided Claimant an impairment rating of 4% lower extremity for her left knee injury. The value of this rating is $2,387.09 [4% of 100% lower extremity value for date of injury of $59,677.28] *Ex. A.*

13. Following receipt of MMI and rating from Dr. Burris, Respondents filed an application for hearing, per Division Rule 5-5(E)(1)(c). They seek an order providing them repayment of the overpayment. First, they seek to reopen, or retroactively withdraw, the general admissions of liability admitting for and paying temporary total disability benefits from December 14, 2015 through June 11, 2017. They seek a recalculation of the temporary benefits owed under the admissions, based upon temporary partial disability. They seek a credit for overpayment against permanent impairment benefits owed. They seek an order for repayment of the reminder of the overpayment, with a specific amount of obligation per month. They seek a finding from the ALJ per CRS § 8-43-402.

CONCLUSIONS OF LAW

Having entered the foregoing Findings of Fact, the following Conclusions of Law are entered.

1. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000).

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

3. After an admission of liability has been filed, an insurer may not unilaterally withdraw its admission, but rather must continue to make payments consistent with admitted liability until the ALJ enters an order allowing revocation in full or in part. Section 8-43-203(2)(d), C.R.S.; *H.L.J. Management v. Kim*, 804 P.2d 250 (Colo. App. 1990). In accordance with *HLJ Management Group, Inc*., insurers are permitted to "obtain relief from improvident or erroneous admissions." Id. at 252.

4. C.R.S. § 8-43-303(1) states that "at any time within six years after the date of injury, the director or an administrative law judge may, after notice to all parties, review and reopen any award on the ground of fraud, an overpayment, an error, a mistake, or a change in condition…" § 8-43-303. The party seeking to reopen bears the burden of proof to establish grounds for reopening. See *Garcia v. Qualtek Manufacturing*, W.C. No. 4-391-294 (ICAO August 13, 2004).

5. "Overpayment" means money received by a claimant that exceed the amount that should have been paid, of which the claimant was not entitled to receive. C.R.S. § 8-40-201 (15.5). There is no intent requirement under this statute. The ALJ finds Respondents have established by a preponderance of the evidence that there is an overpayment in this matter. The ALJ finds Claimant was not entitled to receive TTD wage replacement benefits for wage loss including Children's Medical Center during the period of December 14, 2015 to June 11, 2017, because Claimant was working at Children's during that time. Based upon the testimony and records, the ALJ finds and concludes Respondents overpaid $44,570.98 in temporary disability benefits.

6. Upon a prima facie showing Claimant received overpayments, an award may be reopened solely as to overpayments and repayment "shall" be ordered. C.R.S. § 8-43-303 (1). In addition, an ALJ in a workers' compensation claim has authority to order repayment of overpayment. *Simpson v. ICAO, 219 P.3d 354 (Colo. App. 2010) rev'd on other grounds, Benchmark/Elite, Inc. v. Simpson, 232 P.3d, 777 (Colo. 2010).* In the recent case of *Turner v. Chipolte Mexican Grill,* the ICAO affirmed an ALJ's ability to order recovery of overpayment. *Turner v. Chipolte Mexican Grill* W.C.# 4-893-631-07 (ICAO, February 8, 2018). The Court of Appeals in *Vargo v. Industrial Commission*, 626 P.2d 1164 (Colo. App. 1981) noted that there were no provisions in the Act authorizing "retroactive withdrawals of an admission of liability." Nevertheless, the Court stated that the "beneficial intent" of the Act was predicated on claimant's providing accurate information. In *Stroman v. Southway Services, Inc*., W.C. No. 4-366-989 (August 31, 1999), ICAO interpreted *Vargo v. Industrial Commission*, 626 P.2d 1164 (Colo. App. 1981) and subsequent statutory amendments to permit retroactive withdrawal of admissions, and ICAO construed those authorities as permitting the ALJ to order repayment of compensation and benefits, including medical benefits. Specifically, in *Stroman*, ICAO stated that "[a]lthough the *Vargo* decision does not expressly state that a claimant may be ordered to repay the insurer for benefits obtained prior to withdrawal of the fraudulently induced admission, the court's reference to "retroactive withdrawal" of the admission indicates that repayment is the intended remedy. *Cf. HLJ Management Group, Inc. v. Kim, 804 P.2d 250* (Colo. App. 1990) (holding that admission may not be withdrawn retroactively unless procured by fraud, but permitting prospective withdrawal of an erroneous admission). Similarly, in *West v. Lab Corp*., W.C. No. 4-684-982 (ICAO February 27, 2009), ICAO reiterated that in a circumstance of fraud, the ALJ did not err in ordering the withdrawal of the respondents' admissions and repayment of compensation and medical benefits. In *West*, ICAO further indicated that "[w]e perceive nothing in the language of [section] 8-43-304(2) indicating that the legislature intended the respondents' only recourse to be an offset against future payments in cases where the claim was fraudulently filed and there will therefore be no future payments." *Id*.

7. The elements of fraud are set forth by the Colorado Supreme Court in *Morrison v. Goodspeed*, 100 Colo. 470, 68 P.2d 458 (1937). In that case, the Court stated: "The constituents of fraud, though manifesting themselves in a multitude of forms, are so well recognized that they may be said to be elementary. They consist of the following:

> (1) A false representation of a material existing fact, or representation as to a material existing fact made with a reckless disregard of its truth or falsity; or concealment of a material existing fact, that in equity and good conscience should be disclosed.
>
> (2) Knowledge on the part of the one making the representation that it is false; or utter indifference to its truth or falsity; or knowledge that he is concealing a material fact that in equity and good conscience he should disclose.
>
> (3) Ignorance on the part of the one to whom representations are made or from whom such fact is concealed, of the falsity of the representation or the existence of the fact concealed.
>
> (4) The representation or concealment made or practiced with the intention that it shall be acted upon.
>
> (5) Action on the representation or concealment resulting in damages."

8. As noted by ICAO in *Essien v. Metro Cab*, W.C. Number 3-853-693 (ICAO August 22, 1991), "[t]he existence of the elements is generally a question of fact for the determination of the ALJ", and because proof of fraud is a factual issue, the ALJ may base his decision on inferences drawn from circumstantial or direct evidence. See *Essien*, supra, citing *Electric Mutual Liability Insurance Co. v. Industrial Commission*, 154 Colo. 491, 391 P.2d 677 (1964). As discussed below, the elements of fraud have been proven by Respondents in this matter.

9. The first element of fraud has been proven: false representation by Claimant as to a material existing fact. Claimant was repeatedly directly asked, in many forms over a long period of time, if she had returned to work at Children's. She responded in writing on more than one occasion that she had not returned to work at Children's, when she had. Ryan Saladin made it clear to her in his first email regarding the AWW calculation that she needed to keep him informed if she returned to work at Children's to avoid overpayment. Every check she signed included a warning about cashing it if she had returned to work. She knew that the fact that she was being paid for work at Children's was a material existing fact. Her statements that she was not working were false representations. Her avoidance of Mr. Saladin's questions and lack of response to his inquires was concealment of a material existing fact. In equity and good conscience, Claimant should have informed Respondents that she was being paid

temporary total disability benefits for wage loss at Children's when she had no wage loss at Children's.

10. The second element of fraud has been proven. Claimant was aware that she was working and being paid by Children's. When she repeatedly informed respondents that she had not returned to work, she knew that this was false. Claimant was cashing checks for TTD of nearly $800 per week. She knew her work with Integrated Healthcare Staffing never exceeded $200 per week. She knew that payment of TTD was continuing for wage loss that did not exist. She admitted this at hearing. Any assertion that she was confused at any time and thought that she was only being paid for her wage loss at Integrated Healthcare Staffing is not credible. She was cashing checks in the amount of $1,578.48 every two weeks, far in excess of any wage loss from her $166 per week job at Integrated Healthcare Staffing. She knew, in equity and good conscience, that she should inform Respondents that she had returned to work at Children's.

11. The third element of fraud has been proven. Respondents were ignorant of the fact Claimant was working while collecting temporary total disability benefits. It is found that Respondents had no means of obtaining the information needed to properly calculate temporary benefits actually due Claimant. They relied upon Claimant to notify them that she returned to work at her concurrent employment, the wages earned, and the dates of work. As testified by Mr. Saladin, Respondents were entirely dependent upon Claimant for this information.

12. The fourth element of fraud has been proven. Claimant's representations and concealments regarding her wage earnings at Children's are found to have been made with the intention that they be acted upon in the form of continuing payment of temporary total disability benefits at a rate of $1,578.48 every two weeks. Claimant took each check and cashed it without hesitation, instead of depositing it into her account, for a total of $3,156.96 per month, from December 14, 2015 through June 11, 2017. This is a total of $61,560.72 in (untraceable) cash. Claimant never indicated to Respondents that payment for wage loss at Children's should be stopped. Claimant is an intelligent and educated person, a licensed practical nurse, and at hearing she displayed no deficits in understanding or communicating. Claimant knew or should have known that she was not due $ 789.24 wage loss benefits per week for her $166 per week job. Claimant knew or should have known that her payments were based upon Respondents' reliance that she was not working at Children's, and that if she revealed that she was, those payments would no longer be made. She knew that when she informed Respondents that she had returned to work almost immediately after the injury, she would be responsible for a large overpayment, and therefore, concealed and then provided false information about her return to work date. It is concluded that Claimant had the intention required for this element of fraud.

13. The fifth element of fraud has been proven. Claimant's actions resulted in damage to Respondents. Claimant was paid temporary total benefits from December 14, 2015 through June 11, 2017 when she was not owed these benefits. This resulted in

an overpayment that Respondents must now seek an order to recover. Respondents have lost the benefit of their money over a long period of time.

14. It is found that Claimant, for self-gain, willfully made false statements material to the claim for the purpose of obtaining compensation under the Colorado Workers' Compensation Act. Claimant knew that her temporary benefits were based upon wage loss at Children's, and she knew that Mr. Saladin needed to know when she returned to work at Children's to avoid overpayment. She knew that she was being overpaid. As noted in chronology of finding number 6, above, there were several occasions when Claimant responded to Mr. Saladin's inquiries about her return to work saying that she had not. She wrote this several times. At all times when she represented to Respondents that she was not working, the Children's records show that she was. She knew that Respondents had found out that she was working when the surveillance tapes were sent to her doctor, and refused to respond to inquiries for months after that. When confronted face to face by Mr. Heiderich, she again made false statements: first stating that she had only returned to work on January 3, 2017, then when confronted, stating that she had not returned to work until May of 2016. Records show that both of these statements are false. It is undisputed that Claimant made several false statements to Respondents, denying and concealing her work at Children's and the fact that she lost almost no time from that job after the date of injury.

15. To the extent the GALs are an "award," the ALJ concludes that Respondents have established by a preponderance of the evidence that the GALs filed in this case shall be reopened based on fraud and overpayment. *See Meza v. BMC West Corp*. W.C. No. 4-651-065 (January 3, 2007) *citing Burke v. Industrial Claim Appeals Office*, 905 P.2d 1, 2 (Colo. App. 1994).

16. The ALJ also concludes that Respondents have established by a preponderance of the evidence that they can retroactively withdraw that portion of each General Admission of Liability which admitted for temporary total disability benefits to which Claimant was not entitled to receive and recover the overpayment.

17. Respondents have requested the reopening and withdrawal of the general admissions of liability in order to recover the overpayment of temporary total disability benefits. Although a request to reopen and withdraw an admission of liability may be duplicative, since each remedy allows the same relief, the ALJ concludes that Respondents are entitled to both remedies in order to effectuate their ultimate request which is to obtain an order determining the amount of the overpayment that has occurred in this case and an order to recover the overpayment.

18. Regarding the recovery of the overpayment, it is noted that Claimant cashed each of the temporary benefits checks sent to her for a total amount of $61,560.72. In 2017, she also earned over $60,193.16 at her job at Children's. It is reasonable to infer that she made an amount very close to this in 2016. From the check stubs in evidence, this appears to be the case. This overpayment is not for a short period of time, but a span of a year and a half, during which she continued working at Children's. Claimant provided no evidence of her financial obligations, and in fact did

not respond to a discovery order asking her to do so. Claimant simply represented that she recently separated and is a single mother and could afford repayment at a rate of $150 a month, with no supporting evidence. She had a bank account, and is certainly reasonable to infer that she cashed instead of depositing her TTD check to prevent the money from being traced and in anticipation of this very determination by the ALJ. Claimant received an overpayment of more than $2,700 per month for a year and a half based upon her repeated false statements. [$3,156.96 in TTD - $444.56 owed for wage loss at Integrated Healthcare Staffing]. She received the benefit of that money over a long period of time, with full understanding that she was not entitled to it. As noted by Respondents, an overpayment payback schedule of $150 per month would take approximately 24 years to recoup, interest free. In many cases, overpayment is not because of any intentional action by Claimant (e.g. when MMI is pushed back by a DIME). That is not the situation here. In fashioning a remedy with regard to overpayments, the ALJ must be fair to all parties.

19. At hearing, Respondents requested Claimant be ordered to repay the overpayment at a rate of $1,200 per month. However, in their proposed order, Respondents proposed a more reasonable figure based on the circumstances of this case and argued Claimant should be ordered to repay the overpayment at a rate of $600 per month. Respondents supported their request for such an order with the following argument:

> Overpayment is $44,570.80 – the amount of a car purchase. Similar to a car loan, claimant has voluntarily and intentionally created this debt for herself. Claimant could never finance a car for 24 years, interest free. Claimant received approximately $2,700 extra dollars a month for a year and a half. December 14, 2015 to June 11, 2017 is 545 days. An overpayment of $44,570.80 represents overpayment of $81.78 per day. The length of time and amount of this overpayment can only be attributable to claimant's misrepresentations and concealment. It is not for lack of effort to obtain the correct information by respondents. Given claimant's behavior, it would certainly be "fair" to provide an order for a monthly amount equal to what claimant wrongfully and intentionally took from respondents. Even half of the amount per month accumulated by claimant could be "fair." Respondents do recognize that this is not realistic. Still, setting the payback amount based upon what claimant says she wants to pay is patently unfair to respondents, given the length of time payback would take, and the reasons that this overpayment occurred. $150 per month is less than 5% of the overpayment claimant accumulated per month, while concealing that she was working. $150 per month may be what is comfortable for her, what she wants to pay, but not necessarily what she can pay. She did not provide documentation of her financial obligations, in violation of a discovery order. She provided only her bank account statements, and only did that the eve of the hearing. She now wants this lack of information to be read in her favor. She has not proven any limits on

> what she can afford per month. The bank account records she did provide do not show any of the $61,560.72 in cash she received in TTD. Respondents assert that there was no reason to cash each of those checks other than to avoid tracing of that money when respondents finally caught on and sought overpayment – who needs over $3,000 in cash every month? With an income of over $60,000 per year, and no reason to believe that a $61,560.72 cash cushion has disappeared. She has not proven that it has. Just as before, we are entirely reliant upon this person to provide us information, and she has not done it. It is reasonable to require Claimant to be at least as responsible as she would be, should she have made a purchase for an item of $44,570.80 in value. According to simple internet calculators, $44,570 car loan with NO interest over 36 months is $1,238; 48 months is $929; 60 months (5 years) is $743. Respondents propose an order with a payback schedule of $600 per month. This is a fraction of the overpayment per month taken by claimant, but represents a realistic amount over a reasonable timeline for the voluntary obligation claimant chose to create for herself.

20. The ALJ finds the arguments raised by Respondents to be persuasive. In addition to the arguments raised by Respondents, the ALJ is taking into consideration the fact that Claimant's primary job was with Children's and she was working for Respondent/Employer as a second job which she had started shortly before her work injury. At the time of her injury, Claimant was earning $166.74 per week with Employer at her second job, which equates to $722.54 per month. It is not unreasonable for Claimant to use earnings from a second job to repay the overpayment. Therefore, the ALJ concludes that Claimant shall repay the overpayment at a rate of $500 per month.

21. Respondents also requested the ALJ to determine whether Claimant willfully made a false statement or representation material to the claim for the purpose of obtaining benefits pursuant to CRS § 8-43-402.

Section 8-43-402 C.R.S. states:

> If, for the purpose of obtaining any order, benefit, award, compensation, or payment under the provisions of [Workers' Compensation Act], either for self-gain or for the benefit of any other person, anyone willfully makes a false statement or representation material to the claim, such person commits a class 5 felony and shall be punished as provided in section 18-1-105, C.R.S., and shall forfeit all right to compensation under said articles upon conviction of such offense.

While the credible evidence demonstrates Claimant acted willfully by failing to disclose her return to employment with Children's, despite numerous opportunities to do

so, §8-43-402, C.R.S., requires forfeiture of all of right to workers' compensation upon a "conviction" of a class 5 felony. The Respondents have presented no evidence of a conviction. As such, § 8-43-402, C.R.S., is inapplicable to the facts of this case.

22. Respondents are also requesting to take a credit for the permanent partial disability benefits of $2,387.09 against the $44,570.80 overpayment. The ALJ concludes that Respondents may take a credit for Claimant's permanent partial disability benefits in the amount of $2,387.09 against the overpayment. Therefore, an overpayment of $42,183.89 remains after this credit is applied.

ORDER

It is therefore ordered that:

1. The General Admissions of Liability dated January 7, 2016, January 26, 2016, and January 26, 2017 and July 21, 2017, are reopened based upon fraud and an overpayment.

2. The General Admissions of Liability dated January 7, 2016, January 26, 2016, and July 21, 2017 are withdrawn, retroactively, as to the admission for temporary total disability benefits based upon fraud.

3. Claimant was not entitled to temporary total disability benefits from December 14, 2015 through June 11, 2017.

4. For the period of December 14, 2015 through June 11, 2017, Claimant was due $16,989.74 in temporary partial disability benefits.

5. Claimant was overpaid $44,570.98 in temporary benefits for the period of December 14, 2015 through June 11, 2017

6. Respondents may take credit against the overpayment for the permanent partial disability benefit award of $2,387.09. Therefore, an overpayment of $42,183.89 remains after this credit is applied.

7. Pursuant to § 8-43-207(1)(q), C.R.S., Claimant shall repay $42,183.89 to Respondents in accordance with this Order.

8. Claimant shall pay $500 per month for 84 months commencing the month after this Order becomes final. Claimant shall make a final payment of $183.89 in the 85th month.

9. Payments shall be sent to Respondent Pinnacol Assurance in care of the adjuster.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that Dr. Genuario's recommendation of a new IV contrast MRI of the right hip is reasonable, necessary and related to Claimant's October 17, 2016 industrial injury.

FINDINGS OF FACT

1. Claimant is a 58-year-old male who works for Employer as a part-time freight employee.

2. On October 17, 2016, Claimant sustained an admitted industrial injury when he fell off of a step stool and landed on his right back and side.

3. On October 27, 2016, Claimant presented to Carrie Burns, M.D. Dr. Burns noted Claimant struck his right buttock and strained his left groin. Claimant complained of "nerve pain" from his right low back and buttocks radiating down to his right thigh. Dr. Burns diagnosed Claimant with a hip contusion and acute lumbar radiculopathy.

4. Claimant underwent a lumbar spine MRI which revealed an L4-L5 disc protrusion with facet spondylosis.

5. On November 16, 2016, Claimant saw John Sacha, M.D. and complained of low back and right anterior thigh pain, right anterior leg numbness and tingling, and occasional right groin pain. Dr. Sacha diagnosed Claimant with lumbosacral radiculopathy and lumbosacral displaced disc. He recommended Claimant proceed with the right L4-L5 transforaminal S1 nerve block.

6. On November 23, 2016, Claimant presented to Chad J. Prusmack, M.D. Claimant reported worsening weakness. On physical exam, Dr. Prusmack noted diminished strength of the right lower extremity. He recommended Claimant undergo an L4-5 microdiscectomy, which was performed on November 29, 2016.

7. On December 12, 2016, Claimant attended a post-operative appointment with Dr. Prusmack's assistant, David Whatmore MMS, PAC, and reported feeling much better, despite some remaining radiculopathy and mild leg weakness.

8. Claimant subsequently began physical therapy. On January 4, 2017, Ryan Winters, DPT noted that Claimant "now feels a tension that wraps around the R side of his LB to his R hip and groin region; sometimes down the thigh but not below the knee." He further noted "moderate R hip mobility restrictions." On January 9, 2017, PAC Whatmore noted, "The patient had some persistence of pain radiating into the groin

which he said was an end stage development of his radiculopathy when he had this acute disc herniation."

9. By March 6, 2017, Claimant was reporting worsening pain in his right groin and buttock. On physical exam, Dr. Prusmack noted positive impingement sign on external rotation of the right hip, weakness in flexion and extension of the thigh, and positive femoral stretch. Dr. Prusmack recommended an MRI of the right hip.

10. A March 17, 2017 right hip MRI revealed a tear of Claimant's right anterior superior and posterior superior acetabular labrum.

11. On March 23, 2017, Claimant returned to PAC Whatmore for a follow-up evaluation. PA-C Whatmore opined that the right hip labral tear was the most likely source of Claimant's hip pain. He remarked that Claimant's radicular symptoms had basically resolved but noted, "Throughout the process though and amongst these other pains, he has also had difficulties with a pain on the right side of the hip radiating into the right groin and posteriorly into the right buttock. The microdiskectomy surgery has not changed these symptoms." Claimant was referred to orthopedic surgeon James Genuario, M.D. for further evaluation of the labral tear.

12. Dr. Genuario first evaluated Claimant on April 17, 2017 and diagnosed Claimant with a right hip FAI with a labral tear. He remarked, "I discussed with [Claimant] that this may have not directly occurred from the fall but may have predated the fall but has become symptomatic secondary to this change in his functional gait pattern and weakness associated with recovery." He recommended that Claimant begin a formalized physical therapy program. Dr. Genuario stated that if Claimant did not see any improvement, he would then consider an intra-articular injection and, ultimately, a hip arthroscopy with a labral repair femoroplasty. Claimant received an intra-articular cortisone hip injection on May 24, 2017.

13. On June 26, 2017, PAC Whatmore noted that the right hip injection had improved Claimant's right hip pain and radiating pain. Claimant continued to report some right-sided back pain and intermittent radiculopathy into the right leg. PAC Whatmore referred Claimant for a right L4-5 transforaminal epidural steroid injection.

14. On July 27, 2017, Allison Fall, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Fall reviewed Claimant's medical records and performed a physical examination. Claimant reported to Dr. Fall that he began to notice right groin pain after the microdiscectomy. Regarding the labral tear Dr. Fall noted, "He was told he probably had it before." She noted that Claimant's right hip pain resolved for a few weeks after the injection and Claimant now had milder symptoms in the groin. Dr. Fall opined that Claimant sustained a work-related L4-5 disc extrusion. She opined that the right hip labral tear was not work-related and was likely preexisting but asymptomatic. She noted that the hip injection helped Claimant's symptoms and concluded that, other than one additional right hip intraarticular injection, further treatment for the right hip would be outside of the scope of the workers' compensation system.

15. On August 28, 2017, Dr. Genuario's assistant, Jeremy B. Smith, PAC, evaluated Claimant and noted that the intraarticular injection helped Claimant's symptoms for a few months and then wore off. Possible treatment options were with Claimant, including a possible right hip arthroscopic surgery and labrum repair. It was recommended that Claimant undergo a new MRI with IV gadolinium to evaluate cartilage and ensure Claimant is a good candidate for arthroscopic labral repair surgery.

16. Dr. Fall testified by post-hearing deposition as an expert in physical medicine and rehabilitation. Dr. Fall testified consistent with her IME report and continued to opine that Claimant's right hip labral tear is more likely a pre-existing, degenerative condition. Regarding the development of hip symptoms, Dr. Fall stated, "I guess that most accurate response is that we don't really know why he felt pain in his hip at that point in time. I don't know. I don't think anybody can say exactly why he started to feel pain in his hip." Dr. Fall noted that Claimant began to notice hip pain during his rehabilitation and stated, "Now, that might have been because he was walking differently or had weakness in his leg, but somehow he felt hip pain and they sent him for an injection and that helped that pain symptom." Dr. Fall acknowledged that Claimant was performing his recreational activities without impairment from a labrum tear prior to the work injury. She testified that the intraarticular injection provided 100 percent immediate diagnostic response, Claimant is not symptomatic from the right hip, and does not need treatment for the right hip as a result of the work-related injury. She opined that the recommended right hip MRI is not reasonable, necessary or related to the work injury.

17. Claimant testified that prior to the work injury he actively engaged in athletic activities, including skiing and ultra-distance running. He testified that prior to the work injury he did not have any right hip injuries or right hip complaints. Claimant stated that subsequent to the work injury he experienced pain radiating from his lower back to his right buttocks around to the right thigh and knee, along with pain in his right groin across the leg to his right hip. Claimant testified that he felt the right groin pain more intensely after the microdiscectomy, which relieved his "all-consuming" low back radicular pain. Claimant further testified that the references in the medical records to left groin symptoms are incorrect, and that his groin pain has always been on the right.

18. The ALJ credits Claimant's testimony at hearing, Dr. Genuario's opinion, and the medical records, and finds that it is more likely than not that the new right hip MRI is reasonable, necessary and related to Claimant's work injury. The ALJ notes the conflicting medical opinions expressed in this case; however, the ALJ finds the opinions expressed by Dr. Genuario more credible and persuasive than the contrary opinion expressed by Dr. Fall.

19. Claimant proved it is more likely than not that the October 17, 2016 industrial injury aggravated, accelerated or combined with Claimant's pre-existing hip condition to produce the need for medical treatment.

20. Claimant proved it is more likely than not that the recommended right hip MRI is reasonable and necessary to cure and relieve the employee of the effects of October 17, 2016 work injury.

21. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Reasonable, Necessary and Related Medical Treatment

A claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

A respondent is liable to provide such medical treatment “as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury.” Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Claimant credibly testified that he did not have any right hip complaints prior to the October 17, 2016 work injury and that his right hip did not become symptomatic until after the work injury. No credible and persuasive evidence was presented at hearing to the contrary. Claimant reported right groin complaints to Dr. Sacha in mid-November 2016, and continued to report such complaints after undergoing surgery and rehabilitation. Claimant credibly testified that the right groin complaints were present after the work injury, but felt more intensely once his “all-consuming” low back pain

subsided. The medical records document reported weakness as well as decreased strength on physical examination. Dr. Genuario credibly opined that, while the labrum tear may have been pre-existing, it became symptomatic due to the change in Claimant's gait pattern and weakness associated with recovery from the back injury. Dr. Fall even acknowledged in her deposition testimony that Claimant's right hip symptoms may have resulted from a change in gait or weakness in the leg during rehabilitation from the back injury. Based on the totality of the evidence, the ALJ is persuaded that the October 17, 2016 industrial injury aggravated, accelerated or combined with Claimant's pre-existing right hip condition to produce the need for medical treatment.

While Dr. Fall opined that, as of the date of her evaluation of Claimant in July 2017, Claimant's right hip was no longer symptomatic, as of late August 2017, the medical records reflect that Claimant was no longer experiencing relief from the intraarticular injection. Dr. Genuario recommended Claimant undergo a new right hip MRI for the purpose of further evaluating Claimant's right hip condition and possible treatment options, which is reasonable and necessary under the circumstances. Claimant has proven by a preponderance of the evidence that the new IV contrast MRI of the right hip recommended by Dr. Genuario is related to the October 17, 2016 work injury and is reasonable and necessary to cure and relieve Claimant from the effects of the work injury.

ORDER

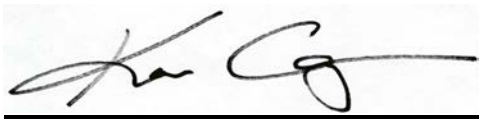
It is therefore ordered that:

1. Dr. Genuario's recommendation for a new IV contrast MRI of the right hip is reasonable, necessary and causally related to Claimant's October 17, 2016 work injury. Insurer shall authorize the proposed MRI of the right hip.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 24, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable work related injury on or about September 8, 2016.

2. Whether Claimant has established an entitlement to reasonable and necessary medical benefits to treat her September 2016 work related injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a full time accountant and has been so employed since June of 2015.

2. On November 30, 2016 Claimant was evaluated at Kaiser by Y Jane Cramer, PA. Claimant reported that she had insect bites that had been occurring since August that were starting to bother her. Claimant reported seeing bugs at work and that she was developing black dots on her skin. Claimant reported thinking that there was something under her skin. Claimant insisted that she had bugs and brought a magnifying glass to the appointment along with pictures on her cell phone. PA Cramer performed an examination and opined that the areas looked like moles. PA Cramer opined that Claimant had scattered dark moles around the neck. PA Cramer noted that she took a #15 blade and scraped off one area and saw no insect or foreign body in Claimant's skin. PA Cramer opined that the areas that Claimant was pointing to looked like pigmented lesions, and she noted that Claimant insisted that she was wrong. PA Cramer opined that she saw no sign of bugs or foreign bodies under Claimant's skin. Despite seeing no signs of bugs or foreign bodies under Claimant's skin, PA Cramer referred Claimant to dermatology. *See* Exhibit C.

3. On December 7, 2016 Claimant was evaluated by dermatologist Megan Weber, M.D. Claimant reported that she had bug bites that began to appear in September and that she had been seeing bugs at both her home and work. Claimant reported that exterminators at her home had found beetles and that she had her home sprayed with pesticides several times in the past few months but that when the vents went on bugs come out and she can feel herself being bitten. Claimant also reported seeing bugs at work. Claimant reported that she looks at her skin with a magnifying mirror and sees little black bugs coming out of certain sites. Claimant had the magnifying mirror with her at the appointment. Dr. Weber performed a full skin check of Claimant's face, eyelids, lips, ears, neck, left arm, right arm, chest, abdomen, back, right leg, left leg, digits, and nails. Dr. Weber found brown verrucous stuck on appearing papules on Claimant's face, under her breasts, and on her back that were too numerous to count. Dr. Weber found follicular

based hyperkeratotic papules on the bilateral upper arms, two dilated open comeodones on the right abdomen, and a firm indurated subcutaneous nodule with peripheral rim of pigmentation x1 on the right back. Dr. Weber found no lesions consistent with arthropod bites and no burrows on finger webs. Dr. Weber noted that Claimant pointed to numerous lesions on the examination which were banal appearing 2-3 mm brown macules with regular pigment network consistent with benign melanocytic nevi. *See* Exhibit C.

4. Dr. Weber assessed Claimant with seborrheic keratosis, melanocytic nevus, dermatofibroma on the right back, and acquired keratosis pilaris. Dr. Weber noted that she reassured Claimant at length and assured Claimant that the numerous banal appearing melanocyutic nevi Claimant was pointing to were normal moles and were not bites. Dr. Weber assessed Claimant as having probable delusions of parasitosis and noted no lesions on exam consistent with bug bites or infestation. Dr. Weber recommended Claimant have an evaluation with psychiatry and after Claimant angered, Dr. Weber gently but clearly advised Claimant that she did not have a skin problem and again recommended Claimant see psychiatry. Dr. Weber noted that Claimant refused the psychiatry referral. *See* Exhibit C.

5. In December of 2016 a first report of injury was filed. The report indicates that Claimant reported that she had sustained a work related injury on September 8, 2016 when she was sitting at her desk working and was bitten by insects all over her body. Claimant reported that she began to experience insect bites, initially on her legs and then over time on her arms and face. Claimant reported that some bites were sharp prickly bites and others just felt like being bitten, and itched. *See* Exhibit A.

6. On January 4, 2018 Claimant was evaluated by Neil Silverman, M.D. Claimant reported that she wanted a skin check to check for evidence of bug infestation and that she was convinced that a dark spot on the mid upper lip and another dark lesion on her right clavicle were bugs imbedded in her skin. Claimant reported feeling that bugs were coming from her job. On examination, Dr. Silverman found 11 brown stuck on plaques with horn cysts in the breast area and that Claimant had numerous brown stuck on papules scattered over the cheeks, back, and more sparsely over the extremities. Dr. Silverman found a mid-upper lip black 2 mm diameter macule and a pore with imbedded dark material within the lesion on the right clavicular area. Dr. Silverman treated the 11 areas under the breast with cryo and he removed the mid upper lip and right clavicle lesions. Dr. Silverman recommended follow up if any moles changed or if any new dark lesions occurred. *See* Exhibit C.

7. On January 9, 2018 Dr. Silverman advised Claimant that the biopsy from the right clavicle lesion showed just an enlarged pore and that the biopsy from the upper lip lesion showed just a lentigo (large freckle). Dr. Silverman opined that there was no sign of bug bites or bug body parts in either of the biopsies. *See* Exhibit C.

8. On January 16, 2017 Respondent filed a notice of contest denying the claim and indicating that the injury was not work related. *See* Exhibit B.

9. A friend of Claimant's, Telmahury Robledo indicated that in December of 2016 while at Claimant's house, she noticed that the light fixture above Claimant's dining room table had insects in it. *See* Exhibit 1.

10. A commercial pest control technician, Stephen Ceas testified by deposition. Mr. Ceas has worked in pest control for 23 years and has taken over 150 courses in pest control including a certification course. Mr. Ceas completed continuing education courses throughout his career to maintain his licensure. Mr. Ceas testified that he had made service calls to 1313 Sherman Street. Mr. Ceas testified that Claimant had called him around September 28th and that he scheduled an appointment for September 30th. Mr. Ceas testified that he went out to Claimant's work building, did an inspection, and didn't find any activity but that he set out monitor traps. He testified that he inspected the baseboards, the desk area underneath, and the chair but didn't see bugs. He set out monitor traps and went back to check them on October 28th. Mr. Ceas testified that there was nothing on the traps and that he left the traps in place. Mr. Ceas testified that he returned on November 10th and found three insects that he identified as sawtooth grain beetles in the traps in Claimant's office. Mr. Ceas testified that those types of insects are generally found where somebody has brought food into the office and the insects were in the food.

11. Mr. Ceas testified that a sawtooth grain beetle is a little beetle that will lay eggs in grains and that they are found in rice, wheat, oatmeal, and things like that. Mr. Ceas testified that sawtooth grain beetles are not known or listed as pests that would be a biting insect pest. Mr. Ceas testified that he treated Claimant's office and did the entire inside of the office all the way around all the walls, under the desk, the edges of the desk, under the chair, and under the bottom of the chair with an aerosol spray.

12. Mr. Ceas testified that he returned to Claimant's office building on December 2nd and that Claimant had moved offices and that he had treated the new office with the aerosol spray before she had moved in. Mr. Ceas testified that the treatment killed insects and that he would expect to find carcasses after a treatment and that the treatment lasts for 30 days minimum and keeps killing insects for a while. Mr. Ceas testified that he also put traps into Claimant's new office on that date. He testified that he also checked the traps in Claimant's old office on this date and didn't find anything. Mr. Ceas returned on December 9th and found minute debris on 3 of the traps that he identified under 10x magnification to be plant debris and not insect or insect body parts.

13. Mr. Ceas testified that Claimant always had insisted she was getting bit and that he used all the techniques he knew of but couldn't find anything that would indicate bites. Mr. Ceas testified that he never found any biting insects while inspecting or treating Claimant's offices. Mr. Ceas testified that he never saw fleas. Mr. Ceas testified that he was trained to consider that a person could have delusionary periostosis when someone is insistent that they are being bitten and he has set traps for months without catching any kind of biting insect.

14. Claimant testified at hearing that she has been bitten by insects at work since September of 2016 and that the bites are ongoing. Claimant testified that it was a harassing condition and that she wanted to know what was biting her and wanted treatment. Claimant testified that she brings Off and Raid insect sprays to her office on a daily basis and sprays her legs and her entire office but that the bites persist. Claimant testified that she gets two different types of bites, one that is sharp and prickly and one that is not, and that she is concerned that there are two types of biting insects in her office. Claimant testified that she believes the insect infestation is intentional and is racially motivated as an attempt to get her to quit her job.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish, more likely than not, that she sustained a compensable injury of insect bites at work. Although Claimant believes she is being bitten by some type of insect or insects at work, she has failed to show this by preponderant evidence.

The medical evaluations have not demonstrated any evidence that Claimant has any insect bites or body parts imbedded in her skin. Rather, it shows she has a large number of normal lesions on her body that are ***not suspicious*** and are consistent with moles, papules, freckles, pores, etc. In November of 2016, PA Cramer opined that there was no signs of bugs or foreign bodies on Claimant's skin and went as far as to scrape off a portion of Claimant's skin to come to this determination. Despite this, PA Cramer referred Claimant to dermatology due to Claimant's insistence that she was being bitten by insects. In December of 2016 dermatologist Dr. Weber noted that Claimant had no lesions consistent with arthropod bites and that the areas Claimant pointed to and insisted that little black bugs were coming out of her skin appeared to be nothing more than normal moles. In January of 2018 Claimant again was evaluated and was convinced that dark spots on her lip and right clavicle were bugs imbedded in her skin. This time Dr. Silverman went to the length of removing and sending the two areas to biopsy. The biopsy showed that the areas were not bugs imbedded in Claimant's skin but that they were an enlarged pore and a large freckle. The examinations by three medical professionals all show no evidence of any bug bites or bugs imbedded in the skin.

Further, as found above, Mr. Ceas went to Claimant's office on several occasions to inspect for insects. Despite the traps he set out and his visits, he was unable to find evidence of insects known to bite humans. He found only sawtooth grain beetles which are not known to be biting insects.

Claimant has not presented sufficient evidence to support her claim that she has been bitten by insects or that she has been bitten by insects at work and sustained a work related injury. Therefore, her request for a finding of compensability and an award of medical benefits to treat her insect bites is denied and dismissed.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that she sustained a compensable work related injury of insect bites on or about September 8, 2016.

2. As Claimant has failed to establish that she sustained a compensable injury, her request for medical benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 4, 2018

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUE

A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant is an employee of Kinney Moving Services (Kinney). Kinney executed a shipping contract with Golden Van Lines on September 20, 2014. Golden Van Lines is an agent of Employer. Employer is thus Claimant's statutory employer.

2. Kinney issued Claimant a W-2 Form for the year 2014. The W-2 Form reflected that Claimant earned a total of $25,000 from Kinney for the year.

3. While working for Kinney in 2014 Claimant also fulfilled a contract for Endo Enterprises. Services pursuant to the contract occurred between May 20, 2014 and July 7, 2014. Payment for the work included Claimant's gross wages from Kinney.

4. On January 27, 2015 Claimant suffered an admitted industrial injury during the course and scope of his employment. On February 26, 2015 Respondents filed a General Admission of Liability (GAL) acknowledging an Average Weekly Wage (AWW) of $300.00 pending receipt of pay records.

5. On April 5, 2017 Respondents filed a second GAL recognizing an AWW of $773.19 with a corresponding Temporary Total Disability (TTD) rate of $515.46. Respondents attached their calculation of the AWW to the GAL. There were 103 days between the date of the shipping contract on September 20, 2014 and December 31, 2014. Claimant earned a net income of $11,377.58 during the period. Dividing $11,377.58 by 103 days and multiplying by seven yields an AWW of $773.19.

6. Claimant testified that he began working pursuant to the Golden Van lines contract on September 26, 2014. He worked through January 27, 2015. Claimant emphasized that he worked for 40 days during the period. He requested an increase in his AWW based on only the 40 days that he actually worked rather than the total number of days in the contract period.

7. Claimant explained that he worked from May 20, 2014 through July 7, 2014 to fulfill the contract with Endo Enterprises. Although Claimant did not testify about the specific number of days he worked during the period, he agreed that his work days were included in the total compensation he received from Kinney.

8. Claimant asserts that his AWW should be $4,375.00. He introduced Exhibit 14 to detail his calculation. The Exhibit specifies that Claimant worked a total of 40 days between September 26, 2014 and January 27, 2015 and earned $25,000. Dividing

$25,000 by 40 days yields a daily pay rate of $625.00. Multiplying $625.00 by seven yields an AWW of $4,375 or $227,500 per year.

9. Claimant's tax records from 2013 through 2015 were admitted into evidence and do not support gross earnings of $227,500. Claimant's Adjusted Gross income (AGI) for 2013 was $18,818. His AGI for 2014 was $7,000 and his AGI for 2015 was $2,925.

10. Claimant worked from May 20, 2014 through July 7, 2014 to complete the contract with Endo Enterprises. There are 49 days in the period. Claimant also worked from September 26, 2014 through January 27, 2015 to fulfill the Golden Van Lines contract. There are 124 days in the period. There are thus a total of 226 days for the period May 20, 2014 through December 31, 2014.

11. Claimant obtained medical treatment for his injuries but did not reach Maximum Medical Improvement (MMI). Respondents thus requested a 24-month Division Independent Medical Examination (DIME) pursuant to statute. On July 25, 2017 Franklin Shih, M.D. performed the DIME. He assigned Claimant a 16% lower extremity impairment rating. On September 17, 2017 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Shih's impairment determination.

12. On September 21, 2017 Respondents filed a second FAL. The second FAL reflected that Respondents had paid Claimant total indemnity benefits of $107,373.75. The indemnity benefits included an overpayment that Respondents noted would "be offset against future benefits owed." The second FAL specified that Claimant was entitled to an AWW of $773.19. At the time the September FAL's were filed Claimant had an Application for Hearing pending on the issue of AWW.

13. Claimant timely filed an objection to the second FAL. He subsequently re-filed his Application for Hearing regarding AWW but did not endorse any other issues for hearing. All issues including TTD benefits, disfigurement, Permanent Partial Disability (PPD) benefits and Permanent Total Disability (PTD) benefits closed by operation of law.

14. Because Claimant's date of injury was January 27, 2015 the effective statutory cap for whole person impairments of 25% or less was $81,435.67. Claimant was assigned a 16% lower extremity impairment rating. The FAL reflects that Claimant received a total of $107,373.75 in indemnity benefits. Respondents have thus paid Claimant indemnity benefits in excess of the statutory cap.

15. An AWW of $773.19 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity. Initially, Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer on January 27, 2015. Respondents acknowledged that Claimant was entitled to receive an AAW of $773.19 by including the 103 days between the date of the shipping contract on September 20, 2014 and December 31, 2014. Claimant earned a net income of $11,377.58 during the period. Dividing $11,377.58 by 103 days and multiplying by seven yields an AWW of $773.19.

16. In contrast, Claimant asserts that his AWW should be $4,375.00. He introduced Exhibit 14 to detail his calculation. The Exhibit specifies that Claimant worked

a total of 40 days between September 26, 2014 and January 27, 2015 and earned $25,000. Dividing $25,000 by 40 days yields a daily pay rate of $625.00. Multiplying $625.00 by seven yields an AWW of $4,375 or $227,500 per year. Claimant's requested AWW is not reflective of his actual earnings during the relevant time period prior to his industrial injury. By selecting only dates on which he actually worked, Claimant's calculation misrepresents and distorts his actual earnings over the relevant time period. In fact, Claimant's tax records from 2013 through 2015 were admitted into evidence and do not support gross earnings of $227,500. Claimant's AGI for 2013 was $18,818. His AGI for 2014 was $7,000 and his AGI for 2015 was $2,925. Because Claimant's requested AWW is inconsistent with his actual earnings during the relevant time period preceding his industrial injury, the proper calculation of his AWW is $773.19. An AWW of $773.19 represents a fair approximation of his actual wage loss.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App.

1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

5. As found, an AWW of $773.19 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity. Initially, Claimant suffered an admitted industrial injury during the course and scope of his employment with Employer on January 27, 2015. Respondents acknowledged that Claimant was entitled to receive an AAW of $773.19 by including the 103 days between the date of the shipping contract on September 20, 2014 and December 31, 2014. Claimant earned a net income of $11,377.58 during the period. Dividing $11,377.58 by 103 days and multiplying by seven yields an AWW of $773.19.

6. As found, in contrast, Claimant asserts that his AWW should be $4,375.00. He introduced Exhibit 14 to detail his calculation. The Exhibit specifies that Claimant worked a total of 40 days between September 26, 2014 and January 27, 2015 and earned $25,000. Dividing $25,000 by 40 days yields a daily pay rate of $625.00. Multiplying $625.00 by seven yields an AWW of $4,375 or $227,500 per year. Claimant's requested AWW is not reflective of his actual earnings during the relevant time period prior to his industrial injury. By selecting only dates on which he actually worked, Claimant's calculation misrepresents and distorts his actual earnings over the relevant time period. In fact, Claimant's tax records from 2013 through 2015 were admitted into evidence and do not support gross earnings of $227,500. Claimant's AGI for 2013 was $18,818. His AGI for 2014 was $7,000 and his AGI for 2015 was $2,925. Because Claimant's requested AWW is inconsistent with his actual earnings during the relevant time period preceding his industrial injury, the proper calculation of his AWW is $773.19. An AWW of $773.19 represents a fair approximation of his actual wage loss.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

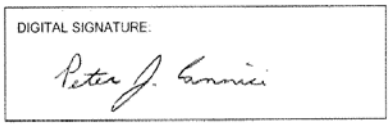
1. Claimant earned an AWW of $773.19.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 11, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she sustained a compensable injury to her right shoulder on August 13, 2017.

II. If Claimant proved she sustained a compensable work injury, whether Claimant is entitled to reasonably necessary and related medical benefits.

FINDINGS OF FACT

1. Claimant is a 51-year-old woman who works for Employer as a pharmacist. Claimant primarily worked in a mail order pharmacy processing bulk pharmaceuticals. Her duties required pushing a metal car and lifting totes filled with pharmaceuticals.

2. On August 30, 2017, Claimant sustained an injury to her right shoulder while performing her duties for Employer. Claimant was scheduled to work from 12:30 p.m. to 9:00 p.m. on August 30, 2017. Claimant testified that, at approximately 6:30 p.m., she experienced a sharp pain in her right shoulder while lifting a tote from the lower rack of a metal cart. At hearing, Claimant demonstrated the movement involved, which required Claimant to bend at the waist, lift the tote to chest level, and place the tote on a desk. Claimant testified the tote was filled with pharmaceuticals and weighed approximately 10-15 pounds. Claimant subsequently completed her shift and went home for the evening. She testified that the pain increased throughout the evening and became so severe she was unable to sleep. Claimant testified she contacted her primary care physician, Mark Nathanson, D.O. early morning on August 31, 2017.

3. Claimant presented to Dr. Nathanson at Aurora Family Practice Group at 10:24 a.m. on August 31, 2017. In the History of Present Illness section, Dr. Nathanson noted, "R shoulder pain for 2 weeks no acute trauma or strain. Worsened slowly and now unable to sleep." On physical examination, Dr. Nathanson noted decreased active range of motion in the right shoulder, positive impingement sign and full empty can testing. He diagnosed Claimant with a non-traumatic rotator cuff tear, prescribed Celebrex, and recommended Claimant rest, ice, stretch and take NSAIDS.

4. Claimant testified that she worked approximately one to two hours of her scheduled shift on August 31, 2017, then left work early due to pain.

5. Claimant returned to Dr. Nathanson on September 1, 2017 complaining of worsening shoulder pain. Dr. Nathanson again diagnosed Claimant with a non-traumatic rotator cuff tear, noting Claimant "thinks it may be work related from carrying totes." He administered a steroid injection and prescribed Percocet.

6. Claimant also underwent a right shoulder MRI on September 1, 2017. The indication states, “Shoulder pain since injury 2 days ago.” Eduardo Seda, M.D. gave the following impression: “Prominent edema and thickening in the supraspinatus and infraspinatus tendons, suspected tendinosis. Tendinitis is an alternate possibility. Shallow bursal surface tear is seen at the infraspinatus insertion.”

7. Claimant testified that Dr. Nathanson excused her from work September 1 - 6, 2017. As a result, Claimant missed scheduled shifts on September 1, September 5, and September 6, 2017. She was not scheduled to work September 2 or September 3, 2017. Claimant returned to work on modified duty on September 7, 2017 and has continued working since such time.

8. On September 7, 2017, Claimant presented to Sarah M. Perman, M.D. at UC Health. Dr. Perman noted that Claimant has a “known labral tear” in her right shoulder and was requesting a change in her prescription because she did not like how Percocet made her feel. Dr. Perman noted, “No evidence of repeat injury, fall or fracture.” She further stated, “This is a new problem. The current episode started more than 2 days ago. The problem occurs constantly. The problem has not changed since onset.” Dr. Perman diagnosed Claimant with a right shoulder injury and prescribed Flexeril.

9. Claimant reported the work injury to Employer on September 7, 2017. Employer subsequently sent Claimant to Henry J. Roth, M.D.

10. Claimant presented to Dr. Roth on September 14, 2017. Dr. Roth quoted Claimant saying, “I started feeling the pain in my shoulder at the completion of my shift on 8/31/17 and did not think too much into it, until bedtime. The pain woke me up through the night that I had to call my physician to get checked.” Dr. Roth remarked that the “exact mechanism of injury is hard to define.” Dr. Roth noted Claimant lifted heavy totes of pharmaceuticals with a hand on each side of the tote, and placed the tote on a table. He noted the movement involved flexion of arms at the elbow. Dr. Roth noted, “She cannot pinpoint a specific moment.” He further noted that the September 1, 2017 MRI revealed supraspinatus thickening, infraspinatus thickening with shallow bursal tear, no impingement anatomy, normal biceps, and a chondral labral junction tear without detachment at the biceps insertion. Dr. Roth opined that the injury was a work-related event, stating, “This is an acute and specific injury that occurred sometime during her shift. I believe it is related to biceps contraction lifting a (sic) heavy totes.” There is no reference to a biceps strain in the report. He placed Claimant on work restrictions and referred Claimant for an orthopedic evaluation with John Paul Spittler, M.D.

11. On September 26, 2017, Claimant presented to Dr. Spittler with right shoulder and neck pain “x1 month.” Dr. Spittler noted Claimant had an “overhead lifting injury” on August 30, 2017, and further noted, Claimant “[w]as lifting boxes at work on 08/30/17 and at end of shift noticed R ant shoulder pain…” He diagnosed Claimant with acute right shoulder pain and a right glenoid labrum tear and referred Claimant for physical therapy.

12. On October 4, 2017, Claimant returned to Dr. Nathanson, who noted Claimant's condition remained the same. He continued Claimant on restricted duty.

13. Claimant attended a physical therapy session on October 12, 2017. Ryan McFadden, PT, noted that Claimant injured her right shoulder on August 30, 2017 when lifting a heavy box overhead. Claimant testified that there was no overhead lifting involved.

14. On October 19, 2017, Dr. Roth issued a progress report after reviewing Dr. Nathanson's August 31 and September 1, 2017 medical records. Dr. Roth noted that Claimant's history of new acute onset pain on August 30, 2017 was inconsistent with Dr. Nathanson's August 31, 2017 medical record that reflected right shoulder pain for two weeks without trauma or strain. Dr. Roth remarked that it did not appear Claimant's reporting was accurate, or that the onset of her shoulder condition occurred on August 30, 2017. He opined, "[w]ork relatedness does not now appear to be medically probable. This is not currently appear (*sic*) to be either a cumulative trauma or acute injury claim."

15. On November 13, 2017, Claimant presented to Andrew Sarka, M.D. at Aurora Family Practice Group. He noted that Claimant's shoulder pain began on August 30, 2017 while working. He further noted, "She has no history of trauma but she does significant repetitive movements at work and this is very likely the source of shoulder injury particularly in light of the fact that she does not do activities at home out of normal activities that would likely aggravate the shoulder." He wrote that Dr. Nathanson's August 31, 2017 report was incorrect in stating that Claimant's pain began two weeks prior to that visit. Dr. Sarka opined that Claimant suffered from a work-related overuse injury and recommended Claimant see an orthopedist.

16. Claimant testified at hearing that she did not tell Dr. Nathanson her pain was present for two weeks and slowly worsened. Claimant contends Dr. Nathanson made a typographical error.

Claimant testified that she did not experience similar shoulder pain prior to the work injury, nor did she seek or receive treatment for shoulder pain prior to the work injury. Claimant alleges she sustained an acute injury. Claimant testified that she continues to attend physical therapy and treat with Dr. Spittler.

17. Dr. Roth testified at hearing that his initial assessment was incorrect. He testified that Claimant did not describe a specific event or mechanism of injury during his initial evaluation. He explained that when he initially opined Claimant sustained a work-related injury, his impression was that Claimant sustained an "acute overuse injury" and strained her bicep. He testified that he later determined Claimant's condition was "an inherent process with gradual development" based on Dr. Nathanson's August 31, 2017 medical report. Dr. Roth initially testified that, at the time of his initial evaluation, he did not have the September 1, 2017 MRI or Dr. Nathanson's reports. He later testified that he did, in fact, have Claimant's MRI results at the time of his initial evaluation. Dr. Roth testified that Claimant's MRI findings revealed a tear, which he

stated is degenerative in most cases, but also can be the result of a traumatic event. Dr. Roth testified that there was no evidence of acute trauma or cumulative trauma, and that Claimant does not meet the criteria for cumulative trauma under the Guidelines.

18. Claimant's testimony, which is supported by the medical records, is found more credible and persuasive than the opinion and testimony of Dr. Roth.

19. Claimant established that it is more likely than not that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment on August 30, 2017.

20. Claimant established by a preponderance of the evidence she is entitled to reasonable and necessary medical treatment related to the August 30, 2017 industrial injury.

21. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S. (the "Act"), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant met her burden of proof to establish she sustained a compensable industrial injury on August 30, 2017. Dr. Roth testified that there is no evidence of acute or cumulative trauma. This is inconsistent with his initial opinion, which changed based solely on Claimant's alleged report that she had longstanding shoulder pain with no acute event. While Dr. Roth stated in his initial report that the exact mechanism of injury was hard to define, he nonetheless opined that Claimant sustained an acute and specific work-related injury, "…related to biceps contraction lifting heavy totes." His initial opinion was made with knowledge of the objective MRI findings and Claimant's reported mechanism of injury, which is the same mechanism of injury Claimant set forth in her testimony at hearing and in other medical records. Dr.

Roth subsequently changed his opinion as to work-relatedness because Dr. Nathanson referenced Claimant having shoulder pain prior to the work injury.

Claimant credibly testified that she did not tell Dr. Nathanson that she had been experiencing shoulder pain for two weeks prior to the August 31, 2017 evaluation. Claimant is credible in her testimony that she did not have similar right shoulder pain or treatment prior to the work injury. No evidence was presented at hearing indicating Claimant sought prior medical treatment for a shoulder issue. Claimant credibly testified she began experiencing pain while lifting a tote during her work shift on August 30, 2017 and that the pain worsened. The medical records subsequent to Dr. Nathanson's August 31, 2017 report corroborate Claimant's credible testimony that her shoulder pain began at work while performing work duties on August 30, 2017. The ALJ acknowledges there are references to overhead lifting in two medical records. Claimant clarified in her testimony that overhead lifting was not involved in the work incident, and there is no reference of overhead lifting in Dr. Roth's initial report where he considered Claimant's mechanism of injury and still opined that her condition was work-related. Thus, based on the totality of the evidence, the ALJ is persuaded Claimant's symptoms and need for medical treatment were more likely caused by Claimant's work duties than the natural progression of a non-work-related preexisting condition. Claimant's credible and persuasive testimony, as supported by the medical records, establish by a preponderance of the evidence that Claimant sustained a work-related injury that produced the need for medical treatment.

Reasonable, Necessary and Related Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant sustained a compensable industrial injury on August 30, 2017. Claimant is entitled to reasonable and necessary medical treatment related to the August 30, 2017 industrial injury. Claimant received and continues to undergo medical treatment for the effects of the injury.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that she sustained a compensable industrial injury to her right shoulder on August 30, 2017.

2. Respondents shall pay for reasonable and necessary medical treatment related to the August 30, 2017 industrial injury, including reimbursement to Claimant for any out-of-pocket expenses.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-997-018

ISSUES

- Whether Respondents have overcome by clear and convincing evidence the Division IME's opinions regarding permanent impairment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant sustained an admitted injury while working for Employer as a cement mason on a bridge on Colfax Avenue on May 28, 2015. He began work at 2:00 p.m. and worked until 5:00 a.m. the following morning. Claimant was smoothing wet cement in 2' X 2' rebar cages, which involved reaching down between the squares of rebar and smoothing out the surface. Conventional tools did not fit into the space, and Claimant had to extend his arm past his elbow into the rebar cage to smooth the cement. He primarily used his right hand, but switched between his upper extremities to perform this task while kneeling on a board and bending forward.

2. After approximately seven hours, Claimant began experiencing pain in his right shoulder and arm. At the end of his shift, Claimant reported that his entire arm was swollen up to the shoulder. He went home, could not sleep, and returned to the office to report his injury. Employer referred Claimant to an occupational clinic in Greeley for treatment of his right shoulder and the lateral aspect of his elbow.

3. Claimant changed physicians so he could treat closer to home, and began seeing Dr. Raschbacher at Midtown. Claimant reported that he developed wrist pain about one month after the date of injury.

4. Ultimately, Claimant underwent rotator cuff repair and a second surgery for adhesive capsulitis.

5. Following the surgeries, Claimant began physical therapy and reported the onset of neck pain in approximately January, 2016.

6. As Claimant progressed through physical therapy, he continued to complain of right shoulder pain with all movements, as well as right elbow pain, pain in the proximal aspect of his right wrist and finger extensor muscles from the lateral epicondyle down to the wrist and fingers, and pain on the ulnar side of the wrist.

7. On September 21, 2016, Dr. Raschbacher placed Claimant at MMI with an 11% upper extremity rating for injuries to his right shoulder.

8. Claimant requested a Division Independent Medical Examination which Dr. Higginbotham performed. Dr. Higginbotham assigned a 3% rating for loss of range of motion in the thoracic spine, a 10% rating for loss of range of motion in the cervical spine, a 10% scheduled rating for subacromial arthroplasty, a 14% rating for loss of range of motion in the shoulder, a 7% rating for loss of range of motion in the elbow, and a 9% rating for loss of range of motion in the wrist.

9. When the DIME Unit received Dr. Higginbotham's report, Courtney Holmes, a Quality Assurance Specialist with the DIME Unit, wrote to Dr. Higginbotham regarding multiple concerns with his report.

- Dr. Higginbotham assigned ROM in the absence of a Table 53 diagnosis. The Division Impairment Rating Tips state, 'In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero.'

- Dr. Higginbotham assigned ROM for isolated thoracic range motion, when none is allowed.

- The DIME Unit asked Dr. Higginbotham to review and clarify his report.

- With regards to functional status, Ms. Holmes wrote, "[t]here appears to be a paucity of information regarding the patient's functional status as it relates to the assigned impairment rating for cervical range of motion and the additional 10% for shoulder surgery. While the Division Impairment Rating Tips allow for this, a more thorough discussion regarding functional deficit would assist all concerned parties in understanding the assigned rating."

- Ms. Holmes concluded, "keep in mind, Article 42, section 3.7 of the Colorado Workers' Compensation Act states 'for purposes of determining levels of medical impairment pursuant to articles 40 to 47 of this title a physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation.' Anatomic correlation must be based on objective findings."

10. In response, Dr. Higginbotham indicated that "there is guidance in the DOWC Impairment Rating Tips that a shoulder condition can result in cervical range of motion loss . . .I extrapolate this guidance to include thoracic range of motion loss as well." Further, Dr. Higginbotham reported, "[t]he operative report of Dr. Motz on 11/16/2015 noted an arthroscopic subacromial decompression. The additional upper extremity rating of 10% is in accordance with the DOWC Impairment Rating Tips."

11. Per the Division of Workers' Compensation Impairment Rating Tips, "[i]n order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under

Table 53." However, "[i]n unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature, an isolated cervical range of motion impairment may be allowed if well-justified by the clinician. Otherwise there are no exceptions to the requirement for a corresponding Table 53 rating."

12. The Impairment Rating Tips allow for a 10% scheduled impairment rating for a subacromial arthroplasty. Here, Claimant did *not* undergo an arthroplasty. Dr. Higginbotham acknowledged in his deposition testimony that Claimant in fact underwent an acromioplasty, not an arthroplasty.

13. Dr. Ridings performed an independent medical examination at Respondents' request and testified at hearing. Dr. Ridings testified that Dr. Higginbotham's rating of Claimant's thoracic spine was impermissible. "It is specifically disallowed to utilize range of motion to assign impairment for the thoracic or the lumbar spines in the absence of a Table 53 rating greater than zero."

14. The Division of Workers' Compensation Rating Tips allow for an isolated cervical range of motion rating in rare circumstances. Dr. Ridings testified, "[t]he actual wording here on page 4 of the Tips says, quote, in unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature, an isolated cervical range of motion impairment may be allowed if well justified by the clinician." Dr. Ridings noted the following problems with Dr. Higginbotham's rating.

- There is nothing at all unusual about this case.
- There is not severe shoulder pathology. Claimant had a rotator cuff tear and a routine rotator cuff repair surgery.
- The rating is not well-justified in Dr. Higginbotham's notes.

15. With regards to the cervical spine, Dr. Ridings further testified, "there is no indication that [Claimant] sustained an acute injury on the date of injury, which is, you know, a point source trauma to the cervical spine, and even the day after had no complaints, which you would think if it was a muscle thing that happened right away, because he was in an awkward position for a long time, certainly you would think by the next day, he would be having muscle pain and so on in the neck. And he, in capital letters, did not [have muscle pain in his neck], according to his evaluating physician."

16. Dr. Ridings testified that notations in the records regarding discomfort in the cervical spine and interscapular region were to be expected given his physical therapy treatment. "The muscles that move the shoulder, certainly include muscles like the rhomboids, which are in between the spine and the shoulder blade, so that is not surprising. In order to treat a shoulder in physical therapy, you are going to have mention in the physical therapy records about the neck. For instance, if you are going to stretch the upper trapezius . . . you are going to have to stretch the neck and shoulder apart in order to treat shoulder."

17. Dr. Ridings testified that there was no evidence of a right wrist injury which would warrant a rating for a loss of range of motion. Per Dr. Ridings, Claimant had lateral epicondylitis, which is an irritation of the connection between the muscles that extend the wrist and extend the fingers at their origin at the lateral condyle elbow. "It is irritation at the elbow, and you rate the elbow joint for lateral epicondylitis or tennis elbow." Dr. Ridings testified that he had never seen a provider rate the wrist range of motion for lateral epicondylitis because doing so is wrong according to the Division's instruction.

18. Dr. Ridings was critical of Dr. Higginbotham reasoning in rating Claimant's shoulder. In his deposition testimony Dr. Higginbotham emphatically states that if one has any sort of "arthroplasty" at the shoulder, one receives a 10% rating. Dr. Ridings testified that he could not remember any provider assigning a 10% impairment solely for a subacromial arthroplasty. And that is emphatically what Dr. Higginbotham testified he did. This explanation is consistent with his wording in the original IME report.

19. Per the Rating Tips, "[t]he AMA Guides 4th and 5th additions continue to suggest that subacromial arthroplasty should be rated using ROM, and when appropriate, 'joint crepitation with motion' from the 'Other Disorders' section. In general, any additional rating for subacromial arthroplasty is deemed inappropriate because other factors have adequately rated the extent of the impairment.

20. Dr. Ridings testified that Dr. Higginbotham did *not* opine that Claimant had an unusually severe condition which required an additional rating beyond range of motion, nor did he say that he was rating crepitus, "which is what you are supposed to do if you are going to use the Tips sheet." He further testified that Claimant was adequately rated for his shoulder. "This person has already got a shoulder rating, so it is not like you are not getting a shoulder rating even though you had a part of your acromion removed. It is just part of the procedure, which is rated typically, and universally, unless you talk about crepitus simply by shoulder range of motion alone."

21. Dr. Ridings testified that in his opinion, to a reasonable degree of medical probability, Dr. Higginbotham used incorrect rating methods when assigning impairment for the cervical spine, thoracic spine, right wrist, and right shoulder.

22. Dr. Ridings evaluated Claimant for permanent impairment and assigned a 9% rating for loss of range of motion for the shoulder, and a 2% rating for loss of range of motion for the elbow, for a combined 11% upper extremity rating.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads

the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002).

The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The findings of a DIME physician concerning the claimant's unscheduled medical impairment rating shall be overcome only by clear and convincing evidence. Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475, 482 (Colo. App. 2005). As a matter of diagnosis, the assessment of impairment requires a rating physician to identify and evaluate all losses and restrictions which result from the industrial injury. *Egan v. Indus. Claim Appeals Office,* 971 P.2d 664 (Colo. App. 1998); *Colorado AFL-CIO v. Donlon*, 914 P.2d 396 (Colo. App. 1995).

Where permanent impairment is limited to a portion of the body included on the list of scheduled ratings in C.R.S. § 8-43-107(2)(a), the burden of proof to establish the impairment rating is a preponderance of the evidence. *Delaney v. Industrial Claims Appeals Office,* 30 P.3d 691, 693 (Colo. App. 2000).

The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately used the Medical Treatment Guidelines and the AMA Guides.

A DIME physician *must* apply the AMA Guides when determining the claimant's medical impairment rating. C.R.S. §8-42-101(3.7); C.R.S. §8-42-107(8)(c). The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

The ALJ finds and concludes Dr. Higginbotham used incorrect rating methods when assigning impairment for the cervical spine, thoracic spine, right wrist, and right shoulder.

Per the Division of Workers' Compensation Impairment Rating Tips, "[i]n order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment of greater than zero under Table 53. The Impairment Rating Tips allow for an isolated range of motion impairment rating for the cervical spine in unusual cases. The Impairment Rating Tips do not allow a similar exception for the thoracic spine. Dr. Higginbotham clearly erred when he assigned an isolated 3% range of motion rating for the thoracic spine.

Similarly, the ALJ finds and concludes Dr. Higginbotham erred when he assigned an isolated 10% range of motion rating for the cervical spine. While the Impairment Rating Tips do allow for this when it is well justified under unusual circumstances, such justification and circumstances are not present in this case. The ALJ agrees with the letter from Ms. Holmes that "[t]here appears to be a paucity of information regarding the patient's functional status as it relates to the assigned impairment rating for cervical range of motion." The ALJ credits the testimony of Dr. Ridings that "there is not severe shoulder pathology. He had a rotator cuff tear. He had a routine rotator cuff repair surgery...there is just nothing unusual about this case, and the shoulder pathology is not severe." Further, the ALJ accepts the testimony of Dr. Ridings that "there is no indication that [Claimant] sustained an acute injury on the date of injury, which is, you know, a point source trauma to the cervical spine, and even the day after had no complaints, which you would think if it was a muscle thing that happened right away, because he was in an awkward position for a long time, certainly you would think by the next day, he would be having muscle pain and so on in the neck. And he, in capital letters, did not, according to his evaluating physician." Additionally, the ALJ credits Dr. Ridings' explanation for the

notations in the records regarding the neck. "The movers of the shoulder, the muscles that move the shoulder, certainly include muscles like the rhomboids, which are in between the spine and the shoulder blade, so that is not surprising. In order to treat a shoulder in physical therapy, you are going to have mention in the physical therapy records about the neck. For instance, if you are going to stretch the upper trapezius…you are going to have to stretch the neck and shoulder apart in order to treat shoulder."

The ALJ finds and concludes that Dr. Higginbotham erred when he assigned a 9% rating of the wrist. As Dr. Ridings testified, there is no evidence of a wrist injury which would warrant a rating for a loss of range of motion. The ALJ accepts the testimony of Dr. Ridings that Claimant had from lateral epicondylitis, which is properly rated as an elbow injury and not as a wrist injury.

The ALJ finds and concludes that Dr. Higginbotham erred when he assigned a 10% rating for a subacromial arthroplasty. Claimant underwent an acromioplasty, not an arthroplasty. Further, the ALJ notes that Dr. Higginbotham did not opine that claimant had an unusually severe condition which required an additional rating beyond range of motion, nor did he say that he was rating crepitus. There is simply no basis for the 10% rating for a subacromial arthroplasty.

The ALJ credits the opinions of Dr. Ridings as more credible and persuasive than the opinions of Dr. Higginbotham on permanent impairment.

Respondents met their burden of overcoming Dr. Higginbotham's opinions regarding permanent impairment of the cervical and thoracic spine by clear and convincing evidence.

Respondents met their burden of overcoming Dr. Higginbotham's opinions regarding permanent impairment of the wrist and shoulder by a preponderance of the evidence.

The ALJ accepts the opinions of Dr. Ridings as most likely correct regarding permanent impairment. Thus, Claimant's upper extremity rating is 11%.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents overcame the opinions of Dr. Higginbotham regarding permanent impairment.

2. Claimant's permanent impairment rating is 11% upper extremity.

3. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: April 16, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant's May 10, 2017 Application for Hearing is barred by the statute of limitations and whether there is compliance with the requirements of § 8-43-103(2), C.R.S. which requires the filing of a notice claiming compensation with the division within two years after an injury.

STIPULATIONS

1. If the statute of limitations argument is not found persuasive, Respondents agree to file a general admission of liability admitting compensability.

2. If the statute of limitations argument is not found persuasive, Respondents will pay for reasonable and necessary medical benefits including the July 3, 2013 surgery and the co-pay of $100.00.

FINDINGS OF FACT

1. Claimant is employed by Employer as a firefighter.

2. On June 13, 2013 Claimant attended an evaluation with Neil Silverman, M.D. after noticing a new mole on his back. The shave biopsy revealed that the lesion was melanoma.

3. Claimant's melanoma was successfully excised by Edward Vaughn, M.D. on July 3, 2013. *See* Exhibit 6.

4. On July 24, 2013 Claimant reported to Employer that he had been diagnosed with melanoma and that he believed it was work related and reported it as a claim to Employer. *See* Exhibit A.

5. On August 5, 2013 Employer/Respondent filed with the Division an Employer's First Report of Injury form. The Division assigned a case number to the claim. *See* Exhibits 1, B.

6. On August 6, 2013 Employer/Respondent filed a Notice of Contest with the Division. *See* Exhibits 2, C.

7. On August 7, 2013 the Division sent a letter to Claimant indicating that a notice of contest had been filed denying liability for Claimant's workers' compensation

claim. The letter provided instructions on requesting a hearing or an expedited hearing. *See* Exhibit 3.

8. On July 18, 2014 Annyce Mayer, M.D. authored an extensive causation report, opining the melanoma was work related. Dr. Mayer opined that Claimant was at maximum medical improvement and that he had an 11% whole person impairment rating. *See* Exhibit D.

9. On May 10, 2017 Claimant followed up with Dr. Mayer who opined that Claimant was still in remission and remained at maximum medical improvement. *See* Exhibit D.

10. On September 1, 2017 Claimant filed an Application for Hearing with the Office of Administrative Courts. *See* Exhibits 5, E.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Statute of Limitations

Section 8-43-103(1), C.R.S. requires an employer to provide notice of an injury for which compensation and benefits are payable to the Division within ten days after the injury. If the employer does not give such notice, then notice may be given by any person. Any notice required to be filed by an injured employee may be made and filed by anyone on behalf of such claimant and shall be considered as done by such claimant if not specifically disclaimed or objected to by such claimant in writing. *See* § 8-43-103(1), C.R.S.

Section 8-43-103(2), C.R.S. bars the right to compensation and benefits provided by the Act unless, within two years after the date of injury, a notice claiming compensation is filed with the Division. The Division has a form titled "Workers' Claim for Compensation." In this case, Claimant did not fill out or submit this form. Claimant argues that the "Employer's First Report of Injury" and the "Notice of Contest" forms filed with the Division by Respondent suffice and count as what is required by statute, namely "a notice claiming compensation filed with the Division." Conversely, Respondent argues that since Claimant did not submit a "Workers' Claim for Compensation" and/or an "Application for Hearing," within two years of his date of injury, Claimant has not met the statutory requirement of filing a notice with the Division claiming compensation within two years of the date of injury.

The parties essentially dispute whether the forms filed with the Division by Respondent suffice as a notice claiming compensation filed with the Division as required by § 8-43-103(2), C.R.S. The forms filed by Respondent were filed within two years of Claimant's date of injury. Claimant's application for hearing was not filed within two years of the date of injury nor did he file a Workers' Claim for Compensation form. Claimant is found persuasive that there is no time requirement (currently) on when an Application for Hearing must be filed if there has been a notice claiming compensation filed with the Division. Here, the issue is whether or not Respondents' filings with the division constitute a notice claiming compensation or whether Claimant is required additionally to file a workers' claim for compensation form within two years of his date of injury to preserve his right to compensation and benefits under the Act.

As found above, after Respondent filed "Employer's First Report of Injury," a workers' compensation claim number was assigned. Employer in this case had notice that Claimant was claiming compensation and claiming that he had sustained a compensable injury. They responded by denying liability and filing a notice of contest. As noted by the general information section on the Workers' Claim for Compensation form, the purpose of the form is to provide notice to Respondent and to allow them to either admit liability or file a notice of contest. Claimant argues since a notice of a claim

and contest of a claim was completed and submitted by Respondent in this case, Respondent and the Division had notice of the claim and he had no further requirement to submit filings with the Division to preserve his right to benefits or compensation under the Act.

The ALJ finds Claimant's arguments persuasive. Filing a Workers' Claim for Compensation form in this case would not have served to provide any additional notice to Respondent and would not have triggered any further filings on behalf of Respondent. Here, Respondent had notice and acted appropriately in filing an Employer's First Report of Injury and a Notice of Contest. A filing with the Division by Claimant would not have produced any different response from Respondent and would have been somewhat duplicative. Here, Respondent had notice that Claimant believed he had sustained a compensable injury and acted appropriately in filing an Employer's First Report of Injury and a Notice of Contest. There is no current time requirement after the notice of contest is filed in which Claimant must request a hearing. Here, The ALJ concludes that a notice of claim was filed with the division within the statutory time limitations and that Claimant's claim is not barred by the statute of limitations.

ORDER

It is therefore ordered that:

1. Claimant's May 10, 2017 Application for Hearing is not barred by the statute of limitations and compliance with the requirements of § 8-43-103(2), C.R.S. was met when both the Employer's First Report of Injury and the Notice of Contest were filed. A "claim" for compensation was filed within two years of the injury.

2. Pursuant to stipulation, Respondents shall file a general admission of liability admitting compensability.

3. Pursuant to stipulation, Respondents shall pay for reasonable and necessary medical benefits including the July 3, 2013 surgery and the co-pay of $100.00.

4. Any issues not determined herein, remain for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 3, 2018

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered an occupational disease to her left upper extremity and neck area during the course and scope of her employment with Employer.

2. Whether Claimant has proven by a preponderance of the evidence that the medical treatment rendered by Rene Shenoi, M.D. at Kaiser Permanente was authorized, reasonable and necessary to cure or relieve the effects of her work-related injuries.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $680.00.

FINDINGS OF FACT

1. Claimant has been employed as an Assembler for Employer for almost 20 years. She worked approximately 40 hours each week. Claimant noted that her primary job duties involved bonding or connecting two pieces of plastic tubing. She remarked that she bonded about 650-900 packets each day.

2. Employer's Production Supervisor Tim Zeller explained that Claimant engages in a variety of bonding activities and other job duties throughout each day. He detailed that there were seven work stations in Employer's facility. Claimant rotated stations approximately every one to one and one-half hours during each eight-hour work day. Five of the work stations involved bonding or connecting pieces of plastic tubing. The number of bonds and required force or pressure to connect the tubes varied at each station. The other two stations involved sealing or packing materials.

3. On April 1, 2017 Claimant reported the onset of left shoulder symptoms. She attributed her pain to increased bonding activities at work. Claimant selected Front Range Occupational Medicine Center for treatment.

4. On June 22, 2017 Claimant visited Authorized Treating Physician (ATP) Matt Miller, M.D. for an evaluation. She reported the slow onset of left arm pain to the back of the shoulder as well as left-sided neck pain. Claimant noted that her work activities had involved changing roles with more bonding. Dr. Miller diagnosed Claimant with acute tenosynovitis of the left hand and wrist with shoulder pain. However, he was unable to determine whether Claimant's condition was related to her work activities for Employer. He recommended conservative treatment including physical therapy and medications. Dr. Miller released Claimant to modified duty employment with no bonding.

5. Claimant continued to receive medical treatment through ATP Dr. Miller during June and July 2017. Claimant reported diffuse tenderness with even light palpation and minimal movement.

6. On July 10, 2017 Claimant reported that she had visited primary care physicians at Kaiser Permanente. Claimant had also undergone an MRI of her neck.

7. On July 27, 2017 Claimant visited Dr. Miller for an examination. She reported increased left arm, shoulder and neck pain. After reviewing Claimant's MRI, Dr. Miller noted that Claimant had possible nerve root impingement at C5-C6. He determined that Claimant's neck symptoms constituted the predominant problem. However, Dr. Miller concluded that Claimant's neck condition was not related to her job duties. Accordingly, he concluded that Claimant reached Maximum Medical Improvement (MMI) without impairment. Dr. Miller did not assign work restrictions and noted that Claimant did not require medical maintenance treatment.

8. On August 1, 2017 Claimant visited Neurosurgeon Rene Shenoi, M.D. at Kaiser. Claimant reported that she began suffering left extremity pain on April 1, 2017 without any specific trauma. She attributed her symptoms to her job duty of connecting or bonding tubing while working for Employer. Claimant noted that she had filed a Workers' Compensation claim but her treating physician had determined her symptoms were not work-related. Dr. Shenoi diagnosed Claimant with cumulative trauma disorder, left C5-C6 radiculopathy due to left lateral recess stenosis, cervical spondylosis and left shoulder pain. She referred Claimant for left upper extremity diagnostic testing in the form of an EMG/nerve conduction study to rule out Carpal Tunnel Syndrome (CTS) ulnar neuropathy and brachial plexopathy.

9. On September 12, 2017 Claimant underwent an EMG/nerve conduction study with Joshua M. Scheidler, M.D. Dr. Scheidler determined that the results were normal and there was no diagnostic evidence of left median neuropathy at the wrist, left ulnar neuropathy or left cervical motor radiculopathy.

10. On October 11, 2017 Dr. Shenoi remarked that the left shoulder MRI revealed mild bursitis and tendinosis but no rotator cuff tear. She stated that "I think the pain is coming from [Claimant's] neck." Dr. Shenoi referred Claimant for an injection.

11. On November 16, 2017 Claimant underwent a cervical facet injection with Jeromy Cole, M.D. to treat cervical facet joint arthritis. However, the injection did not improve her symptoms.

12. On December 13, 2017 Claimant underwent an independent medical examination with Barry A. Ogin, M.D. Claimant remarked that she has worked as an Assembler for Employer for about 20 years. She reported that she had not suffered any left upper extremity symptoms prior to approximately March 2017. Claimant described that she rotates positions or job stations once every hour during her work shift. For at least one and one-half years one of the positions involved hanging bags on a line with her left arm while applying a connector with her right hand. Claimant noted that the line

was at head height and she lifted the bags from her waist to her shoulder at the rate of about 200 cycles per hour. She occupied the station for two to three hours each day. Claimant's other job duties included bonding or connecting tubes. She inserted about eight tubes per unit and completed 120-160 units each hour. Claimant performed the bonding from a seated position and completed two to three shifts each day. Finally, Claimant's other stations involved packing and sealing bags.

13. Claimant detailed that in approximately March 2017 she developed aching in her left shoulder. After she requested to refrain from any bag-hanging activities because of shoulder pain, Claimant was assigned to more bonding shifts. Claimant stated that she completed up to six bonding shifts per day in addition to packing and sealing bags. She explained that the force required by her bonding duties increased her left upper extremity symptoms. Claimant specifically described symptoms on the left side of her neck and shoulder blade.

14. Dr. Ogin reviewed Claimant's medical records and conducted a physical examination. He noted that Claimant presented with chronic pain along her shoulder, arm and left side of her neck. Dr. Ogin explained that Claimant's diagnosis remained unclear. Claimant possibly had a cervical radiculopathy with radiating symptoms into her left neck and arm. Alternatively, Claimant exhibited symptoms of left rotator cuff impingement. In reviewing the Colorado Division of Workers' Compensation *Medical Treatment Guidelines* (*Guidelines*), Dr. Ogin stated that repetitive overhead activity can be associated with rotator cuff pathology. He concluded that, if Claimant has rotator cuff pathology and her job description about repetitively lifting her left arm in an overhead capacity at up to 200 cycles per hour for a couple of hours each day was accurate, then her rotator cuff symptoms were caused by her work activities. However, if Claimant's pain was primarily due to a radiculopathy, then her symptoms are not work-related. Finally, if Claimant's pain was caused by intrinsic shoulder pathology or diffuse myofascial pain, Dr. Ogin reasoned that "her work activities could have caused an aggravation of her pain" but he would have expected improvement with job modifications, therapy treatments and time. He ultimately concurred with Dr. Miller that Claimant's left upper extremity symptoms were not likely work-related.

15. On February 18, 2018 Dr. Ogin issued a supplemental report after reviewing additional medical records. He remarked that MRI films reflected a significant C5-C6 stenosis that was likely the primary cause of Claimant's neck, shoulder and left arm radicular pain complaints. Dr. Ogin also commented that electrodiagnostic testing was negative for a brachial plexus injury or peripheral nerve entrapment. He determined that the cervical spine was thus Claimant's most likely pain generator. Although Dr. Ogin acknowledged that Claimant's work activities could "lead to a cumulative trauma disorder," there was no evidence that Claimant suffered a left upper extremity cumulative trauma disorder. He noted that Claimant did not have evidence of a rotator cuff tear and failed to respond to conservative care. Dr. Ogin thus concluded that Claimant's persistent pain suggested a cervicogenic cause and did not warrant additional treatment through her Workers' Compensation claim.

16. Dr. Ogin also testified at the hearing in this matter. He maintained that Claimant's left upper extremity symptoms were caused by a cervical radiculopathy at C5-C6. He noted that Drs. Miller and Shenoi had determined that Claimant's symptoms originated in her neck area. Dr. Ogin detailed that Claimant performed her bonding activities while in a seated position with her work in front of her. The position would not cause a rotator cuff tendinopathy or myofascial pain. Furthermore, EMG testing did not reveal a significant cumulative trauma disorder affecting the left upper extremity. Finally, applying the *Guidelines* reflects that Claimant's work activities did not cause a cumulative trauma disorder to her left upper extremity.

17. Claimant has failed to demonstrate that it is more probably true than not that she suffered an occupational disease to her left upper extremity and neck area during the course and scope of her employment with Employer. Although Dr. Shenoi diagnosed Claimant with a cumulative trauma disorder, the record is devoid of evidence that she performed a causation analysis. To perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated primary risk factors. Initially, the record reveals that Claimant's primary pain generator is in her cervical spine and thus is not a cumulative trauma condition of the left upper extremity. Furthermore, Claimant's work activities did not meet the Primary or Secondary Risk Factors under Rule 17, Exhibit 5 of the *Guidelines.*

18. The medical records reveal that Claimant suffers from a cervical spine condition. Claimant reported to ATP Dr. Miller that she experienced left arm, shoulder and neck pain. After reviewing Claimant's MRI, Dr. Miller noted that Claimant had possible nerve root impingement at C5-C6. He determined that Claimant's neck symptoms constituted the predominant problem. Dr. Miller concluded that Claimant's neck condition was not related to her job duties. Accordingly, he reasoned that Claimant reached MMI without impairment. Dr. Shenoi agreed that Claimant's primary pain generator was in her neck area. In fact, she remarked that "I think the pain is coming from [Claimant's] neck."

19. Although Dr. Ogin acknowledged that Claimant's work activities could "lead to a cumulative trauma disorder," there was no evidence that Claimant suffered a left upper extremity cumulative trauma condition. Dr. Ogin detailed that Claimant performed her bonding activities while in a seated position with her work in front of her. The position would not cause a rotator cuff tendinopathy or myofascial pain. Furthermore, EMG testing did not reveal a significant cumulative trauma disorder affecting the left upper extremity. Finally, Dr. Ogin remarked that applying the *Guidelines* reflects that Claimant's work activities did not cause a cumulative trauma disorder to her left upper extremity. The medical records thus demonstrate that Claimant did not suffer a cumulative trauma condition to her left upper extremity but instead suffers from a non-work related cervical spine condition.

20. The record reveals that Claimant's work activities did not meet the Primary or Secondary Risk Factors for a cumulative trauma condition in Rule 17, Exhibit 5 of the

Guidelines. Claimant simply did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Although Claimant attributed her left upper extremity symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Claimant engaged in a variety of numerous tasks throughout each shift in her position as an Assembler. Her job duties typically involved working at seven different stations in Employer's facility. Claimant rotated stations approximately every one to one and one-half hours during each eight-hour work day. Five of the work stations involved bonding or connecting pieces of plastic tubing. The number of bonds and required force or pressure to connect the tubes varied at each station. The other two stations involved sealing or packing materials. Because Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in Rule 17, Exhibit 5 of the *Guidelines*, her request for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. The test for distinguishing between an accidental injury and an occupational disease is whether the injury can be traced to a particular time, place and cause. *Campbell v. IBM Corp.*, 867 P.2d 77, 81 (Colo. App. 1993). "Occupational disease" is defined by §8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

6. The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTC diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

W.C.R.P. Rule 17, Exhibit 5, p.16. The duration of force and repetition as a primary risk factor must be greater than six hours at 50% of individual maximum force with task cycles of 30 seconds or less.

7. The *Guidelines* include a Primary Risk Factor Definition Table for Force and Repetition/Duration. The Table requires 6 hours of greater than 50% of individual maximum force with task cycles 30 seconds or less, or sufficient force is used for at least 50% of a task cycle. An additional Primary Risk Factor category is Awkward Posture and Repetition/Duration. The factor requires four hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees or ulnar deviation greater than 20 degrees. The category also includes 6 hours of elbow flexion greater than 90 degrees, or six hours of supination/pronation with task cycles 30 seconds or less or awkward posture is used for at least 50% of a task cycle. Other Primary Risk Factors include computer work for more than seven hours per day or at a non-ergonomically correct work station, continuous

mouse use of greater than four hours or use of a handheld vibratory power tool for six hours or more. Additional risk factors are six hours of lifting 10 pounds greater than 60 times per hour or six hours using hand held tools weighing two pounds or greater.

8. The *Guidelines* specifically include factors for the development of shoulder pathology. They include the following: (1) overhead work of 30 minutes per day for a minimum of five years; (2) shoulder movement at the rate of 15-36 repetitions per minute and no two second pauses for 80% of the work cycle; and (3) shoulder movement with force greater than 10% of maximum with no two second pauses for 80% of the work cycle. Moreover, jobs requiring heavy lifting in excess of 10 times per day over the years may contribute to shoulder disorders. Vibration can also be considered an additional risk factor pursuant to Rule 17, Exhibit 4 of the *Guidelines*. Notably, the *Guidelines* provide that, because of the lack of multiple, high quality studies, each case must be evaluated individually when addressing the likelihood of cumulative trauma contributing to shoulder pathology.

9. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered an occupational disease to her left upper extremity and neck area during the course and scope of her employment with Employer. Although Dr. Shenoi diagnosed Claimant with a cumulative trauma disorder, the record is devoid of evidence that she performed a causation analysis. To perform a medical causation analysis for a cumulative trauma condition pursuant to the *Guidelines*, the first step is to make a diagnosis, the next step is to clearly define the job duties and the final step is to compare the job duties with the delineated primary risk factors. Initially, the record reveals that Claimant's primary pain generator is in her cervical spine and thus is not a cumulative trauma condition of the left upper extremity. Furthermore, Claimant's work activities did not meet the Primary or Secondary Risk Factors under Rule 17, Exhibit 5 of the *Guidelines.*

10. As found, he medical records reveal that Claimant suffers from a cervical spine condition. Claimant reported to ATP Dr. Miller that she experienced left arm, shoulder and neck pain. After reviewing Claimant's MRI, Dr. Miller noted that Claimant had possible nerve root impingement at C5-C6. He determined that Claimant's neck symptoms constituted the predominant problem. Dr. Miller concluded that Claimant's neck condition was not related to her job duties. Accordingly, he reasoned that Claimant reached MMI without impairment. Dr. Shenoi agreed that Claimant's primary pain generator was in her neck area. In fact, she remarked that "I think the pain is coming from [Claimant's] neck."

11. As found, although Dr. Ogin acknowledged that Claimant's work activities could "lead to a cumulative trauma disorder," there was no evidence that Claimant suffered a left upper extremity cumulative trauma condition. Dr. Ogin detailed that Claimant performed her bonding activities while in a seated position with her work in front of her. The position would not cause a rotator cuff tendinopathy or myofascial pain. Furthermore, EMG testing did not reveal a significant cumulative trauma disorder affecting the left upper extremity. Finally, Dr. Ogin remarked that applying the *Guidelines* reflects that Claimant's work activities did not cause a cumulative trauma disorder to her

left upper extremity. The medical records thus demonstrate that Claimant did not suffer a cumulative trauma condition to her left upper extremity but instead suffers from a non-work related cervical spine condition.

12. As found, the record reveals that Claimant's work activities did not meet the Primary or Secondary Risk Factors for a cumulative trauma condition in Rule 17, Exhibit 5 of the *Guidelines.* Claimant simply did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in the *Guidelines*. Although Claimant attributed her left upper extremity symptoms to her work activities, a review of her job duties reflects that they lacked the requisite force or repetition to cause a cumulative trauma disorder. Claimant engaged in a variety of numerous tasks throughout each shift in her position as an Assembler. Her job duties typically involved working at seven different stations in Employer's facility. Claimant rotated stations approximately every one to one and one-half hours during each eight-hour work day. Five of the work stations involved bonding or connecting pieces of plastic tubing. The number of bonds and required force or pressure to connect the tubes varied at each station. The other two stations involved sealing or packing materials. Because Claimant did not engage in forceful and repetitive activity for an amount of time that meets the minimum threshold in Rule 17, Exhibit 5 of the *Guidelines*, her request for Workers' Compensation benefits is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 3, 2018.

ISSUES

1. Whether Claimant has produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Jade Dillon, M.D. that he reached Maximum Medical Improvement (MMI) on October 14, 2015 with a 0% whole person impairment to his right upper extremity as a result of his May 9, 2015 admitted industrial injury.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of right shoulder surgery that are designed to relieve the effects of his May 9, 2015 industrial injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.*, 759 P.2d 705 (Colo. 1988).

FINDINGS OF FACT

1. On January 30, 2013 Claimant injured his right shoulder while working for Mountain Foods, LLC as a Delivery Driver. Claimant was unloading his truck by pushing a dolly loaded with cans of food and bags of rice. The dolly weighed approximately 500 pounds. While descending a ramp, the dolly tipped towards the side and Claimant attempted to stabilize the device. However, Claimant fell backward and the dolly struck him in the chest. Claimant reported injuries to his right shoulder, left elbow, sternum and left lower back.

2. After reaching Maximum Medical Improvement (MMI) Claimant underwent a Division Independent Medical Examination (DIME) with L. Barton Goldman, M.D. on January 20, 2014. Claimant reported symptoms in his left arm, chest wall, neck, left lower back and left abdominal areas. Dr. Goldman noted that Claimant exhibited objective findings of a right shoulder labral tear. He assigned Claimant a provisional 16% right upper extremity impairment rating for crepitus and range of motion limitations. Dr. Goldman concluded that Claimant had not reached MMI and recommended additional treatment that included an MRI arthrogram of the right shoulder. Claimant subsequently settled his Workers' Compensation claim without completing the treatment recommended by Dr. Goldman.

3. In October of 2014 Claimant began working for Employer as a Delivery Driver. On May 9, 2015 Claimant was again pushing a dolly weighing approximately 500 pounds down a ramp. He lost control of the dolly and attempted to prevent it from falling. However, Claimant fell and the dolly struck him in the chest.

4. Claimant initially received treatment with Concentra Urgent Care. However, Claimant's care was subsequently transferred to Authorized Treating Physician (ATP)

Michael Ladwig, M.D. with Aviation Occupational Medicine. Dr. Ladwig referred Claimant to Franklin Shih, M.D. for a physical medicine evaluation and Mark Failinger, M.D. for a surgical consultation.

5. On June 2, 2015 Claimant underwent an MRI arthrogram of his right shoulder. The MRI revealed moderate subacromial/subdeltoid bursitis and marrow edema of the greater tuberosity of the humeral head.

6. Claimant subsequently received conservative medical treatment from Drs. Shih and Failinger. Dr. Failinger discussed surgical options with Claimant. However, in a September 1, 2015 visit with Dr. Shih Claimant stated that he was considering whether to proceed with surgery. In a subsequent examination Claimant remarked that he wanted to proceed with surgery but "not for three months."

7. On October 29, 2015 Dr. Ladwig determined that Claimant had reached Maximum Medical Improvement (MMI) on October 14, 2015 with a 0% permanent impairment rating. Dr. Ladwig remarked that Claimant had discussed surgical options with Dr. Failinger but declined to proceed with surgery at the time. He determined that Claimant was entitled to receive medical maintenance benefits in the form of right shoulder surgery with Dr. Failinger within the following 12 months.

8. On March 8, 2016 Claimant underwent a DIME with Jade Dillon, M.D. Claimant reported burning pain in his right shoulder area. Dr. Dillon noted invalid range of motion measurements with multiple pain behaviors. She agreed that Claimant had reached MMI on October 14, 2015 and assigned a 0% whole person impairment rating. Dr. Dillon determined that it was reasonable to retain the option of surgery over the ensuing 12 months. However, she commented that a pain psychology assessment should precede any surgical intervention.

9. On September 5, 2017 Linda A. Mitchell, M.D. performed a record review of Claimant's case. She considered the medical records from both the 2013 and 2015 right shoulder claims. Dr. Mitchell noted that Dr. Goldman had assigned Claimant a 16% right upper extremity impairment rating for his January 30, 2013 right shoulder injury. She explained that Drs. Ladwig and Dillon had obtained invalid range of motion measurements and neither was aware of Claimant's January 30, 2013 right shoulder injury. Dr. Mitchell agreed that Claimant reached MMI on October 14, 2015 with a 0% whole person impairment rating. She concluded that surgical intervention for Claimant's May 9, 2015 right shoulder injury was not reasonable and necessary. Dr. Mitchell detailed that Claimant was a poor surgical candidate because of pain behaviors, inconsistencies between subjective complaints and objective findings, and failure to respond to conservative treatment.

10. On November 13, 2017 Dr. Failinger issued a supplemental report. After reviewing the DIME reports from Drs. Goldman and Dillon as well as the record review of Dr. Mitchell he addressed the reasonableness and necessity of surgical intervention for Claimant's right shoulder. Dr. Mitchell summarized descriptions of Claimant's 2013 and 2015 accidents and remarked that multiple medical providers had noted inconsistencies

and pain behaviors in Claimant's presentation. He questioned whether Claimant was an appropriate surgical candidate.

11. In addressing causation, Dr. Failinger noted that Claimant's right shoulder MRI revealed a "rim-rent" tear of the supraspinatus that was "in most all situations a degenerative phenomenon that occurs with a rotator cuff and is not with medical probability an acute tear that may have occurred" on May 9, 2015. Although Claimant exhibited some symptoms after the May 9, 2015 accident, there were significant inconsistencies between subjective complaints and physical findings. Dr. Failinger determined that Claimant did not suffer any significant and new injuries on May 9, 2015. However, Claimant's right shoulder MRI reflected a "progressive, high-grade supraspinatus tear." Dr. Failinger characterized the progression of the tear as "a degenerative and ongoing phenomenon." He remarked that progression of rotator cuff tears occurs as individuals age and use their arms at shoulder level or above. Dr. Failinger thus summarized that "there would be great concern proceeding with surgical intervention in a patient with this type of symptomatology unless evaluated by a psychologist" to determine whether non-organic issues contributed to Claimant's heightened symptoms.

12. Claimant testified at the hearing in this matter. He explained that his right shoulder still pops and wishes to pursue the right shoulder surgery originally recommended by Dr. Failinger. Claimant also remarked that Dr. Dillon's DIME evaluation was not very thorough. However, he did not present any evidence that he is no longer at MMI or suffered permanent impairment as a result of his May 9, 2015 work accident.

13. Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Dillon that he reached MMI on October 14, 2015.and suffered a 0% whole person impairment to his right upper extremity as a result of his May 9, 2015 admitted industrial injury. Initially, Claimant received conservative treatment for his right shoulder condition and Dr. Failinger discussed surgical options. However, Claimant considered whether he wanted to proceed with surgery and delayed his decision. Dr. Ladwig determined that Claimant had reached MMI on October 14, 2015 with a 0% permanent impairment rating. He remarked that Claimant had discussed surgical options with Dr. Failinger but declined to proceed with surgery at the time. On March 8, 2016 Claimant underwent a DIME with Dr. Dillon. Claimant reported burning pain in his right shoulder area. Dr. Dillon noted invalid range of motion measurements with multiple pain behaviors. She agreed that Claimant had reached MMI on October 14, 2015 and assigned a 0% whole person impairment rating.

14. Claimant testified that Dr. Dillon's DIME evaluation was not very thorough. However, he did not present any evidence that he is no longer at MMI or suffered permanent impairment as a result of his May 9, 2015 work accident. Furthermore, Claimant has not provided any medical evidence that Dr. Dillon's impairment determinations contravened the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides*) or was otherwise incorrect. Finally, Drs. Ladwig and Mitchell also concluded that Claimant reached MMI on October 14, 2015.

Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Dillon's MMI or impairment determination was incorrect.

15. Claimant has failed to demonstrate that it is more probably true than not that he is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of right shoulder surgery that are designed to relieve the effects of his May 9, 2015 industrial injury or prevent further deterioration of his condition. Claimant explained that he would like to pursue further medical treatment to alleviate his continuing right shoulder pain. However, the overwhelming medical evidence demonstrates that Claimant does not warrant medical maintenance benefits for his May 9, 2015 right shoulder injury.

16. ATP Ladwig and DIME physician Dr. Dillon determined that it was reasonable to retain the option of surgery over the ensuing 12 months. However, Dr. Mitchell persuasively explained that Drs. Ladwig and Dillon had obtained invalid range of motion measurements and neither was aware of Claimant's January 30, 2013 right shoulder injury. Dr. Mitchell agreed that Claimant reached MMI on October 14, 2015 with a 0% whole person impairment rating. She concluded that surgical intervention for Claimant's May 9, 2015 right shoulder injury was not reasonable and necessary. Dr. Mitchell detailed that Claimant was a poor surgical candidate because of pain behaviors, inconsistencies between subjective complaints and objective findings, and failure to respond to conservative treatment. Furthermore, in a supplemental report Dr. Failinger persuasively noted that Claimant's right shoulder MRI revealed a "rim-rent" tear of the supraspinatus that was "in most all situations a degenerative phenomenon that occurs with a rotator cuff and is not with medical probability an acute tear that may have occurred" on May 9, 2015. Although Claimant exhibited some symptoms after the May 9, 2015 accident, there were significant inconsistencies between subjective complaints and physical findings. Dr. Failinger thus determined that Claimant did not suffer any significant, new injuries on May 9, 2015. He characterized the progression of the tear as "a degenerative and ongoing phenomenon." Dr. Failinger remarked that progression of rotator cuff tears occurs as individuals age and use their arms at shoulder level or above. He thus summarized that "there would be great concern proceeding with surgical intervention in a patient with this type of symptomatology" prior to a psychological evaluation. Accordingly, based on the persuasive medical records, Claimant's request for medical maintenance benefits in the form of right shoulder surgery is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The

facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides.* §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office,* 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,*

W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. As found, Claimant has failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Dillon that he reached MMI on October 14, 2015.and suffered a 0% whole person impairment to his right upper extremity as a result of his May 9, 2015 admitted industrial injury. Initially, Claimant received conservative treatment for his right shoulder condition and Dr. Failinger discussed surgical options. However, Claimant considered whether he wanted to proceed with surgery and delayed his decision. Dr. Ladwig determined that Claimant had reached MMI on October 14, 2015 with a 0% permanent impairment rating. He remarked that Claimant had discussed surgical options with Dr. Failinger but declined to proceed with surgery at the time. On March 8, 2016 Claimant underwent a DIME with Dr. Dillon. Claimant reported burning pain in his right shoulder area. Dr. Dillon noted invalid range of motion measurements with multiple pain behaviors. She agreed that Claimant had reached MMI on October 14, 2015 and assigned a 0% whole person impairment rating.

8. As found, Claimant testified that Dr. Dillon's DIME evaluation was not very thorough. However, he did not present any evidence that he is no longer at MMI or suffered permanent impairment as a result of his May 9, 2015 work accident. Furthermore, Claimant has not provided any medical evidence that Dr. Dillon's impairment determinations contravened the *AMA Guides* or was otherwise incorrect. Finally, Drs. Ladwig and Mitchell also concluded that Claimant reached MMI on October 14, 2015. Accordingly, Claimant has failed to produce unmistakable evidence free from serious or substantial doubt that Dr. Dillon's MMI or impairment determination was incorrect.

Medical Benefits

9. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.*, 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

10. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to receive reasonable, necessary and related medical maintenance benefits in the form of right shoulder surgery that are designed to relieve the effects of his May 9, 2015 industrial injury or prevent further deterioration of his condition.

Claimant explained that he would like to pursue further medical treatment to alleviate his continuing right shoulder pain. However, the overwhelming medical evidence demonstrates that Claimant does not warrant medical maintenance benefits for his May 9, 2015 right shoulder injury.

11. As found, ATP Ladwig and DIME physician Dr. Dillon determined that it was reasonable to retain the option of surgery over the ensuing 12 months. However, Dr. Mitchell persuasively explained that Drs. Ladwig and Dillon had obtained invalid range of motion measurements and neither was aware of Claimant's January 30, 2013 right shoulder injury. Dr. Mitchell agreed that Claimant reached MMI on October 14, 2015 with a 0% whole person impairment rating. She concluded that surgical intervention for Claimant's May 9, 2015 right shoulder injury was not reasonable and necessary. Dr. Mitchell detailed that Claimant was a poor surgical candidate because of pain behaviors, inconsistencies between subjective complaints and objective findings, and failure to respond to conservative treatment. Furthermore, in a supplemental report Dr. Failinger persuasively noted that Claimant's right shoulder MRI revealed a "rim-rent" tear of the supraspinatus that was "in most all situations a degenerative phenomenon that occurs with a rotator cuff and is not with medical probability an acute tear that may have occurred" on May 9, 2015. Although Claimant exhibited some symptoms after the May 9, 2015 accident, there were significant inconsistencies between subjective complaints and physical findings. Dr. Failinger thus determined that Claimant did not suffer any significant, new injuries on May 9, 2015. He characterized the progression of the tear as "a degenerative and ongoing phenomenon." Dr. Failinger remarked that progression of rotator cuff tears occurs as individuals age and use their arms at shoulder level or above. He thus summarized that "there would be great concern proceeding with surgical intervention in a patient with this type of symptomatology" prior to a psychological evaluation. Accordingly, based on the persuasive medical records, Claimant's request for medical maintenance benefits in the form of right shoulder surgery is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to overcome the DIME opinion of Dr. Dillon. He reached MMI on October 14, 2015 with a 0% whole person impairment rating.

2. Claimant's request for medical maintenance benefits in the form of right shoulder surgery is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 17, 2018.

ISSUES

I. Whether Claimant proved, by a preponderance of the evidence, that she suffered a compensable industrial injury arising out of and in the course of her employment with Employer on April 29, 2017.

II. If Claimant proved she sustained a compensable injury, whether Claimant is entitled to reasonable, necessary and related medical treatment

III. If Claimant proved she sustained a compensable injury, whether the medical treatment provided by UC Health and Dr. Jeffrey Kesten was authorized, reasonable, necessary and related to the compensable injury.

IV. If Claimant proved she sustained a compensable injury, whether Claimant proved, by a preponderance of the evidence, that she is entitled to temporary disability benefits.

PROCEDURAL MATTER

Pursuant to this Court's Order, the case was kept open for the deposition of Dr. Kathy McCranie and rebuttal from Claimant. Claimant filed a rebuttal report of Dr. Jeffrey Kesten dated March 18, 2018. On March 26, 2019, Respondents filed a Motion to Strike Dr. Kesten's Rebuttal Report. On March 29, 2018, Claimant filed an Objection to Respondents' Motion to Strike Dr. Kesten's Rebuttal Report. The ALJ denied Respondent's Motion to Strike. Dr. Kesten's rebuttal report. The opinions expressed in Dr. Kesten's rebuttal report were considered by the ALJ.

STIPULATION

The parties stipulated that Claimant's average weekly wage ("AWW"), taking into account wages from Employer and her concurrent employer, is $825.66. This amount is comprised of $165.66 from Employer and $660.00 from her concurrent employer ISI.

FINDINGS OF FACT

1. Claimant has a history of pre-existing medical conditions dating back to at least 2013, including migraines, memory loss, bilateral hand paresthesias and pain, vertigo and dizziness, syncopal episodes, vision difficulties and changes, and shoulder and neck pain. Claimant sought treatment for these conditions, including physical therapy and medication.

2. On September 20, 2015, Claimant sustained a concussion after being hit with a cane and punched in the head repeatedly. Claimant sought medical treatment subsequent to the incident and reported experiencing a "whoosh" sensation, a "wave of weirdness," tinnitus, and being off balance. Claimant testified at hearing that she does not recall which side of her head was struck. She testified that after the concussion she was "foggy" for approximately one month, but returned to work full duty and did not have cognitive difficulties lead up to the April 29, 2017 work injury.

3. On April 24, 2017, Jessica Erin Scharein, NP with the UC Health Neurology Department provided Claimant a note which stated,

> [Claimant] has been under my care for a medical condition in which she requires an anti-glare screen filter for any prolonged computer usage. As an alternative to this anti-glare computer glasses that filter both LED and LCD lights can be purchased for her condition.

4. Claimant underwent a brain MRI on April 28, 2017 for worsening headache, visual changes/disturbances, and new onset extremity numbness. The MRI was unremarkable.

5. On Saturday, April 29, 2017, Claimant sustained a contusion and abrasion to her face while performing her work duties for Employer. Claimant was reaching for an empty ice bucket that was located within arm's length at or just above Claimant's head on the shelf/top of the ice maker. The plastic bucket, weighing approximately 1 ¾ pounds, was placed upside-down on a black mat, which had slipped out of place. Claimant went to fix the mat under the bucket and the bucket fell towards her. Claimant testified that the bucket hit her in between the bridge of her nose and her right eye but she does not entirely recall how the bucket came at her. She testified that she did not lose consciousness nor did she fall after the bucket came towards her. After the bucket fell, a two co-workers came to check on Claimant and she told them she was in pain because the ice bucket hit her in the face. Claimant testified she initially had blurry vision immediately following the bucket falling on her face but by the time the manager came over to her she was able to see again without any blurry vision. Claimant then went to the bathroom to look at her face and noticed an abrasion in between her nose and eye that was bleeding and she testified she felt swelling where her cheek and jaw meet. She testified that she put a band-aid on the abrasion. She did not leave work and was not sent for follow-up medical attention. At the end of her shift, Claimant testified that she told her manager that she was still in pain and had taken ibuprofen and was going to get a beer.

6. Claimant was not scheduled to work either job the following day, Sunday, April 30, 2017. Claimant initially testified that she "probably rested" the whole day on Sunday and did not remember leaving her house. Claimant later testified that she did not stay home resting all day, but rather, went out with her friend for a beer and lunch, and also stopped at King Soopers to run an errand.

7. On Monday, May 1, 2017, Claimant went to work at her ISI job as scheduled. She testified that when she arrived at work, the computers were down for about the first 3 ½ - 4 hours of her shift. Claimant testified that when the computers were finally working, she had difficulty typing and she told her supervisor at ISI that she wanted to leave work because she was in pain. Claimant testified that her supervisor let her use her sick time so she could go home and rest and go to the emergency room.

8. Claimant sought medical treatment later that day at the UC Health emergency department. The medical record notes Claimant was seen at 5:41 p.m. Claimant complained of right eye pain. Jean McFall Wheeler Hoffman, M.D. noted,

> 37 y.o. female with closed head injury that does not meet criteria for head or neck imaging, very small punctate nasal bridge abrasion, no indication for T-DAT, no facial instability, no septal hematoma, no indications for fact imaging at this time. Will do with PCP f/u. Has Hx of chronic migraines with recent nml MRI. I do not think this is an acute ICH. She is ambulating through the ED without difficulty. Overall appears well.

Dr. Hoffman discharged Claimant from care and recommended Claimant follow up with her primary care physician. Dr. Hoffman authored a letter dated May 1, 2017 stating Claimant was seen at the emergency department and unable to work. The letter further states, "Once her concussive symptoms resolve or cleared by neurology she may return to work with no restrictions." The letter was electronically signed by Dr. Hoffman at 5:46 p.m.

9. On May 4, 2017, Claimant presented to Jeffrey Kesten, M.D. with complaints of severe and persistent headache and an ice bucket swung and hit her in the face, specifically, on the right forehead and right anterolateral facial region. Claimant reported a history of dizziness, which had markedly worsened since the April 29, 2017 work incident. Claimant also reported a history of migraines, dizziness, and intermittent bilateral hand paresthesias. On physical examination, Dr. Kesten noted a small eschar, tenderness to moderate palpation to the right lateral aspects of her nasal bridge, and dizziness with upward gaze. Dr. Kesten diagnosed Claimant with work-related mild cognitive impairment, mild traumatic brain injury, posttraumatic headache, postconcussive syndrome, contusion of the nose, right orbit, and head, and worsening of premorbid dizziness. Dr. Kesten ordered an x-ray of Claimant's orbits, which was taken the same day. The radiologist found no displaced fracture and noted the visualized paranasal sinuses were clear.

10. Claimant returned to Dr. Kesten for a follow-up evaluation on May 9, 2017, and reported getting "a little foggy about stupid things," exhaustion, compromised dexterity, painful pressure in her forehead, and stiffness in her neck. Dr. Kesten added three new diagnoses: cervicothoracic pain, cervicothoracic sprain/strain, and cervicothoracic myofascial pain syndrome. Dr. Kesten prescribed a trial of tramadol 50mg and continued Claimant on Celebrex, LidoPro cream, Lidopro patch and noted that another medical provider was simultaneously prescribing Lyrica, Imitrex and meclizine. Dr. Kesten kept Claimant off work for Employer and off work half-time for her concurrent

employer ISI. Dr. Kesten also noted he was considering physical therapy, cognitive therapy and cervicothoracic trigger point injections.

11. On May 12, 2017, Claimant was physically examined at UC Health. Claimant reported feeling constant pressure headache, an intermittent squeezing/pulling sensation in the right eye, ringing sensation in the ear, and increased sensitivity to light. The examination showed "full range of motion in the cervical, thoracic and lumbosacral spines. Not tenderness to palpation." With respect to psychiatric, her "mood and affect normal. Judgement normal." As for neurologic, "patient is alert and oriented to person, place, time and situation. Recent and remote memory are intact. Attention and concentration are normal. Fund of knowledge is appropriate to level of education." With respect to Claimant's speech, language including naming, repetition, comprehension and spontaneous speech are normal. No dysarthria or dysphasia." Claimant's pupils were equal, round and reactive to light and her extraocular eye movements were full and conjugate and without nystagmus. Claimant was diagnosed with post-concussion headache, post-concussion syndrome, and neck pain, and referred for massage therapy.

12. On June 1, 2017, Claimant continued reporting cognitive defects to Dr. Kesten. Physical examination revealed that Claimant's small right paranasal eschar had resolved. Claimant also denied "appreciable tenderness to moderate palpation over her posterolateral cervicothoracic region." Dr. Kesten kept Claimant off work as a part-time server for Employer and limited Claimant to working a maximum of four hours per day as an order processing coordinator at ISI.

13. On June 28, 2017. Dr. Kesten noted that Claimant interventions thus far included limited pharmacologic trials, activity restrictions, cervicothoracic trigger point injections, craniosacral therapy, and speech language pathology/cognitive rehabilitation. Dr. Kesten continued to keep Claimant off all part-time work Employer and to restrict her hours at ISI to 4 hours per day or 20 hours per week.

14. Claimant continued to treat with Dr. Kesten. From July 12, 2017 through September 29, 2017, Dr. Kesten continued Claimant on medications, craniosacral massage therapy, and cervicothoracic trigger point injections. He continued to recommend speech language pathology/cognitive rehabilitation and continued Claimant's work restrictions to allow for 30 hours of work a week at ISI and potential modified duty with Employer.

15. On October 3, 2017, Kathie McCranie, M.D. performed an independent medical evaluation ("IME") at the request of Respondents. Dr. McCranie reviewed medical records dated February 15, 2011 through September 11, 2017 and performed a physical examination. On physical examination, Claimant denied tenderness in the cervical or scapular musculature with some tautness in the left trapezius but no tenderness. Claimant denied any facial tenderness. Cervical facet compression tests were negative and Claimant demonstrated good/full cervical and bilateral shoulder range of motion. Dr. McCranie noted preexisting diagnoses of migraines, worsening of headaches and memory loss, vertigo/dizziness/syncopal episodes, neck pain, left

shoulder pain, bilateral upper extremity paresthesias, anxiety, depression, post-concussion, right elbow pain, and GI symptomatology. Based on her review of the medical records, history from Claimant and physical examination, Dr. McCranie opined that the April 29, 2017 work injury solely resulted in a contusion to the nasal bridge and facial area. She opined that the remainder of Claimant's diffuse symptomatology "correspond with her diffuse pre-existing symptom complex and cannot be objectively linked to this minor mechanism of action." Dr. McCranie noted that the mechanism of injury could cause a contusion, but would not be expected to cause persistent headaches, or cognitive or musculoskeletal sequelae. Dr. McCranie further opined that Claimant's past significant medical history of headaches, vertigo, dizziness, visual difficulties, neck and left shoulder pain, memory loss and prior concussion is more likely to be causing current symptoms that the reported minor mechanism of injury Dr. McCranie noted that Dr. Kesten did not apply the Level II criteria in addressing causality assessment.

16. On October 16, 2017, Claimant returned to Dr. Kesten for a follow-up evaluation and continued to report cognitive issues, headaches and tinnitus. In his medical note, Dr. Kesten references an April 6, 2017 note of Jessica Scharein, NP at UC Health. Dr. Kesten's reference (and abridgment) of the documentation states as follows, in relevant part:

> Encounter Diagnosis…Contusion of Ala Nasi, sequelae...Bruised jaw, sequelae….Past history of Concussion; Gastritis; Hiatal hernia (03/2016); and Migraine…Impression: 1. Migraine with aura and without status migrainosus, not intractable…Possible contributing factors include a prolonged use of computer, stress, hx of concussion…2. Papilledema…Possible, will do OCT…3. Visual disturbance…Migraine aura…4. Spells…MRI brain…5. Paresthesia of both hands…Could be part of hemiplegic migraine…Follow up of migraine with aura. Pain is described as mostly being in the right temple and right eye and feels like a 'screwdriver going into my head' and is associated with a pressure feeling in her entire head. Her headaches and her head feels 'foggy' afterwards and neck is sore. More frequent when she looks at a computer screen. Is requesting a work note for migraine screen cover and to see an ophthalmologist to check pressure in her eyes…ACTIVE PROBLEM LIST…Corneal ulcer…Recurrent erosion of cornea…Tear film insufficiency… Syphilis contact… Cognitive complaints… Migraine… Paresthesia…Carpal tunnel syndrome…Syncope…

17. On November 29, 2017, Dr. McCranie issued an addendum to her IME report after reviewing photographs of the ice bucket and additional medical records. Dr. McCranie concluded that the additional medical records further confirmed Claimant's pre-existing history of migraine headaches, vertigo/dizziness, neck and left shoulder pain, and memory loss. She again opined that the mechanism of injury would not cause Claimant's continued symptoms.

18. Dr. McCranie testified by post-hearing deposition as an expert in physical medicine, rehabilitation and pain medicine. Dr. McCranie testified consistent with her IME report and addendum and continued to opine that Claimant's April 29, 2017 work injury solely resulted in a contusion and abrasion to the nose and face area. Dr. McCranie testified that the May 1, 2017 UC Health emergency department records do not indicate any concussive symptoms. She testified that a diagnosis of a closed head injury means the patient was struck in the head, and is different from a traumatic brain injury or concussion diagnosis. She noted that Claimant did not meet the criteria for head or neck imaging, which indicated the lack of severity.

19. Dr. McCranie testified that Claimant was reporting some identical symptoms prior to the work injury, including memory loss and frequent headaches. She testified that the medical records leading up to April 29, 2017 indicate Claimant's symptoms was progressing. She compared symptoms of cognitive deficits Claimant described to Dr. Kesten at this June 1, 2017 visit to the types of symptoms in the medical records from August 23, 2013 and found that the level of cognitive symptoms remained constant with no aggravation or acceleration of the symptoms. Dr. McCranie testified that "I'm not seeing any change in her complaint. She had concerns with memory loss before. She would forget to perform certain important tasks that she brought to the attention of her medical providers, and she's doing the same thing again."

20. Dr. McCranie reiterated her disagreement with all of Dr. Kesten's work-related diagnoses with the exception of the contusion. She stated that Dr. Kesten did not perform a causation analysis, and indicated that his medical records did not include reference to Claimant's 2015 concussion. She testified that Claimant's contusion was expected to resolve without medical care, but also testified that the initial emergency room evaluation on May 1, 2017 was reasonable under the circumstances. Dr. McCranie explained that the other treatment Claimant received, including the craniosacral therapy, cognitive rehabilitation, physical therapy, trigger point injections, was not reasonable, necessary or related to Claimant's April 29, 2017 work injury. She stated that there is no mechanism of injury to explain Claimant's cervicothoracic pain, strain and myofascial pain. The treatment authorized by Dr. Kesten was to treat Claimant's pre-existing conditions. Dr. McCranie opined that Claimant's work-related conditions did not result in any disability and did not necessitate missing any work from Employer or ISI.

21. When questioned by Claimant's counsel as to her opinion as to whether Claimant being in a weakened condition due to her preexisting conditions might result in her reacting in a more exaggerated way to stimuli, Dr. McCranie pointed out that Claimant was in a weakened state prior to her concussion in 2015 where she had a severe trauma to her head, and yet, Claimant reported minimal symptoms related to that. Therefore, Dr. McCranie opined that, in Claimant's case, she does not have a different or increased reaction to stimuli in spite of her preexisting conditions.

22. Claimant filed rebuttal evidence in the form of a March 18, 2018 report authored by Dr. Kesten. Dr. Kesten indicated he reviewed medical records and noted that Claimant experienced migraines, unspecified cognitive complaints and syncope prior to

April 29, 2017. Despite Claimant's history of pre-existing conditions, Dr. Kesten opined that Claimant experienced an "exacerbation and change in quality of symptoms" after the April 29, 2017 work injury. He noted,

> Despite having been provided with photographs of the ice bucket's position prior to having fallen onto [Claimant], I do not feel qualified to render a comprehensive and accurate forensic analysis of the mechanism of injury considered. Nevertheless, as cited by Mayo Clinic, 'the risk of post-concussion syndrome doesn't appear to be associated with the severity of the initial blow.'

23. Claimant testified at hearing that her current symptoms, including her headaches, neck and shoulder pain, and cognitive issues, differ from those she experienced prior to the April 29, 2017 work injury. She stated that she is now more sensitive to light, and the headaches are now a twisting feeling at the base of her skull through the right side of her head, with a pulling sensation behind the eye. Claimant stated that her cognitive issues have improved since the date of the work injury.

24. Claimant testified that she chose to treat with Dr. Kesten because her primary care physician, Dr. Zimmel, would not treat her for a work-related condition. Claimant stated that she has continued to treat with Dr. Kesten and last saw him in December 2017. Respondents denied further treatment with Dr. Kesten based on a Notice of Contest filed May 23, 2017.

25. The ALJ finds Dr. McCranie's testimony and opinion, as supported by the medical records, more credible and persuasive than Claimant's testimony and the opinion of Dr. Kesten.

26. Claimant proved by a preponderance of the evidence she sustained a compensable injury arising out of and in the course of her employment for Employer on April 29, 2017.

27. The compensable injury sustained by Claimant is limited to a facial contusion and abrasion.

28. Claimant is entitled to medical treatment to cure and relieve her from the effects of the facial contusion and abrasion. Claimant is not entitled to medical treatment for her other alleged conditions and alleged symptoms including, but not limited to, headaches, visual changes/disturbances, cognitive issues, and neck and shoulder pain.

29. UC Health and Dr. Kesten are authorized treating physicians.

30. Claimant failed to prove entitlement to temporary disability benefits by a preponderance of the evidence. The compensable injury, a facial contusion and abrasion, did not result in any disability or wage loss.

31. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service.

Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant proved it is more likely than not she sustained a compensable industrial injury arising out of and in the course of her employment with Employer on April 29, 2017. An ice bucket fell and struck Claimant in the face while she was performing her job duties during a scheduled shift. Respondents argue Claimant's injury is not compensable because Claimant did not suffer any disability or require any medical treatment. While the ALJ agrees Claimant did not suffer any disability, the injury did require some, albeit minimal, medical treatment. Dr. McCranie credibly testified that, while a contusion can be expected to heal on its own, the initial treatment sought at UC Health emergency department on May 1, 2017 was reasonable.

While the ALJ concludes Claimant suffered a compensable injury, the totality of the evidence establishes that the work-related injury is limited to a facial contusion and abrasion. An empty plastic ice bucket weighing no more than two pounds fell from a relatively short distance and struck Claimant in the face. Dr. McCranie credibly opined that the mechanism of injury would not cause Claimant's diffuse symptomatology, including persistent headaches, cognitive sequelae, or musculoskeletal sequelae. Despite the general diagnosis of a closed head injury, the May 1, 2017 emergency department records do not list concussive symptoms. The May 1, 2017 medical records do, however, document Claimant's reports of right eye complaints, which were noted a few weeks before the work injury, on April 6, 2017. The same April 6, 2017 medical record documents pain in Claimant's right temple and eye, pressure, fogginess, and neck soreness. A mere day before the industrial injury, Claimant underwent an MRI for worsening headaches and visual disturbances. The medical records clearly reflect Claimant has a longstanding pre-existing history of many of the same symptoms she contends were caused or aggravated by the April 29, 2017 work incident, and that many of those symptoms continued up to the date of the industrial injury.

While Dr. Kesten opined that Claimant experienced an exacerbation and change in quality of symptoms as a result of the April 29, 2017 industrial injury, he acknowledged that he was not qualified to render an analysis of the mechanism of injury. Dr. Kesten's opinion appears to be based on Claimant's subjective reports of her condition, which the ALJ does not find credible and persuasive in light of the mechanism of injury, the medical records and Dr. McCranie's credible opinion. There is insufficient credible and persuasive evidence that Claimant's diffuse symptomatology is the result of the April 29, 2017 work injury and not the natural progression of Claimant's pre-existing condition. Based on the totality of the evidence, it is more likely than not the April 29, 2017 work injury solely resulted in a facial contusion and abrasion, and did not

otherwise cause, aggravate, accelerate or combine with Claimant's pre-existing condition to create the need for medical treatment for any other conditions.

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

As found, Claimant's work-related injury is limited to a facial contusion and abrasion. As discussed, Dr. McCranie credibly opined that Claimant's initial visit to the emergency room on May 1, 2017 was reasonable in light of her facial contusion and abrasion. Claimant subsequently received a variety of other medical treatment, including craniosacral therapy, cognitive rehabilitation, physical therapy and trigger point injections. Dr. McCranie credibly testified that this subsequent medical care was intended to treat Claimant's non-work-related conditions and was not reasonable or necessary. Based on the totality of the evidence, it is more likely than not that the initial UC Health emergency room visit on May 1, 2017 was reasonable, necessary and related to the minor injury Claimant sustained on April 29, 2017. Claimant failed to prove by a preponderance of the evidence that any subsequent medical treatment, including craniosacral therapy, cognitive rehabilitation, physical therapy and trigger point injections, was reasonable, necessary and related to the April 29, 2017 work injury.

Authorized Treating Physicians

Section 8-43-404(5)(a), C.R.S. gives the respondents the right in the first instance to select the authorized treating physician ("ATP"). Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office,* 944 P2d. 677 (Colo. App. 1997). If upon notice of the injury the employer fails forthwith to designate an ATP, the right of selection passes to the claimant. *Rogers v. Industrial Claim Appeals Office,* 746 P.2d 565 (Colo. App. 1987). The employer's obligation to appoint an ATP arises when it has some knowledge of the accompanying facts connecting an injury to the employment such that a reasonably conscientious manager would recognize the case might result in a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006). Medical treatment that a claimant receives prior to the time the employer is provided with sufficient knowledge of a potential claim for compensation is not authorized; therefore, such treatment is not compensable. *Bunch v. Industrial Claim Appeals Office, supra*.

Employer received notification of Claimant's work injury at the time of the injury, on April 29, 2017. The ALJ is persuaded Employer had sufficient knowledge of a potential claim for compensation at such time. Claimant was not sent for medical attention. Thus, the right of selection passed to Claimant, who selected UC Health and Dr. Kesten for medical treatment. However, as discussed above, the only treatment deemed reasonable, necessary and related is the initial emergency room visit at UC Health on May 1, 2017.

Temporary Disability Benefits

To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury, or occupational disease, has caused a "disability," and that he suffered a wage loss that, "to some degree," is the result of the industrial disability. Section 8-42-103(1), C.R.S. (2009); *PDM Molding, Inc. v. Stanburg*, 898 P.2d 542, 546 (Colo. 1995). The term "disability" connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Claimant failed to prove entitlement to temporary disability benefits by a preponderance of the evidence. As found, the extent of Claimant's compensable injury is a facial contusion and abrasion, for which Claimant only required an initial emergency room visit. Dr. McCranie credibly testified that the work-related injury did not result in any disability or necessitate missing work from Employer or ISI. Thus, although Claimant has not returned to work for Employer, there is insufficient credible and persuasive evidence that the facial contusion and abrasion sustained on April 29, 2017 resulted in loss or reduction of bodily function or restrictions that impaired Claimant's earning capacity.

ORDER

It is therefore ordered that:

1. Claimant established by a preponderance of the evidence that she suffered a compensable injury on April 29, 2017, limited to a facial contusion and abrasion.

2. Respondents shall pay for reasonable and necessary medical treatment to cure and relieve Claimant's from the effects of the facial contusion and abrasion. Claimant is not entitled to medical treatment for her other conditions and symptoms including, but

not limited to, headaches, visual changes/disturbances, cognitive issues, and neck and shoulder pain.

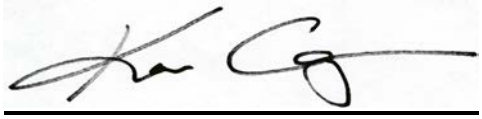
3. UC Health and Dr. Kersten are authorized treating physicians.

4. Claimant's claim for temporary disability benefits is denied and dismissed.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 26, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant has proven by a preponderance of the evidence that he sustained a functional impairment that is not contained on the schedule of impairments set forth at Section 8-42-107(2), C.R.S. and would therefore entitle claimant to a whole person award for permanent partial disability ("PPD")?

FINDINGS OF FACT

1. Claimant is employed with employer as a package car driver. Claimant testified he was injured on April 27, 2016 when he lifted a carpet roll off the top of the packages and injured his right shoulder. Claimant was referred by employer to Dr. Ogrodnick for medical treatment.

2. Claimant was initially evaluated by Dr. Ogrodnick on May 2, 2016. Claimant reported a consistent accident history of reaching up to unload a carpet roll causing a painful pop over the scapular region. Claimant was diagnosed with a shoulder strain.

3. Claimant returned to Dr. Ogrodnick on May 12, 2016. Dr. Ogrodnick noted claimant was doing about the same and complained of pain if he held the steering wheel too long or held a box next to his body. Dr. Ogrodnick recommended claimant undergo a magnetic resonance image ("MRI") of his right shoulder.

4. The MRI took place on May 25, 2016 and demonstrated moderate supraspinatus, infraspinatus and subscapularis tendinosis. Proximal long head bideps tendinosis with degenerative fraying at the biceps labral anchor was also noted. No rotator cuff tear was detected.

5. Claimant returned to Dr. Ogrodnick on May 26, 2016. Dr. Ogrodnick reviewed the MRI and discussed potential treatment options with claimant. Dr. Ogrodnick referred claimant to Dr. Hatzidakis to evaluate the right shoulder and possibly provide claimant with an injection.

6. Claimant was examined by Dr. Hatzidakis on July 14, 2016. Claimant reported to Dr. Hatzidakis that he was having difficulty with his right shoulder in the overhead and behind-the-back activities and with sleeping. Claimant reported pain occurring across the whole shoulder that was described as a constant dull ache with intermittent dull/occasional sharp pain. Claimant reported chronic ongoing neck pain and constant numbness and tingling to the long, index and thumb since his injury. Dr. Hatzidakis diagnosed claimant with a right shoulder traumatic work-related injury with subacromial impingement, tendinitis and bicipital fraying/irritation, with possible partial

thickness rotator cuff tear and possible low grade infection. Dr. Hatzidakis recommended a diagnostic injection that was performed on July 14, 2016. Claimant was instructed to follow up in three to four weeks to review the diagnostic tests.

7. Claimant returned to Dr. Hatzidakis on August 4, 2016. Dr. Hatzidakis noted that claimant complained of pain across the whole shoulder that can radiate up into the neck, with increased pain with neck rotation. Dr. Hatzidakis recommended therapy and a neck magnetic resonance image ("MRI").

8. Claimant again returned to Dr. Hatzidakis on September 1, 2016. Dr. Hatzidakis noted that claimant's symptoms were more likely than not due to his recent work related right shoulder injury. Dr. Hatzidakis recommended claimant undergo a right shoulder arthroscopic debridement with evaluation of the previous repair and removal of sutures that were causing irritation.

9. Claimant underwent surgery under the auspices of Dr. Hatzidakis on October 4, 2016. The surgery consisted of a right shoulder arthroscopy with extensive debridement, arthroscopic removal of multiple sutures, arthroscopic subacromial decompression, arthroscopic rotator cuff pain and arthroscopic long head of biceps tenodesis.

10. Claimant continued to follow up with Dr. Ogrodnick after his surgery. Claimant complained of issues involving his right elbow and complained that his neck would "lock up" if he's been stationary for too long when watching television, reading a book or sleeping.

11. Claimant returned to Dr. Vanderhorst on February 1, 2017. Dr. Vanderhorst noted claimant was complaining of more discomfort related to his bilateral upper posterior neck and trapezius area irritation. Dr. Vanderhorst noted that his physical therapy had tried to address some of his cervical and muscular complaints which had provided him with some relief. Physical examination revealed complaints of tenderness to palpation in the mid to upper trapezius distribution bilaterally. Dr. Vanderhost noted that claimant had mildly increased muscle tone but no spasm or trigger points.

12. Claimant returned to Dr. Ogrodnick on February 21, 2017. Dr. Ogrodnick noted that claimant's physical therapist had been routinely addressing his neck issues. Physical examination revealed claimant to e tender along the trapezii, but not over scalenes or suboccipital notches.

13. Claimant again returned to Dr. Ogrodnick on April 18, 2017. Claimant reported he had pain of only 3 out of 10 and said his shoulder was feeling "good". Physical examination revealed claimant to be tender over his right trapezius. Dr. Ogrodnick released claimant to return to work over claimant's objections.

14. Claimant returned to Dr. Hatzadakis on May 23, 2017. Dr. Hatzadakis noted that claimant was concerned about returning to work as tolerated as he felt he may re-injury his shoulder. Dr. Hatzadakis provided claimant with work restrictions that

allowed him to return to work in the medium level work lifting 25 to 50 pounds with bilateral upper extremities.

15. Claimant was placed at maximum medical improvement ("MMI") by Dr. Ogrodnick on June 23, 2017. Dr. Ogrodnick noted that claimant felt his strength was at 90% pre-injury and complained of pain of 1 out of 10 from what claimant thought was his biceps. Claimant also reported feeling tight in the upper trap. Claimant was provided with a permanent impairment rating of 8% of the upper extremity by Dr. Ogrodnick. The 8% upper extremity converts to a 5% whole person impairment rating.

16. Claimant underwent a Division-sponsored Independent Medical Examination ("DIME") with Dr. Green on October 16, 2017. Dr. Green reviewed claimant's medical records, obtained a medical history from claimant and performed a physical examination in connection with the DIME.

17. Dr. Green noted claimant reported that after his original right shoulder work injury, he had an injury to this left shoulder on August 29 with development of pain in the left shoulder and neck. This left shoulder injury was covered under a different claim. Claimant reported his right shoulder "feels 90%" and complained the shoulder would get weak with lifting or carrying. Claimant reported he would experience an occasional popping sensation in his right shoulder. Claimant reported he develops a tightness over the pectoralis, parascapular and right upper trapezius region, particularly with overhead lifting. Claimant also reported increased left greater than right paracervical pain following the interim work related injury.

18. Dr. Green noted that on examination claimant had no acromioclavicular tenderness on his right shoulder and no scapular winging. Claimant presented with decreased range of motion of the upper extremity that amounted to a permanent impairment rating of 8% of the upper extremity. Claimant reported that cervical range of motion provoked ipsilateral neck pain, left greater than right, with lateral bending. Examination also revealed mildly positive impingement sign with Hawkins testing and negative apprehension testing on the right.

19. Dr. Green noted that with regard to claimant's cervical spine, claimant did report paracervical symptoms following his injury and based upon his exam, he has good compliance of his upper trapezius muscles. Dr. Green noted that claimant had left greater than right sided cervical symptoms without evidence for clinical radiculopathy and the mechanism of injury and immediate reports do not, in Dr. Green's mind, support a more likely than not, separately identifiable cervical spine injury on April 27, 2016.

20. Dr. Green provided claimant with a permanent impairment rating of 8% of the upper extremity based on claimant's range of motion. Dr. Green noted that claimant does not receive a crepitation impairment. The 8% upper extremity impairment rating converts to a 5% whole person impairment rating according to the AMA Guides, Third Edition, Revised.

21. Respondents filed a Final Admission of Liability ("FAL") based on the scheduled impairment rating. Claimant objected to the FAL and applied for hearing on the issue of conversion. The FAL denied future medical treatment based on the report from Dr. Ogrodnick.

22. Claimant underwent an independent medical examination ("IME") with Dr. D'Angelo on January 10, 2018. Dr. D'Angelo reviewed claimant's medical records, obtained a medical history and performed a physical examination as part of her IME. Dr. D'Angelo confirmed that claimant had two separate injuries to his left and right shoulder, with his left shoulder injury occurring August 19, 2017 and being a separate claim.

23. Dr. D'Angelo noted that claimant described his right shoulder as feeling 90% of his pre-injury status. Claimant reported that occasionally with heavy lifting or carrying, his right arm would feel week. Claimant also complained of right arm numbness if he lies on his right side. Claimant reported no pain in the shoulder at rest, but did admit to occasional popping in the right shoulder.

24. Dr. D'Angelo noted several concerns with regard to claimant's current complaints involving the left sided complaints and noted that many of these symptoms were present after claimant's 2016 injury and before the August 2017 injury.

25. Dr. D'Angelo opined that claimant's right shoulder impairment should remain a scheduled injury.

26. With regard to the April 27, 2016 right shoulder injury, Dr. D'Angelo opined that claimant's right shoulder impairment should remain at 8% upper extremity as it is not appropriate to convert this to a whole person impairment.

27. Claimant presented the testimony of Dr. Swarsen at hearing. Dr. Swarsen had reviewed claimant's medical records and testified that claimant had undergone a right shoulder arthroscopy with extensive debridement, removal of mulitiple sututres,subacromial decompression, arthroscopic rotator cuff repair and arthroscopic long head of biceps tenodesis. Dr. Swarsen identified the areas of the surgery on claimant's exhibit 8, which consisted of a diagram of the shoulder. Dr. Swarsen testified that in his opinion, claimant's ongoing complaints of pain were consistent with the surgical procedures performed on claimant's right shoulder. Dr. Swarsen testified that 90% of the surgical repairs conducted by Dr. Hatzidakis to claimant's rotator cuff were performed on an areas of claimant's shoulder that were proximal to the glenohumeral joint.

28. Respondents' presented the testimony of Dr. D'Angelo at hearing. Dr. D'Angelo testified consistent with her IME report regarding her opinion involving the permanent impairment related to claimant's injury. Dr. D'Angelo testified that it was her opinion that claimant's functional impairment was properly rated as a scheduled impairment rating for the upper extremity and that claimant's impairment rating should not be converted to a whole person award. Dr. D'Angelo testified that physicians do not

award impairment for pain, nor do they award impairment for myofascial irritation. Dr. D'Angelo testified that Dr. Green's DIME report does not note any loss of function beyond the arm. Dr. D'Angelo testified that in order for a physician to provide an impairment rating for the cervical spine, the injured worker would need to be entitled to a table 53 diagnosis. In this case, Dr. D'Angelo opined that she saw no evidence of cervical spine abnormality to warrant a diagnosis.

29. Claimant testified at hearing that he has limitation in movement of his right upper extremity and that it goes numb when overhead or while sleeping. Claimant testified that he still has pain in his upper trapezius and up into his neck. Claimant reported that the pain was on a scale of 2 out of 10 on the day of the hearing.

30. The ALJ credits the testimony of claimant at hearing along with the medical records entered into evidence in this case and finds that claimant has established that it is more likely than not that he has sustained a functional impairment to a part of the body that is not contained on the schedule of impairments set forth at Section 8-42-107(2), C.R.S.

31. The ALJ notes that claimant's testimony regarding the area of his symptoms is claimant's report of symptoms to Dr. Ogrodnick on the date of his initial examination in which claimant reported developing a cramp in his scapular region while performing internal rotation. Claimant also reported being tender over the deltoid region on May 12, 2016. Claimant reported to Ms. Fenton, the physicians' assistant for Dr. Hatzadakis, on August 4, 2016 that he had a lot of increasing neck pain along with pain that increased with neck rotation.

32. Following claimant's surgery, claimant again reported to Ms. Fenton on January 11, 2017 that he had ongoing complaints involving the cervical spine. This is consistent with his complaints to Dr. Ogrodnick, including his report of neck issues on March 21, 2017 that was noted along with tenderness along the cervical spine and paraspinal muscles.

33. As Dr. D'Angelo noted in her report and testimony, there was no evidence of a cervical spine abnormality that would warrant a diagnosis that would result in a Table 53 rating. However, the question of whether claimant has sustained a functional impairment that is not contained on a part of the body set forth on the schedule of impairments under Section 8-42-107(2), C.R.S. requires a determination as to the situs of the impairment.

34. In this case, the ALJ determines that the claimant has established that the situs of impairment is off the schedule of impairments set forth at Section 8-42-107(2), C.R.S. Therefore, claimant is entitled to a conversion of the scheduled impairment rating to a whole person award.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a

reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2012. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Section 8-42-107(1) states in pertinent part:

> (a) When an injury results in permanent medical impairment and the employee has an injury or injuries enumerated in the schedule set forth in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (2) of this section.
>
> (b) When an injury results in permanent medical impairment and the employee has an injury or injuries not on the schedule specified in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (8) of this section.

4. It is claimant's burden of proof by a preponderance of the evidence to establish both that he suffered a permanent impairment and that the permanent impairment is either contained on the schedule set forth at subsection (2) or not on the schedule specified in subsection (2). Further, it is Claimant's burden to prove by a preponderance of the evidence the extent of the permanent impairment.

5. The question of whether the claimant has sustained an "injury" which is on or off the schedule of impairment depends on whether the claimant has sustained a "functional impairment" to a part of the body that is not contained on the schedule. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Functional impairment need not take any particular impairment. Discomfort which interferes with the claimant's ability to use a portion of his body may be considered "impairment." *Mader v. Popejoy Construction Company, Inc.*, W.C. No. 4-198-489,

(ICAO August 9, 1996). Pain and discomfort which limits a claimant's ability to use a portion of his body may be considered a "functional impairment" for determining whether an injury is on or off the schedule. *See, e.g., Beck v. Mile Hi Express Inc.*, W.C. No. 4-238-483 (ICAO February 11, 1997).

6. As found, claimant has suffered a "functional impairment" to a part of the body that is not contained on the schedule. Therefore, claimant is entitled to a whole person impairment award pursuant to Section 8-42-107(8), C.R.S. As found, claimant's testimony with regard to the situs of the impairment and the corresponding medical records that are consistent with claimant's testimony are credible and persuasive on this issue. As found, claimant is entitled to an award of 5% whole person as a result of his industrial injury.

ORDER

It is therefore ordered that:

1. Respondents shall pay claimant PPD benefits based on an impairment rating of 5% whole person.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 12, 2018

222 S. 6th Street, Suite 414

ISSUES

- Whether Claimant demonstrated by a preponderance of the evidence that his need for total knee replacement is related to his work-related injury.

- Whether Claimant demonstrated by a preponderance of the evidence that his work-related condition worsened so as to support a reopening of his claim.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On July 20, 2015, Claimant sustained a compensable injury to his right knee while stepping off a fire engine. On October 5, 2015, Claimant first sought medical care with Martin Boublik, M.D. who recorded that Claimant "felt a slight pop in the knee and significant *medial* sided knee pain." Dr. Boublik's physical examination also indicated a medial knee injury based on Claimant's positive *medial* McMurray's test, and negative Lachman test. Dr. Boublik also noted instability with both varus and valgus stress testing. Dr. Boublik determined that Claimant's presentation was consistent with *medial* meniscus pathology. He ordered an MRI.

2. On October 15, 2015, Claimant underwent a right knee MRI which revealed medial and lateral meniscus tears, extrusion of the lateral meniscus, diminution of the lateral meniscus, and underlying osteoarthritis. Although the MRI revealed lateral findings, Claimant's symptomology was medial.

3. On May 26, 2016, Dr. Boublik performed an arthroscopic procedure to address Claimant's medial symptoms. Photographs taken during the procedure revealed the medial joint surfaces were intact.

4. However, the photographs displayed significant osteoarthritis on the *lateral* side of Claimant's right knee. The photographs showed degenerative fraying of the *lateral* meniscus without an acute tear and a small, chronic flap tear. Dr. Boublik removed the degenerative fraying and a small piece of cartilage associated with the flap tear. Photographs taken before the procedure was finished revealed exposed bone in Claimant's tibia and femur, grade IV *lateral* changes, and reflected a large defect of articular cartilage in the *lateral* compartment.

5. On August 24, 2016, Dr. Boublik noted that Claimant did very well and had complete resolution of his pain post procedure.

6. However, during his recovery, Claimant experienced a pain flare after performing activity and reported a new onset of snapping or shifting sensation *laterally*.

Dr. Boublik opined "we have again reviewed the inter-operative findings consistent with his grade IV changes laterally… again this is due to his likely underlying degenerative changes . . . We did discuss possible need for total knee arthroplasty in the future and that he may not be able to return back to full duty as a firefighter given his underlying changes are not only from acute but degenerative type injuries."

7. Dr. Boublik placed Claimant at maximum medical improvement (MMI) as of October 26, 2016, reiterating arthroscopic findings in the *lateral* aspect of Claimant's knee. At the time of MMI, Claimant reported the following symptoms related to the *lateral* aspect of his right knee: diffuse pain, episodic instability, activity related night pain, and difficulty with activities such as trying to climb ladders or going up and down stairs. Dr. Boublik noted Claimant's status as post-partial meniscectomies and debridement for significant lateral compartment changes. With respect to maintenance medical benefits, Dr. Boublik opined "given the fairly significant degenerative changes in the patient's right knee, I think he will benefit from ongoing, primarily home based, physical therapy with occasional formal physical therapy visits. I think he may also benefit from possibly repeat injections into the right knee. Ultimately, he may require further surgery including possible total knee replacement."

8. On November 10, 2016, Claimant returned to Dr. Boublik's office and saw PA Parker. Upon the physical examination, PA Parker noted Claimant "continues to be tender over the *lateral* joint line. No medial joint line pain noted." PA Parker noted that at the October 26, 2016 MMI appointment, "we put him at MMI at that time and we had discussed that given his degenerative changes status post work-injury with subsequent meniscal pathology and again now, bone on bone arthritis in the lateral compartment, he will be unlikely to return to work as a firefighter." Claimant acknowledged at hearing that he and PA Parker discussed Claimant's persistent pain and dysfunction which were due to his underlying arthritis. In November, 2016, Claimant applied for retirement disability due to the fact that he could no longer work as a firefighter due to his ongoing knee problems.

9. On January 10, 2017, Respondent filed a Final Admission of Liability based on Dr. Boublik's report. Claimant did not object, and this claim closed by operation of law.

10. On July 6, 2017, Claimant saw Dr. Yang whose history of present illness states:

> David comes in today for a follow up of his right knee. He is a former patient of Dr. Ray Kim's. The patient had a right knee ACL reconstruction in 2002. He now wears a brace on his right knee. He has bone on bone articulation of the right knee. He has a valgus deformity.

Dr. Yang assessed "post-traumatic osteoarthritis of the right knee." The ALJ finds that the trauma referenced in the preceding sentence refers to the ACL reconstruction surgery performed in 2002. Dr. Yang recommended a total right knee arthroplasty

based upon a diagnosis of "osteoarthritis of the right knee." Dr. Yang makes no mention of the July 20, 2015 work injury to the medial meniscus.

11. Claimant seeks to reopen his July 2015 worker's compensation claim based upon this report of Dr. Yang.

12. On November 6, 2017 Claimant underwent a IME with Dr. Lindberg to address whether the work-related injury to the medial portion of Claimants knee aggravated or accelerated the need for a total knee replacement. Dr. Lindberg opined that Claimant's need for a total arthroplasty was due to his underlying degenerative arthritis and not due to the July 2015 work injury.

- Dr. Lindberg explained that Claimant underwent a major lateral meniscectomy as well as an anterior cruciate reconstruction in 2000 and that "it is well documented in orthopedic literature that the ultimate outcome of the person with an anterior cruciate injury and a major lateral meniscectomy is not good and that one can expect early development of osteoarthritis".

- Dr. Lindberg relied upon the intraoperative photographs that were available from Dr. Boublik's 2016 scope which "showed chronic changes in the lateral meniscus … as well as significant osteoarthritis in the lateral joint affecting both the lateral femoral condyle and the lateral tibial plateau".

13. Dr. Lindberg also relied on the October15, 2015 MRI which revealed significant osteoarthritis prior to the May 2016 work-related scope for the medial sided knee pain. Dr. Lindberg opined that "the MRI confirms significant osteoarthritis prior to the May 2016 scope and that this did not occur or progress to a reasonable degree between his injury and the scope." Dr. Lindberg opined that the injury, as explained to him by Claimant was not responsible for the current situation.

14. Finally, Dr. Lindberg concluded that the need for total knee replacement is caused by Claimant's underlying degenerative arthritis and that Claimant has typical findings in which he would expect to see 15 years after an ACL reconstruction with a 70% removal of his lateral meniscus. He opined that Claimant remained at MMI and any further treatment should be rendered outside of his worker's compensation claim.

15. Claimant testified that subsequent to MMI for his work-related condition, he has experienced increased pain, increased instability "and when I say it locks up, - it catches and then snaps off since it's bone on bone". Claimant testified that he wears a brace designed to open up the outside of the knee so that the "bone on bone" is not as intense. It is undisputed that Claimant's "bone on bone" changes are limited to the *lateral* aspect of Claimant's knee.

16. Claimant testified that subsequent to his 2002 ACL reconstruction, he eventually returned to full duty work and did not have any type of restrictions to his right knee prior to the July 2015 work-related injury.

17. At hearing, Claimant conceded that at the October 26, 2016 MMI appointment, and at his November 10, 2016 appointment with Dr. Boublik, he discussed ongoing persistent pain and dysfunction. Further, his need of a total knee replacement was addressed at both of these visits as well as a prior July 2016 visit. Claimant testified that he wished to undergo a total knee replacement because his knee was not improving.

18. At hearing Dr. Lindberg was admitted as an expert in orthopedics of the knee. Dr. Lindberg testified that he had an opportunity to review medical records as well as to physically evaluate Claimant. Dr. Lindberg testified that he addressed the causality of the need of the total knee replacement and concluded that Claimant's need for the surgery was inevitable and due to the natural progression of Claimant's underlying severe osteoarthritis which resulted from the 2002 removal of 70% of his lateral meniscus.

19. Dr. Lindberg testified that Claimant sustained a work-related injury on July 20, 2015 to the *medial* side of his knee, where he reported symptoms. He explained that Claimant's symptoms and findings are all on the *lateral* side of the knee. He based his opinion on Claimant's MRI and the intraoperative photos from the May 2016 scope. Dr. Lindberg testified the work-related injury to the *medial* side of Claimant's knee had nothing to do with his need for a total knee replacement. Dr. Lindberg opined no evidence of the work-injury aggravating, accelerating, or exacerbating of Claimant's underlying osteoarthritic problems.

20. Dr. Lindberg explained that in 2002, Claimant had a "devastating" injury to his knee wherein he tore his ACL, tore his medial meniscus, and tore his lateral meniscus. Dr. Lindberg testified that while Dr. Yamamoto was able to repair the medial meniscus and did not have to remove it, he unfortunately was unable to fix the lateral meniscus.

- He pointed out that the lateral meniscus was "multiply injured" and explained that Dr. Yamamoto had to remove 70% of the lateral meniscus which is "the worst possible thing that can happen to somebody who tears their anterior cruciate."

- He explained that "the expected outcome is that of a severe degenerative osteoarthritis because of the removal of the lateral meniscus, it is a guaranteed outcome".

- He testified that "as time goes on, Claimant's knee deteriorated, and he started losing joint surface in the outside [lateral] part of his knee."

- Dr. Lindberg testified that at the time of the July 2015 work related injury to the medial meniscus, “the lateral knee was already shot with bone on bone arthritis.”

- Dr. Lindberg testified that he has “performed 10,000 knee scopes and probably 1,000 ACL reconstructions and it’s heartbreaking when you find out that you did a great operation but 15 years later, the knee is shot.”

- He noted that “the outcome is comparable to ‘the Ten Commandments,’ it’s engrained in stone, you know it’s going to happen”.

21. Dr. Lindberg opined that the October 15, 2015 MRI supported his opinion because it revealed significant degenerative arthritis with lateral space narrowing “which is what we would expect to see 12 or 13 years post-injury.”

- Dr. Lindberg testified that the MRI report did not accurately portray the actual MRI films and provided a careful explanation at hearing regarding the MRI films which he also interpreted.

- Dr. Lindberg identified the lateral side and the medial side of the MRI film, and pointed out the white spots which show degenerative arthritis underneath the loss of cartilage on the lateral side.

- Dr. Lindberg pointed out to the Court the area of exposed femur and tibia bone with osteoformation and extrusion of the lateral meniscus.

- Dr. Lindberg showed the Court the bones on the lateral side where the meniscus had “squirted out” or what was left of it because Dr. Yamamoto had taken 70% of it out.

22. Dr. Lindberg noted that as of October 2015 the MRI revealed significant underlying osteoarthritis which is “only going to get worse over time, it’s the natural progression of the disease and it has already progressed significantly at this point in time, in October 2015.” Dr. Lindberg pointed out the top of the tibia and the remnant of the lateral meniscus and explained that this area “looked like someone had gone in there with a church key and scraped that meniscus.” He explained that this represented degenerative fraying of the lateral meniscus and not an acute tear. Based upon the appearance of the frayed lateral meniscus, he opined that it had been there for a long time and was only going to be “a problem.”

23. Dr. Lindberg also relied upon the May 2016 arthroscopic photographs which revealed degenerative fraying of the lateral meniscus. He noted there was “a little flap tear that was frayed and was chronic and had been there for a long time. He opined it was a remnant of his previous surgery.” Dr. Lindberg noted if the work injury caused any acute damage, it was to the *medial* side of Claimant’s knee where he was symptomatic. However, Claimant’s ongoing problems and the symptoms for which he requires a total knee replacement are all on the *lateral* side of the knee. He noted “the

lateral knee was already shot with bone on bone arthritis at the time of this "small injury" that could have possibly torn his medial meniscus." Finally, he testified that at the time of the May 2016 scope, "[Claimant's] lateral side was toast. It was already significantly damaged and that was not secondary to any injury other than the one in 2002 that resulted in 70% excision of his meniscus."

24. Dr. Lindberg testified that Claimant's initial evaluation with Dr. Boublik supported his opinion regarding causation. Specifically, Dr. Lindberg noted that under the physical examination, Claimant reported *medial* sided pain and Dr. Boublik noted that Claimant had a positive *medial* McMurray's test which is the test for a meniscal tear. He explained that Claimant had a negative Lachman test which indicated that his ACL was intact and that he had instability both with varus and valgus stress testing. He explained Claimant's instability was because of his osteoarthritis in his lateral joint with articular cartilage loss and that was why Claimant had instability, especially on exam. He further explained that Claimant had instability due to the removal of his lateral meniscus: "when you take out the cushion, you develop arthritis, point loading on the articular cartilage and the cartilage begins to deteriorate. Once you lose the articular cartilage, you lose the spacer between the bones. So, when you wiggle the knee, it's going to collapse on that side, it's going to be unstable." Dr. Lindberg explained that "at the time of [Claimant's] initial visit, he already had instability consistent with what we saw on his MRI with joint space loss when the two bones come together and they're not supposed to be together, they're supposed to be far apart."

25. Dr. Lindberg testified with 98% guaranteed certainty that Claimant would require a total knee replacement wholly independent of the July 2015 work injury. Dr. Lindberg testified that he has been doing orthopedic surgery and IME's for a long time and "never have I had as much evidence, both MRI and readable photographs of his surgery itself, and an accurate history that backs up everything I've said. There is no evidence of an acute injury on the lateral side of the knee." While Dr. Lindberg acknowledged the possible flap tear of the medial meniscus as it related to the work-injury to the medial side, he opined Claimant's need for surgery is to the lateral side and the fact that the need for surgery to the lateral side happened while Claimant was being treated for his medial meniscus injury has no relationship to the progression of the lateral disease.

26. Dr. Lindberg testified that he was unaware of any medical provider who related Claimant's need for a total knee replacement to the July 2015 work-injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving

entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002). However, no compensability exists if the disability and need for treatment were caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002).

The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of

whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

The Administrative Law Judge finds and concludes that, considering the totality of the evidence, Claimant failed to prove it more likely than not that his worsened condition and need for treatment were caused by the industrial injury. Rather, the credible and persuasive testimony of Dr. Lindberg and the supporting medical evidence make it more likely than not that Claimant's need for knee replacement surgery is caused by factors unrelated to this work injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to demonstrate by a preponderance of the evidence that his work-related condition worsened so as to support a reopening of his claim. Claimant's request to reopen his claim is denied and dismissed with prejudice.

2. Issues not expressly decided herein are reserved to the parties for future determination.

3. If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 11, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that right hip surgery and any necessary diagnostic workup prior to a right hip surgical procedure to treat his right hip labral tear is reasonable, necessary, and causally related to his January 7, 2017 work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a technician performing mechanic type work on cars. Claimant's duties involve placing cars on lifts, raising them up, taking off tires, performing oil changes and doing jobs including brake repairs, new brakes, shocks, struts, transmissions, radiators.

2. On January 7, 2017 Claimant was so employed. Claimant was performing an oil change on a Chevy S10 pickup truck. Claimant's right hand was pinned by the hood of the pickup truck after the hood dropped. The pickup truck started moving forward with Claimant's right hand stuck inside the hood. Claimant turned and attempted to move as far away from the pickup truck as possible but couldn't get completely away from the pickup truck because his hand was inside the hood. The pickup truck pinned Claimant against a toolbox that was against the wall of the shop. Claimant's right hip area and right side of his body was due to his hand being stuck. The bumper of the pickup truck was against Claimant's right hip area and right side of his body when he was pinned. A co-worker got into the pickup truck and reversed it to get Claimant free and then Claimant was able to remove his right hand from the hood of the pickup truck.

3. Claimant's entire right sided hurt following the incident. Claimant had pain from his back going down the front and down his leg. Claimant had trouble standing on his injured right side.

4. Prior to this incident, Claimant had no problems in his right hip, no pain in his pelvis, and had received no prior medical treatment to his hip.

5. On January 9, 2017 Claimant was evaluated at St. Anthony Hospital. Claimant reported that two days prior he was working as a mechanic and standing in front of a vehicle he was working on when a coworker accidentally caused the vehicle to roll forward. Claimant reported that the hood of the vehicle slammed on his right hand and that he was pinned momentarily between the front of the pickup truck and a toolbox against the wall. Claimant reported severe lower back pain since the incident and intermittent numbness and tingling to his bilateral lower legs. Claimant also reported intermittent abdominal discomfort since the incident. *See* Exhibit 5.

6. On January 15, 2017 Claimant was evaluated at by Bethany Wallace, D.O. Claimant reported worsening low back pain and pain into his groin. Claimant reported that he went to the emergency room and was sent home after imaging but that his pain was worse with much worse swelling and pain into his right groin. Due to Claimant's reported pain, Dr. Wallace sent him back to the emergency room. *See* Exhibit 7.

7. On January 15, 2017 at the emergency room of Lutheran Medical Center, Clamant reported increasing low back pain that radiated to his right hip, groin, and thigh after an injury on January 7, 2017. Claimant reported no new injuries since January 7. Claimant had tenderness to palpation diffusely throughout the thoracic and lumbar region bilaterally. A CT scan of the abdomen and pelvis were performed and found to be within limitations of a non-contrast CT examination showing no acute traumatic findings. *See* Exhibit 8.

8. On February 1, 2017 Claimant was evaluated by David Yamamoto, M.D. Claimant reported low back pain, right flank pain, right lower abdominal pain, and right hip pain. Dr. Yamamoto found Claimant to be tender laterally at the right hip. *See* Exhibit 9.

9. On February 2, 2017 Claimant went to the emergency room of Lutheran Medical Center for chest pain. Claimant also reported right hip pain from a recent traumatic accident where he was pinned. *See* Exhibit 10.

10. Claimant continued to be evaluated by Dr. Yamamoto.

11. On March 25, 2017, Claimant underwent an independent medical evaluation performed by Douglas Scott, M.D. Claimant reported a burning and stabbing feeling over the right iliac crest that wrapped around into the right lower abdominal quadrant and then down into the right inner aspect of his thigh. Claimant reported that he had been pinned between a pickup truck and a tool box against the wall. Claimant reported that his right hand was also pinned under a partially closed hood because he was shutting the truck hood when the truck moved forward and that because his hand was trapped under the hood he was pulled before being able to release his right hand. Claimant reported that he had a bruise over the right side of his trunk into his right lower quadrant abdomen. Dr. Scott found on examination a maximum point of tenderness over the right groin and found reduced active range of motion in the right hip. Dr. Scott opined that Claimant's presumptive diagnoses included: right sided trunk contusion, possible right lumbar strain, possible right groin strain, and right hand abrasions. Dr. Scott opined that a cane for walking was reasonable and necessary and that a referral to physical therapy was reasonable and necessary. *See* Exhibits 13, B.

12. On April 5, 2017 Claimant began physical therapy. Claimant reported being pinned between a truck and a toolbox and that he had not worked since. Claimant reported pain in his right anterior hip to his buttocks, back, and mid spine. Claimant reported pain in his inner right thigh and that he had difficulty walking and could not bend. *See* Exhibit X.

13. Claimant continued to treat with Dr. Yamamoto who eventually referred Claimant to David Zarou, D.O. after physical therapy failed to provide Claimant with improvement.

14. On June 14, 2017 Claimant was evaluated by Dr. Zarou. Dr. Zarou opined that Claimant was not an excellent candidate for osteopathic manipulative treatment and opined that he believed Claimant had a torn labrum in the right hip and needed an MRI/arthrogram to identify the lesion that would not be visible by a plain MRI or CT scan. Dr. Zarou recommended Claimant be evaluated by an orthopedic hip specialist. *See* Exhibit 19.

15. On July 13, 2017 Claimant underwent a right hip MRI arthrogram interpreted by Cameron Bahr, M.D. The findings included suspicion for cam type femoracetabular impingement of the right hip, slight irregularity of the right hip labrum anteriorly suspicious for small tear, mild chondral thinning over the femoral head posteriorly, and mild tendinosis of the right hamstring tendon origin. *See* Exhibit 23.

16. On September 6, 2017 Claimant was evaluated by Brian White, M.D. at Western Orthopaedics. Claimant reported being pinned at work between a truck and toolbox and that since then he had pain deep in the groin that radiates into his thigh and that it had gotten to the point where he was now significantly limited with his function. Dr. White opined that Claimant's findings were consistent with right hip femoracetabular impingement, labral tear, and some hypersensitivity possible CRPS scenario. Dr. White opined that Claimant would be a candidate for right hip arthroscopy surgery to address the impingement and labral tear and opined that it may be helpful to do a diagnostic injection to definitively confirm the labral tear. Dr. White opined that he wanted to do a diagnostic injection first to see how much pain goes away and that if Claimant had a nice benefit from injection, then hip arthroscopy with labral reconstruction would be the best fit for him. Dr. White also opined that he was not sure if Claimant had an element of CRPS but that Claimant's level of pain was a little bit more than he would like to see with just a labral tear and that Claimant should get an evaluation to see if CRPS is a component of it so that they would know and could treat the right hip differently with regard to the anesthesia for the hip procedure and different modalities of pain control prior to and after but opined that moving forward with hip arthroscopy would be reasonable as well. *See* Exhibit 25.

17. On September 6, 2017 Dr. White wrote a letter to Dr. Yamamoto. Dr. Yamamoto noted that Claimant's pain response was significant and that he was worried about an element of CRPS. Dr. White thought that a diagnosis of CRPS could be helpful preoperatively, intra-operatively, and postoperatively as well. Dr. White indicated he did not know if a CRPS diagnosis would deter him from doing anything surgically for Claimant but thought that it might be a component of pain that he could make worse with hip arthroscopy if it was not reasonably treated. He indicated he thought they should see if CRPS was a component of all of this. *See* Exhibit 25.

18. On September 18, 2017 Claimant was evaluated by Dr. Yamamoto who referred Claimant for CRPS testing. *See* Exhibit 26.

19. On September 27, 2017 Claimant underwent an independent medical evaluation performed by Dr. Scott. Dr. Scott issued a report on October 14, 2017. Dr. Scott noted that Claimant had a cam type abnormality in the shape of the femoral head and had femoracetabular impingement that can be associated with labral tears. He noted that degenerative labral tears occurred after years of repetitive minor injuries and were usually associated with impingement. He opined that femoracetabular impingement predisposed patients to tearing of the labrum. He also opined that labral tears can be the result of trauma. Dr. Scott noted Claimant's apparent distress due to the right hip pain. Dr. Scott noted that the medical treatment guidelines indicated labral tears could result from high energy trauma, but questioned the cause of Claimant's right hip labral tear after noting the January 9, 2017 urgent care records and records from St. Anthony's emergency room referencing lumbar contusions and right hand contusions. Dr. Scott noted that Dr. White had diagnosed cam type femoracetabular impingement and labral tear but did not clarify if the labral tear was due to the January 7 injury or was the result of repeated small trauma to the labrum from the cam type FAI and opined that Dr. White needed to clarify the cause of Claimant's labral tear. *See* Exhibits 27, B.

20. On October 24, 2017 Jorge Klajnbart, D.O. performed a medical records review. Dr. Klajnbart noted that Claimant had not yet been evaluated for CRPS and that Claimant should have a workup due to his allodynia, decreased range of motion, hyperalgesia, and lower extremity pain out of proportion. Dr. Klajnbart opined that the CRPS was directly related to Claimant's injury. However, Dr. Klajnbart opined that Claimant's labral tear was probably pre-existing in nature and not directly related to Claimant's workers' compensation injury. Dr. Klajnbart noted Claimant's cam type femoroacetabular impingement and defect led primarily to Claimant's labral tear. Dr. Klajnbart opined that although a labral tear can be caused by trauma, it can also be caused by femoroacetabular impingement and hyperlaxity of the hip joint. Dr. Klajnbart noted that Claimant did not have right hip pain until approximately one month after the injury and that traumatic labral tears typically occur from a twisting or pivoting movement at the hip that involves external rotation and hyperextension and that he did not see that type of mechanism of injury documented in Claimant's case. He therefore opined that the traumatic event at work was not the causative event of Claimant's labral tear. *See* Exhibits 30, C.

21. On November 2, 2017 Claimant was evaluated by David Reinhard, M.D. Dr. Reinhard reviewed the mechanism of injury with Claimant and reviewed the past medical treatment. Dr. Reinhard performed a physical examination. Dr. Reinhard provided the impression of: work related crush injury to the right hip and low back; right hip labral tear due to crush injury; lumbar strain and sprain and contusion due to crush injury with possible right sacroilitis; right thigh pain of unclear etiology. Dr. Reinhard recommended a repeat Doppler ultrasound of the right lower extremity, a non-contrast MRI of the lumbar spine, a three phase bone scan to evaluate for possible CRPS, and s-rays of the right femur. *See* Exhibit 31.

22. On November 30, 2017 Claimant was evaluated by Dr. Reinhard. Dr. Reinhard noted that the lumbar spine MRI showed multilevel degenerative changes and no findings explaining Claimant's right lower extremity symptoms. He also found that the repeat diagnostic Doppler ultrasound of the right lower extremity was negative and that x-rays of the right femur were normal. Dr. Reinhard noted that the triple phase bone scan had not been authorized or performed and recommended it be done. Dr. Reinhard also recommended referral for a right lumbar sympathetic block. *See* Exhibit 34.

23. On February 14, 2018 Dr. White issued a letter clarifying his assessment of Claimant. Dr. White opined that Claimant had a significant twisting injury to his hip and lower extremity at work on January 7, 2017. Dr. White opined that his injury resulted in CRPS on that side and a labral tear and bad hip. Dr. White opined that Claimant had underlying impingement but that Claimant was asymptomatic before and was doing heavy work without any problems. Dr. White opined that the work injury is clearly what changed everything and rendered Claimant in severe pain and rendered him severely dysfunctional. Dr. White opined that CRPS was an issue and could be a significant portion of Claimant's overall pain. Dr. White noted that he would like to do a diagnostic injection into Claimant's hip joint to see how much better Claimant's hip moved and how much better Claimant felt. Dr. White noted he had great respect for operating on patients with CRPS and noted things he could do to try to minimize the risk of making it worse intra-operatively and postoperatively typically using IV ketamine and he recommended that for Claimant provided that Claimant received good relief with the diagnostic injection and had improvement in function with that. *See* Exhibit 38.

24. Dr. White recommended moving forward with arthroscopic surgery of the hip with reshaping of the ball and the cup and a labral reconstruction and he recommended getting a physician involved now that treats CRPS to help Claimant and to be a helpful partner in moving forward with Claimant's surgery. *See* Exhibit 38.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even

if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reasonable and Necessary Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

Claimant has established by a preponderance of the evidence that he is entitled to right hip arthroscopy recommended by Dr. White to treat his work related right hip labral tear sustained on January 7, 2017. The surgery is reasonable, necessary, and causally related to Claimant's work injury. Claimant is credible and persuasive in his testimony surrounding the mechanism of injury where his body twisted to try to get away from the pickup truck that pinned him against the toolbox against the wall. The opinions of Dr. White and Dr. Reinhard are persuasive that the crush injury and Claimant's labral tear are related to the work injury. The surgery proposed is found to be reasonable, necessary, and causally related to the injury. As found above, there is concern that Claimant may have CRPS and Dr. White noted a slightly different approach in surgery if that is confirmed. Dr. White also indicated a desire to perform a right hip injection prior to surgery. The ALJ finds that any necessary diagnostic workup recommended by Dr. White prior to arthroscopic surgery is also reasonable, necessary, and causally related to the work injury and shall be authorized. The opinion of Dr. Klajnbart is not found credible

or persuasive. Although Claimant has pre-existing cam type femoracetabular impingement in his right hip that is congenital, Claimant was asymptomatic and his labral tear is much more likely due to the trauma while twisting and getting pinned against the toolbox against the wall by a pickup truck than due to his congenital condition. Dr. Klajnbart is incorrect in believing Claimant had no reported symptoms in his right hip for a month following the injury. Records show otherwise and show pain reported by Claimant into the right groin on January 15, pain into the right hip on January 15, and again pain into the right hip reported on February 1.

ORDER

It is therefore ordered that:

1. Claimant has established, by a preponderance of the evidence that the right hip arthroscopy recommended by Dr. White and any and all necessary diagnostic workup as recommended by Dr. White prior to the surgical procedure is reasonable, necessary, and causally related to his January 7, 2017 work related right hip labral tear.

2. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Determination of Claimant's appropriate permanent partial disability (PPD) impairment rating.

FINDINGS OF FACT

1. Claimant was 22 years old at the time of hearing. In July of 2016 Claimant was employed by Employer as an order selector.

2. On July 14, 2016 Claimant was working in that capacity. Claimant was training on working in the freezer and was wearing gloves provided by Employer while working. Despite the gloves, Claimant developed frostbite on digits 2-5 of his right hand.

3. Claimant was referred to Concentra and underwent treatment.

4. On August 1, 2016 Claimant was evaluated by hand specialist Kulvinder Sachar, M.D. Dr. Sachar noted that Claimant had sustained superficial frostbite to the right index, middle, ring, and small fingers on July 14, 2016 when he was in the freezer for about 40 minutes. Dr. Sachar also noted a similar but less severe episode about two weeks prior. Dr. Sachar found no deformity on examination of Claimant, found full range of motion, and found no skin or subcutaneous tissue changes. Dr. Sachar found normal capillary refill in the fingertips with normal turgor. Dr. Sachar opined that Claimant had superficial frostbite to the right hand and that it would be reasonable for Claimant to seek out treatment through his primary care physician to make sure he did not have anything that would predispose him to decreased circulation in the hands like sickle cell trait. Dr. Sachar opined that if a workup turned out normal, he did not believe there would be a problem with Claimant continuing to work in a cold environment and that it may be just circumstances on the two episodes that Claimant had cold sensitivity. Dr. Sachar opined that there were really no signs of vascular disorder and that it would be safe for Claimant to resume cold exposure if the blood work including sickle cell trait was negative. Dr. Sachar opined that blood work testing should be done through a hematologist or primary care physician and that he was not certain it would be done through workmen's comp, but that he would defer back to Concentra. Dr. Sachar noted he could see Claimant back as needed. *See* Exhibit F.

5. On August 16, 2016 Claimant was evaluated by Deepa Ramadurai, M.D. Claimant reported that in mid-July while working at a food processing company he sustained a cold injury to his right hand after being in the freezer for an hour wearing appropriate protective gear. Claimant reported pain and tingling in the four digits of his right hands from the tips of the fingers to the DIP joints, that he had white discoloration of the fingertips, and that over the course of a few weeks the affected skin peeled and he regained full sensation and coloring. Claimant reported no prior history of vascular

disease and no prior sudden color changes of fingertips. Dr. Ramadurai found on examination no discoloration of the right hand digits, normal capillary refill, and no signs of digital ulceration. Dr. Ramadurai assessed cold injury with resolved symptoms and exam not concerning for a recurrent vasculitic process. Claimant's complete blood count results were flagged as abnormal for low white blood cell count, high corpuscular hemoglobin concentration, and low neutrophils. Claimant was noted to have leukopenia/neutropenia without anemia or thrombocytopenia and the plan was to re-evaluate his complete blood count in 1-2 weeks. *See* Exhibit 5.

6. On August 22, 2016 Claimant was evaluated by Bryan Counts, M.D. Claimant reported that on July 14, 2016 he had been working in the freezer for almost an hour with freezer gloves and liners at -4 degrees. Claimant reported that 15 minutes into work his hands hurt from the cold. Claimant reported that his fingertips were white colored and that just the right hand, fingers 2 through 5 were affected and still felt numb and tingly. Claimant reported that he was doing better but that he still had some mild tingling in the tip of his ring finger. Dr. Counts noted that Claimant had not been working in the freezer and that Dr. Sachar had recommended blood work through a non-workers' compensation provider and that a sickle cell trait was negative. Dr. Counts assessed superficial frostbite of finger of right hand and opined that Claimant was at maximum medical improvement with no impairment. Dr. Counts provided restrictions of no more than 10 minutes in the freezer at a time with full hand warming in between. *See* Exhibit E.

7. On October 14, 2016 Claimant was evaluated by Dr. Counts Claimant reported that he was doing better but that he still had some mild tingling in the tip of his ring finger. Claimant reported that he had undergone a trial of 30 minutes in the freezer with a glove liner but that he had pain and numbness with dusky discoloration of his fingers. Dr. Counts assessed: local injury due to exposure to cold; and superficial frostbite of finger of right hand. Dr. Counts provided permanent work restrictions of no freezer work and opined that Claimant was at maximum medical improvement. *See* Exhibit E.

8. On November 29, 2016 Claimant was evaluated by Dr. Counts. Claimant reported that his right hand was feeling painful and cold when he was outside in the cooler weather. Dr. Counts recommended keeping Claimant's case closed and that Claimant follow up with his primary care provider for further work up. Dr. Counts noted Claimant's unilateral Raynaud's type symptoms, but opined they were not work related. *See* Exhibit 7.

9. On January 3, 2017 Claimant was evaluated by Dr. Ramadurai. Dr. Ramadurai noted Claimant's current medications included amlodipine (Norvasc) for secondary Raynaud's. Dr. Ramadurai increased the amlodipine (Norvasc) from 2.5 mg per day to 5 mg per day and requested Claimant return in 5-6 weeks to see how the increased dose was going. *See* Exhibit 5.

10. On February 6, 2017 Respondents filed a final admission of liability noting a maximum medical improvement date of November 29, 2016 and no permanent

impairment. Claimant objected and requested a division independent medical examination. *See* Exhibit 7.

11. On February 14, 2017 Bradley Steffen, M.D. issued a letter indicating that both he and Dr. Ramadurai had been treating Claimant for the past six months. Dr. Steffen opined that Claimant's evaluations and work ups had revealed objective deficits in strength and sensation to the distal right upper extremity and included evaluation by a specialist in rheumatologic disease. Dr. Steffen opined that Claimant was suffering from chronic cold sensitivity following a frostbite injury and opined that Claimant would likely continue to suffer from this cold sensitivity. Dr. Steffen recommended Claimant not be allowed to work at temperatures below freezing as Claimant was at risk for worsening his injury. *See* Exhibit 5.

12. On February 24, 2017 Claimant was evaluated by neurologist Dianna Quan, M.D. Claimant reported right hand weakness, numbness, and tingling that became noticeable around the time of his two frostbite injuries between July and September of 2016 while he was working in a freezer. Dr. Quan performed nerve conduction studies and electromyography and opined that the studies were normal. Dr. Quan opined that there was no electrophysiologic evidence of a generalized polyneuropathy, focal entrapment neuropathy, or cervical radiculopathy affecting the symptomatic right arm or hand. *See* Exhibits 5, D.

13. On May 11, 2017 Claimant underwent a Division Independent Medical Examination (DIME) performed by J.E. Dillon, M.D. Claimant reported sustaining frostbite to his right hand when working in a freezer and that he had been working in the freezer at -4 degrees Fahrenheit for about an hour when his hands felt cold. Claimant reported he was found to have discoloration and slowed capillary refill at the onsite doctor. Claimant reported continued discomfort in the right hand with exposure to cold and that below certain temperatures his hand, excluding his thumb, felt uncomfortably cold and stiff. Claimant reported that when his hand was cold he had difficulty with fine manipulation with the fingers and weakened grip. Claimant reported a dusky discoloration of digits two through five when his hand was cold. Dr. Dillon reviewed medical records and performed a physical examination. *See* Exhibits 2, C.

14. Dr. Dillon found no discoloration but found capillary refill at the index and middle fingers to be slow compared to the contralateral side. Dr. Dillon also noted the strength of opposition slightly less on the right when opposing the thumb to the small finger as compared to the left side. Dr. Dillon opined that Claimant was at maximum medical improvement and agreed with a date of 10/14/16 as the date of maximum medical improvement. Dr. Dillon opined that Claimant had a cold exposure injury with residual cold intolerance and opined that it was a ratable condition. Dr. Dillon opined that for rating, Claimant fell under Class 1 of impairment due to vascular disorders of the upper extremity with a Raynaud's phenomenon and assigned him 5% upper extremity impairment for the condition. Dr. Dillon opined that there was no other impairment related to the injury in question. *See* Exhibits 2, C.

15. On June 7, 2017 Respondents filed a final admission of liability. They admitted for permanent partial disability consistent with Dr. Dillon's opinion at a scheduled impairment rating of 5% of body code 01, for an award of $3,067.27. Claimant objected and filed an application for hearing. *See* Exhibits 1, A.

16. On August 16, 2017 Claimant underwent an independent medical examination performed by Ronald Swarsen, M.D. Claimant reported that on July 14, 2016 he was training in the freezer as an order selector and had on his freezer gloves but that about 15-20 minutes into the training his hands were getting very cold. Claimant reported that his trainer advised him that he had to finish the batch and that he spent about another 45-60 minutes in the freezer at 0 degrees or less and that he could not feel his right hand. Claimant reported his fingers were pale and that he was sent to the onsite physician and that it took about a half hour to re-warm and that he had pain, aching, throbbing, and stabbing and that the next day they didn't feel normal and that his fingertips on his right hand started peeling a couple of days later. Claimant reported being out of the freezer for several weeks but that each time he was put back into the freezer his symptoms returned. Claimant reported that on his right hand all four fingers were very sensitive to exposure to temperatures below 60 degrees Fahrenheit. Claimant reported weakened grip strength in his right hand. *See* Exhibit 3.

17. Dr. Swarsen performed a physical examination. Dr. Swarsen found Claimant's hand/fingers to be distinctly colder to touch on the right hand than on the left. Dr. Swarsen noted a grip of 4/5 on the right compared to the left. Dr. Swarsen found capillary refill of digits 2 through 5 to be 3-4 seconds on the right compared to a 1 second on the digits on the left. Dr. Swarsen found light tough decreased compared to the left from the PIP distal to the fingertip at digits 2 through 5. Pinkprick yielded a report of moderate dysthesias over the same discrimination. Dr. Swarsen assessed: frostbite, repetitive cold injury, Raynaud's phenomena, and possible CRPS, right upper extremity and a workup for CRPS was advised. Dr. Swarsen respectfully disagreed that Raynaud's phenomena would not be work related and opined that it was well known that Raynaud's could be triggered by an acute episode or by repeated episodes of cold exposure. Dr. Swarsen opined that Claimant's case fit the criteria and was directly related in time to Claimant's exposures and onset of symptoms and noted Claimant's lack of pre-existing conditions or symptoms of Raynaud's. Dr. Swarsen thus opined that the appearance of Raynaud's was directly related in time and causally related to Claimant's occupational exposure. *See* Exhibit 3.

18. Dr. Swarsen agreed that Claimant was at maximum medical improvement. Dr. Swarsen opined that Claimant fell into the class 3 section of Table 6 of the AMA Guides for having symptoms onset below 50 degrees Fahrenheit. Dr. Swarsen also noted that Claimant was on a medication trial but reported little change from the medications. Dr. Swarsen opined that given Claimant's symptoms, presentation, and severity, a 50% right upper extremity impairment was appropriate under Class 3. *See* Exhibit 3.

19. On September 21, 2017 Claimant underwent an independent medical examination performed by Allison Fall, M.D. Claimant reported that his regular job with

Employer involved working as an order selector in the cooler but that he was training to work in the freezer. Claimant reported that on his first day training in the freezer he was puling food and that after 15-20 minutes he felt his right hand was numb. Claimant reported being told that he had to finish the batch and that he worked another 45 minutes to an hour. Claimant reported afterwards that he could not feel his fingers and that his right hand was pale and discolored. Claimant reported going to Concentra and being placed on restriction that did not allow him to work in the freezer. *See* Exhibits 6, B.

20. Claimant reported that he was sent back to the freezer with new liners and gloves and that it was approved by the Concentra doctor. However, despite the new liners it didn't help and Claimant again had symptoms. Claimant reported horrible symptoms in the winter and that any time it is cold, his hand is freezing and feels numb and gets discolored every now and then. Claimant reported no grip strength and that his hand ached when it was cold. Claimant reported pain at a 9/10 level. Dr. Fall reviewed medical records and performed a physical examination. Dr. Fall found no hair, nail, skin, or color changes in examination of Claimant's bilateral hands. She found that both of Claimant's hands were slightly cold with the right more so than the left but opined that after Claimant moved his right upper extremity and opened and closed his right hand, the temperature returned to normal. Dr. Fall assessed status post superficial frostbite without permanent impairment. *See* Exhibits 6, B.

21. Dr. Fall opined that Claimant's complaints had seemed to escalate somewhat with now greater areas of numbness and weakness which is not consistent with the injury Claimant sustained, described as superficial frostbite. Dr. Fall found it notable that Dr. Sachar noted a normal examination and that Claimant could return to working in the freezer unless he had an underlying condition or reason for cold sensitivity. Dr. Fall opined that indicated no permanent impairment due to Claimant's minor episodes. Dr. Fall opined that Claimant's subjective complaints had seemed to have escalated and that it was likely there were some underlying psychological issues. She opined that Claimant's reported symptoms with temperatures as warm as 60 degrees Fahrenheit were non physiologic. Dr. Fall opined that there was not sufficient objective evidence to diagnose Claimant with a vascular disorder that would indicate permanent impairment of his right hand due to vascular issues and that Dr. Dillon was in error. Dr. Fall also opined that Claimant did not have work related Raynaud's phenomenon. She opined that Claimant had no impairment. *See* Exhibits 6, B.

22. Claimant testified at hearing that he initially was injured in July of 2016 when he couldn't feel his right hand after working in the freezer. Claimant testified that he was out of the freezer for 2-3 weeks but then had another batch to do in the freezer and that he had issues in the freezer 3-4 more times before he was taken off freezer work completely. Claimant testified that his right hand continues to be numb or frozen and that it is different in color from his left hand. Claimant testified that he had trouble gripping with his right hand now.

23. At hearing the undersigned ALJ, Dr. Fall, and Dr. Swarsen felt both of Claimant's hands. Claimant's right hand was noticeably colder than his left hand.

24. Dr. Swarsen testified at hearing. Dr. Swarsen disagreed with DIME physician Dr. Dillon's impairment rating and believed it was too low. Dr. Swarsen opined that Claimant was initially diagnosed with frostbite but then had repeated exposures with reactions to the cold and that Claimant had sustained a micro vascular injury. Dr. Swarsen opined that Claimant now is continually sensitive to cold exposure and that Claimant has a decrease in blood flow to the digits in his right hand and a difference in color between the two hands. Dr. Swarsen opined that visually, Claimant's right hand has dusky cyanosis coloring, consistent with Claimant's exposures. Dr. Swarsen also noted a temperature difference with Claimant's right hand being cooler than the left hand which he opined was consistent with the reports and Raynaud's phenomena. Dr. Swarsen opined that Claimant had the micro vascular disease of Raynaud's phenomena as well as the frostbite condition. Dr. Swarsen opined that because Claimant had symptoms below 60 degrees and because his symptoms were poorly controlled by medication, Claimant was at a class 3 rating level. Dr. Swarsen noted that the DIME physician had rated Claimant at a class 1 rating level, but that he believed a class 3 rating level was more appropriate. Dr. Swarsen opined that the EMG results in this case are irrelevant to the impairment rating as the EMG is a neurologic test and the rating is a vascular rating.

25. Dr. Fall testified at hearing. Dr. Fall opined that Claimant did not have Raynaud's phenomenon and that the color change noted with Raynaud's are noticeable and drastic. She opined that Claimant did not have bilateral symptoms and did not present as someone with Raynaud's. She further opined that there was no support that Raynaud's was developed due to exposure with Employer and that primary Raynaud's has no known cause and happens on its own without cold exposure. Dr. Fall opined that Claimant had initial symptoms of superficial frostbite and not deeper nerve type frostbite and had some peeling of the skin consistent with frostbite, but opined that his symptoms resolved. Dr. Fall noted a normal EMG study and opined that there was no reason for Claimant's subjective symptoms of decreased hand strength per the EMG. Dr. Fall opined that the EMG showed no permanent nerve damage. Dr. Fall acknowledged that Claimant's right hand was slightly lighter and a little bit paler than his left hand and that it was colder than his left hand, but opined that if you don't use your hand it can look lighter and feel colder. Dr. Fall opined that the proper scheduled impairment rating for Claimant was 0% because he did not have a permanent condition or permanent impairment. She noted that Dr. Sachar, a hand surgeon, had provided no restrictions and found no vascular damage. Dr. Fall opined that even if Claimant had Raynaud's, Dr. Swarsen was wrong with providing a class 3 rating because Claimant did not have severe swelling or vascular degeneration and that Claimant doesn't fit the class 3 rating. Although Dr. Fall agreed cold sensitivity for Claimant was possible, she opined that there was no permanent nerve damage.

26. Section 3.1i of Table 16 of the AMA Guides to the Evaluation of Permanent Impairment, 3rd Edition Revised provides a class 3 rating (36-50% impairment) is appropriate if Raynaud's phenomenon occurs on exposure to temperatures lower than 50 degrees Fahrenheit and is only partially controlled by medication. A class 2 rating (10-

35% impairment) is appropriate if Raynaud's phenomenon occurs on exposure to temperatures lower than 39 degrees Fahrenheit but is controlled by medication. A class 1 rating (0-9% impairment) is appropriate when Raynaud's phenomenon that occurs with exposure to temperatures lower than 32 degrees Fahrenheit but is readily controlled by medication.

27. The opinions of Dr. Swarsen are found credible and persuasive. The opinions of Dr. Fall are not found as persuasive and are rejected.

28. The Claimant's testimony and reports of symptoms and onset are credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Permanent Partial Disability (PPD) impairment rating

The increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in § 8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has stated in this respect that: scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. In particular, the procedures of § 8-42-107(8)(c), which states that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

Claimant has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (2007); *Burciaga v. AMB Janitorial Services, Inc. and Indemnity Care ESIS Inc*., W.C. No. 4-777-882 (2010). Respondents are not required to overcome the scheduled impairment rating assigned by the DIME and the usual preponderance of the evidence burden of proof applies for Claimant to prove entitlement to benefits. *Id.*

Here, the weight of the medical evidence establishes that Claimant's injury is a scheduled injury. Claimant has not sustained functional impairment to a part of the body off the schedule of impairment. After weighing the evidence and assessing the probative value to determine the appropriate scheduled impairment rating, the ALJ concludes that Claimant has sustained a 50% right upper extremity impairment rating.

Dr. Swarsen's opinion that Claimant suffers from Raynaud's phenomena is credible and persuasive and more credible than Dr. Fall's opinion that Claimant does not suffer from Raynaud's. Specifically, Dr. Swarsen's opinion that Claimant has Raynaud's is supported by opinions from DIME physician Dr. Dillon who rated Claimant for Raynaud's, Dr. Ramadurai who prescribed and increased medications for secondary Raynaud's, and by Dr. Counts who noted Claimant's unilateral Raynaud's type symptoms but believed they were not work related. Four doctors have opined or noted that Claimant has Raynaud's and these opinions are more persuasive than the opinion of Dr. Fall. Although Dr. Counts believed Claimant's Raynaud's was not work related, the ALJ finds more persuasive the opinion of Dr. Swarsen and Dr. Dillon that Raynaud's is work related. Specifically, Dr. Swarsen's opinion that Raynaud's can be triggered by an acute episode or by repeated episodes of cold exposure is persuasive. Dr. Dillon rated Claimant for Raynaud's, indicating her belief it was work-related. The ALJ finds that the symptoms

onset after repeated freezer work, the temporal relationship, and the credible testimony of Dr. Swarsen make it more likely than not that Claimant's Raynaud's is work related.

Dr. Fall rejected Claimant's reported symptoms due, in part, to her belief that his subjective complaints had escalated and that he reported symptoms at temperatures under 60 degrees. Dr. Fall opined that Claimant's subjective complaints had seemed to escalate in this case after only a superficial frostbite injury and that the report of symptoms with temperatures as warm as 60 degrees was non-physiologic. However, Dr. Fall failed to address Claimant's repeat exposures after his initial frostbite injury and that his increase of symptoms occurred after these repeated exposures and upon the seasons changing from July/August to the fall and to colder outside temperatures. In October and November, Claimant reported to Dr. Counts that he had increased symptoms after being put back into freezer work and with the colder weather. During this time, Dr. Counts increased Claimant's work restrictions to include no freezer work, but recommended Claimant's case stay closed. The increased symptoms during this time with new exposures (attempting freezer work again, and colder temperatures outside) are expected and are consistent with Raynaud's phenomena. Dr. Swarsen is credible and persuasive that Claimant was initially diagnosed with frostbite but then had repeated exposures with reactions to the cold and that Claimant had sustained a micro vascular injury. Dr. Sachar only evaluated Claimant in August after the initial frostbite and Dr. Fall relied, in part, on his opinion that Claimant had only a frostbite injury. However, Claimant was not re-evaluated by Dr. Sachar after continuing to have symptoms with repeated exposures. Thus, the opinion of Dr. Sachar cannot be given great weight as he did not evaluate Claimant after the repeated exposure and continued symptomatology months after the initial frostbite exposure. Further, Dr. Fall believed that Claimant's reported symptoms with temperatures as warm as 60 degrees were non-physiologic. However, the AMA Guides specifically provide for ratings when Raynaud's phenomenon occurs on exposure to temperatures lower than 68 degrees, so Claimant's reports at lower than 60 degrees can certainly be physiologic.

Dr. Fall also opined that even if Claimant had Raynaud's phenomena, the Class 3 rating was incorrect because Claimant did not have severe swelling or vascular degeneration. However, the Class 3 rating in the AMA Guides does not require swelling or vascular degeneration if someone has Raynaud's phenomena. It only requires that Raynaud's phenomenon occurs on exposure to temperatures lower than 50 degrees and is only partially controlled by medication. Dr. Fall has misinterpreted the AMA Guides.

The ALJ concludes that the weight of the credible and persuasive evidence establishes that Claimant not only sustained a frostbite injury in July of 2016, but that as a result of his injury, Claimant has work related Raynaud's phenomena. The rating provided by the DIME physician Dr. Dillon rated Claimant for Raynaud's phenomena at a 5% right upper extremity impairment. However, the rating by Dr. Dillon in Class 1 would require that the phenomenon occur at exposures to temperatures lower than 32 degrees Fahrenheit and be readily controlled by medication. As found above, Dr. Ramadurai provided medication to Claimant that helped somewhat, but did not control Claimant's symptoms or responses to cold exposure. Dr. Ramadurai increased the dosage of

medications prescribed for secondary Raynaud's, but Claimant's testimony at hearing is credible and persuasive that cold exposures still trigger symptoms. Claimant's right hand and digits 2-5 are different in color from his left hand, they are colder than his left hand, and they ache and are painful and stiff and Claimant has these symptoms and Raynaud's phenomena on exposure to temperatures below 60 degrees Fahrenheit. The ALJ finds that Class 1 of the rating under 3.1i does not adequately represent Claimant's permanent impairment nor does Class 2. The ALJ finds Dr. Swarsen to be credible and persuasive that Class 3 is the appropriate impairment rating category for Claimant's Raynaud's phenomenon. After weighing the evidence, the ALJ finds that a rating of 50% is appropriate and has been established by a preponderance of the evidence to be the correct rating for Claimant's right upper extremity permanent impairment.

ORDER

1. Claimant has established by a preponderance of the evidence an entitlement to a 50% right upper extremity impairment rating. Respondents shall admit for and pay for this rating.

2. Respondent shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 1, 2018

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

a. Whether Claimant proved by a preponderance of the evidence that on September 22, 2017, he sustained an injury arising out of and in the course and scope of his employment with the Employer; and

b. Whether Claimant proved by a preponderance of the evidence that the medical treatment he received through the Orthopaedic & Spine Center of the Rockies, including the right shoulder MRI and physical therapy, is reasonable, necessary and related to his September 22, 2017, industrial injury.

STIPULATIONS

a. The parties stipulate that if the claim is found compensable: 1) Claimant's average weekly wage (AWW) is $898.63, with a corresponding temporary total disability (TTD) rate of $599.09; 2) Claimant is entitled to TTD benefits from October 15, 2017, through November 11, 2017; and 3) Claimant is entitled to temporary partial disability (TPD) benefits for pay periods ending September 30, 2017, October 14, 2017 and November 25, 2017, in the amount of $1,842.91.

b. The parties stipulate that, if the claim is found compensable, Respondents are entitled to all applicable offsets.

FINDINGS OF FACT

1. Claimant is 31 years old and worked for Employer as a delivery driver. On September 22, 2017, Claimant injured his right shoulder in the course and scope of his employment when he was pinned against a wall/stud by sheet rock. The sheet rock Claimant delivered was 4'x 12' in dimension with each sheet weighed 100 lbs. Claimant delivered carts containing ten to twelve sheets of sheet rock to the work site.

2. On September 25, 2017, Claimant treated at Concentra with Robert Nystrom, M.D., and reported "a large cart full of drywall hit his [right] shoulder and [pinned] it against a stud three days ago." Claimant reported "he did have significant pain at the time but continued to work." Claimant reported the shoulder hurt more later that night and through the weekend. On physical examination of the right shoulder, Dr. Nystrom noted anterior shoulder pain with palpation and with resisted abduction and internal rotation. Dr. Nystrom provided Claimant with work restrictions, including maximum right arm lifting of five pounds. Dr. Nystrom referred Claimant to an orthopedic specialist.

3. On September 27, 2017, Respondents filed a First Report of Injury which detailed that on September 22, 2017, Claimant injured his right shoulder when it

was pinned between drywall and wood stud. The first report of injury indicated Claimant reported his injury to Employer on September 25, 2017. On October 10, 2017, Respondents filed a Notice of Contest. On November 10, 2017, Claimant filed an Application for Hearing and endorsed compensability, medical benefits, authorized provider and wage loss benefits. On November 22, 2017, Respondents filed a Response to Claimant's Application for Hearing and endorsed the same issues, as well as a number of defenses.

4. From October 13, 2017, through November 27, 2017, Kevin Piper, M.D., Claimant's primary care physician (PCP), placed Claimant on work restrictions of no lifting with his right upper extremity above waist level due to the September 22, 2017, right shoulder injury.

5. On October 18, 2017, Claimant treated with Thomas Anderson, D.O, at the Orthopaedic and Spine Center of the Rockies, and reported he injured his right shoulder when sheet rock was pushed into his shoulder. Claimant reported he now has pain in the anterior aspect of his right shoulder and frequent popping and increased pain with lifting his arm and with overhead lifting. Claimant also reported weakness, numbness and tingling in his right upper extremity. On physical examination, Dr. Anderson noted pain with range of motion and positive Neer and Hawkins tests. Dr. Anderson recommended a right shoulder MRI.

6. On October 26, 2017, Claimant underwent a right shoulder MRI, which revealed minimal supraspinatus/infraspinatus tendinosis, mild fraying of the superior labrum, including physiologic joint fluid, mild acromioclavicular joint osteoarthritis with mild capsular edema, and mild to moderate fatty atrophy of the lateral deltoid muscle.

7. On November 6, 2017, Claimant treated with Dr. Anderson, who noted he reviewed the right shoulder MRI. Dr. Anderson gave Claimant a right shoulder injection.

8. Claimant worked for Employer for approximately two years as a delivery driver. Prior to September 22, 2017, Claimant never had a shoulder injury or treatment and was never under any work restrictions due to a right shoulder injury/condition. Claimant credibly testified that prior to September 22, 2017, he never had any physical limitations doing his job.

9. On September 22, 2017, Claimant was delivering 4' x 12' sheet rock to a six-plex in Windsor, CO. The apartments were already framed-in. Claimant and his coworkers completed the front side of building, which included two apartments on the top and two apartments on the bottom, and were then starting work on the back two apartments. In order to get into the back two apartments, Claimant and his coworker had to push the carts of sheet rock over a 2'x4' stud on the floor. Claimant and his co-worker had to knock out a floor stud and setup a ramp, which was a steel plate, in order to push the carts of sheet rock into one

of the two back apartments. At first, only one ramp was setup, and they did not have a ramp into the second, back apartment. Because there was no ramp setup at the second apartment, Claimant had to lift the front of the cart up over a floor stud.

10. Claimant and his co-worker were getting a cart of sheet rock into the second, back apartment, the one without the ramp. Claimant was in front, closest to the floor stud and Claimant's co-worker was at the far end. Claimant's co-worker was working quickly and Claimant did not have time to look where he was going. Claimant bent down to lift the cart over the 2'x4' floor stud and, when he stood up, the sheet rock on the cart continued to roll toward his right shoulder, pinning Claimant's right shoulder against the wall stud.

11. Claimant shouted at his co-worker, "Why are you going so fast," and shouted in anger and discomfort. Claimant pushed the sheet rock off his shoulder and leaned it against the wall. Claimant continued unloading sheet rock and then went outside and told his brother, also an employee of Employer, and another worker about the incident. Claimant did not discuss the incident with either of his co-workers who Claimant believed observed the incident because those individuals were known to Claimant as Spanish speakers, and Claimant does not speak Spanish.

12. Claimant worked the rest of the day and delivered another five carts of sheet rock to the Windsor apartment complex. Claimant avoided using his right shoulder/arm and working overhead the rest of his shift. Claimant's coworkers, who knew about his injury, helped him avoid using his arm.

13. Claimant did not report his injury to Dustyn Parker, his supervisor that day. Claimant hoped his shoulder would get better. When Claimant got home from work, he felt sharp shooting pain in his shoulder when he reached up above shoulder level. On September 22, 2017, at 7:55 p.m., Claimant sent a text message to Mr. Parker to advise him of his shoulder injury.

14. On Monday, September 25, 2017, Claimant reported to work and discussed his injury with Mr. Parker and Dan, another supervisor. Claimant tried to do a little work on Monday, but he continued to have the throbbing and shooting pain in his right shoulder. Claimant was referred to Concentra by his Employer and then referred to an orthopedic surgeon.

15. Respondents denied his claim and Claimant paid out of pocket for the orthopedic surgeon, right shoulder MRI, and physical therapy. Claimant continues to have problems with his shoulder.

16. William Conrow, Claimant's brother, and Eliseo Soto and Jay Huizar employees of the Employer, testified at hearing. The ALJ finds that Claimant and

Mr. Parker's testimony was more credible and persuasive than Mr. Soto and Mr. Huizar's testimony.

16. The ALJ finds Claimant proved by a preponderance of the evidence that on September 22, 2017, he sustained a right shoulder injury arising out of and in the course and scope of his employment with the Employer. The ALJ finds Claimant proved by a preponderance of the evidence that the medical treatment he received through the Orthopaedic & Spine Center of the Rockies, including the right shoulder MRI and physical therapy, are reasonable, necessary, and related to Claimant's industrial injury.

CONCLUSIONS OF LAW

General Legal Principles

The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the right of the Claimant nor in favor of the rights of Respondents. Section 8-43-201(1), C.R.S. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc., v. Indus. Claim. Apps. Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness; testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Ins. Co. v. Cline,* 57 P.2d 1205, 1209 (Colo. 1936); CJI, Civ. 3:17 (2013).

Compensability

A compensable injury is one that arises out of and occurs within the course and scope of employment. Section 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office,* 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship

between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, Claimant has proven by a preponderance of the evidence that on September 22, 2017, he sustained an injury arising out of and in the course and scope of his employment with the employer.

Medical benefits

Respondents are not liable for medical treatment unless it is rendered for an injury "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Section 8-41-301(1)(c), C.R.S. Similarly, the statute provides respondents are liable for reasonable and necessary medical treatment to cure or relieve the employee "from the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

Claimant proved by a preponderance of the evidence that the medical treatment he received through the Orthopaedic & Spine Center of the Rockies, including the right shoulder MRI and physical therapy, is reasonable, necessary and related to his compensable industrial injury.

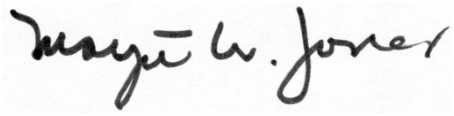
ORDER

A. Claimant sustained an industrial injury arising out of and in the course and scope of his employment with the Employer.

B. The medical treatment Claimant has received through the Orthopaedic & Spine Center of the Rockies, including the right shoulder MRI and physical therapy, is reasonable, necessary, and related to his September 22, 2017 industrial injury. Respondents shall pay for this treatment pursuant to the Colorado Medical Fee Schedule.

C. All matters not determined herein are reserved for future determination.

DATED: May 1, 2018.



MARGOT W. JONES
ADMINISTRATIVE LAW JUDGE

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Respondents overcome the DIME on the issue of MMI by clear and convincing evidence?

- If Respondents overcame the DIME on MMI, did Respondents overcome the DIME's whole person impairment rating?

- Did Claimant prove by a preponderance of the evidence that the treatment recommended by the DIME is reasonably necessary and related to her injuries?

FINDINGS OF FACT

1. Claimant suffered admitted injuries on August 24, 2016 when she hit her head on a wall-mounted computer while performing housekeeping duties for Employer at Memorial Hospital. She had bent over to empty a trash can that was directly under a wall-mounted medical computer used by the nursing staff. When she stood up, she struck the right side of her head on the metal frame that holds the keyboard. She experienced immediate pain, which she described as an electrical type sensation on the right side of her head, jaw and into her neck.

2. Claimant sought treatment in Memorial Hospital's emergency department shortly after the accident. She reported head pain, neck pain, and dizziness. She denied loss of consciousness, severe headache, or blurry vision. A head CT showed no evidence of skull fracture, intracranial bleeding, midline shift, or other brain trauma. A cervical CT showed mild degenerative changes but no acute injury. The ER physician diagnosed a mild closed head injury and neck strain, prescribed ibuprofen, and released Claimant with instructions to return if her symptoms worsened.

3. Employer referred Claimant to the Memorial Occupational Health Clinic on August 26, 2016, where she saw Dr. Rosemary Greenslade. Claimant reported mild concussion symptoms including headaches, dizziness, and difficulty with concentration. She denied blurry vision, nausea, or vomiting. Dr. Greenslade diagnosed "cervicalgia" and concussion. She prescribed ibuprofen and took Claimant off work until August 30.

4. Claimant followed up with Dr. Greenslade on August 30, 2016, reporting ongoing concussive symptoms and worsening headache. She told Dr. Greenslade she had a history of migraines but had not had one in several years. Dr. Greenslade directed Claimant to the ER "due to worsening HA and persistence of symptoms."

5. At the ER, Claimant stated that when she hit her head "the pain radiated from her forehead to her jaw." She further stated "since that time she has had intermittent sharp/severe pain and difficulty focusing. She also has associated nausea, dizziness, and photophobia." A repeat head CT showed no acute abnormalities or significant change

from the previous CT scan. She was given IV medications and acetaminophen, which helped her symptoms. The ER doctor concluded, "the most likely etiology of her symptoms is a concussion related to her head injury."

6. Claimant followed up with Dr. Greenslade the next day and seemed to be improving. Dr. Greenslade opined Claimant's symptoms were consistent with "migraines" and prescribed sumatriptan (Imitrex). Claimant subsequently tried the sumatriptan, but it did not help.

7. At her next appointment on September 7, 2016, Dr. Greenslade released Claimant at MMI with no impairment and no restrictions. Dr. Greenslade stated Claimant's neck pain and concussion symptoms had "resolved," with the only ongoing symptoms being "right-sided [headaches] with hot flashes and other menopausal symptoms." Dr. Greenslade advised Claimant to follow up with her primary care provider.

8. Claimant returned to the ER on September 22, 2016 due to ongoing symptoms. She explained that since the accident "she has been having headache and neck pain. Headache is described as a throbbing. Over the last few days, patient has been feeling a sensation like there is water running down the right side of her head. Endorses dizziness and trouble focusing." Claimant stated the right-side headache "has been essentially persistent, every day [since the accident]. . . . She is taking Motrin at home without relief." She underwent a brain MRI which showed chronic changes but no acute abnormality. The ER physician opined "her symptoms are most likely related to an ongoing posttraumatic cephalgia." The ER records support Claimant's testimony that her symptoms had not resolved by September 7.

9. Claimant had a "one-time evaluation" with Dr. Greenslade on September 28, 2016. Dr. Greenslade again stated that Claimant's neck pain and concussion-related symptoms had "resolved," except for "intermittent" nausea associated with right-sided headaches. She affirmed Claimant was at MMI with no impairment and no restrictions. Dr. Greenslade opined "she has now had 3 imaging studies, 2 CT scans/1 MRI since the injury occurred. All normal. Her HA's are intermittent and resolved on their own and likely migraines/tension variety. Her original injury was a minor blow to her head one month ago. Recommend f/u pcp for further eval and tx migraines and possible htn."

10. Claimant saw Dr. Jack Rook for a Division IME on February 2, 2017. She described ongoing right-sided head and facial pain, right jaw pain, and right-sided neck pain. Dr. Rook noted a history of migraine headaches "about 20 years ago" which resolved, and no prior history of neck pain. Examination of Claimant's neck showed severe tenderness to palpation of the scalene muscles on the right, increased muscle tone with severe tenderness of the right-sided suboccipital and paracervical musculature, and moderate tenderness of the right upper trapezius. Neck symptomatology was localized to the right side, with no pain on the left. Examination of her head and face showed severe tenderness of the right temporalis, masseter, and pterygoid muscles, and moderate tenderness of the right TMJ.

11. Dr. Rook diagnosed posttraumatic headaches, possibly tension headaches and/or right greater and lesser occipital neuralgia; right-sided temporomandibular joint dysfunction with surrounding myofascial pain; and right-sided cervical myofascial pain syndrome. Dr. Rook opined Claimant's visual complaints were most likely due to greater occipital neuralgia, and the ear pain was due to irritation of the lesser occipital nerve. He found Dr. Greenslade's assertion that Claimant's condition had resolved in September 2016 unconvincing. He noted Claimant "had essentially no treatment for this condition" and she was not at MMI. He recommended additional treatment including gentle physical therapy, massage therapy, trigger point injections and occipital nerve blocks. Respondents filed a GAL based on Dr. Rook's report.

12. Claimant returned to Dr. Greenslade on March 8, 2017 for treatment as recommended by Dr. Rook. Dr. Greenslade reiterated that Claimant was at MMI and none of her ongoing symptoms were related to the August 2016 accident. She declined to treat Claimant and advised her to seek treatment under Medicaid. Claimant had another "one-time evaluation" with Dr. Greenslade on September 27, 2017, with the same outcome.

13. Claimant returned to Dr. Rook for a follow-up DIME on November 28, 2017. He noted Claimant presented with the same complaints she had at the first DIME ten months prior. The physical exam findings were very similar to those at his initial examination. Dr. Rook provided the same diagnoses and maintained Claimant was not at MMI. He recommended she be allowed to proceed with the treatment recommendations from his initial DIME "and that her care be transferred to a pain management specialist." He also provided an advisory rating. If Claimant were at MMI she would have a 20% whole person cervical impairment rating, based on a 4% Specific Disorder rating combined with a 17% for cervical range of motion deficits.

14. After receiving Dr. Rook's follow-up DIME report, Respondents requested a hearing to challenge the DIME.

15. Claimant saw Dr. Frank Polanco for an IME at Respondents' request on March 1, 2018. Dr. Polanco noted Claimant appeared "very anxious." His exam findings differed significantly from Dr. Rook's examinations. Dr. Polanco noted normal cervical muscle tone with no trigger points or spasm, and normal cervical range of motion. After he examined her TMJ, Claimant complained of tenderness and pain in the right side of her neck and right trapezius. Dr. Polanco thought it was "obvious" Claimant sustained a work-related injury in the form of a "contusion," but opined "there are not findings to support that she sustained a concussion." He also opined the mechanism of injury would not cause a TMJ disorder. He disagreed with Dr. Rook's conclusions regarding MMI. He also disagreed with the provisional cervical impairment rating because "there are no clinical or diagnostic findings to support that she has sustained a structural injury to her cervical spine. She has a normal examination and normal range of motion. She does not qualify for a table 53 diagnosis and has no range of motion deficits."

16. Claimant attended an IME with Dr. Timothy Hall at her counsel's request on March 7, 2018. In contrast to Dr. Polanco's exam six days earlier, Dr. Hall found significant abnormalities relating to Claimant's neck and head. He noted hypertonicity, active trigger

points, and diffuse tenderness in the right sited cervicothoracic and parascapular areas. Her nuchal ridge was tender on the right side but not on the left. She had "significant" pain in the right TMJ and difficulty opening her mouth. Dr. Hall also noted visual deficits which he attributed to the concussion. He diagnosed mild traumatic brain injury with postconcussive syndrome, postconcussive headaches, occipital neuralgia, TMJ dysfunction and a sleep disorder related to pain and concussion. He agreed with Dr. Rook that Claimant was not at MMI. He agreed that a cervical rating would be appropriate, but he would also include a rating specifically related to the concussion.

17. Shortly before the hearing, Respondents obtained preinjury medical records documenting symptoms in August 2014 similar to those Claimant has experienced since the industrial accident. She was hospitalized on August 23, 2014 for neurological symptoms and functional deficits suggestive of a stroke. Approximately ten days before the hospitalization, she had developed a right-sided headache around the parietal aspect of her head. The pain was constant and extended into her neck. She also had associated tearing, blurriness, and brief blacking out of the right eye. Her gait was unsteady and she had fallen at least two times. She reported difficulty with word finding. She described a history of migraines "many years" ago, but said her current headache was "very different." She was admitted to the hospital to evaluate multiple potential diagnoses including \ CVA, sudomotor cerebri, sinus thrombosis, trigeminal neuralgia, and benign positional vertigo. She underwent extensive diagnostic evaluation, but no specific pathology was identified. Within four days, Claimant's symptoms resolved and she was discharged. She followed up with her PCP a week later, who documented that "all symptoms resolved," including her "headache."

18. The only other mention of headaches between September 2014 and the industrial accident as a March 9, 2015 records from her gastroenterologist noting "some leg pain/cramps as well as some headaches."

19. Dr. Polanco testified at hearing for Respondents. He had reviewed the preinjury medical records before his testimony. Dr. Polanco opined that a complete medical history is "critical" for an accurate DIME, and Dr. Rook's determination was flawed because he did not have access to the preinjury records. Dr. Polanco opined Claimant sustained no significant head injury and her ongoing symptoms were most likely due to anxiety. He thought her similar presentation in August 2014 was also probably attributable to anxiety. He reiterated that Claimant suffered only a minor head contusion in August 2016 with no ongoing injury-related sequelae.

20. Dr. Polanco's opinions represent mere differences of professional opinion with Dr. Rook.

21. Respondents failed to overcome the DIME's MMI determination by clear and convincing evidence.

22. Claimant proved the treatment recommended by the DIME is reasonably necessary and related to the industrial injury.

CONCLUSIONS OF LAW

A. Respondents did not overcome the DIME regarding MMI

"Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). The DIME's determination regarding MMI is binding unless overcome by clear and convincing evidence. Section 8-42-107(8)(b) and (c); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998). In determining whether a claimant is at MMI, the DIME "inherently" must decide whether further treatment is causally related to the industrial injury, and the DIME's determination that a particular condition is or is not related to the industrial injury is binding unless overcome by clear and convincing evidence. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998). Clear and convincing evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office*, 62 P.3d 1015 (Colo. App. 2002). The party challenging a DIME's conclusions must demonstrate it is "highly probable" that the MMI finding is incorrect. *Qual-Med*, 961 P.2d at 592; *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A "mere difference of medical opinion" does not constitute clear and convincing evidence that the DIME is incorrect. *E.g., Gutierrez v. Startek USA, Inc*., W.C. No. 4-842-550-01 (March 18, 2016).

As found, Respondents have failed to overcome the DIME by clear and convincing evidence. Claimant has consistently complained of right-sided head and neck pain since the initial accident. She has no documented preinjury history of neck pain, and there is no indication she suffered any significant head pain immediately before the accident. Dr. Greenslade's assertion that Claimant's condition had "resolved" by September 7 is not persuasive in light of the ER records shortly before and after that date. Admittedly, the history Dr. Rook received from Claimant regarding her prior headaches was incomplete, but the most significant pre-injury records relate to the hospitalization in August 2014, and by September 2014 Claimant's PCP confirmed "all symptoms" including headaches had "resolved." There is no further mention of any significant headache issues until after the August 2016 accident at work. The ALJ is not persuaded that lack of the pre-injury records substantially undermines Dr. Rook's opinions.

The ALJ has little doubt Claimant's emotional state plays a role in amplifying and perpetuating her perception of pain, and whoever assumes the role of ATP would be well advised to consider psychological counseling as part of her treatment regimen. But the mere fact that an underlying anxiety condition may contribute to the overall severity of her symptoms does not negate the accident's causal role in the development of her symptoms in the first instance. On balance, it appears that the August 2016 accident triggered Claimant's current symptoms, which have not resolved to date. Although reasonable physicians can disagree regarding causation, the persuasive evidence does not show Dr. Rook was "highly probably incorrect" in attributing Claimant's ongoing symptoms to the accident and recommending further treatment.

B. The treatment recommended by Dr. Rook is reasonably necessary

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Where the respondents dispute a claimant's entitlement to medical benefits, the claimant must prove that the requested treatment is reasonably necessary and causally related to the injury. Section 8-42-101(1)(a); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). A DIME's recommendation regarding specific treatment is not entitled to presumptive weight but is simply another medical opinion to consider when evaluating all the evidence under the preponderance standard. *Goff v. Schwan's Home Services*, W.C. No. 4-947-921-03 (August 9, 2017); *Holcombe v. FedEx Corp*., W.C. No. 4-824-259-05 (March 24, 2017); *Duplissis v. Shepard's*, W.C. No. 4-508-725 (December 3, 2002). As found, Claimant proved by a preponderance of the evidence that the treatment recommended by Dr. Rook is reasonably necessary. As Dr. Rook pointed out, Claimant has essentially had no treatment for the symptoms, and his opinions regarding the specific treatment needed to bring Claimant to MMI are credible and persuasive.

ORDER

It is therefore ordered that:

1. Respondents' request to overcome the DIME is denied and dismissed.

2. Respondent shall provide treatment reasonably needed to cure and relieve the effects of Claimant's injury as recommended by the DIME.

3. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 4, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Has Claimant shown, by a preponderance of the evidence, that he sustained a compensable injury to his left knee on or about September 21, 2017?

2. Has Claimant shown, by a preponderance of the evidence, that Respondent Employer failed to comply with C.R.S. 8-43-404(5)(a)(I)(A) and WCRP 8-2, thus entitling him to select his Authorized Treating Physician?

3. Has Claimant shown, by a preponderance of the evidence, that his medical treatment, including but not limited to that provided by St. Francis Medical Center and Centura Orthopedics, was reasonable, necessary, and related to his work injury?

STIPULATIONS

The parties stipulated that, if compensable, Claimant's Average Weekly Wage is $1202.95. The corresponding Temporary Total Disability ("TTD") rate is $801.97. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant is truck driver for the Employer. On September 21, 2017, he was in Omaha, Nebraska after delivering a load. While attempting to enter the trailer from the rear, he placed his left foot onto a step, and was attempting to swing his right leg onto the trailer bed. While swinging his right leg, he felt a "pop", and pain in his left knee.

2. Claimant called and reported his injury to the Employer. (Ex L, p. 48). On September 26, 2017, Respondents filed a First Report of Injury ("FROI"), documenting that on September 21, 2017, Claimant reported he injured his left knee climbing into the trailer of his truck. The FROI reflects Claimant reported his injury to the Employer the same day. (Ex. 1, p. 1). On October 12, 2017, Respondents filed a Notice of Contest. (Ex. 2, p. 2).

3. Then, on Sunday, October 8, 2017, Claimant treated at St. Francis Medical Center Emergency Room ("ER") and reported left knee pain. Claimant reported he was walking in the parking lot, and heard a pop in his left knee, accompanied by severe pain. Claimant reported his left knee pain had started approximately two weeks prior when he was trying to get on his tractor-trailer. Claimant reported his knee had started to feel better, but then the knee popped on October 8.

4. Claimant was referred to an orthopedic surgeon. That same day, Claimant sent a text message to Mark Jordan, confirming he went to the ER. (Ex .N, p. 51). Also on October 8, 2017, Mr. Jordan left Claimant a voicemail, stating that he was going to call Carrie or Debra Houston and let them know that Claimant is seeking medical treatment related to his injury. (Ex. N, p. 50).

5. On October 9, 2017, Claimant treated with Robert Schuck, M.D. at Centura Orthopedics. Claimant reported he first injured his knee at work approximately three weeks prior while climbing into the back of his trailer. Claimant reported he stepped up into the trailer and felt a painful pop deep in his left knee; Claimant had immediate sharp pain. Claimant reported to Dr. Schuck that his knee started to feel better, but then yesterday (October 8, 2017), he experienced sharp pain while walking. Claimant reported the pain was a lot more severe than when he hurt it entering the truck. It almost made him pass out. Claimant reported he went to the ER and was placed in a knee immobilizer, provided crutches, and prescribed pain medication.

6. Claimant reported he was unable to bear full weight on his left leg. On physical examination of Claimant's left knee, Dr. Schuck noted a large joint effusion, significant muscular guarding, and that the varus stress test caused intense medial joint line discomfort. Dr. Schuck recommended a left knee MRI. Dr. Schuck gave Claimant a left knee intra-articular corticosteroid injection. (Ex. 6, pp. 18-23). On October 12, 2017, Dr. Schuck released claimant to return to work without restriction. (Ex. I, p. 27).

7. On November 29, 2017, Claimant filed an Application for Hearing and endorsed compensability, medical benefits, authorized provider, average weekly wage, and temporary disability benefits.

8. On December 29, 2017, Respondents filed a response to Claimant's Application for Hearing and endorsed a number of defenses, including causation, relatedness, and pre-existing condition, among others.

9. On January 30, 2018, Claimant underwent an independent medical examination with James P. Lindberg, M.D. Claimant reported that on his date of injury he injured his left knee while climbing into his trailer. Claimant reported he had his right hand on the bed and his left leg on the bumper. Claimant reported he pulled and pivoted on his left leg to get his right foot over the bumper and felt a snap in his left knee. Claimant reported his knee swelled up, and he had burning pain. Claimant reported the injury immediately to Mark Jordan. Claimant returned to Colorado. Claimant reported he was still hurting two weeks later, when he was walking into a restaurant and his knee gave out. Dr. Lindberg opined:

> It appears that what happened on the initial injury on September 21, 2017, was a meniscal tear. The mechanism of injury is consistent with tearing of the meniscus. He pivoted on his knee with significant stress. He felt immediate pain and reported it contemporaneously. He got better on Advil, with a little bit of time and then he had an unprovoked giving way of his knee in a restaurant two weeks later. My guess at this point is he had a

> meniscal displacement. The other possibility is that he had an onset of psoriatic arthritis in his knee and that was the problem. However, one cannot tell one from the other without an MRI. Therefore, I think it is appropriate to approve an MRI at this time, and if he has a meniscal tear, then I think it was an acute Workmen's Compensation injury and it should be treated as such. If the MRI is normal, then this is more than likely a manifestation of his psoriatic arthritis and should be treated by his P.M.D. The MRI will make the decision-making obvious. (Ex. K, pp. 43-45).

10. On February 6, 2018, Claimant treated with Autumn Dean, M.D., who noted Claimant's reported mechanism of injury, provided work restrictions of no lifting, repetitive lifting, carrying, pushing, or pulling more than 10 pounds, and referred Claimant for a left knee MRI. (Ex.7, p. 24).

11. On February 13, 2018, Claimant underwent a left knee MRI, which revealed: a) Medial meniscus demonstrates tri-zonal radial root tear with partial extrusion of medial meniscal body segment (finding may have a subacute component);

b) Focus of subchondral edema at the posterior nonweightbearing medial femoral condyle (subacute subchondral contusion);

c) 1.7 x 1.2 cm greater than 50% partial-thickness chondral ulcer (chronic component) at posterior weight-bearing medial femoral condyle 5mm deep chondral flap tear extending anteriorly from the ulcer;

d) Proximal grade 1 of 3 MCL sprain (subacute component);

e) 7 mm oblique, deep chondral flap tear at patellar crest;

f) Greater than 50% partial-thickness tiny chondral fissure at posterocentral aspect of lateral tibial plateau;

g) Lateral collateral ligament demonstrates scarring of the fibular collateral ligament origin with mild periligamentous edema; and

h) 1.9 cm chondroid lesion at proximal fibula 8 x 8 mm segment of scalloping in the nearby anterior fibular cortex. (Ex. 8, pp.25-26).

12. On February 21, 2018, Dr. Lindberg reviewed the MRI narrative and noted that the MRI report is inconclusive, as it shows both meniscal tearing and degenerative changes. Dr. Lindberg requested to review the original MRI images. (Ex. K, p. 42).

13. On February 27, 2018, Dr. Lindberg issued a third report after reviewing the MRI images and opined the MRI revealed:

> [a]ll chronic changes [that] are secondary to his age and psoriatic arthritis. There is no evidence of an acute injury. Any further

> treatment should be under his personal health insurance. Neither physical therapy nor arthroscopy are indicated. This is clearly pre-existing and his symptoms were a manifestation of his underlying osteoarthritis. There is no evidence of an acute aggravation, acceleration, or exacerbation of the underlying disease. (Ex. K, p. 41).

14. At Hearing, Claimant testified he started working for the Employer as a truck driver in 2014. Claimant testified he was diagnosed with psoriatic arthritis in his feet and hands back in 2003. He testified that previously he had been prescribed numerous medications to treat this condition, something like 27 different pills a day. However, he did not feel that this medication was helping, so he stopped taking all medications, and he does not believe he has gotten any worse. In 2005, he would take Embrel and Remicade infusions. He did this for about one year. He was also sent to San Francisco for additional experimental medicines. Claimant testified that since 2005, he has neither taken any medications nor had any treatment for this condition.

15. Claimant testified this condition has not worsened since he stopped taking the medications. Claimant testified he has no prior treatment to his knees or his hips and that he has never had any injuries to his knee. To his knowledge, the psoriatic arthritis has never bothered his hips or knees. Claimant testified the psoriatic arthritis has never prevented him from working, nor affected how he functions on a daily basis.

16. Claimant testified he advised the Employer that he was looking for a non-physical job. Claimant testified his job duties with the Employer do not generally require heavy lifting. Claimant testified that when he was hired he gave the employer, specifically Mr. Lundquist, the terminal manager, his final doctor's paperwork from the prior work-related injury. Claimant testified he eventually passed his DOT physical and started working for the Employer.

17. At hearing, Claimant testified that he was required to take a physical FirstFleet. Claimant signed a physical form on August 2, 2016. Where the form asked if Claimant had any chronic (long-term) infection or other chronic diseases, claimant checked the box "no". When asked more specifically about "Other health condition(s); not described above: Claimant noted that he was pre-diabetic, and also mentioned a hernia repair, but did not mention his psoriatic arthritis. (Ex. S).

18. Claimant was involved in a prior workers compensation claim involving his back, and prior to returning to work for FirstFleet, he was told that he would have to be off all narcotics for thirty days for the medications to work their way out of his system. Claimant indicated that his job at FirstFleet does not involve heavy lifting, as he uses a pallet jack to unload pallets. However, sometimes he would have to down stack off the back of the trailer. Physically, he does have to get up and down into the trailer and sweep the trailers.

19. Claimant testified that on September 21, 2017, he was at a store outside Omaha, Nebraska. Claimant testified he was going to sweep out his trailer prior to driving back to Colorado Springs. He testified that in order to get into his trailer he has to put his left foot on the bumper and swing his right leg into the truck. Claimant testified the Employer's trailer did not have any hand rails or other device to help him get into the truck. He testified he put his left foot on the bumper, put one hand on the bed of the trailer, shifted his weight to his left leg, and used both hands to push up off the trailer to swing his right foot onto trailer bed.

20. Claimant testified that while doing this his left leg twisted and that he felt a pop in his left knee. Claimant testified he immediately had burning pain in his left knee, and that his knee swelled up in less than two hours. He immediately called and reported his injury to Mark Jordan, his supervisor. Claimant testified Mr. Jordan advised him to call the Employer's injury hot-line, and he did this within minutes of his injury. Claimant testified he then drove back to Colorado Springs, using the truck's clutch minimally, arriving between 6:00-7:00 A.M. on September 22, 2017.

21. Claimant testified he let Mr. Jordan know he was back in town, and then drove straight to Concentra. Claimant testified Mr. Jordan advised him to hold off on going into Concentra until he spoke with Carrie Pritchard, who worked in HR for Employer. Claimant testified he was sitting in his car in Concentra's parking waiting to hear from Ms. Pritchard. Claimant testified he called her three times before she called back. Claimant testified Ms. Pritchard already had the incident report but wanted Claimant to explain everything again.

22. Claimant testified that after explaining the nature of the injury, Ms. Pritchard told him that he did not sustain a work injury and that his injury was not compensable because his knee could have popped anywhere. Claimant testified Ms. Pritchard told him the Employer would not authorize him to see Concentra, but that he did not have to take a drug screen, since he was not injured on the job. Claimant also testified that all phone conversations with FirstFleet are recorded and saved.

23. Claimant testified the Employer refused to allow him to see a doctor, and never provided him a designated provider list. Claimant testified he never refused to see a doctor. Had the Employer authorized him to see a doctor, he would have gone. Claimant testified he then returned to work despite his ongoing knee pain. Claimant testified that over the next two weeks he still had left knee pain and was limping around at work and that he told Mr. Jordan that he was still having knee pain. Claimant testified he was having a hard time doing his job. He asked Mr. Jordan for an automatic transmission truck but nothing was available for him. Claimant testified that prior to September 21, 2017, he never had any similar symptoms or issues with his knee.

24. Claimant testified that on Sunday, October 8, 2017, he took the day off work for his son's baptism. He testified he was walking into a restaurant after the baptism when his knee gave out. He was in excruciating pain and could not put any weight on his left knee. Claimant testified he went to the ER that day. Claimant testified

he sent a text message to Mr. Jordan at 3:38 P.M., letting him know he had to go to the ER.

25. Claimant testified he advised the ER physician how injury occurred, underwent an x-ray, was referred to an orthopedic surgeon, and was provided an immobilizing knee brace and crutches. Claimant testified that on October 9, 2017, he brought the ER paperwork to Mr. Jordan. Claimant testified he also spoke to Ms. Pritchard, who advised him that the Employer would not authorize any medical care related to the injury. Claimant testified he also spoke to Debra Houston, who is Ms. Pritchard's boss, and she too told him his injury is not compensable, and that the Employer would not allow him to see a doctor. Claimant testified he continues to work. Claimant testified he continues to have left knee pain.

26. At hearing, Dr. Lindberg testified as an expert in the field of orthopedic surgery. Dr. Lindberg testified he stopped performing surgery and seeing patients in 2012. Dr. Lindberg testified Claimant admitted he has psoriatic arthritis. Claimant told him the psoriatic arthritis affects only his feet, hands, and chest. Claimant told him the psoriatic arthritis does not affect his knees.

27. Dr. Lindberg testified he reviewed the left knee MRI. At Hearing, Dr. Lindberg compared Claimant's left knee MRI to a knee MRI which Dr. Lindberg described as showing a normal meniscus. Dr. Lindberg testified Claimant's left knee MRI showed arthritis and also revealed chronicity, or degenerative changes in the knee. Dr. Lindberg testified the MRI did not reveal any evidence of an acute injury. Dr. Lindberg opined there is no evidence of an acute injury and that all the findings on the left knee MRI are chronic.

28. Dr. Lindberg opined it is more likely than not Claimant has a chronic injury. Dr. Lindberg testified he is not a rheumatologist, but he does know Claimant has a history of psoriatic arthritis and that Claimant needs to be seen and treated by a rheumatologist. Dr. Lindberg testified this is not an orthopedic problem and that Claimant would not benefit from surgery. Dr. Lindberg testified Claimant's left knee problems are more likely related to a chronic condition than an acute injury.

29. Dr. Lindberg testified the September 21, 2017 incident did not cause a left knee injury and not aggravate his left knee condition. That Claimant has subjective complaints of left knee pain does not mean he has an injury because there is no objective evidence of an acute injury. Dr. Lindberg testified he does not give significant weight to the fact Claimant heard a pop or snap in his knee at the time of his injury. Regarding the October 8, 2017 incident, Dr. Lindberg stated Claimant's popliteal cyst may have ruptured at that time; Dr. Lindberg acknowledged that this is purely a guess.

30. On cross-examination, Dr. Lindberg testified that prior to September 21, 2017, Claimant's left knee was apparently asymptomatic and that there are no records that indicate Claimant ever had any prior left knee injuries, conditions, symptoms, or treatment. Dr. Lindberg testified that Claimant's September 21, 2017 mechanism of injury could have caused an injury, including a meniscus tear. Dr. Lindberg testified he

is not denying Claimant had an injury, twisted his knee, and felt pain on September 21, 2017. Dr. Lindberg acknowledged that knee swelling is objective evidence of an acute injury. Dr. Lindberg testified that there is just no evidence of an acute injury on the MRI. Dr. Lindberg testified the radiologist who reviewed the left knee MRI noted multiple subacute findings and that subacute means 'kind of' acute.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). While Claimant may not have been entirely accurate or forthcoming in outlining his entire medical history when applying for employment, the ALJ finds that overall, Claimant has provided accurate medical history to his medical providers, and has provided credible testimony at hearing. Of particular note is Claimant's unrebutted testimony about being rebuffed by HR when reporting this incident and seeking treatment, when such calls are apparently recorded.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive

arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

E. An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm'n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*.

F. Claimant herein has proven by a preponderance of the evidence that on September 21, 2017, he sustained a left knee injury or aggravation of his preexisting left knee condition arising out of and in the course and scope of his employment with the employer. The ALJ concurs with Dr. Lindberg's general proposition that correlation does not equal causation. In this case, however, Claimant's sudden onset of symptoms, at the very instant he was twisting at an awkward angle to enter the truck is simply too much to attribute to coincidence. Claimant had never experienced knee pain previously. The ALJ further finds that Claimant not only felt pain, but observed swelling within a short time of this incident. Swelling is a significant indicator of acute trauma. Respondents are not to be rewarded, in essence, by denying Claimant the ability to not only treat promptly, but also have independent medical corroboration of the swelling that he experienced. Similarly, a MRI taken shortly after the incident would have been of far greater value to all concerned. Those subacute findings from 2/13/18 might well have been acute if taken promptly. This will remain unknown, but HR made the wrong call in summarily denying compensability. Claimant was plainly at work when this happened. Determining the medical component of compensability is the job of medical professionals, not HR personnel.

Authorized Treatment Provider

G. C.R.S. section 8-43-404(5)(a)(I)(A) requires the insurer or employer to provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers or a combination thereof where available from which an injured worker may select the physician who attends the injured employee. C.R.S. section 8-43-404(5)(a)(I)(A) goes on to state that if the services of a physician are not tendered at the time of injury, the injured worker has the right to select a physician. WCRP 8-2 outlines the rules regarding designating an authorized treating physician. WCRP 8-2(E) states, "If the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing." Respondents failed to designate a medical provider or provide Claimant with a list of physicians as required by C.R.S. section 8-43-404(5)(a)(I)(A) and WCRP 8-2. Accordingly, Claimant proved by a preponderance of the evidence that he has the right to select his authorized treating physician. While the ALJ finds Dr. Lindbergh to be eminently qualified and sincere in his medical opinions, Respondents may not use him after the fact to deny Claimant his own ATP.

Medical Benefits

H. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

I. Claimant has proved by a preponderance of the evidence that the medical treatment he received through St. Francis Medical Center and Centura Orthopedics, including the October 9, 2017 left knee injection, is reasonable, necessary, and related to his compensable industrial injury. While Claimant was not at work when this sudden onset of pain occurred in the parking lot, a sufficient nexus has been shown between this incident and the original work injury from September 21, 2017. Respondents shall pay for this medical treatment and all other medical care that is reasonable, necessary, and related to Claimant's September 21, 2017 industrial injury. Time will tell if Claimant's ATPs will recommend surgery, but Claimant has the right to find that out

through the Workers Compensation process, and the opinions of physicians assigned to treat him.

ORDER

It is therefore ordered that:

1. The injury to Claimant's left knee occurring 9/21/17 is compensable, as is the episode which occurred October 8, 2017.

2. The right to select his Authorized Treating Physician has fallen to Claimant.

3. Respondents shall pay all reasonable and necessary medical treatment related to Claimant's compensable injury, including, but not limited to, treatment rendered to date from St. Francis Medical Center and Centura Orthopedics.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 9, 2018

Colorado Springs, Colorado 80906

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that treatment of his cervical myelopathy (including the cervical surgery performed by Dr. Douglas Orndorff on December 20, 2016) constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted January 16, 2015 work injury.

- Whether claimant has demonstrated by a preponderance of the evidence that treatment of his urological symptoms constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted January 16, 2015 work injury.

- At hearing, the parties stipulated that claimant's average weekly wage (AWW) is $1,106.10 for the period of January 16, 2015 through and including July 31, 2015.

- The parties further stipulated that claimant's AWW is $1,347.24 beginning August 1, 2015 and ongoing until terminated by law.

FINDINGS OF FACT

1. Claimant was employed by employer as a milk delivery driver. Claimant's job duties included loading and unloading pallets of milk to make deliveries to commercial clients. Claimant testified that he began performing these job duties with employer's predecessor company more than 20 years ago.

2. On January 16, 2015, claimant was making an early morning delivery to a customer in Breckenridge, Colorado. Claimant unloaded the delivery onto a wheeled dolly and pushed the dolly on the sidewalk. Claimant testified that the left wheel of the dolly hit some ice, causing claimant to slip and fall. Claimant testified that he landed on his right hip and struck the right side of his head and immediately experienced numbness in his left hand.

3. Claimant first received medical treatment for his injury on January 20, 2015 and was seen by Dr. Jason Stuerman at Middle Park Medical Center. At that time, in addition to issues related to his right hip, claimant reported that since the slip and fall he had a difficult time picking things up because he had numbness from his elbows to his hands. Claimant also reported that he had more frequent urination since the fall. Claimant testified that at that time he was urinating every thirty minutes. Dr. Stuerman recommended that claimant undergo a head CT (computed tomography) scan.

4. On January 20, 2015, claimant returned to Middle Park Medical Center and was seen by Dr. Frank Tong. Claimant again reported numbness in both arms, with tingling in his fingers. Claimant also reported that his arm symptoms were improving. At that time, Dr. Tong opined that claimant had not suffered a concussion. Due to claimant's report that he was improving, Dr. Tong determined that a head CT was not necessary.

5. On February 4, 2015, respondents filed a General Admission of Liability (GAL) for the January 16, 2015 incident.

6. On June 18, 2015, claimant attended an independent medical examination (IME) with Dr. Thomas Moore. In connection with the IME, Dr. Moore reviewed claimant's medical records, obtained a medical history from claimant, and performed a physical examination. In his report, Dr. Moore opined that claimant's right hip condition was related to the January 16, 2015 work injury. Dr. Moore also noted in his report that during the IME claimant reported that he felt he had only "5% feeling" in the fingers of both hands. Claimant testified that at the IME Dr. Moore focused on the injury to claimant's right hip.

7. On September 2, 2015, claimant was seen by Dr. Richard Lawton for a surgical consultation related to his right hip. Dr. Lawton opined that claimant's right hip pain was coming from a torn labrum and recommended that claimant undergo surgery to repair the labrum.

8. At the time of the injury, claimant was living in Silverthorne, Colorado. Prior to undergoing the hip surgery recommended by Dr. Lawton, claimant moved to Bayfield, Colorado where his son lives. Claimant testified that he moved so that he could have support from his son following the surgery.

9. On September 17, 2015, Dr. Lawton performed a right hip arthroscopic labral debridement and partial labrectomy.

10. Following the surgery, began physical therapy with Bayfield Physical Therapy. On October 20, 2015, claimant was seen by Andre Sarnow, PT. Claimant reported to PT Sarnow that since the surgery in September 2015, he had fallen at least four times when his right hip "blows out" and he has no control of the right hip. Claimant also reported that he continued to have numbness and tingling in both hands, and was concerned that those symptoms "had not been addressed".

11. Subsequently, Dr. Lawton referred claimant to Spine Colorado. On March 9, 2016 claimant was seen at Spine Colorado by Clayton LaBaume, PA-C. At that time, claimant reported right sided hip pain with standing or walking. He also reported numbness and tingling in both hands, and some loss of coordination in his hands. PA LaBaume opined that claimant had cervical myelopathy and referred claimant for an MRI of his cervical spine. PA LaBaume also ordered an MRI of claimant's lumbar spine. Claimant testified that the MRI of his cervical spine did not occur.

12. Due to claimant's ongoing hip symptoms, on July 5, 2016, Dr. Lawton performed a right total hip arthroplasty. On July 25, 2016, claimant was seen at Mercy Orthopedic Associates by Ann Theine, PA for a follow up appointment. Claimant reported to PA Theine that he had begun to have urinary incontinence since the surgery. Claimant testified that prior to the July 5, 2016 surgery he had never had urinary issues.

13. On October 10, 2016, claimant returned to Dr. Lawton and reported that he was getting better, but slowly. Claimant also reported that he could walk up to two miles, but that he felt clumsy, as if he might stumble and fall. In the medical record of that date, Dr. Lawton noted that claimant's gait "was a bit odd" and was "definitely abnormal". Dr. Lawton noted that claimant's gait reminded him "of a gait typical for someone with a neurologic disorder of some type."

14. On December 15, 2016, claimant sought treatment with Dr. Jessica Hannah, a neurologist. Claimant testified that he chose to seek a neurologist because he felt that he was getting progressively worse. Claimant testified that at that time he could not pick up items with his hands, he could not get out of bed, and his son had to assist him in going to the bathroom.

15. On December 15, 2016, claimant reported to Dr. Hannah that he had numbness in his left hand immediately after his slip and fall in January 2015, but that in the last month it has also moved into his right hand and his legs. Claimant also reported that he was unable to complete his activities of daily living (ADLs). At that time, Dr. Hannah diagnosed progressive myelopathy with unclear etiology and ordered a magnetic resonance image (MRI) of claimant's cervical spine.

16. On December 15, 2016, an MRI was taken of claimant's cervical spine. The MRI showed critical central canal stenosis at C3-C4 secondary to severe degenerative disc disease with large posterior disc osteophyte complex and ligamentum flavum hypertrophy. The radiologist noted in the MRI notes that the findings correlated with claimant's symptoms. Based upon these MRI results Dr. Hannah requested a surgical consultation with Colorado Spine.

17. Claimant was seen for surgical consultation with Dr. Douglas Orndorff on December 20, 2016. Based upon the results of the cervical MRI, claimant underwent surgery on an emergent basis to his cervical spine. Specifically, Dr. Orndorff performed a posterior cervical decompression and fusion of the cervical spine from C3 to C5 and a C3 and C4 laminectomy.

18. While he was in the hospital recovering from the cervical surgery, claimant continued to experience dislocation of his right hip. On December 28, 2016, Dr. Paige Mallette performed a closed reduction of the dislocated right hip.

19. During claimant's hospitalization in December 2016, a Foley catheter was utilized. Following the cervical surgery that he was admitted to Four Corners Rehabilitation for six weeks. Claimant continued to have a Foley catheter during those six weeks.

20. On January 13, 2017, claimant sought treatment at the urology department at Mercy Medical Center. As indicated by the medical records, claimant had an "indwelling catheter" since his cervical surgery. The catheter was removed on January 13, 2017, but claimant was unable to void. Ultimately claimant was admitted to the hospital for a urinary tract infection (UTI) and sepsis.

21. On January 27, 2017, Dr. Mallette performed a revision of the right total hip arthroplasty acetabular and femoral head to a constrained liner. Claimant testified that the additional hip surgery seems to have addressed the hip dislocation problem.

22. On February 2, 2017, Dr. Carlos Cebrian completed a medical records review to assess whether the December 20, 2016 surgery performed by Dr. Orndorff was reasonable, necessary, and related to claimant's January 16, 2015 work injury. In his written report, Dr. Cebrian opined that claimant's need for surgery in December 2016 was related to claimant's preexisting cervical spine degenerative disc disease and spinal stenosis. Dr. Cebrian further opined that the fall on January 16, 2015 did not cause claimant's cervical spine symptoms. In support of his opinions, Dr. Cebrian noted that claimant's complaints of numbness in his bilateral upper extremities improved after several visits and then returned later in claimant's treatment.

23. On May 26, 2017, Dr. Cebrian completed a second review of claimant's medical records to address whether claimant's urological symptoms are causally related to the January 16, 2015 work injury. Dr. Cebrian opined in his report that claimant's urological symptoms are not related to the work injury. Dr. Cebrian noted that claimant's urological issues did not arise until after the cervical spine surgery. As Dr. Cebrian does not believe claimant's cervical spine symptoms are related to the work injury, he reasons that the urological symptoms are likewise not related.

24. Dr. Cebrian's testimony by deposition was consistent with his written reports. Dr. Cebrian testified that it is his opinion that claimant's cervical spine symptoms and urological symptoms are not related to claimant's work injury. In support of his opinion, Dr. Cebrian noted that early in claimant's medical treatment, Dr. Tong determined that because of claimant's normal neurological exam and lack of neck pain cervical spine imaging was not recommended. In support of his opinion regarding claimant's urological symptoms, Dr. Cebrian noted that the March 10, 2015 MRI of claimant's right hip showed evidence of an enlarged prostate, which would explain claimant's urinary symptoms at that time.

25. Dr. Cebrian also testified that the symptoms claimant was experiencing in 2016 and the need for cervical surgery are unrelated to the fall on January 16, 2015. The need for cervical surgery was needed to correct degenerative changes in claimant's cervical spine. Dr. Cebrian also opined that the January 16, 2015 fall at work did not aggravate claimant's underlying degenerative condition in his cervical spine. With regard to numbness and tingling that claimant has reporting having from his elbows to his hands, Dr. Cebrian testified that the level of claimant's cervical stenosis would not correlate to those types of complaints.

26. On June 12, 2017, claimant underwent urodynamic testing. However, claimant was unable to void before or after the testing, so a catheter was utilized. Thereafter, claimant treated with urologist Dr. Francis Carpio. On June 23, 2017, Dr. Carpio diagnosed claimant with neurogenic bladder and noted that claimant was self-catheterizing every four to five hours.

27. Dr. Orndorff testified by deposition in this matter. Dr. Orndorff explained that prior to the December 20, 2016 surgery claimant had very severe cervical spondylitic myelopathy. Dr. Orndorff also testified that symptoms of cervical myelopathy can include diffuse hand numbness and tingling, loss of hand dexterity, loss of fine motor skills, and balance instability. In addition an individual with cervical myelopathy can have either urinary retention or urinary incontinence.

28. Dr. Orndorff testified that it is his opinion that there is a "very strong correlation" between the January 16, 2015 slip and fall and claimant's cervical condition. In support of this opinion Dr. Orndorff noted in his testimony that claimant's injury was a loading type of injury that can cause compression of the spinal cord combined with claimant's progressive symptoms (including hand numbness and tingling, hand dysfunction, and balance issues) indicate a correlation.

29. During his testimony, Dr. Orndorff indicated that he agrees that claimant had pre-existing degenerative changes in his spinal cord. However, Dr. Orndorff noted in his testimony that the pre-existing condition was asymptomatic prior to claimant's January 16, 2015 work injury.

30. Claimant testified that throughout his extensive medical treatment related to the January 16, 2015 slip and fall, he has reported ongoing numbness in his arms and hands to all of his providers.

31. Claimant testified that his current urological symptoms include urinary retention. Claimant explained that he has to insert a catheter up to six times per day to relieve his bladder. This involves the use of various medical supplies.

32. The ALJ credits claimant's testimony, the medical records, and the opinion of Dr. Orndorff over the contrary opinion of Dr. Cebrian and finds that claimant has demonstrated that it is more likely than not that claimant's cervical myelopathy is causally related to the January 16, 2015 fall at work.

33. The ALJ credits claimant's testimony, the medical records, and the opinion of Dr. Orndorff over the contrary opinion of Dr. Cebrian and finds that claimant has demonstrated that it is more likely than not that claimant's urological condition was caused by the cervical surgery performed on December 20, 2016. As claimant's cervical condition was caused by the work injury on January 16, 2015, the claimant has also successfully demonstrated by a preponderance of the evidence that his urological condition is causally related to the work injury.

34. The ALJ credits the medical records and the opinion of Dr. Orndorff and finds that treatment for claimant's cervical myelopathy, including the cervical surgery performed on December 20, 2016, is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

35. The ALJ credits the medical records and the opinion of Dr. Orndorff and finds that treatment for claimant's urological condition, including catheter supplies, is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has demonstrated by a preponderance of the evidence that treatment of his cervical myelopathy (including the cervical surgery performed by Dr. Orndorff on December 20, 2016) constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the January 16, 2015 work injury. As found, claimant's testimony, the medical records, and the opinion of Dr. Orndorff are credible and persuasive.

5. As found, claimant has demonstrated by a preponderance of the evidence that treatment of his urological symptoms, including catheter supplies, constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the January 16, 2015 work injury. As found, claimant's testimony, the medical records, and the opinion of Dr. Orndorff are credible and persuasive.

ORDER

It is therefore ordered that:

1. Respondents shall pay for medical treatment related to claimant's cervical myelopathy, including the cervical surgery performed on December 20, 2016.

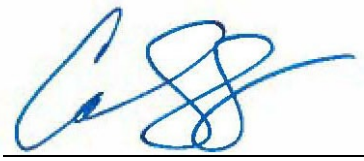
2. Respondents shall pay for medical treatment related to claimant's urological symptoms, including catheter supplies.

3. The ALJ adopts the stipulation of the parties regarding claimant's AWW. Therefore, Claimant's AWW is $1,106.10 for the period of January 16, 2015 through and including July 31, 2015; and is $1,347.24 beginning August 1, 2015 and ongoing until terminated by law.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

Dated: May 1, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that physical therapy treatment she received from Fyzical Therapy and Balance Centers between April 25, 2017 and October 31, 2017, is reasonable and authorized medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 6, 2016 work injury.

- Whether the claimant has demonstrated by a preponderance of the evidence that dental treatment she received from Laurie Stein, DDS is reasonable and authorized medical treatment necessary to cure and relieve the claimant from the effects of the admitted June 6, 2016 work injury.

- Whether the claimant has demonstrated by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits for the period of August 1, 2016 through November 1, 2017.

FINDINGS OF FACT

1. The claimant was employed with the employer on a part-time basis as an in-house accountant. The claimant testified that her job duties were primarily sedentary in nature. At times the claimant also assisted with pouring wine in the employer's tasting room and at special events.

2. On June 6, 2016, the claimant was involved in a motor vehicle accident (MVA) while returning from the bank for the employer. The respondents have admitted for the June 6, 2016 work injury. The claimant testified that at the time of the MVA she believed that her neck and low back were injured.

3. Immediately following the MVA, the claimant received treatment at Community Hospital. While she was at Community Hospital on June 6, 2016, computed tomography (CT) scans were taken of the claimant's cervical and lumbar spines. The CT scan of the claimant's cervical spine showed no acute change and no fracture. The CT scan of claimant's lumbar spine showed no fractures. However, there was evidence of arthritic changes and some circumferential narrowing of the neural canal at the lower four lumbar levels.

4. During this claim, the claimant's authorized treating provider (ATP) has been Work Partners. The claimant was primarily seen at Work Partners by Erica Herrera, PA, and on one occasion the claimant was seen by Dr. Laurie Marbas.

5. The claimant testified that Ms. Herrera referred her to medical treatment that has included exercise treatment and massage therapy at Work Partners and physical therapy with Sean Richardson, PT with Fyzical Therapy and Balance Centers. The claimant began physical therapy with Mr. Richardson on August 18, 2016.

6. The claimant testified that following the MVA she continued to work for the employer in her regular position. The claimant also testified that due to the pain she had in her low back, it was necessary for her to get up and walk or stretch every 30 minutes while at work. The employer was willing to accommodate the claimant in this way.

7. The claimant was placed at maximum medical improvement (MMI) on November 8, 2016 by Ms. Herrera (with the agreement of Dr. Marbas). Ms. Herrera also determined that the claimant had suffered no impairment rating and required no permanent work restrictions. Ms. Herrera recommended maintenance medical treatment that included six addition physical therapy visits with Mr. Richardson over the next six months.

8. The claimant testified that close in time to being placed at MMI a piece of one of her teeth "came off". The claimant also testified that she was scheduled to see her dentist, Dr. Laurie Stein on November 15, 2016 for her normal dental check-up. As she was already scheduled to see Dr. Stein, the claimant addressed the broken tooth at that appointment.

9. When the claimant was seen by Dr. Stein on November 15, 2016, x-rays showed that the claimant had fractured her #5 tooth and her #20 tooth. Dr. Stein opined that the MVA on June 6, 2016 caused these fractures. In support of this opinion Dr. Stein noted that shortly before the MVA the claimant was seen at her office and the two teeth in question were not fractured. In addition, for these fractures to occur the teeth would have to sustain a "sharp trauma".

10. At the recommendation of Dr. Stein the claimant has undergone dental treatment that has included a crown restoration and dental implants for the teeth damaged in the MVA. The claimant has paid out of pocket for this dental treatment and is requesting reimbursement.

11. On May 1, 2017, the respondents filed a Final Admission of Liability (FAL) admitting for the MMI date of November 8, 2016, no impairment rating, and reasonable and necessary post-MMI medical treatment and/or medication. The claimant timely contested the FAL and requested a Division-sponsored independent medical examination (DIME).

12. On July 25, 2017, the claimant attended a DIME with Dr. James McLaughlin. In connection with the DIME, Dr. McLaughlin reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his DIME report, Dr. McLaughlin opined that the June 6, 2016 MVA aggravated the claimant's preexisting back condition and that the claimant was not at

MMI. Dr. McLaughlin also opined that the fractures to the claimant's teeth were likely caused by the June 6, 2016 MVA.

13. Although he found that the claimant was not at MMI, Dr. McLaughlin assessed a provisional permanent impairment. For the claimant's cervical spine, he assessed a whole person impairment rating of 12%. For the claimant's lumbar spine, he assessed a whole person impairment rating of 10%. This combined for a total impairment rating of 21% whole person. Dr. McLaughlin also recommended permanent work restrictions to sit and stand as needed, limited bending, and no lifting over 30 pounds. In addition, Dr. McLaughlin recommended claimant continue physical therapy to achieve MMI. He opined that six to twelve visits would be sufficient. Finally, Dr. McLaughlin recommended claimant undergo a magnetic resonance image (MRI) of her lumbar spine.

14. Based upon Dr. McLaughlin's DIME report, the respondents filed a General Admission of Liability (GAL) on September 15, 2017 recognizing that the claimant was not at MMI and admitting for additional medical benefits.

15. On November 2, 2017, the claimant returned to Work Partners and was seen by Dr. Lori Fay. Dr. Fay agreed with the opinions of Dr. McLaughlin that the claimant was not at MMI and that her dental issues were related to the work injury. At that time, Dr. Fay assigned the claimant work restrictions that included working no more than four hours per day, sitting and standing as tolerated, and no lifting, carrying, pushing, or pulling over 15 pounds. In addition, Dr. Fay ordered an MRI of the claimant's lumbar spine and referred the claimant back to Mr. Richardson for physical therapy. Dr. Fay also referred the claimant to Dr. Stein for treatment of her fractured teeth.

16. Based upon the November 2, 2017 medical report from Dr. Fay, the respondents filed an amended GAL on November 14, 2017. In the amended GAL, the respondents admitted for temporary total disability (TTD) benefits beginning on November 2, 2017.

17. On November 21, 2017, an MRI of the claimant's lumbar spine showed degenerative disc and facet disease at various levels. In addition, it was noted that there was grade 1 anterior listless of L4 on L5 and L5 on S1, which was similar to claimant's prior CT scan.

18. On November 27, 2017, the claimant returned to Dr. Fay and reported aching, sharp and, and stabbing pain in her low back that was made worse by sitting, standing, and riding in a car. The claimant also reported that she felt that her pain was getting worse. At that time, Dr. Fay referred the claimant to Dr. Kirk Clifford for an orthopedic consultation.

19. The claimant was first seen by Dr. Clifford on December 27, 2017. Dr. Clifford noted that despite physical therapy, the claimant has significant debilitating symptoms with pain radiating down the right thigh into the lateral calf and foot. At that

time, Dr. Clifford diagnosed grade 1 spondylolisthesis at L4-5 and grade 2 spondylolisthesis at L4-S1 as well as stenosis at the L4-5 level. Dr. Clifford recommended that the claimant undergo right sided L4-5, L5-S1 transforaminal epidural steroid Injections. The recommended injections were administered by Dr. Clifford on January 11, 2018.

20. Between the claimant's original MMI date of November 8, 2016 and returning to Work Partners on November 2, 2017, the claimant was unable to schedule an appointment with Work Partners. The claimant testified that Work Partners refused to schedule an appointment because her case was "closed". As a result, the claimant was unable to obtain a referral for additional physical therapy. The claimant continued physical therapy treatment with Mr. Richardson during that time. The claimant testified that she chose to continue physical therapy treatment with Mr. Richardson because her back pain was increasing.

21. In addition to the recommended maintenance medical treatment of six sessions, the claimant was seen at Fyzical Therapy and Balance Centers between April 25, 2017 and October 31, 2017. The claimant paid out of pocket for these physical therapy visits. The claimant is requesting reimbursement for these visits.

22. At the request of the respondents, the claimant attended an independent medical examination (IME) with Dr. Albert Hattem on February 21, 2018. Dr. Hattem reviewed the claimant's medical records, obtained a medical history, and conducted a physical examination. In his IME report, Dr. Hattem opined that the claimant had reached MMI as of the date of the IME on February 21, 2018. He also opined that injury to the claimant's cervical spine was a sprain that had resolved by August 4, 2016. As a result, when assessing a permanent impairment rating, Dr. Hattem only assessed claimant's lumbar spine.

23. Dr. Hattem assessed a 15% whole person permanent impairment rating for claimant's lumbar spine. He also recommended permanent work restrictions of "light level of work" with the ability to sit, stand, and stretch for five minutes every hour, and avoid repetitive bending or twisting at the waist. In his IME report, Dr. Hattem does not address any opinion regarding the causation of the claimant's dental issues.

24. The respondents have denied the requested dental treatment with Dr. Stein. The respondents have also denied the claimant's physical therapy treatment from April 25, 2017 through October 31, 2017.

25. The claimant testified that in August 2016 the employer sold the business and the claimant's employment ended. The claimant has not returned to work since that time. The claimant also testified that because of the June 6, 2016 MVA she is unable to work. Specifically, she is unable to sit for more than 20 or 30 minutes and is unable to stand for more than 20 to 30 minutes. The claimant also testified that the injuries she sustained in the MVA have negatively impacted her daily living. For example, the claimant testified that she enjoys cooking, but because she is unable to stand for long periods she is unable to cook like she did previously. Similarly, the

claimant is unable to complete housekeeping tasks. The claimant testified that her hobbies have also been impacted because she is unable to sit for long periods in a kayak and cannot use a 4-wheeler on bumpy roads.

26. The claimant's spouse provided testimony at hearing that was consistent with the claimant's testimony. In addition, the claimant's spouse testified that because of her injuries the claimant is unable travel great distances because she cannot sit for long periods of time.

27. The ALJ credits the claimant's testimony, the medical records, and the opinion of Dr. Fay and finds that claimant has demonstrated that it is more likely than not that the physical therapy that the claimant continued to receive between April 25, 2017 and October 31, 2017 was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

28. The ALJ credits the claimant's testimony and the medical records and finds that physical therapy treatment with Mr. Richardson was within the chain of referrals even after claimant was placed and MMI and during the DIME process. The ALJ finds that claimant has demonstrated that it is more likely than not that the continued physical therapy treatment claimant received between April 25, 2017 and October 31, 2017 was authorized medical treatment.

29. The ALJ credits the claimant's testimony, the dental records, and the opinions for Drs. Stein, McLaughlin, and Fay and finds that the claimant has demonstrated that it is more likely than not that at the time of the June 6, 2016 MVA claimant's #5 tooth and #20 tooth were fractured. The ALJ further credits the dental records and finds that the claimant has demonstrated that it is more likely than not that the dental treatment recommended and performed by Dr. Stein is reasonable medical treatment necessary to cure and relive the claimant from the effects of the work injury.

30. The ALJ credits the claimant's testimony and the medical records and finds that claimant has demonstrated that it is more likely than not that claimant's dental treatment with Dr. Stein is authorized medical treatment.

31. The ALJ credits the claimant's testimony and the medical records and finds that claimant has demonstrated that she suffered a wage loss during the period of August 1, 2016 through November 1, 2017. The claimant's employment with the employer ended on August 1, 2016 when the business was sold. The claimant's injuries from the MVA and the related work restrictions prevent her from obtaining new employment. Although claimant was released to "full duty" by Ms. Herrera, it is undisputed that the claimant's work for the employer was sedentary in nature and claimant had to make accommodations to continue in her employment with employer following the MVA.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008).

5. When the authorized treating physician refers the claimant to another health care provider, the treatment rendered by the referred provider is compensable as part of the legal chain of authorization. *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026, 1029 (Colo. App. 1993) (*citing Greager v. Industrial Commission,* 701 P.2d 168 (Colo. App. 1985)).

6. Section 8-42-101(6)(b), C.R.S. states in pertinent part:

> If a claimant has paid for medical treatment that is admitted or found to be compensable and that costs more than the amount specified in the workers' compensation fee schedule, the employer or, if insured, the employer's insurance carrier, shall reimburse the claimant for the full

amount paid. The employer or carrier is entitled to reimbursement from the medical providers for the amount in excess of the amount specified in the worker's compensation fee schedule.

7. As found, the claimant has demonstrated by a preponderance of the evidence that the physical therapy treatment she continued to receive between April 25, 2017 and October 31, 2017 was reasonable medical treatment necessary to cure and relieve claimant form the effects of the work injury. As found, the claimant's testimony, the medical records and the opinion of Dr. Fay are credible and persuasive.

8. As found, the claimant has demonstrated by a preponderance of the evidence that the physical therapy treatment she continued to receive between April 25, 2017 and October 31, 2017 was authorized medical treatment. As found, the claimant's testimony and the medical records are credible and persuasive.

9. As found, the claimant has demonstrated by a preponderance of the evidence that her #5 tooth and #20 tooth were injured in the MVA. As found, he claimant has demonstrated by a preponderance of the evidence that the dental treatment recommended and performed by Dr. Stein is reasonable and authorized medical treatment necessary to cure and relive the claimant from the effects of the work injury. As found, the claimant's testimony, the dental records, and the opinions for Drs. Stein, McLaughlin, and Fay are credible and persuasive.

10. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

11. As found, the claimant has demonstrated by a preponderance of the evidence that she suffered a loss of wages during the period of August 1, 2016 through November 1, 2017. Therefore, she is entitled to TTD benefits during that time. As found, the claimant's testimony and the medical records are credible and persuasive.

ORDER

It is therefore ordered that:

1. The respondents shall reimburse the claimant for her out of pocket payment for physical therapy treatment between April 25, 2017 and October 31, 2017.

2. The respondents shall reimburse the claimant for her out of pocket payment for dental treatment with Dr. Stein related to the work injury.

3. The respondents shall pay claimant temporary total disability (TTD) benefits for the period of August 1, 2016 through November 1, 2017.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

Dated: May 1, 2018

Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that maintenance medical treatment recommended by Dr. Lori Fay is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI).

FINDINGS OF FACT

1. The claimant was employed with the employer on the project team. The claimant's job duties included setting up displays in the employer's retail locations. The claimant testified that these job duties would often involve moving and lifting heavy items.

2. On October 2, 2015, the claimant suffered an admitted injury while he was installing a display. Claimant testified that a large piece of shelving fell and struck him in the forehead resulting in a laceration. The claimant immediately obtained medical treatment at the emergency department (ED) at St. Mary's Hospital.

3. While treating at St. Mary's Hospital on October 2, 2015, the claimant reported that he did not lose consciousness, but had symptoms that included severe headache, lightheadedness, and nausea.

4. On October 2, 2015, computed tomography (CT) scans were taken of the claimant's head cervical spine. Both CT scans were read as normal. On that date, Dr. Holly Buschhorn diagnosed claimant with a cervical strain and a concussion.

5. During this claim the claimant's authorized treating provider (ATP) has been Work Partners. The claimant was first seen at Work Partners by Erica Herrera, PA on October 5, 2015. At that time, the claimant described the injury and reported that he did not lose consciousness. The claimant also reported that he was experiencing a pressure headache and issues with short term memory. Ms. Herrera diagnosed the claimant with a mild traumatic brain injury/concussion. Ms. Herrera advised the claimant that his symptoms were "very common for this type of injury" and recommended that the claimant rest and avoid nicotine and caffeine.

6. The claimant returned to the ED on October 10, 2015 and reported that his headache had gotten worse since the injury. Dr. Brent Fowler diagnosed post concussive syndrome and advised the claimant that his symptoms were appropriate for his injury. On that date, a second head CT was performed that showed no acute intracranial pathology.

7. On October 12, 2015, the claimant was again seen by Ms. Herrera. The claimant reported to Ms. Herrera that he continued to experience headaches, dizziness, and memory issues. Ms. Herrera noted that the claimant's post concussive symptoms did not seem to be improving. At that time, Ms. Herrera referred the claimant for evaluation by a neurologist. Subsequently, Ms. Herrera referred the claimant specifically to neurologist, Dr. Joel Dean.

8. Other treatment modalities recommended for the claimant throughout this claim have included pain medications, physical therapy, acupuncture, and injections.

9. The claimant was first seen by Dr. Dean on November 11, 2015. The claimant reported to Dr. Dean that he had headaches that were "throbbing" as well as dizziness and issues with memory and concentration. Dr. Dean diagnosed the claimant with post concussive syndrome and post traumatic headache with migraine features and recommended that the claimant undergo neuropsychological screening. In addition, Dr. Dean opined that a magnetic resonance image (MRI) scan of the claimant's brain was not necessary.

10. Based upon Dr. Dean's recommendation, on January 6, 2016, the claimant was seen by Dr. Dale Bowen for neuropsychological testing. Dr. Bowen diagnosed the claimant with mild neurocognitive disorder due to the traumatic brain injury without behavioral disturbance. Dr. Bowen recommended that the claimant undergo speech therapy and cognitive retraining therapy.

11. On April 26, 2016, the claimant was seen at Work Partners by Dr. Craig Gustafson. The claimant reported that he continued to have headaches and acupuncture made his symptoms worse. Dr. Gustafson noted that the claimant's pain was "going in the right direction" but that the claimant continued to have memory problems. Dr. Gustafson also opined that although he expected the claimant's symptoms to improve, sometimes these symptoms can be "chronic".

12. Thereafter, the claimant continued to treat with providers at Work Partners and with Dr. Dean. On February 3, 2017, Ms. Herrera opined that the claimant was nearing maximum medical improvement (MMI) and referred the claimant to Dr. Lori Fay.

13. On February 17, 2017, the claimant was seen by Dr. Fay. At that time, the claimant reported that he continued to have "stabbing" headaches. He also reported that he felt that physical therapy was making his symptoms worse. Dr. Fay noted that despite this report by the claimant, she was hopeful that physical therapy would ultimately improve the claimant's pain. She also recommended claimant undergo injections and made a referral to Colorado Injury and Pain Specialists.

14. On March 10, 2017, the claimant was seen by Dr. Ashish Chavda with Colorado Injury and Pain Specialists. Dr. Chavda opined that the claimant's headaches could be multifactorial including neuralgia of the supraorbital and greater auricular nerves as well as some cervicogenic component. Dr. Chavda recommended that the claimant continue his physical therapy. In addition, Dr. Chavda recommended that the

claimant undergo bilateral nerve blocks of the supraorbital and auriculars. The claimant declined these injections.

15. On April 14, 2017, claimant attended physical therapy with Kelly Winkel, DPT and reported that he had not had any reduction in his headaches and that they "still occur just as frequently and intensely".

16. On April 21, 2017, the claimant returned to Dr. Fay. The claimant reported that he continued to have stabbing and sharp headaches. The claimant again reported to Dr. Fay that he felt that physical therapy treatment was causing his symptoms to worsen. On that date, Dr. Fay administered suboccipital trigger point injections in an attempt to relieve the claimant's headaches.

17. On June 2, 2017, the claimant returned to Dr. Bowen and underwent a second round of neuropsychological testing. Following that testing, Dr. Bowen noted that the claimant's test findings fell within normal limits and are consistent with the claimant's baseline ability level for cognitive and psychological functioning.

18. On June 9, 2017, the claimant was seen by Dr. Fay and reported that his symptoms of headache, dizziness, light sensitivity, and memory loss were unchanged. He also reported that he felt that speech therapy and cognitive therapy were not helpful with his memory issues. The claimant also reported that he was "not sure if [physical therapy] was helping". Dr. Fay noted in the medical record of June 9, 2017, that the claimant had tried various medications, but they either did not help, or caused side effects. Dr. Fay also noted that the subocciptal trigger point injections worsened the claimant's headaches. Despite his continuing symptoms, the claimant reported to Dr. Fay that he was able to attend school and was doing well in that program.

19. On that same date, Dr. Fay placed the claimant at MMI and assessed permanent impairment rating of 15% whole person based on the claimant's "episodic headaches from his head injury". Dr. Fay did not assign any permanent restrictions. At the time of MMI time, Dr. Fay recommended that the claimant receive up to three years of maintenance medical treatment including follow up with Work Partners, neuropsychiatric testing, neurology follow up, up to six physical therapy visits per year, and possible injections.

20. On September 21, 2017, the claimant attended a Division-sponsored independent medical examination (DIME) with Dr. Gareth Shemesh. In connection with the DIME, Dr. Shemesh reviewed the claimant's medical records, obtained a history, and completed a physical examination of the claimant. In his report, Dr. Shemesh agreed that the claimant had reached MMI on June 9, 2017. In addition, Dr. Shemesh agreed that the claimant suffered a permanent impairment, and assessed a whole person impairment of 15% due to the claimant's consistent headaches and cognitive difficulties. However, Dr. Shemesh did not agree with Dr. Fay's recommendations for maintenance medical treatment. In his DIME report, Dr. Shemesh noted that the claimant's condition had stabilized and opined that further medical treatment would not likely improve the claimant's condition.

21. Dr. Shemesh's testimony at hearing was consistent with his written report. Dr. Shemesh testified that a mild traumatic brain injury like the one sustained by the claimant will typically stabilize within six to twelve months. Dr. Shemesh noted that Dr. Bowen's testing of the claimant indicated that the claimant was within normal limits in June 2017.

22. On December 6, 2017, the respondents filed a Final Admission of Liability (FAL) admitting for the MMI date of June 9, 2017 and the impairment rating of 15% whole person. Based upon Dr. Shemesh's report, the respondents did not admit for maintenance medical treatment.

23. The claimant testified that he continues to have "ice pick" headaches and issues with short term memory. The claimant also testified that he is currently working full time as an apprentice plumber, despite these ongoing symptoms.

24. The claimant testified that physical therapy treatment would "trigger" his headaches. As the ALJ understands the claimant's testimony, by triggering headaches, the physical therapy had the effect of lessening the occurrence of the claimant's headaches. However, the medical records indicate that the claimant told his medical providers that he felt that physical therapy was making his symptoms worse.

25. The claimant's spouse provided testimony at hearing that was consistent with the claimant's testimony.

26. The ALJ credits the medical records and the opinion of Dr. Shemesh over the contrary opinion of Dr. Fay and finds that the claimant has failed to demonstrate that it is more likely than not that the recommended post-MMI medical treatment will prevent further deterioration of the claimant's physical condition. On the contrary, the ALJ finds that it is more likely that the recommended medical treatment, particularly injections and physical therapy, will have the effect of worsening the claimant's condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

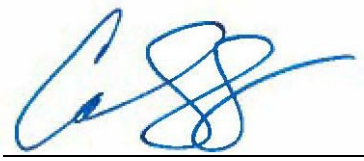
3. The need for medical treatment may extend beyond the point of maximum medical improvement where claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra.*

4. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the recommended post-MMI medical treatment will prevent further deterioration of the claimant's physical condition. As found, it is more likely that the recommended treatment will worsen the claimant's condition. As found, the medical records and the opinion of Dr. Shemesh are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for maintenance medical treatment is denied and dismissed.

Dated: May 10, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she is now entitled to additional medical benefits to cure and relieve the effects of her January 21, 2015 work injury?

II. Has Claimant shown, by a preponderance of the evidence, that she is now entitled to maintenance medical benefits (*Grover* medical benefits), to maintain her MMI status, which had been reached on February 4, 2015?

STIPULATIONS

The parties stipulated that if such medical benefits are awarded, they would be paid according to the established Workers Compensation Fee Schedule. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant was working for Employer as a front end supervisor, operating a checkout cash register on January 21, 2015, when she was struck in the lower back by an empty shopping cart being moved behind her by a co-worker. Claimant reported this claim to Employer on January 23, 2015 (Ex. F).

2. Claimant testified that she initially tried to take care of her symptoms of pain by resting, and taking Tylenol, while she had two days scheduled time off of work. Claimant then presented to the emergency room at Parkview Medical Center ("Parkview") on January 23, 2015, at 3:04 p.m. (Ex. B, pp. 29-30). She reported pain on the right side of her low back. X-ray films ruled out fracture or subluxation, and revealed no acute injury. The X-rays did show "*Chronic severe* L5-S1 intervertebral disc degeneration." (Ex. B, p. 34) (emphasis added).

3. The emergency room's assessment was, "Symptoms are likely due to localized inflammation where the patient was struck." Claimant had also been unknowingly exacerbating her symptoms by using heat packs to her low back area (*Id* at p. 31). She was given one dose of morphine, and a single oral dose of oxycodone-acetaminophen. Claimant was discharged in good condition, with the diagnosis of, "[A] low back contusion." (*Id* at. 31) Claimant continued to work for Employer at her regular job and missed no time from work due to this claim's injury.

4. Claimant's first appointment at CCOM was on January 26, 2015. She said

her symptoms were improving. Mr. Steven Byrne, P.A.-C., said Parkview's examination of Claimant on January 23, 2015, "[W]as essentially negative and the diagnosis was a contusion to the low back." Claimant could move without difficulty, and her exam was, "[M]ildly positive for discomfort." She walked and moved without difficulty. P.A. Byrne thought claimant would reach MMI by her next appointment on February 4, 2015, and gave her no restrictions. He told her to take Motrin as needed (Ex. A, pp. 1-9).

5. Claimant returned to CCOM on February 4, 2015. She said her pain was better, and was now a 2 on a 10-point pain scale. She could work her normal duties without difficulty, and, "[S]he says she has a slight twinge of discomfort occasionally but overall is improved and back to normal." Claimant said she could twist, walk, and bend without difficulty. She moved normally in the exam, and provocative tests were all negative. Claimant reported she was, "[F]eeling considerably better and able to do her normal work without any difficulty." (Ex. A, p. 10).

6. Claimant said, "[She is feeling remarkably improved and has minimal if any discomfort. She'll do her normal work without any difficulty. She can twist and walk without any pain. She feels that she is read[y] to be release to return to normal work." (*Id* at 12). Claimant's diagnosis was a low back contusion, and she was discharged at MMI, without impairment, without restrictions, and with no need for maintenance medical treatment. Dr. Daniel Olson at CCOM agreed with P.A. Byrne's assessments and conclusions (Ex. A, p. 15).

7. Douglas Scott, M.D. evaluated Claimant to assess her low back condition on January 5, 2016, for a similar incident which reportedly occurred on July 16, 2015. He concluded Claimant had a, "[M]inor soft tissue" contusion from the January 21, 2015, incident that, "[R]esolved very quickly." (Ex. C, p. 61) Dr. Scott said Claimant did not require any further medical treatment for her January 21, 2015, injury, and that there was no need for any maintenance medical treatment for this claim's injury (Ex. C, p. 62).

8. At hearing, Claimant admitted that she began taking Mobic in 2012, and that she had experience chronic low back pain for five years before she saw Dr. Michelle Duran on December 6, 2009. She would take Tylenol, Aleve, and Ibuprofen for her back pain since 2004. She testified that she did limit her activities and was careful to avoid activities and tasks that would make her back pain worse since 2004. She testified that she carried heavy items while working at Walgreens' store, and cited this job when explaining her prior low back pain. Claimant in her direct examination testified that her pain in her low back had been ongoing, never being pin-free since January 21, 2015, with low back pain rated as "2" to "8" on a 10-point pain scale daily leading up to her second injury of 7/16/15.

9. However, while pursuing a claim for the alleged similar subsequent incident which reportedly occurred on 7/16/15 (which was subsequently denied after a hearing), Claimant provided answers to interrogatories (Ex. O). Interrogatory #9 yielded the following question and answer:

Q: Please disclose and describe in detail all the symptoms you experienced in or about the body parts allegedly injured in this claim at any time before your injury alleged in this claim occurred for any reason. In your answer, state the symptoms you had, why and how the symptoms arose, how you addressed and treated the symptoms, how the symptoms affected your activities and work, and medical treatment you received for the symptoms, how long the symptoms lasted, and the full name and address of any medical providers you saw for treatment for evaluation of the symptoms disclosed in your answer to this interrogatory.

A: I had *mild* back pain and stiffness due to a similar incident that occurred on *January 21, 2015*, when I was struck with a shopping cart by another co-worker. I was having a *slight twinge* of discomfort *occasionally.* (emphasis added).

10. On December 6, 2009, Claimant saw Michelle Duran, M.D. at Touchstone Health West. Claimant complained at this time of pain in her hips, knees, ankles, and toes, and said, "She is having back pain." She was referred for lab tests including Rheumatoid factor. (Ex. E, pp. 76-77). Claimant had an x-ray of her lumbosacral spine on December 29, 2009. That exam revealed degenerative disc disease at L5-S1 (Ex. E, p. 78).

11. On December 21, 2012, Claimant returned to Touchstone Health West, saying she had pain in her legs every day, and arthritis in her spine. Her pain was getting worse, and had been a problem for the past five years. She was taking 7.5 mg of Mobic, and Dr. Debra Jean McCormack told her to try Celebrex instead for her arthritis pain. Dr. McCormack's diagnoses included chronic osteoarthritis. (Ex. E, pp. 79-82).

12. On July 8, 2013, Claimant told her provider, Mr. Terry Schwartz, P.A.-C. at Southern Colorado Clinic, P.C., "'[m]y spine hurts.'" She reported tenderness in upper lumbar region. (Ex. D, pp. 64-66). On January 29, 2014, Claimant told Ms. Deborah Lynn Chase, F.N.-P. at Touchstone Health West that she was having "Ache, Constant" in many areas of her body including specifically her back, hand, hip, neck and knees. The duration of these pains had been, "Chronic. Years." (Ex. E, p. 84). When Ms. Chase examined her spine, ribs, and pelvis she noted decreased range of motion and decreased muscle strength/tone. Claimant claimed Celebrex she had been taking for her pain symptoms was causing swelling. She changed to an increased dose of Celexa (Ex. E, pp. 83-87).

13. Claimant surgical history showed a "Nerve block in back 2010," when she saw her personal medical provider Mr. Jack Hall, P.A.-C. at Parkview Family Medicine on May 27, 2015. She was back to taking Celebrex (Ex B, p. 35). The medical report authored by Mr. Hall from this visit does not mention this claim's injury, and Mr. Hall's report states Claimant had, "back pain radiating down legs, *no history of trauma*." (Resp. Ex. B, pg. 35). (emphasis added).

14. As noted, Claimant alleged she sustained another similar workplace injury on July 16, 2017. Medical records documenting that claim's medical treatment show Claimant's objective findings were inconsistent with the claimed injury, and that the mechanism of injury in that claim was unlikely to be responsible for her current symptomatology (Ex. A, pp. 22, 25). Dr. Scott opined in his report, and during his hearing testimony summarized in Exhibit N, that Claimant sustained a minor contusion that quickly resolved. Claimant's symptoms were instead due to, and explained by, her chronic, long-standing severe lumbar spine degenerative disease.

15. Claimant also underwent an MRI on June 13, 2015. This MRI confirmed Claimant had degenerative changes in her lumbar spine, including the L5-S1 disc and endplate changes (Ex. B, pg. 37). Claimant was referred by Dr. Hall to Jan G. Davis, M.D. Dr. Davis saw Claimant on June 13, 2016. Dr. Davis took an x-ray of claimant's lumbar spine, that was interpreted to show:

> ….Patient does have some degenerative changes at the lower 2 motion segments. There is flattening of the L5-S1 disc space and some disc osteophyte complex at that level. At L4-5, she is beginning to demonstrate a very slight degenerative spondylolisthesis. (Ex. B, p. 42).

16. Dr. Davis also viewed Claimant's lumbar spine MRI of June 13, 2015 and diagnosed Claimant with "Spondylosis of lumbar region without myelopathy or radiculopathy." Claimant did report that her low back symptoms were due to this claim, and also Claimant's subsequent injury of July 16, 2015. Dr. Davis, however, concluded Claimant's symptoms were due to her long-standing degenerative lumbar spine condition. He said Claimant's degenerative spondylolistheses was not due to this claim's injury. He wrote, "I did show her low-grade degenerative spondylolisthesis and made it very clear that I have never seen this entity occur as a result of recent trauma. This is well described as a purely degenerative condition." (Ex. B, p. 43). "We also went over her MRI scan. I showed her the small disc protrusion at L5-S1 and pointed out that this is on the left side of her spine which does not correlate well with the primary lower extremity symptoms going into her right leg." (*Id* at p. 43). Despite this discussion, at hearing on cross-examination, Claimant acknowledged that in her interrogatory answer #3 for this case, she stated that she had never sought treatment for her lower back prior to this injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The

facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

D. C.R.S. § 8-42-101 (1) (a) provides that Respondents shall furnish medical care and treatment reasonably necessary to cure and relieve the effects of the injury. Claimant bears the burden of proof of showing that medical benefits are causally related to his work-related injury or condition. *Ashburn v. La Plata School District 9R,* W.C. No. 3-062-779 (May 4, 2007). Therefore, Claimant is not entitled to medical care that is not causally related to her work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

E. To satisfy her burden of proof, Claimant must prove that the industrial accident is the proximate cause of claimant's need for medical treatment or disability. § 8-41-301 (1) (c), C.R.S. An industrial accident is the proximate cause of a Claimant's

need for medical treatment if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988) The question of whether Claimant had proven a causal relationship between employment and the alleged injury or disease is one of fact for determination of the ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997); *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App. 1995). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a Claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted, "[C]orrelation is not causation." Whether Claimant met the burden of proof to establish the requisite causal connection between the industrial injury and the need for medical treatment is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

F. The ALJ finds Claimant to be less than persuasive. When Claimant provided her interrogatory answers in her second Workers Comp claim, she stated quite clearly that the first incident (at issue herein) only caused mild back pain with a "slight twinge of discomfort occasionally." At hearing, Claimant stated that her pain levels between her first and second injury varied between a "2" and "8" out of 10, and that she was never pain free. In her interrogatory answers #3 for this claim, she stated that she had never before sought treatment for her back, despite being counseled by her physician about her degenerative lower back condition. When pressed for details, Claimant could only state that she could not recall. At one point in testimony, Claimant stated that her pain was worse after her second alleged injury, but that the pain from that second injury had now resolved.

G. The opinions of Claimant's medical providers at CCOM are found credible and persuasive. The ALJ finds Claimant had returned to her baseline for her contusion caused by the January 21, 2015, work incident covered by this claim on February 4, 2015, and all symptoms causally related to Claimant's January 21, 2015, injury had fully resolved by her MMI date of February 4, 2015. Claimant's injury causally related to the January 22, 2015, work incident covered by this claim was a lower back contusion only. This contusion had fully resolved without residual symptoms or need for medical treatment on February 4, 2015. Any need for continued medical treatment results from her low back symptoms, present since 2004, and her degenerative lumbar spine changes.

Maintenance Medical Benefits

H. The need for medical treatment may extend beyond the point of maximum medical improvement where Claimant requires periodic maintenance care to prevent further deterioration of her physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). An award for *Grover* medical benefits, also referred to as maintenance medical benefits, is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992

P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995).

I. A Claimant may receive maintenance medical benefits that are reasonable, necessary and related to relieve the effects of a claimant's industrial injury or prevent further deterioration of the claimant's condition. See §8-42-101(1) (a), C.R.S.; *Grover v. Industrial Commission*, *supra.* However, the burden of proof to establish entitlement to these benefits is on the Claimant. In order to receive such benefits, the Claimant must present substantial evidence that future medical treatment is or will be reasonably necessary to relieve the claimant from the effects of the injury or to prevent deterioration of the claimant's condition. See *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003); *Stollmeyer v. Industrial Claim Appeals Office, supra*. Section 8-42-101, C.R.S., authorizes the ALJ to enter an order for future treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission*, *supra* The question of whether the Claimant met the burden of proof to establish entitlement to maintenance medical benefits is one of fact for determination by the ALJ. Holly Nursing Care Center v. Industrial Claim Appeals Office, 992 P.2d 701 (Colo. App. 1999).

J. The ALJ finds that, as concluded above, Claimant requires no medical treatment to maintain her MMI status. She reached MMI on February 4, 2015, without need for any maintenance treatment. She was able to work without restrictions from the minor contusion causally related to this claim, and needs no further treatment for this January 21, 2015, work injury.

ORDER

It is therefore ordered that:

1. Claimant’s claim for any additional curative or maintenance medical benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 10, 2018

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits that are designed to relieve the effects of her May~~arch~~ 13~~19~~, 2016~~4~~ industrial injury or prevent further deterioration of her condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

2. Whether Claimant has made a "proper showing" for a change of physician to Katarzyna Kocol, M.D. pursuant to §8-43-404(5)(a), C.R.S.

FINDINGS OF FACT

1. Claimant worked as a Dental Technician for Employer. On May 13, 2016 Claimant was injured in a motor vehicle accident while returning to work after delivering dental supplies. Although Respondents initially contested the claim, Respondents filed a General Admission of Liability (GAL) on December 28, 2016.

2. Claimant initially received medical treatment from chiropractor Clinton Dickason, D.C. She reported neck and back symptoms as a result of the May 13, 2016 motor vehicle accident. Claimant had been receiving treatment from Dr. Dickason since 2013 for areas including the cervical and lumbar spines.

3. Claimant subsequently sought to designate J. Scott Bainbridge as her Authorized Treating Physician (ATP). Respondents approved the request and Claimant visited Dr. Bainbridge on September 19, 2016. Claimant reported injuries to her knees and left shoulder as well as "cervical and thoracolumbar pain." She specifically noted that her bilateral knee cap pain was aggravated by walking, standing and having her knees bent for a long time. A knee examination revealed left patellofemoral pain with compression that involved crepitus. The right knee produced less pain without crepitus. Dr. Bainbridge diagnosed patellofemoral disorder and prescribed medications.

4. On December 12, 2016 Claimant underwent MRI's of both knees. The left knee MRI revealed "Grade 2-3 patellar chondral softening and high-grade fissuring, likely extending to bone, along the median ridge and medial facet, with mild subchondral cystic change. Grade 2-3 inferior central and medial trochlear chondral thinning and probable fissuring to bone…" The right knee MRI reflected "Grade 2-3 patellar chondral softening with high-grade fissuring, possibly to bone, along the median ridge and medial facet. Grade 2-3 central trochlear chondral fissuring, possibly to bone…"

5. Claimant subsequently changed physicians to ATP John Hughes, M.D. On January 25, 2017 Claimant visited Dr. Hughes for an evaluation. Claimant reported

bilateral knee pain in the patellofemoral region that increased with walking. Dr. Hughes diagnosed right and left knee chondromalacia "probably stemming from" Claimant's May 13, 2016 motor vehicle accident. He did not provide treatment for Claimant's knees but referred her to Phillip Stull, M.D. for a surgical evaluation.

6. On March 7, 2017 Claimant visited Dr. Stull for an examination. Claimant recounted that she struck both of her knees on the dashboard during a work-related motor vehicle accident approximately one year earlier. She reported persistent bilateral knee pain behind her kneecaps. On physical examination Dr. Stull noted bilateral mild to moderate retropatella compression tenderness. After reviewing Claimant's MRI's and performing x-rays, Dr. Stull diagnosed patellofemoral arthritis and chondromalacia of both knees. He recommended conservative treatment in the form of injections and physical therapy.

7. On April 7, 2017 Dr. Hughes determined that Claimant reached Maximum Medical Improvement (MMI). Dr. Hughes remarked that Claimant had received no benefit from the physical therapy recommended by Dr. Stull and he did not have any other treatment recommendations. He noted that Claimant continued to suffer bilateral knee pain. Dr. Hughes diagnosed right and left chondromalacias patella. In addition to cervical and lumbar spine impairment ratings, Dr. Hughes assigned a 7% extremity rating for Claimant's right knee and a 10% rating for her left knee. The knee ratings were based on "traumatic chondromalacia patella" combined with loss of range of motion. Dr. Hughes released Claimant to full duty work and did not recommend medical maintenance treatment. He commented that Claimant did not wish to proceed with cervical spine injections and "there really is not that strong an indication to proceed with cervical spine injection-based treatment."

8. On May 17, 2017 Claimant underwent an independent medical examination with Marc Steinmetz, M.D. Dr. Steinmetz concluded that Claimant did not suffer any permanent impairment as a result of her May 13, 2016 motor vehicle accident. He noted that Claimant had provided inconsistent histories to multiple medical providers concerning pre-existing spinal issues and medication usage. Although Claimant exhibited loss of range of motion in both knees, the measurements conflicted with his observations. Thus, Dr. Steinmetz concluded that range of motion testing was invalid.

9. Respondents challenged Dr. Hughes' impairment determinations and sought a Division Independent Medical Examination (DIME). On September 5, 2017 Claimant underwent a DIME with Richard Stieg, M.D. Dr. Stieg agreed with Dr. Hughes that Claimant had reached MMI on April 7, 2017. He determined that Claimant's cervical and lumbar spine complaints constituted mild degenerative changes and were not related to her May 13, 2016 industrial injury. However, he diagnosed "bilateral osteoarthritis of the knees with bilateral patellofemoral chondromalacia." He specified that "the latter is related to [Claimant's] motor vehicle accident" of May 13, 2016. Dr. Stieg assigned a 26% extremity impairment rating for Claimant's right knee and a 29% extremity rating for her left knee. He did not recommend medical maintenance

treatment because Claimant "failed conservative therapy for her chondromalacia of the knees."

10. On October 31, 2017 Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Stieg's MMI and impairment determinations. The FAL specified that Claimant reached MMI on April 7, 2017 with a 26% scheduled impairment of the right knee and a 29% scheduled rating of the left knee. Respondents denied liability for medical maintenance benefits.

11. Claimant subsequently sought medical treatment outside of the Workers' Compensation system with her primary care physician. Her primary care physician referred her to Katarzyna Kocol, M.D. On July 17, 2017 Claimant visited Dr. Kocol for an examination. Claimant reported persistent neck, mid-back, lower back and bilateral knee pain that she attributed to her May 13, 2016 motor vehicle accident. Dr. Kocol remarked that Claimant had received corticosteroid injections into her knees "which did not provide any relief." After reviewing imaging studies, Dr. Kocol recommended medications, lumbar spine injections and physical therapy.

12. On August 21, 2017 Claimant returned to Dr. Kocol for an evaluation. Dr. Kocol noted that Claimant might require maintenance physical therapy, injections and pain management for the following two to three years.

13. Claimant continued to visit Dr. Kocol over the ensuing months. Dr. Kocol administered a series of three left and right knee injections. However, the knee injections did not provide any benefit. Claimant also received physical therapy during the period.

14. On December 8, 2017 Dr. Kocol responded to written questions from Claimant's attorney. Dr. Kocol confirmed that she was treating both of Claimant's knees for the effects of the May 13, 2016 work-related motor vehicle accident. She remarked "injections [with] conservative treatment are performed to treat pain associated with injuries."

15. Dr. Kocol referred Claimant to orthopedic surgeon Anthony Sanchez, M.D. for her knee injuries. On January 25, 2018 Claimant visited Dr. Sanchez for an evaluation. Dr. Sanchez noted that Claimant had been suffering bilateral knee pain since she struck her knees on a dashboard during a May 13, 2016 motor vehicle accident. After reviewing radiographic imaging Dr. Sanchez recommended bilateral "knee scopes with LR and medial plica excision since she has failed months of conservative treatments."

16. On February 9, 2018 Dr. Sanchez performed arthroscopic surgery on Claimant's knees. He removed medial plicas from both knees and noted grade 2 chondromalacia under Claimant's patellas. Dr. Sanchez also released the lateral retinaculum in both knees to improve patella tracking.

17. On March 6, 2018 Dr. Steinmetz issued an addendum report after reviewing supplemental medical records. He maintained that Claimant did not suffer

any permanent impairment as a result of her May 13, 2016 motor vehicle accident. Dr. Steinmetz agreed that Claimant reached MMI on April 7, 2017 and did not require any medical maintenance treatment.

18. Claimant testified at the hearing in this matter. She explained that her surgeries have helped her knees. Specifically, Claimant no longer suffers sharp, shooting pain when walking. She summarized that her knees are approximately 80% better than before her February 9, 2018 surgery.

19. Dr. Steinmetz also testified at the hearing in this matter. He reiterated that Claimant reached MMI on April 7, 2017 and did not require medical maintenance treatment. Dr. Steinmetz noted that the Plica conditions found by Dr. Sanchez were not present on Claimant's December 1, 2016 MRI and multiple providers had not made the diagnosis. Moreover, the chronic, degenerative changes of the chondromalacia were not caused by the May 13, 2016 motor vehicle accident. Dr. Steinmetz summarized that Claimant's current care for her knees is not reasonable, necessary or causally related to her work-related motor accident.

20. Claimant has failed to demonstrate that it is more probably true than not that she is entitled to receive reasonable, necessary and related medical maintenance benefits that are designed to relieve the effects of her May~~arch~~ 13~~19~~, 2016~~4~~ industrial injury or prevent further deterioration of her condition. The bulk of the persuasive medical records reflect that medical maintenance treatment is not warranted. Initially, in addition to cervical and lumbar spine impairment ratings, Dr. Hughes assigned a 7% extremity rating for Claimant's right knee and a 10% rating for her left knee. The knee ratings were based on "traumatic chondromalacia patella" combined with loss of range of motion. However, Dr. Hughes released Claimant to full duty work and did not recommend medical maintenance treatment. Furthermore, DIME Dr. Stieg agreed with Dr. Hughes that Claimant had reached MMI on April 7, 2017. He determined that Claimant's cervical and lumbar spine complaints constituted mild degenerative changes and were not related to her May 13, 2016 industrial injury. However, he diagnosed "bilateral osteoarthritis of the knees with bilateral patellofemoral chondromalacia." He specified that "the latter is related to [Claimant's] motor vehicle accident" of May 13, 2016. Although Dr. Stieg assigned extremity impairment ratings for Claimant's knees, he did not recommend medical maintenance treatment because Claimant "failed conservative therapy for her chondromalacia of the knees." Finally, Dr. Steinmetz also agreed that Claimant reached MMI on April 7, 2017 and did not require medical maintenance treatment. Dr. Steinmetz noted that the Plica conditions found by Dr. Sanchez were not present on Claimant's December 1, 2016 MRI and multiple providers had not made the diagnosis. Moreover, the chronic, degenerative changes of the chondromalacia were not caused by the May 13, 2016 motor vehicle accident. Dr. Steinmetz summarized that Claimant's current care for her knees is not reasonable, necessary or causally related to her work-related motor accident.

21. In contrast, Dr. Kocol noted that Claimant might require maintenance physical therapy, injections and pain management for the following two to three years. Moreover, Dr. Sanchez performed surgery on both of Claimant's knees and removed

medial plicas. Claimant explained that the surgeries have helped her knees. Specifically, she no longer suffers sharp, shooting pain when walking. However, the persuasive medical evidence from Drs. Hughes, Stieg and Steinmetz demonstrates that medical maintenance treatment is not reasonable or related to Claimant's work-related motor vehicle accident. Accordingly, Claimant's request for medical maintenance benefits is denied and dismissed.

22. Claimant has failed to make a proper showing for a change of physician to Dr. Kocol. The record reflects that Claimant is requesting her third change of physician. She previously requested changes to Dr. Bainbridge and later to Dr. Hughes. Respondents authorized both requests. Claimant has failed to produce persuasive evidence that she reasonably developed a mistrust of Dr. Hughes. She has also failed to produce sufficient evidence that Dr. Hughes provided inadequate care or otherwise rendered unreasonable care. Disagreement and dissatisfaction with Dr. Hughes' diagnosis are insufficient to constitute a proper showing warranting a change of physician. Accordingly, considering Claimant's need for reasonable and necessary medical treatment while protecting Respondents' interest in being apprised of the course of treatment for which it may ultimately be liable, Claimant's request for a change of physician to Dr. Kocol is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical Maintenance Benefits

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she is entitled to receive reasonable, necessary and related medical maintenance benefits that are designed to relieve the effects of her May~~arch~~ 13~~19~~, 2016~~4~~ industrial injury or prevent further deterioration of her condition. The bulk of the persuasive medical records reflect that medical maintenance treatment is not warranted. Initially, in addition to cervical and lumbar spine impairment ratings, Dr. Hughes assigned a 7% extremity rating for Claimant's right knee and a 10% rating for her left knee. The knee ratings were based on "traumatic chondromalacia patella" combined with loss of range of motion. However, Dr. Hughes released Claimant to full duty work and did not recommend medical maintenance treatment. Furthermore, DIME Dr. Stieg agreed with Dr. Hughes that Claimant had reached MMI on April 7, 2017. He determined that Claimant's cervical and lumbar spine complaints constituted mild degenerative changes and were not related to her May 13, 2016 industrial injury. However, he diagnosed "bilateral osteoarthritis of the knees with bilateral patellofemoral chondromalacia." He specified that "the latter is related to [Claimant's] motor vehicle accident" of May 13, 2016. Although Dr. Stieg assigned extremity impairment ratings for Claimant's knees, he did not recommend medical maintenance treatment because Claimant "failed conservative therapy for her chondromalacia of the knees." Finally, Dr. Steinmetz also agreed that Claimant reached MMI on April 7, 2017 and did not require medical maintenance treatment. Dr. Steinmetz noted that the Plica conditions found by Dr. Sanchez were not present on Claimant's December 1, 2016 MRI and multiple providers had not made the diagnosis. Moreover, the chronic, degenerative changes of the chondromalacia were not caused by the May 13, 2016 motor vehicle accident. Dr. Steinmetz summarized that Claimant's current care for her knees is not reasonable, necessary or causally related to her work-related motor accident.

6. As found, in contrast, Dr. Kocol noted that Claimant might require maintenance physical therapy, injections and pain management for the following two to three years. Moreover, Dr. Sanchez performed surgery on both of Claimant's knees and removed medial plicas. Claimant explained that the surgeries have helped her knees. Specifically, she no longer suffers sharp, shooting pain when walking.

However, the persuasive medical evidence from Drs. Hughes, Stieg and Steinmetz demonstrates that medical maintenance treatment is not reasonable or related to Claimant's work-related motor vehicle accident. Accordingly, Claimant's request for medical maintenance benefits is denied and dismissed.

Change of Physician

7. A claimant is not entitled to medical treatment by a particular physician. *Colorado Compensation Insurance Authority v. Nofio,* 886 P.2d 714 (Colo. 1994); *Vigil v. City Cab Co.,* W.C. No. 3-985-493 (ICAP, May 23, 1995). Section 8-43-404(5)(a), C.R.S. permits the employer or insurer to select the treating physician in the first instance. Once the respondents have exercised their right to select the treating physician, the claimant may not change the physician without the insurer's permission or "upon the proper showing to the division." §8-43-404(5)(a), C.R.S.; *In Re Tovar,* W.C. No. 4-597-412 (ICAP, July 24, 2008). Because §8-43-404(5)(a), C.R.S. does not define "proper showing" the ALJ has discretionary authority to determine whether the circumstances warrant a change of physician. *Jones v. T.T.C. Illinois, Inc.,* W.C. No. 4-503-150 (ICAP, May 5, 2006). The ALJ's decision regarding a change of physician should consider the claimant's need for reasonable and necessary medical treatment while protecting the respondent's interest in being apprised of the course of treatment for which it may ultimately be liable. *Id.* An ALJ is not required to approve a change of physician for a claimant's personal reasons including "mere dissatisfaction." *In Re Mark*, W.C. No. 4-570-904 (ICAP, June 19, 2006).

8. As found, Claimant has failed to make a proper showing for a change of physician to Dr. Kocol. The record reflects that Claimant is requesting her third change of physician. She previously requested changes to Dr. Bainbridge and later to Dr. Hughes. Respondents authorized both requests. Claimant has failed to produce persuasive evidence that she reasonably developed a mistrust of Dr. Hughes. She has also failed to produce sufficient evidence that Dr. Hughes provided inadequate care or otherwise rendered unreasonable care. Disagreement and dissatisfaction with Dr. Hughes' diagnosis are insufficient to constitute a proper showing warranting a change of physician. Accordingly, considering Claimant's need for reasonable and necessary medical treatment while protecting Respondents' interest in being apprised of the course of treatment for which it may ultimately be liable, Claimant's request for a change of physician to Dr. Kocol is denied and dismissed. *See In Re Loza*, W.C. No. 4-712-246 (ICAP, Jan. 7, 2009) (affirming ALJ's denial of request for a change of physician because the claimant failed to present persuasive evidence that he developed a mistrust of the treating physician because the physician only treated him for his neck instead of for his head).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

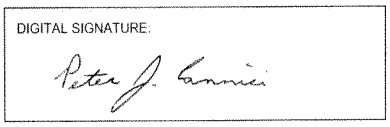
1. Claimant's request for medical maintenance benefits for her May 13, 2016 industrial accident is denied and dismissed.

2. Claimant's request for a change of physician is denied and dismissed.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 9, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence that a spinal cord stimulator ("SCS") implanted by Dr. Giancarlo Barolat on August 15, 2017 was reasonably necessary and causally related to her admitted October 2009 injuries?

- Was Dr. Barolat's request for authorization of the SCS "deemed authorized" under WCRP 16-11(E) because Respondents did not comply with WCRP 16-11(B)(3)(a)-(d)?

- Should Respondents be penalized under WCRP 16-11(F) for unreasonably refusing to authorize the SCS?

- Are Respondents entitled to change Claimant's ATP?

FINDINGS OF FACT

1. Claimant suffered admitted injuries on October 26, 2009, while working as an emergency medicine physician for Employer. She slipped on icy concrete stairs and fell onto her back.

2. At the time of her injury, Claimant was concurrently employed as a traveling physician with Concord Medical Group. In that job, she traveled out-of-state to work at rural emergency rooms in Texas.

3. After the October 26 accident, Claimant was evaluated at Employer's nearby family practice clinic. There is minimal documentation of her treatment, presumably because Claimant was an employee rather than a standard patient. Dr. Lori Moll ordered lumbar and pelvic x-rays for "low back pain." X-rays of Claimant's lumbar spine showed scoliosis and degenerative disc disease, with no evidence of acute compression fracture or other bony injury. The pelvic x-rays were normal. Claimant was also given a "work comp drug screen," which the ALJ infers was negative since there is no evidence to the contrary.

4. Claimant did not immediately ask Employer to provide treatment because she hoped the injury would resolve with time. She saw a massage therapist and tried acupuncture on her own which helped some but did not resolve the symptoms. She continued working her regular job for Employer and the second job with Concord.

5. In February 2010, Claimant requested treatment and Employer referred her to Dr. Daniel Olson at CCOM in Pueblo. At her initial visit on February 9, 2010, Dr. Olson documented:

> She comes in today for a follow-up an injury that occurred back on October 26, 2009. . . . . She was hoping it would get better with time. She did have some radicular type symptoms initially, but those have resolved. She has been seeing a massage therapist, as well as an acupuncturist with some mild response, but no complete resolution.

6. Examination of her lumbar area showed pain and soft tissue "tightness," particularly in the left lower lumbosacral area and the upper gluteal muscles. Dr. Olson noted "these are tender and she had noticeable pain after the exam." Straight leg raising caused discomfort on the left at 40° and on the right at near full extension. Dr. Olson diagnosed thoracic and lumbar contusions "with continued pain," and opined that her "findings on exam are consistent with her mechanism of injury." He referred Claimant for physical therapy, and recommended a lumbar MRI "since it has been 4 months of pain." He prescribed tramadol and recommended that Claimant apply ice, heat, and Biofreeze.

7. Claimant had a lumbar MRI on February 18, 2010 which showed: possible left L5 and L4 nerve root compression at L4-L5 due to disc protrusion and degenerative facet hypertrophy; mild central stenosis at L3-L4 with possible bilateral L4 nerve root compression; minimal degenerative changes with no definitive nerve root compression from T-9 to L-3; and level rotatory scoliosis.

8. After reviewing the MRI, Dr. Olson recommended additional physical therapy and referred Claimant to Dr. Scott Ross for injections.

9. Claimant saw Dr. Ross on April 16, 2010. She reported "since [the accident] her pain has become prominent." She said the thoracic spine pain was improving with therapy but her low back pain was "constant." Dr. Ross diagnosed low back pain "most likely secondary to lumbosacral spondylosis." He recommended bilateral medial branch blocks at L4-5 and L5-S1 "with an eye toward rhizotomy." Claimant underwent the medial branch blocks on July 7, 2010, but they were not helpful.

10. In July 2010, Claimant transferred to the CCOM clinic in northern Colorado Springs, which was closer to her home in Monument. She saw Dr. Mary Dickson on July 21, 2010. She reported "functionally she feels very limited," and was on a leave of absence from work. Dr. Dickson noted claimant was tearful throughout much of the office visit and "frustrated secondary to her continued pain with lack of improvement." She referred Claimant to Dr. Mock for chiropractic treatment, and to Dr. Mann for "biofeedback and relaxation training and assistance with her chronic pain and frustration."

11. In August 2010, Dr. Dickson referred Claimant to Dr. Jeffrey Jenks because she was unhappy with Dr. Ross' office.

12. Dr. Jenks saw Claimant on August 19, 2010 and noted "these symptoms began following a slip and fall which occurred at work. . . . She attempted to wait it out to see if it would improve. It did not. She therefore saw Dan Olson, MD in February. Since then she has had acupuncture and physical therapy. It has not helped." She described bilateral lumbosacral pain without radiation to the lower extremities, aggravated by "most

activities." Dr. Jenks diagnosed "probable symptomatic L-3-4 and L4-5 spinal stenosis and discogenic pain." He recommended a lumbar epidural steroid injection ("ESI") and medication.

13. Over the next several months, Dr. Jenks administered ESI and facet joint injections, which provided varying levels of temporary relief.[1]

14. On November 2, 2010, Dr. Dickson referred Claimant to Dr. James Bee for a surgical evaluation "a she has now had pain for a year." Claimant preferred to see Dr. Sung instead but, for unclear reasons, the appointment never occurred. On December 9, 2010, Dr. Dickson authored a report where she confusingly stated both that Claimant "has elected to proceed with a surgical consultation" and "the patient did not want to proceed with a surgical evaluation."

15. Claimant saw orthopedic surgeon Dr. Michael Janssen on April 7, 2011 on her own referral. She told Dr. Janssen "she has been having severe low back pain ever since she had a work-related injury where she fell outside on some ice in October 2009. She has been having pain and a tingling and numbness sensation in her back and her legs ever since then." Dr. Janssen offered Claimant three treatment options: live with her symptoms, pursue further injections, or surgery. Dr. Janssen opined that surgery

> would either be a minimally invasive approach to strictly treat the stenosis at L3-4 and L4-5 or one could consider doing a fusion because I think the natural history of the L3-4 degenerative disease, collapse, and instability is going to do nothing but progress. This is a major undertaking and may impair her for some time. I did outline all the options. She has clear-cut anatomical structural abnormalities where her symptoms started secondary to the fall.

16. Dr. Janssen recommended a repeat lumbar MRI to help with decisionmaking regarding potential surgery.

17. Claimant followed up with Dr. Dickson the next day, on April 8. Dr. Dickson seemed perturbed that Claimant had seen Dr. Janssen on her own, because she had previously declined a surgical consultation arranged through CCOM. Claimant reported being "very frustrated with the quality of her life at this time. She is having difficulty with bending and running including with her work activities." Dr. Dickson saw no reason for any problems because she opined that working as an ER physician is not physically demanding. Specifically, Dr. Dickson stated "I reviewed with the patient that I had been in the emergency room physician for 13 years and my bending was extremely limited at work, as well as running, especially since she is in a lower volume emergency room. I also noted that historically while I was in the emergency room I never did any lifting at all."

[1] For example, in February 2011 she was "very pleased" with "80%" pain relief from a series of facet injections. But injections in April 2011 only provided pain relief for a day.

18. Dr. Dickson released Claimant to full duties throughout her course of care, which fits her opinion that working as an emergency room physician entails minimal physical demands.

19. Claimant had a repeat lumbar MRI on June 3, 2011, and followed up with Dr. Janssen on June 14, 2011. After reviewing her MRI films, he opined

> She has focal and severe spinal stenosis secondary to thickened ligamentum flavum and a disc herniation at the L3-4 and L4-5 levels. I think that she could probably be treated by a simple approach to make more anatomical/physiological room for her cauda equina and her nerve roots at the L3-4 and L4-5 levels with a central and sub-articular decompressive procedure. Because she has a coronal plane deformity, one could contemplate doing a fusion to stabilize this, but she does not want to have this at this time. She wants the most minimally invasive approach and realizes in the future she may need a fusion. . . . She would like to consider surgical intervention, which I think is a reasonable alternative for this underlying structural abnormality.

20. Claimant saw Dr. Bee on June 29, 2011. He did not recommend surgery because her lower extremity symptoms were not in a radicular pattern and he saw no "defined pain generator."

21. Dr. Jenks performed EMG testing in August 2011, which showed left L4 radiculopathy. He recommended another ESI, which only helped "somewhat." He referred Claimant to Dr. Gary Ghiselli for a surgical evaluation.

22. Claimant saw Dr. Ghiselli on October 25, 2011. He opined any surgery would be a multilevel fusion and recommended "that she try to avoid a large fusion if possible." Dr. Ghiselli recommended Claimant "revisit the options of facet injections, with possible medial branch blocks and rhizotomies."

23. Respondents referred Claimant for an IME with Dr. Nicholas Olson on March 22, 2012. Dr. Olson was "unable to make any sense out of the series of either the facet injections or the medial branch blockades." He opined that Claimant's symptoms resulted from "a combination of potential facet arthropathy which would be related to the 10/26/09 fall and signs of left L4 radiculopathy that are unrelated to the fall and began in June 2011." He opined Claimant was not at MMI pending "carefully performed medial branch blockades to determine if she is a candidate for radiofrequency neurotomies."

24. Dr. Jenks repeated medial branch blocks on July 23, 2012. He performed medial branch rhizotomies on July 27, 2012.

25. Dr. Jenks put Claimant at MMI on August 21, 2012 with a 9% lumbar rating. He noted "[Claimant] states her low back pain is at least 50% better following the medial branch rhizotomies. She is very happy with this. Her leg pain is gone following an epidural injection. She has been attempting to reduce her use of Dilaudid."

26. Claimant suffered a severe flare after being placed at MMI, so Dr. Jenks referred her to Dr. Stephen Shogun for another surgical evaluation. Dr. Shogun recommended that she continue conservative treatment "and leave surgery as only a very last resort."

27. Claimant saw Dr. Thomas Higginbotham for a Division IME on March 7, 2013, who opined she was not at MMI. He recommended a repeat EMG and further investigation of surgical options. Respondents filed a General Admission authorizing additional treatment based on the DIME.

28. On December 12, 2013, Dr. Jenks noted "[Claimant] does not want to increase her pain medication, but is wondering if there are other options for controlling her pain." He referred Claimant to Dr. Mark Meyer for evaluation of spinal cord stimulation.

29. Claimant saw Dr. Meyer on January 22, 2014, who documented "she really has a poor quality of life. She relates being bedridden about 80% of the time. When she gets up, she has a severe increase of pain with walking or standing any period of time, and really any activity is poorly tolerated." Dr. Meyer concluded "she has exhausted all of her reasonable options. She is not at a point where she wants to consider anything surgically in the immediate future. . . . I agreed that spinal cord stimulation would be a very reasonable treatment modality for her. I did explain to her that there is a higher predictive likelihood with radicular pain, and she has predominately low back pain. . . . She does seem by my impression psychologically well fit to proceed."

30. Dr. Jenks referred Claimant for another surgical consultation in February 2015, this time with Dr. Roger Sung. Dr. Sung reported "she has had ongoing low back pain with radiating pain down her leg. It is about 80% back pain and 20% pain down her leg." He documented "she is now taking a Fentanyl patch and this does control her pain somewhat. She does not take anti-inflammatories secondary to a GI bleed." Dr. Sung requested a new MRI before deciding whether to recommend surgery.

31. Respondents sent Claimant to an IME with Dr. Hugh Macaulay on April 7, 2015. Claimant told Dr. Macaulay her pain was bad enough to require the use of a cane or walker, and she was using a wheelchair at the IME. Dr. Macaulay opined Claimant's ongoing symptoms were due to degenerative pathology and were unrelated to her industrial accident.

32. Claimant returned to Dr. Sung in March 2016 and reported "90% low back pain, and 10% bilateral buttock and leg pain." He did not think a fusion surgery was a good option since she primarily had back pain rather than leg symptoms. He was also concerned that Claimant's high level of perceived disability was not poor prognostic indicator. He stated, "I have referred her for a spinal cord stimulator trial. I explained to her that I don't think this is a perfect option. But in terms of a simple option to give her some pain relief, it could be more reliable than a multilevel fusion."

33. A few weeks later, on March 28, 2016, Dr. Jenks noted, "[Claimant] continues with the low back pain and bilateral leg pain, which is unchanged. She has

seen Dr. Sung who did not recommend surgery, but did recommend referral for a spinal cord stimulator. . . . I agree that [Claimant] should be evaluated for a spinal cord stimulator. I have referred her back to Dr. Meyer for this."

34. On May 9, 2016, Dr. Meyer requested preauthorization of a spinal cord stimulator trial. Respondents had the preauthorization request reviewed by Dr. Anant Kumar, a spine surgeon, who recommended the stimulator trial be denied as inconsistent with the medical treatment guidelines.

35. Claimant saw Glenn Kaplan, Ph.D. on September 7, 2016 for a psychological evaluation in connection with the stimulator trial. Dr. Kaplan opined "she appears to be capable of handling the psychological and physical discomfort that may accompany any medical procedure. There is little likelihood that she will use prescribed medication in an inappropriate or dangerous manner. . . . Based on the results from this test there are no signs of psychological problems that would interfere with this patient pursuing the stimulator procedure. [Claimant] is an appropriate candidate for the neurostimulator procedure for chronic pain management."

36. Dr. Floyd Ring performed an IME on May 17, 2016 at Respondents' request. His report focused primarily on his significant concerns regarding potential addictive behavior, escalating narcotic use and potential medication abuse. He recommended that Claimant "undergo a comprehensive independent psychiatric examination with appropriate psychometric testing to address possible addictive behavior, secondary gain issues, or symptom magnification."

37. On September 23, 2016, Dr. Jon Erickson he issued a Physician Advisor opinion for Respondents regarding the SCS trial. He opined

> We are now fielding the third request for the use of a trial of a spinal cord stimulator. . . . As per the Medical Treatment Guidelines, she clearly does not satisfy the criteria for the use of the device based on the location of her discomfort and its nature. It therefore would be well within reason to recommend a denial of this request. . From the standpoint of trying to assist this woman with her pain in whatever way possible, I do believe that we can swing a deal, so to speak. I would give [Claimant] three months with the assistance of her managing pain physician . . . to enable a significant reduction in her opioid usage. If that can be documented within a three-month period of time, then I would vigorously recommend an approval of a trial of a spinal cord stimulator.

38. Respondents authorized the trial SCS, and Dr. Meyer implanted it on November 1, 2016. He removed the trial SCS on November 7, 2016. His report documents:

> She is 6 days status post SCS bilateral 1/8 Boston Scientific lead placement and has had excellent improvement in her pain over the last 5 days including her low back up to the L4 which was initially difficult to capture

during the trial. She . . . has had such great relief that she does not want to allow the leads to be removed today. Tolerated the stim well with improved function. Will send her to Dr. Barolat for permanent implantation.

39. Dr. Barolat evaluated Claimant on January 11, 2017. He noted,

> We recently performed a trial of spinal cord stimulation. The patient experienced excellent relief from her pain. She was able to stand better, walk better, and be more functional. The trial was therefore very successful. . . . I should mention that prior to the spinal cord stimulation trial the patient has undergone very extensive treatment, including acupuncture, physical therapy, chiropractic manipulation, stem cell injections,[2] rhizotomies, and cortisone injections. Out of all those procedures, the one that has helped the most has been the spinal cord stimulation trial.
>
> I reviewed a recent MRI of the lumbar spine. . . . I can see how the extent of her degenerative disease, which affects the whole lumbar spine, would be difficult to correct and would most likely require a substantial surgical procedure.
>
> IMPRESSION: This very nice lady is suffering from a chronic, severe, intractable, and incapacitating low back pain. She has been through innumerable treatments. The only modality that has really helped her substantially has been the spinal cord stimulation trial. I think she would be an ideal candidate for the implantation of the permanent system.

40. Dr. Barolat's office faxed a request for preauthorization of the permanent SCS to Insurer at 5:01 PM on January 17, 2017. Insurer had the request reviewed by Dr. Janssen acting as a Physician Advisor. There is no indication Dr. Janssen recalled his prior evaluations of Claimant, and the tenor of his opinions was substantially different than when he evaluated her as his patient. Dr. Janssen opined:

> Due to the complexity of this patient having this trivial injury of a fall dating back now to almost seven years ago, this 60-year-old female appears to have chronic low back conditions with chronic facet arthropathy and multilevel degenerative changes in addition. There is no indication of a true neuropathic pain pattern or a neuropathic abnormality that clearly correlates with any underlying anatomical condition. . . . [I]t does not appear that this patient meets any reasonable criteria for further intervention, specifically that of an implantable spinal cord stimulator.

41. On January 23, 2017, Insurer's Medical Case Manager, Harry White, sent a letter to Dr. Barolat's office denying authorization and attaching a copy of Dr. Janssen's Physician Advisor note. Mr. White copied all parties on the notice, and no party has denied

[2] Claimant saw Dr. Centeno at her own expense for stem cell treatment.

receiving it. Mr. White also called Dr. Barolat's office on January 23 and verbally informed Dr. Barolat's assistant the request was denied.

42. Claimant started treating at Colorado Clinic in early 2017 after Dr. Jenks ceased practicing medicine. Initially, she was unhappy because she saw several different providers and felt she was not receiving good continuity of care. At some point, she agreed to a change of physician to Dr. Pia Schalin, but later rescinded that agreement. At hearing, she testified she has seen Dr. Dameceo Howard at Colorado Clinic for several months and is satisfied with his care. Consequently, she no longer wants a change of physician. Dr. Howard is not Level II accredited by the Division of Workers' Compensation and Respondents have asked the ALJ to grant a change of ATP to a Level II provider.

43. Dr. Eric Ridings performed an IME for Respondents on March 22, 2017. Dr. Ridings opined Claimant was not a good candidate for a permanent SCS and raised numerous concerns regarding the reliability of Claimant's subjective reports regarding the trial SCS. He opined Claimant's described response to the SCS trial was "not medically believable." Dr. Ridings also denied any causal connection between Claimant's symptoms and the 2009 accident, opining "she would be in exactly the same place anatomically today whether she had fallen on the stairs or not."

44. Claimant saw Dr. Miguel Castrejon on April 25, 2017 for an IME at her counsel's request. Dr. Castrejon concluded that the October 2009 accident "resulted in a permanent aggravation to the claimant's pre-existing underlying degenerative lumbar spine condition." Dr. Castrejon noted the trial SCS "nearly resolved her pain for the period of the trial. Following discontinuation of the trial, the claimant states that her symptoms returned." Dr. Castrejon concluded she had failed conservative care and recommended that "she be allowed to proceed with spinal cord implantation with the caveat that a medication weaning program be developed, clearly delineated and monitored by her treating physician."

45. Dr. Robert Kleinman performed a psychiatric IME for Respondents on April 12, 2017. He opined Claimant was a poor candidate for a permanent SCS from a psychiatric prospective. He thought she was not forthcoming regarding a history of addiction and "misrepresented herself" during the interview. Dr. Kleinman issued a supplemental report on May 15, 2017, wherein he disagreed with Dr. Castrejon's assessment, Dr. Kaplan's conclusions, and the opinions of Dr. Wahl, a psychiatrist who evaluated Claimant in relation to professional discipline issues several years before the industrial accident.

46. Claimant underwent a psychological evaluation with Anthony Ricci, Ph.D. at her counsel's request on May 30, 2017. Regarding the SCS trial, Claimant told Dr. Ricci

> Following the [trial] implantation she felt "fantastic." She was more mobile. She could walk without assistance, and even went to dinner. She could walk unimpeded again, and could stand to cook. The trial continued for about 7 days, and on the last day she was experiencing some soreness. During the course of the trial she stopped utilizing the Dilaudid, and did not replace the

> Fentanyl patch, and went through a moderate opiate withdrawal process, which she tolerated due to the positive experience of having the back and radicular pain symptoms significantly ameliorated. After the spinal cord stimulator was removed the pain returned with full intensity, and she started the opiates several days after its removal.

47. Dr. Ricci opined:

> [T]he MMPI testing performed at Dr. Kleinman's office was not congruent with standard administration procedures, and he does not integrate the findings with her medical condition, and therefore draws erroneous conclusions. . . . He develops a strong theme that [Claimant's] morality is flawed, and therefore should not proceed with permanent spinal cord stimulation implantation.
>
> The issue of spinal cord stimulation candidacy should be based on psychological factors and medical status. Prior psychological evaluation and treatment information, including reports from Dr. Kaplan, Dr. Wahl, Dr. Pollack, and our evaluation present a very different clinical picture and status . . . . [In my opinion] there are no psychological contraindications to [Claimant's] spinal cord candidacy.

48. Claimant scheduled a hearing on July 20, 2017 in Colorado Springs regarding authorization of the SCS. She subsequently vacated that hearing and had the SCS implanted under her health insurance.

49. Dr. Barolat implanted the SCS on August 15, 2017 at Presbyterian/St. Luke's Hospital.

50. Claimant immediately reported significant benefit from the SCS. On August 23, 2017 Dr. Barolat documented, "The patient is doing exceedingly well. She has noticed about 75% reduction in the pain in her lower extremities and about 50% reduction in the low back pain. . . . She is not using the walker any longer. . . . The patient is extremely pleased with the results, and so am I."

51. During a follow-up appointment on September 20, 2017, Dr. Barolat documented:

> She has been compliant with her activity restrictions; however, she has been noticing she is able to easily overdo things due to the substantially decreased pain from the stimulator. She states she is getting well over 75% reduction overall in her pain. She is extremely pleased with this result. The patient's husband states she seems more frustrated by the fact that physically she cannot push herself further at this point in time. [Preoperatively], the patient had been extremely limited in her mobility due to the pain and had to use a walker for assisted ambulation. She is not utilizing the walker at this time. She feels she is also sleeping better. She

> has completely weaned off her Dilaudid.[3] She continues to use the fentanyl patches, as well as intermittently the Robaxin for muscle spasms.
>
> She is also getting nearly 75% relief in both her low back, as well as lower extremity pain. This is a substantial pain relief, and we are quite pleased with the results. She has also increased her activity level. We did ask the patient that she try to limit her frustration and her normal mobility given that she had spent such a long time being severely nearly disabled from the pain. Now that she has decreased pain, she will need to gradually increase her activity levels.

52. On November 8, 2017, Dr. Barolat noted "she is extremely pleased with her stimulator. Her pain is, at maximum, a 1 or a 2 out of 10. She has been able to increase her activities. . . . She has decreased her narcotic analgesics substantially. She continues to utilize the Robaxin for spasms. . . . She is extremely pleased, thus far, with the result." Finally, on February 7, 2018, Dr. Barolat stated, "she has been much more active. She has gotten rid of the wheelchair, the cane, and the walker." He concluded, "This modality has truly changed her life."

53. The Colorado Clinic records also reflect significant improvement due to the SCS. On September 5, 2017, Claimant stated "the pain has decreased from 8-10/10 now down to 2-3/10. . . . [S]he will have a one-month follow-up with the surgeon and then she will taper down on opiates." At her next visit, on October 2, she asked to decrease the Dilaudid. The November treatment note states "patient requesting decrease [in medication]. . . . SCS helps with pain decrease." On December 4, she told Dr. Howard the stimulator "is helping alleviate her pain. She states that her pain level has gone down drastically since the neurostimulator was put in. She would like to lower her dose on Dilaudid." And on January 5, 2018, Dr. Howard noted "patient would like to see if she could receive 30 tabs of hydromorphone [Dilaudid] at 4 mgs PRN. She states she's gotten to the point where she does not need medication every day."

54. On February 2, 2018 Dr. Howard cut the dose of fentanyl in half, and increased the Dilaudid "for breakthrough." When she returned on March 3, she reported her pain had gotten worse with the lower dose of fentanyl, and requested that it be increased.[4] Dr. Howard's nurse declined the request "since she has already been on the lower dose for 1 month." The nurse did not refill the Dilaudid because Claimant was not using it.

55. Claimant's pharmacy prescription log shows a steady decrease in Dilaudid and fentanyl starting in October 2017. Before the SCS, she was consistently using 480mg of Dilaudid and 10-15 fentanyl patches each month. After the SCS, she decreased the

[3] This information was incorrect, because Claimant continued to refill Dilaudid through February 2018. Claimant testified Dr. Barolat must have misunderstood her and did not tell him she was completely off Dilaudid. Rather, she told Dr. Barolat that she eventually wanted to be entirely off Dilaudid.

[4] Although Dr. Ridings questioned Claimant's motivation for seeking to asking fentanyl rather than taking more Dilaudid, the ALJ does not find it unusual that Claimant would prefer a higher dose of sustained release fentanyl rather than continually chasing her pain with Dilaudid multiple times per day.

Dilaudid each month from October 2017 through January 2018. The Dilaudid was temporarily increased in February 2018 when Dr. Howard cut the fentanyl in half.

56. The opinions of Dr. Meyers, Dr. Barolat, Dr. Castrejon and Dr. Ricci are credible and more persuasive than medical opinions in the record to the contrary.

57. Claimant proved by the preponderance of the evidence that the permanent SCS was reasonably necessary and causally related to her admitted October 2009 injury. Claimant's accident permanently aggravated a previously asymptomatic underlying degenerative condition and caused her to develop chronic pain. The SCS has significantly reduced Claimant's pain, leading to lower opioid use and increased functional abilities.

58. Claimant failed to prove that Dr. Barolat's preauthorization request was "deemed authorized." Respondents timely obtained a medical review by a spine surgeon and notified all parties within seven business days that the request was denied.

59. Claimant failed to prove that Respondents should be penalized for "unreasonably" denying authorization of the SCS. The decision to deny the permanent SCS was not "objectively unreasonable" given the numerous medical opinions and other evidence in Respondents' possession questioning her candidacy for the procedure. Even Claimant's IME acknowledged she did not precisely fit the criteria under the MTGs. The ALJ finds reasonable minds could, and did, disagree regarding whether the permanent SCS was reasonably necessary and related to the 2009 admitted injury. Although the ALJ has ultimately credited the opinions of Claimant's treating providers, Respondents were entitled to rely on the opinions of their examiners to deny the procedure and require Claimant to prove her entitlement to medical benefits at an evidentiary hearing.

60. Respondents failed to prove entitlement to a change of physician.

CONCLUSIONS OF LAW

A. The SCS is causally related to the October 2009 admitted accident

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). The mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury, and even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The claimant must also prove that the requested treatment is reasonably necessary, if disputed. Section 8-42-101(1)(a). The existence of a preexisting condition does not disqualify a claim for compensation if an industrial accident aggravates, accelerates, or combines with the preexisting condition to produce disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). The claimant must prove

entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

As found, Claimant proved that the SCS was causally related to her October 2009 accident. She unquestionably had degenerative changes in her lumbar spine before the accident, but there is no persuasive evidence she was symptomatic or required any treatment. The persuasive evidence shows Claimant suffered a permanent aggravation of her pre-existing condition as a result of the October 2009 accident.

B. The permanent SCS is reasonably necessary

As found, the permanent SCS was reasonably necessary. According to the records from her treating providers, the SCS was very successful, leading to decreased pain and increased function. Dr. Barolat used superlatives such as "excellent" and "life-changing." Dr. Howard used more muted terminology but clearly documented a good outcome from the SCS. Claimant appears to be on an opioid weaning regimen, as evidenced by Dr. Howard's records. Claimant's prescription log shows a steady decrease in her opioid medication since she received the SCS. The temporary increase of Dilaudid in February 2018 coincided with a 50% reduction in the fentanyl, and Dr. Howard's office did not refill Dilaudid in March 2018.

Admittedly, the ALJ has concerns regarding the reliability of some of Claimant's testimony. In particular, her memory appears to become less reliable as events recede further into the past. Some of her testimony at hearing was contradicted by medical records or other documentation. Accordingly, the ALJ has given comparatively greater weight to her contemporaneous reports documented in the medical records, which likely provide a more accurate description her condition at any given time. Although Claimant has likely embellished her positive response somewhat, on balance, the evidence persuades the ALJ she received enough benefit from the SCS to justify finding it was reasonably necessary.

C. Dr. Barolat's request for preauthorization was not "deemed authorized."

WCRP 16-11(E) provides that if a payer does not comply with the preauthorization requirements, the request shall be "deemed" authorized. Claimant has predicated her argument on two provisions of WCRP 16-11.[5] Specifically, Claimant argues Respondents failed to include Dr. Janssen's "professional credentials" and did not include a certificate of mailing with the denial notice.

The ALJ disagrees with Claimant's arguments. The notation of Dr. Janssen's credentials as "spine surgery" is sufficient to satisfy Rule 16-11(B)(3)(a). The ALJ is

[5] Although Claimant specifically cited WCRP 16-10, the ALJ notes the rules were amended in January 2017, and the provisions on which Claimant relies are now codified in Rule 16-11.

unaware of any authority that would require Respondents to provide more detailed information such as the physician's education, training, and employment experience.

Regarding WCRP 16-11(B)(3)(d), the ALJ concludes the Rule does not require a formal certificate of service akin to a legal pleading. The intent of the rule is satisfied if the notice indicates when and to whom it was sent, which was the case here. At a minimum, Respondents' January 23, 2017 notice substantially complied with the Rule and preserved Respondents' right to dispute the procedure.

D. Claimant failed to prove Respondents should be penalized for violating WCRP 16-11.

Section 8-43-304(1) provides that an insurer "who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel, for which no penalty has been specifically provided, or fails, neglects, or refuses to obey any lawful order made by the director," shall be punished by penalties of up to $1,000 per day.

The assessment of penalties is governed by an objective standard of negligence and involves a two-step analysis. The ALJ must first determine whether the insurer or employer violated the Act, a rule, or an order. Second, the ALJ must determine whether the violation was objectively reasonable. *Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Diversified Veterans Corporate Center v. Hewuse*, 942 P.2d 1312 (Colo. App. 1997); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003).

Whether the insurer's conduct was objectively reasonable presents a question of fact for the ALJ. *Pioneers Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005). A party establishes a *prima facie* showing of unreasonable conduct by proving that an insurer violated the statue or a rule of procedure. If the claimant makes a *prima facie* showing, the burden shifts to the respondents to show their conduct was reasonable under the circumstances. *Pioneers Hospital v. Industrial Claim Appeals Office, supra*; *Human Resource Co. v. Industrial Claim Appeals Office,* 984 P.2d 1194 (Colo. App. 1999).

Claimant argues Respondents should be penalized under WCRP 16-11(F), which provides, "Unreasonable delay or denial of prior authorization, as determined by the Director or an administrative law judge, may subject the payor to penalties under the Workers' Compensation Act."

The mere act of procuring a medical opinion under WCRP 16 does not excuse the carrier from its duty to act reasonably regarding the request. Rather, the insurer must act as a reasonable insurer would act regarding the information obtained from the medical reviewer. *Fera v. Industrial Claim Appeals Office*, 169 P.3d 231 (Colo. App. 2007); *Miller v. Industrial Claim Appeals Office*, 49 P.3d 334 (Colo. App. 2001). The carrier is not limited to considering the Rule 16 opinion, but may also consider other information in its file when evaluating a preauthorization request.

Claimant's request for penalties fails because Respondents' decision to deny preauthorization was not objectively unreasonable. The medical opinions and other evidence in Respondents' possession were sufficient to raise a reasonable question of whether Claimant was an appropriate candidate for a permanent SCS. Even Claimant's IME acknowledged she did not precisely fit the criteria under the MTGs for SCS. Dr. Erickson made a similar point when he approved the SCS trial. The ALJ concludes that reasonable minds could disagree regarding whether the permanent SCS was reasonably necessary and related to the 2009 admitted injury. Although the ALJ has ultimately credited the opinions of Claimant's treating providers in approving the procedure, Respondents were entitled to rely on the opinions of their examiners to deny the procedure and require Claimant to prove her entitlement to medical benefits at hearing.

E. Respondents did not prove a basis for a change of physician.

Section 8-43-404(5)(a)(VI) permits a claimant to obtain a change of physician "upon the proper showing to the Division." The ALJ knows of no similar statutory provision or other authority permitting the respondents to obtain a change of physician from an ALJ, and Respondents have pointed to none. To the ALJ's knowledge, absent agreement with a claimant, the only mechanism for the respondents to change an ATP is through the medical utilization review ("MUR") process.

ORDER

It is therefore ordered that:

1. The SCS implanted by Dr. Barolat on August 15, 2017 was reasonably necessary and related to Claimant's October 2009 accident. Insurer shall cover the cost of the SCS, including reimbursement of Claimant's out of pocket expenses.

2. Claimant's request that the SCS be "deemed authorized" is denied and dismissed.

3. Claimant's request for penalties is denied and dismissed.

4. Respondents' request for a change of physician is denied and dismissed.

5. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 14, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

The issue addressed by this decision involves Claimant's entitlement to medical benefits. The specific question presented is:

I. Whether Claimant has proven, by a preponderance of the evidence, that medial branch blocks to treat Claimant's lumbar spine condition, as requested by Dr. Bernardini, are reasonable, necessary and related to his July 24, 2013, admitted industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant began working for Black Hills Energy in October of 2000 as a meter reader. He progressed to a premise lineman; did a four-year apprenticeship, and became a board-certified journeyman lineman in early 2005.

2. On July 24, 2013, Claimant responded to a power outage in the Flower, Colorado service area of Pueblo County. Heavy storms passing through the area caused a high voltage transmission pole to break and fall into an adjacent pole triggering a cross-wire fire. Claimant and a co-worker were dispatched to extinguish the fire and repair the downed transmission lines. While working in a bucket lift approximately 40 feet off the ground, Claimant inadvertently came in contact with a live wire and was electrocuted.[1] According to Claimant's testimony, he felt an arc, saw a blue flame and was snapped backwards.

3. Emergency medical personnel were contacted and it was determined that Claimant would require Flight for Life transport to University of Colorado Hospital in Denver.

4. Upon arrival, the Flight for Life team obtained a medical history and assessed Claimant's condition. The team ascertained that Claimant had touched a "high voltage (16,000 volts) wire, causing him to go to his knees. He did not fall. There was no LOC (loss of consciousness) per [Claimant]." Claimant was contacted and noted to be alert and oriented times three (AOX3). He complained of "pain in [the] left elbow, hand and shoulder." Moreover, he was observed to have a burn wound to the "outer aspect of [his] left elbow and to [the] index and middle finger of [the] left hand." A field diagnosis

[1] Given the nature of his injuries, questions remain as to whether Claimant was actually shocked by a transmission wire or struck by lightning occurring some distance away.

of deep necrosis of underlying tissue due to burn (deep third degree) of thumb (nail), without mention of loss of thumb" was documented and Claimant was air lifted to Denver.

5. Claimant was admitted to the University of Colorado (UC) Hospital at 9:34 p.m. under the care of the "burn surgery team . . ." Upon admission, Claimant reported that he was "thrown back into [the] bucket."[2] He verbally reported "myalgias and back pain" during the reviews of systems assessment. Although he reported back pain, careful review of this section of the inpatient report fails to localize this "back pain" to a specific region of the spine.[3] Claimant testified that his low back was badly bruised, yet upon admission he "[exhibited] no tenderness and no boney tenderness" over the lumbar spine. Claimant did report TTP (tenderness to palpation) "over the left scapula and pain with provocative arm extension and supination against resistance. It was determined that Claimant had "injured his left shoulder in the workplace accident." He was instructed to follow-up with his primary care physician (PCP) for additional care.

6. At hearing, Claimant testified that the hospital team wanted him to stay in the hospital because he was having difficulty laying down due to a "black and purple" bruise across his back. As noted, the medical records are devoid of any reference to a bruise or any signs of trauma to the back and Claimant failed to complain of any tenderness or boney tenderness to the lumbar spine upon examination. Despite the professed condition of his low back, Claimant testified that he asked to be discharged from the hospital.

7. Respondents filed a General Admission of Liability (GAL) admitting liability for Claimant's injuries on August 7, 2013.

8. Claimant was discharged from the hospital on July 25, 2013 at approximately 1:57 p.m. in stable condition. The discharge summary notes the following:

> Pt was working on power lines when he arced between his elbow and his hand. The electricity did not pass through his chest. *He was not thrown back from the shock.* He was placed on tele and along with two EKGs there with (sic) no evidence of cardiac damage. His sensation in his hand and arm improved during his treatment and his arm never became tense, hot or had increasing pain. *No other signs of trauma, besides the shoulder.* (emphasis added)

9. Upon his discharged from the hospital, Claimant was referred to Dr. Dwight Caughfield for follow-up care. Dr. Caughfield evaluated Claimant on August 8, 2013. Dr. Caughfield obtained the following history: "[Claimant] is a 42 year old left-handed

[2] Claimant testified that he did not report being thrown backward into the bucket after contact with an electrical wire. Tr. 19:19-25, Tr. 20:1-2.

[3] Elsewhere in the medical records from UC Hospital, Claimant reported that he was thrown back in the bucket but sustained no trauma and no LOC. In this section of the record, Claimant reported "some lower back pain from hitting the bucket."

gentleman who sustained an injury to his left arm at work on the date of 7/24/13. . . . He states he had electrical contact with entry wound around the left lateral epicondyle, exit wound into the index and long fingers. He also had intense spasm with the high voltage and ended up with a rotator cuff tear." The record from this date of visit is devoid of any complaints of Claimant having sustained a back injury, back bruising or back pain despite his suggestion that he was essentially on bed rest following his discharge from the hospital secondary to back pain. Indeed the initial evaluation report of Dr. Caughfield notes that Claimant appeared "surprisingly jovial." Nonetheless, he complained of left subacromial shoulder pain. Given his confirmed rotator cuff tear and persistent left shoulder pain, Dr. Caughfield referred Claimant to an orthopedist for a surgical opinion.

10. Claimant's shoulder pain continued. He also developed headaches and proximal symptoms in his neck.

11. On October 18, 2013, Claimant underwent left shoulder surgery, consisting of a subacromial decompression, arthroscopic rotator cuff repair, biceps tenodesis, and distal clavicle resection, with David Weinstein, M.D. Claimant undertook post-surgical treatment (rehabilitation) for his left shoulder. While the condition of Claimant's shoulder improved, he continued to suffer from neck pain and debilitating headaches. Careful review of the records up to the date of Claimant's shoulder surgery fail to reflect that he complained of low back pain or that he obtained in treatment for his lower back.

12. A record dated July 14, 2014, includes a pain diagram wherein Claimant noted having pain in the mid portion (thoracic) of his back. Claimant's pain was characterized by Dr. Caughfield as periscapular in nature. No complaints of low back pain were noted in the record from this date of visit, nor was there any treatment directed to the thoracic or lumbar spine.

13. Dr. Caughfield instructed Claimant to pursue a home strengthening program to improve strength and range or motion in the left shoulder. This exercise program became unnecessary as of March 13, 2014, when Dr. Weinstein noted Claimant had reached maximum medical improvement for his left rotator cuff tear.

14. Claimant completed a pain diagram on May 18, 2015 depicting pain in his neck, upper left shoulder and left wrist. He characterized the pain as aching, sharp, numbing and tingling. No marks intended to represent pain in any portion of the thoracic or lumbar spine are included on Claimant's May 18, 2015 pain diagram.

15. On February 20, 2017, Claimant returned to Dr. Caughfield for a follow-up appointment. During this visit, he complained of "back pain and stiffness." The records from this encounter fail to indicate what part of the back was painful and stiff and no pain diagram accompanied the report admitted into evidence. Moreover, the record fails to indicate that treatment was directed to any portion of Claimant's back. Similarly, the record is devoid of any recommendation for a home exercise program geared towards strengthening any part of the back.

16. Claimant's headaches and neck pain persisted. Discography and MRI revealed disc pathology at the C5-6 level. Conservative treatment directed to the neck, including injections and ablation treatment failed. Consequently, Claimant underwent an anterior cervical discectomy with artificial disc replacement at C5-6 with Dr. Chad Prusmack on May 4, 2017.

17. Claimant was referred to post surgical physical therapy (PT) to "restore functional movement, [decrease] neck pain and improve strength and function" for the following diagnoses: "Cervical disc disorder at C5-C6 level with radiculopathy" and "Spinal stenosis, cervical region." Claimant testified he discussed returning to work and preparing for a functional capacity evaluation with his medical providers. Claimant testified that due to the fact he was inactive for over three years after his work injury, Dr. Prusmack and PT Brown recommend he supplement his physical therapy with a workout routine at a gym. Claimant testified Dr. Prusmack and PT Brown wrote out a list of strength and conditioning exercises for him to do at the gym and at home (outside of formal physical therapy) in order to get stronger and ready to go back to work.

18. Claimant testified that he joined Planet Fitness on May 15 or 16, 2017. He testified that that from either May 15 or 16 through July 18, 2017, he would work out at Planet Fitness three days per week for 3-4 hours at a time.

19. Claimant's initial PT evaluation occurred June 7, 2017. Based upon the PT records admitted at hearing, the ALJ finds that Claimant's PT was focused on ameliorating the effects of injuries to Claimant's neck and left upper extremity. The section of the report designated "Core Exercise Program" contains no information, suggesting that Claimant was not instructed in or asked to perform any core exercises at his June 7, 2013 initial PT evaluation.

20. On June 14, 2017, Physical Therapy Assistant (PTA), Melinda Velasquez documented that Claimant was lacking an appropriate home exercise program. Based upon the types of exercise recommended and performed in therapy up to this date, the ALJ finds that Claimant's PT treatment remained focused on his meeting treatment goals in connection with his neck and left /shoulder arm conditions/impairments. While the PT record from this date persuades the ALJ that the majority of the exercises performed in PT focused on his neck and upper extremities rather than his low back, it is noted that Claimant was performing seated rowing and upper body ergometer as part of an in clinic core exercise program. Moreover, the record indicates that Claimant was instructed in and performed exercise for stabilization including marching in place, pelvic tilts and hands on knees-push/hold.[4] Based upon the evidence presented, the ALJ is persuaded that core-strengthening exercises were added to Claimant's formal rehabilitation as of June 14, 2017.

[4] As noted by Dr. Fall these exercises are typically part of a home exercise program to improve core strength.

21. While the list of exercises recommended by Dr. Prusmack and/or PT Brown was not presented at hearing, the ALJ finds it reasonable to conclude that such a list was given to Claimant. Moreover, the ALJ finds it reasonable to infer that the list probably included recommendations for improving Claimant's overall endurance and core strength to address the general deconditioning associated with Claimant's neck surgery since his formal PT included a core exercise component.

22. On July 6, 2017, approximately 7 weeks after he testified he began working out at Planet Fitness, Claimant was instructed in the independent performance of an exercise program that was designed to address the problems and achieve the goals outlined in the plan of care." Based upon the July 6, 2017 PT note, the ALJ finds the plan of care to focus on improving cervical range of motion, decreasing cervical trigger points, improve grip and pinch strength, improve upper extremity strength, and increase independence with activities of daily living along with core strengthening given that the list of exercises included hands on knees-push/hold, marching in place and pelvic tilts-knees flexed in addition to seating rowing. (Claimant's Hearing Exhibits, Tab 14, Bates Stamp pg. 236).

23. Claimant testified that on July 18, 2017, he was at Planet Fitness following the written protocol recommended by Dr. Prusmack and PT Brown. Claimant testified that while completing a sidesaddle exercise, which involved sitting with his legs to left and his arms to right and pulling 40-60 pounds to his left, as recommended by Dr. Prusmack and PT Brown, he felt a pop in his back. Claimant testified he had extreme back pain and reported this to Nick, the manager at Planet Fitness, who helped him retrieve his belongings from a locker and get to his vehicle. Claimant testified he drove directly to PT Brown's office and reported to PT Brown what happened at the gym. Claimant testified he could make his back pop and that he demonstrated this for PT Brown, who stopped all physical therapy. Claimant testified PT Brown called Dr. Prusmack's assistant and told him what was going on.

24. Claimant underwent a non-contrast CT-scan of the lumbar spine on August 14, 2017. Among other findings, the scan revealed "chronic bilateral well-corticated pars defects (fracture) at the L2-3 level" along with bilateral foraminal protrusions and osteophytes with moderate right and mild left foraminal stenosis." A careful read of the CT scan report persuades the ALJ that substantial degenerative changes exist in Claimant's lumbar spine. While Claimant testified that the lumbar CT scan revealed a re-fracture of his pars at L2, the ALJ is unable to find any reference to Claimant's characterization that the pars defect visualized constituted a "re-fracture."

25. Claimant testified he followed-up with Dr. Prusmack, who referred him to Dr. Bernardini. Claimant was re-evaluated by Dr. Bernardini on September 7, 2017. In his report of this date, Dr. Bernardini noted that imaging revealed, "L2-3 anterolisthesis L2 pars fracture bilaterally. Contrary to Claimant's testimony, there is no indication by Dr. Bernardini that Claimant suffered a re-fracture of his pars interarticularis. Dr. Bernardini recommended that Claimant undergo a series of lumbar injections. The request for injections has been denied.

26. Claimant reiterated the following history to Dr. Bernardini during the September 7, 2017 appointment: "Per [Claimant] on 7/24/13 [he] was struck by lightning while working on a powerline, was sent to burn unit, bruising seen across back, was to evaluate but [Claimant] mentioned headaches, had skin graft issues along with torn left bicep and tricep (sic), and overtime the lower back got better. The [Claimant] feels that overtime his injury got worse and drew back, finally snapping while doing PE exercises."

27. Based upon the evidence presented, the ALJ finds the above history, especially the report that bruising was "seen across the back" along with the suggestion that but for headaches, the back was to be "evaluated", misleading and contrary to the balance of the more persuasive evidence tending to establish that Claimant did not suffer any significant injury to his low back during the incident in question. Indeed the record contains no persuasive evidence that bruising was ever observed on Claimant's low back and there are conflicting reports as to whether Claimant was actually thrown back onto the bucket upon being shocked. Moreover, Claimant treated with Dr. Caughfield very early in the course of his recovery, yet Dr. Caughfield's records are devoid of specific references to bruising and or pain in the lumbar spine.

28. On November 7, 2017, PT Brown authored a noted surrounding the denial of further treatment for Claimant's low back condition. PT Brown noted that he was advised that Claimant was unable to obtain treatment for his low back because he "didn't report in my notes how it was aggravated." While PT Brown recalled that, he felt popping in Claimant's low back, he could not recall the "particulars of the exacerbation." He simply recollected that Claimant "hurt it while trying to exercise at the health club." PT Brown noted that because Claimant was being treated for his "neck and not his back" he did not make a thorough report. Without explanation beyond referencing that, Claimant reported having bruising on his low back, PT Brown relates Claimant's spinal condition to his original condition. Based upon the totality of the evidence presented, the assumption is not persuasive.

29. On January 3, 2018, Physician Assistant (PA), David Whatmore opined that Claimant's need for low back treatment was a "direct consequence" of Claimant's original documented injury based upon the fact that a "flight medic" commented on Claimant having neck and low back symptoms." As noted above, the ALJ finds no reference to low back pain in the Flight for Life records or any of Dr. Caughfield's records until 2017. Moreover, while Claimant subjectively reported having pain in his "back" upon admission to the hospital, there was no evidence of trauma, let alone the presence of a "black and purple" bruise and he did not complain of pain with palpation to the lumbar spine during physical examination. Consequently, the ALJ finds PA Whatmore's causality opinion unconvincing.

30. Dr. Allison Fall, an expert in physical medicine and rehabilitation, performed Independent Medical Examinations (IME's) of Claimant at Respondents request on May 18, 2016 and January 25, 2017. In addition, Dr. Fall authored a Rule 16 Medical Records Review on October 19, 2017 and an addendum report on November 16, 2017.

31. Dr. Fall testified that she saw no reports in Claimant's medical record referencing low back pain prior to July 18, 2017. Moreover, Dr. Fall testified that Claimant did not refer to low back pain at either IME she performed despite an instruction to describe all symptoms and complaints.

32. Dr. Fall testified that a pars fracture can present at birth, could be traumatic, or degenerative in nature.

33. Dr. Fall testified that Claimant's pars defect fracture was not caused by the initial work injury. Dr. Fall opined that Claimant would have experienced some sort of significant back complaints from July 2013 through July 2017 had he suffered a pars fracture in the incident of July 24, 2014. Claimant's lack of diagnosis consistent with an injury to the lumbar spine, coupled with the lack of any low back complaints to medical providers following the July 24, 2013 incident until 2017, and a history of prior, severe low back complaints were noted as the basis for her opinion.

34. Dr. Fall opined that although Claimant had a 2008 MRI which did not reveal a pars defect, this imaging was not the gold standard for detection of this type of injury. A CT scan would better detect a pars defect.

35. Dr. Fall opined that while Dr. Bernardini's request for medial branch blocks for the lumbar spine is reasonable and necessary, the need for said injections is not causally related to the work injury from 2013.

36. The ALJ credits the opinions of Dr. Fall to find that Claimant likely did not suffer pars fractures at the time of his July 24, 2013 industrial injury. The evidence presented, persuades the ALJ that Claimant suffered electrical burns to his left arm/hand, a left shoulder injury and probably an aggravation of a pre-existing neck condition, which ultimately required surgery. The record presented supports a causal connection between these injuries and Claimant's July 24, 2013 work accident. In contrast, the record does not support a persuasive indication that Claimant experienced a mechanism of injury, i.e. being thrust backward onto the edge of the bucket that would cause injury to his low back. Here, the evidence presented fails to convince the ALJ that Claimant had any objective indication of injury (trauma/bruising) to his back upon admission to the hospital, which would support a conclusion that he was thrown back onto the edge of the bucket when he was shocked. Moreover, there is scant evidence that he complained of symptoms consistent with a severe injury to the vertebrae in the days, weeks, months and years following the July 24, 2013 incident. Accordingly, the ALJ finds that Claimant has failed to establish that he suffered pars fractures at the time of his July 24, 2013 work accident.

35. While the evidence fails to persuade the ALJ that Claimant's pars fractures were caused by the July 24, 2013 incident, the evidence presented persuades the ALJ that the pars defects are nonetheless related to his July 24, 2013 injury. In this case, the ALJ finds that Claimant was performing physical conditioning, including core-

strengthening exercises at the gym at the direction of his authorized treating providers, Dr. Prusmack and PT Brown. Although Claimant was involved in rehabilitation directed towards his cervical spine, the ALJ finds that core-strengthening exercises were part of his formal PT protocol and where likely made part of his independent exercise program by his PT no later than July 6, 2017 and probably by recommendation of Dr. Prusmack much earlier. Consequently, the ALJ finds that Claimant was participating in medical treatment related to his work injury when he injured his lower back. But for Claimant's July 24, 2013 industrial injury, he probably would not have been in the gym on July 18, 2017, and would not have injured his lower back. Accordingly, the ALJ finds Claimant's low back injury related to his July 24, 2013 industrial injury as part of the quasi course of employment doctrine. Finally, the evidence presented convinces the ALJ that the lumbar medial branch block injections recommended by Dr. Bernardini are reasonable and necessary to cure Claimant of the ongoing effects of his persistent low back symptoms. Indeed, Dr. Fall agrees as much.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* In this case, Claimant must prove his entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201(1), C.R.S.* Rather, a workers' compensation claim is to be decided on its merits. *Id.*

B. In deciding whether Claimant has met his burden of proof, the ALJ is empowered: "To resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, *supra*. The weight and credibility to be assigned expert medical opinion is a matter within the fact-finding authority of the ALJ. *Cordova v. Indus. Claim Appeals Office, supra.* The ALJ should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke*, 139 Colo. 305, 338 P.2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's

knowledge, skill, experience, training and education. *See § 8-43-210, C.R.S.; One Hour Cleaners v. Indus. Claim Appeals Office*, 914 P.2d 501 (Colo.App. 1995). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968). As found here, Claimant's testimony/reported history, especially his account that bruising was "seen across the back" along with the suggestion that but for headaches, his back would have been "evaluated", is unsubstantiated by the evidence presented. Indeed, the record contains conflicting reports regarding Claimant's testimony that he was thrown backwards onto the onto the edge of the bucket causing injury and bruising to the low back. Moreover, Claimant treated with Dr. Caughfield very early in the course of his recovery and long before he developed persistent headaches, yet Dr. Caughfield's records are devoid of specific references to bruising and or pain in the lumbar spine. Accordingly, the ALJ finds Claimant's suggestion that he fractured his pars on July 24, 2013 unpersuasive. Moreover, PT Brown, PA Whatmore and Dr. Bernardini have relied heavily on Claimant's unsubstantiated verbal history to conclude that his pars defects occurred during the July 24, 2013 incident. Because the record does not support Claimant's subjective report of low back pain, bruising or a mechanism for injury likely to cause a pars fracture, the ALJ finds their opinions that the pars fractures occurred on July 24, 2013, equally unconvincing. Nonetheless, the evidence presented persuades the ALJ that Claimant's pars defects are related to his July 24, 2013 work injury under the quasi course of employment doctrine.

C. The "quasi-course of employment" doctrine provides that injuries which would not have occurred but for a compensable work related injury are also compensable. This includes injuries that occur in the course of obtaining medical treatment for a compensable industrial injury. *Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo.App. 1993). The rationale for the doctrine is that the employer is legally required to provide medical treatment to the injured employee, and the employee is legally required to submit to the treatment. The quasi-course of employment doctrine was first applied to injuries that occurred en route to authorized treatment for the original compensable injury. *See Price Mine Service v. Industrial Claim Appeals Office*, 64 P.3d 936, 938 (Colo. App. 2003)(traveling home from authorized medical treatment); *Excel Corp. v. Industrial Claim Appeals Office*, *supra* (slip and fall leaving authorized physical therapy). The doctrine was extended to include injuries involving an evaluation of the underlying workers' compensation claim, even though the claimant receives no treatment. *See Turner v. Industrial Claim Appeals Office* 111 P.3d 534 (Colo.App. 2004).However,the quasi-course of employment doctrine does not extend to injuries involving unauthorized medical treatment, *see Schrieber v. Brown & Root, Inc.*, 888 P.2d 274 (Colo.App. 1993). In workers' compensation proceedings, "authorization" means "a physician's status as the health care provider legally authorized to treat an injured worker." *Mason Jar Restaurant v. Industrial Claim Appeals Office*, 862 P.2d 1026, 1029 (Colo. App. 1993). The question of whether a particular injury falls within the "quasi-course of employment" doctrine is essentially one of fact for determination by the ALJ. *See City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

G. As found here, Claimant was probably given a list of exercises to perform at a gym by Dr. Prusmack, and/or PT Brown to improve his core strength weeks prior to his July 18, 2017 injury. Even if Claimant was not given such a list, as suggested by Respondents, the evidence presented persuades the ALJ that Claimant was, more probably than not, instructed to continue with his core strengthening exercises outside of formal PT as demonstrated by the July 6, 2017 therapy note. While the note does not indicate the specifics of the program, the ALJ is persuaded that Claimant was engaged in an exercise program to improve his core strength in formal PT and sought to advance his progress by working out on the sidesaddle machine as he testified. While Dr. Fall testified that she would never recommend a side saddle machine to a patient, the ALJ concludes it is reasonable to infer that Claimant was performing a movement he believed was going to improve his core strength after consulting with the gym manager based on the list of exercises he was likely given by PT Brown and/or Dr. Prusmack. Consequently, the ALJ is convinced that Claimant's low back injury occurred as part of the quasi course doctrine because it occurred while he engaged in medical treatment for his compensable July 24, 2013 industrial injury. Because the need for medial branch blocks are related to Claimant's July 24, 2013 injury and are otherwise reasonable and necessary, Respondents are obligated to provide and pay for them.

ORDER

It is therefore ordered that:

1. Respondents shall pay for all medical treatment, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the ongoing effects of his compensable low back injury, including but not limited to medial branch blocks recommended by Dr. Bernardini.

2. All matters not determined herein are reserved for future determination.

DATED: May 14, 2018

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that he is entitled to Temporary Total Disability ("TTD") benefits effective October 12, 2017 and ongoing, due to a worsening of his compensable condition?

PROCEDURAL BACKGROUND

This matter has previously been before the OAC in WC No. 5-033-012-01 on the Respondents' Petition to Terminate or Suspend TTD benefits filed on February 13, 2017. The Respondents' position was that the Claimant was responsible for the termination of his employment, which notice was given to the Claimant on December 20, 2016. By Order of ALJ Lamphere on June 27, 2017, the ALJ found that pursuant to the provisions of sections 8-42-105(4) and 8-42-103(1)(g), at that time the Claimant's wage loss was as a result of a volitional act of the Claimant and suspended the Claimant's TTD benefits. In doing so, ALJ Lamphere found, pertinent to this proceeding, that:

1) Employer had a zero tolerance drug policy;

2) The evidence presented showed that the Claimant was aware of the policy;

3) Despite the legalization of marijuana in the State of Colorado, an employer in Colorado may terminate an employee for drug usage, *Coats v. Dish Network, LLC,* 340 P. 3d 849 (Colo. 2015);

4) Claimant sustained severe electrical injuries to his head, brain and shoulder, intracranial bleed and a subsequent MERSA infection as a complication of the skin grafting necessary to treat the severe burns when he was exposed to 12,000 volts of electoral current while working on a high voltage switch at Evans Army Hospital;

5) Upon being airlifted to the University of Colorado Health Center a urinalysis was completed which revealed the presence of cannabinoids in Claimant's urine; and

6) Employer terminated the Claimant's employment on December 20, 2016 for a violation of the Employer's substance abuse policy.

Contemporaneously to the termination of employment on December 20, 2016 the Respondent Insurer filed a General Admission of Liability. The Order of ALJ Lamphere of June 27, 2017 was not appealed and the Claimant's TTD benefits were terminated, effective the date of the Respondent's Filing of the Petition to Terminate or Suspend TTD benefits of February 13, 2017. Thereafter the Respondents filed a new General Admission of Liability on June 28, 2017. (Respondents' Ex. B).

The Claimant has now filed this Application for Hearing requesting reinstatement of TTD benefits as a result of additional surgical procedures which he had to undergo for his ongoing MERSA infection in his brain, and has requested reinstatement of TTD benefits effective October 12, 2017, and continuing, as a result of a worsening of condition.

The Respondents filed a Motion for Summary Judgment regarding the Claimant's Application for Hearing. By Order of ALJ Spencer of March 5, 2018, that Motion was denied and this matter proceeded to hearing on April 3, 2018. (Ex. 18).

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

At Time of his Termination, Claimant was Bedridden and Required 27/7 Care

1. At the time of his termination on December 20, 2016, the Claimant had recently been discharged from a nearly three week stay in the Burn Unit ICU at University of Colorado Hospital. The Claimant was discharged on December 14, 2016 with work-related diagnoses of an electrical injury, third degree burns to the scalp and left shoulder, and an epidural hematoma. At the time of his discharge, there were plans of readmission for surgical debridement, autografting, and possible flap placement. (Ex. F, p. 61).

2. The Claimant's discharge note indicated the Claimant would be discharged into the care of his wife, who the Claimant testified was a nurse, and he would also require home healthcare physical therapy and occupational therapy. The Claimant's immediate care included wound vac changes at least once per week by a RN. (Ex. F, pp. 61-62)

3. The Claimant testified around December 20, 2016, he required supervision twenty-four hours per day, seven days per week. He indicated the vast majority of that care was rendered by his wife, but he also was under the care of a home health nurse who came to his home to help with his wound vac system and activities of daily living, like showering.

4. The Claimant testified that, at the time of his termination from employment, he required assistance to dress himself, to shower, and to prepare meals. He also indicated he was unable to perform house chores, like laundry. On December 20, 2016, the claimant testified that he "didn't move from the couch unless it was to go to bed."

5. The Claimant also reported that he had difficulty walking, was a fall risk, could not drive, and was unable to leave his home by himself at the time of his termination from employment. The Claimant conceded that in the time period around

his termination from employment, the only time he left his house was to attend doctor's appointments about once per week.

6. At hearing, Claimant conceded that, around December 20, 2016, he was essentially bedridden.

At Time of his Termination by Employer, Claimant Was Completely Unable to Work

7. After his discharge from University of Colorado Hospital, the Claimant's first appointment with a Workers' Compensation doctor was on December 26, 2016, at Colorado Springs Health Partners. Dr. Rudderow documented pain levels up to 8-10/10 and that the Claimant complained of balance issues, memory issues, joint pain and muscle pain. In addition to concurrent care with a home nurse, the Claimant was seeing specialists for ophthalmology, plastics, burn, and neurology. Based on the Claimant's condition and status, the Claimant was found to be unable to work and given total "no work" restrictions. (Ex. D, pp.17-20).

8. The Claimant conceded in testimony that on December 20, 2016, he was completely unable to work in any employment. He conceded his ability to work in an employment capacity was "zero."

Claimant' Condition Improved at one Point, and was Better than at Time of Termination

9. Unlike the time around December 20, 2016 where the claimant could not drive, perform house chores, or perform activities of daily living by himself, the Claimant testified that he 'currently' [at the time of this hearing] could do laundry and other house chores and he could drive. The Claimant testified that he drove to the hearing venue for this hearing. He also testified that in July, 2017, he was able to leave the house more freely and able to attend family functions, such as his brother's wedding held in New York, in addition to his medical appointments.

Claimant Concedes Condition Post-Termination is Identical to Condition in October 2017

10. The claimant conceded in testimony that his overall physical ability and condition was identical at the time of his termination and at the time of his alleged worsening in October 2017:

> Q: Mr. Frisch, is it fair to say that on December 20th you were on your couch, you needed 24/7 care, and you had a home health care nurse, physical therapist, and occupational therapist?
>
> A: Yes.

Q: Okay. Is it fair to say that, after the October 2017 surgery, you were on your couch, needing care, had a home health care nurse, physical therapist, and occupational therapist?

A: Yes.

Q: So you understand your condition was identical after each time?

A: Pretty much so. Different – different aspect of life, but yeah.

11. Claimant worked as an electrician's apprentice when he was accidentally electrocuted after his head came into contact with high voltage equipment on November 28, 2016. He was hospitalized at the University of Colorado Health Center in the burn unit from November 28, 2016 thru December 14, 2016. Upon discharge he was ambulatory with steady gait, hemodynamically stable, pain well controlled on oral medications, with no issues of voiding and having regular bowel movements. He was discharged home to the care of his wife with plans to start Home Health Care ("HHC") for vacuum changes with HHC, Physical Therapy ("PT"), and Occupational Therapy ("OT") as soon as possible. (Ex. F, p.62)

12. A Burn Clinic Note from December 19, 2016 noted that the Claimant continued with headaches, difficulty with balance (no falls) and short-term memory loss, and ongoing numbness/tingling of his dorsal left hand with associated weakness. Claimant thought his balance was improving. His wound vac was changed and the wound cultures were positive for MERSA with a new area of eschar. Pain was well controlled with medication. (Ex. F. pp. 56-57).

13. The Claimant required additional surgery for scalp debridement and tangential excision to his left shoulder on December 23, 2016, as a result of multiple areas of non-viable tissues along the circumference of the scalp wound. The goal was to create a healthy, beefy, viable wound down to the subcutaneous layer of the left shoulder. (Ex. F, p. 53). An additional wound vac was applied.

14. The Claimant was readmitted to the hospital on January 7, 2017. Claimant showed no evidence of cellulitis or infection. He was hospitalized for reconstruction of his scalp defect, debridement of the outer calvarium, saphenous vein harvest for a latissimus free flap of the vertex of the scalp and repair of his left external jugular vein with the vein graft tunneled to his face. (Ex. 5, pp. 15-16).

15. The Claimant testified that he thought he did not have the ability to work on December 20, 2016 since he had just gotten home from the hospital. He was relegated to his couch, and he was unable to do much of anything. He was unable to shower, needed assistance in dressing, needed assistance with preparing meals and was in pain all of the time. He further agreed that he was essentially bedridden as of the time of termination on December 20, 2016.

16. After the surgery of January 7, 2017, Claimant's condition began to slowly improve. On May 18, 2017 Dr. Lund reported: "Patient needs temporary

restrictions, patient can lift a maximum of 10 lbs., can repetitively lift 10 lbs., can carry a maximum of 10 lbs., may walk 2 hours per day, patient may stand 2 hours per day and patient may sit 4 hours per day, Light duty, must work indoors, seated duty, part-time 4-6 hours/day. Dr. Lund indicated that *"Patient is able to return to modified duty from 05-18-2017.* (Ex. 7, p. 25) (emphasis added). It appears that Dr. Lund was not aware that Claimant had been terminated by Employer for cause months before.

17. In June of 2017, Dr. Rudderow assumed the ongoing care and treatment of the Claimant. Dr. Rudderow was evidently sent some surveillance of the Claimant to review. By note of June 25, 2017, the Dr. Rudderow was of the opinion that the Claimant could lift greater than 15 pounds, but should ease back into work due to issues with balance, memory and processing issues. She noted: "Thus, we will continue a stepwise approach to return to work. *Please encourage your client to accommodate the restrictions*. (Ex. 8, p.30) (emphasis added). Likewise, it appears that Dr. Rudderow was unaware of Claimant's prior termination, but felt he was fit for some light duty.

18. Instead, Claimant started getting worse, both physically and mentally. By note of August 15, 2017, the ATP noted in "PT [Claimant] has no balance, no strength or stamina, can't ride bike or do sit ups, can't walk fast, middle of shoulder blades has extreme pain with certain movements. sees psychologist monthly, he is going to refer pt to shink (sic) (the ALJ infers this to be 'shrink', i.e., psychiatrist). (Ex. 10, p.32).

19. The Claimant progressively got worse. A note of September 26, 2017 from Dr. Rudderow was requesting an immediate CT scan. The Claimant also testified at hearing that he had open sores on his head and nobody knew why. After the CT scan they found an infection in his skull. According to the Claimant they cut out a portion of his skull about the size of a softball and Claimant, at the time of the hearing, had only skin covering to the top of his head. This would remain until the surgery could be performed to put a plate over the top of his head.

20. The Claimant testified that the surgery in October, 2017 where they removed the portion of his skull was not anticipated at the time of his surgeries in December of 2016 and January of 2017 but was as a result of the holes in his head not healing and becoming infected.

21. As a result of the additional surgery in October of 2017, and because of the nature of the infection the Claimant was put on a PICC line for about six weeks. At the time of this hearing, the Claimant still was in need for additional surgery to install a skull-replacement plate to cover his brain. Prior to doing so he had to undergo implant surgery to expand his skull.

22. When asked if his head pain was not worse in December of 2016 than it was after the surgery in October of 2017, the Claimant replied on cross-examination that he would have to say that when they cut open his head and cut out his scalp, that surgery was even more painful, as he went home with 44 staples in his head. The Claimant testified that his physical condition was worse after this most recent surgery than before it.

23. The Claimant further testified that his mental issues with anxiety and dealing with the pain the longer the effects of the injury have gone on have significantly worsened. Claimant is of the opinion that he needs some assistance mentally with dealing with his situation, and that need has progressively worsened.

24. From the foregoing facts, the ALJ infers that there is no independent intervening cause which worsened Claimant's condition. Secondly, not only is Claimant not at MMI, there is not a realistic date upon which to even estimate his return to MMI.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a witness. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the ALJ finds Claimant to be credible, despite his acknowledged issues with memory. The conclusions to draw are based largely on legal principles, not on significant conflicts in the evidence.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive

arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

D. The Workers Compensation Act is designed to be humanitarian in its enforcement and the mandate set forth in CRS Section 8-43-201 that the facts shall not be liberally interpreted in favor of either party does not conflict with the rule of liberal statutory interpretation of the Act in favor of the beneficent purpose of the Act. As stated by the Colorado Supreme Court in *Mountain City Meat Co. v. Oqueda,* 919 P. 2d 246 (Colo. 1996) and as recently reiterated by the Colorado Supreme Court in *England v. Amerigas Propane,* 2017 CO 55, 395 P.3d 766, 770 (2017)*(citing, Padilla v. Indus. Claim Appeals Office,* 942 P.2d 1358, 1360 (Colo. App. 1997)*,* "the overall purpose of the Act is the 'beneficent' purpose of compensating injured workers; consequently, the 'Act's provisions are to be interpreted liberally in favor of the right of injured workers.'"

Martinez v. Denver Health Medical Center does not apply here

E. Respondents cite the plain wording of the dicta in *Martinez v. Denver Health Medical Center,* WC No. 4-527-415 (ICAO, August 8, 2005) for the proposition that since Claimant's condition will not (and essentially could never) worsen from his termination date, that TTD can never be reinstated. Assuming Respondent's legal position is correct, the ALJ has essentially found every fact proposed by Respondents to allow them to prevail on appeal. As the ALJ believes that the facts herein are distinguishable from Martinez, and *Anderson v. Longmont Toyota*, 102 P.3d 323 (Colo. 2004) the ALJ declines to mechanistically apply the dicta of those cases to deny Claimant's TTD benefits in this case.

Conclusions to Draw from WC No. 5-033-012-01

F. The ALJ makes two observations at the outset: First, that while Judge Lamphere's ruling intimates in Conclusion # "I" that TTD is 'permanently barred', the Order #"1" makes no such reference to permanence. The ALJ herein finds that ALJ Lamphere did not intend that Claimant could never seek reinstatement of TTD benefits if a *worsening of his condition* were shown. The issue of worsening does not appear to have been litigated or addressed in that case at all.

G. Secondly, *Longmont Toyota* at p. 325 states "This provision [§8-42-105(4)] applies to employee TTD claims made ***after*** *an injured worker returns to modified employment* and *subsequently quits* the employment or *is fired* for cause" (emphasis added). Claimant herein never returned to modified employment, nor did he subsequently quit or get fired for cause. That issue, however, was not appealed, nor is the potential total inapplicability of §8-42-105(4) to Claimant now before this ALJ. That ship has already sailed, and those issues determined by Judge Lamphere will not be disturbed.

Longmont Toyota

H. However, this opinion will address the policy considerations behind § 8-42-105(4), as outlined in *Longmont Toyota*, as applied to this claim. There is no need to wade into the realm of constitutional or property rights issues to decide the matter. What is inherently different here is that *Claimant's misconduct predated his injury and subsequent termination.* The legislative rationale, as discussed at length in *Longmont Toyota*, is that a claimant, once placed onto modified duty, becomes the architect of his own fate with this amendment. Before, claimants were essentially abusing their TTD status, and committing acts which got them fired from employment, but with impunity vis-à-vis their TTD benefits. What is also clear is that this was the limit of the intended purpose of the statute; to wit: to prevent such abuses.

> We acknowledge that the 1999 legislative debate surrounding enactment of section 8-42-105(4) was concerned with the point that PDM Molding had opened the door to rewarding employees for causing workplace disruptions, or walking off the job, and then being compensated for wage loss in doing so. Nevertheless, contrary to the court of appeals conclusion that the General Assembly clearly intended an absolute bar to all subsequent TTD benefits involving that employer, the debate actually demonstrates the General Assembly's intent not to bar the employee's subsequent worsening condition claim. Id at p. 328.
>
> This assurance that worsening condition compensation would not be jeopardized by passage of the bill occurred in the context of questions by legislators about the ramifications of passing the bill, and is particularly significant when paired with Representative Berry's statement, as sponsor, that the bill's purpose was "to clarify that temporary total disability is for when you're off work and injured, and it's not for any other purpose." Transcript of Hearings at 2. Id at p. 330.
>
> In summary, we conclude that the General Assembly intended section 8-42-105(4) to weed out wage loss claims subsequent to voluntary or for-cause termination of modified employment that do not involve a worsened condition. Id at p. 330.

I. The incongruous result of this Claimant's predicament, were *Martinez* to apply, can be outlined in the following *hypothetical* involving three (nearly) identical claimants, A, B, and C:

January 1: Claimant suffers a compensable injury to his lower back; goes onto TTD.

February 1: Claimant undergoes a 1-level fusion on lower back; MMI is preliminarily estimated to be August 1.

March 1: Claimant is deemed fit to return to modified, light duty and does so, with steady, predictable progress along the way.

July 1: Claimant's condition suddenly and unexpectedly worsens; he can no longer perform modified duty.

August 1: It is revealed that the fusion hardware has failed, requiring a more extensive revision surgery.

September 1: A 2-level fusion revision surgery is performed; Claimant is now placed onto an even more slow recovery track. MMI indeterminate, but a long ways off.

● Claimant A: An investigation now reveals an ongoing pattern of embezzlement which occurred the previous year; Claimant is terminated, for cause, on July 1.

● Claimant B: An investigation now reveals an ongoing pattern of embezzlement which occurred the previous year: Claimant is terminated, for cause, on September 1.

● Claimant C: An investigation now reveals an ongoing pattern of embezzlement which occurred the previous year; Claimant is terminated, for cause, on February 1. Because he was terminated, Claimant is never placed onto modified duty, despite the medical clearance to do so, effective March 1.

J. There is little doubt that hypothetical Claimants A and Claimant B would be eligible for reinstatement of TTD payments. Despite identical medical trajectories, and identical conduct predating the injury, Claimant C would not receive TTD, presumably ever. The difference? The date the pre-injury misconduct was *discovered* by Employer-or at least when *Employer* chose to act upon it-in good faith or otherwise. Claimant C never went onto modified duty. Instead, on the date Claimant C is terminated, he is under anesthesia, essentially helpless. His condition cannot get worse from that state; ergo no "worsening" of his current condition is ever possible. Checkmate.

K. Claimant herein finds himself essentially in the position of hypothetical Claimant C. Claimant was rightfully terminated for cause, shortly after his pre-injury misconduct was revealed. However, once he was injured and hospitalized, Clamant was no longer the architect of his own fate. Nothing in the record suggests that Employer acted in anything other than good faith in firing him. Nonetheless, it was *Employer's* timing, and not *Claimant's,* that led not only to his *termination of employment*, but also the *termination of his TTD benefits.* This is not the result contemplated by the enactment of §8-42-105(4). This issue was discussed at length in *Longmont Toyota*, and the ALJ declines to apply the dicta of *Martinez* to Claimant herein. Claimant's case is distinguishable.

L. There is ample evidence in the record to find that Claimant had improved sufficiently from his injury such that he was then capable of performing modified duty in May and June, 2017. He did not actually perform such modified duty, since he was (for valid reason) no longer employed by Employer. Shortly thereafter, his compensable

condition, both physical and mental, worsened considerably, culminating in his inability to work in any capacity on October 12, 2017. Hypothetically, had Claimant never sufficiently recovered to be able to perform modified duty (as occurred in this case in May and June of 2017), perhaps this analysis might have yielded a different result. Such analysis must wait for another day, if indeed §8-42-105(4) even applies to pre-injury misconduct.

M. By a preponderance of the evidence, the ALJ finds that Claimant's compensable condition worsened that by October 12, 2017, and ongoing, he was incapable of working in any capacity. He therefore has suffered a wage loss. As contemplated by the purpose of §8-42-105(4), and *Longmont Toyota,* his TTD benefits are to be reinstated as of that date.

ORDER

It is therefore ordered that:

1. Claimant's TTD benefits are to be paid by Respondents, effective October 12, 2017.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has produced substantial evidence that the right knee Synvisc One injection requested by Cary Motz, M.D. on December 1, 2017 in Workers' Compensation claim number 4-876-092 is a reasonable, necessary and causally related maintenance medical benefit that is designed to relieve the effects of his January 10, 2012 industrial injury or prevent further deterioration of his condition pursuant to *Grover v. Industrial Comm'n.,* 759 P.2d 705 (Colo. 1988).

2. Whether Respondent has established by a preponderance of the evidence that all future medical maintenance benefits in Workers' Compensation claim numbers 4-876-092. 4-942-549 and 4-977-997 should be terminated.

FINDINGS OF FACT

1. Claimant is a 63 year old male who works for Employer as a Transportation Maintenance 1. Claimant's job duties include patching asphalt, fixing guard rails, plowing snow, driving a tandem plow and other activities required to maintain Colorado highways.

2. On January 10, 2012 Claimant was a pedestrian in Employer's parking lot when he was struck by a vehicle driven by a coworker at a low speed [case no. 4-876-092]. He fell to the ground but did not lose consciousness and remained able to walk. Claimant suffered admitted industrial injuries to his lower back, right hip and right knee.

3. Claimant received medical care in the form of physical therapy, chiropractic treatment, acupuncture and medications. On October 25, 2012 Authorized Treating Physician (ATP) John Burris, M.D. concluded that Claimant had reached Maximum Medical Improvement (MMI).

4. Claimant challenged Dr. Burris' determination and sought a Division Independent Medical Examination (DIME). On March 11, 2013 David Orgel, M.D. performed the DIME. He agreed with Dr. Burris that Claimant had reached MMI on October 25, 2012. Dr. Orgel assigned Claimant a 29% whole person impairment for his lumbar spine and a 27% lower extremity or 11% whole person rating for his right hip. Notably, Dr. Orgel did not assign any impairment for Claimant's right knee but instead remarked that "there are chronic changes of arthritis noted." He recommended medical maintenance treatment in the form of medications, "occasional" chiropractic visits and possible right hip injections.

5. Claimant subsequently received maintenance medications in the form of Flexeril, Vicodin, Lidocaine patches and 800 mg Ibuprofen prescribed by ATP Samuel

Y. Chan, M.D. He continued to receive the preceding medications at the time of hearing. Claimant has also received chiropractic treatment from ATP Richard Mobus, D.C. and right knee injections from ATP Cary Motz, M.D.

6. On February 10, 2014 [case no. 4-942-549] Claimant suffered admitted industrial injuries to his right shoulder, right elbow and cervical area when he slipped and fell on ice in Employer's parking lot. Claimant continued to receive treatment from the same medical providers who had provided care for his January 10, 2012 claim.

7. As a result of his February 10, 2014 claim Claimant underwent right shoulder surgery with ATP Motz on June 2, 2014. The surgery consisted of a "right shoulder arthroscopy with subscapularis tendon repair, arthroscopic biceps tenodesis, and subacromial decompression."

8. On January 12 2015 ATP Ted Villavicencio, M.D. concluded that Claimant had reached MMI for his February 10, 2014 industrial injuries. Claimant was released to full duty employment.

9. Shortly after reaching MMI Claimant suffered a third admitted industrial injury on February 27, 2015 [case no. 4-977-997] when he again fell and slipped on ice. Claimant reinjured his right shoulder and right hip. A right shoulder MRI revealed a recurrent tear that was eventually related to the February 10, 2014 industrial accident. Claimant underwent repeat right shoulder surgery.

10. On January 22, 2016 Eric Tentori, M.D. concluded that Claimant had reached MMI with no additional impairment. He recommended medical maintenance benefits of one to two as needed visits with either Dr. Chan or Dr. Motz "for any significant clinical deterioration." Respondent subsequently filed a FAL that acknowledged Claimant was entitled to receive reasonable, necessary and related medical maintenance benefits.

11. Claimant challenged Dr. Tentori's MMI determination and sought a DIME. On April 29, 2016 Claimant underwent a DIME with Stephen D. Lindenbaum, M.D. Dr. Lindenbaum considered all three of Claimant's Workers' Compensation claims. He determined that Claimant had reached MMI for his February 10, 2014 industrial injury on November 6, 2015. Dr. Lindenbaum attributed Claimant's right knee pain to chronic degeneration as a result of tricompartment advanced disease. He remarked that numerous other complaints related to Claimant's feet, right arm falling asleep, hearing loss, right finger numbness and compensatory left shoulder symptoms were not related to any work incident. Dr. Lindenbaum concluded that additional medical maintenance treatment was not warranted because of Claimant's poor response to prior treatment. He specifically remarked that "I do not feel [Claimant] requires continued maintenance care because basically he has had several months of continued maintenance care with acupuncture and chiropractic which has been of minimal value."

12. The parties subsequently stipulated to a 7% whole person impairment rating for the February 10, 2014 claim. They also agreed to reasonable, necessary and

related medical maintenance treatment. Respondent filed a FAL consistent with the stipulations on September 7, 2016.

13. On October 6, 2017 Dr. Chan issued a statement providing that he was "in total agreement" with the independent medical examination opinion of Tashof Bernton, M.D. that Claimant's continuing symptoms were degenerative in nature and not related to a specific injury from February of 2015. Although Dr. Chan acknowledged that Claimant's pain symptoms required ongoing medical attention, his condition was not related to the February of 2015 work accident.

14. On December 7. 2017 Respondent filed an Application for Hearing regarding Claimant's February 27, 2015 injury [case no. 4-977-997]. Respondent requested the termination of medical care. Claimant filed a Response on December 11, 2017.

15. On December 15, 2017 Claimant filed an Application for Hearing based on his January 10, 2012 industrial injury in case number 4-876-092. He requested a Synvisc One injection into his right knee that had been recommended by Dr. Motz on December 1, 2017. The procedure had been denied by Respondent based on the opinion of Dr. Bernton. He had determined that Claimant's need for care was caused by degenerative changes unrelated to any of his industrial injuries. Respondent timely filed a Response to Claimant's Application for Hearing and requested the termination of all medical maintenance care.

16. Respondent also filed an Application for Hearing regarding Claimant's February 10, 2014 injury [case no. 4-942-549] requesting the termination of medical maintenance care. Claimant filed a timely Response on March 26, 2018.

17. All claims were consolidated for purposes of the April 24, 2018 hearing.

18. Claimant testified at the hearing in this matter. He explained that the medications and maintenance medical care he was receiving from ATP Chan were reasonable, necessary and related to his admitted industrial injury of January 10, 2012 [case no. 4-876-092]. Claimant remarked that the chiropractic care he has received from ATP Mobus has permitted him to continue to function in his job. He noted that he desires a Synvisc One injection from ATP Motz because the injections have worked previously.

19. Dr. Bernton testified at the hearing in this matter. He generally maintained that Claimant's need for treatment is caused by degenerative changes that are unrelated to any of the industrial injuries. In specifically addressing Claimant's right knee, Dr. Bernton explained that Claimant suffers from a degenerative process and his ACL was removed in 2004. Although Claimant's right knee was injured when he was struck by a slow-moving truck on January 10, 2012, there was no structural damage. Dr. Bernton emphasized that structural changes are necessary to change the degenerative slope of a condition. Absent structural changes, Claimant's right knee symptoms are unrelated to the January 10, 2012 incident but are instead related to

progressive degenerative osteoarthritis. Moreover, the February 10, 2014 and February 27, 2015 accidents did not cause any worsening of Claimant's right knee symptoms. Finally, the Synvisc One injections prescribed by Dr. Motz are designed to treat Claimant's underlying degenerative osteoarthritis and not his work injuries. Accordingly, the requested injections are not related to Claimant's industrial injuries.

20. In addressing Claimant's lower back symptoms, Dr. Bernton reasoned that Claimant also suffers from a pre-existing degenerative condition. The records document a significant history of lower back pain dating back prior to the January 10, 2012 work injury. Claimant was diagnosed with Modic and facet joint changes prior to the work injury and received significant evaluation and treatment including injections. Dr. Bernton explained that Claimant's degenerative lower back condition would continue to progress even in the absence of any of the work injuries based on the nature of the changes and Claimant's age, weight and genetics.

21. In addressing Claimant's right hip, Dr. Bernton had detailed in his report that the need for care was caused by degenerative changes unrelated to Claimant's industrial injuries. However, he testified that one to two right hip injections each year over the course of the following two years would be reasonable. Dr. Bernton apportioned 50% of the cost of the injections to the January 10, 2012 claim and 50% to the February 10, 2014 incident.

22. Claimant has failed to produce substantial evidence that the right knee Synvisc One injection requested by Dr. Motz is a reasonable, necessary and causally related maintenance medical benefit that is designed to relieve the effects of his January 10, 2012 industrial injury or prevent further deterioration of his condition. Initially, on January 10, 2012 Claimant was a pedestrian in Employer's parking lot when he was struck by a vehicle driven by a coworker at a low speed. Claimant suffered admitted industrial injuries to his lower back, right hip and right knee. Claimant noted that he desires a Synvisc One injection from ATP Motz because the injections have worked previously. However, the bulk of the medical records reflect that Claimant's right knee symptoms are not related to the January 10, 2012 incident but are instead attributable to chronic, degenerative changes.

23. DIME Dr. Orgel agreed with Dr. Burris that Claimant had reached MMI on October 25, 2012 for the January 10, 2012 Accident. Dr. Orgel assigned Claimant a 29% whole person impairment for his lumbar spine and a 27% lower extremity or 11% whole person rating for his right hip. Notably, Dr. Orgel did not assign any impairment for Claimant's right knee but instead remarked that "there are chronic changes of arthritis noted." Moreover, in a second DIME, Dr. Lindenbaum attributed Claimant's right knee pain to chronic degeneration as a result of tricompartment advanced disease. He determined that additional medical maintenance treatment was not warranted because of Claimant's poor response to prior treatment. Dr. Bernton also explained that Claimant suffers from a degenerative process and his ACL was removed in 2004. Although Claimant's right knee was injured when he was struck by a slow-moving truck on January 10, 2012, there was no structural damage. Dr. Bernton emphasized that structural changes are necessary to change the degenerative slope of a condition.

Absent structural changes, Claimant's right knee symptoms are unrelated to the January 10, 2012 incident but are instead related to progressive degenerative osteoarthritis. Dr. Bernton also noted that the February 10, 2014 and February 27, 2015 accidents did not cause any worsening of Claimant's right knee symptoms. He reasoned that, because the Synvisc One injections prescribed by Dr. Motz are designed to treat Claimant's underlying degenerative osteoarthritis and not his work injuries, the injections are not related to Claimant's industrial injuries. Based on the persuasive opinions of Drs. Orgel, Lindenbaum and Bernton, as well as the underlying medical records, Claimant's request for a Synvisc One injection into his right knee is denied and dismissed.

24. Respondent has failed to establish that it is more probably true than not that all future medical maintenance benefits regarding the January 10, 2012 [4-876-092] and February 10, 2014 [4-942-549] work accidents should be terminated. However, Respondent has demonstrated that Claimant is no longer entitled to receive medical maintenance benefits regarding the February 27, 2015 claim [4-977-997]. Initially, Respondent seeks to terminate medical maintenance benefits for Claimant's chiropractic care from Dr. Mobus, medications from Dr. Chan for lower back pain and right hip injections. The bulk of the persuasive medical records reflect that Claimant's lower back symptoms are attributable to a chronic degenerative condition. However, Claimant's continuing need for right hip injections is related to his January 10, 2012 and February 10, 2014 industrial accidents.

25. After considering all three of Claimant's Workers' Compensation claims Dr. Lindenbaum determined that additional medical maintenance treatment was not warranted because of Claimant's poor response to prior treatment. In addressing Claimant's lower back symptoms Dr. Bernton reasoned that Claimant suffers from a pre-existing degenerative condition. Dr. Bernton explained that Claimant's degenerative lower back condition would continue to progress even in the absence of any of the work injuries based on the nature of the changes and Claimant's age, weight and genetics. However, in addressing Claimant's right hip, Dr. Bernton testified that one to two right hip injections each year over the course of the following two years would be reasonable. Dr. Bernton apportioned 50% of the cost of the injections to the January 10, 2012 claim and 50% to the February 10, 2014 incident. Accordingly, Respondent's request to withdraw its admission for future maintenance medical benefits in claim numbers 4-876-092 or claim number 4-942-549 is denied.

26. Respondent is permitted to withdraw its admission for future maintenance medical benefits for the February 27, 2015 claim [4-977-997]. The persuasive medical evidence demonstrates that Claimant's need for medical maintenance care is no longer related to the February 27, 2015 accident. Dr. Lindenbaum remarked that Claimant is no longer entitled to medical maintenance treatment because of Claimant's lack of improvement and Dr. Bernton explained that Claimant suffers from pre-existing degenerative conditions unrelated to his industrial accidents. Finally, Dr. Chan issued a statement providing that he was "in total agreement" with Dr. Bernton that Claimant's continuing symptoms were degenerative in nature and not related to a specific injury

from February of 2015. Accordingly, Claimant's request to withdraw its admission for future maintenance medical benefits in claim number 4-977-997 is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To prove entitlement to medical maintenance benefits, a claimant must present substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve the effects of the industrial injury or prevent further deterioration of his condition. *Grover v. Industrial Comm'n.,* 759 P.2d 705, 710-13 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609, 611 (Colo. App. 1995). Once a claimant establishes the probable need for future medical treatment he "is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity." *Hanna v. Print Expediters, Inc.*, 77 P.3d 863, 866 (Colo. App. 2003); *see Karathanasis v. Chilis Grill & Bar,* W.C. No. 4-461-989 (ICAP, Aug. 8, 2003). Whether a claimant has presented substantial evidence justifying an award of *Grover* medical benefits is one of fact for determination by the Judge. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 919 P.2d 701, 704 (Colo. App. 1999).

5. Although Respondent filed a FAL admitting for medical maintenance benefits, it is not precluded from contesting liability for future treatment. *See Azar v. Mervyn's*, W.C. No. 4-354-936 (ICAP, June 9, 2005). An admission for medical

maintenance benefits is general in nature and is subject to a respondents' subsequent right to challenge particular treatment. *Id*. When respondents seek to terminate medical maintenance benefits they have the burden to prove that medical maintenance benefits are no longer reasonable, necessary or related to the industrial injury. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990); *see* section 8-43-201(1), C.R.S. (specifying that "a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification").

Synvisc One Injection

6. As found, Claimant has failed to produce substantial evidence that the right knee Synvisc One injection requested by Dr. Motz is a reasonable, necessary and causally related maintenance medical benefit that is designed to relieve the effects of his January 10, 2012 industrial injury or prevent further deterioration of his condition. Initially, on January 10, 2012 Claimant was a pedestrian in Employer's parking lot when he was struck by a vehicle driven by a coworker at a low speed. Claimant suffered admitted industrial injuries to his lower back, right hip and right knee. Claimant noted that he desires a Synvisc One injection from ATP Motz because the injections have worked previously. However, the bulk of the medical records reflect that Claimant's right knee symptoms are not related to the January 10, 2012 incident but are instead attributable to chronic, degenerative changes.

7. As found, DIME Dr. Orgel agreed with Dr. Burris that Claimant had reached MMI on October 25, 2012 for the January 10, 2012 Accident. Dr. Orgel assigned Claimant a 29% whole person impairment for his lumbar spine and a 27% lower extremity or 11% whole person rating for his right hip. Notably, Dr. Orgel did not assign any impairment for Claimant's right knee but instead remarked that "there are chronic changes of arthritis noted." Moreover, in a second DIME, Dr. Lindenbaum attributed Claimant's right knee pain to chronic degeneration as a result of tricompartment advanced disease. He determined that additional medical maintenance treatment was not warranted because of Claimant's poor response to prior treatment. Dr. Bernton also explained that Claimant suffers from a degenerative process and his ACL was removed in 2004. Although Claimant's right knee was injured when he was struck by a slow-moving truck on January 10, 2012, there was no structural damage. Dr. Bernton emphasized that structural changes are necessary to change the degenerative slope of a condition. Absent structural changes, Claimant's right knee symptoms are unrelated to the January 10, 2012 incident but are instead related to progressive degenerative osteoarthritis. Dr. Bernton also noted that the February 10, 2014 and February 27, 2015 accidents did not cause any worsening of Claimant's right knee symptoms. He reasoned that, because the Synvisc One injections prescribed by Dr. Motz are designed to treat Claimant's underlying degenerative osteoarthritis and not his work injuries, the injections are not related to Claimant's industrial injuries. Based on the persuasive opinions of Drs. Orgel, Lindenbaum and Bernton, as well as the underlying medical records, Claimant's request for a Synvisc One injection into his right knee is denied and dismissed.

Future Medical Maintenance Benefits

8. As found, Respondent has failed to establish by a preponderance of the evidence that all future medical maintenance benefits regarding the January 10, 2012 [4-876-092] and February 10, 2014 [4-942-549] work accidents should be terminated. However, Respondent has demonstrated that Claimant is no longer entitled to receive medical maintenance benefits regarding the February 27, 2015 claim [4-977-997]. Initially, Respondent seeks to terminate medical maintenance benefits for Claimant's chiropractic care from Dr. Mobus, medications from Dr. Chan for lower back pain and right hip injections. The bulk of the persuasive medical records reflect that Claimant's lower back symptoms are attributable to a chronic degenerative condition. However, Claimant's continuing need for right hip injections is related to his January 10, 2012 and February 10, 2014 industrial accidents.

9. As found, after considering all three of Claimant's Workers' Compensation claims Dr. Lindenbaum determined that additional medical maintenance treatment was not warranted because of Claimant's poor response to prior treatment. In addressing Claimant's lower back symptoms Dr. Bernton reasoned that Claimant suffers from a pre-existing degenerative condition. Dr. Bernton explained that Claimant's degenerative lower back condition would continue to progress even in the absence of any of the work injuries based on the nature of the changes and Claimant's age, weight and genetics. However, in addressing Claimant's right hip, Dr. Bernton testified that one to two right hip injections each year over the course of the following two years would be reasonable. Dr. Bernton apportioned 50% of the cost of the injections to the January 10, 2012 claim and 50% to the February 10, 2014 incident. Accordingly, Respondent's request to withdraw its admission for future maintenance medical benefits in claim numbers 4-876-092 or claim number 4-942-549 is denied.

10. As found, Respondent is permitted to withdraw its admission for future maintenance medical benefits for the February 27, 2015 claim [4-977-997]. The persuasive medical evidence demonstrates that Claimant's need for medical maintenance care is no longer related to the February 27, 2015 accident. Dr. Lindenbaum remarked that Claimant is no longer entitled to medical maintenance treatment because of Claimant's lack of improvement and Dr. Bernton explained that Claimant suffers from pre-existing degenerative conditions unrelated to his industrial accidents. Finally, Dr. Chan issued a statement providing that he was "in total agreement" with Dr. Bernton that Claimant's continuing symptoms were degenerative in nature and not related to a specific injury from February of 2015. Accordingly, Claimant's request to withdraw its admission for future maintenance medical benefits in claim number 4-977-997 is granted.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

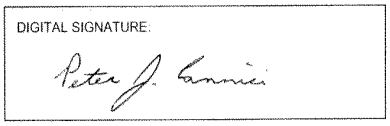
1. Claimant's request for the right knee Synvisc One injection requested by Cary Motz, M.D. on December 1, 2017 in Workers' Compensation claim number 4-876-092 is denied and dismissed.

2. Respondent's request to terminate all future medical maintenance treatment in case numbers 4-876-092 and 4-942-549 is denied and dismissed. Respondent's request to terminate all future medical maintenance treatment in case number 4-977-997 is granted.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: May 15, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

PROCEDURAL STATUS

A Prehearing Conference Order was issued by PALJ Harr on January 12, 2017. PALJ Harr granted Respondent's Motion to Add the Issue of Overcoming/Striking the Determination of DIME physician, Dr. Lindenbaum, based upon the allegations that Claimant violated WCRP 11. Claimant's Objection to adding the issue of overcoming the DIME physician as unripe, as closed, and as it outside the jurisdiction of an administrative law judge was added as an issue. Claimant's request that his objection be treated as an attempt to have the issue struck as unripe pursuant to 8-43-211(3) was granted and preserved for future adjudication.

The ALJ determined based upon the procedural posture of the case, as well as a need for testimony regarding the procedural and substantive issues, an Order bifurcating the issues set for determination was in the interests of justice.

Accordingly, the Court issued an Order Bifurcating the issues set for determination. The following issues were heard initially: Respondents' Motion to Add Issues at hearing; whether Respondents' requested remedy of striking the Division of Worker's Compensation IME is an available remedy under the OACRP and WCRP; whether the issue of the DIME rating was closed; whether the foregoing issues were ripe for determination. The remaining issues were reserved, to be determined after this Order.

PRELIMINARY FINDINGS OF FACT

1. Claimant worked as an Assistant Principal for Employer.

2. Claimant's medical history was significant in that he previously injured his low back in 2012 in a motor vehicle accident. An MRI done in May 2012 revealed Claimant had grade 1 spondylolisthesis at the L5-S1 level, with bilateral pars defect. Moderate foraminal stenosis was also noted at this level.

3. On August 14, 2012, Claimant underwent surgery for his low back, which was performed by Hooman Melamed, M.D. The procedure performed included: partial L5 and S1 semicorporectomy (anterior retroperitoneal approach); anterior lumbar interbody arthrodesis at the L5-S1 level; anterior lumbar segmental instrumentation and L5-S1, using RSB interbody plate; insertion of the biomechanical RSB cage with 12-decree lordosis; use of local harvested autograph and allograft bone; iliac crest bone grafting on the left side, separate procedure, separate incision and modifying up to 59; use of intraoperative fluoroscopy in multiplane; use of intraoperative somatosensory evoked potential and electromyographic monitoring. The pre-and post diagnoses were:

grade 1 isthmic spondylolisthesis at L5-S1 level; bilateral L5-S1 pars defects; bilateral foraminal stenosis; left leg pain, radiculitis, and sciatica; significant left L5 radiculitis; neurologic deficits in the L5 distribution on the left side; failed conservative management; and progressive worsening of the patient's symptoms of low back pain.

4. Claimant was involved in an altercation in 2014 while working. He underwent an MRI on September 17, 2014, which was ordered because of trauma and weakness in the lumbar spine. The MRI, which was read by Jaime Contreras, M.D., showed no acute findings and the anterior fusion at L5-S1, with grade one anterolisthesis of L5 on S1. Bilateral foraminal stenosis was noted at this level. The other lumbar levels were unremarkable.

5. Claimant sustained an admitted industrial injury on August 20, 2015 while working for Employer. Claimant was injured after he was struck in the parking lot by a parent in a pick-up truck.[1]

6. Claimant received treatment for his injuries, including at the North Colorado Medical Center, where he was treated in the Emergency Department.

7. On August 24, 2015, Claimant was evaluated by Jason Haas, D.C.[2] X-rays were taken and Claimant's posture and body composition was analyzed. Claimant returned to Dr. Haas' office on August 31, 2015 and received chiropractic treatments from Alisha Jacobs, D.C. Claimant's cervical, thoracic and lumbar spine were adjusted. Claimant also received chiropractic adjustments and a physical therapy evaluation on September 2, 2015.

8. A General Admission of Liability ("GAL") was filed on September 16, 2015 Respondents admitted for medical and temporary total disability ("TTD") benefits.

9. On September 10, 2015, Dr. Melamed issued a report following a telephone conference with Claimant. The report noted Claimant was doing well until recently when he was involved in a car accident. Dr. Melamed had reviewed Claimant's MRI and the CT scan, which showed psuedoarthrosis at the L5-S1 level. The PEEK cage and plate had completely subsided into the S1 vertebral body, causing bilateral L5-S1 significant foraminal stenosis. Dr. Melamed concluded there was pseudoarthrosis and also a loss of lumbosacral lordosis. Dr. Melamed recommended a posterior pedicle screw fixation at the L5-S1, with bilateral L5-S1 foraminal decompression, requiring an osteotomy and removing the entire facet complex and the pars to open up room for the nerve. Claimant indicated he wanted to go forward with surgical intervention.

[1] Exhibit PP, page 477.

[2] Records of treatment with Dr. Haas before Claimant's work injury were admitted at hearing. These records included treatments on March 19, 26, May 26, August 3, 6, 13, 2015; all of which occurred before the subject injury. Claimant treated for lumbar, cervical and right foot pain, receiving chiropractic adjustments.

10. Claimant received treatment at the Workwell Occupational Health, the designated ATP for Employer, beginning on September 22, 2015. Claimant was evaluated by Kevin Keefe, D.O., who diagnosed sprain/strains-lumbosacral; disturbance of skin sensation. Dr. Keefe opined Claimant's problem was related to work activities and issued an M164, as well as placing Claimant on restricted duty.

11. On September 30, 2015, Claimant was evaluated by Gregory Reichhardt, M.D. On examination, Claimant demonstrated diffuse give-way weakness in the left lower extremity. His reflexes were 2/4 and symmetrical in the patellae and Achilles. Claimant had god cervical and thoracic range of motion ("ROM"). Marked limitations were found in his lumbar ROM. Dr. Reichhardt's impression was: low back pain and bilateral lower extremity pain-history of previous L5-S1 fusion for spondylytic spondylolisthesis; mechanism of injury/pedestrian-motor vehicle accident in which he was directing traffic and was hit intentionally by a truck on 8/20/15; lumbosacral spine x-rays- post-op findings at L5-S1, grade II anterolisthesis, which may be chronic; thoracic spine x-ray 8/20/15-no acute findings; pelvic x-ray 8/20/15-no acute findings; CT of the thoracic spine 9/4/15-negative for acute bony pathology; lumbar MRI 9/4/15-bilateral pars defect, L5, grade I anterolisthesis, previous interbody fusion, moderate bilateral neural foraminal narrowing, L5-S1-mild ligamentum flavum and facet overgrowth, other levels normal; CT of the lumbar spine 9/4/15: L5-S1, interior screw fixation device was well-positioned in the line, no loosening fractures, bilateral L5 spondylolisthesis, slight L5-S1 listhesis, no acute pathology; 9/29/15 thoracic MRI demonstrating a small disc extrusion T5 to T7; concern by patient's prior surgeon re: pseudoarthrosis, with osteolysis; bilateral upper extremity numbness: C-spine x-ray 8/20/15-no acute findings; C3-4 minimal disc bulge, mild bilateral foraminal narrowing, C5-6 mild disc bulge, mild left foraminal stenosis, etiology unclear; opioid use, ORT, high risk; history of Hodgkin's lymphoma; history of stomach ulcers, psoriasis of hypothyroidism; borderline renal insufficiency. Dr. Reichhardt recommended Claimant keep his evaluation by a spine surgeon and offered various referral options.

12. On December 4, 2015, Claimant was evaluated by Anant Kumar, M.D.[3] Dr. Kumar noted Claimant had an antalgic gait and used a cane. Claimant's lumbar spine had localized tenderness at L4-S1. There were no obvious motor deficits, but a subjective decrease in sensation was noted. Dr. Kumar stated Claimant had undergone and L5-S1 anterior lumbar fusion, with anterior fixation using a stand-alone plate/cage. It appeared there had been subsidence of the cage and sacrum, but Dr. Kumar did not have the immediate postoperative x-rays or imaging to compare. In 2014, an MRI showed Claimant had left-sided foraminal stenosis at the L5-S1 level and an in situ fusion at L5-S1, with associated cage subsidence. Dr. Kumar disagreed a posterior only fusion would be successful in a reduction of the spondylolisthesis. He opined a posterior decompression would not decompress Claimant's up-and-down stenosis. Dr. Kumar recommended a revision anterior followed by a posterior spinal fusion.

[3] Dr. Kumar stated Claimant was referred by Insurer for an independent medical opinion. Claimant described Dr. Kumar as an ATP in his Position Statement and the referral from Dr. Pouliot was admitted as Exhibit J, p.177.

13. Dr. Kumar is an ATP.

14. Claimant was evaluated by Matthew Pouliot, D.O. on December 21, 2015. Dr. Pouliot documented Claimant was referred by Dr. Keefe. Dr. Pouliot reviewed the MRI which showed a neural compression at L5. On examination, Claimant's sensation and proprioception were intact on the upper and lower limbs, other than slight decreased sensation on the left in the L5 distribution. Dr. Pouliot's assessment was: 44-year-old male with a work injury on August 20, 2015, reportedly struck by a vehicle speed-now with back and radicular pain bilaterally worse on left, neural compression seen at L5's MRI bilaterally. Claimant was noted to have a history of anterior lumbar interbody fusion at L4-5, with reported pseudoarthrosis and reported negative EMG. Dr. Pouliot offered bilateral L5 transforaminal injections, but felt he would need a spinal operation. Dr. Pouliot noted he would assist Claimant with medication management.

15. Claimant returned to Dr. Keefe on February 9, 2016. Dr. Keefe noted back surgery had been denied by Insurer and Claimant was deciding whether to proceed with procedure using private insurance. Dr. Keefe recommended Claimant see Dr. Mathwich regarding case closure and a potential impairment rating. Dr. Keefe opined the cause of Claimant's problem was related to work activities.

16. On February 24, 2016, Claimant underwent a posterior lumbar spine fusion at L5-S1, which was performed by Dr. Kumar. A posterior instrumented fusion using pedicle screws, local bone graft, a medium in use was performed. Dr. Kumar also did a bilateral decompression of the L5 and S1 nerve roots in the canal and sub-particular zone. Claimant's pre-and post-operative proceedings were the same and included: pseudoarthrosis at L5-S1, status post L5-S1 anterior lumbar fusion; grade 1 spondylolisthesis, with severe foraminal stenosis, bilateral lower limb radiculopathy, left worse than right; present in both upper limbs, left worse than right; inability to stand upright; severe back pain; and failure of conservative treatment.

17. Dr. Kumar opined Claimant's prior L5-S1 anterior lumbar fusion had not healed appropriately and this was a revision surgery performed with no complications. Intraoperatively, Dr. Kumar found that the L5 nerve root was severely compromised and there was significant spinal stenosis in the canal, in the sub-pedicular and sub-articular zone.

18. On March 2, 2016, Claimant was evaluated by Brian Mathwich, M.D. Dr. Mathwich noted he was asked to evaluate Claimant regarding recent complications and the denial of surgery. He noted Insurer had not admitted liability for the lumbar spine and had denied the request for surgery. He spoke to Ms. Harrington, who confirmed the lumbar spine was not related. The lumbar CT and MRI showed significant issues in the lumbar spine, which was determined to be pre-existing and non-work-related. Dr. Mathwich stated Claimant underwent a conservative course of treatment.

19. At the time of Dr. Mathwich's evaluation, Claimant had complaints of bilateral arm numbness and tingling. Dr. Mathwich noted this was a difficult case due to

significant pre-existing issues. Dr. Mathwich found a normal cervical spine, reviewed the neurologic and upper extremity exam from Dr. Kumar, with no further complaints from the patient regarding bilateral arm numbness. Dr. Mathwich's diagnosis was: sprain/strains-lumbosacral; disturbance of skin sensation. If there continued to be no significant issues, Dr. Mathwich would consider Claimant to be without impairment rating and would issue permanent restrictions.

20. Dr. Keefe confirmed Insurer had denied liability after speaking to Ms. Harrington and also spoke to Dr. Mathwich. Dr. Keefe determined Claimant was at MMI on March 17, 2016 and completed a M-164.

21. On April 15, 2016, an amended GAL was filed. TTD benefits were terminated based upon Claimant's return to full duty.

22. Claimant returned to Dr. Mathwich, M.D. on April 21, 2016. Dr. Mathwich said Claimant initially had discomfort in the upper extremities, with bilateral arm numbness and had a negative MRI, as well as bilateral negative EMGs. Claimant underwent surgery on February 24, 2016, which was covered by private insurance. At the time of evaluation, Dr. Mathwich found tightness in the paraspinal muscles bilaterally, with some point tenderness of the left L4-5 paraspinal muscles. Tenderness was noted, along with trigger points in the gluteus medius bilaterally, just over the iliac crest. Dr. Mathwich's diagnosis was the same as on March 2, 2016.

23. Dr. Mathwich stated the cause of this problem did not appear to be related to work activities and noted he received documentation from Insurer which said the back injury, surgery and all associated treatment were not compensable. Dr. Mathwich stated there was no choice but to keep Claimant at MMI as of March 17, 2016. He indicated he would agree to be Claimant's primary care provider, if Insurer accepted liability.

24. Claimant requested a DOWC IME and Stephen Lindenbaum, M.D. was selected as the examining physician.

25. Claimant was evaluated by Dr. Lindenbaum on July 23, 2016. At the time of the evaluation the, Claimant walked without an antalgic gait and was able to walk heel to toe without discomfort. Dr. Lindenbaum agreed with Dr. Mathwich that Claimant reached MMI on March 17, 2016. Dr. Lindenbaum noted he received records from Dr. Haas. More particularly, he stated:

> "Today, the patient brought in some records from Dr. Haas, who he had been followed prior to the injury for just basic medical and physiological well-being. The notes that were brought to me show that the patient on exams prior to the injury had range of motion of the lumbar spine of flexion over 50° and extension over 26°. The exam after the accident dating 12/28/15, which is roughly 5 months later, shows the patient only has 90° flexion and 12° of extension".

26. On examination, Claimant had no long tract signs, clonus, or atrophy in the lower extremities. He had a prior injury fusion by Dr. Melamed and advised Dr. Lindenbaum he had no problems with his back since that time, until some mild back pain related to an altercation in 2014.

27. Dr. Lindenbaum obtained valid ROM measurements during his examination. Based on the *AMA* Guides, Table 53, IIB, Claimant had a 10% impairment of the body for his specific spine disorder and a 9% range of motion deficit. Combining the range of motion deficit with the specific disorder, Claimant had an 18% whole person impairment. Dr. Lindenbaum agreed with Dr. Kumar that this injury was not pre-existing and was a new injury, since he was previously asymptomatic. Dr. Lindenbaum opined that any postoperative care should have been covered under the compensation claim.

28. On August 4, 2016, the DOWC issued a Notice of Receipt of Division IME (DIME) Report DIME Process Concluded. Insurer received a copy of the Notice, as it was date stamped by its mail operations on August 5, 2016.

29. There was no dispute Respondents received a copy of the DIME report on August 17, 2016.

30. Pursuant to 8-42-107.2 (4) (c),C.R.S., Respondents were required to either file an admission of liability or request a hearing on or before August 24, 2016.

31. On September 12, 2016, a Final Admission of Liability ("FAL") was filed on behalf of Respondents. This was 18 days after the deadline set forth in § 8-42-107.2 (4)(c), C.R.S. Respondents admitted for PPD benefits based upon the medical impairment rating issued by Dr. Lindenbaum. Medical benefits after MMI were denied.

32. Claimant filed a timely objection to the FAL on September 15, 2016.

33. On January 12, 2017, counsel for the parties participated in a Prehearing Conference before Prehearing Administrative Law Judge Michael Harr. PALJ Harr's order is referenced, *supra*.

34. An Application for Hearing ("AFH") was filed on behalf of Claimant on February 28, 2017. The AFH listed the issues of medical benefits, disfigurement, as well as Grover medical benefits, mileage, and interest due on PPD.

35. A Response to the AFH ("RAH") was filed on behalf of Respondents on March 2, 2017. Respondents marked the following issues to be considered at hearing: medical benefits, disfigurement, permanent partial disability benefits. Other issues to be heard included reasonableness, necessity and relatedness of any and all medical care sought and/or received; authorization/authorized medical care; fee schedule; *Grover v. ICAO*; overcoming/striking the DIME; violation of Rule 11.

36. A Prehearing Conference was held on April 11, 2017 and an Order issued that same day. The Order vacated the hearing set for May 12, 2017. In addition, the Order allowed Respondents, at their discretion, to suspend payment of PPD benefits, pending a hearing. The Order also provided that if benefits remained owing after the hearing, Respondents were required to pay statutory interest on any amounts not paid during the duration of the suspension.

37. On April 14, 2017, Respondents filed a FAL. Respondents suspended payment of PPD benefits pending the resolution of issues at hearing.

38. On April 18, 2017, Claimant filed an Objection to the FAL.

39. On May 10, 2017, Claimant filed an AFH. He requested a hearing on the following issues medical benefits, disfigurement, along with *Grover* medicals, mileage, interest due on PPD, waiver, ripeness and closure.

40. On June 1, 2017, an RAH was filed on behalf of Respondents. The issues set for determination included medical benefits, disfigurement, and PPD benefits. Other issues include those referenced on Claimant's AFH. Respondents also sought an adjudication on reasonableness, necessity and relatedness of any and all medical care sought and/or received; authorization/authorized medical care; fee schedule; *Grover v. ICAO*; overcoming/striking the DIME; Claimant's violation of Rule 11.

FURTHER FINDINGS OF FACT

41. Dr. Haas testified JTECH is company that prepares a digital ROM assessment. The system on which this is prepared was separate from the medical record system which housed the records related to evaluations of patients.[4] The individual in his office who gathered the information for the report was Dr. Allison, the physical therapist or the PTA (Justin). Dr. Haas testified he had not reviewed Dr. Lindenbaum's report prior to the deposition. He did not have information as to what records Claimant took to the DIME.

42. Claimant brought notes documenting his ROM findings by Dr. Haas' offfice to the DIME, which was performed by Dr. Lindenbaum.

43. Claimant violated WCRP Rule 11 by bringing the records from Dr. Haas to the DIME.

44. Respondents were not aware Claimant brought the ROM findings from Dr. Haas' office to the DIME.

[4] Haas deposition page 16:18-25.

45. Dr. Lindenbaum testified he received notes from Dr. Haas at the time of his evaluation of Claimant.[5] Dr. Lindenbaum confirmed Claimant brought these records to the evaluation.[6]

46. Dr. Lindenbaum testified in his evidentiary deposition that he did not put much weight in the documents from Dr. Haas, stating at page 9:17-10:3:

> "Well, let me preface it by saying, I didn't put very much credence in it, but I thought it was something that should be placed in my report. It just basically says--Dr. Haas is commenting that he had seen the patient before this injury, [Claimant], and his range of motion was one level. And that several months after the injury, he saw him again, and his range of motion dropped significantly.
>
> Now, let me--let me state here that this is a very-this does not mean a lot to me. Only that I think it is important to put that in here because it is a document that suggests there had been a change".

47. Dr. Lindenbaum also stated his major concerns were the findings made by orthopedic surgeons. The ALJ noted Dr. Lindenbaum concluded Claimant's medical impairment was caused by his industrial injury.

48. Dr. Lindenbaum's testimony that his opinions were not affected by review of Dr. Haas' records was persuasive to the ALJ.

49. Laura Harrington testified as a representative for Respondent-Insurer. She has been employed by Insurer as a claims adjuster for 18 years and received notice of the claim on August 25, 2015. She has been responsible for adjusting the instant claim since that time. Ms. Harrington testified she did not prepare the DIME packet which was submitted to Dr. Lindenbaum. She did not have a copy of Dr. Haas' JTECH records prior to the DIME. Ms. Harrington was a credible witness.

50. Ms. Harrington testified she received Dr. Lindenbaum's DIME report on August 17, 2016, which was faxed to her at 3:56 p.m.[7] Ms. Harrington testified she skimmed the report and believed she had 20 days from receipt of the DIME report to take a position. Ms. Harrington testified Respondents disagreed with the DIME and wished to challenge the DIME opinion.

51. An AFH was filed on August 30, 2016[8], but was withdrawn after Ms. Harrington discussed the case with Insurer's staff attorneys and Claimant's counsel.

---

[5] Lindenbaum deposition page 8:14-21.

[6] Lindenbaum deposition page 8:25-9-10.

[7] Exhibit A, p.1.

[8] Exhibit KK, pp. 463-465.

A Notice of Cancellation of hearing was filed, although the hearing had not been set.[9]

52. The ALJ found Ms. Harrington could have determined there was a reference to Dr. Haas' ROM records in Dr. Lindenbaum's report within the time frame to take a position on the DIME. Ms. Harrington incorrectly thought the 20-day time ran upon receipt of the DIME report. An AFH could have been filed on behalf of Respondents within the 20-day period to dispute the conclusions made by the DIME physician.

53. The issues concerning the DIME were ripe for determination.

54. The Court does not have jurisdiction to adjudicate Respondents' Objection to the DIME, as the AFH was filed beyond the 20-day time limit provided by statute.

55. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S. (2016), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2016). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. (2016).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

[9] Exhibit JJ.

RIPENESS

In the case at bench, Claimant disputed whether the issue of striking the determination of a DIME physician was ripe. The term "ripeness" refers to whether an issue is "real, immediate, and fit for adjudication". Colorado courts have held that under this doctrine "adjudication should be withheld for uncertain or contingent future matters that suppose a speculative injury which may never occur". *Olivas-Soto v. Industrial Claim Appeals Office,* 143 P.3d 1178 (Colo. App. 2006).

That is not present in the instant case. The ALJ determined that all of the issues concerning the DIME, including Respondents' response to the Notice of Receipt of Division IME (DIME) Report DIME Process Concluded and receipt of the report of Dr. Lindenbaum were ripe for determination.

MOTION TO STRIKE DIME

Claimant argued that the failure to request a hearing within 20 days barred Respondents' attempt to contest the DIME opinion and this Court has no jurisdiction to decide the issue. Respondents argued that issues admitted to in a filed FAL are closed, unless Claimant filed a timely objection, pursuant to § 8-43-203(2)(b)(II)(A). Respondents cited *Balfour v Boulder County*, W.C. No 4-020-145 (ICAO March 22, 1993) for the proposition that Respondents could then controvert their own admission of liability once the Claimant objected. Respondent further argued that it did not waive its right to contest the DIME opinion since it was not aware Claimant had provided the Dr. Haas' records to Dr. Lindenbaum.

As determined in Findings of Fact 28-30, no contrary evidence was introduced to refute the fact that Respondents received the Notice of Receipt of Division IME (DIME) Report DIME Process Concluded. Respondents were required to take a position on or before August 24, 2016 upon issuance of the Notice of Receipt of Dr. Lindenbaum's report. Even though the adjuster for Insurer (Ms. Harrington) did not have JTECH report which contained the ROM readings before the evaluation, the ALJ determined she could have found the reference to those records in Dr. Lindenbaum's DIME report. (Finding of Fact 51).

The deadline set forth in § 8-42-107.2 (4) (c), C.R.S. has been held to be jurisdictional. *Leprino v. Industrial Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005). In *Leprino*, Claimant suffered an admitted industrial injury and reached MMI. Claimant requested a lump sum after an FAL was filed and then requested a DIME. The DIME physician concluded Claimant was not at MMI, but Respondents took no position with regard to that opinion. The case went to hearing, the ALJ found Claimant had not reached MMI and was entitled to PPD benefits. The ALJ also determined that Respondents failed to either admit or contest liability within 30 days [the 2005 version of § 8-42-107.2 (4)] and therefore Respondents were precluded from challenging the DIME physicians' opinion.

The Colorado Court of Appeals found Respondents were bound by the DIME physician's report because they failed to contest the findings. Justice Casebolt observed:

"Both sections [§ 8-42-107.2 (4) and § 8-43-203(2)(b)(II)] are part of an overall statutory scheme designed to ensure the prompt payment of benefits without the necessity of litigation in cases that do not present a legitimate controversy. [citation omitted]. The provisions of this statute are clear and require the insurer either to contest the DIME report within thirty days or to admit in accordance with the report. *City Mkt., Inc. v. Indus. Claim Appeals Office,* 68 P.3d 601 (Colo.App.2003) [upholding the imposition of penalties for employer's failure to either contest or admit to the DIME report]. Just as an ALJ lacks jurisdiction, without a DIME, to resolve a dispute concerning an ATP's finding of MMI, *Town of Ignacio v. Indus. Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002), the ALJ also lacks jurisdiction, absent an objection to the DIME physician's findings, to resolve a dispute as to those findings". *Id* at 482.

Leprino has not been overruled and remains good law, which governs the case at bench. No contrary authority was provided to the Court. The time limit prescribed by § 8-42-107.2(4) is jurisdictional. Accordingly, Respondents' August 30, 2016 Application for Hearing was outside the jurisdictional time limit for responding to the DIME report. The ALJ determined there was no jurisdiction once the time provided for in § 8-42-107.2(4) had elapsed.

In coming to this decision, the ALJ considered the application of *Rigoberto Almanza v. Terry Johnson and R. Edeltraud Johnson*, W.C. 4-713-132-02 (ICAO December 7, 2012) to the case at bar. Citing *Leprino v. Industrial Claim Appeals Office,* 134 P.3d 475, *supra*, the Industrial Claim Appeals Panel concluded the provisions of § 8-42-107.2 (4) were jurisdictional. The Panel reversed the ALJ Order which determined Respondents had not waived their right to respond to the DIME report based on a PALJ Order which extended the time to respond. (The basis for challenging the original DIME was because there was an improper communication with the examining physician.) The Order awarding PPD benefits based upon a subsequent DIME was also set aside. The ALJ determined this case does not provide the authority to strike the DIME in its entirety, as suggested by Respondents.

Respondents also averred they did not waive the right to contest the findings of the DIME physician. Respondents correctly point out the requirements for waiver were not met here, as there was not a knowing, intentional and voluntary relinquishment of a known right since they were not aware Claimant brought the JTECH report to the DIME. Respondents argued they could not have waived the right to raise the issue of a Rule 11 violation because they were not aware it had occurred. The ALJ found Respondents did not have a copy of Dr. Haas' records prior to the evaluation. (Finding of Fact 44). This was supported by the testimony of Ms. Harrington. (Finding of Fact 49). However, having determined there was no jurisdiction upon the expiration of the statutory timeframe, this argument is unavailing.

The ALJ has determined that Respondents are entitled to present evidence in support of their Petition to Reopen and/or withdrawal of the FAL. Under the particular factual circumstances of this case, the ALJ finds Respondents should be given the opportunity to present evidence on these issues at a subsequent hearing.

Finally, the ALJ has determined that a sanction is appropriate for Claimant's violation of Rule 11. As found, Claimant violated Rule 11 by tendering Dr. Haas' records to Dr. Lindenbaum at the time of the DIME. (Finding of Fact 43). As found, Claimant did not provide a copy of these records to Respondents before or after the DIME. Respondents were not aware these had been provided.

It is well-established that the Colorado Rules of Civil Procedure apply to workers' compensation hearings, except to the extent these are inconsistent with the statute or WCRP/OACRP. *Nova v. Industrial Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988). Moreover, the Colorado Legislature has articulated the important policy underpinning the DIME process, including its independence. The rules governing such evaluations provide a mechanism for submitting medical records and prohibit the submission of records outside the proscribed process. Claimant's submission of records violated this prohibition. (Finding of Fact 43).

Accordingly, the ALJ has determined that an appropriate sanction is to preclude Claimant from recovering statutory interest on PPD benefits during the time in which Respondents have suspended payment of said benefits. Said sanction is in the interests of justice and tailored to remedy the violation which occurred in this instance.

ORDER

It is therefore ordered:

1. Respondents' Motion to Strike the DIME is denied.

2. Claimant's Objection to Respondents adding the issue of Petition to Reopen is overruled. This issue is deemed ripe and will be set for determination at the hearing following this Order.

3. PALJ Gallivan's April 11, 2017 Order is affirmed, in part and overruled in part. Respondents shall not be obligated to pay statutory interest on PPD benefits which were suspended, as a sanction for Claimant's violation of WCRP Rule 11. The balance of PALJ Gallivan's order remains in full force and effect.

4. Counsel for Claimant and Respondents shall confer and schedule a second day of hearing on the remaining issues before the undersigned ALJ.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Has Claimant shown, by a preponderance of the evidence, that he suffered a compensable injury on August 10, 2017?

2. Has Claimant shown, by a preponderance of the evidence, that he is entitled to all reasonable, necessary, and related medical treatment resulting from this work injury?

3. Has Claimant shown, by a preponderance of the evidence, that he is entitled to Temporary Total Disability payments as a result of this work injury?

STIPULATIONS

The parties stipulated that, if compensable, Claimant's Average Weekly Wage is $729.90. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant began working for Employer in 2016. Claimant worked in traffic maintenance, generally performing maintenance on state highways. This typically entailed duties such as clearing brush, guardrail repair, clearing trash, and plowing snow.

2. Claimant testified at hearing that on August 10, 2017, he arrived to work at 7:45 am. He and a team of two other employees, Victor Salone and Julius Orlando, were to clear brush on I-25 northbound near the Fontanero exit. Claimant testified that this job was to take the entirety of the work day.

3. Claimant testified that at 1:30 pm, he was engaged in cutting trees with a chainsaw which weighed about 30 pounds. Claimant was to cut the trees, Mr. Salone was to collect the fallen brush, and Mr. Orlando was to take the fallen brush and feed it into a tree shredder. Claimant testified that he had to look left, where the cut trees were falling, in order to ensure that his team would not be struck by falling debris. While cutting the trees, Claimant was holding his chainsaw extended away from his body at roughly chest height, leaning out over a retaining wall the interstate. At that time, he looked sharply left to ensure a safe falling path. At that time, he felt an instant pain in the center of his neck. He described a "bright flash of light", and "every intense" pain.

4. Claimant testified that he did not immediately inform anyone of his injury because the job was almost done and he felt that the work needed to be completed, as

he did not want to "leave his crew hanging." As it was also a Friday, he testified that he thought that rest and aspirin over the weekend would solve the problem. He did not mention his injury to either Orlando or Salone in the aftermath of the incident.

5. Claimant testified that he first reported his injury to Jacob Aguilar with Employer by phone on Saturday, August 12. He further testified that he also texted his road supervisor Steve Jurich that same day, indicating that he'd hurt himself that Thursday. Respondent's Exhibit J depicts a text message from Claimant to "Jake" (which the ALJ infers to be Mr. Aguilar) on Sunday, August 13 at 10:25 a.m., wherein Claimant states "I think I pinched a nerve in my neck Thursday [August 10] while cutting trees." Claimant testified that Aguilar directed him to wait until Monday, August 14 to present to Centura Centers for Occupational Medicine ("CCOM").

6. As Mr. Aguilar advised, Claimant did seek medical treatment with CCOM on August 14, 2017. (Ex. 4). He was first examined by Jay Neubauer, M.D. Dr. Neubauer noted primary problems located in Claimant's neck, left arm, and both shoulders. Claimant indicated to Dr. Neubauer that he had been operating a 30 pound chainsaw when he turned his head sharply to the left, causing instant pain. Dr. Neubauer placed Claimant under temporary restrictions, limiting him to no more than 5 pounds with his upper body and restricting him from any commercial driving. *Id*. at p. 14. Claimant was referred for physical therapy, and told to follow up in one week.

7. Claimant continued treating with CCOM through November 9, 2017, when his care was discontinued due to denial of his claim by Respondents. *Id*. at 31. Claimant's workers' compensation claim had been previously denied on August 28, 2017 when Respondents filed a Notice of Contest endorsing need for further investigation for prior medical records. (Ex. 3, p. 7).

8. Respondents conducted surveillance of Claimant during this period, most notably on November 19, 2017. (Ex. I). Surveillance footage of Claimant shows him repeatedly bending at the waist, as well as riding an ATV. Dr. Neubauer read a surveillance narrative report- but was unable to view the surveillance video itself-and noted that: "I do find it interesting that he is riding ATV *but surmise that this would be tolerable given his current level of pain*." (Ex. 4 at 37) (emphasis added).

9. Conservative care on Claimant's denied claim resumed with a demand appointment at CCOM on December 5, 2017. (Ex. 4, p. 32). Claimant resumed treatment until February 15, 2018, when he was placed at MMI by Dr. Neubauer. *Id*. at p. 55. Claimant's treatment during this period consisted largely of physical therapy and work hardening exercises, as well as some chiropractic treatment.

10. Throughout his course of treatment at CCOM, Claimant was placed under work restrictions by Dr. Neubauer. (Ex. 4). Those restrictions began on August 14, 2017, initially restricting Claimant with no lifting/carrying/pushing/pulling more than 5 pounds, and restricting commercial driving. *Id*. at 14. Claimant was released from restrictions on January 10, 2018, then returned to restrictions limiting him to no

lifting/carrying/pushing/pulling greater than 20 pounds on January 18. *Id*. at 45, 47. Claimant was released again at full duty, with no restrictions, on February 15, 2018, when Dr. Neubauer placed him at MMI. (Ex. 4 pp. 52-53).

11. Claimant attended an Independent Medical Exam with Jack Rook, M.D. on December 11, 2017. (Ex. 7, pp. 130-136). Dr. Rook reviewed the medical record, performed a physical exam, and took a patient history from Claimant. Dr. Rook diagnosed Claimant with chronic neck pain, including myofascial pain, probable facet malalignment, and diminished sensation in a left C7 distribution, as well as low back pain including a probable facet malalignment. *Id*. at 134.

12. Dr. Rook concluded that Claimant's neck pain was caused by the August 10, 2017 work incident. *Id*. at 135. Dr. Rook noted the awkward and physically demanding work Claimant was engaged in at the time of his injury. He also noted Claimant's utter lack of symptoms prior to the date of injury, and opined that this would have been sufficient to cause Claimant's injury upon turning his head sharply to the left as reported. Dr. Rook additionally concluded that Claimant's low back pain was causally related to the neck pain stemming from the August 10, 2017 work incident. This was caused by Claimant altering his gait in order to reduce pain stemming from his neck. *Id*. at 134-35.

13. Claimant also attended an Independent Medical Exam at Respondents' request with Carlos Cebrian, M.D. on February 12, 2018 (Ex. 16). Dr. Cebrian reviewed the medical record, performed a physical exam and took an oral history from Claimant, and reviewed Dr. Rook's IME report.

14. Victor Salone testified at hearing on behalf of Respondents. Mr. Salone worked for Employer with Claimant, and was present on the job site on August 10, 2017. Mr. Salone was unable to recall much about that day, although he estimated that they began work around 8 or 9 am and finished between 4 and 5 pm. Mr. Salone did not recall noticing Claimant engaging in any pain behaviors, nor did he recall Claimant mentioning anything to him about an injury. Claimant drove Mr. Salone to a bike event he was working that afternoon. He testified that Claimant spoke about being unsatisfied at work, but conceded that this wasn't uncommon, due to employees feeling that they were treated unfairly. He further clarified that Claimant seemed generally happy in his work with Employer.

15. Eric Myers also testified at hearing. Myers testified that as of August 2017 he was a first-level supervisor for Employer. He testified that Claimant reported his injury on August 14 and completed paperwork for a workers' compensation claim at that time, although he did note that Claimant marked the root case as "unknown." Claimant also, in response to the question "How could this type of incident been prevented:" (sic) marked "Unknown" (Ex. H, p.002). He did note that Claimant indicated in the report that the equipment involved in the injury was a chainsaw.

16. Bradley Bauer also testified at hearing on behalf of Respondents. He testified that his position with Employer was a LTC Ops I, part of which entailed supervising Claimant. He testified that it was common knowledge that Claimant intended to move on to another position from performing maintenance with Employer. He testified that Claimant immediately inquired about the promotional process upon being hired and attempted to enter a cross-training program to work in areas more engineering focused. Claimant was denied the cross-training opportunity. Bauer conceded that Claimant evidently intended to remain with Employer in some capacity, and that it was not suspicious for such employees to seek promotion. Finally, Bauer testified that Claimant left a note indicating his resignation on February 8, 2018.

17. Claimant's employee review noted that he had some accountability issues (which Claimant disputed), and some with communication. (Ex. G).

18. Dr. Cebrian testified at hearing. He was qualified as a Level II expert in Occupational Medicine. He testified, consistently with his report, that Claimant's injury could not have occurred as reported. He further noted that Dr. Rook's IME report should be given little weight, as Dr. Rook was only able to review medical records through September 28, 2017 as part of his IME. He concluded that this lack of records past that date rendered Dr. Rook's opinion as to causation less credible than his own, as he was able to review the surveillance footage, and the remainder of the medical records. He finally concluded that there was no objective evidence of an injury to Claimant's cervical spine on August 10, 2017.

19. Dr. Cebrian noted that because his opinion took into account more information than any other physicians', which allowed him to see "a larger view picture of what goes on relative to the mechanism" and thus a more accurate causation analysis. He noted Claimant's medical history showed it was common for Claimant to demonstrate diffuse musculoskeletal complaints without inciting events. (Ex. A p. 20). He opined there was no objective evidence of an injury whatsoever in this claim, and that this included the MRI and all other physicians' opinions. (Ex. A p. 21).

20. Regarding Claimant's report of a flash of light, Dr. Cebrian noted that (a) it had not appeared anywhere else in the record; and (b) the reported mechanism of injury could not have caused a flash of light because that would require force to the brain or eyes. The force of the mechanism described by the Claimant would be to the shoulders and upper back, instead of the neck. He opined the amount of force from this mechanism would be "significantly less" than pushups.

21. Dr. Cebrian addressed each of the potential injuries from the Incident: facet injury, muscle spasm, cervical strain, and low back strain. He stated each possible injury from the mechanism of injury was not medically probable:

- **Facet Injury**: This injury would be to small joints that go together from one vertebral body to another, and typically these are injured by significant forces of flexion and extension, such as whiplash. Therefore, the proposed mechanism of

injury of turning his head rapidly, even holding the chainsaw, did not have sufficient force to have injured the spine.

- **Muscle Spasm:** This injury would have appeared as a "large, knotted muscle," especially for an individual with Claimant's significant musculature. If it had occurred, it would have been found on palpation during examination within the initial evaluations, and those evaluations did not find any evidence of a muscle spasm. Finally, a muscle spasm would not be expected to cause 10 out of 10 pain.

- **Neck Strain:** the diagnosis suggested by Dr. Neubauer is a "stretching of the muscle fibers that results in some sort of local trauma." Onset is typically immediate, or by the next morning. Neck strains usually are at their worst initially, and resolve within 4-6 weeks at the longest. The problems with this diagnosis are: (a) there were no objective signs of a neck strain; and (b) Claimant's six month recovery did not fit the diagnosis because "when you're looking at the entire picture, it doesn't make sense that minimal mechanism would lead to those kinds of complaints that would last for that length of time without any objective findings of significance…"

- **Low Back:** For the first alleged cause, traction, it could not have injured Claimant's low back because it put no force on his low back, and Dr. Cebrian had never heard of neck traction injuring the low back. On the second cause, Claimant's posture could not have affected his low back, as it instead would only cause discomfort to claimant's shoulders and upper back. Further, Dr. Cebrian knew of no scientific studies connecting low back pain to neck posture. Finally, Claimant had full range of motion of his neck, so it would not have affected his posture significantly. Overall, the theory of a posture change was not medically probable.

22. Dr. Cebrian also noted the surveillance showed Claimant lifting a bench without difficulty, which you would not expect from someone with back complaints.

23. Dr. Cebrian opined that Claimant's tingling and numbness of his extremities, if they had been related to the Incident, should have occurred within the first few days, but had not. Regarding the surveillance, Dr. Cebrian testified that the most significant thing about that was that Claimant had no hesitation or pain behavior whatsoever.

24. Dr. Cebrian's ultimate opinion was that Claimant's neck issues were not work related, and that there were no potential neck or low back injuries resulting from the Incident. He also opined that Claimant should not have been placed on restrictions due to the incident.

25. Claimant testified at the hearing. He testified how his injury occurred, as well as the steps he took to report it. He did testify that he hadn't told anyone working with him on August 10, 2017 that he'd sustained an injury; instead deciding that he

needed to work through the pain in order to get the job completed. He further testified that the pain in his neck caused him to hold his head very stiffly to avoid aggravating the area and causing further pain. He testified that in so doing, he began noticing pain in his lower back as a result of the way he was holding himself.

26. He testified that he was able to return to work for 4 or 5 days in January of 2018, but otherwise his restrictions kept him off work, since Employer was unable to accommodate said restrictions. After returning to work for that period, he had a session of chiropractic care that caused his pain to increase, which again took him out of work. Claimant testified that he worked about another 4 or 5 days in February before he resigned.

27. Claimant also testified that while he had a minor injury years prior to August 10, 2017 which had caused stiffness in his neck, that he received treatment and the condition improved. He also indicated that he was not having any pain in his neck or low back immediately before the August 10, 2017 work incident, nor had he received treatment for those areas for some time before the incident.

28. During his testimony, Claimant addressed the surveillance footage showing him riding an ATV. Claimant testified that after his treatment had been ongoing, he was able to ride his ATV without much pain and would be able to do so without much pain. He indicated that the vehicle he uses does not require much effort to operate, as it has power steering. He testified that, to his knowledge, the restrictions from his doctor did not preclude him from riding the ATV.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive

arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

Credibility

D. While Claimant may not have been entirely accurate or forthcoming in outlining his entire medical history depending upon the context of the conversation, overall the ALJ finds that Claimant testified credibly, and provided accurate information to his ATP, who placed him on diminishing work restrictions before ultimately placing him at MMI. Claimant was initially given a restriction of no commercial driving, based upon limited range of motion, but that would not have prevented him from the driving the ATV as he did for the few minutes as observed in November-and to no apparent surprise to Dr. Neubauer. After viewing the surveillance video, the ALJ (like Dr. Cebrian) notes no noticeable guarding or pain behaviors, but Claimant might well have simply been bored.

E. The ALJ finds the testimony of Victor Salone, Eric Meyer, and Bradley Bauer to be credible. However, such testimony merely established that Claimant delayed in reporting his injury, while not displaying pain behavior shortly after the fact. Claimant's credible explanation is that he thought he would work through it. When he realized he could not, he reported it two or three days later. Since the mechanism of injury seemed so benign on its face, and the onset of pain so sudden, it would be logical to describe its origin, and future prevention as "unknown". While Claimant was no doubt disappointed at his promotional prospects, the evidence is insufficient to conclude he has now resorted to fraudulent intentions. While Claimant's abrupt departure from his employment was anything but laudable, he more likely decided not to return, once medically cleared, to a job he saw as a dead end. Had Claimant wished to abuse the system, he likely would not have reported rapid improvements to Dr. Neubauer.

Compensability

F. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and

circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

G. An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm'n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation. *Id*.

H. The medical testimony is plainly in conflict on the conclusions to be drawn. While Dr. Cebrian did have greater access to information at the time of his report than did Dr. Rook, he did not have the benefit of regular treatment of Claimant, as did Dr. Neubauer. While the ALJ concludes that Dr. Cebrian is sincere and professional in his opinions, the testimony of Claimant, combined with the report from Dr. Rook, and the medical evidence from CCOM, is more persuasive in this instance. While Claimant did not fully disclose his prior issues with this neck and back, the record is sufficiently clear that he had worked this physically demanding position for some time without being symptomatic. The ALJ concludes, by a preponderance of the evidence, that Claimant either injured his back as described, or alternatively, aggravated a previously asymptomatic injury.

Medical Benefits

I. The Claimant has the burden to prove her entitlement to medical benefits by a preponderance of the evidence. C.R.S. §8-43-201. The respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. C.R.S. §8-42-101(1)(a).

J. The claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

K. "[I]f a disability were 95% attributable to a pre-existing, but stable condition, and 5% attributable to an occupational injury, the resulting disability is still compensable if the injury has caused the dormant condition to become disabling." *Seifried v. Industrial Com'n of State of Colo.*, 736 P.2d 1262, 1263 (Colo. App. 1986). The ALJ finds that any preexisting injury in Claimant's neck or back was a preexisting, but otherwise stable condition. This condition did not become disabling until August 10, 2017 as a result of the compensable work event.

L The ALJ concludes that Claimant is entitled to all reasonable, necessary, and related medical treatment as it relates to the August 10, 2017 work incident. The treatment Claimant received in the months following were a direct result of the injury he sustained when the incident occurred. That a Claimant has sustained an injury in the past does not, in and of itself, make a subsequent injury a mere repetition of the former. Indeed, Claimant testified that his work as a law enforcement officer ended years before he began working for Employer, and does not appear to have had any trouble performing his work duties leading up to August 10, 2017. The ALJ therefore concludes that Claimant's treatment to his release date at MMI has been reasonable, necessary, and related to the August 10, 2017 work injury.

Temporary Total Disability Benefits

M. To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that she left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998)

N. The ALJ concludes that the August 10, 2017 work incident caused a disability resulting in more than three days of wage loss to Claimant. Claimant testified that Employer was unable or unwilling to accommodate the work restrictions assigned by Dr. Neubauer, and thus he was unable to return to work except for a few days in January and February 2018. Claimant testified, and the medical records document, that he had neck pain preventing him from physical work during such period, and his restrictions prevented a full range of motion in Claimant's neck necessary for him to drive a commercial vehicle safely during the same period. Claimant was impaired from performing his job duties from August 10, 2017 through February 8, 2018, the date Claimant tendered his resignation with Employer. The ALJ therefore concludes that Claimant is entitled to temporary total disability during said period.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury on August 10, 2017. Respondents will pay for all reasonable, necessary, and related medical treatment provided by an ATP.

2. Respondents will pay Claimant TTD benefits from August 10, 2017, through his last date of employment, February 8, 2018. Respondents will be given a reduction in TTD payments for any days during that period that Claimant did report to work and receive wages.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 17, 2018

/s/ William G. Edie

Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

The issues presented involve the relatedness of two medical conditions to Claimant's work duties, as well as medical benefits. The questions to be answered are:

I. Whether Claimant established, by a preponderance of the evidence, that her bilateral carpal and cubital tunnel syndromes are causally related to an occupational exposure, which also admittedly caused right lateral epicondylitis, and if so;

II. Whether Claimant also established by a preponderance of the evidence that she is entitled to reasonable and necessary medical benefits, including the treatment provided by Karl Larsen, M.D.

At hearing, the parties stipulated that Dr. Karl Larsen is an authorized treating physician. They also agreed to hold the issue of AWW in abeyance.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant has been employed with the City of Colorado Springs' police department for approximately 19 years. She began as a patrol officer and is now a detective. In her current position, Claimant works on narcotics cases with a team of other detectives. She also works on homicide and robbery cases, performs surveillance, and assists patrol officers with processing narcotics evidence.

2. Claimant and other detectives use the "Law Enforcement Records Management System" (LERMS) to submit case discovery/reports to the District Attorney's Office. In early 2017, Claimant's team was advised it had not been submitting discovery in the proper manner, and that it would need to reprocess and resubmit approximately 3,000 criminal cases. In order to do so, the detectives had to "rebuild the cases by reentering (typing) case information into the database and then resubmit those cases to the District Attorney's Office. During this time, Claimant was also "acting sergeant" for her team and was working her own criminal cases. As acting sergeant, Claimant was required to track computer statistics for her team, review and assign new investigations, and prepare arrest and search warrants. She was also working on a large prescription fraud case. She typed her own case reports, arrest warrants and search warrants, in addition to completing the case rebuilding duties noted above. All of the aforementioned tasks involve considerable amounts of typing and

computer mousing. Beginning January 2017, Claimant testified she was typing up to 10 hours per day.[1] She was also using a computer mouse 50% of the time.

3. In March 2017, Claimant began to feel an aching pain on the top of her left wrist when typing. She had experienced similar pain in January 2016 while typing at work, but that pain gradually went away. She believed that the pain she developed in March 2017 would go away too, but it did not. Claimant gradually began experiencing pain in the base of her left thumb, then on the bottom of her left wrist, and into her hand. Claimant testified that the pain was aggravated by all of the typing she was doing. Due to her job requirements, Claimant was not able to reduce or eliminate the amount of typing she was performing. Over time, she began to experience pain in the inside of her left elbow.

4. Claimant's job also requires her to drive, and she noticed that gripping the steering wheel in her vehicle caused pain and numbness in her left arm. In approximately March 2017, she began to experience considerable pain in her left elbow at night. She was contacted by Respondent-Employer regarding treatment but elected to simply give it more time to see if the pain would resolve.

5. Claimant's pain did not abate. Consequently, she decided to report her condition. She met with her supervisor, Sergeant John Sarkisian, and completed a "Preliminary Report of Injury/Illness" form. (Claimant's Exhibit 5, pgs. 68-69). Claimant did not report right upper extremity pain during this meeting. In this form, the "Date Injury Occurred" and the "Date Injury Reported to Supervisor" are both listed as May 2, 2017. Claimant testified this was simply the date she decided to complete the injury form, but that she was still unsure whether she wanted to actually file a claim and see a doctor. Claimant did not want to be put onto light duty work status, so from May to July 2017 Claimant continued to wait and see whether her pain would subside. She did not seek treatment during this time.

6. The "Preliminary Report of Injury/Illness" indicates Claimant's injury occurred as a result of "Typing," and "Because she must type for work," and "She must type to complete reports." (Claimant's Exhibit 5, pg. 69).

7. Claimant's left upper extremity pain persisted, worsened and started to affect her job performance. She also developed right thumb and wrist symptoms. Consequently, she decided to pursue a workers' compensation claim and seek medical treatment.

8. Claimant testified that she met with an unidentified female representative of Respondent-Employer on or about August 1, 2017 regarding the pain in her bilateral upper extremities. The representative reviewed the "Preliminary Report of Injury/Illness" Claimant completed on May 2, 2017. She hand-wrote a correction to indicate

[1] The extra typing associated with rebuilding/processing prior cases slowed down after June. According to Claimant, she was to typing 2-3 hours per shift after June 2017.

Claimant's left upper extremity pain extended from the wrist to the elbow (not shoulder), and hand-wrote the addition of "right thumb & wrist."

8. Claimant testified that she began having right thumb/wrist problems sometime in June 2017. The ALJ infers from the evidence presented, that Claimant told the unidentified risk management representative of her right thumb/wrist symptoms during the August 1, 2017 meeting and that the same was added to the Preliminary Report of Injury/Illness form at that time.

9. Respondent contends that Claimant's testimony concerning the development of right thumb/wrist symptoms in June 2017 is inconsistent with her prior answers to interrogatories wherein she noted that her right upper extremity pain "began" (as characterized by Respondent) in August 2017. Based upon the date of Claimant's report to risk management (August 1, 2017) coupled with her response that she was "experiencing" right thumb/wrist symptoms as of August 1, 2017, the ALJ finds it reasonable to infer that Claimant had been experiencing symptoms in her right thumb/wrist prior to August 1, 2017, including sometime in June as she testified. The ALJ credits Claimant's testimony to find that her right thumb/wrist symptoms probably began in June, prompting her to report this pain at her August 1, 2017 meeting with risk management. Respondent's additional arguments suggesting that Claimant's right thumb/wrist symptoms likely began in August are unpersuasive.

10. In 2009, Claimant injured her left wrist during a work-related altercation while trying to arrest a suspect. A surgeon removed a cyst and "cleaned up" some cartilage in the wrist. This injury and the pain associated with this "clean-up" procedure resolved completely, as did Claimant's 2016 left wrist pain noted above. Other than this, Claimant has had no prior injuries to her left wrist. She has never had prior problems/pain in her right thumb, wrist or arm.

11. Claimant met with Paula Homberger, PA-C, of Respondent's "Risk Management and Occupational Health" department on August 2, 2017. Ms. Homberger reported, "…Ms. Genta began getting pain in her L wrist after typing on a big case. She has sharp, shooting pains as well. She had trouble sleeping when it first occurred while working on a big case, this is better now. She has occasional mild numbness. She has some pain on the R, worse on the L. She also notices the pain with push-ups & turning the steering wheel while driving." Ms. Homberger diagnosed "B forearm strain, from overuse of excessive typing." ("B" meaning bilateral)(Claimant's Exhibit 3, pg. 49). Ms. Homberger's recommendations included physical therapy. Claimant participated in physical therapy, but it made her pain worse.

12. Ms. Homberger also recommended an ergonomic evaluation of Claimant's workstation. This was performed on August 14, 2017. (Claimant's Exhibit 4). The evaluator reported the following issues with the workstation: "1) Chair too high. 2) Lumbar support too low. 3) Keyboard tray too low. 4) Monitors too high. 5) Kristin sits too far forwards in her chair. 6) Forward head posture. 7) Reaching for the mouse. 8) Increased wrist extension outside of the norms." (Id. at 55). Claimant's left wrist

extension was measured at 50°, and for the mouse use, it was measured at 40°. (Id. at 56). Adjustments were made to Claimant's workstation. While these helped, they did not resolve Claimant's upper extremity pain, and in fact, it worsened with additional typing.

13. On August 24, 2017, Ms. Homberger reported, "…Ms. Genta reports feeling worse. She is having more pain. She is trying to rest it some. She still has the sharp, shooting pains with increased use. She is getting some numbness in the L hand…She had her ergonomic evaluation done & they found a few problems with her workstation. Her chair has been adjusted, she is trying an ergonomic keyboard…She is concerned because some of her symptoms are worsening." Ms. Homberger's recommendations included a referral to Dr. Larsen "…for consultation since her L arm symptoms are worsening." (Claimant's Exhibit 3, pg. 38).

14. Respondent scheduled an independent medical evaluation (IME) for Claimant with Dr. Eric Ridings on September 20, 2017 for the express purpose of obtaining an opinion as to whether Claimant's upper extremity complaints were causally related to her work duties. Upon taking a history and completing a physical examination, Dr. Ridings concluded that Claimant met the work-relatedness criteria under the Cumulative Trauma Medical Treatment Guidelines matrix for a diagnosis of right lateral epicondylitis only. He specifically opined that Claimant's bilateral wrist and thumb pain was not work related, noting further that Claimant's "described position keyboarding and mousing would not be expected to cause medial epicondylitis and as such, this condition was not work related.

15. In support of his opinions, Dr. Ridings testified that in order to perform a causality analysis, the first thing to do is to establish a diagnosis. Once you have established a diagnosis, the next step is to analyze the job duties of the worker to determine whether those duties meet sufficient risk factors for the development of the diagnosis to determine, within a reasonable degree of medical probability, whether the duties were causative of the diagnosis.[2]

16. Dr. Ridings testified that if Claimant did not develop symptoms in her right upper extremity until August 2017, during which time she was only keyboarding 2 to 3 hours per day, then her right upper extremity complaints would not be causally related to any of her work activities. According to Dr. Ridings, if Claimant began having symptoms in her right upper extremity in August 2017, then, pursuant to the MTG, she would not have been doing a sufficient amount of keyboarding and/or mousing to create a causal connection between her work activities and any of her upper extremity conditions. According to Dr. Ridings, to the extent that Claimant may have been performing a sufficient amount of abnormal motion in her right upper extremity from January 2017, through June 2017, if her symptoms did not begin until August 2017,

[2] Respondents acknowledge that Paula Homberger, the PA at the Occupational Clinic, made an initial assessment that Claimant's work activities were the cause of Claimant's upper extremity complaints reported to Ms. Homberger. Dr. Ridings, however, testified that it does not appear that Ms. Homberger used the algorithm established in the MTG for cumulative trauma conditions.

then there would be no temporal relationship between the amount of typing she was doing from January 2017 through June 2017, and the onset of her right upper extremity complaints.

17. Based on Dr. Ridings' report, Respondent filed a General Admission of Liability (GAL), admitting to Claimant's right lateral epicondylitis. Consequently, the ALJ finds, the questions presented in the instant case to be whether Claimant's bilateral carpal and cubital tunnel syndromes are causally related to her admitted occupational exposure and if so, whether she is entitled to medical treatment for these conditions.

18. Claimant saw Dr. Karl Larsen's physician assistant, Stephanie Noble, PA-C, on October 16, 2017. PA-C Noble noted, "…At this point, workman's comp is only treating her right lateral epicondyle. She now presents today to try to have the rest of her symptoms addressed…She has numbness and tingling in a clockwise distribution involving all digits on both hands, left worse than right. She states her pain started while typing at the computer…She does state that her workstation was adjusted to be more ergonomically appropriate. She had this occur approximately 1 month [ago] and she did note some improvement of her symptoms." On examination, Claimant had a positive carpal compression test. She also had a positive Tinels test over the left ulnar nerve at the elbow. Right ulnar nerve testing (Tinels) at the elbow was negative. Claimant was also noted to be tender over the left lateral epicondyle and bilateral radial tunnels." Claimant was diagnosed with "[b]ilateral hand numbness and tingling with possible carpal and cubital tunnel syndrome." EMG testing was recommended along with use of thumb braces, Voltaren gel and Lyrica for pain. The possibility of injections was also raised.

19. Dr. Katharine Leppard performed the recommended EMG testing on November 9, 2017. Dr. Leppard noted Claimant "…reports pain in both thumbs, there is numbness and tingling in all of the fingers, worse on the left hand than the right. She denies weakness. She rates her pain a 2/10 at its best and an 8/10 at its worst." Dr. Leppard reported the EMG testing was abnormal, with electrodiagnostic evidence of "Bilateral median mononeuropathies at the wrist, mild in severity, the left is slightly worse than the right. There [was] no electrodiagnostic evidence of an ulnar mononeuropathy at either elbow."

20. Dr. Larsen examined Claimant on November 15, 2017. He noted a positive carpal tunnel compression test that "…produces a lot of forearm and wrist pain…She is not tender over the medial epicondyle but is tender over the ulnar nerve…" Dr. Larsen reviewed the EMG testing and noted, "…Her electrodiagnostic tests were reviewed and consistent with mild carpal tunnel syndrome only with no evidence of ulnar or radial neuropathy." Dr. Larsen's impression was, "…Ms. Genta has bilateral arm pain. A lot of this seems to be associated with carpal tunnel syndrome and ulnar neuritis. She also has a some (sic) thumb base instability, probably developing thumb base arthritis. I discussed options. I do not know that we can make a global solution for her but I think her neuropathic symptoms are dominant here. Today, we performed corticosteroid injections into her carpal tunnels as a treatment & test."

21. Dr. Ridings testified that 40% of diagnosed carpal tunnel syndrome cases are idiopathic in nature, i.e. without a known cause.

22. On December 18, 2017, Dr. Larsen reported the injections provided significant temporary relief of the wrist symptoms, but the symptoms returned. On examination he noted, "…She continues to complain of right worse than left medial elbow pain as well as bilateral wrist pain palmarly and dorsally to some degree with intermittent numbness in the fingers…She is tender over both carpal tunnels and both ulnar nerves as well as the right medial epicondyle. The left medial condyle is not particularly tender today. She has a positive Tinels sign over both ulnar nerves and both carpal tunnels. She also has abnormal tenderness over both thumb bases with laxity and pain with crank testing."

23. Dr. Larsen confirmed Claimant had symptoms due to bilateral arm pain, and "…this may be related to poor ergonomics in her work activities…" He noted, "…I think here in the near term carpal tunnel surgery and cubital tunnel decompression with possible transposition of (sic) her nerve demonstrates instability intraoperatively would be the best way to start…"

24. On January 15, 2018, Dr. Larsen examined Claimant and reported,"…she is tender over the ulnar nerve at the elbow with a positive Tinels sign and positive elbow flexion compression test. She has a positive Tinels sign over the median nerve at the wrist. She is also continuing to be tender, right worse than left over her radial tunnels…We again had a discussion of options, and I think she very clearly has median and ulnar neuritis and electrodiagnostically has verified carpal tunnel syndrome…So, we are going to plan for right carpal and cubital tunnel decompression…"

25. Claimant testified that prior to surgery, the pain in her thumbs and wrists bilaterally was worse than the pain in her elbows, and the pain in her left wrist was worse than the right. She described the wrist pain as intense and radiating. She explained that she experienced numbness and tingling in her hands and fingers often while sleeping at night.

26. Dr. Larsen performed right carpal tunnel release and cubital tunnel release surgery on February 13, 2018. During a follow-up appointment on February 23, PA-C Noble reported Claimant was "…no longer getting any numbness or tingling." Dr. Larsen performed left carpal tunnel release and cubital tunnel release surgery on March 13, 2018.

27. At hearing, Claimant testified her bilateral upper extremities feel "better" since the surgeries though she has continued to experience some normal post-surgical pain. She testified the numbness and tingling in her fingers and thumbs has improved as well.

28. At the time she was performing extensive typing in 2017 Claimant was not pregnant, not a smoker, was not overweight, was not a diabetic and did not have a

rheumatologic disease or autoimmune disorder. Moreover, the evidence presented persuades the ALJ that Claimant did not participate in any non-work activities that would have exposed her to the likely development of a symptomatic cumulative trauma disorder in an equal or greater degree than that presented by her typing/mousing work.

29. Dr. Karl Larsen testified via deposition as a board-certified orthopedic surgeon specializing in hand surgery. He testified regarding his opinion of the causation of Claimant's upper extremity problems as follows:

> ***Q Sure. Do you have an opinion as to what was the cause of Detective Genta's bilateral carpal tunnel and cubital tunnel syndromes?***
>
> *A Yeah, it's a little hard to know. I mean, she -- you kind of speak in terms of risk factors, because it's a common disease. And the only real risk factor she has is age and female gender, right? She doesn't have any of the other associated issues, diabetes, heavy alcohol use, tobacco use, any of those things that go with it.*
>
> *So that's pretty nebulous. She felt that these symptoms were related to the prolonged typing and kind of described very extended periods of typing, like more than eight hours a day. And I know she had an ergonomic evaluation where they made a certain number of ergonomic corrections. So I interpreted that as she was not in an ergonomically appropriate position when these symptoms started. And so I felt that was contributory to her symptoms.*
>
> *And, you know, also take into consideration that as a law enforcement officer, they have a fairly high level of physical fitness, and she seemed to have been functioning well to this point. So I didn't have any other explanation other than what she described.*

(Dr. Larsen depo. tr. pg. 16, l. 6 – pg. 17, l. 5).

> ***Q Did you review the medical treatment guidelines at all with respect to trying to come to a causation opinion about the carpal and cubital tunnel?***
>
> *A Not before today's discussion. I'm aware -- you know, I just went through my Level II recertification; so I've looked through those before, that, you know, while the State doesn't ordinarily recognize keyboarding less than eight hours a day as causative for these cumulative trauma conditions, there's the little statement in there "in an ergonomically appropriate position."*

So if we're going to look at ergonomics as a potential contributory factor, she had demonstrated poor ergonomic setup for her work station because they made a certain number of corrections to it. And so I think that that was probably contributory to her symptoms.

(Dr. Larsen depo. tr. pg. 17, l. 17 – pg. 18, l. 8).

Q Okay. I guess the bottom line really, Doctor, is: Do you have enough information to give an opinion as to whether you think it's more likely than not that her carpal tunnel and cubital tunnel problems resulted from her work activities?

A I feel like based on the ergonomic assessments and the history where she had no antecedent symptoms, that it's more likely that her work activities either caused or aggravated this to the point where it needed treatment.

(Dr. Larsen depo. tr. pg. 19, l. 23 – pg. 20, l. 7).

30. Despite the above testimony, Dr. Larsen agreed that if Claimant was not doing extensive typing and mousing at the time that she developed her right upper extremity problems, then he would not link her work activities and the development of her carpal tunnel syndrome. That is, her work activities would not be the cause of her carpal tunnel. Rather, he would consider her right-sided carpal tunnel syndrome to be idiopathic. As noted, the ALJ is persuaded that Claimant's right hand, wrist and arm symptoms developed progressively around June rather than August as suggested by Respondent.

31. Based upon the evidence presented as a whole, the ALJ finds Dr. Larsen's testimony and opinions regarding the cause of Claimant's upper extremity conditions credible and persuasive. The ALJ has considered, and rejects as unpersuasive, the contrary opinions of Dr. Ridings.

32. Claimant has proven by a preponderance of the evidence presented that she is entitled to reasonable and necessary medical treatment to cure and relieve the effects of her bilateral carpal and cubital tunnel syndrome, including the treatment provided by Karl Larsen, M.D.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1),*

C.R.S. In this case, Claimant must prove her entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201(1), C.R.S.* Rather, a workers' compensation claim is to be decided on its merits. *Id.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found in this case, the ALJ credits Claimant's testimony to conclude that her right upper extremity symptoms, probably began sometime in June rather than August as suggested by Respondent. Claimant's testimony is generally consistent with the content of the medical records and the testimony of Dr. Larsen. Given the consistency between Claimant's testimony and balance of the remaining evidence, the ALJ finds Claimant's testimony credible.

C. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent, expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting all, part or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968); see also, *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary opinion). In this case, the undersigned ALJ concludes that the expert medical opinions of Dr. Larsen are credible and supported by Claimant's testimony and the medical record. When the evidentiary record is considered in its totality, the opinions of Dr. Larsen are more persuasive than contrary opinions of Dr. Ridings.

D. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

The Relatedness of Claimant's Carpal and Cubital Tunnel Syndrome to her Work Duties and her Entitlement to Medical Benefits

E. The Claimant bears the burden of establishing entitlement to medical

treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo.App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo.App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo.App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused, i.e. related to an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability were caused by the industrial injury.

F. The question of whether the need for treatment is causally related to an industrial injury is one of fact. *Walmart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 521 (Colo.App. 1999). Similarly, the question of whether medical treatment is reasonable and necessary to cure or relieve the effects of an industrial injury is one of fact. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.*, W.C. No. 4-117-758 (ICAO April 7, 2003).

G. In this case, the totality of the evidence presented persuades the ALJ that in addition to her right lateral epicondylitis, Claimant likely suffers from bilateral carpal and cubital tunnel syndrome. Nonetheless, the question remains as to whether those conditions are related to Claimant's work duties. In concluding that Claimant has proven that her carpal and cubital tunnel conditions are related to an admitted occupational exposure, significant enough to cause right lateral epicondylitis, the ALJ has considered the Medical Treatment Guidelines, specifically Rule 17, Exhibit 5. The Medical Treatment Guidelines (MTG's) are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo.App. 2005). The Medical Treatment Guidelines, Rule 17-2(A), W.C.R.P. provide: All health care providers shall use the Medical Treatment Guidelines adopted by the Division. In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight and have been accepted in the assessment of the cause of carpal tunnel syndrome. *See, Flores v. Safeway Store, Inc.*, W.C. No. 4-799-270 (ICAO November 2, 2011).

H. As noted, Rule 17 Exhibit 5 of the MTGs specifically addresses causation of carpal tunnel syndrome. In determining whether treatment for carpal tunnel syndrome is due to a work related exposure or injury, the MTGs require that a provider identify "non-occupational" diagnosis/exposures as well as avocational activities in order to establish their contribution to symptoms and the need for treatment. According to the Guidelines the pertinent question to be answered is: "Is it medically probable that the patient would need the treatment that the clinician is recommending if the work exposure had not taken place? If the answer is "yes," then the condition is not work-related. If the answer is "no," then the condition is most likely work-related. The following non-occupational factors are to be considered when determining the occupational relationship regarding the need for treatment in cases involving carpal tunnel: age, sex, high BMI (obesity), the presence of other upper extremity musculoskeletal diagnosis, diabetes, rheumatologic diseases, hypothyroidism, smoking history and whether the patient is pregnant. *See Rule 17 Exhibit 5, D.1(c)(v)(A-G).* Based upon the evidence presented, the ALJ is not persuaded that Claimant's age, weight or any other non-occupational factors played a role in the development of her carpal or cubital tunnel syndrome.

I. The MTG's also contain an "Ergonomic Considerations Table." The Guidelines indicate that, "…This table is a generally accepted guide for identifying job duties which may pose ergonomic hazards…"[3] The Table itself indicates that "repetitive motion" activities with wrist extension greater than 30° for more than 2 hours per day is are ergonomic hazard. The Table indicates that "intensive keying" activities with wrist extension greater than 30° for more than 4 hours per day are an ergonomic hazard. [4] Here, Claimant's wrist extension was noted to be 50° in the ergonomic evaluation. (Claimant's Exhibit 4, pg. 56). Based upon the evidence presented, the ALJ is convinced that Claimant performed intensive keying activities with wrist extension greater than 30° for more than 4 hours per day for several weeks. Accordingly, the ALJ concludes that Claimant proved her job duties featured ergonomic hazards for the development of cumulative trauma conditions associated with the wrists and arms.

J. Furthermore, the Medical Treatment Guidelines provide that "…Clinicians may determine in a particular case that there is a relationship based on the ergonomic conditions or on excessive typing, such as more than 7 hours per day of essentially uninterrupted keyboard use or full-day court reporting." (W.C.R.P. 17, Exhibit 5(D)(3)(a) or Respondent's Exhibit E, pgs. 64, 65). The same section next provides that, "…There is some evidence that mouse use appears to be associated with carpal tunnel syndrome and related symptoms with 4 hours or greater of continuous use per day. Studies of pressure within the carpal tunnel indicated that pressures may rise to levels which could affect the median nerve when the mouse is being dragged or clicked. Again, the actual ergonomics of the work place should be considered for each individual patient before making a final causation decision." (Respondent's Exhibit E, pg. 65).

[3] The Table is described in the "Job Hazard Checklist" on page 141 of W.C.R.P. 17, Exhibit 5(H)(6)(c).
[4] The referenced portions of The Table are found on page 144 of W.C.R.P. 17, Exhibit 5(H)(6)(e).

K. The Guidelines provide that "…When the employee meets the definition for a sole Primary Risk Factor and the risk factor is physiologically related to the diagnosis, it is likely that the worker will meet causation for the cumulative trauma condition." (Respondent's Exhibit E, pg. 67). They then provide that a "primary risk factor" under "awkward posture and repetition/duration" is "4 hrs. of wrist flexion [greater than] 45 degrees, extension [greater than] 30 degrees, or ulnar deviation [greater than 20 degrees." (Respondent's Exhibit E, pg. 71). Here, the ergonomic evaluation determined Claimant's left wrist extension was 50 degrees, obviously greater than 30 degrees.

L. The Guidelines also identify "wrist bending or awkward posture for 4 hrs." as a "diagnosis based risk factor" for carpal tunnel syndrome. They identify the combination of force, repetition, and awkward posture as an additional risk factor for carpal tunnel syndrome. (Id. at 74).

M. The Guidelines require "at least one" of several findings to support a diagnosis of carpal tunnel syndrome. (Respondent's Exhibit E, pg. 58). The list of findings includes a positive compression test, which Dr. Larsen documented on physical examination. (Claimant's Exhibit 1, pgs. 11, 14).

N. Similarly, the Guidelines require "at least one" of several findings to support a diagnosis of cubital tunnel syndrome. (Respondent's Exhibit E, pg. 59). The list includes "diminished sensation of the fifth and ulnar half of the ring fingers…" Ms. Noble documented this on October 16, 2017 ("…She has numbness and tingling in a clockwise distribution involving all digits on both hands, left worse than right…"). Claimant's Exhibit 1, pg. 13).

O. The ALJ has considered the Medical Treatment Guidelines, Claimant's testimony and the testimony of Drs. Larsen and Ridings. The ALJ has also considered the parties' hearing exhibits. Based upon the totality of the evidence presented, the ALJ concludes Claimant has proven that her bilateral carpal and cubital tunnel syndromes are related to the work duties associated with her position during the period of time she was tasked with rebuilding cases for resubmission to the District Attorney's (D/A's) Office. The ALJ is persuaded that these disorders resulted directly from the conditions under which Claimant's work was performed and can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of her employment. Moreover, they can be fairly traced to Claimant employment as a proximate cause. Finally, the conditions do not come from a hazard to which the Claimant would have been equally exposed outside of her employment. Consequently, the ALJ is convinced that these conditions are related to Claimant's work duties and she likely would not have needed the treatment recommended by Dr. Larsen if her work place exposure had not taken place.

P. Even if Claimant's job does not fall precisely within the primary or secondary risk factors outlined in the causation matrix of the MTGs as suggested by Dr. Ridings, the ALJ finds and concludes that the particular facts in her case still make it more likely

than not that her bilateral carpal and cubital tunnel syndrome was caused by her work. The Court is not bound by the MTGs in deciding individual cases. Indeed, § 8-43-201(3) specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. The director or administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.

Here, the ALJ concludes that Dr. Ridings causation argument is founded upon a rigid application of the MTGs' resting necessarily upon the assumption that the causation matrix is absolute, and provides the only source of information to which we should turn to determine causation in this case. The ALJ is not convinced. The evidence presented in this case persuades the ALJ that Claimant had no history of right upper extremity problems before she began reprocessing criminal cases for resubmission to the D/A's Office. Moreover, the evidence presented is not persuasive of Claimant having left upper extremity symptoms associated with cumulative trauma disorders, i.e. carpal/cubital tunnel syndrome for several months until she experienced a new onset of symptoms while performing work activities associated with the repossessing of these cases. Finally, there is no alternate cause, which explains her symptoms more persuasively, i.e. equally or more likely than her work exposure. Accordingly, the ALJ concludes that Claimant's carpal and cubital tunnel syndrome is, more probably than not, related to her work duties during the LERMS project wherein she was called upon to perform excessive typing and mousing in a poorly defined ergonomic position.

Q. The medical reports outline persistent pain and functional decline in the face of failed conservative treatment leading Dr. Larsen to perform bilateral carpal and cubital tunnel releases. Taken in its entirety, the ALJ concludes that the evidentiary record contains substantial evidence to support a conclusion that these procedures were reasonable and necessary to cure and relieve Claimant from the ongoing effects of her compensable cumulative trauma conditions. The contrary opinions of Dr. Ridings are unpersuasive.

ORDER

It is therefore ordered that:

1. Claimant has proven that her bilateral carpal and cubital tunnel syndromes are causally related to an occupational exposure, which also admittedly caused right lateral epicondylitis. As such, these disorders are compensable conditions under the claim.

2. Respondents shall pay for all medical expenses, pursuant to the Workers'

Compensation medical benefits fee schedule, to cure and relieve Claimant from the effects of her bilateral carpal and cubital tunnel syndrome including, but not limited to the bilateral carpal and cubital tunnel release procedures performed by Dr. Larsen.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 18, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, Co 80906

ISSUES

1. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable work injury to her back on August 31, 2017?

2. If such injury is compensable, has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related treatment for her injured back?

3. Has Claimant shown, by a preponderance of the evidence, that she is entitled to Temporary Total Disability benefits from November 29, 2017 and ongoing?

4. Have Respondents shown, by a preponderance of the evidence, that Claimant willfully violated a safety rule, resulting in a 50% reduction in Claimant's Indemnity benefits?

STIPULATIONS

The parties stipulated that, if a compensable injury is shown, that Claimant's Average Weekly Wage is $519.40. The parties further agreed that if compensability is shown, the Claimant is entitled to TTD benefits from November 29 and ongoing until terminated by operation of law. The issue of any wage loss between August 31, 2017 and November 29, 2017 is held in abeyance. The ALJ accepted these stipulations.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant has been employed by Employer since June of 2017. She performed the very same duties with a predecessor company, beginning in 2015. As of the time of hearing, Claimant remains employed by Employer.

2. Claimant's formal job title is that of an Environmental Service Attendant (hereinafter "ESA"). She testified at hearing that her job duties include cleaning rooms, changing sheets, dusting, mopping, and other similar duties for the Penrose St. Francis Hospital system. As an ESA, per the position profile provided by the Employer, Claimant's *General Responsibilities* include:

- *Moves furniture* and sets-up tables and chairs

- Complies with all company safety and risk management *policies and procedures*.

●Performs all work in accordance with *established* safety *procedures*.

Under Skills/Aptitude is listed:

●Ability to work well *under pressure.*

●Ability to work well *alone* and *in a team*.

Under Physical Requirements is listed:

●Ability to reach, bend, stoop, push and /or pull, and *frequently lift up to 35 pounds* and occasionally lift/move 40 pounds. (Ex. E) (emphasis added).

3. Claimant testified that she began work around 7:00 am on August 31, 2017. She sustained an injury around noon that day, as she recalled it being right after she ate lunch, which was usually from 11:30am until noon. Claimant testified that she received a call from her supervisor, Ms. Pauline Sylvester, while she was eating lunch that day. She was instructed to perform a "stat terminal" clean. A "stat" clean is one that needs to be accomplished quickly and a "terminal clean" is one that requires a very thorough cleaning of everything in the room, even the walls.

4. According to Claimant, a terminal clean typically takes one hour to one-and-a-half hours, but she recalls being instructed by her supervisor to complete it in 30 minutes. Claimant immediately began cleaning the room, starting with the walls, dusting, and picking up trash. The only furniture actually in the room was the bed. When Claimant went to the bathroom to clean it, she noticed that all of the other furniture had been moved into the bathroom. Specifically, the sofa bed had been placed in the shower standing up vertically, on its side. Claimant called her supervisor for assistance to move the sofa bed out of the shower. Claimant testified that she waited for approximately 15-20 minutes before help eventually arrived. While she was waiting, Claimant felt pressured by the floor nurses, asking when the room would be ready, as they needed it right away.

5. Claimant, feeling pressured to clean the room timely, then attempted to move the sofa bed on her own. Claimant clarified that her intention was to only move the couch to one side, using essentially a 'hugging' motion, so that she could clean the walls around it until assistance arrived. While attempting to move the sofa bed, she felt it was beginning to fall towards her, so she pushed it back in its original position. It was during this act that Claimant felt pain in her back.

6. Claimant reported the injury to Ms. Sylvester the same day. (Ex. A). It is documented in the first report of injury that Claimant was pulling a couch out of the restroom when she felt pain in her lower back.

7. Upon cross examination, Claimant conceded certain points:

● Sodexo does not require a quota of rooms to be cleaned in a shift.

● She does not report to the nursing staff, but only to Sodexo and its supervisors.

● Sodexo conducts safety meetings at least once a month.

● She is able to converse in and understand English in court and at work.

● In the past she has called other supervisors on multiple occasions to move heavy couches.

● If there was a heavy object to be moved that she was supposed to call someone to get help.

● On the day of the alleged incident the actual time it took for her to clean the room with the vertical couch was in line with the normal average time to clean similarly situated rooms.

● Claimant had already spent 45 minutes cleaning the room, and it would take her an additional 30 minutes to clean the bathroom – which is right in line with the average to clean a similarly situated room.

● She was at lunch when she was assigned to clean the "stat" room, but was not asked to hurry up and finish her lunch.

●She was in a hurry to move the couch, "I knew I couldn't take it out of the bathroom by myself. But I wanted to put it to one side so I could start the—the wall, cleaning the walls."

● She was never chastised or disciplined by her supervisor for not having the room cleaned, as she alleges, within 30 minutes.

8. Claimant presented to CCOM the next day for evaluation. (Ex. 4, p. 11). Physician's Assistant, Steven Byrne, documented Claimant's complaints of pain in the thoracic and lumbar region of her spine as a result of her moving a couch at work. Physical examination documented tenderness along the bilateral paraspinals in the lower thoracic region through the lumbosacral spine with straight leg raises being positive bilaterally. *Id.* at 12. Mr. Byrne indicated that the objective findings were consistent with the history of a work related injury. Claimant was given various restrictions, including no lifting more than 10 pounds. She was also prescribed medications and instructed to follow up.

9. Claimant denied any previous back injury. (Ex. 4, p. 11). There are no records in evidence to suggest that Claimant had any degree of a lower to mid-back condition prior to August 31, 2017.

10. Claimant's next visit at CCOM was on September 11, 2017, with Dr. Kathryn Murray. (Ex. 4, p. 17). Claimant reported feeling worse than she did ten days prior and was experiencing some radiating pain into her buttock. Dr. Murray documented multiple muscle spasms and trigger points in the lumbar and thoracic region. She instructed Claimant to continue the medications and referred her for physical therapy for her lumbar and thoracic spine. (Ex. 4, p. 18). She kept Claimant restricted from performing full duty.

11. On November 28, 2017 at Colorado Springs Imaging a non-contrast MRI of Claimant's lumbar spine was conducted. Findings: lumbar lordosis normal. Overall volume of lumbar spinal canal is well within normal limits. No scoliosis. Distal thoracic spinal cord, conus medullaris, and cauda equine are normal. Vertebrae are normal. No spondylolysis or spondylolisthesis. Normal signal in the intervertebral discs at all levels. No disc protrusion, tearing of the disc margin, or significant disc bulging. No encroachment on nerve roots. Facet joints and pedicles are unremarkable. Spinous processes appear normal. Paraspinal soft tissues including the abdominal aorta are normal. Visualized parts of kidneys normal. Opinion: Normal degenerative limits for age. Negative for disc protrusion or nerve impingement. (Ex. F p. 20, G p. 27, 9, p. 127).

12. On February 15, 2018 Dr. Primack, with CCOM, concluded that objective findings indicate normal exam, negative MRI, subjective findings not consistent with objective findings and are nonphysiologic. Claimant was at maximum medical improvement, no permanent impairment, no restrictions at full time and full duty. (Ex. F, pp. 20, 22).

13. Respondents retained Dr. Jorge Klajnbart to perform an IME of Claimant. This took place on February 18, 2018. (Ex. G). Claimant reported ongoing mid-axial to low back pain, and she reported to him being approximately 50% better at that point in time due to the treatment received to date. *Id.* at 25. Claimant denied any previous injury to her back. *Id.* at 32. Claimant reported to Dr. Klajnbart that she felt the pain in her back after attempting to move the sofa bed out of the shower. Regarding causation, Dr. Klajnbart stated the "[M]echanism of injury is congruent with a lumbar sprain-strain…," though he did feel that Claimant's symptoms should have resolved within the first 90 days. *Id.* at 28. Dr. Klajnbart agreed that all treatment to date had been "*reasonable and related to this injury pattern to include radiographs and MRI."* Dr. Klajnbart did not dispute that there was a compensable injury, but noted: "Her current complaints are completely inconsistent with the isolated soft tissue, self-limiting injury pattern." *Id* at p. 28. (emphasis added).

14. Dr. Timothy Hall performed an IME at the request of Claimant on March 8, 2018. (Ex. 11). Dr. Hall reviewed medical records, took a history from Claimant, and performed a physical examination. Dr. Hall's examination revealed tenderness with palpation through the thoracolumbar paraspinals into the quadratus lumborum bilaterally. (Ex. 11, p 134). She was also very tender in the psoas bilaterally and that she had limited hip extension with pain.

15. Dr. Hall diagnosed Claimant as having a lifting injury at work, likely soft tissue, as well as pelvic obliquity with significant psoas spasm likely involved in Claimant's pain presentation. Dr. Hall felt the treatment Claimant had been receiving was appropriate, but also recommended more neuromuscular and stretch work involving the psoas, quadratus lumborum, and thoracolumbar paraspinals.

16. Dr. Hall testified at hearing that it was his understanding that Claimant was essentially "hugging" the couch during her attempt to move it. Claimant was essentially performing a "torqueing" maneuver, i.e., attempting to lift and turn the sofa bed. It is this kind of torqueing maneuver that creates forces through the thoracolumbar spine, which can exceed the tolerance of the muscles, ligaments, and tendons in that area of the spine. Dr. Hall felt the attempt to move the couch resulted in a soft tissue sprain/strain type injury to the thoracolumbar area. He acknowledged that, basically, what Claimant reported to him were subjective complaints, and that it was a 'benign' exam.

17. Dr. Hall agreed with Respondents' expert, Dr. Klajnbart, that Claimant's mechanism of injury is congruent with a lumbar sprain/strain injury.

18. Respondents called Ms. Pauline Sylvester to testify. Sylvester testified that she eventually arrived at the room after Claimant had called her for assistance with the sofa bed in the bathroom. Ms. Sylvester estimated that she arrived within 5 to 7 minutes of getting the call from Claimant, and by this time, someone from hospital maintenance had already moved the sofa out of the way. Claimant did not tell her at that time that she attempted to move the couch and injured herself in doing so. Rather, Claimant reported this information to Ms. Sylvester at the end of her shift around 3:00pm.

19. Ms. Sylvester is the operations manager for the Employer and was the operations manager during the transition to the current ownership. Her job included daily operations, overseeing the staff, and staff trainings. Ms. Sylvester testified that there are safety policies in place, and there is training on how to lift and move items properly. She explained that they would have safety meetings, and the topics for these meetings would change from meeting to meeting. Ms. Sylvester said that during some of these meetings, the issue of when to call for help in regard to moving heavy or awkward objects was discussed. She also indicated that individuals were supposed to sign off on the trainings after they were accomplished.

20. There is no record in evidence that Claimant underwent any of the specific training Ms. Sylvester was referring to. Further, Ms. Sylvester testified she is unaware of any document signed by Claimant that she had undergone the specific training regarding the alleged safety rule.

21. Ms. Sylvester was asked if there is any specific procedure when somebody calls asking for assistance moving a heavy item. She explained that in such

an event, the worker is supposed to call a supervisor, who would then go get a dolly and take it to the object needing to be moved.

22. Ms. Sylvester agreed that her workers normally do have to move furniture, particularly away from a wall so that cleaning can be accomplished. The workers are expected to perform this activity on their own. Ms. Sylvester testified about the policy in the event the worker needs help: "If they—*if they **feel** it's too heavy*, yes, they ***should*** call [for help]" (emphasis added).

23. Ms. Sylvester indicated that this particular rule she is referring to is in the Employer's policy manual. Ms. Sylvester then conceded that no copy of the rule was provided to either her counsel or Claimant's counsel, and that she could not specifically recall what the rule actually stated. Her response was that, "Basically, if the object is too heavy to move or pick up, they *should* ask for help. It's ***just a common practice basically."*** (emphasis added). When asked whether workers' are required to move furniture, she testified that yes, they are, but *not for long distances*. Ms. Sylvester conceded the policy manual 'probably', did not address what to do when a vertical sofa bed is encountered in a shower.

24. The following exchange took place in furtherance:

> Q: And I believe you've testified that typically when the employees go through these [safety] trainings that there's some document that they sign—
>
> A: Yes
>
> Q: ---that indicates that they've actually been trained?
>
> A: Yes
>
> Q: Do you know if that document is in existence in this case, as it applies to Ms. Ramirez?
>
> A: There are documents for training, yes.
>
> Q: But for this particular training, in terms of moving furniture. Are you aware- -
>
> A: I- -I'm not aware of that.

25. Ms. Sylvester acknowledged that part of Claimant's job required her to move furniture, and in this particular situation with a vertical couch in the shower, she could understand how the job profile and alleged rule could be confusing when considered together:

Q: So could you see why it might be confusing that her job requires her to move furniture, but in this particular situation she wasn't supposed to move the furniture?

A: I can see where that would be somewhat confusing.

26: Ms. Sylvester confirmed that Claimant was never disciplined for failing to complete this room in the 30 minute window as alleged by Claimant. Notably, Ms. Sylvester was never asked if Claimant was ever disciplined for violating a safety policy by attempting to move this vertical couch on her own.

27. Ms. Virginia Black testified via telephone during Claimant's case-in-chief in her capacity as a former employee of the Employer who performed the same job duties as Claimant. Ms. Black was present at work on the day of the incident. She recalled seeing the room that Claimant had been cleaning with the furniture all being placed in the bathroom. She then went to take her lunch break, which occurred at the same time as Ms. Sylvester's break. Ms. Black recalled Ms. Sylvester answering her phone, saying something about a couch in a shower, and that she would be on her way up. Ms. Black testified that it was approximately 10 to 15 minutes before Ms. Sylvester left the lunch room.

28. Ms. Black further testified that, as part of her job duties, she was required to move furniture in order to clean. Ms. Black testified that she was unaware of any Employer rule when it came to moving or lifting heavy furniture.

29. Ms. Black testified that she saw Claimant later in the day, and that Claimant appeared to be in pain, so she asked Claimant what happened. Claimant told Ms. Black that she hurt her back moving the sofa bed. Ms. Black worked with Claimant every day, and never saw Claimant exhibit any similar outward signs of pain prior to August 31, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the Respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

Conflicts in Testimony

D. In this instance, there is a conflict in the testimony between Claimant, Pauline Sylvester, and Virginia Black on the time it took to respond to Claimant's initial request for help in moving the sofa. The ALJ finds that each of these individuals is telling the truth as they recall it. Each were merely providing their estimate of the time frame; none were checking a clock. In the final analysis, it doesn't matter whether Claimant waited 15-20 minutes, or 5 minutes, or 30 seconds, or an hour. It was a work injury.

E. Secondly, there is a conflict in the testimony between Claimant and Pauline Sylvester on how quickly the room was to be cleaned. The ALJ finds that Pauline Sylvester did not actually insist that this stat terminal clean be completed in 30 minutes. She knew better. The ALJ further finds, however, that Claimant reasonably believed, and in good faith, that time was of the essence in completing this room. The entire subject came up during her lunch break-itself not a routine assignment. Claimant did not just make this up. It is certainly possible that in the course of this lunch conversation, it was mentioned that the nurses wanted it done in 30 minutes. Claimant certainly felt pressure to complete it ASAP, due to direct inquiries by the nurses as well. Of course, Claimant reports to her supervisor and not the nurses- just like a waitress

reports to her supervisor and not the impatient customer- but the pressure to deliver is still very real. It's part of the job. See also *Skills/Aptitude* in Finding of Fact #2, above.

Compensability

F. A Claimant must prove by a preponderance of the evidence that she is a covered employee who suffered an injury arising out of and in the course of employment. C.R.S. § 8-41-301(1); S*ee*, *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett, 33 P.3d 1230* (Colo. App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 592 P.2d 792 (Colo. 1979).

G. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires Claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.*

H. The ALJ finds that Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her thoracic and lumbar spine as a direct result of her work activities on August 31, 2017. There is virtually no evidence to the contrary. Claimant denied ever experiencing mid to lower back pain in the past and no records or testimony contradicts this. Ms. Black testified that she worked with Claimant and had never seen her in pain until after Claimant attempted to move the sofa bed on August 31, 2017, at which time Claimant told her she injured her back moving the sofa bed. Claimant also told her supervisor at the end of the shift that she injured herself moving the sofa bed. The slight delay in reporting this injury is of no consequence. It took Claimant a couple hours for the gravity of her situation to set in. Claimant told all of her medical providers and IMEs that she injured herself at work moving the sofa bed. All of the providers and experts involved, including Respondents expert, agree that Claimant likely sustained an injury to her mid to lower back when she attempted to move the couch at work on August 31, 2017.

Medical Benefits

I. For a compensable injury, Respondents must provide all medical benefits that are reasonably necessary to cure and relieve the injury. C.R.S. § 8-42-101 (2010). Respondents are liable for reasonable and necessary medical treatment by a physician to whom a claimant has been referred by an authorized treating provider. *Rogers v. Industrial Commission*, 746 P.2d 565 (Colo. App. 1987).

J. Claimant sustained a compensable injury to the mid to lower back on August 31, 2017. It therefore follows that Claimant is entitled to all reasonable, necessary, and related treatment for her condition stemming from the August 31, 2017 incident. This includes all treatment rendered to date. Even Respondent's IME concurs. To the extent there is truly a conflict in the medical testimony, the ALJ finds Dr. Hall's analysis to be more persuasive.

Temporary Total Disability

K. To receive temporary disability benefits, the claimant must prove the injury caused a disability. C.R.S. § 8-42-103(1); *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Once the Claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d). Claimant is not required to prove that the industrial injury is the "sole" cause of his wage loss to recover temporary disability benefits. *Jorge Saenz Rico v. Yellow Transportation, Inc*. W.C. No. 4-547-185 (ICAO December 1, 2003), citing *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209 (Colo. App. 1996).

L. The parties stipulated that Claimant would be entitled to TTD from November 29, 2017 and ongoing until otherwise properly terminated by operation of law. Because the claim was found compensable, Claimant is therefore entitled to TTD from November 29, 2017 and ongoing until otherwise properly terminated by operation of law.

Safety Rule Violation

M. Section 8-42-112(1)(b), C.R.S. governs the imposition of a penalty for a violation of a safety rule. That section provides for a 50 percent reduction in Claimant's compensation when Respondents prove "the injury is caused by the employee's willful failure to obey any reasonable rule adopted by the employer for the safety of the employee". The question of whether the Respondents met their burden and proved a willful safety rule violation by a preponderance of the evidence is generally one of fact for determination by the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995).

N. Respondents are required to show Claimant's conduct was willful, i.e., that she knew the rule, then intentionally did what the rule prohibited. Willful conduct may be inferred from circumstantial evidence including the frequency of warnings, the obviousness of the danger, and the extent to which it may be said that the Claimant's actions were the result of deliberate conduct rather than carelessness or casual negligence. The Respondent is not required to present direct evidence concerning the Claimant's state of mind or prove the Claimant had the rule "in mind" when he did the prohibited act. Rather, a "willful" violation may be inferred from evidence the Claimant knew the safety rule and did the prohibited act. *Bennett Props. Co. v. Indus. Comm'n*,

165 Colo. 135, 140, 437 P.2d 548, 551 (1968). As used in this statute, the word "willful" means "with deliberate intent", *City of Las Animas v. Maupin*, 804 P.2d 285, 286 (Colo. App. 1990)[citation omitted], or "the intentional doing of something either with the knowledge that it is likely to result in serious injury, or with a wanton and reckless disregard of its probable consequences." *Johnson v. Denver Tramway Corp.*, 115 Colo. 214, 222, 171 P.2d 410, 414 (1946)(emphasis omitted)[quoting 1 William R. Schneider, *The Law of Workmen's Compensation* § 282, at 876 (2d ed. 1932)]. An ambiguous safety rule that may have led to a claimant having an unclear understanding of exactly what the rule is are appropriate grounds for an ALJ to opt not to impose a 50% reduction. *See Jerry Leon Hobbs v. Salida Auto Salvage, Inc.*, W.C. No. 4-289-777 (June 10, 1997)

O. The ALJ finds that Respondents have failed to prove by a preponderance of the evidence that Claimant willfully violated a known safety rule. The "rule" in question is ambiguous at best. According to Ms. Sylvester, there is a specific rule in the Employer's policy manual, but she was unable to produce a copy of said manual and she was unable to recite the exact rule. Ms. Sylvester summarized the rule generally by stating that if the worker "feels" the object is too heavy, they "should" call for assistance. *"It's just a common practice, basically."*

P. In order for Respondents to meet their burden, they must establish that Claimant knew what the rule was and that she willfully violated a known safety rule. The ALJ finds it to be unreasonable to expect the Claimant to know she was willfully violating a known safety rule when Claimant's supervisor is not familiar with the exact requirements of the rule. 'Common practice' does not sufficiently place a worker on notice of the Safety Rule. Even using the "Rule" as set forth by Ms. Sylvester (which the ALJ does not), Respondent's evidence falls short. Claimant had to ***try*** to move the sofa a few inches, before she could reasonably ***"feel"*** it was too heavy and ask for help. That is exactly what she did, and she got hurt. *Of course* she now regrets doing so. Her back now hurts. Had the sofa been better balanced internally, she likely could have bear hugged and scooted it a foot or two and kept on working without troubling anyone else. Claimant worked under pressure, both alone and as part of a team. See Skills/Aptitude under Finding of Fact #2, above.

Q. The ALJ finds that the alleged "Rule" in question is ambiguous at best. Claimant's formal job description explicitly requires her to move furniture- under pressure, and alone if need be. Claimant was also not disciplined by Employer for this alleged Safety Rule Violation. Ms. Sylvester herself testified that she could see how the situation Claimant was in with the sofa bed in the shower was particularly confusing. It does not matter if Claimant waited 5 minutes, or 15-20 minutes, before trying to move the sofa. She acted reasonably, and in good faith, and not in willful violation of a safety rule, and the ALJ so finds.

ORDER

It is therefore Ordered that:

1. Claimant has suffered a compensable work injury to her back. Respondents shall pay all reasonable, necessary, and related treatment stemming from this work injury.

2. Claimant is entitled to TTD payments-not subject to any 50% reduction-from November 29, 2017 and ongoing, unless terminated by operation of law.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Claimant's receipt of the Final Admission of Liability (FAL) and the timeliness of Claimant's objection to the FAL. Whether Claimant retains the right to object to the FAL and file a Notice and Proposal to Select an Independent Medical Examiner.

FINDINGS OF FACT

1. Claimant was employed by Employer as a resident care specialist, CNA. *See* Exhibit A.

2. On March 1, 2016 Claimant sustained an admitted compensable injury to his right shoulder when trying to assist a patient from the floor using a mechanical lift. *See* Exhibit A.

3. Claimant eventually underwent two shoulder surgeries and other authorized treatment for his injury.

4. As a result of his March 1, 2016 injury Claimant received temporary total disability (TTD) benefit checks bi-weekly beginning March 2, 2016. Claimant's TTD rate was $419.99/week. Claimant received checks bi-weekly in the amount of $839.98 at his home address. Claimant testified credibly that through October of 2017, he received all of his checks regularly at his correct home mailing address of: 1885 Terry St., Apt. 12, Longmont, CO 80501. *See* Exhibits B, E.

5. On October 10, 2017 Claimant was placed at maximum medical improvement (MMI) by Bruce Cazden, M.D. Dr. Cazden assigned a permanent partial disability impairment rating of Claimant's right upper extremity of 8%, which converts to a 5% permanent impairment of the whole person. *See* Exhibits 8, C.

6. Claimant testified that he recalled Dr. Cazden telling him that his treatment was pretty much done. Claimant testified that he continued to receive his bi-weekly benefits checks after Dr. Cazden said he was done with treatment.

7. On October 23, 2017 claims representative Coralyn Kiess filed a FAL with the Division. She mailed copies of the FAL to Claimant and to Respondent Employer. The FAL was mailed to Claimant at his correct home mailing address of: 1885 Terry Street, Apt. 12, Longmont, CO 80501. The FAL noted TTD payments from March 2, 2016 through October 9, 2017, the beginning of permanent partial disability (PPD) benefits on October 10, 2017, and that Respondents were admitting to a PPD rating of 8% scheduled impairment of the right upper extremity. The FAL noted that PPD would be paid at a

weekly rate of $286.91. The FAL also noted that Respondents would offset an overpayment of TTD against future benefits. *See* Exhibits 8, C.

8. Records show that Claimant's last TTD bi-weekly benefits check in the amount of $839.98 was issued to Claimant with a payment date of October 19, 2017 for a period of benefits from October 18, 2017 through October 31, 2017. *See* Exhibit F.

9. Records show that the first payment for PPD was issued to Claimant with a payment date of October 20, 2017 for benefits starting October 10, 2017 and going through October 23, 2017. This was issued in the amount of $573.82. This equals the amount of the weekly PPD rate listed on the FAL multiplied by two weeks. *See* Exhibit F.

10. Records show that the next payment for PPD was issued to Claimant with a payment date of November 3, 2017 for benefits starting October 24, 2017 and going through November 6, 2017 and was also issued in the amount of $573.82. *See* Exhibit F.

11. On approximately November 14, 2017 Claimant called Ms. Kiess to see why his normal bi-weekly check for $839.98 was late. Claimant testified that he was told by Ms. Kiess that his benefits had changed and that he should have received a FAL. Claimant testified that he told Ms. Kiess he had not received a FAL.

12. Claimant requested that Ms. Kiess mail him a copy of the FAL she had filed on October 23, 2017. Ms. Kiess mailed Claimant a copy of the FAL on November 14, 2017. *See* Exhibit 7.

13. Claimant testified that he did not receive the original FAL mailed on October 23, 2017. He testified that he received benefits checks every two weeks at the same address on the original FAL and always got them.

14. Ms. Kiess testified that she was responsible to make sure Claimant received benefits timely and that none of the TTD checks had come back. Ms. Kiess testified that she mailed the FAL to Claimant on October 23, 2017 and that it did not come back as undeliverable. Ms. Kiess testified that Claimant contacted her and that she mailed a copy of the October 23, 2017 FAL to Claimant on November 14, 2017.

15. On November 15, 2017 Claimant received in the mail the copy of the FAL that had been filed by Ms. Kiess on October 23, 2017.

16. On December 4, 2017 Claimant filed an objection to the FAL and a Notice and Proposal to Select an Independent Medical Examiner (notice). *See* Exhibits 6, D, E.

17. Thirty days from October 23, 2017 was November 22, 2017. Claimant did not file his objection or notice within thirty days of the date the FAL was filed.

18. Claimant argues that he had thirty days from the date the claims representative mailed him a copy of the FAL (November 14, 2017) to file his objection and notice and that he was within 30 days of his actual notice when he filed both.

19. Respondents argue that Claimant failed to timely object to the FAL and failed to timely file a notice within thirty days of the FAL (by November 22, 2017) and that the copy sent by the adjuster did not extend or expand the time within which Claimant had to object to the FAL. They therefore ask that his objection and notice be stricken.

20. Claimant had a prior work related injury to his left shoulder in 2015. As a result of that injury Claimant reached MMI on May 6, 2016 and a FAL was mailed to Claimant at his correct home mailing address of: 1885 Terry Street, Apt. 12, Longmont, CO 80501. Claimant testified that he received the FAL from this prior case. Claimant did not object to this prior FAL or request an independent medical examination. *See* Exhibit G.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Final Admission of Liability, Closure, and Notice

Section 8-43-203(2)(b)(II)(A), provides that a claim will be automatically closed "as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the admission in writing and request a hearing on any disputed issues that are ripe for hearing, including selection of an independent medical examiner pursuant to section 8-42-107.2." Section 8-43-203(2)(d), C.R.S., provides that once a case is closed under subsection (2) "the issues closed may only be reopened pursuant to section 8-43-303." The automatic closure provisions contained in these statues are designed to "promote, encourage, and ensure prompt payment of compensation to an injured worker without the necessity of formal administrative determination in cases not presenting a legitimate controversy." *Dyrkopp v. Industrial Claim Appeals Office,* 30 P.3d 821, 822 (Colo. App. 2001).

If a party fails to comply with the time limits established in § 8-43-203(2)(b)(II) the ALJ may determine that an issue is closed and not subject to reconsideration unless reopened. *Peregoy v. Industrial Claim Appeals Office,* 87 P.3d 261 (Colo. App. 2004); *Dyrkopp v. Industrial Claim Appeals Office, supra*. Although § 8-43-203(2)(b)(II) does not expressly state what is meant by "the date of the final admission," the ALJ concludes that the statute refers to the date the FAL is mailed to the Division of Workers' Compensation and the claimant. This conclusion is consistent with cases holding that an FAL must be served the claimant by mailing it to his home address. *Bowlen v. Munford*, 921 P.2d 59 (Colo. App. 1996). In similar fashion WCRP 1-2 which provides that: "Unless a specific rule or statute states to the contrary, the date a document or pleading is filed is the date it is mailed or hand delivered to the Division of Workers' Compensation or the Office of Administrative Courts." Finally, this conclusion is consistent with § 8-42-107.2(2)(a)(I)(A), C.R.S., which provides: "For the claimant the time for selection of an IME commences with the date of mailing of a final admission of liability."

The provisions of § 8-43-203(2)(b)(II) affording the claimant 30 days after the "date of the final admission" to object to the FAL and file an application for hearing are designed to insure an opportunity for informed decision-making regarding the right to contest the FAL. *See Paint Connection Plus v. Industrial Claim Appeals Office*, __P.3d__ (Colo. App. No. 09CA0598, January 7, 2010). Requiring that the claimant be mailed a copy of the FAL at his home address maximizes the probability the claimant will receive notice, and protects the claimant's due process right to be apprised of critical decisions in sufficient time to take necessary procedural steps to preserve his rights. *Bowlen v. Munford, supra; Hall v. Home Furniture Co.,* 724 P.2d 94 (Colo. App. 1986).

It has been held that when Respondents err by addressing a FAL to an old address, the error does not vitiate the FAL's effectiveness if the Claimant actually receives the FAL in sufficient time to file a timely objection. *Duran v. Russell Stover Candies,* WC 4-524-717 (ICAO April 13, 2004). Generally due process requires notice and an opportunity to be heard. *Hendricks v. Industrial Claim Appeals Office,* 809 P.2d 1076 (Colo. App. 1990). Where a party receives actual notice of a proceeding and is afforded a reasonable opportunity to participate, non-jurisdictional errors in the statutory notice process do not nullify the administrative determination. *Wunder v. Department of Revenue,* 867 P.2d 178 (Colo. App. 1993); *Shumate v. Department of Revenue,* 781 P.2d 181 (Colo. App. 1989).

Consequently, where a claimant actually receives a FAL in sufficient time to take the necessary procedural steps to protect his rights, the ALJ concludes that there has been substantial compliance with the notice requirement § 8-43-203(2)(b)(II)(A). *Cf. Kuhndog, Inc. v. Industrial Claim Appeals Office,* 207 P.3d 949 (Colo. App. 2009); *EZ Building Components Mfg. v. Industrial Claim Appeals Office,* 74 P.3d 516 (Colo. App. 2003). In cases where there is substantial compliance with the statutory notice requirements the time for contesting the FAL is not extended until the date of actual receipt. *Duran v. Russell Stove Candies, supra.*

Here, as found above, Claimant received actual notice of the FAL by November 15, 2017 when he received a copy of the FAL in the mail. Claimant also had actual notice that the FAL had been filed when he spoke with the claims representative on November 14, 2017. Even assuming that Claimant did not receive the FAL that was originally mailed on October 23, 2017, Claimant had actual notice by November 15, 2017. The ALJ finds that when he received actual notice, Claimant had sufficient time to take the necessary procedural steps of objecting and requesting an independent medical examination prior to the thirty day deadline of November 22, 2017. Claimant had approximately 7 days and had sufficient and meaningful opportunity to make an informed decision on whether or not he wished to contest the FAL. Despite having approximately 7 days after he received actual notice, Claimant failed to timely object and failed to use the existing process to protect his rights. As there was actual notice in this case that afforded Claimant a meaningful opportunity to lodge an objection to the FAL and to request an independent medical examination within the statutory thirty day time limit, his argument that the time for filing his requests was tolled or that the thirty day period should start from the date he received the copy of the FAL is not found persuasive.

If Claimant had not received actual notice of the FAL or if Claimant received actual notice of the FAL with only 1-2 days in which to act to protect his rights, the analysis of whether or not he had sufficient notice and a meaningful opportunity to respond would be different. However, in this case, with approximately 7 days in which to act, Claimant had sufficient time for informed decision making and his due process rights were not violated. Claimant failed to timely object to the FAL and failed to timely file a notice and proposal to select an independent medical examiner. Respondents' requests to strike the objection to the FAL and to strike the notice and proposal to select an independent medical examiner are granted.

It is therefore ordered that:

1. Claimant failed to timely object to the FAL and failed to timely file a notice and proposal to select an independent medical examiner.

2. Respondents requests to strike the Objection to Final Admission of Liability and to strike the Notice and Proposal to Select an Independent Medical Examiner are granted.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 22, 2018,

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable injury in the form of an occupational disease.

II. If Claimant proved he sustained a compensable injury, whether Claimant proved by a preponderance of the evidence he is entitled to medical benefits.

III. If Claimant proved he sustained a compensable injury, whether Claimant proved by a preponderance of the evidence that he is entitled to temporary disability benefits.

STIPULATIONS

The parties stipulated to an average weekly wage of $1,277.64.

FINDINGS OF FACT

1. Claimant is a 33-year-old man who works for Employer as a control specialist technician. Employer operates a facility that handles and ships packages. Claimant began working for Employer on July 14, 2017, two months before the facility became fully operational.

2. Claimant's primary job duties involved tending to electrical work within the facility and programming systems to ensure the facility operated efficiently. Claimant also assisted with resolving issues with machinery when necessary. Claimant testified that he fixed conveyor belt jams, which required climbing a ladder to reach boxes on the conveyor belt, and either pull the boxes down one by one, or yank and organize the boxes to get them back on the conveyor system. Claimant stated that jams occurred frequently throughout a normal shift. Claimant assisted in removing heavy diverters, which required two employees to disconnect and lift the diverter. Claimant also participated in relocating uprights (steel shelving), which required three people to put the upright on its side and place the upright on a fork truck.

3. Claimant testified he also assisted with replacing belts on the machine used to seal packages, known as the "Little David." Claimant testified that the belts would often wear out quickly. He explained that two employees would pull the belt together while another employee secured the belt with a pin.

4. Claimant testified that he replaced belts on the Little Davids multiple times a day. Claimant replaced two diverters shortly before he left his shift early to go to the emergency room on October 25, 2017. Claimant testified he removed a number of uprights on October 22, 2018.

5. Employer's facility covers a million square feet. Claimant testified that he often had to walk from one point of the building to the other. Employer required Claimant to wear steel-toed boots. Claimant initially wore his own boots that Claimant estimated weighed ten pounds. Employer subsequently provided work boots to Claimant. Employer's facility is considered a non-sort facility meaning it only handles packages larger than 18-inches.

6. Claimant worked overnight shifts from 5:30 p.m. to 6:00 a.m. Claimant worked October 14-17, 2017. Claimant was not scheduled to work October 18-21, 2017. Claimant worked October 22-25, 2017.

7. Claimant testified he started to feel pain on October 15, 2017, but attributed the pain to aches and pain he experienced on a regular basis. Claimant testified he straightened up his garage that weekend (the weekend of October 20-21, 2017). He stated the pain progressively worsened, and he took some Tylenol before returning to work at 5:30 p.m. on October 22, 2017. Claimant testified the pain he felt on October 22, 2017 was a "new pain."

8. Claimant further testified that around 2:30 a.m. or 3:00 a.m. on October 25, 2017, he called his area manager, Andrew Martin Aragon, and informed him he was experiencing pain in his leg and that he was going to the emergency room.

9. Shortly thereafter, Claimant sought treatment at the UC Health emergency department complaining of leg and back pain shooting down his side. At about 3:21 a.m. on October 25, 2017, he told Kelli Hodge, RN, he noticed pain on Monday before work that had increased over time. Claimant was seen by Jacqueline Ward-Gaines, M.D., at about 4:02 a.m. He told Dr. Ward-Gaines he had left leg pain which started three days prior to arrival. He denied falls, trauma, or similar symptoms previously. He reported he had been at work that day and the pain became unbearable and he went to the emergency department.

10. While at the UC Health emergency department on October 25, 2017, Claimant sent a text message to Mr. Aragon advising that he was at the emergency room and would not be in that night. When asked if he pulled something at work, he responded, "It started happening Sunday at the beginning of my shift. I have no idea why…. As of now I'm not doing this as a workmen comp." Claimant did not tell Mr. Aragon his symptoms began October 15, 2017. Claimant testified that, at that time, he was not sure what caused his injury and he decided that he should use caution and at least receive a diagnosis before he attributed the injury to his work for Employer.

11. At about 8:37 a.m., on October 25, 2017 Julia Lehmann, RN, went to discharge Claimant from UC Health. Claimant informed Ms. Lehmann he just wanted to leave. Ms. Lehmann offered to have the doctor come speak with Claimant, but he refused. He also refused a work note. Claimant testified he left UC Health with no idea why he was hurt. He did not get any release paperwork or medications. Claimant testified he left the hospital before being released because he was angry about "being ignored in here for a long time, maybe eight hours, and nobody has seen or done anything with me."

Claimant testified that they asked for his "deductibles and things of that nature," but he then left angry.

12. When asked if he told Ms. Hodge or Dr. Ward-Gaines that his symptoms began on October 15, 2017 and then slowly progressed to the October 22, 2017, Claimant responded, "I'm saying that when was it pain? It was probably the 22nd, when I consider it pain." He also said he did not remember what he told Ms. Hodge or Dr. Ward-Gaines.

13. Claimant went to sleep upon arriving home from UC Health on the morning of October 25, 2017. Claimant testified that he later woke up, attempted to walk down the stairs, and fell down the stairs in pain. He then went to the emergency room at Sky Ridge Medical Center.

14. At about 5:45 p.m. on October 25, 2017, Claimant told Jennifer Bates, RN, he had right upper leg pain starting Sunday night. He denied trauma. When asked if he was telling Ms. Bates his symptoms started October 22, 2017 Claimant testified, "That is when the pain started, yes." At about 6:04 p.m., Claimant was seen by Katelyn Garel, PA, who noted Claimant presented with lumbar back pain with onset of the pain on Sunday, four days earlier. She noted Claimant reported the pain occurred when he was at work, an office job, and that he did not recall any specific movements. Claimant testified he did not remember what he told Ms. Bates and Ms. Garel. The records from Sky Ridge make no mention of symptoms beginning during the week of October 15, 2017. Claimant was diagnosed with lumbar radiculopathy. Claimant testified he was told he had a herniated disc that was caused by lifting and twisting.

15. The following morning, October 26, 2017, Claimant spoke with his supervisor, Mr. Aragon, and his regional manager, Ineko Thompson. He informed them that the discussions with his treatment providers at Sky Ridge led him to believe that his work for Employer caused his injury and that he wanted to file a workers' compensation claim. Both Mr. Aragon and Mr. Thompson testified Claimant did not report it as a work injury during their calls with Claimant. Claimant testified he decided on October 26, 2017 he had a workers' compensation claim because he believed he pulled his back, which he associated with the work he does every day. Claimant testified about work tasks which he felt were heavy and could be the explanation for an onset of symptoms in his low back.

16. On October 27, 2017, Claimant was seen by his personal physician, Ann E. Trawick, DO, for evaluation of low back pain. Claimant reported to Dr. Trawick that the pain started six days prior. Claimant acknowledged at hearing that this would be Sunday, October 22, 2017. Claimant reported no known trauma or inciting event. After physically examining Claimant and reviewing imaging studies taken at the emergency department, Dr. Trawick opined that there was nothing to relate to pain etiology and concluded that Claimant's weakness appeared to be pain-related.

17. On October 29, 2017, at 8:09 p.m., Claimant sent an e-mail inquiring how to "get this changed" from his insurance to Employer's. Mr. Thompson responded at 8:04

a.m. October 30, 2017, asking if this was a work-related incident and asking Claimant to confirm the information he conveyed to Mr. Aragon about it occurring on October 22, 2017 prior to his shift. On October 31, 2017, at 3:37 a.m., Claimant replied,

> This is a work related incident. Unfortunately it is NOT a 'I dropped a hammer on my foot a (sic) 6:32 on Tuesday' type of injury. It is an injury from repeatedly pushing myself until I got to a point of severe pain. I originally thought that I had pulled a muscle in my leg. It turns out that I had pulled my lower back out and had a pinch/irritated sciatic nerve, this started during my shift the week of 10/15. By Sunday my leg still hurt, I took some ibuprofen and came to work. By Wednesday 10/25/17 I was in a large amount of pain…" (emphasis not added).

18. Mr. Aragon testified that, when he saw this e-mail, he thought Claimant was changing his report of when and how the accident happened, because he had initially been told it was at the beginning of Claimant's shift on October 22, 2017.

19. Mr. Thompson testified Claimant's job was physical in nature, and required walking around and performing maintenance. He testified he followed up with Claimant by phone after Claimant left work for back pain. Mr. Thompson stated Claimant never told him this occurred at work until Monday, October 30, 2017, when Claimant said he wanted to make this claim as a workmen's comp issue. Mr. Thompson testified he asked Claimant if his claim was about the deductible being a thousand dollars and Claimant responded, "Yeah, it is a deductible, and it happened at work." At that point, Claimant told Mr. Thompson his symptoms began at the beginning of his shift on October 22, 2017, not October 15. Mr. Thompson then asked Claimant to write a summary of what occurred and when it happened, so he could file the claim. Mr. Thompson noted that in Claimant's written summary he reported that his pain started at the beginning of the shift on 10/15/17. Mr. Thompson testified Claimant changed his story about when his symptoms began and why they began between their conversation and the email.

20. Greg Gauna, a friend and co-worker of Claimant, testified Claimant started complaining about back and hip pain on Monday, October 23, 2017. Mr. Gauna did not hear from Claimant he was having any symptoms in his back during the week of October 15. Mr. Gauna testified Claimant was going through a list of what could have caused his back pain and mentioned his back could have been bothering him as a result of sleeping on his couch. Mr. Gauana testified that during the week of October 22, 2017, he and Claimant, moved "a lot of the uprights." He described the process of moving an upright as having to lift, pull, and twist the upright in order to relocate it.

21. On November 2, 2017, Claimant was seen by Stephen F. Pehler, MD, at Colorado Orthopedic Consultants for lower back pain and leg pain. On the Patient Medical History form, Claimant indicated the date of injury was "~10/25/17." He checked that this was not an accident. He did not check the box for "Work Comp. Dr. Pehler noted Claimant presented post a "lifting and twisting injury while at work." He noted that x-rays and a CT scan of Claimant's lumbar spine did not reveal any evidence of

instability, fracture, dislocation or other osseous pathologies. He released Claimant to work with temporary restrictions of no bending, lifting or twisting until Claimant underwent an MRI and follow-up appointment.

22. Despite being released to work, Employer informed Claimant that he was not allowed to return to work until he had an MRI and fully recovered from the injury.

23. On November 28, 2017, Respondents filed a Notice of Contest on the grounds the alleged injury/illness was not work-related.

24. On January 8, 2018, Claimant underwent a lumbar spine MRI. Kenneth Allison, MD gave the following impression: minimal degenerative changes at L5-S1, with no significant central canal stenosis, significant foraminal narrowing, or clear neural impingement at any level.

25. Dr. Pehler reevaluated Claimant on January 16, 2018. He noted the lumbar spine MRI findings were consistent with lumbar spondylosis at L5-S1 and a "very mild" left-sided L5-S1 disc protrusion, with no evidence of disc herniation or significant nerve root compression. Dr. Pehler released Claimant to work without any restrictions, and referred Claimant for physical therapy and pain management.

26. On January 19, 2018, Claimant presented to R. Carter Jones, III, MD, PhD, for a pain management evaluation. Claimant reported that the onset of his pain was gradual. The report contains no mention of Claimant's work activities. Dr. Jones diagnosed Claimant with lumbago and recommended daily exercise, physical therapy, and medication.

27. Claimant testified that outside of work, he engages in house chores such as cleaning and laundry. He also enjoys working on circuit boards. Claimant testified that he had not experienced any prior back or leg injuries.

28. The ALJ does not find Claimant's testimony as to the onset of symptoms and his activities outside of work credible or persuasive.

29. Claimant failed to prove by a preponderance of evidence that he sustained a compensable injury in the form of an occupational disease.

30. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of

proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC

4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

An "injury" is traceable to a particular time, place and cause the claimant has sustained an "industrial accident." *Delta Drywall v. Industrial Claim Appeals Office*, 868 P.2d 1155 (Colo. App. 1993). In contrast, where an "injury" is acquired in the ordinary course of employment and is a natural incident of the employment, the claimant has sustained an "occupational disease." *Climax Molybdenum Co. v. Walter*, 812 P.2d 1168 (Colo. 1991); *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993).

"Occupational disease" is defined by §8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond that required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). The existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.* Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

Claimant argues he sustained an occupational disease as a result of his work for Employer. Claimant acknowledges there was not a specific industrial accident that occurred. He contends extensive physical labor was characteristic of his job and caused his condition.

The ALJ concludes Claimant failed to prove by a preponderance of evidence that he sustained a compensable injury in the form of an occupational disease resulting directly from the employment or the conditions under which the work was performed for Employer. Claimant's inconsistency as to the onset of symptoms undermines his credibility. In an e-mail to Employer, Claimant alleged his symptoms began during his shift the week of October 15, 2017. Claimant testified he began to feel pain on October

15, 2017, but attributed the pain to normal aches and pain he experiences on a regular basis. Claimant's explanation is implausible, as it is unlikely he would clearly identify a particular date on which he specifically began experiencing symptoms if the symptoms were merely normal aches and pains typical of any other day. Claimant alleges his symptoms did not magnify until over that weekend. Per such timeline, Claimant's symptoms did not become problematic until after he straightened up his garage. Claimant did not attempt to report his condition as a work injury until he became responsible for a deductible under his personal health insurance. While Claimant's job involved physical activity, the ALJ is not persuaded that his job duties proximately caused his condition, or aggravated or accelerated any pre-existing condition. Although possible, the totality of the credible and persuasive evidence does not establish it is more likely than not his condition directly resulted from his employment or the conditions under which his work was performed.

As Claimant failed to meet his burden to establish a compensable injury, the remaining issues of medical benefits and temporary total disability are moot.

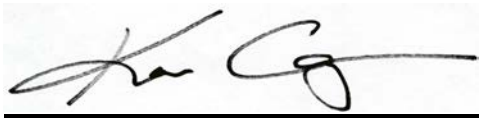
ORDER

It is therefore ordered that:

1. Claimant failed to prove by a preponderance of the evidence he sustained a compensable injury in the form of an occupational disease. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 22, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

WORKERS' COMPENSATION NO. WC 5-051-996-1

ISSUES

- Whether Claimant proved by a preponderance of the evidence that he is entitled to temporary total disability benefits.

- Whether Respondents proved by a preponderance of the evidence that Claimant is responsible for the termination of his employment.

STIPULATIONS

The parties stipulated to the compensability of the claim, an average weekly wage of $606.00, and, if TTD is awarded, a closed period of TTD from June 13, 2017 to February 5, 2018.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On March 22, 2017, Claimant began working for Employer as a short-rib boner. A short rib boner is part of a production line that manipulates meat on the table and cuts it.

2. Claimant testified he told his supervisor, Carlos Camacho, in mid-April 2017, that he was experiencing pain in his hands. Mr. Camacho sent Claimant to a "trainer" who escorted Claimant to the nurse at Employer's in-house clinic.

3. The nurse did not physically examine Claimant. Rather, she gave him two pain pills and told him he would get better with time. The nurse did not provide Claimant with work restrictions, so he continued to perform his job.

4. Claimant's pain worsened over the next week. Claimant told Mr. Camacho that his pain was worse and that he needed to see a doctor. Mr. Camacho did not respond verbally, but appeared angry and gestured with his hand that Claimant should go to the nurse. Again, the nurse did not examine Claimant. She gave Claimant a glove to support his right wrist and sent him back to the production line.

5. Claimant's pain continued to increase and he reported to Mr. Camacho a third time. He stated that he had already seen the nurse two times and that he needed to see a doctor. Claimant also told Mr. Camacho that his hands hurt so badly that he could not work. Mr. Camacho replied, "You f---ing Puerto Ricans! All you do is live off the system." Rather than send Claimant for medical treatment, Mr. Camacho told Claimant to "take it like a man."

6. Claimant consistently testified that he reported his pain and asked for medical attention at least ten times. Mr. Camacho still did not send Claimant for medical attention and still did not file a report of injury. Rather, Mr. Camacho would respond by making comments such as, "The Puerto Rican girl is crying again."

7. Claimant twice reported to Billy Martinez, Employer's supervisor of trainers, that Mr. Camacho was not letting him seek appropriate medical care and was making racial slurs. Mr. Martinez assured Claimant that he would go to the production line, but that Claimant never observed Mr. Martinez at the line. The second time Claimant reported his hand pain and Mr. Camacho's conduct; Mr. Martinez told Claimant that he needed to understand that Mr. Camacho was under a lot of pressure and that Claimant just had to deal with it. Mr. Martinez did not address Claimant's pain complaints on either occasion.

8. Claimant also complained to Mr. Brandon in Employer's human resource department. Mr. Brandon does not speak Spanish and Claimant credibly testified that he did not understand what Mr. Brandon said to him.

9. Claimant continued to work. His increasingly unbearable pain prevented Claimant from maintaining the speed required on the production line. When he would fall behind, Mr. Camacho would take Claimant's knives and his place on the line. Mr. Camacho would say that he "was a real man," and that "Puerto Ricans are crybabies with no balls."

10. Respondents emphasize that Claimant sought outside medical care on two occasions without mentioning his hand pain. On April 17, 2017, Claimant went to Colorado Plains Express Care (CPEC) where a nurse practitioner diagnosed him with influenza A and started on Tamiflu and a nebulizer. On June 7, 2017, Claimant returned to CPEC where Dr. Tawana Nix diagnosed him with acute streptococcal pharyngitis. Clamant credibly testified that he did not seek medical attention for his hand pain at those times because he was there for other reasons, and that he did not independently seek medical care for his hand pain in the United States because he did not have insurance and knew treatment would be expensive. Claimant sought independent medical care in Puerto Rico.

11. Respondents also emphasize that Claimant did not seek help through his union representative. The ALJ credits Claimant's testimony that he did not know that he could do so and did not know how a union worked.

12. Claimant worked through June 12, 2017. At that time his pain was so severe he feared his the damage to his hands could be permanent. He called into work the next several days and reached a recorded message that gave him the option of pushing one number for "sick," and a different number for "personal." There was no option to leave a message.

13. Claimant filed his worker's claim for compensation on July 14, 2017.

14. At some point between two and four weeks later, Claimant received a phone call from Insurer. He provided the information the representative requested. Insurer did not tell Claimant to go to a doctor. At that point, Claimant decided to return to Puerto Rico to seek medical attention. When Claimant left Employer on June 12, 2017, he intended to return when his condition improved.

15. Claimant treated in Puerto Rico.

16. On February 5, 2018, Claimant began working for a new employer in Atlanta, Georgia.

17. The ALJ credits Claimant's testimony and finds it credible and persuasive. Claimant testimony was consistent and reasonable. Further, his pain complaints are consistent with his difficulty meeting Employer's speed requirements. And, although Claimant appeared by phone, his speech was in a comfortable cadence.

18. Billy Martinez has worked for Employer for twenty-five years and recruited Claimant in Puerto Rico. He also is in charge of trainers. Mr. Martinez testified that Employer puts all new employees on a forty-five day probationary period for them to get up to speed on their job, and that Claimant had not qualified during that period. When asked if Claimant ever qualified for his position, Mr. Martinez responded, "I don't remember. I can't remember that far back."

19. Mr. Martinez acknowledged that Claimant had reported to him that Claimant's hands were sore. "He – well, a couple of times, he – like I said, he's seen me in the cafeteria quite a bit, and he would tell me his hands were sore." Mr. Martinez advised Claimant to do exercises and to ice his hands at home. Mr. Martinez later changed to answer and testified that Claimant had only come to him one time with complaints of hand soreness. Mr. Martinez initially denied that Claimant asked him if he could go to health services, but later testified that he told Claimant to go to his supervisor, Mr. Camacho. He also denied that Claimant ever told him that Mr. Camacho would not let him go to health services.

20. Mr. Martinez also denied that Claimant ever came to him reporting Mr. Camacho's derogatory comments about Puerto Ricans. However, he testified that Claimant did tell him once that Mr. Camacho was "a little loud." He responded that he would "tell Camacho to lower his voice when he's talking out in the – you know, in the – you know, just try to be a little more *calm* with his voice when he's trying to talk to employees." Later, Mr. Martinez testified that he told Claimant he "would get with Mr.

Camacho and *calm him down* a little bit when he's talking to his employees." The ALJ notes that "calm" is a word used to denote not volume, but affect or demeanor.

21. Mr. Martinez further denied that he had ever witnessed Mr. Camacho exhibit discriminating or harassing behavior. He also testified that no one had ever made a complaint of Mr. Camacho acting in that way.

22. Mr. Martinez testified that the only discrimination complaints he was aware of at Employer were "possibly – probably about two" complaints between co-workers. He later testified that there was only one incident. He described two employees getting into a fight and one calling the other "you know, names or what, -- you know, discriminatory – like either you're – you're – you're black or – or you – you're Mexican. You know something sort of like that nature."

23. Mr. Martinez testified that he and Mr. Camacho were friends and "co-partners." Later he testified, "I wouldn't say friends 'cause we don't really associate after work."

24. The ALJ does not find Mr. Martinez' testimony to be credible or persuasive for the following reasons:

- He acknowledged problems with his memory;
- His answers were often inconsistent with each other;
- His testimony about Mr. Camacho speaking loudly, and trying to calm him down was not forthcoming or credible;
- His testimony that on only once two employees discriminated against each other by one saying, "You're black," and the other responding, "You're Mexican," was disingenuous at best.
- Mr. Martinez stammered when answering questions, and was not spontaneous in his speech.
- Mr. Martinez is a current employee who has twenty-five years with Employer. It is unlikely he would testify against Employer.

25. Mr. Camacho has worked for Employer for more than six years, as a production supervisor, but since Employer has promoted him to a different position. As a production supervisor, he saw Claimant every day Claimant worked for Claimant's entire shift. Mr. Camacho acknowledged that Claimant complained of hand soreness and he had a trainer take Claimant to see the nurse. When asked if it happened more than once, he answered, "Maybe twice? I – I recall, specifically, the first time. It – he might have gone to the nurse – I think he did go two times to the nurse." He further testified that "any employee . . . at any time, can go up there and not have any kind of repercussion or disciplinary action if – if – if we wanted to."

26. Mr. Camacho acknowledged that he had a loud voice and that Mr. Martinez had brought that to his attention. He went on: "I'd like you to try to imagine, when – when you're on the production floor, we have moving belts and saws and 500 people down there, you know? Everybody's wearing ear protection . . . So for me to, kind of, get my – my verbiage out, sometimes I have to speak a little louder, right?" Mr. Camacho's testimony supports a finding that the problem was not the volume of his voice, given the context of a very loud environment where employees were using ear protection. And, without any question pending, Mr. Camacho volunteered all of the strategies he uses to be a friendly communicator and creates an atmosphere where he and a worker can understand each other.

27. Mr. Camacho testified that he "absolutely" never prevented Claimant from going to health services. He testified that it was "absolutely false" that he made disparaging remarks about Puerto Ricans, and that it "hurt his feelings" for someone to question his integrity. When asked if he ever told Claimant to take it like a man, he answered, "Absolutely not." When asked if he ever said that Puerto Ricans were crybabies and need to grow balls," he answered awkwardly, "No, no that's – that – that's never been said by myself."

28. Mr. Camacho responded "absolutely not," when asked if he ever discrimated against Claimant based on national origin. He also responded "absolutely not," when asked if he discriminated against Claimant based on ethnicity.

29. Mr. Camacho signed Claimant's termination letter dated June 19, 2017, explaining that Employer terminated Claimant "for – for – for absenteeism."

30. Mr. Camacho denied that he was under "pressure," but acknowledged, "We have goals, and we have – we have efficiencies that – that – that need to be met." When asked if having an underperforming employee put additional stress on him as a supervisor, he responded, "Absolutely not." Mr. Camacho denied ever stepping into Claimant's place on the line when meat started backing up. Mr. Camacho denied ever using foul language.

31. The ALJ does not find Mr. Camacho's testimony to be credible or persuasive for the following reasons:

- His answers were often inconsistent with each other;
- His testimony about the problem being the volume of his voice rather than his manner was unreasonable given the context of the work environment;
- His testimony was consistently and unnecessarily phrased in terms of absolutes;
- Mr. Camacho stammered when answering questions, and was not spontaneous in his speech;

- Mr. Camacho used awkward language in answering questions. For example, “that’s never been said by myself,” and “to get my – my verbiage out.”

- Mr. Camacho is a current employee who Employer promoted after the incidents of this case. It is unlikely he would testify against Employer.

32. Given the totality of the evidence, the ALJ finds Claimant proved by a preponderance of the evidence that he is entitled to temporary total disability benefits.

33. Given the totality of the evidence, the ALJ finds Respondents have not proven by a preponderance of the evidence that Claimant is responsible for the termination of his employment.

CONCLUSIONS OF LAW

The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

This is an admitted claim as the Respondents stipulated at hearing that the injury is compensable. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to Section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once

respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). In this circumstance, Claimant requested to see a physician numerous times and Employer did not provide medical care. As such, Respondents was never designated a treatment provider in the first instance. Claimant attempted to seek medical care by returning to the nurse but his supervisor made derogatory and discriminatory comments instead of insuring he was provided medical care.

"Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

As found, Claimant has demonstrated that the treatment he received from his authorized treating providers was reasonable necessary and related to his admitted industrial injury. The right of selection passed to Claimant when Employer became aware of the Claimant's injury on the numerous occasions he reported it.

Claimant calling in sick and returning to Puerto Rico for treatment, under the circumstances, was reasonable and necessary.

Claimant is not responsible for his termination or wage loss.

ORDER

The ALJ therefore orders that:

1. Claimant has proven by a preponderance of the evidence that he is entitled to TTD from June 13, 2017 until February 5, 2018, at the stipulated average weekly wage of $606.00.

2. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Whether Claimant has established by a preponderance of the evidence that the lumbar fusion surgery requested by Scott Prusmack, M.D. and performed on December 14, 2017 was reasonable, necessary and causally related to his December 11, 2007 industrial injury.

FINDINGS OF FACT

1. On December 11, 2007 Claimant suffered an admitted industrial injury to his lower back while working for Employer. Claimant initially received conservative medical treatment and diagnostic testing. On February 26, 2009 Claimant underwent an L5-S1 laminectomy. He subsequently required additional surgeries that included an L5-S1 fusion.

2. On October 3, 2013 Scott Hompland, M.D. performed a Division Independent Medical Examination (DIME). He determined that Claimant reached Maximum Medical Improvement (MMI) on January 11, 2012. Dr. Hompland explained that Claimant's medical condition was stable and static. Additional treatment would be "considered maintenance and related primarily to chronic pain management."

3. On June 26, 2014 Claimant was determined to be permanently and totally disabled.

4. During 2015 and 2016 Claimant received medical treatment from Yani Zinis, D.O. Claimant reported progressive worsening of his lower back symptoms.

5. By July 7, 2017 Claimant presented to Dr. Zinis with worsening lower back symptoms that reached a severe level of 9/10 pain. Dr. Zinis noted that the symptoms were related to a chronic condition that began on December 11, 2007. He commented that "the weakness has been more progressive over the last 2-3 months, but the left sided radicular pain has been progressive for more than a year." Dr. Zinis ordered a repeat lumbar MRI.

6. On July 31, 2017 neurosurgeon Chad Prusmack, M.D. recommended a lumbar discogram to evaluate Claimant's lower back pain. Claimant was also experiencing left-sided radiculopathy with foot drop.

7. On August 16, 2017 Claimant returned to Dr. Prusmack for an evaluation of the discogram. Dr. Prusmack determined that the discogram revealed a pain response of the L4-L5 disc with a grade three annular tear. He explained that

> this is a segment that does show degenerative changes on his MRI as well. The patient has severe limiting back pain that is causing him issues on a daily basis constantly. Based on the disk herniation and stenosis that exists on the left side at L4-5, he will need a full facetectomy with removal of the torn disk at the L4-5 level with interbody fusion and subsequent posterior instrumentation from L4-S1.

8. On September 28, 2017 Claimant returned to Dr. Zinis for an evaluation. Dr. Zinis commented that it was reasonable and necessary for Claimant to proceed with surgical intervention "proximal to his previous fusion." He emphasized that Claimant's disc herniation, progressive instability and degenerative changes were more likely than not a direct result of his "initial surgeries and fusion just proximally at L2-3 and L3-4."

9. On November 7, 2017 Claimant visited Dr. Zinis for an examination. He reported progressive lower back pain and leg weakness that had caused difficulties with routine daily activities. Dr. Zinis summarized that Claimant has been suffering

> progressive low back pain with left lower extremity radiculopathy, due directly to a progression of instability and degenerative changes just proximal to his previous fusion procedure. This includes a disc herniation at L2-3 which has become increasingly symptomatic over the last several months, and I'm concerned regarding his progressive weakness and pain symptoms with left-sided radiculopathy and myelopathy.
>
> Again I have voiced considerable concern about progressive myelopathy and an L2-3, L3-4 pattern on the left and within a reasonable degree of medical probability feel this is directly related to worsening of his condition related to the 3 back surgeries including fusion.

10. On November 9, 2017 Dr. Zinis performed an EMG/nerve conduction study on Claimant. The testing revealed "active progressive denervation apparent L2-3, L3-4 pattern on the left" that was caused by "complications related to the fusion procedure."

11. On December 13, 2017 Claimant visited the Sky Ridge Medical Center Emergency Room. Claimant identified Dr. Prusmack as his primary care physician. However, because Dr. Prusmack was unavailable, his surgical partner John Serak, M.D. evaluated Claimant.

12. Dr. Serak reviewed Claimant's radiographic records and noted "adjacent level disease with disc degeneration and moderate central stenosis." He remarked that Claimant suffered a worsening condition, weakness and spondylolisthesis that was mobile and unstable. On December 14, 2017 Dr. Serak performed a left transforaminal interbody fusion, L4-L5 percutaneous pedicle screw placement, posterior lateral fusions, aspiration of bone marrow and use of fluoroscopy for greater than one hour on Claimant's back.

13. Claimant testified that he volunteered at a food bank a few times each month. He acknowledged that he was the subject of video surveillance during 2016. The video reveals that Claimant lifted boxes of tiles. He also lifted pallets and boxes at the food bank. After conducting an independent medical examination and reviewing the video footage, John J. Raschbacher, M.D. determined that Claimant did not require any restrictions on physical activity. Claimant specifially did not appear to have any limitations regarding walking, standing, sitting, driving, climbing or bending forward.

14. In a January 3, 2018 report Dr. Raschbacher noted that he had reviewed additional medical records that included the December 14, 2017 surgical report. He reasoned that there was no clear connection between the surgery and Claimant's December 11, 2007 industrial injury. Dr. Raschbacher explained that Claimant had failed to provide accurate medical histories regarding his improvement.

15. Dr. Raschbacher testified through a pre-hearing evidentiary deposition on October 27, 2017 and at the hearing in this matter. In specifically addressing Claimant's emergency need for surgery on December 14, 2017, Dr. Raschbacher testified that the procedure was based on Claimant's subjective complaints. He remarked that the surgery was not related to Claimant's December 11, 2007 industrial injury at L5-S1 because it involved higher levels and structures in Claimant's back. Dr. Raschbacher summarized that there was no medical necessity for the surgery recommended by Dr. Prusmack that was performed on December 14, 2017.

16. On March 14, 2018 the parties conducted the post-hearing evidentiary deposition of Dr. Prusmack. After considering Claimant's activities in the surveillance video as detailed by Dr. Raschbacher, Dr. Prusmack maintained that Claimant warranted lower back fusion surgery on December 14, 2017. Dr. Prusmack explained that Claimant required the surgery because he suffered worsening instability and dysfunction. He noted that Claimant's condition had changed significantly since 2016 and sympotms including pain, weakness and the development of foot drop justified surgical intervention.

17. Dr. Prusmack summarized that Claimant's need for surgery on December 14, 2017 was related to his December 11, 2007 industrial injury. He detailed that

> indeed the essence of this case and the essence [of] neuro-surgically is the fact that [Claimant] had a lumbar fusion, at L5-S1, in 2011. It's very clear, once a lumbar fusion is performed, you run a risk of approximately 25 percent every 10 years of needing another fusion due to what's called adjacent segment disease. What that refers to is that the stabilization, of a previously mobile joint, transfers excess load to the next level above, in this case being L4-5. Therefore, an undeniable cause of this back problem, in my opinion, is his previous fusion.

Dr. Prusmack detailed that the spondylolisthesis in Claimant's spine was caused by "adjacent segment disease. It occurs adjacent to an existing fusion over the long-run." He commented that Claimant's condition was not "activity related" or a "degenerative condition seen in the elderly."

18. Claimant has established that it is more probably true than not that the lumbar fusion surgery requested by Dr. Prusmack and performed on December 14, 2017 was reasonable, necessary and causally related to his December 11, 2007 industrial injury. Initially, on December 11, 2007 Claimant suffered an admitted lower back injury. After receiving conservative treatment Claimant underwent multiple surgeries including an L5-S1 fusion. Claimant subsequently began to experience progressively worsening lower back pain. The persuasive medical records reflect that Claimant's need for the December 14, 2017 fusion surgery was caused by the progressive worsening of his condition as a result of his L5-S1 fusion surgery. Dr. Zinis determined that Claimant's lower back symptoms were related to a chronic condition that began on December 11, 2007. By August 16, 2017 a discogram revealed a pain response of the L4-L5 disc with a grade three annular tear. Based on Claimant's disc herniation and stenosis on the left side at L4-5, Dr. Prusmack recommended a full facetectomy with removal of the torn disk at the L4-5 level with an interbody fusion and posterior instrumentation from L4-S1. Dr. Zinis attributed Claimant's lower back symptoms to a progression of instability and degenerative changes that were proximal to his previous fusion procedure. He summarized that Claimant's disc herniation, progressive instability and degenerative changes were more likely than not a direct result of his "initial surgeries and fusion just proximally at L2-3 and L3-4."

19. In contrast, Dr. Raschbacher explained that the December 14, 2017 surgery was based on Claimant's subjective complaints. He remarked that the surgery was not related to Claimant's December 11, 2007 industrial injury at L5-S1 because it involved higher levels and structures in Claimant's back. Dr. Raschbacher summarized that there was no medical necessity for the surgery. However, Dr. Prusmack persuasively determined that Claimant required the surgery because he suffered worsening instability and dysfunction. He noted that Claimant's condition had changed significantly since 2016 and sympotms including pain, weakness and the development of foot drop justified surgical intervention. Dr. Prusmack concluded that Claimant suffered from adjacent segment disease that was caused by his prior fusion. The process occurred over a period of time because Claimant's previous fusion transferred an excess load to the L4-L5 level. The objective medical records thus reflect that Claimant's December 14, 2017 lumbar spine fusion surgery was reasonable, necessary and causally related to his December 11, 2007 industrial injury. Respondents are therefore financially responsible for the procedure.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has established by a preponderance of the evidence that the lumbar fusion surgery requested by Dr. Prusmack and performed on December 14, 2017 was reasonable, necessary and causally related to his December 11, 2007 industrial injury. Initially, on December 11, 2007 Claimant suffered an admitted lower back injury. After receiving conservative treatment Claimant underwent multiple surgeries including an L5-S1 fusion. Claimant subsequently began to experience progressively worsening lower back pain. The persuasive medical records reflect that Claimant's need for the December 14, 2017 fusion surgery was caused by the progressive worsening of his condition as a result of his L5-S1 fusion surgery. Dr. Zinis determined that Claimant's lower back symptoms were related to a chronic condition that began on December 11, 2007. By August 16, 2017 a discogram revealed a pain response of the L4-L5 disc with a grade three annular tear. Based on Claimant's disc herniation and stenosis on the left side at L4-5, Dr. Prusmack recommended a full facetectomy with removal of the torn disk at the L4-5 level with an interbody fusion and posterior instrumentation from L4-S1. Dr. Zinis attributed Claimant's lower back symptoms to a progression of instability and degenerative changes that were proximal to his previous fusion procedure. He summarized that Claimant's disc herniation, progressive instability and degenerative changes were more likely than not a direct result of his "initial surgeries and fusion just proximally at L2-3 and L3-4."

6. As found, in contrast, Dr. Raschbacher explained that the December 14, 2017 surgery was based on Claimant's subjective complaints. He remarked that the surgery was not related to Claimant's December 11, 2007 industrial injury at L5-S1 because it involved higher levels and structures in Claimant's back. Dr. Raschbacher summarized that there was no medical necessity for the surgery. However, Dr. Prusmack persuasively determined that Claimant required the surgery because he suffered worsening instability and dysfunction. He noted that Claimant's condition had changed significantly since 2016 and sympotms including pain, weakness and the development of foot drop justified surgical intervention. Dr. Prusmack concluded that Claimant suffered from adjacent segment disease that was caused by his prior fusion. The process occurred over a period of time because Claimant's previous fusion transferred an excess load to the L4-L5 level. The objective medical records thus reflect that Claimant's December 14, 2017 lumbar spine fusion surgery was reasonable, necessary and causally related to his December 11, 2007 industrial injury. Respondents are therefore financially responsible for the procedure.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's lumbar spine fusion surgery on December 14, 2017 was reasonable, necessary and causally related to his December 11, 2007 industrial injury. Respondents are therefore financially responsible for the procedure.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Has Claimant shown, by a preponderance of the evidence, that the metacarpophalangeal ("MP") surgery as proposed by Dr. Idler is reasonable, necessary, and related to her work injury which occurred on July 19, 2015?

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. This is an admitted injury. Claimant began employment for Employer as a stockbroker in June of 2012. On Sunday, July 19, 2015, she was playing second base at a company softball game sponsored by Employer. Claimant was playing second base, when a baserunner ran at high speed into her right hand and thumb. Claimant described him as a large man. After the impact, she felt immediate sharp pain in her thumb. She returned home and iced the thumb. Claimant had also injured her ankle on a separate play in the same game.

2. The next day, she made an appointment with Dr. Brad Dresher at Colorado Springs Orthopedic Group (which became Claimant's ATP) for Tuesday, July 21, 2015. She notified her employer that she would be missing a meeting on Tuesday, at which time she was advised that the injury would be covered under the employer's Worker's Compensation policy. At her visit to Dr. Dresher on July 21, 2015, Claimant was diagnosed with right ankle and right thumb sprains. He ordered X-rays, a cast boot for the ankle, a splint for the thumb, and occupational therapy. (Ex. 3).

3. The occupational therapy patient questionnaire for the initial visit indicated that Claimant complained of pain with gripping, trouble opening jars, doing heavy household chores, carrying a shopping bag, washing her back, using a knife, and engaging in recreational activities. The pain diagram of the same date shows that the entire right thumb was circled as the location of her discomfort. *Id.*

4. On August 19, 2015, Claimant came under the care of Dr. Richard Idler at the same orthopedic group. He ordered an MRI of the thumb, which showed a sprain of the right first carpometacarpal (CMC) joint. Dr. Idler also noted that the X-rays showed evidence of a "proximal metaphyseal fracture which is healed with an angular alignment apex dorsal." (Ex. 3).

5. At Claimant's visit with Dr. Idler, on November 5, 2015, Dr. Idler noted, "[o]verall the patient is improved." Claimant reported "improvement in her discomfort. Dr. Idler noted Claimant's right thumb CMC grind test produced no discomfort nor crepitance. Dr. Idler noted that Claimant had no pain on an MP shear maneuver. Dr.

Idler did not schedule a follow-up visit and noted Claimant may return on an as needed basis. (Ex. C, p. 18)

6. Dr. Idler's notes from February 15, 2016 state that she had a new onset of pain involving the MP joint, noting that her symptoms began “a few weeks ago”, and recommended consideration of an intraarticular steroid injection. (Ex. C, p.22). Claimant, however, testified at hearing that her thumb has always hurt since the softball injury, and that she was not asked specifically about one joint versus another.

7. Over the next eight months, Claimant continued in occupational therapy. She also tried splinting, and had numerous injections in her CMC and MP joints, although she noted an increase in pain following the MP injection on March 9, 2016. By April of 2016, Dr. Idler recommended surgery of tendon stabilization of the CMC joint and an MP joint capsulodesis. (Ex. 3) As a follow up to the MP joint complaints noted in February of 2016, Dr. Idler's office notes of October 13, 2016 state, "In association with her pain and instability of the right first CMC joint, the patient has developed a progressive hyperextension deformity of the MP joint." *Id.*

8. On 3/19/2018, Dr. Idler opined that he was not able to attribute Claimant’s right thumb MP joint issues to the July 19, 2015 injury:

> Based on the above I am not able with any degree of medical certainty to attribute Ms. Hartt’s present issues with the MP joint of her right thumb to her injury of 7/19/2015. I also believe that any expert witness reviewing this case would likely attribute her progressive MP joint hyperextension and pain to the angular deformity of the thumb metacarpal which predate her injury of 7/19/2015 (Ex. C, p. 30).

9. In May of 2017, Dr. Idler had requested another bone scan, which was denied by the Respondent/Insurer. Claimant obtained a second opinion with Dr. Clinkscales outside of the Worker's Compensation system on July 18, 2017. Dr. Clinkscales noted her history of the softball injury from 2015 with two prior thumb injuries as a child, and no subsequent intervening injuries. He diagnosed chronic symptomatic right thumb volar plate instability with associated MP joint laxity. Dr. Clinkscales never opined on the issue of relatedness of her condition to the work injury. Dr. Clinkscales concluded that the proposed fusion would have a more ‘predictable’ outcome for Claimant, and recommended it. (Ex. 6). On 8/10/2017, Dr. Idler then concluded that the MP fusion was more predictable than the capsulodesis, and more appropriate in case this joint had degenerative changes, as the bone scan subsequently revealed. (Ex. 3).

10. After the denial, Claimant pursued the bone scan through her health insurance, and it was completed on July 31, 2017. The scan revealed arthritis of the MP joint, making joint fusion the more viable surgical option, a conclusion with which Dr. Idler, Dr. Karl Larsen, and Dr. Clinkscales, now concur.

11. On May 31, 2017, Wallace K. Larson, M.D. issued another IME for Respondents. Initially, he had opined that the proposed fusion was not reasonable, necessary, or related to this claim. He placed her at MMI on 4/16/2106. (Ex. F, pp. 46-47) He then opined on August 23, 2017, after further record review, that within a reasonable degree of medical probability, the right thumb MP joint fusion is still not related to Claimant's work injury. Dr. Larson did, however, opine that the surgery was *now medically indicated,* but still not related to this claim. (Ex. F, pp. 48-49).

12. Claimant underwent a second independent medical examination at Respondents' request, with Dr. Karl Larsen on March 9, 2018 (Ex. 7). In his eight-page report, Dr. Larsen writes a detailed analysis of the issue of the relationship between the original CMC sprain and the present MP joint instability. Under Impression, he states, "Ms. Hartt has progressive symptoms of metacarpophalangeal joint pain and instability that *started* following an injury to her right thumb," referring to the 2015 softball injury (Ex. 7 at p. 5)(emphasis added). He now recommends the arthrodesis (fusion) as recommended by Dr. Clinkscales. Further on the issue of relatedness, he writes:

> I think the question here is about the proximate cause of her condition. She very clearly had a well-described injury on July 19, 2015. She had MRI evidence that clearly demonstrated an injury to the thumb CMC joint, so I think the fact that she sustained a CMC joint injury is *clearly related to her work activity.* While that thumb CMC joint injury seems to be resolved in terms of painful symptoms, she had developed enough increased instability to the thumb CMC joint to accentuate MP joint instability and *bring about the need for treatment* that she has now. It should be noted that this is a *very, very unusual* case…..
>
> Because Ms. Hartt was *not symptomatic* prior to her traumatic event of July 19, 2015, I think the *only* conclusion I can draw is that it is likely that *her injury of July 19, 2015* has led her through a series of mechanical changes in her thumb that *has now produced the need for treatment* of her thumb metacarpophalangeal joint. (Ex. 6, p. 6)(emphasis added).

13. Claimant testified that she had sustained two prior injuries to the right thumb, in 2001 and 2003. She fractured the first metacarpal of the thumb in 2003. That bone showed irregular healing even in 2003, i.e., "X-ray noteworthy for nondisplaced mildly angulated fracture at the base of the first metacarpal," according to her then-treating physician, Dr. Whiteside. (Ex. H, p. 59)

14. Claimant had been released to full activities in October of 2003. She testified that she experienced no difficulties whatsoever with her right thumb, no medical treatment, no limitations in her life, until the softball injury twelve years later.

15. She also testified that she sustained no thumb injuries subsequent to the softball injury in July of 2015. She testified that her thumb has never been pain-free, other than a brief few days following an injection, since the injury on July 19, 2015. She

testified that she is ready to proceed with the MP fusion at this time, after near three years of conservative treatment and a substantial negative impact on her life.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Credibility

D. The ALJ finds that each of the medical experts who provided medical opinions along the way-sometimes changing their opinions in the face of new evidence-have done so with the highest professionalism. Each are eminently qualified, and the

ALJ will analyze their conclusions more on the basis of persuasiveness, than credibility per se. The ALJ further finds that Claimant presents as credible, not only in her courtroom testimony, but also in giving the best possible medical history too all professional providers since the date of her injury. Claimant's sincere motivation is to get better and resume an active lifestyle.

Medical Benefits, Generally

E. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

Reasonable and Necessary

F. Respondents essentially concede this issue. Drs. Idler, Clinkscales, and Karl Larsen all concur, after considerable testing and record review, that this fusion surgery is reasonable and necessary-or at least the best alternative currently available. Claimant herself was sincerely hoping to avoid this if possible, but still has pain, mobility issues and lack of grip strength. It has affected her ability to lead an otherwise active lifestyle, despite an ability to snowboard without incident. The ALJ finds that this surgery, as proposed, is reasonable and necessary to cure Claimant's condition.

Related to Work Injury

G. To quote Dr. Karl Larsen: "It should be noted that this is a *very, very unusual case".* It is an unusual case indeed where the Respondent's IME physician ultimately determines causation/relatedness in Claimant's favor, but that's what happened here. The opinions of each of the providers have evolved with the passage of time, as more information has become available. This is a credit to all involved in her care and diagnosis; 'Sticking to one's guns' in the face of mounting evidence does little to enhance one's persuasiveness. For that reason, the ALJ gives far greater weight to the *most recent* opinions of the providers, to those with the greatest access to information, and to those with the least potential for bias. Respondents essentially take the position that Dr. Larsen has not made his case (in the form of his most recent

opinion) for relatedness with great medical precision and certainty. What he has done, by a preponderance of the evidence, is to persuade the ALJ-along with Claimant's credible, consistent, and straightforward testimony and medical evidence that her thumb has never been the same since her work accident. What occurred herein is an aggravation of a preexisting condition, which does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting disease or infirmity to produce the need for medical treatment. The ALJ so finds.

ORDER

It is therefore ordered that:

1. The MP fusion surgery as proposed by Dr. Idler is reasonable, necessary, and related to Claimant's work injury. Respondents will pay for this procedure, and all costs associated with it.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 24, 2018

Colorado Springs, Colorado 80906

ISSUE

The issue set for hearing is whether Claimant established by a preponderance of the evidence that he injured his right shoulder and neck in the work related accident of December 18, 2015.

FINDINGS OF FACT

1. On December 18, 2015, Claimant had worked for Employer for approximately five years. His job involved lifting over 70 pounds. He worked 12 hours per day sandblasting pipe, coating pipe at welds, lifting and placing wood skids and sand bags around the pipes. The job was extremely physical. Claimant had worked his entire work career at very physically demanding jobs.

2. Claimant was injured on December 18, 2015, when he was working down in a ten foot ditch. He was facing the truck hoe outside of the ditch that was lifting another 30-36 inch pipe into the ditch. The operator of the truck hoe got out of his vehicle without shutting the mechanism down. The pipe came at Claimant in a swooping motion, hitting him in the lower extremity. Claimant tried to grab the pipe with both arms, leaning forward. The truck hoe pushed him against the pipe behind him and then further pushed him another eight to ten feet into other pipes that had been lined up.

3. Claimant was crushed between the two pipes for approximately five minutes before he was removed by coworkers. He passed out for a brief period of time then he first recalled being grabbed by his shoulders and taken out of the ditch by co-workers. He was seated in a chair where he awaited the arrival of paramedics.

4. When the paramedics arrived, they indicated that Claimant was complaining of pelvic pain and bilateral leg pain. These body parts had been crushed between the two large steel pipes. The paramedics determined that due to his slow respirations Claimant should be classified as code red. Claimant was placed on an IV and on c-spine precautions. He was then transported to the hospital by helicopter.

5. Claimant was a patient at North Colorado Medical Center in Greeley, CO, for two and a half days during which time he was heavily medicated. He was treated for low back, right knee, pelvis and hip injuries. Upon his release from the hospital, he was sent to Workwell.

6. Claimant testified that, at Workwell, he felt that only his right knee was being treated. The treatment notes from December 22, 2015, indicate that Claimant suffered from body pain. His major complaints were back pain, legs and a fracture in the pelvis that would heal itself. Throughout his visits with Workwell, it was noted that Claimant's chief complaint was body pain.

7. Feeling that his injuries were not being appropriately addressed, Claimant was able to change his medical care from Workwell to Concentra. Claimant first went to Concentra on February 3, 2016. It was noted that he had right arm numbness at that time.

8. Dr. Robert Nystrom first saw Claimant on March 8, 2016. He noted that Claimant presents today for a recheck of his neck, back, hips and knees. He also noted in his report a diagnosis of right shoulder strain.

9. In his testimony, Dr. Nystrom stated that the mechanics of the injury are consistent with an injury to Claimant's right shoulder and neck. He recited the fact that Claimant put his arms in front of him in an effort to push the pipe back and then endured a type of whiplash injury when he was thrown backwards into the pipes.

10. Dr. Nystrom also testified that with an accident such as the one that Claimant sustained, the more severe injuries would take precedence over the less severe and would be given priority in treatment.

11. Dr. Nystrom indicated that Claimant's neck injury was probably not going to result in surgery. He stated that he would probably order physical therapy then injections, if needed, for the neck. As far as the shoulder, he would start with conservative treatment and then progress to surgery if conservative treatment did not alleviate the symptoms.

12. Dr. Carlos Cebrian performed a record review of Claimant's medical records from this accident on March 24, 2017. The doctor prepared a Supplemental report on April 14, 2017, and prepared an independent medical examination report at the request of the Respondents on June 14, 2017. In the March 24, 2017, report, Dr. Cebrian references the report from the Transport North Colorado Med Evac in describing the accident. The accident was described as, "[the Claimant] was in a ditch laying pipe when the pipe dislodged and rolled over three workers. He was pinned for less than one minute. The pipe was a 2-3 feet diameter steel pipe."

13. The paramedic from the Southeast Weld Fire Department described the accident as Claimant being crushed between two pipes for approximately five minutes and Claimant had a loss of consciousness for about thirty seconds.

14. When Dr. Cebrian saw Claimant on June 14, 2017, Dr. Cebrian took a brief history of the accident. "[Claimant] was injured on 12/18/15 while he was working on a pipeline and states that one large pipe swung towards him. He states this was steel and it was approximately 100 feet long. This pushed him 8 feet back and dragged him into a second pipe. He stated the pipe was approximately two and a half to three feet wide. He was pinned between the pipes."

15. Dr. Cebrian's opinion was that Claimant had "an expansion" of complaints and that it is only the right knee, pelvis, hip and low back that were injured in the accident. Dr. Cebrian attributes his opinion regarding the relatedness of the neck and right

shoulder condition because of the lateness of reporting injuries to the various body parts. He also states that the expansion of complaints are non-organic in nature. In his deposition, he indicates additionally that he believes that the mechanism of injury is such that the upper part of Claimant's body could not have been injured and that there are psychological evaluations in which Claimant he is complaining of whole body pain which does not fit with an acute injury.

16. Aside from Dr. Cebrian, none of Claimant's treating physicians have voiced an opinion that Claimant's physical complaints are non-organic in nature. There are findings on the right shoulder MRI that there is severe infraspinatus tendinosis and interstitial tear that would support Claimant's complaints. (Exh.19 p. 2)

17. In an April 18, 2017, response to Respondents' attorney's letter to him dated April 17, 2017, Dr. Nystrom states his disagreement with Dr. Cebrian's opinion that there have been some symptom expansion. He goes on to indicate his opinion that "Claimant suffered a serious (potentially life ending) injury that could certainly result in the current constellation of symptoms currently being treated."

18. Claimant credibly testified that he is in need of medical treatment for his right shoulder and neck so that he can continue to get better and return to work.

19. Currently, Claimant is unable to work due to his conditions caused by the accident of December 18, 2015, which include the neck and right shoulder.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is evidence that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the

reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability of the right shoulder and neck

4. Dr. Cebrian's reports focus on what he calls Claimant's "expansion of symptoms." He states that Claimant continuously reported injuries to new body parts other than the right knee, hip, pelvis and low back, throughout his treatment. Dr. Nystrom explains that Claimant had an extremely serious accident. While Claimant sustained a crush injury to the lower portion of his body, the crush was not static. The accident involved Claimant being hit by a moving pipe that was 30 to 36 inches in diameter. The pipe drove him into another pipe that was two feet behind him then continued pushing him another eight to ten feet into the other pipes on the ground. Dr. Nystrom testified that when Claimant attempted to push at the incoming pipe with both of his arms, the right shoulder would have been injured. When the pipe pushed Claimant back, Claimant would have sustained a whiplash type injury to his neck. Dr. Cebrian did not go into an in depth analysis of the mechanics of the injury but rather dismissed the results of the accident as a "crush" injury.

5. Claimant credibly testified that he told doctors about his injured neck and right shoulder shortly after the accident. Workwell physicians, who saw him within four days of the accident, noted that Claimant had whole body pain. Claimant was probably hurting all over his body at that time due to the serious nature of the accident. Most probably, it took time for various parts of his body to calm down before it became apparent what parts of his body required medical treatment. Dr. Nystrom's testimony is consistent when he indicated that the most serious injuries are most probably treated first.

6. Dr. Cebrian does not address the fact that Claimant had a very heavy job. Claimant was able to perform that job for five years prior to the accident with Employer. If Claimant had had neck and shoulder problems, he would not have been able to perform the work that he was doing prior to the accident. The medical record shows Claimant has tenderness in the neck, trapezius area and pain in his right shoulder. Claimant testified that he never had injuries to his right shoulder and neck before the accident. There is no evidence of new injuries or accidents since the December 18, 2015, accident. It is therefore most probable that Claimant injured his neck and right shoulder as a result of the December 18, 2015, accident.

7. Dr. Cebrian briefly mentions that many of Claimant's injuries are somatic. There is no indication from any of Claimant's treating physicians that Claimant's physical complaints are somatic.

8. For reasons stated above, it is found that Claimant has proven by a preponderance of the evidence that he sustained injuries to his right shoulder and his neck as a result of the industrial accident of December 18, 2015.

Medical Benefits

9. Claimant bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Once a Claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and the respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. In*dustrial Commission, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, *supra*
.

10. In this matter, Dr. Nystrom credibly testified that there is medical treatment for his right shoulder and neck that Claimant needs to cure and relieve the symptoms of his industrial accident. Claimant is awarded reasonable and necessary medical treatment for his neck and shoulder.

ORDER

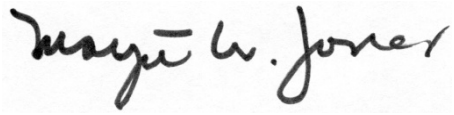
It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he suffered additional injuries to his neck and right shoulder as a result of the December 18, 2015 industrial accident.

2. Respondents are responsible for reasonable and necessary medical treatment for claimant's neck and right shoulder injuries.

3. All further issues not determined by this Order are reserved for that time when they become ripe.

DATED: May 23, 2018



MARGOT W. JONES,
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant proved by a preponderance of the evidence that he is entitled to temporary total disability benefits.

- Whether Respondents proved by a preponderance of the evidence that Claimant is responsible for the termination of his employment.

STIPULATIONS

The parties stipulated to the compensability of the claim, an average weekly wage of $606.00, and, if TTD is awarded, a closed period of TTD from June 13, 2017 to February 5, 2018.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. On March 22, 2017, Claimant began working for Employer as a short-rib boner. A short rib boner is part of a production line who manipulates meat on the table and cuts it.

2. Claimant testified he told his supervisor, Carlos Camacho, in mid-April 2017, that he was experiencing pain in his hands. Mr. Camacho sent Claimant to a "trainer" who escorted Claimant to the nurse at Employer's in-house clinic.

3. The nurse did not physically examine Claimant. Rather, she gave him two pain pills and told him he would get better with time. The nurse did not provide Claimant with work restrictions, so he continued to perform his job.

4. Claimant's pain worsened over the next week. Claimant told Mr. Camacho that his pain was worse and that he needed to see a doctor. Mr. Camacho did not respond verbally, but appeared angry and gestured with his hand that Claimant should go to the nurse. Again, the nurse did not examine Claimant. She gave Claimant a glove to support his right wrist and sent him back to the production line.

5. Claimant's pain continued to increase and he reported to Mr. Camacho a third time. He stated that he had already seen the nurse two times and that he needed to see a doctor. Claimant also told Mr. Camacho that his hands hurt so badly that he could not work. Mr. Camacho replied, "You f---ing Puerto Ricans! All you do is live off

the system." Rather than send Claimant for medical treatment, Mr. Camacho told Claimant to "take it like a man."

6. Claimant consistently testified that he reported his pain and asked for medical attention at least ten times. Mr. Camacho did not send Claimant for medical attention and still did not file a report of injury. Rather, Mr. Camacho would respond by making comments such as, "The Puerto Rican girl is crying again."

7. Claimant twice reported to Billy Martinez, Employer's recruiter, that Mr. Camacho was not letting him seek appropriate medical care and was making racial slurs. Mr. Martinez assured Claimant that he would go to the production line, but Claimant never observed Mr. Martinez at the line. The second time Claimant reported his hand pain and Mr. Camacho's conduct; Mr. Martinez told Claimant that he needed to understand that Mr. Camacho was under a lot of pressure and that Claimant just had to deal with it. Mr. Martinez did not address Claimant's pain complaints or provide him with a list of medical providers on either occasion.

8. Claimant also complained to Mr. Brandon in Employer's human resource department. Mr. Brandon does not speak Spanish and Claimant credibly testified that he did not understand what Mr. Brandon said to him.

9. Claimant continued to work. His increasingly unbearable pain prevented Claimant from maintaining the speed required of his position on the production line. When he would fall behind, Mr. Camacho would take Claimant's knives and his place on the line. Mr. Camacho would say that he "was a real man," and that "Puerto Ricans are crybabies with no balls."

10. Respondents emphasize that Claimant sought outside medical care on two occasions without mentioning his hand pain. On April 17, 2017, Claimant went to Colorado Plains Express Care (CPEC) where a nurse practitioner diagnosed him with influenza A and started on Tamiflu and a nebulizer. On June 7, 2017, Claimant returned to CPEC where Dr. Tawana Nix diagnosed him with acute streptococcal pharyngitis. Clamant credibly testified that he did not seek medical attention for his hand pain at those times because he was there for other reasons, and that he did not independently seek medical care for his hand pain in the United States because he did not have insurance and knew treatment would be expensive. Claimant sought independent medical care in Puerto Rico.

11. Respondents also emphasize that Claimant did not seek help through his union representative. The ALJ credits Claimant's testimony that he did not know that he could do so and did not know how a union worked.

12. Claimant worked through June 12, 2017. At that time his pain was so severe he feared the damage to his hands could be permanent. He called into work the next several days and reached a recorded message that gave him the option of pushing

one number for "sick," and a different number for "personal." There was no option to leave a message.

13. Claimant filed his worker's claim for compensation on July 14, 2017.

14. At some point later, Claimant received a phone call from a representative of Insurer. He provided the information the representative requested. Insurer did not tell Claimant to go to a doctor. At that point, Claimant decided to return to Puerto Rico to seek medical attention. When Claimant left Employer on June 12, 2017, he intended to return when his condition improved.

15. Claimant received reasonable and necessary treatment in Puerto Rico for his work injury.

16. On February 5, 2018, Claimant began working for a new employer in Atlanta, Georgia.

17. The ALJ credits Claimant's testimony and finds it credible and persuasive. Claimant's testimony was consistent and reasonable. Further, his pain complaints are consistent with his difficulty meeting Employer's speed requirements. And, although Claimant appeared by phone, his speech was in a comfortable cadence and he did not hesitate when answering questions.

18. Billy Martinez has worked for Employer for twenty-five years and recruited Claimant in Puerto Rico. Mr. Martinez testified that Employer puts all new employees on a forty-five day probationary period for them to get up to speed on their job, and that Claimant had not qualified during that period. When asked if Claimant ever qualified for his position, Mr. Martinez responded, "I don't remember. I can't remember that far back."

19. Mr. Martinez acknowledged that Claimant had reported to him that Claimant's hands were sore. "He – well, a couple of times, he – like I said, he's seen me in the cafeteria quite a bit, and he would tell me his hands were sore." Mr. Martinez advised Claimant to do exercises and to ice his hands at home. Mr. Martinez later changed his answer and testified that Claimant had only come to him one time with complaints of hand soreness. Mr. Martinez initially denied that Claimant asked him if he could go to health services, but later testified that he told Claimant to go to his supervisor, Mr. Camacho. He also denied that Claimant ever told him that Mr. Camacho would not let him go to health services.

20. Mr. Martinez also denied that Claimant reported Mr. Camacho's derogatory comments about Puerto Ricans to him. However, he testified that Claimant did tell him once that Mr. Camacho was "a little loud." He responded that he would "tell Camacho to lower his voice when he's talking out in the – you know, in the – you know, just try to be a little more *calm* with his voice when he's trying to talk to employees." Later, Mr. Martinez testified that he told Claimant he "would get with Mr. Camacho and

calm him down a little bit when he's talking to his employees." The ALJ notes that "calm" is a word used to denote not volume, but affect or demeanor.

21. Mr. Martinez further denied that he had ever witnessed Mr. Camacho exhibit discriminating or harassing behavior. He also testified that no one had ever made a complaint of Mr. Camacho acting in that way.

22. Mr. Martinez testified that the only discrimination complaints he was aware of at Employer were "possibly – probably about two" complaints between co-workers. He later testified that there was only one incident. He described two employees getting into a fight and one calling the other "you know, names or what, -- you know, discriminatory – like either you're – you're – you're black or – or you – you're Mexican. You know something sort of like that nature."

23. Mr. Martinez testified that he and Mr. Camacho were friends and "co-partners." Later he testified, "I wouldn't say friends 'cause we don't really associate after work."

24. The ALJ does not find Mr. Martinez' testimony to be credible or persuasive for the following reasons:

- He acknowledged problems with his memory;
- His answers were often inconsistent with each other;
- His testimony about Mr. Camacho speaking loudly, and trying to calm him down was not forthcoming or credible;
- His testimony that on only once two employees discriminated against each other by one saying, "You're black," and the other responding, "You're Mexican," was disingenuous at best.
- Mr. Martinez stammered when answering questions, and was not spontaneous in answering questions.
- Mr. Martinez is a current employee who has twenty-five years with Employer. It is unlikely he would testify against Employer.

25. Mr. Camacho was present in the courtroom for Claimant's and Mr. Martinez' testimony. He has worked for Employer for more than six years as a production supervisor. After the incidents involving this claim, Employer promoted him to a different position. As a production supervisor, Mr. Camacho saw Claimant every day that Claimant worked for Claimant's entire shift. Mr. Camacho acknowledged that Claimant complained of hand soreness and he had a trainer take Claimant to see the nurse. When asked if it happened more than once, he answered, "Maybe twice? I – I recall, specifically, the first time. It – he might have gone to the nurse – I think he did go two times to the nurse." He further testified that "any employee . . . at any time, can go

up there and not have any kind of repercussion or disciplinary action if – if – if we wanted to."

26. Mr. Camacho acknowledged that he had a loud voice and that Mr. Martinez had brought that to his attention. He went on: "I'd like you to try to imagine, when – when you're on the production floor, we have moving belts and saws and 500 people down there, you know? Everybody's wearing ear protection . . . So for me to, kind of, get my – my verbiage out, sometimes I have to speak a little louder, right?" Mr. Camacho's testimony supports a finding that the problem was not the volume of his voice, given the context of a very loud environment where employees were using ear protection. Without any question pending, Mr. Camacho volunteered all of the strategies he uses to be a friendly communicator and creates an atmosphere where he and a worker can understand each other. The ALJ found this testimony to be disingenuous.

27. Mr. Camacho testified that he "absolutely" never prevented Claimant from going to health services. He testified that it was "absolutely false" that he made disparaging remarks about Puerto Ricans, and that it "hurt his feelings" for someone to question his integrity. When asked if he ever told Claimant to take it like a man, he answered, "Absolutely not." When asked if he ever said that Puerto Ricans were crybabies and need to grow balls," he answered awkwardly, "No, no that's – that – that's never been said by myself."

28. Mr. Camacho responded "absolutely not," when asked if he ever discrimated against Claimant based on national origin. He also responded "absolutely not," when asked if he discriminated against Claimant based on ethnicity.

29. Mr. Camacho signed Claimant's termination letter dated June 19, 2017, explaining that Employer terminated Claimant "for – for – for absenteeism."

30. Mr. Camacho denied that he was under "pressure," but acknowledged, "We have goals, and we have – we have efficiencies that – that – that need to be met." When asked if having an underperforming employee put additional stress on him as a supervisor, he responded, "Absolutely not." Mr. Camacho denied ever stepping into Claimant's place on the line when meat started backing up. Mr. Camacho denied ever using foul language.

31. The ALJ does not find Mr. Camacho's testimony to be credible or persuasive for the following reasons:

- His answers were often inconsistent with each other;
- His testimony about the problem being the volume of his voice rather than his manner was unreasonable given the context of the work environment;
- His testimony was consistently and unnecessarily phrased in terms of absolutes;

- Mr. Camacho stammered when answering questions, and was not spontaneous in his speech;

- Mr. Camacho used awkward language in answering questions. For example, “that’s never been said by myself,” and “to get my – my verbiage out.”

- Mr. Camacho is a current employee who Employer promoted after the incidents of this case. It is unlikely he would testify against Employer.

32. Given the totality of the evidence, the ALJ finds Claimant proved by a preponderance of the evidence that he is entitled to temporary total disability benefits.

33. Given the totality of the evidence, the ALJ finds Respondents have not proven by a preponderance of the evidence that Claimant is responsible for the termination of his employment.

CONCLUSIONS OF LAW

The purpose of the “Workers’ Compensation Act of Colorado” is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers’ Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers’ Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers’ Compensation case is decided on its merits. Section 8-43-201, *supra*.

The ALJ’s factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness’s testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

This is an admitted claim as the Respondents stipulated at hearing that the injury is compensable. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work-related injury.

Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Pursuant to section 8-43-404(5), C.R.S., Respondents are afforded the right, in the first instance, to select a physician to treat the industrial injury. Once respondents have exercised their right to select the treating physician, claimant may not change physicians without first obtaining permission from the insurer or an ALJ. *See Gianetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). In this circumstance, Claimant requested to see a physician numerous times and Employer did not provide medical care. As such, Respondents did not designate a treatment provider in the first instance. Section 8-43-404(5)(a) provides: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor."

As found, Claimant has demonstrated that the treatment he received from his authorized treating providers was reasonable necessary and related to his admitted industrial injury. The right of selection passed to Claimant when Employer became aware of the Claimant's injury on the numerous occasions he reported it.

Claimant calling in sick and returning to Puerto Rico for treatment, under the circumstances, was reasonable and necessary.

Claimant is not responsible for his termination or wage loss.

ORDER

The ALJ therefore orders that:

1. Claimant has proven by a preponderance of the evidence that he is entitled to TTD from June 13, 2017 until February 5, 2018, at the stipulated average weekly wage of $606.00.

2. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

3. Respondents have not proven that Claimant was responsible for his termination.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 25, 2018

/s/ Kimberly Turnbow

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, Suite 400
Denver, CO 80203

ISSUES

I. Whether Claimant produced clear and convincing evidence to overcome the DIME opinion on maximum medical improvement ("MMI") and permanent impairment.

II. Whether Respondent overcame the DIME's opinions regarding scheduled permanent impairment, and if so, whether Respondent is entitled to an overpayment for permanent partial disability ("PPD") benefits previously paid;

III. Whether Claimant has proven by a preponderance of the evidence that she is entitled to conversion of a scheduled impairment to a whole person impairment.

IV. Whether Claimant is entitled to temporary disability benefits;

V. Whether Claimant has proven by a preponderance of the evidence that the post-MMI medical treatment recommended by Dr. Faulkner is reasonable and necessary.

VI. Whether Claimant is entitled to an award for disfigurement pursuant to C.R.S. §8-42-108.

VII. Average weekly wage ("AWW").

STIPULATIONS

In exchange for a lump sum payment of $1,000.00, Claimant waives the right to any and all mileage reimbursement benefits to which she might be entitled for mileage incurred from the date of injury through July 5, 2017.

FINDINGS OF FACT

Prior History

1. Claimant has a pre-existing history of Systemic Lupus Erythematous. On June 1, 2006, Floyd Russak, M.D. authored a report in which he noted Claimant had "severe arthritis of the hip, fingers, knees and hands" due to the lupus, in addition to severely decreased circulation, which caused coldness and weakness in her hands.

2. On September 4, 2012, Claimant was involved in a rear-end motor vehicle accident ("MVA"). Claimant presented to the emergency department complaining of headache and diffuse spine pain from her neck to lower back.

3. Claimant continued to experience lower back pain. On October 10, 2012, she completed pain diagrams indicating pain in her back and buttocks, and reported having

severe back pain the previous evening. On January 3, 2013, she described "persisting right lower back pain." On February 6, 2013, she reported ongoing back pain. On March 23, 2014, she again sought treatment for low back pain, which she reported had been present for a month. On April 17, 2014, she sought care for right-sided low back pain which she reported had been present since late January 2014.

August 13, 2014 Industrial Injury

4. On August 13, 2014, Claimant suffered an admitted industrial injury when the heel of her left shoe became caught in a sidewalk.

5. Claimant presented to authorized treating physician ("ATP") Annu Ramaswamy, M.D. on August 13, 2014, reporting that she twisted her left ankle and left knee. Claimant reported falling forward on outstretched wrists/hands and landing on her computer bag. She denied striking her knee or ankle on the ground. Claimant reported pain in the left ankle, knee and leg in general, and pain in the left lower back SI joint. Examination of the lumbar spine revealed some tenderness in the left SI joint extending to the greater trochanter region, tenderness in the left knee and ankle, and some swelling in the left ankle. Dr. Ramaswamy diagnosed Claimant with a left ankle sprain, left knee sprain, and left hip/sacroiliac joint strain. He recommended Claimant ice the areas, exercise, and wear an ankle brace. He prescribed Claimant Tradmadol and suggested the use of over the counter ibuprofen. Claimant was released to modified duty.

6. Dr. Ramaswamy reexamined Claimant on August 15, 2014. Claimant reported left knee pain, along with swelling and coldness in her left ankle. Dr. Ramaswamy noted x-rays taken on August 13, 2014 revealed "a questionable nondisplaced pathologic fracture through the proximal tibia." X-rays of the left ankle were negative for fracture.

7. Claimant also underwent a left knee CT scan on August 15, 2014 that was negative for any abnormalities. A venous duplex study was performed the same day because Claimant reported having a history of blood clots. The study was negative for deep venous thrombosis.

8. On August 26, 2014, Claimant underwent a left ankle MRI that revealed a mild high ankle sprain, a mild deltoid sprain, and mild acute sprains of the collateral ligaments, with no ruptured ligaments or fractures. A left foot MRI performed the same day revealed medial haliux sesamoiditis with suspected stress fracture and reactive MTP joint effusion. Claimant also underwent a left knee MRI that was negative.

9. On September 2, 2014, Dr. Ramaswamy opined Claimant's secondary left hip and SI joint dysfunction was likely due to her altered gait. He referred Claimant for physical therapy and an orthopedic consultation with Stuart H. Myers, M.D.

10. Claimant saw Dr. Myers on September 2, 2014. On examination, Dr. Myers noted multiple points of tenderness in the left lower extremity with guarding behavior. Regarding the left knee, he noted there was no meniscal, ligamentous, or tenderness pathology, and no fracture. He noted that the left foot MRI revealed inflammation and

the left ankle MRI revealed fluid around multiple ligaments. Dr. Myer diagnosed Claimant with a high ankle sprain and recommended Claimant wear a brace and participate in physical therapy.

11. On September 18, 2014, Dr. Ramaswamy noted swelling, coolness, discoloration, and tenderness on physical examination. He recommended Claimant undergo a vascular ultrasound.

12. Claimant later sought treatment at the Castle Rock Adventist emergency department on September 18, 2014 with complaints of swelling, discoloration and coolness in her left leg, along with "shock waves" up the leg. No duskiness or discoloration was observed on physical examination. Claimant was diagnosed with leg pain.

13. Dr. Myers reevaluated Claimant on September 19, 2014. He gave the following impression: diffuse tenderness and hypersensitivity, and subjective autonomic complaints including coldness.

14. On October 2, 2014, Dr. Ramaswamy noted there were some elements of complex regional pain syndrome ("CRPS") present during physical examination. He recommended Claimant undergo CRPS testing and wear a smaller walking boot.

15. Claimant presented to George Schakaraschwili, M.D. on October 13, 2014. Dr. Schakaraschwili noted the following on physical examination: no swelling or discoloration, no skin, hair or nail changes, no hyperhidrosis, and temperatures equal to touch. Claimant reported some hyperesthesia in the foot and decreased pin sensation in the leg. Range of motion was somewhat limited at the ankle. He assessed pain and paresthesias in the left lower extremity following a sprain. He noted Claimant could have sustained injuries to the saphenous or common peroneal nerves which could be causing symptoms suggestive of CRPS. He stated, "I see few clinical signs consistent with complex regional pain syndrome and would only pursue workup for this if electrodiagnostic studies are negative." He scheduled Claimant for an EMG of the left lower extremity, which took place on October 21, 2014. The EMG was normal.

16. Dr. Schakaraschwili reexamined Claimant on October 21, 2014. Physical examination again revealed no swelling, discoloration, hyperhidrosis, or changes in skin, hair or nails. Temperature was equal to touch between the left and right feet. Dr. Schakaraschwili noted that there was no electrophysiological evidence of a peripheral nerve injury. He remarked that Claimant's description of pain was consistent with CRPS, but his physical examinations did not reveal strong clinical signs of CRPS. He recommended Claimant undergo an infrared thermogram test and QSART test.

17. Claimant underwent a CT scan of the left lower extremity on November 10, 2014, which was normal.

18. On December 2, 2014, Claimant presented to podiatrist Robert Anderson, D.P.M. Claimant reported that she was scheduled to have testing for CRPS. He noted no skin discoloration or significant trophic changes on the leg. He concluded that

Claimant was not suffering from a podiatry or orthopedic issue, and remarked he could not account for the burning discomfort and global nature of the discomfort from the injury and/or this stress fracture. He diagnosed Claimant with possible CRPS and recommended Claimant set up a consultation with a CRPS specialist.

19. Claimant returned to Dr. Ramaswamy for a follow-up evaluation on December 16, 2014. Claimant continued to complain of lower extremity discomfort, edema and discoloration. She also reported bilateral hip, neck, and thoracic and lower back discomfort. Claimant informed Dr. Ramaswamy she injured her spine at the time of injury, but that the prescribed Neurontin medication "likely 'masked' her symptoms." On physical examination of the left leg, Dr. Ramaswamy noted hyperesthesias, paresthesias, slight swelling, and some discoloration. He noted the left foot was colder than previous visits. Regarding Claimant's back complaints, Dr. Ramaswamy remarked, "In regards to causality – the patient did initially fall and therefore some somatic dysfunction likely is present in the spine. The hip discomfort likely relates to a chronically altered gait." Dr. Ramaswamy noted diagnostic testing for CRPS needed to occur.

20. Claimant underwent a three-phase bone scan on December 23, 2014. Wayne Wenzel, M.D. gave the following impression: increased activity in the right ankle and in the tarsals of the right foot.

21. On January 5, 2015, Dr. Schakaraschwili reexamined Claimant and noted the following on physical examination: mild edema in the left foot, mild reddish discoloration in the lower left leg, and coolness in the left leg as compared to the right. He also conducted an infrared stress thermogram, which produced abnormal findings. Dr. Schakaraschwili noted, "There were significant areas of cooler temperatures in the left lower leg circumferentially not corresponding to any dermatomal or peripheral nerve pattern. There was a normal sympathetic response to exposure to cooler temperatures." He concluded the findings were "consistent with although not strongly diagnostic for complex regional pain syndrome." He noted he was informed the bone scan was not suggestive for CRPS. Dr. Schakaraschwili recommended Claimant undergo an autonomic testing battery, stating if the findings were abnormal, Claimant would meet the criteria for CRPS with two abnormal diagnostic tests.

22. On January 8, 2015, Dr. Ramaswamy noted Claimant refused QSART testing due to her belief that the test would aggravate her fibromyalgia/lupus. Physical examination revealed allodynia, swelling, minimal discoloration, and tenderness. Dr. Ramaswamy listed CRPS as a possible diagnosis.

23. On January 10, 2015, John Gerhold, M.D., amended the bone scan report to correctly refer to the left foot instead of the right foot, and gave the following impression: "The findings of subtle diminished blood pool activity in left foot (*sic*) and subtle diminished delayed phase bone activity in the left foot suggest the possibility of chronic CRPS (complex regional pain syndrome) in the lower left leg and foot. Clinical correlation is recommended."

24. On January 28, 2015, Dr. Ramaswamy noted the bone scan report was revised to state CRPS is suggested in the left lower extremity.

25. Claimant underwent a left knee MRI on January 28, 2015 that revealed an isolated high-grade transverse chondral fissure with no evidence of ligament or meniscal injury. Claimant also underwent x-rays of the left foot, ankle, and tibia/fibula. Kelly Lindauer, M.D. noted the x-rays "were reviewed with specific attention to the presence of any radiographic findings of complex regional pain syndrome." She concluded there were no radiographic findings to suggest CRPS, as well as no acute or chronic fractures in left foot, ankle, and tibia/fibula.

26. On February 4, 2015, Claimant was seen by Barry A. Ogin, M.D. On physical examination Dr. Ogin noted no obvious swelling, redness, atrophic or dystrophic changes, marked discomfort to superficial palpation, and full knee range of motion. Dr. Ogin remarked, "She has a paucity of objective pathology. The thermography study was somewhat positive, but this could be influenced by other factors. It is certainly possible that she may have underlying CRPS, but that her pain conditions may also be highly influenced by anger, stress, anxiety or other psychological barriers." He recommended Claimant see a pain psychologist, and noted Claimant was "surprisingly incredibly resistant" to doing so. He offered to perform a sympathetic nerve block, which Claimant declined. Dr. Ogin recommended a QSART.

27. On March 5, 2015, Dr. Ramaswamy noted, "Examination is consistent with possible CRPS based on allodynia, discoloration and temperature changes. Thermogram testing was positive and bone scan study was suggestive of CRPS. It is reasonable for the patient undergo a nerve block (sympathetic block) for diagnostic and hopefully therapeutic purposes."

28. On March 25, 2015, Claimant presented to J. Scott Bainbridge, M.D. reporting left leg pain with discoloration and bruising, foot pain and weakness, and pain in the left hip and buttock wrapping to the low back. Claimant reported noticing the pain immediately after the fall on August 13, 2014. Dr. Bainbridge noted the following "abnormal" exam findings: cold toes, hypersensitivity in the leg and foot with pinprick, pain inhibition with strength testing on the left, right low back pain with thigh thrust, left groin pain, left SI joint tender to palpation, bilateral paralumbar tender to palpation, and low back pain. Dr. Bainbridge assessed thoracic or lumbosacral neuritis or radiculitis, reflex sympathetic dystrophy of the lower limb, pain in the joint pelvic region and thigh, left knee strain with medial compartment cartilage defect, left foot injury, and CRPS. He requested a lumbar MRI, sympathetic nerve block, and pelvis x-ray.

29. Dr. Bainbridge performed a left lumbar sympathetic nerve block on April 17, 2015. Claimant reported an immediate decrease in pain from 0/10 from 6/10, and increased warmth in the lower left extremity. Dr. Bainbridge did not record Claimant's pre-operative or post-operative skin temperatures. Claimant subsequently reported experiencing increased pain at the site of injection, starting April 19, 2015. She also reported developing pain in left lumbar area with radiation to the left arm region.

30. On April 28, 2015, Floyd O. Ring Jr., M.D. performed an Independent Medical Examination ("IME"). Dr. Ring reviewed medical records dated August 15, 2014 through April 2, 2015. He did not physically examine Claimant, as Claimant cancelled the appointment alleging increased pain from a recent intervention. Dr. Ring noted there remained some question as to whether Claimant sustained a fracture, as the more recent CT scan did not reveal a fracture. Dr. Ring remarked Claimant had persistent subjective complaints with inconsistent objective clinical findings. He noted the EMG was negative for a peripheral nerve injury or other findings, and the knee MRI revealed only minor, non-surgical changes, which could be compatible with Claimant's age and body habitus. Dr. Ring opined Claimant's CRPS diagnosis was questionable, based on the thermogram results which could have been influenced by Claimant's history of deep vein thrombosis and lupus. He noted the bone scan and x-rays were non-diagnostic. Dr. Ring recommended Claimant see a pain psychologist prior to consideration of any further treatment.

31. On April 30, 2015, a lumbar spine MRI revealed mild joint arthritis and a synovial cyst at L4-5.

32. On May 1, 2015, Claimant returned to Dr. Ramaswamy reporting significant lower back pain. She reported experiencing improvement in her left leg discomfort after the sympathetic block, but continued to complain of knee pain. Dr. Ramaswamy noted the lumbar MRI revealed a synovitis cyst at L4-L5 "likely related to facet degeneration." Physical examination revealed minimal paresthesias, hyperesthesias, and discoloration, no allodynia, and increased temperature in the left leg. Claimant was tender at the lumbar injection site with some spasms. He noted Claimant had a diagnostic response to the sympathetic block. Dr. Ramaswamy opined, "Therefore, the diagnosis of CRPS appears to have been established- positive bone scan, x-rays, and thermogram- along with diagnostic block." He remarked Claimant's lower back pain was likely secondary to the nerve block and noted that the injection did not cause the cyst.

33. Claimant continued to complain of pain in the lumbar spine and left hip. On May 8, 2015, Dr. Bainbridge administered a right L4-5 facet joint block and aspirated the facet cyst.

34. On May 22, 2015, Claimant saw Dr. Ramaswamy and reported improved lower back pain but increased discomfort in her left lower extremity.

35. On June 15, 2015, Dr. Ramaswamy opined the sympathetic block helped Claimant's left lower extremity discomfort, despite noting Claimant's left leg pain continued at a 6-7/10 with paresthesias and hyperesthesias. Claimant also reported continued pain in the low back. On exam, Dr. Ramaswamy noted tenderness and trigger points in the lumbar spine, paresthesias and hyperesthesias in the left lower extremity, and swelling and allodynia in the foot and ankle. He opined Claimant's left lower extremity sympathetic discomfort was stable at the time.

36. Claimant returned to Dr. Ramaswamy for a follow-up visit on August 25, 2015 and reported experiencing progressively worsening symptoms. Dr. Ramaswamy noted

the sympathetic block helped with Claimant's symptoms for approximately for 3 ½ months. On exam, he noted tenderness in lumbar spine and allodynia, swelling, purple discoloration, and coldness in the left leg. He further noted x-rays of Claimant's foot had no evidence of a fracture. He stated he was unable to relate Claimant's cyst to the sympathetic block, and referred Claimant for another sympathetic block.

37. On September 8, 2015, Dr. Ramaswamy issued a report after reviewing Dr. Ring's April 28, 2015 medical report. Dr. Ramaswamy disagreed with Dr. Ring's opinion regarding Claimant's CRPS diagnosis, noting his understanding was that the bone scan was suggestive of CRPS, the x-rays were suggestive of CRPS, and the sympathetic block was diagnostic and therapeutic.

38. On September 12, 2015, Claimant underwent a psychiatric examination by Robert Kleinman, M.D. Dr. Kleinman commented that the results of the CRPS testing are "equivocal and appear to be inconclusive," and "[d]espite the questionable diagnosis, [Claimant] has it in her mind that she does have CRPS." Dr. Kleinman diagnosed Claimant with psychological factors affecting medical condition and adjustment disorder with anxiety. He recommended complete psychological testing in the event of a delayed recovery lasting more than another three months. Dr. Kleinman also recommended reviewing all of Claimant's medical records, past and current, to help clarify her diagnoses and how she reacts to medical illness.

39. On October 6, 2015, Claimant continued to report worsening symptoms to Dr. Ramaswamy. He noted Claimant's pain levels and objective findings for CRPS decreased significantly for three to four months after the first sympathetic block. Dr. Ramaswamy further noted he reviewed medical records regarding the history of Claimant's low back pain and was "unable to link a lower back diagnosis to this claim."

40. On October 9, 2015, Lynn Parry, M.D. performed an IME at the request of Claimant. Dr. Parry performed a medical records review and physically examined Claimant. Physical exam revealed hyperpathia and allodynia. The temperature of Claimant's feet was symmetrical. Dr. Parry opined that Claimant had CRPS, stating, "While the bone scan and thermogram are not 'textbook' positive, they are consistent with the diagnosis and meet the criteria for the workers compensation guidelines. Her response to sympathetic blockade was unequivocal with a significant positive response and prolonged duration of that response." Dr. Parry assessed a total 36% whole person impairment, consisting of 15% whole person impairment for CRPS under Table 1 of the AMA Guides, 27% lower extremity impairment (11% whole person) for knee range of motion and chondromalacia, and 15% lumbar spine impairment for range of motion and specific disorders. She opined Claimant required maintenance treatment in the form of topical medication, access to a pool and personal trainer, follow-up appointments with Dr. Ramaswamy, and orthopedic access for her knee.

41. Claimant presented to Haley Burke, M.D. on October 16, 2015 with complaints of pain in her left lower extremity and foot. On physical examination Dr. Burke noted trace pedal edema in left extremity, some degree of allodynia in the foot and left lower extremity, erythema in the left lower extremity, and "markedly" cooler skin temperature

of the left lower extremity compared to the right. She diagnosed Claimant with CRPS type 1.

42. On December 3, 2015, Claimant reported to Dr. Ramaswamy having "no sensation in her [left] leg whatsoever." Dr. Ramaswamy noted Claimant believed she needed to undergo additional blocks and then gym/therapy for three to four months before being placed at MMI.

43. On January 28, 2016, Dr. Burke performed a left-sided popliteal nerve block, saphenous nerve block, posterior tibial nerve block, and superficial and deep peroneal nerve block.

44. On February 4, 2016, Claimant reported to Dr. Burke that she experienced complete resolution of her CRPS pain and increased temperature in her feet. Dr. Burke noted some ongoing "orthopedic" type pain in left knee and ongoing back pain.

45. Dr. Ramaswamy referred Claimant to orthopedist Nathan Faulkner, M.D. Dr. Faulkner diagnosed Claimant with chondromalacia and joint pain of the left knee. On May 19, 2016, Dr. Faulkner recommended full length custom orthotics, physical therapy, and possible intraarticular steroid injection if Claimant's pain did not improve with physical therapy. Claimant continued to treat with Dr. Faulkner. As of January 12, 2017, Dr. Faulkner recommended three months of physical therapy and the continuation of Celebrex.

46. On June 20 and June 23, 2016, Dr. Ring reviewed additional medical records and opined Claimant reached MMI. He opined that an independent exercise program, topical medications and an anti-inflammatory agent were reasonable medical maintenance, along with sympathetic blocks if substantial long-term benefits were documented. Dr. Ring concluded lumbar spine injections were not work-related and there were no indications for surgical intervention, orthopedic care or physical therapy.

47. On June 28, 2016, Dr. Ramaswamy opined Claimant's myofascial low back pain was related to her altered gait and recommended orthotics.

48. Dr. Ramaswamy placed Claimant at MMI on July 6, 2016 and assigned a 15% whole person impairment under Table 1 of AMA Guides for station and gait abnormalities associated with Claimant's CRPS diagnosis. He recommended orthotics, land/pool physical therapy, a gym pass, lidoderm patches, and sympathetic blocks as maintenance treatment.

49. On September 27, 2016, Lawrence A. Lesnak, D.O. performed an IME at the request of Respondent. Dr. Lesnak reviewed Claimant's medical records and physically examined Claimant. Dr. Lesnak noted Claimant was uncooperative and refused to complete certain paperwork, provide certain information, and perform certain maneuvers. On examination, sitting straight leg raise was to 90 degrees bilaterally without reproduction of any specific symptoms, and supine straight leg raise was to 90 degrees bilaterally without reproduction of any specific symptoms. Supine straight leg raising maneuvers on the right at 70 degrees reproduced no symptoms, and on the left

at 30 degrees had reproduction of increased left anterior knee pains, which Dr. Lesnak noted was nonphysiologic. Reversed straight leg raising maneuvers reproduced midline lower lumbar spine soreness. Dr. Lesnak noted Claimant exhibited several pain behaviors and nonphysiologic findings during examination.

50. Dr. Lesnak opined that, while Claimant may have sustained a left high ankle strain/sprain, "there is absolutely no medical evidence to suggest that she sustained any other type of injury as a result of this occupational incident of 08/13/2014." (emphasis not added). Dr. Lesnak concluded there were no clear clinical findings or diagnostic criteria to support a CRPS diagnosis. Dr. Lesnak opined the bone scan possibly suggested some subtle abnormalities, but were not conclusive for a CRPS diagnosis, and the thermogram also suggested a possible diagnosis of "subtle CRPS," but "did not meet any type of 'strong' diagnostic criteria." He questioned whether the nerve blocks resulted in any significant benefit because Dr. Bainbridge failed to document any temperature changes, Claimant's symptoms and function have not significantly improved as a result of them, and Claimant's subjective reports of post-block improvement are undependable due to her having a pain disorder, chronic generalized anxiety disorder, PTSD, and depression.

51. Dr. Lesnak placed Claimant at MMI. He concluded Claimant had no permanent impairment, opining that Claimant did not have CRPS or any impairment of the left ankle, knee, hip or low back. Dr. Lesnak recommended the ongoing use of lidocaine patches and occasional over-the-counter ibuprofen as maintenance, with no other medications, further interventions, or work restrictions.

52. Claimant underwent a DIME with John Sacha, M.D. on November 28, 2016. Dr. Sacha reviewed medical records and physically examined Claimant. Dr. Sacha noted Claimant's history of lupus, chronic low back pain, and stroke with left-sided symptoms. He also noted Claimant was involved in a prior MVA with low back, head and neck complaints and ongoing symptoms at the time of the work injury. Dr. Sacha listed the date of the MVA as 9/4/2010. The MVA was in 2012, not 2010. He also noted Claimant participated in massage therapy with acupuncture with Dr. Bondi for nine visits, Claimant had a QSART which had "essentially borderline findings," and Claimant was seen by a Dr. Failinger who did an injection of the left knee and recommended some physical therapy and orthotics. Dr. Sacha did not reference Claimant's thermogram. Claimant did not undergo massage therapy with acupuncture with Dr. Bondi, nor did she treat with or receive an injection from Dr. Failinger. Claimant did not undergo a QSART test.

53. Dr. Sacha further noted the triple-phase bone scan was negative, specifically stating, "It showed some uptake in the left foot consistent with chronic degenerative changes, but no evidence of sympathetic-mediated pain." He noted Dr. Bainbridge performed a lumbar sympathetic block, to which Claimant "had a diagnostic response with partial temporary relief and lasting relief for a couple months but had increased low back pain postprocedure." On examination, Dr. Sacha remarked Claimant had severe marked pain behaviors. He noted no allodynia, hyperapthia or skin trophic changes, equal temperatures in both lower extremities, pes planus bilaterally, some mild venous

stasis changes, decreased sensation in both legs in a patchy nondermatomal distribution, minimal tenderness over the anterior talofibular ligament and heel, pain in low back with straight leg raise and neural tension testing on the left side. He further noted minimal crepitus with range of motion in both knees, no medial or lateral laxity, positive patellar grind test on the left, negative McMurray and anterior drawer tests, and positive bowstring test on left.

54. Dr. Sacha gave the following impression: (1) history of dorsiflexion injury to the left ankle, (2) knee complaints with a negative MRI, (3) History of a diagnosis of CRPS with no evidence of sympathetic-mediated pain, (4) lumbar radiculopathy, non-work-related, and (5) delayed recovery.

55. Dr. Sacha opined Claimant's lumbar radiculopathy did not fit the mechanism of injury and was "clearly" related to her prior MVA. Dr. Sacha further opined there was no evidence of CRPS, stating, "She does not meet any of the criteria and does not have any findings on exam consistent with this." He remarked Claimant is high risk for delayed recovery and overutilization of resources.

56. Dr. Sacha opined Claimant reached MMI as of July 6, 2016 with no need for further interventions, surgery, lumbar sympathetic blocks, or a spinal cord stimulator. As maintenance treatment, Dr. Sacha recommended follow-ups with Dr. Ramaswamy, six pool physical therapy sessions, and a pool pass for two years. Dr. Sacha concluded Claimant had no work restrictions. He assigned a total 18% lower extremity impairment rating (7% whole person), consisting of 8% loss of range of motion impairment for the hindfoot, and 11% impairment for range of motion deficits in the knee. Dr. Sacha noted he did not give a Table 40 diagnosis for the knee because the MRI was negative, but there were some clinical findings.

57. On January 17, 2017, Albert Hattem, M.D. performed a physician advisor review and recommended denying a proposed left sciatic nerve block.

58. On January 24, 2017, Claimant underwent an IME by Rachel Basse, M.D. Dr. Basse performed a thorough medical records review and physically examined Claimant. Dr. Basse noted Claimant refused to complete the health history questionnaire and would not answer certain questions. On physical examination, Dr. Basse noted diffuse tenderness in the left lower extremity, no increased symptoms to regular light touch, very minimal color changes in the knee and ankle with overall symmetric appearance of the legs, no color, temperature, sweat, swelling, hair, or nail changes in the foot or toes. Dr. Basse noted bilateral hindfoot valgus and pes planus, which she opined was not trauma-related.

59. Dr. Basse noted Claimant's history of arthritis in her knees and low back pain. She noted that, while Claimant reported left SI and low back symptoms on the day of the fall, she did not again report low back issues until approximately two months later. Dr. Basse explained that Claimant was not on Neurontin at levels that would be expected to mask any significant low back injury. She opined the temporal relationship needed to establish causality was not present.

60. Dr. Basse also opined there were "no objective fall-related, traumatically acquired findings that can explain Claimant's current left knee symptoms," and no traumatically acquired injury to the foot or toe related to the work injury.

61. Dr. Basse further opined there was no objective evidence of confirmed CRPS, noting she looked at the "actual objective study results" for the CRPS analysis, including the stress thermogram, bone scan and x-rays. She opined the studies "are all negative and do not support the diagnosis of CRPS." Dr. Basse agreed the bone scan could suggest the possibility of chronic CRPS, but stated the findings were nonspecific and "highly atypical of the usual findings in ACUTE CRPS" (emphasis not added). She opined that the bone scan findings are "more likely representative of her decreased weight bearing with associated decreased bone metabolism/turnover." Dr. Basse further explained the stress thermogram noted a normal sympathetic response, and x-rays did not reveal CRPS. Dr. Basse further noted Claimant's positive short-term response to the sympathetic blockade was subjective and unreliable. She noted her exam findings, along with those of Drs. Schakaraschwili, Anderson and Ogin did not identify clinical symptoms. She explained Claimant's temperature asymmetry, color changes, and swelling could be due to Claimant's use of a walking boot, or other non-work-related conditions.

62. Dr. Basse opined Claimant suffered a high ankle sprain/strain and her continued diffuse left ankle symptoms are non-traumatic and not work-related. She concluded "[t]here was no objective evidence of any ongoing traumatically-related problems that can be attributed to the 08/13/2014 fall." Dr. Basse further concluded Claimant has some type of pain disorder, somatoform disorder, or other psychological diagnosis. She recommended that Claimant discontinue all passive treatment.

63. On February 13, 2017, Respondent filed a Final Admission of Liability, which admitted an AWW of $629.81, PPD benefits based on Dr. Sacha's 18% scheduled rating, and post-MMI medical benefits. Claimant objected and requested a hearing on several issues, thereby keeping them open, including PPD benefits, temporary disability benefits, medical benefits, and "what are all the areas of injury that should be . . . treated."

64. Claimant's pay records reflect she earned $1,259.62 for the biweekly pay period ending July 19, 2014 and $1,259.68 for the biweekly pay period ending August 2, 2014. $31.49 per hour, 40 hours per week.

65. Claimant testified at hearing she experienced significant pain relief from the sympathetic blocks, but that her symptoms ultimately returned. Claimant continued to participate in physical therapy and pool therapy at her own expense. Claimant stated she continues to experience pain, discoloration, weakness, temperature asymmetry, burning sensations, swelling, tenderness, and loss of sensation in her left lower extremity. She testified her symptoms are different from the symptoms she experiences from lupus flare-ups. During her testimony, Claimant also admitted the following: she had chronic low back pain prior to the accident, she suffered a brown recluse spider bite on the left leg prior to the work injury, she received treatment for arthritis in both knees

in 2006, and she testified at a deposition in February 2017 that a lupus flare can cause pain all over her body, including in her knees and ankles, and she sometimes has coldness in the upper extremities due to the lupus. Claimant further testified she received treatment for posttraumatic stress disorder and anxiety prior to the work injury, including Celexa, which she stopped taking for financial reasons, and she was also prescribed Celebrex prior to the accident. Claimant testified she wants additional treatment under this claim, including therapies, orthotics, blocks, imaging studies, and medications. She stated her current medications are Lidoderm patches, Celebrex, and Celexa. She testified Dr. Sacha and Dr. Lesnak did not measure the temperature of her lower extremities.

66. Dr. Lesnak testified at hearing as an expert in physical medicine and rehabilitation. Dr. Lesnak is board certified in physical medicine and rehabilitation and is Level II accredited by the Colorado Division of Workers' Compensation. Dr. Lesnak testified the August 13, 2014 work injury caused mild high ankle and deltoid ligament sprains. He opined Claimant's ongoing symptoms are inconsistent with the original mechanism of injury and the work-related diagnoses, as sprains typically resolve within a couple of months. Dr. Lesnak agreed with Dr. Sacha's opinion that Claimant is at MMI, but assigned an earlier date of January 5, 2015, because the negative thermogram was completed on that date and no subsequent treatment substantially improved Claimant's symptoms or function. Dr. Lesnak explained Claimant has undergone at least seventeen diagnostic studies, which is unusual in a non-surgical case, and the sole objective findings were the mild sprains identified by the original MRI.

67. Dr. Lesnak reiterated his opinion that Claimant does not have CRPS. He explained the timeframe for developing CRPS is inconsistent with the timing of Claimant's symptoms, as CRPS takes at least several weeks or months to develop, but Claimant reported knowing something was significantly wrong just days following the accident. Dr. Lesnak also testified CRPS does not cause loss of sensation. He stated his physical exam was negative for any color changes, temperature changes, swelling, or other hallmark signs of a CRPS diagnosis. Dr. Lesnak testified none of the objective tests confirmed CRPS. He acknowledged the bone scan had some subtle findings that could be consistent with chronic CRPS, but pointed out the bone scan was taken just four months after the date of injury, and chronic CRPS takes several years to develop. Dr. Lesnak explained there are several potential alternative causes for Claimant's condition. He disputed the notion that Claimant's allegedly positive responses to the blocks establish CRPS, explaining that any immediate relief in the recovery room would not constitute a diagnostic response because blocks are administered with pain medication, Dr. Bainbridge's records do not reflect that he applied appropriate controls in administering the blocks, and sympathetic blocks provide limited diagnostic benefit.

68. Dr. Lesnak testified he agrees with Dr. Sacha that Claimant should not receive a lumbar spine impairment rating, as there is no evidence Claimant sustained a work-related low back injury, the lumbar spine MRI was negative for any trauma-related problems, she had pre-existing low back pain, and her ongoing low back pain is most likely due to other non-work-related factors. Dr. Lesnak opined Claimant did not sustain any permanent impairment of the left knee or ankle. Concerning the knee, he explained

there is no work-related pathology, the mechanism of injury was inconsistent with a knee injury, and Claimant's preexisting arthritis may better explain her symptoms.

69. Dr. Lesnak further testified Dr. Sacha erred by assigning a rating for knee range of motion loss without a supporting Table 40 diagnosis, explaining "you need to have a reason why you are assigning a…range motion abnormality." Dr. Lesnak stated Dr. Sacha should have compared the range of motion for Claimant's right knee joint before assigning a range of motion rating for the left knee. Regarding the ankle, Dr. Lesnak explained sprains are not permanent conditions and the mild work-related sprains which Claimant sustained have clearly resolved after three years. Dr. Lesnak also testified Claimant's alleged lower extremity impairment does not extend into or affect the function of her whole person.

70. Dr. Lesnak testified no further medical benefits are reasonable or necessary for the resolved work-related injury, including, but not limited to, Celebrex, Tramadol, Lidoderm patches, pool therapy, orthotic inserts, or a gym membership.

71. The ALJ credits the opinions of Drs. Sacha, Lesnak, Basse and Ramaswamy as to Claimant's MMI status and finds Claimant reached MMI on July 6, 2016. Claimant failed to prove by clear and convincing evidence Dr. Sacha erred in his opinion that Claimant reached MMI on July 6, 2016.

72. The ALJ credits the opinions of Drs. Sacha, Lesnak and Basse over the conflicting opinion of Dr. Ramaswamy as to the lumbar spine and CRPS and finds Claimant does not have CRPS and did not sustain any work-related injury to her lumbar spine. Claimant failed to overcome Dr. Sacha's opinion on the lumbar spine and CRPS by clear and convincing evidence.

73. The ALJ credits the opinion of Dr. Lesnak as to whether the assigned scheduled impairment should be converted to a whole person impairment. Claimant failed to prove by a preponderance of the evidence that the scheduled impairment assigned by Dr. Sacha should be converted to a whole person impairment.

74. The ALJ credits the opinions of Drs. Lesnak and Basse as to the nature of Claimant's permanent impairment and finds Claimant did not sustain any permanent impairment as a result of the August 13, 2014 industrial injury. Respondent proved by a preponderance of the evidence the 18% scheduled impairment rating assigned by Dr. Sacha and admitted to in the February 13, 2017 is incorrect.

75. The ALJ credits the opinions of Drs. Lesnak and Basse as to the need for post-MMI medical treatment and finds the medical treatment recommended by Dr. Faulker is not reasonable and necessary to relieve Claimant of the effects of the industrial injury or prevent further deterioration of her condition. Claimant failed to prove by a preponderance of the evidence that she is entitled to the post-MMI treatment recommended by Dr. Faulkner.

76. Claimant's AWW is $1,259.62.

77. The evidence is insufficient to determine Claimant's entitlement to temporary disability benefits. While the evidence indicates Dr. Ramaswamy issued work restrictions, there is insufficient evidence establishing the actual time periods Claimant missed work, if any.

78. Claimant contends she is entitled to a disfigurement award based on an altered gait. Over the course of three hearings, the ALJ observed Claimant walking with a slight limp. However, based on the aforementioned findings of fact, there is insufficient persuasive evidence the gait is a result of the August 13, 2014 industrial injury. Accordingly, Claimant failed to prove entitlement to a disfigurement award.

79. Evidence and inferences contrary to these findings of fact were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Under the statute, MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

As found, Claimant failed to overcome Dr. Sacha's DIME opinion that Claimant is at MMI by clear and convincing evidence. Dr. Sacha's opinion on MMI is supported by Claimant's ATP, Dr. Ramaswamy, as well as Drs. Ring and Lesnak. Based on the totality of the evidence, Claimant's condition has plateaued and there does not currently appear to be any further medical treatment that is likely to improve her condition or prevent further deterioration.

Respondent contend Claimant reached MMI as of January 5, 2015. Dr. Lesnak opined Claimant reached MMI on January 5, 2015 because there was no substantial improvement in Claimant's functions or symptoms after such date. He further argued Dr. Ramaswamy's July 6, 2016 MMI date is based on Claimant's influence and personal opinions as to her status and further treatment. The ALJ concludes Dr. Lesnak's opinion

as to the MMI date represents a mere difference of opinion. Claimant underwent several diagnostic and therapeutic measures subsequent to January 5, 2015 in an attempt to further evaluate and define Claimant's condition and/or reduce her pain or improve function. Moreover, there is insufficient persuasive evidence Dr. Ramaswamy did not use his own independent medical judgment when placing Claimant at MMI on July 6, 2016.

Causation and Impairment

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning a claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The procedures of § 8-42-107(8)(c), which state that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence, has been recognized as applying only to non-scheduled impairments. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo.App.1998); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (2000). The burden of proof pertinent to a dispute concerning the impairment rating of a scheduled injury is a preponderance of the evidence. *Maestas v. American Furniture Warehouse*, W.C. No. 4-662-369 (June 5, 2007); *Ortiz v. IngersollRand Co*., W.C. No. 4-981-218-04 (January 25, 2018); *see generally, Wagoner v. City of Colorado Springs*, W.C. No. 4-817-985-03 (Oct. 21, 2013)(no presumptive weight afforded DIME physician concerning scheduled injuries; DIME opinion unnecessary to determination of scheduled impairment), aff'd *Wagoner v. Industrial Claim Appeals Office*, Colo. App. No. 13CA1983 (Oct. 23, 2014)(NSOP).

As a matter of diagnosis, the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence

present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*.

Claimant argues Dr. Sacha erred by failing to assign impairment ratings for the lumbar spine and CRPS. Both conditions are not listed on the schedule of disabilities codified at Section 8-42-107(2), C.R.S. Accordingly, Claimant bears the burden of proof to overcome the DIME physician's findings regarding the non-scheduled injuries by clear and convincing evidence.

Based on the totality of the evidence, Claimant failed to meet her burden to overcome Dr. Sacha's opinions. Claimant points to inaccuracies in Dr. Sacha's DIME report, including, among other things, references to an incorrect MVA date and treatment Claimant did not actually receive. While Dr. Sacha referred to treatment Claimant did not actually undergo, he does not further discuss such treatment or specifically refer to the treatment in support of his opinions. Although Dr. Sacha referenced a date two years prior to the actual MVA date, it is not disputed the MVA occurred prior to the work injury. The ALJ is not persuaded that inaccurate references made by Dr. Sacha render his ultimate opinions highly probably incorrect.

Lumbar Spine

Dr. Sacha opined Claimant's low back condition is pre-existing and the result of a prior MVA. The medical records clearly establish Claimant had pre-existing low back issues for which she sought prior treatment. The lumbar spine MRI was negative for any trauma-related issues. Drs. Ring, Lesnak and Basse credibly and persuasively opined Claimant did not sustain any work-related impairment of her spine. Accordingly, Claimant failed to meet her burden to prove Dr. Sacha erred by finding Claimant's low back condition unrelated to the August 13, 2014 industrial injury and by not assigning impairment for the low back.

CRPS

Dr. Sacha opined Claimant does not have CRPS. Rule 17 of the Guidelines provides that a confirmed CRPS diagnosis requires both a clinical diagnosis and at least two positive tests from the following categories of diagnostic tests: (1) trophic tests, which include comparative x-rays and triple bone scans; (2) vasomotor/temperature tests (infrared stress thermography); (3) sudomotor test (autonomic test battery with an emphasis on QSART); and (d) sensory/sympathetic nerve test (sympathetic blocks).

The DIME report indicates Dr. Sacha considered Claimant's history, clinical findings, and diagnostic test results when rendering his opinion. Dr. Sacha's physical examination revealed no clinical signs of CRPS. Claimant's clinical signs of CRPS have been inconsistent throughout the medical records. Multiple physicians, including Drs. Ogin, Basse and Lesnak, found no clinical findings of CRPS. Additionally, Drs. Basse, Ogin and Lesnak credibly opined clinical findings noted by other physicians, including discoloration, swelling and coolness, could have resulted from Claimant's use of a

walking boot or other non-work-related medical conditions. Dr. Sacha's clinical findings are similar to the findings of multiple other physicians.

Regarding diagnostic tests, Claimant underwent x-rays, a triple bone scan, a stress thermography test and sympathetic blocks. Dr. Sacha specifically noted Claimant had "borderline" QSART results, a negative bone scan, negative x-rays, and a diagnostic response to lumbar sympathetic blocks. Multiple physicians opined the results of the diagnostic tests do not establish a clear diagnosis of acute CRPS.

The medical records indicate the x-rays were negative for CRPS. Dr. Sacha specifically noted the bone scan revealed some uptake in the left foot, but concluded the findings were consistent with degenerative changes and not evidence of sympathetic-mediated pain. His remarks indicate he reviewed the amended bone scan report, took the findings into consideration, and ultimately concluded the bone scan was negative for CRPS. Dr. Gerhold interpreted the amended bone scan findings as being suggestive of the "possibility of chronic CRPS" and recommended clinical correlation. Dr. Basse credibly explained that, while the bone scan suggested the possibility of chronic CRPS, the findings were nonspecific and not typical of acute CRPS. Furthermore, Drs. Ring and Lesnak also credibly opined that the bone scan was non-diagnostic and non-conclusive for a CRPS diagnosis. There is insufficient evidence establishing that Dr. Sacha's conclusion regarding the bone scan was incorrect.

It is undisputed Claimant did not undergo a QSART test. Claimant did, however, undergo a stress thermography test, which is not specifically referenced in the DIME report. Drs. Schakaraschwili, Ogin, Ring and Lesnak credibly and persuasively opined that, while the results of thermography test were somewhat positive, they were not strongly diagnostic, and could have been influenced by Claimant's medical history and other conditions. Dr. Basse opined the thermogram results were normal. Thus, under the specific circumstances, the ALJ is not persuaded Dr. Sacha's reference to a different "borderline" diagnostic test does not, by itself, render his opinion on CRPS highly probably incorrect.

While Dr. Sacha referred to Claimant's response to the lumbar sympathetic blocks as "diagnostic," based on his analysis of the other diagnostic tests and the clinical findings, he ultimately determined Claimant did not meet the criteria for a confirmed CRPS diagnosis. Dr. Sacha's opinion is supported by the medical records and the credible and persuasive opinions of Drs. Lesnak, Basse and Ring. Thus, while the evidence contains differing medical opinions, the ALJ concludes there is not clear and convincing evidence Dr. Sacha's opinion on CRPS in error.

Whole Person Impairment

To the extent Claimant argues her scheduled impairment rating should be converted into a whole person impairment rating, Claimant has the burden of proof by a preponderance of the evidence. *Vega v. Startek USA, Inc.*, W.C. No. 4-437-951 (ICAO

Oct. 29, 2003). To carry that burden, Claimant needed to establish that the situs of any functional impairment extended into her whole person. §8-42-101, C.R.S.

As found, Claimant failed to establish that her knee and ankle impairment affect the function of her whole person or should be converted into whole person ratings. Dr. Lesnak credibly opined Claimant's lower extremity impairment does not extend into or affect the function of her whole person.

Scheduled Impairment

An injured worker is typically limited to a scheduled impairment rating if the impaired body part is listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Ratings for knee and ankle injuries are listed on the schedule of disabilities at Section 8-42-107(2), C.R.S.

Respondent argues Dr. Sacha erred in assigning impairment for the knee and ankle, contending Claimant did not sustain any permanent impairment as a result of the August 13, 2014 work injury. As previously mentioned, the burden of proof pertinent to a dispute concerning the impairment rating of a scheduled injury is a preponderance of the evidence. *Maestas v. American Furniture Warehouse*, *supra*. The knee and ankle are scheduled injuries, and Claimant failed to prove the impairments should be converted into whole person ratings. Furthermore, Respondent filed a Final Admission of Liability on February 13, 2017, admitting for an 18% scheduled impairment rating in accordance with Dr. Sacha's opinion. Accordingly, Respondent bears the burden to of proof to establish Claimant did not sustain any permanent scheduled impairment by a preponderance of the evidence.

As found, Respondent overcame the 18% scheduled impairment rating assigned by Dr. Sacha by a preponderance of the evidence. Drs. Lesnak and Sacha credibly opined Claimant's ankle sprain was a temporary condition that resolved without any permanent impairment. Dr. Lesnak credibly opined there is no work-related pathology of the knee, the mechanism of injury was inconsistent with a knee injury, and Claimant's preexisting arthritis may better explain her symptoms. Dr. Lesnak also credibly opined Dr. Sacha erred in assigning a rating for range of motion deficits in the knee without a supporting Table 40 diagnosis, and without comparing contralateral range of motion measurements for normalization purposes.

Section 8-42-107(8)(c), C.R.S. provides, in relevant part, "For purposes of determining levels of medical impairment, the physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings." The Impairment Rating Tips state, in relevant part,

> In some cases, the contralateral joint is a better representation of the patient's pre-injury state than the AMA Guides population norms. The 3rd Revised Edition has little commentary on this procedure, however the 5th

> Edition and the Division consider it reasonable to compare both extremities when there are specific conditions which would make the opposite, non-injured extremity serve as a better individual baseline… Therefore, when deemed appropriate, the physician may subtract the contralateral joint ROM impairment from the injured joint's ROM impairment.

The Impairment Rating Tips are not part of the Guides, are merely guidance regarding the assessment of permanent impairment ratings, and are not binding rules, and, thus, are interpretive. *In re: Claim of Vuksic*, W.C. No. 4-956-741-02 August 4, 2016, referring to *Kurtz v. JBS Carriers*, W.C. No. 4-797-234 (Dec. 7, 2011), aff'd, Colo.App. No. 11CA2561 (Oct. 18, 2012). A physician's application of those Impairment Rating Tips when assessing an impairment rating and any deviation from those Impairment Rating Tips is a factor for the ALJ to consider and goes to the weight the ALJ chooses to give to an impairment rating. *Id*. Thus, although the Impairment Rating Tips may be relevant to the impairment rating under consideration by the ALJ, a physician's application of the Impairment Rating Tips, or lack thereof, goes to the weight the ALJ gives to an impairment rating. Compare *Ortiz v. Service Experts, Inc.*, W.C. No. 4-657-974 (January 22, 2009)(ALJ credited impairment rating of physician applying impairment Rating Tips).

Dr. Sacha indicated he assigned an impairment rating for the knee based his clinical findings, acknowledging he did not give a Table 40 diagnosis due to the lack of MRI findings. It was within Dr. Sacha's discretion to consider the contralateral measurements for normalization purposes. However, considering Claimant's specific case of having no work-related pathology of the knee, and longstanding pre-existing bilateral knee arthritis, the ALJ is persuaded it is more likely than not Dr. Sacha's scheduled impairment rating for the knee is incorrect. Based on the totality of the evidence, it is more probable than not Claimant did not sustain any permanent impairment as a result of the August 13, 2014 industrial injury.

Overpayment

Pursuant to Section 8-40-201(15.5), C.R.S., "overpayment" means "money received by a claimant that exceeds the amount that should have been paid, or which the claimant was not entitled to receive, or which would result in duplicate benefits because of offsets that reduce disability or death benefits under said articles." For an overpayment to result, it is not necessary that the overpayment exist at the time the claimant received the subject disability benefits. *Id*. Here, Respondent is entitled to an overpayment for any PPD benefits which Claimant previously received.

Temporary Disability Benefits

As found, Claimant is at MMI as of July 6, 2016. Insufficient evidence was presented to determine Claimant's entitlement to temporary disability benefits. While Claimant endorsed the issue of temporary partial disability and temporary total disability

benefits in her Application for Hearing, Claimant did not further address the issue at hearing or in her position statement. At the beginning of the hearing, Respondent noted temporary total disability as an issue, without reference to any particular dates. In their position statement, Respondent argues Claimant is not entitled to any temporary total disability because Claimant failed to establish the injury caused any disability. While the record indicates Dr. Ramaswamy issued work restrictions, the record is insufficient as to actual dates and time periods Claimant missed from work, if any. The only admission of liability included in the record, the February 13, 2017 FAL does not indicate any temporary disability benefits were paid. As the record is insufficient to determine entitlement to temporary disability benefits, the parties may confer on the issue and file an Application for Hearing if so desired.

Medical Maintenance Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When the respondents challenge the claimant's request for specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether the claimant proved that specific treatment is reasonable and necessary to maintain her condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

Respondent filed a Final Admission of Liability on February 13, 2017 admitting for reasonable, necessary and related post-MMI medical benefits. Claimant specifically argues she is entitled to the post-MMI medical benefits recommended by Dr. Faulkner. As of January 12, 2017, Dr. Faulkner recommended Claimant undergo three months of physical therapy and the continuation of Celebrex.

As found, Claimant failed to prove by a preponderance of the evidence that the medical treatment recommended by Dr. Faulkner is reasonable, necessary and related to the industrial injury. The ALJ credits the persuasive opinions of Drs. Lesnak and Dr. Basse that no further treatment is reasonable or necessary to relieve the effects of the August 13, 2014 industrial injury or prevent further deterioration of her condition.

Disfigurement

Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." Claimant contends she is entitled to a disfigurement award for her altered gait. As found, Claimant failed to establish entitlement to a disfigurement award, as it has not been established that Claimant's current altered gait is a result of the August 13, 2014 work injury.

Average Weekly Wage

An employee's AWW shall be calculated upon the weekly remuneration he or she was receiving "at the time of the injury." §8-42-102(2)(b), C.R.S. Here, the ALJ concludes that an AWW of $1,259.62 best reflects Claimant's earnings at the time of the accident, as she earned $1,259.62 in gross wages during each of the four weeks which preceded the accident.

ORDER

It is therefore ordered that:

1. Claimant failed overcome the DIME physician's opinion on MMI by clear and convincing evidence. Claimant is at MMI as of July 6, 2016.

2. Claimant failed to overcome the DIME physician's opinion on permanent impairment regarding the lumbar spine and CRPS by clear and convincing evidence.

3. Claimant failed to prove by a preponderance of the evidence that any scheduled impairment should be converted to a whole person impairment.

4. Respondent proved by a preponderance of the evidence Claimant did not sustain any permanent impairment as a result of her August 13, 2014 industrial injury. Claimant is assigned a zero percent permanent impairment rating for the work-related injury. Respondent is entitled to an overpayment for any PPD benefits previously paid.

5. Claimant failed to prove by a preponderance of the evidence that she is entitled to the post-MMI medical treatment recommended by Dr. Faulkner.

6. Claimant's AWW is $1,259.62.

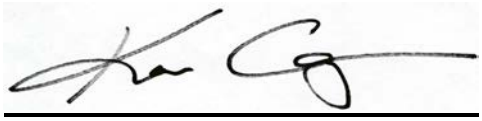
7. Claimant failed to prove entitlement to a disfigurement award.

8. As there is insufficient evidence for the ALJ to rule on Claimant's entitlement to temporary disability, the parties may confer on the issue and file and Application for Hearing on the issue if so desired.

9. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 25, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he suffered an injury to his lumbar spine arising out of and in the course and scope of his employment with the employer.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that medical treatment he received constitutes reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that the surgical fusion recommended by Dr. Kirk Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

- If the claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

- If the claimant proves a compensable injury, what is the claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. The claimant was employed with the employer as an operations manager. The claimant testified that he was paid $26.00 per hour while working for the employer.

2. The claimant's job duties included taking care of radio communications at various tower locations. This involved moving, inspecting, and maintaining the employer's equipment. The claimant testified that the equipment he handled weighed between 2 pounds and 200 pounds. The claimant testified that prior to June 16, 2017, he was able to perform all of his job duties.

3. On Friday, June 16, 2017, the claimant was unloading work equipment from his work vehicle, specifically batteries. The claimant testified that while unloading these batteries he felt a "twinge" in his back. The claimant immediately informed his supervisor, Mr. Arnold, of this incident. As it was a Friday, Mr. Arnold told the claimant to take the weekend to rest and see if it was better by Monday.

4. On Monday, June 20, 2017, the claimant reported to Mr. Arnold that his symptoms were not better. Mr. Arnold instructed the claimant to seek treatment with is personal physician and the employer would reimburse the claimant for the cost of the visit.

5. Based upon this instruction from Mr. Arnold, the claimant sought treatment with his personal physician at Primary Care Partners. The claimant was seen at that practice by Dr. Brian DiMarzio on June 20, 2017. The claimant reported to Dr. DiMarzio that his low back pain started when he was removing items from his truck.

6. The claimant testified that he first told Dr. DiMarzio that the incident was related to work, but amended his statement when the doctor informed him that if it was work related, it would be "filed" as workers' compensation. As a result, the medical record of that date indicates that the claimant reported that the incident "was not work related". Dr. DiMarzio diagnosed a lumbar strain with L4-5 symptoms and prescribed pain medications.

7. The claimant testified that since the June 16, 2017 incident he has received medical treatment that has included referral to Spine Colorado, physical therapy, spinal injections, and magnetic resonance image (MRI) scans.

8. On July 3, 2017, the claimant underwent an MRI of his lumbar spine. The MRI showed degenerative disc disease at the L2-3, L3-4, and L4-5 levels; moderate foraminal narrowing on the right at the L3-4 level; moderate to severe foraminal narrowing on the left at the L4-5 level; mild compression of the traversing left S1 nerve root; and inflammation of the right L4-5 facet joint.

9. On July 6, 2017, the claimant was seen at Spine Colorado by Kim Byrd, PA-C. Based upon the MRI results, Ms. Byrd recommended that the claimant undergo left sided transforaminal epidural steroid injections (TFESIs) at L4-L5 and L5-S1. Ms. Byrd also completed a "return to work" notice for the claimant that indicated that the claimant could return to work as of July 6, 2017. This notice also indicated that the claimant could perform lifting "as tolerated".

10. The injections recommended by Ms. Byrd were administered by Dr. Santos at Spine Colorado on September 6, 2017.

11. A second MRI of the claimant's lumbar spine was performed on January 22, 2018 and showed mild disc desiccation with severe left foraminal stenosis at the L4-5 level.

12. After the claimant received medical treatment for his injury in Durango, Colorado, Dr. Craig Stagg became the claimant's authorized treating physician (ATP). The claimant was first seen by Dr. Stagg on February 8, 2018. The claimant testified that ultimately Dr. Stagg referred him to Dr. Kirk Clifford for a surgical consultation.

13. The records entered into evidence indicate that Dr. Clifford has recommended that the claimant undergo surgical management of the L4-5 lateral disc herniation.

14. At the request of the respondents, on March 3, 2018, the claimant attended an independent medical examination (IME) with Dr. Timothy O'Brien. Dr. O'Brien reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. O'Brien opined that the medical treatment the claimant has received for his lumbar spine has been reasonable and necessary. Dr. O'Brien further opined that the claimant's lumbar spine issues are not work related. In his report, Dr. O'Brien specifically pointed to the June 20, 2017 medical record in which the claimant reported to Dr. DiMarzio that the incident was not work related. In his IME report, Dr. O'Brien also noted that during the IME the claimant exhibited subjective complaints that are not organically based.

15. Dr. O'Brien's testimony at hearing was consistent with his written report. Dr. O'Brien reiterated his opinion that the June 16, 2017 incident was not work related. In support of this opinion, Dr. O'Brien noted that the most contemporaneous medical record, (that of June 20, 2017), shows that the claimant reported the incident a unrelated to work.

16. The claimant's supervisor, Mr. Arnold, testified at hearing that the claimant reported the June 16, 2017 incident to him as work related. Specifically, Mr. Arnold credibly testified that the claimant informed him that he hurt his back while lifting batteries out of his truck. Mr. Arnold also testified that the employer agreed to reimburse the claimant for the visit to his personal physician on June 20, 2017. Mr. Arnold testified that following the June 17, 2017 incident, the claimant continued to work full time. Mr. Arnold explained that any apparent reduction in the claimant's hours during this time was due to the employer asking employees to not work as much overtime as projects were coming to an end.

17. The claimant testified that his final day of employment with the employer was September 15, 2017. The claimant testified that because of the "lifting as tolerated" work restriction assigned by Ms. Byrd he was not able to perform all of his job duties between the July 16, 2017 incident and his final day of employment on September 15, 2017. The claimant also testified that he quit his job with the employer because of the number of hours he was working and the "amount of stress" that he experienced.

18. The claimant testified that he immediately found new employment with Adaptive Communications. While working for Adaptive Communications the claimant's job duties were less physically demanding and caused less stress on the claimant's back. The claimant testified that despite his low back pain, he was able to perform all of his duties while working for Adaptive Communications.

19. The claimant's employment with Adaptive Communications ended on November 1, 2017 when the claimant was laid off. The claimant testified that he has not worked since he was laid off from his employment with Adaptive Communications.

20. The claimant testified that after he was laid off by Adaptive Communications he received unemployment benefits. The claimant received unemployment benefits in the amount of $573.00 each week. The claimant received his final unemployment benefit payment on March 3, 2018.

21. The medical records entered into evidence indicate that on February 7, 2018, Dr. Stagg assigned work restrictions for the claimant. These work restrictions included no lifting, carrying, pushing, or pulling over 15 pounds, and that the claimant should avoid crawling, kneeling, squatting, and climbing. On March 23, 2018, Dr. Stagg responded to a number of questions posed to him by the claimant's attorney. In that response, Dr. Stagg confirmed that the claimant continued to have work restrictions of no lifting, pushing, or pulling greater than 15 pounds, and he was to avoid crawling, kneeling, and squatting. In that same response of March 23, 2018, Dr. Stagg indicated his agreement with Dr. Clifford's surgical recommendation.

22. The ALJ credits the claimant's testimony and the corroborating testimony of his supervisor, Mr. Arnold, over the conflicting opinion of Dr. O'Brien and finds that the claimant has demonstrated that it is more likely than not that he suffered a low back injury arising out of and in the course and scope of his employment. The ALJ further credits the claimant's testimony and finds that although the initial medical report identifies the June 16, 2017 incident as "not work related", the claimant credibly testified that he reported the incident in that way because the employer was going to reimburse him for the cost of the doctor visit.

23. The ALJ credits the testimony of the claimant and the medical records and finds that the claimant has demonstrated that it is more likely than not that the medical treatment the claimant has received since the June 16, 2017 work injury was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

24. The ALJ credits the opinion of Dr. O'Brien and the lack of medical records supporting the surgical recommendation from Dr. Clifford and finds that the claimant has failed to demonstrate that it is more likely than not that the recommended surgery is reasonable and necessary to cure and relieve the claimant from the effects of the work injury.

25. The ALJ credits the medical records and the testimony of Mr. Arnold over the conflicting testimony of the claimant and finds that following the July 16, 2017 injury the claimant continued to work full time. Until the work restrictions placed by Dr. Stagg on February 7, 2018, the claimant was able to continue working. The ALJ finds that from the claimant's date of injury until February 7, 2018, he did not suffer a wage loss due to his injury.

26. The ALJ credits the medical records, the opinion of Dr. Stagg, and the claimant's testimony and finds that as of February 7, 2018, the claimant had work restrictions that have limited his ability to seek and accept work. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that beginning on February 7, 2018, he had suffered a wage loss.

27. The ALJ credits the testimony presented at hearing and finds that the claimant received unemployment benefits as a result as his job separation from Adaptive Communications. Therefore, the respondents are entitled to an offset of TTD benefits for the period of February 7, 2018 through March 3, 2018.

28. The ALJ credits the payroll records admitted into evidence, and finds that the claimant worked an average of 66 hours per week for the sixteen week period immediately prior to the work injury (February 16, 2016 through June 20, 2017). At the pay rate of $26.00 per hour, the ALJ calculates that the claimant's average weekly wage (AWW) was $1,716.00.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also*

Subsequent Injury Fund v. Thompson, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. As found, the claimant has demonstrated by a preponderance of the evidence that he suffered an injury to his low back that arose out of and in the course and scope of his employment with the employer. As found, the testimony of the claimant and Mr. Arnold are credible and persuasive.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, the claimant has demonstrated by a preponderance of the evidence that the medical treatment he received following the June 16, 2017 work injury was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the claimant's testimony and the medical records are credible and persuasive.

7. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the surgery recommended by Dr. Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the opinion of Dr. O'Brien is credible and persuasive on this issue.

8. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

9. As found, the claimant has demonstrated by a preponderance of the evidence that as of February 7, 2018, he has suffered a wage loss due to his work injury and the related work restrictions placed on him by Dr. Stagg. Therefore, the claimant is entitled to temporary total disability benefits beginning February 7, 2018. As found, the medical records, the opinion of Dr. Stagg, and the claimant's testimony are credible and persuasive.

10. As found, the respondents are entitled to an offset of TTD payments for the period of February 8, 2018 through March 3, 2018 because of the claimant's receipt of unemployment benefits. As found, testimony presented at hearing regarding the claimant's unemployment benefits is credible and persuasive.

11. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include the reasonable value of any advantage or fringe benefit provided to the claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

12. As found, the claimant's AWW at the time of his work injury was $1,716.00. As found, the payroll records are credible and persuasive.

ORDER

It is therefore ordered that:

1. The claimant suffered a compensable injury on June 16, 2017.

2. Respondents shall pay for the claimant's reasonable medical treatment.

3. The claimant's claim for surgery, as recommended by Dr. Clifford, is denied and dismissed.

4. The claimant is entitled to temporary total disability (TTD) benefits beginning February 7, 2018 and ongoing until terminated by law.

5. The respondents are entitled to an offset of TTD payments due to the claimant's receipt of unemployment benefits from February 8, 2018 through March 3, 2018.

6. The claimant's average weekly wage (AWW) for this claim is $1,716.00.

7. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

Dated: May 24, 2018

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that she is entitled to maintenance medical treatment (including treatment recommended by Dr. Jeffrey Krebs) to prevent further deterioration to her physical condition pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

- Whether the claimant sustained a serious permanent disfigurement to areas of her body normally exposed to public view, resulting in additional compensation, pursuant to Section 8-42-108 (1), C.R.S.

FINDINGS OF FACT

1. The claimant was employed by the employer on March 31, 2015 when she hit her bilateral elbows on a work bench. The claimant reported her injury to the employer and was referred for medical treatment with Dr. Theodore Sofish.

2. Dr. Sofish initially examined the claimant on April 3, 2015. At that time, Dr. Sofish noted a history of hand numbness in both hands since December 2013. The claimant reported that her work duties included breaking down boxes and electrical pieces using knives, wire cutters, and screwdrivers. Dr. Sofish diagnosed carpal tunnel syndrome of unknown etiology.

3. The claimant returned to Dr. Sofish on May 8, 2015, and reported pain of 4 out of 10, tingling, and numbness in both hands with neck pain. On that date, Dr. Sofish diagnosed work related bilateral carpal tunnel syndrome with probable non-work related neck pain.

4. The claimant again returned to Dr. Sofish on June 8, 2015 and reported ongoing hand pain that was waking her at night. The claimant also reported to Dr. Sofish that her job with the employer included a lot of cutting, bagging, and ripping open bags. Dr. Sofish noted that the claimant was no longer working for the employer. At that time, Dr. Sofish recommended that the claimant undergo an electromyelogram and nerve conduction (EMG/NCV) study.

5. The claimant underwent the recommended EMG/NCV with Dr. Mitchell Burnbaum on June 25, 2015. The EMG/NCV demonstrated bilateral carpal tunnel syndrome, (left greater than right).

6. The claimant returned to Dr. Sofish on July 14, 2015. At that time, Dr. Sofish noted the results of the EMG/NCV study and referred the claimant to Dr. Mitchell Copeland for bilateral carpal tunnel surgery.

7. Dr. Copeland's office evaluated the claimant on July 14, 2015. Dr. Copeland noted the claimant's complaints in both hands and the EMG/NCV results and opined that the claimant had classic carpal tunnel symptoms. Dr. Copeland recommended that the claimant could treat conservatively with cortisteroid injection or undergo surgery.

8. The claimant returned to Dr. Copeland on September 16, 2015 and was evaluated by John Rexroth, PAC. Mr. Rexroth noted that the claimant's injury resulted after repetitive motion at work. Mr. Rexroth discussed non-surgical options with the claimant, but the claimant elected to proceed with carpal tunnel release surgery.

9. On September 24, 2015, the claimant underwent left carpal tunnel release surgery. Thereafter, on December 1, 2015, the claimant underwent right carpal tunnel release surgery. Both surgeries were performed by Dr. Copeland.

10. On October 12, 2015, the respondents filed a general admission of liability (GAL) admitting for temporary total disability (TTD) benefits beginning September 24, 2015.

11. On January 13, 2016, the claimant was seen by Mr. Rexroth and reported that the numbness and tingling symptoms and pain in the median nerve distribution had resolved. Mr. Rexroth noted that he believed the claimant was at maximum medical improvement (MMI) and released the claimant to return to work without restrictions.

12. The claimant was seen by Dr. Sofish on January 18, 2016. On that date, Dr. Sofish noted that the claimant was released to return to work without restrictions and had full range of motion of her wrists and fingers with no reported paresthesias. Dr. Sofish instructed the claimant to return in one month and noted she would likely be placed at MMI at that time.

13. On February 25, 2016, the claimant returned to Dr. Sofish and reported discomfort to the bilateral wrists with pain of 2 out of 10. Dr. Sofish noted that the claimant had full range of motion of both wrists and well-healed surgical scars. Dr. Sofish diagnosed post bilateral carpal tunnel surgery. Also on that date, Dr. Sofish placed the claimant at MMI, with no permanent impairment, and opined that the claimant did not need post MMI maintenance care.

14. On March 23, 2016, the respondents filed a final admission of liability (FAL) on March 23, 2016 admitting for no permanent impairment and no post MMI medical benefits.

15. The claimant objected to the FAL and requested a Division-sponsored Independent Medical Examination (DIME). Dr. Jeffrey Krebs was selected as the DIME physician and the claimant was initially evaluated by Dr. Krebs on August 17, 2016. Dr. Krebs reviewed the claimant's medical records, obtained a medical history, and performed a physical examination in connection with the DIME. In his DIME report, Dr. Krebs noted the diagnosis of bilateral carpal tunnel syndrome and the related bilateral carpal tunnel release surgeries performed by Dr. Copeland. Dr. Krebs noted that after the surgeries the claimant continued to report subjective complaints of tingling and some weakness over her hands and wrists. In addition, the claimant complained of dropping things. Dr. Krebs noted that his examination revealed positive Tinel's signs (left greater than right), with tingling both sides to ulnar and radial aspects of the hand and on both sides of the thumb.

16. Dr. Krebs also noted that range of motion testing resulted in an impairment rating of 9% for the claimant's right upper extremity and 4% for the left upper extremity. In addition, Dr. Krebs noted that the claimant would likely need some further medical treatment, or even surgical treatment for what appeared to be some persistent weakness. Dr. Krebs recommended reevaluation with neurology and Dr. Copeland to determine if further surgery would be warranted.

17. The respondents sent the claimant for an independent medical examination (IME) with Dr. Thomas Mordick on December 20, 2016. Dr. Mordick reviewed the claimant's medical records, obtained a medical history, and performed a physical examination in connection with the IME. Dr. Mordick noted the claimant's complaints of numbness on the both dorsal and palmar aspect of the hand extending from the wrist out into the fingers, with pain in the claimant's bilateral shoulders, elbows, and wrists. On examination, Dr. Mordick found full range of motion of the claimant's wrists and hands. Dr. Mordick diagnosed the claimant with non-specific pain and numbness in the upper extremity that was not consistent with carpal tunnel syndrome. Dr. Mordick opined that the claimant's symptoms did not fit an anatomic diagnosis and that the claimant's carpal tunnel syndrome had been appropriately addressed. Dr. Mordick also agreed that the claimant was appropriately placed at MMI by Dr. Sofish.

18. The claimant underwent a repeat EMG with Dr. Burnbaum on February 16, 2017. The EMG results were reported as normal.

19. On March 3, 2017, the claimant returned to Dr. Copeland and continued to report symptoms in her right hand including pain, numbness, and tingling. Dr. Copeland's examination showed negative impingement signs bilaterally and a negative Spurling's test. Dr. Copeland noted that he did not see evidence of any recurrence of the claimant's carpal tunnel syndrome and recommended that the claimant "live with" her condition and continue to work as tolerated.

20. On April 27, 2017, the claimant was seen by Dr. Krebs for a follow up DIME. Dr. Krebs reviewed the most recent EMG results and evaluation notes from Dr. Copeland. Dr. Krebs noted that the EMG did not demonstrate any issues stemming from higher areas, such as the claimant's cervical spine or elbow. Dr. Krebs opined that the claimant was at MMI as of August 16, 2017 and assessed permanent impairment of 18% for the claimant's left upper extremity and 13% for the claimant's right upper extremity.

21. Included in Dr. Krebs' April 27, 2017 DIME report are recommendations for additional medical treatment. Dr. Krebs noted that although the claimant would not benefit from further surgical intervention, it was his opinion that active medical treatment for the claimant was warranted. In that same DIME report, Dr. Krebs recommended 16 visits of occupational therapy for the claimant's right and left wrists. In addition, Dr. Krebs recommended that the claimant undergo a functional capacity evaluation (FCE)

22. Thereafter, Dr. Mordick provided a supplemental IME report and noted that Dr. Krebs did not provide any explanation as to why the claimant continued to complain of reduced motor control over a year and half after surgery or how that may be related to the carpal tunnel release surgeries. Dr. Mordick opined that the claimant's range of motion measurements, although consistent with Dr. Krebs' prior report, were not medically consistent with the diagnosis and evidence that the claimant's presentation had changed over time, including her presentation at Dr. Mordick's IME in December 2016.

23. On September 6, 2017 and October 6, 2017, the parties attended a prior hearing before ALJ Keith Mottram in which the respondents sought to overcome Dr. Krebs' opinions regarding the claimant's permanent impairment. In ALJ Mottram's October 24, 2017 Findings of Fact, Conclusions of Law and Order, he found that the respondents failed to overcome the opinions of the DIME physician, Dr. Krebs, and ordered the respondents to pay permanent partial disability (PPD) benefits based upon Dr. Krebs' impairment ratings.

24. Thereafter, the respondents filed an amended FAL admitting for PPD benefits pursuant to ALJ Mottram's order, but denying liability for post MMI medical benefits because no such treatment was recommended by the claimant's treating physician. The claimant objected to the amended FAL and requested a hearing on the issues of *Grover* medical benefits and disfigurement.

25. Thereafter, the respondents asked Dr. Mordick to provide an opinion as to whether the post MMI treatment recommended by Dr. Krebs in the April 27, 2017 DIME report would be reasonable and necessary to allow the claimant to remain at MMI. Dr. Mordick responded in a letter dated April 3, 2018, and opined that there was no justification for the claimant to attend occupational therapy, and an FCE was not necessary because the claimant is not returning to work for the employer. Dr. Mordick's testimony at hearing was consistent with his written reports.

26. The claimant testified that she continues to have symptoms (including numbness in both hands) that were present when she was placed at MMI by Dr. Sofish. The claimant wants to have the ability to seek further medical care because she still has the same symptoms that she had at MMI. She testified that she does not know specially what medical care she might need in the future, but she wants her medical treatment to remain open.

27. The ALJ credits the medical records, the claimant's testimony, and the opinion of Dr. Krebs over the contrary opinion of Dr. Mordick and finds that the claimant has shown that it is more likely than not that she is in need of continued medical treatment (including but not limited occupational therapy and an FCE) to prevent further deterioration of her condition as a result of her compensable claim.

28. The ALJ is not persuaded by Dr. Mordick's position that because the claimant will not return to employment with the employer that an FCE is not necessary. On the contrary, the Colorado Medical Treatment Guidelines allow for various "special tests" including an FCE.

29. At the May 3, 2018 hearing, the claimant demonstrated that as a result of the March 31, 2015 injury and the related bilateral carpal tunnel surgeries she has thin, well healed surgical scars on both palms. Each scar measures approximately 2 inches long.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been

contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2014).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

4. The Colorado Medical Treatment Guidelines (the guidelines) indicate that full functional capacity evaluations (FCEs) are rarely necessary and that in many cases, a work tolerance screening will identify the claimant's ability to perform certain job tasks. In the "frequency" section, the guidelines indicate that a FCE can be used initially to determine baseline status and that additional evaluations can be performed for case closure when the patient is unable to return to the pre-injury position and information is desired to determine permanent work restrictions.

5. As found, the claimant has demonstrated by a preponderance of the evidence that she is entitled to a general award of ongoing maintenance medical benefits (including, but not limited to, occupational therapy and an FCE) based upon the recommendations of Dr. Krebs and the claimant's ongoing complaints of persistent symptoms.

6. Section 8-42-108 (1), C.R.S. provides that a claimant may be entitled to additional compensation if, as a result of the work injury, she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

7. As found, as a result of her March 31, 2015 work injury, the claimant has a visible disfigurement to her body consisting of scarring on her palms. Therefore, the claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view.

ORDER

It is therefore ordered that:

1. The respondents shall pay for maintenance medical treatment that is necessary to maintain the claimant at MMI and is designed to prevent further deterioration of her physical condition, including, but not limited to, occupational therapy and a functional capacity evaluation.

2. The insurer shall pay the claimant $500.00 for her disfigurement. The insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

Dated: May 29, 2018

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Determination of Claimant's Average Weekly Wage (AWW)

STIPULATIONS

1. Claimant is owed temporary total disability (TTD) benefits for the periods spanning September 18, 2016 through October 1, 2016 and October 2, 2016 through October 15, 2016.

FINDINGS OF FACT

1. Claimant is employed by Employer and has been so employed for approximately 17 years.

2. On May 23, 2016 Claimant sustained an admitted work related injury when he was involved in a motor vehicle accident. Claimant subsequently underwent treatment and missed time from work due to his injuries.

3. On June 26, 2017 Respondents filed a final admission of liability, admitting for a permanent partial disability impairment rating of 10% whole person and admitting to an average weekly wage of $513.70. *See* Exhibit 1.

4. On August 31, 2017 Claimant underwent a division independent medical examination.

5. On November 3, 2017 Claimant submitted an application for hearing endorsing, among other items, average weekly wage as an issue. Claimant disagrees with the admitted AWW from Respondents and believes his AWW for Employer should be higher than the admitted rate, and also believes it should be adjusted higher to include concurrent employment. *See* Exhibit 3.

6. Prior to May of 2016 Claimant was earning on average approximately $525 per week. *See* Exhibit L.

7. On May 8, 2016, a few weeks prior to his work related motor vehicle accident, Claimant received a salary increase for his work with Employer. His new salary start date was listed as May 8, 2016 and the new rate was $1,220.95 bi-weekly. *See* Exhibit 4.

8. This rate, per week, amounts to an average weekly wage of $610.48.

9. Claimant alleges that his AWW should be increased to include concurrent employment with Shankster, doing business as Concept Fur Dressing, owned by Tom and JoAnn Shankster.

10. A W-2 wage and tax statement issued to Claimant by Shankster showed that in 2016 Claimant was paid by Shankster total wages, tips, or other compensation in the amount of $2,285.22. *See* Exhibit 5.

11. Claimant worked occasionally for Shankster working on animal hides. Claimant has known the husband/wife owners of Shankster for many years and Claimant is the son of a longtime family friend of the Shanksters. Claimant initially was a paid part-time hourly employee for them and later became an employee paid by piece-work. From February of 2012 through May of 2014 Claimant was paid approximately $10/hour for his part time work with Shankster. From May of 2014 through May of 2016 Claimant was paid piece-work and Claimant would track the number of hides/pieces he had cut and would be paid based on his work.

12. Records from Shankster show various cuts of animal species including cape, full hide, etc with different measurement amounts and rates charged per cut. The cuts ranged from $9.40 to $43.39 per cut. From April 22, 2016 through May 9, 2016, Claimant was paid $449.79 for 20 cuts he indicated he performed on 8 different dates. May 9, 2016 was the last date Claimant performed cuts for the Shanksters and that he was paid for. In his paycheck, Shankster deducted federal, state, and local taxes as well as social security and medicare deductions. *See* Exhibit M.

13. In early May of 2016 Claimant decided to start his own company specializing in animal skull finishing. Claimant asked the Shanksters if they would advertise his services to their customers and they agreed. Claimant gave the Shanksters some of his newly created business cards and asked them to hand the cards out to their customers.

14. Claimant stopped working for the Shanksters in early May of 2016 to pursue his own skull finishing company. Claimant named his company “Smoking Skulls.” Claimant created a Facebook page advertising his new business and he also created business cards advertising his services.

15. The Shanksters had some issues with Claimant’s employment and with Claimant’s billing practices for his piece-work and were relieved that Claimant was parting ways and leaving their employment to start his own business.

16. The Shanksters sent some work to Claimant and Smoking Skulls in his first few weeks of running his own skull finishing company. They also gave Claimant a cooking burner machine of theirs to use in his new venture. The Shanksters paid Claimant by check for the skull work they sent to Claimant. The Shanksters did take any deductions out of this check for Claimant’s skull work and considered it as pay to Claimant’s new business and not as an employee paycheck.

17. The Shanksters and Concept Fur Dressing does not perform any skull work and they instead refer skull work out to companies/people who do skull work.

18. Claimant was injured in this work related injury just weeks after starting Smoking Skulls. His injury occurred on May 23, 2016 and he had decided to start his own company early in the month of May.

19. The testimony of JoAnn Shankster and Tom Shankster is more credible and persuasive than the testimony of Claimant. On the date of injury, May 23, 2016, Claimant was not employed by the Shanksters and had left their employment to pursue his own company and business.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2014). The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. (2014). Respondent bears the burden of establishing any affirmative defenses. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979) The facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer and a worker's compensation case shall be decided on its merits. § 8-43-201, C.R.S. (2014).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM*

Corp., 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.*

The ALJ concludes that Claimant's AWW is $610.48. This amount reflects Claimant's earnings at the time of his injury and is a fair approximation of Claimant's wage loss and diminished earning capacity. At the time of his work related injury, Claimant had recently received a pay increase from Respondent Employer. Claimant also had recently started his own business venture, Smoking Skulls. Claimant was not concurrently employed at the time of his work related injury, but he had recently started his own business with the hope of earning money but with no income yet from the business. The credible and persuasive testimony and evidence shows that Claimant was not concurrently employed at the time of his injury and that his employment with Shankster ended in early May of 2016 when he decided to start his own business. Claimant has established an increase to his AWW based on his increased salary with Respondent Employer but has failed to establish an increase in AWW based on concurrent employment.

ORDER

It is therefore ordered that:

1. Claimant's Average Weekly Wage is $610.48.

2. The Average Weekly Wage previously admitted to shall be modified to reflect this wage and any indemnity benefits owed shall be adjusted accordingly.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 29, 2018

/s/ Michelle E. Jones

Denver, Colorado, 80203

ISSUES

1. Has Claimant shown, by a preponderance of the evidence, that the two-level L4-S1 spinal fusion surgery as proposed by Dr. Bee, is reasonable and necessary to cure the effects of Claimant's admitted work injury? Respondents do not argue that Claimant's condition is unrelated to his work injury.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ enters the following Findings of Fact:

1. Claimant sustained an admitted injury to his lumbar spine on November 15, 2013. Claimant injured his lower back while moving a heavy pipe while in a bent over position. (Ex. 6, p. 57).

2. Claimant's ATP at the time, Dr. John Abbott, referred Claimant to Dr. James Bee for an orthopedic surgical evaluation, which took place on January 13, 2014. (Ex. 6, p. 57). After moving the heavy pipe, Claimant reported having pain in his lower back, with symptoms radiating down his right leg. Dr. Bee's review of the December 9, 2013 MRI indicated there was loss of disc hydration at L4-5. There was also a posterior disc bulging at L5-S1, which was affecting the right S1 nerve root, slightly more than the left. *Id.* at 58. Dr. Bee felt that Claimant should attempt conservative treatment before undergoing surgery, and recommended physical therapy and a course of epidural steroid injections.

3. Claimant returned to Dr. Bee on June 16, 2014. (Ex. 6, p. 61). It was noted that the injections previously requested had not been authorized by Respondents. Claimant reported that his symptoms were "bad enough to look at surgical intervention." *Id.* Dr. Bee indicated, "At this time, based on his history, his continued complaints, his incapacitation with the pain and the fact that he is not able to return to work, we are going to obtain a discogram to find out if he would be a good surgical candidate." *Id.* Dr. Bee stated that if the discogram did not have at least one positive level and a negative control level, he would not perform surgery. Dr. Bee referred Claimant to Dr. Martin Verhey for an L3-S1 discogram. *Id*

4. The discogram was not ultimately completed until October 27, 2016, more than two years after the initial request by Dr. Bee. (Ex. 14).

5. In the interim, Claimant's primary treating provider had been switched to Dr. Miguel Castrejon. Dr. Castrejon has been Claimant's primary ATP since October 28, 2015. (Ex. 7). As of October 28, 2015 (now nearly two years post-injury) Claimant

continued to complain of constant, stabbing pain in his lower back with the pain still radiating into the right leg. (Ex. 7 at p. 77).

6. Dr. Castrejon expressed concern with Claimant's lack of treatment over the course of two years. "Having had the opportunity to review the medical file I am concerned about the length of this case and the relative limited treatment that has been provided." (Ex. 7. P. 80). Dr. Castrejon made a referral for Claimant to see a psychologist to ensure there were no psychological barriers to recovery. Claimant received psychological care and counseling through Herman Staudenmayer, Ph.D., and Mr. William Beaver, M.A., LPC, BCIAC. (Exs. 8, 9).

7. Dr. Castrejon also recommended an EMG of the lower limbs to evaluate for radicular symptoms. He also wanted a spinal injection performed before considering a surgical second opinion. As of January 6, 2016, Respondents had yet to authorize the injection or the discogram. *Id.* at 84. Claimant continued to express increasing back pain.

8. Dr. Castrejon's progress notes of 2/24/16 show that the electrodiagnostic testing was finally performed and it did reveal findings consistent with an S1 radiculopathy. (Ex. 7, p. 87). Dr. Castrejon indicated this finding supported Claimant's subjective complaints. *Id.* By this time, Claimant had "persistent slow gait using cane for assisted ambulation". *Id.* Dr. Castrejon requested a right S1 nerve block with Dr. Stephen Ford. After the injection failed to provide relief, Dr. Castrejon referred Claimant back to Dr. Bee on June 8, 2016 for surgical evaluation. (Ex. 7, p. 88).

9. Claimant returned to Colorado Springs Orthopaedic Group on July 27, 2016 and was seen by Dr. Bee's physician's assistant, Nathan Carpenter. (Ex. 6, p. 63). Claimant reported ongoing, intense low back pain with radiation down the right leg. The pain was noted to be severely restricting Claimant's daily activities. Mr. Carpenter recommended a new MRI, since the last one had been completed almost three years prior. Claimant was also noted to be a nonsmoker.

10. Claimant returned to Mr. Carpenter on August 31, 2016 with new MRI results. (Ex. 6, p. 68). The MRI failed to identify a clear pain generator, so it was again recommended that Claimant undergo a discogram to better assess exactly which levels of the spine were causing Claimant's pain symptoms. *Id.* at 69. Mr. Carpenter felt the results of the discogram would dictate whether surgery was appropriate, as Dr. Bee had expressed years prior.

11. The discogram was authorized and performed on October 27, 2016 by Dr. Mark Meyer. (Ex. 14). The 'history of present illness' described Claimant as having ongoing lower back pain consistent with discogenic pain and right sided radicular pain. The exact procedure performed was an L3-4, L4-5, and L5-S1 discogram with fluoroscopic guidance. The discogram was negative for pain at the L3-4 control level, but markedly positive for pain at both L4-5, and L5-S1. The 85 psi pressure put on the L4-5 level produced pain at a level nine out of ten. The 30 psi pressure on the L5-S1 level produced pain at a level ten out of ten.

12. A post-discogram CT was performed the same date as the discogram. (Ex. 13, p. 152). The CT revealed contrast from the MRI extending to the outer third of the posterior annulus fibrosis. This was deemed consistent with a grade 4 annular tear.

13. Claimant returned to Dr. Bee on March 1, 2017 for further surgical consultation and to go over the results of the discogram. (Ex. 6, p. 73). Dr. Bee noted the discogram confirmed a negative control level with positive findings at L4-5 and L5-S1. There was also leakage noted at the L5-S1 level. Dr. Bee recommended an anterior posterior L4 to S1 fusion. The reviewing physician denied the request for surgery, largely based upon a lack of evidence of spinal instability in the documentation he reviewed. (Ex. 11, pp. 146-48).

14. Claimant was sent by Respondents to Dr. Allison Fall for an IME on June 22, 2017. (Ex. 15). Dr. Fall indicated in her report, "Certainly, if one follows the results of the discogram, which in my opinion was not specific in documenting that he had concordant pain, which is the typical phrase used, and relies upon the psychological indication, then [Claimant] may be considered a candidate for a lumbar fusion according to the medical treatment guidelines." (*Id.* at p. 160). Dr. Fall expressed concerns regarding possible psychological issues, and a mismatch between subjective reports of pain and objective findings, and recommended a second orthopedic evaluation.

15. Claimant was sent by Respondents to Dr. Bryan Castro for a second opinion. (Ex. 16, p. 161). Dr. Castro opined that discograms are poor indicators for surgical outcomes, and he did not feel that they adequately identify pain generators. Dr. Castro also noted that Claimant's pain was sometimes noted to be out of proportion to objective findings in his analysis.

16. Dr. Castrejon authored a special report on February 5, 2018 discussing Claimant's need for surgery. (Ex. 7, pp. 108-113). Dr. Castrejon noted that Claimant's psychological evaluation was completed by Dr. Herman Staudenmayer already. Dr. Staudenmayer indicated that Claimant was a reliable historian without defensiveness about his psychological issues, that his pain and that his anger and resentment were a result of his perceived lack of adequate medical care to date. Claimant expressed motivation to receive counseling to help deal with his claim induced anxiety and depression, which he also underwent. (Exs. 8, 9). Dr. Castrejon highlights the delays by Respondents on page three of his special report.

> This examiner had recommended and requested authorization to perform electrodiagnostic testing on October 28, 2015. The request was repeatedly denied. I performed electrodiagnostic testing on January 27, 2016 (approximately 3 months following request), despite lack of authorization in an effort to move forward with the claimant's work-up and care. At the completion of electrodiagnostic testing I recommended a right S1 nerve root block with Dr. Ford. That request was repeatedly denied. On May 11, 2016 I requested that the carrier provide authorization for the injection or forward reasoning as to why treatment was not being authorized…….The right S1 nerve root block was not completed until May

> 27, 2016 (approximately four months following request)…..Dr. Bee reviewed the repeat MRI on August 31, 2016, stating that the MRI revealed "marked degenerative changes of the 5-1 level". There was also reported to be mild loss of disc hydration seen at L3-4 and L4-5. The recommendation was made for proceeding with discography. Again, please note that this request had previously been made by Dr. Bee in 2014. (Ex. 7 at p. 110).

17. Dr. Castrejon provided an analysis of the medical treatment guidelines and their position on discograms. (Ex. 7, p. 111). He explained that Claimant met the requirements for a discogram under Rule 17 of the Medical Treatment Guidelines (hereinafter "Guidelines"), as it is intended for cases with equivocal MRI findings. Regardless, Dr. Castrejon stressed that the Guidelines are just "guides." *Id.* at 112.

18. Dr. Castrejon points out that Respondents are attempting to use Claimant's lack of diagnostics as a reason for denial: "In the case of this claimant, this examiner notes that the ability of the treating physician to carry out diagnostic measures intended to identify the diagnosis and therefore provide adequate treatment have been significantly limited by the [Respondents], thereby prolonging not only medical treatment but also directly contributing to the inability of this claimant to return to at or nor reinjury function." *Id.* Dr. Castrejon further pointed out that Claimant had annular *instability* in his lumbar spine as evidenced by the grade 4 annular *tear.* (emphasis added).

19. Dr. Castrejon concluded, "It would appear to this examiner that the request by Dr. Bee is one that is medically reasonable. It is easy to mischaracterize the claimant by bringing up loss of work time, need for prescription pain medication and development of psychological responses to pain yet the carrier needs to take responsibility with regard to delay and/or lack of appropriate diagnosis and treatment that has directly contributed to these issues." (Ex. 7, p. 112). Dr. Castrejon performed electrodiagnostic testing after three months without authorization, noting it would have taken eight months if he waited on Respondents. *Id.* at 113. The request for the right S1 nerve root block took four months for authorization. *Id.* Dr. Castrejon cited a study that indicated that although the discogram remains somewhat controversial, the data suggested that discography with imaging is a useful tool that reliably generates significantly positive outcomes. Dr. Castrejon also indicated "There was a significant association between concordant discogenic pain and annular tears as determined by discography and CT, respectively." *Id.*

20. Dr. James Bee testified via evidentiary deposition on March 12, 2018, in his capacity as an expert in orthopedic surgery. Dr. Bee explained that at his initial evaluation, he recommended conservative care because he wanted to avoid having to perform a fusion surgery on Claimant if it could be avoided. Dr. Bee anticipated a possible fusion surgery down the road based on Claimant's clinical findings. (Bee Depo. p. 8).

21. Dr. Bee explained what a discogram is. It involves putting needles directly into the disc and pressurizing the disc to look for reproduction of pain. Equally

important, there must be a negative control. (Bee Depo. p. 9). The purpose of the post-discogram CT is to see if there are any other abnormalities, such as extravasation of the contrast material, which was noted on the CT. (Bee Depo. p. 12). Dr. Bee indicated that what he puts the most faith in is the particular physician performing the discogram. Dr. Bee indicated that Dr. Mark Meyer, who performed the discogram, is a "great injectionist" and gives a fair assessment. (Bee Depo. pp. 12-13).

22. Dr. Bee was asked specifically about Dr. Castro's reservations in relying on a discogram. He indicated that one can find literature on both sides of the argument, but in his opinion, he would not have ordered and reordered a discogram if he did not feel it would help him find out what was causing Claimant's pain. (Bee Depo. p. 16).

23. Dr. Bee was asked about Dr. Castro's opinion that fusion surgery carries extremely poor outcomes in the absence of structural instability. Dr. Bee disagreed. He explained there can be a lot of different pain generators. One can have problems amenable to fusion surgery without having a defined instability based on White and Panjabi's' description of instability. (Bee Depo. pp. 16-17). He explained there are many patients with discogenic back pain that can benefit from this type of fusion surgery and opined Claimant's best chance of success rested with the L4-5, L5-S1 fusion. (Bee Depo. p. 17). Dr. Bee strongly maintained his position that this fusion was the best way to treat Claimant. (Bee Depo. pp. 18-19).

24. On Cross-examination, Dr. Bee testified that he was not sure what Dr. Castro was referring to in the way of a lack of "structural findings," but indicated Claimant had loss of disc hydration, collapse of disc height space, and high intensity zones/annular tears. (Bee Depo. p. 21). Dr. Bee was also asked about pain complaints out of proportion to objective findings. Dr. Bee testified that Claimant certainly has pain, but based on the objective findings and his examinations, he saw no red flags in Claimant's presentation. Dr. Bee specifically said that if Dr. Meyer had indicated Claimant's response to the discogram was pain at every level, even the L3-L4 control level, he certainly would not perform the surgery. Such was not the case here. (Bee Depo. pp. 23-24). Dr. Bee explained that the goal of the surgery is to decrease pain, increase function, and help get the Claimant off narcotic pain medication. (Bee Depo. p. 26).

25. Dr. Allison Fall testified via telephone during hearing on March 29, 2018 in her capacity as an expert in physical medicine and rehabilitation. She was concerned that Dr. Bee had indicated in his testimony that he had not taken the Guidelines into account when forming his opinion and she felt they were "good guidelines to follow." She noted that there are extenuating circumstances and the Guidelines should not necessarily be applied in every case. Dr. Fall testified that fusions are typically performed in the context of a structural abnormality. She also discussed the risks to the patient from this procedure, including the healing from the incisional wound, decreased range of motion, and increased stress on the level above the fusion, especially if two levels are fused.

26. On direct examination, Dr. Fall testified it was her understanding that Dr. Bee's surgery was intended to reduce pain by about 50%, but not to increase function. Surgery, she said, should be performed in the context of improving function, as she does not feel this procedure is designed to decrease pain. On cross-examination, Dr. Fall conceded that Dr. Bee testified that his surgery was intended to both decrease pain and increase function. (*See* Bee Depo. p. 26). Dr. Fall testified regarding her concerns of psychological overlay and subjective complaints of pain allegedly being out of proportion to objective findings, and that those are red flags when determining if fusion surgery is appropriate.

27. Dr. Fall testified that the lumbar spine fusion would result in Claimant being considerably less functional. Dr. Fall attributed decreased functionality to having two levels of his spine fused and further deconditioning from undergoing a major surgery. Dr. Fall also testified that a discogram was a somewhat controversial test which involved putting a probe into a disc that can cause significant pain. Dr. Fall testified that some surgeons rely on them whereas others think they're worthless due to the large subjective component. Dr. Fall testified further that surgical decisions should not be based on the results of a discogram.

28. Dr. Bryan Castro testified via post-hearing evidentiary deposition on April 23, 2018. Dr. Castro was asked whether fusion is contraindicated in the absence of flexion and extension x-rays demonstrating spinal instability. His response was that "Occasionally it's indicated. But the understanding is that the surgery is quite a large undertaking." (Castro Depo. pp. 7-8). He noted the procedure involved a fairly large incision, insertion of metal, screws, rods, and interbody cages. Recovery from such an operation took six months to one year. Dr. Castro testified that people would have less range of motion and be less functional as a result. Dr. Castro further testified that Claimant did not have instability in the lumbar spine. Dr. Castro testified that he felt the use of discograms was controversial, and he personally does not use them in his practice. (Castro Depo. pp. 8-9).

29. Dr. Castro testified that he was familiar with the Colorado Workers' Compensation Medical Treatment Guidelines. Dr. Castro testified that the Guidelines clearly noted reasons for fusions as instability, other tumors, and trauma fractures. He testified further that the Guidelines were very skeptical of discograms. Outside of the Workers' Compensation setting, he stated that people had gone away from discograms as being an accurate portrayal of diagnosing pain generators

30. Dr. Castro testified that he did not use discograms as identification of a pain generator had not been fully established. In addition, he testified that discograms can result in further degeneration of the disc just by injecting saline into a disc. Dr. Castro testified that outcomes were not any better after a discogram purportedly identified the pain generator, and the risk of a false positive was possible. While Dr. Castro agreed that a preoperative indication for lumbar fusion for the medial treatment guidelines was a positive discogram, he noted that the guidelines stated the procedure was controversial.

31. Dr. Castro agreed that the approach recommended by Dr. Bee was the correct approach if this surgery were to proceed, but he felt that Claimant should not have the operation. (Castro Depo. pp. 10-11). Ultimately, Dr. Castro felt Claimant's lack of benefit from conservative care was a primary reason for Claimant not undergoing this particular surgery. (Castro Depo. p. 14). On cross-examination, Dr. Castro did agree that the Guidelines establish a preoperative indication for a lumbar fusion in a positive discogram, but he still felt that discograms are controversial. (Castro Depo. p. 17). Dr. Castro also conceded that Claimant did receive a diagnostic response to the injection he was given at the right S1 level, and it was "great" that he received a response, but he would have *preferred* to see a *longer* response. (Castro Depo. pp. 18-19).

32. Dr. Castro testified that he questioned whether the proposed surgery would attack or relieve Claimant's pain, noting fusion surgeries often do not. Dr. Castro testified that the possibility of a 50% reduction in pain was not enough to consider a life-altering operation in hopes that Claimant may be 50% better. Dr. Castro testified he did not think any literature would support people being more functional after a two-level lumbar fusion, typically a young person. Dr. Castro testified that the lumbar spine fusion as proposed by Dr. Bee was not reasonable and necessary for the Claimant

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

3. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible

inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

Medical Benefits: L4-5, L5-S1 Two-Level Fusion

4. For a compensable injury, Respondents must provide all medical benefits that are reasonably necessary to cure and relieve the injury. C.R.S. § 8-42-101 (2010). Respondents are liable for reasonable and necessary medical treatment by a physician to whom a claimant has been referred by an authorized treating provider. *Rogers v. Industrial Commission*, 746 P.2d 565 (Colo. App. 1987). Although Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury, Respondents may challenge the reasonableness and necessity of treatment. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The Claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claims Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The question of whether a Claimant has proven by a preponderance of the evidence that a contested medical treatment is reasonably necessary is one of fact for the ALJ. *City of Durango v. Dunagan,* 939 P.2d 496, 498 (Colo. Ct. App. 1997). The ALJ's factual determinations must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Delta Drywall v. Industrial Claims Appeals Office*, 868 P.2d 1155 (Colo. App. 1993).

5. Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17-7, 7 Code Colo. Regs. 1101-3 (the "Medical Treatment Guidelines") when furnishing medical aid under the Workers' Compensation Act. The ALJ may also appropriately consider the Medical Treatment Guidelines as an evidentiary tool. *Logiudice v. Siemans Westinghouse,* W.C. 4-665-873 (ICAO January25, 2011). However, the ALJ is not required to grant or deny medical benefits based upon the Medical Treatment Guidelines. *Thomas v. Four Corners Health Care,* W.C. 4-484-220 (ICAO April 27, 2009). The Medical Treatment Guidelines are not definitive, but merely guidelines, and the ALJ has the discretion to make findings and orders which follow or deviate from the Medical Treatment Guidelines depending upon the evidence presented in a particular case. *Jones v. T.T.C. Illinois, Inc.,* W.C. 4-503-150 (ICAO May5, 2006), *aff'd Jones v. Industrial Claims Appeals Office,* N. 06CA1053

(Colo. App. March 1, 2007)(not selected for official publication); *Nunn v. United Airlines,* W.C. 4-785-790 (ICAO September 9, 2011).

6. The Medical Treatment Guidelines regarding discography are reproduced in their entirety, with ***emphasis added*** as noted:

D. Provocation Discography

i. Description**:** Discography is *accepted, but rarely indicated.* It remains *extremely controversial* as an invasive diagnostic procedure to identify or refute a discogenic source of pain for patients who are surgical candidates for fusion or disc replacement. Discography should only be performed by physicians who are experienced and have been proctored in the technique. Discograms have a significant false positive rate. It is essential that all indications, pre-conditions, special considerations, procedures, reporting requirements, and results are carefully and specifically followed. Results should be interpreted judiciously.

ii. Indications**:** *Discography may be indicated when a patient has a history of* ***functionally limiting, unremitting low back pain of greater than four months duration, with or without leg pain,*** *which has been unresponsive to all conservative interventions and meets all of the criteria for spinal fusion. A* ***patient who does not desire operative therapeutic intervention is not a candidate*** *for an invasive non-therapeutic intervention, such as provocation discography.* When a patient exhibits pain with extension and lateral bending of the spine, facet pathology should be explored prior to a discogram.

Discography may prove useful in ***evaluating the number of lumbar spine levels*** *that might require* ***fusion.*** *Discography provides further detailed information about morphological abnormalities of the disc and possible lateral disc herniations.*

Discography may indicate disc degeneration and annular disruption in the absence of low back pain. *Discography may also elicit concordant pain in patients with mild and functionally inconsequential back pain. Because patients with* ***mild back pain*** *(3 points or less on a 10-point VAS measurement* ***should not be considered*** *for invasive treatment) discography should not be performed on these patients.* In symptomatic patients with annular tears, the side of the tear does not necessarily correlate with the side on which the symptoms occur. The presence of an annular tear does not necessarily identify the tear as the pain generator.

There is good evidence that a positive discogram does not predict positive results from a fusion with the same success rate as documented spondylolisthesis (27% success rate compared to 72% success rate). A similar prospective study found that a painful disc (that is, a positive discogram) is a poor independent predictor of low back pain in initially asymptomatic subjects. Psychometric profiles, work loss, medication usage were strongly predictive of subsequent low back pain. An annular tear of high intensity zone on MRI was weakly associated.

There is some evidence that discography with a small-bore needle

increases the risk of later disc herniation at the injected level, and this risk should be taken into account when deciding on a referral for discography.

iii. Pre-conditions for provocation discography include all of the following:

A) *A patient with **functionally limiting,** unremitting back and/or leg **pain** of greater than **four months** duration in whom conservative treatment has been unsuccessful and in whom the specific diagnosis of the pain generator has not been made apparent on the basis of other non-invasive imaging studies (e.g., MRI, CT, plain films, etc.).* It is recommended that discography be reserved for use in patients with equivocal MRI findings, especially at levels adjacent to clearly pathological levels. Discography may be more sensitive than MRI or CT in detecting **radial annular tears.** However, radial tears must always be correlated with clinical presentation.

B) Prior to consideration of discography, *the patient should undergo other diagnostic testing as appropriate in an effort to define the etiology of the patient's complaint including **psychological evaluation,** myelography, **CT, and MRI.***

C) ***Psychosocial evaluation has been completed***. There is some evidence that discography in patients with somatoform disorders is likely to create a risk of development of persistent low back pain in the year following the procedure. Therefore, discograms should not be performed on patients with somatoform disorders.

D) Patients are considered surgical candidates (e.g., symptoms are of sufficient magnitude and the patient has been informed of the possible surgical and non-surgical options that may be available based upon the results of discography). Informed decision making should always be documented. *Discography should **never be the sole indication** for surgery*.

E) **Informed consent** regarding the risks and potential diagnostic benefits of discography has been obtained.

iv. Complications**:** Include, but are not limited to, discitis, nerve damage, chemical meningitis, pain exacerbation, possible damage to the control disc being injected, and anaphylaxis.

There is some evidence that discography with a small-bore needle increases the risk of later disc herniation at the injected level, and this risk should be taken into account when deciding on a referral for discography.

v. Contraindications**:** Include: (a) active infection of any type or continuing antibiotic treatment for infection; (b) bleeding diathesis or pharmaceutical anticoagulation with warfarin, etc.; (c) significant spinal stenosis at the level being studied as visualized by MRI, myelography or CT scan; (d) presence of clinical myelopathy; (e) effacement of the cord, thecal sac or circumferential absence of epidural fat; and/or (f) known allergic reactions.

vi. Special Considerations:

Discography should not be performed by the physician expected to perform the therapeutic procedure *nor by physicians in the same practice. The procedure should be carried out by an* ***experienced*** *individual who has received specialized training in the technique of provocation discography.*

Discography should be performed in a blinded format that avoids leading the patient with anticipated responses. *The procedure should always include one or more disc levels thought to be normal or non-painful in order to serve as an* ***internal control.*** *The patient should not know what level is being injected in order to avoid spurious results.* An injection may be repeated on abnormal disc levels to confirm concordance.

Sterile technique must be utilized.

It is essential that only light sedation be used for diagnostic trials in order to avoid having the sedation interfere with the patient's ability to interpret pain relief from the injection itself. Many patients may not need any medication. For those requiring anxiolytics, short acting agents, such as midazolam, may be used. As with all patients, the pain diary and functional testing post injection must be rigorously adhered to in order to correctly interpret the results of the diagnostic injection.

The discography should be performed using a manometer to record pressure. The injection may continue until either: pain is produced; contrast medium escapes from the disc; the volume of injection reaches 3mL; or a maximum pressure range of 50-75 per square inch (psi) over opening pressure is reached.

Intradiscal injection of local anesthetic may be carried out after the provocation portion of the examination and the patient's response.

A ***post-discogram CT may be considered*** as it frequently provides additional useful information about disc morphology or other pathology, however it also increases radiation exposure.

vii. Reporting of Discography**:** In addition to a narrative report, the discography report should contain a standardized classification of (a) disc morphology (b) the pain response, and (c) the pressure at which pain is produced. All results should be clearly separated in the report from the narrative portion. Asymptomatic annular tears are common. The concordant pain response is an essential finding for a positive discogram.

When discography is performed to identify the source of a patient's low-back pain, both a ***concordant pain response*** *and* ***morphological abnormalities*** *must be present at the pathological level prior to initiating any treatment directed at that level.* The patient must be awake during the provocation phase of the procedure; therefore, sedative medication must be carefully titrated.

Caution should be used when interpreting results from discography. Several studies indicate that a false positive discogram for pain is likely above a pressure reading of 50 psi above opening pressure. When the

psi associated with concordant pain is 20 psi or less from the opening pressure, the false positive rate drops to approximately 25%.

Reporting disc morphology as visualized by the post-injection CT scan (when available) should follow the Modified Dallas Discogram Scale where:

Grade 0 = Normal Nucleus.

Grade 1 = Annular tear confined to inner one-third of annulus fibrosis.

Grade 2 = Annular tear extending to the middle third of the annulus fibrosis.

Grade 3 = Annular tear extending to the outer one-third of the annulus fibrosis.

Grade 4 = A grade 3 tear plus dissection within the outer annulus to involve more than 30° of the disc circumference.

Grade 5 = Full thickness tear with extra-annular leakage of contrast, either focal or diffuse.

Reporting the pain response should be consistent with the operational criteria of the International Spine Intervention Society (ISIS) Guidelines. The report must include the level of concordance for back pain and leg pain separately using a 10-point VAS, or similar quantitative assessment. It should be noted that change in the VAS scale before and after provocation is more important than the number reported. The definition of a positive discogram is noted below. ***Two*** *control discs are* ***no longer*** *routinely* ***recommended*** *due to the possibility* that a disc injection alone may cause later pathology.

A) Positive discogram

- Stimulation of the target disc reproduces ***concordant pain*****; <u>and</u>**
- **The pain is registered as at least 7 on a 10-point VAS;** and has increased significantly from the baseline value; **<u>and</u>**
- The pain is reproduced at a pressure of ***less than 50 psi*** above opening pressure; **<u>and</u>**
- **Stimulation of at least one adjacent disc does not produce pain at all.**

If the patient does not qualify using the criteria above, then the discogram should be considered negative. The VAS score prior to the discogram should be taken into account when interpreting the VAS score reported by the patient during the discogram.

Time Parameters for provocation discography are as follows:

- ❖ Frequency: One time only.

- ❖ Maximum Duration: Repeat Discography is rarely indicated.

7. The ALJ notes that if discography were contraindicated by the Guidelines, the Guidelines would flatly say so. Instead, the pertinent Guidelines devote 4 pages in 10-point type outlining the appropriate use of discograms, and the ALJ finds that Dr. Bee effectively "checked all the pertinent boxes" for Preconditions under iii A) through E). Dr. Bee also noted that the discogram was "positive", according to the four criteria listed in in vii A) of the Guidelines, with the partial exception of the pressure required to produce the pain at L4-L5 level. By all accounts, L5-S1 is the worse of the two levels at issue.

8. The Medical Treatment Guidelines are also reproduced in their entirety regarding the appropriateness of a spinal fusion surgery, with ***emphasis added*** as noted:

4. SPINAL FUSION (USUALLY COMBINED WITH DECOMPRESSION):

b. **Description:** Use of bone grafts, sometimes combined with instrumentation, to produce a rigid connection between two or more adjacent vertebrae.

c. **Complications:** Complications include instrumentation failure, bone graft donor, site pain, superficial infection, deep wound infection, and graft extrusion. There is an increased likelihood of complications with instrumented fusion, although the majority of them are minor. There is some evidence that morbid obesity increases hospital length of stay, mortality and postoperative complications of spinal fusion surgery and results in concomitant increases in cost. Fusion can accelerate adjacent level disease. In one study, more than 1/3 of patients required surgery at an adjacent level by ten years. Refer to the following recombinant human bone morphogenetic protein section for complications from their use.

d. **Surgical Indications:** **A *timely* decision-making process is recommended** when considering patients for possible fusion. The treatment for some patients with lumbar fractures may be immediate fusion. For chronic low back problems, fusion should not be performed within the first five months of symptoms, except for fracture, dislocation, or for some patients with functional loss due to stenosis and instability.

One study of lumbar fusion outcomes in a population of workers compensation patients showed that complications occurred in 36% of patients with a 26% reoperation rate. Only 26% of patients returned to work while 67% of non-operated case returned to work however, it is not clear that severity was fully controlled for. Of the patients with lumbar fusion the following predicted non-return to work: daily morphine usage above 25MEQ 90 days post-surgery, reoperation, complications from surgery, and days off work prior to surgery. Another study of workers compensation patients and others on government funded programs (Social Security Disability Insurance (SSDI), Medicaid and Medicare age below 50 years) found that workers compensation (WC) patients continued to have significantly less benefit for relief of leg and back pain and

lesser benefits on the Oswestry Disability Index than other patients, both controls and others on government programs. The American Pain Society Guidelines note that less than half of patients with degenerative changes treated by fusion experience no pain or only sporadic pain, only a slight restriction in function and occasional use of analgesics. Fusion outcomes are better for those with symptomatic stenosis and instability.

There is good evidence that decompression and fusion, with or without instrumentation, of lumbar stenosis with degenerative spondylolisthesis leads to better 2 year outcomes for patients whose symptoms are severe. However, patients who choose non-operative treatment can also expect their symptoms to improve with nonsurgical treatment, and non-operative treatment is acceptable if this is the patient preference. Physicians should consider this when advocating for surgical procedures in this population. To assure better outcomes fusions should only be performed on those who meet the indications below.

There is some evidence that provocative discography, facet joint blocks and temporary external transpedicular fixation do not adequately screen patients with nonspecific low back pain for fusion success. The tests tend to be sensitive but not specific.

In early studies of patients with spondylolisthesis undergoing decompression with or without instrumentation the relationship between a solid radiographic fusion and a good clinical outcome was not apparent. However, a later follow-up of the same population showed that 86% of the patients with a solid fusion had good to excellent clinical outcomes, compared to only 56% of patients who had a pseudarthrosis. There remains uncertainty concerning the optimal imaging method to detect a pseudarthrosis, with controversy about the amount of motion on flexion-extension films which indicate that a solid fusion has been achieved, and whether the information to be gained from a thin-cut CT justifies the radiation dose associated with that form of imaging. This guideline does not make a recommendation on the clinical significance of fusion detected by any form of imaging.

There is some evidence that fusion is likely to have a higher beneficial effect compared to multidisciplinary rehabilitation for patients with isthmic spondylolisthesis, as differentiated from those without the condition who suffered from chronic low back pain.

There is good evidence that intensive exercise for approximately 25 hours per week for four weeks, combined with cognitive interventions emphasizing the benefits of maintaining usual activity, produces functional results similar to those of posterolateral fusion in patients with chronic non-radicular back pain and no stenosis or instability after one year. *This population may not reflect the workers compensation population as there is frequently little access to intensive rehabilitation programs. There is some evidence that lumbar fusion produces better* ***symptomatic and functional results*** *in patients with chronic non-radicular pain when* ***several months of conservative treatment have not produced*** *a satisfactory outcome.* This population may better reflect the injured worker in Colorado. Fusions associated with decompression are more likely to reduce leg pain in the presence of stenosis.

The effect of comorbidities on surgical outcomes should be considered and discussed with the patient before proceeding with complex spinal surgery. There is some evidence that morbid obesity increases hospital length of stay, mortality, and postoperative complications after spinal fusion surgery, with concomitant

increases in hospital costs. Another similar study did not find increased hospital stays but did show an increased cost and higher rates of non-routine discharges and transfusions for obese and morbidly obese patients. A third study of spinal fusion and metabolic syndrome found higher hospital charges, higher rates of non-routine discharges and increased rates of major life-threatening complications.

Informed decision making should be documented for all invasive procedures. This must include a thorough discussion of the pros and cons of the procedure and the possible complications as well as the natural history of the identified diagnosis. The purpose of spinal injections, as well as surgery, is to facilitate active therapy by providing short-term relief through reduction of pain. Since most patients with these conditions will improve significantly over time, without invasive interventions, patients must be able to make well-informed decisions regarding their treatment.

i. Use Recombinant Human Bone Morphogenetic Protein (rhBMP-2) in fusions**:** A member of a family of cytokines capable of inducing bone formation. It is produced from genetically modified cell lines using molecular cloning techniques. At the time of this guideline revision, rhBMP-2 is FDA approved for use in anterior lumbar interbody fusion (ALIF) at one level from L4-S1 in a skeletally mature patient and is used with a carrier, such as a collagen sponge or other matrix, and a cage. There is some evidence that anterior interbody cage fusion using rhBMP-2 results in shorter operative time compared with the use of iliac crest bone autograft. Minor pain at the iliac crest donor site may persist for 24 months or longer in approximately 30% of patients who undergo an autograft procedure, although local bone graft can also be used for single level fusions. RhBMP-2 avoids the need for harvesting iliac crest donor bone and can therefore, avoid this complication of persistent pain. Despite this, there is good evidence that rhBMP has no clinically important advantage over bone graft for anterior lumbar interbody fusion or posterior lumbar fusion.

   There is a potential for patients to develop sensitizing or blocking antibodies to rhBMP-2 or to the absorbable collagen sponge. The long-term effects are unknown. The rhBMP-2 used with the interbody fusion device is contraindicated for patients with a known hypersensitivity to Recombinant Human Bone Morphogenetic Protein -2, bovine type 1 collagen, or to other components of the formulation. Use of rhBMP-2 outside the anterior cage may carry a risk of swelling and ectopic bone formation, which can encroach on neurovascular structures. One study noted a higher incidence of retrograde ejaculation in ALIF cases using rhBMP-2.

   One study has reported increased neurological compromise when rhBMP was used for posterior interbody fusion or transforaminal lumbar interbody fusion. Another systematic review of rhBMP for posterior interbody fusions, posterior lumbar interbody fusion and transforaminal lumbar interbody fusion, noted appreciable rates of complications including heterotopic ossification within the epidural space or neuroforamina, postoperative radiculitis and endplate osteolyosis with interbody subsidence. At the time of this guideline revision, it is still not FDA approved for posterior interbody fusion use and considered investigational. These results should be considered prior to its use. There is insufficient information to form a recommendation with

instrumentation other than the cage specifically designed for anterior procedures. If the FDA approves its use for other operative approaches, prior authorization is required. The patient must meet all indications on the device manufacturer's list and have no contraindications. The formation of exuberant or ectopic bone growth at the upper levels (L_2–L_4) may have a deleterious impact on certain neurovascular structures, such as the aorta and sympathetic nerve chain. There are also reports of osteoclastic activity with the use of rhBMP-2. One follow-up study noted bone resorption after transforaminal lumbar interbody fusion with rhBMP-2 at a moderate or severe level in 49% of patients treated with or without a cage. This can also result in worsening back pain in the first 3 months after the procedure. However early osteolyosis can resolve.

e. **Diagnostic Indications**: Diagnostic indications for spinal fusion may include the following:

viii. Neural Arch Defect usually with stenosis or instability**:** Spondylolytic spondylolisthesis, congenital unilateral neural arch hypoplasia. It should be noted that the highest level of success for spinal fusions is when spondylolisthesis grade 2 or higher is present.

ix. Segmental Instability**:** Excessive motion, as in degenerative spondylolisthesis 4mm or greater, surgically induced segmental instability.

x. Primary Mechanical Back Pain/Functional Spinal Unit Failure**:** Multiple pain generators objectively involving two or more of the following: (a) internal disc disruption (poor success rate if more than one disc involved), (b) painful motion segment, as in **annular tears,** (c) disc resorption, (d) facet syndrome, and/or (e) ligamentous tear. Because surgical outcomes are less successful when there is neither stenosis nor instability, the requirements for pre-operative indications must be strictly adhered to for this category of patients.

xi. Revision surgery for failed previous operation(s) if significant functional gains are anticipated.

xii. Other diagnoses: Infection, tumor, or deformity of the lumbosacral spine that cause intractable pain, neurological deficit, and/or functional disability.

f. **Pre-operative Surgical Indications:** Required pre-operative clinical surgical indications for spinal fusion include all of the following:

i. ***All pain generators are adequately defined and treated;*** **and**

ii. ***All physical medicine and manual therapy interventions are completed;*** **and**

iii. X-ray, MRI, or CT myelography demonstrate spinal **stenosis** with instability or disc pathology, requiring decompression that may surgically induce segmental instability or a ***positive discogram;*** **and**

iv. ***Spine pathology is limited to two levels***; **and**

v. **Psychosocial evaluation** with confounding issues addressed; (required for all cases except those with degenerative spondylolisthesis with persistent claudication or radicular leg pain with neurologic signs); **and**

vi. For any potential fusion surgery, it is recommended that the injured worker ***refrain from smoking*** for at least six weeks prior to surgery and during the period of fusion healing. Because smokers have a higher risk of non-union and higher post-operative costs, it is recommended that insurers cover a smoking cessation program peri-operatively.

g. **Operative Treatment:** Operative procedures may include: (a) Intertransverse fusion often with pedicle screws; (b) Anterior fusion (with or without rhBMP-2) – generally used for component of discogenic pain where there is no significant radicular component requiring decompression; (c) Posterior interbody fusion – generally used for component of discogenic pain where posterior decompression for radicular symptoms is also performed; or (d) Anterior/posterior (360°) fusion – most commonly seen in unstable or potentially unstable situations or non-union of a previous fusion. Iliac crest bone grafts do not appear to result in increased complications, reoperation or patient dissatisfaction.

h. **Post-Operative Treatment:** An individualized rehabilitation program based upon communication between the surgeon and the therapist and using the therapies as outlined in Section F. Therapeutic Procedures Non-Operative. In all cases, communication between the physician and therapist is important to the timing of exercise progressions. There is some evidence that it is appropriate to defer active rehabilitation until 12 weeks as groups beginning at 6 week had worse outcomes. Post-operative active treatment will frequently require a repeat of the therapy sessions previously ordered. The implementation of a gentle aerobic reconditioning program (e.g., walking), and back education within the first post-operative week is appropriate in uncomplicated post-surgical cases. Some patients may benefit from several occupational therapy visits to improve performance of ADLs. Participation in an active therapy program that includes core stabilization, strengthening, and endurance is recommended to be initiated once the fusion is solid and without complication. If it is performed, care should be taken not to overly mobilize the section above and below the fusion at that time. The goals of the therapy program should include instruction in a long-term home based exercise program (refer to F.12. Therapy – Active).

i. **Return to Work**: Barring complications, patients responding favorably to spinal fusion may be able to:

- Return to sedentary-to-light work within six to twelve weeks post-operatively;
- Light-to-medium work within six to nine months post-operatively;
- Medium-to-medium/heavy work within six to twelve months post-operatively; and
- Heavy-to-very-heavy post-operative labor should be considered for vocational assessment as soon as reasonable restrictions can be predicted.

The practitioner should release the patient with specific physical restrictions and should obtain a clear job description from the employer if necessary. Once an

> injured worker is off work greater than six months, the functional prognosis with or without fusion becomes guarded for that individual.

9. Despite Dr. Bee's acknowledgement that he was not specifically trying to check all the boxes according to the Guidelines' 'Pre-operative Surgical Indications', he has in essence done so anyway. The L4-L5 and L5-S1 levels of the spine (two levels only) are likely the pain generators as evidenced by the imaging studies, the opinions Drs. Bee and Castrejon, the positive EMG, and the diagnostic response at the S1 level to the ESI performed by Dr. Ford. All potential other medical interventions to cure or alleviate Claimant from the effects of his injuries have been exhausted, aside from the requested fusion. Claimant is also a non-smoker.

10. The December 9, 2013 MRI showed disc bulging at L5-S1 affecting the right nerve root more than the left. Claimant underwent psychological treatment and counseling with Dr. Herman Staudenmayer and Mr. William Beaver. Claimant underwent physical therapy that failed to provide any lasting relief. Claimant underwent an ESI that provided a diagnostic response. Claimant underwent an EMG that demonstrated findings consistent with an S1 radiculopathy. A discogram, performed by a physician-not associated with Dr. Bee's practice- provided positive results at L4-5 and L5-S1 with a negative control at L3-4, as anticipated by Dr. Bee. The post-CT discogram revealed a grade four annular tear-arguably an indicator of instability-in addition to credible complaints of intense, chronic pain.

11. To the extent that it might still be found that Dr. Bee and Castrejon have deviated from the Guidelines, the ALJ finds, by a preponderance of the evidence, that any such deviation is reasonable and necessary to cure Claimant of the effects of his work injury. As it stands now, and has for several years, Claimant is effectively disabled from the pain. The ALJ certainly finds the reports, testimony, and opinions of Dr. Castro and Dr. Fall to be sincerely and professionally rendered. However, the opinions of Dr. Castrejon and Dr. Bee are found to me more persuasive in this instance. Time will tell if this procedure proves to be successful in reducing Claimant's pain by at least 50%, and thereby restoring additional function, but Claimant has proven that he deserves the chance to find out. He has waited long enough.

ORDER

It is therefore Ordered that:

1. Respondents shall authorize and pay for the two-level L4-S1 fusion surgery as proposed by Dr. Bee, as well as all costs and treatment associated with it.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 30, 2018

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

Exhibit 9 was withdrawn. The Claimant attached her summary of update wage records to her Post-Hearing Reply Brief to Respondents' Post-Hearing Answer Respondents' Post-Hearing Answer Brief. Respondents' Exhibits A through LL were admitted into evidence, without objection.

Before the last session of the hearing, Claimant filed an interim brief on February 19, 2018, Respondents filed an interim answer brief on the same date, and on February 21, 2018, Claimant filed an interim reply brief on February 21, 2018. At the conclusion of the hearing, the ALJ ordered post-hearing briefs. Claimant's post-hearing opening brief was filed on April 20, 2018. Respondents' post hearing answer brief was filed on April 25, 2018. Claimant's post-hearing reply brief was filed on April 27, 2018 and referred to the ALJ on April 30, 2018, at which time the matter was deemed submitted for decision.

ISSUES

The designated issues concern the Claimant's Petition to Re-Open her claim, dated January 9, 2018, based upon an alleged change or worsening of condition, allegedly attributed to an admitted July 18, 2016 right knee injury; or, in the alternative, for temporary disability benefits, which were denied in the latest Final Admission of Liability (FAL), dated June 13, 2017 and timely objected to by the Claimant on July 10, 2017.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. In the final analysis, both parties did not accept offered stipulations by the opposing party.

2. On June 13, 2017, the Respondents filed an FAL, admitting for a date of maximum medical improvement (MMI) date of November 8, 2016; for zero permanent partial disability (PPD) benefits; denying temporary disability benefits; and, admitting for causally related and reasonably necessary post-MMI medical care and treatment. The Claimant filed a timely objection to the latest FAL on July 10, 2017.

The Injury and the Treatment

3. On July 18, 2016, the Claimant walked into the handle of a floor safe, and the handle poked her right knee below her kneecap. She did not fall, and she did not

injure any other part of her body at that time. She timely reported the incident to the Employer and she was sent to HealthOne. On July 19, 2016, Christian Updike, M.D., authorized treating physician (ATP) evaluated the Claimant, and noted that she had no visible sign of injury. On September 8, 2016, Dr. Updike's exam findings documented no warmth, redness or swelling; diffuse nonfocal tenderness, and questionable effort.

4. On November 4, 2016, Barry Ogin, M.D., a pain management specialist, noted that the Claimant had a possible somatization disorder and her physical exam was benign other than hypersensitivity. On November 8, 2016, ATP Dr. Updike placed the Claimant at MMI and reported that she had symptom magnification and delayed recovery concerns.

5. On February 22, 2017, the Claimant returned to Dr. Ogin for a maintenance care evaluation. She reported allodynia and altered sensation diffusely throughout her right leg anteriorly and posteriorly into her calf, foot and ankle. Dr. Ogin's impression was possible neuropathic pain/CRPS (chronic regional pain syndrome) with minimal objective findings of anything, and possible somatization disorder. Dr. Ogin suggested moving ahead with autonomic testing to fully rule out CRPS. He further indicated that he suspected this would be normal. He postulated that even if the testing was normal, the Claimant would be resistant to the suggestion that her pain is nonphysical.

Division Independent Medical Examination (DIME) of Mark Winslow, M.D.

6. On March 21, 2017, Dr. Winslow evaluated the Claimant for a DIME. He noted that while the Claimant was complaining of severe pain, there was no objective findings, no swelling, no redness, no skin color changes, no palpable temperature changes, her range of motion extension was full, as was her flexion. He commented that the Claimant seems to magnify her symptoms she had in the past and is currently hypervigilant regarding her symptoms and reactions to her injuries. Dr. Winslow's ultimate opinions were that the Claimant did not have CRPS, she had at most a right knee contusion, she was at MMI with no impairment, and no work restrictions.

7. Although maintenance care was admitted, the Claimant did not follow-up with Dr. Updike or Dr. Ogin. Instead, she shopped for her own physicians, and chose to pursue care outside of the worker's compensation system. At hearing, the Claimant admitted that she did not provide any of her new physicians with any of her worker's compensation claim related medical records.

8. On September 20, 2017, Simon Oh, M.D., evaluated the Claimant. Dr. Oh indicated there were some features that suggested CRPRS. He did not render a definitive diagnosis. He referred the Claimant to a pain specialist, apparently unaware that the Claimant had already been under the care of Dr. Ogin, who is a pain specialist. On November 27, 2017, the Claimant returned to Dr. Ogin for a maintenance visit. Her

pain was reported at 8/10, the same as it was in February 2017 before the alleged worsening. Dr. Ogin indicated that here was a remote possibility that the Claimant had a neuropathic component to her pain. He indicated that autonomic testing and thermography was warranted and reasonable, and that if the Claimant's testing was negative, he would not have further recommendations.

10. John Raschbacher, M.D., performed a physician advisor review of the request for autonomic testing, and thermography. Dr. Raschbacher reviewed the DIME report, and he was of the opinion that the CRPS testing was not reasonably necessary. Respondents' counsel wrote to Dr. Ogin and provided him with the Claimant's prior medical records showing hypersensitivity, as well as the MMI report from Dr. Updike, and the DIME report from Dr. Winslow. Dr. Ogin was asked to review these records, and his own medical file, and provide updated opinions.

11. In a response report, dated December 13, 2017, Dr. Ogin initially made it clear that "I have seen no clinical evidence of CRPS and I remain concerned about potential nonorganic cause of her knee pain". He then reviewed the additional records, commenting in his report about the findings and opinions of the other providers. Dr. Ogin then rendered the following opinion:

> In response to your questions and concerns, I do find these additional records compelling. He prior history of pain complaints with non- physiologic findings and hypersensitivity do indicate a pattern of chronic pain with probably underlying psychological barriers or other nonorganic factors. She had a minimal injury, and has failed to improve despite extensive treatment to date. I would anticipate that even if she had CRPS, she would have some improvement with range of motion and medication management. I would not expect the debility she is reporting. At this point, I do agree with Dr. Winslow that ongoing treatment and diagnostic testing will likely be unrevealing, and continued testing and focus on the patient's pain could adversely affect her outcome. Constantly focusing on organic pain generators (may) divert attention away from underlying psychological contributors. I would, therefore, withdraw my request for additional diagnostic testing for CRPS. Given this, I do not feel that this testing is medically necessary or reasonable or directly attributable to her occupational injury of 07/18/16.

Re-Opening

12. The Claimant filed a Petition to Re-Open, dated January 9, 2018, alleging a changed condition, with the attached report of Shannon Bock, PA-C (Certified Physician's Assistant, co-signed by Paul S. Leo, M.D., noting the Claimant's complaints of severe knee pain. There is no indication of a baseline of when and if the Claimant's condition worsened nor is there any indication that PA-C Bock and Dr. Leo were made aware of the Claimant's previous medical history. Therefore, the ALJ finds the report is neither persuasive nor credible on the issue of changed condition.

Ultimate Findings

13. The opinions of ATPs Dr. Updike and Ogin, DIME Dr. Winslow and Independent Physician Reviewer Dr. Raschbacher are highly persuasive and credible. They outweigh the conjecture of Dr. Oh, whom the Claimant sought on her own—without making Dr. Oh aware of her previous medical history. Indeed, the opinions of the ATPs and the DIME are virtually undisputed that the Claimant sustained a minor injury On July 18, 2016 and has continued to exhibit symptom magnification behaviors ever since. Other than the Claimant's testimony and the implications of Dr. Oh and Dr. Leo, there is no persuasive evidence that the Claimant did **not** reach MMI on November 8, 2016. There is no indication of a baseline of when and if the Claimant's condition worsened nor is there any indication that PA-C Bock and Dr. Leo were made aware of the Claimant's previous medical history. Therefore, the ALJ finds their report is neither persuasive nor credible on the issue of changed condition.

14. The ALJ makes a rational choice, based on substantial evidence, to accept the opinions of ATPs Updike and Ogin, DIME Dr. Winslow and Independent Physician Reviewer Dr. Raschbacher and to reject any opinions or implications to the contrary.

15. Based on the totality of the evidence, the ALJ finds that the Claimant has failed to prove, by a preponderance of the evidence that she did **not** reach MMI on November 8, 2016; that her permanent partial disability (PPD) exceeded zero percent; and, that her condition changed or worsened since she was declared to be at MMI. Also, she has not overcome the DIME of Dr. Winslow by clear and convincing evidence, in response to her timely objection to the FAL, however, this proposition is moot in light of the Claimant's Petition to Re-Open, dated January 8, 2018, which the Claimant has failed to sustain by preponderant evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-Contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the opinions of ATPs Dr. Updike and Ogin, DIME Dr. Winslow and Independent Physician Reviewer Dr. Raschbacher were highly persuasive and credible. They outweighed the conjecture of Dr. Oh, whom the Claimant sought on her own—without making Dr. Oh aware of her previous medical

history. Indeed, the opinions of the ATPs and the DIME were virtually undisputed that the Claimant sustained a minor injury on July 18, 2016 and continued to exhibit symptom magnification behaviors, without significant changes thereafter. Other than the Claimant's testimony and Dr. Oh's and Dr. Leo's co-signed implications, there was no evidence that Claimant did **not** reach MMI on November 8, 2016. There was no indication of a baseline of when and if the Claimant's condition worsened nor was there any indication that PA-C Bock and Dr. Leo were made aware of the Claimant's previous medical history. Therefore, their report was neither persuasive nor credible on the issue of changed condition.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of ATPs Updike and Ogin, DIME Dr.Winslow and Independent Physician Reviewer Dr. Raschbacher and to reject any opinions or implications to the contrary.

Re-Opening

c. Under § 8-43-303(1), C.R.S., after MMI and within six years of the date of injury, an ALJ may re-open a claim based on fraud, an overpayment, **an error, a mistake,** or a change in condition. See *El Paso County Department of Social Services v. Donn,* 865 P.2d 877 (Colo. App. 1993); *Burke v. Indus. Claim Appeals Office,* 905 P. 2d 1 (Colo. App. 1994); *Hanna v. Print Express, Inc.,* 77 P. 3d 863 (Colo. App. 2003); *Donohoe v. ENT Federal Credit Union,* W.C. No. 4-171-210 [Indus. Claim Appeals Office (ICAO) September 15, 1995]. This is so because MMI is the point in time when no further medical care is reasonably expected to improve the condition. § 8-40-101(11.5), C.R.S. (2009); *City of Colorado Springs v. Indus. Claim Appeals Office,* 954

P.2d 637 (Colo. App. 1997). Where a claimant seeks to re-open based on a worsened condition, she must demonstrate a change in condition that is "causally connected to the original compensable injury." *Chavez v. Indus. Comm'n,* 714 P.2d 1328 (Colo. App. 1985). It is well established that if an industrial injury leaves the body in a weakened condition, and that weakened condition is a proximate cause of further injury to the injured worker. The additional injury is a compensable consequence of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). Where the actual cause of symptoms is not discovered until after surgery and after a FAL had been filed, based on a DIME opinion of MMI, the Court held that a mutual mistake of fact concerning the claimant's condition was made at the time the DIME placed the claimant at MMI was a n appropriate ground for re-opening. *See Berg. V. Indus. Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005). As found, based on the totality of the evidence, the Claimant has failed to prove, by a preponderance of the evidence that she did **not** reach MMI on November 8, 2016; that her permanent partial disability (PPD) exceeded zero percent; or, that her condition changed or worsened since she was declared to be at MMI. Also, she did not overcome the DIME of Dr. Winslow by clear and convincing evidence, in response to her timely objection to the FAL, however, this proposition is moot in light of the Claimant's Petition to Re-Open, dated January 8, 2018, which the Claimant failed to sustain by preponderant evidence.

Overcoming the DIME of Dr. Winslow

d. The party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475, 482 (Colo. App. 2005); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P. 2d 21 (Colo. App. 1995). To

overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, the Claimant failed to overcome the DIME of Dr. Winslow by clear and convincing evidence, in response to her timely objection to the FAL, however, this proposition is moot in light of the Claimant's Petition to Re-Open, dated January 8, 2018, which the Claimant failed to sustain by preponderant evidence.

Burden of Proof on Re-Opening

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to additional benefits and to a re-opening of her claim based on a change of condition.. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to satisfy her burden of proof with respect to re-opening.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Claimant's Petition to Re-Open, dated January 8, 2018, is hereby denied and dismissed.

B. The Claimant having failed to overcome the Division Independent Medical Examination opinions of Mark Winslow, M.D., that the Claimant reached maximum medical improvement on November 8, 2016, with zero permanent partial improvement, the latest Final Admission of Liability, dated June 13, 2017, is hereby affirmed and adopted by reference as if fully restates herein.

DATED this 30 day of May 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable injury to his right shoulder on October 4, 2017.

II. If Claimant established that he suffered a compensable right shoulder injury, whether he also proved by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was born on November 18, 1950 and was 67 years of age at the time of the hearing.

2. Claimant was hired on January 16, 2017, to work for Respondent-Employer. Claimant's job title was that of customer service representative. He worked at a call center answering calls from clients of Employer.

3. Claimant testified at approximately 11:00 a.m. on October 4, 2017, he went to the bathroom and, that upon attempting to exit while opening the door inward with his right hand/arm he heard or felt his shoulder "pop." According to Claimant, the door would stick making it difficult to pull open.

4. Claimant testified he did not think much of the popping. He thought he pulled a muscle. After the alleged incident, Claimant went into a coaching meeting with his supervisor, Brian Roe. After the coaching meeting, Claimant testified that he asked Mr. Roe if he had any Tylenol for pain, as he believed he had just pulled a muscle. Mr. Roe did not have any Tylenol.

5. Claimant testified on October 6, 2017 he again went to the same bathroom and had a similar experience. He testified he told Melissa Hicks about the door sticking and asked her to have maintenance adjust it.

6. John Coroneos is the general manager for Employer's call center on the third floor. Mr. Coroneos testified that Conduent Business Services took over for Xerox Business Services and provides customer service for a large international phone carrier.

7. Mr. Coroneos began his job October 2, 2017. He reported that he first became aware of the claim was when he received a letter from Claimant's attorney. According to Mr. Coroneos, the letter was received at the end of October 2017.

8. Mr. Coroneos testified there are two sets of restrooms on the third floor of Employer's office building. He reportedly used these restrooms on a regular basis. Mr. Coroneos testified he had no problems with the door that Claimant alleged, "stuck."

9. Melissa Hicks testified she has worked for Respondent-Employer for a little over two years in total, one year for Conduent and one year for Xerox. Ms. Hicks has been a team lead for the past 10 months. Her job duties are to help supervise employees and handle escalated calls for service.

10. Ms. Hicks is familiar with Claimant as part of the customer service team. Ms. Hicks testified that Claimant approached her about the bathroom door sticking but during their conversation, he did not claim that he had injured his shoulder. Rather he only reported that his shoulder was sore.

11. Brian Roe testified at hearing that he has worked for Conduent/Xerox for four years and was Claimant's supervisor. Mr. Roe's job duties include coaching customer service representatives, maintaining reports regarding their performance and being aware of any state or federal laws or rules concerning human resource issues. Mr. Roe's normal workdays in October 2017 were Sunday through Thursday 9:00 a.m. to 6:30 p.m.

12. Mr. Roe testified that on October 4, 2017, he had a regular weekly coaching meeting with Claimant. He testified that Claimant did not notify him of a work-related injury to his shoulder during that meeting. Mr. Roe testified that if Claimant had reported a work related injury during this meeting, he would have made sure the appropriate paperwork was filed to address the injury. Mr. Roe recalled Claimant asking him if he had any Tylenol because his (Claimant's) shoulder hurt. According to Mr. Roe, Claimant did not tell him that his shoulder pain was caused by an injury at work.

13. On October 16, 2017, Mr. Roe testified that Claimant sent him a text stating that he had hurt his shoulder while exiting the bathroom as he was pulling on the door on October 4, 2017. Claimant indicated that because he simply thought it was only a pulled muscle, he did not report it. Claimant also noted that since his shoulder had not improved by October 16, 2017, he felt there was something more going on. He requested that Mr. Roe begin the process of starting a workers' compensation claim. Claimant inquired in that text message as to where he should seek medical treatment. According to Mr. Roe, he informed Claimant that since he had not provided written notice of the injury in a timely fashion, i.e. four days, he was not covered by workers compensation and was barred from making a claim. Mr. Roe testified that he told Claimant that he should seek treatment with his personal physician. Mr. Roe testified that he was not aware of the medical provider designation form providing Claimant a choice of medical providers with whom he could treat for work related injuries. Consequently, Claimant was not provided with a designated provider list. Mr. Roe admitted to his erroneous understanding of the reporting rules concerning Colorado workers' compensation claims. He testified that he based this erroneous belief on his understanding of the Colorado Workers' Compensation Rules, which were also posted at the jobsite, and similar information from prior employers for whom he had worked.

14. Claimant's primary care physicians/providers work at Davita Medical Group. Review of Claimant's records from Davita establish that after his alleged injury Claimant was seen at Davita on a number of occasions without ever mentioning his alleged shoulder injury occurring on October 4th or 6th. The Davita records indicate that after his alleged October 4th injury, Claimant sought care on October 12, 2017 at 9:00 a.m. Claimant was evaluated for osteoarthritis of the hand and gastritis on this date. The report from this visit is devoid of any reference to shoulder pain or any injury occurring October 4th or October 6th. Rather, review of the active problem list 1 through 18 as documented does not establish Claimant reporting an active problem with his right shoulder. Review of the physical exam establishes claimant's neck was supple. Review of the musculoskeletal examination establishes degenerative changes unchanged from previous. Review of a neurologic examination reveals no focal deficits.

15. It is specifically found the October 12, 2017 chart note does not support the alleged October 4, 2017 industrial injury nor, for that matter, a subsequent incident of October 6, 2017.

16. Claimant returned to Davita on October 16, 2017 again at 9:00 a.m. As noted above, this is the same day that Claimant reported that he suffered an injury to his shoulder, although he did not say what had happened only that it happened at work according to the attendance log. Again, review of the report from this date of visit is devoid of any reference to a shoulder injury. Indeed, the report indicates that Claimant was seen for acute otitis media, fever and nasal congestion. Claimant continued to report his health was good without a loss in interest in doing pleasurable things over the past two weeks. Under history of present illness, it indicates that, "[Claimant] here c/o sleeping a lot, cough that is productive that is "reddish brown. He reports fever, ST and congestion X 3 days. No one else has been ill. He is taking Nyquil which has helped." Review of the past medical history, this time documenting eight issues, does not establish a shoulder problem. Review of the physical examination section of the report under neck indicates: "neck: the neck was supple and the appearance of the neck was normal." It is specifically found complete review of the October 16, 2017 chart note does not support any injury to the right shoulder at work as alleged either 10 or 12 days previously.

17. Claimant returned to Davita on October 27, 2017 this time at 10:00 a.m. This time Claimant was being seen for "cramp and spasm." Under chief complaint is the following notation: 66 y/o m here for right leg cramps x1 day. Since 2:00 a.m., constant. Patient rates his health is good. The patient has had no loss of interest in doing pleasurable things over the past two weeks. Under active problems nine are listed, none of which reveal a right shoulder problem. Under review of systems, portion of the report is the following: "musculoskeletal no joint pain no joint swelling, cramps." Motor strength was noted to be "normal" in both upper and lower extremities and no neurologic deficits were documented. It is specifically found that the October 27, 2017 chart note does not support Claimant's report of an alleged industrial injury occurring either October 4 or October 6, 2017.

18. Claimant returned to Davita on November 16, 2017, with a continued complaint of "cramp and spasm." The chief complaint is noted as "66 y/o m here for 2 week f/u on labs and leg cramping. Patient rates his health is very good. The patient has had no loss of interest in doing pleasurable things over the past two weeks. Under Active Problems this time, 10 are listed. No active shoulder problem is listed. Although limb pain is noted, the ALJ finds this likely leg pain based upon Claimant's chief complaint and the balance of the physical examination findings. It is specifically found the November 16, 2017 chart note does not support Claimant's assertion that he suffered a right shoulder injury on either October 4 or October 6, 2017.

19. The first medical notation of the alleged incident in the Davita records is contained in a noted from a December 4, 2017 noted authored by Shireen Rudderow, M.D. In this noted Claimant reported that he "injured his shoulder when he pulled on a "stubborn bathroom door" on October 4, 2017 and "reinjured it on October 6th when he pulled on the same door." According to Claimant, it "[felt] like his shoulder is coming out of the socket." The report form this date of visit also indicates the following: "Here with 2 months right shoulder pain. State (sic) "took this long to get OK from work comp to be seen." Was pushing/pulling on jammed door, felt immediate pain in shoulder, and did report to supervisor. According to the report, Claimant tried icing, rest and Vicodin without much relief." As noted, none of Claimant's medical reports prior to December 4, 2017, contain any information regarding the reporting of an alleged shoulder injury nor Claimant's attempts to relieve the pain associated with one.

20. Claimant admitted that he saw his primary care physician for other non-work-related conditions during October and November 2017. According to Claimant, he did not tell those physicians about his shoulder pain because it was his understanding that they were not workers' compensation doctors. The ALJ finds Claimant's explanation for the absence of shoulder complaints in the medical record unpersuasive.

21. Claimant was evaluated in an IME setting by Eric O. Ridings, M.D. at the request of Respondents on February 19, 2018. Upon completion of a physical examination, Dr. Ridings opined that Claimant presentation was "most similar to that of someone with a severe . . . massive rotator cuff tear, with secondary right upper quadrant myofascial pain." According to Dr. Ridings the described MOI would be unlikely to cause a rotator cuff tear because the movement associated with pulling on the door would not be "expected to cause any abnormality of the glenohumeral joint itself." Dr. Ridings concluded that Claimant may have a rotator cuff tear but that tear did not occur as a consequence of pulling on the door as Claimant alleged. Consequently, Dr. Ridings opined that Claimant's shoulder complaints were not work related and further examination/treatment should occur outside the workers' compensation system.

22. Dr. Timothy Hall performed an IME on March 19, 2018 at the request of the Claimant. Dr. Hall's examination was very limited due to complaints of extreme pain. He was unable to make a diagnosis based on his examination without an MRI of the joint. He did note that when he saw Claimant, his pain encompassed the entire shoulder girdle, which according to Dr. Hall could have changed in nature and location since the original injury in October of 2017. Dr. Hall testified that the act of pulling open

the door and then stepping around the door would cause the shoulder joint to be in some abduction heading toward external rotation. According to Dr. Hall, this mechanism of injury (MOI) would involve the biceps tendon. Older individuals (the Claimant is 67 years old) in the same age group as the Claimant tend to have weak rotator cuff humeral head stabilizers. Dr. Hall testified that the maneuver of pulling the door towards him could have led to subluxation of the humeral head which could, in turn, lead to tendon tears. Dr. Hall explained that pulling weight toward oneself can stress the rotator cuff, can cause impingement and could cause ligament strain. He also explained that there is really no way to know for sure what is going on in the Claimant's shoulder because an MRI, which is the gold standard test to show internal shoulder pathology, has not been completed. Dr. Hall opined that an MRI Arthrogram would be even more helpful. Dr. Hall felt that the Claimant could have a rotator cuff tear or there could be other pathology present. Dr. Hall further opined that although Claimant's MOI is not common, considering he was using his non-dominant extremity in a position that compromises the shoulder joint, he felt the right shoulder pain is related to the October 4th and 6th bathroom door incidents. Dr. Hall opined that Claimant is left handed and injured his non-dominant right shoulder is relevant in this case because non-dominant extremities tend to be weaker, less coordinated and more vulnerable to injury.

23. Dr. Hall testified that he could not say whether Claimant had a rotator cuff tear in the absence of an MRI or arthrogram, although the fact that Claimant obtained relief with an injection supports a conclusion that something is going on within the shoulder joint. According to Dr. Hall, the shoulder joint is in its most vulnerable position and prone to injury when in abduction and external rotation. He described the MOI in this case as the arm being abducted to 90° and externally rotated in order to pull the door open after which Claimant walked around it. Dr. Hall testified that there is no better explanation to support Claimant symptoms.

24. Upon receipt of Dr. Hall's IME report, Dr. Ridings commented further regarding causation. In a reported dated transcribed March 24, 2018, Dr. Ridings opined that Dr. Hall's description of the cause and MOI in this case was "so general and vague that it is unhelpful." According to Dr. Ridings, "[u]nless the humerus is elevated, either because the arm is elevated to 90° or above or because some external force is pushing up on the humerus from below, such as when one falls on the elbow or on an outstretched hand, no 'impingement' is expected to occur." The ALJ infers from Dr. Ridings report and his subsequent testimony that Claimant never placed his arm/shoulder in a position where it could have been injured by pulling on the door in question.

25. Dr. Ridings testified that Claimant's physical examination supports a number of different diagnoses; however, his pain focused in the subacromial space strongly suggests the presence of a rotator cuff tear. According to Dr. Ridings, the muscles making up the rotator cuff are not involved with pulling a door open. Dr. Ridings explained that the shoulder would not be abducted to 90° to pull the door in question open unless Claimant was much lower (on his knees) than the handle of the

door, which he did not allude to. Moreover, Dr. Ridings noted that Claimant's described MOI would not involve the biceps tendon and there would be no impact on the humeral head causing impingement of the rotator cuff.

26. Pictures of the door in question were admitted into evidence. Review of those pictures persuades the ALJ that Claimant's arm would be extended and the shoulder slightly flexed as he was pulling the door open based upon the location of the door's handle. The suggestion that Claimant walked around the door after abducting the shoulder to 90° to pull the door open as explained by Dr. Hall is not convincing. Based upon the evidence presented, the ALJ finds the opinions of Dr. Ridings credible and persuasive. His opinions, particularly those touching upon the MOI and the musculature involved in producing the upper extremity movement necessary to pull the door open in this case are more persuasive than the contrary opinions of Dr. Hall.

27. Claimant has failed to meet his burden of proof to establish by a preponderance of the evidence that he sustained an injury to his right shoulder arising out of and in the course of his employment as a customer service representative for Employer. Because Claimant has failed to prove he suffered a compensable injury, this order does not address his entitlement to medical benefits further.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

B. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo.App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,*

8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201. In this case, the ALJ finds Claimant's testimony regarding the reason he delayed the reporting of his alleged injury unpersuasive. The ALJ agrees with Dr. Ridings that it makes no sense that Claimant, assuming he had a painful shoulder, would not at least mention his pain/symptoms during four visits to his primary care physician after his alleged injury whether those physicians would have treated the condition or not. The ALJ finds the lack of shoulder complaints during these visits coupled with normal upper extremity examination findings concerning and suggestive of a lack of any medical condition of the shoulder requiring treatment. Here, the persuasive evidence presented calls into question Claimant's assertion that he sustained a work related injury on October 4th and/or 6th.

D. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo.App. 1990) To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo.App. 1992)(ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the medical record evidence coupled with pictures of the door in question support the opinions of Dr. Ridings that Claimant's described MOI probably did not cause his right shoulder complaints. As found, the contrary opinions expressed by Dr. Hall are not convincing.

E. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

F. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment

relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits, i.e. the scope of his employment relationship with Employer and during an activity to minister to his personal comfort, i.e. using the bathroom.[1] Regardless, the question of whether the alleged injury/condition, for which Claimant seeks benefits, "arose out of" his employment must be resolved before the injury can be deemed compensable.

G. The "arising out of" test is one of causation. There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* A causal connection exists if it is demonstrated that the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. *Marie Eslinger v. Kit Carson County Memorial Hospital*, W.C. No. 4-638-306 (ICAO, January 10, 2006)(citing *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). This includes discretionary activities on the part of the employee that are devoid of any duty component, and are unrelated to any specific benefit to the employer*. Id., citing Boulder v. Streeb, supra*; *L.E.L. Construction v. Goode,* 849 P.2d 876 (Colo. App. 1992), rev'd on other grounds 867 P.2d 875 (Colo. 1994). As noted, actions taken to minister to a worker's personal comfort, such as using the restroom have been held to be incidental to employment. Nonetheless, there must be a causal connection between Claimants shoulder condition and the act of pulling on the bathroom door for the alleged injury in this case to be compensable. The fact that Claimant may have experienced an onset of pain while engaged in an activity connected to his personal comfort does not mean that he sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989).

H. Under the Workers' Compensation Act ("Act") there is a distinction between the terms accident and injury. An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undesigned occurrence." *Section 8-40-201(1), C.R.S.* In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2)(injury includes disability resulting from accident). Consequently, a "compensable" injury is one that requires medical treatment or causes disability. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an

[1] Colorado recognizes the "personal comfort doctrine" which holds that actions such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water and keeping warm have been held to be incidental to employment. *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17, 22-23 (Colo. 1988).

industrial accident unless the accident results in a compensable "injury." *Romero*, supra; §8-41-301, C.R.S. While the ALJ is convinced that Claimant likely has pain in his shoulder, the evidence presented is persuasive of the fact that his shoulder pain/condition is probably not related to pulling on the bathroom door. Here, the ALJ has carefully considered Claimant's testimony and has weighed it against the balance of the competing evidence, including the medical records presented, the pictures of the door in question and the testimony of Dr. Ridings. Based upon that review, ALJ finds that Claimant's testimony regarding the cause of his shoulder pain cannot be reconciled with the more persuasive competing record evidence, including the testimony of Dr. Ridings that the described MOI is unlikely to cause injury to the shoulder.

I. Given the distinction between the terms "accident" and "injury", an employee can experience symptoms, including pain from an "accident" at work without sustaining a compensable "injury." This is true even when the employee is clearly in the scope of their employment. See *Aragon*, supra, (evidence supported ultimate finding that no injury occurred even where the claimant experienced pain when struck by a bed she was moving as part of her job duties); see also, *McTaggart-Kerns v. Dell, Inc.,* W.C. No. 4-915-218 (ICAO, May 29, 2014)(where Claimant involved in motor vehicle accident without resultant injuries, no compensable injury occurred). As explained by a Panel of the Industrial Claims Appeals Office in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), a coincidental correlation between a claimant's work and his symptoms does not mean there is a causal connection between a claimant's injury and his/her work. To the contrary, as noted by the Panel in *Scully* "correlation is not causation." Simply put, there is no presumption that an employee found injured on the employer's premises is presumably injured from something arising out of his work. *See Finn v. Industrial Commission,* 437 P.2d 542, 544 (Colo. 1968). While the evidence presented supports that Claimant's use of the bathroom caused him to pull on the door handle, it does not support a nexus between his shoulder pain, for which a formal diagnosis remains elusive, and pulling on the handle. Although the evidence in this case supports that an incident occurred, it does not persuasively support a conclusion that the incident caused Claimant's shoulder pain and his need for treatment or a disability. Consequently, the ALJ concludes that Claimant has failed to prove, by a preponderance of the evidence, that there is a causal connection between his employment and his shoulder condition for which medical treatment benefits are sought. *§ 8-43-201, C.R.S.*; *Ramsdell v. Horn*, 781 P.2d 150 (Colo.App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Because Claimant failed to establish he suffered a compensable "injury", his claim must be denied and dismissed and his remaining claims need not be addressed further.

ORDER

It is therefore ordered that:

1. Claimant claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

- Did Respondent prove by a preponderance of the evidence Claimant was responsible for termination of his employment?

- The parties stipulated that if Claimant was not responsible for termination, he was disabled by the admitted June 15, 2017 injury and entitled to TTD benefits from June 16, 2017 through August 6, 2017, and from October 24, 2017 ongoing.

- The parties stipulated that Claimant's admitted average weekly wage is $252.27, and reserved the option to adjust the AWW in the future, if appropriate.

FINDINGS OF FACT

1. Claimant worked episodically for Employer as a day laborer. On June 15, 2017 he injured his right leg while operating a pallet jack. His right foot and ankle were crushed between the pallet jack and a steel beam, causing bilateral malleolar fractures.

2. Claimant was transported by ambulance to the UCHealth emergency department where he was diagnosed with bimalleolar fractures and a right ankle sprain. He was placed in a 3-way splint and given crutches, prescribed Percocet, and discharged with instructions to follow-up with his PCP.

3. A few days after the accident, Claimant smoked marijuana. There is no credible or persuasive evidence that Claimant had used marijuana before the accident or was under the influence of marijuana at the time of the accident.

4. In the days after the accident, Claimant made several attempts to contact Employer regarding treatment for his injuries. He eventually spoke with an employer representative who directed him to Colorado Occupational Medical Partners. Employer also instructed Claimant to undergo a urine drug screen in accordance with its established policy regarding post-accident drug testing.

5. Claimant saw Dr. Matthew Lugliani at Colorado Occupational Medical Partners on June 19, 2017. Dr. Lugliani restricted Claimant from all work and recommended he see an orthopedic surgeon "as soon as possible." Also on June 19, Claimant provided a urine sample for a drug screen per Employer's instructions.

6. Claimant saw Dr. Melissa Gorman at the UCHealth orthopedic trauma clinic on June 22, 2017, who recommended surgery to stabilize the ankle. Dr. Gorman performed a right ankle open reduction with internal fixation on June 28, 2017.

7. Claimant's drug screen came back positive for marijuana. Employer has a zero-tolerance policy regarding positive drug tests, including marijuana.[1] After receiving the results of Claimant's drug test, Employer sent Claimant a "Termination Notice" dated July 6, 2017.

8. Claimant knew he was subject to drug testing after an accident and could be terminated for failing a drug test.

9. At the time of his accident, Claimant had been working for Employer off and on for approximately two years. His employment contract contains several unique features owing to his status as a day laborer. Claimant's employment is entirely at will, and requires a mutual offer and acceptance for each day of work. Claimant is hired and fired each day he works for Employer. The most salient contract provisions are contained in paragraph 9 of the document entitled Employment Terms & Acknowledgments:

> I understand and agree that I am not required to work or register my availability to work for the Company on any particular day. If I want to work, I may register my availability to work by text, phone, or by visiting a branch. . . . **I understand that I am not employed just because I register availability to work. I am not employed until I actually begin working a job assignment, and my employment with the Company is terminated at the end of each day**. (Emphasis added).

10. As Claimant credibly testified, Employer makes it clear there is no ongoing employment relationship beyond any particular day's assignment. Claimant is paid at the end of each day and has no obligation to return for any future assignments. Nor is Employer obliged to offer him additional work if he requests it. Even if a particular job to which Claimant was assigned needs to be staffed for longer than one day, Claimant may or may not be reassigned to that job the following day.

11. Respondent failed to prove Claimant was responsible for termination of his employment. The plain language of the employment contract provides that his employment was terminated at the end of the workday on June 15, 2017, before he used marijuana or took the drug test. As a result, there was no causal connection between the failed drug test, and his termination.

CONCLUSIONS OF LAW

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the subsequent wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work.

[1] Although Claimant was employed in Colorado, Employer follows federal law regarding controlled substances.

Culver v. Ace Electric, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

Respondent stipulated that Claimant was "disabled" and left work due to the injury, but assert TTD is barred because he was terminated for cause (*i.e.*, failing the drug screen).

Section 8-42-103(1)(g) provides that a claimant who might otherwise be considered temporarily disabled is not eligible for TTD benefits if he or she was "responsible for termination of employment." *Kerstiens v. All American Four Wheel Drive*, W.C. No. 4-865-825-04 (August 1, 2013).

The respondents must prove by a preponderance of the evidence that a claimant was terminated for cause or was responsible for the separation from employment. *Gilmore v. Industrial Claim Appeals Office*, 187 P.3d 1129, 1132 (Colo. App. 2008). To establish that a claimant was responsible for termination, the respondents must show the claimant performed a volitional act or otherwise exercised "some degree of control over the circumstances which led to the termination." *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 5 P.3d 1061, 1062 (Colo. App. 2002); *Padilla v. Digital Equipment Corp*., 902 P.2d 414 (Colo. App. 1995); *Velo v. Employment Solutions Personnel*, 988 P.2d 1139 (Colo. App. 1988). The mere fact that the employer discharged the claimant in accordance with its personnel rules does not automatically establish that the claimant acted volitionally or exercised control over the circumstances of the termination. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. App. 1987). The ALJ must consider the totality of the circumstances to determine whether the claimant was responsible for her termination. *Knepfler v. Kenton Manor*, W.C. No. 4-557-781 (March 17, 2004).

As found, Respondent failed to prove that Claimant was responsible for the termination of his employment. The phrase "responsible for termination of employment" necessarily implies the claimant must actually be employed when he performs the predicate act that caused his termination. Here, Claimant was terminated at the end of the day on June 15, 2017 pursuant to his employment contract. Employer paid Claimant his wage for that day and his service was concluded. At that point, neither party had any remaining obligation to the other. Claimant was not required to report to work again, and Employer had no obligation to offer him work if he requested it. The subsequent drug test was of no consequence to his status as an employee because his termination had been effectuated several days before.

When Employer decided to "terminate" Claimant on July 6, 2017, he was no longer its employee under the explicit terms of the day-labor contract. Although Employer labeled its action a "termination," in reality Employer merely notified him it would not accept further applications to re-employ him in the future. Since there was no causal connection between Claimant's failed drug test and the termination of Claimant's employment, Respondent's defense under § 8-42-103(1)(g) must fail.

ORDER

It is therefore ordered that:

1. Respondent's defense to TTD benefits based on the theory that Claimant was "responsible for termination of employment" is denied and dismissed.

2. Respondent shall pay Claimant TTD benefits, at the rate of $168.18 per week, from June 16, 2017 through August 6, 2017, and from October 24, 2017 ongoing until modified or terminated by law.

3. Respondent shall pay Claimant statutory interest in the amount of eight percent per annum on all benefits not paid when due.

4. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 31, 2018

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that her workers' compensation claim should be reopened.

2. Should the claim be re-opened, whether Claimant's request for change of authorized treating physician should be granted.

FINDINGS OF FACT

1. On September 9, 2014 Claimant sustained an admitted work related injury to her right shoulder and neck. Claimant was working as a phlebotomist and a patient whose blood she was drawing passed out and grabbed and jerked Claimant's right hand downward. *See* Exhibits 1, A, D.

2. Claimant underwent treatment and by March 18, 2015 was assessed with chronic neck and back pain, shoulder pain, and degenerative joint disease of the spine. *See* Exhibit D.

3. Claimant underwent a surgical evaluation with Cary Motz, M.D. He noted that Claimant had no relief from a steroid injection and that Claimant had continued complaints of significant discomfort about the periscapular muscles and the thoracic area of her back. Dr. Motz doubted that Claimant would improve with a shoulder arthroscopy given Claimant's response to the shoulder injections and due to the location of most of her discomfort. Dr. Motz opined he had nothing further to offer from an orthopedic standpoint and opined that it would be reasonable for Claimant to be evaluated by a physiatrist and delayed recovery specialist. *See* Exhibit D.

4. By May 22, 2015 Claimant was still reporting pain at a 8-9/10 level and that her pain was getting worse. *See* Exhibit D.

5. On June 2, 2015 Claimant was evaluated by Scott Primack, D.O. Dr. Primack noted Claimant's problems at the cervical spine and that an MRI of the right shoulder had demonstrated cuff tendinosis and a rim-rent tear of the supraspinatus. Dr. Primack noted that the orthopedic referral, Dr. Motz felt that Claimant's MRI changes were consistent with her age and that there was not significant surgical pathology. Dr. Primack opined that Claimant's lumbar complaints were not work related. Dr. Primack recommended a TENS unit to help diminish Claimant's shoulder and trapezius discomfort and he recommended an MRI of the cervical spine. *See* Exhibit D.

6. On July 15, 2015 Claimant was evaluated by Allison Hedien, NP. Claimant reported entire back/body pain and pain at an 8-9/10 level. Claimant was tearful in the

room and crying stating that she was just in pain all the time and that nothing was helping. Claimant reported the pain was all over and that everything hurt including her right shoulder, neck, back, and lower back. NP Hedien noted that at the last visit with Dr. Primack, he opined Claimant was getting close to maximum medical improvement. NP Hedien assessed: chronic neck and back pain, right shoulder pain, and spondylosis. *See* Exhibit D.

7. On July 22, 2015 Claimant was evaluated by John Burris, M.D. Claimant reported diffuse pain involving the posterior neck diffusely and the right shoulder girdle on the posterior aspect extending all the way down to her arms and into her fingers. Claimant reported pain at an 8/10. Dr. Burris noted that the MRI of Claimant's shoulder had shown what Dr. Motz believed were normal aging findings not associated with the work event and that Dr. Motz had no surgical recommendations. Dr. Burris also noted that the cervical MRI ordered by Dr. Primack had shown mild diffuse degenerative changes with no acute abnormalities and no neural impingements identified. Dr. Burris noted that Claimant had marked pain behaviors identified by previous providers. Claimant reported that she had undergone physical therapy, massage therapy, ice, TENS unit, and medication management with no reported benefit and reported that her symptoms had all worsened and that she was 0% improved from the original onset. On physical examination, Dr. Burris found extreme pain behaviors and that Claimant was very somatically focused. Dr. Burris found diffuse tenderness without localization. He also found that at the shoulder Claimant self-limited her motion but that it was inconsistent. Dr. Burris diagnosed myofascial pain. He opined that Claimant's diffuse pain complaints had a non-physiologic presentation and that there were no objective findings. *See* Exhibit D.

8. On July 28, 2015 Claimant was evaluated by Dr. Primack. Dr. Primack noted that the cervical MRI was unremarkable and that nothing in treatment had worked. Dr. Primack opined that the only objective finding in the treatment was a partial thickness rotator cuff tear. Dr. Primack again opined that the lumbar spine was not work related and the mid thoracic spine pain was also not work related. Dr. Primack opined that Claimant had an exorbitant amount of pain behavior. Dr. Primack opined that Claimant was at maximum medical improvement (MMI). He opined that for the loss of motion and for the partial thickness rotator cuff tear there was a 12% impairment of the upper extremity which converts to a 7% impairment of the whole person. *See* Exhibit D.

9. On September 23, 2015 Claimant was evaluated by Dr. Burris. Claimant continued to report diffuse pain affecting the right shoulder girdle at 8/10 in pain level. Dr. Burris opined that Claimant was again very somatically focused and displayed clear psychosomatic overlay. Dr. Burris opined that the physical examination was obscured by marked pain behaviors. He again diagnosed myofascial pain. Dr. Burris noted that Claimant continued to have diffuse pain complaints one year after the work event despite a full course of conservative care. He opined that her workup had been somewhat unrevealing including MRIs of both the cervical spine and the right shoulder. He noted that Claimant was treated and released by orthopedic surgeon Dr. Motz and by

rehabilitation specialist Dr. Primack. Dr. Burris opined that there was really nothing further to offer Claimant. *See* Exhibit D.

10. Respondents filed a Final Admission of Liability (FAL) based on Dr. Primack's determination of MMI and impairment. Claimant objected and requested a Division Independent Medical Examination (DIME).

11. On November 9, 2015 Claimant underwent the DIME performed by Brian Shea, M.D. Dr. Shea reviewed medical records and performed a physical examination. Dr. Shea assessed: right shoulder partial rotator cuff tear; decreased range of motion of the right shoulder; myofascial pain of the right lower cervical and upper and mid thoracic muscles; myofascial pain the right lumbar muscles; and decreased motion of the cervical spine. Dr. Shea opined that Claimant's permanent impairment rating was 15% whole person including ratings of the right shoulder and cervical spine. Dr. Shea opined that the mechanism of injury did affect Claimant's cervical spine and that his exam revealed the likelihood of right sided cervical facet injury, which is why he rated for impairment of the cervical spine. Dr. Shea also opined that Claimant was not at MMI. He opined that Claimant needed a second opinion regarding her right shoulder pain which was likely driving most of the myofascial symptoms in the lower cervical and thoracic regions. Dr. Shea opined that if after an orthopedic evaluation of the right shoulder and MRI it was determined that Claimant was not a surgical candidate then Claimant would be at MMI. *See* Exhibit E.

12. After the DIME, and on January 7, 2016, Claimant was evaluated by orthopedic specialist John Papilion, M.D. Dr. Papilion reviewed the medical records and radiographs, interviewed Claimant, and performed a physical examination. Dr. Papilion reviewed the MRI of Claimant's right shoulder. He noted Claimant's pain was primarily in the neck, upper scapula, and the trapezius and that Claimant had very little shoulder pain. Dr. Papilion assessed myofascial shoulder girdle pain. Dr. Papilion opined that Claimant's symptoms and physical exam did not support evidence for intrinsic shoulder pathology. He noted that Claimant had failed extensive physical therapy and three sub acromial steroid injections and he did not recommend surgical intervention. Dr. Papilion opined that surgical intervention was not likely to help Claimant. *See* Exhibit D.

13. On January 13, 2016 Claimant was evaluated by Dr. Burris. Claimant reported diffuse pain at an 8/10 level throughout the right posterior shoulder girdle. Dr. Burris opined that Claimant remained somatically focused. Claimant reported that she was 0% better in her recovery and just needed rest. Dr. Burris found moderate pain behaviors obscuring the physical examination. Dr. Burris noted that the DIME had recommended further orthopedic evaluation and that Claimant had the evaluation with Dr. Papilion who found no surgical indications. Dr. Burris opined that Claimant was at MMI. Dr. Burris disagreed with Dr. Shea's rating of the cervical spine and opined that diagnostic testing of the cervical spine had been normal with no findings associated with the work event and Dr. Burris opined there was certainly no objective basis for impairment at the cervical spine. *See* Exhibit D.

14. On May 23, 2016 Claimant returned to DIME physician Dr. Shea. Dr. Shea noted that Claimant had been found not to be a surgical candidate for her right shoulder. Dr. Shea opined that given that Claimant had not improved since the time of Dr. Primack's placement at MMI on July 28, 2015 even with ongoing treatment and passage of time, Claimant was placed at MMI as of July 28, 2015. Dr. Shea again opined that Claimant had a 15% whole person impairment including both the right shoulder and cervical region. *See* Exhibit C.

15. On June 21, 2016 Respondents filed a FAL. They admitted to permanent partial disability of 15% whole person and to maintenance care. Respondents noted the MMI date of July 28, 2015 on the FAL. *See* Exhibits 1, A.

16. Claimant did not object to the FAL and the case closed.

17. On June 27, 2016 Claimant was evaluated by Susan Anzalone, M.D. Claimant reported her chief complaint was cervicogenic headache. Claimant reported a bad headache from the back right occiput and that her head felt cold and like a squeezing sensation. Claimant reported she had the headache every day. Dr. Anzalone noted that EMG/NCS imaging was normal, that a brain MRI was normal, and that a cervical MRI from May 31, 2016 had shown a C3-4 2 mm retrolisthesis with minor disc bulge, facet arthropathy likely moderate right foraminal stenosis, C4-5 trace retrolisthesis with facet hypertrophy, likely right and moderate left stenosis, and C5-6 facet hypertrophy with mild bilateral foraminal stenosis. Dr. Anzalone recommended that Claimant see Gin-Ming Hsu, M.D. for the cervicogenic headache, and recommended a migraine diet and exercise. Dr. Anzalone also prescribed hydrocodone. *See* Exhibit 5.

18. On September 21, 2016 Claimant underwent a full blood panel with results reported by Leah Cooper, M.D. Claimant was flagged as having: extremely high C-reactive protein; low TSH; high LDL Cholesterol; and high alkaline phosphatase. *See* Exhibit 6.

19. On September 26, 2016 Claimant was evaluated by Dr. Hsu. Claimant reported chronic pain syndrome that began two years prior without any precipitating trauma or injury. Claimant reported pain all over with no specific location but on the right more than the left. Claimant reported pain at 7-9/10. On examination, Dr. Hsu found tenderness along the right occiput, cervical paraspinals, and shoulder. She also found tenderness along the left occiput, cervical paraspinals, and shoulder. Claimant's range of motion was decreased due to Claimant's reported pain. Dr. Hsu noted that the MRI of the cervical spine from May 31, 2016 was reviewed by her and showed mild spondylosis, no significant central stenosis, and no significant degenerative disc disease. Dr. Hsu noted that Claimant had chronic neck/shoulder pain and headaches and that the headaches appeared to be cervicogenic. Dr. Hsu opined that Claimant's pain on examination was most consistent with myofascial pain and occipital neuralgia and recommended trigger point injections and occipital nerve blocks. *See* Exhibit 4.

20. On September 30, 2016 Dr. Hsu injected Claimant's left and right greater occipital nerves. On October 4, 2016 Dr. Hsu injected Claimant's bilateral trapezius muscles and bilateral levator scapula muscles. On October 13, 2016 Dr. Hsu injected Claimant's bilateral cervical paraspinals and bilateral trapezius muscles. *See* Exhibit 4.

21. November 17, 2016 Claimant was evaluated by Dr. Hsu. Claimant reported that she received some pain relief from the injections, but not much and that she was having headaches, neck pain, lower back pain, and shoulder pain. Dr. Hsu opined that Claimant did not have much benefit from the trigger point injections or the occipital nerve block injections and that they would hold off on repeating any injections. Dr. Hsu recommended Claimant begin a course of formal physical therapy. *See* Exhibit 4.

22. On December 15, 2016 Claimant was evaluated by Dr. Hsu. Claimant reported that physical therapy was helping with her neck pain and that overall her headaches had improved. Claimant reported pain at a level of 4-5/10. Dr. Hsu again noted that they would hold off on any repeat injections. *See* Exhibit 4.

23. On March 11, 2017 Claimant filed a Petition to Reopen alleging that the case should be reopened due to a change in her medical condition. *See* Exhibits 2, B.

24. Claimant attached to her Petition to Reopen two medical records, one from February 22, 2017 and one from February 27, 2017.

25. On February 22, 2017 Claimant was evaluated by Dr. Hsu. Claimant reported that her headaches had returned and that she was having them 1-2 times per week and that her neck pain and shoulder pain were increasing. Claimant continued to report that physical therapy was helping her neck and shoulder pain and that her pain level was at a 6/10. Dr. Hsu injected Claimant's right subacromial bursae and opined that the right shoulder examination and pain were consistent with subacromial bursitis but that the shoulder was difficult to assess fully. Dr. Hsu wanted Claimant to bring in the prior imaging studies of the right shoulder. Dr. Hsu noted that Claimant would be set up for neck shoulder trigger point injections. Dr. Hsu recommended Claimant continue physical therapy. *See* Exhibits 2, B.

26. On February 27, 2017 Claimant was evaluated by Susan Anzalone, M.D. Dr. Anzalone prescribed medications of sumatriptan and fioricet for headaches/migraines. Dr. Anzalone recommended a migraine diet and exercise. *See* Exhibits 2, B.

27. Claimant testified at hearing. Claimant reported that after she was placed at MMI her pain began to increase. Claimant testified that she has new headaches on the right side of her head. Claimant also testified that she has increased numbness in her right arm.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reopening

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App.

2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988). The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997).

Claimant has failed to establish by a preponderance of the evidence that her case should be reopened due to a change in condition. Claimant's allegations of pain and that her pain is new and increased is not found credible or persuasive. Claimant had extreme pain complaints at the time she was placed at MMI and at the time the FAL was filed. The medical reports attached to her petition to reopen show that her pain complaints actually improved slightly following the FAL. Claimant alleges new complaints of headaches and worsened pain in her right scapular area, however, Claimant is not found credible or persuasive. She has had numerous constant severe pain complaints since her date of injury. She has reported little to no improvement with numerous modalities of treatment both before MMI and on her own after MMI.

CHANGE OF PHYSICIAN

Upon a proper showing to the division, the employee may procure its permission at any time to have a physician of the employee's selection attend said employee. Section 8-43-404(5)(a)(VI), C.R.S. Because the statute does not contain a specific definition of a "proper showing," the ALJ has broad discretionary authority to determine whether the circumstances justify a change of physician. *Loza v. Ken's Welding,* WC 4-712-246 (ICAO January 7, 2009). The claimant may procure a change of physician where he/she has reasonably developed a mistrust of the treating physician. *See Carson v. Wal-Mart,* W.C. No. 3-964-07 (ICAO April 12, 1993). The ALJ may consider whether the employee and physician were unable to communicate such that the physician's treatment failed to prove effective in relieving the employee from the effects of his/her injury. *See Merrill v. Mulberry Inn, Inc.*, W.C. No. 3-949-781 (ICAO November 1995). But, where an employee has been receiving adequate medical treatment, courts need not allow a change in physician. *See Greenwalt-Beltmain v. Department of Regulatory Agencies*, W.C. No. 3-896-932 (ICAO December 5, 1995) (ICAO affirmed ALJ's refusal to order a change of physician when the ALJ found claimant receiving proper medical care); *Zimmerman v. United Parcel Service*, W.C. No. 4-018-264 (ICAO August 23, 1995) (ICAO affirmed ALJ's refusal to order a change of physician where physician could provide additional reasonable and necessary medical care claimant might require); and *Guynn v. Penkhus Motor Co.*, W.C. No. 3-851-012 (ICAO June 6, 1989) (ICAO affirmed ALJ's denial of change of physician where ALJ found claimant failed to prove inadequate treatment provided by claimant's authorized treating physician).

Although Claimant indicated at the outset of hearing that her request for change of physician was contingent upon the re-opening of the case, the ALJ notes medical maintenance care has been left open and that Claimant's request to change physician

can be construed to any/all of her maintenance care. Claimant has failed to establish a proper showing to allow her to change her physician. Claimant has received numerous treatments including referrals to multiple specialists. Although Claimant believes, subjectively, that she is not better she has failed to show any mistrust, communication problems, or improper medical care to justify a change in physician. Claimant did not provide any specific testimony or evidence other than her belief that she was not getting better.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that her workers' compensation claim should be reopened due to change in condition. Her petition to reopen is denied and dismissed.

2. Claimant has failed to establish that she should be allowed a change in physician. Her request to change physicians is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven, by a preponderance of the evidence, that she suffered a compensable injury on November 17, 2017;

II. If Claimant has proven a compensable injury, what medical benefits are reasonable, necessary and related;

III. What is Claimant's Average Weekly Wage.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is employed as a Judicial Assistant III for Employer. Claimant's normal work hours are from 10:00 a.m. until 6:30 p.m.

2. Claimant must clock in and out of work and is not permitted to work or access work materials from home. She is not required to drive in the performance of her job duties.

3. Claimant works in two buildings, The Lindsey Flannigan Courthouse (hereinafter "Courthouse) and the Van Cise-Simonet Detention Center (hereinafter "Detention Center"). The Courthouse is located at 520 W. Colfax Avenue, Denver, Colorado 80204. The Detention Center is located at 490 W. Colfax Avenue, Denver, Colorado 80204. These two buildings are separated by a service road.

4. Employer does not dictate the method of transportation their employees must use to arrive at work. Employees may walk, take the bus, ride the light rail, or drive their own personal vehicles. If an employee chooses to drive to work, it is up to that employee to find a place to park. Employer does not provide any employee parking, nor does it reimburse parking expenses of any employee.

5. Claimant's supervisor, Kimberly Pooley, credibly testified that Employer does not recommend where employees park their vehicles. She testified that there are several parking lots close to the Courthouse and Detention Center. For example, Ms. Pooley parks at the Denver Justice Center Garage—which costs approximately $140 per month—and several employees park in lots located near W 13th Avenue and Cherokee Street.

6. Claimant testified that she could take the bus or drive to work. She testified that she chooses to drive to work. She also testified that she chooses to park in a lot located at 2223 Stout Street, Denver, Colorado. This lot is approximately one

mile away from the Detention Center and Courthouse and costs approximately $60 per month.

7. Claimant testified that she walks the same route from her car to the Detention Center every day and drew this route on a map provided by Respondent. (Respondent's Exhibit J). She testified that while she walks this route, she sees other parking lots that are closer to her place of employment, but she thinks these lots are full and does not know how much these lots cost.

8. On November 17, 2017, Claimant clocked out of work at 6:31pm. She began walking her normal route from the Detention Center to her parking spot at 2223 Stout Street. Claimant testified that while she was walking across the intersection of W 21st Street and Stout Street—which she testified is approximately one mile from the Detention Center—she was struck by a car and sustained injuries. The accident occurred at approximately 6:50 p.m. (Claimant's Exhibit 1). She testified that she was taken to Denver Health Emergency Department and underwent surgery to treat her left ankle injury. The driver of the motor vehicle who struck Claimant drove away from the scene after the accident, and Claimant has not been able to identify the driver.

9. Claimant testified that she had heard stories of other employees being hit by cars while walking in downtown Denver. However, despite hearing these stories, she continued to park in the lot for approximately one year.

10. Claimant has failed to demonstrate that it is more probably true than not that she suffered compensable industrial injuries during the course and scope of her employment with Employer on November 17, 2017. Applying the *Madden* factors, she has failed to establish an exception to the "going to or coming from" work rule because her travel was not considered the performance of services arising out of and in the course of employment. Claimant was injured after she clocked off work and approximately a mile away from her place of employment. Thus, the travel did not occur during working hours and was not on Employer's premises.

11. Likewise, Claimant has failed to demonstrate that this travel was contemplated by her employment contract or constituted a substantial part of her service to Employer. Specifically, Ms. Pooley persuasively testified that Employer did not require Claimant to use her automobile during work. Claimant testified that she was not required to use a vehicle to perform job her duties. The credible evidence reveals that Claimant drove her vehicle merely to get to her jobsite in order to work.

12. Claimant has also failed to demonstrate that Employer created a "zone of special danger" out of which Claimant's injuries arose. Claimant alleges that because the Employer does not provide employee parking, she was forced to park a mile away from work, and because she had to park a mile away from work, she was struck by a car. However, the credible evidence reveals that Claimant could have driven or taken the bus to work, and she made the personal choice to drive to work and made the personal choice of where to park her vehicle. Further, the credible evidence reveals that other employees park in lots closer to the Detention Center and Courthouse. Since several employees have found parking closer to the Detention Center, Claimant's testimony that every single parking lot is full between the Detention Center and where she chooses to park her vehicle is not credible. Further, Claimant fails to explain how

her employment with Employer created the risk of downtown Denver traffic. Rather, the risk she describes is true for all pedestrians—whether Employer's employees or not—in the greater downtown Denver area.

13. A review of the *Madden* factors thus reveals that Claimant has failed to demonstrate a nexus between her injuries and her employment for Employer. Accordingly, Claimant's claim for Workers' Compensation benefits is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigations. §8-40-102(1), C.R.S. A Claimant in a Worker' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or of the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witnesses; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To qualify for recovery under the Workers' Compensation Act of Colorado, a claimant must be performing services arising out of and in the course of her employment at the time of her injury. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999); C.R.S. §8-41-301(1)(b). For an injury to occur "in the course of" employment, the claimant must demonstrate that the injury occurred within the time and place limits of her employment and during an activity that had some connection with her work-related functions. *Madden*, 977 P.2d at 863; *See Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arise out of" requirement is narrower and requires the claimant to show a causal connection between the employment and the injury such that the injury had its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id*.

5. Generally, injuries sustained by employees while they are traveling to or from work are not compensable because such travel is not considered the performance

of services arising out of and in the course of employment. *Madden v. Mountain West Fabricators*, 977 P.2d 861, 863 (Colo. 1999). However, injuries incurred while traveling are compensable if "special circumstances" exist that demonstrate a nexus between the injuries and the employment. *Id*. at 864. In ascertaining whether "special circumstances" exist, the following factors should be considered: (1) whether the travel occurred during working hours, (2) whether the travel occurred on or off the employer's premises, (3) whether the travel was contemplated by the employment contract, and (4) whether the obligations or conditions of employment created a "zone of special danger" out of which the injury arose. *Id.* Whether meeting one of the variables, by itself, is sufficient to create a "special circumstance" warranting recovery depends upon whether the evidence supporting that variable demonstrates such a causal connection between the employment and the injury to bring the travel within the course and scope of employment. *Id*.

6. In considering whether travel is contemplated by the employment contract, the critical inquiry is whether the travel is a substantial part of service to the employer. *Madden*, 977 P.2d at 865. Travel may be contemplated by the employment contract when the employer delineates the employee's travel for special treatment as an inducement to employment. *See Staff Administrators Inc. v. Reynolds*, 977 P.2d 866, 868 (Colo. 1999). "Special circumstances" may also exist when the employee engages in the travel at the express or implied consent of the employer, and the employer receives a special benefit from the travel in addition to the employee's mere arrival at work. *See National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259, 1260 (Colo. App. 1992). The essence of the travel status exception is that when the employer requires the claimant to travel beyond a fixed location to perform his job duties the risk of travel become the risk of the employment. *Briedenbach v. Black Diamond, Inc.*, W.C.No. 4-761-479 (ICAP, Dec. 30, 2009).

7. "Special circumstances" may also be found when an injury occurs off an employer's premises but so close to the zone, environment, or hazards of such premises as to warrant recovery under the Act. *Madden*, 977 P.2d at 865. Under this "zone of danger" variable, where the route to the employment premises creates additional risk not applicable to the general public, the hazards of the route become the hazards of the employment. *Martin K. Eby Construction Company v. Industrial Commission*, 377 P.2d 745, 747 (Colo. 1963); *State Compensation Insurance Fund v. Walter*, 34 P.2d 591 (Colo. 1960); *Friedman's Market, Inc. v. Welham*, 653 P.2d 760 (Colo. App. 1982). For example, in *Martin K. Eby Construction Company*, a claimant's injuries incurred while driving through a missile site to get to work were deemed compensable because driving through the site was the only means to reach the work site and site created additional risks not applicable to the public. 377 P.2d at 747. In *State Compensation Insurance Fund v. Walter, supra,* the employer required employees to cross a public street to go from the employer parking lot to the work site. Because the public was not required to cross that street, an excavated ditch on that road created a "zone of special danger" and an employee who twisted his ankle in that ditch was held to be entitled to benefits. 345 P.2d at 551-52. Likewise, in *Friedman's Market, Inc. v. Welham, supra,* the employer's parking policy necessitated employees crossing railroad tracks that the public were not required to cross; therefore, the surviving spouse of a

worker who was killed while crossing those tracks was entitled to death benefits because the tracks constituted a “zone of special danger.”

8. As found, Claimant has failed to demonstrate by a preponderance of the evidence that she suffered compensable industrial injuries during the course and scope of her employment with Employer on November 17, 2017. Applying the *Madden* factors, she has failed to establish an exception to the “going to and coming from” rule because her travel was not considered the performance of services arising out of the course and scope of her employment.

9. Initially, Claimant clocked out of work and was approximately one mile away from her place of employment on November 17, 2017 when she was injured. The travel thus did not occur during working hours and was not on her employer’s premises.

10. As found, Claimant also failed to establish that her travel was contemplated by her employment contract and constituted a substantial part of her service to her employer. The record reveals that Claimant was not required to drive as part of her job duties, nor was she required to drive to work. Claimant instead had the discretion to choose the method of transportation she used to get to work and made the personal decision to drive. She was not compensated for this travel, nor did Employer provide her a parking spot or reimburse her parking expenses. Claimant’s choice to drive to work did not confer any benefit to Employer beyond the sole fact that it allowed her to arrive at work.

11. Because Claimant has failed to establish the first three *Madden* factors, Claimant would need to present substantial evidence of the fourth *Madden* variable to establish that her travel falls within the course and scope of her employment. However, as found Claimant has failed to establish that her Employer created a “zone of special danger” out of which her injuries arose. Claimant has presented no credible evidence that the route to her Employer created additional risks or hazards not applicable to the public that would make the hazards of the route part of her hazards of employment. Claimant alleges that the hazard of her route to her employer is downtown vehicle traffic. Claimant has provided no credible evidence that being an employee of Employer has elevated her risk of being involved in a pedestrian motor vehicle accident. Further, the record reveals that Employer does not require their employees to drive to work, nor does it dictate the route that employees must take to arrive at work. The record reveals that Claimant made the personal decision to drive to work, of which parking lot to use, and of which route to take to get to work. (Respondent’s Exhibit J).

12. A review of the *Madden* favors thus reveals that Claimant has failed to demonstrate a nexus between her injuries and her employment with her employer. As such, her claim for Workers’ Compensation benefits is denied and dismissed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to establish, by a preponderance of the evidence, that she suffered a compensable industrial injury on November 17, 2017;

2. Claimants' request for Workers' Compensation benefits, including medical benefits and temporary disability benefits, is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 7, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable industrial injury arising out of and in the course of his employment for Employer on May 25, 2017.

II. If Claimant sustained a compensable injury, whether he established, by a preponderance of the evidence, entitlement to medical benefits, as well as temporary partial disability benefits ("TPD") from June 2, 2017 through June 19, 2017.

III. If Claimant sustained a compensable injury, whether Claimant has proven that Dr. Kristin Mason is an authorized treating physician ("ATP").

IV. If Claimant sustained a compensable injury, whether Claimant should be penalized for late reporting, entitling Respondents to offsets.

FINDINGS OF FACT

Prior History

1. Claimant had a prior workers' compensation claim for a March 7, 2014 work injury. Claimant testified the injury involved his waist and spine. Claimant was diagnosed with cervical and lumbar strains and underwent treatment.

2. Claimant was placed at maximum medical improvement ("MMI") for the March 7, 2014 work injury on November 24, 2014 with a 5% permanent impairment rating for the lumbar spine. Claimant was provided with permanent restrictions of no lifting, pushing or pulling over 20 pounds, and limiting repetitive bending or twisting at the waist.

3. On March 24, 2015, Claimant underwent a Division Independent Medical Examination with Khoi D. Pham, M.D., who agreed with the recommended restrictions and MMI date of November 24, 2014. Dr. Pham assigned a 13% whole person impairment rating for Claimant's low back. He did not assign any cervical impairment.

Alleged May 25, 2017 Work Injury

4. Claimant is a 62-year-old man who has been employed by Employer as an office cleaner since 2011. Claimant's job duties include cleaning and replenishing restrooms, emptying trash and recycling bins, cleaning desks, vacuuming offices and common areas, cleaning, dusting, and mopping floors. Claimant works for Employer Monday through Friday, 4:00 p.m. to 11:00 p.m., and occasionally on Saturdays and Sundays. Claimant also has had concurrent employment since 2015. Claimant is employed as a

day porter for ICS, performing cleaning services. Claimant works for ICS Monday through Friday, 7:00 a.m. to 3:30 p.m., and three to four hour shifts on Saturdays.

5. Claimant testified that his supervisor, Francisco Perez, called him on Wednesday, May 24, 2017 and notified Claimant he would be out on vacation the remainder of the week.

6. Claimant alleges he sustained a work injury while emptying a recycling bin during a scheduled shift for Employer on Thursday, May 25, 2017 at approximately 6:00 p.m. or 7:00 p.m. Claimant testified that he lifted the bottom of the recycling container with his right hand and placed his left hand on the upper part of the container, and then used his knee to help push the container over the top of the larger recycling bin. He stated that he felt pain in his left ribcage, left shoulder, and along the left side of his neck while performing this activity. Claimant testified that he is aware of how to report work injuries. He stated he did not report the incident to Employer on May 25, 2017 because he thought his symptoms would resolve. He further testified that his supervisor, Francisco Perez, was not at work on May 25, 2017.

7. Claimant testified that he worked for Employer as scheduled on Friday, May 26, 2017. Claimant testified that he did not report the alleged injury to Employer on May 26, 2017 because Mr. Perez remained out of the office and Claimant continued to think his symptoms would resolve. Claimant testified that he told one of two colleagues, Maria or Ruben, that he believed he injured himself the day prior. Claimant also worked his scheduled shift for his concurrent employer on May 26, 2017.

8. Claimant was not scheduled to work for Employer on Saturday, May 27, 2017 or Sunday, May 28, 2017. Claimant testified he did not work for Employer on Monday, May 29, 2017 because it was Memorial Day. Claimant worked for Employer as scheduled on Tuesday, May 30, 2017. Claimant reported the alleged work injury to Mr. Perez on May 30, 2017.

9. On May 31, 2017, Claimant completed a statement regarding the alleged incident. Claimant reported to Employer that he sustained an injury while lifting a recycling bin on May 25, 2017 at around 6:00 p.m. to 7:30 p.m. Claimant reported that he dragged the recycle bin towards the recycle dumpster. Claimant reported he then, used his right arm to lift the bottom of the recycle bin, his left arm to grab the top of the bin, and his right knee to push the bin.

10. Claimant was offered care at Concentra and selected the Concentra on 38th Avenue in Aurora, Colorado. Employer records indicate that a choice of three Concentra locations were offered to Claimant and Claimant selected the location on Chambers Road in Aurora, Colorado, but the medical records indicate that he was seen at the Concentra on 38th Avenue in Aurora, Colorado.

11. On May 31, 2017, Claimant presented to Jocelyn Cavender, PA-C at Concentra, reporting a date of injury of May 25, 2017. Claimant reported injuring himself while lifting and stabilizing a heavy bin. Claimant complained of left shoulder pain that

radiated up his neck and down his left arm to his mid-back. Claimant denied prior problems with his left arm, shoulder, neck or upper back. He also denied participating in other activities or outside work that could have caused or aggravated his condition. Claimant reported that his average daily work hours were 6.30 per day and average weekly hours were 32.5 with no overtime. There is no mention of concurrent employment in the medical record. On physical examination, PA-C Cavender noted tenderness of the ribs on the left side, decreased cervical range of motion, left sided muscle spasms, and tenderness over the left paraspinals and left trapezius muscles. Claimant was released to return to work on May 31, 2017 with work restrictions of no use left upper extremity and very limited turning of neck. Claimant was prescribed medication and referred to physical therapy.

12. Claimant returned to Concentra on June 2, 2017 with left cervical and thoracic spine spasms and trapezius spasms. He had limited cervical spine range of motion. Claimant reported feeling a little worse, and reported the spasms in his neck seemed worse, aggravated by vacuuming even with the other hand. Claimant was taken off work due to increased spasms.

13. On June 6, 2017, Claimant returned to Concentra with increasing symptoms. On exam Claimant was very stiff, with decreased range of motion, and tenderness in the left paracervicals from occipital scalp to trapezius and shoulder with muscle spasms. Dr. Cava diagnosed Claimant with cervical radicular pain, cervical strain, muscle spasm, and thoracic myofascial strain. She recommended Claimant undergo an EMG and MRI. Physical therapy was placed on holding ending results.

14. Claimant also underwent cervical spine x-rays on June 6, 2017, that revealed no acute findings. Spondylotic spurring from C3-7 with slight accentuation of C4-5 and grade 1 spondylolisthesis in flexion was noted.

15. Claimant returned to Concentra on June 9, 2017 with ongoing problems. Claimant remained with a restriction of no work while they waiting for authorization of the requested MRI & EMG.

16. Respondents filed a Notice of Contest on June 9, 2017.

17. Claimant returned to Concentra on June 20, 2017 and reported having pain at night muscle weakness and swelling. Claimant reported that he had been working his day job for his concurrent Employer, but not his night job for Employer. Claimant complained of pain in his left neck and shoulder with increasing pain with movement of the neck and trouble reaching over head with the left upper extremity. Dr. Cava noted that the MRI referrals and claim had been denied. Claimant was released to return to modified activity, and allowed to work his entire shift with no reaching above shoulders with affected extremities, and no use left upper extremity. No further treatment was provided and Claimant was advised to return if claim is opened.

18. Claimant testified that he was taken off work by Concentra from June 2, 2017 through the discontinuation of care on June 20, 2017. Claimant testified that he did not

work his job for Employer during that period, but did continue to work his job with ICS. Claimant testified that he was not able to perform his full job for Employer when released to work on June 20, 2017, but that Mr. Perez permitted him to perform lighter duties.

19. On August 25, 2017, Claimant requested that Kristin Mason, M.D. be allowed to treat him on August 25, 2017. Claimant purports that he did not receive any response to this request.

20. Dr. Mason evaluated Claimant on November 14, 2017. Claimant reported a May 25, 2017 date of injury. Claimant denied previous neck problems and did not report having concurrent employment. He complained of pain in his left ribs, left upper extremity and trapezius area, and numbness in his left chest area, left forearm, and neck. On physical examination, Dr. Mason noted Claimant sat with his head tilted to the right and the arm in full supination resting on his lap. She noted decreased sensation in left C5 distribution consistently and tenderness and hypertonicity in the trapezius on the left. Dr. Mason diagnosed Claimant with a cervical sprain/strain with findings suggestive of C5 radiculopathy on the left, with no indication of a shoulder injury. Dr. Mason recommended an MRI and flexion extension x-rays. She prescribed medication and recommended holding off on physical therapy until imaging studies were obtained.

21. Claimant also saw Lawrence Lesnak, D.O. on November 14, 2017. Dr. Lesnak performed an independent medical evaluation ("IME") at the request of Respondents, completing a medical records review and physically examining Claimant. Claimant reported left-sided suprascapular pain/discomfort and occasional numbness in the left volar forearm. Claimant denied neck, mid back, low back and leg symptoms. Dr. Lesnak found no clinical evidence of symptomatic left shoulder joint pathology, or cervical or thoracic symptomatic spine pathology. He opined that Claimant did not sustain any injurious event while working for Employer on May 25, 2017. In support of his opinion, Dr. Lesnak noted that Claimant delayed reporting the injury, despite having at least three or four prior work injuries and being familiar with how to report work injuries. He further noted that Claimant continued to work the days following the alleged injury. Dr. Lesnak opined that, regardless of causality, Claimant does not require any diagnostic testing or specific treatments.

22. Dr. Lesnak testified at hearing as an expert in physical medicine and rehabilitation. Dr. Lesnak testified consistent with his IME report. He opined that Claimant's subjective complaints are not supported by any objective findings and that the mechanism of injury described by Claimant does not correlate with a shoulder or neck injury. Dr. Lesnak acknowledged that a cervical strain can cause referred pain into the shoulder, but continue to opine that Claimant did not sustain an injurious event. Dr. Lesnak testified that Claimant had chronic, pre-existing neck symptoms.

23. Claimant testified that he continues to have problems with the left side of his neck and shoulder and he has difficulty lifting overhead and feels pain when lifting certain weight, and feels pain when he has to use force with his hand/arm.

24. Per Employer's time records, Claimant did not work any hours for Employer on Thursday, May 25, 2017. The timecard records show Claimant did not work any hours for Employer the entire week of Monday, May 22, 2017 through Friday, May 26, 2017. The timecard records reflect Claimant worked 32.5 hours for Employer the week of Monday, May 15, 2017 through Friday, May 19, 2017, and 35 hours the week of Monday, May 29, 2017 through Friday, June 2, 2017.

25. Per Employer's pay records, Claimant was paid for a total of 35 hours for the for the pay period beginning Sunday, May 21, 2017 through Saturday, June 3, 2017. This information coincides with the timecard records, which reflect 35 hours worked during the week of Monday, May 29, 2017 through Friday, June 2, 2017, including 7.0 hours on May 29, 2017.

26. Claimant testified that he did not use a time clock or report his time using another timekeeping system. Claimant testified that his supervisor, Mr. Perez, was responsible for entering Claimant's time. Claimant contends that he did, in fact, work for Employer the week of Monday, May 22, 2017 through Friday, May 26, 2017. He testified that it was possible his timecards were not accurate or that there was some error on the part of his supervisor in inputting his time. Claimant did not indicate he addressed the alleged pay discrepancy with Employer. The pay records do not reflect any retroactive payments issued to Claimant for time worked May 22, 2017 through May 26, 2017.

27. ICS time records reflect that Claimant worked his concurrent job on Thursday, May 25, 2017, Friday May 26, 2017, and Saturday, May 27, 2017. The records indicate Claimant did not work his concurrent job on Sunday, May 28, 2017 or Monday, May 29, 2017. Claimant then worked his ICS job on Tuesday, May 30, 2017 through Saturday, June 3, 2017.

28. Claimant's testimony is not found credible or persuasive. The ALJ credits the opinion of Dr. Lesnak, as supported by the medical records and employment records, and finds that Claimant did not sustain an injury arising out of and in the course of his employment for Employer on May 25, 2017.

29. Claimant failed to prove, by a preponderance of the evidence, that he sustained a compensable injury working for Employer on May 25, 2017.

30. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201,

C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to prove by a preponderance of the evidence that he sustained a compensable injury while working for Employer on May 25, 2017. Employer's records reflect that Claimant did not, in fact, work any hours for Employer May 22, 2017 through May 26, 2017, and was not paid for any hours allegedly worked during such time period. While Claimant contends the time records are in error, there is no evidence Claimant attempted to address the alleged discrepancy with Employer or was subsequently paid for time he contends he worked. The lack of persuasive

explanation on Claimant's part as to what would be a significant discrepancy in pay supports Employer's contention that Claimant did not actually perform any work for Employer on the alleged date of injury. Moreover, Claimant has concurrent employment at which he performs similar physical job duties and worked on May 25, 2017. Claimant has had prior work injuries and is aware of how to report work injuries. Finally, Dr. Lesnak credibly opined no injurious event occurred. Based on the totality of the evidence, Claimant failed to prove that it is more likely than not he sustained an injury arising out of and in the course of his employment for Employer, and that his condition was proximately caused by the performance of services for Employer.

As Claimant failed to meet his burden to prove he sustained a compensable injury, the remaining issues of medical benefits, TPD, ATP, penalties and offsets are moot.

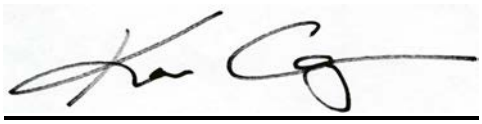
ORDER

It is therefore ordered that:

1. Claimant failed to prove by a preponderance of the evidence he sustained a compensable injury arising out of and in the course of his employment for Employer on May 25, 2017. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 9, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

a. Whether Claimant established by a preponderance of the evidence that his alleged work injury arose out of and in the course and scope of his employment on February 21, 2017;

b. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable, necessary and related medical treatment;

c. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits beginning on February 23, 2017, and continuing until terminated by law ;

d. Whether Claimant was responsible for his termination under Sections 8-42-103(1)(g) and 8-42-105(4)(a); and

e. Whether Claimant's compensation shall be reduced by fifty percent for his willful failure to follow safety rules pursuant to Section 8-42-112(1)(b), C.R.S.

STIPUATION OF FACT

The parties stipulate and agree that Claimant's average weekly wage is $959.93.

FINDINGS OF FACT

1. Claimant began working for Employer on February 13, 2017. Claimant's duties were to drive Employer's truck which carried all the equipment necessary for the crew to work on the job site each day and to work as a general laborer pouring and finishing concrete.

2. Prior to beginning work for Employer, on February 12, 2017, Claimant completed paperwork for the Employer and signed an acknowledgement that he received and understood the Employer's Written Safety Plan. Claimant's acknowledgement reflected that Claimant read and understood Employer's written safety plan and agreed to follow all safety policies and rules.

3. Employer's safety rules included a prohibition regarding horseplay on the job. The rule warned that injury or termination could result from horseplay on the job. Charles Franklin, the General Manager for Employer, credibly testified that Claimant was given the safety policies and rules and instructed to read the written safety plan.

4. Mr. Franklin explained in his deposition testimony that, in January 2017, he and his parents purchased the concrete business, in which they employed all employees previously employed by the company.

5. On February 21, 2017, Claimant was on break with other employees waiting for concrete to be delivered. Two other employees were present with Claimant, Fermin Galindo and Joel Ernesto Escarecega-Olivas. While the group was waiting for the concrete to arrive, Claimant and Escarecega-Olivas decided to arm wrestle. Claimant initiated the arm wrestling.

6. Claimant, Galindo and Escarecega-Olivas were aware that arm wrestling was not part of their job duties. Galindo and Escarecega-Olivas knew that arm wrestling was not permitted and no such horseplay had been observed by them at work. During Claimant's brief employment with Employer, he had not observed anyone arm wrestling.

7. Claimant and Escarecega-Olivas started arm wrestling, facing each other and grasping each other's right hands. The arm wrestling match lasted about 30 seconds. Escarecega-Olivas declared that he had won the wrestling match, Claimant declared an end to the match and Claimant let go of Escarecega-Olivas's hand. Claimant step back from Escarecega-Olivas, tripped and fell to the ground landing on his back. Claimant fell almost immediately after ending the arm wrestling match. Escarecega-Olivas did not cause Claimant's fall.

8. Claimant provided contradictory testimony regarding the arm wrestling incident. Claimant's testimony was found to be less credible and persuasive than the testimony of Escarecega-Olivas and Galindo.

9. Claimant treated for his alleged injury with Dr. David Yamamoto, M.D. On February 22, 2017, Dr. Yamamoto recorded that Claimant suffered an injury while walking backwards when he tripped over rebar. Claimant is reported to have told the physician that he injured his right shoulder. On February 24, 2017, Dr. Yamamoto referred Claimant for a right shoulder MRI, which revealed a full thickness rotator cuff tear, as well as a partial tear of the infraspinatus tendon, strain of the deltoid and infraspinatus muscles, and moderate joint effusion.

10. On March 2, 2017, Claimant treated with Dr. Eric C. McCarty, an orthopedic surgeon. The doctor recommended and requested a right arthroscopic rotator cuff repair, subacromial decompression, distal clavicle excision and biceps tendenosis. The doctor opined that Claimant's right shoulder condition was acute.

11. On July 25, 2017, Claimant saw Dr. Peter Weingarten for an IME and the doctor reported that Claimant was pushed and fell backwards. Claimant reported to this doctor that he could not recall exactly how he fell, whether he fell on his shoulder or fell on his outstretched arm. Dr. Weingarten opined that

Claimant sustained a full thickness tear of the supraspinatus tendon in the February 21, 2017, fall incident.

12. Following the February 21, 2017, incident, Claimant continued to work the remainder of the day. On February 23, 2017, Claimant met with Mr. Franklin, the General Manager, about the safety rule violation and Claimant's tardiness for work. Claimant was issued a written warning regarding his violation of Employer's safety rules prohibiting horseplay. Employer also warned Claimant about his late arrival for work on three occasions. Employer sought Claimant's signature on the written warning regarding his horseplay and tardiness. Claimant refused to sign the warning and walked off the job addressing Mr. Franklin using expletives.

13. Mr. Franklin deemed Claimant's refusal to sign the written warning and his departure from the work site to be a resignation from his position. Later, on February 23, 2017, Claimant returned to the job site and surrendered his keys to the Employer's vehicle when he was advised his employment was deemed terminated.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. The claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his employment with the employer. Section 8-41-301(1)(b) & (c), C.R.S.*; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires the claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

Compensability

3. If the acts of an employee at the time of the injury are for the employee's sole benefit, then the injury does not arise out of and in the course of employment. *Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006), *Kater v. Industrial Claim Appeals Office,* 728 P.2d 746 (Colo.App. 1986); *Brogger v. Kezer,* 626 P.2d 700 (Colo.App.1980). If the claimant's activity at the time of the injury constitutes such a substantial deviation from the circumstances and conditions of the claimant's employment that the activity is for the claimant's sole benefit, the injury does not arise out of and in the course of employment. *Kater v. Industrial Commission, supra.* Where, the alleged deviation from employment involves "horseplay," our courts apply a four-part test to determine whether the resulting injury is compensable. In *Lori's Family Dining v. Industrial Claim Appeals Office,* 907 P.2d 715, 718 (Colo. App. 1995), the Court of Appeals held that the relevant factors are:

> (1) the extent and seriousness of the deviation; (2) the completeness of the deviation, *i.e.,* whether it was commingled with the performance of a duty or involved an abandonment of duty; (3) the extent to which the practice of horseplay had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay.

4. In any event, the critical concern is "whether the claimant's conduct constituted such a deviation from the circumstances and conditions of employment that the claimant stepped aside from his job and was performing the activity for his sole benefit." *Panera Bread, LLC v. Industrial Claim Appeals Office, supra. Ultimately, resolution of the issue is one of fact for determination by the ALJ. Panera Bread, LLC v. Industrial Claim Appeals Office*, *supra.*

5. In this matter, Claimant failed to prove by a preponderance of the evidence that he injured himself in the course and scope of his employment for Employer. Claimant's testimony regarding the mechanism of his injury was less credible and persuasive than that of his co-workers. Claimant's explanation to medical providers was evolving, changing and not credible. Claimant's assertions that he was pushed by a co-worker and fell, that he did not instigate the horseplay activity or that his injury did not occur in the midst of the horseplay was not deemed credible. Claimant's horseplay was a deviation from his duties and provided no service to Employer. Claimant's deviation was not co-mingled with Claimant's duties for Employer. Claimant's injury arises from a brief deviation from providing service to Employer. However, though the deviation was brief in the amount of time Claimant and his co-worker were involved with arm wrestling, the brevity of their deviation was dictated by the time it took for Claimant to injure himself bringing the deviation to an end.

6. The evidence established that Employer maintained a written safety policy which included a prohibition against horseplay at work. Claimant was provided with this written safety policy and was aware of the prohibition. Claimant's co-workers credibly testified that they observed no horseplay in the workplace. The evidence further established that despite Claimant's knowledge of Employer's safety policy, Claimant initiated an arm wrestling match. Upon concluding the horseplay which involved Claimant's right arm being wrapped around his co-worker's right arm, Claimant stepped backward and fell. It is concluded that Claimant's deviation from his employment for Employer was substantial to the extent that Claimant's activities leading up to his fall and at the time of his fall, provided no service to Employer, was outside the scope of Claimant's employment and did not arise from his employment for Employer.

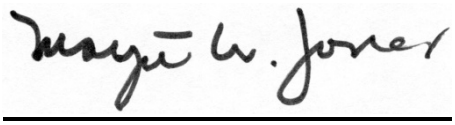
7. Claimant failed to sustain his burden of proof to establish that the injury occurred in the course and scope of his employment, therefore his claim is not found to be compensable.

ORDER

Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43- 301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 14, 2018



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she sustained a compensable injury to her left shoulder.

II. Whether Claimant established, by a preponderance of the evidence, that she sustained a compensable occupational disease to her left shoulder.

III. Whether Claimant is entitled to reasonable, necessary, and related medical benefits.

IV. Claimant's average weekly wage ("AWW").

V. Whether Dr. Mason is an authorized treating provider.

VI. Whether Respondents have established that Claimant is subject to a penalty for late reporting pursuant to §8-43-102(2), C.R.S.

VII. Whether Claimant is entitled to temporary total disability benefits.

VIII. Offset of unemployment benefits against temporary disability benefits.

PROCEDURAL MATTERS

Claimant filed a workers' claim for compensation with a date of injury of May 20, 2016 and Respondent filed a First Report of Injury with an injury date of May 2, 2016. (Ex. 1 & 2.) This resulted in two workers' compensation claim numbers being assigned. The parties agreed that W.C. No. 5-043-691 and W.C. No. 5-043-459 involved the same incident. Therefore, the parties stipulated to merge the claims together and proceed under W.C. 5-043-459 as they were for the same injury claim. A procedural order was issued on June 21, 2017, approving the merger.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on May 30, 1958, and was 59 years of age at the time of the hearing.

2. Claimant was hired in December of 2014 by Respondent/Employer.

3. Respondent/Employer is a greenhouse.

4. In May of 2016 Claimant was employed by Employer as a production worker. Claimant had worked at the green house for a total of seven years and for Olson's since they bought the green house in December of 2014.

5. Claimant worked on the assembly line, planting the plants into containers and moving them from the assembly line onto carts. The carts were metal with 5 to 6 shelves depending on the plants that were being planted on that day. (Ex. 10, pg. 89-90.) According to the Job Site Analysis performed by Summit Vocational Consultants the racks were 7 inches from the floor and up to 68 inches high. Once the rack was filled it was moved and another empty rack was put in its place. A full rack required 18 pounds of force to move across a concrete floor. (Ex. 13, pg. 1.)

6. Claimant worked at a variety of work stations and rotated depending on need. The work stations were at a conveyor belt which was 36 inches from the floor and 15 inches wide. Depending on the plant that is being planted, the speed of the belt varied and often stopped so that the workers could complete the task in front of them. A robot would place cuttings and the workers would fill in those portions of the tray that the robots missed. (*See* Ex. 13, pg. 1.)

7. Claimant testified that on May 20, 2016, while working on the line, she was hit from behind by the metal corner of a rack - cart - that held the plants when a coworker pushed a line of carts into her. Claimant was struck from behind on her left shoulder. Claimant testified that after being hit by the cart, she stabilized herself by putting her hand or hands on the assembly line - conveyor belt.

8. Claimant testified that she reported the incident to her supervisor, Mr. Ernesto Zavala, on the same day. She testified that she also told Mr. Zavala on May 20, 2016, that she hurt her shoulder. She testified that she told him "it was hurting pretty bad" and that "I needed to go to the doctor. I wanted to be sent." (HT, pg. 29.) Claimant further testified that Mr. Zavala refused to send her to a doctor and instead told her to go see her own doctor. *Id.* Claimant testified that because she was not sent to a doctor, she went to her own physician in May of 2016. (HT, pg. 29-30.)

9. Mr. Zavala testified at hearing. He testified that there was an incident in May of 2016 in which a co-worker pushed a cart into Claimant. However, he also testified that after the incident, he asked Claimant if she was okay and whether she needed to be checked by a doctor. According to Mr. Zavala, Claimant said she was okay and that she did not need to see a doctor. (*See* HT, pg. 72.) The ALJ finds Mr. Zavala's testimony to be credible and persuasive.

10. On July 1, 2016, Claimant presented to Salud Family Health Centers. Claimant was evaluated for stomach pain, diabetes, shoulder pain, and depression. There is no mention of the cause of Claimant's shoulder pain. There is no mention of Claimant's shoulder being injured at work. There is, however, mention of the cause of Claimant's depression. It is noted that Claimant has been severely depressed for about a year and that her

depression stems from domestic abuse from her current partner. The severity of her depression was confirmed by a PHQ-9 and GAD-7 testing/screening. The report from this date indicates Claimant's antidepressant was refilled and she was given information for therapy. (Ex. I, pg. 87-92).

11. On July 19, 2016, Mr. Zavala met with Claimant to advise her that she was being laid off. After being advised that she was being laid off, Claimant became upset and angry. Claimant claimed that her "termination" was unfair due to the fact she had worked at the greenhouse longer than others, thought she worked harder than others, and felt the supervisors played favorites. Claimant also alleged that she was being laid off due to her injury in May of 2016. (HT, pg. 46-47.) Once Claimant alleged she was being laid off due to an injury that occurred in May of 2016, the issue of an alleged injury was brought to the attention of Kate Powell, in Human Resources.

12. Prior to being laid off, Claimant had been written up due to performance matters. On October 22, 2015, Claimant's supervisor, Mr. Zavala, wrote Claimant up for insubordination to management and disregarding company policies. (Ex. D, pg. 6.) Mr. Zavala testified Claimant was disciplined because she argued and fought with coworkers and threw a plant at a coworker. (HT, pg. 65-66.). On January 27, 2016, Mr. Zavala wrote Claimant up again for insubordination and for refusing work assignments. (Ex. D, pg. 8.) Mr. Zavala testified that claimant was written up for not doing her work and verbally and physically assaulting coworkers and throwing materials. (Ex. D, pg. 8; HT. pg. 66.)

13. Since Claimant left the Employer's premises after being laid off, Employer arranged for Claimant to come back the following day, May 20, 2016, and meet with Ms. Powell – in Human Resources - to discuss her alleged injury.

14. On July 20, 2016, Claimant, met with Ms. Powell to discuss her alleged work injury. Ms. Powell completed some paperwork and referred Claimant to an urgent care facility which refused to see Claimant.

15. On July 21, 2016, Claimant returned to Salud where she was seen by Dr. Denegri. Claimant complained of left sided neck and shoulder pain and alleged it was caused by an accident at work approximately two months ago.

16. Despite alleging she suffered a work related injury, and knowing how to file a workers' compensation claim since she had previously filed 4 other claims, Claimant did not file a workers' compensation claim soon after she was allegedly injured on May 20, 2016, or soon after she was laid off on July 19, 2016.

17. Instead, on or about July 22, 2016, Claimant filed a claim for unemployment benefits. (Ex. G, pg. 66.)

18. On or about July 29, 2016, Claimant signed a Medical Statement form which authorized her medical providers to provide medical information about Claimant's ability to work. Claimant's physician completed the form and

indicated Claimant was unable to return to work due to left shoulder pain. (Ex. 9, pg. 80.)

19. On August 11, 2016, a Notice of Decision was issued from the Colorado Department of Labor and Employment, Unemployment Insurance Program. (Department of Unemployment.) The notice indicated Claimant's claim for unemployment benefits was disallowed due to a medical condition. The Notice stated:

> A person must be able and available for suitable work during any period for which benefits are claimed or received. Due to a medical condition, you are unable to work; therefore, payments cannot be made because you do not meet the eligibility requirements of the law. (Ex. 9, pg. 83.)

20. On September 6, 2016, another Notice of Decision was issued by the Department of Unemployment. The Notice of Decision indicated:

> A person must be able and available for suitable work during any period for which benefits are claimed or received. Medical information received establishes that you are now able and available for work. Your claim is allowed as of September 4, 2016 provided that you continue to meet the eligibility requirements of the law. (Ex. 9, pg. 81)

21. The ALJ infers from this sequence of events that Claimant's claim for unemployment benefits was disallowed due to her alleged shoulder injury and pain complaints, but Claimant provided supplemental medical information to the Department of Unemployment indicating her shoulder condition did not preclude her from being able and available to work for purposes of receiving unemployment benefits.

22. Claimant was awarded unemployment benefits and paid unemployment benefits at a weekly rate of $323.00 from September 10, 2016, through March 4, 2017. (See Ex. 9, pg. 81 and 88.)

23. On March 6, 2017, just two days after her unemployment benefits stopped, Claimant filed a Workers' Claim for Compensation.

24. As part of her workers' compensation claim, Claimant is requesting temporary total disability benefits as of July 19, 2016, and continuing.

25. As found above, upon the termination of Claimant's unemployment benefits, which were premised on Claimant's contention she was able and available to work, Claimant filed a claim for workers' compensation benefits and is asserting that she has been unable to perform her regular job duties since July 19, 2016, and is entitled to temporary total disability benefits since July 19, 2016. The ALJ acknowledges that a Claimant may be able and available to work and eligible for unemployment benefits, but yet be disabled and entitled to temporary total disability benefits, during the same time period. Therefore, the truth of one position does not necessarily preclude the truth of the other. However, the fact that Claimant alleges she suffered a work injury

on May 20, 2016, and alleges she was laid off because of her injury, and immediately files a claim for unemployment benefits, but waits 8-10 months to file a claim for workers' compensation benefits seems a bit incongruous.

26. Claimant underwent an MRI of her shoulder on February 28, 2017. The MRI showed: i) a high-grade, near full-thickness bursal tearing of the anterior/mid supraspinatus footprint without tendon retraction, ii) superimposed moderate tendinosis, and iii) moderate infraspinatus tendinosis with local interstitial split tear.

27. On June 15, 2017, Claimant underwent an IME with Dr. Kriston Mason. In her report, she assessed Claimant with:

    a. A near full thickness left supraspinatus tear with significant infraspinatus interstitial tearing;

    b. A type 2 acromion with probable chronic impingement;

    c. Myofascial pain based on overutilization of the trapezius and substitution of scapulothoracic for glenohumeral motion; and

    d. Probable exacerbation of underlying longstanding major depression.

28. Although Dr. Mason did not address causation in her report, she recommended Claimant see a psychologist for her depression and an orthopedist for a surgical evaluation of her left shoulder.

29. After issuing her report, Dr. Mason testified via deposition. During her deposition, Dr. Mason was asked to address the cause of Claimant's shoulder condition and complaints. Dr. Mason opined that Claimant's pain generator is her near full thickness supraspinatus tear. (Dep., pg. 26.) She also opined that the tear occurred when Claimant was hit by a cart at work and braced herself from falling with her left hand. (Dep., pg. 8-10)

30. Dr. Mason stated that:

> So she may well have had some degenerative changes in the shoulder prior to this event. But, basically, the mechanism, as described to me, was being hit from behind, bracing out with the arm to prevent being pushed further, and that is essentially the same mechanism as what we call a FOOSH, or a fall on outstretched hand, when people fall, and that is the primary mechanism for injury to the rotator cuff. (Dep., pg. 8-9.)

31. Dr. Mason was asked to further opine on the alleged mechanism of injury in this case since Claimant did not fall to the floor and land on an outstretched hand. Dr. Mason indicated that it's the same motion, and with an unknown force behind it, it "certainly ***could*** cause the tearing." (Emphasis added.) (Dep., pg. 9-10.) Regarding the other findings on the MRI, and whether they were caused by the alleged incident, Dr. Mason stated that:

> So, we know that some of the things on her MRI are things that develop over time. And then other things on her MRI, particularly the tearing, are, you know, more likely to ***potentially*** be something that in the context of a trauma. (Emphasis added.) (Dep., pg. 10-11.)

32. Dr. Mason was again asked whether she had an opinion, within a reasonable degree of medical probability, whether Claimant's shoulder problems are related to the accident on May 20, 2016. Dr. Mason indicated that "the mechanism related to me is ***plausible*** as far as causing a tear to the supraspinatus tendon." (Emphasis added.) (Dep., pg. 22-23.)

33. Dr. Mason also testified that she thought Claimant's physical examination and physical findings correlated "reasonably well." (Dep., pg. 23.)

34. Dr. Mason testified that she did not know what Claimant fell against after being hit by the cart. She said it could have been a wall or a table. (Dep., pg. 29-30.) It does not appear Dr. Mason was aware Claimant was working on the assembly line at the time of the incident and if she needed to brace herself, she braced herself on the assembly line right in front of her, as seen in the photographs submitted at hearing and contained in the Job Site Analysis. (*See* Ex. 13 and Ex. F.) In other words, it is not clear if Dr. Mason was aware that there was very little distance for Claimant to "fall" towards a table or wall and gain momentum which could result in a significant amount of forced being exerted into her rotator cuff. This was not an event in which someone was pushed or lost their balance and fell forward and traveled quite a bit of distance before catching themselves against a wall or table and was therefore consistent with a "FOOSH." In addition, there is no indication that Claimant sought and obtained medical care immediately – or soon after - the incident. Assuming the incident described by Dr. Mason occurred and caused a torn rotator cuff with the immediate onset of pain as described by Claimant, and she requested Employer to send her to a doctor on the day it happened and they refused, Claimant did not seek treatment from her primary care provider, via Salud, close in time to the incident. Moreover, when she did seek treatment for a number of ongoing medical problems on July 1, 2016, and said she had shoulder pain, she did not indicate her shoulder pain was due to an accident, let alone an accident occurring at work.

35. Although Dr. Mason's opinions only need to be within a reasonable degree of medical probability, her use of various qualifiers when rendering opinions about causation such as "could" – "plausible" – and "potentially" make her opinions regarding causation unpersuasive.

36. The ALJ does not find Dr. Mason's opinions regarding causation to be persuasive.

37. Dr. Mason agreed that people can get degenerative rotator cuff tears. (Dep., pg. 41). She also agreed that there is no way to determine whether a rotator cuff tear shown on an MRI was caused by degeneration or an acute injury.

(Dep., pg. 41.) The ALJ does find this portion of her testimony to be credible and persuasive.

38. Claimant was evaluated in an Independent Medical Examination by Henry J. Roth, M.D. on August 10, 2017. Subsequently, Dr. Roth's evidentiary deposition was taken where the parties stipulated to Dr. Roth's qualifications and expertise as an Occupational Medicine Physician, Internal Medicine physician and Level II Accreditation. Dr. Roth not only reviewed all of Claimant's medical records, performed an Independent Medical Examination of Claimant but also was present at the workers' compensation hearing and heard Claimant's testimony as well as the other lay witnesses.

39. As set forth in Dr. Roth's report, Claimant described the mechanism of injury by stating that the edge of the cart hit her at the left medial scapular border and that it was a focal and isolated impact. She also identified the area of impact and discomfort is in the same periscapular region. (Ex. E, pg. 17.) Claimant did not tell Dr. Roth that she was injured when she braced herself after being hit by the cart.

40. It is Dr. Roth's expert medical opinion Claimant did not sustain an injury to her left shoulder on May 20, 2016 when she was hit by a cart. It is Dr. Roth's further expert opinion that Claimant's left upper quarter myofascial pain as well as any underlying left shoulder internal derangement (degenerative arthrosis/arthritis) is independent and unrelated to her workers' compensation claim date of May 20, 2016. The basis in part for Dr. Roth's opinion is:

> The mechanism of injury is not of a mechanical type that would medically be associated with internal derangement at the shoulder as there actually is no direct mechanism at the left shoulder. There is no direct impact to anatomically disrupt the rotator cuff or glenohumeral joint. There is no lateral compressive force. There is no postural or exertional shoulder strain. Currently, there is no indication symptoms are related to the left shoulder joint. (Ex. E, pg. 21.)

41. During his deposition, Dr. Roth testified that the mechanism of injury reported to him:

> [D]oes not provide the mechanism of injury to internal derangements in the shoulder. In other words, would an impact to your upper back result in pathology internal to your shoulder? The answer is no.
>
> There is no mechanism, the impact on her back is below her shoulder and doesn't specifically involve any force to the shoulder or motion to the shoulder joint. (Dep., pg. 12-13.)

42. Dr. Roth also addressed Claimant's contention that the injury occurred when she braced herself after being hit by the cart. Dr. Roth stated:

> The second element, would leaning forward onto a table have produced any disc pathology? And, again, the answer

> is no because it's involving ordinary degenerative change. And, again, what you're describing is not a mechanism where the shoulder joint is put into a position that exceeds the tolerance of the tissues, nor was any force being – significant force being applied. To wit, immediately afterwards she was able to continue the same activity she was performing, and she continued those activities for six weeks. If there would have been an acute injury with tear inside of a joint, it would swell, it would be immediately painful, and it probably would have precluded continuing normal activities of daily living, especially her work. So it's not medically likely that event was associated with a significant atomic change.
>
> Also, the degenerative changes that we're seeing are quite ordinary and almost universal at age 59. That doesn't mean all persons are symptomatic. We have medical studies showing that at age 60, 50 percent of asymptomatic males have partial or complete rotator cuff tears bilaterally. So degenerative changes are quite compatible with not having had previous shoulder symptoms; it doesn't require that. And that's a reflection of genetics, age, and deconditioning and poor health. Subsequently, we have an exaggerated pain response, but that is a reflection of personal circumstances. (Dep., pg. 12-14.)

43. Dr. Roth was also asked during his deposition whether incident alleged by Claimant aggravated, accelerated, or exacerbated Claimant's pathology documented by the February 28, 2017, MRI. Dr. Roth indicated that there is no relationship between the two. He further opined that:

> What you're looking at is the ordinary -- you know, medically probable ordinary degenerative change. And 5/20/16 does not provide a mechanism of clinical significance that would have resulted in alteration or exacerbation of shoulder anatomy. And, subsequently, there was no clinical course that would support an injury having been sustained on that date. (Dep., pg. 14.)

44. It is also Dr. Roth's expert medical opinion that Claimant's left shoulder condition is not due to an occupational disease. (Dep., pg. 19-20). After reviewing the Job Site Evaluation performed by Ms. Pickett, Dr. Roth stated in email correspondence to Respondents' counsel that Claimant's job duties:

> [D]id not breach the thresholds necessary to consider an upper extremity condition potentially work–related. This analysis holds true whether utilizing the evidence-based medicine within the cumulative trauma conditions guideline

or the non-evidence based potential thresholds as reported in the shoulder treatment guidelines. (Ex. E., pg 46.)

45. Claimant testified that her current pain is in the location where she was hit with the cart. (HT, pg. 39.) This is consistent with her presentation to Dr. Henry Roth. As set forth in Dr. Roth's report, Claimant stated that the edge of the cart hit her at the left medial scapular border and that it was a focal and isolated impact. She also identified the area of impact and discomfort is in the same periscapular region. (Ex. E, pg. 17.)

46. Claimant did not tell Dr. Roth that she was pushed forward and used her hand(s) to brace herself from falling and that is when she injured her shoulder. However, after hearing Claimant's revised version of the alleged mechanism of injury, Dr. Roth testified that even that alleged mechanism of injury "does not support an independent injury of any sort because when she presents for medical attention -- even when she presents 15 months later for independent medical examination - her discomfort is isolated to upper torso musculature, which is not a specific condition and doesn't relate to either of the mechanisms that are currently being discussed." (Dep., pg. 7-8.)

47. Claimant's job duties did not involve a peculiar risk that could cause an occupational disease of the shoulder. There was no occupational exposure that contributed to Claimant's shoulder condition, pain complaints, or alleged disability.

48. Dr. Roth's expert medical opinions are found to be credible and extremely persuasive. Dr. Roth's expert medical opinions regarding causation are found to be more credible and more persuasive than those of Dr. Mason.

49. Review of the medical records from Salud demonstrates as early as February 21, 2011, Claimant reported pain in her shoulder. (Ex. J, pg. 70.) On February 7, 2014, Claimant reported pain in her neck radiating to her left arm and had left shoulder pain on arc test. (Ex. J, pg. 72.)

50. A Job Site Analysis was prepared by Ms. Gail Pickett, of Summit Vocational Consultants. (Ex. 13.) Ms. Pickett's report includes a number of photographs of the assembly line – conveyor belt – at which Claimant was working when she was hit on the backside of her shoulder by a cart. The pictures show workers placing cuttings in those portions of the trays that the robots missed. The pictures demonstrate the workers – who appear to be a little shorter than average - like Claimant who is about 5 foot 2 inches - working at the assembly line. The assembly line is about waist height. Although Claimant might not have been placing cuttings in trays like the workers in the photographs when she was hit on the backside of her shoulder by a cart, the pictures demonstrate the proximity of the workers to the conveyor belt while working. This ALJ finds that upon being unexpectedly hit by a cart, Claimant would have most likely been pushed into the side of the conveyor belt and her waist or midsection of her body would have absorbed much of the force. Therefore, Claimant's contention that she braced herself with an outstretched

arm, which resulted in significant force being exerted into her shoulder joint, resulting in a torn rotator cuff, seems unlikely.

51. On April 6, 2017, counsel for Claimant signed a Workers' Claim for Compensation Form on behalf of claimant alleging a date of injury/disease of May 20, 2016 that occurred at 4:00 p.m. Claimant, through counsel, alleged a co-worker pushed a line of metal carts towards her. Claimant did not allege an occupational disease with a date of onset of disability of either July 1 or July 19, 2016.

52. Kate Powell testified post hearing by deposition. Ms. Powell attended the hearing. Ms. Powell was Employer's Human Resources manager. Ms. Powell testified that Claimant, and others, were laid off on July 19, 2016, due to a slowdown in work. She also testified that on July 20, 2016 Claimant, for the first time told Ms. Powell she was injured at work when someone ran a cart into her. She testified that Claimant did not report any type of injury to her in May or June of 2016 and did not report the injury until she was laid off on July 19, 2016. Based on Claimant's allegations, Ms. Powell, completed paperwork regarding Claimant's workers' compensation claim. Ms. Powell testified at no time between May, June and July before July 20 did Claimant report the alleged injury to Ms. Powell. Ms. Powell testified Claimant worked her regular hours through July 19, 2016. Ms. Powell's testimony is found to be credible and persuasive.

53. Mr. Vincente Savala testified at hearing. Mr. Savala was the production supervisor. Mr. Savala, Mr. Zavala and Ms. Powell credibly testified Claimant continued to work her regular job until she was laid off due to the end of season on July 19, 2016.

54. Claimant missed no time from work due to the May 20, 2016 incident, or the May 2, 2016 event and/or the alleged occupational disease.

55. Claimant never claimed to Mr. Zaval, Mr. Savala or Ms. Powell that her job duties caused problems requiring health care or was disabling and interfered or prevented her from working.

56. Review of the medical records from Salud demonstrates as early as February 21, 2011, Claimant reported pain in her shoulder. (Ex. J, pg. 70.) On February 7, 2014, Claimant reported pain in her neck radiating to her left arm and had left shoulder pain on arc test. (Ex. J, pg. 72.)

57. On February 7, 2014, Claimant had an x-ray of her cervical spine due to "radicular pain." On November 26, 2014, Claimant was seen for right shoulder pain also for left shoulder pain. On November 12, 2015, Claimant returned to Salud complaining of neck pain.

58. On December 21, 2015, claimant returned to Salud on follow up after being seen at Poudre Valley Medical Center after she fell and hit her head. Claimant's neck was tender and one of her assessments was neck pain.

59. Claimant returned to Salud on February 6, 2016 because of continuing neck pain. Claimant returned to Salud on February 11, 2016 for follow up for her neck pain. Claimant was seen at Salud on April 14, 2016 for medication refill due to her neck pain.

60. Review of the Salud records does not establish Claimant returning to Salud for any reason after April 14, 2016 until July 1, 2016. On July 1, 2016, claimant was seen for a behavioral health visit. Review of this chart note demonstrates, "The patient states that she fell and hurt her head and that in December 2015 and suffers from pain in those areas. The patient reports that she had difficulty sleeping, lack of energy and loss of appetite. She also reports lack of concentration and feels down and helpless. …the patient disclosed that she is in currently in a domestic violence situation. She has been feeling these depressive symptoms for about a year and this is when this relationship began."

61. Claimant was seen by Clandra Robinson, M.D. at Salud also on July 1, 2016 for stomach pain. Under history of present illness it also states, "also L shoulder pain had X-ray done in Feb but never got results." On physical examination claimant's neck was supple, neurologic grossly normal, musculoskeletal extremities no edema, pulse is equal bilaterally, normal strength and range of motion of shoulders but had tenderness to palpation throughout right half of trapezius muscle. Dr. Robinson noted assessments of diabetes, shoulder pain and depression.

62. It is specifically found the medical records from Salud from July 1, 2016 do not support an alleged industrial injury with a date of either May 2 or May 20, 2016, nor an occupational disease with a date of onset of disability of on or about July 1, 2016.

63. On July 21, 2016 claimant returned to Salud where she was seen by Dr. Denegri. The reason for appointment, "pp here c/o neck/shoulder pain. PP had an accident at work two months ago." Review of the examination, "general exam…in no acute distress, shoulder: left joint no pain with movement, palpation left moderate tenderness. Erythema left none. Edema left none present. Effusion left none present. Flexion left decrease, extension left decrease, ecchymosis none. Present bilaterally. Laceration none. Present bilaterally. Tenderness to palpation left mild diffuse. Dr. Denegri's assessment was shoulder pain.

64. It is specifically found the July 21, 2016 chart note does not support either an industrial injury of May 2 or May 20, 2016, or an occupational disease with a date of onset of disability of on or about July 1 or July 19, 2016. Merely

because Claimant complained of shoulder pain, merely because Claimant vaguely mentioned an accident at work and merely because Dr. Denegri noted some moderate tenderness and decreased motion does not mean either of those were because of what Claimant alleged occurred at work.

65. Based on the totality of the evidence presented, Claimant's testimony that she injured her left shoulder due to the incident with the cart or due to an occupational disease is not found to be credible for a number of reasons. Some of the reasons include, but are not limited to, the following:

First, Claimant testified that she went to her personal physician in May of 2016, after the incident with the cart. The medical records submitted by the parties do not support Claimant's testimony that she went to her own physician in May of 2016, after the May 20, 2016, incident. The first time Claimant went to her physician and complained of shoulder pain after May 20, 2016, was July 1, 2016. Moreover, when Claimant went to her personal physician on July 1, 2016, and was evaluated for a number of medical issues, and mentioned she also had shoulder pain, she did not mention that her shoulder pain was caused by an accident or an accident at work.

Second, Mr. Zavala testified at hearing and the ALJ finds his testimony to be credible and persuasive. He testified that there was an incident in May in which a co-worker pushed a cart into Claimant. However, he also testified that after the incident, he asked Claimant if she was okay and whether she needed to be checked by a doctor. According to Mr. Zavala, Claimant said she was okay and that she did not need to see a doctor. (HT, pg. 72.) In addition, Mr. Zavala also testified that if an employee reports a work injury, he fills out a form and gives the form to Ms. Powell, who then tells the employee where to go and which doctor to see. (HT., pg. 78-79.) In this case, when Claimant was laid off on July 19, 2016, and alleged she was being laid off due to suffering a work injury, the alleged injury was brought to the attention of Ms. Powell and Ms. Powell completed the appropriate paperwork. Had Claimant alleged she was injured on May 20, 2016, when she was hit by the cart, and asked to see a doctor – as Claimant alleges - it seems likely that Mr. Zavala would have advised Ms. Powell of an alleged injury as was done on July 19, 2016 and Ms. Powell would have completed paperwork regarding the alleged work injury as she did on July 20, 2016. Therefore, the ALJ finds that although an incident occurred on May 20, 2016, Claimant's testimony that she told Mr. Zavala on the day of the incident that her shoulder was hurting and that she wanted to be sent to a doctor is not credible.

Third, Claimant's medical records document Claimant has been the victim of domestic violence. As found above, the July 1, 2016, report from Salud documents Claimant has been severely depressed for about a year and that her depression stems from domestic abuse from her current partner. The report also indicates Claimant's antidepressant was refilled and she was given information for therapy. (Ex. I, pg. 87-92). On cross examination,

Claimant was asked whether the domestic violence to which she was subjected was physical. Claimant denied being subjected to any domestic violence and indicated that she does not know where the doctor got that information. (HT, pg. 56.) Claimant also completed a questionnaire when she was evaluated by Dr. Mason. Although Claimant stated that she suffers from depression, she indicated that her depression was due to being in too much pain – and did not indicate it was based upon personal matters. (Ex. 12, pg. 9.) The ALJ is mindful that domestic violence is particularly personal and extremely difficult for most victims to discuss, however, Claimant's failure to honestly answer questions about this matter further decreases Claimant's overall credibility regarding the alleged cause of her left shoulder problems and symptoms.

Fourth, it is Claimant's contention, based upon the testimony of Dr. Mason, the incident on May 20, 2016, tore her rotator cuff and the tear is the cause of her shoulder pain. However, Dr. Roth credibly testified that Claimant's actions of not seeking medical care for approximately 6 weeks and performing her regular work activities until she was laid off is inconsistent with suffering a traumatic rotator cuff tear. Dr. Roth further testified that if there was an acute injury with a tear inside the shoulder joint, it would swell, it would be immediately painful, and it probably would have precluded continuing normal activities of daily living, especially her work, and the ALJ finds this testimony to be credible and persuasive and finds that Claimant's actions are inconsistent with suffering rotator cuff tear when the cart hit her.

Fifth, this ALJ does not find the alleged mechanism of injury which was somewhat described by Claimant during her testimony and more fully described by Dr. Mason, which indicated Claimant fell on an outstretched hand after being hit by the cart, to be credible. As found above, based upon the photographs submitted at hearing, it would seem that upon being hit unexpectedly by a cart, Claimant would have been pushed into the side of the conveyor belt and her waist or midsection of her body would have absorbed much of the force. Moreover, Claimant did not describe to Dr. Roth that she injured her shoulder upon bracing herself after being hit by the cart. Therefore, Claimant's contention that she braced herself with an outstretched arm, which resulted in significant force being exerted into her shoulder joint, resulting in a torn rotator cuff, is not credible.

66. It is specifically found Claimant was not disabled from performing her regular job duties due to what she alleges occurred either on May 2 or May 20, 2016. It is specifically found Claimant's job did not end because of the alleged industrial injury, rather, due to Claimant being laid off due to the end of season. After being laid off Claimant applied for and received unemployment benefits beginning in September of 2016.

67. It is specifically found Claimant did not require healthcare treatment because of what she alleged occurred on either May 20 or May 2, 2016. The temporal

and credible medical evidence does not support Claimant seeking treatment because of the incident with the cart hitting the backside of her shoulder.

68. It is specifically found that Claimant's job duties did not involve a peculiar risk that could cause an occupational disease of the shoulder. It is specifically found that there was no occupational exposure that contributed to Claimant's shoulder condition, pain complaints, alleged disability, or need for medical treatment.

69. It is specifically found Claimant did not sustain a compensable occupational disease with a date of onset of disability of either July 1 or July 19, 2016. It is specifically found Claimant was not disabled from performing her regular job duties due to the alleged occupational disease. It is specifically found Claimant did not require medical treatment to cure or relieve her from the effects of the alleged occupational disease.

70. It is specifically found Claimant's claims for workers' compensation benefits whether due to an industrial injury or an occupational disease are denied and dismissed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ

determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Compensability

The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* WC 4-650-711 (ICAO February 15, 2007).

The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn*, W.C. No. 4-663-169 (ICAO April 11, 2007), the panel stated "[p]ain is a typical symptom caused by the aggravation of pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

Claimant had the burden of proof to establish by a preponderance of the evidence found credible she suffered either a compensable industrial injury or a compensable occupational disease. It is specifically concluded the expert medical opinions of Dr. Roth, are more credible and more persuasive than Dr. Mason. It is also specifically concluded that Claimant's testimony regarding the alleged consequences of the incident with the cart as it relates to her left shoulder is neither credible nor persuasive.

The incident in which Claimant was hit by the cart did not cause, aggravate, or accelerate Claimant's shoulder condition or symptoms and necessitate the need for any medical treatment or cause any disability.

Claimant's job duties did not involve a hazard or peculiar risk that could cause an occupational disease of the shoulder. Moreover, there was no occupational hazard, exposure, or peculiar risk that contributed to, or caused, Claimant's shoulder condition, pain complaints, disability, or need for medical treatment.

Therefore, it is specifically concluded Claimant failed to meet her burden of proof and establish either a compensable industrial injury or a compensable occupational disease.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claims for workers' compensation benefits are denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 29, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that he sustained a compensable injury on or around January 31, 2017.

II. If Claimant proved he sustained a compensable injury, whether Claimant proved by a preponderance of the evidence he is entitled to medical treatment from Dr. John Tobey.

FINDINGS OF FACT

1. Claimant is a 38-year-old right-hand-dominant man who worked for Employer as a production cook. Claimant's job duties consisted of preparing foods for sale to Employer's customers, including setting up the salad bar for use by Employer's customers.

2. Claimant alleges that he sustained a work injury while working for Employer on Tuesday, January 31, 2017. Claimant testified that he walked into a walk-in cooler to collect product to set up the salad bar and reached his left arm above his head to grab a bag of lettuce when he felt a "shock wave" from his left shoulder and down his arm into his left elbow. Claimant testified that the bag of lettuce was located on the top shelf and required him to stand on his toes to reach the bag. Claimant testified that he later commented to a co-worker that the lettuce "kicked his butt" but went on working the rest of his shift. Claimant testified that the pain originally felt like a "Charley horse," but developed into tingling into his hand later in the day.

3. Claimant first sought medical treatment from his primary care physician, Steven Gary Mlodinow, M.D., on February 6, 2017. Claimant complained of left forearm pain radiating from his wrist to his elbow, with numbness and tingling in his fingers. Dr. Mlodinow noted the following under the History of Present Illness section: "6 days ago, awoke from sleep with moderate to severe L[eft] forearm pain, volar surface…No injury or change in use." On physical exam, Dr. Mlodinow noted tenderness along the forearm, hand, wrist, and elbow, and diminished sensation to fine touch. He diagnosed Claimant with a left forearm strain. He specifically noted, "Symptoms and finding perplexing. Much would point to CTS, but some symptoms point to ulnar neuritis or olecranon bursitis. Sudden onset of symptoms with this level of severity would suggest injury, which patient denies."

4. Dr. Mlodinow referred Claimant to Eric Traister, M.D., who diagnosed Claimant with carpal tunnel syndrome ("CTS") and tennis elbow (lateral epicondylitis) on February 22, 2017. Dr. Traister referred Claimant to Kristi Gill, D.O.

5. On February 23, 2017, Claimant sent an e-mail to Employer's Human Resources representative Sheila Nawrocki stating,

> On Monday Jan[uary] 30 my arm started to bother me, my arm from my elbow to my wrist and my hand felt numb and achy. I went to work on Tuesday January 31 and during the course of the day, my left hand and arm continued to hurt and got more painful as the day progressed…There was no specific incident that caused my injury either at work or at home.

He wrote that Dr. Traister diagnosed him with CTS and tennis elbow and stated, "I believe this is a result of the work that I do at [Employer]. There has not been an 'event' that could have caused this injury other than the daily routine of my job." Claimant made no mention in the e-mail of an incident reaching for lettuce in the e-mail reporting the alleged injury.

6. Claimant completed an Incident Report on February 24, 2017 stating, "On Jan[uary] 31 I noticed extrem (*sic*) pain in my arm to elbow and numbness + tingle in hand." Claimant again made no mention of an incident reaching for lettuce.

7. Claimant gave a recorded statement to the insurance adjuster on March 8, 2017. The recorded statement was played at hearing. During the conversation, Claimant stated, in relevant part:

> Adjuster: So where were you when it started hurting?
>
> Claimant: I usually work at like 6 in the morning, so I woke up and it was about 5:30 and on the way into work it kinda felt like … my hand was tingling a little bit and it kinda felt like something I could shake off but I went about my normal routine. About 7:00 that morning I actually opened a bag of lettuce and I was like 'man there is something wrong.'
>
> Adjuster: So it sounds … you said your hand was tingling when you were on the way to work?
>
> Claimant: Yeah, it was something I felt like I could shake off, like maybe it happened … I really wasn't … I really wasn't aware of it … like that morning my hand felt kinda tingly and yeah …
>
> I mean really all I do is go to work and come home and hang out with my kid, it's like there is nothing really that could have affected ... when I think what caused it, I can't tell you.
>
> Adjuster: OK, so there was no traumatic event?
>
> Claimant: No ma'am.

8. On March 8, 2017, Claimant presented to Janet Brown, M.D. at Concentra with complaints of left elbow pain for five weeks with numbness, tingling and swelling. Dr. Brown noted that Claimant noticed the pain on approximately February 6, 2017 while working as a chef for Employer. Dr. Brown diagnosed Claimant with a left elbow injury and recommended an MRI of the left upper extremity.

9. Claimant presented to Dr. Gill on March 9, 2017. Claimant reported an onset of symptoms around the end of January 2017 and beginning of February 2017. Claimant reported experiencing "rare" numbness and tingling in his left hand prior to the alleged work incident. Dr. Gill raised the possibility that Claimant's pain was coming from impingement of the C6-7 nerve root and recommended Claimant undergo an EMG.

10. On March 15, 2017, Claimant underwent MRIs of the left upper extremity. The left wrist MRI revealed a probable linear, interstitial tear of the jugular fibrocartilage complex. The left elbow MRI revealed nonspecific synovitis with small joint effusion. The left shoulder MRI revealed mild tendinosis of the supraspinatus component with no evidence of full-thickness rotator cuff defect.

11. On March 16, 2017, Claimant presented to Felix Meza, M.D. at Concentra. Claimant reported experiencing an onset of pain around February 1, 2017. Dr. Meza noted, "[Claimant] denies specific fall or trauma. Denies specific injury to the wrist or forearm. He does report repetitive activities as a chef in cutting and preparing food." Dr. Meza reviewed the MRIs and assessed left elbow and left wrist pain. He recommended EMG testing, physical therapy, and a worksite evaluation. He remarked, "I have discussed with the patient since he does not have an isolated incident or exact time of injury that he would need to meet the Colorado Workers' Compensation repetitive trauma guidelines." Dr. Meza referred Claimant to John Tobey, M.D. for an EMG.

12. A Job Demands Analysis and Risk Factor Analysis was completed on March 16, 2017. No primary or secondary risk factors were identified.

13. On April 13, 2017, Devin Jacobs, PA-C, evaluated Claimant under the supervision on Dr. Meza. PA-C Jacobs diagnosed Claimant with mild left carpal tunnel syndrome and lateral epicondylitis of the left elbow. He determined Claimant did not meet the criteria for a repetitive use injury and recommended Claimant see his primary care physician for any further treatment.

14. Dr. Tobey performed an EMG on May 9, 2017. He noted that Claimant reported being injured on February 1, 2017 when reaching above his head to grab a bag of lettuce. Based on the EMG findings, Dr. Tobey concluded that there was no evidence of left carpal tunnel syndrome, ulnar neuropathy or radial neuropathy. He diagnosed Claimant with probable mild left subacute C7 radiculopathy.

15. On February 21, 2018, F. Mark Paz, M.D. performed an independent medical evaluation ("IME") at the request of Respondents. Dr. Paz issued an IME report dated March 1, 2018. Dr. Paz interviewed and physically examined Claimant, and conducted a thorough medical records review. Claimant reported sustaining an injury on January 31,

2017 while pulling a bag of lettuce down from an overhead location using his left upper extremity. Dr. Paz gave the following assessment, in relevant part: left upper extremity paresthesias and weakness, left wrist and elbow pain, left wrist TFCC interstitial tear, left elbow synovitis, and left rotator cuff tendinosis. He concluded that there were no objective findings supporting Claimant's subjective symptoms. Dr. Paz included a causation analysis in his report, and opined that it is not medically probable Claimant's left upper extremity symptoms, including the paresthesias and weakness, are causally related to the January 31, 2017 incident.

16. On March 5, 2018, Dr. Tobey testified by deposition as an expert in physical medicine and rehabilitation, electrodiagnostic medicine, and sports medicine. Dr. Tobey explained that the electrodiagnostic findings indicated Claimant has nerve damage on the left, most likely associated with a pinched nerve from the neck. Dr. Tobey testified that Claimant probably has a disc bulge or disc herniation pinching on the C7 nerve root, which was likely caused by Claimant reaching for a bag of lettuce. However, on cross examination, Dr. Tobey testified that his opinion would change if Claimant's pain did not, in fact, begin with the alleged specific incident of reaching overhead for the bag of lettuce. Dr. Tobey stated:

> Q: You said that your opinion as to causation is based upon the fact that it -- that his pain began with a specific incident of lifting his arm over his head, correct?
>
> A: Yes, that's correct.
>
> Q: And is that important to you in reaching your causation analysis?
>
> A: Well, I think it -- I think it's important from the standpoint that, you know, there was a specific incident where it happened rather than just something that kind of developed over time.
>
> Q: And if it had been something that just developed -- Let's say he woke up and his arm was feeling that way, would that change your opinion?
>
> A: Yes. I mean, I think that there is – You know, there can be incidents where people herniate disks or bulge disks, you know, just with normal everyday life activities as well.

17. Claimant testified that he did not have pain in his left upper extremity prior to the alleged work incident. He stated he does not believe he was experiencing problems in his arm the morning of or the day prior to the alleged injury. Claimant testified that he did not initially attribute his symptoms to grabbing the bag of lettuce. He stated he began thinking about other ways that he could have been injured only after receiving medical treatment for CTS that did not improve his condition. Claimant testified that he now is certain his symptoms were caused by the alleged lettuce incident.

18. Claimant's testimony as to the mechanism of injury and onset of symptoms is not found credible or persuasive.

19. The ALJ credits the opinions of Drs. Meza and Paz, the medical records, and the employment records, over Dr. Tobey's conflicting opinion and Claimant's testimony, and finds that Claimant did not sustain an injury or occupational disease arising out of and in the course of his employment.

20. Claimant failed to prove by a preponderance of the evidence that his condition is proximately caused by, arose out of, and occurred in the course of his performance of services for Employer.

21. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to prove by a preponderance of the evidence that he sustained a compensable injury or occupational disease proximately caused by, arising out of, and in the course of his employment with Employer. Claimant's reports as to his mechanism of injury and onset of symptoms have been inconsistent throughout the medical and employment records. In his initial reports to medical providers, Employer and Insurer, Claimant repeatedly denied any specific event occurred. To the contrary, Claimant indicated he experienced symptoms prior to the alleged date of injury, reporting to Dr. Mlodinow that he woke up from sleep with pain in his arm, and telling the insurance adjuster he woke up with a tingling sensation in his hand prior to going to work on the alleged date of injury. There is no mention in the records of a reported specific incident until May 2017, after a Job Demands Analysis failed to identify any primary or secondary risk factors, and it was determined Claimant did not meet the criteria for a repetitive use injury. The inconsistencies in Claimant's reported mechanism of injury and onset of symptoms undermine Claimant's credibility.

Additionally, Dr. Paz and Meza credibly and persuasively opined that Claimant's condition is not work-related. While Dr. Tobey provided a conflicting opinion, his opinion is based on Claimant's reported mechanism of injury and onset of symptoms, which the ALJ found incredible. There is insufficient credible and persuasive evidence Claimant sustained an industrial injury or occupational disease. As found, no primary or secondary risk factors were identified, and it was determined Claimant did not meet the Guidelines for a repetitive use injury. Based on the totality of the evidence, Claimant failed to meet his burden to prove that he sustained a compensable injury and that he is entitled to medical benefits.

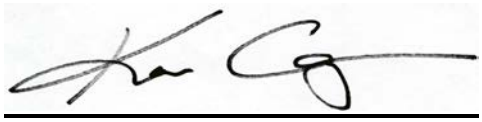
ORDER

It is therefore ordered that:

1. Claimant failed to prove by a preponderance of the evidence he sustained a compensable injury or occupational disease arising out of and in the course of his employment for Employer on or around January 31, 2017. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 15, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable industrial injury or compensable occupational disease.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to medical benefits.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability indemnity benefits from August 5, 2017 and ongoing.

4. Determination of Claimant's average weekly wage.

5. If the claim is found compensable, whether Respondents are entitled to a penalty against Claimant's entitlement to benefits for Claimant's late reporting.

FINDINGS OF FACT

1. Claimant is a 55 year old male who worked for Employer as a certified armored service technician from April of 2000 until he was found to be unfit for duty on August 7, 2017.

2. Claimant's duties included working six days per week, 8-10 hours per day, picking up and delivering customer change orders/deposits, carrying a minimum of 50 pounds by hand or up to several hundred pounds by cart, and having a minimum of 50 stops per day. His job duties also included loading and unloading vehicle cargo consisting of bags and boxes of coin weighing as much as 50 pounds per item 20/25 times per day, and required an unrestricted ability to bend, stoop, squat, stand, walk, climb, twist, turn, and reach out. *See* Exhibit 1.

3. In 2010 while working for Employer, Claimant was involved in a rollover accident in Employer's armored truck. Claimant injured his left knee and had surgery. After recovering from surgery, he returned to working his job as an armored service technician. Claimant was provided with a permanent partial disability impairment rating for his left lower extremity and his right upper extremity as a result of that incident. *See* Exhibits 12, A.

4. On February 11, 2016 Claimant was evaluated by his personal care provider Micah Miller, PA for an annual physical examination and diabetes check. A

history of hypertension, diabetes mellitus type 2, sleep apnea, and morbid obesity were noted. Claimant was noted to have a body mass index of 42.6. *See* Exhibit C.

5. On February 13, 2017 Claimant was evaluated by his personal care provider Sarah Reynolds, PA for an annual physical. Claimant reported that his left knee pain prevented him from exercising but that he did walk a lot on the job. Claimant reported that 30% of the cartilage in his left knee was removed following a prior car accident. PA Reynolds noted a history of diabetes type 2, sleep apnea, hypertension, and morbid obesity. Claimant reported that his left knee had been aching since surgery in 2012 and that it also had occasional swelling. Claimant denied difficulty walking. Claimant was noted to have normal gait and normal stance. Claimant was assessed with chronic left knee pain. It was recommended that Claimant try to do some form of moderate intensity exercise 30-45 minutes per day for 4-5 days per week and that he try wearing a knee brace for stability and pain control. Voltaren Gel was recommended for his left knee for symptom relief. *See* Exhibit C.

6. On May 10, 2017 Claimant was evaluated by his personal care provider Kyle Odvody, NP. Claimant reported recurrent right hip and knee pain that he attributed to his left knee pain and left knee surgery from 2012. Claimant reported that he got flare ups of pain in his left knee and that he compensated by walking differently and then would start having left hip pain. Claimant reported that the pain then shifted to his right knee and into his right hip region. Claimant reported that he was currently in the phase where his right hip hurt and that it had been going on for the last two weeks. Claimant reported getting into and out of his truck a lot during the day and walking a lot during the day. Claimant's body mass index was noted to be 43.1. On exam, NP Odvody found Claimant's right hip to have some tenderness on external rotation, minimal flexibility on external rotation, muscle tenderness and tightness in the right Piriformis muscle. Claimant was found to have no swelling or joint tenderness in his knees but generalized reduced flexibility. NP Odvody assessed: right hip pain, likely right piriformis syndrome or sciatica, obesity, and chronic left knee pain. NP Odvody discussed options for physical therapy evaluation and treatment, but Claimant believed he could not afford physical therapy and noted he may try to get physical therapy approved through his workers' compensation case. NP Odvody discussed stretching exercises twice per day and also discussed proper lifting. NP Odvody discussed 20-30 pound weight loss in order to allow back offload compensating from Claimant's abdominal weight. NP Odvody noted Claimant was to follow up in 3-4 weeks if his symptoms persisted or worsened and noted that Claimant would trial stretching and weight loss. *See* Exhibits 14, C.

7. On May 11, 2017 X-rays were performed of Claimant's pelvis and hips as well as his lumbar spine. The impression provided was no evidence of acute injury and no fracture in the hips. Degenerative changes in the bilateral hips, left significantly greater than right. The impression provided for the lumbar spine was no acute abnormality but mild degenerative changes of the spine with mild dextroconvex curvature of the lumbar spine. *See* Exhibit 15.

8. In the spring of 2017, Claimant was working full time for Employer. Claimant had passed and maintained his fit for duty certification. Claimant had passed his firearms certification and had positive performance evaluations. *See* Exhibits 2, 3, 4, 5.

9. On May 22, 2017 while helping his partner load boxes of coin and money bags into Employer's armored truck, Claimant reported that he began to experience excruciating pain in his knees and buttocks. Claimant reported to his work partner that he was in pain and wanted to go talk to someone. Claimant reported an injury to his operations lead and filled out a first report of injury.

10. In a statement filled out and signed by Claimant on May 22, 2017, Claimant reported that he had a prior left knee injury from a truck rollover that had required surgery at the time. Claimant reported that it flared up with pain, caused awkward walking motion, and placed strain on his right knee. Claimant reported that it usually would clear itself after about two weeks but that recently a flare of pain had continued for almost two months. Claimant reported intense pain in both knees and that he believed that there may be pressure on the sciatic nerve. Claimant reported that the pain had started about the beginning of May while he was "hopping." *See* Exhibits 7, B.

11. On May 22, 2017 Claimant was evaluated at Concentra by Jerold Solot, D.O. Claimant reported bilateral knee pain radiating up to his buttock. Claimant reported no specific mechanism caused it and that the date of injury was 6-7 weeks prior. Claimant reported a prior left knee surgery 6-7 years prior and that he had occasional fares of the left knee pain which would cause an antalgic gait and subsequent pain in the right knee. Claimant reported that presently his right knee pain was worse than the left knee pain. Claimant reported muscle pain, back pain, joint swelling, joint stiffness, limping, and night pain. Claimant's body mass index was noted to be 42.91. On Claimant's pain diagram, Claimant reported pain in both knees and in his right hip/buttock area. See Exhibits 22, D.

12. On May 23, 2017 Claimant was evaluated at Colorado Orthopedic Consults by Phillip Stull, M.D. On his intake form, Claimant reported pain in his knees, buttocks, and hips with an onset of symptoms approximately 7 weeks prior. Claimant reported a prior injury to his left knee several years ago with surgery and intermittent symptoms since. Claimant reported right sided hip pain for about 4 weeks with it being severe right sided posterior hip pain that radiates into the right hamstring area, mild low back pain but not severe low back pain, and limping on the right leg by the end of the work day. Antalgic gait was noted favoring the right leg. Mild groin pain was elicited with gentle range of motion testing and a mildly positive Trendelenburg sign was found on both the right and left. A mildly positive straight leg sign was found on the right. X-rays of the pelvis and right hip were performed and showed moderate right hip joint space narrowing and advanced, bone on bone changes in the left hip joint. X-rays of the lumbar spine were taken and showed mild degenerative scoliosis and disc space narrowing at L5-S1 as well as facet hypertrophy at L4-5 and L5-S1. Dr. Stull provided the impression of osteoarthritis of the right hip, degenerative disc and joint disease of the lumbosacral spine with likely

right lower extremity radiculopathy. Dr. Stull recommended a Medrol Dosepak and a spinal MRI. *See* Exhibits 16, E.

13. On May 23, 2017 Claimant underwent an MRI of his lumbar spine interpreted by Elizabeth Carpenter, M.D. The impression provided was: mild-moderate lumbar spondylosis from L2-L5; at L4-5 a moderate sized broad based central extrusion narrowing both lateral recesses and likely contacting the bilateral L5 nerve roots, more prominent on the left but annular fissuring along the right sub articular zone; L4-5 moderate facet arthropathy and left foraminal stenosis with mild right foraminal stenosis; at L3-4 mild-moderate facet arthropathy with mild bilateral foraminal stenosis; at L2-3 a small annular bulge that narrows both lateral recesses (left greater than right) and superimposed foraminal protrusions with moderate left, mild right foraminal stenosis. *See* Exhibits 17, F.

14. On May 24, 2017 Claimant was evaluated by Dr. Solot. Claimant reported no improvement and pain in the right knee radiating to the right hip and pain in the left knee. Claimant's left knee joint was injected. *See* Exhibit D.

15. On May 27, 2017 Claimant was evaluated by Dr. Solot. Claimant reported that his left knee was much improved after the injection but that he was still having pain in the right knee. Dr. Solot injected Claimant's right knee joint. *See* Exhibit D.

16. On May 31, 2017 Claimant was evaluated by Dr. Solot. Claimant reported persistent bilateral knee pain and right gluteal pain and that his right knee pain was improved status post injection. Claimant was noted to be walking with antalgic gait. X-rays were performed and showed no fracture and mild degenerative joint disease. The left knee x-rays showed no acute fracture, dislocation, or osseous lesion. They showed advanced arthritic change, marginal osteophyte formation present at the medial femoral condyle and lateral tibial plateau and no joint effusion. *See* Exhibit D.

17. In June of 2017, Respondents filed a Notice of Contest. Claimant filed an Application for Hearing in August of 2017. *See* Exhibits 9, 10.

18. On June 12, 2017 Claimant was evaluated by John Aschberger, M.D. Claimant reported a prior left knee injury and surgery and that he has had recurrent pain at the left knee. Claimant reported an antalgic gait and increasing soreness at the right knee and pain towards the right back and hip that has been on and off for him. Claimant reported a recent increase in symptoms with pain in both knees but also pain at the right gluteal area radiating to the anterolateral foreleg with sensation of cramping. Claimant reported recent bilateral knee injections with 75% relief on the right lasting about two weeks and recent injection on the left with good initial relief and gradual recurrence of symptoms. Dr. Aschberger assessed: left knee degenerative joint disease with x-rays showing advanced arthritic changes; right knee degenerative joint disease with x-rays showing advanced arthritic changes; and symptoms of a right lumbar radiculitis. Dr. Aschberger recommended MRIs of both knees. Dr. Aschberger noted that Claimant's records from the prior injury would be helpful in determining the extent of degenerative

changes prior to the incident and issues of progressive degenerative change. Dr. Aschberger noted there were no acute abnormalities with this injury and that it may represent a progressive degenerative process. Dr. Aschberger also discussed weight loss as a treatment for the knee symptomatology and noted Claimant was significantly overweight. Dr. Aschberger opined that the weight was likely a source, at least in part, of Claimant's recurrent aggravation to the knees. *See* Exhibit 23.

19. On June 14, 2017 Claimant was evaluated by Dr. Solot. Claimant reported soreness in both knees. *See* Exhibit D.

20. On July 19, 2017 Claimant was evaluated by NP Odvody. Claimant reported continued intermittent shifting bilateral knee, hip, and low back pain. Claimant reported currently his left knee was the main focus of pain and that everything with work aggravates his pain. Claimant reported that he had been seen over the last month or so as a work comp case and underwent bilateral knee injections with 1 week relief on the right knee and 3 days of relief on the left knee. Claimant also reported that he had undergone 4-5 physical therapy visits, but that he received a letter ceasing all treatment under work comp. Claimant reported low back pain worse on the right with radiation down the back of the leg, inside thigh, and stopping right above the knee. Claimant reported most often his pain was on the left side of the low back. Claimant reported physical therapy stretches minimally helped improve the discomfort in his low back but that his posterior thigh, hip, and knee pain were constant and interchangeable between the right and left side. Claimant's body mass index was noted to be 40.4. On examination, Claimant had right hip tenderness at the piriformis muscle and reduced range of motion. Claimant's knees were limited in flexibility. Claimant had a positive straight leg test with low back pain. Claimant was noted to have an abnormal ataxic gait due to his back pain. *See* Exhibits 19, C.

21. An MRI of the lumbar spine was performed and NP Odvody noted the impression of the MRI to be: L4-5 moderate sized central extrusion, narrowing both lateral recesses and likely contacting the bilateral L5 nerve roots, more prominent on the left but with annual fissuring along the right subarticular zone; L4-5 mild-moderate facet arthropathy and left foraminal stenosis; L4-5 mild right foraminal stenosis; L3-4 mild-moderate facet arthropathy with mild bilateral foraminal stenosis; L2-3 small annular bulge narrowing both lateral recesses (left greater than right); L2-3 superimposed foraminal protrusions with moderate left, mild right foraminal stenosis. *See* Exhibits 19, C.

22. NP Odvody assessed low back pain, right hip pain likely right piriformis syndrome or sciatica, obesity, right knee pain, and chronic left knee pain. NP Odvody recommended referral to Dr. Rauzzino for further evaluation and treatment of the lumbar spine issues. NP Odvody recommended continued use of physical therapy stretching exercises for the sciatica piriformis and again emphasized weight loss to improve some unloading of weight while trying to recover. *See* Exhibits 19, C.

23. On July 25, 2017 Claimant was evaluated by Michael Rauzzino, M.D. Dr. Rauzzino noted that Claimant had been referred to him by his family practice after what appeared to have been a work related injury on May 22, 2017. Dr. Rauzzino noted Claimant's history of knee injury but that this was a back injury that happened while at work and would seem to clearly be related to claimant's job. Claimant reported that he worked as a driver for an armored truck company and moves around money that is quite heavy. Claimant reported that the injury occurred when he was picking up a box or bag of coins and twisting and that he felt a sharp stabbing pain in his right buttock that slowly developed into pain going down the posterior and lateral aspects of his leg with numbness and tingling into the lower leg and foot. Claimant reported his back was sore but not overly painful and that the pain had been primarily in his legs and quite uncomfortable with sitting, standing, or even walking long distances. Dr. Rauzzino found decreased sensation in an L5 distribution on the right with a positive straight leg raise on the right. Dr. Rauzzino assessed a work related injury on May 22, 2017 that resulted in a moderate sized broad based disc extrusion with annular tear on the right. Dr. Rauzzino discussed treatment options and opined that given the acuity and the pain Claimant was in, he wanted to see if it could be treated non-operatively. Dr. Rauzzino recommended physical therapy and an epidural steroid injection in the foramen on the right at L4-5 and possibly a series of them. Dr. Rauzzino opined that depending on how effective conservative treatment was, Claimant may need decompression surgery at L4-5. *See* Exhibit 18.

24. On August 4, 2017 Claimant was suspended from work after being observed carrying an ATM cartridge in his hand, contrary to protocol. An employee counseling record indicates that all liability must be placed in a carryall bag. Claimant was suspended for one day. Due to his suspension, Claimant was required to undergo a fit for duty examination in order to return to work. *See* Exhibit B.

25. On August 7, 2017 Claimant underwent a fit for duty examination at Concentra. Claimant was deemed not fit for duty due to his knee pain. *See* Exhibit 25.

26. On August 8, 2017 Claimant was evaluated by NP Odvody. Claimant reported increased left knee pain, and continued intermittent shifting bilateral knee, hip, and low back pain. Claimant reported his low back pain was right side currently worse than left side and that the left knee was also a main focus of pain. Claimant wanted clearance to return to work with his back pain and knee pain since he was not released by his fit for duty provider. Claimant reported that everything with his work aggravated his pain. Claimant's body mass index was noted to be 39.8. NP Odvody discussed that he could not release Claimant for work duty due to Claimant's back condition. *See* Exhibits 19, C.

27. On August 16, 2017 Claimant underwent a transforaminal right lumbar epidural steroid injection. *See* Exhibits 20, H.

28. On August 31, 2017 Claimant underwent an independent medical evaluation performed by Kathleen D'Angelo, M.D. Dr. D'Angelo issued a report dated

October 11, 2017. Claimant reported that he was injured lifting coin boxes with an increase in leg pain. Claimant reported severe knee pain, severe hip pain, lower back pain/stiffness, and mid back pain/stiffness. Claimant reported that he had left knee recurrent pain since a prior left knee surgery in 2011 and that between 2011 and 2017 he would have pain in his left knee, then pain in his right knee, then pain in his right hip and that over time the pain would resolve. Claimant reported in May of 2017 he had that same pattern but that it didn't go away like it normally does and felt like it was getting worse. Claimant reported that by May 22, 2017 the pain had gotten so bad that he felt he couldn't do his job anymore and felt he needed to see someone. Dr. D'Angelo reviewed medical records and performed a physical examination. *See* Exhibit I.

29. Dr. D'Angelo assessed no work related claim diagnoses. Dr. D'Angelo assessed non claim related diagnoses of: diffuse osteoarthritis; degenerative changes to the right knee; degenerative changes to the right hip; degenerative changes to the left knee; and complaints of lumbar radiculopathy. Dr. D'Angelo noted that Claimant had intermittent pain since 2011 with a pattern of left knee soreness, right knee pain, and right hip pain. Dr. D'Angelo opined that Claimant had a history of diffuse osteoarthritis with no inciting incidents or injuries at work that caused or preceded Claimant's complaints of left knee, right knee, lumbar radicular pain, or right hip pain. Although Claimant reported to Dr. D'Angelo that his pain began when he lifted bags of coins, she opined that the medical records reviewed contradicted that statement and showed no type of work injury nor any particular untoward incident preceding Claimant's onset of pain. Dr. D'Angelo noted that Claimant's pain began as did all of his prior episodes, gradually and spontaneously. Dr. D'Angelo opined that Claimant's work duties of walking and stair climbing have not been linked to premature osteoarthritis onset and that after Claimant's absence from work, he had minimal if any improvement in symptoms. Dr. D'Angelo opined that if his work duties were causally related to his symptoms, he would have had a noticeable decrease or even resolution of symptoms with cessation of his duties. Dr. D'Angelo noted the bilateral knee x-rays showed degenerative changes. Dr. D'Angelo opined that she could not link Claimant's bilateral knee pain to work and that Claimant had recurrent intermittent bilateral knee and right hip pain for 6 years prior to the latest event. Dr. D'Angelo opined that regardless of Claimant's work duties, he would have had symptomatic bilateral knee or hip osteoarthritis. *See* Exhibit I.

30. On September 5, 2017 Claimant was evaluated by Dr. Stull. Claimant reported that since he had last seen Dr. Stull he had seen a spine surgeon and had a spinal injection that did not provide much relief in his right leg symptoms. Dr. Stull reviewed a May 25 MRI. Claimant reported significant pain in the right hip and right leg. X-rays were performed of the pelvis and right hip. They showed moderate to moderate plus arthritic changes in the right hip joint and bone on bone arthritis in the left hip joint. Dr. Stull provided the impression of right hip arthritis with some of the right leg symptoms possibly being from the spinal condition. Dr. Stull recommended a right hip cortisone injection. *See* Exhibits 21, E.

31. On September 11, 2017 Claimant underwent a right hip steroid injection performed by Dr. Stull. *See* Exhibits 21, E

32. On October 11, 2017 Claimant underwent an independent medical evaluation performed by John Hughes, M.D. Claimant reported a left knee injury in 2011 and surgery to correct a meniscus tear. Claimant reported that he continued to have left knee pain and that as a result of "hobbling about" due to his left knee pain he developed the gradual onset of right hip, right knee, and lumbar spine pain. Claimant reported that his job involved lifting boxes of coins and that it increased his pain, causing him to seek care. Claimant reported continued bilateral knee, left hip, and lumbar spine pain and that a recent right hip injection had helped his right hip. Dr. Hughes found Claimant to be deconditioned in apparent generalized musculoskeletal distress with fairly maximal antalgia of gait, ambulating with heavy use of cane. Dr. Hughes performed a physical examination. Dr. Hughes assessed: past history of work related left knee injury sustained as a result of a motor vehicle accident leading to surgical treatment; symptomatic left knee osteoarthritis due to the prior motor vehicle accident injury; occult right knee osteoarthritis and osteoarthritis of the bilateral hips; progressive bilateral knee and hip osteoarthritis with development of arthritis pain and osteoarthritis aggravated by repetitive heavy lifting at work; lumbar L4-5 disc extrusion due to heavy and repetitive lifting at work; deconditioning and obesity; type 2 diabetes; and hypertension. Dr. Hughes opined that Claimant had aggravated his bilateral knee osteoarthritis as a result of his work related activities for Employer. Dr. Hughes also opined that Claimant sustained bilateral hip and lumbar spine injuries. Dr. Hughes opined that Claimant was not at maximum medical improvement for any of the injuries and recommended bilateral knee MRIs, bilateral hip orthopedic surgical evaluations, MRIs of the bilateral hips, a second epidural steroid injection at L4-5 and reassessment by Dr. Rauzzino. *See* Exhibit 27.

33. On November 14, 2017 Claimant was evaluated by Dr. Stull. Claimant reported limited and some mild improvement with a recent right hip injection. Claimant was using a cane for ambulation and reported he was unable to work. Marked antalgia in Claimant's gait was noted. Dr. Stull provided the impression of osteoarthritis in both hips, clinically more significant in the right. Dr. Stull discussed with Claimant treatment options including injections, weight loss, activity modification, strengthening exercises, and hip replacement. *See* Exhibit E.

34. On November 21, 2017 Claimant was evaluated by Dr. Stull. Claimant reported increasing left hip pain over the last few weeks with popping, grinding, soreness, and difficulty getting in and out of bed. Claimant reported that he wished to have his left hip replaced. Dr. Stull noted that Claimant had been through a good trial of conservative measures but was not improved and recommended a left hip replacement. *See* Exhibit E.

35. On January 11, 2018 Dr. D'Angelo issued an addendum to her independent medical evaluation noting that she had received and reviewed additional medical records and would address treatment for bilateral hip osteoarthritis. Dr. D'Angelo noted that x-rays had shown bone on bone arthritis in the left hip joint and moderate to moderate-plus changes in the right hip joint. Dr. D'Angelo also noted that a recent chest x-ray had shown mild disc space narrowing and osteophytes in the thoracic spine consistent with mild

spondylosis. Dr. D'Angelo noted it was important to reiterate that Claimant had diffuse osteoarthritis which appeared to be present in his knees, hips, lumbar spine, and thoracic spine. Dr. D'Angelo noted that by Claimant's own admission there were no inciting incidents or injuries at work that caused or preceded his complaints of pain to the left knee, right knee, lumbar spine, or right hip and that at Claimant's first visit on May 22, Claimant reported bilateral knee pain that began 6-7 weeks prior with no specific mechanism. Dr. D'Angelo also noted that Claimant had been having similar symptoms periodically for 6 years prior. Dr. D'Angelo opined that this was significant and that the natural pattern for osteoarthritis is a series of flares and remissions in symptoms that are unrelated to and do not require any precipitating traumatic event. Dr. D'Angelo opined that Claimant had bilateral degenerative hip disease and that there was no findings in the records of any acute traumatic hip injury. Dr. D'Angelo opined that the changes of osteoarthritis in Claimant's bilateral hips were clearly present for years, if not decades, prior to the alleged May 22, 2017 work injury. Dr. D'Angelo again opined that Claimant had no work related diagnoses and that Claimant's current complaints were due to pre-existing and causally unrelated osteoarthritis. *See* Exhibit I.

36. Dr. Hughes and Dr. D'Angelo both testified by deposition in this matter.

37. Dr. Hughes opined that Claimant's complaints were due to his on the job duties generally without a specific acute event on a day certain and that Claimant had reported to him a gradual onset of symptoms. Dr. Hughes opined that Claimant's gradual onset of symptoms was predicated or preceded by lifting boxes of coin. Dr. Hughes agreed that Claimant's symptoms were in part due to his obesity and that obesity was a possible partial etiology of Claimant's symptoms. Dr. Hughes opined that Claimant's height, weight, and age were contributory factors in conjunction with Claimant's occupational exposure to physical tasks and Claimant's genetics. Dr. Hughes opined that Claimant's occupation aggravated and accelerated conditions in Claimant's knees, hips, and back. Dr. Hughes opined that Claimant had pre-existing osteoarthritis in both hips and both knees. Dr. Hughes opined that Claimant's weight would have a measurable and significant contribution to the development of osteoarthritis in the knees and hips and that obesity was a reasonable explanation for the development of osteoarthritis in Claimant's knees and hips. Dr. Hughes opined that Claimant's work aggravated and accelerated the osteoarthritis.

38. Dr. D'Angelo testified that Claimant had reported recurrent patterns of left knee being sore, swollen, tender then pain in his right knee and in his right hip and that they would resolve. She noted that Claimant reported these episodes were not due to lifting boxes of coin or moving at work but were due to his old left knee injury. Dr. D'Angelo noted Claimant's morbid obesity and opined that obesity may contribute to osteoarthritis of the knees. Dr. D'Angelo opined that the medical literature clearly showed a relationship between the development and progression of knee osteoarthritis and obesity. She also noted that, just as pregnant women, patients tend to hyperextend at the lumbar spine to offset weight they carry in the abdominal region which can place a lot of stress on the facet joints and ligaments of the lumbar spine. Dr. D'Angelo noted that the MRI completed

on May 23, 2017 of the lumbar spine showed no acute findings consistent with an acute injury to the lower back and that it showed clearly degenerative changes from L2 to L5.

39. Claimant's route partner, Mark Schwenk testified at hearing. He reported that he loaded the truck in the mornings with liability (cash, coin) with Claimant and that they did routes together. Mr. Schwenk testified that Claimant would occasionally complain of knee or back pain but that it never interfered with Claimant's regular job duties. Mr. Schwenk agreed that on May 22, 2017 Claimant indicated he was in pain and wanted to talk to somebody but did not indicate a specific incident of lifting with immediate back pain reported to him by Claimant.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). An injury occurs "in the course of" employment where claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id*. An activity arises out of and in the course of employment when the activity is sufficiently related to the conditions and circumstances under which the employee generally performs her job functions such that the activity may reasonably be characterized as an incident of employment*. Price v. Industrial Claim Appeals Office*, 919 P.2d 207 (Colo. 1996).

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005).

Claimant has failed to meet his burden by a preponderance of the evidence to establish that he sustained an acute industrial injury on May 22, 2017. As found above, Claimant had significant pre-existing reports of bilateral knee pain, hip pain, and low back pain before May 22, 2017. Although Claimant reported to Dr. Rauzzino that he had a specific incident on May 22, 2017 where he was lifting a box of coin and twisting when his lumbar back pain developed, this is inconsistent with other records. Records show reports of back pain earlier than that date and also show that he failed to report the same acute incident of lifting and twisting while lifting coin in his first report of injury and to the first providers that he saw following May 22, 2017. Rather, in his first visits he described continued pain on and off for several years in a certain pattern and that this time the pain had failed to go away. Dr. Rauzzino's opinion that Claimant sustained an acute injury to his lumbar spine on May 22, 2017 is based on Claimant's subjective reports that are overall inconsistent with the totality of evidence. Claimant has failed to establish and the overall credible evidence does not support an acute injury to any body part on May 22, 2017.

Additionally, Claimant has failed to meet his burden to establish by a preponderance of the evidence that he sustained an occupational disease to his bilateral knees, bilateral hips, or lumbar spine. Claimant has failed to show an occupational

disease or condition that has resulted directly from his employment fairly traced to his employment as a proximate cause. Claimant's baseline condition of significant degeneration and osteoarthritis in multiple body parts with flare-ups of pain over the past several years and his baseline condition of morbid obesity has not been shown to have changed due to his work activities. As found above, Claimant has significant degenerative changes and osteoarthritis in multiple body parts. Claimant has experienced flare ups of his osteoarthritis and degenerative changes for many years and has reported consistently that he has had pain in multiple body parts for several years. Dr. D'Angelo is credible and persuasive that the imaging shows extensive degenerative changes that has taken years or even decades to develop. Further, she is credible and persuasive in noting that there is significant degeneration throughout Claimant's body including his bilateral knees, bilateral hips, thoracic spine, and lumbar spine. It is found credible and persuasive that Claimant would naturally have flare ups of his degenerative condition consistent with the natural progression of his condition. Claimant had flare ups of pain for multiple years. Claimant has remained morbidly obese for multiple years, which both experts agreed contributes to and can progress and aggravate Claimant's degenerative condition. The credible and persuasive evidence does not show that Claimant's employment or hazards of his employment caused, intensified, or aggravated Claimant's underlying condition. Although Claimant definitely had symptoms at work of his underlying condition, this is more likely due to the natural progression of his significant pre-existing condition unrelated to his employment. Claimant's morbid obesity and severe degeneration noted on imaging supports the credible opinion of Dr. D'Angelo that his conditions are not work related and that his symptoms are typical and natural for the progression of his pre-existing conditions. Dr. Hughes agreed that Claimant's symptoms were in part due to his obesity and noted that Claimant's height, weight, and age were contributory factors. However, Dr. Hughes opined that the work duties aggravated and accelerated the pre-existing osteoarthritis Claimant had in both hips and knees. This opinion is not found as credible or persuasive as the opinion of Dr. D'Angelo. Dr. D'Angelo noted that Claimant's job duties had not been liked to premature osteoarthritis onset and that even after an absence from work, Claimant had only minimal, if any, improvement in symptoms.

Dr. D'Angelo is credible and persuasive that regardless of Claimant's work duties, Claimant would have had symptomatic bilateral knee and hip osteoarthritis consistent with the symptoms he had been having for multiple years and consistent with the natural progression of his underlying condition. Claimant's argument that he had chronic occupational injuries from 17 years of work duties as well as an acute injury on May 22, 2017 is not found persuasive. Rather, it is more likely that Claimant had multiple pre-existing non occupational conditions and did not sustain any acute injuries on May 22, 2017 but experienced pain at work similar to pain he had experienced for several years on and off consistent with the natural progression of his underlying conditions throughout his body. Claimant has failed to establish, more likely than not, that he sustained a compensable injury or occupational disease to his bilateral knees, bilateral hips, or lumbar spine.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that he sustained an occupational injury or occupational disease. His claim is denied and dismissed.

2. As Claimant has failed to establish that he sustained an occupational injury or occupational disease, his request for medical benefits and indemnity benefits is denied and dismissed.

3. As Claimant has failed to establish a compensable injury, the remaining issues are not addressed.

4. All matters not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he suffers functional impairment off the schedule of injuries set forth by § 8-42-107, C.R.S. and is entitled to permanent partial disability benefits based on a whole person conversion of the upper extremity rating.

FINDINGS OF FACT

1. Claimant is employed by Employer as a journeyman pressman and has been so employed for approximately 23 years.

2. As part of his job duties, Claimant operates the presses that print newspapers. Claimant's duties include setting rollers, lifting rollers, operating a computer console to adjust color, and keeping the machines running so that newspapers are printed on a timely basis.

3. On October 15, 2012 Claimant sustained admitted industrial injury to his left shoulder when he was pulling a blanket washer toward his body at shoulder level and felt pain in the anterior aspect of his left shoulder.

4. On November 14, 2012 Claimant was evaluated by orthopedic surgeon Michael Hewitt, M.D. Claimant reported pain with overhead use, weakness, and occasional pain radiating into the forearm. Claimant denied neck pain. *See* Exhibits 9, E.

5. Claimant continued working full duty for Employer without restrictions while he underwent treatment for his left shoulder injury. Claimant eventually underwent left shoulder surgery.

6. On February 12, 2013 Claimant underwent surgery performed by Dr. Hewitt that included: left shoulder arthroscopic biceps tenodesis; arthroscopic subacromial decompression; distal co-planing (resection of 1 cm inferiorly directed distal clavicle exostosis); and superior and posterior labral debridement. *See* Exhibits 9, E.

7. Following shoulder surgery, Claimant's symptoms improved somewhat. However he continued to report night pain, pain with overhead use, and stiffness with certain arm positions. *See* Exhibits 9, E.

8. On July 17, 2013 Claimant was evaluated by Dr. Hewitt. Dr. Hewitt placed Claimant at maximum medical improvement (MMI) and provided Claimant with a 14% scheduled impairment rating, which converts to an 8% whole person impairment rating.

Dr. Hewitt noted that Claimant had an injury and an MRI revealing a superior labral tear and that Claimant had undergone surgery. Dr. Hewitt noted that Claimant could return to work at full duty and that Claimant had occasional shoulder tightness but minimal pain and minimal night pain with no radicular symptoms. *See* Exhibits 9, E.

9. On September 25, 2013 Claimant was evaluated by Dr. Hewitt. Claimant reported he had returned to work activities and that his shoulder symptoms were relatively unchanged. *See* Exhibits 9, E.

10. On November 14, 2013 Respondents filed a final admission of liability admitting to a 14% extremity rating. Claimant's case closed.

11. On June 26, 2014 Claimant was evaluated by Dr. Hewitt. Claimant reported increasing pain in the superior aspect of his shoulder without specific trauma and that his pain was exacerbated with overhead reaching and lifting. Dr. Hewitt opined that the exam was consistent with symptomatic acromioclavicular arthropathy. Dr. Hewitt injected Claimant's AC joint and subacromial space. *See* Exhibits 9, E.

12. On December 5, 2014 Claimant was evaluated by Dr. Hewitt. Dr. Hewitt noted that the prior injection provided 30-40% improvement for several months. Claimant reported continued pain within the superior and lateral aspect of his shoulder. Dr. Hewitt discussed treatment options including observation, anti-inflammatories, activity modification, repeat cortisone injection, and finally surgery. *See* Exhibits 9, E.

13. On May 11, 2016 Claimant was evaluated by Dr. Hewitt. Claimant reported persistent pain at the acromioclavicular joint and Dr. Hewitt opined that given the duration of Claimant's symptoms and failure to resolve with conservative management, arthroscopy was appropriate. *See* Exhibits 9, E.

14. The recommendation for surgery was denied by Respondents. Ultimately, ALJ Margot Jones issued a Summary Order in March of 2017 reopening Claimant's claim and finding the surgical request by Dr. Hewitt to be reasonable, necessary, and related to the claim.

15. On June 27, 2016 Claimant underwent a left shoulder arthroscopic distal clavicle excision and superior and posterosuperior labral debridement performed by Dr. Hewitt. *See* Exhibits 9, E.

16. On September 6, 2017 Claimant was evaluated by Dr. Hewitt. Claimant reported still having some difficulty sleeping and concern with persistent pain. *See* Exhibits 9, E.

17. Claimant underwent multiple visits of physical therapy after his shoulder surgery. On August 24, 2017, Claimant noted continued pain to superior shoulder with certain positions of his arm. On September 19, 2017, Claimant noted only having a slight twinge or tingling in his shoulder. On September 21, 2017, Claimant noted that his

shoulder was not stiff anymore. On September 26, 2017, Claimant noted that his shoulder was doing well, there was "not much for sharp pain," and that he could sleep on his shoulder. On September 28, 2017, claimant noted that he was not having "much shoulder issues anymore." At the October 3, 2017 discharge appointment, claimant reported slight tingling to the superior shoulder, that work was going well, and he was able to sleep on his left side without any pain. Claimant was able to lift overhead 45 pounds each upper extremity and felt he was ready to return to work with restrictions. *See* Exhibit F.

18. On October 4, 2017 Claimant was evaluated by Dr. Hewitt. Dr. Hewitt opined that Claimant was at MMI. Dr. Hewitt noted some mild pain with reaching overhead, but noted that Claimant did not require any medications and that Claimant's sleep pattern was improving. Dr. Hewitt opined that Claimant could work full duty and provided a 15% extremity impairment rating, which converts to a 9% whole person impairment rating. *See* Exhibits 5, 9, E.

19. On October 30, 2017 Respondents filed a final admission of liability admitting to the 15% scheduled impairment rating for the left shoulder. *See* Exhibit A.

20. On November 16, 2017 Claimant filed a response, accepting the rating, but alleging that it should be a whole person impairment based on the situs of functional impairment and that he agreed with the rating provided by Dr. Hewitt. Claimant argues the correct rating is 9% whole person.

21. On March 2, 2018 Claimant underwent an independent medical evaluation performed by John Raschbacher, M.D. Claimant reported popping at the area around the shoulder aggravated with reaching and occasionally shooting to the left side of the neck. Claimant reported that he sometimes will awaken with a headache and that his left hand has some digits which go numb at night maybe every other night. Claimant reported that he was doing all work activities and that he was able to resume doing daily walks, yard work, and mowing the lawn. Claimant reported no limitations on his physical activity. Claimant reported with his left shoulder and left neck he had discomfort every fourth day or so and that if he slept on the left side it took a while to recover. Dr. Raschbacher reviewed medical records and performed a physical examination. Claimant had tenderness to palpation at the left AC joint. Claimant had mild discomfort at the base of his neck on the left. *See* Exhibits 10, D.

22. Dr. Raschbacher assessed: left shoulder AC joint arthritis, status post-surgical procedure. Dr. Raschbacher noted that Claimant had an accepted work related injury involving the left shoulder and surgery. Dr. Raschbacher noted that after the June 27, 2017 surgery, Claimant returned to his same job with no restrictions and that Claimant had resumed all previous work related and non-work related activity. Dr. Raschbacher opined that there was no clear medical basis for including a 10% rating for distal clavicle resection. He also opined that there was no clear medical explanation for why Claimant's abduction active range of motion decreased so significantly and by 50 degrees and opined that the abduction value of 110 degrees may not be an accurate descriptor of the level of active range of motion and consequent impairment in Claimant's case. Dr.

Raschbacher also opined that the rating is and would be a scheduled upper extremity rating and that there was no basis for finding there to be a situs of impairment more proximal than the shoulder. Dr. Raschbacher noted that it was the AC joint that was the site and source of the claim and that was treated. Dr. Raschbacher opined there was no impairment other than at the shoulder joint in this case, which would make it a scheduled upper extremity rating. Dr. Raschbacher opined that Claimant had returned to all previous levels of activity and had no evidence of whole person impairment which would anticipate restriction of physical activity and an inability to return to the same job. *See* Exhibits 10, D.

23. Claimant testified at hearing that prior to his October 2012 work injury he had no problems at all with his left shoulder. Claimant testified that he now has continued pain at night with both pain and sharp numbness. Claimant testified that he has a hard time putting on a shirt, that he has pain with overhead use including reaching overhead, and that he has tingling and sharp pain up his neck that goes from his shoulder up. Claimant testified that his shoulder pops and radiates up the neck and that he works with it and that it will sometimes relax itself and sometimes he uses Tylenol. Claimant testified that he still has pain over the superior aspect of his shoulder.

24. Claimant's testimony is found credible. Claimant continues to experience pain and loss of function due to his injury that is in his shoulder joint, trapezius region, neck, and scapula areas. The objective evidence of the surgical repairs combined with Claimant's credible testimony shows that, although he works through it, Claimant has pain and functional limitations beyond his arm at the shoulder and that he suffers limitations in his shoulder joint and beyond.

25. Dr. Swarsen testified at hearing. Dr. Swarsen reviewed and explained the surgical procedures that Claimant has undergone as a result of this injury. Dr. Swarsen highlighted in different colors the areas of the shoulder joint that were operated on in Exhibit 11. Dr. Swarsen opined that the glenohumeral joint is a joint that separates the arm from the shoulder. Dr. Swarsen opined that the surgeries performed were beyond the glenohumeral joint and above the joint. Dr. Swarsen opined that the situs of functional impairment was at the shoulder joint and the shoulder girdle itself and that there was loss of function at the shoulder girdle and that therefor Claimant was entitled to a whole person impairment rating for loss beyond the arm at the shoulder.

26. Dr. Raschbacher testified at hearing. He opined that Claimant does not have functional impairment beyond the shoulder and that Claimant's problem was with the shoulder itself and with the shoulder joint. He opined that the shoulder joint is an intersection where two parts meet and that the intersection/joint is where Claimant's problem is. Dr. Raschbacher opined that there was nothing beyond the shoulder in Claimant's case and nothing beyond the shoulder joint. Dr. Raschbacher thus opined that a scheduled impairment rating was appropriate.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Scheduled Injury vs. Whole Person Impairment

Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The question of whether the Claimant sustained a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Pain and discomfort that limit the claimant's use of a portion of the body may constitute functional impairment. *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005); *Vargas v. Excel Corp.,* W.C. No. 4-551-161 (ICAO April 21, 2005). However, the mere presence of pain in a portion of the body beyond the schedule does not require

a finding that the pain represents a functional impairment. *Lovett v. Big Lots,* WC 4-657-285 (ICAO November 16, 2007); *O'Connell v. Don's Masonry,* WC 4-609-719 (ICAO December 28, 2006). Claimant bears the burden of establishing functional impairment beyond the arm at the shoulder and the consequent right to permanent partial disability benefits under § 8-42-107(8)(c), C.R.S., by a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4-662-369 (June 5, 2007); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005). The ALJ may also consider whether the injury has affected physiological structures beyond the arm at the shoulder. *Brown v. City of Aurora,* W.C. No. 4-452-408 (ICAO October 9, 2002).

In this case, Claimant's testimony, substantiated by the medical records, establish that Claimant is entitled to a whole person medical impairment under § 8-42-107(8)(c), C.R.S. because he has suffered functional impairment to a part of the body that is not contained on the schedule of impairment. Claimant has met his burden by a preponderance of the evidence that his functional impairment extends beyond the "arm at the shoulder." The credible evidence shows that Claimant's shoulder joint itself is impaired. It does not function as it did before Claimant's work injury. Activities cause pain and functional impairment in Claimant's shoulder joint, upper back muscles, and cervical area such that he is unable or limited in his ability to engage freely in motions that he had no trouble with prior to his work injury. Thus, Claimant has established that the situs of his functional impairment is beyond just the location of the arm at the shoulder. The mere fact that the shoulder joint might affect arm mobility does not mean Claimant sustained only a "loss of arm at the shoulder." Accordingly, the ALJ finds that Claimant has established by preponderant evidence that his impairment includes the shoulder joint, that he has functional impairment beyond the arm at the shoulder and up from the shoulder joint, and that his impairment is not on the schedule of impairments. As noted by Dr. Swarsen, physiologic structures beyond the arm at the shoulder and into the shoulder joint were affected. Claimant had numerous procedures above the arm and in his shoulder joint above the glenohumeral. Claimant has established, more likely than not, functional impairment beyond the arm at the shoulder and an entitlement to the 9% whole person rating.

ORDER

It is therefore ordered that:

1. Claimant suffered functional impairment beyond the shoulder at the arm and off the schedule of injuries listed at § 8-42-107(2), C.R.S. Claimant is entitled to permanent partial disability benefits based upon a whole person impairment rating of 9%.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 14, 2018

Denver, CO 80203

ISSUES

The issues set for determination included:

- Did Claimant sustained a compensable injury on August 21, 2016?
- If Claimant suffered a compensable injury, is she entitled to TTD benefits commencing November 26, 2016, ongoing, subject to an offset for unemployment compensation in the amount of $489.00 per week, commencing March 14, 2017 through July 24, 2017?
- If Claimant suffered a compensable injury, is her medical treatment reasonable, necessary, and related?

STIPULATIONS

The parties stipulated to the following: (1) Claimant's average weekly wage was $765.00 per week; (2) if the claim was found compensable, Anthony Euser, D.O. and his referrals are authorized under the Act; (3) Claimant received unemployment compensation from March 14, 2017 to July 24, 2017, paid at the rate of $489.00 per week.

The Stipulations were accepted by the Court and are incorporated by reference in this Order.

FINDINGS OF FACT

1. Claimant was employed as a deli clerk for Employer, starting in December 2015. Her job duties in this job involved assisting customers in the deli department.

2. There was no evidence in the record that Claimant suffered an injury to her low back prior to August 2016.

3. Claimant previously required treatment for various conditions immediately before the August 21, 2016 incident. On August 2, 2016, Claimant treated at Advanced Urgent Care, LLC. She was evaluated by Jill Postell, PA-C, whose assessment was vaginitis and acute urinary tract infection. Claimant received prescriptions for Diflucan, doxycycline hyclate and Tramadol.

4. Claimant returned to Advanced Urgent Care, LLC on August 10, 2016. She complained of continued vaginal symptoms, flu-like symptoms, migraines, nausea, cold sweats, chills, and back pain. She was evaluated by Linda Smith, M.D., who

administered an injection of ceftratriaxone and ketorolac, as well as prescribing oxycodone-acetominophen and diazepam.

5. Claimant treated at the Little Clinic for left upper eyelid swelling on August 14, 2016. She was diagnosed with septal cellulitis in the right upper eyelid. She was prescribed Bactrim and cephalexin. The ALJ noted there was no evidence of back symptoms reported by Claimant at the evaluation.

6. On August 21, 2016, Claimant was working for Employer and went into the freezer to get a box of chicken for another store. Claimant testified she pulled the top box from a stack of three and the remaining two stuck, which pulled her arms and back. The ALJ found the evidence support the conclusion that an incident occurred. Claimant testified she not feel immediate pain after the incident occurred and when she began experiencing back pain, thought it could be related to her kidney infection. Claimant stated the increased pain caused her to go to the emergency room.

7. A video of Claimant's work in the deli department on the date and time in question was admitted into evidence.[1] The video does not show the boxes falling in the freezer, but rather it shows Claimant walking through the deli, as well as a co-employee walking through the deli. Claimant was then seen walking out of the walk-in freezer. The ALJ found the video confirmed Claimant was working that day, but did not assist in the determination whether an injury occurred on the date and time in question.

8. Claimant was evaluated in the Emergency Department of the Platte Valley Medical Center on August 22, 2016. She complained of severe right flank pain and was initially evaluated by Ashlie Reuscher, R.N. who recorded the above complaint of pain and documented there was no injury. Claimant reported unresolved symptoms from a UTI and yeast infection. In the nursing assessment, Bridget Dwyer, R.N. noted Claimant complained of severe right flank pain and occurred at home. Claimant was evaluated by Erick Anderson, PA-C. PA-C Anderson stated Claimant's lower back pain onset was sudden and occurred 12 hours before. She had no sensory motor deficits. Claimant had right flank pain which and was concerned about a kidney stone. A CT was negative for kidney stones and PA Anderson thought the pain could be due to a herniated disc. The ALJ found it was significant Claimant did not describe the incident at work when she was evaluated in the Emergency Department.

9. An in-store investigation report was prepared by supervisor, Lori Plouff on August 23, 2016. Ms. Plouff noted Claimant was unsure when the incident happened, but stated Claimant requested to go to the doctor because of a kidney infection and denied it was work-related. Claimant texted Ms. Plouff the next day and reported she had a herniated disc and initially did not indicate it was a work-related injury. The following day, Claimant then related an incident occurred on Sunday (August 21) when she was lifting a box of chicken. Deli department manager Alan Herrera confirmed Claimant reported the incident to him.

[1] Exhibit S.

10. On August 24, 2016, Claimant sent an e-mail to Ms. Plouff describing the incident. She stated she went into the walk-in cooler to get a box of chicken and went to grab the top box at the end of the shelf. The whole stack of boxes fell, which caused her to reach and grab all the boxes. Claimant said initially her back did not hurt, but it was aching later, which she thought was related to kidney infection. The next day she could barely walk or bend and Claimant described her pain as excruciating. When she went to the ER, she was told she had a herniated disk.

11. A statement was given by Larry Michael, dated August 26, 2016.[2] Mr. Michael noted that it was a Sunday and a worker from Store 81 dropped by to pick up frozen chicken. Claimant went back to get the chicken and he followed to help. Mr. Michael went in and found her with three boxes on her.

12. An undated statement was given by Debbie Tom (culinary clerk) regarding what happened on the date of the incident. Ms. Tom indicated she was assisting an associate from another store who came by to borrow product. She heard the sound of boxes falling while in the deli walk-in and saw Claimant was attempting to catch the cases of chicken, as the boxes fell to the floor. She described Claimant as being in an awkward position as she twisted around and got up slowly. Ms. Tom was an independent witness to the incident on August 21, 2016 and the ALJ found this supported Claimant's description of what happened.

13. Claimant signed an Injury Review Form on August 28, 2016 said the injury occurred when she was lifting a box of chicken and the stack of boxes fell.

14. Claimant was referred to Julie Parsons, M.D. by Employer, who evaluated her on August 24, 2016. Dr. Parsons diagnosed Claimant with a low back strain. Dr. Parsons referred Claimant for an MRI of the lumbar spine, prescribed Soma and Tramadol, along with massage therapy and gave her lifting restrictions of 10 lbs. In the M-164, Dr. Parsons checked the box that her objective findings were consistent with history and/or work-related mechanism of the injury/illness.[3] That opinion was persuasive to the ALJ on the issue of compensability.

15. On August 28, 2016, Claimant underwent an MRI of the lumbar spine. The films were read by David Cosper, M.D., whose conclusions included: shallow disc displacement at T11-T12 and L4-L5, without substantive spinal canal stenosis, neural foraminal stenosis or nerve root compression; mild loss of intervertebral disc space height at T11-T12 and L4-L5; bilateral facet capsulitis at L4-L5 and L5-S1; general dextroconvex curvature of the lower lumbar spine which may be positional related to mild scoliosis.

16. Dr. Parsons oversaw Claimant's treatment through October 5, 2016. In the follow-up evaluations which occurred on August 29, September 1, 8, 22 and

[2] Exhibit C, p. 13.

[3] Exhibit N, p. 175.

October 5, 2016, Dr. Parsons' diagnoses remained the same: lumbar strain and radiculopathy. Claimant's restrictions were extended by Dr. Parsons.

17. Dr. Euser examined Claimant on October 12, 2016 at which time she reported muscle aches and swelling, along with neurologic pain down the right leg. She also complained of depression. Dr. Euser noted an irregular gait on examination, along with abnormal motor strength in the right leg. The assessment was: neuropathy of the lower limb; low back pain. Dr. Euser referred Claimant for physical therapy ("PT") and continued the 10 lb. restriction.

18. Claimant returned to Dr. Euser on October 24, 2016, with similar complaints. She also reported trouble sleeping. Dr. Euser's assessment was low back pain, neuropathy of the lower limb and difficulty sleeping. Claimant was referred for pain management.

19. On November 15, 2016, Claimant was evaluated by Dr. Euser, complaining of muscle aches and swelling, gait disturbance, along with numbness in both lower extremities. She had no relief from prednisone or gabapentin and continued to experience pain down right leg, along with depression. Claimant's mental status was described as depressed and agitated. On examination, Dr. Euser noted hypertonicity and abnormal motor strength in the right leg. Claimant was to continue taking medications and establish care with a pain management specialist.

20. Records from Employer admitted at hearing included a series of e-mails exchanged by Fred Woodward, the talent manager and Nate Judkins, assistant store manager regarding Claimant's return to work. Mr. Woodward stated on November 25, 2016, Claimant could not return to work because of her restrictions.

21. On December 7, 2016, Claimant underwent a bilateral facet injection at L4-5 and L5-S1, which was administered by Lief Sorenson, M.D.

22. On December 9, 2016, Claimant was transported by ambulance to the Emergency Department of the Platte Valley Medical Center. She was complaining of dizziness and lightheadedness, as well as a syncopal episode earlier that day. Claimant had another syncopal episode while at the hospital. She was evaluated by Erick Anderson, PA-C who diagnosed with low back pain and syncope. Claimant had subsequent syncope episodes and remained in the hospital until December 21, 2016.

23. On December 11, 2016, Claimant was evaluated by David Risher, M.D. He described her episodes of unresponsiveness as inconsistent with typical stupor or coma. Pseudoseizure seemed most likely. The MRI of the brain was unremarkable and she had a gag reflex, with no convincing seizure activity. Dr. Risher noted Claimant's lumbar spine MRI was normal, with no evidence of disc herniation. The results of the MRI constituted objective evidence of the condition of Claimant's lumbar spine at this point in time.

24. Claimant was evaluated by Hua Judy Chen, M.D. on December 11, 2016. Dr. Chen opined Claimant's unresponsiveness did not fit either a seizure or syncope, given the normal MRI of her brain and EEG. Her symptoms were non-physiologic. Dr. Chen agreed to a tilt-table test to look for a cardiac source of the blackout. If this test was normal, Dr. Chen recommended a psychological evaluation or prolonged EEG study. Dr. Chen issued a supplemental report on December 12, 2016, after the tilt-table test was negative and her impression was: episodic non-neurological unresponsiveness, question of syncope. Dr. Chen stated Claimant's episodes did not behave like seizures.

25. On December 16, 2016, Nicole Clements, R.N. completed a nursing note related to the hospitalization and noted Claimant had a consult with a psychiatrist to rule out possible psychosomatic causes of the syncopal episodes. Claimant was referred to a therapist.

26. Claimant was discharged on December 21, 2016 and the treatment note was completed by Arjune Patel, M.D. Claimant was noted to have no prior medical history of adrenal insufficiency and underwent an extensive workup, with the adrenal insufficiency likely related to previous systemic steroid use and a recent ESI. Claimant's MRI of the lumbar spine had no acute abnormality to explain her pain. Claimant was to follow-up with Dr. Rothman and her PCP.

27. Claimant was reevaluated by Dr. Euser on December 30, 2016. Claimant reported similar physical complaints. Dr. Euser diagnosed Claimant with severe adrenal insufficiency, low back pain, neuropathy of lower limb, and spasm of back muscles. He referred Claimant for an endocrinology and continued her medications for the back pain. The ALJ noted Dr. Euser did not offer an opinion regarding the cause of Claimant's adrenal insufficiency.

28. On January 13, 2017, Claimant returned to Dr. Euser. She was complaining of muscle aches and swelling, along with pain down the right leg, along with depression. Dr. Euser's assessment included: low back pain, neuropathy of lower limb, prolapsed lumbar intervertebral disc[4], and adrenal cortical hypofunction. Claimant was to continue PT and was prescribed Percocet, as well as advised to follow up with him an endocrinologist. Dr. user's assessment remained the same and follow-up evaluations which occurred on February 17, March 3 and April 14, 2017.

29. Dr. Roth was called as an expert witness by Respondent. He was qualified as an expert in Internal Medicine, the specialty in which he is board-certified. He is Level II accredited pursuant to the WCRP. Dr. Roth testified consistently with the conclusions expressed in his report, dated August 14, 2017. Dr. Roth testified that Claimant's back pain, including the degree of her pain, as well as the distribution of pain were not consistent with any mechanism described, nor was it physiologic. Dr. Roth

[4] It was not clear from the record whether Dr. Euser had the results of the MRI done on December 11, 2016.

opined Claimant did not sustain the lumbar spine injury on August 21, 2016.[5] Dr. Roth stated the MRI showed ordinary age-related degenerative changes to the lumbar spine. The ALJ credited the opinions of Claimant's ATPs over those expressed by Dr. Roth with regard to the lumbar spine strain.

30. Dr. Roth testified adrenal insufficiency symptoms would include fatigue, anxiety, static hypertension, loss of appetite, abdominal pain, nausea, and generalized weakness. Dr. Roth opined Claimant's adrenal insufficiency was not caused by the use of steroids after the incident on August 21, 2016. There was an insufficient quality and duration of steroids given to cause the adrenal insufficiency. Dr. Roth stated Claimant would have required a period of at least three weeks of a "super physiologic dose" of steroids. Dr. Roth opined the incidents when Claimant passed out on December 9-10, 2016 was not a result of the injection she received on December 7, 2016. This was caused by the adrenal insufficiency. Dr. Roth's expert testimony was credible with regard to the adrenal insufficiency.

31. A record review was performed by Howard Kerstein, M.D. (endocrinologist), who issued a report dated September 10, 2017. After reviewing Claimant's course of treatment, Dr. Kerstein opined that Claimant's secondary adrenal insufficiency was not related to her intermittent use of corticosteroids from August to December 2016. He opined the intermittent use of steroids did not cause secondary adrenal insufficiency associated with the multiple symptoms experienced by Claimant. This opinion was persuasive to ALJ.

32. On July 31, 2017, Dr. Parsons agreed the Medrol Dosepak and prednisone did not cause Claimant's adrenal insufficiency.

33. Claimant proved by a preponderance of the evidence she sustained an industrial injury on August 21, 2016.

34. No ATP placed Claimant at MMI.

35. Based upon the evidence in the record, the ALJ concluded Claimant's adrenal insufficiency was not caused by the incident at work, including the post-injury treatment she received.

36. Claimant's health issues related to adrenal insufficiency and/or periods of unresponsiveness (syncope) constituted a subsequent intervening event, which terminated Respondent's liability to pay wage and medical benefits for her work injury.

37. The ALJ concluded Claimant's need for medical treatment after December 9, 2016 was caused by her adrenal insufficiency, non-physiologic issues and/or periods of unresponsiveness (syncope). Claimant's need for treatment was related to these conditions.

[5] Deposition of Dr. Roth, page 22:18-23.

38. Claimant's wage loss after December 9, 2016 was the result of her adrenal insufficiency, non-physiologic issues and/or periods of unresponsiveness (syncope) which caused her to be hospitalized.

39. Evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability

Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Sections 8-41-301(1)(b) & (c), C.R.S. (2016). Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). However, no compensability exists if the disability and need for treatment was caused as the direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002). The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As a starting point, the evidence admitted at hearing led the ALJ to conclude that an incident occurred on August 21, 2016. (Finding of Fact 6). Specifically, Claimant traversed to the freezer to get a box of frozen chicken and as she lifted the top box, two other boxes of chicken fell. (Findings of Fact 6, 12). This pulled on her arms and back. As determined in Findings of Fact 11-13, this incident was witnessed by co-employees and was reported to Employer by Claimant. As found, statements were taken from employees who worked with Claimant on that day she alleged she was injured that corroborated her version of events. Respondent did not dispute the fact that an incident occurred that day.

Second, there was evidence in the form of medical records, which supported the conclusion that Claimant suffered an injury at work. Dr. Parsons opined Claimant's symptoms were consistent with the reported mechanism of injury. (Finding of Fact 14). In his treatment of Claimant, Dr. Euser also indicated there were findings made at his evaluations which supported the conclusion Claimant was injured at work.

In coming to this conclusion, the ALJ considered Respondent's argument that Claimant proffered insufficient evidence to support her claim she suffered a compensable injury. Respondent also pointed to the fact that Claimant failed to specifically identify the incident at work as the cause of her back pain when she was treated in the emergency department. While true, this latter argument did not outweigh the other evidence before the Court.

Based upon the totality of evidence, the ALJ concluded there was factual support for Claimant's contention that she suffered a compensable injury. In this regard, Claimant's testimony, as well as the statements of her co-employees led the Judge to conclude that she sustained an injury to her low back at work. The ALJ concluded when the boxes fell in the deli freezer, this caused an injury to the Claimant, which was diagnosed by Drs. Parsons and Euser. Therefore, Claimant satisfied her burden of proof by a preponderance of the evidence to establish he suffered a compensable work-related while working for Employer on August 21, 2016.

Temporary Disability Benefits

Claimant had work restrictions issued by Dr. Parsons and Dr. Euser. These restrictions were not lifted and there was no finding by an ATP that Claimant reached MMI. (Finding of Fact 34). From the records admitted at hearing, the ALJ determined Claimant lost time from work after August 22, 2016 and therefore would potentially be entitled to temporary partial disability ("TPD") benefits.[6] However, there was insufficient evidence in the record for the ALJ to determine the amount of TPD benefits to which Claimant would be entitled. Therefore, counsel for the parties will be ordered to confer on this issue to see if it can be resolved. If no resolution is reached, either party can file an Application for Hearing on this issue.

[6] Claimant initially requested TPD benefits in her AFH. However, in the statement of issues at the beginning hearing, only TTD was requested.

Claimant did not return to work after November 25, 2016. Records from Employer confirmed Claimant could not return to work with restrictions. (Finding of Fact 22). Accordingly, Claimant is entitled to TTD benefits from November 26 through December 9, 2016, payable at the rate of $510.00 per week (based upon the stipulated AWW of $765.00 per week).

Subsequent Intervening Event

Results flowing "proximately and naturally from an industrial injury are compensable". However, no compensability exists when a later accident or injury occurs as a direct result of an independent intervening cause. Whether a particular condition is a result of an independent intervening cause is a question of fact for resolution by the ALJ. *Owens v. Industrial Claim Appeals Office,* supra, 49 P.3d at 1188-1189.

As found, Claimant's adrenal insufficiency was not caused by the incident at work, including the treatment she received for said injury. (Finding of Fact 36). The ALJ's conclusion was based on the medical evidence, including the opinions expressed by Dr. Roth, Dr. Kerstein and Dr. Parsons. (Findings of Fact 31-33). In addition, Claimant was hospitalized in December 2016 due to a syncopal episode and received an extensive work-up at that time. There was a divergence of opinions by evaluating physicians as to the cause of Claimant's symptoms. The ALJ determined this hospitalization was not causally connected to Claimant's work injury. As found, the objective testing done when Claimant was hospitalized in December 2016 in connection with Claimant's low back pain was negative. (Finding of Fact 25). The ALJ found Claimant sustained a wage loss and required medical treatment for the adrenal insufficiency and other medical problems. (Findings of Fact 38-39). This was not related to her work injury. The ALJ concluded that this constellation of symptoms, her hospitalization and the treatment Claimant received for the adrenal insufficiency/syncope constituted an intervening event.

Under the standard articulated by the Court in *Owens v. Industrial Claim Appeals Office,* supra, the intervening event (Claimant's hospitalization and treatment for multiple symptoms) severs the chain of causation in this case. Claimant's need for treatment was related to these conditions and not the condition caused by her work injury. Thus, Respondent was not liable for medical benefits. The ALJ also determined that Claimant's adrenal insufficiency and periods of unresponsiveness constituted an independent intervening cause and the ALJ concluded this served to terminate Respondent's liability for wage benefits.

ORDER

It is therefore ordered:

1. Claimant suffered a compensable low back strain on August 21, 2016.

2. Respondent shall pay medical benefits pursuant to the Workers' Compensation Fee Schedule to cure and relieve the effects of Claimant's injury through December 9, 2016. This includes treatment provided by Dr. Parsons, Dr. Euser and their referrals.

3. Claimant may be entitled to recover TPD benefits from August 22, 2016 through November 25, 2016. There was insufficient evidence in the record to calculate the amount due and owing, as records through November 5, 2016 were admitted. Counsel for Claimant and Respondent are ordered to confer with regard to the TPD issue. Either Claimant or Respondent may file an Application for Hearing on the issue of TPD benefits.

4. Respondent shall pay TTD benefits to Claimant at the rate of $510.00 per week from November 26, 2016 through December 9, 2016. These benefits are subject to the offset for Claimant's receipt of unemployment benefits, at the rate of $489.00 per week.

5. Claimant's claim for wage and medical benefits after December 9, 2016 is denied and dismissed.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that a left occipital nerve block is reasonable, necessary, and related to her June 24, 2016 work injury.

2. Whether Claimant has established by a preponderance of the evidence that the medication Imitrex (Sumatriptan) is reasonable, necessary, and related to her June 24, 2016 work injury.

3. Whether Claimant has established by a preponderance of the evidence that massage therapy is reasonable, necessary, and related to her June 24, 2016 work injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as a merchandiser and in June of 2016 was working under contract at a Lowe's store.

2. Claimant's job duties included unloading plants from carts, deadheading plants, moving plants, sweeping, and helping customers choose plants. The position at Lowe's was to be seasonal and her hours varied but she worked full time.

3. On June 24, 2016 Claimant was so employed when she sustained a work related injury. While unloading plants off a pallet, Claimant tripped backwards over the pallet, fell, and hit her head on the pallet jack's metal handle.

4. Claimant was bleeding from her head and had a small gash. Claimant felt off and foggy. Claimant waited for her boyfriend to pick her up because she didn't feel safe to drive. After he picked her up, Claimant went to urgent care.

5. On June 24, 2016 Claimant was evaluated by Clinton Hartman, PA-C. Claimant reported that she was at work moving a pallet when her foot caught and she fell backwards, hitting her head on a pallet jack. Claimant reported that it made her dizzy for a moment but that she did not lose consciousness. Claimant reported pain at a 7/10 level. Claimant was found on examination to have a left occiput small laceration less than 1 cm with swelling on the left side of the back of her head. Claimant also reported a headache. Claimant was noted to have normal neck range of motion and normal mood and affect, judgment, and thought content. Claimant was diagnosed with open wound of scalp and nausea. Claimant was given a tetanus shot. Claimant was provided discharge instructions regarding head injury. *See* Exhibits 3, 6, E.

6. On June 29, 2016 Claimant was evaluated by Tracey Stefanon, D.O. Claimant reported that she had fallen backwards and hit her head on a pallet jack but did not lose consciousness. Claimant reported that she did not have a second job. Claimant reported dizziness, nausea, vomiting, and frontal headache. Claimant noted on the pain diagram pain from her head down to her mid back but denied hearing loss, tinnitus, blurred vision, double vision, photophobia, back pain, joint pain, and neck pain. Dr. Stefanon noted the small wound on the back of Claimant's head was healing well. Dr. Stefanon assessed: scalp laceration, and post concussive symptoms including nausea, headache, and intermittent dizziness. Dr. Stefanon opined that Claimant had symptoms related to concussion but had a very reassuring neurological examination and stability of symptoms without worsening. Dr. Stefanon recommended a bland diet, cognitive and physical rest with limited computer, tv, and reading, and part time restricted duty. *See* Exhibits 3, F.

7. On July 7, 2016 Claimant was evaluated by Dr. Stefanon. Claimant reported being the same or somewhat better than her last visit, but reported continued headaches on a daily basis. Claimant also reported continued dizzy spells at 2-3 per day. Claimant denied vision changes, balance difficulties, slurred speech, concentration difficulty, neck pain, upper extremity pain, and back pain. Claimant reported improvement in her nausea and vomiting and that she was sleeping well with 8-9 hours per night. Claimant denied any prolonged recovery from a prior injury or any prolonged periods off work in the past. Claimant reported she had been off work because her part time restricted duty restrictions were not available in her job. *See* Exhibits 3, G.

8. On July 14, 2016 Claimant was evaluated by Kimberly Siegel, M.D. Claimant reported that her condition had worsened and that her dizziness had increased to the point that she felt unsafe driving. Claimant also reported increased nausea and increased vomiting. Claimant reported trouble remembering things, feeling clumsy, and difficulty focusing her eyes to read. Claimant reported that when she was about to have a dizzy spell her vision turned double briefly and that she had noted some lines at the periphery of her vision. Claimant reported her headaches were slightly improved. Dr. Siegel noted a normal neurological examination. Dr. Siegel noted moderate tenderness to palpation at the left occiput where there was minimal soft tissue residual swelling. A head CT scan was performed and was also noted to be unremarkable and negative with no evidence of acute intracranial hemorrhage or infarction. A brain CT scan also was performed and was normal. Dr. Siegel reassured Claimant that although Claimant had worsened symptoms, Claimant could expect her symptoms to resolve over the next month, and 2 months at most. *See* Exhibits 3, 8, H, I.

9. Claimant began attending physical therapy on July 19, 2018.

10. On July 28, 2016 Claimant was evaluated by Dr. Siegel. Claimant reported her condition was unchanged to somewhat improved. Claimant reported continued dizzy spells, that her nausea had gotten somewhat better, and that her headaches were not as bad and not as frequent. Claimant reported developing neck and upper to mid back pain after her first session of physical/vestibular therapy but that it had improved. Claimant

reported that the physical/vestibular therapy had helped decrease her headaches and neck and back pain. Claimant was noted to be working modified duty part time. Claimant was found to have mild paracervical tenderness and spasm. Range of motion elicited pain at the neck bases within the entire paracervical region. Cervical myofascial pain syndrome and acute thoracic back pain were added to Claimant's assessments. *See* Exhibits 3, J.

11. On August 11, 2016 Claimant returned to Dr. Stefanon. Dr. Stefanon reviewed Claimant's first two initial visits from June 29 and July 7 and noted that Claimant did not have any neck or back pain, but developed neck and back pain remote from her injury a few weeks ago. Dr. Stefanon noted that Claimant initially related the onset of her neck and back pain to a treatment in physical therapy but that claimant had seen chiropractic care on her own with worsening pain the following day. Dr. Stefanon also noted Claimant's report of remote onset intermittent numbness in the left hand. Dr. Stefanon opined that Claimant's neck pain, upper back pain, and numbness in the left hand were not related to the June 24, 2016 work injury and referred Claimant to her primary care provider for those conditions. Dr. Stefanon opined that she had concerns regarding Claimant's delayed recovery and multiple complaints now that did not exist at her initial injury. Dr. Stefanon opined that it was not common in traumatic brain injury to have worsening symptoms. Dr. Stefanon opined that it was difficult to obtain an accurate history whether or not treatment modalities were helping as Claimant was inconsistent in responses throughout the extensive interview. Claimant reported initially that she was the same with physical and vestibular therapy, but when told that it would be stopped since it did not seem to be improving Claimant's functional ability, Claimant reported that she was actually having improvement. *See* Exhibits 3, 12, K.

12. On August 24, 2016 Claimant was evaluated by neuropsychologist Alissa Wicklund, PhD. Claimant reported that she sustained a concussion in a work accident on June 24, 2016 after falling backwards and hitting her head on a metal jack. Claimant reported a scalp laceration, and initial symptoms of headache with pressure, dizziness, nausea, vomiting, neck pain, and photophobia. Dr. Wicklund noted that the medical records showed an unclear pattern of recovery and a concern that the neck and back pain were not related to the initial injury and reflected delayed onset of symptoms. Claimant reported an overall decrease in intensity and frequency of symptoms but that she had headaches with pressure in the forehead and behind the eyes, dizziness and increased headache on cognitive and physical exertion, nausea, photophobia, sleep dysregulation, problems with short term memory, problems with concentration, and feelings of frustration and irritability. Claimant reported that she had attempted to work her second job and approximately 8 hours per week. Dr. Wicklund performed multiple tests on Claimant. Claimant's scores were within the expected average range on measures of working memory, speed of mental processing, retentive memory, simple sustained attention, and executive functioning. Dr. Wicklund opined that a weakness was apparent in encoding of verbal information without evidence of loss of information over time. Vestibular/ocular motor screening did not provoke an increase in symptoms in headache, dizziness, nausea, or mental fogginess. Dr. Wicklund opined that results of the evaluation suggested protracted recovery from concussion. *See* Exhibits 5, L.

13. On November 4, 2016 Claimant was evaluated by Donna Brogmus, M.D. Claimant reported falling over a pallet backwards and hitting the back of her head on the metal pallet jack. Claimant reported that her headache was so severe initially that she didn't feel her neck. Clamant reported a laceration to her scalp along with a concussion. Claimant reported headaches, dizziness, nausea, vomiting, neck pain, and photophobia. Claimant reported that she had been working a different job for the past four months where she does store resets, material handling, and labeling. Dr. Brogmus diagnosed cervical pain, chronic post traumatic headache, not intractable, and unspecified disorder of vestibular function. Dr. Brogmus opined that the cause of the problem was related to work activities. *See* Exhibit N.

14. On November 7, 2016 Claimant underwent x-rays of her cervical spine. The reason for the study was listed as neck pain radiating down her left arm. The impression provided was normal views of the cervical spine with negative findings. *See* Exhibits 8, O.

15. On December 9, 2016 Claimant was evaluated by Dr. Brogmus. Claimant reported headaches, dizziness and nausea all about the same as her last visit. Claimant reported neck pain and left hand numbness about 10+ minutes daily at least. Dr. Brogmus found tenderness over the cervical spine to palpation with cervical range of motion about 70% in all planes and tight and tender over the right and left trapezius to palpation. Dr. Brogmus noted that due to the ongoing left hand arm numbness she ordered a cervical MRI. *See* Exhibit P.

16. On January 23, 2017 Claimant underwent an MRI of her cervical spine. The impression was normal cervical spine MRI. *See* Exhibits 8, R.

17. On April 19, 2017 Claimant was evaluated by Benjamin Miceli, a neurology PA. Claimant reported neck pain, headache, and numbness in the left hand and ongoing post concussive syndrome. Claimant reported that she fell backward on a wooden pallet and hit her head on a pallet jack and later was told she had a concussion. Claimant reported an immediate headache post injury that lasted a week, dizzy spells, now down to 2-3 per week, and that she had resolution of previously blurred vision and cognitive "fog." Claimant reported intermittent spells of paresthesias in her thumb and first two digits in median nerve distribution. PA Miceli found a positive tinel at the left wrist, tenderness to palpation at the left trapezius and splenis capitis muscles with provocation of left sided headache and mild paresthesias of the left upper extremity. PA Miceli assessed cervicogenic headache, left sided, paresthesia of left arm and symptoms consistent with exacerbation of previous carpal tunnel syndrome, and cervicalgia. PA Miceli noted that if Claimant failed conservative treatment they would try trigger point injections or an occipital nerve block. *See* Exhibit T.

18. Claimant continued to treat with Dr. Brogmus. On April 26, 2017 Dr. Brogmus noted that Claimant's headaches started over the left occiput and moved forward. *See* Exhibit P.

19. On June 30, 2017 Claimant underwent an independent medical examination performed by Eric Ridings, M.D. Dr. Ridings reviewed medical records and performed a physical examination. Dr. Ridings opined that Claimant had sustained a contusion and small laceration to her occiput at work on June 24, 2016 and that objective findings, other than the occipital wound, had been entirely lacking. Dr. Ridings opined that there was no medical explanation for Claimant's continuing symptoms one year after what was objectively a quite mild injury. Dr. Ridings opined, strongly, that Claimant did not sustain any cognitive deficits, neck pain, back pain, shoulder pain, left upper extremity pain, numbness or tingling, vision changes, hearing changes, or any other diagnoses beyond a scalp wound and head pain as a result of her June 24, 2016 work injury. Dr. Ridings noted that at Claimant's first three visits she had no complaints or abnormal findings in areas where she later reported problems. Dr. Ridings opined that it was not medically probable that symptoms occurring weeks and months later would be related to the work injury. Dr. Ridings opined that the natural history of traumatic brain injury is for maximum cognitive symptoms to be present immediately after the injury with gradual progressive improvement subsequently. He noted, in Claimant's case, there were no complaints or findings of cognitive deficit at the initial evaluation but later Claimant had expanding symptoms, which is inconsistent with the course of traumatic brain injury. Dr. Ridings opined that there was no indication for any further medical treatment under the claim. Dr. Ridings pointed out all of Claimant's complaints were entirely subjective with repeated normal neurologic examinations and that there was no justification for any continued prescription of medications, physical therapy, chiropractic care, or massage therapy. *See* Exhibit A.

20. On July 11, 2017 Dr. Brogmus anticipated Claimant would be at maximum medical improvement in about 2 visits. Dr. Brogmus noted Claimant's headaches were about 2 mild headaches per week that were controlled with laying down or over the counter medications. Claimant also reported about one severe headache per week. *See* Exhibit Y.

21. On July 25, 2017 Claimant was evaluated by Kathi Patterson, NP. Claimant reported 2-3 headaches per week with a debilitating one every 3 weeks or so. Claimant reported an aura of peripheral blurred vision, seeing spots, and nausea and vomiting as well as photophobia and phonophobia. Claimant reported the frequency was mildly decreasing but that they were still debilitating and that Aleve was no longer helping with the acute headaches. Claimant reported using zanaflex when her neck was really tight, about 4-5 days per week and that she was no longer seeing chiro or massage. NP Patterson assessed occipital neuralgia of the left side and opined that Claimant met all the criteria for the diagnosis. NP Patterson opined that trigger points existed at the emergence of the greater occipital nerve or in the area of distribution of C2 and that Claimant had tenderness over the affected occipital nerve branches. NP Patterson recommended a left sided occipital nerve block for left sided occipital neuralgia and noted that Dr. Schmitt would do the procedure as soon as the schedule allowed. NP Patterson also recommended Sumatriptan for acute headaches since Aleve was no longer effective. *See* Exhibits 11, Z.

22. On August 14, 2017 NP Patterson issued a letter. NP Patterson noted that Claimant had an injury where she fell backward and hit the back of her head on a pallet jack, with an immediate headache following the fall and opined that the mechanism of injury certainly could have resulted in damage to the greater occipital nerve, resulting in headaches. NP Patterson opined that Claimant had tenderness and tingling in the occipital nerve distribution after light compression along the nerve distribution and that although the compression was done on both sides, only the left side elicited symptoms. NP Patterson opined that the symptoms elicited meet the full criteria for a diagnosis of occipital neuralgia and that an occipital nerve block is the treatment of choice for this diagnosis. NP Patterson also recommended Imitrex/Sumatriptan for the chronic headaches that were no longer responding to Aleve. *See* Exhibit 11.

23. On August 15, 2017 Claimant was evaluated by Dr. Brogmus. Dr. Brogmus reviewed Dr. Ridings IME and opined that Claimant was noted to have dizziness, nausea and vomiting with headache since the June 2016 injury. Dr. Brogmus noted that Claimant overall had trended better but that the intermittent dizziness and headaches, and nausea persisted. *See* Exhibit AA.

24. On September 12, 2017 Claimant was evaluated by Dr. Brogmus. Claimant reported that her medications had not been filled by insurer and that she had been out of meds for six weeks and had more headaches off the medications. Claimant reported 4-5 headaches per week starting over the occiput and lasting a few hours if she got Tylenol. Claimant reported her sleep was worse off the meds and that she was dizzy 2-3 times per week. Dr. Brogmus recommended an occipital block and a trial of Imitrex/Sumatriptan and opined that both were reasonable treatments. Dr. Brogmus did not agree with the IME conclusion that given a set amount of time a headache post fall should be gone. *See* Exhibit CC.

25. Respondents denied NP Patterson's request and had a review performed by Dr. Ridings who opined that the occipital nerve blocks and Imitrex/Sumatriptan were not related to Claimant's work injury and were not reasonable and necessary. *See* Exhibit GG.

26. Claimant filed an application for hearing in response to the denial. Respondents also later denied a request for massage therapy.

27. Dr. Brogmus testified by deposition. Dr. Brogmus agreed with the diagnosis of occipital neuralgia given to Claimant by NP Patterson. Dr. Brogmus opined that the occipital neuralgia was related to Claimant's work injury. Dr. Brogmus noted that the occipital nerve block is a steroid injected close to the occipital nerve to see if it can decrease inflammation to that nerve to see if the nerve is a pain generator and, if so, itwill hopefully decrease the inflammation and stop the pain generation. Dr. Brogmus opined that Claimant was a good candidate for the occipital nerve block since Claimant had ongoing headaches since the fall that were not responding to conservative treatment, medications, massage therapy, physical therapy, or chiropractic and opined that the

nerve block was an option to see if it would help. Dr. Brogmus also opined that Imitrex/Sumatriptan was a medication used for migraine treatment used commonly with headaches, whether they be tension or mixed migraine/tension headaches and that Claimant was a candidate for the medication because of the question of what type of headache Claimant has, whether it is a tension migraine, or all from the occipital nerve. Dr. Brogmus opined that the medication would give them an idea of how to further treat Claimant.

28. Dr. Brogmus opined that Claimant did not have a cervical spine injury, but that her headaches were probably causing the cervical myofascial pain and that the headaches were causing tension in Claimant's neck. Dr. Brogmus noted some improvement with massage therapy and opined that was probably due to the tightness factor. Dr. Brogmus noted that Imitrex/Sumatriptan was for the more severe headaches with nausea and vomiting and noted that at Claimant's first visit, she had nausea and vomiting, and photophobia that can be migrainous generally and treated by Imitrex/Sumatriptan. Dr. Brogmus opined that Claimant was not yet at maximum medical improvement because she hadn't finished trials of the nerve block or Imitrex/Sumatriptan. Dr. Brogmus noted that both were reasonable to trial for Claimant to determine diagnostically if they work in treating Claimant's headaches, which had been going on for over one year.

29. Dr. Ridings testified by deposition. He opined that Claimant sustained a contusion and small laceration to her occiput, causing some headache due to the impact in her June 2016 work injury. He noted that Claimant struck the back of her head, had a laceration on the back of her head, and had complained of headache throughout her course of treatment. Dr. Ridings opined, however, that Claimant had no additional diagnoses. He noted that Claimant had complained of many different diagnoses that were not mentioned in her first three visits including her complaints of neck pain, shoulder pain, symptoms all the way down her left arm, decreased vision, decreased hearing, and numbness in her left hand. Dr. Ridings opined that with a point source episode of trauma, you would expect any symptoms to be apparent within the first 24 hours.

30. Dr. Ridings opined that occipital nerve blocks are to treat pain that seems to radiate from the base of the skull up over the top of the head to behind the eye on the side of the occiput being injected. He opined Claimant did not have that type of headache pain during the first year of Claimant's symptoms and that her headache complaints were not in the occipital neuralgia pattern. Dr. Ridings opined that you can check of that type of pain by pressing a thumb over the particular nerve at the base of the skull and that it should cause a shooting pain in the distribution you are expecting if it is the occipital nerve. He opined that in the first year of treatment Claimant did not have this distribution but had complaints of headaches of all different sorts that were mostly generalized. Dr. Ridings opined that even if Claimant had occipital neuralgia now, it was not a consequence of having fallen down in 2016 since there were no initial findings of occipital neuralgia or complaints consistent with occipital neuralgia in the first year. Dr. Ridings opined that he did not believe Claimant actually had occipital neuralgia. Dr. Ridings also opined that Claimant had quite a bit of massage therapy already and that he failed to see

she was receiving any benefit from massage therapy and that it was not reasonable or necessary.

31. Claimant testified at hearing that she still has dizziness and headaches. She also testified that she gets migraines and that her headaches overall are milder but that on some days they are debilitating and she stays in a dark room. Claimant testified that her migraines are all over but that other headaches usually start in the very back of her head and go forward. Leading up to the June 2016 incident, Claimant had no headaches, migraines, or dizziness. Claimant testified that she was evaluated by neurologist Dr. Yang in January of 2018 and that Dr. Yang also recommended the occipital nerve blocks and Imitrex/Sumatriptan. Claimant testified that she would like to try both the nerve blocks and the medication.

32. Claimant failed to report concurrent employment and employment she was engaged in while undergoing treatment in this case. In a prior injury case, on functional evaluation, Claimant appeared not to be performing at her maximum level. *See* Exhibit B.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations,

the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Medical "treatment" encompasses both diagnostic and curative medical procedures. *Merriman v. Industrial Commission,* 120 Colo. 400, 210 P.2d 448 (1949). Reasonable diagnostic procedures have been held to be a prerequisite to maximum medical improvement if they have reasonable prospect for defining claimant's condition and suggesting further treatment. *Villela v. Excel Corp.,* W.C. No. 4-400-281 (ICAO February 1, 2001). A Claimant bears the burden to establish by a preponderance of the evidence that the conditions for which they seek medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S.

Claimant has met her burden to establish by a preponderance of the evidence that the left occipital nerve block and the prescription medication Imitrex/Sumatriptan are reasonable, necessary, and causally related to her June 2016 work injury. As found above, Claimant's injury involved striking her left occiput. She has consistently reported headaches throughout her treatment. In July of 2016 Claimant had tenderness at her left occiput with residual soft tissue swelling. In August of 2016, Claimant had headaches with pressure behind her eyes. In April of 2017 it was noted that Claimant had tenderness to palpation at the left splenis capitis muscles that provoked left sided headache. Claimant also reported in April of 2017 that her headaches started over her left occiput and moved forward. In July of 2017, Claimant was noted to have trigger points at the emergence of the greater occipital nerve and tenderness over the affected occipital nerve branches.

Dr. Brogmus' opinions are found credible and persuasive. Claimant has established, more likely than not, a diagnosis of left occipital neuralgia due to her work injury where she struck her left occiput and has had consistent headaches since. It is credible and persuasive that occipital neuralgia can be caused by trauma to the occiput. Dr. Brogmus' opinion that it is reasonable and necessary to perform a left occipital nerve block to see if it can decrease inflammation to that nerve and determine if the nerve is a pain generator is persuasive. The ALJ finds this opinion to be consistent with recommendations made by PA Miceli, NP Patterson, and Dr. Yang (as credibly testified

by Claimant). The left occiput nerve block is reasonable both to diagnose and determine if, in fact, the left occipital nerve is causing Claimant's continued symptoms and to alleviate or cure Claimant's symptoms. The ALJ finds it persuasive that the recommended left occipital nerve block has a reasonable prospect to define Claimant's condition. The ALJ finds the opinions of Dr. Ridings not to be as persuasive. Dr. Brogmus is credible and persuasive that occipital neuralgia can cause headaches and that the headaches could be causing Claimant's cervical myofascial pain. Determining if the occipital nerve is the root cause through a diagnostic and potentially curative nerve block is found to be reasonable and necessary and casually related to Claimant's injury where she struck her left occiput.

Claimant has also established that the prescription for Imitrex/Sumatriptan is reasonable, necessary, and causally related to her June 2016 work injury. Since injury, Claimant has consistently reported headaches and migraine type headaches not present prior to her injury. Despite significant conservative treatment, the source of the headaches/migraines is not known. While Claimant is waiting the left occipital nerve block and while her treatment continues, it is both reasonable and necessary to allow this medication for her strong migraine type headaches and Dr. Brogmus' opinions that the medication offers a reasonable diagnostic and curative option for Claimant is credible and persuasive.

Claimant has failed to establish by a preponderance of the evidence that massage therapy is reasonable, necessary, or causally related to her June 2016 injury. Dr. Brogmus is unsure if massage therapy should continue. Dr. Ridings noted it had not helped throughout the course of treatment. As found above, Claimant has previously undergone significant conservative treatment including massage therapy that has not provided any ongoing relief. The ALJ finds that Claimant has presented insufficient evidence that massage therapy is reasonable or necessary.

Additionally, it is noted that the issues of whether or not Claimant sustained a traumatic brain injury, a cervical spine injury, a back injury, or shoulder pain as a result of this June 2016 work incident were not issues before the ALJ. The ALJ notes and agrees that the records contain some evidence of increasing symptoms and reports throughout. They also reference Claimant not putting forth maximum effort in a prior injury case. However, the limited issues for hearing were whether or not the occipital nerve block, Imitrex/Sumatriptan, and massage therapy were reasonable, necessary, and related to the injury. The ALJ finds that Claimant has met her burden to show, more likely than not, that the occipital nerve block is reasonable, necessary and causally related. Claimant struck her left occiput in the June 2016 injury. She has had consistent headaches since, with patterns described consistent with what would be expected for occipital neuralgia. She has responses to palpation consistent with occipital neuralgia. The nerve block offers a reasonable opportunity to diagnose and or cure the probable occipital neuralgia. If it offers no relief, and is non-diagnostic, a future determination as to whether or not any further treatment is reasonable or necessary is reserved. However, Claimant has established the nerve block to be reasonable, necessary, and related to her injury. Additionally, the medication Imitrex/Sumatriptan also is reasonable, necessary, and

causally related to her work injury and as testified by Dr. Brogmus it also offers a reasonable opportunity to further diagnose and or cure Claimant's condition. Again, if the medication offers no relief and is non-diagnostic, a future determination as to whether or not any further treatment is reasonable and necessary would also be reserved. Whether or not Claimant has more severe injuries or injuries including possible traumatic brain injury, cervical spine injury, back injury, etc. were not before the ALJ and are therefore not addressed.

ORDER

1. Claimant has established by a preponderance of the evidence that a left occipital nerve block is reasonable, necessary, and related to her June 24, 2016 work injury.

2. Claimant has established by a preponderance of the evidence that the medication Imitrex/Sumatriptan is reasonable, necessary, and related to her June 24, 2016 work injury.

3. Claimant has failed to establish by a preponderance of the evidence that massage therapy is reasonable, necessary, and related to her June 24, 2016 work injury. Her request for massage therapy is denied and dismissed.

4. All matters not determined are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 9, 2018

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that she suffered a compensable occupational disease affecting both of her upper extremities.

II. If Claimant sustained a compensable occupational disease, whether she established by a preponderance of the evidence that she is entitled to reasonable and necessary medical treatment to cure and relieve the effects of that disease.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 33-year-old female who has no previous history of injuries prior to her employment with the Employer. She has been employed by Employer, a grocery store, for the last four years as a checker and night stocker.

2. Claimant became a night stocker approximately 2.5 years ago. (Ex. F, pg. 54.)

3. Claimant's job required her to stock grocery store shelves. Claimant worked from 10:30 p.m. until 7:00 a.m., five days a week, Monday through Friday. During her work shift, Claimant gets 2 fifteen minute breaks and a half-hour lunch break. (Ex. D, pg. 31.)

4. Claimant typically works with 10-12 other stockers. (Ex. D, pg. 31.) Claimant would usually be responsible for stocking 3-4 aisles during her shift.

5. Claimant ultimately became a foreman. As a foreman, Claimant made it a habit to work harder and faster than her crew members to set a good example regarding the pace at which her crew members should work.

6. Claimant described in detail the process of a night stocker for Employer. Claimant testified that the various grocery store products are delivered to the store in boxes – cases of product - which are on pallets. At the beginning her shift, Claimant is required to manually unload the boxes – cases - of product off the pallets by hand. The cases weigh approximately 5 to 50 pounds. Claimant must then lift, move, and sort the cases of product based on which aisle they need to go. Once the cases of product are sorted, Claimant must lift the boxes of product and place each box of product onto various U-boat carts which will be used to transport the cases of product to the proper aisle. Loading up the U-boat carts takes anywhere from 45 minutes to 2 hours, depending on the size of the

loads that day. (HT, pg. 16.) Once the U-boat carts are loaded with cases of product, Claimant would push and pull two U-boat carts at a time to the aisles she would be stocking. Once the U-boat carts were in the appropriate aisles, Claimant would begin stocking the shelves. This required Claimant to grab, lift and/or position the box she intended to open, cut or tear the box open, and then grab each individual item out of the box and place it on the shelf. Performing this activity required Claimant to flex and extend her wrists and pinch and grip the product in order to place it on the shelf. The product placed on the shelf weighs anywhere from ounces to 60 pounds. This activity is done repetitively throughout her shift and at a very fast pace. Claimant is required to work at a very fast pace in order to stock all of the delivered product without any overtime. Claimant spends approximately 90% of her shift loading cases of product onto U-boat carts and opening boxes and placing product on the proper shelf. This amounts to approximately 6.75 hours per day. The remaining 10% of her shift, which amounts to approximately 45 minutes, is spent breaking down the boxes and taking them to the storage area for discarding or compacting and making sure all product in her assigned aisles is properly faced. Claimant's job duties result in Claimant's wrists and upper extremities being in awkward postural positions such as bilateral wrist extension of greater than 30 degrees and bilateral supination and pronation of her hands and wrists. Claimant's job duties also require the use of forceful and powerful gripping and pinching with her hands. Therefore, her job duties require repetitive awkward posture and force - and combinations thereof – regarding the use of her hands and wrists to perform her job duties. (See Ex. D and HT.)

7. Claimant credibly testified that:

> As a foreman at King Soopers, I was told to work harder and faster than my crew. And I had to show them up so I would have to do the heavy aisles with the condiments like ketchup and olives and pickles and things like that.

(HT, pg. 31.)

When asked why she did that, Claimant credibly responded:

> That's what my manager wanted of me. They wanted me to show them that I can do the job.

(HT, pg. 31.)

8. In order to complete her stocking duties every night, Claimant pushed herself at all times. (HT, pg. 33.)

9. Claimant would start having symptoms in her hands after working approximately 3 hours into her shift. (HT, pg. 34.)

10. While working and upon developing numbness in her hands, Claimant would stretch her hands in the manner recommended by the signs posted at the job site for carpal tunnel syndrome. (HT, pg. 27. Claimant associated the symptoms with her job.

11. The symptoms were worse in her right hand compared to her left hand.

12. On November 2, 2017, Claimant was stocking shelves. Prior to this date, Claimant had been having tingling and numbness in her hands for approximately 1 year. At approximately 5:30 a.m., on Thursday, November 2, 2017, Claimant was stocking gallons of water. While lifting a gallon of water from a U-boat cart she had previously loaded, she felt a pop in her right wrist towards the end of her shift. She did not have the immediate onset of pain. Claimant finished her shift and did not report an injury. Later that evening, Claimant developed pain from the volar tip of the right long finger to the mid forearm. She also had tingling and numbness symptoms in her left hand.

13. On Monday, November 6, 2017, Claimant presented to Denver Health and was evaluated by Laura Metier, NP. The medical report from that date indicates Claimant has had hand numbness and tingling at night while sleeping for the last year. The report goes on to indicate that on November 3, 2017, Claimant went to lift a heavy box at work and got pain in both hands as well as shooting pains in her palms and into her fingers. Claimant was complaining of a weaker grip and was having difficulty holding things. The physical examination revealed positive Phalen's and Tinel's testing and weak grip strength bilaterally. NP Metier diagnosed Claimant as suffering from bilateral carpal tunnel syndrome, prescribed bilateral wrist splints, and took Claimant off work for one week. (Ex. 2, pg. 113, 116; Ex. G, pg. 85-91.)

14. On November 7, 2017, Claimant reported her injury to Employer. Employer provided Claimant a list of four designated primary care medical providers from whom she could seek treatment. As set forth on the Designated Medical Provider List, each provider was a specialized "Occupational Medicine Clinic." Claimant selected the Concentra Medical Centers, Occupational Medicine Clinic, at 1212 S. Broadway, Denver, CO. (Ex. A, pg. 8.)

15. On November 7, 2017, an Employee Incident - Questionable Claim Form - was completed by the store manager. The report indicates the manager thought the claim was questionable because Claimant was previously a checker at a different store and Claimant stated that the injury might have been caused by either checking or stocking shelves when she was lifting a gallon of water. (Ex A, pg. 9.)

16. On or about November 7, 2017, an "Associate Incident, In-Store Investigation Report," was also completed by the store manager. This form provides very little space for the Manager to write down the information gathered during the

"investigation." In the incident description, the manager noted that Claimant was placing a single gallon of water on the shelf when her right wrist popped. In the section for the incident type, the store manager indicated Claimant was lifting a case of water. (Ex. 4, pg. 190.) Therefore, the store manager wrote down two different activities he determined Claimant was performing at the time she felt a pop in her right wrist.

17. On November 8, 2017, Claimant presented to the Concentra Occupational Medical Clinic located at 1212 S. Broadway, Denver, Colorado. As found above, this was one of the employer's pre-designated occupational medical clinics for work related injuries which was selected by Claimant. Claimant was evaluated by Dr. Stephen Danahey. As set forth in Dr. Danahey's report, Claimant described stocking shelves at work and lifting gallons of water onto a shelf and feeling a pop in her right wrist. The report also notes that although Claimant did not have the immediate onset of pain in her right wrist, she developed excruciating pain later that evening. Claimant also complained of having numbness and tingling in both hands over the last year. Despite being told by Claimant that she felt a pop in her wrist while stocking water, Dr. Danahey noted that Claimant did not report a specific injury and that she attributed her symptoms to her work activities. Claimant advised Dr. Danahey that she recently saw her primary care physician and was diagnosed with carpal tunnel syndrome. (Ex. 3, pg. 11.) Dr. Danahey obtained Claimant's occupational history, job duties, as well as the days and hours worked each week. Dr. Danahey also asked Claimant about a second job and whether she participated in any significant sports or hobbies in order to rule out other causes of Claimant's carpal tunnel syndrome. Claimant denied having a second job and denied engaging in any significant sports or hobbies. (Ex. 3, pg. 11.) Dr. Danahey also reviewed Claimant's past medical, social, and family history to rule out other causes of Claimant's carpal tunnel syndrome. (Ex. 3, pg. 11.) Dr. Danahey performed a physical examination and noted positive Tinels testing for carpal tunnel syndrome. Dr. Danahey diagnosed Claimant with: i) Right wrist tendinitis, ii) Left wrist tendinitis, and iii) Carpal tunnel syndrome, bilaterally. (Ex. 3, pg. 13.)

18. On November 8, 2017, Dr. Danahey also completed a WC164 form. (Ex. 3, pg. 6.) Dr. Danahey concluded that the objective findings were consistent with Claimant's history and work related mechanism of injury/illness. He specifically noted the work related diagnosis was M77.8/tendinitis and G56.03/bilateral carpal tunnel syndrome. (See Ex. 3, pg. 6, 13.) Dr. Danahey referred Claimant to physical therapy and prescribed wrist braces to treat her work related bilateral tendinitis and bilateral carpal tunnel syndrome. He also placed Claimant on restricted duty and limited her lifting, pushing, and pulling to up to 5 pounds occasionally, advised Claimant to wear her braces, and advised Claimant to avoid gripping and grasping with her hands. (Ex. 3, pg. 14-15.) Lastly, Dr. Danahey advised Claimant to return to Concentra's occupational medical clinic

for a follow-up appointment in 2 days. (Ex. 3, pg. 14.) The ALJ finds Dr. Danahey's findings and opinions regarding his diagnosis of bilateral tendinitis and bilateral carpal tunnel syndrome, and that such conditions are work related, to be credible and persuasive.

19. On November 30, 2017, Claimant returned to Denver Health and was evaluated by Dr. Andrew Wood. The medical report from that visit indicates Claimant was "stocking night grocery, and while lifting a case of water, her wrist "popped;" then severe pain and burning." The medical report also indicates Claimant was "lifting a water bottle and felt a pop in her right wrist." Dr. Wood opined that Claimant's "etiology of her pain appears to be consistent with carpel tunnel especially given her occupation with manual labor. However, due to recent injury where she felt a pop while lifting and now having worsening pain will obtain MRI." (Ex. G, pg. 82) The ALJ finds Dr. Wood's opinion that Claimant's carpal tunnel syndrome is consistent with her job duties as a stocker, as well as his treatment recommendations, to be credible and persuasive.

20. On December 18, 2017, Dr. Jonathan Sollender performed an Independent Medical Examination on behalf of Respondents and issued a report. He diagnosed Claimant with right sided carpal tunnel syndrome and a right sided wrist strain. However, he did not provide a definitive opinion regarding causation in his initial report. Dr. Sollender indicated that before he could provide an opinion as to whether Claimant's conditions were caused by her job activities, he would need to have a Job Demands Analysis performed in order to apply the exposure and causation analysis set forth in Section 17-5 of the Medical Treatment Guidelines. (Ex. F.)

21. Dr. Sollender issued supplemental report on February 13, 2018. Dr. Sollender stated in his report that he relied upon the Medical Treatment Guidelines in assessing causation in this case. Dr. Sollender concluded that based upon his application of Section 17-5 of the Medical Treatment Guidelines, and the information contained in the Job Demands Analysis report prepared by Ms. Jill Adams, Claimant's carpal tunnel syndrome and right sided wrist strain were not caused by her job duties. (Ex. F.)

22. The ALJ does not find Dr. Sollender's opinions and conclusions to be credible or persuasive for a number of reasons.

23. First, the Medical Treatment Guidelines set forth a six step causation analysis process. One of the steps requires the physician to interview Claimant regarding their job duties. The Medical Treatment Guidelines provide:

> 3. **MEDICAL CAUSATION ASSESSMENT FOR CUMULATIVE TRAUMA CONDITIONS**
> General Principles of Medical Causation Assessment

> **Step 3.** ***Interview the patient to find out whether risk factors are present in sufficient degree and duration to cause or aggravate the condition.*** Consider any recent change in the frequency or intensity of occupational or non-occupational tasks. In some cases, a formal jobsite evaluation ***may*** be necessary to quantify the actual ergonomic risks. (Emphasis added.)

(Medical Treatment Guidelines, Rule 17, Exhibit 5 (D)(3)).

As set forth in his initial report, Dr. Sollender obtained very little information from Claimant regarding the physical requirements of her job. As documented in his initial report, Claimant told Dr. Sollender that she has worked for Employer as a checker and night stocker. She advised him that she has flipped back and forth between checking and night stocking because she found stocking to be too strenuous for her and switched back to being a night stocker about 4 months ago for better hours and pay. She also told Dr. Sollender that she worked 8.5 hours per day, which included two 15 minute breaks and a 30 minute lunch break, resulting in 7.5 hours of productivity. She also told Dr. Sollender that she performed repetitive motions of stocking at least five hours daily.

However, despite the requirement to "***Interview*** the patient to find out whether risk factors are present in sufficient degree and duration to cause or aggravate the condition," it is not evident from Dr. Sollender's report that he tried to actively interview Claimant to determine whether Claimant's job duties involved physical activities in sufficient degree and duration to cause carpal tunnel syndrome. For example, Claimant told Dr. Sollender that the physical aspects of her job as a stocker were too strenuous and caused her to alternate between checking and stocking. Dr. Sollender, however, did not ask Claimant, and document it in his report, what specific aspects of her job as a stocker were too strenuous; the repetition, force, and awkward positioning required to perform her job; the symptoms she developed while performing the strenuous aspects of her job; and whether her symptoms changed when she switched to checking which might not have required as much repetition, force, and awkward position of her hands and wrists. It appears to this ALJ that Claimant briefly told Dr. Sollender about her job, and Dr. Sollender chose not to actively interview Claimant to determine whether her job duties involved risk factors for the development of a cumulative trauma disorder, such as carpal tunnel syndrome.

24. After getting a general description of her work, and failing to adequately interview Claimant about her job duties, Dr. Sollender indicated in his report:

> She has not provided me any objective insight, only her subjective impression that her work is laborious and

> repetitive. As a layman, she has no idea of the true definition of repetitive.

The ALJ finds Dr. Sollender asked Claimant about her job duties and summarily dismissed any relevant information Claimant provided, or could have provided, about her job duties which could have been used to establish the cause of her carpal tunnel syndrome. It is also not clear from such statement what type of "objective insight" Claimant could have provided Dr. Sollender as a "layman." In essence, Dr. Sollender appears to be saying that Claimant, as a layman, is incapable of providing sufficient information regarding her job duties which would allow Dr. Sollender, or any other physician, to determine whether her tendinitis and carpal tunnel syndrome were caused by her job duties.

25. Moreover, Dr. Sollender contends the Medical Treatment Guidelines support his methodology of dismissing any information Claimant might have provided, had she been properly interviewed, by stating in his report that: "The current treatment guidelines Rule 17-5 does describe the potential for over reporting of risk factors, such that a job site evaluation is important." (Ex. F, pg. 55) The ALJ finds that although the Medical Treatment Guidelines indicate that a job site evaluation can help define the actual risk factors of a job, they do not indicate Claimants misrepresent and over report the risk factors associated with their jobs and that a job site evaluation is the only way to obtain accurate and credible information to determine causation.

See Medical Treatment Guidelines, Rule 17, Exhibit 5.

26. In addition, the Medical Treatment Guidelines set forth "standard procedures that should be utilized when initially diagnosing work-related upper extremity complaints." The Medical Treatment Guidelines indicate:

> History-taking and physical examination are generally accepted, well-established and widely used procedures that establish the foundation for subsequent stages of diagnostic and therapeutic procedures.

See Medical Treatment Guidelines, Rule 17, Exhibit 5.

The Guidelines also specifically indicate that the physician should include the "patient's perception of cause of symptoms." (*See* Medical Treatment Guidelines, Rule 17, Exhibit 5.) Therefore, the ALJ finds that Dr. Sollender's failure to actively interview Claimant and obtain a detailed job description from Claimant in order to assess whether Claimant's job duties might involve risk factors for the development of carpal tunnel syndrome diminishes the reliability and credibility of his ultimate opinion that Claimant's work activities did not cause her tendinitis or carpal tunnel syndrome.

27. Dr. Sollender also stated in his report:

> I have evaluated night stockers and dairy stockers who all allege the work is repetitive. Some have had ongoing medical problems which were the root cause of their condition.

The ALJ finds the above statement anecdotal and another attempt by Dr. Sollender to diminish the ability of Claimant to provide credible, accurate, and reliable information about her job duties which can be used to establish that her job duties caused her tendinitis and carpal tunnel syndrome.

From this statement, the ALJ finds Dr. Sollender has evaluated other stockers who alleged their jobs were repetitive, but ended up having jobs which were not repetitive, and had underlying medical conditions which were the direct and proximate cause of their cumulative trauma disorder, such as carpal tunnel syndrome.

The ALJ finds in this case that Claimant's job was repetitive and neither Dr. Sollender, nor any other physician, has identified Claimant as suffering from a non-work related medical condition which is the "root cause" of her tendinitis or carpal tunnel syndrome.

28. Dr. Sollender also made treatment recommendations including additional testing, immobilization, splinting, and work restrictions. Dr. Sollender stated in his report that:

> All these treatment recommendations are offered without regard to causation, but are simply suggestions for anyone with a similar condition, whether caused by non-work weekend warriors, or from a forceful job.

Dr. Sollender seems to be suggesting that another possible cause of Claimant's carpal tunnel syndrome might be activities she performs on the weekend as a "weekend warrior." Dr. Sollender, however, noted in his report that he asked Claimant about any hand intensive hobbies and she denied any. Moreover, his reports, and the record, are devoid of any credible and persuasive evidence that Claimant engaged in activities outside of work that would rise to the level of "weekend warrior" activities which would cause wrist tendinitis or carpal tunnel syndrome. Therefore, there is no credible and persuasive evidence that Claimant's wrist tendinitis and carpal tunnel syndrome were caused by activities she performed as a "weekend warrior."

29. Since Dr. Sollender did not obtain a detailed description of Claimant's job duties from Claimant, but stated he "needs data" to determine causation, he suggested a Job Demand Analysis be performed by a vocational expert. He stated that he

maintains a list of vocational experts who know the reporting requirements of Colorado Workers' Compensation Rule 17 Exhibit 5 for Job Demands Analysis and that he would share such list with Respondents if requested.

30. On January 18, 2018, Jill Adams, CRC, CCM, CEAS II, performed a Job Demands Analysis and issued a report. (Ex. D.) It is not clear whether Ms. Adams was on the list of vocational experts maintained by Dr. Sollender. The purpose of her analysis was to determine whether Claimant's job duties consisted of activities which are considered primary or secondary risk factors for developing carpal tunnel syndrome pursuant to the Medical Treatment Guidelines.

31. According to the Medical Treatment Guidelines, and Ms. Adams' report, the following risk factors where relevant based on Claimant's work and were analyzed:

Force & Repetition /Duration

Primary Risk Factors, include the following:

a. 6 hours of use of 2 pounds of pinch force or 10 pounds hand force 3 times or more per minute, or

b. 6 hours of lifting 10 pounds greater than 60 times per hour.

Secondary Risk Factors, include the following:

a. 3 hours of use of 2 pounds of pinch force or 10 pounds hand force 3 times or more per minute, or

b. 3 hours of lifting 10 pounds greater than 60 times per hour.

Awkward Posture & Repetition/Duration

Primary Risk Factors, include the following:

a. 4 hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees.

b. 6 hours of elbow flexion of greater than 90 degrees.

c. 4 hours of supination/pronation with task cycles 30 seconds or less or posture is used for at least 50% of a task cycle.

Secondary Risk Factors include the following:

a. 3 hours of elbow flexion of greater than 90 degrees.

b. 3 hours of supination/pronation of 45 degrees with power grip or lifting.

See Medical Treatment Guidelines, Rule 17, Exhibit 5.

32. Ms. Adams performed a Job Demands Analysis of Claimant's job and issued a report. (Ex. D.) She also testified at hearing. Although she could not evaluate Claimant performing her job, she evaluated other night stockers performing their

job at the store Claimant worked. She testified that she spent about 2 hours at the store and spent about 1½ hours evaluating the physical requirements of Claimant's job. Ms. Adams concluded Claimant's job as a stocker did not involve any primary or secondary risk factors for the development of a cumulative trauma disorder as defined by the Medical Treatment Guidelines.

33. The ALJ does not find certain aspects of Ms. Adams report, or testimony, to be persuasive or credible for a number of reasons.

34. First, Ms. Adams did not evaluate how Claimant performs her job and did not take into consideration the fact that Claimant typically stocked the heavier aisles.

35. Second, Ms. Adams states in her report that she performed the following study:

> A one hour time study was conducted of 2 pounds pinch force or 10 pounds hand force 3 times or more per minute. The data is cumulative.

Ms. Adams' report indicates that during a one hour time study of night stockers at King Soopers, which is broken down into 5 minute increments, the stockers she evaluated exerted 2 pounds of pinch force or 10 pounds of hand force 3 times or more per minute for a total of 15 minutes and 4 seconds. She extrapolated that data to equal one hour, thirty-seven minutes and thirty seconds over an entire work shift. Lacking from Ms. Adams' report or testimony is how she determined the amount of pinch force or hand force each stocker was using while performing each task during her evaluation. In addition, Ms. Adams' report contains a chart that lists the time she alleges she documented the stockers using 2 pounds of pinch force or 10 pounds of hand force 3 times or more per minute with their right hand and their left hand. Over a one hour period, Ms. Adams indicated that she observed stockers using 2 pounds of pinch force or 10 pounds of hand force 3 times or more per minute the exact amount of time - 15 minutes and 4 seconds - for each upper extremity – during a one hour period. A lack of any variability between the stockers' use of their right hand and left hand over an entire hour puts into serious doubt the accuracy of the data set forth in her report. In other words, the ALJ finds the data in Ms. Adams' chart setting forth her alleged documentation of the repetitive and forceful bilateral hand use of the stockers she observed performing their job is too consistent to be credible and reliable.

36. Ms. Adams report also indicates she performed the following study:

> A one hour study of ***bilateral lifting*** 10 pounds or more was conducted with the following observed. (Emphasis added.)

Ms. Adams states in her report that she observed a stocker lifting, ***bilaterally***, 10 pounds or more 12 times during a one hour period of observation and she extrapolated that out to 96 times over an 8 hour work shift. First, the Medical Treatment Guidelines discuss lifting 10 pounds or greater and do not indicate that lifting is to be measured when using both upper extremities concurrently/bilaterally and lifting a single item. Therefore, Ms. Adams did not address how many times the stockers lifted an item with one hand that weighed 10 pounds or more. Second, Ms. Adams was not present at the beginning of the

shift when the stockers are required to unload and sort the cases of product that have been delivered to the store on pallets and must be sorted and carried to the proper U-boat cart.

Moreover, lacking from Ms. Adams' report or her testimony is how she determined the weight of the items being handled by the stockers she observed and documented throughout her report. How did she determine which items weighed 10 pounds or more and the resulting force used to stock items on the U-boats and shelves? It is troubling to the ALJ that Ms. Adams was asked by Claimant's counsel how much a gallon "jug" of water weighs - the item Claimant was lifting and stocking when she felt a pop in her right wrist - and Ms. Adams stated "about 4 pounds." (HT, pg. 85) The ALJ takes judicial notice of the fact that a gallon of water weighs approximately 8.3 pounds.[1] The ALJ does not find Ms. Adams testimony that a gallon of water weighs about 4 pounds to be reliable or credible. Therefore, The ALJ does not find Ms. Adams' ability to determine and document the weight of the items being lifted, carried, and stocked, over Claimant's entire shift, as well as the force required to perform those activities, to be reliable or credible.

37. Ms. Adams also set forth data in her report regarding the amount of time the stockers tasks required wrist extension of greater than 30 degrees. Again, over a one hour period, there was merely a 1 second difference between the cumulative use of the right and left upper extremity. Again, the alleged parallel uniformity of the data noted in her report is not found to be credible.

38. Additionally, although Ms. Adams testified that she spent about 1½ hours observing the job duties of various stockers, she did not explain how she was able to concurrently and accurately observe, measure, and record all of the activities that have to be measured when determining primary and secondary risk factors under the Medical Treatment Guidelines, while each stocker was working at a production pace for an hour. She alleges in her report, and testimony, that she accurately observed and recorded all of the following risk factor data, in 5 minute increments, over a 1 hour period, while the stockers worked at a production pace:

    i. The amount of time the worker extended their right wrist greater than 30 degrees, every 5 minutes, for one hour.

    ii. The amount of time the worker extended their left wrist greater than 30 degrees, every 5 minutes, for one hour.

    iii. The amount of time the worker exerted 2 pounds of pinch force with their right hand, every five minutes, for one hour.

    iv. The amount of time the worker exerted 2 pounds of pinch force with their left hand, every five minutes, for one hour.

[1] See 8 CCR 1202-5-1.4(1.4.16) (The weight of a gallon (231 cubic inches) of water at 60ºF in air shall be 8.32828 pounds; *See also Allen v. Industrial Com'n*, 729 P.2d 15, (1986). (We take judicial notice that liquid milk weighs about the same as liquid water or approximately 8 1/3 pounds per gallon.)

v. The amount of time the worker exerted 10 pounds of hand force 3 times or more per minute with their right hand, every five minutes, for one hour.

vi. The amount of time the worker exerted 10 pounds of hand force 3 times or more per minute with their left hand, every five minutes, for one hour.

vii. The amount of time the worker exhibited ulnar deviation of the right wrist, greater than 20 degrees, every five minutes, for one hour.

viii. The amount of time the worker exhibited ulnar deviation of the left wrist, greater than 20 degrees, every five minutes, for one hour.

ix. The number for times the worker lifted more than 10 pounds bilaterally, every five minutes, for one hour.

x. The number of times the worker lifted 10 pounds with their right upper extremity, greater than 60 times per hour, for one hour.

xi. The number of times the worker lifted 10 pounds with their left upper extremity, greater than 60 times per hour, for one hour.

xii. The number of times the worker supinated their right wrist, every five minutes, for one hour.

xiii. The number of times the worker pronated their left wrist, every five minutes, for one hour.

xiv. The amount of time the worker had supination/pronation with task cycles 30 seconds or less or posture is used for at least 50% of a task cycle of the right wrist.

xv. The amount of time the worker had supination/pronation with task cycles 30 seconds or less or posture is used for at least 50% of a task cycle of the left wrist.

xvi. The amount of time the worker exhibited supination or pronation of 45 degrees with power grip or lifting of the right wrist and hand.

xvii. The amount of time the worker exhibited supination or pronation of 45 degrees with power grip or lifting of the left wrist and hand.

39. In addition, Ms. Adams concludes in her report that none of the Primary or Secondary Risk Factors were observed during her job demands analysis and directs the reader to “See Time Study” for the supporting data. For example, she states in her report to “See Time Study” regarding her conclusion that the data she obtained through her observation of stockers did not demonstrate the job required 4 hours of wrist flexion greater than 45 degrees, extension greater than 30 degrees, or ulnar deviation greater than 20 degrees, during an entire shift. Her report only contains “Time Study” data regarding extension of greater than 30 degrees. The other “Time Study” data which apparently supports her

conclusion, and apparently documents the stockers were not flexing their wrist greater than 45 degrees or that the job did not cause the stockers to have an ulnar deviation of greater than 20 degrees, for any period of time, is missing. Her report also says "See Time Study" for the data regarding her analysis of a stocker engaging in supination/pronation with task cycles of 30 seconds or less or where posture is used for at least 50% of a task cycle to support her conclusion that such risk factors were also not present. Her report, however, only contains a time study with data regarding right and left arm supination/pronation. There is no data referencing the task cycles or posture used for at least 50% of the task cycle.

40. Her report also refers to another "Time Study" which apparently supports her conclusion that the job she observed did not require the stocker to engage in another risk factor involving 3 hours of supination/pronation of 45 ***degrees with power grip or lifting,*** which is a Secondary Risk Factor. (Emphasis added.) Again, there is no corresponding "Time Study" with any data in her report setting forth her observations and data of a stocker engaging in supination/pronation of 45 degrees ***with power grip or lifting***. (Emphasis added.) There is a "Time Study" contained in her report that references whether there was supination or pronation. But such data table does not indicate the degree of pronation or supination she was measuring and whether there was power grip or lifting. Although the additional power grip or lifting factors that are associated with meeting the definition of a Primary or Secondary Risk Factor due to supination or pronation might be irrelevant if there is not 3 or 4 hours of pronation or supination, it seems like the data has to be measured and collected concurrently and accurately in the first instance, to make that conclusion. And, there is no indication the data was collected.

41. The ALJ does not find Ms. Adams' conclusions that Claimant's job duties did not meet the primary or secondary risk factors set forth in the Medical Treatment Guidelines to be credible or reliable.

42. Despite the deficiencies in Ms. Adams' report and testimony, the ALJ finds that portions of her report and testimony establishes Claimant's job duties required the repetitive and forceful use of her upper extremities in awkward positions.

43. On January 29, 2018, Dr. Michael Blei performed an electrodiagnostic examination of Claimant's right upper extremity. The examination showed evidence of entrapment/compression neuropathy involving the median nerve across the wrist segments demonstrating moderate carpal tunnel syndrome. Dr. Blei recommended surgical release along with future evaluation of her left upper extremity at some point in the future. (Ex. G, pg. 74.)

44. On January 30, 2018, Claimant returned to Denver Health. Her diagnosis remained as bilateral carpal tunnel syndrome. Based on her symptoms, and the results of the EMG, she was scheduled with Dr. Ipaktchi for a right carpal tunnel release.

45. On February 5, 2018, Claimant underwent a right wrist carpal tunnel release which was performed by Dr. Ipaktchi at Denver Health. Dr. Ipaktchi noted that

the indication for the procedure was that Claimant had been suffering from paresthesia and numbness over the right hand median nerve distribution and that her symptoms also occurred nocturnally. He noted that on physical examination there was a positive Tinnel's sign over the right carpal tunnel, a positive Phalen's test, and a positive carpal tunnel compression test. He also noted that static 2 point discrimination was increased and demonstrated abnormal sensation over the median nerve innervated fingers. He also noted the electromyography and nerve conduction studies confirmed the diagnosis of right carpal tunnel syndrome.

46. On February 13, 2018, Dr. Sollender issued a supplemental report. As set forth in his report, he reviewed additional medical records, as well as the Job Demands Analysis prepared by Ms. Adams. There is no indication Dr. Sollender critically reviewed Ms. Adams' report, other than taking her conclusory findings that Claimant's job did not meet any of the primary or secondary risk factors set forth in the Medical Treatment Guidelines. Despite the deficiencies found by the ALJ in Ms. Adams' report, Dr. Sollender appears to have blindly adopted her findings and concluded that her report provided the objective data necessary to confirm Claimant was not exposed to adequate volumes of risk factors at work to assign a cause and effect relationship to her symptoms from work. He concluded that based upon Ms. Adams' Job Demands Analysis, the work Claimant performed was not forceful, awkward, or repetitive. He ultimately concluded Claimant's carpal tunnel syndrome as well as her wrist strain was not related to her job.

47. Dr. Sollender provides an analogy in both of his reports to explain and demonstrate that merely performing a task repetitively will not cause a cumulative trauma disorder like carpal tunnel syndrome unless the repetitive task also requires the use of force or is performed with an awkward posture. Dr. Sollender states:

> To be a risk factor, Colorado does require a job be both repetitive and forceful, or repetitive and awkward, or forceful and awkward. Imagine moving feathers at a fast rate. This would be repetitive, but not forceful. Compare moving a feather 10 times per minute versus moving a 20lb bucket of sand 10 times per minute. One is repetitive and one is repetitive and forceful. In Colorado we look at the combined repetitive and forceful activities as potential work-related conditions. In Colorado, the force is typically over 10lbs.

The ALJ finds Dr. Sollender's analogy to be instructive. Claimant's job did not require her to move feathers. Claimant's full time job required the forceful and repetitive use of her hands, wrists, and upper extremities, in awkward positions at times, to stock a grocery store.

48. Dr. Sollender also testified via deposition. His deposition testimony was consistent with his reports. Dr. Sollender testified that he reviewed the Job Demands Analysis of the night stocker performed by Ms. Adams and concluded

that Claimant's bilateral carpal tunnel syndrome and bilateral wrist tendonitis were not caused, aggravated or accelerated by Claimant's job duties:

> Q Did that job demands analysis assist you in reaching a conclusion on the causation of the bilateral wrist tendinitis and bilateral carpal tunnel syndrome?
>
> A. It did.
>
> Q. And how so?
>
> A. With this new information, which was purely objective as to the work she alleged to be doing that she thought was repetitive, and forceful, and awkward, by somebody who knows the Colorado definitions of these risk factors, who is on site watching the job being done by a night stocker, she confirmed that there was no primary and no secondary disk factors as defined by the Colorado Division of Workers' Compensation Rule 17, Exhibit 5, definitions. So with that information I can clearly confirm that her work is not forceful, her work is not repetitive, her work is not awkward in posture of the upper extremities, and her work would not have caused or contributed to the development of those kinds of conditions that she had. Moreover, she did have evidence of carpal tunnel syndrome that predated this claim.

[Sollender Deposition, pp. 7:17 to 8:14].

49. The ALJ does not find Dr. Sollender's ultimate conclusions to be reliable, credible, or persuasive based on the reasons set forth above, which include, but are not limited to, his methods used for gathering information about the physical requirements of Claimant's job as well as his unblinking reliance on Ms. Adams report. Dr. Sollender's steadfast reliance on Ms. Adams' data and conclusions, which the ALJ does not find reliable, makes his opinions regarding causation unreliable and not persuasive.

50. Moreover, Dr. Sollender based his conclusions regarding causation on his contention that he followed the causation analysis set forth in the Medical Treatment Guidelines. The Guidelines specifically indicate that preexisting cumulative trauma conditions may be aggravated by, or contribute to, exposures lower than those listed in the primary and secondary risk factor tables. (See Medical Treatment Guidelines, Rule 17, Exhibit 5 (D)(3)). Dr. Sollender testified that Claimant did have evidence of carpal tunnel syndrome that predated the filing of her claim in this case. Such statement is consistent with Claimant's testimony regarding the onset of her symptoms. Despite this information, Dr. Sollender did not analyze whether Claimant had preexisting non-occupational carpal tunnel syndrome and whether it was aggravated by her work activities that allegedly did not meet the primary or secondary risk factors set forth in the Medical Treatment Guidelines. Therefore, the ALJ finds Dr. Sollender did not

follow all aspects of the Medical Treatment Guidelines in assessing causation in this case.

51. The Division of Worker's Compensation Rule 17, Exhibit 5, Cumulative Trauma Conditions Medical Treatment Guidelines specifically provides that "acceptable medical practice may include deviations from these guidelines as individual cases dictate."

52. The Guidelines themselves indicate that the information about Claimant's job duties used by Drs. Danahey and Wood in determining causation is in line with the intent of the Guidelines which state:

> Mechanisms of injury for the development of cumulative trauma related conditions have been controversial. However, repetitive awkward posture, force, vibration, cold exposure, and combinations thereof are generally accepted as occupational risk factors for the development of cumulative trauma related conditions.

53. On June 21, 2016, Claimant wrote a statement in response to a complaint filed by a new stocker against Claimant. (Ex. 4, pg. 270-271.) The complaint was based on an incident that occurred between Claimant and the stocker during the evening/morning shift of June 16-17, 2016. Claimant provided the statement as part of her hearing submissions to support her contention that she was a hard worker, and as a foreman, pushed her co-workers to work hard as well. Respondent's counsel cross examined Claimant regarding the reason she wrote the statement and read aloud some of the contents of the complaint lodged against Claimant. Although Claimant stated: "that is a lie," it is not clear from the record which statements in the complaint Claimant asserted were not true. Claimant did, however, admit that the allegations or statements read by Respondent's counsel were contained in the complaint that was lodged against her. (HT, pg. 32, 58, and 59.) Respondent contends this exchange establishes Claimant is a liar and that certain statements attributed to Claimant that are contained in the medical records as well as her testimony cannot be believed. The ALJ does not find this exchange, taken as a whole, establishes Claimant was being untruthful.

54. The ALJ finds Claimant's testimony regarding her job duties, the physical requirements of her job duties, the pace at which she worked, the pace at which she worked compared to others, the aisles and items she had to stock, as well as the onset and progression of her symptoms to be credible.

55. Claimant's job as a stocker required her to use her upper extremities to perform repetitive tasks, with force, and in awkward positions, to stock shelves for the majority of her shift and she did this 5 days a week. These tasks represented a peculiar risk of her employment and were the industrial hazard that caused her bilateral wrist tendinitis and bilateral carpal tunnel syndrome and resulted in the need for medical treatment and became disabling as of November 2, 2017.

56. Claimant's job duties as a stocker for Employer was the proximate cause of Claimant's bilateral tendinitis and bilateral carpal tunnel syndrome.

57. The ALJ finds that the medical treatment provided to Claimant from November 6, 2017, through the date of hearing, to diagnose her bilateral upper extremity symptoms, and treat her bilateral tendinitis and bilateral carpal tunnel syndrome, which is documented in the medical records submitted at hearing, is found to be reasonable and necessary and related to her occupational disease.

GENERAL PROVISIONS

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Where the medical evidence is subject to conflicting inferences, it is the ALJ's sole prerogative to resolve the conflict. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

Compensability

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). However, the existence of a preexisting condition does not defeat a claim for an occupational disease. *Id.* A claimant is entitled to recovery if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The claimant bears the burden to prove by a preponderance of the evidence that the hazards of the employment caused, intensified or aggravated the disease for which compensation is sought. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000); *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251 (Colo. App. 1999). The question of whether the claimant has proven causation is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*. In this regard the mere occurrence of symptoms in the workplace does not require the conclusion that the conditions of the employment were the cause of the symptoms, or that such symptoms represent an aggravation of a preexisting condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (I.C.A.O. August 18, 2005). Once claimant makes such a showing, the burden shifts to respondents to establish both the existence of a non-industrial cause and the extent of its contribution to the occupational disease. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992).

When determining the issue of causation the ALJ may consider the provisions of the Medical Treatment Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, the MTG are not dispositive of the issue of causation. Rather, the ALJ may decide the weight to be assigned the provisions of the

Guidelines upon consideration of the totality of the evidence. *See Cahill v. Patty Jewett Golf Course,* WC 4-729-518 (ICAO February 23, 2009); *Siminoe v. Worldwide Flight Services,* WC 4-535-290 (ICAO November 21, 2006).

The Division of Worker's Compensation Rule 17, Exhibit 5, Cumulative Trauma Conditions Medical Treatment Guidelines specifically provides that "acceptable medical practice may include deviations from these guidelines as individual cases dictate." The Guidelines themselves indicate that the opinion provided by Dr. Danahey in determining causation is in line with the intent of the Guidelines which state:

> Mechanisms of injury for the development of cumulative trauma related conditions have been controversial. However, repetitive awkward posture, force, vibration, cold exposure, and combinations thereof are generally accepted as occupational risk factors for the development of cumulative trauma related conditions.

As found, Dr. Danahey reasonably attributed Claimant's bilateral wrist tendinitis and bilateral carpal tunnel syndrome to her work activities which were found to be repetitive, forceful, and required awkward posture. The ALJ finds and concludes that the opinion of causation offered by Dr. Danahey in the medical records, statements made by Dr. Wood in his report, Claimant's medical records, Claimant's credible testimony, and certain aspects of Ms. Adams' report and testimony, supports the ALJ's conclusion that Claimant's bilateral wrist tendinitis and bilateral carpel tunnel syndrome is causally related to her work activities. Dr. Sollender's opinions to the contrary are not persuasive because of his inadequate analysis of Claimant's actual job duties, based on his steadfast refusal to consider the job duties as described by Claimant, or which might have been described by Claimant had properly interviewed Claimant, combined with his unblinking reliance upon the Job Demands Analysis report of Ms. Adams, which this ALJ found to not be completely reliable.

Moreover, even if Claimant's job does not fall precisely within the primary or secondary risk factors outlined in the causation matrix of the Medical Treatment Guidelines, the ALJ finds and concludes that the particular facts in her case based upon the totality of the evidence presented makes it more likely than not that her bilateral wrist tendinitis and bilateral carpal tunnel syndrome was caused by her work. While the Medical Treatment Guidelines provide for specific steps in analyzing whether there is sufficient proof to causally connect Claimant's conditions and need for treatment to her job activities, the Court is not bound by the Medical Treatment Guidelines in deciding individual cases on the Guidelines or the principles contained therein alone. Indeed, § 8-43-201(3) specifically provides:

> It is appropriate for the director or an administrative law judge to consider the medical treatment guidelines adopted under section 8-42-101(3) in determining whether certain medical treatment is reasonable, necessary, and related to an industrial injury or occupational disease. The director or

> administrative law judge is not required to utilize the medical treatment guidelines as the sole basis for such determinations.

Respondent contended, and pointed out at hearing, that Claimant did not provide a consistent and cohesive description of the exact task she was performing that ultimately caused her to seek medical treatment on November 6, 2017. However, the lack of a consistent and cohesive description of the exact task a worker was performing that ultimately caused them to seek medical treatment is consistent with Claimant's job duties and the development of an occupational disease - cumulative trauma disorder.

Respondent also asserted that Claimant's inability to accurately and consistently describe what conversations she had with her mother and her employer between the time she left work on November 3, 2017, and when she first presented to Denver Health for her upper extremity problems on November 6, 2017, and then reported her condition to her employer on November 7, 2017, should be fatal to her Claim. It was during this time that Claimant described her pain complaints and conversations she had with her mother about her symptoms, decision to seek medical treatment at Denver Health, and report her condition as work related. Although Claimant's testimony regarding these matters was a bit inconsistent, such inconsistencies are not fatal to her claim or overall credibility. It should be borne in mind that inconsistencies are not uncommon to the adversary process which, of necessity, must rely upon the sometimes contradictory and often incomplete testimony of human observers in attempting to reconstruct the historical facts underlying an event. *See People v. Brassfield*, 652 P.2d 588 (Colo. 1982). Therefore, Claimant is found to be credible.

Respondent's position regarding compensability and Claimant's entitlement to medical benefits is based primarily upon a rigid application of the Medical Treatment Guidelines causation matrix. Respondent's argument primarily rests upon the assumption that the causation matrix is absolute, and provides the only source of information to which we should turn to determine causation in this case. Such assumption is misplaced. Here, the opinion of Dr. Danahey regarding the cause of Claimant's bilateral tendinitis and bilateral carpal tunnel syndrome is credible and persuasive. The majority of Claimant's testimony regarding her job duties, symptomatology and onset of symptoms is similarly credible, persuasive, and consistent with the development of her occupational disease. The totality of the evidence presented persuades the ALJ that Claimant has established a causal connection between her work duties and bilateral tendinitis and bilateral carpal tunnel syndrome. Accordingly, the ALJ concludes that Claimant has proven by a preponderance of the evidence that she suffered an occupationally induced disease occasioned by the nature of her work, which did not come from a hazard to which she was equally exposed outside of her employment. Consequently, the injury is compensable.

Claimant has proven by a preponderance of the evidence that she suffered an occupational disease to her bilateral upper extremities, including bilateral wrist tendinitis and bilateral carpal tunnel syndrome.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury and occupational disease. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The medical reports from Concentra and Denver Health, and the medical opinions contained therein, as well as the rest of the record, establishes Claimant is in need of medical treatment for her occupational disease. The ALJ finds the reports of Dr. Danahey, as well as the reports of Claimant's other treating physicians and medical providers, to be credible and persuasive and support a finding that Claimant is in need of medical treatment for her occupational disease, which includes bilateral tendinitis and bilateral carpal tunnel syndrome. Therefore, the ALJ concludes Claimant has established by a preponderance of the evidence that she is entitled to medical treatment to cure and relieve her from the effects of her occupational disease.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has proven by a preponderance of the evidence she suffered a compensable occupational disease in the form of bilateral wrist tendinitis and bilateral carpal tunnel syndrome.

2. Claimant is entitled to reasonable and necessary medical treatment to cure and relieve her from the effects of her bilateral wrist tendinitis and bilateral carpal tunnel syndrome.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATE: May 17, 2018

/s/ Glen Goldman

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

PRELIMINARY PROCEDURAL MATTERS

Prior to commencement of hearing, the Judge provided Claimant with a detailed *pro se* Advisement on the record. After being advised of his right to legal counsel if he desired, and his responsibilities if he moved forward without counsel, Claimant elected to proceed *pro se*.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he has suffered a worsening of condition of his May 9, 2016 work injury to allow a reopening of WC Claim 5-015-591.

2. Whether Claimant has established by a preponderance of the evidence that his claim should be reopened due to alleged fraud by Insurer.

3. If the claim is reopened, whether Claimant has established by a preponderance of the evidence that he is entitled to additional medical benefits.

4. Whether Claimant has established by a preponderance of the evidence that his date of maximum medical improvement (MMI) should be changed from February 24, 2017 to July 15, 2017.

5. If the claim is reopened, whether Claimant has established by a preponderance of the evidence that he is entitled to additional temporary total disability (TTD) benefits from February 24, 2017 thru July 15, 2017.

6. Whether Claimant has established by a preponderance of the evidence that he is entitled to an award of permanent partial disability (PPD) benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 54-year-old male who briefly worked for the Employer as a driver. Employer hired Claimant on May 4, 2016; and Claimant began working on May 5, 2016.

2. On May 9, 2016, Claimant was delivering a large load of barley to a customer. The bags were on pallets in the back of the delivery truck. Claimant testified that the bags shifted during the trip, which made them more difficult to unload. Claimant strained his back while unloading the truck and “moving the pallet jack.”

3. Claimant acknowledged that he had expressed frustration and anger toward Employer, because he felt that Employer should have allowed him to use a hydraulic jack rather than the manual jack for that delivery.

4. After Claimant told Employer that he wanted to seek medical treatment, Claimant selected Concentra, one of the designated medical providers. On May 21, 2016, Dr. Steven Danahey evaluated Claimant. Dr. Danahey noted, "[E]mployed for one week at time of injury… He reports he was pulling 11,000# of barley on a 'hand truck' to get it out of the delivery truck . . . In the process he reports straining his back. He felt some discomfort at the time, which intensified over the next day or so. He is very upset at his employer because he feels they should have been using a 'hydraulic cart' to do the unloading. He is upset because he feels his employer did not provided [sic] it when they [sic] could have … He does report that he told his boss about the injury, bit [sic] also stated that he did not need to get a medical evaluation, just that he needed a few days off work. Since that time, he has not been back to work. He says he is not going back at this time. He is very angry with this employer and is acting out during the evaluation by using a loud angry voice . . . He is a poor historian regarding prior back injuries. He reports a WC claim at age 18, and several prior non-work related back injuries that healed well without any invasive treatment. He is s/p an MI with stent replacement. He is not taking any medications, and may have been noncompliant with follow-up. He also reports he has not been sleeping for 10 days because of pain. (I did obtain an XR today and the tech reported to me that he fell asleep on the XR table)."

5. Dr. Danahey noted in his May 21, 2016 report that lumbar x-rays were negative for acute findings. He diagnosed a lumbosacral strain, prescribed medication, and imposed temporary work restrictions.

6. Claimant returned to Dr. Dahahey for follow up on May 25, 2016. "Here to f/u on back injury that occurred on 5/9/16. He has had minimal improvement. The pain radiates to the right hip and he feels a click when he walks. He denies any numbness or tingling in his legs. He reports past injuries with 'electricity going into his legs', but he is not getting any of that at this time." On physical exam, Dr. Dahahey noted Claimant had no muscle spasms in the lumbosacral spine. His straight leg test was negative. His heel/toe gait was normal. Dr. Danahey ordered x-rays of the right hip that revealed no fracture, dislocation, or bony abnormality. Dr. Danahey recommended an MR arthrogram of the right hip and a MRI of the lumbar spine. He referred Claimant for physical therapy.

7. Claimant returned to Concentra on May 26, 2016, following a fall at home that morning. Dr. Amanda Cava evaluated Claimant that same day, recording, "Patient states he woke up and got out of bed this morning, took a few steps and had sudden burning sensation from his hip down his right leg. Patient states that the pain caused him to fall in the doorway of his bedroom. Patient states that he hurt his ankle and lower leg. Patient states he kind of fell against a wall, did not hit his head or lose consciousness. Patient denies trauma to hip or back… Patient reports history of multiple bilateral ankle injuries in the past playing hockey but states he has not had surgery on them… Patient states he took two muscle relaxers around 0100 today and slept much better than he had been." Concentra provided an ankle air cast, crutches, and a referral to an orthopedic specialist.

8. Claimant testified at hearing that he was not exactly sure what happened when he fell at home because it happened very quickly.

9. On May 27, 2016, Dr. Robert Fitzgibbons, an orthopedic specialist at Concentra, evaluated Claimant. Dr. Fitzgibbons reported Claimant's history: "Patient states that he fell down on 05/26/2016 due to back issues and he got a sharp pain going down his right leg. He fell injuring his right ankle and leg and as referred in for consultation." After reviewing x rays, Dr. Fitzgibbons diagnosed a right ankle deltoid disruption with proximal fibular fracture. He fit Claimant in a short walking boot to stabilize his ankle. Dr. Fitzgibbons instructed Claimant to ice and elevate his leg, and recommended that Claimant make a follow-up appointment with Dr. Gregg Koldenhoven, an orthopedist.

10. Claimant saw Dr. Koldenhoven at Front Range Orthopedics on June 8, 2016. The history noted in this report varies significantly from that previously provided to Dr. Fitzgibbons. Dr. Koldenhoven reported, "History of Present Illness. Patient words: Russell is being seen today at the request of Boulder Concentra, for his right ankle. He states that he fell while at work on 5/25/16 and twisted his right ankle. The pain is described as sudden in onset following an incident at work and has been occurring in persistent pattern for 14 days. The injury occurred while at work." Dr. Koldenhoven went on to report: "His injury and fracture of his proximal fibular highly suspicious for Maisonneuve ankle injury. I think he has a rupture of his deltoid and instability of his syndesmosis. Presently, would recommend repair of the deltoid and likely fixation of the syndesmosis. Patient is also having significant calf pain. DVT study obtained today demonstrates clot below the knee. Patient is instructed to go acutely to the emergency room or PCP for treatment for that. Patient does have stents in his heart and states that he stopped taking his heart medication several years ago. He has not seen a cardiologist recently as he states that since he is still smoking he is unlikely certain that a cardiologist will be happy to see him. I encouraged him that he needs to have cardiac clearance prior to anything surgical.

11. Claimant testified at hearing that the history contained in Dr. Koldenhoven's report was incorrect. Claimant said that he had not told the doctor that he had twisted his ankle and fallen at work, but that he had fallen at home.

12. On June 10, 2018, Dr. Koldenhoven's office sent a fax to Insurer's claims adjuster, Jessica Wareham, requesting authorization for a right ankle deltoid repair surgery. In accordance with Rule 16, Insurer had the request for authorization timely reviewed by a physician in the same area of medical specialty. Dr. Jon Erickson performed a physician advisor review of the surgery request on June 17, 2016. Dr. Erickson stated, "He apparently had gotten out of bed in the morning and fell, suffering a twisting injury to his right ankle. An orthopedic surgeon, Gregg Koldenhoven, M.D., subsequently saw him on 06/08/16. It was determined surgical intervention was indicated for a repair of the deltoid ligament and a possible repair of the syndesmosis. First of all, we have an issue with causality as far as the ankle is concerned. I believe that Mr. Stillman simply stumbled getting out of bed. He suffered a substantial injury to the right ankle. It is no way related to his work, and subsequent treatment for his right ankle should be done under his private healthcare insurance. I would therefore recommend a denial of this request for a surgical intervention from Dr. Koldenhoven's office."

13. After the peer review by Dr. Erickson, Insurer sent a letter to Front Range Orthopedics advising that the request for authorization of the right ankle deltoid procedure was being denied. Claimant was copied on the June 17, 2016 denial letter.

14. Jessica Wareham testified at hearing. Ms. Wareham has worked at Insurer for six years as a claims adjuster. She was assigned to Claimant's claim in early June 2016. Prior to that time, the claims adjuster had been Janet Lee. Ms. Wareham explained that Insurer authorized the initial orthopedic evaluation with Dr. FitzGibbons on May 27, 2016, as well as the initial appointment with Dr. Koldenhoven on June 8, 2016, while Insurer was investigating the fall at home and attempting to determine what happened. Insurer denied treatment for Claimant's right ankle after June 17, 2016, the date of Dr. Erickson's opinion letter.

15. Insurer sent denial letters to Front Range Orthopedics for follow-up office visits with Dr. Koldenhoven on June 22, 2016 and July 20, 2016. Insurer copied Claimant on these denial letters.

16. Claimant testified at hearing that Insurer had not provided him with mileage reimbursement or transportation for his medical appointments. In response, Jessica Wareham testified that Insurer had sent letters to Claimant on May 23, 2016 and June 3, 2016 providing the necessary information and forms for mileage reimbursement requests. Ms. Wareham confirmed that Claimant never submitted mileage reimbursement forms to Insurer. In addition, Ms. Wareham testified that she had personally spoken with Claimant on the phone on June 6, 2016 and asked if he needed transportation arranged for appointments – since she had seen in the medical records that he had a boot on his right foot. Claimant told Ms. Wareham that he did *not* need transportation.

17. On June 30, 2016, Nickolaus Cucija, PA-C, at Concentra evaluated Claimant. He reported, "[Claimant] is very angry at his employer and is acting out during the evaluation by using an angry voice and cursing. Upset at Insurance for not approving treatments/delaying treatments and having financial problems, states it is 'ruining his life.' Upset because he states it has been very difficult for him to get medications and also having to drive all over town in bad traffic to get to appointments. Insurance is denying the claim for his ankle fracture and blood clot. He has Medicaid insurance and that is covering his medications. He is s/p an MI with stent placement in past 2-3 years. Stress test done 06/20/2016 per Dr. Altmon, gave him cardiac clearance for surgery for his right ankle. He is going to do through his private insurance/physician." The June 30 report indicates that Concentra filled out a temporary handicap placard form for Claimant. The PA-C referred Claimant to Dr. Burris, a delayed recovery specialist, and to consult with Dr. Aschberger, a physiatrist. Claimant indicated that he would like to reschedule the appointment at a different location after he had started physical therapy.

18. When Claimant saw Dr. Koldenhoven again on June 8, 2016, the doctor reported, "Russell is doing much better. His pain is significantly improved. His fracture is healing proximally."

19. Claimant subsequently began treating with Dr. John Burris at Concentra. In his initial report dated July 28, 2016, Dr. Burris states, "Referred to our clinic for delayed recovery issues regarding his low back complaints. He works as a delivery driver and reports he was pulling a load of barley weighing 11,000 pounds with a manual pallet jack at work when he developed an acute on set of low back pain on 05/09/2016. He verbalizes frustration with his employer because he was using a manual pallet jack and believes he should have been using a hydraulic jack. His examination was benign. MRI of the lumbar spine on 06/08/2016 showed no acute or subacute deformities. Multilevel degenerative disc disease most pronounced at L4-5. No evidence of neural impingement." Claimant provided a different history to Dr. Burris in terms of his fall at home: "The patient states that he injured his right ankle *two days* after the 05/09/2016 event. He states that he fell while getting out of bed and suffered an injury to his ankle."

20. At the July 28, 2016 appointment, Claimant reported low back at a level of 8/10 and that his right hip was "much improved and is really not bothering him today." Claimant noted that he was still having some persistent pain in the right ankle, but told Dr. Burris, "I'm not allowed to talk to you about that issue." On physical exam, Dr. Burris noted that Claimant's lumbar range of motion was full in all planes without hesitation. There were no localized tenderness, muscle spasm, or trigger points. Claimant was neurologically intact throughout the lower extremities. Motor strength was 5/5 in all muscle groups. Seated straight leg raising was negative bilaterally. Dr. Burris recommended the following under the "Treatment Plan" section of his report: "The patient has persistent pain complaints three months after a lifting event at work. Examination is benign with no evidence of radiculopathy and the MRI shows no acute abnormalities. At this point, we need to just get him more mobile. I would recommend enrolling him in physical therapy two to three sessions a week over the next two weeks for acute treatment as well as education in a home exercise program. I also recommend chiropractic sessions and a referral was made."

21. Claimant attended physical therapy through Concentra in August 2016. In a note dated August 12, 2016, the physical therapist states: "As expected, Time was taken to listen to the patient's report that his stress levels are extremely high and what he thinks it will take to get him better."

22. Claimant received chiropractic treatment in August 2016 from Richard Mobus, DC.

23. Claimant attended a follow-up appointment with Dr. Burris on August 11, 2016: "Since our last visit, [Claimant] notes some improvement, but overall is stating that things are unchanged. Some of his pains have improved, but he cannot specify which ones. He is reporting 6/10 discomfort throughout the back. He finds excellent temporary relief with H-Wave in therapy. No numbness or weakness in the legs, bowel or bladder dysfunction, or new symptoms are reported. TREATMENT PLAN: Because he is finding relief with the H-Wave, I provided a prescription for H-wave rental for 3 months. He is not sure if he is receiving any real benefit from the therapy, so I would have him just continue with his home program. I will refer him for physiatry evaluation to see if he is a candidate

for possible injections." Insurer authorized the 3-month rental of the H-wave. Dr. Burris referred Claimant to Dr. John Sacha for the physiatry consult.

24. Claimant saw Dr. Sacha on August 23, 2016 for the physiatry consult. The history section of Dr. Sacha's report notes: "[Claimant] states he was taking a load to pull off of a truck with a power jack, and as he was loosening it up, he felt acute onset of low back pain. He went to Concentra Occupational Medical Centers about a week later. He states the delay was due to waiting to see if it would go away. He was seen and treated with medications, anti-inflammatories, but then his care was interrupted. He had a non-work related fall where he fractured his right fibula and deltoid ligament. He went to the emergency room and then to an orthopedic surgeon, and while being evaluated, they noted a possible DVT. He was sent for an ultrasound that was possible for DVT, and he was started on Coumadin. As a result, his orthopedic surgeon did not recommend surgery and wanted to take a wait-and-see approach and, apparently, things have healed up, although we do not have the records, and a pending x-ray is being done. Recently, he returned to Concentra and started physical therapy which he did for three visits and chiropractic for three visits but without any improvement. An MRI of the lumbar spine showed evidence of disc degeneration and facet spondylosis at the L4-5 ad L5-S1 levels with some mild foraminal narrowing. Recently, his case was transferred to Dr. Burris who sent the patient here." Dr. Sacha noted mild pain behaviors on physical exam. His impressions included, "1. Lumbosacral radiculopathy. 2. Fibular fracture, non-work related. 3. DVT, non-work related." With respect to a treatment plan, Dr. Sacha remarked, "We do need the patient to see his cardiologist and see if he can come off the Coumadin for four days or whether he needs to be treated with a low-molecular weight heparin for the four days while getting the spinal injection. We will then proceed with a lumbar epidural and also do a brief trial of pool PT. Because of the non-work-related ankle injury, I think pool PT is preferred to regular dry land PT because of the buoyancy effect of the water." Dr. Sacha indicated that the right L5 and SI transforaminal epidural steroid injection/selective nerve root block would be diagnostic and therapeutic. This would be done after Claimant contacted his cardiologist to see if he could hold the Coumadin for four days or if the preference was to put him on a low-molecular weight heparin. Dr. Sacha also prescribed Lyrica for Claimant.

25. Claimant returned to Dr. Burris on September 22, 2016: "Since our last visit he was evaluated by a specialist, Dr. Sacha who placed him on Lyrica, ordered a health club membership, and recommended injection therapy with a right L5-S1 epidural steroid/selective nerve root block for diagnostic and therapeutic purposes. It was not clear to him that the injections was for a potential radiculopathy. After today's discussion, he is now agreeable to get clearance so he can move forward with the injection therapy recommended by Dr. Sacha. The patient does not believe that he would benefit from formal pool therapy, although he is open to having access to a health club where he can perform his home exercises. Return in six weeks for reevaluation, sooner with any problems. Hopefully, he will have had the injection and this will give us more diagnostic clarity."

26. During a follow-up appointment on November 10, 2016, Dr. Burris reported, "He states there has been no change in his condition. He has not had the injection that

was proposed by Dr. Sacha. He indicates that he is now seeing a provider outside of the worker's compensation system, a Dr. Kitchen (?). The patient presents today with a rambling history regarding his ongoing complaints. The conclusion is that he would like to attend 4 weeks of a self-direct pool program and if this does not resolve his complaints, he has elected to have an injection in his low back with Dr. Kitchen. He requests a refill of Lyrica that Dr. Sacha previously provided, as he finds this beneficial and only takes occasionally. Lyrica 75 mg one p.o. q.h.s. p.r.n., #20 tables prescribed."

27. Claimant confirmed at hearing that he never moved forward with the injection recommended by Dr. Sacha. Claimant explained that he was not comfortable with that course of treatment.

28. Claimant went to Dr. Steven Kitchen at CHPG Ortho & Sports Medicine on his own on October 5, 2016. Dr. Kitchen is not an authorized treating physician for purposes of this claim. In his October 5, 2016 report, Dr. Kitchen commented, "The patient is unemployed at this point since his back injury in the early summer or late spring. He is a long-term smoker with at least a 20-pack-year history. He denies alcohol use but does use marijuana on a regular basis." Dr. Kitchen also remarked, "Patient was not entirely forthcoming about his history. It is unclear how recently he was seen by his lumbar spine doctor." Dr. Kitchen ordered x-rays of Claimant's right ankle. Those x-rays showed "evidence of a previous Masionneuve ankle injury now healed."

29. Claimant no-showed for his next appointment scheduled with Dr. Burris. As a result, Insurer scheduled a demand appointment for December 30, 2016. Claimant did not attend the demand appointment. Insurer then scheduled another appointment for Claimant with Dr. Burris for January 20, 2017. Claimant did attend the January 20, 2017 appointment.

30. In his January 20, 2017 report, Dr. Burris states, "returns after a 2-month absence for demand appointment. Since his last visit there has been no significant changes in his condition and he has not received any medical treatment. He states he went back to his home in Minnesota and had discussions with several people regarding his ongoing complaints. Their recommendation was to take Lyrica and ibuprofen. He knows that he currently cannot take ibuprofen when he is on Coumadin for unrelated blood clotting issues. On today's visit, he feels that he is improving somewhat. His only complaint is right-sided low back pain that he rates as 4/10 in severity. No numbness or weakness in the legs, bowel or bladder dysfunction. As with previous evaluations, the patient has a very rambling history regarding his ongoing complaints. The conclusion is that he would like to try 4 weeks of Lyrica prior to deciding if he will proceed with an injection that has been offered by previous providers. I did give him a prescription for Lyrica. Return to clinic in 4 weeks for reevaluation… The patient inquires about anti-inflammatory medications. Strict precautions were given and I told him that he cannot take anti-inflammatory medicines while he is on Coumadin. He discusses getting off of the Coumadin. I advised him to contact his provider who is currently prescribing the medicines which is his cardiologist to discuss this issue. The patient has a somewhat odd presentation with a rambling history. Although he can remain somewhat engaged,

there does appear to be some psychiatric overlay of unknown origin. He indicates that he is absolutely sure that he will be cured with 1 month of Lyrica treatment."

31. Claimant returned to Dr. Burris on February 24, 2017, as scheduled. Dr. Burris reported, "He returns stating that his pain is much improved. He found the Lyrica very helpful. He has also developed a new technique of sleeping with his feet off the end of the bed that has also helped him with his sleep hygiene and his back pain. He states he feels 'over the hump.' He does not believe that he needs any further treatment with regards to his low back issues." Dr. Burris noted that Claimant walked with a normal gait and transferred without hesitation; that he observed full range of motion of Claimant's lumbar spine, and noted Claimant to be neurologically intact. Dr. Burris placed Claimant at MMI on February 24, 2017, with no permanent impairment and no permanent restrictions. He noted that no formal maintenance care or follow-up were required.

32. Insurer filed a Final Admission of Liability on March 13, 2017, per the opinion of Dr. Burris. The prominent "Notice to Claimant" language on the FAL clearly sets forth a claimant's obligations if they wish to dispute any benefits admitted or not admitted. That language discusses Claimant's responsibility to file an objection within 30 days from the FAL and to file an Application for Hearing on any disputed issues. The FAL also notified Claimant that if he disagreed with the date of MMI or whole person impairment rating, he must file a Notice and Proposal to Select an Independent Medical Examiner form within the same 30 days.

33. Jessica Wareham confirmed that she mailed a copy of the March 13, 2017 FAL to Claimant. Ms. Wareham testified that Claimant did acknowledge to her that he had received the FAL and was aware that he had missed the deadline to file an objection of apply for a Division IME.

34. Ms. Wareham testified that after Claimant was placed at MMI and the Final Admission of Liability was filed, Claimant never requested to follow up with Dr. Burris or any other provider for medical treatment. Ms. Wareham testified that she was surprised when she received Claimant's Application for Hearing and Petition to Reopen from Claimant nearly 9 months later in December 2017.

35. Claimant's Application for Hearing, although undated, Respondents received it on December 11, 2017. The issues endorsed included: Compensability, Medical Benefits, Petition to Reopen, TTD from 02/24/17 – 7/15/17, TPD from "428" to ongoing, and PPD. In the remarks section of the Application, Claimant wrote "Another look at my ankle to see if it is repairable or not."

36. Claimant filed a Petition to Reopen on December 8, 2017. Claimant indicated that the grounds for reopening were "Change in Medical Condition" and "Fraud." Claimant attached extensive typed notes with his Petition, setting forth his position on his claim and what relief he was seeking. Claimant stated at the beginning of the attached documentation that he "objects to the Final Admission referred to above and another other Final Admission that has been filed, because Claimant is entitled to additional benefits as provided by law. Claimant requests ongoing medical treatment. Claimant requests

special consideration since his injury did not allow him the ability to familiarize himself with the intricate workings of the claim process or the legal aspects of the claim process. Claimant requests a hearing with the Office of Administrative Courts to address possible criminal activity by [Insurer], for knowingly not diagnosing and treating my back injury as a sciatic injury. This was done to avoid any responsibility for my subsequent leg/ankle, and DVT's injuries."

37. In the documentation attached to his Petition to Reopen, Claimant set forth his position that "[Insurer] prematurely initiated MMI which immediately stopped all benefit payments and medical evaluations causing me incredible economic hardships. Claimant requests that his MMI date be changed from February 24, 2017 to July 15, 2017. He submits that July 15, 2017 should be the proper date of MMI "as this was the time that I could perform a job safely and confidently without risk of re-injury." Claimant contends "07/15/2017 is when my back problems were officially over, because I SAY SO!! Nobody knows my body or limitations better than I do." Claimant produced no persuasive medical evidence to suggest that the original MMI date of February 24, 2017, should be rescinded and changed to July 15, 2017. In addition, following the filing of the Final Admission of Liability, Claimant did not apply for a Division IME to dispute his MMI status.

38. In his Petition to Reopen, Claimant states that he would like to "address his ankle again with ankle specialists." However, the ankle was previously determined to be unrelated to this worker's compensation claim. Claimant was aware that Insurer denied treatment for injuries sustained during his fall at home. Claimant did not apply for hearing to argue any medical benefits issues (including relatedness) prior to being placed at MMI. After he was placed at MMI and the Final Admission of Liability was filed, Claimant did not object to the FAL or apply for a Division IME to challenge his permanent impairment rating or the scope of any compensable conditions.

39. Among the documents with his Petition to Reopen, Claimant did attach two medical reports dated June 6, 2017 and June 15, 2017 from his family physicians at CHPG Primary Care Edgewater. The reports do not mention Claimant's ankle. There is mention of sleep disorder, the history of DVT, and reference to "LBP and finger pain." The June 6, 2017 report indicates that Claimant was leaving town permanently and that he will find a PCP in Minnesota to take over care. The report dated June 15, 2017 suggests that Claimant was requesting a letter from the physician to reopen his workers compensation case. There is a statement that "Pt wants to reopen worker's compensation case to get benefits for back injury. Pt to email forms." When asked about these forms on cross-examination at hearing, Claimant testified that he had not pursued that because he didn't want to place his family care physician "in that position."

40. Respondents filed their Response to Application for Hearing on December 21, 2017.

41. During his testimony at hearing, Claimant indicated that he is no longer seeking any further treatment for his back – or any treatment for his ankle. Rather, he requests that his MMI date be changed to July 15, 2017; that he be paid additional TTD benefits for the time period of February 24, 2017 (original MMI date) and July 15, 2017,

that he awarded PPD benefits; and that he be paid for mileage or transportation costs for all of his previous medical appointments (including appointments for his ankle and DVT condition). Based on his specific testimony at hearing, Claimant withdrew the issue of medical benefits.

42. Claimant present no persuasive evidence at hearing that would support an award of PPD benefits. Dr. Burris (ATP) opined that Claimant has no permanent impairment from the work-related back injury. Claimant did not pursue a Division IME to challenge that opinion on impairment. Claimant has produced no medical opinions or reports as to what permanent impairment rating he is alleging and for what condition(s).

43. Claimant's request for additional TTD benefits for the time frame of February 24, 2017 – July 15, 2017 is not supported by the evidence. When Claimant was placed at MMI on February 24, 2017, Dr. Burris stated that he was released to regular duty with no restrictions. In addition, Claimant testified at hearing that he has worked for at least three subsequent employers since being placed at MMI. The information regarding the subsequent employment was also mentioned in the materials submitted with Claimant's Petition to Reopen. The release to regular duty coupled with the wages earned from subsequent employment precludes any award of additional TTD benefits.

44. Jessica Wareham responded to Claimant's testimony that his claim should be reopened due to fraud because Insurer had "knowingly not diagnosed and treated his back injury as a sciatic injury" – and that this had been done to avoid responsibility for the expense of treatment for the subsequent leg/ankle, and DVT's injuries. Ms. Wareham testified that she did not understand these allegations. She is not a physician and does not make medical diagnoses on claims. That is, rather, the job of the treating physicians. Ms. Wareham testified that she has never told a treating physician what diagnosis to provide on a claim. Ms. Wareham also testified regarding the outcome of the Physician Advisor review by Dr. Erickson.

45. With respect to Claimant's contention that Insurer had caused him extreme financial hardship, Ms. Wareham confirmed that Claimant had been paid TTD befits from May 10, 2016 thru February 23, 2017. The FAL filed on March 13, 2017 documents that Claimant was paid $17,383.84 in TTD. There was actually an overpayment of $239.78.

46. At the close of Claimant's case-in-chief, Respondents' counsel moved for a directed verdict. The Judge took the motion under advisement. Respondents then proceeded with the testimony of their witness, Ms. Wareham.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq*., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to

injured workers at a reasonable cost to employers, without the necessity of litigation. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra.* A Workers' Compensation is decided on its merits. Sections 8-43-201, *supra*.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. ICAO*, 43 P.3d 637 (Colo. App. 2001). The ALJ's factual findings concerns only evidence that is dispositive of the issues involved. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P. 3d 385 (Colo. App. 2000). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. ICAO*, 183 P. 3d 684 (Colo. App. 2008).

Reopening and Change of Condition

Once the treating physician has determined the claimant to be at MMI, the employer or insurer may file a Final Admission of Liability. § 8-42-107.2(2)(a)(1)(A). Unless the claimant requests the selection of an independent medical examiner within thirty days, the treating physician's findings and determinations are binding on all parties and on the Division. §8-42-107.2(2)(b). If a claimant does not object to the Final Admission of Liability and request a Division IME, reopening is required.

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S., *Berg v. Industrial Claim Appeals Office*, 128 P. 3d 270 (Colo. App. 2005). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office*, 197 P. 3d 220 (Colo. App. 2008). A change of condition, for purposes of the reopening statute, refers to a worsening of claimant's work-related condition after MMI. *El Paso County Dept. of Social Services v. Donn*, 865 P. 2d 877 (Colo. App. 1993). The pertinent and necessary inquiry is whether claimant has suffered any deterioration in his work related condition that justifies additional benefits. *Cordova v. Indus. Claim Appeals Office*, 55 P. 3d 186 (Colo. App. 2002). An ALJ has broad discretionary authority to determine whether a claimant has met his burden of proof justifying reopening. *See Renz v. Larimer Cnty. Sch. Dist. Poudre R-1*, 924 P. 2d 1177 (Colo. App. 1996).

In this case, Claimant has failed to demonstrate that he suffered a worsening of condition since being placed at MMI by the ATP (Dr. Burris). No medical records or testimony were presented to support this contention. Morever, Claimant represented at hearing that is no longer seeking any additional treatment for his back, nor is he seeking any treatment for his ankle.

Reopening and Fraud

Reopening is permitted on several grounds, including mistake, error, or fraud. *See* §8-43-303(1), C.R.S. The party attempting to reopen a claim "shall bear the burden as to any issues sought to reopened. § 8-43-303(4). Thus, Claimant bears the demonstrating that fraud has been committed that would merit a reopening of his claim.

In addition to the theory of change of condition, Claimant also marked "Fraud" on his Petition to Reopen. In his comments attached with the Petition to Reopen, Clamant stated, "Claimant requests a hearing with the Office of Administrative Courts to address possible criminal activity by [Insurer], for knowingly not diagnosing and treating my back injury as a sciatic injury. This was done to avoid any responsibility for my subsequent leg/ankle, and DVT's injuries." During his testimony at hearing, Claimant suggested that there had been fraud on the part of all of the workers' compensation doctors and Insurer for not diagnosing or mentioning a sciatica diagnosis in the records. It is Claimant's position that his back injury involved sciatica, and that this condition caused him to later fall at home – resulting in a fibula fracture and damage to ligaments in his ankle.

Claimant has failed to demonstrate by a preponderance of the evidence that the Insurer committed fraud of any sort such that his claim should be reopened on that ground.

Directed Verdict

A motion for directed verdict is an appropriate procedural step to testify the sufficiency of a party's case in a workers' compensation proceeding. *Romero v. Tristar Drywall, Inc*., W.C. No. 4-745-833 (ICAO May 24, 2010). C.R.C.P 50 and 41(b)(1) provides that, after a plaintiff in a civil action completed the presentation of the evidence, the defendant may move for a dismissal on the grounds that the plaintiff has failed to present a prima facie case for relief.

In this case, Respondents moved for a directed verdict at the conclusion of Claimant's case-in-chief. The Judge took the motion under advisement for consideration at the conclusion of Respondents' presentation of their evidence, which included the testimony of Ms. Wareham.

After consideration of the evidence, the Judge agrees that Claimant failed to present a prima facie case for a reopening of his claim. Therefore, Respondents' motion for directed verdict is granted.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' motion for a directed verdict is granted.

2. Claimant's claims for reopening based upon alleged worsening of condition or fraud are denied and dismissed.

3. Claimant's claim for additional medical benefits is denied.

4. Claimant's request that his MMI date be changed from February 24, 2017 to July 15, 2017 is denied.

5. Claimant's request for additional temporary disability benefits during the time frame of February 24, 2017 thru July 15, 2017 is denied.

6. Claimant's request for an award of permanent partial disability benefits is denied.

7. Issues not expressly decided herein are reserved to the parties for future determination.

DATED: May 29, 2018

/s/ Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after the mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your Petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms - WC.htm.

ISSUES

Whether Claimant is permitted to move forward with a DIME despite the ruling and order from PALJ Barbo denying her request.

FINDINGS OF FACT

1. Claimant sustained a work-related injury on March 10, 2017, but did not have any compensable lost time from work. Claimant treated conservatively for the injury and was eventually placed at maximum medical improvement (MMI) on June 7, 2017 by Dr. John Burris with no impairment.

2. A final admission of liability (FAL) was filed on July 13, 2017, by the claims adjuster based on the findings of Dr. Burris of MMI and no impairment. Temporary disability benefits were denied as claimant did not have any compensable lost time. Respondents admitted to medical maintenance benefits per the opinion of Dr. Burris.

3. On July 26, 2017, claimant filed an objection to the FAL along with a notice and proposal to select an independent medical examiner.

4. On August 18, 2017, respondents filed a motion to strike claimant's DIME process. Citing the ruling by the Supreme Court holding in *Harmon-Bergstetd* v. *Loofbourrow* if no indemnity paid the claim is not considered compensable so the statutory definition of MMI would not apply. Prehearing Administrative Law Judge (PALJ) Michael Barbo granted Respondents' motion to strike the DIME. The motion was granted without prejudice

5. Claimant subsequently filed an Application for Hearing on October 13, 2017, to appeal the order of PALJ Barbo before an Administrative Law Judge.

CONCLUSIONS OF LAW

DIME Process

Based on the Colorado Supreme Court's holding in *Harmon-Bergstetd v. Loofbourrow*, 320 P.3d 327 (Colo. 2014), a determination of MMI has no statutory significance with injuries that do not result in a loss of no more than three days or shifts of work time or permanent disability. The court noted "maximum medical improvement" as a statutory term of art has no applicability or significance for injuries insufficiently serious to entail disability, indemnity, or compensation in the first place, *see* Section 8-42-107(8)(b)(I), C.R.S. While the concept is fine in terms of the ineffectiveness of further

medical treatment and may therefore be useful in assessing the extent to which an employer is obligated to continue furnishing medical services to an injured employee, as a statutory term of art with consequences for contesting a final admission of liability, reopening a closed claim, or filing a new claim for an injury that has become compensable for the first time, it can logically have applicability only for injuries for which disability indemnity is payable. The statutory consequences of a finding of "maximum medical improvement" can apply only to injuries as to which disability indemnity is payable. *Id* at 331.

Here, the filing of the FAL based on the authorized treating physician's (ATP) finding of MMI which provided that no disability indemnity was payable has been found by the Supreme Court to be premature and therefore claimant does not have the statutory right to begin the DIME process by filing her notice and proposal for DIME because as stated by the court, she does not meet the statutory definition of "maximum medical improvement" and does not have the right to seek a DIME under Section 8-42-107(8)(b)(II), C.R.S. As stated by the court, "maximum medical improvement" only has statutory significance in a determination of the amount, if any, of permanent disability benefit and in making a point in time at which temporary disability benefits terminate and permanent disability benefits begin.

Based on the Supreme Court ruling in *Loofbourrow*, the filing of the FAL premised on the finding of MMI with no disability indemnity payable does not allow claimant the opportunity to begin the DIME process by her filing of the notice and proposal for DIME and she ultimately cannot request a DIME under Section 8-42-107(8)(b)(II), C.R.S. Without an applicable determination of MMI, no DIME review of the MMI determination may be requested, Section 8-42-107(8)(b)(II), C.R.S. no permanent impairment rating may be calculated nor DIME review initiated, Section 8-42-107(8)(c), C.R.S. and the provisions of Section 8-43-203(2)(b)(II), C.R.S. cannot control because one of the options provided by that section includes the ability to request a DIME. *Kazazian v. Vail Resorts*, W.C. No. 4-915-969 (ICAO April 2017).

As found, the order of PALJ Barbo should be upheld based on the Supreme Court ruling in *Loofbourrow*. Since claimant does not meet the statutory definition of MMI per the Supreme Court, claimant does not have the statutory right under the Workers' Compensation Act to request a DIME.

Appeal of Interlocutory Order

Respondents contend the ALJ does not have jurisdiction to rule on the order of PALJ Michael Barbo. Pursuant to Section 8-43-207.5(3), C.R.S.:

"An order entered by a prehearing administrative law judge shall be an order of the director and binding on the parties. Such an order shall be interlocutory. Prehearing conferences need not be held on the record; however, any party to a claim may request in advance that a record be made of the prehearing conference, either taken verbatim

by a court reporter provided and paid for by the requesting party or electronically recorded by the division."

The order issued by PALJ Barbo is interlocutory. An order that does not grant or deny benefits is not a final order and therefore not subject to appeal. The right for claimant to obtain a DIME is not a medical benefit because there is no treatment provided by an ATP and no patient-physician relationship established. Since no benefit was awarded or denied, the order is interlocutory and therefore outside the jurisdiction of the ALJ.

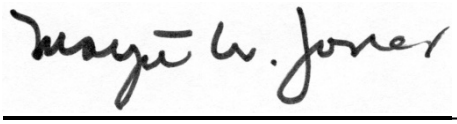
ORDER

IT IS ORDERED:

1. The order of PALJ Barbo is interlocutory and therefore not subject to review.

2. Claimant does not have the statutory right to a DIME based on the Supreme Court ruling in *Loofbourrow* therefore the order of PALJ Barbo is affirmed and claimant's request for a DIME is denied.

DATED: _May 1, 2018.



MARGOT W. JONES
ADMINISTRATIVE LAW JUDGE

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

Determination of Claimant's average weekly wage (AWW).

STIPULATIONS

1. Claimant's AWW for Respondent Employer is $264.96.

2. The parties agree that Claimant has additional self-employment wages that should be added to her AWW. The parties disagree as to the amount of self-employment wages that should be added to Claimant's AWW for Respondent Employer.

FINDINGS OF FACT

1. Claimant is employed by Employer.

2. On September 15, 2017 Claimant sustained an admitted work related injury. Due to her work related injury, Claimant has not been able to return to work for Employer and has not been able to continue her prior work as a self-employed massage therapist. Claimant has not worked since September 15, 2017.

3. On October 16, 2017 Respondents filed a General Admission of Liability (GAL) admitting to an AWW of $264.96. The parties agree that this wage accurately represents Claimant's AWW for the work she performed for Employer. *See* Exhibits 2, A, B.

4. On November 22, 2017 Respondents filed an updated GAL. Respondents admitted to an AWW of $318.33. Respondents stated on the updated GAL that they were increasing the AWW based on additional self-employment from Claimant's 2016 tax records. Respondents noted that the tax records documented Claimant's self-employment as a massage therapist and that self-employment AWW was based on net pay. Respondents indicated that they had taken Claimant's gross earnings of $2,775 and divided it by 52 weeks to come out to an increase of $53.37 to the AWW. Respondents indicated the new AWW was $264.96 plus $53.37 for a total of $318.33 as the new admitted AWW. *See* Exhibits 1, D.

5. On Claimant's 2016 U.S. Individual Income Tax Return, Form 1040, she reported a total of $2,775 in business income. *See* Exhibits 4, C.

6. On her 2016 Profit or Loss from Business, Schedule C, Claimant reported gross receipt or sales of $19,656. She then subtracted $11,023 in total expenses including advertising, car and truck, depreciation, legal and professional services, repair and maintenance, supplies, and "other" expenses. The "other" expenses listed on a

separate form included cell phone, internet, oils, towels, stones, music, laundry, continuing education, and outside services. Claimant listed her tentative profit before expenses for the business use of her home as $8,633. Claimant then also subtracted $5,858 for expenses for the business use of her home to arrive at a net profit of $2,775 for her massage therapy business. *See* Exhibits 4, C.

7. On Claimant's 2017 U.S. Individual Income Tax Return, Form 1040, she reported a total of business loss of -$671. *See* Exhibits 5, E.

8. On her 2017 Profit or Loss from Business, Schedule C, Claimant reported gross receipt or sales of $16,354. She then subtracted $17,025 in total expenses including advertising, car and truck, depreciation, legal and professional services, office expenses, rent or lease of business property, and "other" expenses. The "other" expenses listed on a separate form included cell phone, internet, laundry, continuing education, and outside services. Claimant did not subtract any expenses for the business use of her home in 2017. *See* Exhibits 5, E.

9. Claimant reported that in 2016 she was able to work at her self-employment massage therapy business for the entire year. Claimant testified that in 2017 she lost money as she had to stop working as of the date of her injury and wasn't able to perform massage therapy work in the last 3.5 months of the year. Claimant testified that prior to her injury she had been on track to make more money in 2017 than in 2016 because she had moved to a better location and had better clientele.

10. Claimant's testimony is credible. It tracks with her 2016 and 2017 tax returns which show an increase in 2017 for the rent or lease of business property and the removal in 2017 of business use of home. It is logically credible and persuasive that moving from a "home" based massage therapy business to a business location would put Claimant on track to earn more money due to what she testified was a better business location and better clientele.

11. In 2017 Claimant's gross receipts or sales from her massage therapy business were $16,354. This was for a period of 8.5 months prior to her injury. This amounts to a monthly average of gross receipts or sales of $1,924. Multiplying her average monthly gross receipts or sales of $1,924 by the 3.5 months left in 2017 calculates to $6,734. The ALJ finds it credible and persuasive and consistent with Claimant's testimony and the records that Claimant was on track to earn an additional $6,734 in 2017 had she not been injured.

12. Adding her actual gross receipts and sales of $16,354 through September 15, 2017 plus the estimated continued gross receipts and sales (had she not been injured) of $6,734 results in an estimated total gross receipts or sales for 2017 of $23,088.

13. Taking $23,088 and subtracting Claimant's total expenses from 2017 of $17,025 results in a total estimated net profit from her business for 2017 of $6,063.

14. $6,063 divided by 52 weeks results in an average weekly net profit from her massage therapy business of $116.60.

15. Although this number is based on an estimated net profit, the ALJ finds it to be a fair calculation of Claimant's estimated average weekly net profit at the time of her injury and concludes that Claimant was on track to earn more money in 2017 than in 2016 due to the change of her business location and better clientele.

16. An additional $116.60 added to Claimant's AWW is a fair approximation of her lost income due to her injury.

17. Claimant's AWW is thus $381.56 ($264.96 + $116.60).

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979) The facts in a workers' compensation case shall not be interpreted liberally in favor of either the rights of the injured worker or the rights of the employer and a worker's compensation case shall be decided on its merits. *See* § 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

Average Weekly Wage

Section 8-42-102(2) C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon her AWW on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), *supra*,

grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Where her earnings increase periodically, claimant's AWW should be calculated based upon her earnings during a given period of disability, and not based upon earnings at the time of injury. *Campbell v. IBM Corp.*, *supra*. Earnings from concurrent employment may be included in a claimant's AWW where the injury impairs earning capacity from such employment. *Jefferson County Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

After reviewing the evidence and testimony, the ALJ determines that Claimant's AWW at the time of her injury was $381.56. This is a fair approximation of Claimant's wage loss and diminished earning capacity due to her injury. This includes Claimant's AWW for Employer as well as an additional weekly AWW of $116.60 from her massage therapy business. As found above, Claimant was unable to continue her massage therapy work in mid-September when she was injured. If Claimant had not sustained a work related injury in mid-September, she would have continued work as a massage therapist and was on track to earn more money in 2017 than in 2016 due to her better business location and better clientele. The ALJ finds that the net profit is the appropriate amount to use for calculation of lost wages and diminished earning capacity. Claimant's argument that her gross receipt and sales and not her net profit should be used as the basis for her average weekly wage from self-employment is not found persuasive. Claimant testified to and acknowledged she had expenses and that the net profit is truly what she made and was her income. The ALJ finds that the 2016 and 2017 tax documents are the best reflection of Claimant's true receipts/sales/expenses and net profit or loss from her business. The tax records are found to be the most credible and persuasive evidence of total income and or expenses and are found more reliable than Claimant's personal banking account history or her testimony as to what she felt like she made in her self-employment.

For the reasons outlined above, the ALJ finds a fair determination of Claimant's AWW using the discretionary formula is $381.56. This accurately and fairly reflects Claimant's wage loss and diminished earning capacity due to her September 15, 2017 work injury.

ORDER

It is therefore ordered that:

1. Claimant's Average Weekly Wages is $381.56. Respondents shall file a new General Admission of Liability admitting to this AWW.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues set for determination were:

- Is Claimant entitled to PPD benefits?
- If so, what was his permanent medical impairment rating?

FINDINGS OF FACT

1. Claimant was employed as a waste water operator for Employer.

2. Claimant sustained an admitted industrial injury on March 8, 2017 while working for Employer. Claimant was injured while lifting a metal plate in order to gain access to an electrical vault. He testified that he lifted the metal cover with his third finger and felt a pop.

3. Claimant's medical history was significant in that he previously injured his right wrist at age nine. There was no evidence Claimant had permanent restrictions or any limitations related to this injury.

4. On March 8, 2017, Claimant presented at the University of Colorado Health Center-Timberline Medical Walk-In Clinic and was evaluated by Curtis Weibel, N.P. He reported pain in his right hand, which was worsening. He also had an inability to bear weight, joint locking and swelling, as well as limited range of motion ("ROM") in the right hand. On examination, NP Weibel noted decreased ROM, tenderness and swelling in the right hand. The right third MP joint had snapping and crepitus. NP Weibel's diagnosis was tendon rupture of the hand, right, initial encounter; strain of right wrist, initial encounter. NP Weibel completed the M-164 form with this diagnosis. Physical therapy ("PT") was ordered and Claimant was referred to Timothy Pater, M.D.

5. On March 13, 2017, Claimant was evaluated by Dr. Pater. Dr. Pater's assessment was flexor tender rupture of hands, right. The x-ray of Claimant's right fingers showed no evidence of arthritis, fracture, joint subluxation or other soft-tissue or bony abnormalities. Claimant was given a prescription for Norco and surgery was to be scheduled for a right long finger flexor digitorum profundus repair.

6. Claimant returned to NP Weibel on March 20, 2017. He had pain in the right fingers, with associated symptoms including joint swelling and limited ROM. Claimant was scheduled for surgery the next day, but needed an echocardiogram due to a murmur and abnormal EKG. Claimant was to be cleared for surgery, if the echocardiogram was normal.

7. On March 23, 2017, Claimant underwent surgery on his right hand, which was performed by Dr. Pater. The procedure was: exploration of right long finger flexor tendon that tendon transfer of flexor digit profundus of right long finger to flexor digitorum superficialis, right long finger. At the time of the surgery, Dr. Pater found a lot of inflammatory synovial tissue and some rough surface at the bottom of the carpal canal, which led him to conclude that the tendon had eroded over time, which led him to conclude the tendon had eroded and then ruptured. He made an incision to the palm, debrided this area so that it would be smooth and did a small synovectomy, along with a side-to-side transfer of the superficialis to the profundus of the long and do a tendon weave to the palm. A release was done to this area. The pre-and post-operative diagnoses were the same: flexor digitorum profundus tendon repair, right long finger.

8. Following surgery, Claimant was evaluated by Lauren Bailey, OT at Front Range Orthopedics on March 27, 2017. As a result of this assessment, she concluded Claimant required skilled occupational therapy, in conjunction with a home exercise program, to address range of motion in the right hand and to increase Claimant's activities of daily living.

9. Dr. Pater reevaluated Claimant on April 3, 2017 and prescribed hand therapy, scar management, scar massage, control, desensitization, and ROM. Claimant continued to receive therapy provided by OT Bailey from April 3, 2017 through June 21, 2017. The ALJ noted therapy was provided to Claimant's right wrist and hand, including his fingers.

10. Claimant was seen at regular intervals by NP Weibel from June 1, 2017 through October 19, 2017. NP Weibel monitored Claimant's therapy and the progress of his symptoms was documented during this time. Deficits in Claimant's ROM were noted.

11. Claimant was evaluated by Dr. Pater on July 24, 2017. Claimant reported moderate pain and decreased ROM was found by Dr. Pater. Dr. Pater said Claimant did not have much pull-through with the profundus tendon and it was noted he did well after his mitral valve replacement (unrelated to work Injury). Dr. Pater stated Claimant would continue working on therapy and home exercises for his hand and would follow-up in approximately three months. There was a possibility of tenolysis.

12. On August 17, 2017, Claimant underwent an occupational therapy outpatient evaluation, which was performed by Lynn Stepaniak, OTR at Estes Park Medical Center. At that time, ROM deficits were noted in Claimant's middle, ring and small fingers. The goal was to increase right hand strength and ROM for three fingers on the right hand. Claimant received ultrasound and myofacial stretching to his wrist, forearm, as well as flexor tendon. The ALJ found these records support the conclusion that Claimant required treatment beyond his middle third finger as a result of his industrial injury.

13. Records for Claimant's treatment on August 21, 28, September 1,8, 15, 2017 were admitted into evidence. These records showed also showed OT treatments

were applied to Claimant's hand, wrist and forearm. Claimant was discharged from occupational therapy on September 19, 2017

14. Claimant returned to NP Weibel on October 19, 2017. Claimant described an aching quality to the pain in his hand, which occurred intermittently. Associated symptoms included an inability to bear weight, joint swelling, stiffness and tingling. Claimant was released to full duty and referred for an impairment evaluation by a Level II-accredited physician.

15. On November 16, 2017, Claimant was evaluated by Paul Fonken, M.D. to whom he was referred by Dr. Pater. At the time, Claimant reported a loss of dexterity and some weakness in the right hand. Dr. Fonken obtained final grip and pinch strength results from Estes Park Medical Center, as well as performing his own range of motion measurements. Dr. Fonken's found decreased ROM in the right hand, as well as decreased strength. Dr. Fonken opined Claimant sustained an impairment that exceeded the impairment beyond the loss of ROM in his fingers, including a loss of strength. He found 5% digit impairment in the index finger, 12% digital impairment of the middle finger and 13% digit impairment to the ring finger.

16. Dr. Fonken concluded Claimant's hand impairment added up to a total of 11% scheduled impairment, which converted to a 10% upper extremity impairment, pursuant to the *AMA* Guides, Chapter 3, Table 2. He also assigned impairment for Claimant's grip strength totaling 10%, which gave a total right upper extremity impairment of 19%, which converted to an 11% whole person impairment.[1] The ALJ credited this opinion and found Dr. Fonken's opinion of permanent medical impairment was more persuasive than that offered by Dr. Bisgard.

17. Respondent filed an Application for Hearing on or about December 19, 2017, listing the partial disability benefits as the issue to be adjudicated.

18. On February 12, 2018, Claimant was evaluated by Elizabeth Bisgard, M.D., at the request of Respondent. Claimant reported he had some loss of ROM in the finger, as well as loss of grip strength. Dr. Bisgard diagnosed FDP tendon rupture of the right middle finger. Dr. Bisgard agreed Claimant was at MMI and assigned a medical impairment rating of 8% upper extremity, with a functional loss at the level of the hand.

19. Dr. Bisgard opined that Dr. Fonken did not follow the AMA Guides in that he included impairment ratings for digits that were not involved. Dr. Bisgard noted Dr. Fonken also included grip strength, which was not appropriate. Dr. Bisgard cited page 53 of the *AMA* Guides, as follows:

> "Hand strength and its measurements are affected in the presence of amputations and loss of motion of the digits, and by disorders of bones, joints, and musculotendinous units. *These anatomical impairments are rated only according to the guidelines presented in section 3.1b, c, d, i and j, and no*

[1] Exhibit D, pp. 84-90.

separate strength impairment values are given. It should be noted that loss of strength of the upper extremity can occur without atrophy". [Emphasis in original].

20. The ALJ noted page 53 of the *AMA* Guides also specifies:

"*It must be stressed that, in general, grip and pinch measurements are functional tests and are not to be used for evaluating impairment.* However, if loss of strength is felt to represent an additional impairment not already taken into account, this may be measured and the loss rated. The impairment would be combined with other impairments of the hand". [Emphasis in original].

21. The ALJ found Dr. Fonken concluded that loss of strength in Claimant's right hand was an additional impairment. He identified it as such in the worksheet he completed. This loss of strength was identified by Claimant's ATP, Dr. Pater and other providers during his treatment.

22. Claimant was a credible witness.

23. No evidence was admitted at hearing which contravened the medical evidence in the record which showed Claimant sustained a permanent medical impairment related to his industrial injury.

24. Claimant sustained a permanent medical impairment which was caused by his industrial injury. The ALJ concluded Dr. Fonken's medical impairment rating, which included rating for a loss of hand strength, was a more accurate assessment of Claimant's impairment.

25. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S. (2016), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. (2016). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. (2016).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Permanent Medical Impairment

In the case at bench, Claimant's permanent medical impairment is governed by § 8-42-107(1)(a), C.R.S. This section provides in pertinent part:

"When an injury results in permanent medical impairment, and the employee has an injury or injuries enumerated in the schedule set forth in subsection (2) of this section, employee shall be limited to medical impairment benefits specified in subsection (2) of this section".

Claimant contended Dr. Fonken provided a more complete assessment of his medical impairment. Respondent argued Dr. Bisgard provided the more accurate assessment of Claimant's permanency.

As a starting point, the ALJ found Claimant sustained a permanent medical impairment as a result of his industrial injury. (Finding of Fact 24). The medical evidence the record established this and, in fact, there was no evidence to the contrary. (Finding of Fact 23). Therefore, Claimant was entitled to PPD benefits based upon his medical impairment.

The focus of the dispute then turned to a determination of what was Claimant's permanent medical impairment. There was a divergence of opinions on this subject between Dr. Fonken and Dr. Bisgard. As determined in Findings of Fact 14-15, the ALJ credited Dr. Fonken's opinion as to the correct medical impairment for Claimant. The ALJ's decision was premised first on the fact that Claimant's treatment records documented symptoms/treatment to not only to the third finger, but also the right hand and wrist. In addition, Dr. Pater's surgical note referenced the debridement of the carpal canal, a synovectomy and release procedure on the tendon, as well as to the surrounding tissues, including the old scar tissue. (Finding of Fact 7). Claimant's post-surgery treatment was not limited to the hand, but also included his fingers and wrist. ROM deficits were noted in Claimant's fingers. (Finding of Fact 12). The therapy records were replete with references to a loss of strength in Claimant's right hand. (Findings of Fact 12-13). At the conclusion of this treatment, Dr. Fonken determined Claimant's loss of strength in the hand was an additional impairment. (Finding of Fact 21).

Second, the ALJ considered Respondent's argument, based upon the expert opinion of Dr. Bisgard, who concluded Claimant had an 8% upper extremity medical impairment rating. Dr. Bisgard reasoned that the *AMA* Guides did not allow for impairment based upon loss of strength and therefore concluded Dr. Fonken's rating

was in error. As found, the succeeding paragraph in the *AMA* Guides (p. 53) following the one cited by Dr. Bisgard specified a rating could be given for loss of strength. The ALJ found Dr. Bisgard's reasoning was too circumscribed by limiting the impairment only to the finger and an additional impairment could be based on loss of strength was appropriate in the discretion of the rating physician. Accordingly, the ALJ credited Dr. Fonken's opinion and found this rating accurately assessed Claimant's medical impairment.

The rationale articulated by the Colorado Court of Appeals in *Martinez v. Industrial Commission* 511 P.2d 921, 922 (Colo. App.1973) supports the ALJ's conclusion. In that case, Claimant suffered an amputation of the hand and Insurer-Respondent admitted liability for a loss of hand and wrist. Claimant alleged he suffered additional permanent disability to his forearm and presented testimony of an orthopedic surgeon to support this claim. The expert testified the articulation of the hand was less than satisfactory and Claimant had limitation of supination and pronation of the forearm. Claimant's request for additional benefits was denied and that decision was affirmed by the Industrial Commission.

The Court of Appeals reversed, finding that the claim for additional disability of the forearm was supported by the evidence. The Court noted that on the schedule of injuries, compensation for an amputation "is limited to the specific amount provided on the statutory schedules for such permanent disability. An employee who suffers such an injury cannot receive additional compensation for disability measured as a working unit". Claimant, however, was seeking additional compensation for disability in addition to the amputation, specifically the forearm. The Court determined Claimant was entitled to this additional compensation. *Id.*

Although the case at bench did not involve a full amputation, the principle in *Martinez* supports a finding that Claimant's disability was not limited to the third finger, but rather involved additional impairment of loss of strength. The ALJ credited Dr. Fonken's opinion that Claimant was entitled to additional impairment in the form of loss of range of motion in other fingers and loss of strength. Based on the evidence introduced at hearing, the ALJ determined Claimant was entitled to this additional medical impairment, pursuant to the *AMA* Guides.

ORDER

It is therefore ordered:

1. Respondent shall pay permanent partial disability benefits to Claimant, based upon Dr. Fonken's rating.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

1. Has Claimant shown, by the preponderance of the evidence, that he is entitled to post-MMI medical treatment to relieve the effects of his work injury and prevent deterioration of his condition?

2. Has Claimant suffered serious permanent disfigurement about the head, face, or parts of the body normally exposed to public view, which would entitle him to additional compensation?

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ enters the following Findings of Fact:

1. Claimant injured his left knee in an admitted work injury on 7/7/16, while stepping into a pothole. Prior to this injury, Claimant's knee had not been symptomatic, despite his having been previously diagnosed with rheumatoid arthritis.

2. He was referred to an orthopedist, Dr. Wiley Jinkins, M.D. Conservative treatment was not entirely successful. Dr. Jinkins eventually performed an arthroscopic surgery on 6/19/17, which Claimant tolerated well. Claimant had medical and lateral meniscus tears repaired, among other procedures.

3. Claimant continued to follow-up with Dr. Jinkins, who sought authorization for three injections of hyaluronate (Supartz) into the knee to relieve ongoing post-surgical pain. Those were performed, with some relief noted by Claimant, in the fall of 2017.

4. Dr. Jinkins placed Claimant at MMI on 11/14/17 following these injections. At this visit, Claimant noted that he was "75% better" as a result of the surgery and injections. Slight swelling in the knee was noted. In this final visit, Dr. Jinkins noted the following:

> The only medication he is taking at the present time is Relafin and I did give him a *new prescription on this date*. David will return to see me on an as needed basis. I do think it *reasonable for him to have a period of "maintenance care"* for a period of time into the future, should he need an injection, prescription, etc. (Ex. 1, p. 3) (emphasis added).

5. It was noted by Dr. Jinkins, and other physicians, that Claimant would likely need a knee replacement in the future, but no timeline for this has been established.

6. In a previous visit on 3/21/17, Dr. Jinkins had written to Claimant's ATP at Concentra that Claimant had reported that he had placed Claimant on Pennsaid as a

topical nonsteroidal anti-inflammatory medication which had helped to some degree. This Pennsaid prescription was refilled on this date.

7. Claimant had been going to Concentra in a series of visits since shortly after the injury, and had been seeing Randall Jones until March of 2017, after which he was seen by Dr. Daniel Peterson. In a visit dated 4/3/17 Dr. Peterson notes that Claimant had reported that the Pennsaid lotion was helping 'considerably' with the swelling. (Ex. E, p. 54).

8. Dr. Peterson's final visit with Claimant was 11/17/17. He concurred with the MMI assessment, but noted that "David Strine is at functional goal, not at end of healing." (Ex. 1, p.71). He noted at this visit that "Dr. Jinkins did his IR [Impairment Record] already. Specialist is not supposed to do this, but Dr. Jinkins does anyway! Will not waste time repeating it today". (Ex. 1, p. 69). In this visit, Dr. Peterson merely notes that Claimant "needs no medical maintenance care," without further explanation. (Ex. 1, p. 72).

9. Claimant testified at hearing. He reported that he benefitted from the surgery and treatment to date, but still experiences some pain and swelling. He described some benefit from the Relafin as an anti-inflammatory, and the Pennsaid lotion helped with his pain. He still sleeps with a pillow between his legs, and will occasionally awake at night from the pain.

10. Claimant acknowledges that he has not gone to the emergency room or urgent care in recent months, nor has he seen a primary care physician. Claimant explained that he is not currently working, and has no health insurance.

11. Claimant also presented for his disfigurement hearing. Claimant showed some slight swelling on the inner portion of his left kneecap, and two small arthroscopic scars around the kneecap. Each scar is slightly indented, and perhaps 5 mm in length. Additionally, Claimant does have a barely discernable gait disturbance, favoring his left knee when walking.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is

that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, no expert testimony was offered, but the medical reports have been reviewed, and the opinions of Claimant's treating physicians have been weighed.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

General Award of Medical Benefits after MMI

D. The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond MMI if the Claimant requires further treatment to relieve the effects of the injury or prevent deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

E. To establish entitlement to *Grover* medical benefits, a Claimant must prove that future medical treatment is or will be reasonably necessary to relieve the effects of the injury or to prevent deterioration of their condition. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI to obtain a general award of future medical benefits. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1989). If the Claimant establishes the probability of a need for future treatment, the claimant is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity. *Hanna, supra*.

F. Claimant has established, with substantial evidence, the probability of a need for future medical treatment, which entitles him to a general award of future medical benefits. The ALJ finds Claimant's testimony to be credible. The ALJ further finds that Claimant accurately reported his symptoms to his medical providers. He continues to suffer pain and swelling related to his work injury. He reports some benefit from the Pennsaid and Relafin, which are not affordable through private insurance-nor is it reasonable to require him to resort to that. Additionally, the ALJ is more persuaded by the notes of Dr. Jinkins than those of Dr. Peterson-who does not explain his reasoning why Claimant could not benefit from post-MMI treatment.

Disfigurement

G. Section 8-42-108(1) provides that a Claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." Claimant's disfigurement, as found, is all exposed to public view. The ALJ concludes that Claimant should be awarded $1,800.00 for this disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore Ordered that:

1. Respondent shall cover all reasonable and necessary medical treatment from Authorized Treatment Providers to relieved the effects of Claimant's injury and prevent deterioration of his injury.

2. Respondent shall pay Claimant $1,800.00 for his disfigurement. Respondent may take credit for any disfigurement benefits previously paid to Claimant in this matter.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 3, 2018

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury on September 5, 2017.

II. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment for his right shoulder.

III. Whether Claimant established by a preponderance of the evidence that the total reverse shoulder surgery recommended by Dr. Papillion is reasonable, necessary, and related treatment to cure and relieve Claimant of the effects of his work-related injury.

STIPULATIONS

The parties stipulated that Claimant's average weekly wage was $384.00. The issue of any additional AWW based on the value of meals was reserved.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was 66 years old on the date of the hearing. His date of birth is June 14, 1951.
2. Claimant was hired as part of the security team at Ameristar Casino as a security officer. He was first signed in on August 3, 2017. Although there has been disputed testimony concerning the Claimant's commencement date, Respondents' records indicate, and it is found, that the Claimant did not start work full-time until August 15, 2017.
3. Claimant testified that on September 5, 2017, he was in the course and scope of employment as a security officer when he injured his right shoulder. This injury happened between 3:00 a.m. and 5:00 a.m. on the Labor Day Weekend when Claimant was working the night shift helping with a "table drop." Claimant testified that this was the second time he had been engaged in "table drop." A "table drop" entails gathering the boxes of poker chips and money from the various gaming tables.
4. Claimant testified that the boxes weigh between 25 and 40 pounds. Claimant testified that his two co-workers collected the boxes from the various gaming tables and placed them next to the "cage." Claimant testified that it was his

job to place the boxes in the "cage." The cage is a metal rolling cart which contains approximately three shelves and the top shelf is about shoulder height. Claimant testified that approximately five of the boxes were really heavy and while lifting one of the boxes up from the floor and placing it on a shelf in the cage he felt a pop and pain in his shoulder.

5. Claimant did not report his injury right when it happened. Claimant did, however, report his injury on Friday, September 8, 2017, which appears to have been the next day he was scheduled to work after the work accident. Claimant indicated in his written statement that he hurt his back and shoulder. Claimant also indicated that he did not report it right away because he was afraid he would be sent to see a doctor would not be called back to work again. (Exhibit 1.)

6. Employer maintains surveillance video of the job site and monitors all table drops. The video surveillance submitted by Claimant of September 5, 2017, is consistent with Claimant's testimony. The video shows two of Claimant's co-workers gathering the boxes from the gaming tables and placing them next to the cage. The video shows Claimant lifting the boxes from the floor and placing them onto various shelves in the cage. The video surveillance also contains video and sound of another room in which other employees monitor the casino. After the table drop was performed, one of Claimant's co-workers entered the room and said to another employee that Claimant was really struggling with the heavier boxes and indicated Claimant said he had back problems.

7. Employer also obtained a written statement from Claimant's co-worker, Garrett Flesh, who was assisting with the table drop. Mr. Flesh's statement is consistent with Claimant's testimony and the surveillance video. Mr. Flesh stated that Claimant:

> [W]as showing signs of struggle of picking up the Jackpot and the house boxes from the poker room. I checked on [Claimant] to see how he was doing. He then at that point told me he has lower back problems. Myself and Chris took it upon ourselves to assist [Claimant] with the extremely heavy boxes so he did not have to possibly hurt himself even more. (Exhibit 15.)

8. Employer also obtained a written statement from another co-worker, Christopher Venten (sp), who was also helping with the table drop. His statement also indicates Claimant was having a hard time lifting the heavy boxes and that they needed to help him. (Exhibit 15.)

9. Employer also has a job description which sets forth Claimant's job duties. The job description indicates Claimant's job duties require him to lift between 25 and 50 pounds. Claimant' job description is consistent with his testimony that the boxes he was lifting when he got injured weighed between 25 and 40 pounds. (Exhibit 14.)

10. Claimant's injury was described by the ATP doctors at Concentra as follows:

> History of Present Illness:
>
> Patient presents for evaluation of injuries sustained at work on September 5, 2017. While working at the casino, he was responsible for lifting heavy boxes of currency and chips and placing them on a rack. He did this about 5 times, and when placing one of the boxes on a rack that was above his shoulder level, he felt pain in the anterior and posterior right shoulder. He did not immediately report his injury. He also reports developing pain in the right thoracic and lumbar regions. Should ROM is painful and limited. Denies blunt trauma. Denies radiation of pain into the arms or legs. Denies parethesias. He has been taking aspirin and ibuprofen with mild relief, however, he notes a diagnosis of renal failure, currently under treatment by a nephrologist. He is right hand dominant.

(Exhibit 4, BS 70.)

11. The Claimant was sent for an MRI on October 2, 2017, which established the presence of significant degenerative problems in the right shoulder. The Claimant was then referred by Concentra for evaluation with orthopedist Dr. Papillion.

12. Dr. Papillion described the Claimant's condition as follows:

> I had the pleasure of seeing Manuel in the office in consultation today. As you know, he is a 66-year-old right-hand-dominant male. He sustained acute injury to his right shoulder on 09/05/2017. He was in his employment as a security guard for Ameristar Casino. He was lifting heavy boxes of 25-40 pounds overhead. He felt a pop in his right shoulder. He had immediate pain, weakness, and loss of motion. He believes that this was documented on surveillance video. Since then, he has had difficulty with any lifting or using the arm away from his body and overhead. He has tried NSAIDS. He has had a course of physical therapy with little improvement. He has significant loss of function. This bothers him some at rest but increases with any attempted activity. He has pain at night. He has no previous problems with the right shoulder and has been working at full duty without difficulty prior. He has no left-sided symptoms.

(Exhibit 6, BS 80.)

13. At the time, Dr. Papillion issued his opinion, he noted that he was aware that Claimant had undergone an MRI which showed severe tearing in the rotator cuff, as well as pre-existing atrophy. Nevertheless, he opined that Claimant's

condition was consistent with a rotator cuff arthropathy; that Claimant suffered a "irreparable rotator cuff tear" requiring intervention; and that his right shoulder had been "fully functional prior to the incident." (*Id*., BS 81.)

14. Dr. Papillion further opined in his report that:

> This does appear to be a tear with some chronicity. However, he was working at full duty and having no difficulty with lifting and using the arm away from his body and overhead prior to this incident. Currently, he is severely restricted in his function and has significant pain.

(*Id*., BS 81.)

15. Dr. Papillion opined that "Definitive care would be reverse total shoulder arthroplasty." (Exhibit 6, BS 82.)

16. Dr. Papillion also stated that under the Colorado Division of Workers' Compensation Medical Treatment Guidelines a reverse total shoulder arthroplasty is an appropriate procedure for individuals over 65 who have massive irreparable rotator cuff tears with rotator cuff arthropathy. (*Id*., BS 82.)

17. The ALJ finds Dr. Papillion's opinions to be credible and persuasive.

18. Claimant was also sent for evaluation with orthopedist Dr. Mark Failinger. He agreed with Dr. Papillion that a reverse total shoulder replacement was the appropriate treatment for the Claimant's condition and to help alleviate his symptoms. (Exhibit 7.)

19. Claimant testified that he had been working since he was young. He worked twenty years for Wells Fargo, he worked at a casino in Florida. Most recently he worked for seven years at Frontier Airlines. In his most recent employment with Frontier Airlines he was cleaning the interior of airplanes.

20. Claimant credibly testified that prior to his injury on September 5, 2017, he had never been given restrictions for his right shoulder nor had he been treated. No medical records show right shoulder treatment or restrictions prior to Claimant's injury of September 5, 2017. The records from the MRI of October 2, 2017, documented the presence of arthritic problems, as does an x-ray which was performed on January 10, 2014. (Exhibit 5, BS 79 and Exhibit K.)

21. Claimant testified that he was able to perform the essential functions of his job at Frontier, as well as at Ameristar during his brief tenure there. Claimant also testified that he has continued to work at Ameristar and is able to perform all of the essential functions of his modified duty.

22. Claimant is found to be a credible witness and his testimony is persuasive and consistent with the medical records, surveillance video, witness statements, and Employer's job description.

23. Respondents retained Dr. William Ciccone, an orthopedist who is Level II certified, to testify as an expert. Dr. Ciccone agreed with both Dr. Papillion and Dr. Failinger that a reverse shoulder arthroplasty was reasonable. However, it was his opinion that the Claimant's need for the surgery was unrelated to the Ameristar events of September 5, 2017.

24. Dr. Ciccone testified that his opinion was based significantly on the Claimant's failure to report his injury initially. This is belied by the report from Concentra dated September 11, 2017, where the treating medical provider recorded a detailed description the event. (Exhibit 4, BS 70.)

25. Dr. Ciccone also testified that Claimant did not inform him that he had felt a pop in his shoulder. Therefore he felt that the Claimant was engaging in a bit of "revisionist history" when he described popping. However, Dr. Papillion reported in his October 5, 2017, report that Claimant informed him that he "felt a pop in his right shoulder when he was lifting heavy boxes." (Exhibit 6, BS 80.)

26. Dr. Ciccone agreed that a competent orthopedist who felt that the Claimant's symptoms were inconsistent with his mechanism of injury would have noted this fact in his report. He also agreed that neither Dr. Papillion nor Dr. Failinger made a note to the effect in their reports.

27. Dr. Ciccone acknowledged that given the diagnostic impression of the MRI that he would not have recommend the Claimant engage in activity requiring him to lift above waist level. He also agreed that given the findings on the MRI of October 2, 2017, the Claimant would likely have felt pain and discomfort resulting from his lifting activities.

28. Dr. Ciccone testified that when he examined Mr. Lagasca, his right shoulder showed diffuse atrophy at the rotator cuff and active motion at 140 degrees, with external rotation actively of 10 degrees, but passively of 80 degrees, and an internal rotation of 70 degrees. Dr. Ciccone testified that these findings are associated with chronic rotator cuff disease (Respondents' Hearing Submission A; Hearing Transcript p. 63, ll 3-25; p. 64, ll 1-25; p. 65, ll 1-25).

29. Dr. Ciccone testified that the rotator cuff is a group of muscles and tendons that attach the humerus to the shoulder and allow movement of the arm. He testified that when there is a rotator cuff tear, the tendon is no longer attached to the bone. He testified that when the tendon is not attached to the bone the shoulder cannot functionally be used because it cannot lift the arm anymore. He testified that with a tear it is like not using your muscle and so the muscles get smaller and result in atrophy (Hearing Transcript p. 66, ll 1-13).

30. Dr. Ciccone testified that he reviewed imaging of Mr. Lagasca's shoulder in the form of x-rays and MRIs from 2009 through the present. He testified that his understanding of the mechanism of injury was lifting boxes at work when he had pain in his shoulder. Dr. Ciccone indicated that during his examination, Mr. Lagasca did not tell Dr. Ciccone that he felt a pop in his shoulder. As a result, Dr. Ciccone testified that there was no specific injury to

the Claimant's shoulder in his medical opinion (Hearing Transcript p. 66, ll 22-25; p. 67, ll 1-18).

31. Dr. Ciccone testified that the imaging and x-rays that he reviewed showed different things. He testified that x-rays dated September 11, 2017 showed no abnormalities in the bones. He testified that an MRI is necessary to see soft tissue. Dr. Ciccone further testified that in chronic rotator cuff tears, a process of a high riding humeral head progresses because the shoulder is no longer contained by the rotator cuff. Dr. Ciccone said you could see the high riding humeral head on the x-ray that he reviewed of September 11, 2017. With respect to the MRI, Dr. Ciccone testified that he saw an MRI performed on October 2, 2017, which again showed a high riding humeral head with a pseudoarticulation superiorly, which is part of the scapular bone called the acromion. He testified that when the rotator cuff is chronically torn at the humerus or the shoulder bone, the ball will ride up high and that will actually bump into or articulate the bone above it called the acromion. He testified that in long-standing cases a pseudoarticulaton will develop, which is what he viewed on the Claimant's MRI (Hearing Transcript p. 68, ll 3-25; p. 69, ll 1-4).

32. Dr. Ciccone testified that in his medical opinion, the findings on the MRI scan show a preexisting condition because one does not get significant rotator cuff atrophy with an acute rotator cuff tear. He testified further, that high riding humeral heads do not develop with an acute rotator cuff tear. He testified that pseudoarticulation also does not develop with an acute injury. Based on the evaluation of the MRI and the physical attributes shown, Dr. Ciccone testified that the MRI shows no acute injury (Hearing Transcript p. 69, ll 5-15).

33. Dr. Ciccone testified that he evaluated Dr. Papillion's assessment of "acute on chronic rotator cuff tear" and disagreed with that finding. Dr. Ciccone testified that if there were an acute on chronic rotator cuff tear, potentially bleeding in the shoulder could be seen as well as bruising on the skin from an acute injury. He testified that with a normal shoulder to a rotator cuff tear there is no atrophy or anything else that is present on Mr. Lagasca's MRI scan (Hearing Transcript p. 69, ll 16-25).

34. Dr. Ciccone testified that it was possible to tell that the tear in the Claimant's shoulder preexisted any work activity on September 5, 2017. The evidence that supports this opinion in his testimony is the high riding humeral head, the pseudoarticulation within the shoulder, the muscle atrophy and significant retraction of the rotator cuff tear (Hearing Transcript p. 70, ll 1-12).

35. Dr. Ciccone testified that he agreed with Dr. Papillion's opinion that the Claimant is a candidate for a reverse shoulder replacement but that it is not related to a work injury. Dr. Ciccone testified that he did not think that the Claimant actually suffered a work-related injury based on his findings on the MRI scan which are chronic and longstanding. Dr. Ciccone testified that the Claimant saw Dr. Failinger in a second opinion, who also agreed that the reverse arthroplasty would be appropriate, but that he did not perform any causation analysis in relation to his opinion. Dr. Ciccone testified that Dr.

Burris saw the Claimant in December of 2017 and he agreed with Dr. Burris' determination that the Claimant had advanced end stage degenerative changes to the right shoulder. Dr. Ciccone also concurred that the MRI findings and the described mechanism of injury would not represent an acceleration or aggravation of a preexisting condition based on the non-acute injury (Hearing Transcript p. 70, ll 1-25; p. 71, ll 1-25; p. 72, ll 7-25).

36. Dr. Ciccone further testified that the Claimant had a radiograph of his chest in January of 2014, which showed osteoarthritis on the glenohumeral joints bilaterally. Dr. Ciccone testified that this was significant because there is a difference between osteoarthritis of the glenohumeral joint verses AC joint arthritis. Dr. Ciccone testified that on examination Mr. Lagasca had no pain at the AC joint, which is a common finding in patients with rotator cuff tear arthropathy. He testified that the medical focus was on the rotator cuff because that was a more current finding with arthritis being even more chronic in nature than rotator cuff tears. Dr. Ciccone testified that the Claimant has very limited cartilage left in the shoulder, which represents arthritis. He testified that on top of that the Claimant has a rotator cuff tear. The chronic arthritis coupled with the rotator cuff tear results in rotator cuff tear arthropathy, which is what led to the need for the reverse shoulder according to Dr. Ciccone's testimony (Hearing Transcript p. 73, ll 7-25; p. 74, ll 1-13).

37. Dr. Ciccone testified that chronic tearing of the supraspinatus, the infraspinatus and severe atrophy would not be medically probably caused by the result of lifting boxes on one day (Hearing Transcript p. 74, ll 14-22).

38. Dr. Ciccone testified that the Medical Treatment Guidelines require causation analysis and the physicians who saw the Claimant at Concentra and Dr. Papillion did not perform a causation analysis. He testified that Dr. Papillion most likely did not have any previous medical records and had to relate his treatment plan based on the injury as related by the Claimant, Mr. Lagasca (Hearing Transcript p. 75, ll 7-19).

39. Dr. Ciccone testified that he in fact had done a causation analysis because he had the complete medical records and he could do a more thorough review of the preexisting and current medical treatment. Dr. Ciccone testified that the medical evidence significant to him in terms of a causation analysis were multiple. He cited failure to report the injury at the time of the event and a history of what exactly happened at the time of the event, which differed throughout the different evaluations. Dr. Ciccone noted that at the initial evaluation the written report was that he felt pain and there was no report of a pop. Dr. Ciccone testified he believed there was no specific injury and it would be expected that someone with chronic rotator cuff tearing and the cuff tear arthropathy would have pain in their shoulder irrelevant or irrespective of whatever they were performing at the time (Hearing Transcript p. 75, ll 20-25; p. 76, ll 1-17).

40. Dr. Ciccone testified that it would not be medically surprising that the Claimant felt symptoms the first time he performed the table drop. Dr. Ciccone testified that this is because someone trying to lift up to 30 pounds with a dysfunctional rotator cuff would have pain and symptoms. However, according to Dr. Ciccone's testimony, pain does not equate to an injury. Dr. Ciccone testified that in Mr. Lagasca's situation, multiple reasons exist for him to have symptoms and that these symptoms could occur at any time with any type of use of his shoulder without specific injury and pain is not related to work and that it would be more medically-probably related to the disease process itself (Hearing Transcript p. 76, ll 22-25; p. 77, ll 1-13).

41. Dr. Ciccone testified that the only medical record containing a report of a "pop" was made to Dr. Papillion (Hearing Transcript p. 77, ll 14-17).

42. The ALJ does not find Dr. Ciccone's opinion that Claimant did not suffer a work injury and that the work injury did not necessitate the need for medical treatment, including the surgery recommended by Dr. Papillion, to be persuasive.

43. The ALJ does not find Dr. Ciccone's ultimate opinions to be persuasive, for a number of reasons, which include, but are not limited to, the following:

    First, Dr. Ciccone testified that in assessing causation, he relied upon the fact that Claimant did not report his injury on the day it happened. However, Claimant's written statement indicates he did not report his injury on the day it happened because he was afraid he would be sent to the doctor and would not be called back to work. The ALJ finds this to be a very plausible explanation as to why Claimant did not report his injury on the day happened. In addition, the video surveillance of September 5, 2017, and witness statements, confirm Claimant's account of his job activities and that he was struggling with the heavy boxes.

    Second, Dr. Ciccone testified that he also took into consideration the fact that the history contained in Claimant's medical records "of what exactly occurred at that time has been different throughout the different evaluations." For example, Dr. Ciccone testified that the initial evaluation indicates Claimant felt pain [after lifting heavy boxes of currency] and there is no reference to a "pop", however, the medical report from Dr. Papillion's evaluation which took place approximately three weeks later indicates Claimant stated there was a "pop" at the time of the accident. Despite this difference in the medical records, and assuming there was not a pop, there is a lack of credible and persuasive evidence establishing a "pop" is a necessary element of a work related shoulder injury. Moreover, the ALJ does not find such a difference or variance in the medical records to be persuasive evidence that Claimant did not suffer a work injury on September 5, 2017, in light of the other evidence contained in the record. Besides, this ALJ finds Claimant's testimony to be credible and Claimant credibly testified that he felt a pop while lifting the box at work and that he told that to his medical providers.

Third, Dr. Ciccone testified that in his opinion, Claimant's shoulder pain and disability is due to the disease process instead of Claimant's work activities. Dr. Ciccone testified that:

> Well, I mean, there's multiple reasons to have pain. I mean, I--the--there's--there are in this situation, again, multiple reasons to have these symptoms. And these symptoms could occur at any time with any type of use. And without a specific injury, the pain is not related to the work. It would be more related to the disease process itself. (Hearing Transcript p. 77, ll 7-13).

However, the ALJ does not find this analysis to be persuasive because although there could be multiple reasons for Claimant's symptoms, which includes the natural progression of the disease process, Claimant's chronic pain and disability were proximately caused by the work activity of lifting a heavy box at work. This is not a case in which Claimant was merely at work performing sedentary activities, such as sitting at a desk or walking and developed shoulder pain and limited range of motion. This a case in which Claimant had an asymptomatic shoulder condition and the specific work activity of lifting a heavy box caused pain and disability, which has not abated, and caused the need for medical treatment. In other words, this is a work-related exposure that has rendered a previously asymptomatic condition symptomatic and subsequently requires medical treatment.

44. There is a single pain diagram from January 10, 2014. Respondents contend the pain diagram establishes Claimant had pre-existing bilateral shoulder pain. However, the pain diagram is part of the Patient Appointment Sheet, of the same date. The Patient Appointment Sheet indicates Claimant is having x-rays taken of his cervical, thoracic, and lumbar spine as well as his chest. There are no x-rays being taken of either of Claimant's shoulders. (Respondents' Hearing Submission I.) Therefore, the ALJ does not find the pain diagram demonstrates Claimant was having bilateral shoulder pain on January 10, 2014, and seeking treatment for such.

45. Claimant suffered a compensable injury to his right shoulder.

46. Claimant had a pre-existing right shoulder condition which was asymptomatic.

47. On September 5, 2017, during the course and scope of his employment, Claimant suffered an injury to his right shoulder when he lifted a 25-40 pound box at work and aggravated his pre-existing asymptomatic right shoulder condition.

48. Claimant was not having any pain or difficulty using his right shoulder prior to the work injury. The work injury caused Claimant to develop significant and chronic shoulder pain and has also severely restricted his shoulder function.

49. Claimant lifting the heavy box of poker chips and money at work was a work-related exposure that has rendered his previously asymptomatic shoulder condition symptomatic and subsequently requires medical treatment.

50. In order to treat Claimant's chronic shoulder pain and restricted shoulder function which were caused by the work injury, Dr. Papillion recommended a reverse total shoulder arthroplasty.

51. The reverse total shoulder arthroplasty surgical procedure is to decrease Claimant's shoulder pain and increase his shoulder function.

52. The reverse total shoulder arthroplasty is reasonable, necessary, and related to Claimant's work injury.

53. The need for medical treatment, including the shoulder surgery, is not attributable to Claimant's asymptomatic underlying preexisting shoulder condition.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App.

2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable injury on September 5, 2017.

Claimant is required to prove by a preponderance of the evidence that the condition for which he seeks medical treatment was proximately caused by an injury arising out of and in the course of employment. Section 8-41-301(1)(c), C.R.S.; *Singleton v. Kenya Corp.,* 961 P .2d 571 (Colo. App. 1998). Thus, when an injury occurs in a work place resulting in disability, it is compensable if the circumstances and conditions of employment have contributed to the injury sustained by the employee, as is the case here. See *National Health labs v. ICAO*, 844 P.2d 1259 (Colo. App. 1992)(a compensable injury can result from the aggravation of a pre-existing condition, see also *H & H Warehouse v. Vicory v. ICAO*, 805 P.2d 1167 (Colo. App. 1990)).

If an industrial disability is attributable to a stable pre-existing, condition and an occupational injury, the resulting disability and medical benefits are compensable if the injury has caused a pre-existing condition to become industrially disabling. See *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Thus, a pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v Industrial Claim Appeals Office*, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). This is because compensation is not dependent on the state of an employee's health or his freedom from constitutional weakness. *Peter Kiewit Sons' Co., v. ICAO*, 236 P.2d 296 (Colo. 1951).

Claimant's right shoulder had degenerative changes that predated his injury. But, the degenerative pathology was asymptomatic before lifting the heavy box containing poker chips and money on September 5, 2017. Lifting the box which weighed between 25 and 40 pounds required Claimant to use his right shoulder in a manner that exceeded its physical capacity and resulted in an injury that resulted in chronic pain and limited function, i.e., disability, of his shoulder and necessitated the need for medical treatment.

Dr. Papillion, in his report, persuasively opined that before the incident of September 5, 2017, Claimant did not have any problems with his right shoulder and had been working at full duty without difficulty. At the time Dr. Papillion issued his opinion, he noted that he was aware Claimant had undergone an MRI which showed severe tearing in the rotator cuff, as well as pre-existing atrophy. Nevertheless, he opined that Claimant's condition was consistent with a rotator cuff arthropathy; that the Claimant suffered a "irreparable rotator cuff tear" requiring intervention; and that his right shoulder had been "fully functional prior to the incident." Dr. Papillion further opined in his report that:

> This does appear to be a tear with some chronicity. However, he was working at full duty and having no difficulty with lifting and using the arm away from his body and overhead prior to this incident. Currently, he is severely restricted in his function and has significant pain.

Claimant credibly testified that he experienced the onset of symptoms after lifting the heavy boxes. Moreover, Claimant's co-workers corroborated Claimant's testimony that he was struggling with the heavy boxes on September 5, 2017. In addition, the video surveillance further corroborated Claimant's description of the work he was performing at the time he was injured and the fact that he was struggling with the heavy boxes. Although temporal proximity alone does not automatically establish causation, it does suggest a causal relationship. In combination with other evidence contained in the record, the ALJ finds the clear temporal relationship between the onset of symptoms and Claimant's work activities to be a persuasive factor in favor of compensability.

Dr. Ciccone is correct that Claimant had shoulder pathology before the September 5, 2017, incident. Dr. Ciccone testified regarding the medical findings that supported his conclusion that Claimant had shoulder pathology before the incident of September 5, 2017. However, Claimant's preexisting shoulder pathology was asymptomatic and the activity that proximately caused Claimant's pain and disability on September 5, 2017, and necessitated the need for medical treatment, was a work-related job task within the course and scope of his employment. As such, Claimant's injury had its origins in a work-related function and is compensable.

II. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment for his right shoulder.

III. Whether Claimant established by a preponderance of the evidence that the total reverse shoulder surgery recommended by Dr. Papillion is reasonable, necessary and related treatment to cure and relieve Claimant of the effects of his work-related injury.

Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of the industrial injury. Section 8-42-101 (1)(a), C.R.S. 2007; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997);

Country Squire Kennels v. Tarshis, 899 P.2d 362 (Colo. App. 1995). Where the Claimant's entitlement to benefits is disputed, Claimant has the burden to prove a causal relationship between a work-related injury and the condition for which benefits or compensation are sought. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Whether Claimant sustained his burden of proof is generally a factual question for resolution by this ALJ. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

A preexisting disease or susceptibility to injury does not disqualify a claim if the injury aggravates, accelerates, or combines with the preexisting disease or infirmity to produce the need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The ICAO has noted that pain is "a typical symptom from the aggravation of a pre-existing condition" and a claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.,* WC 3-998-279 (ICAO February 16, 2001).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any preexisting condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a preexisting condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant had a preexisting shoulder condition which was asymptomatic. On September 5, 2017, during the course and scope of his employment, Claimant suffered an injury to his right shoulder when he lifted a 25-40 pound box at work and aggravated his preexisting asymptomatic right shoulder condition. Claimant was not having any pain or difficulty using his right shoulder prior to the work injury. The work injury caused Claimant to develop significant shoulder pain and severely restricted his shoulder function. In order to treat Claimant's shoulder pain and restricted shoulder function which was caused by the work injury, Dr. Papillion recommended a reverse total shoulder arthroplasty. Claimant was sent to Dr. Failinger for a second opinion. Dr. Failinger concurred that a reverse total shoulder arthroplasty was appropriate to treat Claimant's underlying condition and symptoms. As found, the reverse total shoulder arthroplasty is to decrease Claimant's shoulder pain and increase his shoulder function which were proximately caused by his work injury. The need for medical treatment, including the shoulder surgery, is not attributable to his asymptomatic underlying preexisting condition. Therefore, the ALJ concludes that the reverse total shoulder arthroplasty is reasonable, necessary, and related to Claimant's work injury.

Claimant, through his testimony, and the reports of Dr. Papillion and Dr. Failinger, has established by a preponderance of the evidence, his entitlement to medical benefits, including Dr. Papillion's recommended reverse total shoulder arthroplasty.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury to his right shoulder on September 5, 2017.

2. Respondents are liable for the medical care Claimant receives from authorized providers which is reasonably necessary to cure and relieve Claimant from the effects of his industrial injury to his right shoulder which occurred on September 5, 2017, as well as Dr. Papillion's recommended reverse total shoulder arthroplasty, subject to the Division of Workers' Compensation Medical Fee Schedule.

3. Any issues not determined in this decision are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a compensable "injury" as a result of an accident on September 30, 2017?

- If Claimant suffered a compensable injury, is he entitled to reasonably necessary and related medical treatment to cure and relieve the effects of the injury?

FINDINGS OF FACT

1. Claimant worked for Employer as a stocker. On September 30, 2017, he slipped and fell while stocking product in a freezer. Claimant fell onto his left side, "on my hip." A co-worker, Austin Hanley, observed the fall "out of the corner of his eye." Mr. Hanley asked Claimant if he was okay and "he said he was fine, got up, and walked out of the freezer."

2. Claimant did not immediately request medical treatment and went home after his shift. Claimant testified he never felt pain in his left side but developed pain in the middle of his back toward the right side.

3. Claimant went to the St. Thomas More Hospital emergency department on October 2, 2017. He stated that he "fell at work (slipped in the freezer), landed on his left hip and hurt his lower back . . . . Pt reports the pain is central at his spine and radiates down into the right side and around the front of his leg." The physical examination was largely benign with only "moderate paraspinal tenderness." X-rays showed "advanced degenerative changes" but "nothing acute." The ER physician diagnosed a "myofascial strain" and discharged Claimant with prescriptions for ibuprofen and methocarbamol.

4. Later on October 2, 2017, Claimant reported the accident to his manager and completed an incident report. Claimant was given a list of designated providers, from which he chose Dr. Robert McCurry.

5. Claimant saw Dr. McCurry at the end of the day on October 2, 2017. He told Dr. McCurry "he slipped on ice in the freezing unit, landed on his left hip, and by the end of 2 more hours of work, had significant right low back discomfort, radiating into the buttocks." He had not filled the prescriptions given to him at the ER. Claimant denied any history of low back problems. Physical examination showed tenderness over the left trochanteric bursa but no ecchymosis. Dr. McCurry also appreciated tenderness and muscle spasm in the lumbar region, mainly on the right side. There were no findings relating to the left side of his back. Dr. McCurry diagnosed "acute mechanical low back pain secondary to fall." Claimant declined any specific treatment, stating instead "he will do self-directed home therapy program, with exercises given at the emergency

department today." Dr. McCurry took Claimant off work through October 8, with a follow-up visit on October 9 "before any returned to work."

6. Claimant returned to Dr. McCurry on October 9, 2017. He stated his pain was "much worse, 10/10, constantly," and he had severe pain with "any movement." At this visit, he told Dr. McCurry about a previous L4-5 herniated disc for which he received treatment "in the 1990s," even though he had denied any history of back problems at his first appointment.[1] Although Claimant was complaining of "10/10" pain, he had no difficulty walking into the exam room, causing Dr. McCurry to question whether his complaints were "exaggerated." Dr. McCurry recommended Claimant start physical therapy, renewed the ibuprofen and methocarbamol, and continued restrictions of "off work through 10-17-17."

7. Respondent obtained several hours of surveillance video of Claimant between October 16, 2017 and October 28, 2017. The video footage depicts Claimant engaged in a variety of activities with no observable difficulty or signs of pain, including bending and squatting to check and add air to his vehicle tires, entering and exiting his vehicle, shopping, lifting a microwave oven, carrying a gallon of milk, eating at restaurants, and bending over to pick up items from the ground.

8. Claimant next saw Dr. McCurry on October 31, 2017. He again reported severe pain and associated functional limitations. For example, he told Dr. McCurry after walking approximately 50-100 yards "the pain worsens to where he is no longer able to walk." He was not attending therapy or performing any home exercises. He arose from a chair and walked around Dr. McCurry's office without difficulty. He said he could not bend over or squat down due to severe pain, but on examination, his lumbar range of motion was significantly improved. There was no muscle spasm, tenderness, or reproducible discomfort with palpation of the lumbar spine and paravertebral musculature. Dr. McCurry stated "all of this is a significant improvement from his initial 2 visits." In contrast to Claimant's demonstrated improvement, Dr. McCurry noted "continued pain complaints of 10/10, unclear incongruency of his complaints to his exam tonight." Dr. McCurry released Claimant to modified duty and instructed him to follow-up in two weeks.

9. Dr. McCurry spoke to Claimant by telephone the next day. He did not report to work as planned because he was "in too much pain." Dr. McCurry stated, "I advised him that I watched him do the movements that he stated he could not do, and that he could use his pain medicine if he was in discomfort but that he needed to return to work." Claimant ended the call by hanging up on Dr. McCurry. Claimant subsequently canceled his November 15, 2017 follow-up appointment, and when Dr. McCurry's staff tried to reschedule, "he refused and said he would not be coming back to our office."

10. Dr. John Burris performed an IME for Respondent on February 27, 2018. Claimant reported pain of 7/10 in the low back and right leg. Despite that, he sat comfortably on the exam table and walked around the office with no difficulty. On examination, Claimant complained of diffuse superficial tenderness to light touch, but Dr.

[1] At hearing, Claimant admitted he had received a 27% whole person rating for this prior injury.

Burris appreciated no muscle spasm or trigger points. Lumbar flexion was self-limited to approximately 10°, at which point Claimant stated: "he can bend no further secondary to pain." He complained of pain on straight leg raising at approximately 10° bilaterally. Motor testing showed breakaway weakness with minimal effort. Claimant said he could not squat or kneel due to the pain. Dr. Burris commented, "he displays extreme pain behaviors which obscure his examination."

11. Dr. Burris reviewed the surveillance video and opined, "[Claimant] was seen to engage, in a normal manner, in numerous activities he currently states he cannot perform. All of his movements on the video are fluid, without hesitation, and appeared uninhibited. At no time did he appear to have difficulties, be limited in his movements, or to be in pain."

12. Dr. Burris concluded Claimant suffered a "minor myofascial lumbar strain from his reported slip and fall at work," but required no medical treatment. Dr. Burris explained, "the natural history of a minor myofascial strain is predictable recovery within days to weeks regardless of treatment." Dr. Burris further opined:

> Significant inconsistencies exist between [Claimant's] presentation at today's evaluation and activities documented on the surveillance video. On today's evaluation, he displays difficulties with all movements and range of motion of the lumbar spine. He states that there are several activities, such as squatting down, which he cannot perform. On the video surveillance, [Claimant] is seen moving freely without any difficulties in performing maneuvers that he does not perform, or states he cannot perform, during the examination. The discrepancy between today's presentation and the activity seen on the video surveillance, clearly indicates that [Claimant] is misrepresenting his physical capabilities."

13. Dr. McCurry testified in a deposition on March 27, 2018. Dr. McCurry opined that the location of Claimant's reported pain was unusual and "highly improbable" based on the mechanism of injury (*i.e.*, pain on the right side of his back after falling on his left hip). He testified Claimant's physical exams showed no significant objective findings to substantiate any injury. But despite several observed inconsistencies, he had given Claimant the benefit of the doubt and accepted his subjective complaints when recommending conservative treatment and restricting Claimant from work. Dr. McCurry had reviewed the surveillance video and opined it was inconsistent with Claimant's reported symptoms and claimed limitations. He used measured language and soft-pedaled some of his opinions to avoid unnecessarily disparaging his patient, but Dr. McCurry clearly has significant reservations regarding the veracity of Claimant's alleged symptoms.

14. Dr. Burris testified at hearing to reiterate and expound upon the opinions in his IME report. Dr. Burris' opinions and conclusions, as expressed in his report and clarified at hearing, are credible and persuasive.

15. Claimant failed to prove by a preponderance of the evidence that the September 30, 2017 accident proximately caused a compensable injury. Claimant's allegations of pain and limitations caused by the incident are not credible, and there is no persuasive objective evidence of injury. Although the ER physician and Dr. McCurry initially accepted Claimant's pain complaints at face value, prompting them to recommend treatment and impose work restrictions, the remainder of the evidence shows his subjective complaints are not reliable. When Claimant's allegations are removed from the equation, there is minimal persuasive evidence to substantiate his claim. Claimant told a co-worker immediately after the accident he was "fine," and displayed no observable sign of injury. He did not seek treatment for two days, and when he pursued treatment, he reported symptoms in his right lumbar area, which are not consistent with a fall on his left hip. Claimant initially denied any history of back problems to Dr. McCurry, even though he previously suffered an injury resulting in a 27% whole person lumbar spine rating. Claimant has undergone several post-accident physical exams with minimal findings, and his clinical presentation has generally been at odds with his contemporaneous reports of severe pain. Most important, the video shows Claimant performing a wide range of activities inconsistent with his reported pain levels and claimed incapacity. Claimant alleged he was "in too much pain" to work, but had no difficulty performing various activities around town, including putting air in his tires, going to restaurants, and shopping. Although the ALJ does not doubt Claimant slipped and fell in the freezer on September 30, he did not present sufficient evidence to prove that the accident proximately caused any "injury."

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (ICAO Aug. 17, 2016). Moreover, the

fact that a claimant receives some medical treatment after an accident does not automatically establish a compensable injury if the evidence ultimately shows the treatment was not reasonably necessary or proximately caused by the accident. *McTaggart-Kerns v. Dell, Inc*., W.C. No. 4-915-218-02 (May 29, 2014).

Based on the evidence presented, the ALJ concludes that Claimant did not suffer a compensable "injury" as a result of the September 30, 2017 accident. The minimal treatment and work restrictions Claimant received after the incident were based entirely on his subjective pain complaints, with no persuasive objective evidence of any injury. Although it is understandable for providers to give a patient the benefit of the doubt at their initial encounters, the overall evidentiary record casts serious doubt on the reliability of Claimant's complaints. The activity level demonstrated on the surveillance video is particularly concerning given Claimant's contemporaneous descriptions of "10/10" pain causing inability to perform even basic activities. As Dr. McCurry pointed out, the video shows Claimant "doing everything that he said that he could not perform." After reviewing all of the evidence, the ALJ concludes Claimant failed to prove that the September 30, 2017 slip and fall incident proximately caused a need for medical treatment or disability.

ORDER

It is therefore ordered that:

1. Claimant's workers' compensation claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Office of Administrative Courts

ISSUE

Whether Respondents have produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Gary Zuehlsdorff, M.D. that Claimant suffered a 16% whole person impairment as a result of her April 10, 2016 admitted industrial injuries.

FINDINGS OF FACT

1. Claimant worked at Employer's fast food restaurant performing a variety of jobs. On April 10, 2016 Claimant slipped on trash while working in the kitchen area. She suffered right shoulder, right hip and back pain.

2. Claimant initially received medical treatment from Authorized Treating Physician (ATP) Robert Dixon, M.D. She subsequently underwent a course of conservative medical care and diagnostic testing.

3. On August 18, 2016 Claimant visited ATP Samuel Y. Chan, M.D. for an examination. Claimant reported pain in her thoracic spine and lower back. Dr. Chan prescribed a lumbar MRI to determine whether Claimant suffered from underlying discogenic disease or a neurological disorder. He noted that Claimant's right shoulder MRI was essentially normal.

4. On September 6, 2016 Claimant underwent a lumbar spine MRI. The MRI revealed degenerative changes at L4-L5 with moderate spinal canal stenosis and impingement on the descending L5 nerve root.

5. Beginning on November 29, 2016 Claimant underwent psychological counseling with Walter J. Torres, Ph.D. After administering psychological testing, Dr. Torres remarked that Claimant exhibited an extreme level of somatic complaints that were higher than 99% of all patients. Nevertheless, he commented that Claimant's "highly elevated symptom presentation on psychological testing reflects her overwhelmed state, and not necessarily a highly problematic characterological orientation."

6. Dr. Chan performed diagnostic epidural steroid injections and an S1 injection to address Claimant's lower back pain. However, the injections provided no benefit. On January 19, 2017 Dr. Chan thus remarked that Claimant's MRI findings did not constitute her pain generator.

7. Claimant completed a course of physical therapy through Select Physical Therapy. Claimant consistently reported lower back pain as a result of her April 10, 2016 slip and fall. She also completed chiropractic treatment but did not receive any benefit.

8. On March 20, 2017 Dr. Chan determined that Claimant had reached Maximum Medical Improvement (MMI). He noted that Claimant had received 11 months of "diagnostic, therapeutic intervention." Dr. Chan commented that, although Claimant was still reporting subjective pain complaints, her treatment had been "comprehensive and thorough." He noted that Claimant completed physical therapy and chiropractic treatment with no benefit. Relying on the *AMA Guides for the Evaluation of Permanent Impairment Third Edition (Revised) (AMA Guides)* he assigned a 5% rating for Claimant's lumbar spine. However, he did not assign a rating for lumbar flexion range of motion deficits because Claimant's measurements were invalid. Dr. Chan also assigned a 2% rating for a psychological disorder. Combining the 5% impairment for Claimant's lumbar spine with the 2% impairment for a psychological disorder yields a total 7% whole person rating.

9. In addressing Claimant's right shoulder condition Dr. Chan commented that, although Claimant reported right shoulder symptoms, her MRI was essentially normal. Claimant's lack of right shoulder pathology thus did not warrant a permanent impairment rating. Furthermore, Dr. Chan also did not assign an impairment rating for Claimant's cervical spine. He remarked that Claimant's cervical spine range of motion was within normal limits and "there was no tenderness with extension or rotation of the cervical spine bilaterally."

10. On March 24, 2017 Claimant visited Robert Broghemmer, M.D. from Dr. Dixon's office for an examination. He concurred with Dr. Chan's conclusion that Claimant reached MMI on March 20, 2017 with a 7% whole person impairment.

11. Respondents filed a Final Admission of Liability (FAL) consistent with Dr. Chan's MMI and permanent impairment determinations. Claimant challenged the FAL and sought a Division Independent Medical Examination (DIME).

12. On September 28, 2017 Claimant underwent a DIME with Gary Zuehlsdorff, M.D. Dr. Zuehlsdorff reported that Claimant was suffering from continuing pain in the "right lateral neck, right shoulder and right low back." He detailed that Claimant "had diffuse myofascial pain throughout the right side of her cervical spine, right shoulder girdle and right lumbosacral area." Dr. Zuehlsdorff agreed that Claimant reached MMI on March 20, 2017. However, he assigned a total 16% whole person impairment rating. The rating consisted of a 7% scheduled or 4% whole person rating for Claimant's right shoulder, 8% for her lumbar spine and 4% for her cervical spine. The lumbar spine rating consisted of 5% pursuant to Table 53 part 2-B of the *AMA Guides* and 3% for range of motion deficits. Dr. Zuehlsdorff assigned permanent work restrictions of no lifting, pushing, pulling or carrying in excess of 15 pounds. He did not recommend any medical maintenance benefits.

13. Dr. Zuehlsdorff explained his permanent impairment ratings. He commented that Claimant had continuously suffered subjective pain in her right neck, shoulder and lower back areas since the date of her industrial injury. Dr. Zuehlsdorff remarked that, although Claimant did not report cervical pain to her urgent care providers on the date of the accident, "urgent cares are notoriously poor for delineating all the pain

complexes." He thus determined that Claimant's cervical spine symptoms were "compensable." Dr. Zuehlsdorff concluded that Claimant suffered "fibromyalgia pain type syndrome" in the right lateral neck area, right shoulder girdle and right lumbosacral region." He acknowledged that other providers expressed concerns about Claimant's pain behaviors and lack of correlation between subjective and objective complaints. Dr. Zuehlsdorff could not verify whether Claimant's subjective pain complaints were valid. However, based on the moderate mechanism of injury and pain complaints since the date of the work accident, Dr. Zuehlsdorff reasoned that "she does have at least a fibromyalgia pain syndrome" that warranted impairment ratings. Dr. Zuehlsdorff thus "decided to assign" ratings for the lumbar spine, cervical spine and right shoulder.

14. On March 6, 2018 Lawrence A. Lesnak, D.O. performed an independent medical examination of Claimant. Dr. Lesnak reviewed Claimant's medical records and performed a physical examination. He agreed that Claimant had reached MMI on March 20, 2017. However, he assigned Claimant a total 5% whole person impairment rating for her lumbar spine based on Table 53 of the *AMA Guides*. Dr. Lesnak specifically noted that Claimant did not exhibit any lumbar range of motion deficits on dual inclinometer testing and thus assigned a 0% rating for lumbar spine range of motion impairment.

15. Dr. Lesnak detailed that Dr. Zuehlsdorff erroneously assigned Claimant an impairment rating for her right shoulder. He explained that Claimant did not exhibit any evidence of symptomatic right shoulder joint pathology related to the April 10, 2016 industrial accident. Dr. Lesnak remarked that Claimant demonstrated full active and passive range of motion of each shoulder joint. Similarly, Dr. Chan's medical records reflected that Claimant exhibited full range of motion of each shoulder in all planes. Dr. Lesnak thus concluded that Dr. Zuehlsdorff incorrectly assigned an impairment rating for Claimant's right shoulder.

16. Dr. Lesnak also explained that Dr. Zuehlsdorff erroneously and incorrectly assigned Claimant an impairment rating for her cervical spine. He remarked that Claimant "clearly" did not sustain any cervical spine pathology as a result of the April 10, 2016 work accident. Dr. Lesnak specified that there was no evidence that Claimant suffered "fibromyalgia-type" symptoms. Based on the administration of psychosocial screening tests, Claimant exhibited an underlying somatoform disorder that was unrelated to the April 10, 2016 industrial accident.

17. Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Zuehlsdorff that Claimant suffered a 16% whole person impairment as a result of her April 10, 2016 admitted industrial injuries. Initially, on April 10, 2016 Claimant slipped on trash while working in Employer's kitchen area. She suffered pain in her right shoulder, right hip and back. Claimant underwent extensive conservative treatment and diagnostic testing. She reached MMI on March 20, 2017. Dr. Chan noted that Claimant completed physical therapy and chiropractic treatment with no benefit. He assigned a 5% whole person rating for Claimant's lumbar spine and a 2% rating for a psychological disorder for a total 7% whole person rating.

18. DIME Dr. Zuehlsdorff agreed that Claimant reached MMI on March 20, 2017. However, he assigned a total 16% whole person impairment rating. The rating consisted of a 7% scheduled or 4% whole person rating for Claimant's right shoulder, 8% for her lumbar spine and 4% for her cervical spine. He commented that Claimant had continuously suffered subjective pain in her right neck, shoulder and lower back areas since the date of her industrial injury. Dr. Zuehlsdorff determined that Claimant suffered "fibromyalgia pain type syndrome" in the right lateral neck area, right shoulder girdle and right lumbosacral region. He acknowledged that other providers expressed concerns about Claimant's pain behaviors and lack of correlation between subjective and objective complaints. Dr. Zuehlsdorff also could not verify whether Claimant's subjective pain complaints were valid. Nevertheless, based on the moderate mechanism of injury and pain complaints since the date of the work accident "she does have at least a fibromyalgia pain syndrome" that warranted impairment ratings. Dr. Zuehlsdorff thus "decided to assign" impairment ratings for the lumbar spine, cervical spine and right shoulder.

19. The record reveals that Dr. Zuehlsdorff based his diagnosis of "fibromyalgia type syndrome" on Claimant's subjective complaints. He acknowledged that he was unable to verify any correlation between Claimant's subjective complaints and the objective medical pathology. Dr. Zuehlsdorff's opinion is contradicted not only by Dr. Lesnak, but also by Drs. Chan and Broghemmer. He generally failed to adequately consider the diagnosis of somatoform disorder as confirmed by Dr. Lesnak during psychosocial screening tests. Moreover, Dr. Torres specifically found that Claimant had a high level of somatic pain complaints that rendered subjective reporting unreliable.

20. Dr. Zuehlsdorff specifically erred in determining that Claimant sustained a neck injury on April 10, 2016 because there is a lack of objective medical evidence in the record supporting the determination. Drs. Chan, Broghemmer and Dixon all evaluated Claimant and none of them diagnosed a specific neck injury. Dr. Lesnak remarked that Claimant "clearly" did not sustain any cervical spine pathology as a result of the April 10, 2016 work accident. He explained that there was no evidence that Claimant suffered "fibromyalgia-type" symptoms. Finally, Dr. Chan also did not assign an impairment rating for Claimant's cervical spine. He remarked that Claimant's cervical spine range of motion was within normal limits and "there was no tenderness with extension or rotation of the cervical spine bilaterally."

21. Dr. Lesnak persuasively reasoned that Dr. Zuehlsdorff erroneously assigned a permanent impairment rating for Claimant's right shoulder. The record lacks objective, clinical evidence of right shoulder joint pathology to warrant an impairment rating. Dr. Lesnak explained that Claimant did not exhibit any evidence of symptomatic right shoulder joint pathology related to the April 10, 2016 industrial accident. He remarked that Claimant demonstrated full active and passive range of motion of each shoulder joint. Furthermore, Dr. Chan commented that, although Claimant reported right shoulder symptoms, her right shoulder MRI was essentially normal. Claimant's lack of right shoulder pathology thus did not warrant a permanent impairment rating.

22. Respondents have produced unmistakable evidence free from serious or substantial doubt that it is highly probable that Dr. Zuehlsdorff's 16% whole person impairment rating is incorrect. The record is simply devoid of objective clinical evidence that Claimant suffered continuing cervical spine or right shoulder pathology as a result of the April 10, 2016 work accident. Dr. Zuehlsdorff linked Claimant's "fibromyalgia-type" symptoms to the work accident in the absence of objective evidence or a causal analysis.

23. Finally, Drs. Lesnak, Chan and Broghemmer agreed with Dr. Zuehlsdorff that Claimant suffered a 5% whole person impairment rating to her lumbar spine as a result of the industrial incident. However, based on Claimant's documented subjective symptoms that fail to correlate with objective findings, Dr. Zuehlsdorff erroneously assigned a 3% impairment rating for lumbar range of motion deficits. Dr. Chan did not assign a rating for lumbar flexion range of motion deficits because Claimant's measurements were invalid. Moreover, Dr. Lesnak specifically noted that Claimant did not exhibit any lumbar range of motion deficits on dual inclinometer testing and thus assigned a 0% rating for lumbar spine range of motion impairment. Accordingly, Claimant is entitled to receive a 5% whole person i9mpairment rating for her April 10, 2016 work accident.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

5. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

6. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

7. A physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings. §8-42-101(3.7), C.R.S. Table 53(II)(B) of the AMA Guides assigns a 5% whole-person rating where an injured worker suffers an "intervertebral disc or other soft tissue lesion" in the lumbar spine which is unoperated, with a medically documented injury and, "[A] minimum of six months of medically documented pain and rigidity with or without muscle spasm." The determination of whether a claimant meets the criteria of Table 53 II.B is made at the time of MMI and not at the time of any subsequent evaluation. *Lopez v. Cargill Meat Solutions*, W.C. Nos. 4-757-408 and 4-758-952 (Sept. 9, 2010). In order to receive a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established.

8. If a party has carried the initial burden of overcoming the DIME physician's impairment rating by clear and convincing evidence, the ALJ's determination of the

correct rating is then a matter of fact based upon the lesser burden of a preponderance of the evidence. *See Deleon v. Whole Foods Market, Inc*., W.C. No. 4-600-47 (ICAP, Nov. 16, 2006). The ALJ is not required to dissect the overall impairment rating into its numerous component parts and determine whether each part has been overcome by clear and convincing evidence. *Id.* When the ALJ determines that the DIME physician's rating has been overcome, the ALJ may independently determine the correct rating. *Lungu v. North Residence Inn*, W.C. No. 4-561-848 (ICAP, Mar. 19, 2004); *McNulty v. Eastman Kodak Co*., W.C. No. 4-432-104 (ICAP, Sept. 16, 2002).

9. As found, Respondents have produced clear and convincing evidence to overcome the DIME opinion of Dr. Zuehlsdorff that Claimant suffered a 16% whole person impairment as a result of her April 10, 2016 admitted industrial injuries. Initially, on April 10, 2016 Claimant slipped on trash while working in Employer's kitchen area. She suffered pain in her right shoulder, right hip and back. Claimant underwent extensive conservative treatment and diagnostic testing. She reached MMI on March 20, 2017. Dr. Chan noted that Claimant completed physical therapy and chiropractic treatment with no benefit. He assigned a 5% whole person rating for Claimant's lumbar spine and a 2% rating for a psychological disorder for a total 7% whole person rating.

10. As found, DIME Dr. Zuehlsdorff agreed that Claimant reached MMI on March 20, 2017. However, he assigned a total 16% whole person impairment rating. The rating consisted of a 7% scheduled or 4% whole person rating for Claimant's right shoulder, 8% for her lumbar spine and 4% for her cervical spine. He commented that Claimant had continuously suffered subjective pain in her right neck, shoulder and lower back areas since the date of her industrial injury. Dr. Zuehlsdorff determined that Claimant suffered "fibromyalgia pain type syndrome" in the right lateral neck area, right shoulder girdle and right lumbosacral region. He acknowledged that other providers expressed concerns about Claimant's pain behaviors and lack of correlation between subjective and objective complaints. Dr. Zuehlsdorff also could not verify whether Claimant's subjective pain complaints were valid. Nevertheless, based on the moderate mechanism of injury and pain complaints since the date of the work accident "she does have at least a fibromyalgia pain syndrome" that warranted impairment ratings. Dr. Zuehlsdorff thus "decided to assign" impairment ratings for the lumbar spine, cervical spine and right shoulder.

11. As found, the record reveals that Dr. Zuehlsdorff based his diagnosis of "fibromyalgia type syndrome" on Claimant's subjective complaints. He acknowledged that he was unable to verify any correlation between Claimant's subjective complaints and the objective medical pathology. Dr. Zuehlsdorff's opinion is contradicted not only by Dr. Lesnak, but also by Drs. Chan and Broghemmer. He generally failed to adequately consider the diagnosis of somatoform disorder as confirmed by Dr. Lesnak during psychosocial screening tests. Moreover, Dr. Torres specifically found that Claimant had a high level of somatic pain complaints that rendered subjective reporting unreliable.

12. As found, Dr. Zuehlsdorff specifically erred in determining that Claimant sustained a neck injury on April 10, 2016 because there is a lack of objective medical evidence in the record supporting the determination. Drs. Chan, Broghemmer and Dixon

all evaluated Claimant and none of them diagnosed a specific neck injury. Dr. Lesnak remarked that Claimant "clearly" did not sustain any cervical spine pathology as a result of the April 10, 2016 work accident. He explained that there was no evidence that Claimant suffered "fibromyalgia-type" symptoms. Finally, Dr. Chan also did not assign an impairment rating for Claimant's cervical spine. He remarked that Claimant's cervical spine range of motion was within normal limits and "there was no tenderness with extension or rotation of the cervical spine bilaterally."

13. As found, Dr. Lesnak persuasively reasoned that Dr. Zuehlsdorff erroneously assigned a permanent impairment rating for Claimant's right shoulder. The record lacks objective, clinical evidence of right shoulder joint pathology to warrant an impairment rating. Dr. Lesnak explained that Claimant did not exhibit any evidence of symptomatic right shoulder joint pathology related to the April 10, 2016 industrial accident. He remarked that Claimant demonstrated full active and passive range of motion of each shoulder joint. Furthermore, Dr. Chan commented that, although Claimant reported right shoulder symptoms, her right shoulder MRI was essentially normal. Claimant's lack of right shoulder pathology thus did not warrant a permanent impairment rating.

14. As found, Respondents have produced unmistakable evidence free from serious or substantial doubt that it is highly probable that Dr. Zuehlsdorff's 16% whole person impairment rating is incorrect. The record is simply devoid of objective clinical evidence that Claimant suffered continuing cervical spine or right shoulder pathology as a result of the April 10, 2016 work accident. Dr. Zuehlsdorff linked Claimant's "fibromyalgia-type" symptoms to the work accident in the absence of objective evidence or a causal analysis.

15. As found, finally, Drs. Lesnak, Chan and Broghemmer agreed with Dr. Zuehlsdorff that Claimant suffered a 5% whole person impairment rating to her lumbar spine as a result of the industrial incident. However, based on Claimant's documented subjective symptoms that fail to correlate with objective findings, Dr. Zuehlsdorff erroneously assigned a 3% impairment rating for lumbar range of motion deficits. Dr. Chan did not assign a rating for lumbar flexion range of motion deficits because Claimant's measurements were invalid. Moreover, Dr. Lesnak specifically noted that Claimant did not exhibit any lumbar range of motion deficits on dual inclinometer testing and thus assigned a 0% rating for lumbar spine range of motion impairment. Accordingly, Claimant is entitled to receive a 5% whole person i9mpairment rating for her April 10, 2016 work accident.

ORDER

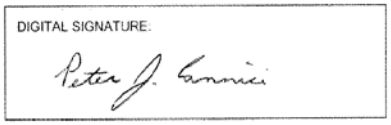
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant reached MMI on March 20, 2017 and suffered a 5% whole person impairment rating to her lumbar spine as a result of her April 10, 2016 admitted industrial injuries.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 6, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury/compensable aggravation to his left shoulder on December 16, 2017.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to medical benefits for his left shoulder injury including the treatment he received at urgent care, Platte Valley Medical Center, and with Dr. Mason.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from December 16, 2016 through December 23, 2016 and from February 16, 2018 and ongoing until terminated by statute.

STIPULATIONS

1. Claimant's average weekly wage is $1,198.15.

FINDINGS OF FACT

1. Claimant is employed by Employer as an inspector with duties that include inspecting oil and gas wells. In December of 2016 Claimant was inspecting oil and gas wells in northern Colorado.

2. On December 15, 2016 Claimant testified that he was out all day performing his normal job duties and that the wind was very strong. Claimant had to fight the wind when opening and closing the driver's side door on his vehicle which made his left arm sore.

3. On December 16, 2016 Claimant testified that it was again very windy with wind gusts he estimated at 40 to 50 miles per hour. Claimant testified that the wind "caught him again" when he opened his driver's door and that the wind yanked or jerked the driver's side door extremely hard on one specific occurrence while he was holding onto the door handle to prevent the door from being sprung out or slammed into the truck.

4. Claimant testified that previously he had let the door go during a wind event and that the door had "sprung" and caused some damage and that he didn't want that to happen again so held onto the door on the date in question.

5. Claimant testified that he felt pain in his left chest and left shoulder. Claimant testified that his chest was hurting, his fingers were tingling, his biceps hurt, and that the top of his left shoulder hurt. Claimant was worried that he was having a heart

attack due to his pain and symptoms. Claimant called his supervisor and went to urgent care.

6. On December 16, 2016 Walk Right In Urgent Care evaluated Claimant. Claimant reported left sided chest pain that started an hour prior after opening a car door. Claimant reported tightness, being sweaty, and nausea. Claimant reported discomfort at a 7/10 in severity localized to the left mid parasternal region and that it did not radiate. Claimant underwent an EKG, was given one dose of SL nitro with reported pain reduction, and was referred to Platte Valley Medical Center (PVMC) for further cardiac treatment. *See* Exhibit 1.

7. On December 16, 2016 Thientu Truong, M.D. evaluated Claimant at PVMC. Claimant reported chest pain while at work as a gas inspector and while driving. Claimant reported left sub sternal chest pain, aching in nature that radiated through the shoulder and down his arm with numbness and tingling of the first three digits of his left hand. Vitals showed Claimant to be hypertensive. Claimant reported that sublingual nitrol had been given to him and completely resolved his pain but that the chest pain had returned. Claimant also reported diaphoresis, shortness of breath, and nausea. Claimant reported never having had chest pain like this before. Claimant's EKG and portable chest x-ray were normal but Claimant was placed in observation. *See* Exhibits 1, D.

8. The next day, Claimant was discharged from PVMC with discharge diagnoses of chest pain, negative stress test, hypertension, hyperlipidemia, and gastro esophageal reflux disease. The hospital course listed Claimant's concerning symptoms of left shoulder pain with some numbness in the fingertips. It also noted that Claimant had done some lifting which may have caused the left shoulder pain. Claimant was discharged in stable condition with no further chest pain and was instructed to follow up with his primary care physician. *See* Exhibits 1, D.

9. On December 22, 2016 Claimant filled out an "employee statement of injury/illness exposure." Claimant reported that he was injured on December 16, 2016. Claimant reported that he pulled muscles in his chest, arm, and shoulder and that he "got out of truck wind gust caught door and I held on door to keep from springing hinges and tore muscles in my arm, shoulder, and chest, wind gusts were 40 to 50 mph that day, chest pains thought I was having heart attack." *See* Exhibit 2.

10. Following the incident, Claimant missed work on December 19, 20, 21, 22, and 23. Claimant was released back to work by his primary care physician Martin McDermott, M.D. who noted Claimant was fit to return to work after December 23, 2016. *See* Exhibits 2, D.

11. On December 23, 2016 Claimant returned to his normal job and continued working his normal duties. Claimant testified that the pain had let up a little bit and that he was able to live with it. Claimant did not seek treatment between the end of December, 2016 and the end of July, 2017, a period of approximately 7 months. Claimant testified

that after golfing in the summer, and realizing that he still had pain and it wasn't getting better on its own, he decided to seek treatment.

12. On July 31, 2017 Claimant was evaluated by Kristin Mason, M.D. Claimant reported that he was injured on approximately December 15 or 16, 2016 when working out on the prairie. Claimant reported there were 40-70 mile per hour wind gusts and that he had to get in and out of his truck multiple times in the day and that on about 10 to 12 occasions the door was blown open, yanking his left arm, and that on at least one occasion he came out of the truck with the door and landed hard on his right leg. The following day Claimant reported he had similar incidents about six to eight times. Claimant reported that he developed pain in the left pectoral area as well as some tingling into the hand and was seen in the emergency department for a cardiac workup that was negative. Claimant reported continued left shoulder pain since as well as pain in the sacroiliac area and some pain in the ball of his foot. Claimant reported that he had seen the chiropractor a few times and that he had continued to work full duty but felt he was getting worse at times. Claimant reported difficulty reaching away from his body, particularly over shoulder level. Claimant reported pain at a 3/10. Claimant reported that he had two prior left shoulder surgeries, one prior right shoulder surgery, and that he just had a total knee replacement in April of 2017. Dr. Mason performed a physical examination and provided the assessment of: patient with prior history of rotator cuff repair x2 now with possible re-tear as well as deformity of the biceps tendon consistent possibly with long head of the biceps tearing; and left SI area pain. Dr. Mason recommended an MRI of the left shoulder. *See* Exhibits 3, D.

13. On August 11, 2017 Claimant underwent an MRI of his left shoulder. The impression provided was: status post rotator cuff repair with a very large full thickness tear involving the majority of the supraspinatus and infraspinatus tendons and possibly extending into the cranial aspect of the subscapularis and teres minor tendons with retraction to near the level of the glenoid and moderate volume loss within all the rotator cuff muscles; full thickness tearing of the long head of the biceps tendon which is retracted and seen within the bicipital groove; mild degenerative changes in the acromioclavicular joint with contrast extending into the subacromial subdeltoid bursa; narrowing of the acromiohumeral distance with remodeling of the undersurface of the acromion; and mild to moderate chondral thinning over the humeral head and over the glenoid posteriorly and superiorly. *See* Exhibit 3.

14. On August 24, 2017 Dr. Mason evaluated Claimant. Claimant reported feeling the same with a pain level of 3/10. Dr. Mason reviewed the MRI results. Dr. Mason noted on physical examination that Claimant was actually able to abduct the left upper extremity to about 130 or 140 degrees. She opined that Claimant was still weak in the rotator cuff muscles and still had a popeye deformity of the left biceps. She assessed a history of prior rotator cuff repair x2 now with a massive re-tear of the supraspinatus, infraspinatus, and biceps longhead tendons and recommended a surgical referral. *See* Exhibits 3, D.

15. On November 14, 2017 Claimant was evaluated by Armodios Hatzidakis, M.D. Claimant reported that December 15 and 16, 2016 were very windy at work and that the wind constantly blew his car door outwards and pulled his arm back with him. Claimant reported that he went to the hospital for his pain and was evaluated and that since his shoulder had continued to be bothersome. Claimant reported that he could not golf anymore and that he had weakness with abduction. Claimant reported 4-5 previous rotator cuff repair surgeries performed by Dr. Cavanaugh all on the left side. Claimant reported that his shoulder had not been bothersome since 2000 until this incident. Claimant also reported that his shoulder was at 35-40% of normal. Dr. Hatzidakis performed a physical examination, took x-rays, and reviewed Claimant's August 2017 MRI. Dr. Hatzidakis assessed: left shoulder glenohumeral joint osteoarthritis with rotator cuff deficiency, history of previous surgery. Dr. Hatzidakis opined that Claimant would likely need a reverse shoulder arthroplasty. Dr. Hatzidakis noted that Claimant could continue with his shoulder as is and proceed with surgical intervention at a later point when Claimant was ready. *See* Exhibit D.

16. On February 5, 2017 William Ciccone II, M.D. performed an independent medical evaluation. Claimant reported that while working on a very windy day, he opened the truck door which pulled his left arm causing an injury to his shoulder. Claimant reported that it happened twice, initially on December 15, 2016. Claimant also noted that he had increasing pain in the chest at the time and thought he was having a myocardial infarction so went to an urgent care facility. Claimant reported a long history of left shoulder problems with four rotator cuff repairs in the shoulder, the first two in the 1990s and the last two in early 2000s. Claimant reported that he did not recall if he had a rating for his shoulder back at that time. Claimant reported that he was given permanent work restrictions in 2000. Claimant reported that he had been able to reach and lift overhead with occasional posterior pain and that he noted that the difference in his shoulder from prior to this injury versus after this injury was that it felt weaker. Dr. Ciccone reviewed medical records and performed a physical examination. *See* Exhibit D.

17. Dr. Ciccone opined that Claimant did not suffer a work related injury to the left shoulder and right hip on December 16, 2016. Dr. Ciccone opined that it was highly unlikely that a car dull pulling on the arm would cause significant injury to the shoulder, even in high winds. Dr. Ciccone also noted that Claimant's pain completely resolved in the emergency department on the day of the injury and that it would be unlikely for someone to suffer an acute rotator cuff tear and then have no pain in the same day. Dr. Ciccone noted that Claimant had a long history of shoulder problems with four rotator cuff surgeries in the past. Dr. Ciccone opined that the findings on the MRI scan were chronic in nature and that muscle loss occurs only in long standing rotator cuff pathology. Dr. Ciccone also noted that Claimant sought out no medical care for the injury for over seven months and that for a significant injury he would have expected medical follow up sooner. Dr. Ciccone opined that a reverse shoulder arthroplasty is appropriate for Claimant's chronic unrepairable rotator cuff pathology. Dr. Ciccone opined that the need for the procedure was not work related. *See* Exhibit D.

18. On February 26, 2018 Dr. Hatzidakis performed surgery on Claimant's left shoulder. The postoperative diagnosis was left shoulder extensive irreparable rotator cuff tear with end-stage glenohumeral osteoarthritis and retained hardware. Dr. Hatzidakis performed a total shoulder replacement. *See* Exhibits 4, D.

16. Claimant testified, and the medical records and evidence establish, that he had four prior left shoulder surgeries.

17. In 1996 Claimant injured his left shoulder after falling and catching himself with his left arm in an abducted and externally rotated position and had a left rotator cuff arthroscope in June of 1996. *See* Exhibit C.

18. In November of 1996 Claimant underwent a left distal clavicle resection. *See* Exhibit C.

19. In October of 2002 Claimant underwent a left rotator cuff surgery. *See* Exhibit C.

20. On August 31, 2009 Claimant was evaluated by Martin McDermott, M.D. Claimant reported moderate pain in both shoulders for years. Claimant reported this was a chronic problem aggravated by work which involved heavy labor. Dr. McDermott assessed joint pain of the shoulder and prescribed naproxen and hydromorphone. *See* Exhibit C.

21. On March 22, 2010 Claimant filled out an orthopedic patient history form. Claimant reported slipping and hitting his shoulders and that he had pain at a 6/10 in both shoulders that was always there. Claimant reported that the right shoulder hurt more that day but that he injured both shoulders at the same time. An MRI of the right shoulder was taken on April 21, 2010 and showed AC inferior spur, severe S tendonosis vs. complete tear, and longitudinal split biceps. *See* Exhibit C.

22. On November 4, 2010 Claimant was evaluated by Tony Euser, D.O. Claimant was there for follow up on right shoulder pain. Claimant also reported concerns of low back pain, left shoulder pain, and right knee pain and Dr. Euser reviewed that they were only authorized to treat the right shoulder. *See* Exhibit C.

23. Dr. Ciccone testified by deposition. Dr. Ciccone specializes in shoulder surgery and performs approximately 20-30 surgeries per month. Dr. Ciccone opined that the August 2017 MRI of Claimant's let shoulder showed no findings that were acute in nature. Dr. Ciccone noted that Claimant's MRI showed prior repairs of the rotator cuff with anchors placed in the humeral head which are used to pull the tendon back to the bone. Dr. Ciccone noted that Claimant's tendon retracted off the bone, and that while it could be an acute finding, in Claimant's case the tendons were retracted all the way back to the glenoid which occurs with more chronic tears. Dr. Ciccone also noted the significant atrophy of the musculature of the rotator cuff that and opined that only occurred with chronic tearing. Dr. Ciccone also opined that when you see remodeling of the

undersurface of the acromion, it means that the humeral head has been high riding for a long period of time which correlates to a chronic rotator cuff dysfunction. Dr. Ciccone also opined that the surgical findings matched the findings from the MRI and that there were no acute findings in the surgical report. Dr. Ciccone opined that surgery was reasonable and necessary for Claimant but that it was not related in any way to his complaints of a work injury on or around December 16 and 17, 2016.

24. Dr. Ciccone opined that the mechanism of injury described by Claimant did not correlate to either the MRI or the surgical findings and that the mechanism of injury described by Claimant did not correlate with an acute injury. Dr. Ciccone opined that catching a door when it was flying open would not have enough traction on the arm to cause the type of problems Claimant had. Dr. Ciccone opined that Claimant's complaints made in December of 2016 could potentially be consistent with a symptomatic flare of underlying degenerative condition and/or pre-existing rotator cuff injuries and that it was more probable than not that Claimant had symptomatology from his underlying condition without a new acute injury or acute aggravation. Dr. Ciccone opined that normal use could cause Claimant to go from being asymptomatic to symptomatic with the condition of Claimant's shoulder and the chronic shoulder pathology Claimant had.

25. Dr. Ciccone testified that a history of four prior rotator cuff surgeries made it more likely than not that Claimants' shoulder would need to be replaced in the future because rotator cuff degeneration is progressive in nature and that once you had a large tear, it usually gets worse with time and then you get the muscle atrophy on top of it. Dr. Ciccone testified that with time the shoulder dysfunction becomes greater and usually more painful and gets worse with time as a natural course of the disease not related to trauma, acute injury, or acute aggravation.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should

consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability of left shoulder

Claimant is required to prove by a preponderance of the evidence that the condition for which he seeks medical treatment was proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). ICAO has noted that pain is “a typical symptom from the aggravation of a pre-existing condition” and a claimant is entitled to medical treatment for pain as long as the pain was proximately caused by the injury and is not attributable to an underlying preexisting condition. *Rodriguez v. Hertz Corp.,* WC 3-998-279 (ICAO February 16, 2001). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet his burden to establish that he sustained a left shoulder injury or compensable aggravation of his left shoulder condition on December 16, 2016. Although Claimant argues that there is no evidence of any other event, incident, or

condition that could have caused Claimant's shoulder to become symptomatic such that he sought medical care in December 2016 other than the wind catching the door, this is not persuasive. The natural progression of Claimant's severe underlying condition is a condition that could have caused Claimant's underlying condition to become symptomatic and Claimant has failed to meet his burden to show, more likely than not, that the incident on December 16, 2016 aggravated his underlying condition.

Claimant reported pain at a 7/10 at the urgent care center. Within a short time, his pain level was reported as down to a 3/10 and he was able to return to full duty work. Dr. Ciccone is credible and persuasive that the MRI showed changes that take a long time to develop and that it showed nothing acute including no acute injury and no acute aggravation to the underlying condition. Prior to the incident with the wind and door at work, Claimant had severe tearing with severe retraction that takes years to develop. Claimant had muscle atrophy that also takes years to develop.

Claimant's reports that he had no problems with his left shoulder in the years leading up to this incident with the door and wind in December of 2016 are not found credible or persuasive. As found above, in August of 2009 Claimant reported that he had moderate pain in both of his shoulders and that he had the pain for "years." Claimant reported that the bilateral shoulder pain was a chronic problem. Over a year later, in November of 2010 Claimant wanted left shoulder treatment and reported concerns of left shoulder pain but Claimant was told that the doctor was only authorized to treat his right shoulder. Although there is a lack of treatment records for the left shoulder during a period of time leading up to this work incident in December of 2016, Claimant clearly reported his left shoulder pain as a chronic problem in August of 2009 and wanted treatment for it in November of 2010 which was denied. It is highly unlikely that the left shoulder pain he reported as a chronic problem in 2009 and that he sought treatment that was denied in 2010 suddenly went away given the amount of extensive damage in his left shoulder shown by MRI imaging.

Dr. Ciccone is credible and persuasive that the findings on the MRI scan were chronic in nature and that the muscle loss only occurs in long stating rotator cuff pathology. Dr. Ciccone's opinion that Claimant did not sustain a work related injury or work related aggravation to his underlying condition is credible and persuasive. Claimant has failed to show, more likely than not, that the incidents at work in December of 2016 aggravated his underlying condition. Rather, it is just as likely that any symptoms Claimant experienced while at work were the result of the natural progression of his pre-existing condition unrelated to his employment.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury/compensable aggravation to his left shoulder. His claim is denied and dismissed.

2. As Claimant did not sustain a compensable injury, his request for medical benefits and temporary indemnity benefits is also denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

W.C. No. 4-790-122-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF RESPONDENTS

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

PINNACOL ASSURANCE,

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for June 28, 2018, in Denver, Colorado. On March 2, 2018, the Claimant filed an Application for Hearing on the issue of medical benefits and Petition to Re-open. Upon receipt of the Claimant's Application for Hearing on March 2, 2018, Respondents requested a pre-hearing conference on the issue of striking the Claimant's March 2, 2018 Application for Hearing. The pre-hearing conference was held on March 23, 2018 before Pre-Hearing Administrative Law Judge (PALJ), John H. Sandberg. Respondents alleged that the statute of limitations barred the Claimant's Application for Hearing. PALJ Sandberg determined that an affirmative defense, *i.e.* "statute of limitations" must be determined by an Administrative Law Judge (ALJ)t from the Office of Administrative Courts (OAC).

Thereafter, the Respondents filed Motion for Summary Judgment, dated April 18, 2018 on the issue of the Claimant's Application for Hearing as herein above specified.

The Motion contained attachments, including Respondents' Final Admission of Liability (FAL) [Exhibit D, attached to Motion]. As of the date of this decision, the Claimant has filed no timely written Response to the Motion for Summary Judgment. The matter was deemed submitted for decision on April 23, 2018 and was referred to ALJ Edwin L. Felter, Jr. on April 27, 2018 for a ruling.

Hereinafter Jesse Taylor shall be referred to as the "Claimant." Cade Drilling, LLC shall be referred to as the "Employer." All other parties shall be referred to by name.

ISSUES FOR SUMMARY JUDGMENT

The issues to be determined by this decision concern whether there are genuine issues of disputed material fact concerning whether the Claimant failed to contest the FAL and request a hearing within the time allowed by the statute of limitations. §8-43-203(b)(ii), C.R.S; AND, whether the Claimant's Petition to Re-Open was filed within the time specified in the statute of limitations pursuant to §8-43-303(1), § § (2)(a), and § § (2)(b). Respondents also raised the affirmative defense of laches.

Respondents bear the burden of proof, by preponderance of the evidence on the "statute of limitations" affirmative defense and the doctrine of laches affirmative defense.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Preliminary Finding

1. A hearing is currently set in this matter for June 28, 2018, pursuant to the Claimant's Application for Hearing. The hearing issues include medical benefits and Petition to Re-open. The Claimant's request to re-open W.C. No. 4-790-122-001 for benefits under §8-43-303(1), § § (2)(a), and § § (2)(b), C.R.S., arise from a dental evaluation performed on November 16, 2017.

Undisputed Facts

2. The Claimant was an employee of the Employer at the time of his injury.

3. On December 16, 2008, the Claimant was injured in the course and scope of his employment. Pinnacol Assurance admitted liability for this claim and benefits were provided pursuant to statute.

4. Over the course of the claim, the Claimant failed to attend numerous medical appointments with his designated provider, Cathy D. Smith, M.D., including an appointment set for April 20, 2010 for a final evaluation and impairment rating. The final evaluation was rescheduled for June 22, 2010 and the Claimant failed to attend this appointment as well (Exhibit A, attached to Motion).

5. The Claimant was contacted in an attempt to reschedule the final evaluation and Dr. Smith's office was advised by the Claimant that he had moved out of state and he would not be returning for any further evaluations (Exhibit B, attached to Motion).

6. On August 3, 2010, Dr. Smith stated the opinion that the Claimant had reached maximum medical improvement (MMI) and Claimant was discharged from treatment due to non-compliance. Dr. Smith provided an impairment rating of 3% of the whole person, based upon the Claimant's last evaluation on March 23, 2010 (Exhibit C, attached to Motion).

7. On August 23, 2010, Respondents filed an FAL, admitting for the 3% whole person impairment rating provided by Dr. Smith and for reasonably necessary and causally related medical treatment and/or medications after MMI (Exhibit D, attached to Motion).

8. The Claimant filed **no** timely objection to the August 23, 2010 FAL. A Final Payment Notice was filed by Respondents on October 22, 2010.

Petition to Re-Open

9. On or about December 7, 2017, the Respondents received a Petition to Re-Open, dated December 4, 2017. This was received buy the Respondents more than ten (10) years from the Final Payment Notice, referenced herein above. The Claimant alleges that this claim should be re-opened due to a change in condition (Exhibit E, attached to Motion).

10. Thereafter, on March 2, 2018, the Claimant filed an Application for Hearing, endorsing medical benefits and Petition to Re-Open as issues for hearing. The hearing is set for June 28, 2018 (Exhibit F, attached to Motion),

11. Upon receipt of the Claimant's Application for Hearing, the Respondents scheduled a pre-hearing conference on the issue of striking the Claimant's March 2, 2018 Application for Hearing.

12. The pre-hearing conference was held on March 23, 2018 before PALJ Sandberg. PALJ Sandberg stated in part, “Respondents’ oral motion to strike the application for hearing as barred by the statute of limitations is, in effect, an affirmative defense that must be pled before OAC. This PALJ is without statutory authority to grant the relief sought, namely, finding as a matter of fact that the petition to reopen is untimely.” Therefore, Respondents request that Claimant’s March 2, 2018 Application for Hearing be stricken was denied (Exhibit G, attached to Motion).

13. On April 18, 2018, the Respondents filed a Motion for Summary Judgment stating that Claimant’s Application for Hearing does not comply with the statute of limitations specified in §8-43-203(2)(b)(ii), C.R.S. and that Claimant failed to apply to re-open this claim in accordance with §8-43-303(1), § § (2)(a), and § § (2)(b), C.R.S.

14. The Respondents attempted to confer with the Claimant regarding the Motion for Summary Judgment. Claimant has not responded to Respondents’ Motion for Summary Judgment.

Ultimate Findings

15. Respondents have established, by a preponderance of the evidence that there is no genuine, disputed issue of material fact concerning Claimant’s failure to comply with the statute of limitations set forth in §8-43-203(2)(b)(ii), C.R.S., and §8-43-303(1), § § (2)(a), and § § (2)(b).

16. It is undisputed that the Claimant has not responded, or denied, in writing, that his Application for Hearing and Petition to Re-Open were not timely.

17. It is undisputed that the Claimant has not alleged that he was **timely** in filing his Application for Hearing or petitioning to re-open this claim. The Claimant has failed to show or allege that there is a genuine issue of disputed material fact with respect to the timing of the Application for Hearing and Petition to Re-Open.

18. It is undisputed that Respondents took the position that Claimant had failed to comply with the statutes of limitations. It is undisputed that the Claimant failed to contest the FAL and file an Application for Hearing on or before September 23, 2010, thirty days after the FAL was filed. It is also undisputed that the Claimant did not petition to re-open his claim: on or before December 16, 2014, six years after the date of injury; on or before September 20, 2012, two years after the last permanent partial disability benefits became due or payable; on or before March 23, 2012, two years after the last medical benefits became due or payable. The Claimant’s failure to object to the FAL and request a hearing automatically closed the issue of overpayment. Because Claimant failed to comply with the statutory provisions cited above, the Claimant is barred from pursuing any additional benefits as this claim is closed by operation of law.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, the Motion for Summary Judgment is supported by documents. As further found, the Claimant has not responded in writing, nor has he alleged that his Application for Hearing was within the statute of limitations pursuant to §8-43-203(b)(ii), C.R.S. As further found, Claimant has not alleged that his Petition to Re-Open was within the statute of limitations pursuant to §8-43-303(1), (2)(a), and (2)(b), C.R.S.

b. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegations of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the documentary evidence establishes that it is undisputed that the Claimant's Application for Hearing and Petition to Re-Open exceeded the statutes of limitations.

c. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Respondents' Motion for Summary Judgment shows specific facts probative of a right to summary judgment; and, the Claimant has failed to show that there is a genuine issue of disputed material fact for hearing.

Claimant's Failure to Comply with the Statutes of Limitations

d. As found, the Claimant failed to object to Dr. Smith's finding that Claimant reached MMI as admitted in the FAL. A workers' compensation claim automatically closes after thirty days "as to the issues admitted" in a FAL if the claimant does not contest the FAL in writing and does not request a hearing on any disputed issues. § 8-43-203(2)(b)(II)(A), C.R.S. The phrase "as to the issues admitted" refers "to issues on which the employer affirmatively takes a position, either by agreeing to pay benefits or by denying liability to pay benefits." *Dyrkopp v. Indus. Claim Appeals Office*, 30 P.3d 821, 822 (Colo. App. 2001). "Once a case has closed, the issues resolved by the FAL are not subject to further litigation unless they are re-opened." *Berg v. Indus. Claim Appeals Office*, 128 P.3d 270, 272 (Colo. App. 2005); and, an uncontested FAL "renders the final admission binding on all parties," *Cash v. Ciboloa Const.*, W. C. No. 4-192-809 [Indus. Claim Appeals Office (ICAO) April 17, 1998—not precedent but persuasive].

e. A claim may be re-opened at any time within six years after the date of injury based upon fraud, overpayment, an error, mistake or a change in condition. § 8-43-303(1), C.R.S. In addition, an ALJ may re-open a claim upon fraud, overpayment, an error, a mistake or a change in condition at "any time within two years after the date the last temporary or permanent disability benefits or dependent benefits excluding medical benefits become due or payable." § 8-43-303(2)(a), C.R.S. An ALJ may also re-open a claim "only as to medical benefits on the ground of an error, a mistake, or a change in condition" any time within two years after the last date medical benefits become due and payable. § 8-43-303(2)(b), C.R.S.

f. Self-represented claimants are bound by the same procedural rules as represented parties. *See Yadon v. Southward*, 64 P.3d 909, 912 (Colo. App. 2002) ("[P]ro se litigants must adhere to rules of procedure applicable to attorneys."); *Darby v. Trilogy Consulting Corp.*, W.C. No. 4-263-154 (ICAO May 14, 1996) ("[P]ro se litigants must adhere to the same principles and procedures as those who are qualified to practice law, and are not entitled to any special treatment.").

g. The statute of limitations is an affirmative defense and unless raised, it is waived. *See Kersting v. Indus. Comm'n,* 30 Colo. App. 297, 567 P.2d 394 (1977). To paraphrase the late U.S. Supreme Court Justice Oliver Wendell Holmes, Jr: "It has nothing to do with justice. It is a housekeeping device of the law to clean out old cases." When the time specified in a statute of limitations has passed, it could be conceptualized that there is a conclusive presumption that there will be prejudice to the side on the receiving end of the lawsuit. As found, herein above, the Respondents timely raised this affirmative defense herein.

Doctrine of Laches

h. The affirmative defense of laches must be based on an unconscionable delay in enforcing rights that has prejudiced the Respondents. *See Colorado State Board of Medical Examiners v. Ogin*, 56 P.3d 1233 (Colo. App. 2002). Laches does not grow out of the mere lapse of time, but rather is founded upon the inequity of permitting a claim to be enforced after some change in the condition or relation of the property or parties. *Arkins v. Arkins,* 77 P. 256 (Colo. App. 1904). Thus, Respondent must show: (a) an unconscionable delay; and, (b) **prejudice to Respondent,** which the Respondents have not done in this case. "Whether the elements of the doctrine are proved essentially presents a question of fact to be determined upon the evidence in the case." *Colorado State Board of Medical Examiners, supra.*

i. The doctrine of laches does not apply in the present case. It is undisputed that Respondents took the position that the substantial period of time that had passed between the Claimant's injury and the Claimant's Petition to Re-Open prejudiced the Respondents' ability to defend their position. Respondents have not produced any evidence that the Claimant's delay was unconscionable or that it prejudiced the Respondents' ability to defend their position. A mere conclusory statement that the doctrine of laches applies in insufficient.

Burden of Proof

.j. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Respondents have sustained their burden concerning the applicability of the statutes of limitations, but have failed their burden concerning the applicability of the doctrine of laches.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Summary Judgment on the issue of Claimant's Application for Hearing is hereby granted in favor of the Respondents.

B. The hearing of June 28, 2018 is hereby vacated.

D. Claimant is not entitled to and Respondents are not liable for any additional benefits on the closed claim W.C. No. 4-790-122-001.

DATED this_____day of June 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on February 9, 2017.

2. Whether Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical treatment for his February 9, 2017 industrial injury.

FINDINGS OF FACT

1. Claimant is a 62-year-old male who worked for Employer as a Night Stocker. He began his employment in July 2011. His job duties involved stocking merchandise in Employer's grocery store.

2. Claimant testified that on February 9, 2017 he was placing canned goods on shelves in Employer's store. He explained that lifting and bending activities while stocking the shelves caused right lower back pain, right hip symptoms and right leg numbness. Although Claimant did not identify a specific, discrete event that caused his symptoms, he remarked that bending forward from his knees to stock bottom shelves precipitated his pain.

3. After completing his overnight work shift on February 9, 2017 Claimant visited personal physician Laurence Williams, M.D. for an examination. Claimant reported that he had developed pain in his lower back and right hip as a result of standing and kneeling while stocking shelves for Employer. Dr. Williams assigned light duty work restrictions for the period February 10, 2017 through February 17, 2017.

4. On February 10, 2017 Claimant reported his injuries to Employer. He specifically noted that, as a result of stocking shelves for two weeks, he developed increasing pain in his right lower back, hip and leg.

5. Employer referred Claimant to Workwell Occupational Medicine for treatment. Claimant visited Sara Harvey, M.D. for an examination. He reported that he had been stocking groceries in the can and soup aisle from his knees. Claimant noted pain on the right side of his lower back, hip and leg. He mentioned that he had suffered prior, similar symptoms. Dr. Harvey diagnosed Claimant with lower back pain and right-sided sciatica. She assigned work restrictions of no squatting and no lifting exceeding 10 pounds. Dr. Harvey prescribed physical therapy two times per week for three weeks.

6. On March 21, 2017 Claimant visited Paul Ogden, M.D. at Workwell. Dr. Ogden diagnosed Claimant with lower back pain and right-sided sciatica. He noted that

Claimant was "a bit better, but symptoms wax and wane." Dr. Ogden remarked that Claimant was "not back to his baseline" because he suffered intermittent tingling and numbness in the right lower extremity. He requested additional physical therapy and chiropractic treatment.

7. The medical records reflect that Claimant has suffered a long-history of degenerative disc disease. A January 22, 2011 MRI revealed significant lumbar spine degeneration that included a right far lateral disc herniation, bilateral disc bulges, mild to moderate spinal canal narrowing and bilateral facet degenerative changes. The medical records reveal that Claimant has experienced intermittent, waxing and waning lower back symptoms since 2011.

8. Claimant testified that he experienced significant back pain as a result of his job duties by December 2011. He thus ceased to perform his job as a Night Stocker and obtained modified duty employment facing and conditioning the aisles at Employer's store for the following four years. Claimant explained that during his four years of modified employment his lower back pain returned to manageable levels. However, Claimant continued to periodically receive treatment for his lower back pain and sciatica symptoms. By October 2016 Employer informed Claimant that modified duty of facing and conditioning was no longer available and he would be required to return to his regular position of Night Stocker.

9. On November 1, 2017 Kathy McCranie, M.D. conducted an independent medical examination of Claimant. She reviewed Claimant's medical records and performed a physical examination. Claimant reported that he began suffering right lower back pain and right lower extremity numbness in approximately 2011 or 2012. Dr. McCranie commented that by May 2012 Claimant was diagnosed with degenerative disc disease of the lumbosacral spine based on an MRI from the previous year. She remarked that Claimant was experiencing a flare-up of symptomatology and had been advised that "he was possibly doing too much work for a 56-year-old with his spine issues." Dr. McCranie noted that Claimant subsequently received follow-up evaluations for sciatica symptoms during July 2015 and February 2016.

10. Dr. McCranie recounted that Claimant had worked modified duty for Employer from 2012 through December 2016 based on work restrictions from his personal physician. When requested by new management to return to his regular duties as a Nigh Stocker Claimant reported right-sided lower back pain and right-sided lower extremity numbness. Dr. McCranie noted that Claimant developed the same symptoms that Dr. Williams had identified in 2015. Because Claimant denied any specific incident or injury in the present matter, Dr. McCranie determined that his current symptoms are "a continuation of his long-standing degenerative disc condition." She summarized that "it is expected" that an individual with a history of degenerative disc disease and a herniated disc "would have symptomatology with increased activity. The increased activity does not cause a new or different injury. Instead, there is an expected waxing and waning of symptomatology with changes in activity level."

11. On April 25, 2018 the parties conducted the post-hearing evidentiary deposition of Dr. McCranie. Dr. McCranie maintained that Claimant suffered from long-standing degenerative disc disease of the lumbar spine. She explained that Claimant's degenerative disc disease caused pain down his right leg or sciata because of nerve root impingement. Dr. McCranie remarked that Claimant's expected course of symptoms involved continuing lower back and lower extremity pain that would wax and wane over time. She determined that there was no objective evidence that Claimant suffered a new injury or aggravated his pre-existing condition while performing his job duties on February 9, 2017. In fact, she explained that Claimant's condition would have worsened regardless of whether he had been working during February 2017 because of the natural progression of his degenerative lumbar spine condition.

12. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on February 9, 2017. The record reveals that Claimant has suffered a long-history of degenerative disc disease. A January 22, 2011 MRI revealed significant lumbar spine degeneration that included a right far lateral disc herniation, bilateral disc bulges, mild to moderate spinal canal narrowing and bilateral facet degenerative changes. The medical records reveal that Claimant has experienced intermittent, waxing and waning lower back symptoms since 2011. In fact, by December 2011 Claimant ceased to perform his job as a Night Stocker and obtained modified duty employment facing and conditioning the aisles at Employer's store for the following four years. Nevertheless, Claimant continued to periodically receive treatment for his lower back pain and sciatica symptoms. By October 2016 Employer informed Claimant that modified duty of facing and conditioning was no longer available and he would be required to return to his regular position of Night Stocker.

13. Claimant explained that on February 9, 2017 he was placing canned goods on shelves in Employer's store. He commented that lifting and bending activities while stocking the shelves caused right lower back pain, right hip symptoms and right leg numbness. Although Claimant did not identify a specific, discrete event that caused his symptoms, he remarked that bending forward from his knees to stock bottom shelves precipitated his pain. However, the record demonstrates that Claimant's symptoms merely constituted the natural progression of his pre-existing degenerative disc disease.

14. Dr. McCranie persuasively determined that Claimant's current symptoms are "a continuation of his long-standing degenerative disc condition." She summarized that "it is expected" that an individual with a history of degenerative disc disease and a herniated disc "would have symptomatology with increased activity." The increased activity would not cause a new or different injury because there is an expected waxing and waning of symptoms with changes in activities. Dr. McCranie summarized that there was no objective evidence that Claimant suffered a new injury or aggravated his pre-existing condition while performing his job duties on February 9, 2017. In fact, she explained that Claimant's condition would have worsened regardless of whether he had been working during February 2017 because of the natural progression of his degenerative lumbar spine condition. Based on Claimant's significant history of degenerative disc disease with waxing and waning symptoms as well as the persuasive

opinion of Dr. McCranie, Claimant's work activities on February 9, 2017 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment. Instead, Claimant's symptoms constituted the natural progression of his pre-existing condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the

natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on February 9, 2017. The record reveals that Claimant has suffered a long-history of degenerative disc disease. A January 22, 2011 MRI revealed significant lumbar spine degeneration that included a right far lateral disc herniation, bilateral disc bulges, mild to moderate spinal canal narrowing and bilateral facet degenerative changes. The medical records reveal that Claimant has experienced intermittent, waxing and waning lower back symptoms since 2011. In fact, by December 2011 Claimant ceased to perform his job as a Night Stocker and obtained modified duty employment facing and conditioning the aisles at Employer's store for the following four years. Nevertheless, Claimant continued to periodically receive treatment for his lower back pain and sciatica symptoms. By October 2016 Employer informed Claimant that modified duty of facing and conditioning was no longer available and he would be required to return to his regular position of Night Stocker.

8. As found, Claimant explained that on February 9, 2017 he was placing canned goods on shelves in Employer's store. He commented that lifting and bending activities while stocking the shelves caused right lower back pain, right hip symptoms and right leg numbness. Although Claimant did not identify a specific, discrete event that caused his symptoms, he remarked that bending forward from his knees to stock bottom shelves precipitated his pain. However, the record demonstrates that Claimant's symptoms merely constituted the natural progression of his pre-existing degenerative disc disease.

9. As found, Dr. McCranie persuasively determined that Claimant's current symptoms are "a continuation of his long-standing degenerative disc condition." She summarized that "it is expected" that an individual with a history of degenerative disc disease and a herniated disc "would have symptomatology with increased activity." The increased activity would not cause a new or different injury because there is an expected waxing and waning of symptoms with changes in activities. Dr. McCranie summarized that there was no objective evidence that Claimant suffered a new injury or aggravated

his pre-existing condition while performing his job duties on February 9, 2017. In fact, she explained that Claimant's condition would have worsened regardless of whether he had been working during February 2017 because of the natural progression of his degenerative lumbar spine condition. Based on Claimant's significant history of degenerative disc disease with waxing and waning symptoms as well as the persuasive opinion of Dr. McCranie, Claimant's work activities on February 9, 2017 did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment. Instead, Claimant's symptoms constituted the natural progression of his pre-existing condition.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: June 7, 2018.

ISSUE

- Whether Claimant proved, by a preponderance of credible evidence, that the medical treatment in the form of a right L5 selective nerve root block is reasonably necessary to cure and relieve Claimant of the effects of his May 21, 2014, industrial injury?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ finds as fact:

1. Claimant sustained an admitted injury to his lumbar spine on May 21, 2014.

2. Claimant treated with Dr. Sanjay Jatana until 2017, and then with Drs. David Wong and Allison Fall.

3. Dr. Wong's progress note dated August 16, 2017, noted Claimant's history of epidural steroid injections with partial temporary relief, analgesic anti-inflammatory medications, nerve stabilizers, and non-pharmaceutical modalities that produced partial improvement. On examination, Dr. Wong observed normal spinal contours, a desiccated disc at L4-5, and a mild desiccation at L5-S1. He assessed Claimant with low back pain, a possible element of irritation from prior surgery, an element of mechanical back pain secondary to degenerative changes, and pain on extension.

4. Dr. Wong recommended EMG and nerve conduction studies to clarify acute versus chronic radicular issues. If acute changes were observed, he was inclined to consider additional injections. Dr. Wong did not conclude his report with a definitive recommendation regarding the medical necessity of additional injections, and did not address Claimant's pre-injection status or functionality. Dr. Wong also did not mention whether there were any documented changes in response to the previous injections.

5. Dr. Fall examined Claimant on September 29, 2017. Claimant advised her that Dr. Wong recommended an injection. Claimant reported a 40% improvement generally, but could not provide a percentage improvement because of the injection. Dr. Fall referred Claimant for a right L5 selective nerve root block (SNRB) for diagnostic and therapeutic purposes. Dr. Fall did not document objective pain reduction or functional improvement following prior injections administered by Dr. Jatana. Her September 29, 2017 report accompanied a November 8, 2017 injection request to Respondents.

6. Respondents denied the prior authorization request for the SNRB on November 14, 2017 as not medically certified. Insurer supported its denial with Dr. Siva Ayyar's November 10, 2017 peer review report. Dr. Ayyar stated that the Colorado Chronic Pain Medical Treatment Guidelines require an 80% improvement in pain scores or reporting following receipt of a prior injection. In addition, the Guidelines required evidence of functional improvement with markers including evidence of a return to baseline function, a return to increased work duties, and measureable improvement in physical activity goals, which Dr. Fall did not address. Dr. Ayyar recommended denial of

the request for SNRB prior authorization because the Dr. Fall's request did not satisfy the Guideline's requirements.

7. Claimant returned to Dr. Fall on December 1, 2017. Dr. Fall noted that the 40% improvement referenced in her September 2017 report was overall improvement, not a response to a previous injection. Claimant reported an improvement in leg pain and in his ability to walk after his prior injection. Dr. Fall reported, "He tells me he was much improved with a great improvement in his leg pain after the prior injection. He had three months of relief. He was able to walk more and be more functional." Dr. Fall renewed the prescription and continued Claimant's work restrictions. Although she did not specifically address Dr. Ayyar's concerns about objective support for the recommendation, she clearly described pain relief and increased function that lasted for three months.

8. Dr. Fall's office faxed her renewed request for the right L5 SNRB to Respondents on December 19, 2017. The transmittal status information on Claimant's first seven pages of exhibits reflect that Insurer received pages 5/8, 6/8, 7/8, 2/8, 3/8, 8/8, and 1/8 of an 8 page transmission. These pages include:

- a three-page transcription of Dr. Fall's dictation from Claimant's December 1, 2017, appointment in which she recommended a SNRB;
- a Concentra Provider/Specialist Referral Form in which Dr. Fall referred Claimant to Dr. Kawasaki for a SNRB;
- a Patient Referral form;
- a Notification by Authorized Treating Provider completed and signed by Dr. Fall;
- a letter from a staff person at Colorado Pain and Rehabilitation to Insurer's adjuster for the claim, requesting authorization and providing, "Pursuant to Rule 16-9, if we do not receive a response by 12/28/17 (per Holiday), the procedure is deemed authorized and we will proceed with scheduling."

This information contained the procedure requested, Dr. Fall's notification as an authorized treatment provider, and an appropriate request for authorization.

9. Claimant did not proffer page 4/8 of the report. From context, the ALJ discerns that page 4/8 is the second page of a two-page Patient Referral indicating a service date of 12/01/2017 on a Concentra Advanced Specialists form. The form appears complete on the first page. The Judge finds that it is highly unlikely that page 4/8 contained information contrary to the rest of the document.

10. On January 2, 2018, Respondents denied the request for prior authorization of the SNRB as not medically certified, based on Dr. Ayyar's December 29, 2017 peer review report. Dr. Ayyar noted an absence of improved pain scores and an absence of

evidence as to functional improvement such as improved baseline function, a return to increased work duties, and increased physical activity goals. Dr. Ayyar noted continued dependence on adjuvant medications. Consequently, he found the request to be not medically necessary under the Medical Treatment Guidelines.

11. Claimant testified at hearing that he received his most recent injection in early 2017. He experienced pain relief and increased function, including the ability to walk farther, sleep better, and work more. These benefits lasted approximately three months. Claimant testified that his pain has steadily increased and his ability to work and sleep have steadily decreased since the injection wore off. Claimant testified that he wanted the SNRB. He understood Dr. Wong to have opined that surgery was the alternative in the absence of the SNRB.

12. The Judge finds Claimant to be a credible witness. His testimony was consistent with the medical records, and his demeanor was sincere.

13. The Judge finds Dr. Ayyar's report biased, as he is a current employee of Insurer. In addition, his review was of incomplete information about Claimant's experience.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado (Act), sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits – Reasonably Necessary

Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of the industrial injury. "Medical treatment" involves not only treatment or care designed to improve or maintain a claimant's condition, but also relief from symptoms including pain. *See Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1999). Respondents may challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care in a case. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The question of whether a particular medical treatment is reasonable and necessary is one of fact for determination by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claims Office,* 989 P.2d 251 (Colo. App. 1999). The claimant bears the burden of proof to establish the right to specific medical benefits. *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). Factual determinations related to this issue must be supported by substantial evidence in the record. Section 8-43-301(8), C.R.S. Substantial evidence is that quantum of probative evidence, which a rational fact finder would accept as adequate to support a conclusion without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411, 415 (Colo. App. 1995).

Pursuant to W.C. Rule of Procedure 17-2 (A), 7 Code Colo. Regs. 1101-3, health care practitioners are to use the Medical Treatment Guidelines referenced as Exhibits at W.C. Rule of Procedure 17, 7 Code Colo. Regs. 1101-3 (the “Guidelines”) when furnishing medical aid under the Workers’ Compensation Act. The ALJ may also appropriately consider the Guidelines as an evidentiary tool. Certain cases may require treatment modalities that differ from those generally prescribed in the Guidelines, but otherwise the Guidelines are the accepted professional standards governing care under the Act absent presentation of evidence that a deviation from them is necessary. *Hall vs. Industrial Claim Appeals Office*, 74 P.3d 459 (Colo. App. 2003).

Respondents argue that the recommended injection be denied because it is not reasonable and necessary. Respondents rely on the conclusions offered by Dr. Ayyar, their paid Peer Reviewer. Dr. Ayyar in part relied on the Dr. Fall’s notes September 5, 2017, and December 1, 2017 in formulating his opinion that the recommended injections were outside of the Guidelines and thus, not reasonably necessary. Dr. Ayyar applied “page 112 of the Colorado Chronic Pain Disorder Medical Treatment Guidelines” which states, “Epidural injections may be repeated only when a functional documented response lasts for 3 months.” Dr. Ayyar continues, “Colorado defines a functional documented response as an 80% reduction in pain scores and evidence of functional improvement, with markers of the same including evidence of return to baseline function, return to increased work duties and a measurable improvement in physical activity goals.”

Dr. Ayyar supports his determination of denial by stating that Claimant did not receive 80% improvement in functioning following his prior injection. However, in reaching this conclusion, Dr. Ayyar only reviewed the records from the 11/08/17 and 12/01/17 visits with Dr. Fall. Claimant testified at hearing that he had his most recent injection in “early, 2017”. Dr. Fall noted that Claimant did experience “three months of

relief" in her December 1, 2017 report, although she did not note when he had the prior injection. Further, Dr. Fall noted that while Claimant noted he was "40% better…[h]e tells me that he has difficulty giving a percentage, however, he was much improved with a great improvement in his leg pain after the prior injection." Regarding increased functionality, Dr. Fall noted, "[h]e is able to walk more and be more functional." Claimant further testified that he was able to work more, stretch more, and sleep better following his most recent injection. As for "physical activity goals," in her December 1, 2017, report, Dr. Fall noted, "the hope is to avoid surgery." Claimant reiterated at hearing that he would like to avoid surgery and that he believes the recommended injection could help achieve this goal.

Claimant has not been released from care and has not reached maximum medical improvement. As such, the recommended right L5 selective nerve root block is reasonable, necessary and related medical treatment.

Compliance with Rule 16

Workers' Compensation Rules of Procedure (WCRP) Rule 16-9(A) states, "[t]he Notification process is for treatment consistent with the Medical Treatment Guidelines . . . Providers may, but are not required to, utilize the Notification process to ensure payment for medical treatment that falls within the purview of the Guidelines. Therefore, lack of response from the payer within the time requirement set forth in section 16-9(D) shall deem the proposed treatment/service authorized for payment." WCRP 16-9(C) states, "[n]otification may be submitted using the 'Authorized Treating Provider's Notification to Treat' (Form WC 195)". WCRP Rule 16-9(D) states, "payers shall respond to a Notification submission within five (5) business days from receipt of the request with an approval or contest of the proposed treatment."

Dr. Fall properly submitted a Notification by an Authorized Treating Provider to Insurer on December 19, 2017. It was not until December 29, 2017, seven (7) business days (not including December 25 due to the Christmas holiday) after the initial Notification, that Respondents submitted the request to their internal peer reviewer (called the "Peer Review Services Division") to assess the reasonable, necessity of the recommended injections. On January 2, 2018, eight (8) business days (not including January 1 due to the New Year's Day holiday) after the initial Notification, that Respondents' issued their denial of the recommended injections. Respondents' failed to comply with the time requirement set forth in Rule 16(D) and as such, the recommended injections are authorized.

Claimant has proven, by a preponderance of credible evidence, that the requested SNRB is reasonable and necessary to cure and relieve the effects of the May 21, 2014 industrial injury at this time.

ORDER

1. Respondents have failed to comply with the time requirements set forth in WCRP Rule 16-9(D) following a proper Notification by an Authorized Treating Provider.

2. Claimant has met his burden of proof by a preponderance of the evidence that the recommended right L5 selective nerve root block is reasonable, necessary and related medical treatment.

3. Respondents are liable for payment of the costs associated with the L5 selective nerve root block.

4. All issues not ruled upon are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence that he suffered a compensable injury on December 19, 2015?

- If Claimant proved a compensable injury, what part or parts of his body were injured as a result of the accident?

- The parties stipulated to an average weekly wage in the amount of $1,215.

FINDINGS OF FACT

1. Claimant works for Employer as a field technician. On December 19, 2015, he slipped and fell while carrying a ladder down an icy slope. He fell onto the left side of his body.

2. Claimant reported the injury to his supervisor and was directed to the emergency room for initial treatment. He was evaluated at the Memorial Hospital emergency department later that day. On examination, he was diffusely tender to palpation of the left upper arm, left shoulder, left trapezius, and left hip. There was an abrasion on the left hip. X-rays of the left arm and hip were normal. He was diagnosed with contusions of the left hip and left upper arm and abrasion of the left hip.

3. After leaving the ER, Claimant spoke with his supervisor and was referred to Concentra for ongoing care.

4. Claimant saw Dr. Nicholas Kurz at Concentra on December 21, 2015. He reported left-sided soreness, especially of the left upper arm. He did not mention neck or upper back pain. No physical exam was documented in the record. Dr. Kurz diagnosed contusions of the left arm, left hip, and by, and referred Claimant for physical therapy.

5. Claimant returned to Concentra on December 30, 2015, and saw Dr. Larimore. He indicated "the left shoulder and arm are better," and his left hip was "fine." His main complaint on that visit was "bilateral upper back and neck stiffness, pain, and achiness." Examination of his neck showed tenderness of the paraspinal muscles at C3-C7 and the trapezius muscles on both sides, but no palpable muscle spasms. The cervical spine itself was nontender. Cervical range of motion was full but painful. Spurling's maneuver was positive. He also had tenderness to palpation of theT1-T4 paraspinal muscles on the left and right sides. Dr. Larimore opined the left arm, left hip, and left thigh contusions had "resolved," but added a new diagnosis of "cervical strain." He prescribed ibuprofen and referred Claimant to physical therapy.

6. Claimant had at least one physical therapy session through Concentra.

7. On January 13, 2016, Claimant saw Dr. Kenneth Ginsburg at Concentra. He stated his symptoms had resolved and requested a full duty release. He was released from care at MMI with no impairment or restrictions.

8. Claimant was a credible witness. The medical records by and large support his testimony regarding the parts of his body that developed symptoms after, and as a result of, the accident. There is no documented record of any trapezius or upper back symptoms or treatment in at least the three years preceding the accident. The initial ER records confirm pain in his left arm, left hip, and left trapezius. Dr. O'Brien's opinion that Claimant's injuries were strictly limited to the left arm and left hip is not persuasive, because he fails to note the pain in the left shoulder and left trapezius documented in the ER records.

9. Claimant proved he suffered compensable injuries as a result of his slip and fall accident on December 19, 2015. Claimant sustained strains and contusions of his left hip, arm, and shoulder, and a cervical strain.

10. The treatment Claimant received at the emergency room on December 19, and at Concentra in December 2015 and January 2016, was authorized, reasonably necessary, and related to his compensable injuries.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

As found, Claimant proved he suffered compensable injuries as a result of the December 19, 2015 accident. Based on the evidence presented, the ALJ concludes Claimant sustained left arm, shoulder and hip strains and contusions, and a cervical strain. The Memorial Hospital ER and Concentra were authorized, and the treatment they provided was reasonably necessary and related to Claimant's compensable injuries.

ORDER

It is therefore ordered that:

1. Claimant's claim in W.C. No. 5-048-516 (DOI 12/19/2015) is compensable.

2. Respondents shall provide reasonably necessary medical treatment to cure and relieve the effects of Claimant's compensable injuries.

3. To the extent not already covered, Respondents shall pay for the treatment Claimant received at the Memorial Hospital emergency department on December 19, 2015, and the treatment he received from Concentra in December 2015 and January 2016.

4. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 11, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Has Claimant, by clear and convincing evidence, overcome the DIME opinion of Dr. Stephen Gray on the issues of Causation, MMI, and Impairment?

II. Is Claimant entitled to ongoing medical treatment as a result of his admitted work injury which occurred on September 22, 2015?

III. Is Claimant entitled to Temporary Total Disability ("TTD") payments from October 14, 2015 and ongoing?

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant suffered an admitted work-related injury which occurred on September 22, 2015. Claimant was employed by Employer as a Carpenter. Claimant suffered an episode of severe dehydration, resulting in rhabdomyolysis, while performing his work duties in extreme heat.

2. Claimant reported severe muscle cramps, resulting in treatment in the emergency room later that evening. He was treated with intravenous fluids to relieve his symptoms, and released. The medical records available indicate that Claimant had highly elevated Creatine Kinase ("CK") levels shortly after the incident, after which said levels gradually subsided.

3. Prior to this September 22, 2015 work related injury, the Claimant had suffered a right knee, non-work-related injury which resulted in arthroscopic knee surgery on July 10, 2015 by Dr. John Redfern, MD. The Claimant had a second surgery on his right knee injury on April 1, 2016.

4. Claimant was placed at MMI for this rhabdomyolysis injury on October 13, 2015 with a 0% PPD rating by P.A. Stephen Byrne. (Ex. C). Dr. Daniel Olson, MD concurred with this assessment on January 22, 2017. (Ex. D). Respondents filed a Final Admission of Liability based on that MMI report on February 14, 2017. The Claimant filed a timely objection to the Final Admission of Liability and sought review of the issues of MMI and rating via the Division IME process.

5. The Claimant proceeded to a Division IME with Dr. J. Stephan Gray on July 19, 2017. Upon completion of his evaluation, Dr. Gray agreed with the October 13, 2015 MMI date and that the Claimant suffered no permanent disability rating as a result of the work-related injury. He also opined that "the persistent right leg and knee pain is not causally related to the 9/22/17 work-related heat exposure." (Ex F, p. 12).

6. In Dr. Gray's DIME report, he references his review of Dr. Redfern's report from June 16, 2015: " This patient has degenerative joint disease in the medial compartment as well as a degenerative medical meniscus tear….He has had the symptoms for long-standing duration with no improvement." (Ex. F, p. 2).

7. The DIME report references comments by Dr. Redfern following the second right knee surgery, which had occurred on April 1, 2016. On June 16, 2016, Dr. Redfern notes: His [Claimant's] symptoms are consistent with his examination and arthroscopic findings of knee arthritis. Unfortunately, he has not had pain relief with the most recent knee arthroscopy." (Ex F, p. 3).

8. In the final DIME "Assessment", Dr. Gray concludes: "Work related heat exposure with probable rhabdomyolysis on September 22, 2015, *resolved without permanent sequelae."* (Ex. F, p. 12). (emphasis added).

9. Respondents filed a new Final Admission of Liability based on Dr. Gray's findings at the DIME on August 18, 2017, The Claimant filed a timely Objection to the Final Admission of Liability along with the Application for Hearing at issue at this hearing to overcome the DIME physician's findings.

10. At hearing, Claimant provided a handwritten note from the Claimant's primary care physician, Dr. Glover, which stated that she was "concerned that his right upper and lower leg pain and continued elevated serum CK is due to his rhabdomyolysis overheating incident", as well as several blood lab results noting a minimally elevated CK level. This note provides no statement that the findings and opinions are provided within a reasonable degree of medical probability. Dr. Glover also recommended that Claimant undergo an EMG.

11. Respondents submitted two reports from their medical expert, Dr. J. Tashof Bernton, dated January 26, 2017 and September 26, 2017. Dr. Bernton also testified at hearing, consistent with the opinions provided in his reports.

12. Dr. Bernton opined in his report and in his live testimony that the Claimant suffered heat exposure with an episode of rhabdomyolysis, with very mild impairment of his renal function, which returned to baseline by the time the Claimant was placed at MMI on October 13, 2015. He opined that the Claimant had the proper treatment at that time and that the condition resolved without impairment or need for additional medical treatment.

13. Dr. Bernton stated that the slightly elevated CK levels noted on the Claimant's more recent blood tests were clinically insignificant and provided a number of studies and articles to support this opinion. He also noted that such minimally

elevated levels could be related to a number of other issues unrelated to the Claimant's heat exposure. He noted that these slightly increased levels do not support Dr. Glover's concern or need for any type of medical workup, nor any concern regarding the Claimant's prior episode of rhabdomyolysis. Dr. Bernton opined that one would only be concerned if the level of CK was above 500, which would then be determined to be clinically significant.

14. Dr. Bernton opined that Claimant's reported right leg symptoms are related to his pre-existing right knee degenerative issues and subsequent surgeries. Dr. Bernton does recommend treatment for the non-work-related right knee injury/symptoms outside of the Claimant's workers' compensation claim. He concurs with the conclusions reached in the DIME report of Dr. Gray.

15. Dr. Bernton noted in his report of January 30, 2017 that while sleeping on the night of his work-related heat exposure incident, Claimant woke with very heavy muscle pain and cramping in **both** legs, which is indicative of the symptoms of the heat exposure. However, presently, the Claimant is complaining of ongoing symptoms which he relates to the heat exposure only in the **right** leg.

16. In his testimony, Dr. Bernton explained that the "muscle breakdown" that Claimant suffered during this episode was temporary, and did not result in *damage.* He explained: "Rhabdomyolysis is an event, not a disease". He further opined that the EMG as recommended by Dr. Glover might be useful if Claimant suffered from a muscle disease, but not from one acute episode of rhabdomyolysis.

17. Claimant testified at hearing. He described severe muscle cramping during this event, unlike pain he had experienced before. After several visits with Dr. Glover, his muscle issues remain, both above and below the right knee. Claimant asserts that the pain he is experiencing is muscular in nature, distinguishable from the pain from within his knee. He desires further treatment for the pain he is experiencing.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion of Dr. Gray Regarding MMI, Causation, & Impairment

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

F. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

G. While sincere in his belief that his ongoing symptoms are related to his work injury, Claimant has not met his burden here. The DIME report has not been overcome. The scant medical evidence provided by Dr. Glover's notes amounts, at most, to a difference in medical opinion between her and Drs. Gray, Olson, Bernton, and P.A. Byrne. Claimant suffered no longstanding injury to his right leg from his work injury. The rhabdomyolysis, painful as it was, was an unfortunate event which resolved with the brief passage of time; within three weeks of his injury.

Medical Benefits and TTD Benefits

H. The ALJ therefore concurs with Dr. Gray on the issues of MMI, Causation, and Impairment. The Claimant, therefore, is not entitled to TTD payments, nor is he in need of further medical treatment as a result of his work injury.

ORDER

It is therefore ordered that:

1. Claimant's Claim for Workers Compensation benefits is denied and dismissed.

2, All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 13, 2018

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable injury.

II. Whether Claimant established, by a preponderance of the evidence, that he is entitled to reasonable, necessary, and related medical treatment.

III. Whether Respondent's are bound by the MMI date and impairment rating provided by Claimant's authorized treating physician which was issued prior to a determination as to whether Claimant suffered a compensable injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was hired by Employer on September 10, 2012. (Ex. N, pg. 84)
2. Claimant worked as a warehouse worker for Employer, a furniture company. Claimant's usual work hours were 5:00 a.m. to 1:30 p.m., Sunday through Thursday.
3. Claimant's job required him to pull furniture purchased by customers from the warehouse and bring it to the dock for pick up by the customers. Claimant was also responsible for stocking furniture in the warehouse in the proper location. In order to move the furniture, Claimant used a dolly and a lift.
4. Claimant alleges he injured his right shoulder and low back at work.
5. Claimant testified that he was injured at work on December 4, 2014, while moving a recliner at a loading dock. He stated that as a result of this injury, he had a sharp stabbing pain in his back, and pain in his right shoulder. (Transcript P 21, hereinafter references to the transcript denoted as "TP" with the page number). He testified that prior to December 4, 2014, he had never had low back pain. (TP 37).
6. Claimant testified that on December 4, 2014, his shift began at 5 AM (TP 55), that he was disciplined that morning for inventory errors (TP 35, 36), and that later that morning he was injured, although he did not remember the time of his injury. (TP 54).
7. Claimant testified that he reported his injury to his manager, Steve Harris, who then contacted another manager, Jeff Harris. Claimant testified that his managers had him wait until the emergency room opened (TP 21). Claimant testified that he did not fill out a report, but that he signed paperwork regarding

his injury (TP 19, 20), and that he was sent for treatment by his manager. (TP 22).

8. Claimant testified he went to the emergency room on December 4, 2014, (TP 39), and arrived at approximately 6:32 AM, according to the ER records. (TP 55). He testified that he told the ER doctor how he was injured, i.e., that he was moving a recliner at work. (TP 22).

9. On December 4, 2014, after leaving work, Claimant presented to Medical Center of Aurora at approximately 6:30 a.m. Claimant complained of pain in his right shoulder, upper arm, and forearm. Claimant alleged his symptoms developed one week earlier. Claimant also stated that he had similar symptoms approximately one month earlier, but they were relieved with swimming. At this visit, Claimant did not indicate his right shoulder and arm pain developed as a result of a lifting injury at work or anywhere else. Moreover, the medical report from this visit specifically notes Claimant "DENIES" thoracic pain and lumbar pain. (Ex. A, pg. 2.)

10. The ALJ is aware that some of the records generated by Claimant's December 4, 2014, ER visit reference "back" pain. However, the ALJ resolves this conflict in the evidence by finding that Claimant was complaining of pain in his right shoulder region and upper extremity and this region encompasses the front and back of his shoulder which Claimant might have also referred to as his back. This is supported by the fact that the x-ray report which indicates "chest, back, and shoulder pain" indicates that only frontal and lateral chest x-rays were taken. There were no x-rays taken of Claimant's lumbar spine or low back. Moreover, the ER report from Dr. Girard, dated December 4, 2014, specifically indicates Claimant denied thoracic and lumbar pain. (Ex. A, pg. 2.) Therefore, the ALJ finds Claimant did not report lumbar or thoracic back pain when he presented to the ER on December 4, 2014.

11. Due to Claimant's pain complaints and presentation regarding the development of his symptoms, which did not include any type of lifting injury or acute injury due to some type of traumatic event, an ultrasound of his right upper extremity was performed to rule out a blood clot. The indication for the ultrasound was "Right shoulder and upper extremity pain and edema for one week." The ultrasound was negative. The final impression of the physician evaluating Claimant was that there was no evidence of deep venous thrombosis or superficial venous thrombophlebitis within the right upper extremity.

12. Claimant testified that on the morning after his injury, i.e. on December 5, 2014, he met with Employer's director of HR and risk management (Ms. Lambert) to fill out paperwork for his WC claim. Although that paperwork (Exhibit B) reflects Claimant reported an injury of November 28, 2014, and that he woke up with pain on December 4, 2014, Claimant testified that he did not remember telling Ms. Lambert that he was injured on November 28, 2014, or telling her that he woke up with pain on December 4, 2014. (TP 47, 57, 59). Claimant testified that even

though he signed the forms stating that he was injured on November 28, 2014, he was not injured that day because he did not work that day.

13. Ms. Lambert testified that she was Employer's director of human resources and risk management, and worked in the same building (albeit at a different section) where Claimant worked, and that on Friday, December 5, 2014, Mr. Steve Harris called to advise her that Claimant wanted to report a work-related injury, but that Mr. Harris had no information about this injury. (TP 77). She directed Mr. Harris to have Claimant meet with her in her office. She then met with Claimant and prepared paperwork regarding his allegation of a work-related injury. She stated that she typed, then hand wrote, as Claimant reported the details of his alleged injury. She credibly testified that Claimant told her that he had been injured at work on November 28, 2014 at 11:40 AM, which she recorded on an "incident report". (TP 79, 80, Exhibit B, P 9-10).

14. Although Claimant testified that he did not work on November 28, 2014 (because it was a Friday which was his normal day off), Ms. Lambert stated that November 28, 2014 was the day after Thanksgiving, and Claimant's time records (which she stated she personally obtained from the company's records) showed Claimant worked his full shift that day. (TP 91, Exhibit K, P 67 reflecting Claimant worked 7.98 hours that day).

15. Ms. Lambert testified that Claimant told her that he was injured on November 28, 2014, around 11:40 AM at the dock area, where he was pulling "upholstery" (which she stated could be an upholstered recliner, a sofa, or similar upholstered furniture). (TP 80- 81). She stated that Claimant was not specific as to what he was doing at the time, and did not know what the specific item was, other than "upholstery" and knew of no witnesses to his alleged injury. (TP 80-81, 85).

16. Ms. Lambert testified that Claimant told her that although he had been hurt on November 28, 2014, he had not reported his injury to Employer until December 4, 2014. (TP 83). Claimant told her that on December 4, 2014, he woke up in pain, and that he let Mr. Steve Harris know that his pain was "unbearable", and that he went to the emergency room at HealthOne. (TP 83). Claimant told Ms. Lambert that the ER staff told him that he had a "bruise inside his arm". (TP 85).

17. Ms. Lambert stated she completed the forms and then had Claimant read them to be sure she had stated things correctly, and that he reviewed and signed those documents. (TP 85, see exhibit B). She stated that Claimant never stated to her that he had been injured on December 4, 2014, and that if he had, she would have changed the forms. While Claimant was present in her office, she called and set up an appointment for him to be seen that day by a WC physician. (TP 87). Later that day, she received a report from that WC physician (Dr. Broghammer at HealthOne), but that medical record showed a different date of injury. (TP 89). Although Claimant had told her he had been hurt on November 28, 2014, Dr. Broghammer's record (Exhibit C) shows Claimant reported he had been hurt on December 4, 2014, at 5:30 AM. (TP 88, see exhibit C, P 23, top right). To clarify whether this was an error by Dr. Broghammer, she asked her

staff to call his office, and they confirmed Claimant had reported to them a different date of injury than what he had told her. (TP 88-89).

18. Ms. Lambert testified that she had an investigation done to see whether anyone could support Claimant's allegations of a work-related injury, whether on November 28 or December 4, 2014, and that she found no one that knew anything that would support Claimant's allegations of a work injury. (TP 89, 90). The ALJ finds Ms. Lambert's testimony to be credible.

19. Mr. Jeff Harris testified that he was an assistant warehouse manager for Employer. He stated that on December 4, 2014, around 5:30 AM (i.e., the same time Claimant reported to Dr. Broghammer he was injured at work), he met with Claimant to discipline him for repeated inventory errors. He testified that Claimant made no statement of any work-related injury during that meeting. He later became aware that Claimant alleged that he had been hurt that day. He became aware that Claimant had also told Ms. Lambert that he was hurt at work on November 28, 2014. He found no records or witnesses to support any of claimant's allegations. (TP 98).

20. Mr. Jeff Harris testified that in March 2016 he fired Claimant, for timecard theft, because Claimant was found sleeping in his vehicle while "on the clock" at work. He testified that he confronted Claimant on this issue, and Claimant denied the allegations and stated he had been working. Mr. Harris reviewed store surveillance tapes which showed that while "clocked in", Claimant had left the workplace and gone to his vehicle in the parking lot where he was found sleeping. (TP 101-104).

21. The ALJ finds the testimony of Mr. Jeff Harris to be credible.

22. Steve Harris testified that he was Claimant's direct supervisor. He testified that on December 3, 2014, due to Claimant's poor job performance, he prepared a disciplinary report, and that on December 4, 2014, around 5:15 AM, he and Jeff Harris met with Claimant to administer the discipline. Mr. Steve Harris testified that the disciplinary meeting lasted around 15 minutes and Claimant made no reference to any work-related injury. (TP 114-116, 117).

23. Mr. Steve Harris testified that approximately 10-15 minutes after the disciplinary meeting, Claimant came up to him and said that he was sick and asked to go home. (TP 117). Claimant did not allege a work-related injury, because if he had, Mr. Steve Harris would have filled out an incident report. (TP 118). Mr. Steve Harris stated that he never filled out any injury forms for Claimant nor did he send Claimant for any treatment. Mr. Steve Harris stated that Claimant left the workplace on December 4, 2014, and that neither Claimant nor his wife returned to the work facility that day. (TP 118).

24. Mr. Steve Harris testified that Friday, December 5, 2014, was Claimant's scheduled day off, but Claimant came to the workplace and told him that he had seen a doctor and that he had a work injury to report. (TP 119-120). Mr. Harris replied that Claimant had not mentioned any work injury to him, otherwise he

would have filled out an incident report. Mr. Steve Harris then contacted Ms. Lambert and sent Claimant to her office. (TP 120).

25. The ALJ finds the testimony of Mr. Steve Harris to be credible.

26. Dr. Lawrence Lesnak testified for Employer as an expert in physical medicine and rehabilitation. He stated that he had reviewed Claimant's medical records and had evaluated Claimant. He stated that Claimant's testimony that he had never had prior back problems prior to his alleged work injury of December 4, 2014 was not correct; during the three months prior to Claimant's alleged work injury, Claimant had been twice treated for various pain complaints, which included low back pain, for which he had been prescribed opioids. He testified that his examination of Claimant was normal; although Claimant had subjective complaints, there was no objective pathology. (TP 132, 135).

27. Dr. Lesnak testified that the medical records showed numerous inconsistencies in Claimant's allegations as to how he allegedly injured himself at work and did not support Claimant's allegation of a work-related injury. The initial record from the Emergency Room at HealthOne from December 4, 2014 shows Claimant reported arm pain for the past week, which was similar to symptoms which he had a month previous. Claimant was diagnosed with cellulitis, a skin infection, or myofasciitis. Moreover, the medical report from that visit indicates Claimant specifically denied back pain, and the ER report contains no reference to any work-related condition or event. (TP 138-140).

28. Dr. Lesnak commented that Claimant's treatment records following his allegation of a WC injury on December 4, 2014 contained numerous different mechanisms of injury reflecting different renditions given by Claimant to different providers regarding how he was injured. (He referenced at least six different versions. TP 141). He stated that in his experience, when there are different versions, the very first medical record is usually the most accurate. (TP 141). He stated that there was a significant difference between the December 4, 2014 ER report and Dr. Broghammer's December 5, 2014 report. The ER report (from Claimant's alleged date of injury) reflected no work-related injury but instead arm pain which had been going on for a week, while Dr. Broghammer's report on the next day (hours after claimant told Ms. Lambert that he was hurt at work on November 28, 2014) referenced a December 4 2014 low back injury due to lifting at work.

29. Dr. Lesnak concluded within a reasonable degree of medical probability that Claimant did not suffer any injury at work on December 4, 2014. Dr. Lesnak also stated that the test results from Claimant's psychological screening suggested Claimant had an underlying somatic disorder/somatoform disorder. Dr. Lesnak stated that patients with these types of disorders commonly have unreliable subjective complaints at best and frequently embellish/exaggerate their symptomatology and frequently have no objective findings to support their symptomatology, as is the case with Mr. Irvine.

30. The ALJ finds Dr. Lesnak's opinions, as set forth in his report, and testimony, to be credible and persuasive.

31. The ALJ finds Dr. Lesnak's opinions, as set forth in his report, and testimony, to be credible and persuasive, based on a number of factors, which include the testimony at hearing, and the records submitted at hearing. The records submitted at hearing demonstrate, among other things, the various stories told by Claimant regarding the initial development of symptoms without reference to a work injury up to an injury that occurred at work in many different ways. For example:

- On December 4, 2014, after leaving work, Claimant presented to Medical Center of Aurora at approximately 6:30 a.m. Claimant complained to Dr. Girard of pain in his right shoulder, upper arm, and forearm. Claimant alleged his symptoms developed one week earlier. Claimant also stated that he had similar symptoms approximately one month earlier, but they were relieved with swimming. At this visit, Claimant did not indicate his right shoulder and arm pain developed as a result of a lifting injury at work or anywhere else. Moreover, the medical report from Dr. Girard regarding this visit specifically notes Claimant "DENIES" thoracic pain and lumbar pain.

- On December 5, 2014, Claimant presented to HealthOne and was evaluated by Dr. Broghammer. Claimant presented with complaints of right shoulder pain, upper back pain, and the additional complaint of lower back pain. Claimant stated that he injured himself yesterday at work. Claimant stated "he was moving a recliner off a lift" at 5:30 a.m. He also stated that "He was lifting with both hands when he noticed some symptoms in his right mid and upper back that extends into his lower back." (Ex C, pg. 21,23) Claimant also stated he had mild symptoms the day before, which would have been December 3, 2014, but no particular incident was noted.

- On December 29, 2014, Claimant returned to HealthOne and was seen by Dr. Hiep Ritzer. At this appointment, Claimant provided a different mechanism of injury. Dr. Ritzer noted Claimant stated:

> He was lifting this recliner by himself, lifting it 18 inches from the ground to the lift. He had to put it in a vertical position. It started to fall towards him, and he tried to stabilize it. In the process, he jerked his right shoulder." (Ex. C, pg. 26)

As set forth above, Claimant indicated that instead of being injured while lifting, he was actually injured while trying to catch or stabilize a recliner that he had lifted and moved 18 inches and placed on a lift, in a vertical position, and was falling towards him.

- On January 28, 2015, Claimant was evaluated by Dr. Davis. Claimant reported to Dr. Davis that "he was moving a sofa when he felt sudden pain in his back and shoulder."

  Although there might not be much of a difference between a recliner and sofa, in that both are pieces of furniture, the fact that it is noted in the medical records that Claimant is telling different stories about what he was lifting, or preventing from falling, when he got hurt, is relevant in this case. Moreover, the fact that Claimant told Dr. Ritzer that he was injured while trying to catch a recliner from tipping over or falling, which he had allegedly placed in a vertical position, does not make sense. Most recliners are fairly square, compared to a sofa which is usually rectangular. Therefore, a recliner would not fall over if put on any of its sides, compared to a couch being put in a vertical position on one of its sides.

- On February 27, 2015, Claimant was evaluated by Dr. Samuel Chan, a physiatrist. Claimant did not indicate he suffered an injury while lifting a single recliner or couch. Instead, Claimant told Dr. Chan that he developed right shoulder and low back pain the day after lifting approximately 200 recliners, which each weighed 300 pounds.

- On November 10, 2017, while being evaluated by Dr. Lesnak, Claimant alleged he was injured while lifting a recliner that weighed between 170 and 200 pounds.

32. In addition, Mr. Jeffrey Harris, the assistant warehouse manager, was asked whether Claimant's allegation that he was injured while lifting a recliner 18 inches from the ground to the lift makes sense and would be something Claimant would do to perform his job. Mr. Harris credibly testified that the way the warehouse is set up and the and the way the warehousemen perform their job, such contention could not be true. Mr. Harris stated that such contention could not be true because:

> The way our -- our -- our warehouse is set up and the way we put away merchandise we have what we call "order pickers" and it's a -- it's a machine that kind of looks like a forklift but it has a long bed, and at its lowest height it's probably four inches from the ground. And the way we put away merchandise, we have dollies. We have several dollies throughout the warehouse, and in order to put those merchandise away you -- you are instructed to grab a dolly, put it under there and lift it, and take it to your lift, and in its lifted position you set it down on the bed. That's how you lower any merchandise that we would have.

Q. Does anyone lift recliners 18 inches off the ground?

A. No, we do not. (TP 99.)

33. Therefore, the ALJ finds that Claimant's job did not require him to lift a recliner or couch 18 inches up off the ground and onto a lift as described by Claimant and finds that Claimant did not lift a recliner or couch in such a manner on November 28, 2014, or December 4, 2014.

34. Claimant contends in his proposed order that the different statements contained in the record regarding how and when he allegedly got injured are "understandable as each physician describes what happened in different terms;" and that the "difference between a sofa and a recliner is not significant;" and "lifting from the ground is not significantly different from lifting onto a lift." The ALJ is mindful that the words used by a Claimant to describe an accident and resulting injuries might not always be exactly the same. The ALJ is also mindful that even if a Claimant were to describe an accident and resulting injuries exactly the same to each medical provider, each medical provider might not document the information provided by Claimant in the same manner. However, the ALJ concludes that the inconsistencies in this case are more than the typical variations commonly seen in such matters. Therefore, the ALJ finds that the inconsistencies and variances involved in this case render Claimant's testimony unreliable and not credible.

35. In addition, Claimant testified that after he reported his injury to Employer on December 4, 2014, his manager had him wait for the ER to open before having Claimant go to the ER. Such testimony does not make any sense and is not credible.

36. The ALJ found the testimony of the Employer witnesses to be credible for a number of reasons. First, the testimony of each Employer witness is consistent with each other's testimony. Second, the testimony of the Employer witnesses is consistent with the Employment and medical records submitted at hearing. For example, Mr. Steve Harris testified that on December 4, 2014, shortly after going over Claimant's poor performance issues with Claimant, Claimant returned to his office and said he was not feeling well and asked if he could go home. Mr. Steve Harris testified that Claimant did not say he injured himself at work. Consistent with Mr. Harris' testimony, Claimant went to the ER and complained of various symptoms which primarily involved his right upper extremity. Claimant did not tell the ER physician that his symptoms were the result of an injury, let alone an injury at work. Moreover, once Claimant alleged he suffered a work related injury on December 4, 2014, and told his Employer on December 5, 2014, the matter was immediately addressed by Employer the same day and Claimant was provided a list of designated medical providers to evaluate Claimant's alleged work injury, and Claimant was seen that same day. Had Claimant reported an alleged injury on December 4, 2014, as alleged by Claimant, the ALJ finds that Employer would have immediately addressed the matter as was done the following day.

37. Claimant is not found to be credible based on a number of reasons. These reasons include, but not are not limited to:

- The inconsistencies contained in the medical records and his testimony regarding how he allegedly got hurt and when his various symptoms started.
- The inconsistencies in the employment records which include the statements made by Claimant to Ms. Lambert indicating the date he allegedly got hurt and the date listed in the medical records. As found above, Claimant told Ms. Lambert that he was injured on November 28, 2014, and then told the physicians he was injured on December 4, 2014.
- The fact that Claimant told his supervisor on December 4, 2014, about 10-15 minutes after being disciplined for poor performance, that he was sick and wanted to go home and did not mention he allegedly injured himself. Then, Claimant presented to the ER and did not indicate his symptoms were due to an injury or work injury.
- The inconsistencies between Claimant's testimony and the testimony of the Employer witnesses which this ALJ found credible.
- The overall demeanor of Claimant on the witness stand when testifying about his alleged injury and his demeanor when confronted with the numerous inconsistencies.
- The allegation that after reporting his injury to his supervisor on December 4, 2014, he was told by his supervisor to wait for the ER to open before going to the ER.

38. The ALJ finds Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable work injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERAL PROVISIONS

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App.

2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Where the medical evidence is subject to conflicting inferences, it is the ALJ's sole prerogative to resolve the conflict. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable injury.

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998).

A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005).

The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

In this case, Claimant has failed to meet his burden of proof and establish that he suffered a compensable work injury. Claimant was found to not be credible regarding the onset of his symptoms and the cause of his symptoms.

Employer's witnesses have credibly refuted Claimant's testimony that he reported his injury to his supervisors on the morning of December 4, 2014, and that he was sent to the ER by his supervisor. Most significantly, the ER record from that day is inconsistent with Claimant's allegations of a work injury. That record makes no reference to an injury, let alone a work-related injury to claimant's low back. Instead, the medical record from Dr. Girard states Claimant denied back pain. The ER record from Dr. Girard shows that Claimant's complaint was arm pain that he had for one week, waxing and waning, and that he told the ER staff that he had similar pain a month previously.

In addition, Employer's risk manager credibly testified that on December 5, 2014, Claimant told her that he had been injured on November 28, 2014, that he had woken up in pain on the morning of December 4, 2014, and thus he had not reported his alleged injury until the morning of December 4, 2014. The risk manager prepared documents during her interview with Claimant and had Claimant review them. Claimant did so and then signed those documents. The risk manager then sent Claimant for treatment with a workers' compensation physician. That physician's records reflect that, approximately two hours after having told employer's risk manager that he was injured on November 28, 2014, Claimant told his physician he was injured on December 4, 2014.

During cross-examination, Claimant offered no explanation for this. He stated that he did not remember telling the risk manager that he was injured on November 28, 2014, and asserted that he could not have been injured on November 28, 2014 because he did not work that day. This testimony, like much of Claimant's testimony, was not credible. While testifying, many of Claimant's statements were inconsistent, and his demeanor on the stand, as observed by this ALJ, demonstrated to this ALJ that Claimant was not being truthful about injuring himself at work. Claimant offered no witness testimony nor credible and persuasive evidence (apart from his own testimony) to support his allegation that he was injured at work.

Moreover, Claimant's changing explanation to various providers as to how he allegedly got hurt further diminished Claimant's credibility.

The ALJ also found the opinions rendered by Dr. Lesnak in his report and testimony that Claimant did not suffer a work injury to be credible and persuasive.

Therefore, the ALJ concludes Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 14, 2018

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that the left knee surgery requested by Peter D. Wood, M.D. is reasonable, necessary and causally related to his February 18, 2015 admitted industrial injury.

FINDINGS OF FACT

1. Claimant worked for Employer as a Sound Technician. His job duties involved monitoring noise generated at oil and gas drilling sites.

2. On February 18, 2015 Claimant was working at a drilling site in Wyoming. While carrying two batteries to power acoustic drilling equipment Claimant stepped into a prairie dog hole that was covered with snow. Claimant twisted his left knee and injured his left leg. He suffered immediate knee swelling.

3. Claimant informed his supervisor of the accident. The supervisor advised Claimant to visit his Primary Care Physician (PCP) for treatment.

4. On February 19, 2015 Claimant visited Heather Gray, PA-C at Partners in Family Health Medicine for an evaluation. PA-C Gray noted bruising and swelling in Claimant's left knee and ordered x-rays. The x-rays were negative for a fracture. PA-C Gray referred Claimant for an orthopedic consultation and left knee MRI.

5. Claimant received two days off work from Employer. Claimant explained that he then resumed full duty employment and repeatedly sought Workers' Compensation treatment. However, Employer continually denied Claimant's requests.

6. On October 27, 2016 Claimant returned to his PCP for an evaluation of his continuing left knee pain. PA-C Gray diagnosed arthralgia or joint pain of the left knee and was "suspicious" of a meniscal tear. She again referred Claimant for an orthopedic evaluation and left knee MRI.

7. On November 14, 2016 Claimant underwent a left knee MRI. The MRI reflected progressive patellofemoral chondromalacia with a prominent full thickness defect and degenerative fraying at the medial meniscus. The MRI did not reveal a lateral meniscus tear.

8. Respondents eventually admitted Claimant's Workers' Compensation claim. Claimant chose US Health Works Medical Group as his Authorized Treating Physician (ATP).

9. On November 16, 2016 Claimant visited US Health for an initial left knee evaluation. Claimant recounted that he had stepped in a hole in a field while carrying batteries at work and twisted his left knee. Donald Downs, PA-C remarked that diagnostic testing of Claimant's left knee revealed "chondromalacia with some lateral subluxation of the patella." He also noted that there was "some truncation of the medial meniscus body which may reflect degenerative fraying or small non-displaced free edge tear." PA-C Downs diagnosed Claimant with a left knee sprain and "likely" meniscal tear that was caused by his industrial accident on February 18, 2015. He permitted Claimant to continue his regular job duties and referred him to an orthopedist for a possible meniscal repair.

10. On December 16, 2016 Claimant visited Orthopedic Surgeon Peter D. Wood, M.D. for an examination. Claimant reported persistent, worsening left knee pain for approximately two years as a result of stepping into a hole at work. In reviewing Claimant's left knee MRI Dr. Wood noted "a slightly truncated medial meniscus but a distinct tear is not visible." He administered an injection and prescribed physical therapy.

11. Claimant subsequently underwent physical therapy and received injections. The physical therapy aggravated his symptoms and the injections only provided temporary pain relief.

12. On April 7, 2017 Claimant returned to Dr. Wood for an examination. Dr. Wood noted that Claimant continued to suffer significant discomfort despite a trial of Visco supplementation. He thus requested authorization for a left knee arthroscopy with a lateral release and chondroplasty.

13. Respondents denied the surgical authorization request based on the Rule 16 report of William Ciccone, M.D. dated April 17, 2017. Dr. Ciccone explained that the requested left knee surgery was not related to Claimant's February 18, 2015 industrial injury and was instead designed to address Claimant's pre-existing, degenerative patellofemoral changes. Moreover, Dr. Ciccone reasoned that Claimant was unlikely to benefit from the proposed surgery. He detailed that:

> On the orthopedic examination of December 16, 2016, the claimant has pain along the patellofemaoral joint with pain associated with kneeling, squatting, and stair climbing. These are symptoms that one would associate with degenerative changes in the patellofemoral joint and not to an acute injury. The minor twisting injury suffered by the claimant would not aggravate or accelerate the degenerative changes already occurring within the claimant's knee. I believe that the claimant's current symptoms are related to the natural progression of the cartilage degeneration within the knee and not to the work injury. I do not believe that the need for left knee arthroscopy is related to a work injury and therefore should be denied under worker's compensation insurance.

14. On July 25, 2017 Dr. Wood renewed his request for left knee surgery. He explained that, although Claimant had a pre-existing left knee condition, it was not

symptomatic until the February 18, 2015 industrial accident. Dr. Wood also noted that there was little treatment left to offer Claimant.

15. On August 8, 2017 Dr. Ciccone issued a letter again denying the left knee surgery requested by Dr. Wood. He explained that Claimant's MRI scan did not reveal an acute injury but only chronic, degenerative disease. The twisting injury did not aggravate or accelerate Claimant's pre-existing degenerative condition. Dr. Ciccone concluded that Claimant's February 18, 2015 industrial injury did not cause his degenerative changes or patellar misalignment. Accordingly, Dr. Ciccone recommended that the requested surgical procedure should not be authorized under the Workers' Compensation system.

16. On January 5, 2018 Claimant underwent a second left knee MRI. The MRI revealed a medial meniscus tear and full thickness cartilage defects in all compartments of Claimant's knee.

17. On January 22, 2018 Dr. Wood again requested authorization for Claimant's left knee surgery. He explained that Claimant's recent left knee MRI revealed "an oblique tear of the medial meniscus" and "significant chondromalacia" in all three compartments.

18. On January 28, 2018 Dr. Ciccone issued a Rule 16 medical record review again denying the left knee surgery requested by Dr. Wood. After reviewing Claimant's medical records, Dr. Ciccone reiterated that Claimant's symptoms are related to his continuing degenerative disease and not an acute injury to his left knee. He explained that degenerative arthritis is a progressive disease that is consistent with Claimant's intermittent symptoms. Dr. Ciccone noted that Claimant suffered a minor, twisting injury at work on February 18, 2015 with no acute damage reflected on the initial MRI scan. He explained that the January 5, 2018 MRI revealed progressive arthritic changes in the left knee involving all three compartments as well as a medial meniscus tear. Dr. Ciccone summarized that Claimant suffered a minor twisting injury on February 18, 2015, recovered quickly and "did not require another evaluation for over 18 months after the injury." He attributed Claimant's worsening symptoms to the natural progression of his pre-existing left knee condition.

19. On March 23, 2018 Claimant underwent an independent medical examination with John Papilion, M.D. Dr. Papilion reviewed Claimant's medical records and conducted a physical examination. He concluded that Claimant suffers from left knee progressive, degenerative arthritis as reflected on the January 5, 2018 MRI. In addressing Dr. Wood's request for surgery in the form of an arthroscopy, chondroplasty and lateral release, Dr. Papilion determined that the proposed procedure will not provide long-term relief for Claimant's degenerative arthritis. Furthermore, although Claimant had some evidence of a medial meniscus tear on MRI, his examination was not consistent with the diagnosis. Dr. Papilion thus concluded that Claimant's medial meniscus tear on MRI was not the likely pain generator for his symptoms.

20. Claimant has failed to establish that it is more probably true than not that the left knee surgery requested by Dr. Wood is reasonable, necessary and causally

related to his February 18, 2015 admitted industrial injury. Initially, on February 18, 2015 Claimant stepped in a hole in a field while carrying batteries at work and twisted his left knee. A November 14, 2016 left knee MRI reflected progressive patellofemoral chondromalacia with a prominent full thickness defect and degenerative fraying at the medial meniscus. The MRI did not reveal a lateral meniscus tear. Claimant subsequently underwent physical therapy and received injections. However, after conservative measures failed, Dr. Wood requested authorization for a left knee arthroscopy with a lateral release and chondroplasty. However, relying on the Rule 16 opinions of Dr. Ciccone, Respondents repeatedly denied Dr. Wood's surgical request.

21. Dr. Ciccone explained that Claimant's MRI scan did not reveal an acute injury but only chronic, degenerative changes to his left knee. Although Dr. Wood explained that Claimant's pre-existing condition did not become symptomatic until the February 18, 2015 twisting incident, Dr. Ciccone persuasively reasoned that the February 18, 2015 event did not aggravate or accelerate Claimant's left knee degenerative changes. After reviewing a second left knee MRI from January 5, 2018 Dr. Ciccone explained that degenerative arthritis is a progressive disease that is consistent with Claimant's intermittent symptoms. Dr. Ciccone noted that Claimant suffered a minor, twisting injury at work on February 18, 2015 with no acute damage reflected on the initial MRI scan. He explained that the January 5, 2018 MRI revealed progressive arthritic changes in the left knee involving all three compartments as well as a medial meniscus tear. Dr. Ciccone summarized that Claimant suffered a minor twisting injury on February 18, 2015 and recovered quickly. He attributed Claimant's worsening symptoms to the natural progression of his pre-existing left knee condition.

22. Dr. Papilion agreed with Dr. Ciccone's analysis. He concluded that Claimant suffers from left knee progressive, degenerative arthritis as reflected on the January 5, 2018 MRI. In addressing Dr. Wood's request for surgery in the form of an arthroscopy, chondroplasty and lateral release, Dr. Papilion determined that the proposed procedure will not provide long-term relief for Claimant's degenerative arthritis. Despite Dr. Wood's request for left knee surgery, the bulk of the persuasive medical evidence reveals that Claimant suffered a minor twisting incident on January 18, 2015 that did not cause his need for the requested surgical procedure. Instead, Claimant's need for left knee surgery is more likely attributable to the natural progression of his chronic, degenerative condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the

rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has failed to establish by a preponderance of the evidence that the left knee surgery requested by Dr. Wood is reasonable, necessary and causally related to his February 18, 2015 admitted industrial injury. Initially, on February 18, 2015 Claimant stepped in a hole in a field while carrying batteries at work and twisted his left knee. A November 14, 2016 left knee MRI reflected progressive patellofemoral chondromalacia with a prominent full thickness defect and degenerative fraying at the medial meniscus. The MRI did not reveal a lateral meniscus tear. Claimant subsequently underwent physical therapy and received injections. However, after conservative measures failed, Dr. Wood requested authorization for a left knee arthroscopy with a lateral release and chondroplasty. However, relying on the Rule 16 opinions of Dr. Ciccone, Respondents repeatedly denied Dr. Wood's surgical request.

6. As found, Dr. Ciccone explained that Claimant's MRI scan did not reveal an acute injury but only chronic, degenerative changes to his left knee. Although Dr. Wood explained that Claimant's pre-existing condition did not become symptomatic until the February 18, 2015 twisting incident, Dr. Ciccone persuasively reasoned that the February 18, 2015 event did not aggravate or accelerate Claimant's left knee degenerative changes. After reviewing a second left knee MRI from January 5, 2018 Dr. Ciccone explained that degenerative arthritis is a progressive disease that is consistent with Claimant's intermittent symptoms. Dr. Ciccone noted that Claimant suffered a minor,

twisting injury at work on February 18, 2015 with no acute damage reflected on the initial MRI scan. He explained that the January 5, 2018 MRI revealed progressive arthritic changes in the left knee involving all three compartments as well as a medial meniscus tear. Dr. Ciccone summarized that Claimant suffered a minor twisting injury on February 18, 2015 and recovered quickly. He attributed Claimant's worsening symptoms to the natural progression of his pre-existing left knee condition.

7. As found, Dr. Papilion agreed with Dr. Ciccone's analysis. He concluded that Claimant suffers from left knee progressive, degenerative arthritis as reflected on the January 5, 2018 MRI. In addressing Dr. Wood's request for surgery in the form of an arthroscopy, chondroplasty and lateral release, Dr. Papilion determined that the proposed procedure will not provide long-term relief for Claimant's degenerative arthritis. Despite Dr. Wood's request for left knee surgery, the bulk of the persuasive medical evidence reveals that Claimant suffered a minor twisting incident on January 18, 2015 that did not cause his need for the requested surgical procedure. Instead, Claimant's need for left knee surgery is more likely attributable to the natural progression of his chronic, degenerative condition.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for left knee surgery as recommended by Dr. Wood is denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

W.C. No. 5-050-078-02 is an occupational disease claim for bilateral carpal tunnel syndrome alleging a date of injury of April 4, 2017 wherein New Hampshire was the insurance carrier until April 13, 201-based on a stipulation of the parties and finding of the ALJ. W.C. No. 6-056-383 is an occupational disease claim for bilateral carpal tunnel syndrome, alleging a date of injury of May 16, 2017 wherein travelers was the insurance carrier. On January 21, 2018, Prehearing ALJ (PALJ) Michael J. Barbo ordered a consolidation of both cases for hearing.

Claimant's Exhibits 1 through 6 were admitted into evidence, without objection. Respondents New Hampshire's Exhibits A through M were admitted into evidence, without objection. Respondent Travelers; Exhibits A through J and L through N were admitted into evidence without objection. Claimant objected to Travelers' Exhibit K, and it was withdrawn.

At the conclusion of the hearing, the ALJ ordered post-hearing briefs. Claimant's opening brief was filed on or about April 16, 2018. Respondent New Hampshire's answer brief was filed on or about April 20, 2018. On or about April 27, 2018, Claimant advised that he would **not** be filing a reply brief. On June 1, 2018, the ALJ granted Respondent New Hampshire's "Motion to Correct New Hampshire's Response Brief." Respondent Travelers filed no responsive post-hearing briefs and the matter was deemed submitted for decision on June 1, 2018.

ISSUES

The issues to be determined by this decision concern two fully contested occupational disease claims for alleged bilateral carpal tunnel syndrome. Depending on which insurance carrier is liable, additional issues concern medical benefits, average weekly wage (AWW) and temporary total disability (TTD) benefits from approximately June 15, 2017 (the last date the Claimant worked).

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated, and the ALJ finds, that workers' compensation insurance coverage changed from New Hampshire to Travelers.

2. The Claimant began work for the Employer on February 6, 2017 as a crew chief on oil and gas drilling rigs. He was required to sign Rig Tickets showing the job title that he performed for the Employer. The Rig Tickets in evidence show from the date the Claimant began his employment until April 6, 2017 he was a crew chief. (Respondent New Hampshire's Exhibit G pp. 29 through 47). The ALJ infers and finds that Claimant's pre-April 6, 2017 duties were significantly **lighter** than his post-April 6, 2017 job duties. His job duties changed to relief operator, meaning he would do the work of a derrick worker or crewman as needed, on April 7, 2017(Respondent New Hampshire's Exhibit G, p. 47).

3. Beginning on April 7, 2017, the Claimant first worked as a derrick worker, and again on April 12, 2017 during New Hampshire's coverage (Respondent New Hampshire's Exhibit G, pp.47 and 50). He then worked on the day the coverage changed to Travelers as a derrick worker which was April 13, 2017 (Respondent New Hampshire's Exhibit G p.51).

4. After the change of coverage to Travelers, the Claimant worked one time as a derrick worker and 39 times as a crewman until which time he was taken off of work on June 16, 2017 (Respondent New Hampshire's Exhibit G, pp. 52 through 108).

5. The Claimant originally filed a workers' compensation claim in the State of Wyoming. In completing the required form, he was asked to describe his symptoms. He stated" first noted tingling and numbness in early April. Progressed to constant throbbing pain and numbness and loss of grip strength by May" (Respondent New Hampshire's Exhibit D p. 8).

6. The Claimant's last date worked was June 15, 2017. A Worker's Claim for Compensation was completed and filed on June 23, 2017. The Employer's First Report was filed August 16, 2017.

7. New Hampshire filed a Notice of Contest on July 28, 2017. Travelers filed a Notice of Contest on September 29, 2017.

Compensability/Last Injurious Exposure

8. The Claimant testified at hearing that by the time he needed a physician in May of 2017, his grip strength was bad enough that he could not hold a toothbrush.

9. In early April 2017, the Claimant's job duties prior to April 7, 2017 did not cause symptoms of carpal tunnel syndrome.

10. The ALJ finds that the Claimant developed bilateral carpal tunnel syndrome as a result of his employment with the Employer. The parties stipulated, and the ALJ found, that Respondent New Hampshire's coverage ended on April 13, 2017 and Respondent Travelers insurance coverage began on the same day.

11. Based on the testimony and records, if the Claimant's symptoms as of the date of the coverage change were primarily tingling and possibly some pain, Claimant's condition was not severe enough for him to seek medical care. After the date of the coverage change, however, according to the Claimant, his condition progressed to constant throbbing, pain, numbness, and loss of grip strength to include not being able to hold a toothbrush. By the end of May 2017, the Claimant's condition had progressed to the point where he believed he needed medical care and treatment.

12. The Rig Tickets from the Employer show that prior to the change in coverage the Claimant worked 2 times as a derrick worker and his third time as a derrick worker was on the date of coverage change. After the date of the coverage change, the Claimant worked one time as a derrick worker and 39 times as a crewman. Because the job duties prior to and after the coverage change were essentially the same, and the job duties cause the Claimant's carpal tunnel syndrome, the last injurious exposure occurred on June 15, 2017, when the Employer was insured by Travelers.

13. The ALJ finds that there was a substantial and permanent aggravation of the Claimant's bilateral carpal tunnel syndrome as of his last day on the job. The determinative factor is not how long the employment lasted but focuses on both the harmful nature of the concentration of the exposure and the magnitude of the effect of such exposure. In this case, after the coverage change the Claimant was subjected to the job duties that caused the original condition much more often and for an extended period of time. The fact that the Claimant's subjective complaints indicated that his condition progressed to include additional symptoms that were not present prior to the coverage change is a factor. The Claimant's symptoms were not severe enough to create the need for him to seek medical care until after the change of coverage. These factors lead to the factual conclusion that there was a substantial and permanent aggravation of the occupational disease of bilateral carpal tunnel syndrome after the change of coverage to Travelers.

Medical

14. The ALJ finds **no** evidence that there was no persuasive evidence presented concerning medical referrals or lack thereof by the Employer or either New Hampshire or Travelers. Therefore, the issues concerning carrier liability for medical care and treatment remains unresolved.

15. After seeking initial medical care on May 26, 2017, the Claimant had a medical appointment on June 19, 2017 with Nextcare. The medical report for that date of examination took the Claimant off of work stating that continuation of his work could worsen his condition. He has not worked after that date.

16. John Raschbacher, M.D., a Level-II accredited physician [by the Division of Workers' Compensation (DOWC)], examined the Claimant on December 15, 2017, in an Independent Medical Examination (IME). Dr. Raschbacher also consulted the DOWC Medical Treatment Guidelines (MTG) for carpal tunnel syndrome. He reviewed the Claimant's medical history, job duties, and medical records. In his report, Dr. Raschbacher wrote that the Claimant's bilateral carpal tunnel syndrome was work-related and was caused by the change in the work performed to relief operator in April 2017. Dr. Raschbacher stated: "My recommendation is to see a hand surgeon and have surgery (carpal tunnel release, bilaterally). "

17. At hearing, Dr. Raschbacher testified consistently with his report. He had since reviewed the original and amended jobsite analyses prepared by Dawn Leskinen, M.A., CRS, CVE, CEAS I, finding neither jobsite analysis changed his medical opinions and conclusion about work-relatedness.

.18. Dr. Raschbacher considered all of the available vocational information (both job site assessments and the Claimant's explanation of the errors in same), the EMG/NCV testing, as well as the 6-step causation analysis for cumulative trauma conditions - carpal tunnel syndrome set forth in the MTG.

19 Although the Claimant's burden of proof is never lessened, the ALJ can find no reasonable alternate mechanism as probably causing the Claimant's carpal tunnel syndrome. To be clear, neither Respondent Carrier is obliged to identify a plausible, alternative exposure.

20. As Dr. Raschbacher also notes, the way the Claimant specifically performed his tasks and the degree of force and duration of the work performed by the Claimant were enough to make it likely that he suffered the industrial disease due to what Claimant was doing, starting in March, 2017 for the Employer. According to the Claimant, he worked longer and was exposed to more weight, twisting, and vibrations than indicated in the jobsite analyses, and the jobsite analyses did not properly evaluate the work he was doing. The ALJ does not have to resolve who is correct on this point,

because there is no dispute. Suffice it to say, the Claimant was doing repetitive work at the time his symptoms occurred, and this repetitive work was at or near the primary and secondary risk factors set forth in the MTG.

Average Weekly Wage

21. The Claimant's AWW as of the date of his last injurious exposure, June 15, 2017, was $1,243.69, which was less than the State AWW for Fiscal Year (FY) 2016/2017, thus the Claimant's TTD rate is $829.13 per week, or $118,45 per day.

Temporary Total Disability

22. After seeking initial medical care on May 26, 2017, the Claimant had a medical appointment on June 19, 2017 with Nextcare. The medical report for that date of examination took the Claimant off of work stating that continuation of his work could worsen his condition. He has not worked after that date. There is **no** persuasive evidence that this total restriction has been lifted. The Employer has **not** offered the Claimant any modified work. The Claimant has not returned to any work nor has he earned any wages since June 16, 2017. No physician has declared him to be at maximum medical improvement (MMI). He has been sustaining a 100% temporary wage loss since June 15, 2017. Therefore, he has been temporarily and totally disabled since June 16, 2017 and continuing.

Ultimate Findings

23. Other than Dr. Raschbacher's IME opinions attributing the Claimant's last injurious exposure to his work after April 13, 2017, the date that coverage changed to Travelers, there are no other persuasive medical opinions contradicting Dr. Raschbacher's opinions. The ALJ finds Dr. Raschbacher's opinions highly persuasive and credible. Also, the ALJ finds the Claimant's testimony credible and undisputed.

24. The ALJ makes a rational choice to accept Dr. Raschbacher's opinions and the Claimant's testimony; and, to reject any opinions and evidence to the contrary.

25. The ALJ finds that the Claimant has sustained an occupational disease, bilateral carpal tunnel syndrome, which resulted directly from his employment or the conditions under which his work was performed, and can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the Claimant's employment, and which can be fairly traced to the employment as a proximate cause and which did not come from a hazard to which the Claimant would have been equally exposed outside of the employment. As found, the Claimant has proven an occupational disease with an onset date of March 2017 and a last injurious exposure of June 15, 2017, when Travelers was on the risk.

26. No persuasive evidence as presenting concerning the authorization of medical care and treatment for the Claimant's bilateral carpal tunnel syndrome was presented, however, the Claimant's first medical care was in May 2017, when Travelers was on the risk. Therefore, the issue of authorization must be reserved for future decision.

27. All of the Claimant's medical care and treatment for his bilateral carpal tunnel syndrome is and was causally related to his last injurious exposure of June 16, 2017, when Travelers was on the risk, and reasonably necessary to cure and relieve the effects thereof.

28. The Claimant's AWW as of the date of his last injurious exposure, June 15, 2017, was $1,243.69, which was less than the State AWW for Fiscal Year (FY) 2016/2017, thus the Claimant's TTD rate is $829.13 per week, or $118,45 per day.

29. The Claimant has been temporarily and totally disabled from June 16, 2017 through April 10, 2018, the hearing date, both dates inclusive, a total of 299 days; and, from April 11, 2018 and continuing until termination or modification of benefits is warranted.

30. The Claimant has proven, by a preponderance of the evidence that he sustained the occupational disease of bilateral carpal tunnel syndrome with a date of last injurious exposure of June 15, 2017, when Travelers was on the risk; that his medical care and treatment for the occupational disease was and is causally related to the last injurious exposure and reasonably necessary to cure and relieve the effects thereof; that his AWW is$1,243.69, thus, yielding a TTD rate of $829.13 per week, or $118.45 per day; and that he has been temporarily and totally disabled since June 16, 2017 and continuing.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990);

Penasquitos Village, Inc. v. NLRB, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, other than Dr. Raschbacher's IME opinions attributing the Claimant's last injurious exposure to his work after April 13, 2017, the date that coverage changed to Travelers, there are no other persuasive medical opinions contradicting Dr. Raschbacher's opinions. The ALJ finds Dr. Raschbacher's opinions highly persuasive and credible. Also, the ALJ finds the Claimant's testimony credible and undisputed.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions

in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice to accept Dr. Raschbacher's opinions and the Claimant's testimony; and, to reject any opinions and evidence to the contrary.

Compensability of Occupational Disease/Bilateral Carpal Tunnel Syndrome

c. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). As found, the Claimant has proven an occupational disease of bilateral carpal tunnel syndrome, with an onset date of March 2017, and a last injurious exposure of June 15, 2017.

d. Section 8-41-304 (1), C.R.S., assesses sole and full liability for workers' compensation benefits on the employer in whose employment the claimant sustains the last injurious exposure. There has only been one employer herein. Consequently, the **substantial permanent aggravation** test is not apropos, the underlying rationale thereof is to affix liability on the last of successive employers. As found, Respondent travelers solely and fully liable for all workers' compensation benefits, including medical benefits (no medical costs were incurred before Travelers was on the risk).

Medical Benefits

e. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to his occupational disease of bilateral carpal tunnel syndrome, with an onset in March 2017 (no medical costs were incurred until May 2017). And a date of last injurious exposure of June 15, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary.

Average Weekly Wage (AWW)

f. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, Claimant has been losing 100% of his wages since June 15, 2017. *See also Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). As found, the Claimant's AWW is $1,243.69.

Temporary Total Disability

g. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). When a temporarily disabled employee loses his employment for other reasons which are not his responsibility, the causal relationship between the industrial injury and the wage loss necessarily continues. Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals Office (ICAO), December 18, 2000)]. As found, after seeking initial medical care on May 26, 2017, the Claimant had a medical appointment on June 19, 2017 with Nextcare. The medical report for that date of examination took the Claimant off of work stating that continuation of his work could worsen his condition. He has not worked after that date. There is **no** persuasive evidence that this total restriction has been lifted. The Employer has **not** offered the Claimant any modified work. The Claimant has not returned to any work nor has he earned any wages since June 16, 2017. No physician has declared him to be at maximum medical improvement (MMI).

h. Once the prerequisites forTTD are met (*e.g.*, no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring, modified employment is not made available, and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant has been sustaining a 100% temporary wage loss since June 16, 2017. Therefore, he has been temporarily and totally disabled since June 16, 2017 and continuing.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an occupational disease, the date of last injurious exposure, and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012).. A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.*, W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on compensability; last injurious exposure on June 15, 2017; causal relatedness and reasonable necessity of medical care and treatment for the bilateral carpal tunnel syndrome; AWW of $1,243.60; and, TTD from June 16, 2017 and continuing.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims against Respondent New Hampshire Insurance Company are hereby denied and dismissed.

B. The Claimant's medical care and treatment for the occupational disease of bilateral carpal tunnel syndrome was and is causally related to the last injurious exposure of June 15, 2017; and, it was and is reasonably necessary to cure and relieve the effects thereof.

C. Respondent Travelers Indemnity Company shall pay the Claimant temporary total disability benefits $829.13 per week, or $118.45 per day, from June 16, 2017 through April 10, 2018, both dates inclusive, a total of 299 days, in the aggregate amount of $35, 415.55, which is payable retroactively and forthwith.

D. From April 11, 2018 and continuing as provided by law, Respondent Travelers Indemnity Company shall pay the Claimant $829.13 per week in temporary total disability benefits.

E. Respondent Travelers Indemnity Company shall pay the Claimant statutory interest of eight percent (8%) per annum on all amounts due and not paid when due.

F. Any and all issues not determined herein, including authorization of medical providers and treatment, are reserved for future decision,

DATED this 15 day of June 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to an award of penalties pursuant to Section 8-43-304 C.R.S. for respondent's alleged failure to timely pay temporary total disability (TTD) benefits; alleged failure to pay for claimant's reasonable and necessary medical treatment; and alleged failure to file a bond with the Division of Workers' Compensation.

FINDINGS OF FACT

1. On January 3, 2018, ALJ Sidanycz issued Findings of Fact, Conclusions of Law, and Order in which the following was ordered:

   a. The claimant suffered a compensable injury on June 8, 2017 that arose out of and in the course and scope of his employment with the respondent.

   b. The respondent is responsible for payment of reasonable medical treatment necessary to cure and relieve the claimant from the effects of the June 8, 2017 work injury.

   c. The claimant's average weekly wage (AWW) for this claim is $1,500.00.

   d. The respondent shall pay the claimant temporary total disability (TTD) benefits for the periods of June 9, 2017 through June 30, 2017; September 18, 2017 through September 24, 2017; and October 16, 2017 and ongoing.

   e. The respondent shall pay the claimant temporary partial disability (TPD) benefits for the periods of July 31, 2017 through September 17, 2017; and September 25, 2017 through October 14, 2017.

   f. The claimant's benefits shall be increased by 50% because of the respondent's failure to obtain and maintain workers' compensation insurance.

   g. The respondent shall pay interest to the claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

2. In the January 3, 2018 Findings of Fact, Conclusion of Law, and Order, the ALJ also instructed the respondent to deposit the sum of $50,000.00 with the Division of Workers' Compensation, as trustee, or file a bond in the sum of $50,000.00 with the Division of Workers' Compensation, in lieu of payments to the claimant.

3. As of the date of the June 6, 2018 hearing, the employer has not provided any payment to the claimant, either directly or through counsel.

4. As of the date of the June 6, 2018 hearing, the employer has not provided any payment to the Division of Workers' Compensation.

5. The claimant testified at hearing that on April 11, 2018 he began new employment as a CNA at Palisade Living Center.

6. Based upon records provided by the claimant, the claimant is owed temporary total disability (TTD) benefits in the amount of $35,646.03 for the period of October 16, 2017 through April 10, 2018. In addition, interest accrued on this amount totals $1,099.24.

7. Since beginning new employment on April 11, 2018, the claimant is owed temporary partial disability (TPD) benefits totaling $7,797.49. Total interest owed by the employer for unpaid TPD is $41.70.

8. The respondent failed to appear at the hearing in this matter. As a result, there is no persuasive evidence on the record to demonstrate any mitigating circumstances that would have resulted in the respondent's failure to comply with the January 3, 2018 order. Nor has the respondent provided any explanation that his failure to comply is reasonable.

9. The ALJ relies upon the claimant's testimony and the exhibits entered into evidence and finds that the claimant has demonstrated that it is more likely than not that the respondent has failed to comply with the ALJ's January 3, 2018 order.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and

actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

3. Section 8-43-304, C.R.S., governs when penalties may be imposed in a workers' compensation matter and provides, in relevant part, that any employer or insurer:

> "who violates any provision of [the Workers' Compensation Act], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or panel…, or fails, neglects, or refuses to obey any lawful order…, shall be subject to … a fine of not more than one thousand dollars per day for each such offense."

This provision has been construed as applying to violation of an order issued by an ALJ. *Giddings v. Industrial Claim Appeals Office,* 39 P.3d 1211 (Colo. App. 2001).

4. Before penalties may be assessed the ALJ must first determine whether a party has violated any provision of the Workers' Compensation Act or an order. If the ALJ finds such a violation, penalties may be imposed if it is also found that the employer's actions were objectively unreasonable. Section 8-43-304, C.R.S*. City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jimenez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003). The "objective standard" is measured by reasonableness of the insurer's action and does not require knowledge that the conduct was unreasonable." *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office*, 907 P.2d 676 (Colo. App. 1995).

5. An order is defined as including "any decision, finding and award, direction, rule, regulation, or other determination arrived at by the director or an administrative law judge." *See* Section 8-40-201(15), C.R.S. The fine shall be apportioned in whole or part at the discretion of the director or administrative law judge between the aggrieved party and the workers' compensation cash fund created in Section 8-44-112, C.R.S. with the amount apportioned to the aggrieved party being a minimum of fifty percent of any penalty assessed. *See* Section 8-43-304, C.R.S. In addition, Section 8-43-305 C.R.S. provides that each day a party engages in the violation is construed as a separate offense.

6. In this case, the claimant seeks penalties for the employer's failure to comply with the ALJ's January 23, 2018 order. As found, the claimant has demonstrated by a preponderance of the evidence that the employer has failed to comply with the ALJ's January 23, 2018 order.

7. Pursuant to Section 8-43-301(2), C.R.S., the ALJ's January 3, 2018 order became final 20 days after it was issued. However, applying Section 8-43-401(2)(a), C.R.S., the employer had 30 days from the date of the order to pay benefits as ordered. Therefore, any penalties begin on the 31st day. In this matter, 31 days from January 3, 2018 is February 3, 2018.

8. For failing to comply with the January 3, 2018 order, the employer shall be assessed penalties in the amount of $500.00 per day beginning on February 3, 2018 through and including the date of hearing on June 6, 2018. This is a total of 124 days, resulting in penalties of $62,000.00.

ORDER

It is therefore ordered that:

1. The employer shall pay the claimant past due TTD benefits and interest totaling $36,745.27.

2. The employer shall pay the claimant past due TPD benefits and interest totaling $7,839.19.

3. The employer shall be liable to the claimant for penalties totaling $62,000.00. The penalties shall be paid 90% (or $55,800.00) to the claimant and 10% (or $6,200.00) to the subsequent injury fund.

4. The employer shall pay the Director of the Division of Workers' Compensation on behalf of the Workers' Compensation Subsequent Injury Fund as follows: employer shall issue any check payable to "Colorado Subsequent Injury Fund" and shall mail the check to Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee.

5. The employer continues to be responsible for filing a bond in the original amount of $50,000.00 with the Division of Worker's Compensation as ordered by the ALJ on January 3, 2018.

6. The employer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

8. In lieu of payment of the above compensation and benefits to the claimant, the employer shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $100,400.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee and mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik/Trustee; or

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $100,400.00 with the Division of Workers' Compensation within ten (10) days of the date of this order that is:

i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

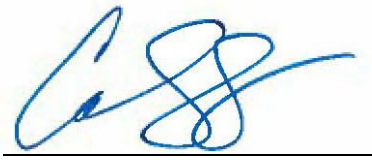
ii. Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

9. It is further ordered that the employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

10. It is further ordered that the filing of any appeal, including a petition to review, shall not relieve the employer of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

Dated: June 19, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issues to be determined herein concern whether the Claimant sustained a compensable injury to his left hip on November 28, 2016. If so, what are the consequences of the injury; and, medical benefits, including the causal relatedness of a total left hip replacement. By agreement, the parties struck issues concerning temporary disability for the herein hearing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing and in the event the claim was deemed compensable, the parties stipulated that the Claimant's average weekly wage (AWW) was $618.68, which would increase by $110.20 for COBRA after April 1, 2018, for an AWW of $728.88. After the hearing, the parties stipulated, in the event the claim was deemed compensable; also, that Respondents are entitled to an offset of temporary benefits due to the Claimant's receipt of unemployment benefits. These stipulations are academic in light of the fact that issues concerning temporary disability benefits were withdrawn for purposes of the hearing.

2. The Claimant was employed by the Employer as a security guard on November 28, 2018.

3. The Claimant sustained a compensable injury to his left hip when he slipped and twisted without falling at work November 28, 2016. As found herein below, this injury was minor and amounted to a compensable aggravation of a pre-existing degenerative left hip condition, which degeneration was in the normal course of progression.

4. The Claimant had a long history of left hip pain prior to November 28, 2016. He was seen for left hip pain and stiffness November 6, 2000 (Respondents' Exhibit C, p. 017). On February 21, 2001, the Claimant was seen by Douglas H. Green, M.D., complaining of left inguinal pains over the previous five months. Dr. Green's impression was the pain was musculoskeletal (Respondents' Exhibit D, p. 020) As recently as January 25, 2016, the Claimant completed a New Patient Health History Form on which he indicated he had joint problems with his hips (Respondents' Exhibit E, p. 023) At hearing, the Claimant testified that when he completed Exhibit E, he was

referring to the symptoms he had in 2000. The ALJ infers and finds that the Claimant's testimony in this regard does not add up and is, therefore, not credible

The Incident of November 28, 2016 and Aftermath

5. The Claimant was seen by Keith Meier, FNP-C (certified nurse practitioner) on December 1, 2016. The Claimant reported that he had slipped on some hydraulic fluid **and caught himself without falling.** He complained of intermittent pain in the left hip and left groin. Meier's assessment was sprain of groin. The Claimant was released to return to full work and activity that day (Respondents' Exhibit F, pp. 024–026). On February 14, 2017, Rosalinda Pineiro, M.D., issued a WC164 form for the December 1, 2016 appointment. She noted that the Claimant had no restrictions (Respondents' Exhibit T, p. 063)

6. On December 5 and 14, 2016, the Claimant was seen again by Meier. He reported his symptoms were improving. Mr. Meier's assessment continued to be sprain of groin. The Claimant was released to return to full work and activity at each appointment. On December 14, 2016, Mr. Meier referred the Claimant for physical therapy. (Exhibit G, pp. 027–029, Exhibit H, pp. 030–032)

7. On December 15, 2016, the Claimant had physical therapy with Brian Busey, MPT. Mr. Busey noted no tenderness was found with palpation, and range of motion was within normal limits. (Exhibit I, pp. 034–035)

8. On December 20, 2016, the Claimant was seen again by Busey. He reported his hip had felt good the past two days. (Exhibit J, p. 036) On December 22, 2016, the Claimant reported to Busey his hip was feeling pretty good, 60% better overall. (Exhibit K, p. 037)

9. On December 29, 2016, the Claimant was seen by Bren F. Schmidt, MPT. He reported his hip was feeling pretty good, 70% better overall. Schmidt noted no significant postural deviations, normal gait with no observed deviations, no tenderness found with palpation, range of motion within normal limits, and manual muscle testing within normal limits. (Exhibit L, p. 040)

10. On January 3, 2017, the Claimant was seen again by MPT Busey. He estimated that overall he had a 70 to 75% improvement since initiating physical therapy. (Exhibit M, p. 043) On January 5, 2017, the Claimant reported to Busey he was still 75% improved. He had tried jogging at the gym earlier that day with no adverse reactions. Busey noted the Claimant was able to stand for six hours pain free, his goal of standing pain-free was 90% achieved, and his goal of walking pain-free was 100% achieved. His therapy assessment was: "Overall progress. As expected. Decreased pain complaints, improved function." (Exhibit N, p. 046–047)

11. On January 13, 2017, the Claimant was seen by Amy Patrick, PA, at Banner Health to complete deployment paperwork. No hip issues were noted. (Exhibit O, p. 049).

12. On January 17, 2017, the Claimant was seen again by MPT Busey. He reported 80% improvement. Busey noted no significant postural deviations, normal gait with no observed deviations, no tenderness found with palpation, range of motion within normal limits, manual muscle testing within normal limits, and negative FABER test. Busey noted the Claimant was able to stand for six hours pain free, his goal of standing pain-free was 90% achieved, and his goal of walking pain-free was 100% achieved. His therapy assessment was: "Overall progress. "As expected. Decreased pain complaints, improved function." (Exhibit P, pp. 052–053)

13. On January 19, 2017, the Claimant was seen again by MPT Busey. He reported >80% improvement. Busey noted no significant postural deviations, normal gait with no observed deviations, no tenderness found with palpation, range of motion within normal limits, manual muscle testing within normal limits, and negative FABER test. Busey noted the Claimant's goals of standing and walking pain-free were 100% achieved. His therapy assessment was: "Overall progress. "As expected. All functional and impairment goals have been achieved." Busey recommended discontinuation of therapy with emphasis on continuation of home exercise program for prophylaxis. (Exhibit Q, pp. 055–056).

14. On January 19, 2017, the Claimant was seen by Derek Wright, M.D. Dr. Wright noted the Claimant had been working full time without restrictions. He had completed PT and knew his home exercises to perform at home. The Claimant said his hip was feeling better. The Claimant reported he had no pain currently, but he got "a little gnawing every now and then" after a workout at the gym. Symptoms resolved within about an hour. Dr. Wright's left hip exam was normal. There was no tenderness. Internal and external rotation were painless. Neurovascular function was intact. Straight leg raise was negative. Upper and lower extremity reflexes were symmetric bilaterally. The Claimant's gait was normal. Dr. Wright's assessment was sprain of groin. Dr. Wright released the Claimant from care with a maximum medical improvement (MMI) date of January 19, 2017. The Claimant was released to return to full work and activity. Dr. Wright did not address permanent impairment. (Exhibit R, pp. 058–060).

15. `The Claimant testified he had to perform a physical fitness test to remain employed with respondent employer. That test involved the Claimant running a distance of 1/1.5 miles under a certain time scaled to the age of the employee. The Claimant was able to run the required distance and meet the benchmark to pass his timed fitness tests.

16. On February 10, 2017, the Claimant was seen by Ms. Patrick at Banner Health for hypertension. She noted he was exercising 3–4 days a week. No hip issues were noted. (Ex. S, p. 061). On February 22, 2017, the Claimant was seen again by Ms.

Patrick at Banner Health for hypertension. She noted he was exercising regularly. No hip issues were noted. (Exhibit U, p. 064)

17. On July 13, 2017, the Claimant was seen by Robert Nystrom, D.O. Dr. Nystrom had not treated the Claimant previously. He is seeing the Claimant for a one-time evaluation. The Claimant advised Dr. Nystrom that he was placed at MMI on January 19, 2017 "he had been placed at MMI concerning his hip injury on 1/19/17. He was still having some discomfort at that time but it was felt that it would gradually resolve. Unfortunately it did not, in fact it seems to have worsened." However, this is not a fair characterization of the Claimant's status at discharge at MMI and Dr. Nystrom did not indicate he reviewed the prior chart. Dr. Nystrom recommends the case be reopened but Dr. Nystrom did not evaluate the cause of the worsening of condition and the history he was given was not accurate. The Claimant was released to return to full work and activity. (Exhibit V, pp. 066–067)

18. On July 26, 2017, the Claimant had an MRI of the left hip without contrast. It was read by Derek Burdeny, M.D., whose impression was: "Right hip arthrosis with grade 4 chondral loss to the articular surfaces and small joint effusion. Marginal osteophytes may predispose to combine CAM and pincer impingement." (Claimant's Exhibit 5, p. 115).

19. On August 15, 2017, the Claimant was seen by Joshua T. Snyder, M.D., at Orthopaedic & Spine Center of the Rockies. The Claimant reported his hip catches and he continued to have significant pain within the groin. The Claimant reported it had affected his activity and he was unable to run and walk distances he usually would be able to do. Dr. Snyder's impression was left hip osteoarthritis. He recommended conservative treatment with anti-inflammatories, physical therapy, and possibly cortisone injection. He also recommended the Claimant follow up with one of their primary joint replacement specialist for consideration of total hip arthroplasty. Dr. Clark did not do a causation analysis. (Claimant's Exhibit 6, p. 124)

20. On September 5, 2017, the Claimant was seen by C. Dana Clark, M.D. Dr. Clark recorded a history that in November the Claimant twisted and fell and had had pain in his left hip since then. Dr. Clark did not review the medical records. The Claimant told Dr. Clark he had undergone physical therapy without relief, the pain was getting worse and now he was limping with every step. Dr. Clark noted the radiographic studies showed the Claimant had severe osteoarthritis, bone-on-bone, complete loss of joint space, osteophytes, and cysts, which the MRI further corroborated. Dr. Clark's diagnosis was end-stage left hip arthrosis with failure of non-operative management. Dr. Clark recommended a hip replacement. (Exhibit 6, p. 122)

21. The history the Claimant reported to Dr. Clark is inconsistent with his previous medical records for treatment of the November 28, 2016 injury. Specifically, Dr. Clark was under the impression the Claimant fell in November. Furthermore, the Claimant apparently reported to Dr. Clark that physical therapy had not provided relief.

The physical therapy records at the time of MMI documented the Claimant's goals of standing and walking pain-free were 100% achieved. Dr. Wright's record when he placed the Claimant at MMI documented the Claimant's report his hip was feeling better; he had no pain currently, but he got "a little gnawing every now and then" after a workout at the gym, which resolved within about an hour. (*See* Exhibits Q and R). The Claimant also advised Dr. Clark he was limping, yet the PT notes on multiple occasions indicated the Claimant was not observed to have a limp.

22. In his September 13, 2017 report, Peter L. Weingarten, M.D., stated the Claimant's diagnosis was advanced degenerative arthritis superimposed with the left hip sprain/exacerbation of osteoarthritic symptoms. He stated the arthritic changes were 100% pre-existing and unrelated to the November 28, 2016 incident, and the need for total hip arthroplasty was related to the pre-existing condition and not to the relatively minor November 28, 2016 incident. Dr. Weingarten further stated the course and progression of the degenerative arthritis was not altered or accelerated by the November 28, 2016 incident. Dr. Weingarten agreed the left hip replacement was indicated and appropriate for treatment of the pre-existing degenerative arthritis, but reiterated that the need for hip replacement was not related to the November 28, 2016 incident. Dr. Weingarten stated the Claimant did not have a disability related to the November 28, 2016 incident, and no further treatment was indicated for injuries sustained in the November 28, 2016 incident. (Respondents' Exhibit Y, pp. 076–078)

23. On October 12, 2017, Dr. Nystrom listed his assessment as left hip pain. He noted the Claimant had decided to go ahead with the hip replacement surgery by Dr. Clark through his private insurance. (Exhibit X, pp. 071–072)

24. On October 25, 2017, Dr. Clark performed left anterior total hip arthroplasty. (Claimant's Exhibit 6, p. 118)

25. The adjuster filed a Notice of Contest on November 13, 2017, stating: "Request for surgery not work related per Dr. Weingarten's attached report." (Respondents' Exhibit Y, p. 074)

26. On December 7, 2017, Dr. Clark noted the Claimant had no restrictions outside of no running and jumping. He released the Claimant to return to work. (Respondents' Exhibit Z, pp. 080–081)

27. On February 8, 2018, Dr. Nystrom noted the Claimant had been working regular duty without any problems, but he had not been released to run yet by Dr. Clark. Dr. Nystrom noted the Claimant was released to return to full work and activity. (Respondents' Exhibit AA, pp. 082–083)

28. The Claimant testified he did not miss any time from work from the date of his injury until he was placed at MMI.

Ultimate Findings

29. The ALJ finds the opinions of Dr. Ciccone and Dr. Weingarten on causation highly persuasive and credible. The ALJ further finds the opinions of Dr. Nystrom and Dr. Clark lacking in credibility on the causal relatedness to the November 28, 2016 incident, primarily because they were based on the Claimant's failure to give them an accurate history of previous problems with his left hip. Also, because the Claimant was not forthcoming with initial treating physicians and Surgeon Dr. Clark, concerning an accurate medical history of previous left hip problems and treatment, the ALJ finds the Claimant's testimony lacking in credibility.

30. Between conflicting medical and lay opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of IME Dr. Ciccone and Dr. Weingarten, on the causal relatedness of medical treatment after January 19, 2017 (the MMI date for the left hip sprain/strain) and the left knee replacement performed by Dr. Clark on October 25, 2017. Both Dr. Ciccone and Dr. Weingarten establish the work-relatedness of the sprain/strain of November 28, 2016, from which the Claimant recovered by January 19, 2017, and was back to the baseline of his naturally progressing degenerative condition of the left hip.

31. The sprain/strain incident of November 28, 2016 necessitated medical care and treatment until January 19, 2017, and was, therefore, a compensable event. Consequently, medical care and treatment for the strain/sprain until January 19, 2017, was authorized, causally related to the sprain/strain, and reasonably necessary to cure and relieve the effects of the November 28, 2016 sprain/strain incident.

32. The Claimant is **not** entitled to temporary disability benefits from November 28, 2016 and January 19, 2017. Although this issue was withdrawn at the commencement of the hearing, this finding is necessary to underscore the Claimant's entitlement to medical benefits during this period of time.

33. The Claimant has failed to prove, by a preponderance of the evidence that there is a causal link between his left hip condition after January 19, 2017, including the total left hip replacement of October 25, 2017 by Dr. Clark.

34. At this juncture, the stipulation concerning AWW is academic for purposes of this decision, however, it amounts to a judicial admission by the Respondents that the Claimant's AWW as of November 28, 2016 wasa$618.69, and as of April 1, 2018, it increased to $728.88.

Discussion of Lack of Applicability of *Loofbourrow*

Harman-Bergstedt, Inc. v. L*oofbourrow*, 320 P.3d 327 (Colo. 2014), which applied very narrow, fact specific principles, without establishing a sweeping precedent. *Trujillo* determined that MMI is a term of art, and has no legal significance in a case with no indemnity benefits payable. This makes implicit sense because MMI is the demarcation line between temporary and permanent disability indemnity benefits.

Indeed, it is the demarcation line between temporary disability benefits and **zero** permanent disability. In *Loofbourrow* by extension, an FAL is not effective to close a case as to further medical benefits. The Court stated that a claimant could still seek further medical benefits, with the burden of proof as to reasonableness and causal relatedness on the claimant. The holding of the case is that a petition to reopen need not be filed under §8-43-303, if the claimant should seek further medical benefits. The case sets no precedent as to any broader meaning than in the context of reopening for medical benefits, and it does not specify what type of medical benefits it is meant to address (*i.e*. *Grover* or pre-MMI substantive treatment). To accept the Respondents argument that the sprain/strain incident of November 28, 2016 is **not compensable**, although it was work-related and necessitated medical treatment for which the Respondents were liable if it met the workers' compensation tests would overturn the reasonable expectations of the community of injured workers who choose to go to hearing to establish an employer's liability for denied medical benefits in a work-related claim. Such an argument bears the hallmarks of a circular argument that may amount to sophistry. This could be the situation in a parallel universe (where technical form triumphs over due process), but not in Colorado.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a

witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* §8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Ciccone and Dr. Weingarten on causation were highly persuasive and credible. As further found, the opinions of Dr. Nystrom and Dr. Clark were lacking in credibility on the causal relatedness to the November 28, 2016 incident, primarily because they were based on the Claimant's failure to give them an accurate history of previous problems with his left hip. Also, because the Claimant was not forthcoming with initial treating physicians and Surgeon Dr. Clark, concerning an accurate medical history of previous left hip problems and treatment, the Claimant's testimony lacked credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical and lay opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of IME Dr. Ciccone and Dr. Weingarten, on the causal relatedness of medical treatment after January 19, 2017 (the MMI date for the left hip sprain/strain) and the left knee replacement performed by Dr. Clark on October 25, 2017. Both Dr. Ciccone and Dr. Weingarten established the work-relatedness of the sprain/strain of November 28, 2016, from which the Claimant recovered by January 19, 2017, and was back to the baseline of his naturally progressing degenerative condition of the left hip.

Sufficiency for Compensability of November 28, 2016 Left Hip Sprain/Strain

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). Respondents argue that the holding in *Harman-Bergstedt, Inc. v. Loofbourrow* effectively negates the compensability of injuries where the worker is not disabled for more than three days or shifts. Such is a misinterpretation of *Loofbourrow* and the prevailing law of compensability. *Loofbourrow* was decided on very narrow, specific circumstances not applicable to the present case. § 8-41-301, C.R.S.,*Henderson, supra* and *Gaudett, supra,* distinguished something in the nature a work-related paper cut, where no medical care was sought or given—not to a situation where the effects of a strain are treated for almost two months and an employer is ultimately held liable whether or not it chose to pay medical bills without admitting or denying liability. As found, the Claimant sustained a sprain/strain of the left hip on November 28, 2016; he received medical care and treatment for the sprain/strain from November 28, 2016 through January 19, 2017, when he returned to the baseline of his naturally progressive degenerative condition, which ultimately necessitated the non-work related total left hip replacement of October 25, 2017.

Lack of Compensability of Left Hip Condition After January 19, 2017

d. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** A manner of conceptualizing the matter is, essentially, that a presumption of work-relatedness may arise when an unexplained injury occurs during the course of employment. However, it is incumbent to show that non-work related factors caused the injury. Nonetheless, proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant failed to prove, by a preponderance of the evidence that there was a causal link between his left hip condition after January 19, 2017, including the total left hip replacement of October 25, 2017 by

Dr. Clark. Therefore, the Claimant failed to prove entitlement to any workers' compensation benefits for his left hip condition after January 19, 2017.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven the compensability of the left hip sprain/strain of November 28, 2016, a temporary phenomenon which lasted until January 19, 2017, when he was placed at MMI for the sprain/strain. As further found, the Claimant failed to prove the causal relatedness and/or compensability of his left hip condition after January 19, 2017, including the causal relatedness of the total hip replacement of October 25, 2017.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of authorized, causally related and reasonably necessary medical care and treatment for the Claimant's left hip sprain/strain of November 28, 2016 from that date until January 19, 2017, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all claims for medical care and treatment for the Claimant's naturally progressing, degenerative left hip condition, including the total left hip replacement of October 25, 2017, are hereby denied and dismissed.

DATED this_____day of June 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

The issues to be determined herein concern whether the Claimant sustained a compensable injury to his left hip on November 28, 2016. If so, what are the consequences of the injury; and, medical benefits, including the causal relatedness of a total left hip replacement. By agreement, the parties struck issues concerning temporary disability for the herein hearing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing and in the event the claim was deemed compensable, the parties stipulated that the Claimant's average weekly wage (AWW) was $618.68, which would increase by $110.20 for COBRA after April 1, 2018, for an AWW of $728.88. After the hearing, the parties stipulated, in the event the claim was deemed compensable; also, that Respondents are entitled to an offset of temporary benefits due to the Claimant's receipt of unemployment benefits. These stipulations are academic in light of the fact that issues concerning temporary disability benefits were withdrawn for purposes of the hearing.

2. The Claimant was employed by the Employer as a security guard on November 28, 2018.

3. The Claimant sustained a compensable injury to his left hip when he slipped and twisted without falling at work November 28, 2016. As found herein below, this injury was minor and amounted to a compensable aggravation of a pre-existing degenerative left hip condition, which degeneration was in the normal course of progression.

4. The Claimant had a long history of left hip pain prior to November 28, 2016. He was seen for left hip pain and stiffness November 6, 2000 (Respondents' Exhibit C, p. 017). On February 21, 2001, the Claimant was seen by Douglas H. Green, M.D., complaining of left inguinal pains over the previous five months. Dr. Green's impression was the pain was musculoskeletal (Respondents' Exhibit D, p. 020) As recently as January 25, 2016, the Claimant completed a New Patient Health History Form on which he indicated he had joint problems with his hips (Respondents' Exhibit E, p. 023) At hearing, the Claimant testified that when he completed Exhibit E, he was

referring to the symptoms he had in 2000. The ALJ infers and finds that the Claimant's testimony in this regard does not add up and is, therefore, not credible

The Incident of November 28, 2016 and Aftermath

5. The Claimant was seen by Keith Meier, FNP-C (certified nurse practitioner) on December 1, 2016. The Claimant reported that he had slipped on some hydraulic fluid **and caught himself without falling.** He complained of intermittent pain in the left hip and left groin. Meier's assessment was sprain of groin. The Claimant was released to return to full work and activity that day (Respondents' Exhibit F, pp. 024–026). On February 14, 2017, Rosalinda Pineiro, M.D., issued a WC164 form for the December 1, 2016 appointment. She noted that the Claimant had no restrictions (Respondents' Exhibit T, p. 063)

6. On December 5 and 14, 2016, the Claimant was seen again by Meier. He reported his symptoms were improving. Mr. Meier's assessment continued to be sprain of groin. The Claimant was released to return to full work and activity at each appointment. On December 14, 2016, Mr. Meier referred the Claimant for physical therapy. (Exhibit G, pp. 027–029, Exhibit H, pp. 030–032)

7. On December 15, 2016, the Claimant had physical therapy with Brian Busey, MPT. Mr. Busey noted no tenderness was found with palpation, and range of motion was within normal limits. (Exhibit I, pp. 034–035)

8. On December 20, 2016, the Claimant was seen again by Busey. He reported his hip had felt good the past two days. (Exhibit J, p. 036) On December 22, 2016, the Claimant reported to Busey his hip was feeling pretty good, 60% better overall. (Exhibit K, p. 037)

9. On December 29, 2016, the Claimant was seen by Bren F. Schmidt, MPT. He reported his hip was feeling pretty good, 70% better overall. Schmidt noted no significant postural deviations, normal gait with no observed deviations, no tenderness found with palpation, range of motion within normal limits, and manual muscle testing within normal limits. (Exhibit L, p. 040)

10. On January 3, 2017, the Claimant was seen again by MPT Busey. He estimated that overall he had a 70 to 75% improvement since initiating physical therapy. (Exhibit M, p. 043) On January 5, 2017, the Claimant reported to Busey he was still 75% improved. He had tried jogging at the gym earlier that day with no adverse reactions. Busey noted the Claimant was able to stand for six hours pain free, his goal of standing pain-free was 90% achieved, and his goal of walking pain-free was 100% achieved. His therapy assessment was: "Overall progress. As expected. Decreased pain complaints, improved function." (Exhibit N, p. 046–047)

11. On January 13, 2017, the Claimant was seen by Amy Patrick, PA, at Banner Health to complete deployment paperwork. No hip issues were noted. (Exhibit O, p. 049).

12. On January 17, 2017, the Claimant was seen again by MPT Busey. He reported 80% improvement. Busey noted no significant postural deviations, normal gait with no observed deviations, no tenderness found with palpation, range of motion within normal limits, manual muscle testing within normal limits, and negative FABER test. Busey noted the Claimant was able to stand for six hours pain free, his goal of standing pain-free was 90% achieved, and his goal of walking pain-free was 100% achieved. His therapy assessment was: "Overall progress. "As expected. Decreased pain complaints, improved function." (Exhibit P, pp. 052–053)

13. On January 19, 2017, the Claimant was seen again by MPT Busey. He reported >80% improvement. Busey noted no significant postural deviations, normal gait with no observed deviations, no tenderness found with palpation, range of motion within normal limits, manual muscle testing within normal limits, and negative FABER test. Busey noted the Claimant's goals of standing and walking pain-free were 100% achieved. His therapy assessment was: "Overall progress. "As expected. All functional and impairment goals have been achieved." Busey recommended discontinuation of therapy with emphasis on continuation of home exercise program for prophylaxis. (Exhibit Q, pp. 055–056).

14. On January 19, 2017, the Claimant was seen by Derek Wright, M.D. Dr. Wright noted the Claimant had been working full time without restrictions. He had completed PT and knew his home exercises to perform at home. The Claimant said his hip was feeling better. The Claimant reported he had no pain currently, but he got "a little gnawing every now and then" after a workout at the gym. Symptoms resolved within about an hour. Dr. Wright's left hip exam was normal. There was no tenderness. Internal and external rotation were painless. Neurovascular function was intact. Straight leg raise was negative. Upper and lower extremity reflexes were symmetric bilaterally. The Claimant's gait was normal. Dr. Wright's assessment was sprain of groin. Dr. Wright released the Claimant from care with a maximum medical improvement (MMI) date of January 19, 2017. The Claimant was released to return to full work and activity. Dr. Wright did not address permanent impairment. (Exhibit R, pp. 058–060).

15. `The Claimant testified he had to perform a physical fitness test to remain employed with respondent employer. That test involved the Claimant running a distance of 1/1.5 miles under a certain time scaled to the age of the employee. The Claimant was able to run the required distance and meet the benchmark to pass his timed fitness tests.

16. On February 10, 2017, the Claimant was seen by Ms. Patrick at Banner Health for hypertension. She noted he was exercising 3–4 days a week. No hip issues were noted. (Ex. S, p. 061). On February 22, 2017, the Claimant was seen again by Ms.

Patrick at Banner Health for hypertension. She noted he was exercising regularly. No hip issues were noted. (Exhibit U, p. 064)

17. On July 13, 2017, the Claimant was seen by Robert Nystrom, D.O. Dr. Nystrom had not treated the Claimant previously. He is seeing the Claimant for a one-time evaluation. The Claimant advised Dr. Nystrom that he was placed at MMI on January 19, 2017 "he had been placed at MMI concerning his hip injury on 1/19/17. He was still having some discomfort at that time but it was felt that it would gradually resolve. Unfortunately it did not, in fact it seems to have worsened." However, this is not a fair characterization of the Claimant's status at discharge at MMI and Dr. Nystrom did not indicate he reviewed the prior chart. Dr. Nystrom recommends the case be reopened but Dr. Nystrom did not evaluate the cause of the worsening of condition and the history he was given was not accurate. The Claimant was released to return to full work and activity. (Exhibit V, pp. 066–067)

18. On July 26, 2017, the Claimant had an MRI of the left hip without contrast. It was read by Derek Burdeny, M.D., whose impression was: "Right hip arthrosis with grade 4 chondral loss to the articular surfaces and small joint effusion. Marginal osteophytes may predispose to combine CAM and pincer impingement." (Claimant's Exhibit 5, p. 115).

19. On August 15, 2017, the Claimant was seen by Joshua T. Snyder, M.D., at Orthopaedic & Spine Center of the Rockies. The Claimant reported his hip catches and he continued to have significant pain within the groin. The Claimant reported it had affected his activity and he was unable to run and walk distances he usually would be able to do. Dr. Snyder's impression was left hip osteoarthritis. He recommended conservative treatment with anti-inflammatories, physical therapy, and possibly cortisone injection. He also recommended the Claimant follow up with one of their primary joint replacement specialist for consideration of total hip arthroplasty. Dr. Clark did not do a causation analysis. (Claimant's Exhibit 6, p. 124)

20. On September 5, 2017, the Claimant was seen by C. Dana Clark, M.D. Dr. Clark recorded a history that in November the Claimant twisted and fell and had had pain in his left hip since then. Dr. Clark did not review the medical records. The Claimant told Dr. Clark he had undergone physical therapy without relief, the pain was getting worse and now he was limping with every step. Dr. Clark noted the radiographic studies showed the Claimant had severe osteoarthritis, bone-on-bone, complete loss of joint space, osteophytes, and cysts, which the MRI further corroborated. Dr. Clark's diagnosis was end-stage left hip arthrosis with failure of non-operative management. Dr. Clark recommended a hip replacement. (Exhibit 6, p. 122)

21. The history the Claimant reported to Dr. Clark is inconsistent with his previous medical records for treatment of the November 28, 2016 injury. Specifically, Dr. Clark was under the impression the Claimant fell in November. Furthermore, the Claimant apparently reported to Dr. Clark that physical therapy had not provided relief.

The physical therapy records at the time of MMI documented the Claimant's goals of standing and walking pain-free were 100% achieved. Dr. Wright's record when he placed the Claimant at MMI documented the Claimant's report his hip was feeling better; he had no pain currently, but he got "a little gnawing every now and then" after a workout at the gym, which resolved within about an hour. (*See* Exhibits Q and R). The Claimant also advised Dr. Clark he was limping, yet the PT notes on multiple occasions indicated the Claimant was not observed to have a limp.

22. In his September 13, 2017 report, Peter L. Weingarten, M.D., stated the Claimant's diagnosis was advanced degenerative arthritis superimposed with the left hip sprain/exacerbation of osteoarthritic symptoms. He stated the arthritic changes were 100% pre-existing and unrelated to the November 28, 2016 incident, and the need for total hip arthroplasty was related to the pre-existing condition and not to the relatively minor November 28, 2016 incident. Dr. Weingarten further stated the course and progression of the degenerative arthritis was not altered or accelerated by the November 28, 2016 incident. Dr. Weingarten agreed the left hip replacement was indicated and appropriate for treatment of the pre-existing degenerative arthritis, but reiterated that the need for hip replacement was not related to the November 28, 2016 incident. Dr. Weingarten stated the Claimant did not have a disability related to the November 28, 2016 incident, and no further treatment was indicated for injuries sustained in the November 28, 2016 incident. (Respondents' Exhibit Y, pp. 076–078)

23. On October 12, 2017, Dr. Nystrom listed his assessment as left hip pain. He noted the Claimant had decided to go ahead with the hip replacement surgery by Dr. Clark through his private insurance. (Exhibit X, pp. 071–072)

24. On October 25, 2017, Dr. Clark performed left anterior total hip arthroplasty. (Claimant's Exhibit 6, p. 118)

25. The adjuster filed a Notice of Contest on November 13, 2017, stating: "Request for surgery not work related per Dr. Weingarten's attached report." (Respondents' Exhibit Y, p. 074)

26. On December 7, 2017, Dr. Clark noted the Claimant had no restrictions outside of no running and jumping. He released the Claimant to return to work. (Respondents' Exhibit Z, pp. 080–081)

27. On February 8, 2018, Dr. Nystrom noted the Claimant had been working regular duty without any problems, but he had not been released to run yet by Dr. Clark. Dr. Nystrom noted the Claimant was released to return to full work and activity. (Respondents' Exhibit AA, pp. 082–083)

28. The Claimant testified he did not miss any time from work from the date of his injury until he was placed at MMI.

Ultimate Findings

29. The ALJ finds the opinions of Dr. Ciccone and Dr. Weingarten on causation highly persuasive and credible. The ALJ further finds the opinions of Dr. Nystrom and Dr. Clark lacking in credibility on the causal relatedness to the November 28, 2016 incident, primarily because they were based on the Claimant's failure to give them an accurate history of previous problems with his left hip. Also, because the Claimant was not forthcoming with initial treating physicians and Surgeon Dr. Clark, concerning an accurate medical history of previous left hip problems and treatment, the ALJ finds the Claimant's testimony lacking in credibility.

30. Between conflicting medical and lay opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of IME Dr. Ciccone and Dr. Weingarten, on the causal relatedness of medical treatment after January 19, 2017 (the MMI date for the left hip sprain/strain) and the left knee replacement performed by Dr. Clark on October 25, 2017. Both Dr. Ciccone and Dr. Weingarten establish the work-relatedness of the sprain/strain of November 28, 2016, from which the Claimant recovered by January 19, 2017, and was back to the baseline of his naturally progressing degenerative condition of the left hip.

31. The sprain/strain incident of November 28, 2016 necessitated medical care and treatment until January 19, 2017, and was, therefore, a compensable event. Consequently, medical care and treatment for the strain/sprain until January 19, 2017, was authorized, causally related to the sprain/strain, and reasonably necessary to cure and relieve the effects of the November 28, 2016 sprain/strain incident.

32. The Claimant is **not** entitled to temporary disability benefits from November 28, 2016 and January 19, 2017. Although this issue was withdrawn at the commencement of the hearing, this finding is necessary to underscore the Claimant's entitlement to medical benefits during this period of time.

33. The Claimant has failed to prove, by a preponderance of the evidence that there is a causal link between his left hip condition after January 19, 2017, including the total left hip replacement of October 25, 2017 by Dr. Clark.

34. At this juncture, the stipulation concerning AWW is academic for purposes of this decision, however, it amounts to a judicial admission by the Respondents that the Claimant's AWW as of November 28, 2016 wasa$618.69, and as of April 1, 2018, it increased to $728.88.

Discussion of Lack of Applicability of *Loofbourrow*

Harman-Bergstedt, Inc. v. L*oofbourrow*, 320 P.3d 327 (Colo. 2014), which applied very narrow, fact specific principles, without establishing a sweeping precedent. *Trujillo* determined that MMI is a term of art, and has no legal significance in a case with no indemnity benefits payable. This makes implicit sense because MMI is the demarcation line between temporary and permanent disability indemnity benefits.

Indeed, it is the demarcation line between temporary disability benefits and **zero** permanent disability. In *Loofbourrow* by extension, an FAL is not effective to close a case as to further medical benefits. The Court stated that a claimant could still seek further medical benefits, with the burden of proof as to reasonableness and causal relatedness on the claimant. The holding of the case is that a petition to reopen need not be filed under §8-43-303, if the claimant should seek further medical benefits. The case sets no precedent as to any broader meaning than in the context of reopening for medical benefits, and it does not specify what type of medical benefits it is meant to address (*i.e*. *Grover* or pre-MMI substantive treatment). To accept the Respondents argument that the sprain/strain incident of November 28, 2016 is **not compensable**, although it was work-related and necessitated medical treatment for which the Respondents were liable if it met the workers' compensation tests would overturn the reasonable expectations of the community of injured workers who choose to go to hearing to establish an employer's liability for denied medical benefits in a work-related claim. Such an argument bears the hallmarks of a circular argument that may amount to sophistry. This could be the situation in a parallel universe (where technical form triumphs over due process), but not in Colorado.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a

witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* §8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Ciccone and Dr. Weingarten on causation were highly persuasive and credible. As further found, the opinions of Dr. Nystrom and Dr. Clark were lacking in credibility on the causal relatedness to the November 28, 2016 incident, primarily because they were based on the Claimant's failure to give them an accurate history of previous problems with his left hip. Also, because the Claimant was not forthcoming with initial treating physicians and Surgeon Dr. Clark, concerning an accurate medical history of previous left hip problems and treatment, the Claimant's testimony lacked credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical and lay opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of IME Dr. Ciccone and Dr. Weingarten, on the causal relatedness of medical treatment after January 19, 2017 (the MMI date for the left hip sprain/strain) and the left knee replacement performed by Dr. Clark on October 25, 2017. Both Dr. Ciccone and Dr. Weingarten established the work-relatedness of the sprain/strain of November 28, 2016, from which the Claimant recovered by January 19, 2017, and was back to the baseline of his naturally progressing degenerative condition of the left hip.

Sufficiency for Compensability of November 28, 2016 Left Hip Sprain/Strain

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). Respondents argue that the holding in *Harman-Bergstedt, Inc. v. Loofbourrow* effectively negates the compensability of injuries where the worker is not disabled for more than three days or shifts. Such is a misinterpretation of *Loofbourrow* and the prevailing law of compensability. *Loofbourrow* was decided on very narrow, specific circumstances not applicable to the present case. § 8-41-301, C.R.S.,*Henderson, supra* and *Gaudett, supra,* distinguished something in the nature a work-related paper cut, where no medical care was sought or given—not to a situation where the effects of a strain are treated for almost two months and an employer is ultimately held liable whether or not it chose to pay medical bills without admitting or denying liability. As found, the Claimant sustained a sprain/strain of the left hip on November 28, 2016; he received medical care and treatment for the sprain/strain from November 28, 2016 through January 19, 2017, when he returned to the baseline of his naturally progressive degenerative condition, which ultimately necessitated the non-work related total left hip replacement of October 25, 2017.

Lack of Compensability of Left Hip Condition After January 19, 2017

d. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** A manner of conceptualizing the matter is, essentially, that a presumption of work-relatedness may arise when an unexplained injury occurs during the course of employment. However, it is incumbent to show that non-work related factors caused the injury. Nonetheless, proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant failed to prove, by a preponderance of the evidence that there was a causal link between his left hip condition after January 19, 2017, including the total left hip replacement of October 25, 2017 by

Dr. Clark. Therefore, the Claimant failed to prove entitlement to any workers' compensation benefits for his left hip condition after January 19, 2017.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven the compensability of the left hip sprain/strain of November 28, 2016, a temporary phenomenon which lasted until January 19, 2017, when he was placed at MMI for the sprain/strain. As further found, the Claimant failed to prove the causal relatedness and/or compensability of his left hip condition after January 19, 2017, including the causal relatedness of the total hip replacement of October 25, 2017.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the costs of authorized, causally related and reasonably necessary medical care and treatment for the Claimant's left hip sprain/strain of November 28, 2016 from that date until January 19, 2017, subject to the Division of Workers' Compensation Medical Fee Schedule.

B. Any and all claims for medical care and treatment for the Claimant's naturally progressing, degenerative left hip condition, including the total left hip replacement of October 25, 2017, are hereby denied and dismissed.

DATED this_____day of June 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

STIPULATION

The parties stipulated to an average weekly of $675.35.

ISSUES

The following issues were raised for consideration at hearing.

- Whether Respondents established by a preponderance of the evidence a safety rule violation pursuant to C.R.S. §8-42-112(1)(a), for Claimant's failure to maintain 3-points of contact at all times with a ladder when he fell while descending the ladder while holding a water bottle or water bottle and lunch box.

- Whether Respondents established by a preponderance of the evidence a safety rule violation pursuant to C.R.S. §8-42-112(1)(a), for Claimant's failure to comply with an OSHA rule prohibiting the carrying of objects while descending or ascending a ladder that could cause an employee lose balance and fall.

- Whether Respondents established by a preponderance of the evidence a safety rule violation pursuant to C.R.S. §8-42-112(1)(d) that Claimant willfully mislead the Employer by admittedly failing to inform Employer that he was restricted to avoid ladders in case of a seizure and Claimant was injured six weeks later after falling from a ladder at work.

FINDINGS OF FACT

Having considered the evidence presented at hearing, the following Findings of Fact are entered.

1. Claimant is a 55 year old, 13-year employee, roofer for Employer. Employer has an accident prevention plan to promote the safety of its employees, especially around ladders. Approximately 12-years ago, a different employee fell from a ladder while using his cell phone. Since then, Employer has been adamant about educating all employees and enforcing ladder safety.

2. Employer contends Claimant violated three separate safety rules, two involving ladders. The first is the "3-point ladder rule" which provides that when ascending or descending a ladder, at least one hand must be free to grasp the ladder at all times. The employee must maintain "at least three points of contact with the ladder (two feet and one hand or two hands and one foot) when climbing the ladder." The rule goes on to state that: "[s]upplies or equipment shall not be hand carried by the worker on the ladder; instead a rope, block, tool belt, or pulley system shall be used to carry tools or equipment."

3. The second is OSHA's ladder rule that "an employee shall not carry any object or load that could cause the employee to lose balance and fall." Any carried object should not impede the employee's ability to maintain full control while climbing up and/or down a ladder. "It is OSHA's belief that the employee's focus and attention while climbing up and/or down a ladder should be on making a safe ascent or descent and not on transporting items up and down the ladder."

4. Claimant admitted he was aware of both ladder safety rules. Employer made the rules known to Claimant upon hiring and frequently restated them during safety meetings and throughout the course of any given day. Significantly, the ladder rules were "common knowledge" with experienced roofers and/or long-term roofers for Employer. New and inexperienced roofers most commonly violated the ladder rules.

5. Jeremy Shull, Employer's owner, testified that both ladder rules were strictly enforced, company-wide for the entire time Claimant worked for Employer. Mr. Shull persuasively explained that the company was concerned about employee safety as well as company liability. If any Employee, including Claimant, violated the 3-point ladder rule, that Employee would be issued a company safety citation and reprimanded. Ladder rule violations, however, were uncommon among experienced roofers because Employer strictly enforced the rules and were strictly enforced and because experienced roofers likely did not desire to fall.

6. Nathan Shull, Employer's Safety Director (and brother of owner Jeremy Shull) testified that he conducted safety trainings that Employer required all employees, including Claimant, to attend. He regularly and repeatedly discussed the rule requiring employees to maintain three points of contact with ladders at all times. Employer also maintained pulleys and ropes available for employees to use to transport supplies and equipment to and from the roof instead of carrying them up and down the ladder, specifically as a safety precaution to avoid injuries.

7. Claimant fell from an extension ladder approximately 10 feet tall while descending the ladder at the point on the ladder about halfway down where the ladder goes from 2-rungs for foot support to 1-rung. Claimant contends that he was carrying an empty industrial sized water bottle with a strap that he brought to court. According to Claimant, he placed the strap over his forearm above the elbow and was able to descend the ladder while complying with the 3-point ladder rule because his hands were allegedly free.

8. Claimant claimed he was going down the ladder because he was thirsty and needed to fill his water bottle. Claimant explained that his industrial sized water bottle was empty by late morning because he shared his water with his co-workers. Claimant testified inconsistently that all employees bring their own water bottles to the roof. If all employees brought their own water bottles, they would not have needed to drink Claimant's water, and more likely than not his water bottle would not have been empty when he climbed down the ladder. Moreover, Employer persuasively explained that employees used ropes and a pulley to transport water bottles to the roof. Claimant denied carrying anything other than the water bottle down the ladder when he fell.

9. Nathan Shull demonstrated in court the scenario admitted to by Claimant and descended the ladder with the empty water bottle strapped to his arm. The water bottle swayed back and forth and caught repeatedly on the ladder rungs making it impossible for Shull to maintain 3-points of contact with the ladder all times. The ALJ finds that given the size of the water bottle and Claimant's allegation that it was empty, the water bottle would not remain stationary. Rather, an empty water bottle would swing back and forth and hit the ladder resulting in Claimant having to break contact with the ladder to move the water bottle out of the way and back up his arm.

10. During each demonstration without the water bottle strapped to his arm, Nathan Shull was able to grab hold of the ladder with both hands to prevent himself from falling no matter how hard the ladder shook or how many times he feigned missing a step. As long as both of his hands were free, Shull was able to hang onto the ladder and indicated he could hang there "all day" without falling.

11. Claimant testified that while descending the ladder, each of his hands were 6 inches from the side of the ladder. That was not possible because that would place Claimant's hands on top of each other in the middle of the rungs. The ALJ finds that Claimant did not correctly understand the unit of measure.

12. Shull demonstrated that wherever he placed his hands on the ladder, if he had the water bottle hanging over his arm as Claimant described, the water bottle swung on his arm as he descended the ladder, making it impossible for Shull to maintain 3-points of contact. No matter where he placed his hands without the water bottle, Shull was able to hold onto the ladder to avoid falling. The ALJ finds that Claimant would not have fallen if both of his hands were in fact free and if Claimant maintained 3-points of contact with the ladder at all times. The ALJ finds that Claimant did not maintain 3-points of contact.

13. Employer disputes Claimant's version of the fall. Employer asserts that Claimant was carrying the water bottle *and* his lunch box as he was climbing down the ladder when he fell.

14. Claimant's co-worker Eduardo Rodriguez witnessed Claimant's fall. According to Rodriguez, Claimant was carrying his lunch box on a shoulder strap and he was carrying his water bottle with his hand. In this scenario, the water bottle would not have been swinging back and forth because it would not have been empty. Claimant would have been climbing down the ladder with his partially full water bottle and his lunch box because it was time for lunch. Rodriguez continued to watch Claimant slip where the rungs of the ladder went from two to one rung and fall. If Claimant had carried his lunch box and water bottle as witnessed by Rodriguez, more likely than not, he would not have fallen from the ladder as both hands would have been free. The ALJ finds it more likely true than not that Claimant violated Employer's 3-point ladder rule, and the OSHA rule that an employee shall not carry any object that would cause him to lose his balance or fall. The ALJ also finds it more likely than not that but for the violation of the rules Claimant would not have fallen.

15. Claimant denied carrying his lunch box down the ladder, although he admitted that he fell right next to his water bottle and upside down lunch box and that other employees observed the items next to him on the ground. Claimant explained this by testifying that he happened to fall in a spot by a tree where many of the employees' lunch boxes, including Claimant's, were all lined up. When asked why, following his fall, was Claimant's lunch box spotted by others on the ground upside down next to his water bottle, Claimant maintained that he may have kept his lunch box in an upside down position while he worked or that it was just a coincidence. The ALJ rejects this testimony as unlikely and not persuasive.

16. Claimant first claimed that he carried his water bottle up and down ladders all the time without consequence. The ALJ rejects the notion that Employer would issue citations for safety rule violations for everything "other than" the 3-point ladder rule.

17. Jeremy Shull explained that he never before observed Claimant violating the 3-points of contact ladder rule. While Shull was not always on the job site, a foreman typically was and it was part of the foremen's job to issue safety rule citations. They did so as evidenced by the citations submitted into evidence.

18. Finally, Claimant testified that he had seen Nathan Shull descending quickly down a ladder with his hands sliding down the sides, seeming to suggest that even the Safety Director himself did not comply with the rule. Claimant, however, admitted that when he observed Shull doing this, Claimant had no idea that Shull was simply showing another employee how to make an emergent descent from a ladder, which is known as a "firefighter" descent.

19. Alternatively, on July 17, 2017, six weeks before Claimant fell from the ladder, he presented to Denver Health for "follow-up of his epilepsy." Claimant has had two late in life non-work-related seizures. The first seizure was approximately two years prior to the medical visit and the second seizure occurred in May 2017, at which time he began taking anti-seizure medication. According to the medical record, Claimant's wife witnessed both seizures reporting that Claimant's eyes closed; the seizures lasted about 5-10 minutes; and that Claimant clenched his upper extremities during the episodes. Claimant was confused for several hours after each episode.

20. Claimant underwent a brain MRI at Denver Health that revealed chronic small vessel ischemic changes ("CSVIC"), likely secondary to age and smoking. The CSVIS increased Claimant's risk for seizures. The physician documented that Claimant "has about an 80% chance of having recurrent episodes" of seizures. During the July 17, 2017 medical evaluation, Claimant's doctor gave him "seizure precautions" which included "avoid activities where it is dangerous with a seizure such as bathing, swimming, lifting, etc." Claimant testified that he did not know he had a seizure condition because his MRI was "normal." However, Claimant also admitted to taking anti-seizure medication for more than a year in effort to prevent a future seizure. Claimant also admitted that if he had a potential for a future seizure that climbing up and descending a ladder or being on a ladder at all would qualify as a "dangerous activity" that Claimant should avoid.

21. It is undisputed that Claimant did not inform Employer of his medical restriction to avoid dangerous activity because he had an 80% likelihood of having another seizure. Jeremy Shull testified that had Claimant told Employer about this restriction, Employer would not have allowed Claimant to continue working on ladders. According to Shull, he would have accommodated Claimant's restriction and assigned Claimant job duties that did not require ladder use. Claimant presented no persuasive evidence that he refrained from telling Employer about his seizure likelihood because he forgot. Rather, Claimant denied having the condition and denied knowledge that he was likely to have another seizure claiming that nobody ever told him. The ALJ rejects Claimant's testimony as not credible, especially given that Claimant admitted to taking anti-seizure medication for over a year to avoid another seizure.

22. Claimant contends that a seizure did not cause his fall. Respondents do not contend otherwise. However, the ALJ finds that Claimant willfully mislead Employer concerning Claimant's physical ability to ascend and descend ladders. Claimant injured himself falling from a ladder when he was medically restricted from being on a ladder. The fact that a seizure did not cause the fall is irrelevant. Claimant would not have fallen from the ladder on August 31, 2017 had he told Employer about the 80% likelihood of having another seizure. Claimant would not have been on a ladder on August 31, 2017.

CONCLUSIONS OF LAW

The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* Claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. *Section 8-41-301(1), C.R.S.; See City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance* Co. *v. Cline,* 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). As found, the testimony of Jeremy and Nathan Shull are credible and persuasive. Claimant's testimony on significant issues is not credible and in some instances not plausible.

Pursuant to C.R.S. section 8-42-112(1), a claimant's compensation is reduced 50% when claimant's injury results from the willful failure to obey any reasonable rule adopted by the employer for the safety of the employee. A safety rule does not have to

be written to be violated. "Rather, a verbally communicated safety rule is sufficient to trigger the provisions of §8-42-112(1)(b), if the rule, warning, or prohibition is heard and understood by the employee." *Id.* Further, the safety rule does not have to be formally adopted by the employer and does not have to be posted. *See Bennett Properties Co.,* 165 Colo. 135, 437 P.2d 548, 552 (1968). In addition, the safety rule does not need to be specific. *See Jentzen v. Northwest Transport,* W.C. No. 4-009-435 (ICAO April 24, 1992)

Respondents carry the burden of proof to establish willful violation of the safety rule. *See Juarez v. Pillow Kingdom, Inc.,* W.C. No. 4-364-252 (ICAO January 22, 1999). However, "there is no extraordinary burden of proof [on the part of respondents], and the ALJ's finding of willful conduct must be upheld if supported by substantial evidence in the record." *Id.* A presumption against willful conduct does not exist. *Id.* Once respondents make a prima facie case of a safety rule violation, the burden of going forward shifts to claimant to rebut the prima facie case or establish the claim lacks merit. *See Bauer v. CF&I Steel, L.P. dba Rocky Mountain Steel Mills,* W.C. No. 4-495-198 (ICAO October 20, 2003).

Willfulness must be the result of deliberate intent and not mere negligence or forgetfulness*. Johnson v. Denver Tramway Corp.*, 171 P.2d 410 (Colo. 1946). However, to establish willfulness, respondents are not required to present direct evidence of claimant's state of mind or that claimant had the rule in mind when he performed the act that constituted a violation. It is sufficient to show that claimant had knowledge of the rule and deliberately performed the prohibited act. *Alvarado, supra; Bennett Properties Co. v. Industrial Comm'n*, 437 P.2d 548 (Colo. 1968). As noted in *Gargano v. Metro Wastewater Reclamation District,* W.C. No. 4-435-104 (ICAO February 19, 1999), "willful misconduct may be established by showing a conscious indifference to the perpetration of a wrong, or a reckless disregard of the employee's duty to his employer. Moreover, there is no requirement that the respondents produce direct evidence of the claimant's state of mind…Indeed, it is a rare case where the claimant admits that his conduct was the product of a willful violation of the employer's rule."

As found, according to Claimant's version of events, Claimant admits that he willfully climbed down the ladder to fill up his water bottle because he was thirsty. He simply claims he was able to do so while at the same time comply with the three-point ladder rule because both hands were on the ladder at all times because the water bottle was hanging from Claimant's arm. As demonstrated, it is not possible for the water bottle to remain immobile in such position. Instead, the water bottle swings back and forth and becomes caught on the ladder rungs. The bottle also slides up and down the carrier's arm to the point where he or she must take a hand off the ladder to move the bottle so it stops swinging and hitting the ladder's rungs.

Respondents maintain that Claimant was carrying his water bottle in his hand and his lunch box on his shoulder. Eduardo Rodriguez documented that he saw:

- Claimant holding his water bottle in his hand with his lunch box strapped around his shoulder.

- Claimant slip where the ladder changed from two rungs to one.

- Claimant was unable to grab hold of the sides of the ladder with both hands because one of his hands was holding a water bottle.

This eye witness account, coupled with Claimant's admission that he fell and landed right next to his upside down lunch box, and Nathan Shull's demonstrations, lead the ALJ to conclude that Claimant would not have fallen if both of his hands were free. Whether carrying an empty water bottle or a lunch box and water bottle, Claimant would have been unable to maintain three points of contact with the ladder. When he did slip, he could not grab the sides of the ladder to avoid the fall because one or both of his hands would not have been holding onto the ladder or free to grab onto the ladder to avoid the fall.

In sum, Respondents have shown by a preponderance of the evidence that

- Claimant willfully violated the three-point ladder rule and the OSHA Rule.

- Claimant was aware of the rules and understood them.

- Employer adopted and enforced the Rules.

- But for the violation, Claimant would not have fallen from the ladder as he claims .

- Respondents are entitled to the safety rule violation deduction pursuant to § 8-42-112(1) (a).

Independently section 8-42-112. (1)(d) provides that compensation is also reduced by fifty percent where an employee willfully misleads an employer concerning the employee's physical ability to perform the job, and the employee is subsequently injured on the job as a result of the physical ability about which the employee willfully mislead the employer. The term "willful" means with "deliberate intent" as opposed to mere thoughtlessness, forgetfulness, or negligence. *Bennett Properties Co. v. Industrial Commission*, 165 Colo. 135, 437 P.2d 548 (1968); *Johnson v. Denver Tramway Corp.,* 115 Colo. 214, 171 P.2d 410 (1946). The phrase "physical ability" is described in terms of the ability to do some physical action. The question of whether the respondents proved willfulness was one of fact for determination by the ALJ. *See Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995).

Claimant had two late in life seizures, one in 2015 and one in May 2017, six weeks before his work injury. Claimant's doctor told him to avoid activities that can be dangerous to a person who has a seizure, using "bathing, swimming and lifting, etc." as activities to avoid. Claimant admitted that he was aware that such dangerous activities included driving and climbing up or down ladders. Claimant also admitted that he did not tell Employer that his doctor advised him to refrain from being on ladders due to an 80% likelihood that he would experience another seizure. Claimant testified that he was

unaware that he was supposed to avoid dangerous activities because the doctor told him he did not have a risk for future seizures because his MRI was normal. However, Claimant admitted he was taking anti-seizure medication for more than one year. Jeremy Shull persuasively explained that he would not have allowed Claimant to step foot on a ladder had Claimant told Employer about his medical condition. It follows that Claimant could not have fallen from a ladder if he was not on a ladder in the first place. Here, on July 17, 2017, Claimant's doctor cautioned him to avoid dangerous activities such as climbing ladders. Had Claimant timely informed Employer of this restriction, he would not have been on a ladder at work on August 31, 2017.

ORDER

It is therefore ordered that:

1. Respondents have proven by a preponderance of the evidence that they are entitled to a 50% reduction in benefits pursuant to C.R.S. section 8-42-112(1) (a) and (d).

2. All matters not determined herein are reserved for future determination.

DATED: June 20, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Court
1525 Sherman St., 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable injury on December 8, 2016 or December 11, 2016.

II. Whether Claimant established, by a preponderance of the evidence, that he is entitled to reasonable and necessary medical treatment.

STIPULATIONS

At the time of hearing, the parties stipulated and agreed as follows:

- Claimant's average weekly wage is $520.00, with a corresponding benefit rate of $346.67;
- Claimant lost no time from work as a result of the alleged work incident; and
- In the event the claim is found compensable, Respondents will pay the medical bill from Blue Sky Neurology for the evaluation that was performed on January 24, 2018.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 66-year-old man with an April 3, 1952, date of birth. Exhibit A. Claimant was hired by the Respondent Employer on November 29, 2016 to work as a security officer. (Exhibit A.)
2. On December 8, 2016, Claimant was on patrol, when he slipped and fell while walking on a flat roof of a building, which was slippery, to make sure a door was locked. Claimant reported both legs twisted inwards and he fell back onto his lower back. (Exhibit E, Bates 18.) Claimant testified the slip and fall occurred at approximately 10:00 p.m., and he completed his shift, which ended at 11:00 p.m. Claimant did not initially request medical treatment. Claimant worked his regular shifts on December 9th and December 10th, 2016.
3. On December 12, 2016, Claimant surreptitiously recorded Employer's Director of Security, his General Manager, Mr. Jackson Marshall, apparently advising Claimant to give a December 11, 2016, date of injury as opposed to a December 8, 2016, date of injury.

4. On December 12, 2016, Employer filed a First Report of Injury documenting a reported slip and fall incident involving Claimant occurring at 10:00 p.m., December 11, 2016.

5. Employer referred Claimant for medical care at Concentra Medical Centers on December 12, 2016.

6. On December 12, 2016, PA Ron Rasis evaluated Claimant at Concentra. Claimant reported he was patrolling a flat roof at work "yesterday", when both legs "twisted inward" and he "fell back onto his lower back. [The claimant denied] hitting his head, neck pain. . . ." PA Rasis discussed with Claimant and noted the "odd mechanism to twist both knees and fall backwards, difficult to generate significant twisting force in bilateral knees while falling back." (Exhibit E, Bates 18.) Claimant reported muscle pain, back pain and stiffness, but there was no swelling on physical exam. The was no external swelling on or of the head and no evidence of trauma. The knee exam showed no ecchymosis, no effusion, no crepitus on palpation with normal warmth. Judgment and insight were normal, with intact recent and remote memory. Examination of Claimant's skin revealed normal skin and no rashes or lesions. Therefore, there was no documentation of redness or bruising on Claimant's lower back. Despite a number of physical complaints, Claimant's physical examination appeared to be objectively normal. Notwithstanding Claimant's physical examination, the initial assessment provided by PA Rasis included back pain, contusion of lower back, left knee sprain, and right knee sprain. (Exhibit E, Bates 19.)

7. On December 12, 2016, Claimant was not having any problems with his memory or cognition. (Exhibit E, Bates 19.)

8. Claimant testified his memory and cognition problems developed later, over time. (Hearing audio @ 2:50 p.m.)

9. On December 14, 2016, Physical Therapist, Christi Galindo, evaluated Claimant. Claimant reported "doing the splits" and then falling on his back. Claimant also reported hitting the back of his head. (Exhibit F, Bates 34.) Although Claimant admitted to having a prior back injury, he denied having any prior knee issues. (Exhibit F, Bates 36.) Claimant was evaluated and treated for complaints of back and bilateral knee pain. Ms. Galindo noted that although Claimant complained of 10/10 pain, he was able to walk in to the physical therapy facility independently. (Exhibit F, Bates 36.)

10. On December 15, 2016, Claimant was again evaluated and treated by Ms. Galindo. She noted Claimant continued to complain of 8-10/10 lumbar and bilateral knee pain. She also noted Claimant's reported pain levels were high compared to his actual functional ability to walk into therapy and get on and off the physical therapy table. She further noted Claimant's ability to sit and hang his legs off the physical therapy table with 90 degrees of flexion while sitting, but yet he demonstrated having less than 90 degrees of active flexion. She noted signs of symptom magnification. (Exhibit F, Bates 41.)

11. On December 21, 2016, PA Ron Rasis reevaluated Claimant. On that date, Claimant reported no change in his condition. PA Rasis again noted the questionable mechanism of injury and indicated Claimant's exam was concerning due to limited effort and signs that were suggestive of delayed recovery. (Exhibit E, Bates 22.) He also noted that on physical exam, Claimant actively resisted as the provider attempted passive range of motion. He further noted that despite Claimant's subjective complaints, his lumbosacral spine had no erythema, no ecchymosis, no swelling, no bilateral muscle spasms, no warmth and his neurovascular function was intact. In addition, it is noted that Claimant alleged he was unable to get onto his toes standing, which the provider noted, "would seem incompatible with walking." He also noted Claimant's recent and remote memory remained intact. Based on Claimant's presentation, PA Rasis referred Claimant to delayed recovery specialist, Dr. Eric Tentori. (Exhibit E, Bates 23.)

12. X-rays of Claimant's bilateral knees were performed at Kaiser Permanente on November 30, 2017. Claimant's knee x-rays were read as normal, showing well preserved joint spaces without degenerative changes. (Exhibit G, Bates 70.)

13. On December 29, 2016, Claimant returned to Ms. Galindo for physical therapy. Ms. Galindo again noted ongoing signs of symptom magnification. (Exhibit F, Bates 57.)

14. On January 4, 2017, Claimant returned to Ms. Galindo for physical therapy. Ms. Galindo again noted ongoing signs of symptom magnification with pain being 10/10 regardless of performing any movement, regardless of position, and regardless of the time of day. (Exhibit F, Bates 62.) On January 5, 2017, Ms. Galindo noted similar findings, which again included symptom magnification. (Exhibit F, Bates 66.)

15. On January 6, 2017, Dr. Tentori evaluated Claimant. Claimant told Dr. Tentori that while falling backwards, he twisted both knees inwards and that he also struck his head. For the first time, Claimant indicated he "may have lost consciousness." Claimant presented describing that his "whole body" hurt and, instead of improving, his symptoms were worsening. Claimant alleged the medical treatment he had been provided had not produced any benefit. Claimant described neck pain, back pain, bilateral shoulder pain, and bilateral knee pain. Upon direct questioning by Dr. Tentori, Claimant denied any historical issues with pain affecting his shoulders, neck, back or knees. (Exhibit E, Bates 25.) Claimant stated he had some surgery in the remote past, but reported he could not recall the details of the surgical procedures and purportedly could not even recall what body parts required surgical intervention. Claimant explained that his memory may be affected from the alleged December 11, 2016, work injury. Dr. Tentori noted Claimant appeared to have "some difficulties with regard to recall/memories as it relates to recent events and remote events." Physical exam revealed diffuse tenderness of the entirety Claimant's cervical, thoracic and lumbar spine and lumbosacral junction. Examination of his shoulders revealed symmetrical findings of diffuse tenderness with palpation. Examination of his knees also revealed symmetrical findings, no effusion and no warmth with palpation. The neurological examination was without significant/focal findings

other than breakaway-type weakness with regard to strength testing of all extremities. Dr. Tentori assessed:

- Diffuse pain complaints of *unclear/undetermined etiology*;
- *Possible* musculoskeletal strain of the patient's cervical spine, thoracic spine, and lumbar spine;
- *Possible* strain of the bilateral shoulders and bilateral knees.
- Report of associated closed head injury and *possible related loss of consciousness;*
- Subjective complaints appear to be in excess of objective findings. *Cannot rule out symptom magnification*.

(See Exhibit E, Bates 25-27. [Emphasis supplied.])

16. On February 9, 2017, Claimant, through counsel filed a Workers' Claim for Compensation alleging an 8:30 p.m., December 8, 2016, incident with the Respondent Employer resulting in injuries to his "bilateral knees, low back and head", with no reference to the shoulders or neck being injured. (Exhibit C, Bates 10.)

17. On January 24, 2018, Neurologist, Dr. Karen Karwa, evaluated Claimant, on referral from his primary care physician for evaluation and management of chronic headaches. Claimant told Dr. Karwa he thought bread and yeast were possible triggers for his headaches. Claimant reported he sometimes experienced memory loss when he was off work and at home. "He forgets what he is doing intermittently. He hasn't no symptoms of problems with memory or attention or at work." [Sic] (Exhibit H, Bates 72.) On physical exam, Claimant's neck was "supple", he was alert and oriented times three, memory was intact and gait was normal. Dr. Karwa assessed:

- Chronic daily headache;
- Polyneuropathy;
- Daytime sleepiness;
- Fatigue, unspecified type;
- Memory disturbance.

(Exhibit H, Bates 73.)

18. Dr. Karwa opined the etiology of Claimant's alleged chronic daily headaches was likely multifactorial and included medication overuse. She also noted Claimant's sleep deprivation, daytime sleepiness, and fatigue was concerning for possible obstructive sleep apnea. She also stated that Claimant's alleged memory symptoms were fairly nonspecific and appeared to be more related to attention matters. Dr. Karwa specifically noted that Claimant's memory disturbance did not appear to be impacting his job. She also stated that Claimant reported tingling and numbness in his feet which was described as a sensory predominant polyneuropathy which was most likely caused by Claimant's diabetes. Dr. Karwa

did not relate Claimant's headache complaints to his slip and fall at work, despite being aware of the alleged incident. (Exhibit H, Bates 73.)

19. Dr. Marc Steinmetz performed an independent medical examination (IME) of Claimant on November 21, 2017, at Respondents' request, and issued a report. As set forth in his report, Claimant was asked to complete an intake questionnaire. Claimant refused to complete the questionnaire in any detail. According to his report, Claimant told Dr. Steinmetz that he was injured when he:

> [F]ell backwards. He says his knees were bent and his feet were underneath him, and his legs were spread apart when he fell onto his back and head. He says he thinks he lost consciousness.

(Exhibit I, Bates 77.)

20. Dr. Steinmetz also asked Claimant about prior work injuries. Claimant admitted to having a prior work injury involving his knees and back. However, Claimant was evasive as to whether he had any permanent restrictions or ongoing problems due to his prior work injury. (Exhibit I, Bates 78.)

21. Dr. Steinmetz performed a physical examination of Claimant and observed Claimant during the IME. Dr. Steinmetz noted in his report that while observing Claimant, sometimes he would limp and sometimes he would not. He also noted that Claimant attempted to demonstrate his body position when he fell by getting up on the exam table and voluntarily showing him how his knees were bent all the way underneath him and his legs were spread apart. Dr. Steinmetz also noted that while Claimant was taking off his shoes and socks, and putting them back on, he fully flexed his back forward without any pain behaviors. However, upon formal examination, Claimant had limited lumbar flexion. Dr. Steinmetz noted that while Claimant demonstrated how he fell, he fully flexed his knees. However, upon formal examination, he could barely bend his knees to 90 degrees. He also noted that while casually sitting in the clinic and walking into his exam room, he would fully extend his knees, but Claimant would not fully extend his knees during his physical examination. Despite Claimant's limited range of motion of his knees during Dr. Steinmentz' physical examination, Dr. Steinmetz noted no instability and no crepitous. Dr. Steinmetz also noted Claimant demonstrated limited shoulder range of motion during his examination, but had normal shoulder range of motion when demonstrating how he fell. He also noted Claimant's legs and arms had full musculature, with some breakaway weakness noted with strength testing. (Exhibit I, Bates 78-79.)

22. After observing and physically evaluating Claimant, Dr. Steinmetz determined Claimant had a normal physical examination. Dr. Steinmetz concluded that based upon Claimant's inconsistent and normal physical examination as well as the inconsistent mechanism of injury, he did not think Claimant sustained any injuries due to the December 2016 work accident. (Exhibit I, Bates 79-80.)

23. Dr. Steinmetz also testified at hearing and testified consistent with his report.

24. Numerous medical providers who evaluated Claimant expressed doubts about the reported mechanism of injury. They also observed and documented nonphysiological findings together with symptom magnification.

25. Dr. Tentori assessed diffuse pain complaints of unclear/undetermined etiology. Dr. Tentori was unaware of Claimant's prior work-related knee and back injuries resulting in permanent physical impairment, and surgeries to Claimant's knees. As set forth above, Dr. Tentori assessed possible musculoskeletal strain of Claimant's cervical spine, thoracic spine and lumbar spine, possible strain of the bilateral shoulders and bilateral knees and report of closed head injury and possible related loss of consciousness. In other words, Dr. Tentori noted lots of possibilities, but very few certainties.

26. Dr. Steinmetz credibly testified that the medical records do not contain any objective and credible evidence supporting a work injury. Dr. Steinmetz credibly testified Claimant does not have a work-related diagnosis of closed head injury, cervical, thoracic or lumbar spine strain, or strain of the bilateral shoulders and knees. Dr. Steinmetz credibly testified it is not medically probable Claimant suffered injuries to his head, neck, shoulders, low back or bilateral knees in the course and scope of his employment with the Respondent Employer.

27. The ALJ finds Dr. Steinmetz' opinions as set forth in his report and hearing testimony to be credible and persuasive. Dr. Steinmetz' opinions are consistent with the other medical providers who questioned Claimant's reliability regarding how he allegedly fell and allegedly hurt so many body parts as well as the reliability of his reported symptoms.

28. Claimant testified at hearing and tried to explain how he slipped and fell, twisted both knees, hit and injured his low back on the ground, and also hit and injured his head on the ground. Claimant described how his feet went under him, twisted, and ended up under his back, and his low back and the back of his head hit the ground.

29. During his testimony, Claimant took a piece of tissue paper and used it to demonstrate how he contends he fell and injured his knees, back and head. Claimant rolled the tissue into a tube and began folding the tissue at various junctures which were meant to correlate with his ankles, knees, and low back. Each fold was meant to demonstrate how he fell with his feet and lower legs ending up underneath his back and hitting his back and head on the ground. At the end of his demonstration, he ended up with a piece of tissue paper that was folded so many times and in such a manner, that his demonstration drove home the point that his contention as to how he allegedly fell and hurt his knees, back, and head appears to be physiologically and anatomically impossible.

30. The ALJ does not find Claimant credible as it relates to how he allegedly fell, the alleged symptoms caused by the fall, or the injuries allegedly caused by the fall.

31. The ALJ finds insufficient evidence to establish that it is more likely than not that Claimant suffered an injury requiring medical treatment, resulting in disability or permanent physical impairment, arising out of, and in the course and scope of his

employment with the Respondent Employer on December 8, 2016, or December 11, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Legal Principals

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. The claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits, including medical benefits, by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable injury on December 8, 2016 or December 11, 2016.

Colorado's Workers' Compensation Act creates a distinction between the terms "accident" and "injury". The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." See §8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury."

A compensable injury is one which requires medical treatment or causes a disability. It is well established that it is Claimant's initial burden to prove a compensable injury. *City of Boulder v. Payne*, *supra*; *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990). The determination of whether Claimant proved an injury which required medical treatment or resulted in disability is one of

fact for the ALJ. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Moreover, the ALJ's findings may be based on reasonable inferences from circumstantial evidence. *Ackerman v. Hilton's Mechanical Men, Inc.*, 914 P.2d 524 (Colo. App. 1996).

In the instant claim, Claimant alleges a slip and fall on December 8, 2016. Claimant filed a January 26, 2018, Application for Hearing, alleging a December 11, 2016, date of injury. Claimant testified the accident occurred at 10:00 p.m., December 8, 2016. Claimant's Worker's Claim for Compensation indicates the accident occurred at 8:30 p.m. Claimant initially described the accident occurring when his legs twisted inwards with a fall landing on his low back. Claimant reported to the physical therapist that he "did the splits" and landed on his low back. Claimant demonstrated "doing the splits" and falling to Dr. Steinmetz. At hearing, Claimant described his knees coming together prior to the alleged fall.

At hearing, and during his testimony, Claimant took a piece of tissue paper and used it to demonstrate how he contends he fell and injured his knees, back and head. Claimant rolled the tissue into a tube and began folding the tissue at various junctures which were meant to correlate with his ankles, knees, and back. Each fold was meant to demonstrate how he fell with his feet and lower legs ending up underneath his back and hitting his back and head on the ground. At the end of his demonstration, he ended up with a piece of tissue paper that was folded so many times and in such a manner, that his demonstration drove home the point that his contention as to how he allegedly fell and hurt his knees, back, and head appears to be physiologically and anatomically impossible.

Claimant denied any history of prior shoulder, back or knee pain to Dr. Tentori. He reported a history of surgery, but suggested he had no memory of the surgical body part. At hearing, Claimant first denied but then admitted to prior back and knee injuries resulting in permanent physical impairment ratings and settlement, and prior knee surgeries. Claimant testified that he had no memory problems immediately following the accident. The memory issues, headache and cognitive problems allegedly developed and allegedly worsened progressively. Dr. Steinmetz credibly testified it is not medically probable traumatically induced headache and memory issues would not be present immediately post-accident and develop later. Dr. Steinmetz credibly testified it is not medically probable traumatically induced memory loss would not be present while the claimant was working, but would be present intermittently while Claimant was at home. Dr. Steinmetz credibly testified it is not medically probable Claimant would fall with his knees together, landing backwards and hit multiple body parts. Dr. Steinmetz credibly opined, based on Claimant's inconsistent history, inconsistent/normal physical exam and demonstrated functional capacity, it is not medically probable Claimant suffered an injury to his neck, low back, shoulders, knees or head on December 8, 2016 or December 11, 2016.

Despite medical treatment, including diagnostics, medications, physical therapy and specialist referral, no medical provider has identified objective and credible evidence of a work related injury requiring medical treatment, resulting in disability or permanent medical impairment.

It is Claimant's burden to prove a causal connection between his employment and the resulting condition for which medical treatment and indemnity benefits are sought. Section 8-43-201, C.R.S.; *Ramsdell v, Horn*, 781 P.2d 150 (Colo. App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). The determination of whether Claimant sustained that burden of proof is factual in nature. Claimant bears the burden of proof, by a preponderance of the evidence, to establish that an injury arising out of and in the course of the employment was the cause of the disability and need for treatment. The question of whether Claimant has met the burden is one of fact for the ALJ. *Faulkner v. Industrial Claim Appeals Office, supra*.

It is Claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between his employment and his injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ). *See also, In the Matter of the Claim of Tammy Manzanares, Claimant*, W. C. Nos. 4-517-883 and 4-614-430, 2005 WL 1031384 (Colo. Ind. Cl. App. Off. Apr. 25, 2005).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. 2008). In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part, or none, of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ also had the opportunity to observe Claimant testify at the hearing and observe his demeanor, which included Claimant's intonations, facial expressions, gestures, fluid movements, and demonstration as to how he allegedly fell and got hurt. Such observations contradicted Claimant's testimony and alleged physical complaints regarding the extent of his symptoms which he contends flow from the accident. Such observations also included his demonstration as to how he allegedly fell and got hurt and exposed the implausibility as to Claimant's contortionistic account as to how he fell.

As found, Claimant's statements to various medical providers, Dr. Steinmetz, and his testimony at hearing regarding how he allegedly slipped and fell and injured himself was not found to be credible. In fact, it was found implausible. In addition, Claimant's pain complaints and complaints of memory problems and headaches was also not found to be credible.

The ALJ does credit Claimant's testimony that he slipped at work on December 8, 2016, and that his supervisor appears to have told him to use December 11, 2016, as the date of the accident. Although the reason the supervisor wanted Claimant to use a different date of accident is unknown, the ALJ does not find the statements of the supervisor to be relevant as to the ultimate findings and conclusions in this case. The ultimate findings and conclusions in this is are that despite falling, Claimant did not suffer an injury that required medical treatment or caused any disability or medical impairment.

Claimant contends that the fact that he presented to numerous medical providers with various complaints and symptoms and was provided medical treatment and referred to other medical providers proves he suffered a compensable injury. However, in this case, the ALJ has found Claimant did not suffer any injury at work that required medical treatment. In this case, the ALJ found that the causal connection between the slip and fall and the need for any medical treatment was absent.

The facts of this case present an example of doctors and other medical providers prescribing and providing treatment and assigning work restrictions based upon a worker's subjective complaints and misrepresentation of his symptoms. The provision of treatment under such circumstances cannot be deemed tantamount to a compensable work injury.

Claimant has failed to prove, by a preponderance of the evidence, that he suffered an injury requiring medical treatment, or resulting in disability or permanent physical impairment as a result of a December 8, 2016, or December 11, 2016, accident in the course and scope of his employment with the Respondent Employer. Therefore, the ALJ concludes Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable work injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 20, 2018

ISSUES

- The issue for determination involves the impact of ALJ Lamphere's December 30, 2016 final order on Claimant's eligibility for temporary disability benefits. Specifically, Claimant asserts ALJ Lamphere's order left open the issue of temporary disability. Conversely, Respondents assert all issues regarding indemnity benefits are closed, and the statute of limitations for reopening has run.

- Claimant's Application for Hearing describes the disputed issue as an appeal of PALJ Barbo's October 18, 2017 order striking Claimant's prior application for hearing. In his order, PALJ Barbo discussed at length the effect of the reservation clause in ALJ Lamphere's December 30 order. Claimant's brief did not address the reservation clause, and at the May 31, 2018 supplemental hearing Claimant's counsel stated he is not pursuing that issue.

FINDINGS OF FACT

1. Claimant worked as a computer support technician for Employer. On September 7, 2010, she injured her low back while moving a file cabinet.

2. Respondent admitted liability and Claimant underwent a lengthy and complex course of conservative care. Claimant was eventually put at MMI, and her claim was closed by an uncontested Final Admission of Liability (FAL) dated September 18, 2013. The FAL admitted for "reasonable, necessary, and related medical care after MMI that is provided by an authorized treating physician."

3. Claimant continued to receive maintenance care for several years after her claim closed per the FAL. Her symptoms progressively worsened to the point that Dr. David Wong recommended surgery in March 2016.

4. Respondent denied the procedure, and the matter went to hearing before ALJ Lamphere on October 20, 2016. The issues for ALJ Lamphere's determination were: (1) Respondent's request to withdraw its admission of liability for medical benefits after MMI; (2) whether the surgery proposed by Dr. Wong was reasonably necessary "as maintenance care"; and (3) in the alternative, whether Claimant's condition had worsened, entitling her to reopen her claim to obtain the surgery recommended by Dr. Wong.

5. ALJ Lamphere issued his Findings of Fact, Conclusions of Law and an Order on December 30, 2016. ALJ Lamphere found the proposed surgery was reasonably necessary and causally related to Claimant's industrial injury, and denied Respondent's request to withdraw its admission. ALJ Lamphere further determined Claimant proved "that her condition has worsened and that the requested spinal surgery is reasonable and

necessary to prevent further deterioration of the spinal conditions caused by [ ] her September 7, 2010 work-related injury." ALJ Lamphere ordered Respondent to cover the surgery as "maintenance" treatment. Since the claim remained open for medical benefits, ALJ Lamphere determined Claimant's petition to reopen was moot.

6. Claimant eventually had the surgery and missed time from work. She requested temporary disability benefits, which Respondent denied on the theory that indemnity benefits were closed and it was more than six years past the injury.

7. Claimant applied for a hearing on August 30, 2017 on: "Whether Claimant is eligible for TPD benefits under the Court Order dated December 30, 2016." Respondent moved to strike the application as "unripe and frivolous," so PALJ Barbo convened a prehearing conference on October 16, 2017. Respondent argued Claimant was "attempting an end run around the statute of limitations in order to reopen this matter." Claimant argued ALJ Lamphere's order was "ambiguous" and she was entitled to a hearing to "clarify" alleged "inconsistencies" in the order. PALJ Barbo disagreed, and struck Claimant's application for hearing.

8. Claimant then applied for a hearing on December 18, 2017 to appeal PALJ Barbo's prehearing order.

9. The "inconsistencies" Claimant perceives in ALJ Lamphere's order are contained primarily in Findings of Fact #53 and #61, and Conclusions of Law ¶ M and ¶ N. Those sections provide:

> 53. The medical records submitted generally support Claimant's March 4, 2015 report to Dr. Wong that her symptoms have been worsening with time. Moreover, the medical records subsequent to March 4, 2015 support Claimant's testimony that her condition is deteriorating. Indeed, by records from CCOM, Claimant is now experiencing stabbing pains down both legs, reported weakness in the legs, loss of sensation in the right leg, causing her to fall, and a loss of bladder control. Consequently, the ALJ credits Claimant's testimony to find that she has suffered a worsening of condition since being placed at MMI.
>
> 61. Claimant has proven by a preponderance of the evidence that her condition has worsened and that the requested spinal surgery is reasonable and necessary to prevent further deterioration of the spinal conditions caused by, i.e. related to, her September 7, 2010 work-related injury.
>
> * * *
>
> M. Although Claimant asserts that she is not at MMI, she presented scant evidence to support such a conclusion. Here, the evidence presented persuades the ALJ that Claimant remains at MMI and the proposed surgery is contemplated for maintenance purposes to control Claimant's pain and maintain her current level of function. Given that

> Claimant has proven that the recommended surgery is reasonable, necessary and related to her September 7, 2010 industrial injury, the question concerning her entitlement to additional medical treatment becomes whether Dr. Wong's recommendation for surgery is properly considered maintenance treatment.
>
> N. The ALJ recognizes that surgery is often directed to curing and relieving a claimant's medical condition and not necessarily with maintaining and preventing deterioration of the claimant's condition. However, it is the purpose for which treatment is provided, not the "nature" of the treatment, which determines whether the treatment is curative or provided for maintenance reasons. . . . In this case, the ALJ concludes that irrespective of the nature of the surgery recommended . . . the purpose of the procedure is to relieve the worsened pain associated with Claimant's spinal injuries and to prevent deterioration of her present condition by decompressing the affected areas and in the case of fusion, stabilizing the mobile segment. Consequently, the ALJ concludes that Claimant is entitled to the recommended surgery on a maintenance basis.

10. The ALJ finds this claim remains open for medical benefits but is closed for additional indemnity benefits. ALJ Lamphere's December 30, 2016 order does not allow Claimant to receive temporary disability benefits without reopening the indemnity portion of her claim.

CONCLUSIONS OF LAW

The Supreme Court has held that the propriety of the PALJ's order is reviewable by an ALJ with the OAC. *Industrial Claim Appeals Office v. Orth*, 965 P.2d 1246 (Colo. 1998). Since then, it has been accepted that the appeal procedure is to bring the issue to an ALJ. There is no statutory or rule-based authority requiring deference to the PALJ's order, and the ALJ reviews the order *de novo*. *Dee Enterprises v. Industrial Claim Appeals Office*, 89 P.3d 430 (Colo. App. 2003) (ALJ has authority to overrule PALJ's order).

Although PALJ Barbo dismissed Claimant's application for hearing, Claimant's right to appeal the prehearing order to an ALJ essentially nullifies the order, as there is no way to consider Claimant's appeal without allowing her a hearing and considering her underlying arguments. The ALJ has, in effect, overruled PALJ Barbo's order by permitting Claimant to litigate the merits of her position.

Although this matter is postured as an appeal of PALJ Barbo's order, it is really a dispute over whether Claimant can pursue additional temporary disability benefits without reopening her claim. Claimant concedes the time to reopen indemnity benefits has expired but argues reopening is unnecessary due to findings in ALJ Lamphere's order. Claimant argues ALJ Lamphere's order "allows" her to seek temporary disability benefits because he found Claimant's condition had worsened. Claimant further asserts "[ALJ Lamphere's] finding of worsening was consistent with the Claimant no longer being at MMI. . . . Since there was a specific finding that Claimant's condition had worsened after

being placed at MMI, this is inconsistent with the requirement that a claimant's condition remain 'stable' in order to be at MMI."

The ALJ disagrees with Claimant's argument that the issue of temporary disability benefits remains open simply because ALJ Lamphere found Claimant's condition had worsened. ALJ Lamphere awarded the surgery as post-MMI treatment and merely cited Claimant's worsened condition as evidence that the surgery was needed to prevent further deterioration. Although the finding that Claimant's condition had worsened *could have* supported a finding she was no longer at MMI, ALJ Lamphere did not find that to be the case. Rather, he explicitly found Claimant "remains at MMI." The ALJ knows of no authority that a worsening of condition ***invariably*** means a claimant is no longer at MMI. ALJ Lamphere's factual findings were well-supported by the record and his conclusions of law were consistent with governing law regarding post-MMI treatment.

Had Claimant been dissatisfied with the determination she remained at MMI despite her worsened condition, the remedy would have been to request reconsideration or file a timely Petition to Review. She did not do so, and ALJ Lamphere's order is final and binding. The ALJ sees nothing in ALJ Lamphere's factual findings or conclusions of law that would permit Claimant to pursue additional temporary disability without first reopening the indemnity portion of her claim. Since the time to request reopening has expired, there is no apparent basis to do so.

ORDER

It is therefore ordered that:

1. Claimant's claim remains open for medical benefits but is closed for additional indemnity benefits.

2. Claimant's request for a determination that ALJ Lamphere's December 30, 2016 order allows her to pursue temporary disability benefits without reopening the indemnity portion of her claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: June 21, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant proved by a preponderance of the evidence that she is entitled to a 30% scheduled right upper extremity impairment rating assigned by her authorized treating physician ("ATP").

II. Whether Claimant proved by a preponderance of the evidence that she is entitled to a general award of maintenance medical benefits.

FINDINGS OF FACT

1. Claimant is a 62-year-old right-hand-dominant woman who works for Respondent as both a health technician and a team leader in Respondent's after-school program.

2. On March 28, 2017, Claimant suffered an admitted industrial injury while on a field trip to a skating rink. In an attempt to avoid crashing into students, Claimant fell and landed on her right wrist.

3. On March 28, 2017, Claimant was seen by her ATP, Lori Rossi, M.D., at U.S. Health Works Medical Group. On examination, Dr. Rossi noted deformity, tenderness, and crepitus of the right wrist. X-rays revealed a fracture of the distal radius and ulna with scapholunate widening. Dr. Rossi diagnosed Claimant with a work-related closed fracture of the right distal radius and ulna and right scapholunate dissociation. She referred Claimant for a hand surgery consultation and prescribed medication.

4. Nathan Faulkner, M.D. performed Claimant's hand surgery consultation. On March 30, 2017, Dr. Faulkner diagnosed Claimant with a comminuted intra-articular distal radius fracture and noted that his colleague, Craig Davis, M.D., would assume Claimant's care.

5. On April 7, 2017, Claimant underwent surgery with Dr. Davis, who performed an open reduction and internal fixation of the right distal radius fracture with freeze-dried cancellous graft and skeletal dynamics plate.

6. Claimant attended follow-up evaluations with Dr. Rossi on April 20, May 11, and May 25, 2017. Dr. Rossi did not document crepitus of the right wrist during these examinations. Dr. Rossi noted minimal active range of motion of the wrist on May 11, 2017 and improved active range of motion in the wrist on May 25, 2017, but mild to moderate index finger stiffness.

7. On May 8, 2017, Timothy Abbott, PA-C, evaluated Claimant under the supervision of Dr. Davis. Claimant reported continued stiffness in her fingers. Dr. Davis

noted limited wrist range of motion, without crepitation, and nearly full extension of the fingers with composite flexion limited to about 1 cm distal palmar crease. He remarked, "We discussed the fact that she may not regain full motion but hopefully we'll have no functional deficit."

8. On June 5, 2017, Dr. Davis reevaluated Claimant. He noted limited wrist and digital range of motion and remarked, "She is very stiff at this point and even her fingers have limited motion. I explained that some people have a tendency to form a lot of scar tissue as she evidently does." Dr. Davis did not document crepitus of the wrist. Dr. Davis referred Claimant for electrodiagnostic testing for concerns of carpal tunnel syndrome.

9. On June 16, 2017, Claimant saw Barry Ogin, M.D. for an evaluation and electrodiagnostic testing. Claimant reported she began experiencing numbness and tingling in her right hand approximately two weeks after the surgery. She complained of swollen fingers and stiffness. On physical examination, Dr. Ogin noted slight swelling in Claimant's fingers and a decreased ability to close her fist. Dr. Ogin gave the following impression:

> 1. Right distal radius fracture, status post open reduction and internal fixation. 2. Persistent complaints of right hand stiffness and abnormal sensation and mild dystrophic change. 3. Possible early chronic regional pain syndrome. 4. Electrodiagnostic testing reveals borderline median neuropathy at the wrist, similar to the asymptomatic left side, query clinical significance.

10. Claimant subsequently treated with Dr. Ogin on June 30, July 28, August 28, September 11 and September 22, 2017. Dr. Ogin documented stiffness in Claimant's hand and wrist and restricted range of motion of the wrist. Dr. Ogin did not document crepitus of the wrist in any of his examinations.

11. On June 23, 2017, Claimant returned for a follow-up evaluation with Dr. Rossi complaining of a club hand with radiating pain, tightness, tingling, and minimal functionality. On exam, Dr. Rossi noted crepitus of the right wrist with minimal active range of motion and markedly decreased active range of motion of the right hand.

12. On June 30, 2017, Dr. Rossi's physical exam revealed decreased grip strength and pinch on the right compared to the left, with no crepitation of the right wrist.

13. On July 17, 2017, Dr. Davis noted improved digital flexion. Dr. Davis made no mention of crepitus in the right wrist.

14. On July 27, 2017, Dr. Rossi noted crepitus of right wrist with improved right wrist range of motion.

15. On August 7, 2017, Dr. Rossi noted crepitus of the right wrist with restrictions to right wrist range of motion.

16. On August 17, 2017, Dr. Rossi's physical exam revealed crepitus of the right wrist with limited range of motion, swollen fingers, and difficulty with flexion and strength. Pinch and grip testing on the right were unequal to the left.

17. On September 5, 2017, Dr. Rossi noted that Claimant's injury was 5% better. Dr. Rossi performed a physical exam and determined Claimant was approaching maximum medical improvement ("MMI"). She again noted crepitus of the right wrist.

18. Claimant continued treating with Dr. Rossi, who continued to note restricted wrist, finger and thumb range of motion, as well as crepitus of the right wrist at follow-up evaluations on October 2, 2017, October 23, 2017, November 2, 2017, November 20, 2017 and December 11, 2017.

19. Dr. Rossi placed Claimant at MMI on December 13, 2017. Physical examination revealed restricted range of motion in the wrist, fingers and thumb, crepitus in the right wrist, and muscle weakness in the hand and fingers. Dr. Rossi opined that Claimant's fingers were affected by the surgery. She assigned a combined 30% upper extremity impairment rating under the AMA Guides, consisting of 21% upper extremity impairment for the right wrist (14% wrist range of motion and 20% joint crepitation for moderate crepitation), and 11% upper extremity impairment for the hand (12% impairment to hand based on impairment to fingers and thumb). Dr. Rossi did not assign any permanent restrictions. Regarding maintenance medical benefits, she stated that Claimant "may follow up with Dr. Davis, if needed, up to December 13, 2018."

20. On February 26, 2018, Carlos Cebrian, M.D., performed an independent medical evaluation ("IME") at the request of Respondent. Dr. Cebrian issued an IME report on March 16, 2018. Dr. Cebrian reviewed medical records dating back to March 2004 and physically examined Claimant. Claimant reported not experiencing any significant improvement since being placed at MMI. Claimant further reported difficulty with fine movements, as well as numbness and tingling of the right hand. Physical exam revealed decreased wrist range of motion with no crepitus, and slightly decreased range of motion of the right index finger, middle finger, and thumb. Dr. Cebrian diagnosed Claimant with a work-related right wrist fracture and agreed Claimant reached MMI as of December 13, 2017. He opined that Claimant's finger stiffness and decreased range of motion was likely due to inactivity and not a permanent condition. Dr. Cebrian assessed a 12% upper extremity impairment rating for range of motion loss to the wrist. Dr. Cebrian noted that crepitus was not present on his examination or documented in early medical records. He opined that, even if Claimant had crepitus, assigning a separate impairment rating for crepitation would be inappropriate under the AMA Guides, as Claimant's total impairment was adequately addressed with the impairment for wrist range of motion deficits. Dr. Cebrian further opined that no range of motion deficits for the fingers was appropriate and no maintenance care was medically reasonable or necessary.

21. Dr. Cebrian testified at hearing on behalf of Respondent as a Level II accredited expert in occupational medicine. Dr. Cebrian testified consistent with his IME report. He acknowledged that his range of motion measurements of Claimant's right wrist were

similar to those of Dr. Rossi, but continued to opine that Claimant sustained a 12% impairment due to wrist range of motion deficits, instead of 14% impairment assigned by Dr. Rossi.

22. Dr. Cebrian testified that Dr. Rossi's impairment rating was erroneous and not a proper application of the AMA Guides, specifically referring to the section 3.1j of the AMA Guides regarding bone and joint crepitation. Dr. Cebrian explained that crepitus is a sound and is produced by inflammation of the tendon sheath. He testified that he did not find crepitus on his examination, nor did any other ATP, with the exception of Dr. Rossi. Dr. Cebrian testified that under the AMA Guides, even if Claimant did have crepitus, it would be duplicative to assess a separate impairment rating for crepitation because the range of motion rating adequately addressed Claimant's functional impairment. Furthermore, Dr. Cebrian testified that Dr. Rossi's crepitation impairment based on "moderate" crepitation was improper because "moderate" crepitation requires constant crepitation, and Claimant's crepitation was not present on a constant basis.

23. The AMA Guides section 3.1j "Impairment Due to Other Disorders of the Upper Extremity Joint," page 48, provides in relevant part:

> The evaluator must use judgment and avoid duplication of impairments when other findings, such as synovial hypertrophy, carpal collapse with arthritic changes, or limited range of motion are present. The latter findings may indicate a greater severity of the same underlying pathological process and take precedence over joint crepitation, which should not be rated in these instances.
>
> * * *
>
> It must be stressed that impairments secondary to these disorders are usually rated by other parameters. The following disorders [including joint crepitation] are to be rated only when other factors have not adequately rated the extent of impairment. Whether or not to consider these disorders separately is left to the discretion of the examiner.

24. Dr. Cebrian also testified that Claimant did not require an impairment rating for the fingers, because Claimant did not have any ratable pathology in the fingers. Dr. Cebrian testified that, to a reasonable degree of medical probability, Dr. Rossi's 11% upper extremity rating for the fingers was not a proper application of the AMA Guides. Dr. Cebrian opined that, while Claimant did report stiffness in the fingers, without an underlying pathology or anatomic injury to the fingers, it is not appropriate to rate this symptomology relative to a wrist fracture. Additionally, He testified that on examination, Claimant's range of motion in her fingers was very close to normal and similar to her left hand. Dr. Cebrian acknowledged that permanent impairment is determined as of the date of MMI.

25. Dr. Cebrian further testified that maintenance medical care was not reasonably necessary or related because Claimant has returned to work, is not taking medication,

is continuing to improve, and there is no indication that she requires an orthopedic follow-up.

26. Claimant testified at hearing that, prior to March 28, 2017, she had no history of any symptoms, limitations, pain complaints, or restrictions in her right or left upper extremities. Claimant testified that it took Dr. Rossi over an hour to perform impairment rating measurements while referring to a book, while it took Dr. Cebrian only 15 minutes and he did not refer to a book during such time period. Claimant described her understanding of crepitus as "clickety clacks." She testified that her crepitus is present daily, but not every minute of the day. Claimant testified she continues to have numbness and stiffness in her right hand. She stated that she works with therapy putty at home and is no longer taking medication. Claimant testified that she has not seen Dr. Davis since November 2017 and, as of the date of hearing, has not scheduled an appointment to see Dr. Davis in the upcoming months. Claimant stated she would like the ability to follow-up with Dr. Davis as needed.

27. Claimant's testimony is found credible and persuasive.

28. The ALJ credits the opinion of Claimant's ATP, Dr. Rossi over the conflicting opinion of Dr. Cebrian on impairment and maintenance medical benefits.

29. The ALJ finds Claimant has proven by a preponderance of the evidence she sustained a 30% scheduled right upper extremity impairment.

30. The ALJ finds that Claimant has proven by a preponderance of the evidence that she is entitled to a general award of maintenance medical benefits.

31. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally
