26. Based upon the totality of the evidence presented, the ALJ finds Claimant's testimony and the opinions of Dr. Gallus' credible and more persuasive than those of Drs. Larson and Bisgard. As noted, Dr. Larson did not examine Claimant and likely did not review Claimant's MRI images. He chose to ignore Dr. Gallus' contrary opinion that an acute C4-5-disc herniation was causing Claimant's symptoms. Similarly, Dr. Bisgard glossed over the presence of an acute disc herniation as the cause of Claimant's symptoms when expressing her opinion that Claimant's pre-existing DDD would inevitably become symptomatic and require surgery. Dr. Bisgard's suggestion that Claimant is not credible given what she referred to as "conflicting reports regarding the onset of symptoms" is not persuasive. The ALJ is convinced that the record contains ample (substantial) evidence to support Claimant's testimony regarding the MOI and onset of symptoms in this case. Moreover, the suggestion that Claimant's account of what occurred while she was blading the roadway is not believable because she reported that she did not know if her medical condition was work related or not and because she did not report it until the weekend passed is equally unpersuasive. Here, the ALJ finds Claimant's comments and actions reasonable in light of her lack of medical knowledge and the fact that she reported her injury on Monday after her symptoms did not subside over the weekend.

27. The ALJ credits the testimony of Claimant and the opinions of Dr. Gallus to find that while Claimant may have progressive DDD, she probably suffered an acute disc herniation at C4-5 when the blade of the grader she was operating hit a buried rock. The evidence presented persuades the ALJ that Claimant's acute disc herniation likely lead to her symptoms and eventual need for surgery. Accordingly, the ALJ finds Claimant's need for treatment, including the C4-5 cervical discectomy and fusion performed by Dr. Gallus on April 16, 2018, directly related to the above described

February 9, 2018 work accident.

28. Respondent has failed to establish by a preponderance of the evidence that Claimant did not sustain a compensable left calf and knee injury on December 25, 2015 entitling them to withdraw their March 30, 2016 General Admission of Liability (GAL).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

I. Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). As found, the testimony of Claimant and the opinions expressed by Dr. Gallus are more persuasive that the contrary opinions of Drs. Larsen and Bisgard. Since Dr. Larsen's

opinion regarding the cause of Claimant's symptoms revolves around a limited record review while ignoring key evidence that Claimant suffered an acute disc herniation at C4-5 which explained her symptoms, the ALJ concludes that his opinions are unpersuasive. For largely the same reason, the ALJ is also unpersuaded by Dr. Bisgard's stated opinion that Claimant's acute symptoms and need for surgery are the inevitable consequence of her progressive DDD. While convenient, given Claimant's pre-existing DDD, the ALJ finds it unlikely that Claimant would spontaneously suffer an acute herniated disc in the absence of an inciting event. Here, the evidence presented overwhelmingly supports a conclusion that Claimant's symptoms came on suddenly after an inciting event. Furthermore, the suggestion that Claimant did not suffer a compensable injury to her neck because she reported she did not know if her condition was work related and because she waited two days to seek care are unpersuasive.

II. Respondents' Request to Withdraw the February 20 and March 6, 2018 General Admissions of Liability

D. Pursuant to § 8-43-201(1), C.R.S., Respondents bear the burden of proof regarding any attempt to modify an issue that previously has been determined by a general or final admission of liability or an order. *Section 8-43-201(1), C.R.S.*; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to § 8-43-201 in 2009 and provides, in pertinent part:

> …a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. (2) The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed.

E. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed the burden on respondents and made such a withdrawal the procedural equivalent of a reopening. In this case, Respondents, relying principally on the opinions of Dr. Larsen and Dr. Bisgard are seeking to modify an issue determined by the aforementioned GALs, specifically compensability. Therefore, the burden is on Respondents to prove that Claimant did not sustain a compensable injury.

F. To recover workers' compensation benefits, a claimant must suffer a compensable injury. A compensable injury is one which arises out of and in the course of employment. § 8-41-301(1)(b), C.R.S; *see City of Boulder v. Streeb*, 706 P.2d 786

(Colo. 1985). An injury occurs “in the course of” employment where the claimant demonstrates that the injury occurred within the time and place limits of his/her employment and during an activity that had some connection with work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is more narrow and requires a showing of a causal connection between the employment and the injury such that the injury has its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. S*ee Triad Painting Co. v. Blair, supra*. In this regard, there is no presumption that an injury which occurs in the course of a worker's employment also arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968); *see also, Industrial Commission v. London & Lancashire Indemnity Co.,* 135 Colo. 372, 311 P.2d 705 (1957)(mere fact that the decedent fell to his death on the employer's premises did not give rise to presumption that the fall arose out of employment). Rather, there must be a direct causal relationship between the employment and the injuries for which compensation is sought. § 8-43-201, C.R.S. 2006; *Ramsdell v, Horn,* 781 P.2d 150 (Colo. App. 1989).

G. In this case, the evidence presented persuades the ALJ that Claimant likely had pre-existing, yet asymptomatic degenerative changes throughout the cervical spine at the time of her alleged injury. The evidence presented also convinces the ALJ that Claimant, more probably than not, suffered an acute disc herniation at C4-5 due to the sudden and unexpected jarring of her head and neck after hitting a concealed rock while grading the roadway. In addition to causing acute herniation at C4-5 the February 9, 2018, incident likely aggravated her underlying degenerative condition contributing to her overall neck pain. Because Claimant’s injury/symptoms arose as a direct consequence of hitting a concealed rock while engaged in her work related functions, i.e. pulling a ditch, the ALJ concludes that she sustained a compensable injury. Accordingly, the Respondent’s request to withdraw either the February 20, 2018 or March 6, 2018 GAL must be denied and dismissed.

III. *Medical Benefits*

H. A pre-existing condition “does not disqualify a claimant from receiving workers’ compensation benefits.” *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment “aggravates, accelerates, or “combines with” a pre-existing infirmity or disease “to produce the disability and/or need for treatment for which workers’ compensation is sought”. *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo.App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

I. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while

performing job duties does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo.App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). As found in this case, the totality of the evidence presented persuades the undersigned ALJ that Claimant's symptoms and need for treatment, including her C4-5 discectomy and fusion is causally related to an aggravation of her pre-existing DDD in addition to an acute cervical disc herniation caused by an unexpected jarring of the head and neck after hitting a hidden rock while operating her motor grader on February 9, 2018. In so concluding, the undersigned ALJ rejects Dr. Larsen and Dr. Bisgard's contrary opinions as unpersuasive.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish by a preponderance of the evidence that Claimant did not suffer a compensable injury while in the course and scope of her employment on February 9, 2018. Therefore, Respondents request to withdraw the previously filed February 20, 2018 or March 6, 2018, General Admissions of Liability is denied and dismissed.

2. Respondent shall pay for all medical expenses to cure and relieve Claimant from the effects of her February 9, 2018 cervical spine injury, including but not limited to the C4-5 discectomy and fusion surgery performed by Dr. Gallus on April 16, 2018.

3. All matters not determined herein are reserved for future determination.

DATED: October 4, 2018

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the

Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant establish by a preponderance of the evidence he was permanently and totally disabled as a result of his industrial injury and is entitled to receive benefits?

STIPULATIONS

The parties stipulated Claimant's average weekly wage as of July 20, 2016 was $845.46. This gives a TTD rate of $563.64 per week.

Claimant receives Social Security retirement in the amount of $722.00 per month as of May 2016.[1]

The Stipulations were accepted by the Court and are made part of this Order.

FINDINGS OF FACT

1. Claimant is 64 years old (DOB December 13, 1953).

2. Claimant testified he attended a few months of school. There was an indication in the record Claimant attended up to the equivalent of the sixth grade in Mexico.[2] There was no evidence in the record that Claimant completed a GED or equivalent) or received a certification of any type.

3. Claimant speaks Spanish and is able to read and write some Spanish. Spanish is spoken in his home. He is unable to read and write English.

4. For the past 30 years, Claimant has worked in the meatpacking industry. He worked for Employer for a number of years in the 1990s.

5. Claimant's medical history was significant in that he suffered injuries arising out of a motor vehicle accident in 1997. Claimant had permanent restrictions related to this accident, but returned to full-time work.

[1] There was a discussion at the outset of the hearing regarding the exact date on which Claimant began receiving Social Security benefits and counsel for the parties agreed to discuss the matter further. No agreement was apparently reached regarding this date, at least as referenced in the post-hearing submissions.

[2] The ALJ notes educational testing was not conducted by either party.

6. Claimant underwent a Functional Capacity Evaluation ("FCE") on March 8, 1999.[3] His diagnosis was listed as chronic low back pain. As a result of this evaluation, Claimant was placed within the light work category (exerting up to 20 pounds of force occasionally, and/or up to 10 pounds of force frequently, and/or a negligible amount of force constantly). Claimant had no restrictions for sitting and walking. Claimant could frequently stand and occasionally walk, crawl, stair climb, kneel, crouch, stoop and reach. He was not restricted from reaching with his right hand and was limited to reaching on an occasional basis with his left.

7. Claimant left Employer to work for another company in Fort Morgan for approximately one year. He then returned to Greeley and worked for Employer. In approximately 2003, he was laid off by Employer's predecessor company.

8. Gail Pickett performed a vocational assessment of Claimant on June 1, 2005. Ms. Pickett testified at hearing this was in connection with an ADA claim and she was hired by Claimant's counsel.[4] Ms. Pickett incorporated Dr. Branum's November 9, 1997 physical restrictions (no lifting from the floor, limited stooping, crouching, ladder climbing, kneeling, twisting, reaching of the left arm at or above shoulder level), as well as Dr. Wunder's July 19, 2002 restrictions (maximum lift, push, pull of 5 pounds-right arm; no lift for right hand) into her findings. Ms. Pickett concluded Claimant did not retain full access to the light work category (U.S. Dept. of Labor classifications) due to the restrictions to his right hand of 5 pound lifting. Claimant lost access to jobs within the very heavy, heavy and medium categories of work. Ms. Pickett noted Claimant had lost access to a broad range and class of jobs. All of Ms. Pickett's opinions were to a reasonable degree of vocational probability.

9. There was no evidence in the record that Claimant's upper extremity restrictions were ever rescinded.

10. Claimant returned to work for Employer in approximately 2010.

11. Claimant has been diagnosed with type II diabetes mellitus.

12. Claimant testified he took regular retirement when he reached 62 years of age, but also referred to getting insurance when he became eligible.

13. On September 25, 2015, Claimant suffered an admitted industrial injury when he fell backwards at work. Claimant testified he had finished cleaning his knives, stepped and fell backwards on water that was on the floor. Claimant injured his low back and right side. Claimant initially treated at Employer's in-house clinic. He received conservative treatments, including cold compresses, Biofreeze massage and rest.

14. On October 28, 2015, Claimant was evaluated by Dr. Smith at Banner

[3] Exhibit AA.

[4] Hearing Transcript ("Hrg. Tr"), p. 56:21-57:1

Health, the ATP for Employer. At that time, he complained of low back pain, going down into his buttock and pain in his right-sided chest. Dr. Smith noted pain in Claimant's back with full flexion and abduction in the shoulders. Slight scoliosis was noted to the right in the lumbar region, with palpable tenderness found. Dr. Smith's diagnoses were: sprain, thoracic spine; lumbosacral sprain, lumbar spine; contusion, back; muscle spasm. Claimant's restrictions included: no lifting from the ground to waist, keep all activities above waist level; no bending, twisting or stooping; sit down job mainly with frequent position changes and avoid prolonged standing or walking.

15. Dr. Smith oversaw Claimant's treatment, referring him for physical therapy ("PT") and chiropractic treatments. Claimant received chiropractic treatments from Scott Parker, DC. Claimant received ten (10) chiropractic treatments with Dr. Parker. The treatment notes reflected continuing low back pain complaints throughout. In the final evaluation and treatment on January 30, 2016, Dr. Parker's assessment was right lumbosacral/sacroiliac strain/dysfunction-slowly improving, but ongoing; lumbar degenerative changes-preferred documentation review.

16. Claimant was evaluated by Gregory Reichhardt, M.D. on February 19, 2016. At that time, he was complaining of an aching pain in his low back, with a feeling of pins and needles extending down the lateral thigh and calf, but not into the foot. He reported pain at the level of 4-5/10. On examination, his lumbar spine was tender to palpation, with trigger points over the elevator scapula and L5 paraspinals. Decreased range of motion ("ROM") was noted in all planes.

17. Dr. Reichhardt's diagnosis was lumbar contusion; DISH (diffuse idiopathic skeletal hyperostosis); rule out lumbosacral radiculitis; possible component of myofacial pain. Dr. Reichhardt recommended a lumbar MRI, as well as a trial of trigger point injections, which were administered at this appointment. Dr. Reichhardt also discussed with Claimant that the most important aspect of his treatment was an independent exercise program.

18. On February 29, 2016, Claimant underwent an MRI of his lumbar spine. The films were read by Sarah Jane Jess, M.D., whose impression was: multilevel degenerative disc disease and facet arthritis, worst at L2-3 and L5-S1 where there was mild bilateral foraminal stenosis; no spinal stenosis or nerve root compression was noted. The large anterior and lateral osteophytes could be due to DISH or other spondyloarthropathy. Chronic bilateral L5 pars defects were present.

19. Dr. Reichhardt performed electrodiagnostic testing on April 7, 2016. His diagnoses remained the same as the prior appointment, with the addition of peripheral polyneuropathy, which was possibly related to Claimant's diabetes. Dr. Reichhardt opined the EMG demonstrated frank denervation in the left S1 innervated muscles, as well as the lumbar paraspinals. Dr. Reichhardt noted this could be seen as lumbar radiculopathy, but did not meet the diagnostic criteria for lumbar radiculopathy.

20. Claimant was able to perform light duty tasks assigned by Employer after his injury. He cleaned the locker room and the cafeteria. Claimant testified he still had symptoms from his injury while doing this work.

21. A letter from Employer to Claimant, dated April 12, 2016 was admitted into evidence. The correspondence referenced Claimant's current restrictions consisting of: "maximum of 20 pounds for lifting, pushing and pulling; maximum of 10 pounds for repetitive lifting and carrying. Avoid prolonged and repetitive bending, twisting or stooping. May climb stairs occasionally". The ALJ noted these restrictions corresponded to the restrictions issued by Dr. Reichhardt. The letter gave Claimant notice that temporary assignments for all restricted duty jobs were limited to six months in duration. Further, if Claimant was unable to return to the active payroll in a regular full-time crewed position which matched his permanent restrictions, his employment would end.

22. Claimant returned to Dr. Smith on June 16, 2016. He reported his back pain was worse in the morning and experienced increased problems when bending, standing or walking more than 60 minutes and with prolonged sitting. On examination, Claimant exhibited no pain behaviors. Lumbar range of motion was restricted and painful at 15° of extension and 80° of forward flexion. Lateral motion was restricted in all planes. Claimant's reflexes were symmetric and equal at the biceps, triceps, patellas and Achilles.

23. Dr. Smith's diagnoses were: thoracic and lumbar pain, resolved; back contusion, improved; muscle spasm, resolved. Dr. Smith issued recommended activity restrictions, noting all of Claimant's work should be done in close to the body from knee to chest level. He was to avoid bending, twisting, stooping and reaching away from the body or above chest level. Claimant was to do no walking or standing more than 60 minutes without sitting for 45 minutes. Claimant's lifting was limited to 15 pounds or less, as was pushing and pulling. Claimant was not to perform bending, reaching, stooping or twisting. Dr. Smith confirmed Claimant was at MMI. The ALJ noted Dr. Smith consistently opined Claimant was restricted as to bending, reaching, stooping and twisting.

24. Claimant was evaluated by Dr. Reichhardt on September 9, 2016. At that time, tenderness to palpation of the lumbar spinewas found, with mild lumbar paraspinal muscle spasm was noted. Dr. Reichhardt's diagnosis was: lumbar contusion; DISH; possible lumbar radiculopathy; peripheral polyneuropathy and right knee pain. Dr. Reichhardt concluded Claimant was at MMI at that time and assigned a 17% whole person impairment rating. The ALJ concluded Dr. Reichhardt was of the opinion that the subject work injury was the cause of Claimant’s permanent medical impairment.

25. Dr. Reichhardt issued the following restrictions for Claimant: limit lifting, pushing, pulling and carrying to 20 pounds occasionally, 10 pounds frequently. Claimant was to perform no lifting or bending or twisting at the waist and limit bending and twisting at the waist on a rare basis, four times per hour, while not lifting. Dr.

Reichhardt also noted Claimant may require a restriction for stair climbing based on his knee condition, which was unrelated to the work injury. The ALJ concluded the restriction with regard to lifting, bending or twisting at the waist limited Claimant's ability to perform assembly type tasks.

26. On September 27, 2016, Claimant underwent a DIME, which was performed by Alicia Feldman, M.D. Claimant had subjective complaints of low back pain, right leg pain and left knee pain at the time. Dr. Feldman noted Claimant originally reported thoracic spine pain, however, that appeared to be resolved. Claimant had significant findings in his lumbar spine on the MRI scan, but Dr. Feldman opined these were all chronic and long-standing in nature, not related to work injury. Claimant had evidence of peripheral neuropathy on his electrodiagnostic exam, but no findings of radiculopathy and no nerve injury related to the work injury.

27. Dr. Feldman confirmed Claimant reached MMI and assigned an 18% whole person impairment rating. This included a loss of ROM totaling 13% in the lumbar spine, as well as a 5% impairment rating for six months of continued pain and rigidity. The ALJ concluded Dr. Feldman determined the subject work injury caused Claimant's permanent medical impairment.

28. Dr. Feldman concurred with Dr. Reichhardt's maintenance care recommendations. She also recommended a functional capacity evaluation to establish permanent work restrictions.

29. Claimant's permanent physical restrictions precluded his return to work in the position he held for Employer.

30. Ms. Pickett prepared a report of vocational assessment, dated March 20, 2017. In her report, Ms. Pickett noted Claimant did not know how to operate a computer or a smart phone. Ms. Pickett concluded Claimant did not have transferable skills outside of the meat industry. She stated he would be able to obtain entry-level jobs that fall into the light category work where he could meet the language barrier. She noted Dr. Reichhardt did not place work restrictions on him in terms of sitting, standing or walking.

31. Ms. Pickett opined Claimant may be able to perform production jobs in a manufacturing facility, as he had good hand dexterity and has been able to use tools throughout his work in the meatpacking industry. She found jobs were available in this category of work. Ms. Pickett stated Claimant should be able to work in a light janitorial position, such as cleaning offices. These jobs were within Claimant's work restrictions. Claimant could also potentially be a laundry attendant or work in a fast food restaurant in the kitchen setting or as a lobby attendant. Ms. Pickett also opined he would be able to work as a delivery driver for foods or as a lot attendant in a car dealership. There were jobs available within the light category. The ALJ was not persuaded that Claimant could perform all of the duties for those positions identified by Ms. Pickett, given his restrictions on bending/twisting/stooping and reaching away from the body.

32. Ms. Pickett concluded Claimant remained employable and his work-related injury placed him in to the light category of work. She believed he could earn wages in his local labor market.

33. Ms. Montoya prepared a report of vocational evaluation on March 22, 2017. She noted Claimant reported similar work activities for all of his employers, resulting in limited, if any, transferable skills. She noted the restrictions provided by Dr. Reichhardt and Dr. Smith were not consistent. Ms. Montoya opined that, in general, the limitations of Dr. Reichhardt would likely provide some limited return to work alternatives for Claimant, even though he was an unskilled worker of advanced age and Spanish-speaking, limited education. She stated Claimant may have difficulty performing some of the cleaning and preparations jobs, as the tasks typically performed within this range of work because of limitations in bending.

34. When considering the restrictions from Dr. Smith, Ms. Montoya stated Claimant was going to have a much more difficult time returning to work. Based on her vocational research in areas such as cleaning, food preparation and production, Ms. Montoya opined the physical limitations provided by Dr. Smith would eliminate Claimant's capacity to return to work within those areas.

35. Evidence of video surveillance of Claimant was admitted at hearing. This evidence was of Claimant's activities on April 2 and April 3, 2017.[5]

- On April 2, 2017 at 9:49 AM, Claimant lifted the hood and appeared to be pouring antifreeze from a yellow container into a blue van. He put the yellow container in a bag with his left hand.

- On April 3, 2017 at 8:21 AM, Claimant opened the passenger side door and cleans the window with a blue cloth. It was difficult to see, he appeared to go around to the other side and clean the driver's side window.

The ALJ found the activities depicted on the video were not dispositive as to whether Claimant could continually perform job duties which required him to lift 5 pounds with his right upper extremity. This video evidence was not conclusive as to whether Claimant could stand and/or walk for a period of longer than 60 minutes.

36. A letter from Employer (human resources department) to Claimant, dated April 13, 2017 was admitted into evidence. It listed Claimant's current restrictions as: lifting, carrying, pushing/pulling, repetitive motion restrictions, walking, standing, sitting or working close to body need to chest level; avoid bending/twisting/stooping/reaching away from the body or above level; no walking/standing greater than 60 minutes without sitting 45 minutes. The ALJ noted the upper extremity restrictions corresponded to the restrictions issued by Dr. Smith. This letter did not refer to a specific number of pounds for the lifting, carrying and pushing/pulling restriction. The letter requested medical

[5] Claimant confirmed it was his blue van that was depicted in the video.

documentation of Claimant's current condition and/or work restrictions on or before April 19, 2017. Claimant's employment would be terminated if he did not respond or if there were no available positions which he was able to perform within his current work restrictions.

37. Claimant did not return to work for Employer in a full-time crewed position after he reached MMI.

38. Claimant was evaluated by Dr. D'Angelo on May 30, 2017, at the request of Respondents. At that time, he was complaining of low back pain and right leg pain, as well as lack of strength in his leg. Dr. D'Angelo did not conduct range of motion measurements of Claimant's thoracic and lumbar spine. On ROM, Dr. D'Angelo noted excellent extension and flexion and full ROM with lateral flexion and twisting without any pain behaviors. Claimant's not work-related diagnoses included: diabetes; diabetic neuropathy; chronic alcoholism; hypertension; gastritis; osteoarthritis; degenerative spine disease; DISH. The diagnoses related to the work injury work were: lumbosacral contusion: at MMI; thoracic contusion: at MMI. Dr. D'Angelo opined Claimant's complaints were to degenerative spine disease and his underlying DISH.

39. Dr. D'Angelo noted she was at a loss from a physiological standpoint to explain Claimant's continued complaints of pain in view of benign lumbar spine examinations, which revealed no consistent objective findings of neurological deficits such as motor abnormalities. Given the mechanism of the of the injury, the lack of acute findings on EMG and MRI and lack of objective physical findings, Dr. D'Angelo could not understand the reason for the assignment of a permanent medical impairment rating and restrictions. The ALJ found this opinion to be less persuasive than the opinions offered by Dr. Reichhardt and Dr. Feldman; both of whom concluded Claimant sustained a permanent medical impairment related to the subject injury and had permanent physical restrictions.

40. Dr. D'Angelo testified as an expert in Occupational Medicine at the time of her deposition. She said Claimant moved fluidly during her examination and did not demonstrate distress and/or pain behaviors. She testified Claimant had a normal neurological examination and his activities depicted on the video were consistent with her findings on examination. Dr. D'Angelo said she could not causally link Claimant's back pain to the work injury. He had a prior history of leg pain and numbness prior to this injury, as well as degenerative changes to his spine.

41. Dr. D'Angelo reiterated her opinion that Claimant should not have any work restrictions. She also stated Claimant could perform the restrictions placed on him which were 10 pounds frequently, 20 pounds occasionally. Dr. D'Angelo said Claimant could lift occasionally 10 pounds from floor to waist and would not limit his bending and twisting. Dr. D'Angelo went on to testified that she saw no reason for reaching restrictions nor was there any reason for flexion, extension, twisting, stooping and squatting restrictions. The ALJ found Dr. D'Angelo was less persuasive than Dr. Smith, who evaluated Claimant on multiple occasions.

42. A Final Admission of Liability ("FAL") was filed on behalf of Respondents on July 12, 2017. The FAL admitted for the 18% medical impairment rating issued by Dr. Feldman. TTD benefits were paid through June 8, 2016. Respondents admitted to post-MMI care, as outlined Dr. Reichhardt's June 9, 2016 report.

43. On August 28, 2014, Dr. Reichhardt signed a note in which he deferred to Dr. Smith with regard to Claimant's restrictions.

44. On November 27, 2017, Dr. Smith testified as an expert in Occupational Medicine, which is the specialty in which she is board-certified. Dr. Smith testified when she initially evaluated Claimant on October 28, 2015, she issued restrictions of: no bending; carrying should be limited to 10 pounds; climbing and pulling should not be performed. Claimant was also instructed to alternate his positions frequently; work in close to the body; no repetitive bending, twisting, stooping.[6]

45. Dr. Smith modified Claimant's restrictions on November 18, 2015, increasing his lifting, carrying, pushing and pulling restrictions to 20 pounds. He could also occasionally climb stairs. These restrictions remained the same when Dr. Smith evaluated Claimant on March 16, April 19 and May 17, 2016. Dr. Smith testified that the restrictions for lifting, carrying, pushing and pulling remained the same. Also, Claimant had a reaching restriction with regard to working in close to the body at chest level above the shoulders or down to the floor. She said the reason for reaching restriction was that reaching in this way caused an arch to develop and put stress on the low back.[7]

46. Dr. Smith testified she reported a change in Claimant's restrictions on June 16, 2016. This was after he was placed at MMI and she had a conversation with him. Dr. Smith said her restrictions differed from Dr. Reichhardt's, whom Claimant told he could lift, push, pull 20 pounds. That was not what Claimant related to her and the inference was Dr. Smith simply adopted what Claimant told her. The ALJ was not persuaded by that testimony. Dr. Smith said Claimant would sometimes push and pull more than 20 pounds while he was in PT. She thought he should be able to lift, push, pull 20 pounds. When questioned whether the activity restrictions which said bending, reaching and stooping may not be performed, Dr. Smith stated this was simply carried through an electronic record. However, Dr. Smith stopped short of eliminating these restrictions and said this should be done no more than once every ten minutes. Dr. Smith also noted after looking at everything she would not normally recommend sitting for 45 minutes after an individual was walking and standing for 60 minutes. She amended this restriction to say the sitting requirement would be 10-15 minutes.

[6] Smith deposition, p. 6:2-7.

[7] Smith deposition, p. 18:2-22.

47. On cross-examination, Dr. Smith stated there were concerns about potential restrictions related to Claimant's bilateral knee pain complaints. She did not know if those complaints were from a work-related injury in August 2015.

48. Claimant testified he still has pain in his waist and right leg related to the injury. This pain comes and goes. The ALJ found Claimant to be a credible witness.

49. Claimant testified he has not worked since leaving Employer. He registered with the Colorado State Office of Rehabilitation. He also applied for work at King Food, dairies and restaurants, including fast food restaurants such as McDonald's. Claimant also applied for a job at Lowe's. He is helped by one of his daughters, who applies for him on the computer. No one has offered him a job.

50. Ms. Pickett testified at hearing as a vocational expert. She said if Claimant could not reach with his arms to work, except very close to his body, he was not employable.[8] Ms. Pickett believed Claimant was employable, based upon the restrictions issued by Dr. Reichardt. Ms. Pickett testified there were positions available within those restrictions. Ms. Pickett admitted she did not consider the restrictions issued by Dr. Branum or Dr. Wunder.

51. Following the hearing, Ms. Pickett was deposed on November 9, 2017. Ms. Pickett reiterated there were jobs available for Claimant within Claimant's commutable market based upon Dr. Reichardt's restrictions. She was advised of Dr. Smith's deposition and her testimony regarding Claimant's restrictions was summarized. The restrictions included: no lifting, pushing, pulling or carrying greater than 20 pounds (amended from 15 pounds). Claimant was also to work in close to the body from knee to chest, reaching approximately 12 to 18 inches from the body and no bending, twisting and stooping more often than 10 minutes.

52. Ms. Pickett identified potential jobs in the Greeley area, which she testified Claimant could perform within his restrictions. She performed this labor market research in August 2017. The jobs included:

- Assembling earrings (through an employment agency-Employment Solutions). This job required good manual dexterity. Spanish speaking was not a problem.

- Production operator (through Employment Solutions)-task included trimming plastics, which required reaching, but not extended reaching.

- Distortions Unlimited, a company which manufactured Halloween masks. This job involved trimming plastic from molded products with a utility knife.

[8] Hrg. Tr. p. 73:2-8; p. 73:16-20.

- ABM-various office cleaning positions. The job tasks depended on assignments, some only involved cleaning restrooms (cleaning mirrors, counters and toilets; emptying trash; sweeping and mopping floors). These positions required standing and walking and there was very little ability to sit for those positions. Ms. Pickett admitted Claimant was not capable of doing these jobs under Dr. Smith's restrictions, but could do some of those under Dr. Reichardt's restrictions.

- Laundry attendant for Embassy Suites. Ms. Pickett stated this position required 20 pounds of lifting and reaching within a dryer drum. She believed this was within the reaching restriction.

- Silver Mine Subs-Delivery Driver. Ms. Pickett said this job was within Dr. Smith's restrictions.

- Cintas-garment inspector. This job involved hanging garments to make sure these were clean and ready for packing and pick up. Ms. Pickett stated this job involved standing and walking, no sitting. She believed it fit within Dr. Smith's lifting and reaching restrictions.

53. On cross-examination, Ms. Pickett stated she was not aware Dr. Reichardt signed the note saying he deferred to Dr. Smith's restrictions. Ms. Pickett agreed some of the ABM cleaning jobs would not be consistent with Dr. Smith's restrictions. She agreed to the laundry attendant job might require Claimant to reach more than 18 inches in the dryer. Ms. Pickett agreed that she did not disclose her opinion in her written report that Claimant was permanently and totally disabled, if Dr. Smith's restrictions (at that time) were used. Ms. Pickett testified she was focused on Dr. Reichardt's restrictions when she did the labor market survey on August 24, 2017. She did not re-review Dr. Smith's restrictions.

54. Ms. Montoya testified as a vocational expert at hearing. Ms. Montoya testified the September 2015 injury was the reason Claimant lost his job. She agreed that if only Dr. Reichhardt's restrictions were used, there were light duty positions available for Claimant. Ms. Montoya opined Claimant would not be as competitive compared to the general labor market, given his age, limited education and inability to speak English.

55. Ms. Montoya testified she disagreed that Claimant could perform the tasks in some of the production positions, as these required twisting. These positions were similar to some of the positions in the meatpacking plants, including pick fat, pick lean, and pick bone. The ALJ credited this testimony, as well as inferring those assembly and production jobs which required twisting and bending were outside of Claimant's restrictions. Ms. Montoya noted there were many similarities to some of positions in the plant where Claimant worked and the light assembly positions proposed by Ms. Pickett. Ms. Montoya agreed with Ms. Pickett that Employer would be the most motivated to

accommodate an injured worker such as Claimant. Ms. Montoya opined that if restrictions given by Dr. Smith were used, Claimant was not employable.[9]

56. On cross-examination, Ms. Montoya stated she considered both what Claimant related as his physical restrictions, as well as the physician's opinions on the restrictions. She weighed the latter more heavily. Ms. Montoya testified Claimant had restrictions related to the left shoulder and lumbar spine, which were identified in the FCE dated March 8, 1999. Claimant's back issues did not affect his ability to do the job he was performing the time of the 2015 injury.

57. Ms. Montoya was deposed on January 11, 2018. Prior to the deposition, reviewed the depositions of Dr. Smith and Ms. Pickett. She also reviewed Ms. Pickett's notes.[10] Ms. Montoya reviewed specific jobs identified by Ms. Pickett as to whether these fell within the restrictions given by Dr. Smith. The potential jobs were as follows:

- For the earring assembly job, she was not able to provide an opinion, as was not able to locate this position.

- For the production operator position, this job was part of another job and required packaging, boxing and pulling molds; all of which were not within Claimant's restrictions. This was because of the standing, reaching and bending potential, as well as the fact that lifting ranged up to 30 pounds.

- Ms. Montoya stated the office cleaning position was not within Claimant's restrictions.

- With regard to the laundry attendant position, the reaching exceeded Dr. Smith's restrictions. Ms. Montoya contacted Embassy Suites and confirmed this job required standing for certain periods and there were no seated tasks. The job also required reaching in all directions, as well as kneeling, stooping and bending.

- The delivery driver position (Silver Mine Subs) required English-language ability, as well involving food preparation activity.

- For the garment inspector position, Ms. Montoya testified this job had reaching requirements for hanging. An individual needed to be able to perform repetitive motions over their entire shift, along with standing and walking, repeated bending, stretching, twisting and lifting.

[9] Hrg. Tr. p. 98:10-14.

[10] Claimant's counsel proffered these notes for admission during the deposition of Ms. Montoya. Respondents objected and the ALJ sustained the objection on the grounds that insufficient foundation was laid for the admission of the notes.

58. The ALJ was persuaded by Ms. Montoya's opinions that the potential jobs identified by Respondents' expert were either beyond Claimant's physical restrictions, not currently available, or ones for which he was not qualified. The ALJ found Ms. Montoya to be more credible than Ms. Pickett, as the specific jobs the latter identified did not have the complete descriptions of all the physical requirements.

59. Claimant's age, education and work experience were barriers to his re-employment and ability to earn wages

60. Claimant's restrictions, including 5-pound right-hand restriction, the lift, push, and pull restriction (either 15 or 20 pounds), the reaching restriction which required him to work close his body (no more than 18"), along with the bending, twisting and stooping restrictions precluded him from returning to labor market and earning wages.

61. Claimant met his burden of proof and established he is unable to earn wages in the same or similar employment.

62. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In this case, there was extensive expert testimony presented by Claimant and Respondents. The determination of the permanent total disability benefits issue turned on the testimony of these experts.

Permanent Total Disability Benefits

To prove his claim that he is permanently and totally disabled, Claimant shouldered the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. §§ 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003); *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). Claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001).

The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). The ability to earn wages inherently includes consideration of whether Claimant is capable of getting hired and sustaining employment. *Christie v. Coors Transportation Co.,* 933 P.2d 1330, 1335 (Colo. 1997). In weighing whether Claimant is able to earn any wages, the ALJ may consider various human factors, including Claimant's physical condition, mental ability, age, employment history, education, and availability of work that Claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998).

The ALJ may also consider Claimant's ability to handle pain and the perception of pain. *Darnall v. Weld County,* W.C. No. 4-164-380 (ICAO April 10, 1998). The critical test is whether employment exists that is reasonably available to Claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. The question of whether Claimant proved inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995). In the case at bench, the ALJ determined Claimant met his burden of proof and established he was permanently and totally disabled as a result of his industrial injury.

As a starting point, the ALJ first considered Claimant's age, education and work experience to determine whether he satisfied his burden of proving he was entitled to PTD benefits. As found, Claimant was sixty-four years old and had limited education. (Findings of Fact 1-3). Claimant's employment over the last 30 years was in the meatpacking industry. (Findings of Fact 4). Both vocational experts agreed Claimant had, in general, a lack of transferable skills as a result of his work experience. (Findings of Fact 30 and 33). The ALJ concluded Claimant's age, education and work experience were barriers to his reemployment and ability to earn wages. (Findings of Fact 59).

Second, the ALJ considered Claimant's physical restrictions, which were the subject of a bona fide dispute, particularly whether Claimant could lift, push, pull and carry up to 20 versus 15 pounds occasionally and 10 pounds frequently. The ALJ found Claimant's restrictions provided by either Dr. Reichhardt or Dr. Smith precluded his return to work in the meatpacking industry. (Finding of Fact 29). As determined in Findings of Fact 8, 23-25, Claimant also had restrictions of bending and stooping. In this regard, Dr. Smith consistently restricted Claimant's bending, reaching and stooping while she was his ATP. (Findings of Fact 39). In addition to preventing Claimant's

return to work in the meatpacking industry, these restrictions limited Claimant's ability to perform the functions of those which required bending and stooping. (Finding of Fact 55). These restrictions limited Claimant's access to those jobs within the light job classification of the labor market that required bending and stooping, including some assembly positions.

The inquiry then turned to Claimant could lift, push, pull and carry up 15 pounds as opposed 20 pounds occasionally and 10 pounds frequently. At the time Claimant was placed at MMI, Dr. Smith issued restrictions which included: lifting limited to 15 pounds or less, as was pushing and pulling. (Finding of Fact 23). Dr. Reichhardt limited this aspect of Claimant's ability to lift up to 20 pounds. (Finding of Fact 25). However, then Dr. Reichhardt deferred to Dr. Smith's opinions with regard to Claimant's restrictions. (Finding of Fact 43). In her testimony, Dr. Smith equivocated somewhat, noting there were times when she observed Claimant lifting more than 20 pounds while doing PT. (Finding of Fact 46). She also believed Claimant was not required to rest for up to an hour after standing or walking, but could rest 10-15 minutes. In weighing this evidence, the ALJ determined that it was the combination of all of Claimant's restrictions, including 5-pound right-hand restriction, the lift, push, and pull restriction (either 15 or 20 pounds), the restriction form reaching away from his body, along with the bending and stooping restrictions which led to the conclusion that he could no longer earn wages. (Finding of Fact 60).

In this regard, the ALJ considered Respondents' argument that Dr. D'Angelo's opinions regarding Claimant's physical restrictions should be adopted. Dr. D'Angelo opined Claimant had no permanent restrictions as a result of the industrial injury. This ran counter to the opinions of Claimant's ATPs, as well as the DIME physician (Dr. Feldman). In this case, the ALJ determined the opinions of Dr. Reichhardt and Dr. Smith were more persuasive with regard to Claimant's restrictions. (Findings of Fact 23).

Third and finally, the ALJ weighed the testimony proffered by Claimant's and Respondents' experts. The ALJ was persuaded by Ms. Montoya's analysis of Claimant's restrictions and employability. The ALJ found Ms. Montoya's testimony was more persuasive than that offered by Ms. Pickett. (Findings of Fact 29 and 58). Based upon the testimony provided by Ms. Montoya, the ALJ determined he did not have the ability to earn wages in the same or similar employment.

The ALJ also reviewed the argument put forward by Respondents that Claimant still had access to the labor market and there were jobs available within his restrictions. Respondents also averred the video evidence showed Claimant could perform activities, including lifting more than 5 pounds with his right hand. As noted above, there was no evidence this restriction was ever lifted. (Finding of Fact 9). Further, the video evidence did not persuade the ALJ Claimant could consistently lift 5 pounds and perform job duties with the right upper extremity. (Finding of Fact 35).

As found, Claimant was able to work full time up to the September 25, 2015 injury. This work injury caused permanent restrictions, as well as a permanent medical

impairment. Claimant did not work after his termination from Employer, who utilized the restrictions issued by Claimant's ATPs. (Findings of Fact 21, 37 and 49). Under the "full responsibility rule, an employer takes a worker as he finds him, and cannot escape liability for the entire disability resulting from a compensable accident". See *Siegfried v. Industrial Commission,* 736 P.2d 1262, 1263 (Colo. App 1986) *[citing Colorado Fuel & Iron Corp. v. Industrial Commission,* 151 Colo. 18, 379 P.2d 153 (1962)].

The ALJ found Claimant's upper extremity and low back restrictions, as well as his activity restrictions limited his ability to earn wages. He also had restrictions related to a prior workers' compensation claim, along with non-occupational health conditions which limited him. The combination of all the conditions, including the subject injury which rendered him unable to earn wages.

In summary, the ALJ considered the totality of the circumstances regarding Claimant's work injury and its sequelae, as well as other relevant conditions. After applying the human factors to the case at bench, the Court found Claimant was unable to earn wages in his commutable labor market and thus, rendered permanently and totally disabled as a result of his industrial injury. *Weld County School Dist. Re-12 v. Bymer*, *supra,* 955 P.2d at 552-553. More particularly, the ALJ concluded as follows:

- Claimant worked for approximately 30 years in the meatpacking business. He had few transferable skills from this employment.

- Claimant is Spanish-speaking, with little formal education.

- Claimant had a work restriction of maximum push/pull of 5 pounds for the right arm from the 2005 injury. There was no evidence this restriction was ever lifted.

- Claimant was restricted from reaching away from his body as a result of the 2015 work injury.

- Claimant had permanent restrictions which included no repetitive bending, twisting, or stooping.

- Claimant sustained a permanent medical impairment as a result of the subject injury.

- Claimant has not worked since the termination of his employment with Employer.

- Claimant applied for positions at different employers, but has not been offered a job.

- Claimant continues to have persistent pain in his low back, which limits his activities.

Based upon the evidence presented in the case, Claimant is entitled to permanent total disability benefits, as he can longer earn wages in the same or similar employment. As found, Claimant receives regular social security retirement benefits to which Respondents are entitled to claim an offset.

ORDER

It is therefore ordered:

1. Respondents shall pay PTD benefits to Claimant beginning on September 9, 2016. Respondents are entitled to a credit for PPD benefits paid.

2. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. Respondents are entitled to an offset for Claimant's receipt of Social Security retirement benefits. Counsel for the parties are ordered to confer regarding the amount of said offset, as well as the date on which said offset begins. Either Claimant or Respondents may file and AFH, if no agreement is reached.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-026-591-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer, Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 18, 2018 in Denver, Colorado. The hearing was digitally recorded (reference 9/28/18, Courtroom 3, beginning at 1:30 PM, and ending at 2:35 PM).

Claimant's Exhibits were admitted into evidence as Exhibits 1 through 7 (hereinafter "Claimant's Ex." followed by a page number), without objection. Respondent's Exhibits were admitted into evidence as Exhibits A through I (hereinafter "Respondents' Ex." followed by a page number).

ISSUES

The issues to be determined by this decision concern (1) Claimant's average weekly wage (AWW) at the time of injury for the purpose of calculating temporary total disability (TTD) benefits from September 26, 2016 (the last day that Claimant worked), and continuing, and (2) whether or not the Employer should be required to reimburse

the Claimant for the full amount of a year-long membership to Glenwood Hot Springs ("GHS") prior to proof of its use.

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the time of the Claimant's admitted injury, he worked as a delivery driver for the Employer. His duties as a delivery driver were not subject to seasonal variation. There was no persuasive evidence that there were spikes in the Claimant's earnings throughout the year.

2. Respondents admitted that the Claimant suffered a compensable injury to his mid-back on September 22, 2016, while loading bibs in the back room of a gas station & convenience store.

3. The Respondents ultimately filed a Corrected General Admission of Liability (GAL), dated January 26, 2018, admitting for medical benefits; an AWW of $1,255.62; and, TTD benefits of $837.08 per week from September 23, 2016 through "ongoing."

4. It is undisputed that the Claimant has been unable to work since the injury occurred, and that he has been following the course of treatment prescribed by the authorized treating physician (ATP).

Average Weekly Wage (AWW)

4. The Respondents' Corrected GAL admits for an AWW of $1,255.62 (Respondents' Ex. A, p. 1). The Claimant disputes this admission as not accurately reflecting his temporary loss of earnings.

5. At the time of the admitted injury, the Claimant's weekly wage was composed of a base pay rate, an overtime pay rate, and a commission fee (Claimant's Ex. 3, p. 9).

6. At the hearing, Respondents argued that the Claimant's AWW for the purpose of calculating temporary total disability benefits should be determined solely by

the Claimant's base wage on the date of injury. The ALJ finds that the Claimant's work is **not** seasonal nor are there any significant spikes in his yearly earnings.

7. The weekly wage that the Claimant earned at the time of the admitted injury, encompassed a base pay rate, an overtime pay rate, and a commission fee, all of which fairly reflected the Claimant's AWW.

8. Based on a review of Employer records for the nine months encompassed by January 1, 2016 through September 30, 2016, both dates inclusive, a total of 274 days, the Claimant's gross earnings were $50,215.50. Divided by 274 days, a daily rate of $183.27 is reached. Multiplied by 7 days, a weekly rate of $1,282.88 is reached. This exceeds the admitted AWW by $27.26 per week, the Claimant has proven, by a preponderance of evidence, and the ALJ finds that his average AWW is $1,282.88, thus, yielding a TTD rate of $855.02 per week, or $122.15 (rounded) per day; and that Employer has underpaid the Claimant by $17.95 per week, or $2.56 per day. The Claimant is entitled to this differential for every day encompassed by the Corrected GAL from September 26, 2016 through September 18, 2018, the hearing date, both dates inclusive, a total of 723 days. The aggregate amount of the differential equals $1,852.95.

GHS Membership

9. The Claimant has been in constant pain since his injury happened (Respondents' Ex. C).

10. To help remedy this pain, Bruce D. Lippman, M.D., who specializes in Family Medicine [the Claimant's authorized treating physician (ATP)], recommended that the Claimant engage in aqua therapy at a hot springs pool (Respondents' Ex. C, pp. 16-17, 22).

11. The Claimant gained a significant amount of weight after sustaining the admitted injury (Respondents' Ex. C, p. 26).

12. Wade Ceola, M.D., a Neurosurgeon, indicated that Claimant "should go to the gym 4 or 5 days a week" (Respondents' Ex. C, p. 26; Ex. H, p. 70). Dr. Ceola refused further surgery until the Claimant lost 100 pounds (Respondents' Ex. C, p. 25; Ex. H, p. 87; and, Ex. I, p. 126).

13. Dr. Lippman wrote a series of prescriptions to provide Claimant access to both a gym and aqua therapy at a hot springs pool (Respondents' Ex. C, pp.17, 22; Claimant's Ex., p. 45; Ex. 5, p. 49).

14. The first two prescriptions, dated February 7, 2018 and March 7, 2018, declare that the prescription is to last three months. (Claimant's Ex. 5, p. 48).

15. The most recent prescription, dated April 4, 2018, does not provide an end date. It states Claimant was "[r]eferred to hot springs pool for therapy. Need to use the gym and hot pool in the same location" (Claimant's Exhibit 5, p. 49).

16. Dr. Lippman felt that the initial prescription was not long enough, stating it was reasonable to extend it "[three] additional months, maybe six additional months." (Respondents' Ex. H, p. 92).

17. A location that possesses both a gym and a hot spring is necessary because prolonged driving causes the Claimant back pain (Claimant's Ex. C, pp. 29 and 32).

18. The ALJ infers and finds that, based on varying lengths of time specified in prescriptions, the Claimant mistakenly believed that the gym and hot pool prescription would extend for one-year.

18. Acting in good faith and in furtherance of his treatment to accelerate recovery, the Claimant purchased a year-long membership at GHS on June 4, 2018 for a total of $1,400.00 (Respondents' Ex. F, p. 53; Ex. 6, p. 50).

19. The Claimant has regularly used his membership at GHS for the months of June, July, and August 2018 (Claimant's Ex. 7, pp. 52 - 56).

20. As of the hearing, the Respondents have reimbursed the Claimant for $350.00 of the total amount of the gym membership, presumably based on earlier prescriptions.

21. The Respondents expressed concern that the Claimant would not use his gym pass on a regular basis, and therefore, that it would be a waste of money (Respondents' Ex. H, pp. 94-95).

22. The ALJ infers and finds that the Respondents' position concerning reimbursement of the full $1,400 is unclear other than Respondents indicating they would reimburse every 3 months for 3 months if the pool and gym membership continued to be medically warranted. In the meantime, the Claimant must make his credit card payments, with interest.

23. At the hearing on September 18, 2018, and at Dr. Lippman's deposition on August 9, 2018, Respondents stated that they were concerned about wasting money on an underutilized gym pass (Respondents' Ex. H, pp. 94-95). It is ambiguous how long the prescription was to last for, and how long access to GHS would be medically necessary for Claimant's recovery.

24. Two assertions were made at hearing, based upon the factual record. First, that GHS was the only location close to Claimant that had both a hot spring for aqua therapy and a gym where Claimant could pursue his weight loss goals. Second, that GHS required the purchase of a year-long membership. Since the Claimant has already been paid $350.00, then, in equity and good conscience, he should be reimbursed the remaining balance of $1,050.00, which he advanced. He relied on his imperfect understanding of the ambiguous and changing recommendations made by Dr. Lippman when he purchased the year-long membership at GHS.

Ultimate Findings

25. As found, the Claimant's correct AWW is $1,282.88. This exceeds the admitted AWW by $27.26 per week, which yields a TTD rate of $855.02 per week, or $122.15 (rounded) per day. Respondents underpaid the Claimant by $17.95 per week, or $2.56 per day. The Claimant is entitled to this differential for every day encompassed by the Corrected GAL from September 26, 2016 through September 18, 2018, the hearing date, both dates inclusive, a total of 723 days. The aggregate amount of the differential equals $1,852.95.

26. As found herein above, the Claimant relied on the sometimes ambiguous recommendations made by Dr. Lippman when purchasing the year-long membership at GHS. He acted in good faith to advance his medical treatment and ultimate recovery. In equity and good conscience, he should not be left "holding the bag."

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Substantial Evidence

a. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions

in the evidence. See *Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice to accept the evidence offered regarding the wage earned by Claimant for nine months preceding the admitted injury at his job at the time of the injury, and that the Claimant's job was of a non-seasonal nature; and that the pre-payment of the Claimant's year-long membership was made in good faith and it is reasonably necessary to cure and relieve the effects of the Claimant's admitted injuries. The ALJ rejects any evidence to the contrary.

Average Weekly Wage

b. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, the Claimant has lost 100% of his wages since September 26, 2016. *See also Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). As found, the Claimant's correct AWW is $1,282.88, thus the Claimant's average daily wage is $183.27 (rounded), which figure, multiplied by seven, yields the AWW of $1,282.88 (rounded). Based on the AWW of $1,282.88, Claimant's temporary TTD rate is $855.25. Since the indemnity admissions in the Corrected GAL, Respondents have been paying Claimant $837.08 weekly. Claimant has been underpaid in the amount of $18.17 per week, or $2.59 per day, in the aggregate total amount of $1,882.93.

GHS Membership

d. Under the Workers' Compensation Act, "[e]very employer, regardless of said employer's method of insurance, shall furnish such medical, surgical, dental, nursing, and hospital treatment . . . as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee from the effects of the injury." § 8-42-101(1)(a), C.R.S. As found, Dr. Lippman's conclusion was that access to a location with both a gym and a hot spring was reasonably needed at the time he wrote the most recent prescription on April 4, 2018, and GHS provided access to both of these facilities. As ultimately found, access to GHS was recommended by Dr. Lippman for a period of up to nine months at the time he made his recommendation, and the Claimant reasonably relied on these assertions—in good faith when he prepaid $1,400 for a year-long membership. It would be fundamentally unfair to require the Claimant to absorb the bill for his treatment. The treatment as found, is reasonably needed. In equity and good conscience, the Respondents should reimburse Claimant the full amount of the year-long membership

e. The Claimant should provide two things to the Respondents in order to verify that this treatment is reasonably needed for the full duration of the membership. First, evidence of his regular attendance at GHS in the same or a substantially similar

manner as he has already done, for the remaining duration of the membership, should be provided to the Respondents. Claimant should provide evidence that the final three months of his membership are reasonably needed to relieve him from the effects of his injury in the same manner as he has already done. The Claimant should have until March 8, 2019 to gather the required documentation. Failure to timely provide the required documentation could be deemed a violation of this order.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an occupational disease, the date of last injurious exposure, and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P2d 792 (1979). *People v. M.A.,* 104 P.3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden on the AWW of $1,282.88; underpayment of average weekly wage by Respondents to Claimant in the total amount of $1,882.93 for the period from September 26, 2016 through September 18, 2018, inclusive; and, Claimant has sustained his burden of showing that his year-long membership to GHS is reasonably needed to relieve him from the effects of his injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents are liable for underpayment to the Claimant of temporary total disability benefits of $18.17 per week, or $2.59 per day, from the September 26, 2016, through September 18, 2018, both dates inclusive, a total of 727 days, in the aggregate amount of $1,882.93, which is payable retroactively and forthwith, From September 18, 2018, and continuing as provided by law, Respondents shall pay the Claimant $855.25 per week in temporary total disability benefits until and unless modification thereof is warranted by law.

B. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

C. As modified by this decision, the Corrected General Admission of Liability, dated January 26, 2018, shall remain in full force and effect.

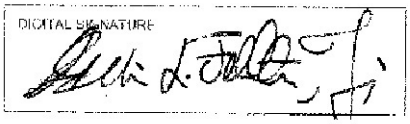
D. In addition to medical benefits admitted and paid, Respondents shall reimburse the Claimant in the amount of $1,050.00 for the year-long membership to GHS.

E. The Claimant shall provide Respondents with evidence of regular attendance at GHS for the prior six months by March 8, 2019, and again three months thereafter.

F. The Claimant shall provide Respondents with an authorized treating physician's prescription providing that the final three months of his gym membership is reasonably necessary to relieve him from the effects of his admitted injury by March 8, 2019.

G. Any and all issues not determined herein are reserved for future decision.

DATED this 9th day of October, 2018



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Did Claimant prove by a preponderance of the evidence he suffered a compensable injury to his right knee on January 22, 2018?

- If Claimant proved a compensable injury, did he prove the treatment he received through Colorado Occupational Medicine Partners was reasonably necessary to cure and relieve the effects of the injury?

STIPULATIONS

If the claim is compensable, the parties agreed Colorado Occupational Medicine Partners is the authorized provider. The parties reserved the issues of temporary disability benefits.

FINDINGS OF FACT

1. Claimant has worked for Employer as an overnight stocker since November 2007. The job is physically demanding, involving tasks such as unloading vehicles and stocking product. Claimant worked primarily in the meat department and frequently moved heavy pallets of frozen meat.

2. At approximately 2:30 AM on January 22, 2018, Claimant was using a manual pallet jack to move approximately 1,000 pounds of frozen product. He was pulling the pallet jack and pivoted on his right leg when he felt a "pop" in his right knee. He felt a "little bit" of pain in the right knee but was able to finish his shift. He did not report the incident because he did not think it was a serious issue that would require any treatment. His shift ended at approximately 6:30 AM, and Claimant went to his second job as an appliance "customizer" for Whirlpool. No incident occurred at Whirlpool that could have injured his right knee.

3. During that day, the pain in Claimant's knee increased significantly, to the point he had difficulty walking. He reported the injury to his foreman, Joseph, at the start of his next shift. Claimant completed an incident report describing the injury as:

> Moving product from meat cutting room to the floor with pallet jack and felt a tweak in my right knee but kept on working. I didn't think much about it. It wasn't until I got off work that I noticed wasn't able to stand correctly. I wasn't able to put full weight on my right knee.

4. Employer referred Claimant to its designated provider, Colorado Occupational Medicine Partners ("COMP"). Claimant saw Dr. Lugliani at COMP on January 23, 2018. Claimant explained to Dr. Lugliani, "he was pulling some product on a pallet. As he did so, he believes he might have twisted and felt pain in his right knee.

Since then, he has had some stiffness and difficulty with range of motion and pain with weightbearing."

5. Claimant has a history of right knee problems dating to an occupational injury at Penske in 2016. He received conservative treatment for that injury through Concentra. A right knee MRI on August 15, 2016 showed a mild impaction fracture at the medial femoral condyle, significant degenerative changes, and a complete root tear of the posterior horn of the medial meniscus. He saw an orthopedic surgeon, Dr. Cary Motz, who opined surgery would not resolve his symptoms. Dr. Motz gave Claimant a cortisone injection, which was very helpful. PT records show steady improvement. Concentra released Claimant at MMI with no impairment and no restrictions on October 20, 2016.

6. On June 7, 2017, Claimant saw his PCP for right knee pain and swelling. This was a continuation of the prior issues, with no new injury. Claimant was diagnosed with mild to moderate osteoarthritis of the right knee with a posterior loose body. He was referred for an orthopedic evaluation but did not follow through with it. At hearing, Claimant testified the pain and swelling improved after approximately three weeks so he did not feel he needed further evaluation or treatment.

7. There is no documentation or other persuasive evidence of further right knee treatment until the January 2018 incident. There is no persuasive evidence the knee interfered with Claimant's ability to perform his physically demanding job, or limited him in any other respect between October 2016 and January 2018.

8. Claimant told Dr. Lugliani about the prior injury at the initial visit:

> He adds that he did have a previous work injury to his right knee back in July 2016 . . . . He states that he did undergo an MRI scan of the right knee in this did show a meniscus tear. However, he improved with physical therapy and did not require surgery and was eventually placed at MMI without an impairment rating. He states he has not had any problems with that right knee until yesterday.

9. Physical examination showed tenderness along the anteromedial joint line and edema. Dr. Lugliani opined the "objective findings appear consistent with a work-related mechanism of injury." He requested Claimant's prior medical records, including the previous MRI. He referred Claimant to PT since he had "responded well" to therapy in the past. Dr. Lugliani imposed work restrictions of maximum 10 pounds lifting, and no crawling, kneeling, squatting, or climbing.

10. On February 21, 2018, Dr. Lugliani recommended a right knee MRI "to assess if there is progression of disease. If there is, I believe this is work-related. If there is no change, and the patient will be referred back to his PCP for further evaluation, management, and treatment."

11. Claimant had the MRI on April 20, 2018. It showed a macerated and displaced medial meniscal tear with almost complete disruption of the posterior root ligament, and high-grade degenerative changes in the medial compartment.

12. Claimant saw Dr. Wallace Larson for an IME at Respondents' request on May 30, 2018. Dr. Larson reviewed both MRIs and saw no acute changes or evidence of recent trauma. He noted "there does appear to be some progression of the degenerative condition, which is to be expected." He opined the mechanism of injury Claimant described would not cause or aggravate a torn meniscus. He agreed with Dr. Motz that meniscal surgery was not indicated, and concluded "it is likely the patient will need a total knee arthroplasty but this is not an occupationally related surgical indication."

13. Dr. Larson testified in a deposition on June 26, 2018 consistent with the opinions expressed in his IME report. He opined Claimant's symptoms were due to the natural progression of his underlying degenerative conditions, without contribution from the incident at work. He saw no evidence the accident aggravated or accelerated the underlying osteoarthritis or meniscal tear.

14. Claimant saw Dr. Timothy Hall for an IME at his counsel's request on July 20, 2018. Dr. Hall acknowledged Claimant's preinjury history, but opined the January 22 incident aggravated Claimant's symptoms and triggered the need for treatment. He thought the conservative care recommended by Dr. Lugliani was appropriate. Dr. Hall agreed the pre-existing degenerative changes "may be the source of his symptoms" but opined "they will need to be addressed in order to return [Claimant] to the comfort and functional level he enjoyed prior to this event." Dr. Hall thought the discussion regarding total knee arthroplasty was "premature" pending Claimant's response to conservative measures. He concluded "what we are treating here are symptoms that are reasonable, consistent with the mechanism of injury, and reported on a timely basis."

15. Dr. Larson testified in a post-hearing deposition on September 4, 2018. He disagreed with Dr. Hall and maintained his previously expressed opinion that Claimant's condition was simply a manifestation of a pre-existing degenerative condition.

16. Dr. Hall's opinions regarding causation and symptomatic aggravation causing a need for treatment are more persuasive than Dr. Larsen' opinions to the contrary.

17. Claimant's testimony regarding the accident and subsequent development and progression of symptoms is credible.

18. Claimant proved by a preponderance of the evidence he suffered a compensable aggravation of his pre-existing right knee condition on January 22, 2018.

19. Claimant proved the treatment he received at Colorado Occupational Medicine Partners and the April 20, 2018 MRI were reasonably necessary to cure and relieve the effects of his compensable knee injury.

CONCLUSIONS OF LAW

A. Compensability

To receive compensation or medical benefits, a claimant must prove he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The claimant must prove an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201.

If an industrial injury aggravates, accelerates, or combines with a pre-existing condition to produce disability or a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and if the pain triggers the claimant's need for medical treatment, the claimant has suffered a compensable injury. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016). But the mere the fact that an incident at work causes symptoms does not automatically establish compensability. Rather, the ALJ must determine whether the need for treatment was the proximate result of an industrial aggravation or is merely the direct and natural consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Carlson v. Joslins Dry Goods Company*, W.C. No. 4-177-843 (March 31, 2000).

A compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016). Compensable medical treatment includes evaluations or diagnostic procedures to investigate the existence, nature, or extent of an industrial injury. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000). Even a minor "strain" can be a sufficient basis for a compensable claim if it was caused by a claimant's work activities and caused him to seek medical treatment. The ICAO's decision in *Garcia v. Express Personnel*, *supra*, is instructive regarding the minimal extent of an injury that can satisfy the basic threshold requirement of compensability. In *Garcia*, the claimant felt pain in her abdomen and hip while lifting a piece of glass at work. The employer referred the claimant to Dr. Caughfield, who diagnosed a lumbar strain, but opined she had already reached MMI. The ALJ found that the claimant suffered a "minor back sprain," but also found the sprain had "resolved" within five days of the incident. The ALJ denied the claim on the theory that the claimant suffered no "injury." The ICAO reversed and held that the claimant had established a compensable injury as a matter of law:

> Where pain triggers the claimant's need for medical treatment, the claimant has established a compensable injury if the industrial injury is the cause of the pain. The term medical treatment includes diagnostic procedures required to ascertain the extent of the industrial injury.

> Here, the ALJ found there was an industrial accident which caused a minor lumbar strain. Further, the ALJ determined that when the injury was reported to the employer, the employer offered the claimant medical services from Dr. Caughfield, which the claimant accepted. Although Dr. Caughfield placed the claimant at MMI based upon his [ ] examination, the ALJ found with record support that Dr. Caughfield diagnosed a lumbar strain. Thus, the ALJ's findings compel the conclusion the claimant established a compensable injury which entitled her to an award of medical benefits. (Citations omitted).

As found, Claimant proved he suffered a compensable injury to his right knee on January 22, 2018 while moving a heavy pallet. The accident proximately caused a need for evaluation, diagnostic imaging, and conservative care. Claimant's description of the incident has been consistent throughout the medical records and in testimony. Although Claimant has a well-documented history of right knee problems, including a pre-existing torn meniscus, the symptoms were relatively quiescent immediately before the accident in January 2018. Claimant was last evaluated for right knee pain in June 2017, six months before the accident. He chose not to pursue further treatment at that time, which supports his testimony the symptoms had improved. Claimant worked two jobs with no apparent difficulty or limitation, at least one of which was physically demanding. The January 22, 2018 work accident significantly flared his pain and he reasonably requested treatment. Employer obliged the request and referred Claimant to its designated provider. At the initial evaluation with Dr. Lugliani, Claimant was forthcoming about the pre-existing condition. Dr. Lugliani noted edema in the knee and opined the objective findings were consistent with a work-related mechanism of injury. Dr. Lugliani recommended physical therapy to bring Claimant's symptomatology back to baseline. He subsequently ordered an MRI "to assess if there is progression of disease" and delineate the next steps in treatment. These facts are sufficient to cross the threshold for a compensable injury.[1]

B. Medical benefits

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999).

As found, the treatment Claimant received through COMP was reasonably necessary and proximately caused by the work-related aggravation. Dr. Lugliani reasonably recommended therapy since it had helped claimant resolve his prior knee problems without surgery. The April 20, 2018 MRI was reasonably necessary to investigate whether the incident had caused any structural change within Claimant's knee, and help Dr. Lugliani determine the appropriate course of care.

[1] The more challenging question would be: if surgery were recommended, would it be reasonably necessary and causally related to the compensable injury? But at present, no ATP has recommended surgery, Claimant is not requesting surgery, and that issue can be left for another day.

ORDER

It is therefore ordered that:

1. Claimant's claim for a right knee injury on January 22, 2018 is compensable.

2. Respondent shall provide all reasonably necessary treatment from authorized providers to cure and relieve the effects of the industrial injury, including, but not limited to, evaluation and treatment at Colorado Occupational Medicine Partners, and the April 20, 2018 right knee MRI.

3. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 5, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether the respondent has demonstrated by a preponderance of the evidence that on July 22, 2017, the claimant was not an employee of the employer, but rather an uncompensated volunteer.

- If the claimant is deemed an employee of the employer, whether the claimant has demonstrated by a preponderance of the evidence that she sustained an injury arising out of and in the course and scope of her employment with the respondent on July 22, 2017.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that medical treatment she received was reasonable and necessary to cure and relieve her from the effects of the injury.

- If the claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that the medical treatment she received was authorized.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that penalties shall be assessed pursuant to Section 8-43-408, C.R.S. for the employer's alleged failure to obtain and maintain worker's compensation insurance.

- If the claimant proves a compensable injury, whether the respondent has demonstrated by a preponderance of the evidence that the respondent is entitled to a statutory offset for the claimant's receipt of unemployment insurance benefits (UIB).

STIPULATION

- At hearing the parties agreed that if the claim is found compensable they will work to reach a stipulation regarding the claimant's average weekly wage (AWW).

FINDINGS OF FACT

Based upon the evidence and testimony presented at hearing, the ALJ makes the following Findings of Fact:

1. The respondent operates a towing business. Insurance companies and individual customers contact the respondent to request towing services. The respondent owns more than ten tow trucks.

2. The claimant met the respondent in June 2017 when the claimant was planning to move from the Denver, Colorado area to the Rifle, Colorado area. The claimant has prior experience as a commercial truck driver and holds a commercial driver's license (CDL).

3. The claimant completed an employment application for the respondent. In addition, the claimant submitted to a urinalysis at the direction of the respondent. Thereafter, the respondent offered the claimant a position driving a tow truck. The claimant accepted the respondent's offer of employment and began operating a tow truck for the respondent.

4. Mr. Adams testified that the claimant was not his employee, but an uncompensated "volunteer". Mr. Adams further testified that he agreed to take the claimant on as a volunteer to teach her the business so that the claimant could start her own towing business in Hotchkiss, Colorado.

5. The ALJ is persuaded by the claimant's testimony that she had no intention of starting her own towing business in Hotchkiss.[1] The claimant has a brother that lives in Hotchkiss, but she was not planning to move there in June 2017.

6. The ALJ is not persuaded by Mr. Adams' testimony that the claimant provided tow truck driving services as an uncompensated volunteer. On the contrary, it is clear from the claimant's testimony that she was hired by Mr. Adams to drive a tow truck and she was paid in cash for her services. The respondent paid all of his tow truck drivers in cash. The claimant credibly testified that she was paid an average of $500.00 per week while employed by the respondent.

7. The parties provided extensive testimony regarding the process used by the respondent to assign drivers to complete tows; what paperwork is completed; and how drivers are paid. Based upon that testimony the ALJ finds the following processes were followed. Mr. Adams would receive communications from insurance companies, dispatch companies, and individuals requesting services. These services included

[1] The ALJ notes that any such business would quite likely be in direct competition with the respondent. The ALJ finds it unconvincing that the respondent would agree to "teach [the claimant] the business" knowing that any such business would be a competitor for his business.

towing, tire changes, and unlocking vehicles. Based upon the service requested and the location of his drivers, Mr. Adams would assign a driver to complete the requested service. There is no persuasive evidence on the record to indicate that the claimant handled locked out vehicles or tire changes.

8. At the end of each week, Mr. Adams would collect the various service orders and organize them by the driver who completed the work. Each driver would then receive their specific packet of paperwork to review and complete. Once completed, the paperwork was returned to Mr. Adams. At that time, Mr. Adams would calculate the wages owed each driver and pay them in cash. After paying the drivers, Mr. Adams would then forward the completed paperwork to Ms. Hall and/or Ms. Adams for purposes of billing the respondent's customers.

9. The claimant received and returned paperwork and was paid in cash as described above.

10. Mr. Adams testified that in July 2017 his company did not carry workers' compensation insurance. Instead, his company had coverage that he had been advised "was the same" as workers' compensation insurance. Mr. Adams further testified that the claimant was not covered by his company's insurance because she was a volunteer tow truck driver.

11. On July 22, 2017, Mr. Adams assigned the claimant to tow a Ford F250 pickup truck in Rifle, Colorado. While loading the F250 onto her assigned tow truck, the claimant was lying on the ground attaching the safety chains as she had been trained. At that time, the winch on the tow truck released and caused the truck to roll back. As the claimant was underneath the truck when this occurred, the rear left tire of the F250 rolled on the claimant's right arm. The claimant was able to remove her arm from under the tire. However, the truck rolled a second time and the tire was on the claimant's chest. The claimant was able to extract herself from out from under the truck and called for help. Bystanders assisted the claimant in calling Mr. Adams and emergency services.

12. The claimant was transported by ambulance to Vail Valley Hospital. While at Valley View Hospital the claimant underwent various tests and imaging including: x-rays of her right humerus, pelvis, and chest; a CT angiogram of her chest, abdomen, and pelvis; an abdominal ultrasound; and an echocardiogram. The claimant was diagnosed with a laceration to her right arm; fractures on her 2, 3, 4, 5, 6 and 7 ribs; a pulmonary contusion, a small pneumothorax; and a cardiac contusion. The claimant was administered oxygen because of the damage to her lungs. The claimant's hospital stay lasted approximately six days.

13. Thereafter, the claimant received treatment from Dr. Dennis Eicher with New Castle Family Heath. The claimant first treated with Dennis Eicher on July 31, 2017. On that date, Dr. Eicher noted that the claimant had been diagnosed with multiple rib fractures, a contused lung, a contused heart, and an abrasion on her right arm.

14. On September 8, 2017, the claimant returned to Dr. Eicher who noted decreased range of motion in the claimant's right shoulder and deformity of the inner aspect of the forearm by the medial elbow. At that time, Dr. Eicher recommended that the claimant undergo physical therapy. However, the medical record of that date indicates that the claimant declined that treatment for financial reasons. As a result, Dr. Eicher instructed the claimant on generalized shoulder exercises.

15. The medical records entered into evidence indicate that Dr. Eicher cleared the claimant to return to work on September 11, 2017. However, the employer's records indicate that the claimant completed a tow on September 9, 2017. The ALJ finds that this was the claimant's first day back to work after her injury. From that date, the claimant continued to work for and be paid by the respondent in the same manner as she had prior to the July 22, 2017 injury.

16. The claimant completed tows for the employer from September 9, 2017 through October 21, 2017. After October 21, 2017, the claimant stopped responding to text messages from Mr. Adams asking her to complete tows. The claimant testified that she quit her employment when she did because of ongoing pain symptoms. In addition, the claimant testified that she could no longer perform her job duties because she felt afraid when walking behind a tow truck. The claimant testified that after she quit her position she moved to Hotchkiss.

17. The claimant testified that she applied for and received unemployment insurance benefits from October 2017 through May 2018. The claimant also testified that she received a total of $13,732.00 in unemployment insurance benefits. The claimant's unemployment claim was made against her prior employer, Calabrese Trucking, and not against the respondent.

18. Text messages entered into evidence demonstrate that the respondent regularly dispatched the claimant to complete tows. The text messages also include communication regarding the claimant returning to work after her injury because her finances were "getting very low". Also contained in these text messages is communication from Mr. Adams to the claimant regarding completing the claimant's "pay". The ALJ is not persuaded by Mr. Adams' testimony that when he texted "pay" to the claimant he actually meant "paperwork".

19. The claimant testified that she has incurred more than $100,000.00 in medical bills related to the July 22, 2017 injury. Records entered into evidence indicate that the actual cost of medical treatment incurred by the claimant as of the date of hearing totals $100.116.71.[2]

20. The ALJ credits the claimant's testimony over the conflicting testimony of Mr. Adams and finds that the claimant has demonstrated that it is more likely than not that she was an employee of the respondent. The claimant was hired and paid to operate the employer's tow truck. The claimant was not working as a "volunteer".

21. The ALJ credits the medical records and the testimony of the claimant and finds that the claimant was injured while operating a tow truck for the respondent. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that she suffered an injury that arose out of and in the course and scope of her employment with the respondent.

22. There is no persuasive evidence in the record to indicate that the respondent provided the claimant with a list of designated medical providers, upon learning of the claimant's work injury. Therefore, the ALJ finds that the claimant has shown that it is more likely than not that the choice of physician passed to her.

23. The ALJ credits the medical records and the testimony of the claimant and finds that the claimant has shown that it is more likely than not that the medical treatment she has received since the work injury is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

24. The ALJ credits the medical bills entered into evidence and the claimant's testimony and finds that the claimant has demonstrated that she has accrued medical bills totaling $100.116.71.

25. The ALJ credits the medical records and the testimony of the claimant and finds that the claimant has shown that it is more likely than not that she was unable to earn wages because of her work injury from July 22, 2017 until September 9, 2017.

26. The ALJ credits the claimant's testimony and finds that she stopped accepting work from Mr. Adams after October 21, 2017. The ALJ is not persuaded that the claimant was physically or emotionally prevented from working and earning wages after October 21, 2017. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she was unable to earn wages after October 21, 2017. On the contrary, it is clear from the claimant's testimony that she chose to stop working for the employer to move to Hotchkiss, Colorado.

[2] This total was calculated from the following: Vail Valley Hospital $94,324.34; Delta County Memorial Hospital $1,397.92; Mountain Radiology $2,273.20; City of Glenwood Springs $1,041.20; Areo Care $90.59; New Castle Family Health $871.00; prescriptions $118.46.

27. The ALJ credits the claimant's testimony that she received unemployment insurance benefits from October 2017 through May 2018. However, the ALJ finds that the respondent's request for an offset due to the claimant's receipt of unemployment insurance benefits is moot because the claimant did not suffer a wage loss related to her work injury during the same time she was receiving unemployment insurance benefits.

28. The ALJ credits the testimony Mr. Adams that he and his company did not have workers' compensation insurance coverage at the time of the claimant's July 22, 2017 injury. In addition, the insurance coverage the employer did have on July 22, 2017 did not cover the claimant.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (the Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. "Employee" includes "every person in the service of any person, association of persons, firm or private corporation. . . under any contract of hire, express or implied." Section 8-40-202(b), C.R.S.

4. Under Section 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person "is free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an

independent trade, occupation, profession, or business related to the service performed."

5. As found, the claimant provided services to the respondent and was paid for her services.[3] Therefore, the ALJ concludes that the claimant was an employee of the respondent. As found, the claimant's testimony is credible and persuasive.

6. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

7. As found, the claimant has demonstrated by a preponderance of the evidence that she suffered an injury that arose out of and in the course and scope of her employment with the respondent. As found, the claimant's testimony and the medical records are credible and persuasive.

8. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a) specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee. If the services of a physician are not tendered at the time of the injury, the employee shall have the right to select a physician or chiropractor." "[A]n employee may engage medical services if the employer has expressly or impliedly conveyed to the employee the impression that the employee has authorization to proceed in this fashion…." *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985), *citing*, 2 A. Larson, *Workers' Compensation Law* § 61.12(g)(1983).

9. There is no persuasive evidence in the record to indicate that the respondent provided the claimant with a list of designated medical providers, upon learning of the claimant's work injury. In the absence of a selection of physician by the respondent the claimant has demonstrated by a preponderance of the evidence that

[3] Even if the ALJ were to entertain the respondent's assertion that the claimant was an unpaid volunteer who agreed to operate a tow truck in exchange for training and experience but no pay, the ALJ concludes that the claimant would still be an employee under the Act. The ALJ reasons that even in the unpersuasive scenario purported by the respondent, the claimant was still compensated by the respondent in the form of training and experience.

choice of medical provider passed to the claimant. Therefore, the medical treatment the claimant received as a result of the July 22, 2017 work injury is authorized medical treatment.

10. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

11. As found, the claimant has demonstrated by a preponderance of the evidence that the medical treatment she received following the July 22, 2017 injury was reasonable and necessary to cure and relieve the claimant from the effects of the work injury. As found, the medical records and the testimony of the claimant are credible and persuasive.

12. As found, the claimant has demonstrated by a preponderance of the evidence that she has accrued medical bills totaling $100.116.71. As found, the claimant's testimony and the claimant's testimony and the medical bills entered into evidence are credible and persuasive.

13. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

14. As found, the claimant has demonstrated by a preponderance of the evidence that the July 22, 2017 work injury caused disability that resulted in a wage loss from July 22, 2017 to September 8, 2017. Therefore, the claimant is entitled to TTD benefits during for that period of time. As found, the medical records and the testimony of the claimant are credible and persuasive.

15. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she suffered wage loss after October 21, 2017. As found, the claimant's testimony is credible and persuasive.

16. As found, the respondents' request for an offset due to the claimant's receipt of unemployment insurance benefits is moot because the claimant is not entitled to TTD benefits for the period in which she received unemployment insurance benefits. As found, the claimant's testimony is credible and persuasive.

17. Section 8-43-408(1)(5), C.R.S., provides that in cases in which a claimant suffers a compensable injury and the employer failed to comply with the insurance provisions of the Colorado Workers' Compensation Act, the employer shall pay the Colorado uninsured employer fund an amount equal to twenty five percent (25%) of the compensation or benefits due to the claimant.

18. As found, the respondent did not have workers' compensation insurance at the time of the claimant's July 22, 2017 work injury. Therefore, the respondent shall pay the Colorado uninsured employer fund $25,029.18 (25% of the amount of $100.116.71 in medical benefits due to the claimant). The respondent shall also pay to the Colorado uninsured employer fund an amount equal to 25% of the TTD benefits due to the claimant for the period of July 22, 2017 through September 10, 2017.[4] As found, the medical bills entered into evidence and the claimant's testimony are credible and persuasive.

ORDER

It is therefore ordered that:

1. The claimant was an employee of the respondent on July 22, 2017.

2. On July 22, 2017, the claimant suffered an injury that arose of out and in the course and scope of her employment with the respondent.

3. The choice of medical provider passed to the claimant and medical treatment the claimant received as a result of the July 22, 2017 work injury is authorized medical treatment.

4. The respondent shall pay for reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury, this includes the $100.116.71 in outstanding medical bills that have accrued since the claimant's work injury.

[4] At this time, the ALJ is unable to calculate the actual amount owed related to TTD because the parties plan to reach a stipulation regarding the claimant's AWW. Once the parties have reached that stipulation the amount of TTD owed to the claimant as well as the 25% penalty due to the Colorado uninsured employer fund will be calculated by the DOWC.

5. The claimant is entitled to temporary total disability (TTD) benefits for the period of July 22, 2017 through September 8, 2017.

6. The claimant's request for TTD benefits beginning October 22, 2017 and ongoing is denied and dismissed.

7. The respondents' request for an offset due to the claimant's receipt of unemployment insurance benefits is denied as moot because the claimant is not entitled to TTD benefits for the period in which she received unemployment insurance benefits.

8. For failing to maintain workers' compensation insurance, the respondent shall pay the Colorado uninsured employer fund $25,029.18 The respondent shall also pay to the Colorado uninsured employer fund an amount equal to 25% of the TTD benefits due to the claimant for the period of July 22, 2017 through September 8, 2017.

9. The parties shall provide the DOWC with a copy of their stipulation regarding the agreed to average weekly wage (AWW) by forwarding a copy of the stipulation to Gina Johannesman, Trustee DOWC Special Funds Unit, gina.johannesman@state.co.us.

10. The respondent shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

11. All matters not determined herein are reserved for future determination.

12. In lieu of payment of the above compensation and benefits to the claimant, the respondent shall:

a. Within ten (10) days of the date of service of this order, deposit the sum of $130,000.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to: Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Gina Johannesman, Trustee; **OR**

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $130,000.00 with the Division of Workers' Compensation within ten (10) days of the date of this order:

i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

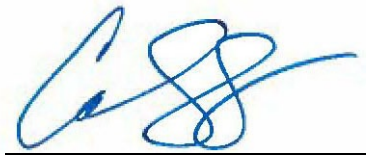
ii. Issued by a surety company authorized to do business in Colorado.

iii. The bond shall guarantee payment of the compensation and benefits awarded.

13. The respondent shall notify the Division of Workers' Compensation of payments made pursuant to this order.

14. The filing of any appeal, including a petition to review, shall not relieve the respondent of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

Dated: October 11, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

W.C. No. 5-075-727-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF RESPONDENTS AND DENYING CLAIMANT'S CORRECTED VERIFIED OBJECTION TO RESPONDENTS' MOTION

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

The above-referenced matter is scheduled for hearing on October 19, 2018, in Greeley, Colorado. On October 2, 2018, the above referenced matter was referred to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) with the Office of Administrative Courts (OAC) for a decision on the Respondents' Motion for Summary Judgment, filed on or about August 23, 2018; and, on Claimant's Corrected Verified Objection to Respondents' Motion for Summary Judgment, filed on or about September 24, 2018.

Hereinafter Efrain Velador shall be referred to as the "Claimant." JBS Holdings (apparently a holding company for Swift Beef Company) shall be referred to as the "Employer." All other parties shall be referred to by name.

ISSUES FOR SUMMARY JUDGMENT

The issues to be determined by this decision concern whether there is a genuine issue of disputed material fact concerning whether the Claimant can challenge, at an evidentiary hearing, Division Independent Medical Examiners (DIMEs), based on their

lack of specific specialty expertise to address the Claimant's impairment, contrary to the Claimant's alleged DIME rights.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

1. On May 1, 2018, Claimant's Authorized Treating Physician (ATP), Anjman Sharma, M.D., rendered the opinion that Claimant reached maximum medical improvement (MMI) and provided the Claimant with a permanent medical impairment rating of 7% of the left upper extremity (LUE) converted to 4% whole person (*See* Respondents' Summary Judgment Exhibit A).

2. On May 11, 2018, Respondents timely filed a Notice and Proposal to Select an Independent Medical Examiner to challenge the report of Dr. Sharma (*See* Respondents' SJ Exhibit B).

3. On June 28, 2016, the Claimant filed an Application for Hearing and Notice to Set endorsing the issue of "Determine propriety and effect of preemptive DIME and physician specialties and selection contrary to Claimant's DIME rights as expressed in AFL-CIO v. Donlon and Whiteside v. Smith, contrary to the Claimant's true treatment and diagnostic needs and extent of his occupational impairments" (*See* Respondents' SJ Exhibit C).

Verified Objection

4. The Claimant's Corrected Verified Objection to Respondents' Motion for Summary Judgment **fails to** state a genuine issue of disputed material fact relative to the issue the Claimant set for hearing for October 19. It sets forth an alleged legal argument that has previously been resolved by the Court of Appeals in another case involving the affiant-attorney herein.

5. The Claimant's Corrected Verified Objection, signed by the Claimant's attorney, under oath and penalty of perjury, is replete with scandalous invective, first attacking the validity of the Employer's holding company as part of a "worldwide re-structured conspiracy "to protect the assets of the former parent company as [named] and its worldwide subsidiaries from creditors and shareholders suits following the payment of 1.4 billion dollars by said Company's Founders and principals-the Bautista family-to stay out of prison following the discovery of their **longstanding pattern and practice of companywide corruption** (emphasis supplied)."

6. The Corrected Verified Objection further states under oath of Claimant's counsel: "Even more egregious, to fraudulently procure relief herein consisting of the nonexistent relief of striking Claimant's pending Application for Hearing or dispositive relief on the merits under OAC Rule 17, 'Respondents' **and their attorneys falsely and fraudulently delineate a number of other utterly ludicrous, biased, and concerted ALJ rulings and ICAP opinions, all of which serve only to depict how far said ALJs and ICAP members will go to grant Respondents whatever relief they seek, regardless of their entitlement thereto…."** To characterize these statements of Claimant's counsel as patently offensive to everyone in the workers' compensation system would be an enormous understatement. These statements on their face appear to be the uncorroborated musings, under oath, of a lawyer who is seriously ill and in need of treatment.

Ultimate Findings

7. Based on the totality of the items in the official file, documents, pleadings, motions, evidence, and the law applicable to the evidence, the ALJ finds that there is no genuine issue of disputed material fact relative to the hearing issue designated in the Claimant's Application for Hearing. In a non-published opinion involving other parties, but in which the affiant attorney herein was the losing attorney of record, the Court of Appeals, in denying the opposing side attorney fees, noted that Claimant's argument amounted to a "good faith" attempt to change the law, but found the existing DIME statutory provisions appropriate. *See Heinz v. Indus. Claim Appeals Office* (16CA2236, November 22, 2017) (Not Published Pursuant to C.A.R. 35 (e). In the present case, the Claimant is again trying to change the law through the vehicle of an evidentiary hearing before the Office of Administrative Courts (OAC), which is not the appropriate forum. An appropriate starting point would be with a bill to first be heard by a committee of the General Assembly. After the holding in *Heinz,* a matter in which affiant counsel herein was privy, the "good faith" attempt to change the law argument had already been used once, unsuccessfully. It cannot be expected that doing the same thing in the present case will result in a different outcome. The Claimant is not entitled to a hearing on the issue designated, which amounts to an effort to change the law. There is no justiciable controversy to be resolved by the hearing set for October 19. The only potential remedy would be to change the law—a prerogative reserved for the legislative branch of government. The Claimant is **not** entitled to a hearing on the issue designated in his Application for Hearing, dated June 28, 2018.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, the Motion for Summary Judgment contains attached documents. As further found, the Claimant's Corrected Verified Objection contains the sworn Verified Objection, signed under oath by the affiant-attorney; three computerized tax documents, and an unidentified printout from the Internet, purporting to show that the Employer herein is not really who it says it is.

b. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegations of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. *See Drake v. Tyner*, 914 P.2d 519 (Colo. App. 1996). As found, the documentary evidence establishes that there is no genuine issue of disputed material fact with respect to the Findings herein above.

c. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Respondents' Motion for Summary Judgment shows specific facts probative of a right judgment; and, the Claimant has failed to show that there is a genuine issue of disputed material fact for hearing, with respect to the Findings herein above.

d. Accordingly, an affirmative showing of specific facts probative of a right to judgment which is uncontradicted by counter-affidavits leaves a trial court with no

alternative but to conclude that no genuine issue of material fact exists. *Terrell v. Walter E. Heller & Co.,* 165 Colo. 463, 439 P.2d 989 (1968). As found, there are no affirmative showings by the Claimant which would support the proposition that there is, in fact, a genuine issue of disputed material fact.

e. The Corrected Verified Objection, as found in Finding No. 6 herein above, is replete with scandalous and libelous invective against almost all parties in the Colorado Workers' Compensation System, including the ALJs and ICAP [*e.g.,* "…'Respondents' and their attorneys falsely and fraudulently delineate a number of utterly ludicrous, biased, and concerted **ALJ rulings and ICAP opinions,** all of which serve only to depict how far said ALJs and ICAP members will go to grant Respondents whatever they seek…." A lawyer who repeatedly violated the state's (disciplinary) rule prohibiting undignified and discourteous conduct degrading to a tribunal was held accountable in discipline. *Board of Overseers v. Campbell,* 539 A.2d 28 (Me. 1987).

f. As found herein above, the Court of Appeals, in denying attorney fees, noted that Claimant's argument amounted to a "good faith" attempt to change the law, but found the existing DIME statutory provisions appropriate. *See Heinz v. Indus. Claim Appeals Office* (16CA2236, November 22, 2017) (Not Published Pursuant to C.A.R. 35 (e). The ALJ herein concludes that there is only one bite of the "good faith" apple. Affiant attorney has been told that an adjudicatory forum is not the right forum to change the law. A lawyer's repeated disobedience to court orders, rearguing matters on which the court had already ruled, was determined to be in violation of disciplinary standards. *See United States v. Lumumba,* 794 F.2d 806 (2nd Cir.); *cert denied* 479 U.S. 855 (1986). By innuendo and explicitly charged adjectives, affiant attorney has made unsubstantiated allegations, maligning opposing counsel and the adjudicators up the line in the system. Perhaps, the affiant attorney has been making scandalous and libelous accusations against most players in the Workers' Compensation System for such a long period of time that no one takes him seriously anymore. His use of unsubstantiated invective casts a dark shadow over the entire legal community. Perhaps, the affiant attorney should be put to the proof concerning his sworn allegations.

Burden of Proof

g. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979); *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, Respondents have satisfied their

burden with respect to the proposition that there is no genuine issue of disputed material fact with respect to the issue concerning Claimant's view of how the DIME provisions should be changed.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents' Motion for Summary Judgment is hereby granted.

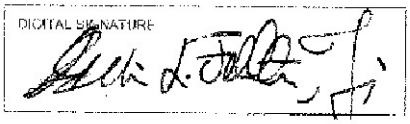
B. Claimant's Application for Hearing and Notice to Set, dated June 28, 2018, is hereby stricken.

C. The Division Independent Medical Examination sought by the Respondents may proceed, with or without the Claimant striking one of the three potential DIME examiners proffered by the Division of Workers' Compensation.

D. The hearing set for October 19, 2018, is hereby vacated.

E. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of October 2018.



_____

EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that the right total hip arthroplasty recommended by Dr. Brian White is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted April 7, 2017 work injury.

- Whether the claimant has demonstrated by a preponderance of the evidence that the intraarticular steroid injection of the right hip recommended by Dr. Michael Sisk is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted April 7, 2017 work injury.

FINDINGS OF FACT

1. In April 2017, the claimant was employed with the employer as an administrative assistant. On Friday, April 7, 2017, the claimant was returning from an errand, when she stepped over a parking curb and the lace of her right shoe became caught on a piece of rebar. This caused the claimant's foot to catch and she tripped, injuring her right hip.

2. The claimant testified that she did not feel any immediate pain in her right hip. However, over the course of the weekend she felt developing tightness in her hip that caused her difficulty walking. When these symptoms continued into Monday, the claimant sought medical treatment with her primary care provider, Frances Jenkins, PA.

3. The claimant first treated with Ms. Jenkins for this injury on April 13, 2017. On that date, the claimant reported pain in her right groin and right thigh. Ms. Jenkins diagnosed strain of the right flexor muscle of the right hip and referred the claimant for physical therapy treatment. On April 18, 2017, the claimant began physical therapy with John Pearson, PT at Pearson Physiotherapy Specialists.

4. The claimant testified that she underwent physical therapy treatment for approximately four weeks. However, physical therapy did not resolve the claimant's right hip pain. Subsequently, Ms. Jenkins ordered a magnetic resonance image (MRI) of the claimant's right hip

5. On May 26, 2017, an MRI of the claimant's right hip showed extensive tearing of the anterior superior labrum with associated anterior paralabral cysts; high grade chondral loss along the superior acetabulum, with underlying bone edema (which the radiologist opined was "most likely degenerative in nature"); and edema tracking within the medical portions of the obturator external muscle.

6. The claimant testified that based upon the May 26, 2017 MRI results Ms. Jenkins recommended that the claimant report her injury as a work injury. Based upon that recommendation, the claimant notified the employer in early May 2017 of the April 7, 2017 incident.

7. Once her injury was reported to the employer, the claimant's authorized treating physician (ATP) for this injury became Dr. Larry Kipe. The claimant began treatment with Dr. Kipe on June 1, 2017 and reported persistent pain in her right hip. On that date, Dr. Kipe noted that the right hip MRI showed a labral tear and referred the claimant to Dr. Brian White for an orthopedic consultation.

8. On August 2, 2017, the claimant was seen by Dr. White. Based upon the claimant's MRI results and the extent of the arthritis in the claimant's hip, Dr. White determined that the torn labrum could not be repaired arthroscopically. At that time, Dr. White recommended a right total hip replacement. The claimant testified that Dr. White was the first provider to inform her that she had hip dysplasia as well as arthritis in her right hip.

9. The claimant resides in Craig, Colorado. Dr. White's practice is located in Denver, Colorado. The claimant testified that Dr. White indicated to her that he could perform the recommended hip replacement surgery. However, Dr. White also informed the claimant that any of the orthopedic surgeons near her residence in Craig would also be qualified to perform the surgery.

10. After seeing Dr. White, the claimant returned to Dr. Kipe on September 7, 2017. On that date, Dr. Kipe referred the claimant to Dr. Michael Sisk for an orthopedic consultation. The referral order indicated that the claimant needed right total hip replacement. The claimant testified that Dr. Sisk has previously treated her for issues with her knees. The claimant also testified that she suggested Dr. Sisk to Dr. Kipe for referral because Dr. Sisk practices in Steamboat Springs Colorado, which is closer to the claimant's residence in Craig.

11. The respondents filed a General Admission of Liability (GAL) on September 14, 2017.

12. On September 19, 2017, Dr. Peter Weingarten reviewed the claimant's medical records in light of the request for authorization of the hip replacement surgery. Dr. Weingarten noted that the MRI showed long term chronic changes in the claimant's right hip. Dr. Weingarten opined that although the recommended surgery was reasonable treatment, the need for surgery was not causally related to the claimant's work injury. As a result, Dr. Weingarten recommended that the respondents deny authorization for the recommended surgery.

13. On September 29, 2017, Dr. Jon Erickson also performed a records review related to the recommended right hip arthroplasty. In his report, Dr. Erickson agreed with Dr. Weingarten that the abnormalities seen on the MRI were chronic and evidence of a preexisting condition. Dr. Erickson also noted that individuals with

advanced osteoarthritis of the hip joint can be "completely asymptomatic". Dr. Erickson opined that the claimant's April 7, 2017 injury was minor, and that hip arthroplasty would be treating her preexisting condition and not the minor work injury.

14. Based upon the opinions of Drs. Weingarten and Erickson, the respondents denied authorization for the right total hip replacement surgery.

15. The claimant was seen by Dr. Sisk on March 28, 2018. At that time, the claimant reported intermittent pain in her right groin that she described as pinching and burning. Dr. Sisk agreed with Dr. White's assessment that the claimant would not benefit from arthroscopic repair of her labrum, and the claimant would likely need a right hip arthroplasty. However, Dr. Sisk recommended that the claimant undergo an intraarticular steroid injection of the right hip before pursuing hip replacement.

16. On April 13, 2018, Dr. Erickson completed a second records review. This review was to address the recommendation by Dr. Sisk that the claimant undergo a steroid injection to her right hip. In that report, Dr. Erickson opined that the claimant was at maximum medical improvement (MMI) prior to treatment she received "for an exacerbation of her pain" on May 26, 2017. Dr. Erickson recommended denial of the requested injection as it was his opinion that it would be treating the claimant's preexisting condition and not the work injury. Dr. Erickson's testimony at hearing was consistent with his written reports.

17. On July 3, 2018, Dr. Weingarten authored a letter to the respondents' counsel regarding the etiology of the claimant's hip arthritis. Dr. Weingarten opined that the claimant's fall and hyperextension injury on April 7, 2017 "did not substantially alter the course and progression of the [claimant's] underlying condition." Dr. Weingarten also noted that although the claimant experienced a minor exacerbation of the arthritic changes in her right hip, the need for total hip arthroplasty was based upon the underlying arthritis and not the work injury.

18. The claimant testified that her current symptoms include tightness in her right hip, a lack of mobility, and gait changes. The claimant also testified that she has pain in her hip if she sits, stands, or walks for extended periods of time.

19. Throughout treatment of her symptoms related to the April 7, 2017 work injury, the claimant reported to her medical providers that she did not have right hip issues prior to this work injury. The claimant provided similar testimony at hearing.

20. Medical records entered into evidence indicate that the claimant reported right hip pain at a medical visit with Ms. Jenkins on August 24, 2015. In the medical record of that date, Ms. Jenkins noted that the claimant described the pain as radiating from the top of her hip bone. The claimant also reported that she had had the pain for approximately three weeks.

21. In addition, on November 9, 2015, the claimant was seen by Ms. Jenkins and complained of right sided low back pain. At that time, the claimant described two

falls onto her right hip. In that medical record, the claimant described the pain as "grabbing and 'sucking your breath out of you type pain' ".

22. The claimant testified that she did fall while working as a lifeguard for the City of Craig. The claimant testified that she recalls falling on her tailbone, not her right hip. In addition, the claimant testified that the pain she had after that fall was different from the pain she began to experience after the April 7, 2017 fall at work. The claimant also testified that what she had previously believed to be hip pain was in fact low back pain.

23. The ALJ is not persuaded by the claimant's testimony that she had no prior issues with her right hip. The ALJ credits the medical records that demonstrate that the claimant complained of right hip pain in August 2015 and then in November 2015 described falls onto her right hip. These medical records indicate that the claimant's right hip was not asymptomatic leading up to the work injury on April 7, 2017. The ALJ credits the opinions of Drs. Weingarten and Erickson and finds that the claimant's work injury was minor and the need for hip replacement surgery and/or hip injections is not causally related to the work injury.

24. Therefore, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the need for a total right hip replacement and/or right hip injections are related to the April 7, 2017 work injury. Similarly, the ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that the incident on April 7, 2017 aggravated, accelerated, or combined with the claimant's preexisting right hip condition to warrant medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the

testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008).

4. As found, the claimant has failed to prove by a preponderance of the evidence that the need for a right total hip replacement and/or right hip injections is related to the admitted April 7, 2017 work injury. As found, the incident on April 7, 2017 did not aggravate, accelerate, or combine with the claimant's preexisting right hip condition to warrant the need for medical treatment. On the contrary, the claimant's right hip symptoms were symptomatic prior to the work injury and the need for surgery and/or injections is related only to the claimant's preexisting condition. As found, the opinions of Drs. Weingarten and Erickson and the medical records are credible and persuasive.

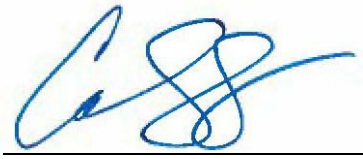
ORDER

It is therefore ordered:

1. The claimant's request for authorization of a right total hip arthroplasty is denied and dismissed.

2. The claimant's request for authorization of intraarticular steroid injections of the right hip is denied and dismissed.

Dated this 11th day of October 2018.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after

mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Did Claimant prove by a preponderance of the evidence the need for a total knee replacement is causally related to the March 23, 2016 work injury?

- Disfigurement.

PROCEDURAL HISTORY AND STIPULATIONS

Claimant suffered an admitted injury to her left knee on March 26, 2016. Due to ongoing symptoms, a left total knee arthroplasty has been recommended. Respondent denied the surgery as not causally related to the admitted accident. Claimant's ATP, Dr. Bradley, placed her at MMI in March 2017 because the knee replacement was denied. Respondent filed a Final Admission of Liability, to which Claimant timely objected and requested a DIME. The DIME has been held in abeyance pending the present litigation. The parties agree an arthroplasty is reasonably necessary, but disagree on causation. The parties stipulated if the knee replacement is deemed causally related to the admitted accident, Claimant is not at MMI and a DIME is unnecessary.

FINDINGS OF FACT

1. Claimant worked for Employer as a correctional officer. On March 23, 2016, she suffered an admitted injury to her left knee while escorting inmates in snowy conditions. Claimant thought she heard someone call her name, so she turned around. Her right leg slid on snow, and she twisted her left leg. She heard a pop and felt sharp burning pain in her left knee. She did not fall to the ground.

2. Claimant first obtained treatment the next day at the St. Mary Corwin emergency room. Physical exam showed tenderness of the medial and lateral joint lines but no obvious edema. McMurray's test elicited pain and clicking, suggesting a lateral meniscus tear. X-rays showed degenerative changes and knee joint effusion. The ER physician noted, "x-ray shows swelling inside the joint, nothing is acutely broken. I am concerned you may have torn the meniscus or other ligamenture." Claimant was placed in a knee immobilizer, given crutches, and referred for an orthopedic evaluation "as she is going to need an MRI."

3. Employer referred Claimant to its designated provider, Emergicare. She saw Dr. Bradley at the initial visit on March 25, 2016. Claimant complained of crepitus and localized aching in the left knee that worsened with activity. Examination showed lateral knee tenderness and she walked with an antalgic gait. Dr. Bradley diagnosed a left knee "sprain."

4. Claimant subsequently tried physical therapy with no significant benefit.

5. A left knee MRI on May 10, 2016 showed a horizontal tear involving the anterior horn and body of the lateral meniscus, and chondral degeneration of the lateral and medial femoral condyles.

6. Claimant was referred to Dr. Michael Simpson, an orthopedic surgeon. Because corticosteroid injections were contraindicated due to Claimant's diabetes, Dr. Simpson recommended an arthroscopic lateral meniscectomy and chondroplasty. He opined surgery was needed for "symptomatic lateral meniscal tear" which had failed conservative measures. Dr. Simpson also opined Claimant may continue to have knee pain despite surgery due to the underlying arthritis.

7. The surgery was initially denied by Respondent, but approved on reconsideration. On March 2, 2017, Dr. Simpson performed an arthroscopic lateral meniscectomy and chondroplasty. Intraoperatively, he noted a complex tear of the lateral meniscus and significant arthritis in all three compartments.

8. Claimant did not receive significant benefit from the surgery. She saw Dr. Simpson on April 17, 2017 for increasing pain due to "worsening of her underlying the arthritis." Dr. Simpson opined, "I believe the aggravation of her knee arthritis is directly related to her work related injury and subsequent need for lateral meniscal removal." He recommended viscosupplementation to try and forestall a total knee arthroplasty.

9. Viscosupplementation injections were ineffective, so Dr. Simpson recommended Claimant see a knee replacement specialist. He reiterated his belief the work injury and subsequent surgery aggravated Claimant's underlying arthritis, but stated he would "leave it to the expertise of Dr. Bradley and an arthroplasty surgeon" to make a final determination regarding causation of a potential knee replacement.

10. Claimant saw Dr. Michael Schuck on December 7, 2017, who determined Claimant was a candidate for a left total knee arthroplasty. Dr. Schuck further stated,

> With regard to causality, the patient states that her left knee problem began on the date of the work injury in March 2016. She had no trouble at all with the knee prior to the injury. No x-rays or MRI imaging exist from prior to the injury because she was not symptomatic at that time. It is possible that moderate osteoarthritis was present in the left knee prior to the injury, but the injury itself clearly accelerated her symptoms. For this reason, I feel that the work injury is directly related to her current knee problem.

11. Respondent obtained a peer review from Dr. Thomas Hoffeld after receiving Dr. Schuck's request for preauthorization of arthroplasty. Dr. Hoffeld concluded,

> Review of cited Colorado Guidelines shows the claimant has achieved all the indications for surgical intervention as requested. Upon review of these medical records which has excellent documentation, it is apparent that the requested left total knee replacement arthroplasty is medically necessary and appropriate as related to the compensable injury based on the clinical

information available for my review. The requested surgery as recommended for certification . . . .

12. Claimant saw Dr. William Ciccone II for an IME at Respondent's request on January 24, 2018. Dr. Ciccone opined Claimant suffered only a "minor sprain/strain" from the work accident. He believed the lateral meniscus tear was degenerative and not caused by the accident. He opined Claimant's poor result from arthroscopy was "not surprising" given her underlying arthritis. He stated "the knee arthroscopy may have aggravated the underlying degenerative arthritis, but in my opinion the need for the knee arthroscopy was not work-related." Dr. Ciccone "knee replacement is appropriate, however I do not believe that the need for the replacement is related to the slip at work."

13. Respondent denied the arthroplasty based on Dr. Ciccone's IME report. Because surgery was denied, Dr. Bradley put Claimant at MMI on March 1, 2018. At hearing, the parties agreed Dr. Bradley's declaration of MMI was based on administrative factors rather than a medical determination no further treatment was reasonably expected to improve her condition. The parties further agreed if the requested knee replacement is deemed injury-related, Claimant is not at MMI.

14. Dr. Ciccone testified in deposition consistent with his IME report. He maintained his opinion the March 2016 accident was minor and caused no objective structural damage to Claimant's knee. He reiterated a knee replacement is reasonable, but not causally related to the industrial accident.

15. There is no persuasive evidence Claimant's left knee was symptomatic or caused any functional limitations before the admitted accident in March 2016. Before the accident, she had no knowledge or perception of any knee problems. She maintained a physically demanding job and participated in a wide range of recreational activities without limitation, such as bowling, kayaking, hiking, riding horses, and dancing. Claimant credibly testified at hearing regarding numerous ways the injury has changed her symptoms, limitations, and functional abilities.

16. The causation opinions of Dr. Schuck, Dr. Hoffeld, and Dr. Simpson are credible and more persuasive than the contrary opinions expressed by Dr. Ciccone.

17. Claimant proved the March 2016 accident substantially aggravated her pre-existing arthritis, proximately causing disability and a need for medical treatment.

18. Claimant proved a left total knee arthroplasty is reasonably necessary and causally related to the March 26, 2016 industrial accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to

find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally, for the claimant or the respondents. Section 8-43-201.

A claimant is entitled to medical benefits if an accident "aggravates, accelerates, or combines with" a pre-existing condition to produce disability or a need for treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990).

As found, Claimant proved by a preponderance of the evidence the recommended total knee arthroplasty is causally related to the March 2016 accident. Although Claimant had pre-existing arthritis in her left knee, she was asymptomatic, required no treatment, and had no knee-related limitations. The industrial injury aggravated her condition and proximately caused the need for surgery, including the 2017 arthroscopy and the requested arthroplasty. The parties offer conflicting interpretations of whether the lateral meniscal tear was pre-existing or caused by the accident. The ALJ does not consider this issue dispositive because the accident either caused a new lateral meniscal tear or caused a pre-existing but asymptomatic tear to become symptomatic and disabling. Under either scenario, the March 2, 2017 surgery was reasonably necessary to treat the effects of the industrial injury. Unfortunately, arthroscopic surgery failed to alleviate Claimant's symptoms. The logical next step is a total knee arthroplasty, which is a direct and proximate consequence of the March 23, 2016 accident.

Given that additional surgery is contemplated, Claimant's request for disfigurement benefits is premature.

ORDER

It is therefore ordered that:

1. Respondent shall authorize and pay for the total knee arthroplasty recommended by Dr. Schuck.

2. Claimant's request for disfigurement benefits is denied without prejudice as premature.

3. The DIME process is terminated without prejudice to either party, pending a future declaration of MMI or other appropriate legal process following knee replacement surgery.

4. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-029-982-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 26, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 9/26/18, Courtroom 3, beginning at 1:30 PM, and ending at 2:30 PM). The official Spanish/English Interpreter was Hilda Gehrke.

Claimant's Exhibits 1 through 10 were admitted into evidence, without objection. Respondents' Exhibits A through C were admitted into evidence, without objection. Exhibit D was withdrawn.

ISSUES

The issues to be determined by this decision concern whether the Claimant has overcome the opinion of Division Independent Medical Examiner (DIME), Lloyd Thurston, D.O. Dr. Thurston's opinion that the Claimant has an un-apportioned impairment rating of 18% left upper extremity (LUE), mechanistically converted to 11% whole person, as required by the AMA *Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev. (hereinafter "AMA *Guides*"); and, that the Claimant was at maximum medical improvement (MMI) on Sept. 20, 2017.

To overcome the DIME of Dr. Thurston on the issue of whole person medical impairment rating and MMI, the Claimant would bear the burden of proof, by clear and convincing evidence., however, if the disputed degree of impairment is 25% left upper

extremity (LUE) [ATP Yusuke Wakeshima, M.D.] as opposed to 18% LUE [DIME Lloyd Thurston, D.O.], the Claimant's burden is by a preponderance of the evidence.[1]

At the conclusion of the hearing, the ALJ ruled from the bench and determined that the Claimant had not overcome the DIME's implied opinion that there was **no** whole person impairment rating or the DIME's MMI determination by clear and convincing evidence. Thereafter, the ALJ took the matter under advisement in order to prepare a written decision. After a consideration of the record as a whole, the ALJ hereby determines that the actual issue concerning permanent impairment to be determined concerns 25% LUE versus 18% LUE. Nonetheless, the DIME's determination of MMI is binding unless overcome by clear and convincing evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on January 24, 1971 and at the time of the hearing was 47 years old.

2. The Claimant worked for nine years with Empire Fire & Safety as a service technician for fire extinguishers. The admitted work injury was on Oct. 28, 2016.

3. The Claimant underwent surgery on Nov. 8, 2016. He states that the surgery helped with his pain and he took pain medications after the surgery. The Claimant stated that on the day of the hearing he felt "75% okay" from how he felt before the incident.

4. The Claimant testified that as of the hearing date he could not lift weights without feeling a pain in his left wrist and left shoulder. He stated that the pain causes limitations in his daily life, for instance, the inability to change a tire when his wife requested. He also states that he cannot lift things that are heavier than 15 pounds.

5. The Claimant testified to having an ongoing pain on a scale of 4 out of 10 and the pain shoots up to an 8 out of 10 when he lifts things.

l

[1] A DIME's scheduled rating has no presumptive effect. It is on a level playing field.

Authorized Treating Physician (ATP) Yusuke Wakeshima, M.D.

6. On Oct. 3, 2017, Dr. Wakeshima reported that the Claimant continues to have left wrist and shoulder pains. The Claimant then reported left wrist pain at 5 out of 10 and left shoulder pain at 4 out of 10.

7. Dr. Wakeshima assessed the Claimant to have a 25% LUE scheduled rating, which would mechanistically convert to 15% whole person impairment. He also concluded that the Claimant was at MMI as of September 20, 2017.

Division Independent Medical Examination (DIME) of Lloyd Thurston, D.O., Level II Accredited

8. On March 20, 2018, Dr. Thurston performed a DIME on the Claimant.

9. Dr. Thurston agreed with Dr. Wakeshima on the Claimant's MMI. date, however, Dr. Thurston incorrectly noted that Dr. Wakeshima placed the Claimant at MMI on October 3, 2017 instead of September 20, 2017. The ALJ finds that the Claimant reached MMI on September 20, 2017.

10. Dr. Thurston evaluated the Claimant using an Acumar digital inclinometer to record range of motion measurements on the Claimant's left shoulder and left wrist. Dr. Thurston concluded that the Claimant was at 18% regional impairment of LUE and 11% impairment of whole person.[2] Dr. Thurston's impairment rating was performed using the AMA *Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev. Dr. Thurston did **not** render an opinion concerning which tiered rating {extremity or whole person) was appropriate.

Independent Medical Examiner (IME) by Elizabeth Bisgard, M.D., Level II Accredited.

11. On August 13, 2018, Dr. Bisgard conducted an examination of the Claimant. She concluded that "Dr. Thurston did not make any error in his calculations." Dr. Bisgard also agreed with Dr. Wakeshima that MMI was reached on September 20, 2017. Based on the range-of-motion (ROM) measurements taken that day, Dr. Bisgard concluded that the Claimant was at 23% impairment of the LUE. Dr. Bisgard did **not** render an opinion concerning the propriety of a whole person rating.

12. Dr. Bisgard was of the opinion that there were no errors in the rating methodologies of Dr. Wakeshima (25% LUE) or DIME Dr. Thurston (18% LUE).

[2] The AMA *Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev. require a mechanistic conversion to a whole person rating regardless of whether a whole person rating is appropriate.

13. Dr. Bisgard also stated that the Claimant reported an average 3 out of 10 stabbing pain in wrist and when in use the Claimant's pain increased to 8 out of 10. On that specific day, the Claimant rated his pain 3 out of 10.

Ultimate Findings

14. From the standpoint of credibility, the ALJ places greater weight on the scheduled rating of ATP Dr. Wakeshima because of his more thorough familiarity with the Claimant's medical case. On a level playing field, it is more likely than not that Dr. Wakeshima's scheduled rating of 25% LUE is the more accurate reflection of the Claimant's scheduled disability than the 18% LUE rating of Dr. Thurston. The ALJ infers and finds that IME Dr. Bisgard's rating of 23% LUE is a compromise rating between the ATP's and the DIME's scheduled rating.

15. Examining the four corners of DIME Dr. Thurston's opinions, there is not even a hint that he is of the opinion that a whole person rating is more appropriate than a scheduled rating. Indeed, there are no medical opinions in evidence that indicate that a whole person rating is more appropriate.

16. The ALJ finds that Claimant's testimony, concerning his pain, credible but insufficient to overcome the DIME opinions on MMI and whole person impairment, by clear and convincing evidence. The MMI date of September 20, 2017 is undisputed unless the Claimant's testimony about pain could result in an unsupported inference that the Claimant is not at MMI. The ALJ rejects making such an inference.

17. The ALJ makes a rational choice, based on substantial evidence, to accept the 25% LUE scheduled opinion of ATP Dr. Wakeshima and to reject other scheduled ratings/opinions to the contrary, including the Claimant's implied opinion.

18. The Respondents have met their burden, by clear and convincing evidence that a whole person rating is **not** warranted. Also, the Respondents have established by clear and convincing evidence that the Claimant's date of MMI was September 20, 2017.

19. The Claimant has proven, by preponderant evidence that ATP Dr. Wakeshima's scheduled rating of 25% LUE is the appropriate measure of the Claimant's permanent scheduled disability.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the MMI date of September 20, 2017 is undisputed. *See, Annotation, Comment: Credibility of Witness Giving Uncontradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As further found, from the standpoint of credibility, the ALJ placed greater weight on the scheduled rating of ATP Dr. Wakeshima because of his more thorough familiarity with the Claimant's medical case. On a level playing field, it is more likely than not that Dr. Wakeshima's scheduled rating of 25% LUE is the more accurate reflection of the Claimant's scheduled disability than the 18% LUE rating of Dr. Thurston. The ALJ infers and finds that IME Dr. Bisgard's rating of 23% LUE is a compromise rating between the ATP's and the DIME's scheduled rating. Therefore,

ATP Wakeshima's scheduled rating of 25% LUE is the most credible scheduled rating. The ALJ gives **no** weight or credibility to any of the mechanistic conversions to whole person ratings.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found, the Claimant's lay testimony about pain is not of the nature of nor sufficiency to overcome the medical opinions herein, or to bootstrap the Claimant's scheduled rating to a whole person rating.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, based on substantial evidence, to accept the 25% LUE scheduled opinion of ATP Dr. Wakeshima and to reject other scheduled ratings/opinions to the contrary, including the Claimant's implied opinion.

Burden to Overcome DIME on Impairment Rating

d. A DIME physician must apply the AMA *Guides* when determining a claimant's medical impairment rating. §§ 8-42-101(3.7); 8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning a claimant's medical impairment rating and MMI date shall be overcome only by clear and convincing evidence. "Clear and convincing evidence" is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411

(Colo. App. 1995); *Camille L. Lafont v. WellBridge d/b/a Colorado Athletic Club*, W.C. No. 4-914-378-02 ([Indus. Claim Appeals Office (ICAO), June 25, 2015].

e. In *Wackenhut Corp. v. Indus. Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000), the court noted that under the AMA *Guides* the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the *Guides*." Consistent with this concept, ICAO has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (ICAO. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (ICAO. August 12, 2002).

f. Ultimately, questions of whether the DIME physician properly applied the AMA *Guides*, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Indus. Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA *Guides* requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA *Guides* constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Indus.l Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009); *Linda Vuksic v. Lockheed Martin Corporation* W.C. No. 4-956-741-02 (ICAO, August 4, 2016). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO, March 22, 2000).

g. In this case the Claimant has not provided any evidence that demonstrates that the DIME physical deviated from protocols or AMA *Guides*. In fact, the Claimant's own IME stated "Dr. Thurston did not make any errors in his calculations." (Respondents' Ex. C, p. 19). In fact, as found, there is **no** medical opinion which maintains that a **whole person** rating is appropriate in this case. The Respondents have met their burden, by clear and convincing evidence that a whole person rating is **not** warranted.

DIME's Maximum Medical Improvement (MMI)

h. MMI is defined as the point in time when any medically determinable physical or medical impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. § 8-40-201(11.5), C.R.S. *Donald B. Murphy Contractors, Inc. V. Indus. Claim Appeals Office*, 916 P.2d 611 (Colo. App. 1995). Diagnostic procedures that constitute a compensable medical benefit must be provided prior to MMI if such procedures have a reasonable prospect of diagnosing or defining a claimant's condition so as to suggest a course of further

treatment *See In the Matter of the Claim of William Soto, Claimant,* W.C. No. 4-813-582 (ICAO, October 27, 2011).

i. "Clear and convincing" evidence is established by showing that the truth of a contention is highly probable, *Askew v. Sears Roebuck & Co*., 914 P.2d 1049 (Colo. App. 1983), and free from substantial or serious doubt, *Metro Moving & Storage Co. v. Gussert*, 914 P. 2d 411 (Colo. App. 1995). The question of whether a party meets the "clear and convincing" burden of proof is a question of fact for the administrative law judge. *McLane Western, Inc. v. Indus. Claim Appeals Office*, 906 P. 2d 263 (Colo. App. 1999). In order to overcome a DIME opinion, there must be evidence which proves that it is highly probable that the DIME physician's opinions are incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P2d 411 (Colo. App. 1995). As found, ATP Dr. Wakeshima, DIME Dr. Thurston, and Dr. Bisgard all agreed on the MMI date of September 20, 2017. Furthermore, the Claimant has consistently expressed the same level of pain through all three medical evaluations as he did during the hearing. The Claimant has offered no contradictory evidence disputing the MMI date.

Burden of Proof: Scheduled vs. Scheduled Rating

j. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has met his burden with respect to the 25% permanent disability of the LUE.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant has **not** overcome the Division Independent Medical Examination of Lloyd Thurston, D.O., by clear and convincing evidence concerning maximum medical improvement and impairment ratings.

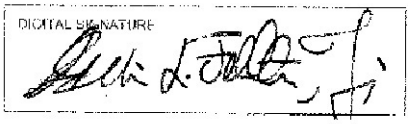
B. The Claimant reached maximum medical improvement on September 20, 2018.

C. The degree of the Claimant's permanent scheduled disability is 25% of the left upper extremity.

D. Respondents are entitled to a credit for an permanent disability benefits paid to date.

E. Any and all issues not determined herein are reserved for future decision.

DATED this 11th day of October 2018.



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his left shoulder.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and related medical benefits to treat his left shoulder.

FINDINGS OF FACT

1. Claimant worked for Employer as a construction laborer.

2. On August 2, 2016, Claimant sustained an admitted compensable work-related injury to his right shoulder when he slipped and fell toward his right side while at a jobsite and landed on his outstretched right hand and arm. Claimant had immediate pain in his right shoulder that did not improve.

3. Employer referred Claimant for medical care and underwent treatment for his right shoulder. Claimant eventually underwent two surgeries on his right shoulder. The first surgery was in April of 2017 and the second was in December of 2017.

4. This claim involves the left shoulder. Claimant alleges he sustained a compensable injury to his left shoulder due to overuse following his August 2, 2016 injury to the right shoulder. Claimant concedes that there was no acute injury to his left shoulder, but argues an injury occurred due to overuse.

5. At his first evaluation for the right shoulder injury on August 9, 2016, Paul Ogden, M.D. placed Claimant on work restrictions of no lifting, pushing, or pulling with right arm and no raising the right arm above shoulder level. Dr. Ogden provided Claimant a sling and noted Claimant could wear the sling for comfort. *See* Exhibit 2.

6. By August 16, 2016 with Claimant's continued significant pain, an MRI of the right shoulder was scheduled. *See* Exhibit 5.

7. An August 22, 2016 MRI of the right shoulder demonstrated a full thickness tear of the posterior aspect of the supraspinatus and anterior portion of the infraspinatus. By mid-September 2016, Claimant had strongly positive impingement testing, difficulty, and pain in range of motion of the right shoulder. Craig Davis, M.D. recommended surgery. *See* Exhibits 7, G.

8. On October 4, 2016, Brian Mathwich, M.D. evaluated Claimant. Claimant reported continued pain in his right shoulder. Claimant reported he was continuing to work within his restrictions. Claimant reported that he took hydrocodone but it made his head fuzzy so he was taking ibuprofen, Tylenol, and some aspirin occasionally for the pain. Claimant remained on restricted duty work status with limited lifting, pushing, and pulling at 1 pound, no repetitive activity, and no raising the right arm above shoulder level. Dr. Mathwich noted that unfortunately the psychologist had not yet evaluated Claimant and that a psychological evaluation was wanted prior to surgery. *See* Exhibit 8.

9. On January 18, 2017 neurologist Simon Oh, M.D. evaluated Claimant. On physical examination, Dr. Oh found full range of motion with the exception of the right shoulder due to pain. *See* Exhibit I.

10. Concerns about cardiac issues, psychological issues, and alcohol issues delayed the surgery recommended by Dr. Davis. Claimant was eventually cleared to Dr. Davis' satisfaction to undergo the recommended right shoulder surgery. *See* Exhibit G.

11. Dr. Davis performed surgery on April 7, 2017. The procedure was right shoulder arthroscopy with extensive labral debridement and biceps tenodesis, arthroscopic double row repair of the rotator cuff, and subacromial decompression. *See* Exhibits 7, G.

12. On April 13, 2017, Kathryn Sears, M.D. evaluated Claimant. Claimant reported chest wall tenderness and evidence of direct trauma to the chest was present. It was noted that Claimant was following up for an injury sustained on March 27, 2017. Claimant's left shoulder was examined to compare to the right. The left shoulder exam had no tenderness, no muscle spasm, negative drop arm sign for rotator cuff integrity, negative apprehension test, and full range of motion with no weakness. *See* Exhibit 10.

13. On April 18, 2017, Timothy Abbott, P.A., evaluated Claimant. Claimant reported a lot of pain the first couple of days postop and gradual improvement since. Claimant reported needing occasional Percocet, usually only at night. Claimant reported compliance with wearing his sling, and that he had been doing home exercises. PA Abbott noted that physical therapy would begin in 2-3 days and discussed the importance of working on motion early. PA Abbott noted that Claimant would remain at no use of the right hand for work and continue in the sling. *See* Exhibits 7, G.

14. On May 26, 2017, PA Abbott evaluated Claimant. Claimant reported he had been doing therapy twice a week and felt it was helping somewhat but that he still had decreased motion. Claimant reported that he was wearing the right shoulder splint as advised and was compliant with his restrictions and had been able to work avoiding use of the right hand. Claimant reported having occasional pain but only taking Percocet at night. *See* Exhibits 4, H.

15. On June 20, 2017, Claimant underwent physical therapy. Claimant reported his symptoms were about the same. Claimant reported pain into his left shoulder as well.

The therapist noted that Claimant had difficulty progressing due to higher levels of pain in the right shoulder and the recent onset of left shoulder pain in the last 2 weeks. The therapist noted that Claimant was coming into therapy three days in a row and opined it was too much for Claimant and not beneficial as his therapy had to be modified. *See* Exhibit 14.

16. On June 22, 2017, Claimant underwent physical therapy. Claimant reported that his symptoms were about the same and that he was not told to take his medications daily. It was noted that active range of motion was more painful due to Claimant's left shoulder pain. The therapist noted Claimant would discuss the left shoulder pain with Dr. Ogden at his next visit as Claimant felt he was using the left arm too much at work. *See* Exhibit 13.

17. On June 23, 2017, PA Abbott evaluated Claimant. Claimant reported needing Percocet for pain fairly regularly and continued limitations of motion. Claimant reported he was working light duty wearing the sling to avoid overuse of the arm. PA Abbott noted Claimant was 10 weeks post op from a large rotator cuff repair and that with loss of motion, Claimant might be developing early frozen shoulder. A plan to have therapy work aggressively on motion was put in place. PA Abbot advised Claimant to decrease the Percocet use. *See* Exhibits 4, H.

18. On July 25, 2017, Dr. Davis evaluated Claimant. Dr. Davis noted that Claimant had been in therapy a couple of times per week and had been taking Percocet but was unable to fill the last prescription so had only been taking Advil. Claimant reported a lot of pain and weakness in the right shoulder and reported that he had been working one handed on a construction site. Dr. Davis was concerned with Claimant's slow progress, level of weakness with abduction and forward elevation, and loss of motion. Dr. Davis ordered a repeat MRI to assess the surgical repair. Dr. Davis gave Claimant tramadol as needed for pain, meloxicam to take regularly, and Terocin topical that he opined may diminish Claimant's need for the Tramadol. *See* Exhibits 7, G.

19. On September 29, 2017, PA Abbott evaluated Claimant. Claimant reported continued significant activity related pain in his right shoulder and difficulty lifting it up overhead. Claimant reported he had been working light duty mostly using his left arm and that he was not taking any medications because he ran out. Claimant was assessed with a partial re-tear of the rotator cuff after surgery as found by the August 3, 2017 MRI and it was noted that the size of the original tear placed Claimant at a high risk of re-tear from the onset. Claimant was referred to Dr. Faulkner. *See* Exhibits 7, 11.

20. On December 7, 2017, Claimant underwent surgery for his right recurrent rotator cuff tear performed by Nathan Faulkner, M.D. Dr. Faulkner noted that Claimant had a prior injury with a large rotator cuff tear and surgery in April of 2017 but that Claimant had persistent pain and weakness with a postoperative MRI showing a re-tear of the rotator cuff. *See* Exhibits 3, J.

21. On December 11, 2017, Dr. Ogden evaluated Claimant. Claimant reported he was not working due to no light duty. Claimant reported taking oxycodone every 2 hours, 2 tablets. Dr. Ogden placed restrictions on Claimant of sedentary work with sitting 90% of the time and no safety sensitive work, no driving, and no use of right arm. *See* Exhibit 2.

22. On December 20, 2017, Dr. Faulkner evaluated Claimant. Claimant reported that his pain had progressively improved since surgery and that he had been wearing his sling and doing home exercises as instructed. Dr. Faulkner recommended work restrictions per Dr. Ogden but recommended left hand work only and no lifting, pushing, or pulling greater than 2 pounds with the right operative arm. *See* Exhibit 3.

23. On December 28, 2017, Dr. Ogden evaluated Claimant. Claimant reported he was not working due to no light duty work. Claimant reported he was trying to minimize the use of the Vicodin and continued to be in a sling. Claimant reported that he had been having more pain in the left shoulder anteriorly particularly when his left arm was cold. Claimant felt the left shoulder was related to using it more at work since the original injury. On exam, Dr. Ogden found normal strength in the left shoulder with mostly negative testing. Dr. Ogden found tenderness at the anterior deltoid. Claimant remained on work restriction sf sedentary work sitting 90% of the time, no use of the right arm, no safety sensitive work, and no driving. Dr. Ogden added a work restriction of limited lifting with the left arm to 15 pounds and no overhead work. Dr. Ogden noted that Claimant was having left shoulder complaints, which were outside the scope of the injury and recommended limited use in the short term as the right arm was recovering but noted that if the left arm became more of a problem, it would be a different claim. Dr. Ogden recommended Voltaren gel on the left shoulder. *See* Exhibit 2.

24. On January 19, 2018, Dr. Faulkner evaluated Claimant. Claimant reported continued improvement and that he was taking only an occasional pain Percocet at night. Claimant reported he had not been back to work and had not started therapy yet. Dr. Faulkner recommended work restrictions of left hand work only with no lifting, pushing, or pulling greater than 5 pounds with the right operative arm. *See* Exhibit 3.

25. On January 30, 2018, Walter Torres, Ph.D. evaluated Claimant. Claimant reported that left arm overuse was generating pain in his left arm and that he saw his employer as pressuring him excessively and planned to quit. *See* Exhibit 12.

26. On March 26, 2018, Dr. Ogden evaluated Claimant. Dr. Ogden noted that Claimant had ongoing left shoulder pain which was not a part of the claim and for which Claimant had been seeing his primary care provider.

27. On April 23, 2018, Dr. Ogden evaluated Claimant and noted again that Claimant had ongoing left shoulder pain not related to the claim. Dr. Ogden noted work restrictions of limited pushing, lifting, pulling of right arm to 5 pounds, no reaching out or overhead with the right arm, and no impact tools or power tools with the right hand. See Exhibit 2.

28. Claimant worked light duty following the August 2, 2016 right shoulder injury until approximately October 21, 2016. Claimant testified that he did not engage in any heavy lifting, overhead lifting, or repetitive motion activity. Claimant was then off work from October 21, 2016 through March 21, 2017 for non-work related personal health conditions. Claimant underwent the first right shoulder surgery on April 7, 2017 and was off work until approximately April 20, 2017. From approximately April 20, 2017 through early December, 2017 Claimant worked light duty for Employer. Claimant then underwent a second right shoulder surgery in December of 2017 and was off work again following this second surgery.

29. Claimant testified that his left shoulder pain began 4-5 months after the first surgery, which would be approximately August/September of 2017. However, physical therapy records note reports of pain in June of 2017, then there are numerous treatment records from July to December that do not note any reports of left shoulder pain or limitations, then the first report of left shoulder symptoms made to a physician was reported by Claimant on December 28, 2017. The report of pain to a physician in December was approximately 6 months after the report of pain to a physical therapist in June. Despite seeing multiple providers in between June and December, no other left shoulder complaints are documented.

30. On April 18, 2018, Carlos Cebrian, M.D. performed an independent medical evaluation. Dr. Cebrian issued a report dated April 30, 2018. Claimant reported right shoulder pain, left shoulder pain, and left arm pain. Dr. Cebrian noted that Claimant was a poor historian with tangential and distracted speech. Claimant reported that his left shoulder and arm started to hurt 4 to 5 months after his first shoulder surgery and that he was having pain from his shoulder down to his elbow. Claimant reported that his left arm hurt 24 hours per day, 7 days per week and had been getting worse over the past 3-4 months. Claimant felt like it started to get worse in September of 2017. Claimant reported that he was at work on restrictions and was supposed to be doing light duty but that at some point he was sent to do cement work and was lifting garbage with his left arm, hammering pain chips off bars, moving trash bags, and moving containers with rubber caps for rebar primarily using his left arm. Claimant reported doing occasional overhead work cleaning walls, frames, and windowsills and that he did some vacuuming and sweeping. Claimant reported that his right shoulder was getting better and stronger with physical therapy. Claimant reported that he last worked on December 6, 2017. Claimant reported that between October 21, 2016 and March 21, 2017 he did not work, then worked between March 21, 2017 and December 6, 2017 but had one month off for his surgery. *See* Exhibit E.

31. Dr. Cebrian reviewed medical records and performed a physical examination. Dr. Cebrian assessed non-claim related diagnoses to include anxiety, depression, chest pain, syncope, unexplained weight loss, prediabetes, past history alcohol abuse, left 5th finger surgery, low back injury, sjogren's syndrome, anemia, and left shoulder pain. Dr. Cebrian assessed claim related diagnosis to include the right shoulder full thickness tear and two surgeries. Dr. Cebrian opined that Claimant was not

yet at MMI. Dr. Cebrian noted that Claimant was progressing well after the second right shoulder surgery and expected Claimant to be at MMI 6 months post-surgery which would be June 7, 2018. *See* Exhibit E

32. Dr. Cebrian noted that the left shoulder pain was diffuse and non-specific and may include myofascial pain, strain, or rotator cuff impingement. Although Claimant attributed the left shoulder complains to having to use the left arm more frequently after the first right shoulder surgery, Claimant reported he did not work between October 2016 and March of 2017, hadn't worked since December 6, 2017, and worked between March, 2017 and December, 2017 with approximately one month off for surgery. Dr. Cebrian opined that Claimant's activities had been limited and that Claimant had not performed repetitive activities with force and monotonous short cycle activities. Dr. Cebrian reviewed the Colorado Division of Workers' Compensation Shoulder Medical Treatment Guidelines. Dr. Cebrian opined that Claimant's left shoulder complaints, current symptoms related to the left shoulder, and the need for treatment of the left shoulder were independent, incidental, and unrelated to the August 2, 2016 claim and not due to his work for Employer. *See* Exhibit E

33. Dr. Cebrian opined that there was no mechanism of injury or exposure and that Claimant's activities did not rise to the minimum threshold for his left shoulder complaints to be work related. Dr. Cebrian agreed with Dr. Ogden that the left shoulder complaints were not causally related to the August 2, 2016 claim. *See* Exhibit E

34. On June 9, 2018, J. Stephen Gray, M.D. performed an independent medical examination. Claimant reported left upper extremity pain and right shoulder pain. Claimant reported constant bilateral shoulder pain at a 5/10 that was severe, sharp, and throbbing. Claimant reported the left shoulder pain radiated down into the left arm with sharp stabbing pain and pins and needles sensations. Dr. Gray noted that Claimant was not currently working. Dr. Gray reviewed medical records. Dr. Gray noted that Claimant seemed somewhat anxious and displayed some mild pain behaviors but seemed to give exceedingly good effort during range of motion measurements. Dr. Gray found Claimant's left shoulder to be moderately tender over the long head of the biceps, found positive impingement signs, and moderately positive biceps provocation maneuvers. Dr. Gray performed range of motion measurements on the left and found a 4% impairment of the left upper extremity. Dr. Gray assessed development of left shoulder pain, probably due to aggravation of pre-existing tendinitis and/or arthritis due to post-operative compensatory overuse. Dr. Gray opined that Claimant was not yet at MMI and that his left shoulder pain had not been treated adequately. *See* Exhibit 1.

35. Dr. Gray noted that despite the fact that Claimant reported that the left shoulder pain began 4-5 months after the first right shoulder surgery, there appeared to be little evidence that Claimant's return to work caused any symptomatology in the left shoulder. Dr. Gray noted that documented left shoulder pain developed several weeks after the second right shoulder surgery with no records of a fall or incident or new injury. Dr. Gray noted there was just an assumption that the onset of left shoulder pain was not related. Dr. Gray opined that there did not appear to be consideration that the complete

inability to use the right arm post operatively would be attributable for onset of the left shoulder pain. Dr. Gray pointed out activities including sleeping on the left shoulder, use of left arm to bathe, dress, prepare meals, eat, move around, get into and out of a car, driving, and participating in home exercise or physical rehab. Dr. Gray also pointed out that Claimant was not well-educated and had limitations in understanding spoken and written instructions and was not medically or relatively sophisticated. Dr. Gray opined that it could not be ruled out that poor understanding of body mechanics, fear of re injury on the right, clumsiness, or unsupervised participation in early post-operative rehabilitation placed Claimant at increased risk of aggravation of a pre-existing or a new injury of the left shoulder. Dr. Gray also noted there did not appear to be consideration that the left shoulder was somehow injured during the pre or post-operative period and was masked by heavy use of narcotics. Dr. Gray opined that Claimant might not have been able to recognize new left shoulder pain post operatively until his medication dosage lowered. Dr. Gray opined that the left shoulder pain was a direct result of compensatory overuse while protecting the right shoulder post operatively. Dr. Gray opined that while the onset of left shoulder pain could not be said to have been caused specifically by work activities, it was nonetheless attributable to compensatory overuse and should be considered a complication of the right sided work injury. *See* Exhibit 1.

36. Dr. Gray opined that with Claimant's return to work in the last few weeks with highly limited use of either upper extremity, it was not medically probable that the return to work caused any aggravation of the left shoulder condition as Claimant reported rather extreme limitation of his work activities. Dr. Gray opined Claimant was a good example of an "egg shell patient," with medical pre-disposition to aggravation of glenohumeral arthritis and/or poorly defined connective tissue. Dr. Gray opined that Claimant should be treated until stabilized to as close to his base line condition as possible. *See* Exhibit 1.

37. Dr. Gray testified at hearing and Dr. Cebrian testified by deposition.

38. Dr. Gray testified that Claimant was not a good historian. Dr. Gray testified that after surgery, Claimant was not using his right arm at all and his right arm was in a sling after the injury and after surgery. Dr. Gray testified that Claimant is right handed so having to use his left arm a lot was significant. Dr. Gray noted that Claimant has not had imaging yet on the left arm but that the examination was consistent with bicipital tendinosis and Claimant's range of motion was abnormal. Dr. Gray testified that Claimant returned to work really early after the first right shoulder surgery and did repetitive vacuuming, lifting, pushing carts, gathering random materials and putting into a chest height trash can. Dr. Gray testified that Claimant did a variety of activity with the left arm and had a repetitive injury to the left arm. Dr. Gray testified it was probably bicipital arthritis and maybe an aggravation of pre-existing arthritis. Dr. Gray testified that Claimant's pain was very typical for bicipital tendinosis but admitted that they did not yet know because there was no imaging done. Dr. Gray testified that Dr. Cebrian used overuse section of the guidelines that is meant for rotator cuff overuse but not meant for bicipital tendinosis or aggravation of arthritis. Dr. Gray testified that you don't have to do

overhead lifting to get tendinitis and that tendinitis is caused by forward repetitive flexion and reaching.

39. Dr. Cebrian testified that Claimant had pre-existing problems with widespread joint pain for which he was seeing an arthritis clinic. Dr. Cebrian noted a pre-existing positive SSA test and a diagnosis of Sjogren's syndrome, which can affect all the joints. Dr. Cebrian testified that after reviewing medical records and performing a physical examination he would give Claimant a general diagnosis considering the differential of left shoulder pain that could be myofascial, rotator cuff impingement, or just a strain. Dr. Cebrian testified that Claimant had nonspecific shoulder pain and opined it was not related to the August 2, 2016 claim. Dr. Cebrian testified that Claimant believed he had used his left arm more than previously due to the fact that Claimant wasn't using his right arm as much and that his pain was due to overcompensation. Dr. Cebrian testified that to assess the problem, he looked at the left shoulder and whether it would have developed that kind of problem based off the work related exposure at hand. Dr. Cebrian testified that Claimant may have been using his left arm more and primarily using his left arm for activities but that the activities performed were quite minimal and below any kind of threshold that would have established a causal relationship between his shoulder pain on the left side and work exposure. Dr. Cebrian testified that in terms of exposure there had to be a fair amount of activity involved, including overhead activity, repetitive movements, force, etc. He opined that Claimant did not have the type of activity to be at the threshold to cause shoulder pain on the left side. Dr. Cebrian testified that there was no information that Claimant engaged in the highly repetitive type of activity to cause his symptoms. Dr. Cebrian also testified that Claimant was doing a bunch of different activities as well. Dr. Cebrian testified that the causation analysis he used under the guidelines was for the shoulder including both rotator cuff and bicipital tendinosis. Dr. Cebrian testified that he disagreed with Dr. Gray's opinion.

40. Claimant testified at hearing. Claimant testified that after his first right shoulder surgery, he went back to light duty work and that he was doing very light duty but was given more work as time went by. Claimant reported that he told the physical therapist of his left shoulder pain and told Dr. Ogden several times of the left shoulder pain, but that Dr. Ogden told him to discuss it with his attorney. Claimant testified that he had no trauma or injury to his left shoulder and had no prior problems or treatments for his left shoulder. Claimant testified that his left arm pain started out as just feeling tired for a few months but that after about 5 months he realized it was not just tired.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance

of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability of Left Shoulder

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection

is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury to his left shoulder. Claimant has not established that his work duties caused his symptoms or that his employment aggravated or accelerated any pre-existing condition in his left shoulder. Dr. Cebrian and Dr. Ogden are found persuasive that the left shoulder complaints are not work related or related to the original compensable right shoulder injury. Claimant was not performing repetitive or significant activities with his left arm at work to cause his complaints or to cause objective pathology or changes in the natural condition of his left shoulder. Claimant has failed to establish that his left shoulder symptoms are a compensable consequence of his right shoulder injury. Claimant was off work for significant periods following his right shoulder injury. While at work, he was performing minimal duties that were not repetitive or forceful and were not sufficient to cause his symptoms or to cause symptoms from overcompensation/overuse. Claimant has thus failed to meet his burden. The opinion of Dr. Gray is not found as persuasive as the opinions of Dr. Cebrian and Dr. Ogden. Although Dr. Gray believes that Claimant's work duties could cause bicipital tendinitis due to forward repetitive flexion reaching while picking up trash and debris from construction sites, Claimant's testimony indicated he did not repetitively perform any single duties. Rather, the ALJ concludes from the totality of evidence that Claimant's job duties when at light duty work were varied and minimal.

Medical Benefits- Left Shoulder

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As Claimant has failed to meet his burden to establish a compensable injury to his left shoulder, his request for medical benefits is denied and dismissed.

ORDER

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury to his left shoulder.

2. As he failed to establish a compensable injury, Claimant is not entitled to medical benefits to treat his left shoulder. His request for medical benefits for the left shoulder is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence a left total knee arthroplasty is reasonably necessary and causally related to his September 30, 2015 industrial injury?

PRELIMINARY ISSUE

This case was the subject of a prior hearing in September 2017 in the context of Respondent's attempt to overcome the DIME regarding MMI. Although there is considerable overlap of the factual questions evidence presented in the two proceedings, the ALJ agrees with Respondent that the findings in the previous final order are not binding under the doctrine of issue preclusion. Notwithstanding the prior order, Claimant has the burden to prove by a preponderance of the evidence that the proposed arthroplasty is reasonably necessary and causally related to the admitted injury.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his left knee on September 30, 2015 while working for Employer as a firefighter. He was walking down a ramp while wearing 80+ pounds of firefighter gear. He turned at the bottom of the ramp and felt a painful pop in his left knee.

2. Claimant had a prior work-related injury to his left knee in 2006. Dr. Michael Hewitt performed an arthroscopic partial medial meniscectomy (40% of the posterior horn) and a patellar chondroplasty in August 2006. On April 19, 2007, Dr. Brian Beatty assigned a 22% lower extremity impairment rating and released him to full duties, with allowance for up to three cortisone injections over the next year.

3. The last documented treatment to the left knee was August 17, 2007, when Dr. Hewitt gave Claimant a cortisone injection. Dr. Hewitt indicated Claimant could "return to full running activities in the next three to four days. He will otherwise follow up in this clinic on an as needed basis." There are no subsequent treatment records until the September 30, 2015 injury.

4. Claimant worked as a firefighter without difficulty or limitation related to his knee from at least 2008 until the accident in September 2015. He also regularly participated in recreational activities such as golfing, mountain biking, and waterskiing. Claimant testified his knee was asymptomatic for many years before September 2015, which is corroborated by the medical records.

5. After the September 2015 injury, Employer referred Claimant to Concentra for authorized treatment. He initially saw Dr. Carlos Guerrero on September 30. The physical examination suggested a medial meniscus tear, so Dr. Guerrero ordered an MRI.

6. Claimant had an MRI of the left knee on October 7, 2015 which showed complex multidirectional tearing of the medial meniscus. The radiologist opined some of the findings could be related to the 2006 surgery but "given the complexity and appearance of the meniscus this is highly concerning for a recurrent tear." The MRI also slowed advanced osteoarthritis, primarily in the medial compartment.

7. Claimant saw Dr. David Walden, an orthopedic surgeon, on October 27, 2015. Dr. Walden referenced Claimant's 2006 injury and remarked, "reportedly he had no problems with regard to this knee following that procedure and was completely able to perform all elements of his firefighting job." Dr. Walden diagnosed an acute medial meniscus tear and left knee osteoarthritis. Dr. Walden opined "although the patient had prior knee surgery, he had been doing well for [a] number of years without any significant limitations (nine years)."

8. On November 11, 2015, Dr. Walden performed an arthroscopic partial medial meniscectomy to address a "substantial avascular tear of the posterior horn and body of the medial meniscus." He also observed "rather significant osteoarthritis" of the femoral trochlea, grade 2 and 3 osteoarthritic changes of the weight-bearing surface of the medial femoral condyle. He performed chondroplasties of the femoral trochlea, the medial femoral condyle, and medial tibial plateau.

9. Claimant progressed relatively well after surgery and was released to work without restrictions on January 26, 2016.

10. Unfortunately, Claimant had ongoing problems with his knee after going back to work. He returned to Dr. Walden's office in April 2016 complaining of "buckling, difficulty going down stairs, and stiffness after being seated for long periods of time or first thing in the morning." Dr. Walden recommended Orthovisc injections, which were done in May 2016.

11. Dr. Steve Danahey at Concentra put Claimant at MMI on September 13, 2016. Claimant reported the Orthovisc "has worn off. He is feeling the same constant pain. Walking downstairs is high pain for the patient as well as just walking. He was told he may need to consider a knee replacement." Dr. Danahey assigned a 10% lower extremity rating after apportionment of the 2007 rating. Dr. Danahey assigned permanent restrictions against kneeling, squatting, or jumping, and opined "I do not think he can perform the regular duties of a firefighter."

12. Claimant was considering a knee replacement at the time, but Dr. Danahey deferred that decision to an orthopedist. He noted that the 2006 injury and surgery "likely contributed significantly to the resultant arthritic changes in the left knee joint."

13. Claimant followed up with Dr. Walden on January 17, 2017. He reported the Orthovisc injections were "helpful and he was able to move around a great deal more with the help of those. They have gradually worn off, and he felt pain and stiffness in the knee and difficulty moving including kneeling, squatting, and pivoting motions." Dr. Walden gave Claimant a steroid injection and recommended another series of Orthovisc.

14. Dr. John McBride, an orthopedic surgeon, performed a record review for Respondent on January 25, 2017. Dr. McBride noted Claimant's extensive osteoarthritis undoubtedly preexisted the September 2015 injury. He opined the July 2006 surgery, which removed 40 percent of the medial meniscus, ultimately caused Claimant to develop medial joint osteoarthritis. He cited the Lower Extremity MTGs which state individuals with an intra-articular meniscus injury and/or surgery are at risk for later osteoarthritis. He opined the surgery by Dr. Walden was reasonable and related to the September 2015 injury, but ongoing treatment directed at symptoms of osteoarthritis was not causally related to the admitted injury.

15. Dr. McBride issued a supplemental report on February 1, 2017, and opined:

> I agree with Dr. Walden that the arthroscopy was reasonable and necessary for the acute degenerative meniscus tear, but his ongoing symptoms *at this time* are related to his ongoing osteoarthritis, which is what viscosupplementation is used for. The *potential* for a total knee replacement is related to his previous 40% partial medial meniscectomy in 2006. The bottom line is that the viscosupplementation, while it is reasonable and necessary with regards to his arthritis, is ***not related*** to the September 30, 2015 injury. (Emphasis in original).

16. Claimant saw Dr. Jack Rook for an Independent Medical Examination (IME) at the request of his counsel on March 13, 2017. Claimant recounted the history of the 2006 injury and told Dr. Rook he was having no problems with his left knee immediately before the September 2015 injury. After recovering from the 2006 surgery, Claimant returned to work as a firefighter with no restriction or limitation. Additionally, he "engaged in multiple sporting activities without any problems, including basketball, skiing, hiking, mountain biking, and golfing."

17. Dr. Rook disagreed with Dr. McBride that further treatment was not injury-related. He agreed the osteoarthritis was pre-existing but noted Claimant was "completely asymptomatic" before the September 2015 injury and engaged in physically demanding vocational and recreational activities without limitation. By contrast, "[s]ince he injured his left knee, he has been unable to engage in these activities due to ongoing and persistent left knee pain." Dr. Rook opined Claimant satisfies the criteria in the Lower Extremity MTGs for aggravated osteoarthritis. Dr. Rook opined Claimant was not at MMI and needed further treatment to address ongoing left knee pain and significant functional limitations, including a possible knee replacement.

18. Claimant saw Dr. John Tyler for Division IME on March 22, 2017. Claimant described a constant, dull ache "deep inside" the knee, aggravated by prolonged walking and going up and down stairs. On physical examination, Dr. Tyler noted slight atrophy of the left quadriceps muscles and tenderness to palpation along the medial joint line. There was "audible and tactilely noted crepitation that appears to be generated primarily if not completely in the medial joint space."

19. Dr. Tyler determined Claimant was not at MMI. He noted Claimant "was not having difficulties with any pre-existing osteoarthritic changes within the left knee until after the trauma suffered on September 30, 2015." Dr. Tyler opined

> "But if for the" injury of September 30, 2015, I believe this patient would continue to be able to work as a firefighter performing all the heavy lifting, climbing, crawling, etc. and responsibilities of that job and "if but for the" injury suffered, he would not have ongoing pain in the knee from pre-existing osteoarthritis. Secondary to same, though the arthritis did indeed build up over the years from his earlier medial meniscectomy, it was not a symptomatic factor in the level of this patient's functioning and quality of life, both vocationally and non-vocationally, until the injury of September 30, 2015. Secondary to same, surgical intervention toward the knee including the possibility of a total knee replacement at this time, should be entertained and I feel would be related directly to the injury of September 30, 2015.

20. Dr. Tyler further opined:

> I cannot state categorically that a total knee arthroplasty versus a partial knee arthroplasty is required at this time, as I am not a trained orthopedic surgeon and I will defer entirely to the judgment of Dr. Walden and Dr. Walden's partner who performs total knee arthroplasties and partial knee arthroplasties. If Dr. Walden and/or his partner feel that an arthroplasty is required, that arthroplasty would be directly related to the injury suffered in his September 30, 2015 injury.

21. Respondent conducted the surveillance of Claimant twice, on April 9, 2017 and April 22, 2017. The surveillance video shows Claimant working at his second job, and a barbecue truck operated by Claimant and his wife. The video shows Claimant standing for prolonged periods interacting with customers and serving food. Claimant can also be seen at various times lifting objects such as a drink cooler, and at one point stood on a chair after stepping up with his left leg.

22. Dr. McBride performed a third record review for Respondent on June 29, 2017. Besides Dr. Rook's report and Dr. Tyler's DIME report, he also viewed the surveillance video. Dr. McBride disagreed with Dr. Rook and Dr. Tyler regarding MMI. He maintained his opinion the osteoarthritis "indisputably" pre-existed the September 2015 injury. He also opined Claimant's activities on the video contradicted his reported limitations and undermined the DIME's conclusion that the injury aggravated his underlying arthritis.

23. Respondents deposed Dr. Tyler on August 16, 2017. Dr. Tyler reviewed the video surveillance and noted Claimant appeared to stand for longer than he would have expected. Dr. Tyler stated the video changed his mind regarding Claimant's ability to stand for prolonged periods but did not otherwise impact his assessment. Dr. Tyler did not retract or change his opinion that Claimant is not at MMI.

24. On November 2, 2017, the undersigned issued Findings of Fact, Conclusions of Law, and an Order finding Respondent failed to overcome the DIME regarding MMI. No final decision or formal request for authorization of surgery had been made as of the hearing date. Therefore, Claimant did not ask the ALJ to award any surgery.

25. Claimant returned to Dr. Walden on January 25, 2018, who opined a total knee arthroplasty was indicated and referred Claimant to Dr. Purcell.

26. Respondent wrote to Dr. Danahey on February 28, 2018 to get his opinion about the proposed arthroplasty. In "checkbox" form, Dr. Danahey opined the arthroplasty was reasonably necessary, but not related to the September 2015 accident. He provided no discussion or analysis but the ALJ infers he likely shares Dr. McBride's view regarding the underlying pre-existing arthritis.

27. Dr. Purcell submitted a request for preauthorization of left total knee arthroplasty on March 1, 2018. Respondent denied the request based on Dr. Danahey's opinion.

28. Claimant underwent another IME with Dr. McBride on May 30, 2018. Dr. McBride opined Claimant's residual pain after recovering from the 2015 meniscectomy is due entirely to the natural progression of his end-stage osteoarthritis. Consistent with his prior opinions, Dr. McBride opined a total knee arthroplasty is reasonably necessary but not related to the 2015 accident.

29. Dr. McBride testified at hearing consistent with the opinions expressed in his reports. He opined the total knee arthroplasty is reasonably necessary but is related to the 2006 partial meniscectomy rather than the September 2015 accident. He testified the 2015 injury neither aggravated nor exacerbated Claimant's pre-existing arthritis. He opined there is no objective evidence the September 2015 accident permanently aggravated or accelerated the arthritis.

30. Dr. Rook testified at hearing and emphasized the symptomatic aggravation caused by the injury and resulting change in Claimant's functional abilities. He opined the 2015 injury "tipped him over in terms of having constant pain as opposed to no pain." He concluded the arthroplasty is injury-related because "he did not need a knee replacement despite whatever arthritic changes he might have had prior to that [2015] injury because he had no functional loss, chronic pain or symptomatology from his [left] knee."

31. The ALJ credits Dr. McBride's opinion that the advanced osteoarthritis was probably caused by the 2006 meniscectomy, but also credits the opinions of Dr. Rook and Dr. Tyler that the September 2015 accident aggravated Claimant's pre-existing arthritis and proximately caused his current need for total knee arthroplasty.

32. Claimant proved by a preponderance of the evidence the proposed total knee arthroplasty is reasonably necessary and causally related to the industrial accident.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The claimant must prove entitlement to medical benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally, for either claimant or respondents. Section 8-43-201.

The mere existence of a pre-existing condition does not disqualify a claim for medical benefits. A claimant with a pre-existing condition may recover benefits if an industrial accident "aggravates, accelerates, or combines with" the pre-existing condition to proximately cause disability or a need for medical treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). To prove an aggravation, a claimant does not have to show an injury objectively caused any identifiable structural change to their underlying anatomy. Rather, a purely symptomatic aggravation is a sufficient basis for an award of medical benefits if it caused the claimant to need treatment he would not otherwise have required but for the accident. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949); *Dietrich v. Estes Express Lines*, W.C. No. 4-921-616-03 (September 9, 2016).

The Director has adopted Medical Treatment Guidelines (MTGs) to advance the statutory mandate to assure the quick and efficient delivery of medical benefits to injured workers at a reasonable cost to employers. WCRP Rule 17, Exhibit 6 addresses lower extremity injuries including osteoarthritis. As the arbiter of disputes regarding treatment, the ALJ may consider the MTGs as an evidentiary tool but is not bound by the MTGs when determining whether requested treatment is reasonably necessary or injury-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011).

As found, Claimant proved the recommended left knee arthroplasty is reasonably necessary and causally related to the admitted injury. There is no doubt Claimant had advanced osteoarthritis in his knee before the September 2015 accident. As Dr. McBride explained, the arthritis probably resulted from the 2006 meniscectomy. But the critical factor for determining if, and when, to perform a knee replacement is not based on the mere presence or objective severity of Claimant's arthritis. Rather, it depends on when his symptoms and functional limitations rise to a level to warrant the procedure. The ALJ is persuaded the September 2015 accident aggravated Claimant's underlying

osteoarthritis and caused it to become symptomatic. Claimant had “end-stage” arthritis the day before the injury but had no symptoms, required no medical treatment, and could participate in a wide range of physically demanding activities. Since the date of injury, he has been continuously symptomatic, with attendant limitations and need for treatment. Although the prolonged standing depicted in the surveillance footage is somewhat inconsistent with Claimant’s description of his symptoms, it is unlikely Claimant would pursue a major surgery if he were not genuinely limited by a painful knee. Furthermore, Dr. McBride agreed Claimant needs a knee replacement despite the activities demonstrated on the surveillance video.

ORDER

It is therefore ordered that:

1. Respondent shall cover the left total knee arthroplasty recommended by Dr. Purcell.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 15, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

STIPULATION

The parties have stipulated to an Average Weekly Wage of $555.42. The ALJ approves the parties' stipulation.

REMAINING ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable work-related injury to his neck on August 1, 2017, and is therefore, entitled to reasonable, necessary and related medical benefits to cure and relieve him of the effects of said injury.

II. If Claimant established that he suffered a compensable injury to his cervical spine, whether he also established, by a preponderance of the evidence, his entitlement to temporary disability benefits.

III. Whether Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment thereby precluding his entitlement to TTD benefits beginning August 23, 2017 and ongoing.

Because the undersigned concludes that Claimant failed to prove that he sustained a compensable injury on August 1, 2017, this order does not address questions II-III as set forth above.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works for Employer as a welder/fabricator. On August 1, 2017, Claimant was working at a table in the work yard, reviewing fabrication plans. He stood up from the table and turned to walk to the tool house to get some materials. Claimant had taken a few steps when he struck the top of his forehead on the handle of a grain hopper.

2. Claimant explained that the handle had only recently been installed, and as such, was not anticipating its presence there. Claimant was not walking fast as he had not reached full speed when he struck the handle. Nonetheless, Claimant testified that he experienced a snapping in his neck and developed associated neck pain.

3. Claimant's impact with the grain hopper handle was witnessed by Jackie

Snyder, the daughter of Jeff Belveal, Claimant's employer. Snyder testified that she saw Claimant collide with the handle and recover quickly, telling her that he thought he was alright. She agreed that Claimant was not moving fast when he struck the handle. She did not observe Claimant's head and neck to snap backward after making contact with the handle.

4. The handle of the grain hopper in question consists of a metal pipe that extends to 54 inches above the ground. (Resp. Ex. G, p. 61). Video tape played in open court reveals that the handle in question is mobile and moves with very little force. Claimant agreed that there is play (give) in the handle. Ms. Snyder testified that the handle gave way when Claimant impacted it.

5. Ms. Snyder testified that Claimant did not express being injured nor did he act as if he had been. Rather, Ms. Snyder testified that Claimant joked about the incident with her and went about his work day. Claimant agreed that he treated the incident rather casually. He etched the phrase "midget killer" on the grain handle and evidently repeated the joke often. (Resp. Ex. G, pp. 59-60). Claimant testified that he didn't initially think much of the August 1, 2017 incident and simply moved on from it.

6. Jeff Belveal is the owner of Kutch Steel and Claimant's employer. Mr. Belveal was not present on the date of injury. He testified that the morning after the incident, Claimant reported to him that he had walked into the grain hopper handle. Mr. Belveal asked Claimant if wanted to see a medical doctor. Claimant declined, responding that it wasn't that bad. Claimant confirmed Mr. Belveal's testimony.

7. Claimant has a history of neck pain and stiffness. He testified that he had broken his neck in a motor vehicle accident (MVA) in 1977 requiring the application of a halo brace to restrict cervical rotation. He initially testified that after this injury incident, he had not sought any medical care for his neck for 40 years. However, on cross-examination Claimant admitted that he had previously sought intermittent chiropractic care for a stiff neck. Moreover, the record evidence reveals that Claimant sought medical care from Peak Vista on March 1, 2017 for a stiff neck. Claimant told the provider at Peak Vista on March 1, 2017 that he'd been experiencing neck pain for at least six years. He testified that he had been exposed to fleas and expressed a belief that his neck pain/stiffness was caused by Lyme Disease.[1]

8. Claimant also testified that about three days after the August 1, 2017, incident he "jumped out of the back of [his] pickup truck like I was 16 instead of 61" and when he landed on the ground, he heard and felt the vertebrae in his neck "stacking" up from the impact. Claimant testified that this incident jarred his neck and his pain increased substantially above what had persisted from the work incident days before. Claimant reported his worsening pain to Mr. Belveal, who testified that during their

[1]Claimant would continue to seek care at Peak Vista for neck pain on August 9, 2017 and August 30, 2017. Despite these visits taking place after running into the grain hopper handle, Claimant did not reference this incident to his medical providers as the cause of his pain. Rather, Claimant continued to attribute his neck pain/stiffness to Lyme disease.

discussion, Claimant attributed his neck pain to arthritis that had set in over the years following his 1977 MVA. Mr. Belveal specifically testified that Claimant never endorsed walking into the grain hopper handle as the cause of his neck pain.

9. Claimant sought chiropractic treatment from Dr. Francine Palmer on August 14, 2017, after jumping from the back of his pickup truck. At his first appointment with Dr. Palmer, Claimant specifically reported that his neck pain started "after jumping out of the back of a pickup 3 weeks ago." RE D, Bates 5. During this appointment, Claimant also completed paperwork on which he was asked whether his injury was work related and who was responsible for payment of the bill. Claimant indicated that he was solely responsible for the bill and did not attribute his need for chiropractic treatment to a work related cause. RE D, Bates 15. Claimant also referenced the 1977 MVA and his belief that his neck pain could be due to arthritis setting in. He told Dr. Palmer that he had experienced neck pain off and on for the last 16 years. RE D, Bates 16.

10. Claimant treated with Dr. Palmer for three additional visits, specifically on August 16, 2017, August 18, 2017, and August 23, 2017. At no time during any of these additional visits did he ever report that he had run into the grain hopper handle nor did he attribute his neck pain/stiffness to the same. RE D.

11. Claimant testified that his neck pain was significant and often interfered with his ability to work. Eventually he deemed the pain too intense to continue working. Thus, on or about August 22, 2017, he informed Belveal, by text message, that he was no longer able to work because he was having difficulty/pain with his neck. Claimant did not indicate that his inability to work was due to a work injury nor did he ask to file a workers' compensation claim. Claimant and Mr. Belveal both testified that Claimant had worked for Kutch Steel off and on for approximately 10 years. Claimant testified that sometimes he just decided he didn't want to work and that sometimes the work would slow down and Mr. Belveal would not need him to work. Mr. Belveal testified that it was Claimant's decision to leave his employment on August 22, 2017 and that he did not ask him to leave. Claimant testified that he intended to return to work once the problems with his neck had resolved, although he did not recall specifically whether he specifically informed Belveal of this intention to return.

12. Claimant and Mr. Belveal both testified that in late November 2017 or perhaps in early December 2017, Claimant called Mr. Belveal to request a copy of his wage records. Claimant needed this information in order to apply for Social Security disability benefits. When Claimant called Mr. Belveal to request the wage information, he did not indicate that he thought he had sustained a work injury after walking into the grain hopper handle.

13. Claimant presented to Peak Vista on December 1, 2017 with complaints of neck pain. He reported that he "bumped into a crate 3 months ago and reinjured his neck after a MVA in 1977."

14. On December 16, 12017 Claimant presented to the emergency department (ED) at St. Francis Medical Center for complaints of "chronic" neck pain since suffering a c-spine fracture approximately 30 years previously. On this date, Claimant reported that walked into a piece of steel at work and felt the pain in the back of his neck that had persisted for 4 months. Provider notes document some bilateral hand tingling which had developed in the week prior to Claimant's appointment. Claimant underwent a CT scan that did not immediately reveal definite evidence for acute cervical fracture. *Id*. at 43. The CT scan also revealed a chronic non-united fracture at the base of the dens, presumably remaining from Claimant's 1977 incident. Claimant was recommended to undergo MRI and referred to a neurosurgeon.

15. Claimant testified that after he received his wage records from Mr. Belveal he applied for Social Security disability benefits. Claimant's application for Social Security disability income (SSDI) was subsequently denied and he admitted on cross examination that it wasn't until after he had been denied SSDI that he contacted Mr. Belveal seeking to file a claim for workers' compensation benefits.

16. Claimant completed a Workers' Claim for Compensation form on December 29, 2017, alleging injuries to his neck after hitting his head on "pipe".

17. Respondents denied the claim.

18. Claimant continued to treat on his own after Respondents denied his claim. On January 16, 2018, he presented to UC Health where he reported that "he walked into a piece of steel". He explained that he turned to walk and hit his head so hard that he felt pain in the back of his neck". An MRI was performed. The MRI demonstrated "extensive degenerative changes of [the] cervical spine with resultant canal and foraminal stenosis and abnormalities at the C2 level "with question of changes related to remote injury (old fracture) or possibly underlying developmental abnormality (os odontoideum).

19. Claimant returned to UC Health on January 24, 2018 where he was evaluated by Dr. Ricky Medel. Dr. Medel diagnosed Claimant with a closed nondisplaced odontoid fracture with type II morphology and nonunion, stating that "[t]he patient has a history of an old C2 fracture, likely with nonunion. This was worsened 5-1/2 months ago when the patient hit his head". The report from this date of visit is devoid of Claimant's prior reported history of jumping from the back of his pickup truck and feeling as though the vertebrae in his neck stacked up upon impacting the ground.

20. Claimant returned to UC Health on January 31, 2018 at which time Dr. Medel recommended a C1-4 posterior cervical fusion. Dr. Medel discussed with Claimant that as part of his planned fusion surgery, he would perform a bilateral neurectomy at C2. Dr. Medel explained to Claimant that as a consequence of the C2 neurectomy he would experience posterior numbness in that nerve distribution. (Clmt. Ex. 8, p. 112). Claimant sought a second opinion from Dr. John Barker of the Rocky Mountain Spine Clinic. (Clmt. Ex. 10, p. 128). Dr. Barker recommended a posterior

fusion at C1-2 with interlaminar wiring and/or screw fixation and allograft. Dr. Barker informed Claimant that he would not undertake a lateral approach while performing his recommended procedure nor would he resect the C1 nerve in order to preserve sensation to the back of the head. Claimant elected to proceed with surgery with Dr. Barker.

21. Dr. Barker performed surgery on February 21, 2018. The surgery went well, and Claimant recovered. (Clmt. Ex. 9, pp. 126-27).

22. Respondents requested a records review from Dr. David Orgel. RE F. Dr. Orgel was asked to review records and provide an opinion as to whether the mechanism of injury (MOI) in this case, i.e. walking into the grain hopper handle was the likely cause of Claimant's neck complaints and need for posterior cervical fusion at C1-2.

23. In his records review report, Dr. Orgel outlined the type of cervical fracture Claimant sustained in his 1977 car crash. He also noted that the December 2017 x-rays taken at the University of Colorado Medical Center demonstrated 6 to 7 mm of motion through the C2 fracture site. According to Dr. Orgel, the MRI scan showed a possible signal change at C2 and the impression was that Claimant had an odontoid fracture type II. RE F, Bates 48. Dr. Orgel opined that the alleged MOI in this case, i.e., walking into the grain hopper handle is not consistent with causing a type II odontoid fracture. He also pointed out that the prior neck fracture from the 1977 MVA was consistent with that seen on more recent MRI and as such was preexisting and was likely becoming progressively more unstable given the motion through the fracture as seen on x-ray in 2017. RE F, Bates 52.

24. In Dr. Orgel's opinion, there is no objective medical evidence to support that Claimant likely sustained a type II odontoid fracture at C2 or any other work injury to his neck on August 1, 2017. Instead, Dr. Orgel opined that Claimant's symptoms are likely related to progressive instability caused by a preexisting and unhealed (non-union) C2 fracture associated with his 1977 MVA. Simply put, Dr. Orgel found no objective evidence to support a conclusion that Claimant had suffered any acute injury to his cervical spine at work on August 1, 2017. RE F, Bates 53.

25. Based upon the totality of the evidence presented, the ALJ credits Dr. Orgel's opinions to find that Claimant's cervical spine symptoms and need for surgery are likely the product of the natural progression of instability caused by his nonunion C2 fracture associated with his 1977 MVA rather than his walking into the hopper handle on August 1, 2017. While Dr. Medel and Dr. Barker's reports indicate that Claimant's C2 fracture, likely with nonunion worsened after Claimant hit his head, the ALJ finds that this conclusion is based upon Claimant's subjective reports alone. Nothing in the record presented persuades the ALJ that Dr. Medel or Dr. Barker reviewed Claimant's prior medical records, including those from Peak Vista or Dr. Francine Palmer in order to provide a comprehensive causation analysis. The ALJ finds that neither Dr. Medel nor Dr. Barker were in a position to assess causality without having the benefit of reviewing Claimant's past medical records, including those from Peak Vista and Dr. Palmer.

Consequently, The ALJ is not persuaded that the opinions of Dr. Medel and/or Dr. Barker constitute sufficient proof that Claimant suffered a work related "injury".

26. Based upon the evidence presented, the ALJ finds that while Claimant established that he had an "accident", i.e. he walked into the hopper handle while performing work duties, he failed to prove by a preponderance of the evidence that he suffered a compensable "injury" resulting in disability or the need for treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo.App. 2000)*; City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo.App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo.App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. In this case, the ALJ finds Claimant's evidence suggesting that he suffered a neck injury necessitating surgery unpersuasive.

Here, the evidence presented establishes that Claimant did not strike the hopper handle very hard and given the ease with which the handle moves, any impact would have been minimized further. Claimant admitted that within minutes after walking into the handle, he thought he was okay and was able to go about his work day without difficulty. Claimant joked about walking into the handle, calling it a "midget killer" and even writing these words in sandstone on the handle. He testified that he thought the whole incident was a "funny thing" and his demeanor while testifying demonstrates that he took the incident lightly. He also testified that when he informed his Employer of the incident the next day, he declined the medical care stating that it wasn't that bad. In fact, claimant testified that over the next several days, he felt better.

Subsequently, a few days or maybe a week or so later[2] Claimant testified that he jumped out of the back of his pickup truck and that when his feet hit the ground, he heard and felt his cervical vertebrae stacking up. It was after this non-work related incident that his neck pain returned and began to worsen and it was only then that he sought medical treatment, including chiropractic care. Claimant provided his treating providers with a couple of explanations as to what he attributed his neck pain to: first, he told his providers at Peak Vista that he believed his neck pain was due to Lyme disease and that he had been experiencing neck pain for six years. Secondly, he told his chiropractor, Dr. Palmer, that his neck pain started as a result of jumping out his pickup truck, which occurred shortly after the date of the alleged injury. He also told Dr. Palmer of his 1977 motor vehicle accident in which he sustained a cervical fracture and that he thought his pain could be the result of the arthritis that had begun to settle in. While Claimant apparently told Drs. Medel and Barker that he hit his head on a piece of pipe at work, this was long after the initial incident and shortly after he had been denied SSDI benefits. Furthermore, the evidence presented is devoid of any suggestion that either Dr. Medel or Dr. Barker relied upon anything other than Claimant's subjective historical report when they opined that Claimant's condition had worsened after hitting his head rendering any causation analysis on their part incomplete and unconvincing.

Compensability

D. As noted, Claimant bears the burden to prove that she suffered a Compensable injury. To sustain that burden, he must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); §8-41-301(I)(c), C.R.S. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place

[2] The ALJ finds that Claimant is not an accurate historian and was unable to provide specific dates and/or timelines for many of the events to which he testified.

limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, there is little question that Claimant's alleged injury occurred within the time and place limits of his employment as a welder for Employer. Nonetheless, the question of whether the alleged injury "arose out of" Claimant's employment must be resolved before the injury is deemed compensable.

E. The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The fact that Claimant may have experienced an onset of pain while performing job duties, does not mean that she sustained a work-related injury. An incident which merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo.App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991); *Hoffman v. Climax Molybdenum Company,* W.C. No. 3-850-024 (December 14, 1989). Moreover, under the Workers' Compensation Act there is a distinction between the terms "accident" and "injury". An "accident" is defined under the Act as an "unforeseen event occurring without the will or design of the person whose mere act causes it; an unexpected, unusual or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *see also*, §8-40-201(2)(injury includes disability resulting from accident). Consequently, a "compensable" injury is one which requires medical treatment or causes disability. *Id*.; *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo.App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; §8-41-301, C.R.S.

F. Given the distinction between the terms "accident" and "injury" an employee can experience symptoms, including pain from an "accident" at work without sustaining a compensable "injury." This is true even when the employee is clearly in the course and scope of employment performing a job duty. See *Aragon*, supra, ("ample evidence" supports ultimate finding that no injury occurred even where the claimant experienced pain when struck by a bed she was moving as part of her job duties); see also, *McTaggart-Kerns v. Dell, Inc.,* W.C. No. 4-915-218 (ICAO, May 29, 2014)(where Claimant involved in motor vehicle accident without resultant injuries, no compensable injury occurred). As found above, the ALJ is not persuaded that Claimant's neck pain and treatment, including his fusion surgery was caused by walking into the hopper handle. To the contrary, the overwhelming evidence presented persuades the ALJ that Claimant's neck pain and need for cervical treatment is probably related to the natural evolution of a chronic, preexisting, degenerative cervical spine condition generally and more specifically the progressive instability caused by an unhealed (nonunion) type II odontoid fracture at C2 following his 1977 MVA. Because Claimant failed to establish a

causal nexus between his alleged injury and his related functions, he failed to establish that he suffered a compensable injury. Accordingly, his claim must be denied and dismissed and his remaining claims need not be addressed.

G. Even if Claimant had established the requisite causal connection between his neck pain and walking into the hopper handle as he alleged, the evidence presented persuades the ALJ that an intervening event, i.e. jumping from his pickup truck a few days later would have severed the causal relationship between any such work injury and his need for treatment. It is well settled that the natural development of an intervening, nonindustrial injury, which is separate from and uninfluenced by an earlier industrial injury, is not compensated as part of the original industrial injury. *Post Printing & Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934). Here, the expansion of symptoms to include numbness in the arms after jumping from the bed of a pickup and feeling the vertebrae "stack" up which prompted Claimant to seek chiropractic care, supports a conclusion that his worsening symptoms are probably associated with this event rather than bumping his head on the hopper as alleged. Indeed, Claimant reported as much to Dr. Palmer on August 14, 2017. Consequently, while Claimant likely benefitted from continued care, including surgery, the evidence presented persuades the ALJ that this treatment was probably unrelated to address any symptoms caused by the alleged August 1, 2017 industrial injury. Rather, the evidence presented persuades the ALJ that ongoing treatment, including the aforementioned fusion surgery was necessary (related) to address the probable aggravation/acceleration of the instability of Claimant's unhealed C2 odontoid fracture caused by jarring his neck after jumping from his pickup. Because Claimant failed to prove by a preponderance of the evidence that his need for medical treatment, including surgery, as performed by Dr. Barker, was causally related to his August 1, 2017 accident, Respondents' are not obligated to provide it.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is hereby denied and dismissed.

DATED: October 15, 2018

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver,

CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on April 7, 2018.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive authorized, reasonable and necessary medical treatment for his industrial injury.

FINDINGS OF FACT

1. Claimant is a 62 year old male who was born on May 8, 1956. He began working for Employer as a cashier on September 21, 2017. Claimant's job duties involve lifting and scanning items at a large warehouse store.

2. Claimant testified that on April 7, 2018 he was walking down a hallway from Employer's break room to the stairs when he slipped on small droplets of water on the floor. Claimant characterized the April 7, 2018 accident as a "significant event" in which he "significantly wind-milled" his arms, in a "Charlie Chaplin" like manner to maintain his balance and keep from falling. Claimant did not fall to the ground. He testified that he felt an immediate "twinge" following the slip incident. The event was captured on Employer's in-store security video.

3. On April 7, 2018 Claimant and Employer completed a First Report of Injury. Claimant also filled out an Associate Incident Report. The Incident Report specified that Claimant's right foot slipped in a puddle of water "twisting my mid-right back." Claimant declined medical treatment.

4. Claimant testified that following the slip incident he left work early because he had difficulties performing his job duties as a cashier. He specifically noted that he had trouble standing, walking and lifting because of pain in his mid-back area.

5. Claimant acknowledged that he has a history of lower back pain but has never previously suffered an injury to his lower back. He detailed that he now has pain in his mid-back, through the groin area, in the buttock and down to his right leg. Prior medical records from CHPG Primary Care specifically reflect that he suffered lumbar spine pain in the L3-L5 region. In fact, Claimant purchased an inversion table several years ago for treatment of his lower back symptoms.

6. Claimant explained that he resides on a 40 acre "working ranch." He raises dogs, cats and chickens. Claimant commented that he rents out the pasture area to other ranchers. In an April 12, 2018 Witness Statement co-worker Kari Shearer remarked that

Claimant talked about his ranch and had chores that included lifting 80 pound hay bales. Similarly, in an April 25, 2018 Witness Statement Manager Susan Enoch noted that, on the day after the slipping incident, Claimant "was home moving bales of hay." Claimant testified that he "could not recall" making the statements about hay bales to co-workers, but he might have made them when he "first got there."

7. On April 12, 2018 Claimant visited UC Health Urgent Care in Castle Rock, Colorado for an examination. He reported that he had slipped on a wet spot on a floor at work and twisted the right side of his lower back. Claimant remarked that he did not fall and the incident was captured on video. He noted continuing right-sided lower back pain with symptoms radiating into his right buttock and right upper back. Claimant commented that he suffered a lower back injury in 1979 but had a "chiropractic adjustment" and has not subsequently experienced back problems. Ryan Sharp, PA-C conducted a physical examination. Claimant exhibited decreased lumbar range of motion, tenderness and spasms. PA-C Sharp assigned work restrictions and prescribed medications.

8. On April 18, 2018 Claimant returned to UC Health for an evaluation. Physician's Assistant Jocelyn Cavender diagnosed Claimant with a lumbar strain and referred him to physical therapy. X-rays of the lumbar spine revealed "hypertrophic degenerative changes and significant disc space narrowing at the L4-L5 and L5-S1 levels." There was no acute fracture or compression deformity.

9. During the latter part of April 2018 Claimant continued to receive treatment at UC Health. Claimant reported persistent lower right-sided back symptoms. He received work restrictions and underwent physical therapy. For the period April 27, 2018 through May 21, 2018 Claimant underwent seven physical therapy sessions with No Limits Physical Therapy.

10. On May 16, 2018 Claimant returned to UC Health for an evaluation. He reported some improvement with physical therapy and was following the treatment plan. Claimant mentioned that a few years earlier he had some back discomfort, visited a chiropractor and purchased an inversion table. He used the inversion table periodically but started using it regularly and has obtained significant benefit. PA Cavender maintained Claimant's work restrictions and referred him for additional physical therapy.

11. On August 26, 2018 Claimant underwent an independent medical examination with Orthopedic Surgeon Timothy S. O'Brien, M.D. Claimant reported that on April 7, 2018 he slipped on one of the many fifty-cent-piece sized water droplets in Employer's break room hallway. Claimant described "cart wheeling" his arms to prevent falling and maintain his upright position. He noted that he would have struck a metal column or corkboard with a ledge if he had fallen to the ground. A physical examination revealed full lumbosacral range of motion.

12. Dr. O'Brien reviewed the full one hour and 59 minute security video of the April 7, 2018 incident. The video revealed that Claimant walked down the break room hallway on two occasions but did not slip and fall. Dr. O'Brien determined that there was no medical record documentation or surveillance video footage that support Claimant's

"representation that he sustained a work-related injury on April 7, 2018." He remarked that all of the medical records and video footage suggested that Claimant did not suffer any injuries on the date of the incident. Dr. O'Brien specified that there was simply no objective evidence that Claimant suffered a work injury on April 7, 2018. He commented that radiographs only revealed normal, age-related degenerative findings. Furthermore, there was no evidence of any tissue breakage or yielding. Dr. O'Brien explained that Claimant suffers from the progressive condition of "pre-existing and long-standing multilevel thoracolumbar spondylosis." He reasoned that Claimant is likely to experience episodic pain without an inciting or traumatic event.

13. Dr. O'Brien testified at the hearing in this matter. He maintained that Claimant did not suffer an industrial injury while working for Employer on April 7, 2018. Dr. O'Brien explained that Claimant simply bent forward and slipped a bit to the right but there was no actual mechanism of injury to cause his symptoms.

14. In-store security video reveals that on April 7, 2018 at 12:20:15 a.m. Claimant was walking up stairs while carrying a drink cup in his left hand. Claimant proceeded down the hallway out of sight. At 12:22:21 p.m., Claimant returned to view. At 12:22:23 p.m. Claimant was walking, slipped and bent slightly forward to less than 90 degrees, but did not wind-mill or cartwheel his arms. Claimant did not drop the vest from his right hand or the drink cup in his left hand. In fact, none of the liquid spilled from the cup. Claimant subsequently looked back at the floor, turned and continued down the stairs. At the end of the staircase, Claimant turned and proceeded back up the stairs, down the hall and out of sight.

15. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on April 7, 2018. Initially, on April 7, 2018 Claimant was walking down a hallway from Employer's break room to the stairs when he slipped on small droplets of water on the floor. He was diagnosed with a lumbar strain and reported persistent lower right-sided back symptoms. Claimant acknowledged that he has a history of lower back pain but has never previously suffered an injury to his lower back. He detailed that he now has pain in his mid-back, through the groin area, in the buttock and down his right leg.

16. Despite Claimant's testimony, the medical records, persuasive analysis of Dr. O'Brien and video surveillance reflect that Claimant did not suffer a compensable injury or aggravation of his pre-existing lower back condition during the course and scope of his employment on April 7, 2018. Claimant's prior medical records specifically reflect that he suffered lumbar spine pain in the L3-L5 region. In fact, he purchased an inversion table several years ago for treatment of his lower back symptoms. X-rays of the lumbar spine subsequent to April 7, 2018 revealed "hypertrophic degenerative changes and significant disc space narrowing at the L4-L5 and L5-S1 levels." There was no acute fracture or compression deformity.

17. Dr. O'Brien considered Claimant's medical history, performed a physical examination and reviewed the one hour and 59 minute security video of the April 7, 2018

incident. The video revealed that Claimant walked down the break room hallway on two occasions but did not slip and fall. Dr. O'Brien determined that there was no medical record documentation or surveillance video footage that support Claimant's "representation that he sustained a work-related injury on April 7, 2018." He remarked that all of the medical records and video footage suggested that Claimant did not suffer any injuries on the date of the incident. Furthermore, Dr. O'Brien commented that radiographs only revealed normal, age-related degenerative findings. There was also no evidence of any tissue breakage or yielding. Dr. O'Brien summarized that Claimant simply suffers from the progressive condition of "pre-existing and long-standing multilevel thoracolumbar spondylosis." He reasoned that Claimant is likely to experience episodic pain without an inciting or traumatic event.

18. In-store security video is consistent with Dr. O'Brien's determination. Claimant was walking, slipped and bent slightly forward to less than 90 degrees, but did not "windmill" or "cartwheel" his arms. He did not drop a vest from his right hand or the drink cup in his left hand. In fact, none of the liquid spilled from the cup. Based on Claimant's pre-existing, degenerative back condition, the persuasive analysis of Dr. O'Brien and in-store video footage, Claimant has failed to demonstrate that his work activities on April 7, 2018 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Claimant's Workers' Compensation claim is thus denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on April 7, 2018. Initially, on April 7, 2018 Claimant was walking down a hallway from Employer's break room to the stairs when he slipped on small droplets of water on the floor. He was diagnosed with a lumbar strain and reported persistent lower right-sided back symptoms. Claimant acknowledged that he has a history of lower back pain but has never previously suffered an injury to his lower back. He detailed that he now has pain in his mid-back, through the groin area, in the buttock and down his right leg.

8. As found, despite Claimant's testimony, the medical records, persuasive analysis of Dr. O'Brien and video surveillance reflect that Claimant did not suffer a

compensable injury or aggravation of his pre-existing lower back condition during the course and scope of his employment on April 7, 2018. Claimant's prior medical records specifically reflect that he suffered lumbar spine pain in the L3-L5 region. In fact, he purchased an inversion table several years ago for treatment of his lower back symptoms. X-rays of the lumbar spine subsequent to April 7, 2018 revealed "hypertrophic degenerative changes and significant disc space narrowing at the L4-L5 and L5-S1 levels." There was no acute fracture or compression deformity.

9. As found, Dr. O'Brien considered Claimant's medical history, performed a physical examination and reviewed the one hour and 59 minute security video of the April 7, 2018 incident. The video revealed that Claimant walked down the break room hallway on two occasions but did not slip and fall. Dr. O'Brien determined that there was no medical record documentation or surveillance video footage that support Claimant's "representation that he sustained a work-related injury on April 7, 2018." He remarked that all of the medical records and video footage suggested that Claimant did not suffer any injuries on the date of the incident. Furthermore, Dr. O'Brien commented that radiographs only revealed normal, age-related degenerative findings. There was also no evidence of any tissue breakage or yielding. Dr. O'Brien summarized that Claimant simply suffers from the progressive condition of "pre-existing and long-standing multilevel thoracolumbar spondylosis." He reasoned that Claimant is likely to experience episodic pain without an inciting or traumatic event.

10. As found, in-store security video is consistent with Dr. O'Brien's determination. Claimant was walking, slipped and bent slightly forward to less than 90 degrees, but did not "windmill" or "cartwheel" his arms. He did not drop a vest from his right hand or the drink cup in his left hand. In fact, none of the liquid spilled from the cup. Based on Claimant's pre-existing, degenerative back condition, the persuasive analysis of Dr. O'Brien and in-store video footage, Claimant has failed to demonstrate that his work activities on April 7, 2018 aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Claimant's Workers' Compensation claim is thus denied and dismissed.

ORDER

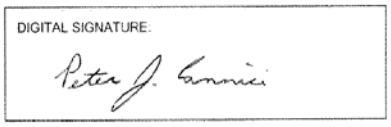
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's request for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: October 16, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether Claimant has established by a preponderance of the evidence that he sustained an injury in the course and scope of his employment on November 11, 2017.

- Whether Claimant has established by a preponderance of the evidence that he is entitled to medical benefits because of a work-related injury.

FINDINGS OF FACT

1. Employer, a restaurant chain, hired Claimant on October 5, 2017, to begin working as a bar back when the restaurant opened. The "soft" opening occurred on November 8, 2017. Claimant's duties as bar back included stocking glassware, stocking drinks, preparing the bar for service, emptying trash, filling ice buckets, running food for the bar, and performing other tasks requested by the bartender. As a bar back, Employer paid Claimant an hourly rate plus a portion of the total bar sales. Claimant assisted Employer by performing some set-up work prior to the subject restaurant opening. Employer paid Claimant a higher hourly rate for this work.

2. Claimant alleges that he sustained an injury on November 11, 2017, while working as a bar back. At hearing, Claimant testified that the injury occurred when he lifted two racks each containing 36-49 glasses each from the floor underneath the bar sink. Claimant testified that he felt an immediate onset of pain while lifting up the racks. Claimant completed a worker's claim for compensation form dated November 16, 2017.

3. Claimant's reports of the mechanism of his injury are inconsistent.

   - Claimant reported on his Worker's Claim for Compensation Form that he was leaning over a sink doing dishes.

   - Claimant reported to the Boulder Medical Center that he "was bent over the bar sink and my back pain started. It progressed through the evening and now I can hardly move."

   - Claimant testified that his injury occurred immediately after he returned to the bar after delivering biscuits.

   - He also testified that he injured himself while taking out bar trash.

   - Claimant later testified that after the onset of pain, he carried glass racks from the bar to the sink in the back of the restaurant.

   - Dr. Miller, a medical provider from whom Claimant sought treatment, noted that Claimant reported he had repeatedly lifted racks, leading to his injury.

4. Claimant's reports of the timing of his injury are inconsistent.

- Claimant reported on his Worker's Claim for Compensation Form that he began work at 4:00 p.m. on November 11, 2017.

- Matthew Glassford, Employer's general manager at the restaurant, testified that Claimant was to begin work at 4:30 p.m., on November 11, 2017, but did not arrive until approximately 6:00 p.m.

- Claimant first testified that the bartenders told him to arrive for work at 6:00 p.m. He later changed his testimony to say Mr. Glassford told him to arrive at 6:00 p.m.

- Mr. Glassford credibly testified that Claimant requested to come in after 6:00 p.m. Claimant informed Mr. Glassford that his primary employment was in landscaping, and Mr. Glassford permitted Claimant to arrive at work late when his landscaping schedule conflicted with his restaurant schedule.

5. Claimant's testimony regarding reporting his injury to Employer is not credible.

- Claimant testified that after feeling the onset of pain he walked to a corner designated for the bar back, behind the bar. Claimant testified that, at that time, Mr. Glassford was standing beside the ice machine at the end of the bar, talking to customers. He inconsistently testified later that Mr. Glassford was alone at the ice machine. He testified that he made eye contact with Mr. Glassford and hand signaled his injury by placing both hands on his lower back and grimacing.

- Mr. Glassford testified that he was at the expediting window running the meal service from 5:45 p.m. until the kitchen and service had caught up with orders between 7:00 and 7:30 p.m. The expediting window is located approximately thirty feet from the ice machine and around a corner. The bar back corner is not visible from the expediting window.

- Mr. Glassford credibly testified that he did not see Claimant make any hand signal or facial expression to indicate that he had sustained an injury at any time on November 11, 2017.

- In Claimant's answers to interrogatories, he stated that he reported his injury to Mr. Glassford via Employer's messaging and scheduling service, ScheduleFly, pursuant to instructions Mr. Glassford previously gave him about how to report an injury by use of hand signals. Mr. Glassford testified that he did not train Claimant to use ScheduleFly or hand signals to report an injury.

6. Claimant testified that after he hand signaled Mr. Glassford, he received no response so he left the restaurant and smoked cigarettes in the alley for thirty minutes waiting for someone to come speak with him. Claimant provided no credible explanation

for why he thought someone would come to speak with him in the alley, especially given that Claimant admitted that Mr. Glassford did not respond to Claimant's hand signal. Contrary to his testimony, Claimant's answer to interrogatory number one states that Claimant went outside to see if his back pain would resolve.

7. Mr. Glassford testified the restaurant had recently opened, and November 11, 2017, was only the second high volume service for the new staff. Mr. Glassford testified that when he left the expediting window an employee informed him that Claimant was not fulfilling his bar back duties. Mr. Glassford asked two other employees for help finding Claimant, but they were unable to find him.

8. Claimant testified that when no one came outside to speak with him, he decided to leave work and went back into the restaurant to get his jacket. Before leaving, Claimant picked up his paycheck from the assistant manager, Michael Grimm, and told Mr. Grimm, "My back hurts. I'm outta' here." Claimant did not disclose to Mr. Grimm that he injured his back. When asked at hearing why he had not done so, Claimant testified that he thought Mr. Glassford had already discussed Claimant's injury with Mr. Grimm. Claimant provided no credible explanation for why he made that assumption.

9. The ALJ finds Claimant's assumption that Mr. Glassford and Mr. Grimm had already discussed his alleged injury to be unreasonable given that (1) he had not yet reported his injury to either of them, and (2) Claimant was aware that the restaurant was extremely busy at that time.

10. Claimant acknowledged at hearing that he was upset when he left the restaurant because he felt ignored, he felt unable to do his job due to pain, and that Employer was too busy to deal with him. When he reached his home, he opened his check, believed his pay was short and incorrectly calculated. He became more upset.

11. Claimant testified that he attempted to call the restaurant later that night, but no one answered the phone. However, in Claimant's answers to interrogatories, he never mentioned trying to call the restaurant. At 9:10 p.m., Claimant posted the following message on ScheduleFly to all of the restaurant's employees:

> Bullshit!! 6dollar base pay…..tip out for a bizzy Friday was shit…ohand Friday was below projected!meaning if we doubled that bizzy Friday…which it was bizzy you would still make crap.i applied for barbackand was running fucking biscuits….wtf.get a system and quit rushing everything and every1.the restaurant is short handed…every1 behind the scenes is talking so demand better base pay.the workers are the heroes not the people that can affordto open on pearl!!unprepared and reliant on us!!power to the poor!!!!!#smokescreenhustlefakelove.it was great to meet every1☺ moving on…peace;\

(Errors in original).

12. Claimant initially testified that the message included statements regarding both his injury and difficulty reaching management by phone. Claimant testified that the above message was how he reported his injury to Employer. However, he admitted on cross-examination that nothing in the message mentions an injury.

13. Claimant testified that he did not intend to quit his employment with the last sentence of the message, "moving on." However, Claimant sent the message after he left the restaurant in the middle of his shift. Mr. Glassford credibly testified that reading the message he understood that Claimant was quitting his job due to the numerous complaints he had working for Employer.

14. The ALJ finds that Claimant's actions are more consistent with a frustrated employee venting his anger than an injured employee reporting an injury. Claimant's testimony and statements are inconsistent with the records, with Mr. Glassford's testimony, and Claimant's other testimony and statements. No persuasive evidence supports Claimant's allegation of an injury.

15. Based on the totality of the evidence, the ALJ finds Claimant severed his employment with Employer no later than November 11, 2017 at 9:10 p.m. Even crediting Claimant's stated intention; a person could not reasonably expect to remain employed after sending the message quoted above.

16. On November 12, 2017, Mr. Glassford responded to Claimant's message. Claimant then replied to Mr. Glassford's message on November 12, 2017. The reply stated in part:

> Hey matt the mouth of south..lol.dont threaten me boy.why if I want to rant further do I need to see you and mike…im1guy;)your tough guy attitude doesn't mean shit to me.u might impress the young hostesses(in your mind)but your smoke didn't fool me.

(Errors in original).

Claimant's reply went on to accuse Mr. Glassford of failing to discuss wages when he hired Claimant, and sending a bar back to run biscuits rather than other employees. Notably, Claimant again failed to mention his alleged injury.

17. When Claimant sought medical care, he reported inconsistent symptoms.

- On November 13, 2017, Leah Treadwell, M.D. evaluated Claimant. Dr. Treadwell noted that Claimant reported pain in his mid-back, which began while bending over at work, and she diagnosed him with a thoracic strain.

- On November 21, 2017, Lori Miller, M.D. treated Claimant who reported mid-back and chest pain after repeatedly bending over a sink with heavy glass racks. Claimant also informed Dr. Miller that he lives and works on a farm doing chores and that he had another source of employment.

- On December 14, 2017, Claimant reported to Deborah Lund, M.D., that he was experiencing lumbar spine pain with no mention of mid-back or thoracic pain. Dr. Lund ordered an MRI of Claimant's lumbar spine. Claimant's MRI was normal and revealed no acute injury.

- At hearing, Claimant testified that his back is stiff from his low back up through his shoulder.

- Claimant did not testify to any current pain in his low back, mid-back, or chest.

18. Claimant has a pre-existing history of back problems. These include a discectomy at T5, surgery on his lumbar spine, a cervical strain, and a diagnosis of degenerative disc disease.

19. Claimant has filed at least three previous workers' compensation claims.

20. Based on the totality of the evidence, the ALJ finds Claimant incredible. The ALJ gives his testimony and reports of a work injury no weight.

21. Based on the totality of the evidence, the ALJ finds that Claimant has not met his burden of establishing by a preponderance of the evidence that he suffered a work injury.

22. Based on the totality of the evidence, the ALJ finds that Claimant has not established by a preponderance of the evidence that he is entitled to medical benefits.

CONCLUSIONS OF LAW

For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. C.R.S. § 8-41-301(1)(c); *In re Swanson*, W.C. No. 4-589-645 (ICAO, Sept 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the ALJ. *Faulkner*, 12 P.3d at 846. A compensable injury is an injury that "arises out of" and "in the course of" employment. *See* C.R.S. § 8-41-301(1)(b); *Schepker v. Daewoo North*, W.C. No. 4-528-434 (ICAO April 22, 2003); *Price v. Industrial Claim Appeals*, 919 P.2d 207 (Colo. 2012).

In deciding whether the claimant has met his burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to testimony, and draw plausible inferences from the evidence." *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002).

Claimant failed to meet his burden to prove by a preponderance of the evidence that he suffered an injury proximately caused by and arising out of the course and scope of his employment. Claimant's testimony throughout the hearing was self-contradicting, inconsistent with exhibits, unreasonable, and inconsistent with Mr. Glassford's testimony. Conversely, Mr. Glassford's testimony was credible, reasonable, and consistent with the admitted exhibits.

Credibility is a significant consideration when determining compensability. In assessing credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness of the testimony; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936).

Claimant's actions following his injury are also inconsistent with a person who is attempting to report an injury. Claimant testified that after he signaled to Mr. Glassford, he walked outside in the alley and waited for someone to come meet with him to discuss the injury. Claimant did not speak to anyone, tell anyone where he was going, or tell Mr. Glassford that he was stepping outside. Claimant testified that he waited outside for over thirty minutes. It is unreasonable to think that standing outside of a busy restaurant in an alley without notifying anyone of his whereabouts will get the attention of a manager. Claimant knew that Mr. Glassford was inside the restaurant. If Claimant wanted to report an injury, he could have walked up to Mr. Glassford and reported an injury rather than stand outside. In fact, Claimant's answers to interrogatories state that he went outside to see if his back would get better, not to speak with anyone regarding an alleged injury.

In establishing causation, a claimant "must show that the industrial injury bears a 'direct causal relationship between the precipitating event and the resulting disability.'" *See Garcia v. CF&I Steel*, W.C. No. 4-454-548 (ICAO May 14, 2004). The respondents are liable for medical treatment that is reasonably necessary to cure and/or relieve an injured worker from the effects of an industrial injury. § 8-42-101(1)(a), C.R.S. The claimant must prove a causal nexus between the claimed disability, need for medical treatment, and the work related injury. *Singleton*, 961 P.2d 571 (Colo. App. 1998). The question of whether the claimant has met the burden to establish the requisite causal connection and whether the medical treatment sought is reasonably necessary is one of fact for the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner*, 12 P.3d 844 (Colo. App. 2000).

ORDER

The ALJ orders the following:

1. Claimant has failed to prove that he sustained an injury in the course and scope of his employment on November 11, 2017.

2. Claimant's claim for benefits is therefore denied and dismissed.

3. Issues not expressly decided herein are reserved to the parties for future determination.

ENTERED this 16th day of October 2018.

STATE OF COLORADO
OFFICE OF ADMINISTRATIVE COURTS

By: */s/ Kimberly Turnbow*
Administrative Law Judge

NOTE: If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of John Tyler, M.D., that Claimant suffered a 0% permanent impairment rating due to her December 19, 2015, work injury.

II. Whether Claimant is entitled to reasonable and necessary medical maintenance benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On December 19, 2015, Claimant was working for Employer on an assembly line. While working, another employee was having difficulty managing an item on which he was working and bumped into the back of Claimant with his elbow.

2. On December 21, 2015, Employer completed an Employer's First Report of Injury. On the First Report of Injury, the mechanism of injury is described as:

> Another associate was trying to loosen a kit that's tubing was tangled and when he pulled really hard it came loose and he elbowed [Claimant] in back. The [Claimant] suffered an unk [unknown] injury to the mid/lower back and the [Claimant] did seek medical treatment.

Ex. 1

3. Claimant did not miss any time from work because of her low back injury. (Claimant's testimony; See also Exhibits B and F: Dr. Miller's medical records that released Claimant to regular work without restrictions.)

4. Claimant primarily treated with Dr. Matt Miller, Dr. Robert Kawasaki, Chiropractor Dr. Hauk, and psychologist Dr. Ron Carbaugh.

5. On December 21, 2015, Claimant was evaluated by Matthew Miller, M.D., at Front Range Occupational Medicine. Claimant described the incident and her complaints as follows:

> The [Claimant] complains of back pain. Coworker was struggling with a part and hit her in the back. Possibly with elbow. The pain is located in the mid/lower back. The pain is

> described as dull, aching, stabbing at times. The pain has been present 2 days. Pain level is 7 out of 10. The patient has not seen another provider for this problem.
>
> Numbness and tingling at times in the legs, left more than right. No bowel or bladder incontinence. Does feel like she can't empty bladder.

At this appointment, Claimant also indicated she has a history of a prior neck and back injury that occurred in 2002 and that she had some occasional problems due to such injury.

Dr. Miller physically examined Claimant and noted no bruising. Dr. Miller diagnosed Claimant as suffering from a contusion to her back. He also noted that the mechanism of injury is consistent with a back contusion and not a disc injury. Although Claimant was complaining of some lower extremity symptoms as well as urinary frequency, he thought the urinary frequency was due to a urinary tract infection – based on a urine test - and treated her for such. He returned Claimant to full duty and planned on seeing her in a few days. (Ex. 7.)

6. On December 23, 2015, Claimant returned to Dr. Miller complaining of increasing back pain of 8/10 and worsening urinary symptoms. Claimant also complained of numbness in a saddle distribution. Therefore, due to concerns for a cauda equina lesion, Dr. Miller ordered an MRI. Despite referring Claimant for an MRI, Dr. Miller did not assign any work restrictions and anticipated Claimant would reach MMI within one month. His assessment at that time remained as a back contusion. (Ex. 8.)

7. On December 23, 2015, Claimant underwent an MRI. The impressions were minimal lumbar spine degenerative changes, with no indication of disc herniation, foraminal narrowing, or spinal stenosis. (Ex. 9.) It was basically a normal MRI.

8. On January 4, 2016, Claimant returned to Dr. Miller. At this appointment, Claimant indicated her back pain was slightly better at 6/10 and her numbness had mostly resolved. Dr. Miller noted Claimant had continued pain complaints and tenderness of her low back as well as some decreased range of motion. Dr. Miller's neurological examination indicated Claimant's sensation in her lower extremities was intact in both lower extremities and that her lower extremity reflexes were normal. His assessment of Claimant's condition remained as a lumbar contusion and he did not assign any work restrictions. (Ex. 10.)

9. On January 11, 2016, Claimant returned to Dr. Miller and indicated she was getting worse. Claimant alleged she slipped on ice and had an increase in back pain, up to 7/10, and developed an increase in numbness in her left and right leg. Dr. Miller noted that sensation to light touch was intact except for decreased sensation in the dorsal foot. Dr. Miller returned Claimant to full duty but noted "If

not improved, may consider a second opinion. I'm surprised she isn't getting better given the mechanism of injury." (Ex. 11.)

10. On January 15, 2016, Claimant returned to Dr. Miller. Although she said her pain was better, 5/10, she still complained of pain with back extension and flexion. Dr. Miller noted a positive straight leg test on the left, but yet also noted a positive Waddell's sign for superficial tenderness. He also stated in his report that Claimant was walking with a normal gait. (Ex. 12.)

11. On January 22, 2016, Dr. Miller indicated that despite Claimant's minimal improvement and a "good looking MRI," he would refer her to Dr. Kawasaki for a second opinion.

12. On January 25, 2016, Claimant was evaluated by Dr. Kawasaki. At this visit, Claimant provided a much more dramatic description of her accident at work. As set forth in Dr. Kawasaki's report, he noted the following:

> She was struck on the back by another person. She indicates she was on the assembly line putting devices in packages. The coworker next to her was pulling a packaging off the assembly line but was stopped when the box recoiled secondary to being tethered. This caused the coworker to strike her across the back with the box. Another coworker got caught and fell over slamming into her getting her from behind. She was forced into the table into a forward flexed position. (Ex. 13.)

13. As found, the initial description of the accident noted in the medical records indicates Claimant was not sure what hit her in the back and thought it was someone's elbow. At this visit with Dr. Kawasaki, she provides a much more dramatic description of the incident. This new and revised description of the accident was neither noted by Dr. Miller in his notation from his initial examination of Claimant in which he described the mechanism nor noted in the Employer's First Report of Injury.

14. Dr. Kawasaki stated in his report that Claimant had radicular symptoms in all dermatomes of the left lower extremity and globally to the right. Dr. Kawasaki indicated that he reviewed Claimant's MRI and there were minimal degenerative findings and there were no findings that would explain Claimant's radicular complaints. In addition, Dr. Kawasaki did not indicate Claimant's alleged radicular symptoms followed any expected dermatomal pattern. Despite Claimant's complaints, which did not appear to be anatomically or physiologically consistent, Dr. Kawasaki recommended an EMG to determine if there was any evidence of radiculopathy. (Ex. 13.)

15. On February 4, 2016, Claimant began physical therapy at Physiotherapy Associates. At her first appointment, the report provides a slightly different mechanism of injury. The report indicates Claimant initially got hit in the back

during December of 2015. Then, shortly thereafter, but on the same day, someone had to catch their balance and grabbed onto Claimant. Therefore, this description provides two separate incidents on the first day that Claimant contends resulted in a back injury. The report also indicates that about a week or so later, Claimant noted a third incident when slipped on some ice and fell. Thus, this physical therapy report provides a third version of how Claimant contends she injured her back at work. (Ex. 15.)

16. Claimant continued going to physical therapy through February 23, 2016. As noted in the physical therapy records, Claimant complained of pain with all movement exercises. Therefore, the physical therapist spoke with Dr. Miller and Dr. Miller stopped physical therapy and decided to refer Claimant to a psychologist to assist in determining whether Claimant's physical complaints, which were not supported by objective findings, were psychologically based.

17. On or about February 12, 2016, Claimant attempted to be seen by her personal PCP due to complaints of back pain and loss of bladder control. Because Claimant could not be seen by her personal PCP, she was referred to the emergency room due to her complaints. (Ex. 16.) Therefore, on February 12, 2016, Claimant underwent another MRI. The history and reason for the second MRI documented on the report is: "Fall. Back pain. Left leg numbness. Loss of bladder control. Fell on ice 2 weeks ago." The MRI findings were basically the same as the first MRI and did not provide an anatomical or physiological explanation for Claimant's self-reported symptoms. (Ex. 17.)

18. On February 17, 2016, Claimant returned to Dr. Kawasaki and underwent an EMG in order to determine if there was any anatomic or physiologic basis for her radicular complaints. The EMG was negative and did not demonstrate any evidence of lumbar radiculopathy, lumbosacral plexopathy, or compression neuropathy. Dr. Kawasaki stated that Claimant continued to complain of pain in her low back as well as radicular symptoms down both of her lower extremities. Despite Claimant's subjective complaints, and reviewing the results of the diagnostic testing, Dr. Kawasaki noted the following:

    - She has no objective findings.
    - Radiographic evaluation with MRI was normal.
    - EMG nerve conduction studies are normal.
    - There is no clear objective evidence for her subjective complaints.

    There is no indication in this report Claimant advised Dr. Kawasaki at this visit that she fell on some ice 2-3 weeks ago and underwent a second MRI just 5 days earlier.

Because there were no objective findings to support Claimant's back pain and bilateral radicular complaints, Dr. Kawasaki referred Claimant to Dr. Ron Carbaugh for a psychological evaluation. (Ex. 18.)

19. On February 17, 2016, Dr. Miller noted that he spoke with Dr. Kawasaki and that the EMG was negative. He also indicated Claimant saw her personal PCP last week and was sent to the ER for another MRI. Although the results were not available, Dr. Miller noted that he anticipated it would be negative, but that he would review it. (Ex. 16.)

20. On February 18, 2016, Claimant returned to Dr. Miller. Although she did mention that she tried to see her primary care physician and because they could not see her, they sent her to the emergency department and she underwent another MRI, (which was negative), her symptoms remained the same. At this appointment, Dr. Miller indicated Claimant was approaching MMI.

21. On March 8, 2016, Claimant was evaluated by a psychologist, Dr. Ron Carbaugh. After evaluating Claimant, Dr. Carbaugh stated that:

> [Claimant's] behavioral presentation and subjective symptom report are both inconsistent with her psychometric testing profiles and results, similar to the discrepancy between her subjective physical complaints and her objective medical testing.

Dr. Carbaugh diagnosed Claimant as suffering from a somatic symptom disorder as well as a preexisting depressive disorder and he concluded Claimant had no psychological impairment related to the incident at work. (Exhibit G.)

22. On March 10, 2016, Claimant returned to Dr. Miller. As noted in his report, he spoke with Dr. Kawasaki and Dr. Carbaugh and despite Claimant's ongoing subjective complaints, he determined there was nothing else they could offer Claimant. Therefore, he placed Claimant at MMI and determined she suffered zero impairment. He did, however, recommend maintenance medical care of six sessions of chiropractic care and for Claimant to follow-up with Dr. Kawasaki for medications.

23. On April 4, 2016, Dr. Kawasaki agreed Claimant reached maximum medical improvement without restrictions despite her continued low back pain complaints and complaints of radicular symptoms. Dr. Kawasaki noted that his examination continued to reveal that Claimant's symptoms were non-focal and that there was no clear objective evidence for her subjective complaints. Dr. Kawasaki did, however, recommend Claimant discontinue tramadol and continue tizanidine when necessary. He also agreed to follow Claimant for medication needs for around 1 year. (Exhibit I.)

24. On April 6, 2016, Dr. Malinda Schlicht, at Kaiser, reported that Claimant's neurogenic symptoms were not explained by the MRIs of her lumbar spine. (Exhibit D.)

25. On April 27, 2016, Claimant reported a separate work-related injury to her mid back and shoulder for which she started to treat with Dr. Kristen Mason. Claimant testified that shortly thereafter she stopped treating with Dr. Miller and Dr. Kawasaki for the low back injury which is the subject of this claim. (*See* Exhibit 25.)

26. On December 13, 2017, Respondents filed a Final Admission based on Dr. Miller's and Dr. Kawasaki's reports. Respondents admitted for maintenance medical treatment "with the authorized treating physician that is reasonable, necessary and related to the compensable injury." (Exhibit 3.) Thereafter, Claimant requested a Division IME which was scheduled with Dr. John Tyler.

27. This claim was complicated when, on January 22, 2018, Claimant reported work-related back pain after she slipped on ice, jerked her body, but did not fall. Claimant reported this incident occurred during a break while at work. (See Exhibit 26, and Exhibit A.) Claimant followed up with Dr. Mason.

28. Dr. Mason reviewed records from the 2015 low back injury and prepared a report dated March 19, 2018. Dr. Mason concluded that due to the 2015 back injury, Claimant was not restricted with respect to the lumbar condition and may return to regular work; there was no permanent impairment; and Claimant did not require any medical treatment for her low back condition. (Exhibit J.)

29. On April 3, 2018, ALJ Eley issued a Prehearing order that allowed Dr. Tyler's Division IME to proceed and allowed Dr. Tyler to address both low back claims and to apportion, if appropriate, any impairment between the 2015 and 2018 incidents. (Exhibit O.)

30. On April 12, 2018, Dr. John Tyler performed the Division IME, and issued his report on April 13, 2018. He took a history from Claimant, examined the Claimant, reviewed the medical records, and reported that he agreed with Dr. Miller that Claimant reached maximum medical improvement on March 10, 2016, and that Claimant suffered 0% impairment. Dr. Tyler noted there was no objective evidence of any acute trauma to the lumbar spine and no pathology whatsoever on exam of the lumbar region. Dr. Tyler noted Claimant was moderately overweight and that her pain was due to her deconditioned state. Dr. Tyler also addressed the January 22, 2018, incident Claimant stated happened at work and concluded that "at most" Claimant suffered a short-term aggravation of her previous injury to the lumbar spine but there was never a specific injury that occurred on that date. Dr. Tyler did not address medical maintenance care other than to note that there was no evidence of acute trauma to the lumbar spine and no pathology in the lumbar spine region. Based on his statement that "there was no pathology whatsoever on exam of the lumbar region, it can be inferred that he did not think maintenance medical treatment was necessary. (Exhibit A.)

31. Dr. Tyler spent a considerable amount of time evaluating this case and analyzing Claimant's medical records. Dr. Tyler stated in his report that the day before IME he "spent well over 7 ½ hours in review of these medical records the night before today as well all of this morning to prepare for this [DIME] this afternoon." (Ex A,

pg. 2.) Although Dr. Tyler indicated that most of the medical records he reviewed were related to Claimant's 2016 claim, which he thought was still open, the salient point is that Dr. Tyler spent a significant amount of time critically reviewing Claimant's medical records in order evaluate this case and formulate his ultimate opinions and conclusions. Therefore, based on the totality of the evidence presented in this case, the ALJ finds Dr. Tyler's findings and conclusions to be highly credible and persuasive.

32. On May 1, 2018, Respondents filed an FAL which was consistent with Dr. Tyler's DIME report. The FAL indicated Claimant reached MMI on March 10, 2016, and that Claimant suffered zero impairment. Respondents also denied liability for maintenance medical treatment.

33. On August 1, 2018, Dr. John Hughes performed an independent medical examination at Claimant's request and Dr. Hughes prepared a report. Dr. Hughes agreed with Dr. Miller and Dr. Tyler that Claimant reached maximum medical improvement. Dr. Hughes "disagreed" with Dr. Miller and Dr. Tyler that there was no evidence of permanent impairment of the lumbar spine stemming from Claimant's work-related injuries of December 19, 2015, and Dr. Hughes rated Claimant with a 15% whole person impairment. Dr. Hughes admitted in his report, however, that his disagreement was a matter of opinion: "It is my opinion that Ms. Gries has a permanent lumbar spine permanent impairment." Dr. Hughes did not indicate that Dr. Tyler or Dr. Miller erred or made a mistake in determining Claimant did not suffer a ratable impairment under the AMA Guides. (Exhibit K.)

34. Claimant testified at hearing. She reported ongoing low back symptoms that remain similar to symptoms at the time of maximum medical improvement. Claimant admitted she did not miss time from work because of her injuries. Claimant admitted that she treated with multiple providers and that she told them all, including Dr. Tyler, about the nature and extent of her symptoms.

35. Claimant failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Tyler that Claimant reached MMI on March 10, 2016, with a 0% permanent impairment rating for her December 19, 2015, admitted industrial injury.

36. There is a lack of objective findings to support Claimant's subjective pain and radicular/neurological complaints. Moreover, the ALJ does not find Claimant to be reliable or credible regarding the onset of her symptoms, the extent of her symptoms, the duration of her symptoms, or the cause of her symptoms.

37. Claimant testified that she has obtained and paid for some chiropractic treatment on her own to relieve her from the effects of her industrial injury. Claimant also testified that she stopped treating with Drs. Miller and Kawasaki upon suffering another work related injury in 2016 for which she is seeing Dr. Mason.

38. Claimant testified that she would like to receive additional chiropractic treatment and medications, (i.e., medication management) which was recommended by Drs. Miller and Kawasaki when she was placed at MMI. However, the ALJ finds

that Claimant has failed to establish by a preponderance of the evidence that such treatment is reasonable and necessary to relieve Claimant from the effects of her industrial injury. The ALJ finds that Drs. Miller and Kawasaki are prescribing treatment for subjective symptoms which are neither reliable nor credible.

39. Respondents have also established by a preponderance of the evidence that Claimant is not entitled to maintenance medical treatment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of Claimant nor in favor of the rights of Respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met their respective burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant produced clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of John Tyler, M.D., that Claimant suffered a 0% permanent impairment rating due to her December 19, 2015, work injury.

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

In *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000), the court noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has even upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002). These cases embody the principle that the AMA Guides require the rating physician to use their medical expertise and clinical judgment in "analyzing the history and the clinical and laboratory findings to determine the nature and extent of the loss, loss of use of, or derangement of the affected body party, system or function," in order to determine whether the work accident caused any ratable impairment pursuant to the AMA Guides. (*See* AMA Guides, pg. 7.)

Consistent with the above principles, the Colorado Division of Workers' Compensation Impairment Rating Tips (Impairment Rating Tips) provide that permanent impairment ratings are only warranted when a specific diagnosis and objective pathology can be identified. See Desk Aid #11, General Principles 1. The Impairment Rating Tips summarize that:

> The existence of [the preceding] anatomic findings cannot be considered pathological unless there are clear physiologic ties and correlation with clinical findings in an individual patient. The mere presence of these changes is not a sufficient justification to attribute correlation to a non-specific spinal complaint. The physician should not rate findings by diagnostic imaging which have not been clearly defined as contributing significantly to the patient's condition. . . . Due to discrepancies between x-ray findings and pathological conditions, it is incumbent on physicians to carefully examine and apply other diagnostic tests as appropriate to identify the

> true pain generators in a patient and plan their treatment and impairment rating accordingly.

See Desk Aid #11, Spinal Rating 7.[1]

Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As found, Claimant failed to produce clear and convincing evidence to overcome the DIME opinion of Dr. Tyler that Claimant suffered 0% permanent impairment as a result of her December 19, 2015 admitted industrial injury. Dr. Tyler took a history from Claimant, examined the Claimant, reviewed the medical records, and agreed with Dr. Miller that Claimant reached maximum medical improvement on March 10, 2016, and that Claimant suffered 0% impairment. Dr. Tyler found no objective evidence of any acute trauma to the lumbar spine and no pathology whatsoever on exam of the lumbar region. Dr. Tyler noted Claimant was moderately overweight and that her pain was due to her deconditioned state. Dr. Tyler's conclusions are supported by Claimant's treating physicians Dr. Miller, Dr. Kawasaki, and Dr. Mason who was treating Claimant for a different work injury – but still rendered an opinion regarding impairment in this case. Furthermore, MRIs and electrodiagnostic testing were normal. The persuasive medical records thus corroborate Dr. Tyler's permanent impairment determination.

In contrast, Claimant testified at hearing and Claimant only produced Dr. Hughes' medical opinion evidence contradicting the opinions of the treating physicians and Dr. Tyler's DIME determination. Dr. Hughes merely "disagreed" with Dr. Miller and Dr. Tyler that there was no evidence of permanent impairment of the lumbar spine stemming from Claimant's work-related injuries of December 19, 2015, and Dr. Hughes did not credibly and persuasively report that Dr. Tyler or Dr. Miller erred or made a mistake. The mere difference of medical opinion in this case does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. Also, Claimant's testimony at hearing did not constitute clear and convincing evidence to overcome the opinion of the DIME physician. As found, there is a lack of objective findings to support Claimant's subjective pain and radicular/neurological complaints. Moreover, the ALJ did not find Claimant to be reliable or credible regarding the onset, extent, duration, or cause of her symptoms. As found, Claimant provided numerous scenarios regarding how she hurt her back and such variance combined with a lack of objective findings to support her reported symptoms and complaints diminished Claimant's credibility and

[1] See also Desk Aid #11, Spinal Rating, *Updated May 2018.*

reliability as well as the opinions of her treating providers who relied on the history and statements provided by Claimant in making diagnoses and treatment recommendations.

Claimant contends in her post hearing submission that Dr. Tyler misapplied the AMA Guides by requiring Claimant to establish that she suffered a "significant" injury in order to qualify for a rating. The ALJ does not interpret Dr. Tyler's report in the same manner. Dr. Tyler stated in his report the following:

> There never was any direct trauma to the lumbar spine or its surrounding structures, that I can see based on review of these records, of any significance. The MRI scans she had of the lumbar spine do not show any acute trauma to the lumbar spine that would correlate with the trauma she suffered at the time of work dating back to December 19, 2015. Her exam on today's date shows no pathology whatsoever in the lumbar spine region…

The ALJ interprets Dr. Tyler's conclusions, when taken in context with the entire medical record, to mean that he concluded Claimant suffered a compensable injury at work but yet the incident did not result in any ratable impairment pursuant to the AMA Guides.

Claimant also appears to contend in her post hearing submission that Dr. Tyler erred by not providing Claimant a rating based on Claimant's subjective complaints of pain and radicular symptoms, her presentation of limited range of motion in her lumbar spine, and her receipt of medical treatment. The ALJ is not persuaded by this argument either. As found, Claimant was not a reliable historian regarding the onset, extent, duration, and cause of her symptoms. Therefore, the provision of medical treatment in response to her unreliable complaints, symptoms, and any presentation of limited range of motion of her lumbar spine, does not equate to clear and convincing evidence that Dr. Tyler erred in not providing Claimant an impairment rating under the AMA Guides.

Accordingly, the ALJ concludes that Claimant failed to produce unmistakable evidence free from serious or substantial doubt, (i.e., clear and convincing evidence), that Dr. Tyler's impairment determination was incorrect.

II. Whether Claimant is entitled to reasonable and necessary medical maintenance benefits.

a. Whether Claimant established by a preponderance of the evidence that she is entitled to any specific maintenance medical treatment.

Where the Respondents file an FAL admitting for maintenance medical treatment pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), this does not preclude them from later contesting their liability for a particular treatment. Rather, when the Respondents contest liability for a particular medical benefit, the Claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury. *See Grover v. Industrial Commission*, 759 P.2d at 712; *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

In this case, Respondents filed an FAL on December 13, 2017, and admitted for maintenance medical treatment with "the authorized treating physician that is reasonable, necessary and related to the compensable injury." Therefore, Claimant is entitled to maintenance medical treatment that is reasonable, necessary, and related to relieve Claimant from the effects of her industrial injury or prevent further deterioration. *See Grover v. Industrial Commission, supra*; *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992).

The ALJ concludes, however, that Claimant failed to establish by a preponderance of the evidence that she is entitled to any specific medical treatment which has been recommended by an authorized treating physician and denied by Respondents. Dr. Miller did recommend maintenance medical care of six sessions of chiropractic care and for Claimant to follow-up with Dr. Kawasaki for medications. And, Claimant testified that she sought chiropractic care on her own through a chiropractor other than the one she was seeing under this claim. She also testified that she stopped seeing Dr. Kawasaki once she suffered another injury in 2016 and began treating with Dr. Mason and agreed to only get medication from Dr. Mason. Therefore, Claimant has not sought additional medication management from Dr. Kawasaki under this claim since that time. Based on the totality of the evidence, including the lack of any objective findings to support Claimant's subjective complaints, the failure of Claimant to provide reliable information regarding the onset, extent, duration, and cause of her symptoms, the opinion of Dr. Mason, and the opinion of Dr. Tyler in which he indicated there was no indication of any pathology whatsoever regarding Claimant's lumbar spine, the ALJ concludes that specific maintenance medical treatment in the form of chiropractic treatment or medication management is not reasonable and necessary to relieve Claimant from the effects of her industrial injury or prevent deterioration.

b. <u>Whether Respondents established by a preponderance of the evidence that Claimant is not entitled to maintenance medical treatment.</u>

Where the Respondents attempt to modify an issue that previously has been determined by an admission, they bear the burden of proof for such modification. *See* Section 8-43-201(1), C.R.S.; *see also Barker v. Poudre School District*, W.C. No. 4-750-735 (March 7, 2012). Here, because Respondents had previously filed an FAL admitting for maintenance medical benefits, under § 8-43-201, C.R.S., Respondents had the burden to show by a preponderance of the evidence why they are no longer responsible for maintenance medical benefits in general.

In this case, Respondents, have met their burden. As set forth above, based on the totality of the evidence, including the lack of any objective findings to support Claimant's subjective complaints, the failure of Claimant to provide reliable information regarding the onset, extent, duration, and cause of her symptoms, and the opinion of Dr. Mason and Dr. Tyler that there was no evidence of any lumbar pathology whatsoever, the ALJ concludes that Respondents have established by a preponderance

of the evidence Claimant is not entitled to maintenance medical treatment that is reasonable, necessary, and related to relieve Claimant from the effects of her industrial injury or prevent further deterioration. *See Grover v. Industrial Commission, supra; Stollmeyer v. Industrial Claim Appeals Office, supra; Milco Construction v. Cowan, supra.*

Therefore, the ALJ concludes Respondents have established by a preponderance of the evidence that Claimant is not entitled to a general award of maintenance medical treatment.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant failed to overcome the opinion of the DIME physician, Dr. Tyler, regarding the Claimant's impairment rating by clear and convincing evidence. Therefore, Dr. Tyler's 0% impairment rating for the lumbar spine is binding.

2. Claimant is not entitled to maintenance medical treatment.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 17, 2018.

Denver, CO 80203

ISSUES

I. Whether Respondents established by a preponderance of the evidence that they are entitled to withdraw either their final admission of liability (FAL) which admitted for maintenance medical treatment.

II. If Respondents, failed to carry their burden of proof, whether Claimant established, by a preponderance of the evidence, that her need for continued maintenance medical care is reasonable, necessary and related to her January 27, 1996 industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. On January 27, 1996, Claimant sustained an admitted work injury to her left buttock, and low back.

2. Claimant underwent a course of medical treatment for her injuries.

3. Ultimately, Claimant was placed at Maximum Medical Improvement (MMI) on or about October 1996, per the Division Independent Medical Examination performed by Alan B. Lichtenberg, M.D. on April 7, 2005.

4. Respondents filed a Final Admission of Liability admitting for maintenance medical benefits.

5. Thereafter, Respondents reached a full and final settlement agreement with Claimant regarding indemnity benefits. All issues under the claim closed with the exception of maintenance medical care. Claimant has received post MMI treatment to include injection therapy, physical therapy, massage therapy and prescription medications. Claimant testified that she continued to receive treatment after the aforementioned settlement with Dr. Timothy Hall.

6. Medical record review indicates that Dr. Hall provided maintenance treatment though 2016. A report from November 1, 2016 reflects that Dr. Hall provided Claimant with Botox injections. Claimant was to follow-up in one month; however, Claimant failed to do so.

7. On March 28, 2018, Claimant returned to Dr. Hall who indicated that he had last evaluated her on November 1, 2016. Based upon this history, the ALJ finds that there was a hiatus in care lasting approximately 16 months. Claimant returned to Dr. Hall on this date reporting continued depression, interrupted sleep, persistent anxiety and ongoing pain. Dr. Hall noted that Claimant was not taking any medication prescribed through his office, noting further that Claimant had been taking antidepressants, prescribed by a psychiatrist in Pueblo; however, was no longer taking them because Insurer had stopped paying for them and it was financially draining for her to cover the cost personally. Dr. Hall recommended repeat Botox injections as they "helped quite a bit with local symptoms" in the past.

8. Claimant testified that she continues to receive treatment from her psychiatrist, Dr. Brett Fouss, whom she sees about every two months. Dr. Fouss prescribes and Claimant is currently taking the following medications: Fetzima (antidepressant); Ambien (sleep medication); and Buspar (anxiety medication). Claimant testified that approximately 8 months prior to the hearing forming the basis for this order, Insurer stopped paying for these medications. According to Claimant, sudden withdrawal from the aforementioned medications poses an increased risk for stroke and death. Consequently, she testified that she refills the medications at her own cost

9. Claimant testified that she paid $64.95 cash for each Ambien prescription. Tr. 29:3-12. Claimant further testified that she paid $443.96 for each Fetzima prescription. Claimant also testified that she has not filled her prescription for Buspar, as Dr. Fouss provides her with samples.

10. On February 24, 2017, Claimant underwent an Independent Medical Examination (IME) with Dr. Carlos Cebrian at Respondents request. Dr. Cebrian testified as an expert in occupational medicine with accreditation as a Level II physician by the Colorado Department of Labor. Dr. Cebrian testified that he was experienced in performing causation assessments.

11. Dr. Cebrian conducted an extensive medical record review of Claimant's past treatment, to include review and analysis of Dr. Stephen Moe's psychiatric IME, Dr. Bart Goldman's IME, and Dr. Alan Lichtenberg's Division IME and Dr. Neil Pitzer's IME.

12. On November 20, 2001, Stephen A. Moe, M.D., conducted a psychiatric IME of Claimant. Dr. Moe opined that Claimant's "experiences of physical pain and depression are not the result of the injury on 1/27/96 but are instead due to causes entirely apart from injuries from her fall." According to Dr. Moe, Claimant's chronic pain disorder was the likely result of "long standing characterological deficits and/or pre-existing anxiety or mood disorder." Claimant has a history of depression and anxiety predating her industrial accident. She reported being diagnosed with anxiety and depression at age 25 to Dr. Cebrian.[1] He explained that with chronic pain disorders a minor injury similar

[1] Claimant confirmed her prior history of depression and anxiety, testified that she was first diagnosed in 1982 or 1983.

to the type Claimant experienced[2] "results in chronic symptoms and impairment not because of the initial injury but because of the pre-existing mental state of the person injured."

13. Dr. Moe opined that "[o]nce the pattern seen with Ms. Riccillo . . . [becomes] entrenched it is very difficult to reverse." He noted further that Claimant had identified with the illness role and would not improve "spontaneously." He explained that only with "firm limits on future treatment that in essence force her to confront her reluctance to return to work will she stand any chance of reversing her regression." Based upon the evidence presented, Claimant continued to treat actively for years following Dr. Moe's 2001 IME without lasting improvement. Moreover, she never returned to work.

14. On October 2, 2002, Dr. Goldman conducted an IME of Claimant. Dr. Goldman opined that Claimant's work-related diagnoses included a lumbar strain and piriformis syndrome. Dr. Goldman further opined that Dr. Moe's recommendations appeared accurate. Dr. Cebrian corroborated Dr. Goldman's opinions and testified that Dr. Goldman highlighted Claimant's chronic pain disorder with psychological factors affecting her physical condition as a non-work-related condition. Tr. 57:12-22.

15. Claimant also underwent an IME with Dr. Neil L. Pitzer on January 21, 2014. Dr. Pitzer opined that Claimant's work-related diagnosis was left buttock myofascial pain. Dr. Cebrian testified that Dr. Pitzer indicated that there was no objective evidence to support Claimant's wide spread pain complaints.

16. On April 7, 2005, Claimant underwent a Division IME with Dr. Alan Lichtenberg. Dr. Lichtenberg opined that Claimant's work-related diagnoses were low back pain, left buttocks pain, and left hip pain due to the slip and fall. Dr. Lichtenberg directly supported Dr. Moe's conclusions, noting that Claimant's "psychiatric diagnosis of pain disorder is the cause of her continuing chronic pain…In my opinion and the other IME doctors, psychiatric pain disorder is a pre-existing psychiatric condition."

17. As noted above, Dr. Cebrian most recently completed an IME of Claimant on February 24, 2017. After completing his records review and physical examination, Dr. Cebrian opined that while Claimant "may have had some psychiatric symptoms and diagnoses related to the 1/27/1996 claim, including depression and anxiety, her psychiatric symptoms are no longer proximately related to the 1/27/1996 claim." He opined that Claimant's ongoing complaints "are outside of the reasonable medical expectation for her claim-related conditions." He concluded that Claimant's primary condition was chronic pain disorder as pointed out by multiple physicians. He reiterated that "chronic pain disorders and somatic symptom disorders are not injury-related conditions" but rather, maladaptive coping mechanisms. He found no mechanical lesion that correlated with Claimant's ongoing symptoms. Accordingly, he concluded by indicating that there was no need for ongoing medical treatment under the claim while at

[2] Dr. Moe opined that based on her medical records, Claimant did not sustain anything "more than contusions" as a result of the January 27, 1996, incident.

the same time stressing that Claimant's "prognosis [was] poor while litigation and enabling medical support continues."

18. Dr. Cebrian largely repeated the opinions expressed in his IME report during his testimony at hearing. He testified that Claimant likely suffered a temporary aggravation of her pre-existing depression and anxiety which was appropriately treated under the workers' compensation claim. While he agreed that Claimant required continued medications to manage her depression and anxiety, Dr. Cebrian opined that the need for such prescription medication(s) and/or mental health treatment were unrelated to the 1996 industrial injury. Rather, Dr. Cebrian testified that Claimant's residual treatment needs are related to her non-work related chronic pain disorder and somatization. Claimant contends that her ongoing symptoms may be related to a head injury suffered during the 1996 accident.

19. The ALJ credits the content of the numerous IME reports issued in this case, as well as the opinions of Dr. Cebrian to find that Claimant likely suffers from non-work related somatization causing a chronic pain disorder. The evidence presented persuades the ALJ that Claimant's continued physical and psychiatric symptoms are probably emanating from an exaggerated response to her 1996 injury which has, over the ensuing years, been reinforced by the inadvertent actions of the medical providers attending to her.

20. Based upon the evidence presented, the ALJ is convinced that Claimant's current symptoms and need for continued treatment, including prescription medication are no longer related to her 1996 industrial injury.

21. The evidence presented also persuades the ALJ that ongoing medical treatment under this claim should be terminated to stop what the ALJ finds has been an over reliance on medical treatment providers buttressing Claimant's illness-role identification and reinforcing the ongoing manifestation of her non-work related somatoform/chronic pain disorder.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S.* In this case, Claimant must prove her entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. *Section 8-43-201(1), C.R.S.* Rather, a workers' compensation claim is to be decided on its merits. *Id.*

B. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge need not address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

C. The need for medical treatment may extend beyond the point of maximum medical improvement where a claimant requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*." Even with a general award of maintenance medical benefits, respondents retain the right to dispute whether the need for medical treatment was caused by the compensable injury or whether it was reasonable and necessary. *See Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003)(a general award of future medical benefits is subject to the employer's right to contest compensability, reasonableness, or necessity).

D. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo. App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, Claimant argues that she is entitled to ongoing maintenance medical treatment due to her continued complaints of depression, anxiety, and pain. Claimant contends that she suffered a severe head injury and subsequently developed psychological symptoms as a consequence. However, Claimant's treatment records establish a pre-existing history of anxiety, depression and chronic pain. Moreover, the claim related diagnoses in this case did not include a "severe head injury". In fact, multiple IME physicians diagnosed Claimant with a lumbar strain and left hip strain without reference to any head injury. Dr. Cebrian testified that he agreed with the previous IME physician's that the claim related diagnoses in this case include a lumbar strain, left hip contusion and myofascial pain. He also testified that these conditions resolved with time, an opinion the ALJ concludes is supported, in part, by Claimant's absence from treatment with Dr. Hall for approximately 16 months. Finally, Dr. Cebrian testified that Claimant's need for ongoing treatment is no longer reasonable, necessary, or related to the work-related conditions caused by her January 27, 1996 injury. Dr. Cebrain's testimony is supported by the opinions of Drs. Moe and Lichtenberg. In fact, when the evidence is viewed in its totality, it supports a conclusion that Claimant suffers from a somatic symptom disorder which is not injury related.

E. It is well settled that where respondents file a final admission admitting for maintenance medical benefits pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988), respondents are not precluded from later contesting liability for a particular treatment. *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Moreover, when respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury and is related to that injury. *See Grover v. Industrial Commission*, *supra; Snyder v. Industrial Claim Appeals Office*, *supra.* Where, however, respondents attempt to modify an issue that previously has been determined by an admission of liability, they bear the burden of proof for such modification. *Section 8-43-201(1), C.R.S.*; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Section 8-43-201(1), C.R.S. was added to the statute in 2009 and provides, in pertinent part:

> …a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order shall bear the burden of proof for any such modification. (2) The amendments made to subsection (1) of this section by Senate Bill 09-168, enacted in 2009, are declared to be procedural and were intended to and shall apply to all workers' compensation claims, regardless of the date the claim was filed.

F. The principal aim of the 2009 amendment to § 8-43-201(1), C.R.S. was to reverse the effect of *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). That decision held that while the respondents could move to withdraw a previously filed admission of liability, the respondents were not actually assessed the burden of proof to justify that withdrawal. The amendment to § 8-43-201(1), C.R.S. placed that burden on the respondents and made such a withdrawal the procedural equivalent of a reopening. The statute serves the same function in regard to maintenance medical benefits. The Supreme Court in *Grover v. Industrial Commission*, 759 P.2d 705, 712 (Colo. 1988), provided that after the respondents had admitted for maintenance medical benefits "the employer retains the right to file a petition to reopen, … for the purpose of either terminating the claimant's right to receive medical benefits or reducing the amount of benefits available to the claimant." The amendments to § 8-43-201(1), C.R.S., then, require that when the respondents seek a ruling at hearing that would serve as "terminating the claimant's right to receive medical benefits," they are seen as seeking to reopen that admission and the burden is theirs. In *Salisbury v. Prowers County School District*, *supra,* the Industrial Claims Panel held that where the effect of the respondents' argument is to terminate previously admitted maintenance medical treatment, the respondents have the burden, pursuant § 8-43-201(1), C.R.S., to prove that such treatment is not reasonable, necessary or related to the claimant's industrial injury. In this case, Respondent is seeking to withdraw their admission of liability to provide ongoing maintenance care based upon Dr. Cebrain's opinion that Claimant suffers from a somatic symptom disorder which is not injury related. While Claimant may require treatment for ongoing physical and psychiatric symptoms, the evidence

presented leads the ALJ to conclude that this treatment need is probably emanating from the continued manifestation of her non-work related chronic pain disorder that has been reinforced over the years by well-intended, but ill-advised attention from various medical providers. As found, the ALJ credits the testimony and opinions of Dr. Cebrian in conjunction with the IME reports of Drs. Moe and Lichtenberg to conclude that Claimant's need for ongoing treatment/medication to address persistent pain and continued depression and anxiety is no longer necessary to cure and relieve her of the effects of her industrial injuries. Indeed, the evidence presented persuades the ALJ that Claimant's current need for treatment is unrelated to her 1996 industrial injury. Accordingly, the ALJ concludes that Respondents have convincingly established that Claimant has no ongoing treatment need related to her 1996 injury, that all maintenance medical benefits should be terminated and that they be allowed to withdraw their admission for the same.

ORDER

It is therefore ordered that:

1. Respondents request to withdraw their FAL admitting for maintenance medical benefits is granted.

2. Claimant's request for continued care, including prescription medication to treat her ongoing depression and anxiety is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 19, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

STIPULATION

- The parties reserve the issue of authorized medical benefits for future determination.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on September 21, 2017.

2. Whether Respondents established by a preponderance of the evidence that Claimant is an independent contractor as defined in Section 8-40-202(b)(II), C.R.S. of the Act.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits beginning September 22, 2017, and ongoing.

4. Whether Claimant has established by a preponderance of the evidence that Dr. David Yamamoto is the authorized treating provider (ATP) as designated by Claimant on March 8, 2018.

FINDINGS OF FACT

1. Claimant began working for Employer on May 20, 2017. He was hired by Jeffery Radcliff as a lead painter. Mr. Radcliff is the owner and operator of Employer. There was no contract for employment. There was no anticipated end of Claimant's employment. Claimant was not hired to do a specific painting job. Claimant and Mr. Radcliff discussed becoming partners and owners of Employer.

2. Mr. Radcliff hired Claimant on an hourly basis. After it became difficult to calculate Claimant's hours each week, Mr. Radcliff began to pay Claimant a salary each week. Claimant began his employment making $20 to $25 per hour and subsequently was placed on salary making $1000 per week and a 1% bonus for each job.

3. Claimant was paid by personal check from PMR Services. Employer did not make payment to a company or other entity other than Claimant himself.

4. Mr. Radcliff paid Claimant two $800 checks after Claimant was injured and in the hospital. Claimant was paid a salary and not on a per job basis.

5. Claimant was designated as a 1099 non-employee for payroll purposes. Claimant credibly testified that he was thus designated because Mr. Radcliff did not have a payroll company set up to handle the payroll. Claimant credibly testified that he wanted to be an employee with a W-2 designation.

6. Mr. Radcliff did not contract with Joe Lutz Accounting to handle his payroll until after Claimant was hired.

7. Mr. Radcliff testified that Claimant requested to be a 1099 non-employee because Claimant did not want the state of Illinois to garnish his wages due to a child support lien. However, to the contrary, Claimant testified that he did not request the 1099 status. Claimant was deemed more credible on this topic than Mr. Radcliff. Claimant testified that the child support lien from Illinois does not reflect his true obligation. Claimant testified that he is working to fix the child support issue in Illinois.

8. Mr. Radcliff was the person at Employer who made the determination that Claimant was an employee. Mr. Radcliff testified that the only reason he did not consider Claimant an employee was because of Claimant's 1099 status. There was no other indication that Claimant was not an employee. Mr. Radcliff and Claimant were discussing becoming partners in Employer's business.

9. Mr. Radcliff determined when Claimant worked. Mr. Radcliff determined the number of hours Claimant worked each day and the number of days Claimant worked each week. Claimant did not have control over his work schedule.

10. Claimant was in the exclusive employ of Employer. Claimant did not perform work for another company. Claimant did not operate separate operations.

11. Claimant was not terminated from Employer.

12. Mr. Radcliff ordered business cards for Claimant. The cards were sent directly to Mr. Radcliff and then supplied to Claimant. The business cards identified Claimant's position at Employer as a Project Manager. Mr. Radcliff procured the business cards for Claimant so that Claimant could perform work on behalf of Employer, such as, giving quotes and estimates.

13. Prior to his employment with Employer, Claimant purchased a general liability policy through State Farm for a specific commercial painting job on which he worked. When Claimant began working for Employer, Mr. Radcliff informed Claimant he no longer needed the insurance policy. Claimant cancelled the policy effective July 13, 2017.

14. A general liability insurance policy was not a requirement of employment with Employer.

15. Employer arranged and paid for Claimant to attend training sponsored by Employer. Claimant completed the training on or about July 13, 2017. Claimant was given a plaque to commemorate the completion of his training.

16. When Claimant returned from training, he continued to work in a capacity of project manager. His job duties included: supervising other employees, contacting potential clients, performing job estimates for potential clients, interviewing candidates for employment, extending offers of employment, reviewing payroll records, and firing employees.

18. Claimant possessed the resumes of potential employees as part of his position as Project Manager.

19. Mr. Radcliff was directly in charge of Claimant's work for Employer. Mr. Radcliff the final say on when a job was done to the quality expected by Employer. Mr. Radcliff held Claimant to upholding the Employer's standard for work quality.

20. Employer provided the tools required to perform the jobs. Claimant provided his own hand brushes and drill because he preferred them to the tools Employer offered.

21. Claimant drove his personal truck for work. Employer outfitted Claimant's truck with magnets advertising Employer's name and contact information.

22. Employer maintains a website to instruct the public as to its services and to solicit business. That website states as part of Employer's promise to consumers, Employer "Only use in-house employees, never sub-contractors."

23. Mr. Radcliff testified that Employer does not have a policy against hiring independent contractors. He testified that it was not his practice to hire independent contractors. He also testified that he knew other franchises that employed independent contractors. This testimony is not credible as it contradicts the information on the Employer's website and other credible evidence supplied by Claimant concerning his employment status.

24. On September 21, 2017, Claimant was carrying a hose up a ladder when the ladder dislodged and slipped. Claimant fell from the second story on to the first story roof. Claimant's left leg was entangled in the ladder as he fell. Claimant suffered a compound fracture of his lower left leg and an injury to his left hand.

25. Mr. Radcliff called emergency services. Claimant was transported by ambulance from the work site to a landing area. Claimant was then taken by flight for life to St. Anthony's hospital.

26. Claimant underwent two surgeries on his left ankle. He was in the hospital for five days. Claimant continued to receive treatment from the surgeons at St. Anthony's.

27. On October 3, 2017, Claimant suffered several minor and one major heart attack. The heart attacks were a result of Claimant not being able to afford the blood thinning medication he was prescribed after surgery.

28. Claimant was in the hospital for three days recovering from the heart attacks.

29. Claimant has continued to receive medical care for his left ankle, left hand, left hip, and the heart issues.

30. Claimant has not returned to work since the date of his accident because he is unable to work. He has not been released to return to work by his doctors.

31. Neither Employer nor Insurer sent Claimant a designated provider list as required by WCRP 8-2.

32. Claimant designated Dr. David Yamamoto as his ATP on March 8, 2018. Respondents denied the designation of Dr. Yamamoto despite not having provided Claimant with the names of authorized providers.

33. The ALJ does not find Mr. Radcliff's testimony regarding Claimant's employment status persuasive. Claimant's payroll status was as a 1099 non-employee. However, Claimant did not request that status. Mr. Radcliff had Claimant as 1099 status because he did not yet have a payroll company. Mr. Radcliff considered Claimant an employee in every other aspect of their employment relationship besides the payroll designation.

34. The ALJ finds Claimant's testimony to be credible. Claimant was an employee of Employer. Claimant did not request 1099 status. Claimant worked as a manager and supervised other employees. Claimant was given significant responsibilities. Claimant was given extensive training in Employer's standards and practices. Claimant was paid personally. Claimant was paid at an hourly rate and then paid a salary. Claimant was supervised by Mr. Radcliff as to work schedule and quality of work. Claimant worked exclusively for Employer without a designation of an end of employment. Claimant did not enter into a written contract with Employer for a specific amount of work or duration. Employer provided tools and materials for Claimant to perform the job. Furthermore, Employer had a policy against using independent contractors for its painting jobs as stated on its website.

36. It is found that Claimant was an employee at the time of the injury. Following Claimant's attendance at corporate training in July 2017, Claimant was fully integrated in his responsibilities, duties, manner of work, supervision, and manner of payment.

CONCLUSIONS OF LAW

General legal principles

1. The purpose of the Act, Section 8-40-101, C.R.S. *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the alleged injury he was performing service arising out of and in the course of the employment, and that the alleged injury was proximately caused by the performance of such service. See Section 8-41-301(1)(b) and (c), C.R.S. The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected,

unusual, or undesigned occurrence." See Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Soto-Carrion v. C & T Plumbing, Inc.*, W.C. No. 4-650-711 (ICAO February 15, 2007). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). As found, Claimant established, by a preponderance of the evidence, that he suffered a compensable injury on September 21, 2017. The work-related accident caused Claimant's left ankle injury, left hip injury, left hand injury, and heart attacks. Claimant's testimony regarding the injury is found credible and persuasive.

Employment Status

The Act defines employee as "[e]very person in the service of any person, association of persons, firm or private corporation … under any contract of hire, express or implied." Section 8-40-202(1)(b), C.R.S. It continues, "any individual who performs services for pay for another shall be deemed to be an employee." Section 8-40-202(2)(a), C.R.S. The Act further defines nine criteria to prove that a person is not an employee and instead should be deemed to be an independent contractor. Section 8-40-202(2)(b)(II), C.R.S. In *Industrial Claims Appeals Office v. Softrock Geological Services*, 325 P.3d 560 (Colo. 2014), the supreme court held that the question whether an individual is engaged in an independent trade, occupation, profession, business can only be resolved by applying the totality of the circumstances test to evaluate the relationship between an employer and the putative employee. The court held that there is no single dispositive factor or set of factors.

As found, Respondents failed to establish by a preponderance of the evidence that Claimant is an employee of Employer. The evidence established that Claimant worked exclusively for Employer without a designation of an end of employment. Claimant was required to perform work to the quality standard set by Mr. Radcliff and Employer. Claimant was paid at an hourly rate and then paid a salary. Claimant did not enter into a written contract with Employer. Employer provided more than minimal training for Claimant by sending Claimant to the corporate offices for training. Employer provided tools and materials for Claimant to perform the job. Mr. Radcliff dictated the time of performance of Claimant's work; Claimant did not negotiate with Mr. Radcliff nor Employer regarding completion of the work. Mr. Radcliff and Employer paid Claimant personally instead of making checks payable to another entity. Mr. Radcliff and Claimant did not work under separate operations, and they discussed becoming partners in Employer.

Temporary Total Disability (TTD)

To establish entitlement to temporary disability benefits, the claimant must prove that the industrial injury has caused a "disability" and that he has suffered a wage loss that, to some degree, is the result of the industrial disability. Section 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick,* 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 (ICAO, December 18, 2000). There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish his temporary disability. *See Lymburn v. Symbosis Logic*, 952 P.2d 831 (Colo.App.1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." Id. Once the prerequisites for TTD have been met; e.g., no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring and there is no actual return to work, TTD benefits are designed to compensate for a temporary wage loss. *See Eastman Kodak Co. v. Industrial Commission*, 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch*, 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant was temporarily and totally disabled from his September 21, 2017 injury. Claimant continues to be disabled from his usual employment as a result of the September 21, 2017, injuries.

Medical Benefits
Authorized Treating Physician

Respondents are not liable for medical treatment unless it is rendered for an injury "proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment." Section 8-41-301(1)(c), C.R.S. Authorization refers to the physician's legal authority to treat the injury at respondents' expense, and not necessarily the reasonableness of the particular treatment. *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Section 8-43-404(5)(a)(I)(A), *supra*, allows the employer the right in the first instance to designate a list of at least four authorized treating physicians from which the injured worker can select a provider; the right to select however passes to a claimant where the employer fails to designate in the first instance. *Rogers v. Industrial Claim Appeals Office*, 746 P.2d 565 (Colo. App. 1987).

Furthermore, WCRP 8-2(A) states, "[w]hen an employer has notice of an on-the-job injury, the employer or insurer shall provide the injured worker with a written list of designated providers." The rule continues, "[a] copy of the written designated provider list must be given to the injured worker in a verifiable manner within seven (7) business days following the date the employer has notice of the injury" (WCRP 8-2(A)(1). WCRP 8-2(E) states, [i]f the employer fails to supply the required designated provider list in accordance with this rule, the injured worker may select an authorized treating physician or chiropractor of their choosing."

As found, Employer did not timely provide Claimant with a designated provider list. Claimant designated Dr. David Yamamoto as the ATP. Dr. David Yamamoto is Claimant's ATP.

ORDER

1. Claimant established by a preponderance of the evidence that he sustained a compensable injury on September 21, 2017.

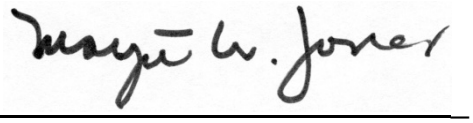
2. Respondents failed to establish that Claimant is an independent contractor as defined in Section 8-40-202(b)(II), C.R.S.

3. Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits beginning September 22, 2017, and continuing ongoing.

4. Claimant established by a preponderance of the evidence that Dr. David Yamamoto is the authorized treating provider (ATP) as designated by Claimant on March 8, 2018.

5. Any issues not determined in this decision are reserved for future determination.

DATED: October 19, 2018



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see Section 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he sustained an injury arising out of and in the course and scope of his employment with the employer on July 28, 2017.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that the medical treatment he received was reasonable medical treatment necessary to cure and relieve him from the effects of the work injury.

- If the claimant proves a compensable injury, what was the claimant's average weekly wage (AWW)?

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits beginning July 29,2017 and ongoing.

- If it is found that that claimant is entitled to TTD benefits, whether the respondents have demonstrated by a preponderance of the evidence that the claimant is responsible for termination of his employment, thereby ending TTD benefits.

FINDINGS OF FACT

1. The claimant's date of birth is June 24, 2002. He began his employment with the employer on June 6, 2017 when he was 14 years old. The employer has both farm operations and ranch operations. The claimant was hired to work full-time as a seasonal farm laborer. On June 23, 2017, the claimant's position was changed to ranch operations.[1] The claimant was paid $15.00 per hour in both positions.

2. The claimant testified that he injured his back at work on July 28, 2017. The claimant testified that he was injured while he was moving tree branches, stumps, and rocks. This task involved loading the items onto a flatbed pickup truck and then unloading the same items into the employer's "burn pile".

3. The claimant testified that to reach and lift the materials off of the truck bed it was necessary for him to stand on his toes. The claimant further testified that while he was lifting a log off of the truck in this way, he turned and felt pops in his upper, middle, and lower back. The claimant testified that the incident occurred at approximately 11:30 a.m. The claimant also testified that after he felt the pops in his back he called out to his coworker, David, but his coworker did not respond. As a

[1] The parties provided conflicting testimony regarding the reason for the change to the claimant's position on June 23, 2017. The ALJ addresses testimony regarding those conflicts later in this order.

result, the claimant testified that he walked to Mr. O'Brien's office (which is located close to the burn pit) to report the incident to Mr. O'Brien. The claimant testified that Mr. O'Brien responded by stating "okay" and the claimant returned to work. The claimant completed the remainder of his scheduled shift on that date.

4. The claimant also testified that at the conclusion of his work day on July 28, 2017, Mr. O'Brien presented him with paperwork regarding the lifting incident. At that time, the claimant was also provided with a list of medical providers. From that list the claimant selected Doctors on Call.

5. On July 28, 2017, the claimant initially treated at Doctors on Call with Dr. Guy Kovacevich. Beginning on that date, Dr. Kovacevich was the claimant's authorized treating physician (ATP) for this workers' compensation claim. On July 28, 2017, the claimant reported to Dr. Kovacevich that he did not have prior back issues. The claimant testified that this is accurate. The claimant also testified that although he is a long time competitive skier, he did not have any long-term medical treatment for any skiing related injuries.

6. At that first medical treatment appointment on July 28, 2017, Dr. Kovacevich diagnosed the claimant with sprain of the ligaments in the lumbar spine and sprain of the ligaments in the thoracic spine. Dr. Kovacevich prescribed cyclobenzaprine and referred the claimant to physical therapy. In addition, Dr. Kovacevich restricted the claimant from all work.

7. The claimant returned to Dr. Kovacevich on August 1, 2017. At that time, the claimant had not begun his prescription medication and had not started physical therapy. Dr. Kovacevich's recommendations remained the same.

8. On August 4, 2017, the claimant requested a change of physician from Dr. Kovacevich to Colorado Mountain Medical.

9. On August 8, 2017, the claimant was again seen by Dr. Kovacevich. At that time, the claimant reported that his symptoms had worsened and he was having shaking and weakness in his hands and occasionally numbness in his feet. Dr. Kovacevich noted that the claimant's heightened complaints of pain and inability to function were not consistent with the mechanism of injury or findings on physical exams. Dr. Kovacevich ordered magnetic resonance image (MRI) scans of the claimant's cervical, lumbar, and thoracic spines. In addition, Dr. Kovacevich recommended laboratory screening to rule out inflammation or possible infection. However, the claimant and his mother declined the additional blood tests.

10. The claimant testified that Dr. Kovacevich "screamed" at him at the August 8, 2017 appointment. The claimant also testified that Dr. Kovacevich's behavior on August 8, 2017 was the reason he requested a change of physician.

11. The claimant also sought medical treatment at Mountain Family Health Centers on August 8, 2017. At that time, the claimant was seen by Diane Purse, PNP. In the medical record of that date, the reason for that medical visit is listed as back pain. At that visit, the claimant's mother asked Ms. Purse questions regarding the blood tests recommended by Dr. Kovacevich.

12. The claimant's request for a change of physician was successful and Dr. Eric Olson with Colorado Mountain Medical became the claimant's ATP on August 9, 2017. The claimant was first seen at Colorado Mountain Medical on August 10, 2017 by Andrea Hutchinson, NP-C. On that date, the claimant reported that following the July 28, 2017 incident he had swelling along his spine. He also reported that he was having numbness and tingling in his lower extremities with weakness in his arms and legs. In addition, the claimant reported difficulty sleeping because of the pain in his spine. Ms. Hutchinson diagnosed acute midline back pain and noted that the claimant had muscular spasm in the right thoracic paraspinous area. She also recommended MRIs of the claimant's cervical, thoracic, and lumbar spine as well as continuation of physical therapy.

13. The claimant returned to Colorado Mountain Medical on August 15, 2017 and was seen by Dr. Olson. At that time, the claimant reported pain in the upper thoracic, lower thoracic, and lumbar spine. The claimant also reported numbness in his feet, with tingling in his toes. Dr. Olson opined that it was "highly unlikely that there is a discogenic injury", but agreed that MRIs would be reasonable.

14. On August 15, 2017, an MRI of the claimant's lumbar spine showed mild bilateral neural foraminal and lateral recess stenosis at the L4-L5 level secondary to a mild circumferential disc bulge with mild contact of the descending left L5 nerve roots in the lateral recess.

15. On August 16, 2017, the claimant was seen by Dr. Scott Raub at Vail Summit Orthopaedics. At that time, the claimant reported back pain with pain down both arms and both legs. The medical record of that date lists the cause of the claimant's back pain as "[w]ork lifting tree". Dr. Raub diagnosed acute thoracic back pain, and unspecified back pain laterally. At that time, Dr. Raub recommended an MRI of the claimant's thoracic spine.

16. On August 16, 2017, an MRI of the claimant's thoracic spine showed no evidence of degenerative disc disease, facet arthropathy, or stenosis.

17. The claimant returned to Dr. Olson on August 25, 2017 and reported sharp pain in the upper back and difficulty walking more than 200 feet. Dr. Olson noted that the claimant's MRI results showed minimal changes and "very mild' changes at that L4-L5 level. Dr. Olson also noted that the claimant's main discomfort was in his thoracic region. On that date, Dr. Olson referred the claimant to Dr. Raub. Dr. Olson also recommended that the claimant "try to normalize his activities as much as possible".

18. On September 1, 2017, the claimant returned to Vail Summit Orthopaedics and was seen by Dr. Ernest Braxton. At that time, Dr. Braxton noted that the claimant was suffering from cervical, thoracic, and low back pain. Dr. Braxton did not recommend surgical intervention because the claimant had not maximized conservative treatment and was "not skeletally mature". However, Dr. Braxton recommended that the claimant see a pediatric orthopedic surgeon.

19. On September 11, 2017, the claimant was seen at Children's Hospital Colorado by pediatric orthopedic surgeon Dr. Garg Sumeet. Dr. Sumeet noted that the claimant rated his pain at an 8 of 10, on a daily basis. At that time, Dr. Sumeet opined that the claimant's MRI findings were likely chronic in nature. He also opined that the claimant's symptoms were related to a muscle sprain/strain. Dr. Sumeet recommended that the claimant could improve his overall conditioning by engaging in activities such as walking, bicycling, swimming, yoga, and general free play. Dr. Sumeet also recommended a guided physical therapy program. If the claimant did not improve with conservative treatment, Dr. Sumeet further recommended that the claimant undergo evaluation for chronic pain.

20. On November 2, 2017, an MRI of the claimant's cervical spine showed straightening of the normal cervical lordotic curvature, (which the radiologist noted "can be seen with muscle spasm"), and normal appearance of the cervical discs and facet joints without evidence of fracture or stenosis.

21. On November 20, 2017, the claimant was seen by Dr. Seth Eisdorfer at the Multidisciplinary Chronic Pain Clinic at Children's Hospital Colorado. At that time, the claimant was diagnosed with chronic low back pain (without sciatica) and unspecified back pain laterally. Dr. Eisdorfer restricted the claimant to not more than 30 minutes of exercise, no lifting over 10 pounds, not running, and no contact sports. In addition, the claimant was not to be exposed to cold weather.

22. The claimant returned to Children's Hospital Colorado Pain Clinic on January 2, 2018. At that time, Dr. Eisdorfer opined that the claimant's pain was consistent with chronic pain syndrome and myalgia. The records from the Multidisciplinary Chronic Pain Clinic at Children's Hospital Colorado do not reference a work injury, or any acute incident or injury.

23. The claimant testified that his current symptoms include headaches, right leg pain, and a feeling that his "bones are grinding" when he moves. The claimant also testified that he cannot sit, stand, or walk for long periods. He is unable to reach down to open low cupboards and, at times, is unable to bend over while brushing his teeth. The claimant further testified that since July 28, 2017, he cannot participate in sports because he cannot run.

24. The claimant testified that he has been a competitive skier for many years. The medical records indicate that the claimant has sought medical treatment a number of times related to skiing. The claimant testified that he was required by his ski coaches to see a doctor any time he had an issue while skiing.

25. On April 29, 2016, more than a year before the incident at issue, the claimant sought treatment with Mountain Family Health Centers for back pain. On that date, the claimant was seen by Diane Purse, PNP. On that date, the claimant reported the onset of back pain four months prior. The claimant also reported that the pain was in his upper, middle, and lower back. The claimant denied any injury. Ms. Purse recommended heat and acetaminophen.

26. The medical records indicate that in the months before the July 28, 2017 incident, the claimant received physical therapy treatment with Joint Worx. On March 9, 2017, the claimant was seen at Joint Worx for "symptoms consistent with [sacroiliac joint] dysfunction". The claimant returned to Joint Worx on June 27, 2017 complaining of back pain form heavy lifting. The claimant testified that he was having muscle problems and his "manager" told him to go to physical therapy. The claimant testified that he did not recall which manager directed him to physical therapy.

27. Ms. Rimel is the employer's Director of Administration. Ms. Rimel testified that the claimant was hired as a seasonal farm laborer. The was a full-time position that would end in August 2017. Ms. Rimel also testified that when the claimant was hired, the parties discussed that the claimant would stop working for the employer when school started in mid-August. Ms. Rimel has children in the same school district as the claimant. She testified that school started on August 16, 2017. Therefore, the claimant's last day of work was scheduled to be August 15, 2017.

28. On June 23, 2017, the claimant and his mother met with Ms. Rimel regarding the claimant's employment. Ms. Rimel testified that the claimant informed her that he was resigning from his farm laborer position, but asked if there were any full-time available in ranch operations. At that time, the employer offered, and the claimant accepted, an "on call/as needed" position in ranch operations. The claimant began working in that capacity on Monday, June 26, 2017.

29. The claimant testified that he did not quit his farm laborer position. In his testimony, the claimant asserted that it was Ms. Rimel's decision to transfer him to the ranch position. The claimant agreed in his testimony that the ranch position was "as needed". However, the claimant also testified that he continued to work 40 hours, or more, each week. The payroll records entered into evidence indicate that the claimant's hours became variable after he began working in ranch operations on June 26, 2017.

30. Mr. O'Brien is the employer's Ranch Manager. Mr. O'Brien provided testimony that was consistent with Mr. Rimel's testimony that the claimant was working on an "as needed" basis in July 2017. With regard to the July 28, 2017 incident, Mr. O'Brien testified that at the end for the work day (at approximately 4:20 p.m.), the claimant reported that he believed that he hurt his back while moving branches. Mr. O'Brien testified that he and the claimant filled out paperwork regarding the incident. Mr. O'Brien then provided that paperwork to Ms. Rimel.

31. Mr. Klatte is the employer's Ranch Foreman. Mr. Klatte testified that on July 28, 2017, he worked with the claimant and another employee, David. Their job duties that day involved loading tree branches onto a flatbed pickup truck and then transporting and ultimately removing those same branches into the burn fire pit. Mr. Klatte testified that the branches were approximately six to seven feet long, and were from one half of an inch to an inch and one half in diameter. In his testimony, Mr. Klatte estimated that the braches weighed between 5 pounds and 30 pounds.

32. Mr. Klatte also testified that the claimant did not report any injury or issues to him. Mr. Klatte noted in his testimony that during the afternoon on July 28, 2017, it was raining. As a result, they could not continue their project moving the tree branches until the rain stopped. Mr. Klatte testified that he, the claimant, and David sat in the truck while they waited out the rain. At no time did the claimant mention to Mr. Klatte that he had injured himself.

33. On December 19, 2017, the claimant attended an independent medical examination (IME) with Dr. Albert Hattem. In connection with the IME, Dr. Hattem reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report Dr. Hattem opined that the claimant's pain complaints are not related to the July 28, 2017 alleged injury. In support of this opinion, Dr. Hattem noted that the claimant's MRIs are essentially negative. Dr. Hattem further opined that the claimant's subjective complaints are due to behavioral issues. Dr. Hattem's testimony by deposition was consistent with his written report.

34. The ALJ does not find the claimant's testimony to be credible or persuasive. The ALJ credits the testimony of Ms. Rimel, Mr. O'Brien, and Mr. Klatte with regard to the nature of the claimant's employment and the events of July 28, 2017. The ALJ finds the medical records persuasive, specifically those that show that the claimant has a history of injuries related to skiing. In April 2016, the claimant complained of symptoms virtually identical to those he now asserts were caused on July 28, 2017. In the months prior to the July 28, 2017 incident, the claimant was undergoing physical therapy treatment for SI joint issues and back pain. The ALJ credits the opinion of Dr. Hattem that the claimant's pain complaints are not related to the July 28, 2017 alleged injury.

35. The ALJ finds that the claimant did not sustain an injury on July 28, 2017. The need for treatment of the claimant's back pain is related to his longstanding medical history and not due to any acute injury. The ALJ also finds that there was no aggravation nor acceleration of a preexisting condition on July 28, 2017. The ALJ also finds that no activity the claimant engaged in on July 28, 2017 while at work combined with a preexisting condition to necessitate medical treatment. For all of the foregoing reasons, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he was injured at work on July 28, 2017.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

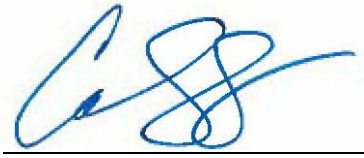
2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he suffered an injury that arose out of and in the course and scope of his employment with the employer. As found, the opinion of Dr. Hattem, the medical records, and the testimony of the respondents' witnesses are credible and persuasive.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits is denied and dismissed.

Dated October 22, 2018.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

I. Whether Claimant is entitled to a one-time change of physician pursuant to Section 8-43-404(5)(a)(III), C.R.S.

FINDINGS OF FACT

1. Claimant sustained an industrial injury to her back on January 18, 2018. Claimant credibly testified she immediately reported the injury to her general manager and was given a list of medical providers on January 19, 2018, which she signed. The list Claimant received on January 19, 2018 is Claimant's Exhibit 1. The record also contains a copy of the same list, but initialed by Claimant (Exhibit D).

2. The designated provider list given to Claimant on January 19, 2018 lists the following providers: CCOM - Church Ranch, Concentra Medical Center - Thornton Parkway, US Healthworks Medical Group, Concentra Medical Center - Stapleton Drive North, North Suburban Medical Center, and Good Samaritan Medical Center. North Suburban Medical Center and Good Samaritan Medical Center are identified as hospitals. The document states, in relevant part, "If you feel that you need medical attention, the providers listed are available for treatment…For urgent care needs OR after clinic hours, you may seek treatment from the hospital Emergency Department listed OR the nearest qualified facility or provider."

3. Respondents allege Claimant was also provided another list of providers on January 19, 2018 (Exhibit C). This document, dated January 19, 2018, identifies Employer's third party administrator ("TPA"), and lists the following providers: Concentra Medical Center - Thornton Parkway, Concentra Medical Center - Thornton, Concentra Medical Center - North Denver (Stapleton Drive North), and US Healthworks Medical Group. The letter lists a P.O. Box address in Englewood, Colorado for Employer's TPA, and an address for Employer's Director of Risk Management in Denver, Colorado. The letter is not signed by Claimant. Claimant credibly testified she did not receive the letter dated January 19, 2018 contained in Exhibit C.

4. Claimant ultimately chose Concentra – Thornton Parkway as her designated medical provider and began undergoing physical therapy.

5. Claimant credibly testified she is dissatisfied with the treatment she has received at Concentra – Thornton Parkway, in part due to limitations in scheduling appointments. Claimant credibly testified Concentra only permits her to schedule appointments before 5:00 p.m., which conflicts with Claimant's work schedule. Claimant credibly testified she is required by Employer to arrange for another employee to cover her duties during scheduled medical appointments. Claimant credibly testified she reported her

complaints regarding scheduling appointments to Alixe Landry, Senior Resolution Manager with Employer's TPA. Claimant credibly testified she also is dissatisfied with the medical treatment because her condition has not improved and she feels as though she is "getting the runaround" by various doctors.

6. Claimant subsequently requested Employer send her a copy of the designated provider list. On April 16, 2018, Claimant received a different, undated, list identifying the following providers: CCOM - Church Ranch, Concentra - Thornton Parkway, US HealthWorks and Concentra – Stapleton Drive North (Exhibit E). The list also includes North Suburban Medical Center under "Emergency Care." The contact information for a TPA representative as a P.O. Box address in Englewood, Colorado. A section of the letter states that medical bills can be submitted to the TPA at different P.O. Box address in Clinton, Iowa. Claimant signed and dated this list on April 16, 2018.

7. An April 18, 2018 from Ms. Landry to Claimant requesting Claimant complete and return a HIPAA Medical Release Form lists the address of the TPA as the P.O. Box address in Clinton, Iowa.

8. On April 18, 2018, Claimant submitted written notice to Insurer of a request to change physicians. The written notice was submitted on the Division's Notice of One-Time Change of Physician & Authorization for Release of Medical Information form. Claimant requested to change physicians from Concentra- Thornton Parkway to Good Samaritan Medical Center. The document was signed by Claimant and dated April 18, 2018.

9. Claimant credibly testified she mailed the notice to Employer's TPA, Concentra - Thornton Parkway, and Good Samaritan Medical Center. Claimant credibly testified she personally addressed each envelope, attached the proper postage, and deposited the three envelopes in the United States mail on April 18, 2018. Claimant mailed notice to Employer's TPA at their P.O. Box address in Clinton, Iowa.

10. Claimant credibly testified she designated Good Samaritan Medical Center as her new provider because it is located between her work location and home. Claimant credibly testified she was unaware Employer intended to designate Good Samaritan Medical Center only for emergent care purposes.

11. Ms. Landry testified she did not become aware of Claimant's request to change physicians until April 27, 2018, when she received an e-mail from Claimant's counsel following up on Claimant's request. Ms. Landry testified that the mailed copy of Claimant's request was not received until May 16, 2018 because Claimant mailed the request to the address for bills processing, not claims processing. Ms. Landry testified she denied Claimants' request because Claimant's request was mailed to the wrong address, the request was received after the 90-day deadline, and Good Samaritan Medical Center is not listed on the designated provider list given to Claimant.

12. In an April 23, 2018 letter to Claimant's counsel from Ms. Landry, Ms. Landry denied Claimant's request for a change of physician and advised that further material should be directed to her attention at the P.O. Box address in Clinton, Iowa.

13. The ALJ finds that Claimant has met the requirements for a one-time change of physician under Section 8-43-404(5)(a)(III), C.R.S.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Change of Physician

Section 8-43-404(5)(a)(I)(A), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d

228 (Colo. App. 1999). However, the respondents must provide injured workers with a list of at least four physicians or corporate medical providers. §8-43-404(5)(a)(I)(A),C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S., defines "corporate medical provider" to mean a 'medical organization in business as a sole proprietorship, professional corporation, or partnership." The respondents must supply a copy of the written designated provider list to the injured worker “in a verifiable manner within seven (7) business days following the date the employer has notice of the injury.” W.C.R.P. 8-2(A)(1).

Section 8-43-404(5)(a)(III), C.R.S. provides that an employee may obtain a one-time change in the designated authorized treating physician if the following requirements are met:

(A) The notice is provided within ninety days after the day of injury, but before the injured worker reaches maximum medical improvement;

(B) The notice is in writing and submitted on a form designated by the director…

(C) The notice is directed to the insurance carrier or to the employer’s authorized representative, if self-insured, and to the initially authorized treating physician and is deposited in the United States mail or hand-delivered to the employer, who shall notify the insurance carrier, if necessary, and the initially authorized treating physician;

(D) The new physician is on the employer’s designated list or provides medical services for a designated corporate medical provider on the list;

(E) The transfer of medical care does not pose a threat to the health or safety of the employee.

Respondents argue Claimant’s request to change physicians should be denied for the following reasons: (1) Good Samaritan Medical Center is not on the designated provider lists dated January 19, 2018 or April 16, 2018, (2) Good Samaritan Medical Center was included on the other lists provided to Claimant as a hospital for emergent care services, not a provider; and (3) Claimant mailed the request to the wrong address and the request was not received until after the 90-day deadline. The ALJ is not persuaded.

The record reflects multiple provider lists. The provider list contained in Exhibit C dated January 19, 2018 does not include Good Samaritan Medical Center, nor does the list dated April 16, 2018. Claimant credibly testified she did not receive the provider list dated January 19, 2018 (Exhibit C), and the document is not signed by Claimant. The April 16, 2018 list, which Claimant acknowledges she received and signed, was sent to

Claimant three months after the date of injury. Claimant credibly testified the only list she received from Respondents during the seven days after the date of injury was the list contained in Exhibit 1, which includes Good Samaritan Medical Center. The list is signed by Claimant. A second copy of the list, Exhibit D, is initialed by Claimant. Thus, the ALJ determines Good Samaritan Medical Center is, in fact, on the employer's designated provider list.

Claimant credibly testified she was unaware that Good Samaritan Medical Center was included on the designated provider list solely as a hospital for emergent services. The language included in the document does not state Claimant is prohibited from designating Good Samaritan Medical Center as an authorized treating provider. No evidence was admitted at hearing as to the corporate structure of Good Samaritan Medical Center. Accordingly, there is insufficient evidence for the ALJ to determine that Good Samaritan Medical Center is not a provider within the meaning of Section 8-43-404(5)(a)(I)(A), C.R.S.

Claimant was credible in her testimony that she mailed notice to Employer's TPA on April 18, 2018, which is within 90 days of the date of injury. Although Claimant mailed the notice to an address provided on correspondence from Employer's TPA. Claimant's confusion regarding the mailing address was reasonable under the circumstances. Claimant mailed written notice to Employer's TPA and to Concentra-Thornton Parkway within 90 days of the date of injury, using the form designated by the director. As found, Good Samaritan Medical Center is on Employer's designated provider list. No evidence was presented at hearing indicating the transfer of medical care poses a threat to the health or safety of Claimant. Accordingly, Claimant has met the requirements entitling her to a one-time change of physician under Section 8-43-404(5)(A)(III), C.R.S.

ORDER

It is therefore ordered that:

1. Claimant's request for a one-time change of physician from Concentra Medical Center - Thornton Parkway to Good Samaritan Medical Center is GRANTED.

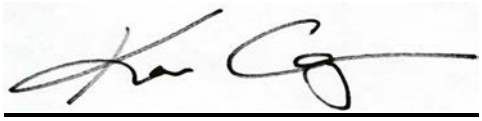
2. If Good Samaritan Medical Center refuses to treat Claimant, Claimant shall select another provider on the designated provider list.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 19, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-041-118-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer, Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 2, 2018 in Denver, Colorado. The hearing was digitally recorded (reference 10/2/18, Courtroom 5, beginning at 8:30 AM, and ending at 10:15 AM).

Claimant's Exhibits 1 through 12 were admitted into evidence without objection. Respondent's Exhibits A through W were admitted into evidence without objection.

The evidentiary deposition of John Burris, M.D., taken on September 24, 2018 (hereinafter referred to as "Burris Depo., followed by a page number) was placed in evidence in lieu of Dr. Burris' live testimony at hearing.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUES

Whether Claimant has overcome the Division Independent Medical Examiner's (DIME's) determination that the Claimant is not at maximum medical improvement. (MMI); and, post-MMI medical maintenance benefits. The DIME examiner was David Orgel, M.D.

The Claimant bears the burden of proof by clear and convincing evidence on MMI and degree of permanent medical impairment. The Claimant's burden on post-MMI medical maintenance benefits is "preponderant evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Admitted Work Injury on March 7, 2017 and Treatment

1. Respondents filed a Final Admission of Liability (FAL), dated August 1, 2018, admitting for medical benefits; an average weekly wage (AWW) of $257.95; temporary total disability (TTD) benefits of $171.96 per week from March 8, 2017 through May 30, 2017; TTD benefits of $371.96 per week from May 31, 2017 through July 5, 2017; zero permanent partial disability (PPD); and, denying post-MMI medical maintenance benefits.

2. Aaron Stafford, M.D., initially examined the Claimant at Platte Valley Medical Center on March 7, 2017 (Claimant's Exhibit 4, p. 24) Claimant was injured at work while emptying a bag, weighing from 20 to 30 pounds, which fell on her head (Claimant's Exhibit 4, p. 26; Respondents' Exhibit E, p. 51). The Claimant complained of pain in her neck and upper back (Respondents' Exhibit 4, p. 20). She also had some vertigo symptoms (Claimant's Exhibit 4, p. 42; Respondents' Exhibit E, p. 51). Dr. Stafford found no signs of injury upon examination and he ultimately determined that the Claimant's injury was a minor head injury and neck muscle strain (Respondents' Exhibit E, p. 51).

3. Lon Noel, M.D. examined the Claimant at Midtown Occupational Health Services (hereinafter "Midtown") on March 9, 2017. Dr. Noel determined that in order to treat her injury the Claimant should go to physical therapy (PT), take a combination of

medications, engage in a home exercise program, and continue to apply ice and heat to the injury (Respondents' Exhibit E, pp. 51-52; Exhibit R, p. 320).

4. From March 14, 2017 to May 26, 2017, the Claimant attended 18 sessions of PT and massage therapy at Midtown in order to treat her injury (Respondents' Exhibit E, p. 52).

5. Dr. Noel examined the Claimant again at Midtown on March 16, 2017. Dr. Noel determined that the Claimant had a slight improvement in her injury and recommended she continue treatment (Respondents' Exhibit R, p. 325).

6. Dr. Noel next examined the Claimant at Midtown on March 23, 2017. The Claimant complained to Dr. Noel of a cervical strain. Dr. Noel determined there was some improvement in her injury and recommended that she continue treatment (Respondents' Exhibit R, p. 328).

7. Dr. Noel next examined the Claimant at Midtown Occupational Health Services on April, 6 2017. He determined that Claimant's "head injury/neck injury" was not due to a "herniated nucleus pulposus of the cervical spine" and recommended that she have an MRI (magnetic resonance imaging) of her cervical spine (Respondents' Exhibit R, p. 331).

8. David Cosper, M.D. performed an MRI of the Claimant's cervical spine on April 13, 2017 (Respondents' Exhibit E, p. 53).

9. Dr. Noel again examined the Claimant at Midtown on April 14, 2017. Dr. Noel, after reviewing Dr. Cosper's MRI, referred the Claimant to Bryan Andrew Castro, M.D., an orthopedic spine specialist (Respondents' Exhibit E, p. 53; Exhibit R, p. 34).

10. Dr. Castro examined the Claimant on May 5, 2017. Dr. Castro determined that the Claimant would not need surgery, but he recommended that the Claimant continue her PT and massage therapy treatment. The MRI indicated mostly older degenerative issues, as opposed to new signs of harm from the Claimant's work-related injury, according to Dr. Cosper (Respondents' Exhibit E, p. 54).

11. Dr. Noel again examined Claimant at Midtown on May 11, 2017. After reviewing the notes from the Claimant's examination by Dr. Castro, Dr. Noel recommended that the Claimant continue treatment and be referred to Dr. Gridley, D.C. for acupuncture and chiropractic treatment (Respondents' Exhibit R, p. 339).

12. Dr. Noel saw the Claimant again at Midtown on May 26, 2017. He recommended that the Claimant continue treatment (Respondents' Exhibit R, p. 361).

13. Dr. Noel saw the Claimant again at Midtown on June 2, 2017. He again recommended that the Claimant continue treatment (Respondents' Exhibit R. p. 364). On the same date, Dr. Noel determined that the Claimant reached MMI, with **no** permanent impairment, as of the date of the examination (Respondents' Exhibit R, p. 367; and, Exhibit X).

Independent Medical Examinations (IMEs) of Elizabeth W. Bisgard, M.D. and John Burris, M.D.

14. Dr. Bisgard performed an IME on September 11, 2017 at the Claimant's request (Respondents' Exhibit F, p. 58). She concluded that the Claimant suffered a "permanent aggravation of her underlying arthritic condition" and therefore was entitled to an impairment rating of "18% whole person" (Claimant's Exhibit 1, p. 6). She recommended maintenance medication for the next six months and twelve visits with chiropractic Dr. Gridley, D.C., over the next year.

15. John Burris, M.D. saw the Claimant on June 29, 2017, at Respondents' request, and performed an IME (Respondents' Exhibit E, p. 41). Dr. Burris concluded that there was no objective basis for an impairment rating, that there was no basis for further treatment related to the injury, and that Claimant was at MMI on the date he performed his examination. (Respondents' Exhibit E, p. 56).

Division Independent Medical Examination (DIME) of David Orgel, M.D.

16. DR. Orgel performed a DIME on March 21, 2018 (Respondents' Exhibit A, p. 1). Dr. Orgel concluded that the Claimant "has a pre-existing psychological condition, most likely a conversion disorder or other somatoform disorder. This psychological condition is the primary driver of her delayed recovery after her m [sic] arch 2017 injury." (Respondents' Exhibit A, p. 1); Claimant's Exhibit 11, p.124).

17. Dr. Orgel based his conclusion, in part, on a psychological assessment performed by Clinical Psychologist Ron Carbaugh, Psy. D., done on March 28, 2013 and related to an injury on September 5, 2012 (Respondents' Exhibit A, p. 1; Exhibit K, p. 222). Dr. Carbaugh determined that 6 to 8 sessions of "pain and adjustment counseling" would be beneficial, as Claimant's "non-injury-related stressors in her life" might be affecting her recovery from the injury on September 5, 2012 (Claimant's Exhibit 2, p. 17).

18. Dr. Orgel also based his conclusion on Claimant's the counseling history. Claimant underwent six counseling sessions from April 9, 2013 to June 20, 2013 (Respondents' Exhibit A, p. 1).

19. Dr. Orgel based another conclusion on the Psychiatric IME performed on March 9, 2018 by Robert E. Kleinman M.D. Dr. Kleinman's "overall opinion was that

[Claimant] did not suffer any psychiatric injury related to her occupational injury on [March 7, 2017]" and that her current psychological issues were preexisting (Respondents' Exhibit A, p. 2). Furthermore, Dr. Kleinman concluded that "[Claimant's] Persistent Depressive Disorder is not related to the occupational injury and is responsible for what appears to be a prolonged recovery." (Respondents' Exhibit C, p. 15).

20. Dr. Orgel determined that the Claimant was at MMI at the time of his examination, March 21, 2018 Respondents' Exhibit A, p. 2).

Claimant's Offered Evidence at Hearing on October 2, 2018

21. The Claimant testified at the hearing. He felt that it was improper of Dr. Orgel to rely on Dr. Carbaugh's psychological assessment from 2013 because the "stressors" in Claimant's life during 2013 were more extreme than the stressors in her life at the time of Dr. Orgel's examination.

Ultimate Findings

22. The Claimant's testimony focused on discrediting the DIME finding that she was at MMI at the time of her examination. Claimant did this by attempting to show it was based on outdated medical information, particularly the psychological examination performed by Dr. Carbaugh.

23. The Claimant may be correct that the stressors in her life in 2013 were extreme as compared to now. However, it is unclear if that would have affected the DIME's findings. Dr. Orgel relied on more than the findings of Dr. Carbaugh's 2013 psychological assessment in arriving at his conclusion that Claimant was at MMI.

24. The Claimant was credible, however, while she offered her opinion, she has no medical training. Therefore, it is clear that her opinions are **not** based on reliable medical principles. Permanent impairment ratings and opinions concerning MMI must be based on the American Medical Association *Guides to the Evaluation of Permanent Medical Impairment,* 3rd, Ed., Rev.

25. A comparison of IME Dr. Bisgard's opinions and rating reveals a mere difference of opinion between Dr. Bisgard and DIME Dr. Orgel, which is not sufficient to overcome the DIME opinion. Dr. Bisgard's opinions did not and could not point to errors in DIME Dr. Orgel's opinions because her opinions pre-dated the DIME.

26. The Claimant has failed to establish that it is highly probable, unmistakable, and free from serious and substantial doubt that Dr. Orgel's DIME opinions are in error. Therefore, the Claimant has failed to overcome the DIME by clear and convincing evidence.

27. Concerning post-MMI maintenance medical benefits, the standard of proof is "preponderance of the evidence." In the present case, the ALJ finds that it is more likely than not that IME Dr. Bisgard's recommendations for post-MMI medical treatment are more persuasive and credible than DIME Dr. Orgel's opinions, if any. The ALJ makes a rational choice, between conflicting evidence, if any, to accept Dr. Bisgard's treatment recommendations and reject any opinions to the contrary.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). As found, the Claimant's testimony was credible, however, The Claimant may be correct that the stressors in her life in 2013 were extreme as compared to now. However, it is unclear if that would have affected the DIME's findings. Dr. Orgel relied on more than the findings of Dr. Carbaugh's 2013 psychological assessment in arriving at his conclusion that Claimant was at MMI.

As found, the Claimant was credible, however, while she offered her opinion, it was clear that she has no medical training. Therefore, her opinions are **not** based on reliable medical principles. Permanent impairment ratings and opinions concerning MMI must be based on the American Medical Association *Guides to the Evaluation of Permanent Medical Impairment,* 3rd, Ed., Rev.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found in Ultimate Findings Nos. 24 and 25, the Claimant's lay testimony was insufficient to overcome medical opinion based on the AMA *Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding without regard to the existence of contradictory testimony or contrary inferences. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). So long as the findings of fact are supported by **substantial evidence,** they will be upheld –even if an appellate tribunal would have reached a different conclusion if it had entered findings of fact. *See May D & F v. Indus. Claim Appeals Office,* 752 P.2d 589 (Colo. App. 1988). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, between conflicting evidence, if any, to accept Dr. Bisgard's treatment recommendations, and reject any opinions to the contrary.

Overcoming the Division Independent Medical Examination (DIME)

d. A DIME's findings of maximum MMI and permanent impairment rating "are dispositive unless they can be overcome only by clear and convincing evidence." *City of Manassa v. Ruff*, 235 P.3d 1051, 1059 (Colo. 2010); § 8-42-107(8)(b)(III), C.R.S. "Whether a party has met the burden of overcoming a DIME by clear and convincing evidence is a question of fact for the ALJ as the sole arbiter of conflicting medical evidence." *Justiniano v. Indus. Claim Appeals Office*, 410 P.3d 659, 663 (Colo. App. 2016). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the Division IME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). To overcome the DIME physician's findings, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), October 4, 2001]. As found, the Claimant failed to meet her burden by "clear and convincing" evidence. The Claimant only offered her own testimony to attempt to establish that DIME Dr. Orgel's opinions were erroneous. As further found, Claimant's testimony failed to show that the DIME's findings were based on outdated medical information. Furthermore, because the DIME relied on information other than the psychological assessment performed in 2013, the Claimant failed to show how the determination that the DIME's findings were based on outdated medical information would have altered the DIME's ultimate conclusion. As found, the Claimant's permanent medical impairment is zero.

Maximum Medical Improvement

e. MMI is defined by statute as the point of time when (a) "any medically determinable physical or mental impairment as a result of the injury has become stable" and (b) "when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S. As found, the Claimant reached MMI on March 21, 2018, as determined by DIME Dr. Orgel

Post-MMI Maintenance Medical Benefits

f. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical

treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the injury.

Burden of Proof on Post-MMI Medical Maintenance Benefits

g. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained her burden, by preponderant evidence on post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant has not overcome the findings of the Division Independent Medical Examiner, David Orgel, M.D., by clear and convincing evidence.

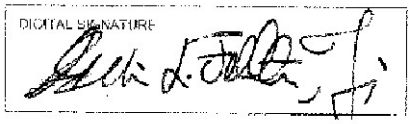
B. The Claimant reached maximum medical improvement on March 21, 2018, the date that Dr. Orgel performed the Division Independent Medical Examination.

C. Respondents shall pay the costs of post-maximum medical improvement maintenance medical care and treatment, subject to the Division of Workers' Compensation Medical Fee Schedule.

D. The Final Admission of liability, dated August 1, 2018, shall remain in full force and effect, however, the maximum medical improvement date is March 21, 2018.

E. Any and all claims for additional temporary disability benefits are hereby denied and dismissed.

DATED: October 24, 2018.



_____

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

The evidentiary deposition of John Burris, M.D., taken on September 24, 2018 (hereinafter referred to as "Burris Depo., followed by a page number) was placed in evidence in lieu of Dr. Burris' live testimony at hearing.

At the conclusion of the hearing, the ALJ took the matter under advisement and hereby issues the following decision.

ISSUE

Whether Claimant has overcome the Division Independent Medical Examiner's (DIME's) determination that the Claimant is not at maximum medical improvement. (MMI); and, post-MMI medical maintenance benefits. The DIME examiner was David Orgel, M.D.

The Claimant bears the burden of proof by clear and convincing evidence on MMI and degree of permanent medical impairment. The Claimant's burden on post-MMI medical maintenance benefits is "preponderant evidence."

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Admitted Work Injury on March 7, 2017 and Treatment

1. Respondents filed a Final Admission of Liability (FAL), dated August 1, 2018, admitting for medical benefits; an average weekly wage (AWW) of $257.95; temporary total disability (TTD) benefits of $171.96 per week from March 8, 2017 through May 30, 2017; TTD benefits of $371.96 per week from May 31, 2017 through July 5, 2017; zero permanent partial disability (PPD); and, denying post-MMI medical maintenance benefits.

2. Aaron Stafford, M.D., initially examined the Claimant at Platte Valley Medical Center on March 7, 2017 (Claimant's Exhibit 4, p. 24) Claimant was injured at work while emptying a bag, weighing from 20 to 30 pounds, which fell on her head (Claimant's Exhibit 4, p. 26; Respondents' Exhibit E, p. 51). The Claimant complained of pain in her neck and upper back (Respondents' Exhibit 4, p. 20). She also had some vertigo symptoms (Claimant's Exhibit 4, p. 42; Respondents' Exhibit E, p. 51). Dr. Stafford found no signs of injury upon examination and he ultimately determined that the Claimant's injury was a minor head injury and neck muscle strain (Respondents' Exhibit E, p. 51).

3. Lon Noel, M.D. examined the Claimant at Midtown Occupational Health Services (hereinafter “Midtown”) on March 9, 2017. Dr. Noel determined that in order to treat her injury the Claimant should go to physical therapy (PT), take a combination of medications, engage in a home exercise program, and continue to apply ice and heat to the injury (Respondents’ Exhibit E, pp. 51-52; Exhibit R, p. 320).

4. From March 14, 2017 to May 26, 2017, the Claimant attended 18 sessions of PT and massage therapy at Midtown in order to treat her injury (Respondents’ Exhibit E, p. 52).

5. Dr. Noel examined the Claimant again at Midtown on March 16, 2017. Dr. Noel determined that the Claimant had a slight improvement in her injury and recommended she continue treatment (Respondents’ Exhibit R, p. 325).

6. Dr. Noel next examined the Claimant at Midtown on March 23, 2017. The Claimant complained to Dr. Noel of a cervical strain. Dr. Noel determined there was some improvement in her injury and recommended that she continue treatment (Respondents’ Exhibit R, p. 328).

7. Dr. Noel next examined the Claimant at Midtown Occupational Health Services on April, 6 2017. He determined that Claimant's "head injury/neck injury" was not due to a "herniated nucleus pulposus of the cervical spine" and recommended that she have an MRI (magnetic resonance imaging) of her cervical spine (Respondents’ Exhibit R, p. 331).

8. David Cosper, M.D. performed an MRI of the Claimant's cervical spine on April 13, 2017 (Respondents’ Exhibit E, p. 53).

9. Dr. Noel again examined the Claimant at Midtown on April 14, 2017. Dr. Noel, after reviewing Dr. Cosper's MRI, referred the Claimant to Bryan Andrew Castro, M.D., an orthopedic spine specialist (Respondents’ Exhibit E, p. 53; Exhibit R, p. 34).

10. Dr. Castro examined the Claimant on May 5, 2017. Dr. Castro determined that the Claimant would not need surgery, but he recommended that the Claimant continue her PT and massage therapy treatment. The MRI indicated mostly older degenerative issues, as opposed to new signs of harm from the Claimant's work-related injury, according to Dr. Cosper (Respondents’ Exhibit E, p. 54).

11. Dr. Noel again examined Claimant at Midtown on May 11, 2017. After reviewing the notes from the Claimant's examination by Dr. Castro, Dr. Noel recommended that the Claimant continue treatment and be referred to Dr. Gridley, D.C. for acupuncture and chiropractic treatment (Respondents’ Exhibit R, p. 339).

12. Dr. Noel saw the Claimant again at Midtown on May 26, 2017. He recommended that the Claimant continue treatment (Respondents' Exhibit R, p. 361).

13. Dr. Noel saw the Claimant again at Midtown on June 2, 2017. He again recommended that the Claimant continue treatment (Respondents' Exhibit R. p. 364). On the same date, Dr. Noel determined that the Claimant reached MMI, with **no** permanent impairment, as of the date of the examination (Respondents' Exhibit R, p. 367; and, Exhibit X).

Independent Medical Examinations (IMEs) of Elizabeth W. Bisgard, M.D. and John Burris, M.D.

14. Dr. Bisgard performed an IME on September 11, 2017 at the Claimant's request (Respondents' Exhibit F, p. 58). She concluded that the Claimant suffered a "permanent aggravation of her underlying arthritic condition" and therefore was entitled to an impairment rating of "18% whole person" (Claimant's Exhibit 1, p. 6). She recommended maintenance medication for the next six months and twelve visits with chiropractic Dr. Gridley, D.C., over the next year.

15. John Burris, M.D. saw the Claimant on June 29, 2017, at Respondents' request, and performed an IME (Respondents' Exhibit E, p. 41). Dr. Burris concluded that there was no objective basis for an impairment rating, that there was no basis for further treatment related to the injury, and that Claimant was at MMI on the date he performed his examination. (Respondents' Exhibit E, p. 56).

Division Independent Medical Examination (DIME) of David Orgel, M.D.

16. DR. Orgel performed a DIME on March 21, 2018 (Respondents' Exhibit A, p. 1). Dr. Orgel concluded that the Claimant "has a pre-existing psychological condition, most likely a conversion disorder or other somatoform disorder. This psychological condition is the primary driver of her delayed recovery after her m [sic] arch 2017 injury." (Respondents' Exhibit A, p. 1); Claimant's Exhibit 11, p.124).

17. Dr. Orgel based his conclusion, in part, on a psychological assessment performed by Clinical Psychologist Ron Carbaugh, Psy. D., done on March 28, 2013 and related to an injury on September 5, 2012 (Respondents' Exhibit A, p. 1; Exhibit K, p. 222). Dr. Carbaugh determined that 6 to 8 sessions of "pain and adjustment counseling" would be beneficial, as Claimant's "non-injury-related stressors in her life" might be affecting her recovery from the injury on September 5, 2012 (Claimant's Exhibit 2, p. 17).

18. Dr. Orgel also based his conclusion on Claimant's the counseling history. Claimant underwent six counseling sessions from April 9, 2013 to June 20, 2013 (Respondents' Exhibit A, p. 1).

19. Dr. Orgel based another conclusion on the Psychiatric IME performed on March 9, 2018 by Robert E. Kleinman M.D. Dr. Kleinman's "overall opinion was that [Claimant] did not suffer any psychiatric injury related to her occupational injury on [March 7, 2017]" and that her current psychological issues were preexisting (Respondents' Exhibit A, p. 2). Furthermore, Dr. Kleinman concluded that "[Claimant's] Persistent Depressive Disorder is not related to the occupational injury and is responsible for what appears to be a prolonged recovery." (Respondents' Exhibit C, p. 15).

20. Dr. Orgel determined that the Claimant was at MMI at the time of his examination, March 21, 2018 Respondents' Exhibit A, p. 2).

Claimant's Offered Evidence at Hearing on October 2, 2018

21. The Claimant testified at the hearing. He felt that it was improper of Dr. Orgel to rely on Dr. Carbaugh's psychological assessment from 2013 because the "stressors" in Claimant's life during 2013 were more extreme than the stressors in her life at the time of Dr. Orgel's examination.

Ultimate Findings

22. The Claimant's testimony focused on discrediting the DIME finding that she was at MMI at the time of her examination. Claimant did this by attempting to show it was based on outdated medical information, particularly the psychological examination performed by Dr. Carbaugh.

23. The Claimant may be correct that the stressors in her life in 2013 were extreme as compared to now. However, it is unclear if that would have affected the DIME's findings. Dr. Orgel relied on more than the findings of Dr. Carbaugh's 2013 psychological assessment in arriving at his conclusion that Claimant was at MMI.

24. The Claimant was credible, however, while she offered her opinion, she has no medical training. Therefore, it is clear that her opinions are **not** based on reliable medical principles. Permanent impairment ratings and opinions concerning MMI must be based on the American Medical Association *Guides to the Evaluation of Permanent Medical Impairment,* 3rd, Ed., Rev.

25. A comparison of IME Dr. Bisgard's opinions and rating reveals a mere difference of opinion between Dr. Bisgard and DIME Dr. Orgel, which is not sufficient to overcome the DIME opinion. Dr. Bisgard's opinions did not and could not point to errors in DIME Dr. Orgel's opinions because her opinions pre-dated the DIME.

26. The Claimant has failed to establish that it is highly probable, unmistakable, and free from serious and substantial doubt that Dr. Orgel's DIME opinions are in error. Therefore, the Claimant has failed to overcome the DIME by clear and convincing evidence.

27. Concerning post-MMI maintenance medical benefits, the standard of proof is "preponderance of the evidence." In the present case, the ALJ finds that it is more likely than not that IME Dr. Bisgard's recommendations for post-MMI medical treatment are more persuasive and credible than DIME Dr. Orgel's opinions, if any. The ALJ makes a rational choice, between conflicting evidence, if any, to accept Dr. Bisgard's treatment recommendations and reject any opinions to the contrary.

CONCLUSIONS OF LAW

Based on the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). As found, the Claimant's testimony was credible, however, The Claimant may be correct that the stressors in her life in 2013 were extreme as compared to now. However, it is unclear if that would have affected the

DIME's findings. Dr. Orgel relied on more than the findings of Dr. Carbaugh's 2013 psychological assessment in arriving at his conclusion that Claimant was at MMI. As found, the Claimant was credible, however, while she offered her opinion, it was clear that she has no medical training. Therefore, her opinions are **not** based on reliable medical principles. Permanent impairment ratings and opinions concerning MMI must be based on the American Medical Association *Guides to the Evaluation of Permanent Medical Impairment,* 3rd, Ed., Rev.

b. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found in Ultimate Findings Nos. 24 and 25, the Claimant's lay testimony was insufficient to overcome medical opinion based on the AMA *Guides to the Evaluation of Permanent Impairment,* 3rd Ed., Rev.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding without regard to the existence of contradictory testimony or contrary inferences. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). So long as the findings of fact are supported by **substantial evidence,** they will be upheld –even if an appellate tribunal would have reached a different conclusion if it had entered findings of fact. *See May D & F v. Indus. Claim Appeals Office,* 752 P.2d 589 (Colo. App. 1988). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the ALJ made a rational choice, between conflicting evidence, if any, to accept Dr. Bisgard's treatment recommendations, and reject any opinions to the contrary.

Overcoming the Division Independent Medical Examination (DIME)

d. A DIME's findings of maximum MMI and permanent impairment rating "are dispositive unless they can be overcome only by clear and convincing evidence." *City of Manassa v. Ruff*, 235 P.3d 1051, 1059 (Colo. 2010); § 8-42-107(8)(b)(III), C.R.S. "Whether a party has met the burden of overcoming a DIME by clear and convincing evidence is a question of fact for the ALJ as the sole arbiter of conflicting medical evidence." *Justiniano v. Indus. Claim Appeals Office*, 410 P.3d 659, 663 (Colo. App. 2016). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the Division IME physician's rating is incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). To overcome the DIME physician's findings, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), October 4, 2001]. As found, the Claimant failed to meet her burden by "clear and convincing" evidence. The Claimant only offered her own testimony to attempt to establish that DIME Dr. Orgel's opinions were erroneous. As further found, Claimant's testimony failed to show that the DIME's findings were based on outdated medical information. Furthermore, because the DIME relied on information other than the psychological assessment performed in 2013, the Claimant failed to show how the determination that the DIME's findings were based on outdated medical information would have altered the DIME's ultimate conclusion. As found, the Claimant's permanent medical impairment is zero.

Maximum Medical Improvement

e. MMI is defined by statute as the point of time when (a) "any medically determinable physical or mental impairment as a result of the injury has become stable" and (b) "when no further treatment is reasonably expected to improve the condition." § 8-40-201(11.5), C.R.S. As found, the Claimant reached MMI on March 21, 2018, as determined by DIME Dr. Orgel

Post-MMI Maintenance Medical Benefits

f. An employee is entitled to continuing medical benefits after MMI if reasonably necessary to relieve the employee from the effects of an industrial injury. *See Grover v. Indus. Comm'n of Colorado*, 759 P.2d 705 (Colo. 1988). The record must contain substantial evidence to support a determination that future medical treatment will be reasonably necessary to relieve a claimant from the effects of an injury or to prevent further deterioration of his condition. *Stollmeyer v. Indus. Claim Appeals*

Office, 916 P.2d 609 (Colo. App. 1995); *Grover v. Indus. Comm'n, supra*. Such evidence may take the form of a prescription or recommendation for a course of medical treatment necessary to relieve a claimant from the effects of the injury or to prevent further deterioration. *Stollmeyer v. Indus. Claim Appeals Office, supra*. An injured worker is ordinarily entitled to a general award of future medical benefits, subject to an employer's right to contest causal relatedness and reasonable necessity. *See Hanna v. Print Expediters,* 77 P.3d 863 (Colo. App. 2003). Treatment to **improve** a claimant's condition does **not** fall under the purview of *Grover* benefits. *Shalinbarger v. Colorado Kenworth, Inc.,* W.C. No. 4-364-466 [Indus. Claim Appeals Office (ICAO), March 12, 2001]. As found, Claimant is entitled to maintenance medical care, which is reasonably necessary to address the injury.

Burden of Proof on Post-MMI Medical Maintenance Benefits

g. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained her burden, by preponderant evidence on post-MMI medical maintenance benefits.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant has not overcome the findings of the Division Independent Medical Examiner, David Orgel, M.D., by clear and convincing evidence.

B. The Claimant reached maximum medical improvement on March 21, 2018, the date that Dr. Orgel performed the Division Independent Medical Examination.

C. Respondents shall pay the costs of post-maximum medical improvement maintenance medical care and treatment, subject to the Division of Workers' Compensation Medical Fee Schedule.

D. The Final Admission of liability, dated August 1, 2018, shall remain in full force and effect, however, the maximum medical improvement date is March 21, 2018.

E. Any and all claims for additional temporary disability benefits are hereby denied and dismissed.

DATED: October 23, 2018.

ISSUE

- Did Claimant suffer a compensable injury arising out of and in the course of his employment on May 5, 2018?

FINDINGS OF FACT

1. Claimant worked for Employer as a groundskeeper at the St. Simeon Catholic Cemetery. He was injured on May 5, 2018 when a ruggedized "Club Car" used for grounds maintenance flipped on its side.

2. The accident occurred on a Saturday at approximately 10:00 AM. Although Saturday is normally Claimant's day off, he had come in to check on some ongoing vandalism and grave desecration issues. Claimant retrieved and buried a dead rat vandals had left on a grave, and was returning the Club Car to the maintenance area before going home. The accident occurred in a large parking lot where Employer stores vehicles and other pieces of equipment. The surface of the lot is loose gravel and packed road base.

3. Claimant testified to the following sequence of events leading to the accident: He was putting the Club Car away and heard a "ticking" noise coming from the front end while making a turn. He drove "five of six" figure eights in the parking lot, which allowed him to listen for the noise while making both left and right turns. Claimant testified he was driving "no more than" five to ten miles per hour with "just barely" the weight of his foot on the gas pedal. During one turn, a rabbit darted out from underneath a parked truck. Claimant swerved to miss the rabbit, causing the Club Car to flip over on its side.

4. There is no question Claimant suffered serious injuries in the accident but Respondent argues he was engaged in "horseplay" and was therefore outside the scope of his employment when the accident occurred.

5. After the accident, Claimant called 911 and drove himself to the main office in his personal vehicle. Claimant reported the incident to a co-worker, Sol Decker, who called the executive director, Gary Schaaf. Mr. Schaaf had been at the cemetery earlier that morning regarding the vandalism but was driving home when he received Ms. Decker's call. He turned around and returned to the cemetery.

6. When Mr. Schaaf arrived at the office, paramedics were tending to Claimant's injuries. Deputy Sheriff Lendi was also present and interviewed Claimant about the accident. Claimant told Deputy Lendi he had been driving the Club Car in the yard and swerved to avoid a rabbit that had hopped in front of him. He made no mention of doing figure eights or any maintenance issue with the vehicle.

7. Claimant was concerned about his eyeglasses, so Mr. Schaaf and Deputy Lendi went to the maintenance yard to look for them. Upon arriving at the accident scene, Mr. Schaaf immediately saw "clear evidence" of multiple figure eights that were not there earlier that morning. Mr. Schaaf was "surprised" to see the figure eight tracks because Claimant had said nothing about it earlier. The tracks "looked obviously like they were done at a high rate of speed and that they were fresh." Mr. Schaaf observed dirt pushed to the outside edges of the tire tracks, consistent with the vehicle sliding around the curves at high speed. Mr. Schaaf saw no indication the vehicle had swerved before tipping over; the tracks merely showed a tight turn leading directly to the overturned Club Car.

8. Mr. Schaaf took multiple photographs of the yard, the tracks, and the overturned Club Car. The photographs corroborate Mr. Schaaf's testimony, showing loose dirt flung several feet on the outside edge of the tracks, consistent with skidding through a turn. Additionally, the tracks appear deeper than one would expect from a slow-moving vehicle, again consistent with high speed.

9. Prior to being hired by Employer, Mr. Schaaf worked many years as an FBI agent. Before that, he was a police officer with the Los Angeles Police Department. His duties included crime scene and accident investigations. Mr. Schaaf's law enforcement and investigative background lend credence to his observations and conclusions regarding the cause of the accident. That said, the ALJ finds it does not require special training to conclude dirt flung several feet on the outside of a tire track indicates the vehicle was moving quickly.

10. Mr. Schaaf's observations were consistent with what Deputy Lendi documented in his accident report:

> In observing the lot, I noticed there were tire track impressions in the dirt which matched those of the Club Car and which were in both concentric circles and "figure-eight" patterns. I was able to follow one set of tire tracks directly back, from the rear left tire, as it entered a "figure-eight." Leading toward the Club Car, the tracks began a right-hand curve which appeared to get tighter, until it led to the Club Car in its resting location.

11. Deputy Lendi followed up with Claimant later that day and noted:

> I asked him what led to the crash. [Claimant] immediately defended, stating "there was a rabbit." I advised [Claimant] that I'd observed circles and "figure-eights," and he replied "driving in circles probably caused it," but then reaffirmed that a rabbit had run out in front of him. [Claimant] then stopped talking to me.

12. Based on the results of his investigation, combined with several prior employment-related issues, Mr. Schaaf decided to terminate Claimant. He offered Claimant the opportunity to resign instead of being fired, which Claimant accepted.

13. Claimant admitted he knew of Employer's policy prohibiting the use of company vehicles for personal purposes.

14. No persuasive evidence suggests Employer condones or tolerates horseplay or misuse of company vehicles. To the contrary, Mr. Schaaf testified credibly about another employee who was terminated for misusing a company truck to remove snow.

15. Crediting Mr. Schaaf's credible and persuasive testimony, the ALJ finds the Club Car overturned because Claimant was doing "figure eights" and tight turns at a high rate of speed. That activity had no legitimate connection to Claimant's work; it was a purely personal deviation. Claimant's testimony he was driving slowly is not credible. Nor is the ALJ persuaded Claimant was trying to listen for a noise coming from the front end, because, as Mr. Schaaf explained, the sound from the engine at high speeds would drown out any mechanical noise.

16. Claimant failed to prove he suffered an injury arising out of and in the course of his employment. Respondent proved Claimant's injuries occurred during a substantial personal deviation from his employment. The personal deviation was the proximate cause of the accident and resulting injuries.

CONCLUSIONS OF LAW

To establish a compensable claim, a claimant must prove the injury occurred while "performing service arising out of and in the course of his employment." Section 8-41-301(1)(b). The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower, and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Rather, the question is whether the activity is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Id*. at 210. Whether an injury arises out of and in the course of employment are questions of fact for the ALJ. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998).

An employee can momentarily step outside the scope of employment by engaging in a purely personal deviation. When a personal deviation is asserted, the question is "whether the claimant's conduct constituted such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing an activity for his sole benefit." *Panera Bread, LLC v. Industrial Claim Appeals Office*, 141 P.3d 970, 972 (Colo. App. 2006). The deviation must be "substantial" to remove the claimant from the course and scope of employment. *Kelly v. Industrial Claim Appeals Office*, 214 P.3d 516 (Colo. App. 2009).

One of the most common forms of deviation from employment is "horseplay." The Court of Appeals has enunciated a four-part test to analyze whether horseplay constitutes a substantial deviation from employment: (1) the extent and seriousness of the deviation; (2) the completeness of the deviation, i.e., whether it was commingled with the performance of a duty or involved an abandonment of duty; (3) the extent to which the practice of horseplay has become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). When a personal deviation

As found, Claimant failed to prove he suffered an injury arising out of and in the course of his employment. Instead, Respondent proved Claimant was engaged in a substantial deviation from his work that caused the accident. Mr. Schaaf's testimony was credible and persuasive. The tire tracks do not support Claimant's allegation he "swerved" to avoid a rabbit that ran out in front of him. The tracks are more consistent with the vehicle overturning because it was cornering too quickly. Claimant's testimony he was driving "no more than five to ten miles an hour" is not credible and his lack of candor regarding the speed he was traveling undermines the reliability of the rest of his testimony. Claimant had no legitimate work-related reason to be driving "figure eights" at high speed. At the time of injury, Claimant had stepped outside the course and scope of his employment and was performing an activity for his sole benefit.

ORDER

It is therefore ordered that:

1. Claimant's request for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 24, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Tyler, which provided a lumbar impairment rating of 13%?

II. Has Claimant shown, by a preponderance of the evidence, that he is totally and permanently disabled?

STIPULATIONS

The parties stipulated that Claimant's Average Weekly Wage ("AWW") is $1366.76. Claimant now receives Social Security Disability payments of $230.31. Therefore, if Claimant were declared to be Permanently and Totally disabled, his indemnity payments would be $679.95. The ALJ accepted these stipulations.

On the date of hearing, the ALJ also approved a written stipulation regarding Temporary Total Disability.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is 56 years of age. He has a Bachelor's Degree in History. Claimant testified that after graduation he participated in a training program at the Hyatt Corporation and was employed by this company for 4 years. He subsequently installed burglar alarms for 16 years. He began working for AT&T in 1999, installng phone lines. For the past 4 years he was employed by Employer.

2. Claimant installed phones and internet service for Employer. This job required lifting up to 75 pounds, climbing ladders, squatting, kneeling and overhead work. Claimant would drive daily, from Trinidad, Colorado, to outlying sites.

3. Claimant sustained an admitted injury on January 21, 2016 when his work vehicle was rear ended by a vehicle driven by his supervisor. Claimant injured his neck and low back as a result of this accident.

4. Claimant initially treated with Dr. Paz in Trinidad, Colorado on February 25, 2016. Dr. Paz notes that Mr. James was driving a bucket truck which was totalled when rear ended by his supervisor. (Ex. 5, p. 121).

5. Claimant's care was subsquently transferred to Dr. Castrejon when Dr. Paz retired. Dr. Castrejon's initial examination was on November 1, 2016, (Ex. 1, p. 27).

6. Claimant's neck injury was treated by Dr. Murad at Parkview Neurological Services, (Ex. 4). An MRI was performed of the cervical spine, (Ex. 7, p. 132). It revealed canal stenosis at the C5-C6 and C6-C7 level. Dr. Murad performed a right C5-C6 and C6-C7 foraminotomy on October 17, 2016. (Ex. 5, p. 5)

7. In a 3-month follow-up exam, on February 15, 2017, the PA for Dr. Murad noted:

> He [Claimant] is now about four months out from surgery. He is quite happy with the results of his surgery. He has had complete relief of severe right upper extremity radicular pain. Severe neck tightness has improved significantly after physical therapy in Trinidad. He is no longer taking pain medication. (Ex. H. pp. 175-177).

8. Claimant testified that the surgery relieved the sharp pain in his neck and arms, though he still continues to experience cramping in the neck when utilizing his arms on a repetitive basis, overhead reaching or holding his neck in a stationary position. The cramping was described as a knot which becomes progressively worse.

9. Claimant was also treated by Dr. Murad for his low back injury. In the initial examination on March 30, 2016, Mr. James reported persistent low back pain radiating into the right leg. The pain increased when walking. A diagnosis of lumbar radiculopathy was provided.(Ex. 4, p. 85) Epidural steroid injections were administered at the L3-L5 level by Dr. Naalegowda. An MRI of the lumbar spine did not reveal significant central canal stenosis or nerve root impingement, (Ex. 4, p. 100).

10. Dr. Castrejon performed diagnostic studies with a finding of right L5 radiculopathy, (Ex. 1, pg. 20). Dr. Murad concurrs with the diagnosis providing an assessment of chronic lumbar radiculopathy; however, it is noted that "There is no severe nerve compression in the lumbar spine. All levels appear to be fairly well preserved without any significant degeneration." (Ex. 4, pg. 70).

11. At hearing, Dr. Olsen rendered the opinion that the January 13, 2017 electrodiagnostic study was completely normal. Specifically, although Dr. Castrejon reported that there were positive waves on the EMG table, they were only 1+. Dr. Olsen, who also is board certified in electrodiagnostic studies, indicated that electrodiagnostic evaluators rate positive waves from 1+ to 4+. As a result, 1+ would suggest that it is just 'barely there.' In addition, although Dr. Castrejon's study showed positive sharp waves, chronic positive sharp waves would be 1-300 microvolts. The units found on the studies, therefore, were clearly motor units that Dr. Castrejon had mistaken for positive sharp waves. Finally, although Dr. Castrejon noted that the EMG study showed polyphasics, 30% of normal individuals will have polyphasics as a normal finding. As a result, polyphasics in and of themselves are not diagnostic of a radiculopathy. Consequently, Dr. Olsen believed it was very important to have the lumbar MRI imaging corroborating the electrodiagnostic findings that Dr. Castrejon interpreted to be evidence of a radiculopathy.

12. Dr. Murad's office notes of January 10, 2018 state that "He [Claimant] has had chronic right L4 radiculopathy siince that time [of the foraminotomy] which is now manifested as more numbness and tingling." It was further noted in discussions with Claimant:

> We discussed the natural history of *lumbar radiculopathy.* Symptoms may be due to a structural pathology, which can be identified on MRI scans. However, at times, symptoms may be related to nerve injury as a result of *nerve stretching,* etc, *which cannot be seen on MRI. The latter may the the most likely cause of his current symptoms. As far as surgery is concerned, options are quite limited.* (Ex. 4, p. 71)(emphasis added).

13. In response to correspondence from Employer's attorney, Dr. Castrejon released Claimant to modified work with the employer, (Ex. 1, p. 16). The proposed job did not require lifting more than 10 pounds, repetitive extension or flexion of the neck, no repetitive bending or stooping and the ability to alternate sitting and standing, (Ex. 1, p. 16).

14. On a follow up examination on March 22, 2017, Claimant reported that he was able to alternate positions as tolerated in the modified work. However, his job was primarly computer work and making telephone calls. He described difficulty reaching forward and operating the computer keyboard as well as holding the phone between his cheek and shoulder. Dr. Castrejon's physical exam noted decreased cervical range of motion with right paraspinal tendonitis and muscle spasm. Trigger points were noted in the paraspinal musculature. Dr. Castrejon recommended an ergonomic evaluation of the work station and limited the use of computer for 15 minutes. He noted that Claimant may be unable to perform this work. Massage therapy was prescribed.(Ex. 1, pp. 14-15)

15. On April 3, 2017, Dr. Castrejon noted that Mr. James continued to experience pain when working beyond two to three hours, (Ex. 1, p. 11). On April 27, 2017, (Ex. 1, p. 3) he opined that the return to modified work was not successful. On June 23, 2017, Dr. Castrejon provided an opinion that Mr. James is only able to work 2 to 4 hours per day, (Ex. 1, p. 1).

16. A Functional Capacity Exam ("FCE") was performed at Colorado Pain and Rehab Center on March 9, 2017. (Ex. 2). It provided that Claimant can lift at less than the sedentary level of exertion, could sit for 30 to 40 minutes and stand for 20 to 30 minutes. He should frequently change posture. He can bend on an occasional basis within his limited range.

17. Dr. Olsen, after reviewing the FCE report, testified that Claimant probably was required to perform approximately 4-5 hours of testing. The report reflects that Claimant reported a pre-test pain level of 3.5 out of 10, and a post-test pain level of 3.5 out of 10 (Ex. F. p. 115). Dr. Olsen explained that when Claimant arrived to start the test, the evaluators would have asked him to rate his pain, and then after the four hours

of testing, the evaluators would have then asked him to rate his existing pain. Stated differently, on March 9, 2017, Claimant was able to perform 4-5 hours of testing during the FCE, without any increase in his reports of pain.

18. Dr. Olsen testified that the reports of symptoms that Claimant provided to Dr. Castrejon that Claimant believed resulted from performing this light duty work was inconsistent with how he tested out during the FCE that he performed in the same month. In that regard, Dr. Olsen testified as follows:

> A. No, it's not consistent. The FCE would have been, while limited, would have been much more involved than what he was doing at work. And, he was at the FCE and started with a pain of three-and-a-half and left with a pain of three-and-a-half. And at work he was doing significantly less activity –
>
> Q. For two hours?
>
> A. -- for two hours from report of symptoms that would be – that would not make medical sense, given the results he had from his neck surgery or the normal work above his lumbar spine.
>
> Q. But not making medical sense at the same time that he did five – four or five hours of FCE activities, which would be more than when he was doing light-duty work, no increase in pain, less activities during his light-duty work two hours, and he's got pain so bad that he has to leave and he has to take another day off?
>
> A. Correct.
>
> Q. No medical sense at all?
>
> A. And no basis for that flare-up. And it's inconsistent with his response. The FCE where he left that facility with pain of three-and-a-half over 10, and they didn't report any significant difficulties upon his departure.

19. In response to correspondence dated June 23, 2017, however, Dr. Castrejon adopted the restrictions provided in the Functional Capacity Evaluation. (Ex. 1, pg. 1). He further recommended that Claimant should avoid repetitive flexion or extension of the neck and should avoid static positioning of the cervical spine. Claimant should be limited to between 2 and 4 hours of work per day, given his unsuccessful return to modified employment.

20. Claimant testified that he can lift up to 10 pounds and on occasional basis lift more. When walking, he will usually stop after 15 to 20 minutes. He will stretch and then be able to continue. He develops pain when sitting too long which is relieved by standing. When standing, he will lean forward to stretch. After sitting for extended

periods, he will experience groin pain and numbness in his right leg when he commences walking. He experiences cramping in the neck when utilizing his arms on a repetitive basis or holding his neck in a stationary position. He develops problems with his neck when driving. He has difficulty sleeping as a result of neck and low back pain.

21. Dr. Castrejon placed the Claimant at maximum medical improvement on April 27, 2017. (Ex. 1, p. 3). Claimant completed a pain diagram for that office visit. In that pain diagram, Claimant did not notate having any kind of neck pain at all. Rather, Claimant indicated that he had a certain amount of low back pain, as well as pain in his right wrist (not alleged to be work-related).

22. Claimant was subsequently contacted by his employer and advised that there was no work for him in the Trinidad area. Claimant contacted the Colorado Division of Rehabilitation but was not provided any assistance. He submitted employment applications in Trinidad. These included a position with Cricket, AS Protection, manager at Kentucky Fried Chicken, Alert Patrol, Dish Network, Sodexo, LaQuinta and Holiday Inn. When submitting applications, Mr. James indicated that he had work restrictions, but did not specify any physical limitations.

23 Claimant received one response after submitting those applications for employment; from Sodexo who indicated that they were not interested. Per stipulation of the parties, Claimant has been awarded Social Security Disability benefits of $230.31 monthly.

24. In his report of MMI on April 27, 2017, Dr. Castrejon provided a whole person impairment of 35%. This combined a 20% impairment of the cervical spine and a 19% impairment of the lumbar spine. (Ex. 1, p. 4). The physical exam on that date noted a decreased range of motion of the cervical spine and paralumbar muscle spasm, (Ex. 1, p. 3). Range of motion measurements of the lumbar spine were found to be valid per the AMA Guidelilnes, (Ex. 1, p. 7).

25. Respondents then requested a DIME, which was performed by Dr. Tyler on September 19, 2017. In his physical examination, Dr. Tyler noted right paralumbar tenderness, trigger points in the parascapular regions and restricted mobility in the cervical spine. (Ex. 3, p. 63). He provided a diagnosis of post C4-5, C5-6 foraminotomies with resolution of radicular pain into the upper extremity, but continued segmental dysfunction of the cervical spine.

26. Dr. Tyler also indicates moderately severe obliquity in the lumbar region with noted secondary spasm, (Ex. 3, p. 64). By this time, Claimant had undergone three lumbar range of motion measurements. Claimant had his first lumbar range of motion testing with Dr. Castrejon on March 9, 2017 (Ex. F, p. 131). Claimant then had his second range of motion testing performed with Dr. Olsen on June 26, 2017 (Ex. A, p. 16). Claimant then had his final lumbar range of motion testing performed with Dr. Tyler on September 19, 2017 (Ex. D, p. 84).

27. Respondents prepared Exhibit N, which graphs the various measurements performed by each of these providers. Claimant demonstrated 5 degrees of lumbar extension with Dr. Olsen. At hearing, Dr. Olsen demonstrated what 5 degrees of a lumbar extension would be, which means Claimant barely extended his back at all. Given Claimant's normal lumbar MRI and normal EMG, Dr. Olsen did not believe that there was any plausible medical explanation for such limited range of motion in the lumbar extension.

28. Dr. Tyler's DIME opinion is that Claimant had a 17% impairment of the cervicial spine and a 13% impairment of the lumbar spine, combining for a total whole person impairment of 28%. The range of motion measurements of the lumbar spine were found to be valid per the AMA Guide, (Ex. 3, pp. 52-54).

29. Dr. Tyler observed the client shifting his weight from his right buttock to his left buttock at least every five minutes while sitting in the examining room. He was able to sit for the first 30 minutes of the exam, (Ex. 3, p. 63).

30. Dr. Olsen prepared a series of reports. (Ex. A). Claimant reported to Dr. Olsen that he had achieved an 80% improvement in his cervical problems following his surgery. Nevertheless, Claimant reported to Dr. Olsen that he continued to experience cramping pain in his neck at a level of 6-7 out of 10 on a daily basis (Ex. A, p. 13).

31. In a report dated June 26, 2017, (Ex. A, p. 8), Dr. Olsen indicated that the range of motion testing performed by Dr. Castrejon is not considered objective but rather self limited, even though the testing met the criteria for validity under AMA Guidelines (Ex. 1, p. 7). He opinioned that Claimant could comfortably lift up to 50 pounds on an occasional basis and 40 pounds on a frequent basis. Claimant would not need to alternate positions on a frequent basis.

32. In a report dated January 8, 2018, (Ex. A, pg 5), Dr. Olsen disagreed with the impairment rating provided by the DIME physician, Dr. Tyler. He noted that the range of motion measurements of the lumbar spine taken by Dr. Tyler differed from his own measurements. He opinioned that Dr. Tyler errored in determining the impairment rating for the lumbar spine, even though the test was deemed valid per the AMA Guides.

33. In reponse to correspondence from employer's attorney, Dr. Olsen generated a report dated February 5, 2018, (Ex. A, p. 3). He presents an opinion that Claimant was self limiting in the FCE performed on March 9, 2017, (Ex. 2). He recommended a second FCE to be performed at Select Physical Therapy indicating that a more current FCE would be medically necessary to determine Claimant's current level of functioning.

34. A second FCE was then performed at Select Physical Therapy on April 12, 2018, (Ex. C). It lasted 3 ¼ hours. The report provides that the result of the

evaluation were considered to be an accurate representation of his functional abilities, (Ex. C, pg. 1).

35. During the testing, elevated blood pressure and heart rate were detected requring Claimant to sit, breath, and stretch throughout the testing. On the treadmill test when the angle was increased by a 5% incline, his right knee buckled and he stepped off the treadmill. He reported pain in the right groin area but stated that he wanted to keep walking. The treadmill was reduced to a 0% incline. Claimant subsequently sat and stretched his low back, (Ex. C, p. 1). This FCE stated that Claimant is unable to sit, stand or walk on a frequent basis. He can lift up to 20 pounds but was placed in the sedentary level of exertion due to his inability to perform the full range of demands in the light category.

36. Dr. Olsen corresponded again with Respondent's attorney on May 2, 2018 (Ex. A, p. 1). In his report, he states that even though physical therapy did not identify inconsistencies in the testing, the symptoms reported while on the treadmill would be considered a significant inconsistency. He disagreed with the findings of the Functional Capacity Evaluation performed at Select Physical Therapy which stated that these are the minimal capabilities of the Claimant.

37. At hearing, Dr. Olsen testified that during the past 2 years, he has prepared two to three Independent Medical Examinations per month for Respondents' attorney. Dr. Olsen reviewed PA Glass' February 15, 2017 clinical note. Dr. Olsen stated that Claimant's reports to him of 80% improvement in his neck following surgery is consistent with PA Glass' clinical note, but inconsistent with Claimant's assertion that he was still having 6-7 out of 10 pain on a daily basis.

38. Dr. Olsen also reviewed Dr. Castrejon's January 10, 2017 clinical note in which Claimant reported to Dr. Castrejon that he was doing quite well following the surgery. Dr. Olsen believed that Dr. Castrejon's January 10, 2017, clinical note was consistent with Claimant's report to him that he experienced an 80% improvement in his cervical symptoms following the surgery, but inconsistent with him still having 6-7 out of 10 pain on a daily basis.

39. Dr. Olsen testified that walking at a 2 mph rate is the speed of an old shuffling man. Dr. Olsen also testified that there is no pathology emanating from Claimant's low back that could explain his inability to walk faster than 2 miles per hour and then have his right knee give out. Dr. Olsen testified that because Claimant is able to walk on his treadmill at home for 10-15 minutes at a time, he should have been able to perform the same treadmill testing during the FCE, but clearly did not.

40. Claimant, following the FCE, reported that his pain levels were 9 out of 10 (Ex. C, p. 48). As Dr. Olsen noted, most of the testing activities that Claimant was requested to perform was terminated early due to Claimant's complaints of pain. Dr. Olsen noted that Claimant, during his March 2017 FCE, exerted much more than he did for the April 2018 FCE. However, despite exerting more in the March 2017 FCE, his post-testing pain score was the same as his pretest score: 3.5 out of 10. After exerting

substantially less for the April 2018 FCE, Claimant's reports of pain were 9 out of 10. Once again, Dr. Olsen could not identify any plausible medical explanation why Claimant's pain scores after the April 2018 testing would be three times higher than the pain reports that he had following the March 2017 FCE.

41. Dr. Olsen also reviewed the pain diagram completed by Claimant himself for the April 27, 2017 office visit with Dr. Castrejon. Again, at that time, Claimant made no notations in the pain diagram indicating that he had any kind of cervical symptoms. Dr. Olsen testified that Claimant's pain diagram that he completed on April 27, 2017, is entirely consistent with Claimant's statements to Dr. Olsen that he had at least 80% improvement in his cervical problems following his surgery, but inconsistent with Claimant's statements that he was still experiencing 6-7 out of 10 pain on a daily basis.

42. Dr. Olsen disagreed with the diagnosis of lumbar radiculopathy provided by Dr. Castrejon, indicating that his interpretation of the EMG was incorrect and that his clinical notes are unreliable. The MRI of the lumbar spine was normal, and not consistent with any sort of nerve impingement. Given the lack of objective findings, Dr. Olsen was unable to come up with any diagnosis for Claimant's low back problems.

43. Dr. Olsen disagreed with the assessment of Dr. Murad and PA Glass that Claimant suffered from a chronic lumbar radiculopathy as reported January 10, 2018, (Ex. 4, p. 67). Dr. Murad had opined that even though the MRI showed minimal degeneration and no nerve compression, most likely the cause of the current symptoms are a nerve injury which cannot be seen on this diagnostic study, (Ex. 4, p. 72).

44. Dr. Olsen also disagreed with the opinion of DIME physician Dr. Tyler that Claimant had an impairment of the lumbar spine providing that there was no plausable explanation for the range of motion measurements taken by Dr. Tyler.

45. Dr. Olsen also disagreed with the results of both FCEs even though they were found to be valid. He opined that Claimant provided sub-maximal efforts during the testing.

46. Dr. Olsen was questioned about a surveillance photo taken of the Claimant on July 1, 2017, (Ex. M). He testified that the photo of Mr. James bending over was not consistent with any range of motion testing performed by Drs Castrejon and Tyler. Exhibit M shows the Claimant bending over, at near full flexion, to reach something on the ground with both knees bent, and in no apparent distress.

47. Michael Fitzgibbons prepared a Vocational Assessment for Claimant, (Ex. 8). Katie Montoya prepared a Vocational Assessment for Respondents, (Exhibit B). Both reports were prepared prior to the second FCE performed by Select Physical Therapy at the request of Dr. Olsen. Both Michael Fitzgibbons and Katie Montoya present an opinion that the medium work restrictions presented by Dr. Olsen (if accepted) provide for a variety of return to work options.

48. Mr. Fitzgibbons observed that the Claimant had applied for jobs in the limited market of Trinidad, Colorado and has not received any job offers. Claimant also contacted the Colorado Division of Vocational Rehabilitation, but had not received any job offers. He notes that Claimant is an older worker, age 55, which makes it more difficult to find employment.

49. Ms. Montoya presents an opinion that given the sedentary classification per the first FCE, it would be reasonable to investigate customer service and front desk clerk types. There may also be opportunities as a driver in the Trinidad area. It is her understanding that an additional FCE is outstanding and she elected to postpone labor market research until this document was received. She states that her opinion will be finalized upon receipt of the second FCE. Other than contemplating further labor market research, Ms. Montoya did not offer vocational sevices on behalf of the Employer to Mr. James.

50. The deposition of Michael Fitzgibbons, was taken on September 12, 2018. Mr. Fitzgibbons stated that Claimant does not have clerical/secretarial skills that can be utilized in a sedentary job, (Depo., p. 8). He further testified that the medical reports of Dr. Castrejon showed that Mr. James was not able to perform the light duty accommodations provided by his employer, (Depo, p. 10).

51. Mr. Fitzgibbons also reviewed the FCE performed at Colorado Pain and Rehabilitation Center on March 9, 2017, (Ex. 2). He noted that sitting was limited to 30 to 40 minutes per hour as well as the recommendation for frequent changes in postures. Sedentary work requires being seated most of the time while performing job tasks, (Depo., pg. 12).

52. Mr. Fitzgibbons testified that the second FCE performed on February 15, 2018 (Ex. C) also restricted sitting, standing and walking. Even through the material handling is at the light level, the restrictions of standing, walking and sitting placed the Claimant at the sedentary level. The limitation of sitting on an occasional basis would preclude sedentary work as it is customarily performed, (Depo., pp. 12-13).

53. Mr. Fitzgibbons reviewed the first page of the second FCE, (Ex. 6). He noted that because of elevated blood pressure and heart rate, it was necessary for Mr. James to take breaks during the testing so he could sit, breath and stretch. The Claimant would not able to engage in sedentary work activity without the need for breaks. From a vocational perspective, he opines that it is difficult to place someone if he is not able to engage in sedentary activity on a consistent basis, (Depo., pgs. 14-15). In order to be competitevely employable in Trinidad, Claimant would need to comply with the standard breaks that are customarily allowed in the workplace. (Depo., p. 21). Mr. Fitzgibbons testified that the second FCE was consistent with the report of Dr. Castrejon that Mr. James was only able to engage in activities for 2 to 4 hours, (Depo., p. 20).

54. Mr. Fitzgibbons tesified that Claimant had applied for employment in Trinidad, but was not offered any positions. Claimant had also contacted the Division of

Vocational Rehabilitation. Based on the restrictions provided by Dr. Castejon and both Functional Capacity Evaluations, it is the opinion of Mr. Fitzgibbons that Claimant does not have the residual capacity to maintain or sustain any type of employment in the Trinidad labor market, (Depo., pp. 20-21).

55. Mr. Fitzgibbons noted that Dr. Olsen had changed the material handling for the Claimant from medium level to the light level, with no postural limitations. Based on either the light or medium level or exertion, there would be jobs the Claimant could perform in Trinidad, (Depo., pp. 12, 24).

56. On April 10, 2018, Katie Montoya issued a Vocational Assessment report. In taking a history from Claimant, she noted that Claimant would "wake up and have coffee and stretch. He may walk 10 to 15 minutes on the treadmill at his home. He goes to his buddy's house in the mountains until noon and then will come home for the rest of the day….*Mr James identifed that he is always moving throughout the day*." (Ex. B, p. 33)(emphasis added).

57. Ms. Montoya further noted Claimant's efforts at seeking new work, once he was no longer in the employ of Qwest:

> Mr. James explained that he went to the Work Force Center, but they told him their policy is that they do not help while a person is on workers' compensation…..Mr. James explained that his entire work search has taken place in Trinidad…..Mr. James described that *he looked for work in November 2017 and <u>has not looked before or since</u> that time.* He did note that he would probably follow up with the Work Force Center for an assessment *once his workers' compensation case is done*. (Ex. B, p. 35)(emphasis added).

58. Ms. Montoya noted that the DIME physician, Dr. Tyler, provided an impairment rating, but did not define work restrictions. She therefore had only Dr. Olsen's and Dr. Castrejon's work restrictions to examine. In her view, Claimant is either a sedentary or medium classification, depending upon whose medical opinion to adopt. While she wanted to await the results of the then-pending second FCE before finalizing labor market research, she indicated that even if Claimant were restricted to 'sedentary' positions,Claimant could potentially serve as a cashier, delivery, or hotel front desk. If Claimant were at medium classification, even greater job opportunites would exist.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion/Lumbar Rating

D. The medical impairment determination of the DIME is binding unless overcome by clear and convincing evidence. Section 8-42-107(8), C.R.S. *See Qual-Med Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998); *Cudo v. Blue Mountain Energy, Inc.,* W.C. No. 4-375-278 (ICAO, October 29, 1999). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it highly probable and free from serious or substantial doubt. As otherwise stated, clear and convincing evidence is defined as evidence which demonstrates that it is highly probable that the rating of the IME physician is incorrect. *Metro Moving & Storage Co., v. Gussert*, 914 P.2d 411 (Colo. App. 1995). Clear and convincing evidence is evidence which is stronger than a preponderance, is unmistakable and is free from serious or substantial doubt. In re *Welker,* W.C. No. 4-

309-642 (Industrial Claim Appeals Office, 1998). See also DiLeo v. Koltnow, 613 P.2d 318 (1980). This enhanced burden of proof in overcoming a DIME reflects the underlying assumption that a physician selected independently by the Division of Workers' Compensation will provide a more reliable medical opinion.

E. The mere difference of opinion between medical experts is insufficient to overcome a DIME physician's rating by clear and convincing evidence. *In re Holmes* W.C. No. 4-527-829. (January 21, 2005). Repondents have failed to prove by a clear and convincing evidence that the 28% combined whole person medical impairment rating by Dr. Tyler is incorrect. The DIME physician's opinion is the only opinion the ALJ is required to afford any presumptive weight. *Harrison v. Wal-Mart Stores*, W.C. No. 4-522-344 (ICAO, April 18, 2003). See also, *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002).

F. Dr. Olsen raises serious, valid concerns about the inconsistency of Claimant's range of motion across several raters. In a perfect world, ranges of motion post-MMI would remain reasonably consistent with different physicians. There is a disparity here, but in the end, Dr. Olsen believes that the results are from submaximal effort by Claimant. Part of Dr. Olsen's conclusions stem from his own belief that Claimant's objective testing-MRI and Electrodiagnostics-shows no pathology. However, in this case, the ALJ is persuaded that Claimant's lumbar radicular complaints could indeed be from stretching of nerves in the lumbar region, which, according to Dr. Murad and staff, will not lend itself to diagnositic testing, and surgical alternatives are limited. This was by all accounts a violent traffic encounter, and the ALJ is not persuaded that this mechanism of injury could not have caused Claimant's symptoms.

G. While the ALJ acknowledges that Dr. Olsen might indeed be correct, in the end, it is a difference in medical opinions between he and Dr. Tyler. Dr. Tyler is the DIME physician, who conducted his exam within validity parameters. Dr. Tyler did not sense the submaximal efforts that Dr. Olsen did. Although not referenced in the DIME report, the photograph of Claimant bending over was taken more than two months before the DIME exam. The ALJ concludes that the 13% lumbar impairment rating assigned by the DIME physician has not been overcome by clear and convincing evidence.

Permanent Total Disability

H. In order to prove PTD, Claimant must show by a preponderance of the evidence that he is incapable of earning any wages in the same or other employment. *Section 8-40-201(16.5)(a)*. A Claimant therefore cannot receive PTD benefits if he or she is capable of earning wages in any amount. *Weld County School Dist. RE-12 v. Bymer*, 955 P.2d 550, 556 (Colo. 1998). The term "any wages" means more than zero wages. See, *Lobb v. ICAO*, 948 P.2d 115 (Colo. App. 1997); *McKinney v. ICAO*, 894 P.2d 42 (Colo. App. 1995). In weighing whether Claimant is able to earn any wages, the ALJ may consider various human factors, including Claimant's physical condition, mental ability, age, employment history, education, and availability of work that the Claimant could perform. *Weld County School Dist. R.E. 12 v. Bymer*, at 550, 556, 557.

The critical test is whether employment exists that is reasonably available to a claimant under his particular circumstances.

I. Claimant has significant subjective complaints and self-limiting restrictions. Claimant did have a neck surgery, and *has received an impairment rating from the DIME physician* which will remain undisturbed. By February, 2017, Claimant was reporting to his surgeon that he was very pleased with the results of the surgery, and that in fact he was taking no pain medications at the time. When Claimant was placed at MMI by Dr. Castrejon on April 27, 2017, Claimant, in his own pain diagram, did not notate that he was having any symptoms in his neck. It was only later that Claimant began reporting significant symptoms in his neck.

J. If the objective evidence does not establish the extent of Claimant's disability, then the remaining measure of Claimant's disability is the reliability of his subjective complaints. Such subjective complaints vary:

- In March 2017, Claimant underwent a 4-5 hour FCE with no self-reporting of increase in pain (both pain levels pre and post being 3.5), yet reports to Dr. Castrejon that if he performed two hours of light work (sitting at a desk and answering phones), he experienced such an increase in pain that he had to leave early and rest the following day.

- Reporting to the evaluating therapist during the April 2018 evaluation that less than 30 seconds into his treadmill test, he began to experience symptoms that he believed was causing his right leg to give out, yet reports being able to walk 10 to 15 minutes a day on a treadmill at home.

- Widely varying range of motion measurements among the different medical providers.

- Demonstrating 45 degrees of forward flexion to Dr. Olsen on June 26, 2017, yet less than one week later (July 1, 2017) being apparently able to flex his spine while upright, at least with knees bent.

K. Dr. Castrejon, did not challenge Claimant's reporting of his inability to perform two hours of light duty work in March 2017 by referencing the FCE that Claimant performed in March 2017 in which he did significantly more exertional activities with no increase in pain. Instead, he chose to simply accept Claimant's subjective complaints without reservation. Because Dr. Castrejon accepted without challenge Claimant's subjective complaints, he imposed significant permanent restrictions on Claimant.

L. Dr. Olsen, on the other hand, identified the numerous occasions when Claimant's subjective complaints were simply not consistent. His proposed restrictions included lifting up to 20 pounds on occasional basis, and no restrictions in terms of standing, walking, or sitting. Respondents submit that the greater weight of evidence establishes that Dr. Olsen's restrictions should be considered the most accurate permanent restrictions for Claimant.

M. As outlined above, if Dr. Olsen's restrictions are considered accurate, then there is no disagreement amongst the vocational experts as to whether Claimant would be able to continue to earn a wage. Both Ms. Montoya and Mr. Fitzgibbons have rendered the opinion that Claimant would still be considered employable in the Trinidad labor market if Dr. Olsen's restrictions are in fact accurate.

N. While insufficient evidence exists to prove to the ALJ, by clear and convincing evidence, that Claimant provided submaximal effort in his DIME exam, the ALJ does find that Claimant has put submaximal effort in his job search. He applied for a handful of positions in a small market for one month. He then quit trying, pending results of the Workers Compensation process. This falls far short of showing that someone in Claimant's position can earn no wages, regardless of which Vocational Expert one might find more persuasive. While Ms. Montoya's conclusions were not complete, pending the second FCE, the ALJ still finds her more persuasive than Mr. Fitzgibbons.

O. Claimant was seriously injured, through no apparent fault of his own, while at work. Claimant was then provided medical care to rehabilitate himself back to MMI. Modern medicine has its limits, so the final result has not been perfect, despite efforts made on behalf of his medical providers. As a result, Claimant has now been provided a whole person impairment rating for his back and neck, to compensate him for ***diminished*** earning capacity moving forward. It is the best the Workers Compensation system can do for him. Claimant has a good education, a good work history, and is mentally intact. He is capable of working, at a minimum, in a sedentary capacity, and more likely, medium capacity, and the ALJ so finds.

P. Claimant has not proven by a preponderance of the evidence that he should be considered permanently and totally disabled.

ORDER

It is therefore Ordered that:

1. Respondents have not overcome the DIME opinion of Dr. Tyler. Claimant's Whole Person Impairment rating is 28%.

2. Claimant has not shown that he is Permanently and Totally Disabled. His claim for Permanent and Total Disability is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty

(20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

Whether the claimant has demonstrated by a preponderance of the evidence that the right ankle arthroscopy (with debridement, possible chondroplasty micro fracture and possible iliac crest bone marrow aspiration) recommended by Dr. Christopher Copeland is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted August 19, 2015 work injury.

FINDINGS OF FACT

1. The claimant began his employment with the employer in August 1990. In 2015, the claimant was working for the employer performing code inspections at construction locations.

2. On August 19, 2015, the claimant suffered an injury at work when he stepped down to inspect a foundation footer and stepped on a rock with his right foot. The claimant testified that by stepping down onto the rock he rolled of his right ankle which caused his right foot to roll up and to the inside. The claimant further testified that after the injury his right ankle was painful, swollen, and discolored.

3. The claimant reported the incident to the employer and was referred to Work Partners for medical treatment. The claimant first treated at Work Partners on August 20, 2015 and was seen by Daniel Meyer, PA. Mr. Meyer recorded that the claimant had pain in the right foot that was aching and sharp. On examination, Mr. Meyer noted that there was swelling in the claimant's right midfoot and bruising over the affected area. Mr. Meyer also noted that the claimant's ankle range of motion was "functional", but "limited by the injury to the lateral foot".

4. Also on August 20, 2015, x-rays were taken of the claimant's right foot and showed a linear fracture of the right fifth metatarsal (also referred to as a "Jones fracture"). Based upon the results of the x-rays, Mr. Meyer ordered a "cam" boot, crutches, and a knee scooter for the claimant. In addition, Mr. Meyer referred the claimant to Dr. Christopher Copeland for an orthopedic consultation.

5. The claimant was first seen by Dr. Copeland on September 11, 2015. At that time, Dr. Copeland noted that the claimant's symptoms were located in the right foot. Dr. Copeland also noted that a Jones fracture can be difficult to heal. As a result, Dr. Copeland discussed the claimant's options and it was agreed that they would pursue the conservative treatment of a cast on the claimant's right foot in an attempt to avoid surgery.

6. On December 18, 2015, a computed tomography (CT) scan of the claimant's right foot showed a partial union of the fracture at the claimant's fifth metatarsal, degenerative joint disease at the first metatarsophalangeal (MTP) joint, and an osteochondral lesion of the medial talar dome. In addition, the radiologist, Dr. Roy Erb, noted fragments beneath the medial malleolus. Dr. Erb opined that these fragments were probably related to trauma.

7. On December 22, 2015, the claimant returned to Work Partners and was seen by Mr. Meyer. At that time, the claimant reported pain anterior and medial to the tibia. Mr. Meyer noted the CT finding of the osteochondral lesion and deferred to Dr. Copeland for a discussion of causation and treatment.

8. On January 15, 2016, the claimant returned to Dr. Copeland. In the medical report of that date, Dr. Copeland noted that the claimant was complaining of right ankle pain. In addition, Dr. Copeland noted the finding of an osteochondral lesion on the CT scan. Dr. Copeland opined that the claimant's ankle symptoms potentially correlated to the osteochondral lesion and recommended a magnetic resonance image (MRI) of the claimant's right ankle.

9. On January 15, 2016, an MRI of the claimant's right ankle showed a full thinness chondral defect of the posterior medial talar dome with underlying subchondral marrow edema.

10. Following the MRI, the claimant was again seen by Dr. Copeland on January 22, 2016. Based upon the MRI results and the claimant's right ankle complaints Dr. Copeland recommended a diagnostic/therapeutic injection. On that date, Dr. Copeland administered an injection to the claimant's right ankle with anterior medial approach. Dr. Copeland opined that if the claimant's symptoms were confirmed to be coming from the ankle joint, the claimant would need to undergo arthroscopy with possible micro fracture.

11. On February 2, 2016, the claimant reported to Mr. Meyer that the January 22, 2016 injection provided relief. Also on that date, Mr. Meyer noted that the claimant's Jones fracture continued to heal.

12. On February 22, 2016, the claimant returned to Dr. Copeland who noted that the claimant's symptoms had not improved with conservative treatment. Dr. Copeland opined that the claimant's right ankle symptoms were related to the August 19, 2015 work injury. In support of his opinion, Dr. Copeland noted that the claimant had not had ankle problems prior to the injury. On that date, Dr. Copeland recommended that the claimant undergo right ankle arthroscopy with possible micro fracture. Dr. Copeland further opined that the claimant's need for right ankle surgery was related to his August 19, 2015 work injury.

13. The claimant testified that since the August 19, 2015 injury he has undergone three surgeries. Each of these surgeries had been performed by Dr. Copeland. The claimant's first surgery occurred on March 9, 2016. At that time, Dr. Copeland performed the recommended a right ankle arthroscopy with debridement, including micro fracture (due to the osteochondral lesion of the right ankle talus), and excision of bone at the distal tibia.

14. Despite conservative treatment, the claimant's Jones fracture was not healing and surgery was recommended by Dr. Copeland. On August 15, 2016, Dr. Copeland performed an open reduction and internal fixation (ORIF) of the claimant's right fifth metatarsal, with bone grafting of the Jones fracture, iliac crest bone marrow aspiration, peroneal brevis tendon repair, peroneal longus tenolysis, and superior peroneal retinacular reconstruction.

15. On January 9, 2017, the respondent asked Dr. Timothy O'Brien to review the claimant's medical records and opine regarding whether a recommended compound cream (specifically CMPD Ketamine/tramadol/gabapentin/salt stab) was reasonable medical treatment that was medically necessary and causally related to the claimant's work injury. With regard to the specific medical treatment recommended, Dr. O'Brien opined that the compound cream was not reasonable medical treatment.

16. In that same report, Dr. O'Brien further opined that the osteochondral lesion was an incidental finding on the CT scan of a preexisting condition. Dr. O'Brien further opined that the claimant's preexisting condition of an osteochondral lesion was not aggravated nor accelerated by the August 19, 2015 work injury. In support of his opinion, Dr. O'Brien noted that the claimant did not have ankle pain, swelling, or bruising at the time of his initial medical treatment for his work injury.

17. Subsequently, it was determined that the claimant's fifth metatarsal fracture was still not healing. As a result, Dr. Copeland recommended a revision surgery involving a repeat ORIF procedure with a separate incision for open grafting of the fifth metatarsal fracture, and iliac crest bone marrow aspiration.

18. On March 4, 2017, the claimant attended an independent medical examination (IME) with Dr. O'Brien. In connection with the IME, Dr. O'Brien obtained a history from the claimant, completed a physical examination, and again reviewed the claimant's medical records. In his IME report of that date, Dr. O'Brien opined that a revision of the ORIF procedure on the claimant's fifth metatarsal was reasonable medical treatment that was related to the claimant's August 19, 2015 work injury. In that same IME report, Dr. O'Brien reiterated his opinion that the recommended compound cream was not reasonable medical treatment.

19. On April 19, 2017, Dr. Copeland performed the recommended revision of the ORIF procedure with a separate incision for open grafting of the fifth metatarsal fracture, and iliac crest bone marrow aspiration.

20. Following the April 19, 2017 revision surgery, the claimant continued to undergo physical therapy which included range of motion exercises and increased weight bearing.

21. The respondent filed a General Admission of Liability (GAL) on September 28, 2017.

22. On October 17, 2017, the claimant returned to Dr. Copeland. At that time, Dr. Copeland noted that the claimant had "[i]ntermittent symptoms about the ankle and distal peroneal tendons lateral incision."

23. On January 12, 2018, the claimant's right ankle symptoms were also noted by Erica Herrera, PA with Work Partners. Ms. Herrera specifically noted that the claimant had tenderness over the lateral incision of the ankle, the peroneal tendons, the anterior ankle joint, and the lateral ankle joint.

24. Thereafter on February 14, 2018, the claimant was seen at Work Partners by Dr. Lori Fay to discuss whether the claimant had reached maximum medical improvement (MMI). At that time, Dr. Fay referred the claimant back to Dr. Copeland for additional evaluation to confirm whether the Jones fracture had healed.

25. On February 20, 2018, a CT scan of the claimant's right foot showed near-complete healing of the Jones fracture and stable bony osteochondral proliferation of the medial talar dome.

26. On March 13, 2018, the claimant returned to Dr. Copeland who noted that the claimant's fifth metatarsal fracture continued to heal. Dr. Copeland also noted that the claimant continued to have pain that was located in the anterior medial ankle joint. Dr. Copeland opined that the claimant's symptoms were generally "more ankle joint related" and might be caused by the osteochondral lesion. At that time Dr. Copeland recommended and administered a diagnostic injection to the claimant's right ankle joint.

27. On April 12, 2018, the claimant was again seen by Dr. Copeland. Dr. Copeland noted that the claimant complained of increased pain in the anterolateral ankle. Dr. Copeland reiterated his opinion that the claimant had pathology with the osteochondral lesion and recommended an additional MRI of the claimant's right ankle.

28. On April 23, 2018, an MRI of the claimant's right ankle showed that the osteochondral lesion of the medial talar dome had manifested as a surface osteophyte without osseous marrow edema.

29. The claimant returned to Dr. Copeland on April 24, 2018 to discuss the most recent MRI results. At that time, Dr. Copeland recommended and administered a diagnostic and therapeutic injection.

30. On May 3, 2018, the claimant was seen by Dr. Lori Fay with Work Partners. At that time, the claimant reported that the April 24, 2018 injection resulted in 50% improvement of his ankle symptoms.

31. The claimant was seen by Dr. Copeland on May 22, 2018. Based upon the April 23, 2018 MRI results, the claimant's response to the April 24, 2018 injection, and failure of other conservative treatment, Dr. Copeland opined that the claimant's right ankle symptoms were consistent with anterior lateral impingement. At that time, Dr. Copeland recommended that the claimant undergo a right ankle arthroscopy with debridement, possible chondroplasty micro fracture and possible iliac crest bone marrow aspiration.[1]

32. On July 3, 2018, the claimant attended a second IME with Dr. O'Brien. As with the prior IME, Dr. O'Brien reviewed the claimant's medical records, obtained a history, and performed a physical examination. In his July 3, 2018 IME report, Dr. O'Brien opined that the claimant's only injury on August 19, 2015 was the fracture of the right fifth metatarsal. Dr. O'Brien further opined that the claimant's need for the recommended right ankle surgery was not related to the August 19, 2015 work injury. Dr. O'Brien reiterated his opinion that the finding of a osteochondral lesion of the medial talar dome was an incidental finding. Dr. O'Brien further opined that the surgery would not be successful because the osteochondral lesion is not the cause of the claimant's right ankle symptoms. Dr. O'Brien's testimony by deposition was consistent with his written reports.

33. Based upon Dr. O'Brien's July 3, 2018 IME report the respondent denied authorization for the recommended right ankle surgery.

34. The claimant testified that immediately after the August 19, 2015 injury he reported ankle symptoms, including pain and swelling. In addition, the claimant testified that the cast he wore after the injury had to be adjusted and cushioned because his ankle was swelling inside the cast. The claimant credibly testified that although his medical treatment was primarily focused on his Jones fracture, he had ankle swelling and pain throughout his claim. The claimant also testified that his current right ankle symptoms include pain, stiffness, popping, and a feeling that the joint is swelling.

35. The ALJ credits the claimant's testimony at hearing, the medical records and the opinions of Dr. Copeland over the conflicting opinions of Dr. O'Brien. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that his right ankle symptoms are causally related to the August 19, 2015 work injury. The ALJ also finds that the claimant has demonstrated that it is more likely than not that the right ankle surgery recommended by Dr. Copeland is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury.

[1] This is a revision of the procedure performed on March 9, 2016.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

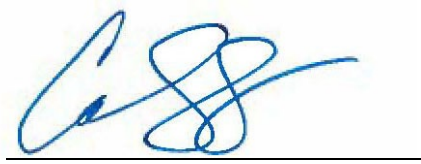
3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008).

4. As found, the claimant has demonstrated by a preponderance of the evidence that the recommended right ankle arthroscopy with debridement, possible chondroplasty micro fracture and possible iliac crest bone marrow aspiration is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted August 19, 2015 work injury. As found, the claimant's testimony, the medical records, and the opinions of Dr. Copeland are credible and persuasive.

ORDER

It is therefore ordered that the respondent shall pay for the recommended right ankle arthroscopy with debridement, possible chondroplasty micro fracture and possible iliac crest bone marrow aspiration, pursuant to the Colorado Medical Fee Schedule.

Dated October 25, 2018.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that she sustained an injury arising out of and in the course and scope of her employment with the employer on December 26, 2016 (WC 5-065-055).

- Whether the claimant has demonstrated by a preponderance of the evidence that she sustained an injury or developed an occupational disease that arose out of and in the course and scope of her employment with the employer, with a reported date of onset of September 24, 2017 (WC 5-058-479).

- If the claimant proves a compensable injury and/or occupational disease, whether the claimant has demonstrated by a preponderance of the evidence that medical treatment she received was reasonable and necessary to cure and relieve her from the effects of the injury and/or occupational disease.

- If the claimant proves a compensable injury and/or occupational disease, whether the claimant has demonstrated by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits beginning September 24, 2017.

- At hearing, the parties stipulated that if indemnity benefits are ordered, the claimant's average weekly wage (AWW) for both claims is $511.41.

FINDINGS OF FACT

1. The claimant began her employment with the employer in June 2015. The claimant worked in housekeeping at a hotel located in Telluride, Colorado.

2. The claimant's job duties included cleaning rooms, which included vacuuming, scrubbing bathroom fixtures and showers, sweeping, mopping, dusting, striping beds, making beds, and doing laundry. The hotel where the claimant was employed has 30 rooms. The claimant testified that during a normal shift she would clean nine to ten guest rooms. The claimant used a housekeeping cart to transport items from room to room to complete her tasks. The claimant testified that during an eight hour shift she would typically perform laundry duties for approximately two hours. The claimant is right handed, but would use both hands to complete her housekeeping duties.

3. The claimant testified that on December 26, 2016, she was pushing a housekeeping cart through a doorway when the cart became caught on the door knob. As a result, the cart rebounded into the claimant and hit her left wrist. The claimant testified that she reported the incident to the hotel manager the next day, December 27, 2016. Upon learning of the December 26, 2016 incident, the employer sent the claimant for medical treatment at Telluride Medical Center.

4. The claimant was first seen at Telluride Medical Center on December 29, 2016 and treated with Eric Johnson, FNP. At that time, the claimant reported pain in her left wrist that radiated up her arm. On examination, Mr. Johnson noted that there was no swelling, redness, or ecchymosis (bruising) of the claimant's left wrist. He also noted normal range of motion, but diminished strength of flexors and extensors and diminished grip "secondary to pain". On December 29, 2016, an x-ray of the claimant's left wrist showed no fracture. Mr. Johnson diagnosed a left wrist sprain and gave the claimant a wrist brace and recommended ibuprofen for the pain. In addition, Mr. Johnson assigned the claimant work restrictions of no lifting, carrying, pushing, or pulling with her left hand of more than 10 pounds.

5. On January 6, 2017, the claimant returned to Telluride Medical Center and was seen by Mr. Johnson. At that time, the claimant reported that she was feeling better and had improved by 80%. On examination, Mr. Johnson again noted no swelling, redness or ecchymosis and normal range of motion. In addition, Mr. Johnson noted that the claimant had normal strength of flexors and extensors, but "pain with resisted extension". Mr. Johnson instructed the claimant to continue to use the wrist brace. At that time, the claimant's work restrictions were increased to no lifting, carrying, pushing, or pulling with her left hand of more than 20 pounds.

6. The claimant was seen by Mr. Johnson for a third time on January 17, 2017. The claimant reported that she only had pain in her left wrist when lifting more than 20 pounds, but that even then the pain was a minimal dull ache. The claimant also reported that she wanted to return to full duty. On physical examination, Mr. Johnson noted normal range of motion, normal strength of flexors and extensors, with "minimal pain on extension". At that time, the claimant was released to full duty, with no work restrictions. Mr. Johnson instructed the claimant to return in one week when he anticipated she would be at maximum medical improvement (MMI).

7. On January 24, 2017, the claimant returned to Mr. Johnson and reported minimal pain, despite working full duty. The claimant also reported that she had "some difficulty when carrying heavy bags" but was "[a]ble to work without pain". Mr. Johnson placed the claimant at MMI on January 24, 2017 with no permanent restrictions and no permanent impairment.

8. While treating with Mr. Johnson, the claimant was able to return to work and work within her work restrictions. Once she was released to full duty on January 17, 2017, the claimant returned to all of her normal job duties as a housekeeper.

9. The claimant testified that when she was first seen by Mr. Johnson on December 29, 2016, her symptoms included numbness in her left wrist, and numbness in three of the fingers on her left hand. The claimant also testified that while treating with Mr. Johnson her symptoms did not improve. The claimant also testified that when she was placed at MMI she continued to have numbness and tingling her left wrist and these same symptoms continued between January 2017 and September 2017. However, the claimant did not receive any medical treatment during that time.

10. On September 24, 2017, the claimant notified the hotel manager that she had pain in her left wrist. The employer instructed the claimant to return to Telluride Medical Center for treatment. The claimant testified that she had increasing pain in her left wrist on that date because of the activity of completing laundry duties. Specifically, the claimant noted wrist pain when loading laundry onto the industrial iron.

11. The medical records entered into evidence indicate that on September 25, 2017, the claimant sought medical treatment with Montrose Memorial Hospital Emergency Department (ER) and was seen by Dr. David Dreitlein. At that time, the claimant reported left upper extremity pain that had started several weeks prior. She also reported to Dr. Dreitlein that she had sprained her left wrist at work several months prior. On that date, x-rays of the claimant's left wrist were interpreted by Dr. Dreitlein as negative. Dr. Dreitlein opined that the claimant's left wrist symptoms were related to the repetitive use of her hand at work and he suspected "early carpal tunnel syndrome". He recommended physical therapy and ibuprofen and instructed the claimant to follow up with her workers' compensation provider.

12. On September 27, 2017, the claimant was seen at Telluride Medical Center by Jana Faragher, FNP. The claimant reported pain in her left wrist that radiated up to her elbow (although it had previously gone as high as her shoulder). Ms. Faragher recorded that the claimant described the pain at "really sharp pain" that was accompanied by tingling and numbness. Ms. Faragher diagnosed a left wrist sprain and referred the claimant to physical therapy. In addition, Ms. Faragher placed the claimant on work restrictions of no lifting, carrying, pushing, or pulling over five pounds. The claimant testified that she did not return to work for the employer.

13. The claimant pursued physical therapy treatment with Mountain View Therapy. The claimant testified that physical therapy provided some relief of her symptoms.

14. On October 11, 2017, physician advisor, Dr. Jason Novak, opined that the claimant's September 2017 wrist complaints and related medical treatment were not causally related to the December 26, 2016 wrist sprain. Dr. Novak also opined that it was unlikely that the claimant would meet the criteria for cumulative trauma given her job as a housekeeper.

15. On October 5, 2017, the respondents filed a Notice of Contest related to the September 24, 2017 alleged injury.

16. Thereafter, the claimant independently sought treatment with Dr. Vineet Singh and was first seen by him on December 21, 2017. At that time the claimant reported left shoulder pain, wrist pain, and hand pain. On examination, Dr. Singh noted that the claimant's left wrist range of motion, sensation, and reflexes were all normal. However, Dr. Singh diagnosed carpal tunnel syndrome and opined that this diagnosis was related to the claimant's December 26, 2016 wrist injury. Dr. Singh recommended that the claimant undergo a carpal tunnel injection, with the possibility of carpal tunnel release surgery. On December 21, 2017, Dr. Singh administered the recommended injection.

17. The claimant returned to Dr. Singh on January 25, 2018. Dr. Singh recorded that the claimant was "improved" after the injection. He recommended that she continued with physical therapy, home exercise, and night splinting. The claimant testified that the injection administered by Dr. Singh provided her with five days of relief of her arm and wrist pain.

18. On January 16, 2018 and January 26, 2018, the respondents filed Notices of Contest related to the December 26, 2016 alleged injury.

19. On June 11, 2018 Torrey Beil, CDMS, QRC completed a job demands analysis (JDA) of the claimant's job duties. In her JDA report, Ms. Beil evaluated the required tasks and physical demands of the duties of a "room attendant". The duties identified in the JDA were the same as those described by the claimant in her testimony. Ms. Beil noted one risk factor present in the performance of the duties of a room attendant. That risk factor was up to three hours (but less than six hours) of elbow flexion over 90 degrees.

20. At the request of the respondents, on July 10, 2018 the claimant attended an independent medical examination (IME) with hand surgeon, Dr. Jonathan Sollender. In connection with the IME, Dr. Sollender reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Sollender opined that the claimant had "diffuse complaints inconsistent with any specific diagnosis". Dr. Sollender noted that the claimant suffered a minor injury on December 26, 2016 for which she was placed at MMI within a few weeks. In addition, based upon Ms. Beil's JDA, Dr. Sollender opined that there were insufficient risk factors in the claimant's job duties to establish a cumulative trauma claim.

21. Dr. Sollender's testimony by deposition was consistent with his IME report. Dr. Sollender specifically testified that elbow flexion (the risk factor identified by Ms. Beil in the JDA) is not related to the development of carpal tunnel syndrome.

22. The claimant testified that her current symptoms include pain from her left wrist to her shoulder, limited use of her left hand, inability to lift more than five pounds, and difficulty sleeping due to pain.

23. With regard to the incident on December 26, 2016 (WC 5-065-055), the ALJ credits the medical records of Mr. Johnson dated December 29, 2016 through January 27, 2017 and finds that the claimant has demonstrated that it is more likely than not that she suffered an injury to her left wrist on December 26, 2017. The ALJ credits the opinion of Mr. Johnson that the claimant reached MMI for that injury on January 27, 2017 with no permanent restrictions and no permanent impairment. The ALJ is not persuaded by the claimant's testimony that she continued to have symptoms after reaching MMI.

24. The claimant continued to work during treatment for the December 26, 2016 work injury. The ALJ is not persuaded that the claimant's inability to work beginning September 24, 2017 is causally related to the December 26, 2016 work injury. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she is entitled to TTD benefits related to the December 26, 2016 work injury.

25. With regard to the September 24, 2017 alleged injury/occupation disease, the ALJ credits the opinions of Dr. Sollender over the contrary opinion of Dr. Singh and finds that the claimant's December 26, 2016 injury did not worsen or become exacerbated in September 2017. The ALJ does not find the claimant's testimony regarding her ongoing and worsening symptoms to be credible or persuasive. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that she suffered an injury and/or occupational disease in September 2017. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that she suffered a wage loss as the result of a work related injury and/or occupational disease.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also*

Subsequent Injury Fund v. Thompson, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

4. The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by Section 8-40-201(14), C.R.S. as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

5. A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, Section 8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id.* Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no

statutory requirement that claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

December 26, 2016 incident (WC 5-065-055)

7. As found, the claimant has demonstrated by a preponderance of the evidence that she suffered an injury that arose out of and in the course and scope of her employment on December 26, 2016. As found, the medical records of Mr. Johnson dated December 29, 2016 through January 24, 2017 are credible and persuasive.

8. As found, the claimant continued working following the December 26, 2016 work injury and had no wage loss between the date of injury and being placed at MMI on January 24, 2017. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she is entitled to TTD benefits beginning September 24, 2017. As found, the medical records are credible and persuasive.

September 24, 2017 incident/occupational disease (WC 5-058-479)

9. As found, the claimant has failed to demonstrate by a preponderance of the evidence that on September 24, 2017 she suffered an injury arising out of and in the course and scope of her employment. As found, the opinions of Dr. Sollender are credible and persuasive.

10. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she developed an occupational disease (with a date of onset of September 24, 2017) arising out of and in the course and scope of her employment. As found, the opinions of Dr. Sollender are credible and persuasive.

11. As found, the claimant has failed to demonstrate by a preponderance of the evidence that she suffered a wage loss as the result of a work related injury and/or occupational disease. As found, the claimant is not entitled to TTD benefits beginning September 24, 2017.

ORDER

It is therefore ordered:

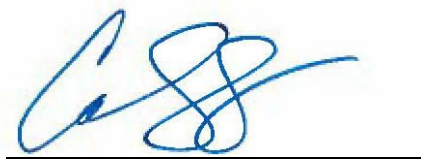
1. The claimant suffered a compensable injury on December 26, 2016.

2. The respondents shall pay for the medical treatment the claimant received from Telluride Medical Center following the December 26, 2016 injury and until she was placed at MMI on January 27, 2017. Such medical treatment is subject to the Colorado Medical Fee Schedule.

3. The claimant's claim related to an alleged injury/occupational disease with a date of onset of September 24, 2017 is denied and dismissed.

4. The claimant's claim for TTD benefits beginning September 24, 2017 is denied and dismissed.

Dated October 25, 2018.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Whether the opioid medications currently being prescribed to Claimant, including Suboxone, are medically reasonable and necessary and related to her worker's compensation injury.

- Whether maintenance treatment should be terminated.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 53-year-old (DOB: 6/26/1965) former employee of Employer who injured her right wrist on September 4, 2008 while trying to maneuver a gurney. Claimant reported to providers at the time that she felt a click in her wrist and had immediate pain.

2. Respondents admitted liability for the injury and provided extensive treatment including two surgeries by Dr. Kavi Sachar for Claimant's wrist injury. Claimant's authorized treating physician (ATP), Dr. Robert Kawasaki, eventually placed her at maximum medical improvement (MMI) on June 28, 2010 and gave a 19% upper extremity impairment rating. Respondents filed a final admission of liability admitting liability for this rating and admitted for reasonable and necessary maintenance treatment.

3. At MMI, Claimant was receiving seven different prescriptions including Avinza, Diclofenac, Baclofen, Bupivacaine, Vicodin, ibuprofen and Flector patches. She continued in maintenance treatment with Dr. Kawasaki and eventually underwent another surgery that consisted of a hardware removal on March 7, 2013. Her symptoms did not improve.

4. Eventually in 2014, Dr. Kawasaki attempted to wean claimant off her pain medications. However, Claimant insisted that medications were necessary for her to function. Dr. Kawasaki continued with his attempts to wean Claimant from her medications but Claimant continued to resist. On November 17, 2015, Claimant no longer wished to treat with Dr. Kawasaki and Dr. Kawasaki arranged to transfer her care to a different provider. On April 5, 2016, Dr. Kawasaki learned that Claimant's case was transferred to Dr. Samuel Chan for pain management. Claimant asked Dr. Kawasaki to provide one additional narcotic prescription for the period until Dr. Chan could evaluate Claimant. Dr. Kawasaki agreed but reiterated his concerns about Claimant's medication use and compliance. He also noted that Claimant's work up out ruled out CRPS.

5. Post MMI, Dr. Ron Carbaugh, PhD, performed a pain psychology evaluation of Claimant on May 12, 2014. Dr. Carbaugh's evaluation included administering a battery of tests, performing an initial intake interview, and examining Claimant. Dr. Carbaugh also reviewed Claimant's medical records as of that date. He concluded that Claimant focused on the need for additional medical assessment and intervention for her wrist and that she was clearly not coping well with her ongoing pain. He stated that Claimant was clearly

"not ready to accept more self-responsibility for symptom management at the present time." She felt that something her medical providers has missed diagnosing the "real" problem with her wrist and was quite anxious for a second surgical opinion. He opined that Claimant was a poor surgical candidate and diagnosed her with a somatic pain disorder.

6. Claimant followed up with Dr. Carbaugh on October 1, 2014 after undergoing another surgical consult and evaluation where the surgeon determined that she was not a candidate for further surgery. Despite this opinion, Claimant continued to believe that she needed more intervention for her wrist. Although Claimant admitted to pre-existing psychological issues, she claimed her condition had worsened because of the work injury. Dr. Carbaugh continued to treat Claimant through January 28, 2015. At this appointment, Dr. Carbaugh noted that Claimant's pain behavior remained relatively high and that it was very unlikely that she would be able to move toward more self-directed coping strategies until she was fully convinced of an absence of a surgically correctable situation in her wrist.

7. On January 12, 2015, Dr. Lawrence Lesnak conducted a Respondents sponsored medical examination. Dr. Lesnak reviewed all medical records to date, interviewed Claimant and conducted a physical examination. Dr. Lesnak ultimately agreed with Dr. Kawasaki and Dr. Carbaugh that Claimant was not a candidate for surgery or any further interventional treatments including injection trials. Dr. Lesnak also addressed Claimant's use of opioids for pain management. He observed that Claimant had several inconsistent/noncompliant random urine drug screens and, from the medical records was frequently noncompliant with medical appointments, etc. Based on that information she appeared to be a relatively poor candidate for treatment with opioid pain management, including Suboxone. However, he did believe that the transition to Suboxone might enhance a more effective wean from all opioid pain medications but stressed that the goal in switching should be to wean her from all opioid pain medications over the course of several months.

8. On January 13, 2016, Dr. Kavi Sachar evaluated Claimant for the last time. At this appointment, Claimant reported to Dr. Sachar that her wrist would intermittently have an area that pops out on the ulnar side but was unable to reproduce this phenomenon in the doctor's office. Her physical examination showed no deformity and full range of motion. She did have some tenderness over the TFCC but had no crepitation or instability and Dr. Sachar was unable to reproduce any pain. X-rays taken in the office revealed no visible bone loose bodies. Dr. Sachar discussed his findings with Claimant in detail and explained that there were no indications for any surgical intervention. He recommended that Claimant find a new pain management provider.

9. On April 22, 2016, Claimant began treating with Dr. Samuel Chan for pain management. Claimant reported to Dr. Chan her goal of being pain free; which he opined was not realistic. He stated this was especially so when there was not a specific pathology identified in multiple imaging studies including MRI arthrogram. Dr. Chan refilled Claimant's pain medications and had her complete a narcotic contract. He also advised her that at some point she would need to come off the narcotic medications because she had not demonstrated any significant functional gain. After approximately five months of

treatment, on September 12, 2016, Dr. Chan determined that Claimant's treatment should progress to a detox program. He noted that she had not had any significant functional improvement despite narcotic usage and that her clinical history revealed that she had been rather non-compliant. He felt the most appropriate course of treatment for Claimant was to proceed with a detox program despite her "protest and disagreement." Dr. Chan did not believe further narcotic medication was appropriate for Claimant and transferred her care.

10. In November of 2016, Claimant began treating with Mountain Medical Injury & Pain Professionals. At her initial evaluation after reviewing Claimant's records, Dr. Robert Fierrer noted that Claimant had "a long history of non-compliance and a normal MRI of the wrist." Dr. Fierrer decided either to move Claimant to Suboxone or to wean her off opiates entirely. The providers at Mountain Medical decided to pursue multiple tools to manage Claimant's pain and by March of 2017 had administered a nerve block and were considering a nerve stimulator. Mountain Medical providers referred Claimant to Dr. Giancarlo Barolat for consideration of the stimulator. Dr. Barolat ultimately recommended an ulnar nerve stimulator.

11. In response to the request for the ulnar nerve stimulator, Respondents scheduled Claimant for independent medical examination with Dr. Henry Roth and Dr. Robert Kleinman. Dr. Roth conducted an IME of Claimant on September 15, 2017 and opined Claimant's ongoing complaints of pain were not due to a work injury but the result of her behavioral health status. He found no medically objective evidence on physical examination or diagnostic studies to suggest a physiologic pain generator. Accordingly, Dr. Roth recommended against the neurostimulator and that all opioid medications be discontinued. In fact, he went further and recommended cessation of all maintenance treatment related to the worker's compensation claim. Dr. Roth wrote, "In my opinion cessation of narcotic medication and treatment under workers' compensation will improve [Claimant's] circumstances . . . .and improve her ability and necessity to take responsibility for her personal situation."

12. Dr. Kleinman examined Claimant on August 15, 2017 and issued his final report on September 18, 2017. Dr. Kleinman diagnosed Claimant with preexisting attention deficit disorder (ADD), depression, anxiety, and post-traumatic stress disorder (PTSD) all of which dated back to childhood or adolescence. Claimant was in psychotherapy and on medications for these conditions at the time of the injury and continuing after that injury. Dr. Kleinman noted that in her evaluation and treatment for the injury with Dr. Carbaugh, Claimant appeared to over report symptoms and this was consistent with psychological testing with Dr. Carbaugh who noted that Claimant appeared to have more emotional symptoms than objectively existed and that she "exhibited her symptoms dramatically to get attention and support." Dr. Carbaugh had also predicted that Claimant would have a poor surgical outcome based on psychological and psychosocial factors. Based on his review of the medical record, the IME recommendations from Dr. Roth, and his interview of Claimant in which she "under reported her psychopathology and minimized stressors," Dr. Kleinman concluded that Claimant would be a poor candidate for neuromodulation trial and implantation. He also

opined that the medical records did not support the ongoing use of psychotropic medications, as there was little indication that they were helping.

13. On December 7, 2017, in response to Dr. Roth's IME report and a specific request from Sedgwick for a weaning schedule, Nancy Beste, PA, a physician's assistant with Mountain Medical, issued a report. She stated Claimant had chronic but manageable pain. She reported that Claimant had obtained complete pain relief with a nerve block administered by Dr. Smith for at least a month and reiterated her belief that Claimant would benefit from a peripheral nerve stimulator. She believed continued Suboxone and some non-opiate pain management would be reasonable and necessary. However, she did discuss a gradual taper of the buprenorphine/naloxone with Claimant and Claimant agreed to slowly wean and taper the medication. Ms. Beste believed it would take several months for Claimant's neuro-receptors to adapt and allow for an accurate assessment of her baseline pain. Ms. Beste recommended medication to control Claimant's withdrawal and to help with heightened pain. Ms. Beste believed Claimant could be fully weaned by July of 2018 and possibly more quickly with the addition of micro doses of naltrexone.

14. On December 19, 2017, Dr. Robert Fierer with Mountain Medical documented that Claimant had pain at a level of 9/10 and referenced the IME recommendation that she be weaned off medications. Claimant's current level of Suboxone was 8-2 MG and 1.5 strips per day along with Lyrica three times per day. He indicated that Claimant was reluctant to try weaning as she believed her pain would increase. He nevertheless agreed to begin weaning "next month" but stated that he expected her pain to increase.

15. On February 12, 2018 Claimant had a follow up appointment with Dr. Fierer. Claimant reported her pain had continued to worsen with tapering of Suboxone. She reported her symptoms as 9/10. According to Dr. Fierer, Claimant was now very irritable and continued using Lidoderm patches and topical cream, brace, ice, heat and massage to manage. She was currently taking ¾ strip a day of Suboxone. Despite his own prior statement that he expected the pain to increase and Ms. Beste's statement that the weaning process could take through July of 2018, Dr. Fierre opined that there had been a fair amount of time with the decrease of Suboxone to determine if Claimant's pain was hyperalesia pain. He did not feel this was the case and that Claimant was "experiencing unnecessary pain that can be controlled for (sic)". He recommended slowly increasing her Suboxone until the pain was controlled. Claimant was also to continue Lyrica 100 mg 3 times a day, Cyclobenzaprine 10 mg, Zipsor 25 mg, Lidoderm patch and topical cream.

16. Dr. Roth testified via deposition on behalf of Respondents. Dr. Roth testified that he had examined Claimant almost nine years to the day after her initial work injury, which he described as a right wrist strain. Dr. Roth summarized Claimant's treatment prior to his IME and explained that Claimant had undergone extensive conservative treatment and four different surgical interventions with no improvement in her symptoms or function. According to Dr. Roth, if the areas in which the surgeries had been performed had been the cause of Claimant's pain, she would have experienced improvement in her symptoms because of those procedures. Indeed, Dr. Roth explained that if there was a physiological

basis for Claimant's symptoms, the passage of time alone should have resulted in some improvement of Claimant's condition. The lack of any improvement supported the conclusion that Claimant's symptoms were not physiologically based.

17. Dr. Roth believed there was no longer any medical need for ongoing opioid medications in the context of the worker's compensation claim. According to Dr. Roth, there was a complete absence of positive objective demonstration of an injury by x-ray, MRI, arthrogram, physical findings, the evaluations of three hand surgeons, and two physiatrists had previously opined that medications be weaned. Ultimately, Dr. Roth concluded that even though Claimant subjectively and psychologically may still need the medications, the worker's compensation system requires physicians to be able to demonstrate that any treatment is medically probably the result of the specific work event and pathology identified by objective means. In this case, that objective pathology simply did not exist.

18. Claimant testified on her own behalf at the hearing. Claimant testified that she was currently taking a combination 13 oral medications for pain, hypertension, and psychological issues and uses a patch and compound cream to treat her pain. At the time of hearing, Claimant did not have an active prescription for Suboxone but was planning to pick up a new prescription after the hearing. In addition to her medications, Claimant also uses a TENs unit for pain control. Claimant admitted that she had previously insisted on staying on pain medications while treating with Dr. Kawasaki because she was opposed to stopping all pain medications and not having anything done to fix her wrist. She testified that after beginning treatment with Mountain Medical, the peripheral nerve stimulator was mentioned and she believes that this a procedure that could provide her with pain relief other than being on "tons of medication." On cross-examination, Claimant admitted that after Respondents denied the request for the stimulator in June of 2017, she took no steps to pursue authorization. Instead, she has continued on increased medications. Claimant denied that Dr. Chan ever discussed a detox program with her. Claimant testified that she was against discontinuing all of her pain medications because her pain was too great to rely only on over the counter medications. She also testified that the cause of her pain needed to be identified and treated.

19. The ALJ finds Dr. Roth's opinions credible, persuasive, and supported by the medical records as well as the opinions of Dr. Kawasaki, Dr. Lesnak and Dr. Chan. Additionally, both Dr. Carbaugh and Dr. Kleinman agree that Claimant's pre-existing psychological conditions are influencing her physical presentation, were not aggravated by the work injury, and that there is a lack of objective evidence to explain her pain complaints.

20. Based on the credible and persuasive medical evidence, the ALJ finds that the opioid medications, including Suboxone as well as ongoing maintenance treatment of any kind are no longer medically reasonable and necessary or related to the September 4, 2008 work injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law.

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Maintenance Medical Benefits

Where the respondents file a final admission admitting for post-MMI medical treatment pursuant to *Grover v. Industrial Comm'n,* 759 P.2d 705 (Colo. 1988), respondents retain the right to contest liability for a particular treatment. When

respondents contest liability for a particular medical benefit, the claimant must prove that such contested treatment is reasonably necessary to treat the industrial injury. Id. at 712; *Snyder v. Industrial Claim Appeals Offc.*, 942 P.2d 1337 (Colo. App. 1997). However, where the respondents attempt to modify an issue that previously has been determined by an admission, respondents bear the burden of proof for such modification. Section 8-43-201(1), C.R.S. (2018). This includes the termination of previously admitted maintenance medical benefits. *Arguello v. State of Colorado,* W.C. No. 4-762-736-04 (May 3, 2016); *Salisbury v. Prowers County School* District, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). Accordingly, Respondents bore the burden of proof with respect to the reasonable necessity of any specific benefits at issue, while Claimant bore the burden of proving that specific medications being prescribed by Mountain Medical are reasonably necessary and causally related to the 2008 work injury. Respondents had the burden of proving that maintenance medical treatment in general was no longer medically reasonable and necessary.

As found, Claimant has no objective findings to support her subjective symptoms and has not achieved any functional improvement from any of the treatment modalities tried over the preceding ten years since the September 4, 2008 date of injury. The ALJ has credited the opinions of Drs. Roth, Kawasaki, Chan, and Lesnak that weaning of all opioid medications is medically reasonable and necessary in this claim. Additionally, the ALJ has credited the opinions of Dr. Roth, Dr. Carbaugh and Dr. Kleinman that Claimant needed to take self-responsibility for her symptom management and that cessation of not only opioid medications but of further treatment in the worker's compensation system is the only means to accomplish this end. Dr. Roth has further opined that Claimant's current treatment is not treating a specific pathology identified by objective means that can be related to the work injury. Therefore, any treatment that Claimant is receiving at this time is not causally related to the September 4, 2008 work injury.

ORDER

IT IS THEREFORE, ORDERED THAT:

1. Continued opioid medications, including Suboxone, are not medically reasonable and necessary to treat Claimant's work injury.

2. Ongoing maintenance medical treatment is no longer medically necessary or causally related to the September 4, 2008 work injury.

DATED this 24th day of October 2018.

ISSUE

Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury on July 15, 2017.

FINDINGS OF FACT

1. Claimant testified that on July 15, 2017, he went to work at the Westin DIA at 9:00 a.m. as part of his employment with Employer. Claimant worked until 8:30 p.m. On this date he worked in the laundry, gathering linens to be laundered, and also took out bags of trash. At the end of the day, his back was sore.

2. The next day, July 16, 2017, Claimant was scheduled to work at 3:00 p.m. but he could not get up as his "body was not responding." On Monday July 17, Claimant went to Employer's office on Federal Blvd. and spoke with Carlos Otero, a manager, to explain why he had missed work. Claimant's testified that he was instructed to fill out an accident report and to write down witnesses to his injury. His supervisor Christina Chavez was called into the meeting and advised Mr. Otero that Claimant had not called in to report an injury. Claimant did not fill out the accident report as requested by the Employer.

3. Claimant testified that he returned to the office on another occasion to ask for "help." He was told to come back when he was released to return to work. During the next few weeks he called Employer to ask for help with work he could perform. But he was not offered modified work. He advised Employer he was going to make a complaint about the company.

4. Claimant then sought work elsewhere and was hired to perform the same type of laundry and housekeeping work he performed at Employer. Claimant represented to his new employer he was capable of performing this type of work.

5. While Claimant was at work at his new job, he received a phone call from Victor Juarez at Employer advising him he should go to one of the designated physicians to receive treatment. Following receipt of this phone call, Claimant went to the respondent-employer's Yates Dr. office to talk to Mr. Juarez. After this meeting, Claimant filed a workers' claim for compensation at the Division of Workers' Compensation. On this claim form, Claimant stated he was injured on July 15, 2017 taking out laundry and trash and lifting heavy bags.

6. Claimant was given the designated provider list when he spoke with Mr. Juarez. When Claimant was asked why he had never gone to the designated physician to receive treatment, he stated he was waiting for Mr. Juarez to explain what help the

company was going to give him. When pressed, Claimant stated he was waiting to see if the company was going to give him money.

7. Claimant was asked to state specifically what time the accident or injury had occurred on July 15, 2017, and what he was doing at the time he was injured. Claimant could not provide a specific time, but he was performing these tasks all day long. Claimant explained that he believed the pain in his back was "residual." When asked to explain this, he stated that he believed his pain was related back to an incident which he alleges occurred in 2016 and that he had not had a separate injury on July 15, 2017. Upon further questioning, Claimant testified unequivocally that he was not claiming that he sustained an injury on July 15, 2017.

8. Additionally, Claimant testified that he expected to paid money for his claim of work injury. Claimant testified indicating a belief that everyone understood Claimant wanted to receive money for his work injury claim. Claimant appeared unconcerned with the question whether he had an injury and most concern with how Employer could be convinced or ordered to pay Claimant money.

9. Claimant rested his case on the basis of his own testimony. In light of Claimant's admission that he did not sustain an injury on the date of injury listed on Claimant's claim for compensation, Respondents moved to dismiss Claimant's claim.

10. The Court granted Respondents' motion to dismiss on the grounds that Claimant failed to sustain his burden of proof to establish by a preponderance of the evidence that he suffered an injury in the course and scope of his employment for Employer on July 15, 2017. The motion to dismiss is granted because Claimant admitted during his testimony that he did not suffer at work related injury on July 15, 2017, and because Claimant testified that he wanted and expected Employer to pay him money because Claimant had come forward with a claim of work injury.

CONCLUSIONS OF LAW

1. The purpose of the Act, Sections 8-40-101, C.R.S. (2018), *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or

every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he or she suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. Section 8-41-301(1) (c), C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp*., 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for the determination of the Judge. *Faulkner*, 12 P.3d. at 846. Here, Claimant's testimony does not support a finding that Claimant suffered a disability proximately caused by an injury arising out of and within the course and scope of his employment on July 15, 2017.

5. Claimant's testimony was conflicted and confusing. However, Claimant specifically testified under oath that he did not sustain a work related injury on July 15, 2017, and that he believed his back problems are "residual" from a 2016 injury event. The evidence claimant offered at the hearing in this matter does not support a claim that he sustained a work related injury on July 15, 2017. Claimant specifically denied that any injury took place on this date.

11. Additionally, Claimant testified that he expected to paid money for his claim of work injury. Claimant testified indicating a belief that everyone understood Claimant wanted to receive money for his work injury claim. Claimant appeared unconcerned with the question whether he had an injury and most concern with how Employer could be convinced or ordered to pay Claimant money.

6. Therefore, it is concluded that Claimant has failed to carry his burden of proof to establish by a preponderance of the evidence that he sustained a compensable work related injury on July 15, 2017. Claimant's claim is therefore denied and dismissed.

ORDER

Claimant's claim for workers' compensation benefits is denied and dismissed, with prejudice.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), CR.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 25, 2018

Denver, CO 80203

ISSUES

I. Whether Respondents are subject to penalties under Section 8-43-304, C.R.S. for failure to timely pay temporary total disability ("TTD") benefits pursuant to Section 8-42-105(2)(a), C.R.S.

II. Whether Respondents are subject to penalties for failure to pay mileage.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury on April 5, 2017. Respondents initially denied the claim, filing a Notice of Contest on April 21, 2017. Respondents subsequently filed a General Admission of Liability on July 14, 2017 admitting for ongoing TTD starting April 6, 2017 at a rate of $509.39 per week. Respondents issued a TTD check to Claimant on July 14, 2017 for the time period April 6, 2017 to July 19, 2017 in the amount of $7,640.85.

2. Respondents were 15 days late in issuing Claimant's next TTD payment. The next TTD payment was issued on August 2, 2017 in the amount of $2,546.95 for the time period August 2, 2017 to August 17, 2017.

3. Claimant's next two TTD checks were issued timely, covering the time periods September 7, 2017 to September 20, 2017 and September 21, 2017 to October 4, 2017.

4. Claimant's next TTD payment should have been made on or before October 18, 2017. Respondents did not issue Claimant another TTD payment until February 1, 2018, 105 days late. The check was in the amount of $9,169.02 for the time period October 5, 2017 to February 7, 2018.

5. Claimant's next TTD payment should have been made on or before February 21, 2018. Respondents did not issue Claimant's next TTD payment until April 25, 2018, 63 days late. The check was in the amount of $6,112.68 for the time period February 8, 2018 to May 2, 2018.

6. Respondents did not pay interest on any of the late TTD payments.

7. On February 16, 2018, Claimant e-mailed a mileage reimbursement request to the adjuster on his claim, Cheryl Shelby. Ms. Shelby replied via email on the same day acknowledging receipt of the mileage reimbursement request. Claimant was not paid mileage until on or around August 29, 2018.

8. On April 18, 2018, Claimant's counsel sent Ms. Shelby a letter requesting payment of late TTD benefits.

9. On May 17, 2018, Claimant filed an Application for Hearing endorsing penalties. The Application for Hearing specifically lists multiple time periods at issue regarding late TTD payments and states, "Respondents have failed to pay timely pursuant to 8-42-105(2)(a); violation of 8-43-304(1.5); 8-43-305; 8-43-304. Failure to timely pay mileage."

10. Claimant's Case Information Sheet states the same information as the Application for Hearing. At hearing, Claimant did not indicate which statute or rule Respondents violated in with their failure to timely pay mileage.

11. Ms. Shelby, testified the first late payment of 15 days may have been due to the TTD check waiting on reserve. She testified subsequent delays in Claimant's TTD payments were likely caused by the payments "falling off" in Insurer's automated payment system. Ms. Shelby testified she was not aware of the second delay until she reviewed Claimant's file in February 2018. She stated that she may have had conversations with Claimant during such time period regarding the status of his claim, but was unaware Claimant had not been paid timely. Ms. Shelby testified she became aware of the third delay upon receiving the aforementioned April 18, 2018 letter from Claimant's counsel. Ms. Shelby testified she has since created "diary" reminders for herself to ensure Claimant is paid TTD every two weeks as required. She testified she is aware benefits are to be paid every two weeks to Claimant, and that people receiving TTD are not working and typically relying on the TTD payments. Ms. Shelby further testified she does not know why interest was not paid on the late payments.

12. Regarding Claimant's mileage request, Ms. Shelby initially testified she did not receive Claimant's mileage request until the day prior to the hearing, when it was forwarded to her by Respondents' counsel. When presented with Claimant's February 16, 2018 e-mail and her February 16, 2018 response, Ms. Shelby then testified she had, in fact, received Claimant's mileage request. She testified she forwarded the mileage request to be paid and thought the mileage had been paid. Ms. Shelby further testified she received a copy of Claimant's Application for Hearing and was aware failure to pay mileage was endorsed as an issue. Ms. Shelby testified she issued a payment of $906.04 to Claimant for mileage on or around August 29, 2018.

13. Claimant testified that, during each of the time periods in which his TTD payments were late, he called Ms. Shelby approximately once per week to notify her of the issue. Claimant testified that the late payments caused him to fall behind on his house and car payments and to cancel certain services, including cable television, because he could not afford to pay the bill without the TTD payment. Claimant testified he hired an attorney in March 2018 because his attempts to address the late TTD payments with Insurer had been futile, and he was experiencing financial hardship as a result of the late payments.

14. Claimant's testimony is found more credible and persuasive than the testimony of Ms. Shelby on the issue of whether Claimant repeatedly contacted the Insurer regarding the late payments.

15. Based upon the evidence presented, the ALJ finds Respondents were in violation of Section 8-42-105(2)(a), C.R.S. by failing to pay Claimant TTD at least once every two weeks as required on three separate occasions. There is nothing in evidence indicating the Director of the Colorado Division of Workers' Compensation determined Claimant's payments should be made at some other interval.

16. The ALJ finds Respondents cured their violation of Section 8-42-105(2)(a), C.R.S. with payments to Claimant on August 17, 2017, February 18, 2018 and April 25, 2018. Each of the payments were made prior to the May 17, 2018 Application for Hearing that endorsed penalties as an issue.

17. The ALJ finds Claimant provided clear and convincing evidence Respondents knew or reasonably should have known they were in violation of Section 8-42-105(2)(a), C.R.S. for the second and third late payments, in which Respondents were 105 days and 63 days late, respectively. Accordingly, Claimant has proven entitlement to an award of penalties for Respondents' late payments of TTD.

18. The ALJ further finds Claimant failed to establish entitlement to an award of penalties for Respondents' failure to pay mileage, as such penalty was not pled with specificity as required by Section 8-43-304(4), C.R.S.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Penalties

Whether statutory penalties may be imposed under Section 8-43-304(1), C.R.S. involves a two-step analysis. The statute provides for the imposition of penalties of up to $1,000 per day where the insurer "violates any provision of article 40 to 47 of [title 8], or does any act prohibited thereby, or fails or refuses to perform any duty lawfully enjoined within the time prescribed by the director or the panel, for which no penalty has been specifically provided, or fails, neglects or refuses to obey any lawful order made by the director or panel…" Thus, the ALJ must first determine whether the insurer's conduct constitutes a violation of the Act, a rule, or an order. Second, the ALJ must determine whether any action or inaction constituting the violation was objectively unreasonable. The reasonableness of the insurer's action depends on whether it was based on a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office,* 107 P.3d 965 (Colo. App. 2003); *Gustafson v. Ampex Corp.,* W.C. No. 4-187-261 (I.C.A.O. August 2, 2006), *but see, Pioneers Hospital v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005) (standard is less rigorous standard of "unreasonableness"). However, there is no requirement that the insurer know that its actions were unreasonable. *Pueblo School District No. 70 v. Toth,* 924 P.2d 1094 (Colo. App. 1996).

Section 8-43-304(4), C.R.S. provides respondents the opportunity to cure alleged violations within twenty (20) days of the mailing of an application for hearing asserting penalties. The statute states,

> If the violator cures the violation within such twenty-day period, and the party seeking such penalty fails to prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation, no penalty shall be assessed. The curing of the violation within the twenty-day period shall not establish that the violator knew or should have known that such person was in violation.

Clear and convincing evidence is evidence that is stronger than a preponderance, and is unmistakable and free from serious or substantial doubt. *DiLeo v. Koltnow*, 200 Colo. 119, 613 P. 2d 318 (1980).

TTD Payments

Section 8-42-105(2)(a), C.R.S. provides, in relevant part, that TTD "shall be paid at least once every two weeks, except where the director determines that payment in installments should be made at some other interval."

As found, Respondents were in violation of Section 8-42-105(2)(a), C.R.S. by failing to pay Claimant TTD at least every two weeks as required. The violation occurred on three separate occasions over the course of several months. As Respondents ultimately cured the violation by paying Claimant prior to the May 17, 2018 Application for Hearing, to sustain his burden of proof, Claimant was required to establish it was highly probable or free from serious doubt that Respondents knew or reasonably should have known they were failing to pay Claimant TTD in a timely manner as required.

The ALJ is persuaded the first late payment of 15 days was due to administrative oversight and it was not highly probable Respondents knew or reasonably should have known they were in violation. However, the ALJ is not persuaded administrative oversight is a plausible explanation for the second and third late payments, which came 105 days and 63 days late, respectively. Ms. Shelby testified she was aware Claimant was required to be paid at least every two weeks and attributed the delays to an error in Insurer's autopay system. Claimant credibly testified he made repeated attempts to contact Ms. Shelby during the lengthy delays to address the late payments. As such, Ms. Shelby's testimony that she was unaware Claimant was not being paid timely as required is not credible or persuasive. It was only after Claimant's TTD payments were considerably late on three separate occasions and Claimant retained the assistance of counsel that Ms. Shelby created a diary reminder to ensure Claimant was paid every two weeks as required. The totality of the evidence establishes it is highly probable Respondents reasonably should have known they were in violation in not paying Claimant timely for the time periods of October 18, 2017 to February 1, 2018 and February 21, 2018 to April 25, 2018.

Section 8-43-305, C.R.S provides that "[e]very day during which any…insurer… fails to perform any duty imposed by articles 40-47 of this title shall constitute a separate and distinct violation thereof." The purpose of section 8-43-305 is to address "ongoing conduct." *Spracklin v. Indus. Claim Appeals Office,* 66 P.3d 176, 178 (Colo.App.2002). When conduct is ongoing, imposition of a daily penalty is required. *Pueblo Sch. Dist. No. 70 v. Toth,* 924 P.2d 1094, 1097, 1100 (Colo.App.1996) (delay in paying bill for 645 days resulted in "645 separate offenses," and pursuant to predecessor statute to section 8-43-305, imposition of the penalty at a "daily rate" is "mandated").

Respondents failed to pay Claimant TTD benefits as required on three separate occasions, the second and third of which span several weeks. Respondents' violation

resulted in financial hardship for Claimant, causing him to be late on bills and cancel services. The ALJ concludes a penalty of $25.00 per day for the 105 days late from October 18, 2017 to February 1, 2018, and $50.00 per day for the 63 days late from February 21, 2018 to April 25, 2018 is appropriate for Respondents failure to timely pay TTD benefits.

Mileage Reimbursement

Mileage expenses for travel to attend medical appointments are recoverable as incidental to medical treatment under the Workers' Compensation Act. *Sigman Meat Co. v. Indus. Claim Appeals Office*, 761 P.2d 265 (Colo. App. 1988). WCRP 18-6(E) provides that the injured worker shall submit a request to the payer showing the dates of travel and mileage and explanation. The rule does not specify a time limit within which the insurer is required to pay for mileage. Additionally, Section 8-43-401(2)(a), C.R.S. provides that insurers shall pay benefits within 30 days of when any benefits are due, and if any insurer "knowingly delays payment of medical benefits for more than thirty days" then such insurer shall pay a penalty of eight percent of the amount of wrongfully withheld benefits. WCRP Rule 16-11(A) provides that all bills submitted by a "provider" are due and payable in accordance with the Medical Fee Schedule within thirty days after receipt of the bill by the payer.

Pursuant to Section 8-43-304(4), C.R.S. the party seeking penalties "shall state with specificity the grounds on which the penalty is being asserted." The failure to state with specificity the grounds on which a penalty is asserted subjects the claim to dismissal. *In Re Claim of Horiagon*, W.C. No. 4-985-020 (ICAP, Mar. 15, 2015); *see Salad v. JBS USA, LLC,* W.C. No. 4-886-842-04 (Mar. 5, 2014). The requirement for specificity serves two functions. First, it notifies the potential violator of the basis of the claim so that the violator may exercise its right to cure the violation. Second, the specificity requirement ensures that the potential violator will receive notice of the legal and factual basis for the penalty claim. *In Re Claim of Lovett*, W.C. 4-808-092-04 (ICAP, Aug. 30, 2013); *see Major Medical Insurance Fund v. Industrial Claim Appeals Office*, 77 P.3d 867 (Colo. App. 2003); *Jakel v. Northern Colorado Paper Inc.*, W.C. No. 4-524-991 (Oct. 6, 2003).

Here, Claimant seeks penalties for “failure to timely pay mileage.” Claimant listed the general penalty provisions on his Application for Hearing and Case Information Sheet, but failed to specify the specific statute or rule on which penalties for failure to pay mileage is based. Claimant further did not specify the applicable statute or rule at hearing. Claimant’s general penalty allegations did not provide Respondents adequate notice of both the factual and legal bases of the claims and defenses to be adjudicated. As Claimant failed to plead penalties for failure to timely pay mileage with sufficient specificity, his request for penalties as related to mileage is denied and dismissed.

ORDER

It is therefore ordered that:

1. For their violation of Section 8-42-105(2)(a), C.R.S., Respondents shall pay a penalty in the amount of $25.00 per day for the 105 days late from October 18, 2017 to February 1, 2018, and $50.00 per day for the 63 days late from February 21, 2018 to April 25, 2018, for a total amount of $5,775.00.

2. The penalty is to be apportioned 75% to Claimant and 25% to the workers' compensation cash fund.

3. Claimant's request for penalties as related to Respondents' failure to timely pay mileage reimbursement is denied and dismissed.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

- Is this claim closed by a Final Admission of Liability dated November 15, 2017?

STIPULATIONS

The parties stipulated Claimant did not receive a copy of the November 15, 2017 FAL.

FINDINGS OF FACT

1. Claimant suffered an admitted industrial injury on December 6, 2016. He was placed at MMI by his ATP on August 28, 2017 with a 10% lower extremity rating.

2. Respondents filed Final Admission of Liability (FAL) on November 15, 2017 based on the ATP's MMI report. The FAL was addressed to all parties and the Division of Workers' Compensation (DOWC) on November 15. The certificate of service indicates the FAL was sent to Claimant at his home address and to Claimant's counsel addressed to: "Wes Hassler, 616 West Abriendo Ave., Pueblo, CO 81004." Claimant is represented by Stephen Johnston, Esq., with the same mailing address as Mr. Hassler.

3. The parties stipulated Claimant never received the FAL.

4. Claimant received PPD payments based on the FAL via direct deposit.[1] An initial payment of $2,949.30 was electronically deposited on November 3, 2017, two weeks before the FAL was sent. Claimant subsequently received the balance of admitted PPD in bi-weekly payments, ending on January 26, 2018.

5. No persuasive evidence was submitted to show Claimant received any direct deposit advices or other explanatory documentation regarding the PPD payments.

6. Claimant's counsel did not receive the copy of the FAL mailed to his office.

7. Claimant's counsel was unaware an FAL had been filed until he received a Motion to Withdraw filed by Respondents' counsel on January 8, 2018. Claimant's counsel was puzzled by the Motion to Withdraw because he believed the claim was ongoing. Ms. Malouff contacted the claims adjuster and was told Respondents had filed an FAL on November 15. Ms. Malouff requested a copy of the FAL from Respondents, and from the DOWC.

[1] Claimant had previously received temporary disability payments via direct deposit, from December 16, 2016 through May 31, 2017.

8. Respondents' counsel emailed Claimant's counsel a copy of the FAL on January 8, 2018.

9. The FAL emailed to Claimant's counsel contained all required attachments, including the objection forms and the ATP's MMI report, and the ALJ appreciates no technical errors or omissions. The only issues raised by Claimant are lack of receipt by Claimant and delayed receipt by his attorney.

10. The time to object to the November 15, 2017 FAL has not started to run because Claimant has never received a copy of it. Accordingly, the claim is not closed.

CONCLUSIONS OF LAW

An FAL provides a statutory mechanism for the respondents to initiate closure of a claim. Once an FAL is filed, the claimant must perfect an objection within thirty days or the claim will "automatically close." The purpose of an FAL is to notify the claimant of the exact bases on which benefits have been admitted or denied so the claimant "can make an informed decision whether to accept or contest the final admission." *Paint Connection Plus v. Industrial Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). To that end, due process requires that a claimant receive "actual notice" of an FAL before it can close a claim. *Bowlen v. Munford*, 921 P.2d 59 (Colo. App. 1996). The requirement of "actual notice" has repeatedly been interpreted to require receipt of the FAL itself, rather than mere knowledge of its potential existence. *E.g.*, *Duran v. Russell Stover Candies*, W.C. No.4-524-717 (April 13, 2004); *Meskimen v. Fee Transportation*, W.C. No. 3-966-629 (March 31, 2003); *Gonzales v. Pillow Kingdom*, W.C. No. 4-296-143 (July 12, 1999). If a claimant is represented, the claimant and the attorney must receive actual notice of an FAL before it can close a claim. *Hall v. Home Furniture Co*., 724 P.2d 94 (Colo. App. 1986). Lack of receipt by *either* the claimant *or* his attorney tolls the objection deadline until thirty days after it is received by each of them. *E.g.*, *Meskimen v. Fee Transportation, supra; Gonzales v. Pillow Kingdom, supra.*

As found, the November 15, 2017 FAL did not close Claimant's claim because he never received a copy of it. Although his attorney received a copy of the FAL on January 8, 2018, due process requires actual receipt by the claimant before the time to object begins to run.

The ALJ finds *Gonzales v. Pillow Kingdom*, W.C. No. 4-296-143 (July 12, 1999) instructive and persuasive in resolving this issue. In *Gonzales*, the respondents mailed an FAL to all parties but neither the claimant nor his attorney received it. Several months later, the respondents mailed another copy of the FAL to the claimant's attorney but not to the claimant. The attorney received the second copy of the FAL and failed to timely object. The ALJ determined the claim was closed. The ICAO reversed and held "an uncontested final admission of liability is not sufficient to close a claim unless the final admission is actually mailed to and received by the claimant."

It follows the ALJ disagrees with Respondents that receipt of the FAL by Claimant's attorney on January 8, 2018 started the thirty-day clock running. The caselaw cited above

requires actual receipt by *both* the claimant and his counsel. The case of *Henriquez v. K.R. Swerdfeger Construction*, W.C. No. 4-439-726 (May 5, 2003) cited by Respondents is distinguishable because in that case, the ALJ found the claimant had received the FAL when it was originally mailed.[2] Since the claimant had already received his copy, the time to object started running when the claimant's attorney finally received a copy of the FAL in the DOWC file ten months later.

The ALJ also rejects any suggestion that Claimant's receipt of PPD payments can substitute for receipt of the FAL. As noted, a claimant is entitled to an actual copy of an FAL rather than simply information from which he *might* glean an FAL has been filed. The mere receipt of electronic PPD payments would not provide Claimant a reasonable basis to "make an informed decision whether to accept or contest" an FAL he had never seen.

ORDER

It is therefore ordered that:

1. Claimant's claim is not closed by the November 15, 2017 FAL.

2. All issues not decided herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 26, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

[2] Although the claimant in *Henriquez* had denied receiving the FAL, the ALJ rejected the claimant's testimony on that point.

ISSUES

The issues set for determination included:

(1) Did Claimant sustain a compensable work-related injury to his cervical spine?

(2) If Claimant sustained a work-related injury, what medical benefits are related, reasonable and necessary to cure or relieve the effects of the industrial injury?

(3) If Claimant sustained a compensable injury, is he entitled to TTD benefits?

(4) What was Claimant's average weekly wage?

FINDINGS OF FACT

1. Claimant has worked for Employer for sixteen years as a commercial flooring installer and foreman. Claimant testified that his job is very physically demanding. His job duties included assessing job sites, stocking flooring material, removing existing flooring with power equipment or manually, as well as sanding and skimming the subfloor. Claimant also spread the glue and installed flooring. Some of the aforementioned tasks, such as removing carpet by hand and scraping the subfloor, required Claimant to work on his hands and knees.

2. Claimant testified they had been working on a project at Good Samaritan Hospital which was ongoing for three years. In the six months before November 2017, Claimant's work included removing the existing carpet on the fifth floor, which was particularly arduous, as power equipment could not be used to remove the carpet. Claimant testified they had to remove most of the existing carpeting by pulling it up in thin strips with pliers while on hands and knees.[1] After the demo was done, the floor was sealed with a concrete-based floor leveler using a 20 inch finishing trowel and the new floor was installed.

3. Claimant's supervisor, Manuel Contreras, testified at the hearing. Mr. Contreras stated Claimant was responsible for running the project, which included carrying materials, demoing flooring, prepping the substrate flooring and installing the new flooring. Claimant was a hands-on supervisor, who performed all of the above duties. Mr. Contreras testified Claimant was a great employee and very dependable. He stated Claimant's description of his job duties at the project was accurate.

[1] Claimant referred to pulling up the carpet as "demoing", which was a contraction of the word demolition. Hearing Transcript ("Hrg. Tr.") p. 20:6-9.

4. There was no evidence in the record that Claimant required treatment for his cervical spine before November 2017. There was no evidence that the degenerative condition present in Claimant's spine caused him to miss time from work before November 2017.

5. Claimant testified they had been demoing for six months on this job. They had progressed to the main area around the elevators and went to evening work, where they would work on 2-300 foot sections per night. They would demo the area, carry the boxes of flooring materials (which weighed 65 lbs.) and then install the flooring. After that, they would be done with the section.

6. Claimant testified they had been demoing straight for six months and he demoed carpet that night.[2] He woke up and felt pain in both of his shoulders on November 14, 2017. Although he experienced pain and discomfort related to his job in the past, Claimant testified that the pain he felt on November 14 , 2017 was unlike other pain he had experienced.[3] Claimant initially thought he pulled a muscle. He said that he felt the pain in the joints of both shoulders and while his muscles loosened up, the pain never went away. The ALJ found Claimant to be a credible witness and concluded Claimant's pain complaints resulted from the demo work performed on behalf of Employer the night before November 14, 2017.

7. Claimant testified he reported pain complaints to his supervisor (Mr. Contreras) on November 14th, who recommended Claimant see a doctor. On cross-examination, Claimant agreed he did not experience symptoms until after he left work. He did not have pain in his arms, shoulders or back while at work.

8. Mr. Contreras testified Claimant reported an injury to him on November 14, 2017 and said he was in excruciating pain. The ALJ noted this corroborated Claimant's testimony that he immediately reported that he was in pain. Mr. Contreras confirmed he told Claimant to see a doctor and after he didn't hear anything further, figured Claimant was just sore.

9. Claimant testified his shoulder muscles loosened when he went to work, but the pain did not go away. He continued working even though the pain was present and then sought treatment from his personal physician.

10. On November 21, 2017, Claimant was evaluated by Jeffrey Hilburn, PA-C at Partners in Health Family Medicine. Claimant complained of radiating pain to the arms bilaterally, which was aggravated by resting. Claimant described this as muscle pain, which radiated to his arms. PA-C Hilburn diagnosed Claimant with cervicalgia and acute pain of his left shoulder. He instructed Claimant to continue taking Naproxen, continue chiropractic treatment, as well as to consider a corticosteroid injection for his left shoulder.

[2] Hrg. Tr. p. 19: 9-20.

[3] Hrg. Tr. p. 21:4-10.

11. Mr. Contreras spoke to Claimant again sometime after November 14, 2017, but did not recall the date. Mr. Contreras told him that they needed to fill out the injury report and get with the office manager (Jennifer), in order to file the claim.[4] The ALJ inferred from this testimony that Mr. Contreras viewed Claimant's condition as potentially work-related and required the filing of a workers' compensation claim. Mr. Contreras testified this was the first injury Claimant reported as a workers' compensation claim.

12. The ALJ found that it was more probable than not that Claimant experienced shoulder, neck and arm symptoms the morning of November 14, 2017 as a direct result of his work for Employer the night before. The ALJ credited Claimant's testimony regarding his symptoms.

13. Claimant continued to experience symptoms and was referred to CCOM Church Ranch by Employer. On December 4, 2017, Claimant was evaluated by Lileya Sobechko, N.P. He was complaining of pain in the left trapezius, left side of posterior neck, left supraspinatus to and infraspinatus, left A-C joint, left upper arm and right shoulder. Claimant noted this was made worse by pulling, lifting, repetitive arm use and moving it. Limited range of motion ("ROM") was found in the left shoulder on examination. Pain on palpation was noted right there. ROM was normal for the cervical spine, with left posterior neck spasm noted.

14. NP Sobechko diagnosed Claimant with: sprain of ligaments of cervical spine, strain of left rotator cuff, myalgia and sprain of right shoulder joint. NP Sobechko prescribed Naproxen and Flexeril for muscle spasms, recommended starting physical therapy ("PT"), and restricted Claimant to lifting, pushing, and pulling of no more than 5 pounds. In her assessment, NP Sobechko opined that the cause of the injury was work-related and completed a WC 164 to this effect.

15. NP Sobechko ordered X-rays of the cervical spine and left shoulder, which were taken on December 4, 2017. The films were read by Michael Kershen, M.D., who found that Claimant had mild to moderate degenerative changes in his spine, with mild disc degeneration and spondylosis seen at the C6-C7 level.

16. Claimant stopped working in December 2017, due to his symptoms.[5] The payroll records admitted at hearing documented that Claimant was paid through December 15, 2017.[6] The ALJ was unable to determine the precise day on which Claimant stopped working.

17. Claimant was examined by James Fox, M.D. on December 22, 2017. At that time, Claimant had quite a bit of diffuse pain in his neck, shoulders, trapezius muscles, the upper back, arms and forearms, as well as his wrists and hands. Claimant was not working and also having difficulty sleeping. On examination, diffuse tenderness

[4] Hrg. Tr. p. 43:16-23.

[5] Exhibit C, p. 99.

[6] Exhibit H, p. 249.

of the cervical spine and muscles in the mid- to lower back was found, along with diffuse tenderness of the trapezius and rhomboid muscles bilaterally. Moderate tenderness of the deltoid muscles was noted, with moderate diffuse tenderness of the muscles of the upper arm and decreased grip strength was found.

18. Dr. Fox' diagnoses were: sprain of ligaments of cervical spine, subsequent encounter; strain of muscles and rotator cuff of left shoulder, subsequent encounter; myalgia; unspecified sprain of right shoulder joint, subsequent encounter; other polyosteoarthritis. Claimant was to continue PT two times per week and his dose of Flexeril was increased.

19. Dr. Fox specifically addressed the issue of causation and concluded Claimant's injury was work-related.[7] The ALJ credited this opinion. Dr. Fox ordered an MRI of Claimant's cervical spine and continued Claimant's restrictions, noting he was not working, as modified duty was not available.

20. Records of Claimant's earnings while working for Employer from 2016-2018 were admitted at hearing.[8] From January 1, 2017 to December 31, 2017, Claimant earned a total of $48,981.51, which included regular and overtime pay. When considering the entire year of gross earnings divided by 52 weeks, Claimant's average weekly wage was $ 941.95 per week. Claimant testified he made $29.00 per hour, which when multiplied by 40 hours gives an average weekly wage of $1,160.00 per week.

21. The ALJ concluded a more accurate representation of Claimant's average wage was to consider the six months prior to November 14, 2017, which included weeks in which he worked overtime hours, as well as weeks in which he did not. From August 4, 2017 through November 10, 2017, Claimant earned a total of $15,179.26. Over those 15 weeks, Claimant's AWW was $1,011.95. This gives a TTD rate of $674.63 per week.

22. Claimant underwent an MRI of the cervical spine on January 3, 2018 and the films were read by Patrick O'Malley, M.D. Dr. O'Malley's impression was: multilevel degenerative disc disease of the cervical spine. The most significant findings were at C6-C7, where there was moderate posterior disc bulging, causing mild to moderate spinal stenosis, severe left foraminal narrowing, and mild right foraminal narrowing. No other areas of spinal canal or neural foraminal stenosis were seen.

23. On January 17, 2018, Bryan Andrew Castro, M.D. at Cornerstone Orthopaedics & Sports Medicine, P.C. examined Claimant. Claimant noted he started experiencing pain in his shoulders and neck after scraping off on carpet. It started to develop and have numbness, tingling, some difficulty with moving his hands and grip strength, swelling in his hands, fingers and spasm. Dr. Castro noted Claimant's x-rays showed mild to moderate degenerative changes. The MRI highlighted similar findings-

[7] Exhibit 1, p. 2.

[8] Exhibit H.

disk degeneration and disc bulging resulting in biforaminal encroachment at C6-C7, which could be causing C7 compression.

24. Dr. Castro diagnosed Claimant with cervicalgia and upper extremity arm symptoms. He noted that only the C6-C7 level had any stenosis and the pain appeared to be in multiple myotomes. Dr. Castro stated Claimant's pain did not appear to be dermatomal or radicular in nature. Dr. Castro recommended an EMG and started Claimant on an oral steroid regimen, although he noted with hand numbness, tingling, grip strength and swelling in his fingers, this problem seemed to be arthritic.

25. Claimant was evaluated by Brian McIntyre, D.O. on January 30, 2018, at which time he reported left arm pain and a burning sensation. He also had burning pain in his right arm. Dr. McIntyre's diagnoses were: sprain of ligaments of cervical spine, subsequent encounter; neuralgia and neuritis, unspecified; myalgia; radiculopathy, cervical region; other polyosteoarthritis. Dr. McIntyre performed NCV and EMG testing. Dr. McIntyre noted this was an abnormal electrodiagnostic study. There was evidence of ongoing denervation (radiculopathy) affecting the left greater than the right, but bilateral C7 nerve roots were involved. There was also evidence of a mild demyelinating left median sensory neuropathy.

26. Claimant returned to Dr. Fox on January 9, 2018. The diagnoses were the same as the December 22, 2018 evaluation. Dr. Fox referred Claimant to Dr. Castro and continued Claimant's work restrictions.

27. On February 13, 2018, Claimant received a steroid injection which was administered by Bryan Gary Wernick, M.D. at St. Anthony North Hospital. The steroid mixture was injected at Claimant's C7-T1 interspace. In a follow-up evaluation on March 14, 2018, Dr. Castro noted that the injection provided relief to Claimant and although his symptoms had returned, these were much less severe than before the injection. Claimant was still experiencing right hand pain. Dr. Castro said the EMG highlighted a positive C7 nerve root level problem, which was consistent with disc herniation and some compression at the C6-C7 level. Dr. Castro recommended a second injection as an option for managing Claimant's symptoms. Surgical intervention was discussed as an option, if Claimant failed to respond to conservative treatment measures.

28. On March 21, 2018, Claimant returned to Dr. Castro. Although his symptoms had improved, he still reported significant and limiting right arm pain. Dr. Castro's diagnosis was: acute C6-C7 disc bulging, with acute C7 radiculopathy and denervation. The ALJ noted this was an acute finding and inferred this constituted evidence of an aggravation of the underlying condition of Claimant's cervical spine. Based on Claimant's report that he did not experience symptoms before November 14, 2017, Dr. Castro concluded that surgery would be causally related to Claimant's injury sustained through his work.

29. Dr. Castro recommended an anterior cervical discectomy and fusion (ACDF) surgery at C6-C7. He made this recommendation because Claimant's symptoms had not been fully resolved with more conservative treatment and because the EMG

revealed acute denervation. The ALJ inferred this was objective evidence to support the surgical recommendation. A request for authorization was sent to Insurer that day.

30. Claimant testified that he returned to work with restrictions on March 6, 2018.

31. Dr. Castro responded to questions posed by Insurer in a letter dated on April 6, 2018. Dr. Castro reviewed the November 21, 2017 medical report and noted he did not initially have this record. Dr. Castro stated there were findings suggestive of an acute injury and Claimant had also acute EMG findings. Dr. Castro noted did not have all the records at the initial evaluation when it was reported to him that it was related to a demo of a flooring job. The ALJ found this was not a retraction by Dr. Castro of his opinion as to the cause of Claimant's symptoms.

32. An Independent Medical Examination was conducted on June 4, 2018 by Peter L. Weingarten, M.D., at the request of Respondents.[9] Claimant related that pain in his shoulders developed while he slept and affected both shoulders. Claimant received treatment, but continued to experience cervical, trapezius and shoulders pain. On examination, Claimant did not manifest pain-related behavior. No spasm or tenderness was found in the cervical spine. Range of motion in the upper extremities was full, but slow.

33. Dr. Weingarten stated Claimant had significant degenerative arthritic changes at the C6-C7 level and these changes were potentially compressing the exiting nerve roots, which was confirmed by MRI. Electrophysiological testing showed radicular changes, both right and left, resulting from the C6-C7 nerve root impairment and compression. Dr. Weingarten found Claimant did not have evidence of an acute herniated disc, although there was evidence of a bulging disc. He said surgical intervention was indicated and appropriate, but it was not related to Claimant's work activities. Dr. Weingarten opined Claimant's work activities, although these involved in relatively heavy labor, did not constitute a proximate cause of his condition. He noted arthritic changes in the cervical spine were a common problem, frequently present at the C6-C7 level, but this did not qualify or constitute an injury.

34. Dr. Weingarten testified at hearing as an expert in Orthopedic Surgery, with a focus on cervical injuries and complaints. He is Level II accredited pursuant to the WCRP. Dr. Weingarten noted Claimant did not say he suffered an acute injury when he was evaluated. Dr. Weingarten opined there was no evidence of cumulative trauma, even though Claimant did a vigorous job.

35. Dr. Weingarten testified Claimant's x-rays showed evidence of degenerative changes throughout his cervical spine, which included arthritis and disc narrowing. The MRI also showed multilevel degenerative disc disease at the cervical spine. He noted that arthritic degeneration was determined by two factors: age and genetic predisposition. Dr. Weingarten concluded Claimant's pain complaints were

[9] Exhibit A.

caused by the arthritic condition in the cervical spine. Dr. Weingarten stated there was no causal link between work activities and the changes seen at the Claimant's cervical spine.

36. Dr. Weingarten also explained he believed the pain caused by Claimant's degenerative condition was caused or exacerbated by his bulging disc at C6-C7 level; he stated that a bulging disc can be caused by an acute injury or injury through repetitive stress and neither of these causes would have arisen from Claimant's work activities. Dr. Weingarten testified that Claimant's pain would be acute in the onset, had he suffered a herniated disc. The ALJ noted this was in response to a question whether pain would be acute if a disc bulge occurred as a result of an acute injury. Dr. Weingarten used the terms disc bulge and disc herniation interchangeably when discussing whether there was an acute injury. He did not provide an explanation vis a vis the disc bulge (as opposed to a disk herniation) at C6-C7 found on MRI as to why this would have become symptomatic. The ALJ found Dr. Weingarten did not specifically consider the work activities Claimant performed the night before he developed symptoms, nor did he address the lack of symptoms before Claimant worked that night. Therefore, his opinion was less persuasive than those expressed by Claimant's ATPs, including Dr. Fox and Dr. Castro.

37. Dr. Weingarten agreed with Dr. Castro's assessment that surgery is reasonable and necessary. Dr. Weingarten opined Claimant's symptoms were the result of the pre-existing degenerative changes.

38. Claimant testified his current symptoms include what he described as knots in both shoulders. He also experiences pain between the shoulder blades and his neck as if it is not aligned, along with pain shooting down the muscles of his arms.

39. Claimant successfully proved that, on balance, it is more probable than not that the condition of his cervical spine was exacerbated by his job duties and caused him to experience symptoms.

40. Claimant proved he is entitled to receive medical benefits to cure and relieve the effects of the industrial injury.

41. Respondents are required to provide treatment to Claimant to cure and relieve the effects of the industrial injury.

42. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §

8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability-Cervical Spine

Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Sections 8-41-301(1)(b) & (c), C.R.S. (2016). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). This case presented a question of whether Claimant's work activities aggravated a pre-existing condition.

Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. *Faulkner v. Indus. Claim Appeals Office*, 12 P3d 844, 846 (Colo. App. 2000); Section 8-41-301(1)(c), C.R.S. The evidence must establish the causal connection with reasonable probability, not medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission, 491 P.2d 106* (Colo. App. 1971*)*. Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant asserted he sustained a compensable injury to his cervical spine. In Claimant's opening, counsel argued this was an occupational disease claim. However, this theory was not pursued in Claimant's post-hearing submission. Respondents averred Claimant failed to meet his burden of proof to prove he suffered an injury arising out of and in the course of his employment. Respondents focused on the fact that Claimant admitted the onset of symptoms did not occur work and there was no specific event which

caused his symptoms. Respondents relied upon the opinions of Dr. Weingarten and argued Claimant's symptoms were the result of degenerative changes in his cervical spine.

The ALJ determined Claimant's work aggravated the underlying condition of his cervical spine and thus, he suffered a compensable injury as a result of these work activities. As determined in Findings of Fact 1-3, Claimant testified that his job was physical in nature. The specific work he was doing for Employer immediately before he experienced symptoms included removing carpeting and working on his hands and knees. The strenuous nature of Claimant's work activities was corroborated by Mr. Contreras. (Finding of Fact 3).

The medical evidence in the record, including the MRI performed on December 22, 2017, established there were degenerative changes in Claimant's cervical spine. (Finding of Fact 22). No medical evidence was admitted at hearing which showed Claimant required treatment or missed time from work because of the degenerative changes in his cervical spine. (Finding of Fact 4). Claimant credibly testified that he experienced pain due to the strenuous nature of his job. Claimant articulated he would experience muscle soreness that would loosen up when he was working and testified this was part of the job.

However, Claimant testified the pain he experienced on November 14, 2017 was unlike what he had felt before. (Finding of Fact 6). As found, Claimant was engaged in the strenuous job activities while working for Employer immediately before he experienced symptoms. There was also evidence Claimant was working on that portion of the project, which involved work in the evening. (Findings of Fact 5-6). Thus, the evidence in the form of Claimant's testimony established that he performed the extremely heavy work of demoing the floor at Good Samaritan Hospital, working on his hands and knees, lifting cartons of flooring material which weighed on average 65 lbs., applying the floor leveler and installing the new floor. Claimant's testimony was corroborated by his supervisor, Mr. Contreras. (Finding of Fact 3). He performed those job duties work in the hours immediately before he developed symptoms in his cervical spine. (Finding of Fact 6). The ALJ concluded that it was more probable than not that the symptoms were the direct result of Claimant's work activities. (Finding of Fact 12).

In addition, the evidence in the form of opinions provided by Claimant's ATPs supported the conclusion he suffered a compensable injury. As found, Claimant's initial evaluation at CCOM, which was performed by NP Sobechko contained the conclusion that Claimant's work activities were the cause of his symptoms. (Finding of Fact 14). Dr. Fox also concluded that Claimant's work caused his condition. (Finding of Fact 19). Dr. Castro also opined that Claimant upon caused him to symptoms. (Finding of Fact 29). Dr. Castro noted Claimant suffered from acute C7 radiculopathy with denervation. The ALJ found this was an objective finding, which supported the inference that Claimant's job duties aggravated the underlying condition of Claimant's cervical spine and made it symptomatic. When Dr. Castro reviewed additional medical records, he did not change

his opinion regarding causation and noted Claimant had objective findings of an acute injury. (Finding of Fact 31).

The ALJ considered Dr. Weingarten's expert opinions when concluding Claimant's job duties aggravated his cervical spine. As determined in Findings of Fact 32-36, Dr. Weingarten opined Claimant's cervical spine had underlying pathology which was degenerative in nature and there was no acute incident which caused Claimant's symptoms. This was contradicted by Dr. Fox's and Dr. Castro's opinions, which the ALJ found more credible.

In addition, the ALJ concluded Dr. Weingarten's opinions were unreasonably circumscribed, in that he did not consider Claimant's specific physical activities immediately before the onset of symptoms. Dr. Weingarten also did not consider Claimant had worked into the night immediately before he developed symptoms. The ALJ also found Dr. Weingarten did not distinguish between a disc herniation and bulge. He did not provide an explanation of how the degenerative process would have caused the disc bulge present at C6-C7 to become symptomatic at that moment in time. Accordingly, the ALJ found Dr. Weingarten's opinions were less credible than those offered by Claimant's ATPs. On balance, the ALJ determined there was sufficient evidence introduced at hearing to establish the required causal connection between Claimant's work activities and his cervical spine symptoms.

Medical Benefits

Claimant is entitled to receive medical treatment that is reasonable and necessary to cure and relieve the effects of the injury. § 8-42-101(1)(a), C.R.S.; *Yeck v. Industrial Claims Appeals Office,* 996 P.2d 228 (Colo. App. 1999). Claimant bears the burden to prove by a preponderance of the evidence there was a causal relationship between the work-related injury and the condition for which treatment is sought. *Snyder v. Industrial Claims Appeals Office,* 942 P.2d 1337 (Colo. App. 1997).

The necessity and reasonableness of Claimant's medical treatment was not challenged at hearing. Dr. Castro opined that the ACDF surgery is reasonable and necessary. (Finding of Fact 29). Dr. Weingarten concurred with this opinion, agreeing that the surgery was reasonable and necessary given the condition of Claimant's cervical spinal and the fact that conservative measures had been tried. (Finding of Fact 35). Therefore, because Claimant suffered a compensable injury while working for Employer, Respondents must provide reasonable and necessary medical treatment (including the proposed surgery) to Claimant. (Finding of Fact 40).

Average Weekly Wage

§ 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW.

However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-102(3), C.R.S. establishes the so-called "discretionary exception". *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra; Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007)

In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "manifestly unjust to base Claimant's disability benefits in 1986 and 1989 on her substantially lower earnings in 1979", and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. *Campbell v. IBM Corp., supra,* 867 P.2d at 82. The rationale for the Court's decision was one of fairness and Justice Plank stated:

"The entire objective of wage calculation [under the Act] is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage". *Campbell v. IBM Corp., supra,* 867 P.2d at 82.

Likewise, in *Pizza Hut v. ICAO*, 18 P.3d 867, (Colo. App. 2001), Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, then quit the delivery job. The Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and reinforced the principle that the ALJ had discretion to calculate Claimant's wages based on earnings from a subsequent employer and not upon wages earned at the time of injury, as the former represented a fairer calculation of Claimant's AWW.

In the case at bench, Claimant argued his AWW was $1,160.00 per week, based upon an hourly pay rate of $29.00 per hour and a work schedule of 40 hours per week. Respondents asserted Claimant worked a total of 1482 hours in the 45 weeks from January 1, 2017 through November 10, 2017. This averaged out to be 33 hours per week and multiplied by $29.00 per hour, Respondents calculated Claimant's average weekly wage as $957.00 per week. However, this methodology did not adequately factor in those weeks where Claimant worked overtime for Employer.

The ALJ reasoned that the calculation of AWW based upon the six months before Claimant's injury represented the fairest approximation of Claimant's wage loss, as it included weeks in which he was working overtime and those weeks when he worked less than 40 hours per week. Using this calculation, the ALJ determined Claimant AWW was

$1,011.95. (Findings of Fact 20-21). Pursuant to § 8-42-105(1), C.R.S. (2016), Claimant's TTD rate is $674.63 per week.

Temporary Total Disability Benefits

Pursuant to §§ 8-42-103, 8-42-105, C.R.S., Claimant is entitled to an award of temporary disability benefits if: (1) the injury or occupational disease causes disability; (2) the injured employee leaves work as a result of the injury; and (3) the temporary disability lasts more than three regular working days. *See Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). Claimant must establish a causal connection between the industrial injury and the subsequent wage loss in order to be entitled to temporary disability benefits. Section 8-42-103, C.R.S.

Evidence was presented at hearing which established Claimant lost time from work as a result of his industrial injury. This evidence was in the form of Claimant's testimony, as well as medical records adduced at the hearing. (Findings of Fact 16-17,19). Claimant's ATPs also issued restrictions and at some point, Employer could not accommodate these restrictions. (Findings of Fact 14,19, 26). This was directly related to the injury he suffered at work. Accordingly, Claimant satisfied his burden of proof to establish that he was entitled to receive wage replacement benefits. As found, Claimant is entitled to receive TTD benefits from December 15, 2017 through March 5, 2008, when he testified he returned to work.

ORDER

It is therefore ordered:

1. Claimant proved he suffered a compensable injury on November 14, 2017, namely an aggravation of the preexisting degenerative changes in his cervical spine.

2. Respondents shall pay for medical benefits to cure and relieve the effects of Claimant's injury, including the surgery recommended by Dr. Castro.

3. Respondents shall pay TTD benefits from December 15, 2017 through March 5, 2018.

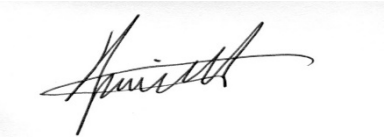
4. Respondents shall pay 8% statutory interest on all benefits not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 24, 2018



Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. What is Claimant's average weekly wage (AWW); and

2. Whether Claimant has proven by a preponderance of the evidence that the right of selection of medical provider passed to her.

FINDINGS OF FACT

1. Claimant injured her back on November 7, 2016, within the scope and course of her employment.

2. Claimant has been employed as a physical therapist for Employer for twelve years. Claimant was employed as a substitute therapist and was assigned to work in various hospital settings when a regular employee was out sick or on vacation. Claimant provided physical therapy services in different facilities. Claimant was paid by the hour for her work and the amount she was paid per hour varied depending on the facility she was assigned to work at.

3. Claimant was paid between $32.00 to $35.00 per hour depending on the facility and the contract rate with that facility. Claimant provided a W-2 of the wages she earned for 2016. Claimant's 2016 W-2 was representative of the amount that she earned for the past several years working for Employer.

4. Claimant's last day of work following her injury was November 18, 2016.

5. Claimant was injured on November 7, 2016, and thought that it would resolve itself or get better. On November 21, 2016, Claimant called in and reported her injury to Suzanne in the Employer's human resources office who advised her to go to urgent care.

6. Employer's first report of injury reflects that Employer was advised of Claimant's injury on November 7, 2016. Claimant was not provided the name of a specific doctor or treating facility to utilize for medical attention.

7. After speaking with Employer on November 21, 2016, Claimant went to On Point Urgent Care which was located near her home. On November 21, 2016, Claimant was evaluated and provided with medications and a referral to physical therapy.

8. Claimant began having increased symptoms of pain running into her toe and limping. When Claimant returned to the Urgent care, she was advised that she should see a designated workers' compensation doctor.

9. Claimant followed up speaking to the workers' compensation insurance adjuster, Trish Postell, in early December of 2016 and advised that the Urgent Care doctor said that she needed a workers' compensation doctor.

10. The insurance adjuster referred Claimant to Concentra as she had been seen there before. Claimant requested that she see Dr. Carrie Burns at Concentra who she had treated with for a previous workers compensation injury.

11. Claimant was not provided a choice of provider by the adjuster or Employer for this work injury.

12. Respondent filed a Notice of Contest on December 6, 2016, for further investigation for medical history and prior claims.

13. Claimant was evaluated by Dr. Burns at Concentra Medical Center on December 6, 2016.

14. Claimant was never provided with a designated provider list or written choice of physician by Employer or the workers compensation carrier.

15. Claimant first requested a change of physician on April 24, 2017, to Dr. Kristin Mason.

16. Claimant selected Dr. Mason from a list of providers after she researched the physicians provided to her by her counsel that provided medical care to injured workers.

17. Claimant was evaluated by Dr. Mason on May 30, 2017. Claimant selected Dr. Mason because she was a specialist in physical medicine and rehabilitation, was female and based upon the doctor's credentials. Claimant saw Dr. Mason and was impressed with Dr. Mason and appreciated that she had recommendations for care including providing an explanation of her injury and the length of recovery she could expect with Claimant's type of injury.

18. Dr. Mason diagnosed Claimant with an L4-5 central disk herniation with some intermittent L5 radiculopathic symptoms, currently in flare-up and with a history of multiple episodes of SI dysfunction with lumbopelvic obliquity, most obvious in the supine position with the right iliac crest elevated compared to the left, possible on the basis of spasms. Dr. Mason provided several treatment recommendations.

19. Respondent did not admit liability for Claimant's work injury until September 22, 2017. Respondent admitted for an average weekly wage of $799.13 per week and for temporary total disability benefits commencing on November 21, 2016.

20. After Respondent admitted liability for her injury, Claimant filed a request for change of physician to Dr. Kristin Mason on November 29, 2017, which was denied by the carrier on December 6, 2017 without explanation.

21. Claimant was off work and unable to work through June 11, 2017. Claimant returned to work on June 11, 2017, with work restrictions of no lifting over 35 pounds. Claimant's restriction limited the facilities that she could work at and therefore limited her hours and rate of pay.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

AWW

4. Section 8-42-102(2)(d), C.R.S. provides that where the claimant is paid by the hour, the claimant's AWW shall be determined by multiplying the hourly rate by the number of hours per day the claimant was working at the time of the injury.

However, Section 8-42-102(3), C.R.S. 2018, provides that, if "for any other reason" Section 8-42-102(2) (d) will not "fairly" determine the claimant's AWW, the ALJ may compute the AWW "by such other method" as will fairly determine the claimant's wage loss and diminished earning capacity.

5. The substantial credible evidence presented at hearing established that Claimant was paid by the hour, but at different rates at different facilities. Because Claimant's scheduled work varied depending upon the need of the Employer's clients and her weekly work assignments can be at different facilities, the best method for calculating Claimant's AWW is to use the W-2 for the year of her injury of 2016. Claimant's W-2 for 2016 showed earnings of $48,295.92 through November 18, 2016 (46 weeks) which makes her average weekly wage $1049.91 per week.

6. Respondents shall be liable for benefits under the Act based on an AWW of $1049.91.

Medical benefits/Right of selection

7. Respondents failed to provide Claimant with a list of designated providers that met the statutory requirement of 8-43-404(5) (a) (I) (A). The statute provides, as follows:

> …insurer shall provide a list of at least four physicians or four corporate medical providers or at least two physicians and two corporate medical providers, or a combination thereof where available, in the first instance, from a list an injured employee may select the physician who attends said injured employee. At least one of the four designated physicians or corporate medical providers offered must be at a distant location from the other three designated physician or corporate medical providers at distinct locations without common ownership….If the services of a physician are not tendered at the time of injury, the employee shall have the right to select a physician or chiropractor.

8. In addition to the statutory requirements, W.C.R.P. 8-2 (A) provides that "when an employer has notice of an on-the-job injury, the employer or insurer shall provide the injured worker with a written list of designated providers from which the injured worker may select a physician or corporate medical provider. For purposes of Rule 8 compliance, the list will be referred to as the designated provider list. Rule 8 (A)(1) also indicates that a copy of the written designated provider list must be given to the injured worker in a verifiable manner within seven (7) business days following the date the employer has notice of the injury. Respondent was aware of Claimant's injury on November 7, 2016, and on November 21, 2016, when Claimant was directed to urgent care.

9. Respondent's failed to provide a designated list of statutorily qualified medical

providers and as a result the right to select the treating physician passed to Claimant. Claimant properly requested and designated Dr. Kristin Mason on November 29, 2017, after that claim was admitted. W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on the job injury has occurred, "the employer shall provide the injured worker with a written list in compliance with Section 8-43-404(5) (a) (I) (A), C.R.S." W.C.R.P. Rule 8-2(E) additionally provides the remedy for failure to comply with the requirement is that "the injured worker may select an authorized treating physician or the worker's choosing."

10. Respondents argue that Claimant waived her right to a change of physician. However, Claimant credibly testified that she never understood or knew that she had a right to choose her treating physician in the claim until she consulted an attorney and was advised of her right to select from the list provided by the employer or to select a provider if none was provided. In this claim, Claimant was sent to an Urgent Care and then to Concentra by her Employer and the adjuster. Claimant by agreeing to treat at Concentra at the adjuster's recommendation is not a knowing choice because no choice was ever provided. Claimant did not waive a right that she was not aware the law provided her.

11. Waiver is the intentional relinquishment of a known right. A waiver must be made with full knowledge of the relevant facts, and the conduct should be free from ambiguity and clearly manifest the intention not to assert the right. *Johnson v. Industrial Commission, Department of Health v. Donahue,* 690 P.2d 243 (Colo. 1984). Waiver may be explicit, or it may be implied where a party engages, "in conduct which manifests an intent to relinquish the right or privilege or acts inconsistently.

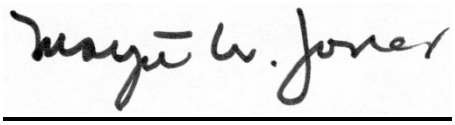
12. It is concluded that Claimant's participation in and with the medical care at Concentra, the medical provider her Employer provided to her, is not a knowing waiver of her right to select her treating physician as a matter of law. In this case, the right to select a physician passed to Claimant and she selected Dr. Kristin Mason to be her authorized treating physician.

ORDER

1. Respondents shall be liable for benefits under the Act based on an AWW of $1049.91.

2. Respondents shall be liable for reasonably necessary and related medical benefits provided by Dr. Kristin Mason.

DATED: September 4, 2018



MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Have Respondents overcome, by Clear and Convincing Evidence, the DIME physician's opinion on the issues of causation and MMI?

II. Have Respondents overcome, by a Preponderance of the Evidence, the DIME physician's impairment rating for her right upper extremity?

III. Has Claimant shown, by a preponderance of the evidence, that she is entitled to ongoing medical benefits, specifically, Voltaren cream?

IV. Is Claimant entitled to an award for Disfigurement?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant sustained a compensable injury to her right elbow on August 18, 2016. (Ex. A, B). The first report of injury was filed August 19, 2016. The report documents that Claimant "struck her right elbow on a door frame…" and that the injury was reported to her employer the same day.

2. Claimant first sought treatment eight days later, on August 26, 2016 at the Memorial Health System Occupational Health Clinic, where she was examined by Dr. Rosemary Greenslade. (Ex. 4, p. 25). It was documented by Dr. Greenslade that Claimant had "smashed" her right elbow against a wall while at work.

3. Claimant's pain had become worse in the following days, prompting her need for medical treatment. Dr. Greenslade diagnosed Claimant with "*traumatic* medial epicondylitis." (emphasis added). It was reported at the next visit on August 30, 2016 that Claimant was still having pain, but denied numbness, tingling, or radiating pain. She did complain of weakness in the affected extremity.

4. Dr. Greenslade performed an injection into Claimant's right medial common extensor tendon about the medial epicondyle at this visit. Claimant reported immediate pain relief due to the anesthesia. Dr. Greenslade increased Claimant's restrictions to "allow for more rest as hand writing aggravating tendonitis" and instructed Claimant to start physical therapy.

5. Claimant's symptoms had not resolved by her September 16, 2016 examination with Dr. Greenslade, who then recommended an EMG to test for possible ulnar nerve entrapment. (Ex. 4, p. 29).

6. Dr. Kenneth Finn performed an EMG/NCS on October 3, 2016. (Ex. 5, pp. 66-69). The study revealed evidence of ulnar neuropathy that Dr. Finn indicated was "consistent with the diagnosis of mild to moderate right cubital tunnel syndrome." Claimant reported to Dr. Finn that she had "struck" her right elbow on a door jamb while cleaning at work. *Id.* at 66. It was Dr. Finn's opinion that Claimant's symptoms were radiating in an ulnar fashion and diagnosed Claimant with a lesion of the ulnar nerve. *Id.* He recommended Claimant undergo orthopedic evaluation. Claimant again reported decreased grip strength and the dropping of items.

7. Claimant was evaluated by orthopedic surgeon Dr. Karl Larsen, on January 11, 2017. (Ex. 6, pp. 73-75). Claimant reported to Dr. Larsen that she had injured herself while cleaning at work, and that

> she [Claimant] pulled her right arm back "striking" her right posterior medial elbow and metal plates sticking out of the door jamb. She had immediate *burning* in the medial arm and hand and *numbness in the ulnar digits* of the hand. She is having *persistent burning discomfort* over the medial elbow as well as pain in the elbow, *especially with gripping activities*….(Ex. 6, p. 73)(emphasis added).

Dr. Larsen performed a physical examination of Claimant's right arm and indicated that Claimant had hypersensitivity over the medial elbow, and was exclusively tender over the ulnar nerve with a palpable tendency for the nerve to subluxate with elbow flexion. He could personally feel the nerve "riding forward" around the medial epicondyle. *Id.* at 74. Claimant's Tinel sign was positive and painful, and she also had a positive elbow flexion compression test. Dr. Larsen felt that, given the tendency of Claimant's ulnar nerve to subluxate, Claimant would be best served by having ulnar nerve transposition surgery. *Id at 74.*

8. Surgery was performed by Dr. Larsen on February 23, 2017. (Ex. 8). The procedures included right anterior submuscular ulnar nerve transposition and right flexor pronator origin lengthening. (Ex. 8, p. 107). The post-operative diagnosis was right ulnar neuropathy/ulnar neuritis at the elbow.

9. Dr. Larsen noted on April 5, 2017 that Claimant was making progress with her condition after surgery, but she was still complaining of a lot of soreness and tightness with some numbness in the right small finger still. (Ex. 6, p. 93).

10. Prior to the surgery, Dr. Greenslade spoke to Claimant's supervisor on November 8, 2016. (Ex. 4, p. 35). Dr. Greenslade was informed of the repetitive tasks that Claimant performs at her job with the employer. Dr. Greenslade opined that the

tasks performed by Claimant were not enough for her to meet the risk factors for cumulative trauma of the elbow pursuant to Rule 17(5). This information led Dr. Greenslade to believe Claimant's condition was not work related. She placed Claimant at MMI, effective November 14, 2016.

11. Dr. Greenslade concluded that Claimant did not suffer a permanent impairment as the result of her work injury. At the time of the exam, Claimant had no instability on valgus/varus testing, 5/5 strength throughout, and no visible bruising or swelling.

12. Claimant's EMG did show evidence of cubital tunnel syndrome, but Dr. Greenslade concluded that those findings were "unrelated to job duties associated with employment at UCH, patient only performs minimal repetitive motion as part of her job duties. She has another job as a CNA and does non-work related computer work which are more likely the etiology of her nerve entrapment as this work involves forceful torque/push/pulling."

13. Claimant's next appointment at the Memorial Health System Occupational Clinic occurred on May 5, 2017, after the claim was reopened due to Claimant's persistent condition. (Ex. 4, pp. 38-39). At this time, Claimant was "progressing slowly" with physical therapy, and was still having ulnar nerve neuralgia. She had improved, however, and expressed a desire to return to work. Dr. Lund also diagnosed Claimant with traumatic medial epicondylitis, along with right ulnar neuritis and status-post ulnar nerve transposition surgery. Dr. Lund documented on June 9, 2017 that Claimant continued to have decreased grip strength. *Id.* at 40.

14. Claimant was ultimately placed at MMI by Dr. Lund on October 6, 2017. (Ex. 4, pp. 51-57). Claimant, however, continued to complain of ongoing pain and symptoms in the ulnar nerve distribution. Dr. Lund opined at the MMI date that Claimant's condition "was related to the performance of her job duties on 08-18-2016 with greater than 50% medical probability." *Id.* at 55. Dr. Lund assigned a 1% extremity rating for range of motion loss. She also assigned 8% using Table 10 of the AMA Guides, Third Edition Revised ("AMA Guides") for Peripheral Nervous System Impairment, for a combined 9% rating.

15. Dr. Lund recommended Claimant continue using her Voltaren Gel for pain relief as maintenance care. *Id.* at 56.

16. Respondents filed a Final Admission of Liability ("FAL") admitting to Dr. Lund's findings on December 21, 2017. (Ex. B) Claimant filed an Objection to Final Admission of Liability and Notice and Proposal to Select DIME Examiner on December 29, 2017.

17. Dr. Anjmun Sharma performed the DIME on April 6, 2018. (Ex. 9). Dr. Sharma documented that Claimant had slipped and "smashed" against the wall, hitting her medial condyle, resulting in the development of persistent pain. A record review was also conducted.

18. On physical examination, Dr. Sharma documented tenderness at the medial epicondyle and tenderness over the scar area where she had the submuscular ulnar nerve transposition surgery. There was atrophy of the right elbow when compared to the left. Grip strength was markedly decreased in the right upper extremity compared to the left, which Dr. Sharma opined was related to the elbow flexor and extensor tendons.

19. Dr. Sharma assigned an 8% rating for range of motion loss of Claimant's right upper extremity. (Ex. 9, p. 117). Additionally, Dr. Sharma indicated that Claimant met the criteria for 'other disorders' of the right upper extremity, specifically grip strength, which was markedly decreased as a result of the surgery and the traumatic medial epicondylitis. Using Table 23 on Page 54 of the AMA Guides, Dr. Sharma assigned a 20% upper extremity rating for loss of grip strength for a combined upper extremity rating of 26%.

20. Respondents challenged the impairment rating of the DIME. Dr. Nicholas Kurz performed a medical records review, and give his opinion regarding Claimant's condition. (Ex. 1, Ex. C). In response to Respondents' inquiry, Dr. Kurz diagnosed Claimant with a "right elbow contusion." (Ex. C, p. 19). Dr. Kurz opined, "Dr. Lund incorrectly reopened this patient's claim as she was properly treated and healed from her minor elbow contusion" at that time. (Ex. C, p. 21). At the time the case was reopened, the proper procedure "would've been a one-time evaluation to determine causality, perform a thorough evaluation, to review job descriptions of the medical probability of a new injury." *Id*

21. Dr. Kurz focused on Claimant's variance of her described mechanism of injury. Dr. Kurz noted that "this patient had no qualifying impairable injury or any objective findings that would qualify for an impairment rating." (Ex C. p. 22).

22. Dr. Kurz therefore, disagreed with the rating assigned by Dr. Sharma. He also disagreed with the rating provided by Dr. Lund, stating that Claimant had nothing more than a minor elbow contusion for which she reached MMI on November 14, 2016. (Ex. C, p. 23). Dr. Kurz further stated that Claimant did not meet the criteria under Rule 17 for a repetitive injury. Kurz disagreed with Dr. Sharma's DIME findings because Claimant provided Dr. Sharma an inaccurate description of the mechanism of injury, and because he assigned Claimant an impairment rating absent objective findings.

23. Dr. Kurz identified several 'inconsistent' stories throughout the records regarding how the accident occurred. The August 18, 2016 Worker's Compensation

New Injury Report from UC Health stated that Claimant sustained a right elbow contusion. Claimant described that the mechanism of injury was "cleaning under toilet with shower brush and hit my elbow onto the door jam." (Ex. E, p. 43).

24. Dr. Kurz opined that Claimant told several inconsistent stories throughout the records regarding how the accident occurred. The August 18, 2016 Worker's Compensation New Injury Report from UC Health stated that Claimant sustained a right elbow contusion. Claimant described that the mechanism of injury was "cleaning under toilet with shower brush and hit my elbow onto the door jam." (Ex. E, p. 43).

25. In the Treating Physician's Report dated August 26, 2016, the mechanism was described as "injury to her right elbow when her arm slipped and smashed against a wall hitting her medial epicondyle." (Ex. E, p. 44)

26. On September 2, 2016, Claimant completed a medical history form for her physical therapist and described the mechanism as "I was cleaning under a toilet floor with a shower brush onto the door jam." (Ex. C, p. 19)

27. On January 11, 2017, orthopedist, Dr. Karl Larson documented Claimant's report that "she sustained an injury in the course of her work on 08/18/16 and she was cleaning her bathroom and something fell and she pulled back striking her right posterior medial elbow and medal plate sticking out of the door jam." (Ex. F, p. 94)

28. Dr. Kurz further noted that, in his March 20, 2017 IME report (at Respondents' request), Dr. John Sanidas, MD, states, "she was mopping the floor in the bathroom. She had a long handled mop, she was mopping the floor basically around the toilet but was basically mopping the whole bathroom. As she was doing this, according to her statement, the mop came up suddenly and she stepped back and then struck her right posterior medial elbow on the door to the bathroom. She did not hit the door or a door jam." (Ex. C, p. 19).

29. [However, the ALJ notes further, that the remainder of the above paragraph cited by Dr. Kurz reads as follows: "Because of the language (she is from Jamaica), there is some confusion. She actually hit where the door latch is shut on the mid-frame with some metal that was projecting out of it. She was standing and moving backwards at the time" (Ex. 6, p. 80)].

30. [The ALJ notes further that in Dr. Sanidas' IME report, under Causation, he elaborates:

> …..it is now more clear on a face-to-face evaluation since the patient was standing in a pediatric bathroom mopping the floor around the toilet, not necessarily down low in the toilet……In reviewing the patient's history, *I have nothing more that indicates that this patient is not giving an accurate summation of her injury*….Consequently, within a reasonable degree of

medical probability, I conclude from the records that *this patient's injury is work-related* as noted above. (Ex. 6, p. 85)(emphasis added).]

31. Then, during the DIME evaluation with Dr. Sharma on April 6, 2018, Claimant stated that she "slipped and fell, smashed against a wall hitting her medial condyle." (Ex. D, p. 32). [The ALJ finds that Claimant did not use the term "medial condyle" with Dr. Sharma; he was merely paraphrasing, in shorthand, her version of events.]

32. According to Claimant at hearing, "I was asked to clean a room. So the floor in the bathroom was kind of dirty so I sprayed and everything and I was using a shower brush to clean the floor and the brush flipped and my (inaudible) and I smashed my – I don't know if it was a metal plate, but I know I smashed it in the door – in the door jam."

33. Claimant specified that by "door jam" she was referring to "the frame yes, and the metal piece." She later stated, "to be honest, I don't know what I hit because my back was turned. So I don't know what I hit because my back was turned."

34. Dr. Kurz explained that Claimant's description of the injury is important because "the fall is substantially different than bumping your elbow. And bumping your elbow on the wall is different than bumping your elbow from a fall just because of the physics and the weight of all that."

35. Claimant underwent her own independent medical examination with Dr. Timothy Hall on June 6, 2018. (Ex. 10). Dr. Hall examined Claimant, and took a medical history from her directly. Dr. Hall's physical examination showed the right medial elbow to be very tender locally, and a positive Tinel's locally. Examination further revealed weak grip strength of the right hand as compared to the left. There was continued decreased sensation in an ulnar nerve distribution from the elbow down.

36. Dr. Hall diagnosed Claimant with "blunt trauma" of the right elbow resulting in chronic medial epicondylitis and ulnar neuropathy status post-surgical transposition. Dr. Hall explained that the different methods of rating Claimant's impairment as performed by Dr. Lund and Dr. Sharma would both be appropriate under the AMA Guides. However, he felt Dr. Lund's usage of the sensory deficit was done incorrectly and should have amounted to 20% for the sensory loss. Ultimately, Dr. Hall opined, *"Dr. Sharma's method of rating is reasonable and appropriate*. Not all that different from mine. *It is critical that the strength deficit be taken into account. This is the main impairment experienced by this patient as a consequence of the work-related injury." Id.* at 127 (emphasis added).

37. Dr. Sharma's deposition was taken by Respondents on August 24, 2018. Dr. Sharma addressed the issue of causation when asked his opinion of Dr. Kurz's diagnosis of a mere elbow contusion; instead it was a cubital tunnel disorder. Dr. Sharma explained that although injuries like Claimant's are typically repetitive in nature, any type of trauma to a nerve, including direct blunt force trauma, can cause this condition. (Depo. Tr. 9:6-18). Dr. Sharma further disagreed with the original placement of MMI by Dr. Greenslade, as he felt there was a documented injury that occurred at work. Claimant did not have any history that would lead him to believe Claimant's condition was caused by anything other than the trauma. (Depo. Tr. 10:4-19).

38. Dr. Sharma was asked how he reconciled the MMI report by Dr. Lund documenting good grip strength with his own testing, which documented decreased grip strength. Dr. Sharma cannot explain why Dr. Lund's note said what it did, but Dr. Sharma confirmed that he used an objective device called a Jamar dynamometer to measure Claimant's grip strength. He performed this testing himself, in his own office, and appropriately 'zeroed out' [calibrated] the device before testing Claimant's grip. The testing revealed markedly decreased grip strength on the right side as compared to the uninjured left side, resulting in a 20% rating for the grip strength. (Depo. Tr. 11:22 – 12:25).

39. Dr. Sharma was asked how we could know whether the Claimant was putting forth maximum effort or not. Dr. Sharma explained that the best way to test for this is by 'zeroing out' the dynamometer and performing the measurements three times to see if the ratings are consistent. (Depo. Tr. 13:3-12). Dr. Sharma opined that he felt the best way to rate Claimant's condition was based on her decreased grip strength, as that was her main complaint when he examined her. (Depo. Tr. p. 20:11-24). "And I felt in order to fairly and accurately represent the true impairment, that is the reason why I included the grip strength." (Depo. Tr. p. 20:24 – 21:1).

40. Dr. Sharma was also asked directly about the reported mechanism of injury and the minor variance of its reporting in the record. Dr. Sharma indicated that the most important variable is "more the impact than anything else" and not necessarily the fact that there are variations in how it was reported…. You know, what I saw that was consistent in the record is that there was some type of *direct acute trauma* to the elbow that resulted in the injury." (Depo. Tr. p. 18:1-22) (emphasis added). Ultimately, Dr. Sharma was asked whether anything regarding the information presented to him, particularly the report from Dr. Kurz, altered his opinions in any way. Dr. Sharma stated:

> Not really. I mean, I appreciate Dr. Kurz having a report, and I can understand why he had some concerns. However, I -- I don't feel that it's compelling enough to me to change anything in my report. I do not believe that I erred in any way. I believe that I addressed the issue, which was the right elbow, the fact that there was a deficit in range of motion and a deficit

in strength. And I believe that this is a fair and accurate representation of where functionally this patient is. (Depo. Tr. pp. 21:18 – 22:6).

41. Dr. Kurz also testified at hearing on behalf of Respondents. It was his opinion that traumatic medial epicondylitis is quite rare and that the odds of "bumping[1]" your elbow in the right place to cause Claimant's injury is low. Dr. Kurz testified that he felt Claimant was appropriately placed at MMI on November 14th of 2016 as previously indicated by Dr. Greenslade.

42. Regarding the impairment rating, Dr. Kurz testified that there must be objective findings for an individual to receive an impairment rating. Claimant's rating was based "purely off subjective complaints." The patient had a normal nerve conduction study and no physical findings of atrophy therefore the strength was subjective and not objective which is required for any impairment rating using the guidelines." (Ex. C, p. 22)

43. Elaborating on the nature of the objective/subjective findings, Dr. Kurz explained at hearing, "After the patient progressed and had the ulnar nerve transposition…a repeat EMG was done because she stated that she had no improvement, still had numbness and weakness and on that second one they were both normal. So there were no objective nerve findings that would equate to a sensory deficit or a motor or strength deficit."

44. Dr. Kurz indicated that he did not feel the Jamar dynamometer used by Dr. Sharma was an "objective" finding to warrant an impairment rating, in part because it was his opinion that the Claimant could see the gauge and consciously match it each time.

45. At hearing, Claimant testified that Dr. Sharma positioned the dynamometer readings' side facing him, so she was unable to see any readings. She further testified that she believed that Dr. Sharma was the only physician to use this device to test her grip. However, on cross examination, Claimant admitted that physical therapists had tested her grip strength, and she could not recall what kind of device they used.

46. For the Disfigurement component of the hearing, Claimant displayed her surgically scarred right elbow to the ALJ. The ALJ notes that there is a semi-circular scar surrounding the elbow, approximately 3" in length, 1/8" in width, darker than the surrounding skin, with stitch marks still visible.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

Overcoming the DIME / Causation and MMI

D. A DIME physician's findings of causation, MMI and impairment are typically binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). However, the same standard of clear and convincing evidence

does not apply to *scheduled ratings* imposed by a DIME. The burden of proof pertinent to a dispute concerning the impairment rating of a scheduled injury is a preponderance of the evidence. It is not by clear and convincing evidence. *Maestas v. American Furniture Warehouse*, W.C. No. 4-662-369 (June 5, 2007); *Ortiz v. Ingersoll-Rand Co.*, W.C. No. 4-981-218-04 (January 25, 2018); *see generally Wagoner v. City of Colorado Springs*, W.C. No. 4-817-985-03 (Oct. 21, 2013)(no presumptive weight afforded DIME physician concerning scheduled injuries), *aff'd Wagoner v. Industrial Claim Appeals Office*, Colo. App. No. 13CA1983 (Oct. 23, 2014)(NSOP).

E. Respondents and their expert rely heavily on variances in Claimant's reported mechanism of injury. The ALJ is not persuaded. The ALJ agrees with the testimony of Dr. Sharma that the most important factor in determining causation and whether the mechanism of injury caused the purported injury in this matter is the impact of the elbow against an object, regardless of whether she fell into it, smashed her arm into it, or something similar. The ALJ finds Claimant credible that she "smashed" her elbow against a hard object behind her that she could not see at the time, be it the door frame, door jamb, or some other hard object. As Dr. Sharma indicated, the medical records repeatedly documented a traumatic injury to the elbow, regardless of what specific object Claimant struck with the elbow.

F. This variance in documenting the precise mechanism is best explained by Respondents' own IME physician, Dr. Sanidas, who, noting the language barrier, observed:

> …..it is now more clear on a face-to-face evaluation since the patient was standing in a pediatric bathroom mopping the floor around the toilet, not necessarily down low in the toilet……In reviewing the patient's history, *I have nothing more that indicates that this patient is not giving an accurate summation of her injury*….Consequently, within a reasonable degree of medical probability, I conclude from the records that *this patient's injury is work-related* as noted above.

G. On the issue of Causation and MMI, the ALJ finds the opinions of Drs. Sharma, Hall, Lund, and Sanidas to be more persuasive than Drs. Kurz and Greenslade. Respondents have therefore failed to prove by clear and convincing evidence that Dr. Sharma erred in the MMI date he assigned. Respondents have also failed to prove, by clear and convincing, evidence that Dr. Sharma erred in finding Claimant's ongoing condition to be causally related to the August 16, 2016 industrial injury, for which Respondents have admitted.

Overcoming the DIME / Impairment Rating

H. A DIME physician is required to rate a claimant's impairment in accordance with the AMA Guides. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office*, 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the AMA Guides do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola*, W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may

consider any technical deviation from the AMA Guides in determining the weight to be accorded the DIME physician's findings. Whether the DIME physician properly applied the AMA Guides to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett*, W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

I. Respondents assert that Claimant did not warrant an impairment rating, based upon Dr. Kurz's opinion that there was a lack of objective findings to warrant the rating. Dr. Lund, a Level II accredited physician, assigned an impairment rating. Dr. Hall, a Level II accredited physician retained by Claimant for an IME, agreed that Dr. Sharma's rating of Claimant's grip strength was the best way to take into account her loss of function as a result of this injury. Dr. Sharma, himself a level II accredited physician, also provided Claimant with an impairment rating for her condition. Three physicians, including Claimant's treating physician and a DIME, have found that Claimant's condition warrants an impairment rating.

J. Moreover, Dr. Kurz's argument that the Jamar dynamometer is not an "objective finding" is not persuasive. The available evidence suggests that the Jamar dynamometer was properly calibrated. The AMA Guidelines reference its proper usage, suggesting the proper settings to best "apply maximal force comfortably". Reliability of measurements requires readings to be within 20% of one another. Nothing suggests Dr. Sharma did not follow this protocol. The ALJ finds that this test is a reasonable, objective measure of grip strength, and that Dr. Sharma followed the proper protocol in so measuring.

K. While Dr. Kurz felt this test lacked objectivity, due to a possible submaximal effort by Claimant seeing the gauge, the ALJ is not persuaded. As Claimant testified, the side of the dynamometer facing her while it was being used did not display any readings, as that side of the device was facing Dr. Sharma. The ALJ further notes that Claimant is simply lacking in the requisite sophistication and guile to successfully game the system. In fact, the ALJ finds Claimant to have acted in good faith throughout the entire process, in providing the best history she could to all medical providers, cooperating in all testing protocols, and testifying at hearing. The ALJ finds, by a preponderance of the evidence, that the 26% upper extremity rating assigned by Dr. Sharma is appropriate and supported by the medical evidence.

Medical Benefits

L. Respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Where a claimant's entitlement to medical benefits is disputed, the claimant must prove by a preponderance of the evidence that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Ongoing medical benefits after MMI are the financial responsibility of Respondents as long as they are reasonable, necessary, and related to the industrial injury. *Grover v. Industrial Com'n of Colorado*, 759 P.2d 705 (Colo. 1988).

M. The ALJ finds that Claimant has established, by a preponderance of the evidence, that she is entitled to all ongoing reasonable, necessary, and related treatment for her injured right upper extremity. Specifically, the ALJ finds the Voltaren Gel to be reasonable, necessary, and related. Claimant was recommended this particular ongoing treatment when she was placed at MMI, and Claimant continues to suffer from the effects of the industrial injury. It should be noted that the ALJ is not limiting Claimant's ongoing medical care to the Voltaren; merely that it meets the criteria known to date.

Disfigurement

N. The ALJ finds that as a result of Claimant's work injury, Claimant has a visible disfigurement to the body as noted in Finding of Fact #46. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S. The ALJ orders that Insurer shall pay Claimant $750.00 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore Ordered that:

1. Respondents have not overcome the DIME opinion of Dr. Sharma. Claimant's upper right extremity rating is 26%.

2. Respondents shall pay for Claimant's ongoing medical care which is reasonable, necessary, and related to her work injury, including Voltaren cream.

3. Respondents shall pay $750.00 for Disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained compensable left shoulder and left knee injuries during the course and scope of his employment with Employer on August 2, 2017.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries.

FINDINGS OF FACT

1. Claimant worked for Employer as a Security Guard at a bank. On August 2, 2017 he caught his right foot on a table and tripped in the basement of the bank while performing his job duties. Claimant fell to the ground. He struck his left knee and left shoulder. Claimant also twisted his left ankle during the incident. He subsequently performed his job duties and completed his work shift.

2. On August 7, 2017 Claimant reported his injuries to Employer. He chose AFC Urgent Care for medical treatment.

3. Claimant has suffered a number of previous work-related injuries to his left ankle, left shoulder and left knee. The injuries occurred during the period 2011-2013 while Claimant was working for other employers. Moreover, on December 23, 2014 Claimant slipped on ice, fell and fractured his patella. He underwent open reduction and internal fixation of the fractured patella on January 2, 2015. Nevertheless, the medical records reflect that Claimant's last left knee treatment occurred on April 1, 2015. Moreover, Claimant testified that he did not have any left shoulder symptoms immediately prior to his August 2, 2017 work accident.

4. On August 22, 2017 Claimant visited AFC Urgent Care for an evaluation of his left shoulder and left knee symptoms. Claimant reported that he had fallen at work approximately two weeks earlier. He injured his left knee and left shoulder. Claimant noted that he had undergone left knee surgery about two years earlier. He remarked that his left shoulder remained stiff and his left knee had been "bothering him more since the fall." Left knee and left shoulder x-rays were normal with no evidence of fractures. Gregory Muench, M.D. diagnosed Claimant with a left shoulder sprain and a left knee contusion. He referred Claimant to an orthopedic specialist to evaluate his left shoulder and "to make sure his knee is OK."

5. Claimant remarked that he sought treatment from personal physician Stephen Shepherd, D.O. at CPHG Primary Care Highlands because he was unable to

obtain an appointment with an orthopedic specialist. On September 13, 2017 Claimant reported that he had fallen six weeks earlier and injured his left shoulder. He also noted continuing left knee pain. Dr. Shepherd prescribed pain medications.

6. On September 18, 2017 Employer completed a First Report of Injury. The document specified that Claimant injured his right shoulder when he ran into a table at work on August 2, 2017.

7. On January 15, 2018 Claimant returned to AFC Urgent Care for an evaluation of his left shoulder and left knee symptoms. However, Claimant's claim was closed because of non-compliance. AFC Urgent Care had called and left multiple messages for Claimant but did not receive any response.

8. Claimant explained that he attempted to schedule appointments with an orthopedic specialist recommended by AFC Urgent Care but never received a return telephone call from the specialist's office. He reasoned that, because he could not make an appointment with an orthopedic specialist, it was fruitless to return to AFC Urgent Care.

9. On February 7, 2018 Claimant completed a Workers' Claim for Compensation. He noted that he was injured when he tripped and fell at work on August 2, 2017. Claimant specifically injured his left shoulder and left ankle.

10. On June 22, 2018 Claimant underwent an independent medical examination with Timothy S. O'Brien, M.D. Claimant reported that, while working for Employer on August 2, 2017 he caught his right foot on the leg of a table and fell to the ground. He inverted his left ankle, struck his left knee and hit his left shoulder during the fall. In reviewing Claimant's medical records, Dr. O'Brien noted that Claimant had been involved in a motor vehicle accident on September 29, 2012 while on his way to work for another employer. He suffered neck and shoulder pain as a result of the accident. Claimant received conservative treatment in the form of physical therapy and injections. He reached Maximum Medical Improvement (MMI) on February 6, 2013 with a 4% whole person impairment rating. In recounting Claimant's treatment for the August 2, 2017 work incident Dr. O'Brien commented that diagnostic testing in the form of radiographs revealed a normal cervical spine, left knee and left shoulder. Physical examinations of the left shoulder, left knee and left ankle were normal.

11. Dr. O'Brien determined that Claimant suffered a minor left knee strain/sprain and a minor left shoulder strain/sprain as a result of his fall at work on August 2, 2017. He explained that Claimant did not immediately seek medical attention for his August 2, 2017 work injuries but waited until August 22, 2017 to obtain treatment. Upon receiving medical care Claimant's physical examination and radiographs were normal. Dr. O'Brien also noted that Claimant had a history of non-organic pain during treatment for his September 29, 2012 motor vehicle accident. Dr. O'Brien explained that approximately 98% of minor injuries similar to Claimant's heal within days. He reasoned that any injuries Claimant suffered on August 2, 2017 healed prior to his August 22, 2017 visit to AFC Urgent Care. Based upon the normal physical

examination on August 22, 2017 Dr. O'Brien commented that Claimant reached his "preinjury level of function" regarding his left shoulder and left knee symptoms. Claimant thus did not require any additional medical treatment and could resume his normal activities. Dr. O'Brien summarized that Claimant "healed expeditiously and uneventfully and without sequela" by August 22, 2017 for his minor August 2, 2017 left knee and left shoulder injuries.

12. On August 24, 2018 the parties conducted the post-hearing evidentiary deposition of Dr. O'Brien. He maintained that Claimant suffered a minor left knee strain/sprain and a minor left shoulder strain/sprain as a result of his fall at work on August 2, 2017. However, Claimant's injuries were self-limiting and self-healing. The injuries had resolved and Claimant did not require any additional medical treatment.

13. Claimant has established that it is more probably true than not that he sustained compensable left shoulder and left knee injuries during the course and scope of his employment with Employer on August 2, 2017. Initially, Claimant explained that on August 2, 2017 he caught his right foot on a table and tripped in the basement of a bank while performing his job duties. Claimant fell to the ground. He struck his left knee and left shoulder. He also twisted his left ankle during the incident. In an August 22, 2017 visit with UFC Urgent Care Claimant reported that he had fallen at work and injured his left knee and left shoulder. Dr. Muench diagnosed Claimant with a left shoulder sprain and a left knee contusion. He referred Claimant to an orthopedic specialist to evaluate his left shoulder and "to make sure his knee is OK." On September 13, 2017 Claimant reported to personal physician Dr. Sheperd that he fell six weeks earlier and injured his left shoulder. Finally, Dr. O'Brien determined that Claimant suffered a minor left knee strain/sprain and a minor left shoulder strain/sprain as a result of his fall at work on August 2, 2017. Accordingly, the bulk of the persuasive medical evidence reflects that Claimant's work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Claimant thus suffered compensable left knee and left shoulder injuries on August 2, 2017.

14. Claimant has established that it is more probably true than not that he is entitled to receive reasonable, necessary and causally related medical treatment for his August 2, 2017 industrial injuries. The record reflects that Claimant is seeking medical treatment for his left shoulder and left knee. Respondents are not challenging a specific medical benefit but instead assert that Claimant's current symptoms are not related to the injuries and seek a denial of additional medical treatment. Relying on the opinion of Dr. O'Brien, Respondents assert that Claimant is not entitled to receive any additional medical treatment because his injuries have resolved.

15. Dr. O'Brien reasoned that any injuries Claimant suffered on August 2, 2017 healed prior to his August 22, 2017 visit to AFC Urgent Care. Based upon the normal physical examination on August 22, 2017 Dr. O'Brien commented that Claimant reached his "preinjury level of function" regarding his left shoulder and left knee symptoms. Claimant thus did not require any additional medical treatment and could resume his normal activities. Dr. O'Brien summarized that Claimant "healed

expeditiously and uneventfully and without sequela" by August 22, 2017 for his minor August 2, 2017 left knee and left shoulder injuries.

16. Relying on Dr. O'Brien's analysis requires a *de facto* finding that Claimant has reached Maximum Medical Improvement (MMI) regarding the August 2, 2017 injuries. Because Claimant is entitled to medical benefits until reaching MMI, a denial of all further medical treatment necessarily reflects an implicit determination that Claimant reached MMI for the effects of his industrial injuries. However, there has been no medical determination of MMI by an Authorized Treating Physician (ATP) or Division Independent Medical Examination (DIME) physician. Furthermore, the persuasive opinions of Claimant's treating doctors reflect that he requires continuing medical treatment for his left shoulder and left knee symptoms. Furthermore, although Dr. Muensch referred Claimant to an orthopedic specialist to evaluate his left shoulder and left knee, Claimant has been unable to obtain the treatment. The bulk of the persuasive evidence thus reveals that Claimant is entitled to continuing medical treatment, including evaluation by an orthopedic specialist, for his August 2, 2017 work injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. As found, Claimant has established by a preponderance of the evidence that he sustained compensable left shoulder and left knee injuries during the course and scope of his employment with Employer on August 2, 2017. Initially, Claimant explained that on August 2, 2017 he caught his right foot on a table and tripped in the basement of a bank while performing his job duties. Claimant fell to the ground. He struck his left knee and left shoulder. He also twisted his left ankle during the incident. In an August 22, 2017 visit with UFC Urgent Care Claimant reported that he had fallen at work and injured his left knee and left shoulder. Dr. Muench diagnosed Claimant with a left shoulder sprain and a left knee contusion. He referred Claimant to an orthopedic specialist to evaluate his left shoulder and "to make sure his knee is OK." On September 13, 2017 Claimant reported to personal physician Dr. Sheperd that he fell six weeks earlier and injured his left shoulder. Finally, Dr. O'Brien determined that Claimant suffered a minor left knee strain/sprain and a minor left shoulder strain/sprain as a result of his fall at work on August 2, 2017. Accordingly, the bulk of the persuasive medical evidence reflects that Claimant's work activities aggravated, accelerated or combined with his pre-existing condition to produce a need for medical treatment. Claimant thus suffered compensable left knee and left shoulder injuries on August 2, 2017.

Medical Benefits

7. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a

causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

8. Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The employer's obligation continues until the claimant reaches MMI. MMI is defined as the point in time when the claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S. However, the claimant may receive medical benefits after MMI to maintain his status or prevent a deterioration of his condition. *See Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988). Furthermore, §8-42-107(8)(b)(I) & (II), C.R.S. provide that the initial determination of MMI is to be made by an ATP. If either party disputes the ATP's MMI determination, the claimant must undergo a DIME. The statute also provides that the ALJ lacks authority to determine MMI until there has been a medical determination of MMI by an ATP or a DIME. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, W.C. Nos. 4-947-316-01, 4-935-813-03 (ICAP, July 31, 2015).

9. As found, Claimant has established by a preponderance of the evidence that he is entitled to receive reasonable, necessary and causally related medical treatment for his August 2, 2017 industrial injuries. The record reflects that Claimant is seeking medical treatment for his left shoulder and left knee. Respondents are not challenging a specific medical benefit but instead assert that Claimant's current symptoms are not related to the injuries and seek a denial of additional medical treatment. Relying on the opinion of Dr. O'Brien, Respondents assert that Claimant is not entitled to receive any additional medical treatment because his injuries have resolved.

10. As found, Dr. O'Brien reasoned that any injuries Claimant suffered on August 2, 2017 healed prior to his August 22, 2017 visit to AFC Urgent Care. Based upon the normal physical examination on August 22, 2017 Dr. O'Brien commented that Claimant reached his "preinjury level of function" regarding his left shoulder and left knee symptoms. Claimant thus did not require any additional medical treatment and could resume his normal activities. Dr. O'Brien summarized that Claimant "healed expeditiously and uneventfully and without sequela" by August 22, 2017 for his minor August 2, 2017 left knee and left shoulder injuries.

11. As found, relying on Dr. O'Brien's analysis requires a *de facto* finding that Claimant has reached Maximum Medical Improvement (MMI) regarding the August 2, 2017 injuries. Because Claimant is entitled to medical benefits until reaching MMI, a denial of all further medical treatment necessarily reflects an implicit determination that Claimant reached MMI for the effects of his industrial injuries. However, there has been

no medical determination of MMI by an Authorized Treating Physician (ATP) or Division Independent Medical Examination (DIME) physician. Furthermore, the persuasive opinions of Claimant's treating doctors reflect that he requires continuing medical treatment for his left shoulder and left knee symptoms. Furthermore, although Dr. Muensch referred Claimant to an orthopedic specialist to evaluate his left shoulder and left knee, Claimant has been unable to obtain the treatment. The bulk of the persuasive evidence thus reveals that Claimant is entitled to continuing medical treatment, including evaluation by an orthopedic specialist, for his August 2, 2017 work injuries. *See Story v. Industrial Claim Appeals Office,* 910 P.2d 80 (Colo. App. 1995); *In Re Bruno*, W.C. Nos. 4-947-316-01, 4-935-813-03 (ICAP, July 31, 2015) (where the claimant had not reached MMI, ALJ's finding terminating all future medical treatment reflected an implicit determination that the claimant had reached MMI and was thus erroneous); *Davis v. Little Pub,* W.C. No. 4-947-977 (June 17, 2015).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable left shoulder and left knee injuries on August 2, 2017 during the course and scope of his employment with Employer.

2. Claimant is entitled to continuing medical treatment, including evaluation by an orthopedic specialist, for his August 2, 2017 work injuries.

3. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that her need for continued maintenance medical care is reasonable, necessary and related to her May 28, 2016 industrial injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant sustained a compensable injury to her lower back on May 28, 2016. On this date, Claimant was lifting and lowering boxes of heavy 18" x 18" tiles off of a shelf. She estimated that the boxes weighed approximately 65 to 75 pounds. As Claimant was holding a box, she twisted to set it down and felt instant pain in her back along with a popping sensation. Claimant described symptoms, including pain across her lower back, into her hips, and down into her right leg immediately after this incident. A few days after her accident, Claimant developed pain in her left leg. She described her leg pain as both burning and stabbing. Claimant's explanation of the mechanism of injury is consistent with the initial emergency room note and the original note from CCOM.

2. The original note from CCOM dated May 31, 2016, three days after the incident, documents that Claimant was experiencing left leg symptoms in addition to the right leg symptoms she expressed at the emergency room three days prior. Again, this is consistent with Claimant's testimony regarding the onset of her symptoms. Nurse Theresa Kuhn indicated that Claimant's symptomatology was consistent with a lumbar radiculopathy. Claimant was diagnosed with a lumbar spine strain and radiculopathy.

3. Claimant underwent an MRI of her lumbar spine on June 10, 2016 that documented an L5-S1 disc bulge with focal disc herniation centrally with mild canal stenosis and moderate to severe bilateral foraminal stenosis along with facet disease at L4-5, L5-S1, and an L3-4 disc bulge.

4. Claimant was evaluated by Dr. James Bee of the Colorado Springs Orthopedic Group on August 3, 2016 for possible surgery. Claimant had a documented poor response to an epidural steroid injection. Consequently, Dr. Bee did not think Claimant was a good surgical candidate.

5. Claimant returned to CCOM where she was re-evaluated by her primary authorized treating provider (ATP), Dr. Daniel Olson, on September 6, 2016. Dr.

Olson's diagnoses at the time of this appointment continued to include radiculopathy of the lumbar region, strain of the lower back, and also a diagnosis of "other intervertebral disc displacement, lumbar region." He referred Claimant to Dr. Michael Sparr for pain management.

6. Claimant began treating with Dr. Sparr October 12, 2016. He diagnosed Claimant with numbness of the limbs and lumbago and recommended an EMG for further evaluation for radiculopathy. At Claimant's next visit, the EMG was performed and was interpreted as a "normal electrodiagnostic study of [the] bilateral lower extremities". Dr. Sparr noted that Claimant had reported a good response to Gabapentin (a nerve pain medication) and massage therapy. Because Claimant did not have evidence of a radiculopathy and her pain was diffuse, Dr. Sparr opined that injection therapy, including facet injections were unlikely to be beneficial. Accordingly, he "suggested" that Claimant continue with her "present course of treatment" including an additional upward titration of her Gabapentin. By this date of visit, Dr. Sparr had increased Claimant's dosage of Gabapentin to 300mg morning and night and 600 mg at noon. Claimant had not experienced side effects; thus, Dr. Sparr was planning to "continue the upward titration."

7. On November 30, 2016, Dr. Sparr recommended Claimant undergo a trochanteric bursa trigger point injection and a gluteal trigger point injection with the possibility of performing a right sacroiliac joint injection depending on the results of the trigger point injections. Authorization for the recommended injections was denied. Consequently, Dr. Sparr indicated he had nothing else to offer Claimant for treatment.

8. On March 27, 2017, Dr. Olsen placed Claimant at maximum medical improvement (MMI) because the only treatment left to try, as suggested by Dr. Sparr, was denied. At the time he placed Claimant at MMI, Dr. Olson recommended continued prescriptions for Gabapentin as maintenance care.

9. Claimant was allowed to return to Dr. Sparr on October 11, 2017 for ongoing medication management. Dr. Sparr noted that Claimant was advised to continue her medications upon MMI, which included the Gabapentin, Cyclobenzaprine, (Flexeril) and occasional Norco. However, Claimant reported to Dr. Sparr that she began losing her hair upon taking 900mg of gabapentin three times per day. Claimant testified to this, adding that the high dose of Gabapentin was also affecting her concentration. Accordingly, Claimant indicated that Dr. Olson had switched her from Gabapentin to Lyrica, 50mg three times per day and that this medication was helping with her burning symptoms. Dr. Sparr decided to increase Claimant's dose of Lyrica to 150mg twice per day and have her continue the Cyclobenzaprine for three times per day.

10. Claimant testified that she continues to take the Lyrica 150mg twice per day and that it helps reduce the burning pain and the pins & needles sensations going down and in her legs. According to Claimant, it does not help with the stabbing pain in the legs. Claimant reportedly has gone multiple days without taking the Lyrica while

waiting for approval for a prescription refill. Without this medication, Claimant testified that the aforementioned pain and sensory symptoms increase in intensity. She further testified that she continues to take the Cyclobenzaprine which is helpful in alleviating muscle spasms in her back.

11. On October 23, 2017, Claimant underwent a surgical evaluation with Dr. Andrew Castro. Dr. Castro diagnosed Claimant with lumbar radiculopathy; however, he did not feel that surgery would be the best treatment option for Claimant. Rather, he opined that she should "continue with the modalities which have been effective…." As of January 3, 2018, Dr. Sparr continued to prescribe Lyrica and Cyclobenzaprine. He also added Diclofenac gel for Claimant to apply to her low back and right hip three times daily to help manage what Claimant described is a feeling of increased pressure and shooting pains in the back and hip. Claimant testified that she currently applies 2 to 3 grams of Diclofenac gel twice a day to the affected area of the back and right hip.

12. The last record from Dr. Sparr in evidence is dated March 19, 2018. The report generated from this date of visit indicates that Claimant's 150mg dose of Lyrica was "therapeutically beneficial for her radicular leg pain." Dr. Sparr indicated that Claimant's pain was manageable with the current regimen of Cyclobenzaprine 10mg three times per day, Lyrica 150 mg twice per day, and application of the Diclofenac gel twice a day. Dr. Sparr's physical examination documented straight leg raising on the right aggravating Claimant's lower back, that Claimant had moderate sensitivity to deep palpation of her right middle rhomboid, gluteal muscles, and lumbar paraspinal muscles. He continued to recommend his regimen of medications based on his known history of Claimant's condition and his current physical evaluation of Claimant.

13. Claimant testified that she has a history of diabetes dating back to the 1990's. Claimant testified she last obtained diabetes treatment approximately one year prior to her hearing, that she had lost her insurance and had not re-established care. Although she had taken Glipizide to lower her blood sugar, she was not taking any medication to control her blood sugar and had not undergone a general physical in "years." She also testified that she has a sister who was mistakenly diagnosed with fibromyalgia when in reality she suffers from rheumatoid arthritis (RA). Nonetheless, Claimant testified that she has never been diagnosed with diabetic neuropathy or fibromyalgia.

14. Claimant also has a history of prior injuries to her back and neck. She sustained an injury to her mid back in 1992 as a certified nursing assistant (CNA) after a resident fell on her, which she testified resolved with medication and physical therapy. Claimant also suffered an injury to her upper back and neck in a motor vehicle accident in August of 2013.

15. Claimant underwent an independent medical examination (IME) with Dr. Allison Fall, an expert in physical medicine and rehabilitation (RM&R), at the request of Respondents on July 11, 2018. Dr. Fall was asked to address Claimant's maintenance treatment needs, including her ongoing medication usage. Claimant reported severe

"constant pain and burning in her back, hips, and legs; muscle spasms in her back, hips and legs; pain radiating up to the mid back; and difficulty sleeping". After completing a records review and physical examination, Dr. Fall opined that Claimant was suffering from "chronic low back pain with underlying degenerative changes". She also felt it "possible" that Claimant had a "non-work-related chronic pain disorder such as fibromyalgia".

16. Concerning maintenance medical care, Dr. Fall recommended an independent exercise program to manage Claimant's chronic pain. Specifically, Dr. Fall recommended that Claimant be afforded a "three-month health club membership with [a] pool". She also recommended that a TENS unit be purchased for home use.

17. Regarding Claimant's continued use of medications, Dr. Fall opined that ongoing prescriptions for Lyrica were not "medically reasonable, necessary and related to the work related injury". According to Dr. Fall, Claimant had no radiculopathy and her pins & needles paresthesia's were "nonphysiologic". She surmised that Claimant's persistent symptoms were more likely related to fibromyalgia and/or diabetes for which the Lyrica was "helping". Consequently, she opined that any continued prescriptions for Lyrica should be obtained outside the workers compensation system.

18. Dr. Fall also indicated that there was no medical indication for the gel, as Claimant did not have an ongoing inflammatory condition. She also noted that the area of application was "too widespread to be efficacious". Claimant reported relief with the usage of the gel and Dr. Sparr apparently felt it appropriate for Claimant to continue it based upon the content of his medical records.

19. With regard to continued use of Cyclobenzaprine, Dr. Fall opined that Claimant could resort to taking it "rarely" on an as-needed basis.

20. Claimant underwent a second IME with Dr. Timothy Hall, at the request of her counsel, on July 26, 2018. Claimant reported to Dr. Hall that the Lyrica had been very helpful in taking away the burning pain and pins & needles sensations that she experiences in her hips and back and allows her to be more functional. Without the Lyrica. Claimant reported that her pain is "distracting to the point of making work activities difficult". Dr. Hall opined that Claimant's usage of the Lyrica was reasonable, necessary, and related to the work incident. He explained that the fact that Claimant does not have a radiculopathy is not a "reasonable rationale for discontinuing the Lyrica in the context of the work injury" because Lyrica is not only used to treat radicular pain/symptoms, but also chronic myofascial and neuropathic pain which describes the presentation and quality of Claimant's pain/symptoms. Since the Lyrica has been used safely to prevent a deterioration in Claimant's function and allows her to be more active, Dr. Hall concluded that it should be provided as maintenance care in the context of her work-related injury. Dr. Hall did not address Claimant's use of Cyclobenzaprine or Diclofenac gel.

21. Dr. Fall testified that she disagreed with Dr. Hall's opinion concerning Claimant's continued use of Lyrica under the auspices of the workers' compensation system. She testified that Claimant does not have neuropathic pain caused by her work related injury as demonstrated by her "normal" EMG findings and lack of a diagnostic/therapeutic response to a cortisone injection. Rather, she testified that Claimant's ongoing neuropathic like pain and paresthesia's are emanating from the progression of Claimant's untreated diabetes and/or undiagnosed fibromyalgia. During cross examination, Dr. Fall admitted that she was not aware of any record/report providing a diagnosis of diabetic neuropathy. Moreover, she did not undertake any physical testing to assist in confirming whether Claimant may have fibromyalgia, testifying only that Claimant's widespread pain maybe suggestive of the diagnosis since some of Claimant's complaints and symptoms did not correlate with nerve impingement from a back injury.

22. Dr. Fall testified that Claimant's use of Cyclobenzaprine at three times per day is above suggested practice given its tendency to produce heavy sedation as a principal side effect. According to Dr. Fall, continued use of Cyclobenzaprine at a rate of two times a day on an as needed basis to control Claimant's intermittent work-related back spasms is reasonable and necessary. The ALJ finds from the evidence that Dr. Sparr, as Claimant's ATP, is more familiar with Claimant's dosing needs than is Dr. Fall who evaluated Claimant on one occasion.

23. Dr. Fall testified that Diclofenac gel is typically used four times per day on small areas of tendonitis or localized inflammation. According to Dr. Fall, Claimant's current use of Diclofenac gel is not reasonable, necessary or related to her industrial injury as it is being applied incorrectly to a generalized area of the body too large to be efficacious and for a non-inflammatory condition.

24. The ALJ credits the testimony of Claimant, the content of the medical records and the opinions of Dr. Hall to find that her continued symptoms are probably emanating from her May 28, 2016 industrial injury. The evidence presented persuades the ALJ that Claimant's use of Lyrica and Cyclobenzaprine are, to a reasonable degree of medical probability, improving her function and preventing deterioration of her condition. Dr. Fall's opinion that Claimant's ongoing burning pain and paresthesia's maybe related to untreated diabetes and/or undiagnosed fibromyalgia is speculative and unpersuasive. Consequently, the ALJ finds that Claimant has proven, by a preponderance of the evidence presented, that she is entitled to ongoing maintenance medical treatment in the form of ongoing prescriptions for Lyrica and Cyclobenzaprine. The dosage and frequency of these medications is left to the sound judgment of Claimant's ATP, Dr. Sparr.

25. While the ALJ is convinced that Claimant's continued use of Lyrica and Cyclobenzaprine, on a maintenance basis, is reasonable, necessary and related to her 2016 industrial injury, the evidence presented persuades the ALJ that the continued use of Diclofenac gel is not. Dr. Fall credibly testified that any benefit Claimant received from the Diclofenac gel was psychological or the result of the gentle massage

associated with the application of the medication, given that the medication would not be effective when spread over the area described as the application site by Claimant. As presented, the evidence establishes that Diclofenac gel is effective for localized, ongoing inflammation, which Claimant is not experiencing per the credible and unrebutted testimony of Dr. Fall. Indeed, Claimant's ongoing symptoms appear to be neuropathically driven rather than inflammatory in nature. Accordingly, Claimant has failed to prove an ongoing need for Diclofenac gel.

26. The evidence presented also persuades the ALJ that the remainder of Dr. Fall's maintenance treatment recommendations are reasonable, necessary and related to the May 2016 industrial injury. The ALJ is not convinced that these modalities should take the place of Claimant's prescriptions for Lyrica and Cyclobenzaprine. Rather, the ALJ finds that a gym membership and a TENS unit for home use should be used to augment the medication regimen currently being prescribed in an effort to reduce Claimant's ongoing dependence on medication.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential*

Insurance Co. v. Cline, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). Based upon the totality of the evidence presented, the ALJ concludes that Claimant is credible. He testimony is supported by the content of the medical reports and the opinions of Dr. Hall.

D. A claimant's need for medical treatment may extend beyond the point of maximum medical improvement where he/she requires periodic maintenance care to relieve the effects of the work related injury or prevent further deterioration of his/her condition. *Grover v. Indus. Comm'n*, 759 P.2d 705 (Colo. 1988). In *Milco Construction v. Cowan,* 860 P.2d 539 (Colo. App. 1992), the Court of Appeals established a two-step procedure for awarding ongoing medical benefits under *Grover v. Industrial Commission, supra*. The Court stated that an ALJ must first determine whether there is substantial evidence in the record to show the reasonable necessity for future medical treatment "designed to relieve the effects of the injury or to prevent deterioration of the claimant's present condition." If the claimant reaches this threshold, the Court stated that the ALJ should then enter "a general order, similar to that described in *Grover*."

E. While a claimant does not have to prove the need for a specific medical benefit, and respondents remain free to contest the reasonable necessity of any future treatment; the claimant must prove the probable need for some treatment after MMI due to the work injury. *Milco Construction v. Cowan*, supra. The question of whether the claimant met the burden of proof to establish an entitlement to ongoing medical benefits is one of fact for determination by the ALJ. *Holly Nursing Care Center v. Industrial* Claim Appeals Office, 992 P.2d 701 (Colo. App. 1999); *Renzelman v. Falcon School District,* W. C. No. 4-508-925 (August 4, 2003). In this case, the ALJ concludes that Claimant has met her burden to establish entitlement to ongoing prescriptions for Lyrica and Cyclobenzaprine. The ALJ is convinced that these medications continue to cure and relieve Claimant from the ongoing effects of her industrial injuries, specifically the neuropathic type pain and paresthesia's along with the muscle spasms she experiences in her back, hips and leg. Dr. Fall's opinion that Claimant's current symptoms are related to untreated diabetes and/or undiagnosed fibromyalgia are not convincing. Moreover, and importantly these medications are, by the evidence generated, preventing deterioration of Claimant's condition and allowing for greater functionality. Without these ongoing medications, the ALJ concludes that Claimant's present condition will likely deteriorate and she will lose her improved level of independence. The ALJ also concludes that the gym membership with a pool and the TENS unit for home purchase/use, as recommended by Dr. Fall, are reasonable, necessary and related adjuncts to Claimant's ongoing prescription medications. However, the evidence presented fails to establish that Claimant's continued use of Diclofenac gel is reasonable or related to her 2016 work injury. To the contrary, the weight of the

persuasive evidence persuades the ALJ that Diclofenac gel is used appropriately for localized inflammation whereas Claimant is currently applying it to a large area of great muscle mass to assist in control of neuropathic pain symptoms, including pressure and stabbing pain. Consequently, Respondents are not obligated to provide and pay for this treatment.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that she is entitled to maintenance medical benefits, including ongoing prescriptions for Lyrica and Cyclobenzaprine. She has also proven by a preponderance of the evidence that she is entitled to a three-month gym membership at a gym with a pool and a TENS unit for home use to supplement the ongoing use of these prescriptions medications. Accordingly, Respondents are liable to provide and cover the costs of this treatment.

2. Claimant has failed to establish that her continued need for Diclofenac gel is reasonable, necessary or related to her May 28, 2016 industrial injury. Consequently, Respondents are no longer liable to provide and pay for this prescription.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 30, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she sustained a compensable work injury on September 14, 2017.

II. If Claimant established she sustained a compensable injury, whether Claimant has proven by a preponderance of the evidence she is entitled to reasonable and necessary medical treatment related to the September 14, 2017 industrial injury.

III. Claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is a 32 year old woman who worked for Employer as a customer service agent. Claimant's job duties included working self-ticketing kiosks, checking identification, and putting luggage on the conveyor belt. Claimant's position required the ability to lift and/or move items up to 70 pounds on a regular basis and repetitively lift and/or move weights of 40 to 50 pounds onto raised surfaces. Claimant testified her job required lifting bags four hours per day.

2. Claimant's pay records reflect Claimant earned an hourly wage of $13.97. Claimant testified she worked 40 hours per week.

3. Claimant has a pre-existing history of neck, back and shoulder problems dating back to 2011. An April 1, 2011 medical record notes complaints of constant left-sided pain. November 2013 records note bilateral cervical paraspinal muscle tightness, left-side body aches, and mid-back and trapezius muscle spasms. Claimant was prescribed cyclobenzaprine and tramadol.

4. On August 20, 2015, Claimant complained to Edward Parks, MD of right and left side pain that began approximately two years prior, radiating from her shoulder to her ankle with distal symptoms in the upper extremity. Dr. Parks' impression was bilateral leg pain. He remarked, "This is an interesting case. I cannot really say that there is an orthopedic explanation for her symptoms." Dr. Parks recommended Claimant undergo a neurologic workup and/or an examination with a rheumatologist for the treatment of fibromyalgia. Claimant testified she did not follow up with a rheumatologist or have a neurologic workup as recommended by Dr. Parks.

5. Claimant underwent physical therapy and chiropractic treatment. On February 10, 2016, Claimant complained of cervical spine pain, generalized in the left upper shoulder, posterior left cervical area and let medial upper thoracic region, and neck pain worse with repetitive movements. On April 14, 2016, Claimant reported to Tamara

Lynne Wristen, PA-C upper back pain from stress/tension. PA-C Wristen assessed Claimant with trapezius muscle spasm.

6. On July 29, 2017, Claimant complained to Grant Johnson, DC of low back and hip pain, neck pain, and right-hand weakness. Claimant's neck pain was on the right side. Dr. Johnson assessed, in part, cervicalgia, cervical segmental and somatic dysfunction, postural kyphosis cervicothoracic region, and muscle spasm of the neck.

7. Claimant regularly attended physical therapy at Denver Back Pain Specialists in 2017. The records mostly reflect complaints of lumbar pain and lumbar radiculopathy. However, on July 31, 2017, Claimant saw Amy Valenta, PT and complained of pain in her bilateral shoulder blades and weakness in the right upper extremity. Claimant reported that her symptoms began approximately three to four weeks prior and associated the symptoms with her new job for Employer. Claimant denied neck pain. PT Valenta's assessment was cervicalgia, radiculopathy of the cervical region, and pain in the thoracic spine.

8. Claimant alleges she sustained an industrial injury on September 14, 2017 while lifting and putting a bag on a conveyor belt. Claimant testified she immediately felt a sharp, severe, shooting pain then experienced irritation, swelling, tension and discomfort. Claimant did not report the alleged injury to Employer at the time and continued working her scheduled shifts. Claimant did not report the alleged injury to Employer until approximately one week later. Claimant testified she did not report the alleged injury to Employer sooner because she thought her symptoms would resolve. Claimant had been performing her regular job duties for approximately four or five days at the time of the alleged injury.

9. Claimant presented to authorized treating physician ("ATP") Braden Reiter, DO on September 21, 2017. Dr. Reiter noted the following regarding the mechanism of injury: "Patient states that on 9/14/2017 she works 6 hours throwing bags on the conveyor belts and started getting aching and pain through the left shoulder arm radiating up into the left neck this gradually got worse as the night went on." Claimant reported getting occasional shooting pain through her upper back, but denied any previous left shoulder and neck pain. On exam, Dr. Reiter noted left shoulder tenderness radiating to the left cervical paraspinal muscles, and decreased shoulder and cervical range of motion. He diagnosed Claimant with work-related left shoulder and cervical strains, placed Claimant on restricted duty of no lifting/pushing/pulling over 15 pounds, and referred Claimant for physical therapy and massage therapy.

10. At an October 3, 2017 physical therapy appointment, Claimant reported that her condition began "At work throwing bags longer than the 4hr time." The physical therapist noted decreased active range of motion, tenderness, and muscle spasms. An October 3, 2017 chiropractic note indicates Claimant reported injuring her left shoulder lifting 50 pound bags. The chiropractor noted reduced range of motion, hypertonicity, adhesions and trigger points in the neck and shoulders on the left.

11. On October 23, 2017, Claimant returned to Denver Back Pain Specialists with left shoulder and left upper extremity pain she alleged began on September 14, 2017. PT Valenta wrote, "She notes that she had been lifting bags incorrectly since she started working there but on the 14th she felt like everything flared to a level that she could not tolerate."

12. On October 26, 2017, Claimant presented to Steven Kolpak, MD at Denver Health. He noted Claimant was hurt lifting bags at work, "throwing bag on belt." His assessment was a left shoulder strain.

13. On October 31, 2017, Dr. Reiter increased Claimant's work restrictions to 25 pounds. Claimant continued to report left shoulder and cervical pain with some improvement.

14. On December 11, 2017, Felicia Doherty, PA at Denver Health released Claimant to work without restrictions.

15. On December 13, 2017, Claimant saw PT Valenta and complained of a huge increase in left shoulder pain after returning to work performing baggage duties.

16. On December 30, 2017, Claimant underwent a left shoulder MRI that revealed mild acromioclavicular joint arthritic changes and degenerative findings and tendinopathy without long head biceps tendinitis, dislocation or rupture. The MRI revealed an intact rotator cuff and no glenohumeral instability.

17. On January 10, 2018, PA Doherty assessed Claimant with chronic left shoulder pain and referred Claimant for an orthopedic evaluation.

18. On February 22, 2018, Claimant presented to Rose G. Christensen, PA-C under the supervision of Dr. Hatzidakis at Western Orthopedics. Regarding the mechanism of injury, Claimant reported feeling a severe pain in her shoulder when handling a medium-sized bag and doing a cross-body maneuver. PA-C Christensen noted Claimant initially thought it was an over-use injury. Claimant alleged her shoulder was 100% normal prior to the injury. Dr. Hatzidakis gave the following assessment: left shoulder strain with acromioclavicular joint strain and associated symptomatic arthrosis with possible labral tear versus capsular stretch injury with a possible thoracic outlet syndrome pathology. He noted imaging showed left-sided AC joint arthrosis with no fracture, subluxation, osteoarthritis, edema, or significant spurring. He recommended Claimant undergo a MRI with arthrogram and a workup for thoracic outlet syndrome ("TOS").

19. Claimant underwent the MRI post arthrogram on March 14, 2018. The MRI revealed mild acromioclavicular degenerative changes "with currently more conspicuous mild subchondral edema." Claimant's rotator cuff and biceps tendon were intact, and there was no evidence of a glenohumeral defect or labral tear.

20. On March 22, 2018, Claimant followed up with PA-C Christensen, who noted Claimant underwent an EMG that was negative, and that Claimant had also seen Dr. Stephen Annest, who did not suspect TOS. Claimant was assessed with a left shoulder strain with associated AC joint strain/pain with possible slight capsular stretch injury. PA-C Christensen administered a cortisone injection and recommended Claimant continue conservative care.

21. On March 1, 2018, Mark Failinger, MD performed an Independent Medical Evaluation ("IME") at the request of Respondents. Dr. Failinger reviewed medical records dating back 2003 and physically examined Claimant. Regarding the mechanism of injury, Claimant reported that her shift she lifted a particular bag, turned to throw the bag, and experienced a shooting pain. She reported to Dr. Failinger she had some soreness prior to the lifting the bag, but nothing significant. On exam, Dr. Failinger noted there was no involvement of Claimant's neck and no evidence of lesions. Dr. Failinger's impression was left periscapular subjective pain. He noted Claimant has a history of left-sided trapezial pain and discomfort, and ther symptoms appeared similar to discomfort noted in November 2013 and April 2016. Dr. Failinger further noted inconsistencies in the reported mechanism of injury, as Claimant did not report to Dr. Reiter a specific injurious event, and also denied to Dr. Reiter a previous history of left shoulder and neck pain. Dr. Failinger opined that Claimant had not been working the job for a long enough period of time to develop any cumulative trauma. Dr. Reiter noted he did not review Claimant's MRIs or EMG, but stated if the tests did not show objective evidence any specific pathology, Claimant was at maximum medical improvement with permanent restrictions.

22. On April 4, 2018, Claimant presented to Jonathan Bravman, MD at UC Health. He reviewed Claimant's MRI and diagnosed Claimant with anterior left shoulder pain consistent with biceps instability/tendonitis as well as distal clavicle osteolysis. Dr. Bravman recommended Claimant undergo a possible arthroscopic debridement, subacromial decompression, distal clavicle excision and biceps tenodesis.

23. On April 30, 2018, Claimant saw Martin Boublik, MD at UC Health. She denied having any previous problems with her left shoulder prior to September 14, 2017. Dr. Boublik reviewed imaging and noted mild AC joint arthropathy with type II acromion and no acute abnormalities. He gave the following impression: some left shoulder impingement, biceps tendinosis, and an element of acromioclavicular pain. He opined that Dr. Bravman's surgical recommendation was reasonable, but suggested in the alternative that Claimant undergo a further course of conservative treatment.

24. Dr. Failinger testified by pre-hearing deposition as a Level II accredited expert in orthopedic surgery. Dr. Failinger explained the December 30, 2017 and March 14, 2018 MRI findings. He testified the MRIs were normal, other than some early arthritic changes in the AC joint and a slight amount of fluid in the subacromial space. He testified neither MRI demonstrated evidence of an acute injury, and it was "highly, highly improbable" any pathology was caused by events in September 2017. Dr. Failinger testified he did not see a specific event noted in Claimant's medical records. Due to the

lack of injury, Dr. Failinger commented he would have been surprised if there was any pathology findings on the MRI. Dr. Failinger noted Claimant had similar pain symptomology before the alleged injury but did not see a reason or explanation for why the pain developed. Dr. Failinger testified Claimant had diffuse pain and, considering Claimant's examination with diffuse findings and fibromyalgia evaluation in 2015, there currently was no identifiable specific source of Claimant's pain and no pathology that an orthopedic surgeon could treat. Dr. Failinger testified there was no evidence Claimant had a specific injury on September 14, 2017. He pointed to Claimant's pain patterns, diffuse examination, nothing on examination that stood out as a specific pain generator, all of which were reinforced by a normal MRI and nerve study. Dr. Failinger diagnosed Claimant with pain without any identifiable injury that occurred.

25. Claimant acknowledged at hearing she had been treating for neck pain and spasms in the months leading up to the date of injury, and also had radiating pain on her left side for many years. She, however, described the pain as "sporadic" and "inconsistent," and testified she was previously able to go about her regular life and had no issues lifting bags or prior work restrictions. Claimant testified her current pain is more consistent and she can no longer participate in activities such as yoga. Claimant testified she informed her providers of her prior sciatic pain and radiating pain and denied a specific prior neck or shoulder injury. Claimant testified that, shortly before the alleged injury, she talked to her supervisor about working in the lobby instead of behind the counter. Claimant testified she did so because she wanted clarification on how long she was supposed to work behind the counter handling bags. Claimant testified she has been working as a cosmetologist since the alleged injury.

26. Kristina Trueworthy, Team Lead, testified that there is no set policy that provides employees perform one position for four hours. On the date at issue, Claimant was scheduled to be in the lobby for four hours assisting passengers.

27. The ALJ finds the testimony of Dr. Failinger, as supported by the medical records, more credible and persuasive than the testimony of Claimant.

28. Claimant failed to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused, aggravated, or accelerated by an injury arising out of and in the course of her employment with Employer.

29. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the

necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment

aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant failed to prove by a preponderance of the evidence she sustained a compensable injury on September 14, 2017. Claimant has a longstanding history of pre-existing neck and left shoulder problems. While such pre-existing condition does not, by itself, disqualify Claimant's claim, Claimant has not met her burden when considering the totality of the evidence. Claimant's MRIs revealed arthritic and degenerative changes with no acute injury. Claimant initially reported a gradual onset of pain more consistent with cumulative trauma, then later alleged a specific incident causing a sudden and sharp onset of pain. Despite her testimony that the pain she experienced pain was immediate, sharp, shooting and severe, Claimant continued working and did not report the alleged injury until one week later. Dr. Failinger credibly opined Claimant's symptomatology was similar to pain patterns Claimant had prior to the work incident. The ALJ is persuaded Claimant's current symptoms are a continuing manifestation of longstanding problems and, while Claimant may have experienced pain at work, there is insufficient credible and persuasive evidence establishing a causal nexus between Claimant's current condition and the alleged work injury.

As Claimant failed to prove she sustained a compensable injury, the remaining issues are moot.

ORDER

It is therefore ordered that:

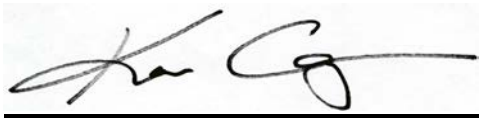
1. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 29, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she suffered a compensable injury to her right knee on or about November 18, 2015?

II. If compensable, has Claimant shown, by a preponderance of the evidence, that the right knee arthroplasty and related treatment from Dr. Duffey was reasonable, necessary, and related to her work injury?

STIPULATIONS

The parties have agreed that if the injury is held compensable, Respondents would pay for all emergency room treatment which occurred on November 19, 2015.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 68-year-old female who worked for Employer as a caregiver for her elderly mother. Claimant began working for Employer in 2011, and was responsible for daily living needs 24 hours a day-seven days a week. Claimant's duties included cooking, feeding, shopping, bedside care of the patient, including lifting. Claimant testified at hearing that her mother is about 5' 3", and weighs about 230 lb.

2. On November 19, 2015, Claimant testified that she was pulling the patient out of her bed, so she could transfer her to the wheelchair. Claimant reported she felt pain in her right knee and it locked up on her. Claimant was taken to the emergency room by her husband and given pain medications. Claimant testified she went to the ER around 11:00 a.m. that morning to seek medical treatment.

3. On November 19, 2015, medical records show that Claimant was seen at the Parkview Medical Center Emergency Room. The report indicates claimant reported she noticed pain around 11a.m. when she was walking and that she denied any twisting or popping sound. Claimant indicated in the triage notes she was walking this morning and got a pain in the right knee and behind the knee, denies injury, and complained of persistent pain. (Ex. N, pp. 33-34).

4. X rays from this visit to Parkview showed the following under FINDINGS:

> There is medial and patellofemoral joint space narrowing with small osteophytes in all three compartments. There is diffuse osteopenia. There is no evidence of fracture or dislocation. There is mild

> anterior superficial *soft tissue swelling*. There is a mild joint *effusion.* (Ex. 3, p. 43) (emphasis added).

5. Claimant was told to see an orthopedist and she went to Dr. James Duffey with Premier Orthopedics for further evaluation. The ER note indicates Claimant was admitted at 15:17 hours. (Ex. N, p. 33)

6. On December 29, 2015, a MRI was conducted on Claimant's right knee. It revealed a subtle nondisplaced *stress fracture* of the medial tibial plateau, severe patellofemoral and moderate medial compartmental osteoarthritis and a *large joint effusion*. There was patellar tendinosis and intrasubstance signal within the posterior horn of the medial meniscus but not a tear. (Ex. 3, p. 14) (emphasis added).

7. Claimant apparently continued to work for the employer until she had her right knee surgery. In a note from her orthopedist, Dr. James Duffey, dated Dec. 10, 2015, under Subjective, it notes: "Barbara has developed insidious onset of right knee pain. It is *extremely painful* when she is weightbearing in certain degrees of flexion. *She is taking to using a walker because of the pain.* Anti-Inflammatories have failed to give her significant or lasting relief. (Ex. P, p. 57) (emphasis added).

8. On January 27, 2016, Claimant returned to Dr. Duffey. Conservative measures had failed. Under PLAN, Dr. Duffey noted:

> Barbara's greatest disability is from her knee pain at this point. It is quite severe and not responsive even to ibuprofen or hydrocodone. She is *going to use a walker* around the house. Physical therapy was discussed, but *she will not be able to tolerate therapy* because of the severe pain. *She is a candidate for a total knee arthroplasty* and would recommend that we *proceed promptly,* as I do not feel we are going to be able to control symptoms adequately until we proceed with this option. (Ex P, p. 55) (emphasis added).

9. On February 8, 2016, Claimant underwent a right knee total arthroplasty performed by Dr. Duffey with Premier Orthopedics. Primary diagnosis was osteoarthritis of the right knee. (Ex. 2).

10. Claimant first reported to the injury to Employer on February 16, 2016. A First Report of Injury was then filed with the Division of Workers' Compensation. This report indicated Claimant was assisting the patient with making breakfast when she turned and her knee gave out. The report indicates the injury occurred on November 15, 2015. (Ex. A, p. 1). Claimant testified at hearing that she did not initially report the injury because she didn't think she would need surgery.

11. Respondents filed a Notice of Contest on February 24, 2016, to further investigate compensability of the knee since this was the first time they had any knowledge of an alleged work injury. (Ex. B).

12. Due to no activity on the claim by Claimant to further pursue her claim, Respondents filed a motion to close the claim for failure to prosecute on November 30, 2017. A Show Cause Order was issued on December 15, 2017 stating Claimant's claim would close unless an Application for Hearing was re-filed. (Ex. C, D). [The ALJ notes that Claimant's current attorney is fairly new to this case].

13. On April 27, 2016, Dr. Wallace Larson, a board-certified, Level II accredited physician and orthopedic surgeon, performed an Independent Medical Examination at the request of Respondents. Dr. Larson examined Claimant and performed a record review. He ultimately opined claimant's right knee condition was not work-related and that there was no medical evidence of an injury to Claimant's right knee. Dr. Larson further opined that Claimant's degenerative osteoarthritis is not related to any occupational exposure and if it were, it would be inconsistent with the Colorado Division of Labor Medical Treatment Guidelines. (Ex. J, pp. 20-24)

14. Dr. Larson testified at the hearing. He again opined that Claimant's condition was not work-related. Dr. Larson testified that Claimant's condition was degenerative in nature. Based on the Medical Treatment Guidelines under Rule 17, Exhibit 6, page 67, he opined that Claimant's condition would fall under aggravated osteoarthritis.

15. Dr. Larson testified that claimant's activities would not fall under that of intensive physical labor as defined in the guidelines. There was no occupational relationship between Claimant's activities and baseline condition. When asked during his direct examination, Dr. Larson testified:

> **A. And the Division of Labor Guidelines address a few things. One of them is under aggravation of osteoarthritis, its whether there is an injury that causes an aggravation. In this particular case, there was no injury. The patient was – became aware of the pain at the time of this incident, but there is really no description, either to me or the emergency room physicians, of actual trauma. But even assuming, which probably isn't really the case, even assuming there was some trauma, the Division of Labor Guidelines said there should be a time frame of two years from the time of an injury until the development of osteoarthritis to be considered an aggravation. So these two factors, there was no injury and there was no two-year time frame. So I think pretty clearly under that section of the Medical Treatment Guidelines, this would not be considered work-related.** (HR. Tr. Pg. 43 ll 7-24)

16. Dr. Larson also testified that Claimant's weight could be contributing to her knee condition and symptoms she was experiencing in her knee which was indicated by the Treatment Guidelines. Dr. Larson also testified that the knee pain Claimant was experiencing could have occurred anywhere. The fact Claimant may have noticed it at work does not mean it rises to the level of a work-related injury.

17. Claimant had an incident involving her left knee on December 1, 2015. Claimant was seen at Centura Health Systems where she reported she was in her garage and had a sudden onset of acute pain in her left knee. Claimant reported she was not doing anything unusual. Claimant reported no prior knee problems. (Ex. S, pp. 103-105). Claimant testified at hearing that she was carrying something and fell down on that particular day. Claimant testified at hearing that she has not had medical issues in the past with her *right* knee until this incident.

18. Dr. Larson testified that Claimant would have required surgery regardless of the alleged incident on November 19, 2015, and her work activities did not accelerate or facilitate her need for surgery. Dr. Larson emphasized that Claimant was at high risk for osteoarthritis, due to gender, age, and BMI. He did not feel that Claimant had the sort of occupational hazards of repeat, heavy lifting which would lend itself to developing her condition due to her work. However, he was unable to articulate any evidence from the record that Claimant had corresponding issues with her *left knee.*

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

C. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and

bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

E. The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

F. Claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition, and the claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment-related activities and not the underlying pre-existing condition. *Merriman v. Industrial Commission*, 210 P.2d 448 (Colo. 1949). The claimant must prove by a preponderance of the evidence that her symptoms were proximately caused by an industrial aggravation of a pre-existing condition rather than simply the natural progression of the condition. *Melendez v. Weld County School District #6*, W.C. No. 4-775-869 (ICAO, October 2, 2009).

G. In this case, the ALJ finds that Claimant has met her burden. Further, the ALJ does not interpret the applicability of the Medical Treatment Guidelines ("Guidelines") the same as Dr. Larson. Specifically, the pertinent section of the Guidelines, Rule 17, Exhibit 6, (E)(2)(a)(iii) reads:

> Other causative factors to consider - Previous meniscus or ACL damage may predispose a joint to degenerative changes. There is strong evidence that an ACL injury increased the ten-year risk of developing Kellgren-Lawrence defined osteoarthritic changes compared to the uninjured knee. This risk is approximately fourfold both for minimal OA and for moderate to severe OA. There is good evidence that meniscal damage, even in the absence of knee surgery, is associated with a

> significantly increased risk of development of radiographic tibiofemoral OA within 30 months of its detection on MRI. There is strong evidence for previous knee injury as a significant risk factor for OA. A number of studies indicate that patients with ACL injuries and meniscus pathology are likely to develop degenerative osteoarthritis. Percentages range from approximately 25% to 50%. It is unclear whether the repair of ACLs significantly decreases the degenerative pathology. One study found more severe arthritis present in those with an ACL repair. *In order to entertain previous trauma as a cause, the patient should have medical documentation of the following: menisectomy; hemarthrosis at the time of the original injury; or evidence of MRI or arthroscopic meniscus or ACL damage.* ***The prior injury should have been at least 2 years from the presentation for the new complaints. In addition, there should be a significant increase of pathology on the affected side in comparison to the original imaging or operative reports and/or the opposite un-injured side or extremity***. (emphasis added).

In other words, this section of the Guidelines refers to the causation issue when there has already been a *prior injury* to the knee in question, thus triggering an analysis of whether any *osteoarthritis* occurring at least two years later *was caused by some earlier trauma.* Of course there was no traumatic change to her baseline. There is no baseline.

H. Herein, it is just the opposite. There is no two-year time frame to reference. Respondents argue today that there was *never a trauma* to the right knee, much less one occurring two years prior. *It's just a worn out knee, destined for replacement someday.* The ALJ concurs with this latter proposition-only. While Claimant had an end-stage osteoarthritic right knee, it became symptomatic as a result of the work incident which occurred in the course of Claimant's employment on November 19, 2015.

I. While the Claimant is not a particularly articulate historian, the ALJ finds her credible in describing what happened, what she did, and why she waited to report it. She felt immediate pain during the lift. So bad was the pain, she went right to the ER. The X Ray taken at the ER showed soft tissue swelling, and joint effusion. While the X Ray did not reveal any fractures that day, the MRI taken about a month later showed a stress fracture, and large effusion. Claimant remained in so much pain that she remained on a walker into December, and beyond, just to get around. During this period, Claimant was not sophisticated enough to understand the important distinction of a work injury versus a knee that just really started hurting.

J. Up until this incident, there is no evidence of significant injury, pain, or treatment to this right knee. And while the ALJ concurs with Dr. Larsen that this ticking time bomb could have gone off at any time, it didn't go off at just any time. It occurred while she was doing a heavy lift, and as a direct result of her job duties. That is when it became symptomatic. Thus, this was more than just the natural progression of her condition; it was an aggravation of her preexisting osteoarthritis. The ALJ finds her injury to be compensable.

Medical Benefits/Surgery by Dr. Duffey/Reasonable, Necessary and Related

K. A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

L. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo.App.2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993.

M. In this case, the ALJ finds that the arthroplasty performed by Dr. Duffey was reasonable and necessary. Dr. Duffey's plan dated January 27, 2016 is sufficient to establish the reasonableness and necessity. Even Dr. Larson concurs with this component. The ALJ further finds, by a preponderance of the evidence, that this surgery was related to her work injury.

Medical Benefits/Surgery by Dr. Duffey/Authorized Treatment Provider

N. Although compensable, all the medical treatment Claimant received was prior to the employer having any notice of a work-related injury. Respondents are allowed to designate an Authorized Treatment Provider under the Worker's Compensation Act. Here, Claimant did not even notify the employer of a potential work-related injury until after her surgery. Respondents were not given the opportunity to designate an ATP. Although they filed a Notice of Contest, Respondents were not given the opportunity to elect a provider. However, the ALJ has not been asked by the parties to issue a ruling on this issue, and declines to do so now, despite the facts found above.

Medical Benefits/Emergency Room Treatment on Date of Injury

O. The ALJ finds that, due to the emergent nature of Claimant's (*now held compensable*) injury, that it was reasonable and necessary to report straight to the emergency room for treatment. Assuming compensability were found, Respondents concede as much. The ALJ further finds, by a preponderance of the evidence, that this emergency room treatment was related to Claimant's work injury.

ORDER

It is therefore Ordered that:

1. Claimant's injury to her right knee on November 19, 2015 is compensable

2. Respondents will pay for all Emergency Room treatment rendered to Claimant on the date of her compensable injury.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 1, 2018

/s/ William G. Edie

William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUE

➢ Whether Claimant proved, by a preponderance of the evidence, that he suffered an indirect right-sided hernia, an indirect left-sided hernia, a direct right-sided hernia and an umbilical hernia, in the course and scope of his employment, with the Respondent Employer on August 29, 2017.

STIPULATIONS

At the time of hearing, the parties stipulated and agreed as follows:

- Claimant's average weekly wage is $319.44, with a corresponding benefit rate of $231.11.

- If the claim is compensable, the medical treatment provided by Concentra Medical Centers and its referrals is authorized, reasonable, necessary and related to the work injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 77-year-old man with an April 5, 1941 date of birth. Claimant was 76 years old on August 29, 2017.

2. In 2009, Claimant suffered a significant cardiac event. Claimant testified that following his heart attack, his treating cardiologist advised against lifting or strenuous activities due to cardiac-related issues.

3. Claimant's medical history includes benign prostatic hypertrophy and hiatal hernia.

4. On August 15, 2017, Claimant started working for Employer as a General Merchandise Associate. Claimant went through an orientation process in which he received training concerning Employer's policy requiring all work-related incidents or accidents to be reported to a salaried member of management. Claimant also received training on Employer's safety and security policies, including the policy requiring a "team lift" for lifts of more than 50 pounds.

5. On August 29, 2017, Claimant was working in the automotive department shelving three pallets of automobile batteries. Each pallet contained approximately twenty-five batteries, and each battery weighed between twenty-five and fifty pounds. The process of stocking the batteries took approximately one hour. After stocking the

batteries, Claimant felt "a slight pain" in his stomach and low back, which he attributed to sore muscles. Sometime the following month, Claimant was helping unload cat litter weighing approximately forty pounds from a truck and felt "the same pain" in the "left lower side of his stomach." He again attributed it to a "tweaked" muscle. Claimant described two additional incidents helping customers take one hundred-pound items off overhead shelves. Claimant experienced increased lower abdominal and scrotal pain after each lifting incident.

6. On November 7, 2017, Claimant presented to his personal care provider, Dr. Melissa Helms, complaining of lower left-sided abdominal pain that had been present for the past three months. Claimant was "wondering if it was a hernia." Claimant reported pain "mostly at night," worse when he bends over. He also complained of urinary leakage, with urinary frequency over the past six months. On physical exam, Dr. Helms diagnosed a small, fully reducible left inguinal hernia. Dr. Helms placed Claimant on lifting restrictions. The physical exam demonstrated no evidence of right-sided or umbilical hernias.

7. Claimant reported a work injury and requested medical treatment. Claimant selected Concentra Medical Centers to treat his diagnosed hernia.

8. Dr. Ted Villavicencio evaluated Claimant on November 14, 2017. Claimant gave Dr. Villavicencio a history of a gradual onset of pain in the left inguinal area. By history, lifting did not exacerbate his pain. Dr. Villavicencio Claimant with a left-sided inguinal hernia. Dr. Villavicencio did not document a right-sided or an umbilical hernia. Dr. Villavicencio referred Claimant to Dr. Weaver and restricted his work activities to no lifting in excess of ten pounds.

9. Employer offered Claimant modified employment within the physician-imposed restrictions, which Claimant accepted.

10. Dr. Villavicencio reevaluated Claimant on November 17, 2017. At this appointment, Claimant gave a past medical history of myocardial infarction, stent placement, with regular cardiac follow-up and no restrictions. Dr. Villavicencio also noted Claimant was tolerating working modified activity well. Claimant again complained of left-sided inguinal pain. Dr. Villavicencio again palpated and diagnosed only a left-sided inguinal hernia. Claimant remained on restricted work status.

11. Claimant treated with Dr. Villavicencio again on December 1, 2017. Claimant's pain complaints remained exclusively left-sided. The diagnosis remained left-sided inguinal hernia. Claimant's work status was modified duty "tolerating well." Claimant continued working restricted duty of no lifting in excess of ten pounds.

12. Claimant saw surgeon Dr. John Weaver for the first time on February 6, 2018. He noted Claimant had pain that had been present for six months and began with lifting at work. Dr. Weaver recommended a laparoscopic inguinal hernia repair.

13. Dr. Bryan Counts evaluated Claimant on January 8, 2018. Claimant's complaints continued to be of left-sided inguinal pain and scrotal pain. For the first time

Claimant's medical diagnosed an umbilical hernia, without obstruction and without gangrene. Dr. Counts noted that lifting did not exacerbate Claimant's complaints.

14. Dr. Villavicencio had Claimant complete a pain diagram in connection with his January 24, 2018, examination. Claimant marked only lower left-sided abdominal pain.

15. Claimant first complained of right-sided inguinal pain and "persistent" umbilical pain in his February 7, 2018, evaluation with Dr. Villavicencio. Claimant's February 7, 2018, pain diagram identifies bilateral lower abdominal pain. On February 28, 2018, Dr. Villavicencio imposed new work restrictions. Claimant was to work seven-hour shifts Monday, Tuesday, and Thursday, and four-hour shifts on Wednesday and Friday. Claimant was experiencing pain in his testicles, his lower stomach, and groin areas.

16. Dr. Weaver performed laparoscopic bilateral inguinal hernia repairs with ProGrip mesh placement on June 20, 2018. Dr. Weaver noted, "The patient had a small direct inguinal hernia and a fat-containing right indirect inguinal hernia. The patient also has a moderate sized left inguinal hernia." Dr. Weaver testified that he viewed the inguinal canal. Claimant had a small right direct hernia and a fatty component to an indirect inguinal hernia. On his left Claimant had a much larger fat containing indirect inguinal hernia. Dr. Weaver pulled the contents of the hernia out of the inguinal canal and placed mesh in the inguinal canals.

17. Dr. Weaver testified as an expert in general surgery and hernia repair. He has performed approximately 2,500 to 2,700 inguinal hernias in his career.

18. Dr. Weaver opined there is "absolutely" a causal relationship between lifting and inguinal hernias. With any type of lifting, one increases his intra-abdominal pressure, which puts more force on the inguinal canals, which causes the hernias to form. Dr. Weaver opined that lifting the car batteries probably caused Claimant's hernias.

19. Dr. Weaver opined lifting a number of automotive batteries, in and of itself, would be a significant enough strenuous event to cause inguinal hernias. Further, Claimant's subsequent lifting would have exacerbated the hernias and made them larger.

20. Dr. Weaver testified that Claimant's surgery was medically necessary. Small hernias cause no pain but become observable over time. Reasons to repair a hernia include ongoing and worsening pain, enlargement of the hernia, and incarceration of the hernia. Claimant's hernias required repair because his complaints and symptoms did not resolve. The repair was medically reasonable.

21. Dr. Cebrian is Level II accredited and testified by deposition for Respondents as an expert in occupational medicine. Dr. Cebrian is not a surgeon and does not repair hernias.

22. In his May 31, 2018, report, Dr. Cebrian outlined the risk factors for the development of direct hernias, indirect hernias and umbilical hernias. Dr. Cebrian opined it was not medically probable that Claimant's bilateral indirect inguinal hernias, direct right-sided hernia, and umbilical hernia related to his employment.

23. Dr. Cebrian testified that following Claimant's hernia diagnosis, his work activity was restricted. At that time, Claimant experienced only one area of pain - his left groin. Claimant underwent multiple subsequent examinations, and no provider identified an umbilical hernia or right-sided hernia for approximately five months. Claimant's work was restricted during that period. Dr. Cebrian opined there was no causative mechanism or exposure that would cause three additional hernias. Dr. Cebrian testified the development of four hernias suggested a systemic exposure caused the hernias.

24. Dr. Cebrian testified Claimant was not doing "clinically significant" lifting. "[Claimant] was doing a little bit of lifting, the lifting that he was doing was not significant." His lifting did not result in immediate pain complaints and it did not result in pain complaints in the three other areas where Claimant developed hernias. Claimant had pain complaints in only one specific area. Dr. Cebrian testified Claimant has other risk factors for developing hernias. These include (1) his age, which results in the weakening of the collagen in the abdominal wall, and (2) lower levels of testosterone, (3) his gender, (4) his prior hiatal hernia, (5) his history of straining to urinate, and (6) the development of four separate hernias.

25. Dr. Cebrian testified the recent medical literature indicates that single lifting events and forceful lifts do not cause hernias as once believed. The more recent literature talks about non-lifting, exposure-related incidents leading to inguinal hernias.

26. Dr. Weaver disagreed with Dr. Cebrian's statement that indirect hernias form if the internal inguinal ring does not seal properly. No evidence supports that all inguinal hernias are due to improper sealing of the ring, also known as patent process of vaginalis. The ring can seal properly and the patient can still develop an inguinal hernia.

27. Dr. Weaver opined that it would be unusual for congenital hernias to develop for the first time at age seventy-six.

28. Dr. Weaver disagreed with Dr. Cebrian that Claimant needed a "specific discomfort onset moment" for his hernias to relate to lifting. Dr. Weaver sees a variety of patients who do not develop pain until the evening of the day of lifting, or even within a couple of days.

29. Dr. Weaver testified that Claimant's lack of symptoms in his right groin and umbilicus when he first sought medical treatment are not significant to his causation analysis. Not all hernias cause pain. By the time Claimant saw Dr. Weaver, he did have bilateral complaints. That may have been due to Claimant's continued lifting at work, or the hernias may have just become symptomatic over time.

30. Dr. Weaver opined that increased abdominal pressure over time also causes umbilical hernias. Claimant's umbilical hernia was not symptomatic and Dr. Weaver did not repair it. Dr. Weaver explained that lifting or strenuous events cause both direct and indirect hernias. The presence of both types of hernias in Claimant did not affect Dr. Weaver's causation opinion.

31. The ALJ finds sufficient evidence to establish that it is more likely than not Claimant suffered bilateral indirect hernias, a right-sided direct hernia, and an umbilical hernia because of his work with Employer.

CONCLUSIONS OF LAW

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits, including medical benefits, by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000). Colorado's Workers' Compensation Act creates a distinction between the terms "accident" and "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." *See* §8-40-201(1), C.R.S. In contrast, an "injury" refers to the physical trauma caused by the accident. In other words, an "accident" is the cause and an "injury" is the result. *City of Boulder v. Payne,* 426 P.2 194 (1967). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury."

It is the claimant's burden to prove by a preponderance of the evidence that there is a direct causal relationship between his employment and his injuries. An ALJ might reasonably conclude the evidence is so conflicting and unreliable that the claimant has failed to meet the burden of proof with respect to causation. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186, 191 (Colo. App. 2002) (weight to be accorded evidence on question of causation is issue of fact for ALJ).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the

weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensecki v. ICAO*, 183 P.3d 684 (Colo.App. *2008).* In short, the ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo.App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo.App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo.App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part, or none, of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

As found, Claimant has proven, by a preponderance of the evidence, that his bilateral indirect inguinal hernias, right-sided direct hernia and umbilical hernia were caused by his work activities with Employer on August 29, 2017.

ORDER

It is therefore Ordered:

1. Claimant has established by a preponderance of the evidence that he has a compensable work injury of bilateral inguinal hernias and an umbilical hernia resulting from an August 24, 2017 work injury.

2. Respondents shall furnish authorized, reasonable, necessary, and related treatment, including reimbursement of the June 20, 2018 hernia repair surgery by Dr. Weaver.

3. Respondents shall compensate Claimant for temporary partial disability commencing February 28, 2018, until terminable by law.

DATED: October 30, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STIPULATION

At the commencement of hearing, the parties stipulated that Claimant's average weekly wage, at the time of the alleged injury was $627.60, yielding a TTD rate of $412.22**.** The stipulation is approved.

REMAINING ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable left shoulder on September 21, 2017. The specific question to be answered in this regard is whether Claimant was in the course and scope of her employment or whether she engaged in a voluntary recreational activity at the time of her alleged injury.

II. If Claimant established that she suffered a compensable shoulder injury, whether she also established that she is entitled to all reasonable, necessary, and related medical treatment, including surgery to attend to her left shoulder injury.

III. Whether Respondents' established by a preponderance of the evidence that Claimant is responsible for her separation from employment thereby precluding her entitlement to TTD benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant is Czech. Although English is her second language, she has completed a substantial amount of higher education in the United States involving English language courses. She received a bachelor of science degree in business administration and management from the University of Maryland University College in 2012, and a Master's degree in finance and financial management services from the same institution in 2017. Based upon the evidence presented, the ALJ finds that Claimant has excellent English language skills.

2. Claimant has a diverse work background having worked as a Logistics Officer in the Army of the Czech Republic, a payroll clerk for the Department of Defense/US Army and as a bookkeeping assistant for a roofing company before accepting a position with Employer as an Adaptive Reconditioning Program (ARP) Assistant.

3. Employer runs a federally funded project assisting soldiers injured in battle. As a ARP Assistant, Claimant was assigned to work with a Warrior Transition Unit

(WTU) at Fort Carson, Colorado to provide support for a recreational program designed to assist in the rehabilitation of these wounded soldiers.

4. Claimant was hired over the phone by Hannah Cowee, a Senior Program Manager for Employer's 14 Wounded Warrior Projects across the country. Claimant testified that she spoke with Ms. Cowee by phone regarding the position and after speaking with Ms. Cowee was aware that she would be Employer's only employee at the Fort Carson WTU. Ms. Cowee is stationed in Virginia and never had face to face contact with Claimant during the hiring process. In fact, Ms. Cowee and Claimant met for the first time at the hearing convened September 11, 2018.

5. Claimant testified that at the time she was hired she was not provided with a list of job duties and was unaware of her specific responsibilities. Ms. Cowee disputes this, testifying that when she and Claimant spoke telephonically, she explained both the scope of the work involved in the position as well as the required duties of the job. She also explained that she would serve as Claimant's supervisor. According to Ms. Cowee, Claimant's assigned work duties included working the phones, drafting memos and reports, arranging and facilitating meetings, assisting with event coordination and setting up and tearing down after adaptive sports activities. Ms. Cowee described Claimant's work duties as consisting of basic administration tasks which explained why her salary was relatively low.

6. Claimant began working for Employer on August 17, 2016.

7. Claimant testified that she understood Ms. Cowee to be her supervisor. She also testified that Ms. Cowee instructed her to take onsite direction from Mark Cattapan since she had no direct supervisor on site. According to Claimant, Mr. Cattapan was the site coordinator and was responsible for the Fort Carson reconditioning program. While he worked for another contractor and was technically not a supervisor, the ALJ understands from Claimant's testimony that she took direction from Mr. Cattapan since he was the site coordinator, she was without a direct onsite supervisor, she was hired as an assistant and was told to follow his lead. According to Claimant, Mr. Cattapan would often ask her to step up and fulfill the duties expected of his position when he was not available. Because she did not have a job description and was without an onsite supervisor, Claimant testified that she followed Mr. Cattapan's directives with the understanding that everything she was asked to do at the battalion level to benefit the soldiers was part of her job.

8. Claimant testified that from the beginning of her employment she participated in the activities that the wounded warriors were doing as part of their rehabilitation, both during working hours as part of her job and after working hours "for pleasure".

9. Claimant testified that she participated in therapeutic horseback riding, archery, air rifles, seated volleyball, wheelchair basketball, water polo, ping-pong among other adaptive reconditioning activities. According to Claimant, it was necessary to have a lead worker run and actively partake in the activity to supervise and guard the

soldier's safety. According to Claimant, she participated in at least five activities every week during her tenure with Employer.

10. Claimant testified that Exhibit 9 represented a sample of a monthly calendar of daily activities for the soldiers that she and Mark Cattapan prepared. She also testified that she provided some of these calendars to Ms. Cowee for review. Review of the calendars reflects that Claimant either acted as the point of contact (POC) for specific activities planned or the lead (L) worker running the activity. Claimant was identified as the leader of several activities in September 2017, including: Standing Volleyball, Horseback Riding, Hiking, and Walking & Outdoor ARP (Badminton & Frisbee Golf).

11. Claimant testified that Mark Cattapan assigned her to act as "lead" for horseback riding activities because he was not skilled in horseback riding, whereas she had familiarity and experience with it. Consequently, she accepted the lead position for this activity at his request. The programs therapeutic horseback riding activity was popular and generated heightened publicity for the WTU program. Claimant drafted a "Good News Story," essentially a one-page flier, regarding the activity which she forwarded to Ms. Cowee for review. The article is dated April 20, 2017. The article notes that therapeutic rides were conducted "bi-weekly" and contains a picture of Claimant on horseback. Claimant appears to be the only female in the picture and lists her name as a participant. Claimant testified that Ms. Cowee "absolutely" knew about her participation with the therapeutic riding activity because she shared the Good News Story with her.

12. Ms. Cowee acknowledged that she received the Good News Story, which she testified was sent to "command". The story did not get published nor was it sent to the Pentagon as suggested by Claimant. Ms. Cowee testified she did not pay attention to any of the captions adjacent to the pictures included with the article, because she was not interested in the name of the participants listed, only the story itself. Ms. Cowee testified further that even if she had paid attention to the pictures included with the article, she would not have known that Claimant's image was included because she had never met Claimant in person. She also testified that while she and Claimant were friends on Facebook, she would not have recognized her in the picture included with the article because her hair was different than the style she had in her Facebook postings.

13. On September 21, 2017, Claimant testified that she was asked, by Mark Cattapan to participate as a "caboose" to secure soldiers on a mountain bike ride, so she joined in to keep the soldiers safe during the activity. The activity involved riding bicycles around Fort Carson, but the riders also went through the gate onto a trail off base. Claimant was injured when she was thrown from her bike while traveling downhill on the aforementioned trail. Claimant flew off the bike landing directly on her left shoulder fracturing her collar bone.

14. Claimant notified Ms. Cowee of her injury later in the afternoon the same day of her accident. Ms. Cowee questioned why Claimant was participating in the biking activity since that was not part of her job. Claimant testified that this was the first time

she was told that she was not supposed to participate in the activities the soldiers were involved in.

15. In a series of text messages after reporting her injury, Claimant acknowledged that she "completely understood" that participating in physical activities was at her risk; however, indicated in another message that she did not know that she was not permitted to participate in physical activities as part of her job function.

16. Claimant summarized her testimony surrounding the events leading up to her left shoulder injury by affirming that she volunteered to be the leader at some events, but was asked, by Mr. Cattapan to either lead or participate in some activities, such as the therapeutic horseback rides and the September 21, 2017 biking activity where he requested that she be a "sweeper". Claimant also reiterated that she never felt the need to ask Ms. Cowee in advance for permission to lead events because "she told me to follow the lead/direction of the site coordinator", Mr. Cattapan. Finally, Claimant testified that she did not tell Ms. Cowee about her participation in the events because she assumed Ms. Cowee was aware of what she was doing in the program.

17. The evidence presented persuades the ALJ that Mr. Cattapan probably used Claimant for assistance to lead and/or participate in activities as necessary. Ms. Cowee has never spoken to Mr. Cattapan and he did not testify at hearing.

18. After reporting her injury, Respondent did not offer Claimant recourse to medical treatment, alleging that she had acted outside the scope of her employment. Consequently, Claimant sought care on her own. She was evaluated by orthopedic specialist, Dr. Paul Rahill on September 25, 2017. Dr. Rahill documented a history of a fall from a bike, noting that Claimant went over the handlebars "after striking a rock with her left front tire." X-rays were obtained which revealed a fracture in the "distal one third junctions of the middle third of the clavicle with significant displacement". Dr. Rahill opined that Claimant required urgent surgery which he performed. Based upon the evidence presented, the ALJ finds Claimant's medical treatment reasonable, necessary and related to her September 21, 2017 bike accident.

18. Ms. Cowee denied that she ever told Claimant that she was to take direction from the site coordinator. She testified that the onsite physical therapist was meant to be Claimant's direct contact/supervisor at the work site. According to Ms. Cowee, Claimant was to take direction from the therapist and work with the site coordinators as co-workers.

19. Claimant testified that a physical therapist was not hired and did not arrive on-site for months after she began her tenure with the WTU. She stressed that the team consisted of herself and one site coordinator (Mr. Cattapan) at first. A second site coordinator and a physical therapist were then added to the team later. Ms. Cowee confirmed this, echoing Claimant's testimony that there was no physical therapist present at the work site at the time of Claimant's hire. Ms. Cowee also testified that she did not know when the physical therapist eventually began working with the WTU. Nonetheless, Ms. Cowee testified that consistent with the government contracting

principal that “one contractor never reports to another contractor”, Claimant should have consulted her job description for direction rather than Mr. Cattapan in the absence of having a therapist to report to on-site.

20. The evidence presented persuades the ALJ that there was no therapist present at the work site for Claimant to report to when she began her employment with the WTU.

21. Ms. Cowee testified that she did occasionally receive calendars from Claimant. She also testified that the calendars were not something she needed. Based upon the evidence presented, the ALJ infers and finds that the calendars sent where not important to Ms. Cowee and she probably did not review them. This is especially likely when Ms. Cowee’s testimony that she was “absolutely” unaware that Claimant was asked to lead some of the recreational activities is considered as that information is clearly set forth on the sample calendar submitted for consideration. Contrary to Ms. Cowee’s assertion, the ALJ finds that Claimant was “open and obvious” regarding her participation in the events she coordinated as demonstrated by her attempts to let Ms. Cowee know what activities were scheduled, which activities she (Claimant) was leading and how successful they were as evidenced by the calendars and the Good News Story she forwarded to Ms. Cowee.

22. Ms. Cowee testified that the first time she knew that Claimant was actually participating in recreational activities was the day that she was advised of Claimant’s injury. She also testified that no one from Fort Carson ever advised her that Claimant was participating in recreational activities.

23. Based upon the evidence presented, the ALJ finds that had Ms. Cowee taken the time to review any of the materials sent to her by Claimant, she most probably would have understood that Claimant was leading specific adaptive sports activities either by volunteering for the assignment or being asked to assume the lead role by Mr. Cattapan.

24. The ALJ credits the testimony of Claimant to find that she was a poorly supervised employee who had little understanding of the job at hire and no direct onsite supervisor from whom to take direction when she reported for work. While discussions about Claimant’s job duties and her supervision were had, the ALJ is convinced that the conversations were probably so vague that they were insufficient to dissuade Claimant of a belief that she was to follow the lead of the onsite coordinator in the absence of having a physical therapist to report to. Under the circumstances presented, the ALJ finds Claimant’s actions in following the directives of Mr. Cattapan to lead and participate in a variety of activities reasonable. Indeed, the evidence presented persuades the ALJ that absent a full team, to include a physical therapist, Claimant’s actions were probably essential in furthering the stated mission of Employer.

25. Only after Claimant’s injury did Employer clarify that she was not authorized to participate in the program’s activities. By this date, Claimant had been participating in a substantial number of activities for months. She had sent Employer a Good News

Story about the therapeutic riding program which contained a picture of her with the indication that she was a participant. Moreover, she sent monthly calendars of the activities scheduled along with the indication that she was leading some of the activities. The evidence presented convinces the ALJ that by April 20, 2017, the date of the Good News Story, and probably sooner Employer had the information necessary to unequivocally advise Claimant that participation in the program's activities was outside the scope of her duties and she was not to join Mr. Cattapan or lead any activities herself. Yet, Employer failed to do so because Ms. Cowee did not "need" the calendars prepared by Claimant nor was she interested in knowing who was participating in the programs activities. Failure to review the aforementioned material constitutes a missed opportunity to take action to counsel Claimant that her participation was unauthorized and the failure to so advise reinforced Claimant's belief that her participation was sanctioned.

26. Based upon the evidence presented as a whole, the ALJ is persuaded that Claimant has proven by a preponderance of the evidence that her shoulder injury arose out of her participation in a work related function, namely while assisting with a therapeutic trail ride, which was sufficiently related to her duties as a ARP assistant so as to be considered part of her service to Employer. The evidence presented also persuades the ALJ that the injury occurred during the time and place limits of the employment relationship with the WTU. Contrary to Ms. Cowee's assertion, she did not issue a clear unambiguous directive that Claimant was never permitted to participate in the activities designed to assist with the wounded soldiers' rehabilitation. Accordingly, the ALJ finds the claimed injury compensable.

27. Claimant insisted that she had no interest in continuing her employment given the events that occurred after her injury. Consequently, she asked Ms. Cowee to terminate her; however, she asked that she not be separated for "bad cause".

28. In response to her request to be separated from employment, Employer sent Claimant a termination letter which indicated that she was being terminated for falsifying her timecards by engaging in recreational activities when her employer was led to believe she was working in her capacity as an administrative assistant. Ms. Cowee testified that a copy of the letter is not available because her computer "crashed", Employer got a new server and she lost some information, including the termination letter. Regardless, Claimant objected to the content of the letter and would not sign it because she did not believe that her participation in activities which she believed she was authorized to engage in supported the assertion that she was falsifying her timecards. Employer then sent Claimant a second, generic letter of separation which did not state the grounds for termination which Claimant signed ending her employment.

29. Claimant testified that she subsequently found the job description for her position on the internet which she downloaded and modified for purposes of publishing her resume on LinkedIn in an effort to secure a new job after her injury. Claimant started a new job on October 21, 2017, as the office manager and accountant for a private jewelry company.

30. Based upon the evidence presented, the ALJ finds that Claimant is responsible for her wage loss and her separation from employment with Employer. The evidence persuades the ALJ that Claimant effectively requested that she be separated from her employment because she was unhappy with Employer's handling of her injury.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

Compensability

C. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

D. The phrases "arising out of" and "in the course of" are not synonymous and a

claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). As found, Claimant's alleged injury arose out of what the ALJ finds/concludes was a work related function, specifically assisting with a therapeutic trail ride. While Respondents seemingly concede that Claimant's injuries arose from her participation in the trail ride, they assert that Claimant was acting outside the sphere of her employment when she was injured because she violated an express employer directive not to participate in the WTU's program activities. Accordingly, Respondents argue that Claimant was outside the scope of her employment.

E. An employer may limit an employee's sphere of employment such that the employee is not acting within the course and scope of his employment if he/she violates the express limitations imposed by the employer. *Bill Lawley Ford v Miller,* 672 P.2d 1031 (Colo. App. 1983). Generally, an employer has a right to issue directives concerning what an employee may do, and when the employee may do it. *Id*. For purposes of determining the compensability of an injury, an employer's direction to an employee falls into one of two categories. *Id.* It may limit the sphere of the employment relationship, or it may simply regulate the employee's conduct while he/she is engaged in such employment. *Id.* A violation of a directive of the first type means that the employee is no longer within the sphere of employment, so that any injury occurring to the employee does not arise out of or in the course of his employment. *Id.* A violation of an order of the second type, while it may result in a reduced benefit under § 8–52–104, C.R.S. (1986 Repl. Vol. 3B), does not affect the compensability of an injury. *See Industrial Commission v. Funk,* 68 Colo. 467, 191 P. 125 (1920).

F. In order for an employer directive to remove conduct from the sphere of employment, it is necessary that the directive be clear and evidence an intent to remove conduct from the scope of employment. *Butland v. Industrial Claim Appeals Office*, 754 P.2d 422 (Colo. App. 1988). In this case, Respondents contend that Claimant took herself outside the sphere of employment because she violated her employer's directive not to participate in the programs rehabilitative activities and was injured as a result. The ALJ is not persuaded. Contrary to Respondents' assertion, the evidence presented does not support a conclusion that Claimant was issued a clear directive limiting the sphere of her employment to working the phones, drafting memos and reports, arranging and facilitating meetings, assisting with event coordination and setting up and tearing down after adaptive sports activities. While Ms. Cowee may have attempted to

communicate the policy regarding participation in the activities for the wounded warriors, the ALJ is convinced that the conversations were probably so vague that they failed to impress upon Claimant that she was not supposed to partake in or lead any such events. Respondents' assertion that Claimant's testimony is incredible because Ms. Cowee was available to her for any clarification of duties is unpersuasive. Ms. Cowee was not on the ground in Colorado. Rather, she was in Virginia available by phone only. Given the circumstances, including the scope of the WTU program and Claimant's lack of training/job knowledge, the ALJ finds/concludes that it is highly unlikely that Ms. Cowee, who the ALJ finds is charged with oversight for 14 different WTU programs, would have the time to make herself available by phone on a daily basis, perhaps multiple times a day, to address Claimant's concerns about her lack of supervision and answer questions about her specific duties. Indeed, Ms. Cowee did not feel it important to review any of the materials Claimant sent to her about the things she was doing in the job despite her assertion that she was Claimant's acting supervisor. More probably than not, Ms. Cowee, in an effort to allay Claimant's fears regarding her lack of having a direct supervisor on the ground in Colorado, her questions about specific job duties and the need to focus on her own duties generally told Claimant to follow the lead of Mr. Cattapan. Even if she was not to follow his lead, the evidence presented does not persuade the ALJ that Claimant was explicitly informed that she was never allowed to participate in the activities designed to assist in rehabilitation of the soldiers involved in the WTU. Consequently, the ALJ concludes that Claimant was in the course and scope of her employment when she injured her left shoulder after falling from her bike during a therapeutic ride designed to aid in the recovery of wounded veterans as part of the WTU's defined mission.

G. Alternatively, Respondents contend that the claim should be denied and dismissed because Claimant was engaged in a voluntary recreational activity at the time of her injury. Again, the ALJ is not persuaded. As noted above, to be compensable, an employee's injury must have been sustained while performing services arising out of and in the course of the employment at the time of the injury. Section 8-41-301(1)(b), C.R.S.; *Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). Section 8-40-201 (8), C.R.S. 2017 excludes from the term 'employment' any "participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program." In addition, § 8-40-301 (1), C.R.S. 2017 provides the term 'employee' will not cover a person "participating in recreational activity, who at such time is relieved of and is not performing any duties of employment, …" *See generally*, *McLachlan v. Center for Spinal Disorders*, W.C. No. 4-789-747 (July 2, 2010).

H. Together Sections 8-40-201(8) and 8-40-301(1) act "to remove participation in a voluntary recreational activity from the employment relationship." In *McLachlan*, the claimant voluntarily participated in a street hockey game organized by fellow employees during an employer sponsored retreat. When he hurt his shoulder playing, the injury was deemed not compensable because §§ 8-40-201(8) and 8-40-301(1) were construed to provide that participation in a recreational activity "presents the type of injury incurred during a deviation from employment so substantial as to remove it from the employment relationship …" In this case, Respondents assert

similarly that Claimant's participation in the trial ride during which she injured her shoulder was voluntary and the activity constituted a recreational pursuit, i.e. she was not performing any duties of employment when she was injured. Accordingly, Respondents argue that the claim should be denied. The common and ordinary meaning of the word "recreate" is "to give new life or freshness to." Webster's New Collegiate Dictionary, (1973). Thus, a "recreational activity" has been found to be "one which has a refreshing effect on either the mind or body." *Laurence White v. Denver School District #1*, W. C. No. 4-378-998 (September 16, 1999). Historically, an activity may be considered "recreational" for purposes of the Worker's Compensation Act even if the activity is also performed in the ordinary course of the claimant's regular duties. *Id*., *citing Dunavin v. Monarch Recreation Corp.*, 812 P.2d 719 (Colo. App. 1991) (off-duty ski instructor was engaged in "recreational activity" for purposes of § 8-40-301(1) while skiing on his free time). While the undersigned concludes that bike riding is "recreational" in nature, as are many of the activities that Claimant participated in during the ordinary course of her employment, the ALJ is cognizant that Claimant's motivation for participation is an important factor in determining whether Claimant's participation is voluntary. Indeed, the Courts have noted that it should not be understood that all participation in an activity which is "recreational" under an objective test necessarily mandates a denial of benefits. Rather, the Court of Appeals has noted that if the claimant's primary motivation for engaging in recreational activity is to satisfy the express or implied duties of employment the recreational activity would not be "voluntary" within the meaning of § 8-40-201(8). *See Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141 (Colo. App. 1998) (where claimant's attendance at employer's Christmas party held at a bowling alley was not "voluntary" and resulting injuries were compensable). Consequently, performance of the activity would still constitute "employment" for purposes of § 8-41-301(1). Here, the totality of the evidence presented persuades the ALJ that Claimant's participation in the trial ride was to satisfy the express and/or implied duties of her employment as an ARP assistant and that her injury occurred during the time and place limits of the employment relationship during an activity connected with Claimant's job-related functions. Respondents contrary arguments, including the suggestion that Claimant's presence during the ride was not necessary because she had no medical training is unpersuasive. Claimant's presence was not requested to fulfill a medical role. Rather, her presence was requested to assure that the wounded warriors remained on task and everyone completed the ride safely. Based upon the evidence presented, the ALJ concludes that Claimant's left shoulder injury is compensable.

Medical Benefits

H. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve

the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her left shoulder. The evidence presented persuades the ALJ that this compensable "injury" is the proximate cause of Claimant's need for medical treatment, including her need for surgery.

Claimant's Separation from Employment & Entitlement to TTD

I. As Claimant's injury was after July 1, 1999, sections 8-42-105(4) and 8-42-103(1)(g), C.R.S. apply regarding her continued entitlement to TTD benefits. These identical provisions state, "In cases where it is determined that a temporarily disabled employee is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Sections 105(4) and 103(1)(g) bar reinstatement of TTD benefits when, after the work injury, claimant causes his/her wage loss through his/her own responsibility for the loss of employment. *Colorado Springs Disposal d/b/a Bestway Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002). Simply put, if the claimant is responsible for his/her termination of employment, the wage loss which is the consequence of claimant's actions shall not be attributable to the on-the-job injury. *Anderson v. Longmont Toyota, Inc.,* W.C. No. 4-465-839 (ICAO February 13, 2002). Respondents shoulder the burden of proving by a preponderance of the evidence that Claimant was responsible for her termination. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 20 P. 3d 1209 (Colo. App. 2000).

J. The concept of "responsibility" is similar to the concept of "fault" under the previous version of the statute. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). "Fault" requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1994). An employee is "responsible" if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (September 27, 2001). "Fault" does not require "willful intent" on the part of the Claimant. *Richards v. Winter Park Recreational Association*, 919 P.2d 933 (Colo. App. 1996) (unemployment insurance); *Harrison v. Dunmire Property Management, Inc.,* W.C. no. 4-676-410 (ICAO, April 9, 2008).

K. In this case, Claimant appears to argue that she was constructively discharged due to inconsistent and unrealistic performance standards, having conflicts with Employer over her supervision and Employer's failure to acknowledge the work relatedness of her injuries. "Constructive discharge" is established if an employee proves that the employer, by its illegal discriminatory acts, has made working conditions so difficult that a reasonable person in the employee's position would feel compelled to resign. *Derr v. Gulf Oil Corp*., 796 F.2d 340, 344 (10th Cir. 1986). *Evenson v. Colorado Farm Bureau*, 879 P.2d 402 (Colo. App. 1993). The record evidence demonstrates

from the credible testimony that Claimant requested to be separated from her employment because she had no interest in working for Employer any longer. Considering the entire evidentiary record, the ALJ concludes that Claimant voluntarily terminated her employment in this case. Claimant exercised a degree of control over the circumstances resulting in her termination by volitionally choosing to sign the paperwork which would effectively terminate her employment. Indeed, she asked for such separation and Employer accommodated that request. The ALJ concludes that an any employee would reasonably expect such request to result in the loss of employment. Because her termination was not compelled by the natural consequence of the work injury, Claimant is "responsible" for her job separation. *Blair v. Art C. Klein Construction Inc., supra.; Longmont Toyota, Inc.*, *supra*.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her left shoulder on September 21, 2017.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation Medical Benefits Fee Schedule, to cure and relieve Claimant from the effects of her left shoulder injury, including, but not limited to the care provided by Dr. Paul Rahill, Practice Fusion, Pikes Peak Anesthesia and Centura Health.

3. Respondents have proven, by a preponderance of the evidence, that Claimant is responsible for her termination of employment.

4. All matters not determined herein are reserved for future determination.

DATED: October 26, 2018

/s/ Richard M. Lamphere
Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts
2864 S. Circle Drive, Suite 810
Colorado Springs, CO 80906

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

and Exhibit E was admitted into evidence. Claimant's objection to Exhibit F for hearsay was overruled and Exhibit F was admitted into evidence.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable injury on November 8, 2017. If so, what are the consequences of the injury: *i.e.*, entitlement to medical benefits, average weekly wage (AWW), and temporary partial disability (TPD). By agreement, the parties withdrew issues concerning temporary total disability (TTD).

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulated Findings

1. At the commencement of the hearing, the parties stipulated to an AWW of $408.74, if the case is determined to be compensable.

Preliminary Findings

2. The Claimant was born on September 21, 1971. She began working for the Employer as a laundry specialist in June 2017, and she worked until her resignation in late December 2017.

Compensability

3. The Claimant's job responsibilities entailed picking up dirty sheets from the Employer's storage unit and then going to a designated laundry facility to wash them. In this regard, the Employer mainly serviced Airbnb's.

4. Jackie Mitchell, a supervisor with the Employer, would send money to the Claimant, via smart phone application, to the Claimant's personal bank account. The Claimant would then go to her personal bank, withdraw the specific amount of money in cash, and then drive to the laundry facility to deposit the money on a laundry card. These transfers would happen weekly and for varying amounts depending on the amount of laundry needed to be done. Proof of these transactions was required to be photographed by the Claimant and sent to Mitchell.

5. Mitchell went on maternity leave from the Employer from November 1, 2017 to December 1, 2017. Megan Gonzalez took over Mitchell's supervisory

responsibilities while Mitchell was on maternity leave. Gonzalez claims that she left $100 in cash at the storage facility for the Claimant to load onto the laundry card. The Claimant denied knowing about the $100 and no one knows what happened to it. This could be an enduring mystery.

6. On November 8, 2018, the Claimant arrived at the Employer's storage facility around 6:45 AM. After picking up the dirty laundry, the Claimant claims that she forgot her debit card at her home and could not access her personal bank account without it, where money from Mitchell was left over. Gonzalez implies that there should not have been money left over. The Claimant then proceeded to drive to her home to pick up her debit card. After retrieving her debit card, she proceeded to her personal bank to withdraw the funds necessary to do the laundry. On the way to the bank from her home, the Claimant was in a car accident caused by another driver (hereinafter "Tortfeasor"). The Claimant sustained injuries from the accident but returned to work, full time, shortly after.

7. Around late December 2018, the Claimant voluntarily resigned from her job with Employer explaining, in text, that it was because of "car problems." Neither Mitchell nor Gonzalez testified that the Claimant had advised them that she resigned because she could no longer do the work. The Claimant testified that she resigned because she started having trouble doing the laundry work. In this regard, the ALJ finds Mitchell and Gonzalez more credible than the Claimant.

8. The Claimant found temporary full time work in early 2018, and is currently employed by the Salvation Army as a clothing sorter. She claims this is lighter work.

9. From Nov 2017 to March 2018, the Tortfeasor's insurance paid for the Claimant's medical bills, up to a cap of $25,000.

Medical

10. On November 8, 2017, the Claimant went to Lutheran Medical Center several hours after the accident. The Claimant informed the doctors that there of a family emergency and she departed before imaging was performed. The next day she went to the Denver Health emergency room (ER). Cervical and thoracic spine x-rays were performed. She was prescribed Flexeril and Ibuprofen. The Claimant later went back to Lutheran Medical Center's ER. Lutheran performed a CAT scan of her head and neck. She was discharged with Vailum and Norco. The Claimant was referred to Antero Medical Group for evaluation

11. From November 21, 2017 to March 7, 2018, the Claimant regularly saw physicians at Antero Medical Group for follow-up and physical evaluation.

12. In at least eight medical questionnaires, in response to the question: Is your condition **work-related** (emphasis supplied)?" The Claimant answered: "**No.**" In

her testimony, the Claimant offered no explanation for this inconsistency with her claim, nor did Respondents cross-examine her in this regard.

13. Claimant's Exhibit 4 is an Initial Medical Consultation report from Usama Ghazi, D.O., to Dr. Laura Graber, D.C., dated January 15, 2018. The second page of that report under "Occupational History," Dr. Ghazi writes "[t]he patient denies any history of work injuries" (Claimant's Exhibit.4, p. 5). While this may be one incident that does not undermine the Claimant's credibility by itself, the Claimant then repeatedly writes that **this is not a work related incident over several months on eight different health insurance claim forms** (emphasis supplied). In these eight health insurance claim forms, the Claimant indicates that her injury from the accident is not employment related. "Box 10" of these health insurance claim forms asks "Is Patient's Condition Related To" followed by three options: "Employment, Auto Accident, and Other Accident." Next to each of these options is a box to mark "yes" or "no." "Box 12" of these forms also provides a spot for "Patient's or Authorized Person's Signature." The Claimant's evidence provides eight of these health insurance claim forms in which "Box 10" is marked with a "no" next to "employment" and where "Box 12" indicates "signature on file" with relevant dates. Details of these health insurance claim forms are as follow:
:

- Lutheran Medical Center's Emergency Department's service for 11/8/2018, signed and dated 3/15/18 (Ex. 7 p.67).
- Forte Health, DII Central, signed and dated 12/15/2017 (Ex. 7 p. 71).
- Colorado Rehab and Occ Med, signed and dated 1/15/18 by the Claimant and 2/15/2018 by Dr. Usama Ghazi. (Ex. 7 p. 72)
- Forte Health, Antero Medical for $350, signed and dated 12/22/2017 (Ex. 7 p. 73)
- Forte Health, Antero Medical for $450, signed and dated 12/22/2017 (Ex. 7 p. 74)
- Forte Health, Antero Medical, signed and dated 12/15/2017 (Ex. 7 p. 75)
- Forte Health, Antero Medical, signed and dated 1/19/2018 (Ex. 7 p. 76)
- Forte Health, Antero Medical, signed and dated 1/15/2018 (Ex. 7 p. 77)

14. The Claimant's own evidence explains why she may seek worker's compensation months after the accident. Claimant's Exhibit 3 contains multiple reports from Antero Medical Group where the Claimant was a patient from November 2017 to March 2018. In the report dated March 6, 2018, it is listed that "patient returns to clinic reporting that she has changed her representation. She was recently informed that she cannot get into Colorado Pain Clinic for '2 or 4 years' due to her insurance (Tortfeasor's) status" (Claimant's Exhibit 3, p. 19). After this report from Antero Medical Group, the Claimant obtained representation from counsel to file a Workers' Compensation claim in April 2018. During the hearing, the Claimant testified that the tortfeasor's insurance would only pay for $25,000, however, the ALJ draws a plausible inference that the Claimant decided to pursue a worker's compensation claim several months after the car accident because the tortfeasor's limit of $25.000 on medical was reached or close to being reached,

Ultimate Findings

15. Based on the totality of the evidence, especially the Claimant's denials of work-relatedness to medical providers, the ALJ does not find the Claimant's claim of a work-related injury as a result of the auto accident on November 8, 2017 credible. Also, the fact that the Claimant worked at her regular job with the Employer and continued to do so until she voluntarily resigned for "car problems," with nothing in writing that she felt she could no longer perform her job duties, further undermines her credibility. The fact that the Claimant is presently working full time at a lesser wage, $10.20 an hour, and seeks TPD benefits based on 2/3 of the differential between her pre-injury wage of $12 an hour and the present $10.20 an hour, in and of itself does not lead to a plausible inference that would affect the credibility of the Claimant's compensability claim. It is the confluence of events that happened in 2018, which causes the ALJ to draw a plausible inference, along with the totality of the other evidence, that the Claimant's claim of work-relatedness is not credible: (1) the $25,000 limit on medical bills in the Tortfeasor's insurance was reached; (2) The Claimant's Worker's Claim for Compensation, dated April 5, 2018 was filed (the Claimant was working full time at a lesser wage at this time); (3) after the auto accident of November 8, 2017, the Claimant checked off "not work-related" at least eight times. The ALJ infers and finds that there are too many anomalies in the Claimant's version of events to render her version of compensable injuries credible.

16. On the other hand, the ALJ finds the testimony of Jackie Mitchell and Megan Gonzalez forthright and making sense. Indeed, their descriptions of the strange and apparently inefficient method of doing business tends to enhance their credibility. Their testimony, however, elevates the anomalies in the Claimant's version of events to a level of incredulity. Contrary to the Respondents' theory that this case is not compensable because the auto accident happened on a detour that took the Claimant outside the course of employment, the ALJ finds that the case turns on overall credibility and, as found herein above, the Claimant's claim is not credible.

17. For the reasons specified herein above, the ALJ finds that the Claimant has failed to prove that she suffered compensable injuries on November 8, 2017, arising out of the course and scope of her employment, thus, the Claimant has failed to sustain her burden of proof by a preponderance of the evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. *Arenas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's claim is lacking in credibility on whether the November 8, 2018 incident amounted to a compensable event. The Claimant now claims the incident was work related and compensable injuries resulted there from, but the totality of the evidence shows that pursuing a workers' compensation claim was not her intention until recently.

b. The Claimant offers a theory positing that the incident was work related due to the awkward, yet consistent, business practice of withdrawing money from her personal bank while on company sent money, via a smart phone to the Claimant's bank account, after which the Claimant withdrew enough money from her account to add sufficient credits to the laundromat's laundry card. Even if the practice of driving from her home to the bank was within the course and scope of work, the Claimant's testimony and the credibility of the Claimant's claim is undercut by her own evidence.

c. As found, Claimant's Exhibit 4 is an Initial Medical Consultation report from Dr. Usama Ghazi, D.O., to Dr. Laura Graber, D.C., dated January 15, 2018. The second page of that report under "Occupational History," Dr. Ghazi writes "[t]he patient denies any history of work injuries." (Ex. 4 p. 5). While this may be one incident that does not undermine the Claimant's credibility in and of itself, the Claimant then repeatedly writes it is not a work related incident over several months on eight different health insurance claim forms. In these eight health insurance claim forms, the Claimant indicates that her injury from the accident is not employment related. "Box 10" of these health insurance claim forms asks "Is Patient's Conditioned Related To" followed by three options: Employment, Auto Accident, and Other Accident. Next to each of these options is a box to mark "yes" or "no." "Box 12" of these forms also provides a spot for "Patient's or Authorized Person's Signature." The Claimant's evidence provides eight of these health insurance claim forms in which "Box 10" is marked with a "no" next to "employment" and where "Box 12" indicates "signature on file" with relevant dates. Details of these health insurance claim forms are as follow:
:

- Lutheran Medical Center's Emergency Department's service for 11/8/2018, signed and dated 3/15/18 (Ex. 7 p.67).
- Forte Health, DII Central, signed and dated 12/15/2017 (Ex. 7 p. 71).
- Colorado Rehab and Occ Med, signed and dated 1/15/18 by the Claimant and 2/15/2018 by Dr. Usama Ghazi. (Ex. 7 p. 72)
- Forte Health, Antero Medical for $350, signed and dated 12/22/2017 (Ex. 7 p. 73)
- Forte Health, Antero Medical for $450, signed and dated 12/22/2017 (Ex. 7 p. 74)
- Forte Health, Antero Medical, signed and dated 12/15/2017 (Ex. 7 p. 75)
- Forte Health, Antero Medical, signed and dated 1/19/2018 (Ex. 7 p. 76)
- Forte Health, Antero Medical, signed and dated 1/15/2018 (Ex. 7 p. 77)

d. As found, the Claimant's own evidence explains that she sought worker's compensation benefits months after the auto accident. because the Tortfeasor's insurance cap of $25,000 on medical benefits either ran out or was about to run out. As further found, Claimant's Exhibit 3 contains multiple reports from Antero Medical Group where Claimant was a patient from November 2017 to March 2018. In the report dated March 6, 2018, it is stated that "patient returns to clinic reporting that she has changed her representation. She was recently informed that she cannot get into Colorado Pain Clinic for '2 or 4 years' due to her insurance status" (Claimant's Exhibit 3 p. 19). After the report from Antero Medical Group, the Claimant obtained representation from counsel to file a Workers' Compensation claim in April 2018. As found, during the hearing, the Claimant testified that the Tortfeasor's insurance would only pay for $25,000 of medical bills. the ALJ drew a plausible inference that the Claimant decided to purrsue a worker's compensation claim several months after the car accident.

Compensability

e. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo.

1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** A manner of conceptualizing the matter is, essentially, that a presumption of work-relatedness may arise when an unexplained injury occurs during the course of employment. However, it is incumbent to show that non-work related factors caused the injury. Nonetheless, proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, it was not credible that the Claimant's injury arose out of or occur within the course and scope of the Claimant's employment with Employer. Therefore, as found, the Claimant did no sustain compensable injuries on November 8, 2017, within the purview of workers' compensation coverage.

Burden of Proof

f. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.*, W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to meet her burden of proof.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits arising out of theClaimant's accident on November 8, 2017, are hereby denied and dismissed.

DATED this 27 day of September 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

WORKERS' COMPENSATION NO. 5-034-710

STIPULATIONS

- The parties stipulated to an average weekly wage of $1,651.14.

- The parties stipulate that, if the claim is found compensable, Claimant is entitled to temporary total disability benefits during the period from December 13, 2016, through March 27, 2017, and temporary partial disability benefits from March 28, 2017, through April 27, 2017.

ISSUES

- Did Claimant establish by a preponderance of the evidence that she sustained a mild Traumatic Brain Injury (TBI) that arose out of the course and scope of her employment with Employer and was causally related to an accident that occurred on or around October 2, 2016?

- If Claimant did establish compensability by a preponderance of the evidence, did Claimant establish an entitlement to medical benefits by a preponderance of the evidence?

FINDINGS OF FACT

1. On October 2, 2016, Claimant, who is currently 63 years old, was walking into the emergency room at the Employer to commence her work day as a pediatric Emergency Room nurse. Claimant was holding a box of toys when she tripped on the sidewalk of the ambulance bay and fell. Claimant testified that she struck the right side of her face.

2. Claimant did not seek any medical treatment on the date of accident and Claimant was able to work and perform her regular shift duties on October 2, 2016. Claimant testified that she informally consulted with a co-worker who was a resident in the ER about her alleged head injuries, but Claimant agrees that this was not a medical evaluation and that Employer does not condone informal medical assessments between co-workers.

3. Claimant reported the trip and fall incident to Employer's "Ouch line" on October 3, 2016. The "Ouch line" report indicates that Claimant reported a hematoma to the eyebrow and an elbow abrasion related to the fall. The report confirms that Claimant declined medical treatment. Claimant agreed that she did not necessitate any medical

treatment for her elbow or hematoma. The report does not indicate that Claimant was experiencing a headache or any other symptoms related to a TBI.

4. Claimant testified that after her trip and fall on October 2, 2016, she began to experience symptoms such as increased anger, having a slower reaction time, feeling dizzy, confused, dazed, that she had a hard time processing, she was distracted, had difficulties with communication, and she felt that she was letting down her co-workers. Claimant testified that her symptoms remained the same in the days and weeks after the alleged date of accident. Claimant denied that her symptoms worsened, changed, or improved in the days and weeks after the date of accident.

5. On November 9, 2016, Claimant had her annual performance evaluation at the Employer. Claimant testified that it was her worst performance review in the history of her career. Claimant testified that she believed that her poor evaluation at work was caused by the TBI that she sustained on October 2, 2016.

6. Claimant's performance evaluation dated November 9, 2016, indicates that Claimant was an "excellent RN" with a "great pediatric skill set." Claimant was counseled in her performance evaluation for having a:

> " . . . difficult time managing her assignment. She often tends to focus on other patients in the department when there are things needing to be done while there is a delay in orders on her patients. [Claimant] often tends to come across to her coworkers as negative. In huddles she often focuses on the negative aspects of things rather than looking for the positive. She is very vocal about these things and her attitude rubs off on other employees. [Claimant] makes snyde remarks to staff and does not communicate very well. [Claimant] seems to have a hard time keeping up with her tasks and will focus on things that aren't as important as other things to get done, is slow at triaging." *See Respondents' Exhibit OO.*

7. Although the performance evaluation was dated November 9, 2016, Claimant agreed that she had been made aware of the performance evaluation by at least November 2, 2016. Claimant agreed that her performance evaluation is based on her performance over a one-year period, yet Claimant maintained at hearing that all the negative aspects in her review were caused by her the accident that had occurred only one month prior to her review being finalized. Claimant was very upset with the negative 2016 review. Claimant testified that this was her first only negative review that she had ever received.

8. Claimant did not seek medical treatment for her alleged work related TBI injuries until December 13, 2016, almost 10 weeks after her date of accident. Claimant described at this evaluation with Dr. Sanders that she was experiencing excessive fatigue, sleepiness, memory problems, and that she felt slower at work. Claimant described to Dr. Sanders that she just recently undergone the worse evaluation that she had ever had in her career. Claimant testified that as of December 13, 2016, she was

experiencing headaches and had a difficult time managing her patient load. These complaints are not noted in Dr. Sanders' medical report. *Claimant's Exhibit 6.*

9. Claimant has a long of history of pre-existing anxiety, depression, and ADHD predating her date of accident. Claimant testified that she has been taking anti-depressants, Abilify and Effexor, since 2009 and has been taking Aderrall since 2009 for ADHD, and she has a script of Ambien for sleep medication. Claimant agreed that she has been taking medication to assist with problems with concentration and focus since 2005. Claimant has a history of migraines dating back to 2003. Claimant has been taking Topamax on a daily basis for headaches since 2003. Claimant has additionally been taking Imitrex for migraines as needed prior to October 2, 2016. Claimant alleges that her headaches have "changed" since her October 2, 2016, in terms of the location of the headache.

10. Claimant's psychiatric medical records date back to 2011. On August 10, 2011, Claimant consulted with Lisa McGloin, M.D. for a history of depression, which she reported had been going on for over 20 years. Claimant described a history of in-patient hospitalizations for possible suicidal ideations. Claimant additionally diagnosed a history of anxiety with "some spaciness/difficulty with word finding and sleep difficulties as well as decreased focus." *See Respondent's Exhibit E, p. 11*.

11. At an October 21, 2011 evaluation with Dr. McGloin, Claimant reported that she was feeling less anxious at work with an increased dose of Effexor. On May 9, 2012, Claimant was evaluated by Dr. McGloin and was seen for continued depression and difficulty with focus and concentration. At another appointment with Dr. McGloin on October 2, 2013, Claimant reported that she was feeling as though she "doesn't fit in at work."

12. On January 8, 2014, Claimant discussed with Dr. McGloin that she had experienced chest pain at work as a result of stress. At a May 20, 2015 evaluation with Dr. McGloin, Claimant reported that she was feeling stressed, tired, and unable to keep up at work. Dr. McGloin increased Claimant's dosage of Effexor and noted that Claimant should consider restarting Abilify. Claimant reported on her intake form that she felt nervous, anxious and on edge nearly every single day.

13. On September 8, 2015, Claimant reported to Dr. McGloin that she was scheduled to transition from nighttime work to daytime work based on a promotion. Claimant testified that when she worked day shifts for the Employer that she was in a managerial position. Claimant described to Dr. McGloin that she was interested in pursuing therapy in addition to psychiatric medication management.

14. On February 15, 2016, Claimant reported to Dr. McGloin regarding recent hallucinations that she had experienced including seeing things out of the corner of her eye, that she thought she heard someone calling her name in a public bathroom and she thought she heard music that was not there. Claimant reported that she had switched to

day shifts in mid-September and that her work was very stressful, that she was having difficulty getting along with coworkers and that she was feeling tired and exhausted.

15. The following month, Claimant reported to Dr. McGloin on March 16, 2016, that she was talking to her manager about her difficulties at work with getting support. Claimant completed a general anxiety disorder self-report where she noted that she was feeling "easily annoyed or irritable nearly every day especially at work."

16. At a May 9, 2016, evaluation with Dr. McGloin, Claimant reported that the previous month she had decided that she could no longer handle working the day shift in the charge nurse position secondary to "lack of support/respect" and in order to step down from the charge nurse position, Claimant was required to transition back to night shifts. Claimant reported to Dr. McGloin that she was experiencing fatigue, poor focus, depression, and that she was feeling stressed and overwhelmed. Claimant continued to report hallucinations including thinking that someone was calling her name when that was not actually happening. Dr. McGloin diagnosed Claimant with generalized anxiety disorder, social anxiety disorder, ADHD, major depressive disorder and insomnia.

17. When Claimant stepped down as the day shift charge nurse, she wanted to stay on the day shift, but her supervisor did not accommodate that request. Claimant was disappointed to be required to transition back to the night shift in the spring of 2016.

18. Claimant's medical records confirm that she qualified for the diagnosis of chronic migraine as of May 18, 2016. On June 10, 2016, Claimant emailed Dr. McGloin and reported that she had been seen for complaints related to dizziness on May 19, 2016. Claimant agreed that she sought medical treatment related to complaints of dizziness in May 2016, five months prior to the date of accident.

19. At a July 18, 2016, evaluation with Dr. McGloin, Claimant reported that returning to the night shift over the past couple of months had taken a toll on her, that she was feeling overwhelmed, having a hard time focusing, that she was having a difficult time prioritizing her work, that she felt she had many "piles" at work and home, that she felt unsupported and defeated in many areas, including at work and at home with relationships. Claimant continued to report that she felt as though her "brain is playing tricks on her" and she reported that she had thought she had seen a Dalmatian in the back of a truck and when she looked again there was no Dalmatian, that she continued to think that she heard her name being called when there was no one there.

20. Claimant agreed that she was having hallucinations in the months preceding the alleged date of accident and Claimant believed that these hallucinations were caused by stress at work and at home.

21. On September 20, 2016, Claimant was evaluated by Dr. McGloin, less than two weeks prior to the date of accident in this case. At this evaluation, Claimant continued to report a feeling of extreme hopelessness at work, feeling overwhelmed, that she felt

stuck, and that she had experienced such decreased energy, interest, motivation, and hopelessness that she had a moment of suicidal ideation at work. Claimant described that she was finding the EPIC system inefficient and difficult to use and was experiencing difficulty keeping up with her work-flow.

22. Claimant testified that the EPIC system was a new computer software program that was implemented at Employer in the spring of 2016 to manage medical record documentation. Claimant agreed that she had a difficult time learning the new EPIC software program. Claimant agreed that she felt she was falling behind at work in the months prior to the date of accident because of the transition to the EPIC system.

23. On May 19, 2016, Claimant was evaluated by Lori Kaufman, PA at Employer for complaints of chronic intractable headache and dizziness.

24. On November 2, 2016, one month after the alleged date of accident, Claimant returned to Dr. McGloin for a psychiatric evaluation. Claimant reported to Dr. McGloin that she was feeling "better than at last visit, depression improving. 'Less angry' at work, feels less stuck. Focus a little better." Claimant described that she had recently had a poor performance evaluation and that there were comments about her difficulty managing the high patient load and regarding her negativity on the job. Claimant expressed to her psychiatrist that she felt betrayed and unsupported at work.

25. The November 2, 2016, report from Dr. McGloin does not make any mention of Claimant's alleged work related accident, a possible head injury, and there is no discussion of any symptoms attributable to the accident. To the contrary, the November 2, 2016, report indicates that Claimant's psychiatric condition had improved since the month prior to the alleged date of accident. Claimant agreed at hearing that her concentration and focus in November 2016 had improved as compared to her ability to concentrate and focus in September 2016. The November 2, 2016, evaluation does not support Claimant's allegation that she had sustained a work related traumatic brain injury on October 2, 2016. The report further rebuts Claimant's allegation that she was suffering from post-concussive type symptoms in the days and weeks following October 2, 2016.

26. On November 15, 2016, Claimant underwent a mental health intake with Shannon Richardson, LCSW at Employer. Claimant testified that this was an extensive evaluation as it was an initial intake and the evaluation occurred pursuant to a referral from her personal psychiatrist, Dr. McGloin. Claimant was in the process of setting up a new counseling and therapeutic relationship with counselor Richardson. Counselor Richardson's lengthy report does not make any mention of Claimant's alleged October 2, 2016, traumatic brain injury. Claimant provided an extensive medical history to Counselor Richardson, including a history of her anxiety, excessive worry, that she felt as though she would start talking in a group and almost blackout, that she had been experiencing hallucinations, that her diagnosis of depression and ADHD dated back to 2003, that she had been hospitalized for suicidal ideation in 2009, and had treated with Dr. McGloin since 2011. Given this extensive medical history provided by Claimant at this medical

evaluation, it is significant that there is no mention in the intake history of Claimant's alleged traumatic brain injury stemming from an October 2, 2016, fall.

27. On December 2, 2016, Claimant was evaluated by another new personal provider, psychologist, Trina Seefeldt, Ph.D. Claimant again described a long history of depression, anxiety, ADHD, and complained of a depressed mood, sleep disturbance, feeling hopeless and helpless, and experiencing psychosocial stressors at work and at home. Claimant described to Dr. Seefeldt that she was struggling with relationships at work after changing from the day shift charge nurse position and returning to the night shift in the emergency room in May 2016. Claimant described that she wanted to attempt to resolve her workplace stressors. Claimant discussed that her husband had chronic health problems and was retired and that she was forced to continue working due to financial constraints. Again, there is no mention of Claimant's alleged traumatic brain injury or the fall of October 2, 2016.

28. At a March 6, 2017, evaluation with Dr. Seefeldt, Claimant reported that she was frustrated because she wanted to retire but was financially unable to afford to do so.

29. On March 9, 2017, Claimant underwent an independent medical evaluation with Dr. John Burris. Dr. Burris testified at the hearing regarding his evaluation of Claimant, his review of Claimant's medical records, and his opinion regarding the October 2, 2016, event at work. Dr. Burris opined to a reasonable degree of medical probability that he does not believe Claimant sustained a concussion, post-concussive syndrome, and/or traumatic brain injury as a result of the slip and fall on October 2, 2016.

30. Dr. Burris explained that the typical presentation for a TBI is for the symptoms to be at their worst in the immediate days and weeks following the accident. The majority of mild traumatic brain injuries resolve within a period of days and weeks. Claimant's medical records are not consistent with the typical presentation of a traumatic brain injury. Claimant's first medical evaluation with Dr. McGloin on November 2, 2016, following the October 2, 2016, date of accident, documents an improvement of symptomatology. Claimant reported that she was feeling less fatigued, less overwhelmed, having less anxiety, and did not report symptoms such as a headache or memory loss.

31. Claimant underwent a neuropsychological evaluation on January 25, 2018, with Jennifer Peraza, Psy.D. Dr. Peraza spent over 12 hours performing the evaluation and neurological workup of Claimant. Dr. Peraza's findings as a result of the neuropsychological evaluation were that Claimant did not demonstrate any cognitive deficits, which would normally be attributable to a traumatic brain injury or postconcussive syndrome. Dr. Peraza attributed any deficits noted during the evaluation to Claimant's preexisting diagnosis of ADHD and to Claimant's long-term preexisting use of Topamax for treatment of chronic migraines. Dr. Peraza further postured that Claimant likely had a learning disability and should undergo a comprehensive evaluation to assess for a learning disability. Dr. Peraza recommended additional psychotherapy for stress management and stress reduction techniques.

32. Dr. Burris testified that the neuropsychological evaluation supported his conclusion that Claimant did not suffer from a traumatic brain injury or post-concussive syndrome related to the October 2, 2016, slip and fall event. Claimant reported to Peraza at her evaluation that "her symptoms started gradually about 2-3 weeks after the fall." Claimant alleged that 2-3 weeks after the fall she began to experience "problems with distractibility, fatigue, slower thinking, and trouble remembering and completing tasks." Claimant's report of the temporal onset of her symptoms 2-3 weeks after her fall is not consistent with a typical presentation for a traumatic brain injury or post-concussive syndrome. It is not typical for symptoms to start 2-3 weeks after a traumatic event.

33. The Colorado Medical Treatment Guidelines support that TBI symptoms start immediately after a traumatic event and improve within a period of 2-3 weeks.

34. Claimant's further reports of symptoms related to feeling fatigued, having slower processing, difficulty completing tasks, and feeling distracted are all preexisting complaints that are well supported by Claimant's preexisting medical records with Dr. McGloin. Claimant has been reporting complaints related to fatigue, processing difficulties, and distractibility for years prior to her date of accident in this claim and Dr. McGloin's medical records document that these symptoms peaked at their worst in the two weeks prior to October 2, 2016. Dr. Burris further explained that all of Claimant's alleged TBI symptoms were symptoms that were attributable to her extensive prescription medication regimen that she has been utilizing for almost a decade. Dr. Burris agreed with Dr. Peraza's conclusion regarding the likely impact of Claimant's lengthy history of utilizing Topamax as causing memory deficits.

35. Claimant underwent an independent medical evaluation with Dr. Bennett Machanic at her own expense. Dr. Machanic testified that he did not have an opportunity to review any of Claimant's predate of accident medical records. Dr. Machanic had not reviewed any of the pre October 2, 2016, medical records from Dr. McGloin.

36. Dr. Machanic agreed that a typical presentation for traumatic brain injuries is that within the first 72 hours following the acute accident the patient will experience the worst onset of symptomatology. Dr. Machanic specifically agreed that Claimant's TBI symptoms should have been at their worst during the first week following the October 2, 2016, date of accident.

37. Dr. Machanic agreed that at best Claimant's findings are indicative of a "very mild traumatic brain injury." Dr. Machanic went on to agree that the symptoms related to the very mild traumatic brain injury were "spotty," but Dr. Machanic felt there were cognitive deficits that could not otherwise be explained. When confronted with Dr. Peraza's conclusion that the cognitive deficits could be related to an undiagnosed learning disability, Dr. Machanic disagreed, but was unable to provide the medical basis for his disagreement, conceding that he has little to no experience with learning disabilities. Dr. Machanic agreed that he did defer to Dr. Peraza's interpretation of the neuropsychological data compiled during the neuropsychological testing. Dr. Machanic

agreed that the prescription for Topamax that Claimant had been utilizing for more than 10 years could have caused at least some of the memory deficits noted during the neuropsychological evaluation.

38. It is found that Dr. Machanic's opinions are less credible and persuasive than the opinions expressed by Dr. Burris and reflected by the medical record. Dr. Machanic did not have the advantage of reviewing Claimant's medical records dating back to 2011. Dr. Machanic was unaware of Claimant's symptom complaints that long predated October 2, 2016, alleged TBI, including complaints related to fatigue, processing difficulties, feeling of being overwhelmed and disorganized, and forgetful. Although Dr. Machanic is a neurologist, he testified that he does not typically treat or manage TBIs. Dr. Burris testified that he is currently managing TBIs. Thus, Dr. Machanic's personal experience and credentials do not render him better suited to render an opinion on the alleged TBI diagnosis than Dr. Burris.

39. Claimant's testimony is not credible as it is not supported by the weight of the medical evidence. If Claimant had in fact sustained a TBI on October 2, 2016, it is probable that this would have been documented in either the November 2, 2016, report from Dr. McGloin, the November 15, 2016, report from Ms. Richardson, or the December 2, 2016, report from Dr. Seefeldt. All three of these evaluations addressed issues that are central to the symptoms that Claimant now associates as being caused by a TBI and as such the absence of documentation of the alleged TBI in these reports strongly weighs against Claimant's credibility.

40. Claimant's belief that her negative annual performance review was caused by her TBI is not credible. Claimant's performance review documents snyde comments and negativity, which are not symptoms associated with a TBI. Further, it is implausible to conclude that the negative review was based on one month of work performance as Claimant contends, rather than a year of performance, which is the nature of an annual review.

41. Dr. Burris' opinion that the course of medical treatment that Claimant underwent per the referral of the COSH clinic was not reasonable and necessary is credited. There is no indication that Dr. Sanders or any of the COSH providers were aware of Claimant's medical history and pre-date of loss complaints to Dr. McGloin or that these providers considered the temporal history of Claimant's alleged TBI presentation.

CONCLUSIONS OF LAW

1. The purpose of the Act, Section 8-40-101, C.R.S. *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably

true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. A "compensable industrial accident is one which results in an injury requiring medical treatment or causing disability." *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). *Subsequent Injury Fund v. State Compensation Insurance Authority*, 768 P.2d 751 (Colo. App. 1988). It is undisputed that Claimant did not obtain medical treatment for almost ten weeks after the slip and fall on October 2, 2016, and that during this time period Claimant continued to work and perform her regular work duties. Claimant has failed to establish by a preponderance of the evidence that her October 2, 2016 injury caused an injury that required her to obtain medical treatment or caused a disability.

5. Claimant has failed to establish by a preponderance of the evidence that her industrial fall caused her to develop post-concussive syndrome or a mild TBI. The medical opinion of Dr. Burris is credited over the opinion of Dr. Machanic. Dr. Machanic rendered his opinions without the advantage of having reviewed the Claimant's pre-date of accident medical records. Claimant's pre-date of loss medical records document complaints that are identical to the post-accident complaints. Further, the temporal progression of Claimant's symptoms is not consistent with the typical presentation for a TBI in that Claimant's immediate presentation following the accident was better than her

presentation before the accident. Claimant's testimony is not credible and her allegation that her poor performance evaluation in November 2016 resulted from her TBI is not supported by the weight of the evidence.

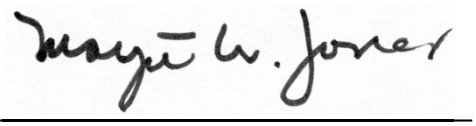
ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for workers' compensation benefits for an October 2, 2016, date of accident is denied and dismissed.

2. Any issues not determined in this decision are reserved for future determination.

DATED: October 4, 2018



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable injury to her left wrist and forearm, left ankle, an exacerbation of her temporomandibular joint ("TMJ") condition, and a left chest injury arising out of and in the course of her employment on September 10, 2017.

II. If compensable, whether the treatment requested by ATP Patrick D. Devanny for a left radial nerve decompression is related to the September 10, 2017 industrial injury and reasonably necessary to cure and relieve the Claimant of the effects of the injury.

III. If compensable, whether the Claimant demonstrated by a preponderance of the evidence that the treatment requested by ATP Michael Simpson of an arthroscopic debridement of Claimant's ankle, with an excision of the ossicle of her lateral malleolus and lateral ligament reconstruction to address instability, is related to the September 10, 2017 industrial injury and reasonably necessary to cure and relieve Claimant of the effects of the injury.

IV. If compensable, whether Claimant demonstrated by a preponderance of the evidence that the Respondent failed to tender the services of an "oral maxillary facial surgeon" when requested by authorized treating physician ("ATP") Kathryn Murray, D.O., on September 26, 2017, rendering the right to select a physician to Claimant who selected Reed H. Day, M.D.

V. If compensable, and if Claimant has established a refusal to treat for non-medical reasons, whether the request of Reed H. Day, M.D., to perform a lavage of the right TM joint with I.V. sedation, is related to the September 10, 2017 industrial injury and is reasonably necessary to cure and relieve Claimant of the effects of the injury.

VI. If compensable, whether Claimant was at maximum medical improvement ("MMI") on May 21, 2018, as opined to by ATP Murray, or whether she is not at MMI as opined to by ATP Simpson.

VII. If compensable, whether Claimant established an entitlement to temporary partial disability ("TPD") benefits for the time period between September 10, 2017 and April 19, 2018.

VIII. If compensable, whether Claimant established by a preponderance of the evidence an entitlement to temporary total disability ("TTD") from April 20, 2018 ongoing, until terminated pursuant to statute.

STIPULATIONS

The parties agreed Claimant's average weekly wage is $1,158.40. Claimant agreed she is not claiming a discrete neck or back injury.

FINDINGS OF FACT

1. Claimant is a 42-year-old woman employed by Employer as a mental health counselor. Claimant alleges she sustained a compensable injury to her left wrist and forearm, left ankle, left chest, and an exacerbation of her TMJ condition during the course and scope of her employment on September 10, 2017.

Prior History

2. Claimant's medical history prior to the September 10, 2017 work injury is extensive. Medical records dating back to 2009 reflect frequent medical visits to primary care physicians and emergency departments for various purported medical issues, including complaints regarding body parts Claimant alleges were injured in the September 10, 2017 work injury.

3. In March 2012, Claimant reported feeling a sensation of heaviness "like a spasm" in her chest. In January 2015, Claimant reported having some chest pain secondary to falling along with knee, wrist and elbow pain. The medical records reflect complaints of bilateral ankle pain in June 2012 and bilateral lower leg swelling in June 2017.

4. In December 2014, Claimant underwent an excision of a symptomatic left wrist carpal ganglion cyst. Claimant also fell in December 2014, striking her left hand, elbow, knee, and chest. Claimant wore a left wrist brace for three months for what was initially thought to be a fractured wrist. It was later determined Claimant did not have a wrist fracture. April 2015 medical records note Claimant developed diffuse flexor tenosynovitis with multiple areas of tenderness and persistent thumb symptoms. May 2015 medical records reflect complaints of tenderness to palpation and restricted left wrist range of motion, as well as aching in the dorsal wrist and hand, and thumb numbness and tingling. In February 2017, Claimant reported bilateral arm soreness and numbness, and tingling radiation in both arms after falling on her back. May 2017 records document reports of occasional left elbow pain.

5. Claimant also has a longstanding documented history of facial pain, headaches, and TMJ syndrome. Claimant underwent a bilateral sagittal split osteotomy in 1994 and repeat jaw surgery in 2003 with a poor outcome. In approximately 2006 implants were placed in Claimant's cheeks and jaw.

6. Claimant's medical records from 2012 document complaints of head, facial, and right ear pain. 2014 medical records document complaints of intermittent headaches, left-sided facial numbness and tingling, facial droop, facial weakness, neuralgia pain of the right face, and right-sided symptoms. In November 2014, Claimant was assessed with Bell's palsy and, in December 2014, Claimant was diagnosed with "atypical facial

pain syndrome." In February 2015, Claimant reported experiencing jaw pain after what she reported was a whiplash injury as a result of a fall. Claimant continued to be seen throughout 2015 for complaints of "ongoing atypical facial pain," ear pain, right-sided face pain, right jaw pain, right neck pain, headaches and facial tenderness.

7. Claimant continued to report and seek treatment for facial and jaw pain and headaches leading up to the September 10, 2017 work injury. Medical records from March 2017 reflect reported chronic ongoing frontal and maxillary pain, as well as headaches and left-sided pain. On April 3, 2017, Claimant complained of left-sided headaches after hitting the left side of her forehead on a bar at the gym. She was assessed with chronic mixed headache syndrome and recent postconcussive injury.

8. On May 6, 2017, Claimant complained of pain in her cheek and reported feeling a pop after a chiropractic sinus adjustment. Claimant was seen by maxillofacial oral surgeon Donald Hull, DDS, who referred Claimant back to Reed Day, MD, DMD, who previously treated Claimant and performed a prior implant surgery. Claimant saw Dr. Day who noted no indications of an implant displacement. Claimant continued to see Dr. Day, reporting bilateral tenderness above her molars and popping/clicking of her right TMJ. On June 15, 2017, Dr. Day reviewed a MRI of the bilateral TMJ joints, which revealed some internal derangement on both sides. He noted the findings of the current MRI were similar to those of a 2008 MRI, and recommended splint therapy.

9. On June 25, 2017, Claimant underwent a bilateral maxillary alveoloplasty with smoothing out of Hydroxyapatite. On June 28, 2017, Claimant returned to Dr. Hull suspecting she had an infection. Dr. Hull determined there were no signs of infection. It was noted Claimant asked Dr. Hull if he would perform a TMJ surgery that "might" be indicated for her in the future. He explained to Claimant he did not perform elective TMJ operations, but that he would help her find a more local surgeon if a TMJ operation was recommended by Dr. Day.

10. On June 30, 2017, Claimant authored an e-mail to Employer's human resources department indicating she was approved for vacation November 26-30, 2017 stating, "I am planning on having my second surgery during that time, rather than having it next month."

11. Claimant's medical records also contain multiple references to potential psychological factors as related to Claimant's presentation. In April 2012, a physician noted that there was "a large psychiatric component to this patient's problems." In October 2012, Claimant made multiple visits to an emergency department with complaints of burns and blisters in her mouth and throat after drinking hot chocolate. Claimant reported concerns of developing cancer as a result of the incident. Claimant's exam was benign. The treating doctor questioned whether Claimant has paranoid schizophrenia and diagnosed Claimant with hypochondriasis, symptom magnification and psychosomatic complaints. In March and April 2015, it was suggested Claimant consider undergoing a psychological evaluation and be referred to chronic pain management.

September 10, 2017 Work Injury

12. On September 10, 2017, Claimant was working in a classroom with inmates when she slipped and fell on a flooded floor. The ALJ observed security video of the incident. The ALJ observed Claimant pushing a chair with her right hand while carrying papers in her left hand. A long rectangular table is located to Claimant's left. Claimant is observed slipping and falling forward, causing the chair to move forward. Claimant drops the papers out of her left hand and attempts to catch herself with her left hand and forearm on the nearby table. The table obstructs the view of Claimant's body as she falls to the ground. The ALJ was unable to see if Claimant struck any part of her chest on the table, or what body parts struck the ground. Claimant did not appear to strike her head on the table. No whiplash-type motion of the head is depicted. Claimant is observed immediately getting up after the fall and walking out of the room without assistance.

13. Claimant reported the incident to Employer and was evaluated on September 10, 2017 at Employer's designated medical facility at the Centura Health Urgent Care Center. Claimant reported that she fell forward and struck her right upper chest against the corner of a table. She complained of right upper chest pain, bilateral ankle pain (left worse than right), left elbow pain, and left wrist pain. Claimant denied any injury to her head and the review of systems was negative for headaches. On exam, Maria Lourdes Duran-Shy, NP noted full left elbow range of motion with a bruise distal to the left elbow, full left wrist range of motion with no swelling, no ecchymosis of the right anterior chest wall, and minimal swelling of the left ankle with no tenderness or joint instability. She diagnosed Claimant with acute bilateral ankle pain with suspected mild sprains, contusion of the right chest wall, left elbow pain, and left wrist pain. She noted all films were negative for fractures or dislocations, and the chest x-ray was normal.

14. Claimant attended a follow-up evaluation with Steven Quakenbush, PA-C on September 11, 2017. Claimant reported slipping and falling, hitting her anterior chest wall on the corner of a table, twisting both ankles, and landing on both outstretched wrists. Claimant again reported that she did not hit her head or back. She complained of "minimal residual anterior chest wall discomfort" and left ankle pain. On exam, PA-C Quakenbush noted no erythema, ecchymosis or abrasions of the chest, minimal upper sternal discomfort, minimal left elbow tenderness, no forearm pain, swelling or deformity, full range of motion of bilateral hands and wrists with no swelling, minimal left ulnar tenderness, and full left ankle range of motion with minimal residual swelling and minor tenderness with palpation. PA-C Quakenbush diagnosed Claimant with an ankle sprain, wrist sprain, and thorax contusion. He noted that the objective findings were consistent with the history of a work-related etiology. PA-C Quakenbush prescribed medication and recommended use of an ankle brace. He placed Claimant on temporary work restrictions of lifting/carrying/pushing/pulling no more than five pounds, and limiting walking and standing to no more than three hours per daily shift.

15. On September 12, 2017, Claimant presented to ATP Kathryn Murray, DO. Claimant reported slipping and falling, hitting her chest on a table, and then twisting and falling to the ground. Dr. Murray noted, "At this time her biggest complaint is the neck

pain. When she fell she did not hit her head and she had no loss of consciousness. She had no neck pain but neck pain has started over the last 1-2 days." Claimant complained of intermittent burning with numbness and tingling in all five fingers on both hands and bilateral ankle pain. Dr. Murray noted Claimant had a history of previous jaw surgeries and complaints of pain radiating from her neck up into her jaw and face. On exam, Dr. Murray noted full wrist range of motion with no bruising or swelling and minimal discomfort to palpation of the left ankle. Dr. Murray diagnosed Claimant with a work-related ankle sprain, thorax contusion, wrist sprain, and neck strain. She continued Claimant's work restrictions, ordered Claimant to wear a left ankle boot, and referred Claimant for physical therapy.

16. On September 14, 2017, Claimant saw ATP Robert Dixon, MD with complaints of right upper back and neck pain radiating into her right face, along with pain in the right anterior chest, left wrist, left hand, and left ankle. On examination, Dr. Dixon, noted some tenderness at the base of the left thumb with no bruising or swelling, no bruising on the chest, and left ankle swelling and tenderness. Claimant's diagnosis remained left ankle sprain, thorax contusion, left wrist sprain and neck strain.

17. On September 20, 2017, Claimant sought treatment at St. Francis Medical Center Emergency Department with complaints of gradually worsening chest pain, throat swelling, voice coarseness, and right-sided facial pain. Claimant denied neck stiffness and headache. Gregory Thacker, MD noted there was "[n]o external evidence of injury." He remarked, "I'm unsure of the exact etiology of her symptoms potentially could have mild upper respiratory infect that is unrelated to the trauma. Ultimately I do not feel there is any underlying significant traumatic injury."

18. On September 23, 2017, Claimant attended a dental appointment at Comfort Dental for a scaling, cleaning and a filling. The medical record contains no reference to the work incident and no complaints of any pain in Claimant's jaw or face.

19. Dr. Murray reevaluated Claimant on September 26, 2017. Claimant reported neck soreness, occasional popping in her left ankle, as well as right hip and left knee pain that began the week prior. Claimant reported improvement in her left elbow and left hand, with some remaining hand soreness. Dr. Murray noted Claimant underwent jaw surgery in July 2017 and remarked, "She denies hitting her face or her head with her fall. She has a burning sensation and a 'poking' sensation right side face…she states her face feels similar to where she was at prior to that surgery." Dr. Murray added right-side jaw pain to her diagnoses, and referred Claimant Dr. Sparr or Dr. Leggett for evaluation, and to an oral maxillary facial surgeon to evaluate Claimant's jaw pain.

20. On October 13, 2017, an appointment with the facial surgeon was scheduled for October 17, 2017 by Claimant pursuant to Dr. Murray's instruction, however the appointment was cancelled by Respondent who did not approve the visit. Claimant argues that since her evaluation was not approved, the right to select an oral maxillary facial surgeon passed to Claimant and she chose to start treating with Reed H. Day, MD, DMD.

21. On October 19, 2017, Dr. Murray noted Claimant resumed wearing an ankle brace and reported ankle swelling and a burning sensation underneath her left breast despite improvement in her chest symptoms. Claimant also reported experiencing a scratchy and poking sensation in the right maxillary region and that her left wrist felt strained but no longer bothered her. Dr. Murray ordered a left ankle MRI and changed Claimant's restrictions to limit walking/standing to four hours, and no standing or walking greater than an hour at a time without a 20 minute sitting break.

22. On October 20, 2017, Claimant underwent a left ankle MRI. Joseph Ugorji, DO interpreted the MRI and noted the following:

> 1. 10 mm triangular ossicle in the expected location of a normal variant os trigonum. Given the degree of swelling in this region a nondisplaced Sheperd's fracture/avulsion would have similar appearance…
>
> 2. 12 mm ossific structure subajacent lateral malleolous. Remote avulsive sprain of the anterior talofibular and calcaneofibular ligaments suspected…
>
> 3. Moderate fluid distension involves distal posterior tibial sheath and the flexor tendon sheaths….
>
> 4. Midfoot arthrosis…

23. Michael Sparr, MD evaluated Claimant on October 27, 2017 for consideration of trigger point injections and other treatment options. Claimant reported constant neck and upper back pain, a burning and poking sensation in her left chest, diffuse left ankle pain, and left thumb pain. On exam, Dr. Sparr noted no swelling or tenderness of the wrist with full range of motion and full ankle range of motion with moderate tenderness and swelling. He diagnosed Claimant with a sprain of the sternoclavicular joint and/or ligament, subluxation of sternocostal joint, costochondritis, and an ankle sprain. He recommended trigger point injections as well as possible costotransverse joint injections.

24. Claimant continued to treat with Dr. Murray who, on November 20, 2017, noted Claimant reported plans to see her surgeon in Arizona on November 27, 2017 for further evaluation of facial and jaw complaints.

25. Claimant saw Dr. Day in Arizona on November 27, 2017. Regarding the September 10, 2017 work incident, Claimant reported to Dr. Day that she slipped and fell, hit her chest, and then hit the concrete. Claimant complained of right TMJ pain. Dr. Day noted that a cone CT scan recently taken was normal with no fractures. He concluded Claimant suffered a right TMJ strain or sprain due to a deceleration injury from the work fall. He remarked, "There is some underlying pre-existing problems consistent with a preinjury stage for internal derangement of the right temporomandibular joint and it looks as though she aggravated that." There is no indication Dr. Day reviewed the security video of the incident. He recommended

Claimant continue splint use and, if the pain continued to be bothersome, a lavage of the right TMJ.

26. On November 27, 2017, Respondent was provided with a request for payment to provide treatment recommended by Dr. Day. Respondent denied the treatment on December 13, 2017.

27. Claimant returned to Dr. Sparr on January 23, 2018 with complaints of a "buggy feeling" over her left dorsal hand. Dr. Sparr noted Claimant did not mention upper extremity tingling during her last visit and was now reporting more diffuse pain. He opined that Claimant's upper extremity tingling symptoms were not likely related to the work injury.

28. On February 16, 2018, Claimant presented to Kenneth P. Finn, MD. Claimant complained of central and left neck pain radiating to her shoulder, as well as pain in her left arm, forearm and wrist. He noted that EMG results were normal with no evidence of cervical radiculopathy, plexopathy or peripheral nerve entrapment.

29. On March 9, 2018, Claimant presented to Patrick Devanny, MD, upon the referral of Dr. Murray. Claimant again reported experiencing "buggy" symptoms in the dorsum of her left hand. Dr. Devanny provided the following assessment: left wrist pain, left cubital tunnel syndrome, and compression of the left radial nerve. He recommended Claimant undergo an MRI of the left forearm to visualize the radial nerve.

30. On March 12, 2018, Claimant saw Michael Simpson, MD, upon the referral of Dr. Murray. He noted Claimant had continued to use an ankle brace with unchanged left ankle pain over last six months. Dr. Simpson concluded Claimant had a "pretty significant sprain of her ankle with residual synovitis." He noted, "She has some irritation in her foot which may be a little bit of a compression or traction neuritis of her superficial peroneal nerve." Dr. Simpson diagnosed Claimant with a sprain of the anterior talofibular ligament of left ankle and administered a corticosteroid injection. He recommended Claimant stop wearing the ankle brace. Dr. Simpson opined that Claimant may require arthroscopic evaluation and possible arthroscopic debridement of her ankle if she continued to be symptomatic.

31. Claimant returned to Dr. Simpson for reevaluation on April 11, 2018 complaining of unchanged symptoms. Claimant reported experiencing temporary relief post-injection. He recommended Claimant attempt to resume full activities as tolerated, noting that if Claimant's ankle did not allow for full activities, she would be an appropriate candidate for surgery. He further noted, "If she decides she does not want to pursue this, she probably could be placed at MMI with the recommendation of 6-9 months of maintenance care."

32. On April 10, 2018, Rachel L. Basse, MD performed an Independent Medical Evaluation ("IME") at the request of Respondent. Claimant reported to Dr. Basse that she hit her mid-chest and under her left breast during the September 10, 2017 fall. She complained of right jaw and ear pain, left ankle pain, left wrist symptoms, and neck and

back tightness. Claimant reported worsening of her left wrist and arm over the last six months. Dr. Basse performed an extensive and medical record review, interviewed and physically examined Claimant, and reviewed security video of the work fall.

33. Dr. Basse opined Claimant did not suffer any injury or exacerbation of her right jaw as a result of the work fall, noting Claimant had pre-existing TMJ issues and the mechanism of injury did not involve deceleration or direct trauma to the head or face.

34. Although Dr. Basse included "resolved contusion of the left chest" in her impressions, in the discussion section of the report, she opined Claimant's left chest symptoms were unrelated to the work fall, noting Claimant initially reported hitting her right chest, and the left chest complaints did not occur until greater than one month after the fall.

35. Regarding Claimant's left ankle, Dr. Basse opined Claimant sustained a sprain/strain that had probably resolved. She noted that the soreness and decreased range of motion present would be expected after demobilizing the ankle for several months. She recommended Claimant avoid surgery, return to an exercise regimen, and use anti-inflammatory agents occasionally. She further recommended Dr. Simpson review the ankle MRI as well as her IME report regarding Claimant's somatoform tendencies.

36. With respect to Claimant's left wrist, Dr. Basse opined Claimant sustained a resolved sprain/strain. She noted Claimant's early exams demonstrated full range of motion without ecchymosis or swelling or anatomic abnormalities, with some tenderness over the distal aspect of the wrist. Her exam of Claimant produced symptoms in a different location, more proximal than distal. She concluded Claimant's current symptoms were a result of increased usage of the upper extremity after being deconditioned and were not related to the work fall.

37. Dr. Basse opined Claimant is at maximum medical improvement ("MMI") with no permanent impairment. She concluded that, while Claimant did not appear to be consciously exaggerating her symptoms, there are unrelated psychological issues at play, noting Claimant's history as a "frequent utilizer of healthcare services" with somatoform tendencies.

38. Dr. Devanny reevaluated Claimant on April 18, 2018. He noted that an April 5, 2018 MRI of the left radial nerve was consistent with denervation of the pronator quadratus/radial tunnel syndrome and assessed left radial tunnel syndrome. He placed Claimant on restrictions of no lifting with or use of her left arm, and recommended Claimant undergo a radial nerve decompression of her dorsal forearm. Claimant was scheduled to undergo the surgery on May 7, 2018. The surgery was not authorized by Respondent.

39. Dr. Murray saw Claimant on May 21, 2018 after reviewing Dr. Basse's IME report. She noted Claimant's continued left ankle and left wrist/forearm complaints and Claimant's plan to proceed with wrist surgery under her own insurance. Dr. Murray did

not perform a physical examination, noting Claimant informed her there was "no point" in doing so because her case was done. Dr. Murray agreed with Dr. Basse's opinion that Claimant was at MMI with no impairment and no need for further medical treatment, noting Dr. Basse had access to approximately nine years of medical records and security video of the work incident that she did not. She further noted she personally spoke to Dr. Simpson regarding the IME report, and that he indicated he would not be interested in performing surgery on Claimant at that time.

40. In a June 12, 2018 letter, Dr. Simpson opined Claimant sustained a work-related ankle injury in the form of a "sprain of her anterior talonfibular ligament, an injury to a previous injured area, as well as an injury to the posterior process of her talus resulting in a symptomatic posterior process injury." He noted Claimant's ankle MRI revealed significant swelling in the posterior aspect of her ankle consistent with either a nondisplaced fracture or injury of a pre-existing os trigonum. He opined that, while Claimant does have pre-existing pathology in her ankle, not all of her current symptoms are a natural progression of a pre-existing condition. He concluded it was unclear if Claimant is at MMI, noting the next step for Claimant would be surgery, which he referred to as "entirely elective." Dr. Simpson noted that the medical records raise an issue of possible somatoform disorder, which he stated did not, by itself, preclude Claimant from being a surgical candidate. He opined Claimant needs appropriate mental health evaluation and concluded she would be at MMI if she refused the involvement of a mental health provider or chose not proceed with surgical intervention.

41. Dr. Basse testified at hearing on behalf of Respondent as a Level II expert in physical medicine and rehabilitation and chronic pain. Dr. Basse reviewed additional medical records subsequent to issuing her IME report. She testified Claimant sustained a resolved chest contusion that did not require treatment and that Claimant's current left-sided chest complaints are not related to the work injury. Dr. Basse testified Claimant suffered a work-related left wrist sprain/strain that has resolved and a left ankle sprain/strain. She testified that, while the referrals and medical care for the wrist were reasonable, no further treatment for the wrist is required. Dr. Basse opined that Dr. Devanny's recommendation for radial nerve surgery is not reasonable, and that ankle surgery is not necessary at this point, particularly without Claimant first undergoing a psychological evaluation. She testified that Claimant's work restrictions were more restrictive than those she would have assigned, but that the restrictions were reasonable and related to the work injury. Dr. Basse reiterated her opinion that Claimant's face or jaw did not sustain any injury in the September 10, 2017 fall, nor was her TMJ condition exacerbated or aggravated by the work incident. Dr. Basse testified that no deceleration injury was observed on the security video. Dr. Basse testified that because Claimant did not sustain any work-related injury or exacerbation of her TMJ condition, treatment for such condition was not and is not work-related.

42. Dr. Basse acknowledged Claimant appeared genuine in her complaints and was not consciously exaggerating her symptoms, but opined that there is some psychological component for Claimant's symptoms, noting Claimant had longstanding tendencies toward somatic symptom disorder. Dr. Basse agreed Claimant reached MMI as of the date determined by Dr. Murray.

43. Claimant testified at hearing that she hit her chest on a corner of a table when she slipped and fell, landing on both wrists and twisting both ankles. Claimant testified the medical records immediately following the work injury are incorrect in that they do not reflect her complaints of jaw pain, which she alleges she reported in her initial evaluations. Claimant testified she has never been diagnosed with a somatoform disorder or mental health issue. She further testified that, prior to the September 10, 2017 work injury, she had no problems with her left ankle, left wrist and forearm, left chest, or back and neck. She stated that, despite her pre-existing TMJ condition, leading up to September 10, 2017 she did not have tingling or pain in her jaw, just occasional popping. Claimant testified she currently experiences pain and a constant cold/icy/burning sensation in her left ankle. She wishes to undergo the surgeries recommended by Dr. Devanny and Dr. Simpson.

44. Employer accommodated Claimant's temporary work restrictions from September 12, 2017 until April 20, 2018. Claimant did not earn her full wages from September 10, 2017 to April 20, 2018 due to attending medical appointments during scheduled shifts. After Claimant was placed on "no use of left upper extremity" by Dr. Devanny on April 18, 2018, Claimant testified her Employer would no longer accommodate her work restrictions and she has not worked for Employer since April 20, 2018.

45. No evidence was offered at hearing indicating a Final Admission of Liability has been filed in this matter.

46. The ALJ finds the opinions of Dr. Murray and Dr. Basse, as supported by the medical records, more credible and persuasive than the opinions of Dr. Devanny and Dr. Simpson and the testimony of Claimant.

47. Claimant proved it is more probable than not she sustained a compensable injury on September 10, 2017 to her left wrist in the form of a sprain/strain and to her left ankle in the form of a sprain/strain.

48. Claimant failed to demonstrate by a preponderance of the evidence she sustained a compensable injury to her chest or an exacerbation of her TMJ condition as a result of the September 10, 2017 industrial injury. Dr. Day provided treatment to Claimant for an unrelated condition and is not an ATP for purposes of this matter.

49. Dr. Murray's opinion on MMI is not ambiguous or conflicting and, in the absence of a DIME, is controlling. Accordingly the ALJ finds, per Dr. Murray's opinion, Claimant reached MMI on May 21, 2018.

50. Claimant failed to prove by a preponderance of the evidence the wrist surgery recommended by Dr. Devanny, the ankle surgery recommended by Dr. Simpson, and the lavage procedure recommended by Dr. Day are related to the September 10, 2017 industrial injury and reasonably necessary to cure and relieve the effects of the industrial injury.

51. Claimant proved by a preponderance of the evidence she is entitled to TPD benefits September 10, 2017 to April 19, 2018 and TTD benefits from April 20, 2018 to May 21, 2018.

52. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Left Chest

Based on the totality of the evidence, the ALJ concludes Claimant failed to prove by a preponderance of the evidence she sustained a compensable injury to her left chest. Claimant initially reported striking her right chest during the fall and initially complained of right chest symptoms. There was no bruising, swelling or abrasions of the chest noted on any examination, and Claimant did not complain of left chest symptoms October 27, 2017. To the extent Dr. Basse opined Claimant sustained a chest contusion, Dr. Basse further credibly opined Claimant did not require any treatment for the contusion and her current left chest symptoms are not related to the September 10, 2017 industrial injury.

TMJ Condition

Based on the totality of the evidence, the ALJ concludes Claimant failed to prove, by a preponderance of the evidence, she suffered an exacerbation of her TMJ condition. Claimant has a longstanding history of TMJ issues leading up to the September 10, 2017 industrial injury. Claimant was underwent a cheek and jaw procedure in June 2017, just a few months prior to the industrial injury. She was planning on undergoing further TMJ treatment in November 2017, as indicated by the June 2017 medical records and Claimant's June 30, 2017 email to human resources. Claimant specifically denied hitting or striking her head during the fall at work. The ALJ observed no whiplash-type motion during Claimant's fall, which is consistent with Dr. Basse's observation of the security video of the incident. Dr. Basse credibly opined

there was no deceleration event or mechanism of injury to Claimant's face or jaw. To the extent Dr. Day opined Claimant suffered a deceleration injury that aggravated her TMJ condition, his opinion was based on Claimant's subjective representation of the mechanism of injury, and does not persuade the ALJ that Claimant's TMJ symptoms are a result of the September 10, 2017 industrial injury.

Left Wrist/Forearm and Left Ankle

Based on the totality of the evidence, the ALJ concludes Claimant proved by a preponderance of the evidence she sustained a compensable injury to her left wrist and left ankle, limited to a left wrist sprain/strain and a left ankle sprain/strain. Dr. Basse and Dr. Murray credibly opined Claimant sustained a left ankle sprain/strain and a left wrist sprain/strain as a result of the September 10, 2017 fall. There is insufficient credible and persuasive evidence Claimant sustained any further injury to her left ankle or left wrist/forearm as a result of the September 10, 2017 industrial injury. Dr. Basse credibly testified that Claimant has longstanding tendencies toward somatic symptom disorder.

Claimant had pre-existing left wrist and arm complaints, including February 2017 complaints of bilateral arm numbness, tingling and radiation, and left elbow pain in May 2017. By October 27, 2017, Dr. Sparr noted full range of motion of the left wrist with no swelling or tenderness. Dr. Sparr specifically noted on January 23, 2018 that Claimant's pain complaints had become more diffuse and opined that the tingling symptoms Claimant was now reporting to him were not related to the work injury.

Authorized Treating Physician

Section 8-43-404(5)(a) contemplates that respondents will designate a physician who is willing to provide treatment without regard to non-medical issues such as the prospects for payment in the event the claim is ultimately denied. *Lutz v. Industrial Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Ruybal v. University of Colorado Health Sciences Center,* 768 P.2d 1259 (Colo. App. 1988). However, the fact that an ATP stops providing treatment based on the *medical determination* that further treatment is not warranted does not automatically authorize the claimant to change physicians. Rather, the claimant must seek applicable statutory remedies such as submitting a request for a change of physician or seeking a DIME. *See Bilyeu v. Babcock & Wilcox Inc.,* W.C. No. 4-349-701 (I.C.A.O. July 24, 2001), *aff'd., Bilyeu v. Industrial Claim Appeals Office,* (Colo. App. No. 01CA1505, April 11, 2002) (not selected for publication). Whether the ATP has refused to provide treatment for non-medical reasons is a question of fact for the ALJ. *Ruybal v. University of Colorado Health Sciences Center, supra.*

As found, Claimant failed to meet her burden to prove she sustained an exacerbation of her TMJ condition as a result of the September 10, 2017 industrial injury. Accordingly, the right of selection did not pass to Claimant and Dr. Day is not an authorized treating physician. Claimant sought treatment with Dr. Day for an unrelated condition.

MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Section 8-42-107(8)(b)(I), C.R.S. provides that an ATP shall make the initial determination of MMI. The ATP's opinion is binding, and the parties may not litigate the issue of MMI, unless the party disputing the ATP's determination of MMI obtains a DIME. § 8-42-107(8)(b), C.R.S.; *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2003),*Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Postlewait v. Midwest Barricade*, 905 P.2d 21 (Colo. App. 1995).

A DIME is not a prerequisite to an ALJ's resolution of certain factual disputes such as who is an ATP, whether an ATP has made a determination of MMI, or the resolution of an ATP's conflicting or ambiguous opinions concerning MMI. *Blue Mesa Forest v. Lopez*, 928 P.2d 831 (Colo. App. 1996), *Monfort Transp. v. Industrial Claim Appeals Office of State of Colo.*, 942 P.2d 1358 (Colo.App. 1997); *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2003). However, an ALJ lacks jurisdiction to resolve conflicts between multiple authorized treating physicians on the issue of MMI in the absence of a DIME. *Town of Ignacio v. Industrial Claim Appeals Office, supra*; *Bath v. Adams County*, WC No. 4-584-461 (ICAO August 27, 2004); *Maravi v. The Brown Schools, Inc.*, WC No. 4-522-504 (ICAO August 21, 2003).

In the case at bench, there is no dispute as to whether Dr. Murray is an ATP. Dr. Murray's May 21, 2018 report placing Claimant at MMI is unambiguous. Dr. Murray's report indicates she was aware of the recommendations of other physicians for treatment at that time and still chose to place Claimant at MMI for all body parts. Although Dr. Devanny and Dr. Simpson are recommending additional treatment to cure and relieve Claimant, the ALJ does not have jurisdiction to resolve the conflicting opinions of the ATPs on the issue of MMI in the absence of a DIME. Accordingly, Dr. Murray's determination that Claimant reached MMI on May 21, 2018 is determinative for purposes of the ALJ's order.

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Once an ATP makes a determination of MMI, the termination of medical care is triggered and the ALJ lacks jurisdiction to conduct a hearing concerning the accuracy of

the ATP's determination until a DIME is conducted. Section 8-42-107(8)(b)(III), C.R.S. 2006; *Story v. Industrial Claim Appeals Office, supra*; *Chapman v. American Medical Response*, WC No. 4-600-029 (ICAO September 15, 2006). Here, Dr. Murray, an ATP, placed Claimant at MMI. The finding of MMI by an ATP ended Claimant's entitlement to further treatment to cure and relieve the effects of her injury. See *Whiteside v. Smith*, 67 P.3d 1240, 1245 (Colo.2003) ("medical treatment automatically terminate[s] if the treating physician determines that the claimant has reached MMI").

As Claimant has been placed at MMI by Dr. Murray and no DIME has occurred, DIME, the ALJ does not have jurisdiction to order curative treatment in these circumstances. Even assuming, arguendo, ordering curative treatment was within the ALJ's jurisdiction, Claimant failed to prove by a preponderance of the evidence any additional curative treatment related to the September 10, 2017 industrial injury is reasonably necessary. As Claimant failed to prove she sustained a chest contusion or an exacerbation of her TMJ condition, further treatment for those conditions would not be related to the September 10, 2017 industrial injury. While Claimant met her burden in proving she sustained a compensable injury to her left wrist and left ankle, the preponderant evidence does not demonstrate the wrist surgery recommended by Dr. Devanny or the ankle surgery recommended by Dr. Simpson are related to the September 10, 2017 industrial injury and are reasonable and necessary to cure and relieve its effects.

Temporary Disability Benefits

To establish entitlement to temporary disability benefits, the claimant must prove that the industrial injury has caused a "disability," and that she has suffered a wage loss which, "to some degree," is the result of the industrial disability. Section 8-42-103(1), C.R.S.; *PDM Molding, Inc. v. Stanberg, 898 P.2d 542 (Colo. 1995)*. The term "disability," as used in workers' compensation cases, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Section 8-42-105(3), C.R.S. provides, in relevant part, that TTD benefits shall continue until the first occurrence of any one of the following: (a) the employee reaches maximum medical improvement; (b) the employee returns to regular or modified employment; or (c) the attending physician gives the claimant a written release to return to regular employment.

As found, Claimant proved by a preponderance of the evidence she is entitled to TPD from September 10, 2017 to April 19, 2018. While Claimant continued to work for Employer during such time period, she did not earn her full wages due to attending doctors' appointments during scheduled shifts. Also Claimant proved she is entitled to TTD from April 20, 2018 to May 21, 2018. The credible and persuasive evidence indicates Employer was no longer able to accommodate Claimant's work restrictions of no use of her left arm. As Dr. Murray placed Claimant at MMI on May 21, 2018, pursuant to Section 8-42-105(3), C.R.S., Claimant's benefits end as of that date.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury on September 10, 2017 limited to a left ankle sprain/strain and left wrist strain/sprain. Claimant did not suffer a compensable injury to her left chest or an exacerbation of her TMJ condition as a result of the September 10, 2017 industrial injury.

2. Dr. Day is not an ATP.

3. As ATP Dr. Murray placed Claimant at MMI as of May 21, 2018 and no DIME has occurred, the ALJ is bound by Dr. Murray's MMI determination of May 21, 2018.

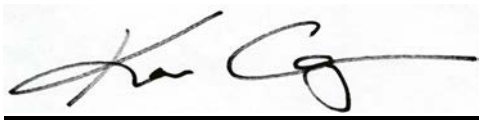
4. Claimant is not entitled to the left wrist surgery recommended by Dr. Devanny, the left ankle surgery recommended by Dr. Simpson, nor the TMJ surgery recommended by Dr. Day.

5. Claimant is entitled to TPD from September 10, 2017 to April 19, 2018 and TTD from April 20, 2018 to May 21, 2018.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 23, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

At the conclusion of the hearing, the ALJ took the matter under advisement. On October 25, 2018, the ALJ's Summary Order was mailed to the parties. On November 2, 2018, the self-represented Claimant mailed and filed a Request for Specific Findings of Fact and Conclusions of Law. Pursuant to the Claimant's Request, Full Findings of Fact, Conclusions of Law and Order are hereby issued.

ISSUES

The issues to be determined by this decision concern compensability of an alleged back injury of May 29, 2018, and medical benefits.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant alleges a work injury to her low back on May 29, 2018, at which time she was working for the Employer.

2. Medical records reveal that the Claimant has a long history of low back issues for which she received chiropractic and massage therapy:

- In a letter from her personal chiropractor, Moyer Total Wellness, Dr. Janea L. Rather, D.C., dated January 12, 2016, the Claimant was noted to have joint restrictions in the lumbar spine and sacroiliac joints, mild injury to her hips and low back, and had been diagnosed with mild lumbar joint dysfunction with myofascial pain syndrome of the low back musculature (Respondent's Exhibit B, pp. 10-12).
- On January 20, 2016, the Claimant reported trouble sitting and standing, which bothered her lower and upper back. (*See Id*. at p. 13).
- According to the letter authored by the Claimant's chiropractor, Dr. Randy Moyer, D.C., on August 20, 2018, the Claimant's treated for two motor vehicle accidents in 2015, and it lasted until April 2016 at which point the Claimant indicated that she was "pain free". (Respondent's Exhibit 9).

- Contrary to Chiropractic Dr. Moyer's opinion, medical records continue to show that the Claimant had low back complaints after April 2016. On July 19, 2016, she reported that her low back was "tight." (Respondent's Exhibit B, p. 17).
- On August 8, 2016, treatment the was focused on the Claimant's back, which was "tight," and it was noted that Claimant had just traveled. (*Id*. at p. 18).
- The Claimant reported low back pain on October 4, 2016 (*Id*. at p. 19).
- The Claimant reported her low back was "tight but better" and that she was going out of town on October 18, 2016 (*Id*. at p. 20).
- On March 31, 2017, the Claimant presented to her chiropractor for a "tune up". She denied any new injury or trauma since her last visit. At that time, the Claimant was assessed with "segmental and somatic dysfunction of lumbar region" and treatment was performed in her lumbar region (*Id*. at p. 22).
- The Claimant's massage therapist noted, "daily use of foam roller recommended for low back" for a tight back (*Id*. at p. 23).
- On May 5, 2017, the Claimant's massage therapist recommended another massage "needed in 3 weeks after long flight back home to Denver" (*Id*. at p. 24).
- The Claimant reported a "stiff and achy" low back on June 7, 2017. She was again assessed with "segmental and somatic dysfunction of lumbar region" by the chiropractor (*Id*. at p. 25).
- On July 5, 2017, the Claimant reported to her chiropractor that her low back was "doing 'ok, but needs a little tune up.'" She was once again assessed with "segmental and somatic dysfunction of lumbar region" (*Id*. at p. 27).
- On July 17, 2017, the Claimant's massage therapist noted "hypertension in area of concern with more noticeable HT in low back" (*Id*. at p. 29).
- On September 12, 2017, the Claimant reported "feeling tight in shoulders and lower back from traveling". Treatment was focused on her lower back (*Id*. at p. 31).
- On December 8, 2017, the Claimant reported that she felt "tight everywhere from sitting". She was once again assessed with segmental and somatic dysfunction of lumbar region". Chiropractic treatment was performed in the lumbar area (*Id*. at p. 34).

- On May 16, 2018, two weeks before the alleged work injury, the Claimant's massage therapist noted her "left low back still tight but improved since start of session". It was noted "another massage needed in 2-3 weeks" or "sooner if low back issue persists or worsens" (*Id*. at p. 37).

3. At hearing, the Claimant testified that she had just returned from a trip to the East Coast two days before.

4. According to the Claimant, her Employer was moving from one office building to another. Due to the move, employees, including the Claimant, were required to move their personal belongings to the new building.

5. The Claimant's first day in the new building was May 29, 2018. As she was lifting a box weighing approximately 4 lbs., containing her personal belongings, out of the trunk of her personal vehicle she felt a "tweak" in her low back (Respondent's Exhibit A, p. 1).

6. According to the Claimant, she weighed this same box of items and it weighed less than 4 lbs.

7. The Claimant reported the incident to her Employer and received a designated medical provider list on May 29, 2018.

8. The Claimant also testified that she scheduled an appointment to see her personal chiropractor the afternoon of May 29, 2018.

9. The Claimant further testified she was able to continue to work on May 29, 2018-- after the incident.

Medical

10. On May 30, 2018, the Claimant presented to the authorized treating provider (ATP), Midtown Occupational Health Services, for evaluation. The Claimant reported that she was moving offices and had to move some of her personal effects in boxes. She stated that she was moving one of the light boxes from her car to the new office when the alleged injury occurred. She was in a bent over position picking the box up when she felt pain in her lower back. The Claimant reported a history of scoliosis, but did not disclose her other low back issues (*See* Respondent's Exhibit E).

11. The Claimant was diagnosed with a lumbar strain and released to return to full duty work without restrictions (Respondent's Exhibit E, p. 62). Based on the Claimant's lengthy history of low back problems, the ALJ finds that the diagnosed lumber strain is attributable to the natural progression of her long-standing back problems; and, it did **not** amount to an acceleration or aggravation of her underlying back issues.

12. The Claimant returned to work and continued to work her normal job duties up through the date of hearing.

13. Lawrence Cedillo, D.O., saw the Claimant on May 30, 2018. He did not render an opinion concerning whether the May 29, 2018 incident aggravated or accelerated the Claimant's long-standing back problems.

14. The ALJ finds that the Claimant did not report her long-standing history of low back issues, for which she had been treating as recently as two weeks prior to the work incident, to either PAC (Certified Physician's Assistant) Kraus or Dr. Cedillo at Midtown.

Independent Medical Examination (IME) by Lawrence Lesnak, D.O.

15. Dr. Lesnak performed an IME of the Claimant on August 27, 2018 and issued a report. Dr. Lesnak also testified at the hearing and was accepted as a Level II Accredited physician, specializing in physical medicine and rehabilitation.

16. Dr. Lesnak reviewed the Claimant's medical records and performed a physical examination of the Claimant. He noted that the Claimant only reported a history of neck injury from prior motor vehicle accidents. He also noted that since May 2016, the Claimant had been receiving chiropractic treatments 1-3 times per month. He further noted that a medical report, dated May 17, 2018, indicated that the Claimant was going on vacation "tomorrow" and "moving offices – stressful transitions. Not focusing well. Not sleeping well" (Respondent's Exhibit A).

17. Dr. Lesnak testified that the Claimant's report to PAC Kraus on May 30, 2018 was consistent with her low back complaints, prior to the alleged work incident.

18. According to Dr. Lesnak, following the Claimant's May 30, 2018 evaluation with PAC Kraus, medical records indicate that her next treatment visit with anyone was not until June 26, 2018, at which point she saw her chiropractor at Moyer Total Wellness. Dr. Lesnak was of the opinion that this was more consistent with her "wellness" visits and treatment for an acute injury.

19. Dr. Lesnak was of the opinion that, while there may have been an incident, there was no evidence of any specific injury occurring on May 29, 2018. He further stated there was "no medical evidence to support that the patient had an actual injurious event occur on 05/29/18." He was of the opinion that without evidence of a specific injury related to work activities, no medical evaluations or treatments were reasonably necessary or causally related to the reported incident (Respondent's Exhibit A, p. 8).

20. The ALJ finds Dr. Lesnak's medical opinion that there was "no medical evidence to support that the patient had an actual injurious event occur on 05/29/18" to mean that the described May 29, 2018 incident of lifting a box weighing less than 4 lbs. was not sufficient to cause a compensable injury.

21. The ALJ credits Dr. Lesnak's opinion that the May 29, 2018 incident did not result in the need for medical treatment. The ALJ finds that the Claimant's symptoms and treatment following the May 29, 2018 incident were more likely the cause of the natural progression of the Claimant's long-standing pre-existing back issues.

22. Further, the ALJ finds the fact that the Claimant returned to her regular employment immediately following the incident, as such, she suffered no disability due to the May 29, 2018 incident.

Ultimate Findings

23. The ALJ finds the opinions of Dr. Lesnak credible and more persuasive than any medical opinion or lay testimony (The Claimant's testimony) to the contrary. As such, the ALJ finds that **no** compensable injury occurred as the result of the May 29, 2018 incident.

24. The Claimant's visit to Midtown on May 30, 201`8, was for the purpose of an evaluation not for medical treatment.

25. Between conflicting opinions and testimony, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Lesnak and to reject any opinions to the contrary.

26. The ALJ finds that the Claimant has failed to establish, by preponderant evidence that she sustained a compensable work-related injury on May 29, 2018.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within

the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Lesnak were credible and more persuasive than any medical opinions or lay testimony (The Claimant's testimony) to the contrary. As such, Dr. Lesnak's opinions support the proposition that **no** compensable injury occurred as the result of the May 29, 2018 incident.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions and testimony, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Lesnak and to reject any opinions to the contrary.

Compensability/Sufficiency

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, the light box lifting event of May 29, 2018 was neither disabling nor did it require medical treatment. As found, the Claimant's visit to Midtown on May 30, 201`8, was for the purpose of an evaluation not medical treatment.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain her burden on compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this 14th day of November 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant has overcome, by clear and convincing evidence, the DIME opinion of Dr. Douthit regarding Claimant's impairment rating.

II. If the DIME has been overcome, what is the correct impairment rating for Claimant's back injury?

III. What is Claimant's disfigurement award for the scar on his lower back due to his work-related back surgery?

PROCEDURAL ISSUES

Respondents sought an order to recover an overpayment from Claimant. However, at hearing the parties were unable to agree on the amount of the overpayment and the record was not fully developed regarding this issue. (Respondents did not think there was a dispute between the parties regarding the amount of the overpayment.) The ALJ would have allowed Respondents to take the post-hearing evidentiary deposition of the adjuster to assist in developing the record and resolving the matter. However, the parties agreed to confer and attempt to resolve the overpayment issue after the hearing. It appears the parties have not resolved the matter. Therefore, the overpayment issue will be reserved, without prejudice to either party, and any party may file an Application for Hearing to resolve any remaining overpayment matter.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

A. Claim history and Claimant's medical treatment:

1. On November 14, 2014, Claimant sustained a compensable injury while performing duties arising in the course and scope of his employment for Employer. Claimant was sitting in his car on a dirt road located on the Uintah reservation in eastern Utah when a vehicle came over the crest of the road at high speed and collided into Claimant's stationary vehicle.

2. Respondents admitted liability for the claim and starting providing Claimant medical and temporary disability benefits.

3. Claimant's authorized treating provider (ATP) was Alisa Koval, M.D. This physician managed Claimant's care throughout his case.

4. Lief Anders Sorensen, M.D. was Claimant's pain management physician. He performed bilateral L5-S1 transforaminal epidural steroid injections (March 30, 2015), a lumbar intralaminar L5-S1 epidural steroid injection (April 22, 2015), bilateral L4-5 and L5-S1 facet injections (May 15, 2015) and bilateral L3, L4, and L5 medial branch injections (July 29, 2015). (Claimant's Ex. 3).

5. Claimant eventually underwent spinal surgery on January 17, 2017. His surgeon was Bryan A. Castro, M.D., who performed a partial laminectomy (L2, L3, L4, and L5), facetectomy with foraminotomies bilaterally (L2-3, L3-4, L4-5), lumber decompressions (L2-3, L3-4, L4-5), and decompression of nerve roots (L2, L3, L4, and L5). (Resp. Ex. J)

6. On August 22, 2017, Dr. Koval placed claimant at Maximum Medical Improvement and returned him to full duty. (Resp. Ex. L)

7. On October 16, 2017, Dr. Koval issued her report regarding Claimant's impairment rating. As set forth in her report, she provided Claimant a 27% whole person impairment rating.

8. On October 17, 2017, and before receiving Claimant's impairment rating from Dr. Koval, Respondents filed a General Admission of Liability, admitting to medical benefits and temporary total disability (TTD) benefits. Respondents admitted for TTD from June 4, 2015, through August 22, 2017, at a weekly rate of $881.65, and for a total of $102,145.45. Respondents also asserted an overpayment of TTD in the amount of $9,575.22 and indicated they would credit the overpayment against future permanent partial disability benefits. They also indicated that they were waiting to receive Claimant's impairment rating from Dr. Koval. (Respondents Ex. A)

9. Upon receipt of Claimant's impairment rating from Dr. Koval, Respondents requested a Division Independent Medical Examination (DIME), which was ultimately performed by Dr. John Douthit.

10. On March 12, 2018, Dr. Douthit performed the DIME and provided Claimant a 24% whole person impairment rating. (Resp. Ex. N.)

11. On March 27, 2018, Respondents filed a Final Admission of Liability ("FAL") admitting for the findings of the DIME which included the 24% impairment rating and a finding of MMI on August 22, 2017. Respondents also admitted for $102,145.45 in TTD benefits from June 4, 2015 through August 22, 2017. Respondents did not admit for any permanent partial disability ("PPD") benefits because they asserted Claimant exceeded the combined cap for PPD and TTD benefits for the 2014 date of injury. Respondents also asserted an overpayment in the amount of $9,572.22 and indicated it would be credited from future permanent partial disability benefits. (Resp. Ex. C, Bates Number 05)

12. On April 19, 2018, Claimant filed an Application for Hearing to overcome the DIME opinion regarding Claimant's impairment rating and for disfigurement benefits.

13. On May 18, 2018, Respondents filed a Response to Application for Hearing. As set forth in their Response, Respondents sought to recoup the asserted overpayment of $9,575.22 in TTD benefits from Claimant.

B. The ATP's impairment rating:

14. After a period of post-surgery therapy and recovery, Dr. Koval placed Claimant at MMI on August 22, 2017. She assigned a 27% whole person impairment rating on October 16, 2017. Dr. Koval's lumbar range of motion measurements resulted in the following impairment: lumbar flexion- 7%, lumbar extension- 5%, lumbar right lateral flexion- 4%, and lumbar left lateral flexion of 3%, which combined for 19% whole person impairment. (Claimant's Ex. 4.)

15. Using the AMA Guides Table 53 for Specific Disorder of the Spine, Dr. Koval assigned a rating of 10% whole person under section II(E). The two figures combined to 27% whole person impairment. (Claimant's Ex. 4.)

C. The DIME impairment rating

16. Claimant attended his DIME examination by John D. Douthit, M.D. on March 12, 2018. Dr. Douthit's lumbar range of motion rating broke down as follows: lumbar flexion- 4%, lumbar extension- 5%, lumbar right lateral flexion- 3%, and lumbar left lateral flexion of 3%, which combined for impairment due to lumbar range of motion of 15% whole person. (Resp. Ex. N.)

17. Dr. Douthit's measurements in all categories of lumbar range of motion show the same degree of motion repeated and unchanged throughout each maneuver, demonstrating none of the variability anticipated by the AMA Guides and experienced by practitioners conducting a thorough and complete examination. (Respondents' Ex. N; Hughes Dep. pg. 21, 35.)

18. Dr. Douthit's lumbar range of motion measurements were recorded on a Figure 75 or 78 from a different version of the AMA Guides, rather than on Figure 83 from the required AMA Guides, 3rd Edition (revised). (Resp. Ex. N, Douthit Dep. Pg. 33-34.)

19. According to Dr. Douthit's report, and testimony, using Table 53, he assigned a value for specific disorders of the spine of 11% whole person impairment. When combined, these ratings resulted in a 24% whole person impairment rating. (Resp. Ex. N., Douthit dep. pg. 36.)

The impairment rating by Dr. Hughes

20. On May 7, 2018, Claimant was seen by John S. Hughes, M.D., for purposes of rendering and independent whole person impairment rating under the AMA Guides. (Claimant's Ex. 5.)

21. Dr. Hughes's lumbar range of motion rating broke down as follows: lumbar flexion- 7%, lumbar extension- 5%, lumbar right lateral flexion- 4%, and lumbar left lateral flexion of 4%. When combined, the whole person impairment due to lumbar range of motion was found to be 20%, properly using Figure 83 of the AMA guides. (Claimant's Ex. 5.)

22. As to specific disorders of the spine, Dr. Hughes assigned a 15% whole person impairment pursuant to Table 53 IV(B) & (C). (Claimant's Ex. 5.)

23. Upon review of Dr. Castro's operative report and his own clinical examination, Dr. Hughes also assigned a 2% whole person impairment for residual radiculopathy related to Claimant's spinal stenosis. All these values were combined to a total impairment rating of 33% whole person, as properly recorded on Figure 84 of the AMA Guides, 3rd Edition (revised). (Claimant's Ex. 5; Hughes Dep., pg. 8.)

D. Claimant's testimony at hearing

24. At hearing, Claimant testified that the DIME examination seemed cursory and extremely short. According to Claimant, the DIME examiner did not use any instrumentation (neither inclinometer nor goniometer) to determine his lumbar ranges of motion, each motion was performed one time only, and he was never asked to lay on the exam table to perform supine straight leg raises.

25. Claimant testified that Dr. Douthit said he had not yet reviewed the medical file. Claimant testified to having an uneasy feeling about the examination, particularly when Dr. Douthit offered his unsolicited opinion that the Colorado's Workers' Compensation system was a sham and was "overly generous" to Claimants.

26. Claimant testified that Dr. Douthit packed his briefcase at the end of the examination and walked out of the office simultaneously. Claimant testified that it was his impression that Dr. Douthit was rushing through the examination.

Dr. Douthit's post-hearing testimony

27. The DIME examiner was unable to explain satisfactorily how he employed AMA Guides Table 53 and made his medical judgment to arrive at 11% impairment for specific disorders of the lumbar spine.

28. Dr. Douthit was not clear when asked to explain how he arrived at the impairment rating he provided Claimant for specific disorders of the spine. When asked about his Table 53 rating, he stated:

> I think I chose IV(C) which was 8 percent, and then three levels was only 11 percent.

(Douthit Dep., pg. 8, ln. 4-6).

29. Moments later Dr. Douthit stated:

> I selected IV(C), which was multiple levels operated with residual medical documented – no, that's not correct. That adding a percentage. It says single level operated without residual signs and symptoms, and I chose II(A) as the – as my primary one and then I added 3 percent – or 2 percent would be 11 percent

(Douthit Dep., pg. 9, ln. 6-16).

30. But that is not what Dr. Douthit's report says either. The DIME examiner continued to be unable to clearly articulate how he calculated that portion of Claimant's impairment rating.

31. According to Dr. Douthit's report, he rated Claimant using Table 53 IV(A) plus 2 points under IV(C) to total 11% whole person impairment, but even that is not clear when examining his report against his testimony. (Respondents' Ex. N)

32. Dr. Douthit's personal belief that range of motion testing should not be used in determining impairment, which is required by the AMA Guides, 3rd Edition, Revised, is clear. He testified:

> everybody knows it's a sham……So for us to sit here and discuss the validity of this is a little absurd.

(Douthit Dep., pg. 16, ln. 10-20).

33. Dr. Douthit disputes the validity of using range of motion measurements, as required by Colorado's version of the AMA Guides, to conduct an impairment rating. He refers to a later version of the AMA Guides (not proper for use in Colorado) to discount the use of lumbar range of motion testing in determining impairment:

> Range of motion is no longer used as the basis for defining impairment since current evidence does not support this is a reliable indicator of specific pathology or permanent functional status.

(Douthit Dep., pg. 15, ln. 21-25).

34. In the current case, it is not clear whether the DIME examiner conducted lumbar range of motion testing in the manner required by the AMA Guides. When asked about why a particular range of motion measurement documented on his range of motion worksheet was different than the range of motion number used in his final report, Dr. Douthit could not determine why the numbers did not match and he could not determine which number was based on an actual measurement and which number was an estimate. Surprisingly, he concluded the number he ultimately used was an estimate. His testimony regarding this matter is as follows:

> A- One might be these are inclinometer measurements, the other one was an estimation.

Q- Which one is the estimation, Doctor?

A- Well, the one in the report probably.

(Douthit Dep., pg. 31, ln. 6-10).

35. The range of motion measurements listed in the DIME report show no variability. The AMA Guides require range of motion measurement to be taken at least three times, and up to six, and they must be within a certain range of one another to be considered valid. In this case, Dr. Douthit documented range of motion measurements which have no variability. Dr. Douthit was asked about the lack of any variability:

Q- So he hit the exact same number six straight times?

A - The way I measured it"

(Douthit Deposition pg.31, ln 24 – pg.32, ln. 1).

Q- So this man was able to duplicate these six different clinical exams three times each and hit exactly the same number each and every time?

A - I measured them that way.

(Douthit Dep. pg. 32, ln. 21-25).

The DIME examiner's explanation regarding the uniform range of motion figures measurements set forth in his report, which provides the basis for the impairment associated with Claimant's decreased range of motion, appears evasive and is not found to be credible.

36. When Dr. Douthit was asked his opinion about using the version of the AMA Guides which are currently being used in Colorado, he continued to articulate his disagreement with using them to determine impairment as set forth in the following exchange:

Q - You don't seem very attached to the third edition revised. Can I say that? Would you agree?

A - That's a real news flash.

(Douthit Dep., pg. 34, ln. 12-15).

Q - We've been using Figure 83 from the third edition revised since 1990?

A - What other backward state is there that uses AMA Guide No. 3?"

(Douthit Dep., pg. 35, ln. 4-11).

37. Dr. Douthit also indicated that getting valid or accurate range of motion measurements is difficult for a number of reasons, many of which permeate most cases such as interrater variability. However, he also indicated that getting valid range of motion measurements in this case is difficult due to Claimant's morbid obesity. (Douthit Dep., pg. 16.)

38. The ALJ finds that the DIME physician does not believe in using the range of motion methods prescribed in Colorado's version of the AMA Guides for determining impairment and that it is the DIME physician's opinion that it is difficult to obtain valid range of motion measurements which reflect work related impairment in this case due to Claimant's obesity.

39. After being examined by both attorneys during his deposition, and after reviewing various records, Respondents' counsel asked Dr. Douthit whether he was still of the opinion that Claimant had a 24% whole person impairment rating. Dr. Douthit answered: "I think that is fair." (Douthit Dep., pg. 52.)

40. The ALJ finds that based on the testimony of Dr. Douthit, he provided an impairment rating that he thought was "fair" instead of providing an impairment rating pursuant to directives of the AMA Guides.

41. The ALJ finds that based on his biases and personal opinions, Dr. Douthit strayed from applying the proper methodology set forth by the AMA Guides in evaluating and rendering an impairment rating in this case.

Dr. Hughes' post-hearing testimony

42. Dr. Hughes testified he became Level 2 accredited in 1992 and has been so accredited ever since. He stated that he took additional time during Claimant's impairment rating examination because he was using that exam to instruct an occupational medicine resident fellow from the University of Colorado. (Hughes Dep. pg. 6, ln. 2-7).

43. Dr Hughes stressed the importance of reviewing the surgeon's report when rendering an impairment rating. According to Dr. Hughes, the surgeon's diagnosis is best because he actually sees the spine through the surgical incision wound and is in the best position to determine whether there is lumbar spinal stenosis. (Hughes Dep. pg. 8, ln. 15-20).

44. Dr. Hughes explained that after close review of Dr. Castro's operative report (Respondent's Ex. J) the four levels of laminectomy performed by Dr. Castro would constitute a primary level and three additional levels under proper implementation of Table 53 of the AMA Guides. (Hughes Dep. pg. 10, ln. 4-7).

45. Accordingly, Dr. Hughes assigned 15% whole person impairment according to Table 53 IV(B) & (C) for specific disorders of the spine. (Hughes Dep. pg. 10, ln. 20, pg. 11, ln 5.)

46. Dr. Hughes next described his testing of Claimant's lumbar range of motion. He explained he discontinued testing his testing of Claimant's lumbar flexion because his measured values were too variable, and Claimant was "kind of in distress." (Hughes Dep. pg. 15, ln. 9-15).

47. Dr. Hughes opted to use Dr. Koval's lumbar extension measurements because they were in general agreement with his own, which he states is recommended by the Division's Impairment Rating Tips. (Hughes Dep. pg. 16, ln. 6-21).

48. According to Dr. Hughes, he stated to himself “I'll go ahead and proceed with three measurements on extension, right lateral flexion, and left lateral flexion.” (Hughes Dep. pg. 16, ln. 15-17).

49. Doctor Hughes felt Claimant was “pushing hard” to give maximum effort during the testing. (Hughes Dep. pg. 18, ln. 1-3).

50. As to variability, Dr. Hughes noted that his repetitions of the measurements rendered “some intra-observation variability, as there almost always is.” (Hughes Dep. pg. 20, ln. 1-2).

51. According to Dr. Hughes it is almost impossible for an exam subject to be measured multiple times without variability, unless the examiner was really measuring only a single occasion or rounding his numbers. (Hughes Dep. pg. 20, ln. 16-21).

52. With regard assigning impairment for lower extremity to radiculopathy, Dr. Hughes noted the Dr. Castro (the surgeon) felt there was radiculopathy, both clinically and intraoperatively. (Hughes Dep. pg. 22, ln. 24, pg. 23, ln. 2).

53. Dr. Hughes also found radiculopathy manifested as numbness, pain, and muscular cramping in Claimant’s right lower leg in an L5 distribution. Thus, Dr. Hughes assigned 2% whole person impairment related to residual radiculopathy. (Hughes Dep. pg. 23, ln. 2-20) (Claimant’s Ex. 5)

54. Looking at the totality of the evidence, the ALJ concludes that the lumbar range of motion testing by the DIME examiner was not correctly done and did not render credible or reliable findings.

55. The ALJ concludes that the DIME examiner was not able to credibly explain how he made his determination and calculated an impairment rating under the AMA Guides regarding Claimant’s specific disorders of the lumbar spine.

56. Finally, the ALJ finds that the DIME examiner’s expressed disapproval for the American Medical Association Guides to the Evaluation of Permanent Impairment, 3rd Edition (revised), which must be used in Colorado, combined with his overall testimony and evasiveness in testifying about the range of motion measurements documented in his report, and attachments, renders his conclusions regarding Claimant’s impairment rating to not be credible or reliable.

57. In contrast, the ALJ finds that Dr. Hughes conducted a knowledgeable and careful impairment rating of the Claimant, adhering closely to the AMA Guides.

58. The ALJ credits the clarity of Dr. Hughes’s report and testimony which demonstrates his review of Claimant’s medical records, his proper use of applicable forms for reporting his results, and his command of the methodology to be employed by Colorado physicians rendering an impairment rating under the AMA Guides.

59. In further support for finding against the DIME report, the ALJ takes specific note of the consistency of the whole person impairment ratings done by Dr. Koval and Dr. Hughes.

60. Claimant has a visible disfigurement to the body consisting of a surgical scar on his low back. The scar is approximately 4 ½ inches long and approximately ¼ inch wide.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met their burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Claimant has overcome, by clear and convincing evidence, the DIME opinion of Dr. Douthit regarding Claimant's impairment rating.

A DIME physician must apply the AMA Guides when determining Claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning Claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that

quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

The question of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, 17 P.3d 202 (Colo. App. 2000).* In *Wackenhut*, the court noted that under the AMA Guides the "evaluation or rating of impairment is an assessment of data collected during a clinical evaluation and the comparison of those data to the criteria contained in the Guides." Consistent with this concept the Industrial Claim Appeals Office has upheld a DIME physician's impairment rating that excluded "valid" range of motion deficits from an impairment rating based on the determination that the range of motion deficits did not correlate with clinical observations and data. *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. August 2, 2005); *Garcia v. Merry Maids,* W.C. No. 4-493-324 (I.C.A.O. August 12, 2002).

Ultimately, the questions of whether the DIME physician properly applied the AMA Guides, and whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. Not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Moreover, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

Insofar as the ALJ finds that the DIME physician made one error with respect to their opinions regarding impairment, The ALJ is not required to dissect the overall opinion into its numerous component parts and determine whether each part or sub-part has been overcome by clear and convincing evidence. *Deleon v. Whole Foods Market, Inc.*, W.C. No. 4-600-477 (November 16, 2006), *citing Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (September 5, 2001).

Considering all of the evidence, the ALJ concludes Claimant has overcome the opinions of the DIME physician Dr. Douthit by clear and convincing evidence. It is the duty of the DIME examiner to evaluate all components of the Claimant's condition and determine the cause of each of those conditions as well as any impairment created by them pursuant to the AMA Guides. Dr. Douthit failed to do so in this case.

Dr. Douthit's report is unclear, contains typographical errors, and some of his findings are expressed on obsolete forms. Dr. Douthit also expressed his personal disapproval for the procedures and methodology to be used when rendering an

impairment rating based on decreased range of motion which is required by the version of the AMA Guides currently used in Colorado. His DIME examination and final conclusions appear to tainted with his bias against using range of motion measurements in determining an impairment rating in this case. As found, his repetition of claimed measurements in Claimant's lumbar range of motion without any evidence of expected human variability is not found to be reliable or credible. Moreover, his testimony regarding the range of motion measurements documented in his report was found to be evasive and not credible or reliable. In addition, he was unable to satisfactorily explain his findings and rating for the specific disorders of the lumbar spine.

The ALJ concludes that it is highly probable Dr. Douthit failed to follow the AMA Guides when rating Claimant's impairment. Therefore, the ALJ concludes Claimant has overcome the rating assigned by Dr. Douthit by clear and convincing evidence.

II. If the DIME has been overcome, what is the correct impairment rating for Claimant's back injury?

Where the ALJ determines that any part of the DIME physician's rating has been overcome, the question of the claimant's correct medical impairment rating then becomes a question of fact for the ALJ. *Garlets v. Memorial Hospital*, W.C. No. 4-336-566 (September 5, 2001). Thus, once the ALJ determines that the DIME's rating has been overcome in any respect, the ALJ is free to calculate Claimant's impairment rating based upon the preponderance of the evidence. *See Lungu v. North Residence Inn*, W.C. No. 4-561-848 (March 19, 2004), and *Deleon v. Whole Foods Market, Inc.,* W.C. No. 4-600-477 (ICAO, November 16, 2006). The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols.

Dr. Hughes conducted a knowledgeable and careful impairment rating of the Claimant, adhering closely to the AMA Guides. The ALJ credits the clarity of Dr. Hughes's report, his review of Claimant's medical records, his proper use of applicable forms for reporting his results, and his command of the methodology to be employed by Colorado physicians rendering an impairment rating under the AMA Guides as was also demonstrated during his deposition testimony. Dr. Hughes convincingly and credibly set forth the basis for each and every component of the 33% impairment rating he provided Claimant.

The ALJ concludes Claimant overcame the rating assigned by Dr. Douthit by clear and convincing evidence. Claimant then established by a preponderance of the evidence that he suffered a 33% whole person impairment due to his work injury pursuant to the AMA Guides as determined by Dr. Hughes.

III. What is claimant's disfigurement award for the scar on his lower back due to his work-related back surgery?

As found, Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional

compensation. Section 8-42-108 (1), C.R.S. The Claimant has a scar on his low back which is approximately 4 ½ inches long and ¼ inch wide. The ALJ concludes that Claimant is entitled to $1,000 for his scar.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay Claimant PPD benefits based upon a 33% whole person impairment rating.

2. Respondents shall pay Claimant $1,000 in disfigurement benefits due to the scar on his low back.

3. Any and all issues regarding the overpayment asserted by Respondents are reserved to the parties for future determination without prejudice to either party.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: October 8, 2018

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by clear and convincing evidence that she has overcome the opinion of Division Independent Medical Examiner (DIME) Dr. L. Barton Goldman regarding maximum medical improvement (MMI) for injuries sustained as a result of her May 5, 2012, work injury.

2. Whether Claimant proved by a preponderance of the evidence that she is entitled to a disfigurement award.

PRELIMINARY MATTERS

Respondents' January 18, 2018, unopposed motion to hold the issue of permanent total disability in abeyance was granted.

FINDINGS OF FACT

1. On May 5, 2012, Claimant was employed by Employer when she was lifting a 12 X 12 box of tiles from a cart to a shelf. Upon lifting the box of tiles, Claimant heard a pop in her left shoulder and felt neck stiffness that resulted in pain. In May 2012, Claimant was a 21 year old female who resided in Roggen, CO. At the time of hearing in this matter, April 24, 2018, Claimant was 27 years old.

2. Respondents filed a General Admission of Liability on August 31, 2012. And, on December 6, 2017, Respondents filed a Final Admission of Liability admitting liability for an 11% whole person impairment pursuant to the DIME report of Dr. Goldman dated September 21, 2017. Dr. Goldman determined that Claimant was at MMI on September 21, 2017.

3. On May 5, 2012, Claimant treated with Dr. Bethany Wallace, D.O. Claimant reported the mechanism of injury and Dr. Wallace diagnosed Claimant with a torn trapezius, impingement syndrome of the left shoulder and left arm numbness due to myofascial tightness in the trapezius scalenes and scapular musculature. Claimant also treated with Dr. Alberto Denegri, M.D on May 7, 2012. Claimant was diagnosed with shoulder bursitis/tendonitis of the left shoulder.

4. On May 8, 2012, Claimant presented to Rocky Mountain Urgent Care. Claimant was referred to an orthopedist for evaluation of the left shoulder. Nevertheless, Claimant continued her treatment at Rocky Mountain Urgent Care with Dr. Bethany Wallace.

5. On May 16, 2012, Claimant was seen by Mountain View Orthopedics, Dr. Daniel Hamman. An MRI of Claimant's left shoulder was unremarkable. Claimant was referred to Dr. Andrew Smolenski for evaluation of Claimant's complaints of neck pain.

6. On August 16, 2012, Claimant was next seen by Dr. Smolenski. Dr. Smolenski referred Claimant for an MRI of the cervical spine with the promise of a recheck after the MRI results returned.

7. On November 26, 2012, Claimant treated with Dr. Wallace who noted continued neck and shoulder blade pain, which kept Claimant from sleeping. Claimant's main pain was at the base of the neck and top of the shoulder. Dr. Wallace made findings consistent with thorarcic outlet syndrome and recommended that Claimant be seen by the appropriate specialist.

8. On December 19, 2012, Claimant attended an Independent Medical Examination (IME) with Dr. Allison Fall requested by Respondents. Dr. Fall opined that Claimant was suffering from left upper quadrant strain with myofascial pain and dysfunction. Dr. Fall noted a prior history of similar symptoms, which had previously resolved in 2007, and subjective complaints outweighed by objective findings. Dr. Fall recommended pursuing an MRI of the cervical spine. Dr. Fall further opined that Claimant's injury was a nonsurgical problem.

9. On December 21, 2012, Claimant presented for an appointment with Dr. Wallace because of a sudden onset of pain in the left arm, numbness, tightness in the chest and difficulty breathing during a dry needling therapy session. Dr. Wallace noted anterior chest wall pain, difficulty catching breathing since the dry needling incident. Dr. Walllace's assessment was a syncopal episode secondary to stimulation during dry needling, left shoulder and trapezius strain, myofascial thoracic outlet syndrome and myofascial pain in the upper right quadrant. Due to Claimant's ongoing complaints, Claimant was referred to Dr. Anderson-Oeser for EMG testing of the left upper extremity and Dr. Stephen Annest for an evaluation of thoracic outlet syndrome.

10. Claimant presented to Dr. Stephen Annest on January 21, 2013. Dr. Annest diagnosed Claimant with left neck, shoulder and arm pain, neck pain, and upper and lower limb pain. Dr. Annest's assessment wasthat Claimant had physical findings consistent with entrapment at left brachial plexus. Claimant was to attend a follow-up appointment after undergoing an EMG and nerve blocks.

11. On February 11, 2013, Dr. Bennet Mechanic, M.D. performed an EMG and Nerve Conduction Study, which revealed a moderately advanced left distal median neuropathy consistent with clinical correlation for a fairly clear carpal tunnel syndrome. Additionally, Dr. Mechanic noted Claimant had proximal pathology over the lower brachial plexus, and the profile of the study might suggest a more distal plexopathy such as pectoralis minor syndrome.

12. On April 2, 2013, Claimant returned to Dr. Annest. Dr. Annest indicated that Claimant's MRI of the cervical spine revealed "no discogenic or spinal canal compression of nerves. She [Claimant] has no foraminal disease. She has abnormal MAC on left with normal C8 and both pec and scalene blocks gave significant relief of [symptoms] for a

short time." Claimant wanted to proceed with surgery. Claimant was advised of risks associated with surgery including damage to the phrenic nerves.

13. On April 4, 2013, Claimant underwent surgery to repair her brachial plexus entrapment with chronic left extremity pain. The surgery was performed by Dr. Annest and Dr. Richard J. Sanders. Claimant underwent a transaxillary pectoralis minor tenotomy, exploration and release of brachial plexus chest wall, transaxial first rib resection, neurolysis of C8-T1 nerve roots, neurolysis of lower trunk brachial plexus, dissection of anterior and middle scalene muscles. No complications occurred.

14. On May 7, 2013, Claimant returned to Dr. Annest reporting pain in the chest and axilla. The doctor assessed a possible resolving hematoma in the left anterior axilla below the incision.

15. In May 28, 2013, Claimant returned to Dr. Annest complaining of neck and arm pains. Claimant's incision sight was irritated without apparent infection.

16. On June 12, 2013, Dr. Wallace noted a diagnoses of left Thoracic Outlet Syndrome (TOS) with paresthesia of the left arm on Claimant's report.

17. On July 9, 2013, Dr. Annest noted that Claimant was a 22 year old female post April 4, 2013, surgery LT TAFRR with pec minor for clear findings of brachial plexus entrapment secondary to injury. After initial good response with improvement, Claimant had redeveloped pain and difficulty using the left arm. Claimant had been doing physical therapy but stopped in June because of recurrence of symptoms. Dr. Annest noted recurrent brachial plexus entrapment due to scarring. Dr. Annest recommended surgery, however, he indicated that the risk of nerve injury was increased because her first surgery occurred a few months earlier.

18. On August 9, 2013, Dr. Annest examined Claimant and diagnosed a recurrent brachial plexus entrapment due to a scar recurrence from her previous surgery. Claimant was experiencing pain in the left shoulder. Claimant's pain interferes with her activities and sleep.

19. Claimant started care with Dr. Anderson-Oeser on January 2, 2014. Dr. Anderson-Oeser noted that Claimant underwent a course of conservative treatment; therapy, surgery, and nerve blocks.

20. On March 19, 2014, Claimant returned to Dr. Annest. The doctor noted Claimant had left sided neck, shoulder and arm pain. The doctor noted scar tissue in the SC fossa and a recurrence of brachial plexus entrapment due to scar and intractable (sic). Dr. Annest informed Claimant that her continued symptoms would unlikely resolve without an additional surgery. Claimant opted to proceed with the second surgery.

21. On April 30, 2015, Claimant underwent a second surgery to repair the recurrent brachial plexus entrapment. The doctor performed left transaxillary pectoraliis major exploration

with neurolysis of brachial plexus and chest wall, supraclavicular exploration of brachial plexus with neurolysis of C5, C6, C7, C8 and T1, long thorarcic nerve phrenic nerve, neurolysis of upper middle lower trunk of entrapped scarred brachial plexus, arterial repair intraoperative arterial injury with bovine pericardial patch. During the axilla myofascial entrapment, which apparently was extensive, Dr. Annest removed in SC fossa severe muscular and scare entrapment of entire plexus 2 long thoracic nerves seen and dissected free, large phrenic nerve had to be mobilized in order to resect scarred anterior plexus. During the muscular excision, Claimant's subclavian artery was injured and repaired intraoperatively.

22. On May 18, 2015, Claimant returned to Dr. Annest. Claimant was instructed to continue treatment with a course of physical therapy.

23. On August 11, 2015, Dr. Annest noted that Claimant complained of neck, shoulder and arm pain with nerve irritation of brachial plexus. Claimant showed some weakness of grip and limitation in her range of motion.

24. Claimant attended a follow-up appointment with Dr. Annest on September 22, 2015. Claimant failed to respond to physical therapy. Dr. Annest suspected additional scar tissue from the April 30, 2015, surgery. Dr. Annest opined Claimant was a candidate "for a Latissimus flap surgery."

25. On October 4, 2015, a 25 year old Claimant was seen by Drs. Josianna V. Schwan and Rachel J. Groff. The October 4, 2015, medical report reflected that Claimant was seen for a history of TOS status postsurgical decompression with pain and weakness in the left arm. No evidence of acute DVT was noted in the left upper extremity, slow flow in the jugular vein and short segment focal wall thickening mid basilica vein suggestive of an old clot.

26. On October 6, 2015, Claimant underwent an injection for pain in Claimant's left upper extremity.

27. On October 10, 2015, Dr. Annest performed a third surgery to repair Claimant's recurrent brachial plexus entrapment due to scarring. Pre-operatively, Dr. Annest noted recurrent brachial plexus entrapment with intense left upper extremity, neck, shoulder and arm pain. This surgery resulted in injury to the phrenic nerve which required repair with microscope.

28. On October 27, 2015, at a postoperative appointment, Dr. Annest instructed Claimant to start physical therapy. Dr. Annest diagnosed brachial plexus disorder and phrenic nerve palsy. Phrenic nerve palsy is typically observed when a claimant reports experiencing difficulty breathing and shortness of breath. Dr. Fall commented during testimony that the partial severing of the phrenic nerve is not an insignificant matter, since the phrenic nerve controls the diaphragm.

29. After Claimant's third surgery, she started to experience chest pain at night. The first occasion Claimant experienced tachycardia was when she awoke in the recovery room after her second TOS surgery. Shortly after that, she experienced shortness of breath when she undertook mild activity. Claimant credibly testified that her chest pain was accompanied by heart palpitations and shortness of breath.

30. On December 8, 2015, Claimant was seen by Dr. Annest for TOS and complaints of crackling noises.

31. On January 11, 2016, Dr. Annest saw Claimant for complaints of chest pain at night.

32. On March 1, 2016, Claimant complained to Dr. Annest of muscle spasms in the left neck, headaches and tachycardia. Since Claimant's last appointment, Dr. Annest noted that Claimant had continuous headaches that were not eased through massage. Claimant was experiencing intermittent twitching and spasms in the neck with pain shooting down the arm. Claimant's arm was weak and Claimant had difficulty sleeping. Dr. Annest assessed Claimant with phrenic nerve palsy, stricture of artery, chest wall pain and shoulder joint pain and limb pain. Claimant persisted with intermittent tachycardia and palpitations.

33. On May 3, 2016, Claimant returned to Dr. Annest reporting decreased range of motion and strength in the left upper extremity and neck. Claimant also reported that she was being evaluated for arrhythmias. Dr. Annest recommended additional physical therapy.

34. Claimant returned to Dr. Annest on July 19, 2016, when Claimant had left arm, left shoulder, limb and upper back pain. Claimant was experiencing palpitation. Dr. Annest opined Claimant's arrhythmia was unrelated, her symptoms were related to her scarred brachial plexus and there was no surgical solution to Claimant's symptoms. Claimant reported she was going to see a cardiologist on July 26, 2016.

35. On July 26, 2016, Claimant presented to Andrew Cohen, M.D. for evaluation of her arrhythmias. Claimant reported palpitations and shortness of breath with activity. It was noted that Claimant wore a Holter monitor. The Holter monitor revealed sinus tachycardia. Dr. Cohen noted Claimant's symptom diary did not coincide with her reports of arrhythmias. Dr. Cohen did not note arrhythmia and the doctor tried to reassure Claimant.

36. On September 15, 2016, Claimant attended another IME with Dr. Fall. Dr. Fall opined Claimant was likely at MMI after the completion of physical therapy. Dr. Fall further opined that she agreed with Dr. Annest's opinion that Claimant's cardiac arrhythmia was not work related.

37. On September 22, 2016, Claimant met with Dr. Anderson-Oeser. Dr. Anderson-Oeser opined that Claimant would likely be at MMI within 4-6 weeks pending any further treatment recommendations.

38. On October 10, 2016, Claimant treated with Dr. Annest who made the assessment that Claimant's pulmonary and muscular-skeletal complaints are related to the surgical intervention involving the Claimant's injury to the phrenic nerve. In Dr. Annest's October 10, 2016, report, the doctor acknowledges that Dr. Fall has arrived at a contrary conclusion in her IME reports.

39. On October 20, 2016, Claimant returned to Dr. Anderson-Oeser. Claimant was referred for a QSART test due to Claimant's symptomology and potential for Chronic Regional Pain Syndrome (CRPS).

40. On December 6, 2016, Claimant was seen by a pulmonologist, Dr. Jeffrey S. Schwartz. Dr. Schwartz's assessment was that Claimant's complaints of shortness of breath are related to the left phrenic nerve dysfunction. Dr. Schwartz wanted another respiratory evaluation, with a chest x-ray and spirometry. The doctor noted that additional testing will require Insurer's approval.

41. On December 19, 2016, Claimant underwent another IME with Dr. Allison Fall. Dr. Fall noted left upper quadrant strain with myofascial pain and dysfunction; and prior history of similar symptoms resolved. Dr. Fall agreed with Dr. Smolenski that the risks of a subacromial injection were low and, if it would decrease pain, would be reasonable prior to resuming physical therapy, which would be needed for posture, stretching and strength. Dr. Fall also recommended electrodiagnostic evaluation, if parethesias persisted. Dr. Fall opined that there were likely ongoing psychological issues.

42. On February 13, 2017, Dr. Annest noted that Claimant's complaints of numbness and tingling in the left neck to fingers was worsening over the previous three months. Claimant had left chest wall and left sided pain. Claimant's left ulnar and radial fingers would alternate getting hot and cold.

43. On March 10, 2017, Claimant returned to the pulmonologist, Dr. Schwarz. Claimant was described as stable, yet she continued to have shortness of breath. Dr. Schwarz remained suspicious that Claimant left hemidiaphragm was paralyzed or paretic. The doctor indicated that Claimant still needed a spirometry test, but the doctor would conduct a "sniff test."

44. On April 12, 2017, Claimant attended a third IME with Dr. Fall. Claimant reported that her symptoms were the same since she last saw Dr. Fall on September 15, 2016. The doctor noted that Claimant had undergone thermogram testing, which indicated a temperature difference that could be consistent with CRPS. Claimant underwent a sympathetic block. Claimant's pain responded to the blocks reducing her pain from five or six out of ten to one out of ten. Her pain relief lasted six days. Dr. Fall opined that Claimant was at MMI due to no functional gains since her last IME. Dr. Fall maintained that additional ganglion blocks could continue to be administered as maintenance care.

45. On April 24, 2017, Dr. Annest noted that Claimant had one week of relief from pain following a stellate ganglion block. Claimant had an adverse reaction to a intravenous

narcotic injection. Claimant has limited range of motion and grip. Dr. Annest noted Claimant's chronic brachial entrapment of the left upper extremity with pain from the neck into the hand. Dr. Annest assessed Claimant to have brachial plexus disorder, left hand weakness, dyspnea, and CRPS type I of the left upper extremity.

46. On July 11, 2017, Claimant saw Dr. Schwarz continuing to complain of shortness of breath and shoulder pain. Claimant's "sniff test" showed normal left hemidiaphragm and Claimant's spirometry test was normal. Overall, Dr. Schwarz opined that there was no pulmonary basis for Claimant's shortness of breath and no respiratory issue.

47. On September 21, 2017, Claimant attended a 24-Month DIME with Dr. L. Barton Goldman. Dr. Goldman conducted an extensive medical record review of Claimant's treatment and conducted a physical examination.

48. Claimant informed Dr. Goldman of her symptoms of shortness of breath and palpitations at the DIME.

49. On October 2, 2017, Dr. Annest noted that Claimant had a stellate ganglion block from Dr. Warnick on September 13, 2017, which had produced good results substantially reducing Claimant's pain for a three week period. Dr. Annest recommended that Claimant continue to receive blocks from Dr. Warnick.

50. On January 8, 2018, Dr. Annest noted that Claimant received relief from the last block. Claimant was having difficulty sleeping and she was not in physical therapy. Claimant reported some shortness of breath that is worsening. Claimant was seen by Dr. Schwartz for pulmonary dysfunction. Claimant also had palpitation and was seeing Dr. Cohen for the doctor's cardiology expertise. Claimant was given medication for her arrhythmia symptoms, but the medication did not help her.

51. Dr. Goldman reviewed Dr. Fall's December 19, 2012, IME report, the September 5, 2013, medical record review report and April 21, 2017, IME report and opined that Dr. Goldman supported Dr. Fall's conclusions and recommendations.

52. Dr. Goldman supported Dr. Fall's opinions regarding the work relatedness of Claimant's symptoms. Dr. Goldman's DIME report reflects that the DIME doctor was fully apprised on Dr. Schwarz opinions indicating the pulmonologist had definitively rule out residual phrenic neuropathy or other work related explanations for Claimant's dyspnea from a pulmonary perspective. Dr. Goldman further opined in the DIME report that Dr. Cohen did not make a work related diagnosis to explain Claimant's chest pain and palpitation.

53. Dr. Goldman diagnosed Claimant with the following work-related conditions: 1. chronic left upper trapezius and shoulder girdle myofascial pain; 2. left disputed neurogenic TOS; 3. mild left lower trunk sensory brachial plexitis in the context of a dispute neurogenic thoracic outlet syndrome consistent with a clinically mild CRPS II, partially sympathetically mediated, as a result of diagnosis #2 above.; 4. iron deficiency anemia hopefully resolved.; 5. intermittent mixed tension/vascular headaches of myofascial

origin in association with diagnosis #1 and #2; 6. sleep dysfunction.; and 6. deconditioning pre-existing and exacerbated, with non-objectified complaints of tachycardia and palpitations.

54. Dr. Goldman opined that Claimant was at MMI on September 21, 2017. Dr. Goldman assigned Claimant an 11% whole person permanent impairment rating for her related May 5, 2012, work injury. Dr. Goldman opined that Claimant could be in a light work category.

55. Dr. Goldman further opined that Claimant does not have a CRPS type I diagnosis because Claimant's physical examination was not compelling in this respect. Dr. Goldman was aware that Claimant's symptoms may be temporarily more benign than usual as result of the short-term benefits from stellate ganglion blocks administered eight days earlier.

56. Dr. Goldman further opined that there is no work-related, medically probable objective diagnoses to explain the palpitations nor did the medications that have been tried, or are currently being prescribed, seem to be of help. Dr. Goldman opined that Claimant's palpitations likely reflect somatization and sensitization issues unmasked by this injury in addition to ongoing deconditioning.

57. Dr. Goldman recommended maintenance medical care to consist of additional ganglion blocks without sedation (3-6), combined with physical therapy, potential for trigger point injections, 6-8 cognitive behavioral sessions, practicing of biofeedback skills, and meditative approaches and follow-up appointments.

58. On June 12, 2017, Respondents filed a Final Admission of Liability admitting to Dr. Goldman's September 21, 2017, date of MMI and an 11% whole person permanent impairment rating. Respondents admitted to reasonable and necessary maintenance medical treatment.

59. On December 29, 2017, Claimant objected to Respondents' Final Admission of Liability and filed an Application for Hearing to overcome the DIME of Dr. Goldman and disfigurement.

60. Claimant continues to suffer from shortness of breath after her third surgery. Dr. Anderson-Oeser continues to treat Claimant's ongoing symptoms. Claimant testified that Dr. Anderson-Oeser has not placed her at MMI.

61. Claimant's symptoms worsened several days after seeing Dr. Goldman. Claimant does not believe she is at MMI.

62. On April 9, 2018, Dr. Anderson-Oeser provided deposition testimony. She testified that she does not agree with Dr. Goldman's determination of MMI because additional testing needs to be performed to address Claimant's heart and lung issues.

63. Dr. Anderson-Oeser testified that she recommended that Claimant see a psychologist specializing in pain management to help her deal with her chronic pain. But, Dr. Anderson-Oeser's recommendation was not authorized for four years and at the time of hearing Claimant had only begun beneficial psychological treatment for pain control.

64. It is found that Claimant failed to present clear and convincing evidence that Dr. Goldman's MMI determination is incorrect. Dr. Fall's medical opinions and testimony, in conjunction with the medical records, was found to be more credible and persuasive than the opinions of Dr. Andersen Oeser. Dr. Goldman's report was shown to be thorough, complete and without error wherein he has addressed all of Claimant's concerns and medical diagnoses.

65. The ALJ finds that as a result of her May 5, 2012, work injury, Claimant has a visible disfigurement to the body consisting of left shoulder, left chest, left back and left underarm scars. The left shoulder is downward sloping and has a horizontal scar three inches long and 1/8 inch wide. A left chest horizontal scar is two and ½ inches long and ¼ inch wide. The chest scar has a keloid and is discolored. On Claimant's left back, the scar is four inches long and ½ inch wide. This scar has a keloid and is discolored. On Claimant's left underarm, there is a scar one and ½ inches long and ¼ inch wide. The scar is discolored. Claimant's left hand turns red. Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Act, Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimant bears the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786, 789 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979) The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 p.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

3. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME opinion regarding MMI

4. Claimant contends that Dr. Goldman's DIME opinion on MMI is most probably incorrect. Claimant argues that her breathing difficulty and palpitations and her psycho-social issues impacting her physical condition have not been addressed. Claimant argues that Dr. Goldman erred in his determination of MMI as Claimant underwent an injection which reduced her pain and increased her range of motion during the DIME. Claimant argues that further testing needs to be completed to determine whether her sinus tachycardia and shortness of breath are related to the performance of her third surgery. Claimant contends that until the requisite testing is performed, she is not at MMI and requires additional treatment.

5. MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

6. Under the statute MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000). Thus, a DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific

treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. Therefore, the DIME physician's opinions on these issues are binding unless overcome by clear and convincing evidence. *See Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002).

7. The party seeking to overcome the DIME physician's finding regarding MMI bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. Where the evidence is subject to conflicting inferences a mere difference of opinion between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. Rather it is the province of the ALJ to assess the weight to be assigned conflicting medical opinions on the issue of MMI. *Oates v. Vortex Industries,* WC 4-712-812 (ICAO November 21, 2008). The ultimate question of whether the party challenging the DIME physician's finding of MMI has overcome it by clear and convincing evidence is one of fact for the ALJ. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

8. It is concluded Dr. Fall credibly testified that Claimant reached an endpoint in treatment, and that Dr. Goldman's determination of MMI on September 21, 2017 was appropriate. Dr. Fall further credibly testified that maintenance care could appropriately address Claimant's ongoing symptoms in relation to the admitted work injury. It is further concluded that Dr. Anderson-Oeser and Claimant failed to identify any clear errors in Dr. Goldman's DIME report.

9. Moreover, on July 19, 2016, Dr. Annest opined that Claimant's arrhythmia was unrelated. Dr. Fall, in her September 15, 2016 IME report, agreed with Dr. Annest that Claimant's cardiac arrhythmia was not work-related. Furthermore, Dr. Cohen, the cardiologist, noted that Claimant's Holter Monitor revealed sinus tachycardia. Dr. Cohen further credibly opined that Claimant's symptom diary did not coincide with her reports of arrhythmia. Claimant testified that she reported her symptoms of palpations and shortness of breath to Dr. Goldman. Even Dr. Anderson-Oeser testified that Dr. Goldman is familiar with Claimant's stellate ganglion blocks and would be aware of Claimant's decrease in symptoms during the DIME.

10. Dr. Anderson-Oeser further testified she agreed with Dr. Goldman's impairment rating.

11. It is concluded that Claimant remains at MMI for the May 5, 2012, injury as determined by Dr. Goldman. Claimant failed to demonstrate by clear and convincing evidence that Dr. Goldman's determination of MMI was invalid.

Disfigurement

12. The ALJ concludes that Insurer shall pay Claimant $2000.00 for her disfigurement.

ORDER

1. THE ALJ ORDERS that Insurer shall pay Claimant $2000.00 for that disfigurement.

2. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

3. Claimant failed to prove by clear and convincing evidence that the MMI determination of Dr. Goldman is incorrect.

4. All matters not determined are reserved for future consideration.

MARGOT W. JONES
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant make a proper showing for a change of physician?

FINDINGS OF FACT

1. Claimant suffered admitted injuries in a rollover motor vehicle accident on June 28, 2016. He initially received treatment at the Lutheran Medical Center emergency department. Thereafter, Employer did not provide a list of designated providers, so Claimant saw his personal providers through Kaiser.

2. On March 30, 2017, Dr. Sean Haney, an orthopedist with Kaiser, stated "you mentioned worker's [sic] comp, our Department does not do workers comp so if this potentially a work comp claim you need to see another provider." The parties agreed to a change of physician to Dr. Updike, but he declined to accept Claimant as a patient. The parties have since been unable to agree on a different physician.

3. Claimant saw Dr. Tashof Bernton for an IME at Respondents' request on October 9, 2017. Dr. Bernton opined that claimant is at MMI with permanent impairment to the right Index finger and left shoulder. Claimant disagrees he is at MMI.

4. Claimant made a proper showing for a change of physician under § 8-43-405(5)(a). Kaiser is not willing to treat Claimant under his workers' compensation claim, and his desire for a Level II accredited ATP is reasonable.

5. At the hearing, the ALJ asked each party propose three Level II providers. Claimant proposed Dr. Carolyn Gellrick, Dr. John Hughes, and Dr. John Gray. Respondents suggested Dr. Marc Steinmetz, Dr. Matthew Brodie, and Dr. Scott Primack. All proposed physicians are fully accredited according to the Division's web site.

6. The ALJ finds it appropriate to start with the providers on Claimant's list because the right of selection had initially passed to him.

7. Claimant has not contacted any of his proposed physicians, so it is unknown whether they will accept him at this stage of his claim. It is reasonable to allow Claimant flexibility to choose any of his three proposed providers. If Dr. Gellrick, Dr. Hughes, and Dr. Gray are not willing to treat Claimant, Claimant may choose from Respondents' list of proposed providers.

CONCLUSIONS OF LAW

Section 8-43-404(5)(a)(VI)(A) allows a claimant to obtain a change of physician "upon a proper showing" to an ALJ. The statute does not define a "proper showing," and the ALJ has discretion to decide if the circumstances justify a change of physician. *Jones*

v. T.T.C. Illinois, Inc., W.C. No. 4-503-150 (May 5, 2006). The ALJ should exercise this discretion with an eye toward ensuring the claimant is receiving reasonably necessary treatment while protecting the respondents' legitimate interest in being apprised of treatment for which they may ultimately be held liable. *Landeros v. CF & I Steel*, W.C. No. 4-395-315 (October 26, 2000).

As found, Claimant made a proper showing for a change of physician. Kaiser is not willing to treat him under his workers' compensation claim, and it is appropriate for Claimant to have a Level II accredited ATP.

ORDER

It is therefore ordered that:

1. Claimant's request for a change of physician is granted. Claimant may treat with Dr. Gellrick, Dr. Hughes, or Dr. Gray, at his option. If Dr. Gellrick, Dr. Hughes, and Dr. Gray are not willing to treat Claimant, Claimant may choose from Dr. Steinmetz, Dr. Brodie, and Dr. Primack.

2. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 1, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that the C5-C6 anterior cervical decompression and fusion surgery recommended by Dr. Brian Witwer is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted August 15, 2017 work injury.

- At hearing, the parties stipulated to an average weekly wage (AWW) of $594.95. The ALJ approves and adopts the stipulation of the parties.

FINDINGS OF FACT

1. The claimant worked for the employer as a butcher. The claimant's job duties included meat processing of hogs and cattle. On August 15, 2017, the claimant was removing meat from an 800 to 900 pound cow. Specifically, he was removing meat from the scapula. To accomplish this task, the claimant held a hook in his left hand to hold the carcass while he used his right hand to pull the meat from the bone. While doing so, the claimant felt a pop in his left wrist and felt pain into his forearm. The claimant reported this incident to his floor manager and then returned to his assigned work tasks.

2. The claimant testified that although the initial pop was in his left wrist, he began to feel pain into his forearm, bicep, and shoulder. The pain began during the remainder of his shift on August 15, 2017. The claimant testified that during that evening he also began to experience some tingling. By the following morning he had pain from his wrist all the way up his left arm into his shoulder and neck.

3. The claimant was ultimately referred to Surface Creek Family Practice for treatment of his injury. On August 30, 2017 the claimant's first treated at Surface Creek Family Practice and was seen by Dan Burnell, PA-C. The claimant testified that the delay in obtaining medical treatment for his injury occurred because his floor manager did not initially believe that that claimant was injured at work.

4. On August 30, 2017, Mr. Burnell noted the claimant's mechanism of injury and listed the diagnosis as a left wrist sprain. At that time, Mr. Burnell recommended a wrist brace and over the counter pain medication. Thereafter, the claimant was seen by Mr. Burnell on September 20, 2017 and November 29, 2017. In the medical records of those dates Mr. Burnell added the diagnoses of tendonitis and "De Quervains". The claimant testified that he informed Mr. Burnell that he was experiencing pain from his wrist, up his arm and into his shoulder and neck. However, Mr. Burnell's medical reports do not list those symptoms.

5. Mr. Burnell referred the claimant to In Motion Therapy for physical therapy treatment. The claimant testified that physical therapy did not help with his symptoms. Due to the claimant's increasing pain symptoms, the claimant's physical therapist suspended treatment until further discussions could be had with Mr. Burnell. The claimant testified that Mr. Burnell informed him that the radiating pain up into his arm was a side effect of the wrist sprain.

6. On September 18, 2017, the respondents filed a General Admission of Liability (GAL) for the August 15, 2017 injury.

7. On December 28, 2017, the claimant was seen by Dr. Kevin Pulsipher with Surface Creek Family Practice. At that time, Dr. Pulsipher diagnosed carpal tunnel syndrome, De Quervains tenosynovitis, and lateral epicondylitis. Dr. Pulsipher referred the claimant to Dr. Michal Hehmann for a neurological consultation, and to Dr. Knutson for an orthopedic consultation. The claimant testified that when he was seen by Dr. Pulsipher in December 2017 he had pain beginning in his left fingers and radiating up his arm into his left shoulder.

8. On January 11, 2018, the claimant was seen by Dr. Hehmann who performed electromyography nerve conduction studies (EMG/NCS) on the claimant's upper extremities. Dr. Hehmann concluded that there were no signs of carpal tunnel; no signs of nerve entrapment at the elbow or wrist; and no signs of peripheral neuropathy. Dr. Hehmann also noted that the claimant had findings at the C5-C6 level (and possibly at the C6-C7 level) with radicular findings down the arm. Based upon those findings, Dr. Hehmann recommended a magnetic resonance image (MRI) of the claimant's cervical spine.

9. On February 22, 2018, an MRI of the claimant's cervical spine showed a moderate broad based disc protrusion at the C5-C6 level with mild cord flattening and narrowing of the cerebrospinal fluid (CSF) space anterior to the spinal cord.

10. Following the MRI, the claimant was seen by Dr. Pulsipher on February 27, 2018. On that date, Dr. Pulsipher noted a new diagnosis of cervical radiculopathy. In the medical record of that date, Dr. Pulsipher noted an "addendum to [history] of hauling several hundred carcasses for processing in meat plant". It appears that as of that date Dr. Pulsipher was relating the information about the claimant's work history to the most recent diagnosis of cervical radiculopathy.

11. Subsequently, the claimant was again referred for an orthopedic consultation. On March 26, 2018, the claimant was seen by orthopedic surgeon, Dr. Brian Witwer. At that time, the claimant reported aching, sharp and electrical like pain in his neck with radiating pain in his left arm along his shoulder, bicep, lateral forearm, and into his hand. Dr. Witwer noted that the MRI showed a large herniated disc at the C5-C6 level that was causing left greater than right foraminal stenosis. Dr. Witwer recommended that the claimant undergo a C5-C6 anterior cervical decompression and fusion surgery.

12. On April 18, 2018, Dr. Joseph Fillmore issued a physician advisor opinion. In that report, Dr. Fillmore opined that the claimant's radiculopathy is not related to an injury to the claimant's left wrist. Based upon the opinion of Dr. Fillmore, the respondents denied authorization for the recommended cervical surgery.

13. On May 16, 2018, the claimant was seen by Dr. Timothy Meilner with Surface Creek Family Practice. The claimant testified that he began treating with Dr. Meilner because Dr. Pulsipher was no longer treating workers' compensation patients. On that date, Dr. Meilner noted his understanding that the claimant felt a pop in his wrist at the time of the injury, but after four months of physical therapy for his wrist the claimant had no improvement. Dr. Meilner also noted that additional workup of the claimant's condition found that "the cause of his condition was in the [cervical spine]". Dr. Meilner recorded cervical radiculopathy as one of the claimant's work related diagnoses and referred the claimant to hand surgeon, Dr. Michael Rooks.

14. The claimant was first seen by Dr. Rooks on June 12, 2018. Dr. Rooks diagnosed post-traumatic flexor/extensor tendonopathies and cervical radiculopathy. Dr. Rooks also opined that the claimant's arm and neck symptoms could be related to the radiculopathy findings.

15. At the request of the respondents the claimant attended an independent medical examination (IME) with Dr. John Raschbacher on July 24, 2018. In connection with the IME, Dr. Raschbacher reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Raschbacher opined that the claimant's current symptoms are not related to the August 15, 2017 injury to the claimant's left wrist. In support of this opinion, Dr. Raschbacher noted that the claimant's initial presentation was limited to the left wrist. Dr. Raschbacher also opined that the claimant suffered only a wrist sprain and had reached MMI for that sprain as of the date of the IME. Dr. Raschbacher's testimony at hearing was consistent with his IME report.

16. The ALJ credits the medical records and the opinions of Drs. Raschbacher and Fillmore and finds that the claimant's cervical spine related symptoms are not causally related to the admitted left wrist injury. The ALJ is not persuaded by the claimant's testimony that he reported symptoms to Mr. Burnell that were not included in the medical records. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the need for the recommended C5-C6 anterior cervical decompression and fusion surgery is necessary to cure and relieve the claimant from the effects of the admitted left wrist injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008).

4. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the recommended the C5-C6 anterior cervical decompression and fusion surgery is causally related to the admitted August 15, 2017 work injury to his left wrist. As found, the medical records and the opinions of Drs. Raschbacher and Fillmore are credible and persuasive.

ORDER

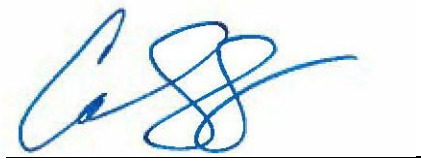
It is therefore ordered:

1. The claimant's request for a the C5-C6 anterior cervical decompression and fusion surgery is denied and dismissed.

2. As stipulated by the parties, the claimant's average weekly wage (AWW) is $$594.95.

3. All matters not determined here are reserved for future determination.

Dated November 1, 2018.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

- Who was the claimant's employer at the time of the admitted July 7, 2017 work injury?

- Whether the claimant has demonstrated by a preponderance of the evidence that the C4-C5 anterior cervical discectomy and fusion (ACDF) surgery performed by Dr. Robert Replogle on September 22, 2017 was reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted July 7, 2017 work injury.

- Whether the claimant has demonstrated by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits beginning August 16, 2017 and ongoing until terminated by law.

- If the claimant demonstrates that she is entitled to TTD benefits, whether the respondents have demonstrated by a preponderance of the evidence that the claimant was responsible for termination of her employment, thereby ending entitlement to TTD benefits.

- What was the claimant's average weekly wage (AWW)?

- Whether the claimant has demonstrated by a preponderance of the evidence that penalties should be assessed against the respondents pursuant to Section 8-43-408, C.R.S. because of the respondents' failure to obtain and maintain workers' compensation insurance.

- Whether the claimant has demonstrated by a preponderance of the evidence that penalties should be assessed for the employer's alleged violation of Rule 16 for failure to authorize medical treatment.

- At hearing, counsel for the respondents attempted to argue a late reporting penalty. At that time, the ALJ reserved ruling on that issue. Upon further review of the hearing file and the record, the ALJ finds that the respondents failed to endorse that issue for hearing. Thus, the ALJ does not consider any argument from the parties on the issue of a late reporting penalty.

PROCEDURAL ISSUES

At the outset of the hearing on August 2, 2018, the respondents asked the ALJ to reverse various orders issued by Pre-Hearing Administrative Law Judges (PALJs) with the Division of Worker's Compensation. Specifically, the respondents made the following arguments:

- The respondents argued that PALJ Elsa Martinez Tenreiro's order dated July 5, 2018 was in error in not permitting the respondents to endorse the issue of withdrawing the general admission of liability. After listening to argument from counsel, the ALJ denied the request to overturn that ruling.

- The respondents argued that PALJ Elsa Martinez Tenreiro's order dated July 5, 2018 was in error in not permitting the respondents to endorse the issue adding witnesses. After listening to argument from counsel, the ALJ denied the request to overturn that ruling.

- The respondents argued that PALJ Elsa Martinez Tenreiro's order dated July 5, 2018 was in error in not ordering the claimant to provide a "provider list" for an alleged prior ulnar nerve injury, (an injury the claimant denied). After listening to argument from counsel, the ALJ denied the request to overturn that ruling.

- The respondents requested a continuance, disputing a ruling from PALJ Michelle S. Sisk dated July 23, 2018. The ALJ denied the respondents' motion.

- The ALJ also determined that her evidentiary rulings on any testimony or statements implicating the Colorado Dead Man Statute, C.R.S. Section 13-90-102 would be considered during the hearing based upon the circumstances and scope of the proffered testimony.

- Lastly, prior to the commencement of the August 20, 2018 continued hearing, the respondents argued that the claimant should be compelled to provide new insurance releases. The ALJ denied the respondents' motion.

FINDINGS OF FACT

Based upon the evidence and testimony presented at hearing, the ALJ makes the following Findings of Fact:

1. The claimant was hired to provide caregiver services to Mary Wales. The claimant met Ms. Wales through a shared neighbor. At that time, Ms. Wales was more than 90 years old. The claimant does not have specific certification or training as a caregiver.

2. The claimant began working as Ms. Wales' caregiver in approximately April 2016. Throughout this employment, all communication regarding the claimant's rate of pay, hours, time off, and job duties occurred between the claimant and Ms. Wales' daughter, Carolyn Cargile. The claimant's job duties included assisting Ms. Wales with food preparation and bathing, laundry, taking Ms. Wales to medical appointments, running errands, and walking Ms. Wales' dog. The claimant provided caregiver services for Ms. Wales in Ms. Wales' residence in Grand Junction, Colorado.

3. The claimant initially provided her services to Ms. Wales on a part-time basis. Ultimately, the claimant's hours were increased and she began working 24 hours per day, and was paid $230.00 per day. At the time of that scheduling change, the claimant and Ms. Wales' daughter, Ms. Cargile, negotiated that the claimant would work no more than 23 days per month. The claimant was paid these wages by checks from Ms. Wales personal checking account. However, these checks were signed by Ms. Cargile.

4. In February 2017, Ms. Cargile's accountant completed various documents with the State of Colorado indicating that Ms. Wales had employees. The documents included obtaining a Federal employer identification number (EIN), and an application for unemployment insurance with the Colorado Department of Labor and Employment. The individual who completed these documents at the direction of Ms. Cargile was Ms. Cargile's accountant and not Ms. Wales' accountant.

5. The documents prepared by Ms. Cargile's accountant list Ms. Wales as an employer, and utilize Ms. Cargile's mailing address in Vernal, Utah. Once these documents were processed by Ms. Cargile's accountant, taxes were withheld from the claimant's pay and wages were reported to the State of Colorado.

6. On May 10, 2017, the Colorado Department of Labor and Employment Division of Workers' Compensation (DOWC) send a letter to Ms. Wales at Ms. Cargile's Utah address. This letter notified the respondents of the necessity to obtain workers' compensation coverage. The document entered into evidence indicates that it was received on May 12, 2017. The ALJ infers that this document was received by Ms. Cargile in Utah as it is addressed to her Utah address. Despite the receipt of this notice, workers' compensation coverage was not obtained by Ms. Wales or Ms. Cargile.[1]

7. In late May 2017, the claimant requested time off because her mother was ill and ultimately died. Ms. Cargile approved this requested time off. The claimant returned to work for Ms. Wales on July 1, 2017.

8. On July 7, 2017, the claimant was injured while performing her normal job duties for Ms. Wales. At approximately 9:00 a.m. on that date, the claimant was assisting Ms. Wales with a shower and Ms. Wales was seated on the shower seat. However, Ms. Wales was seated too far forward on the seat, and the claimant was concerned Ms. Wales would fall. The claimant attempted to reposition Ms. Wales by moving Ms. Wales' knees and then by attempting to lift Ms. Wales under her arms. Both of these attempts were ineffective. While attempting to reposition Ms. Wales, the claimant felt a shooting pain down her left arm into her left index finger as well as across her shoulder blade and into her neck.

[1] However, the respondents later obtained workers' compensation coverage with Pinnacol Assurance after the claimant was injured.

9. Following the incident involving Ms. Wales' shower, the claimant assisted Ms. Wales into her recliner. It was the claimant's normal practice to utilize a "turntable" mechanism to assist Ms. Wales from her wheelchair to her recliner. During this process, Ms. Wales attempted to sit down, even though there was no chair upon which to sit. The claimant attempted to catch Ms. Wales in her lap by bending her knees to create a place for Ms. Wales to sit. The claimant again felt pain down her neck into her left arm. Despite the claimant's initial symptoms, she completed her shift on July 7, 2018, and worked as scheduled on July 8, 9, and 10, 2018.

10. The claimant immediately reported the July 7, 2017 incidents to Ms. Cargile by telephone on July 7, 2017. The claimant assured Ms. Cargile that Ms. Wales was fine, but that the claimant was injured. At that time, Ms. Cargile instructed the claimant to seek medical treatment. In addition, Ms. Cargile agreed to pay for medical treatment related to the injury.

11. Following the July 7, 2017 telephone call, the claimant sent a written summary of the incidents to Ms. Cargile. This written summary was mailed to Ms. Cargile on or about July 11, 2017.

12. The claimant sought medical treatment and was able to schedule an appointment on July 11, 2017 with St. Mary's Occupational Medicine. On that date, the claimant was seen by James Harkreader, NP. The claimant described the July 7, 2017 incident and reported that she had pain in her left hand, neck, and upper back. Mr. Harkreader diagnosed the claimant with left hand paresthesia, a cervical strain, and myofascial strain of the upper back. At that time, Mr. Harkreader recommended that the claimant undergo physical therapy. In addition, Mr. Harkreader ordered x-rays of the claimant's left wrist, cervical spine, and oblique muscles. In addition, Mr. Harkreader took the claimant off of work for one week.

13. The x-ray of the claimant's cervical spine x-ray showed cervical spondylosis that was most prominent at the C5-C6 and C6-C7 levels. The x-ray of the claimant's left wrist was normal.

14. On July 18, 2017, the claimant returned to Mr. Harkreader and reported continued numbness in her left arm and hand. Mr. Harkreader assessed left upper extremity paresthesia and opined the claimant's symptoms were coming from her neck. As a result, he ordered a magnetic resonance image (MRI) of the claimant's cervical spine. In addition, Mr. Harkreader made referrals to Dr. Robert Frazho (for nerve conduction studies) and to Dr. Kirk Clifford (for an orthopedic consultation). At that time, Mr. Harkreader determined that the claimant could return to modified duty, with a 20 pound lifting restriction.

15. The claimant attempted to obtain a workers' compensation number from the respondents because she understood that workers' compensation coverage was in place. However, Ms. Cargile failed to provide the requested information to the claimant. When the claimant was unable to obtain a workers' compensation number from the

respondents she reported the July 7, 2017 injury directly to the Colorado DOWC on July 24, 2017.

16. On August 8, 2017, an MRI of the claimant's' cervical spine showed a large cervical disc herniation at the C4-C5 level impinging on the cord, with canal stenosis and moderate to severe degenerative foraminal narrowing.

17. On August 8, 2017, a General Admission of Liability (GAL) was completed by Ms. Cargile and filed with the DOWC. In the GAL, Ms. Cargile identified herself as the claimant's employer and admitted for medical benefits. Specifically, Ms. Cargile noted in the GAL "[m]edical benefits only . . . short term only – doctor – x-ray – phy[sical] therapy".

18. The ALJ is not persuaded by the respondents' assertion that the GAL filed on August 8, 2017 was completed in an attempt to deny or dispute the claimant's claim for workers' compensation. On the contrary, the ALJ finds that Ms. Cargile understood that by filing a document titled General Admission of Liability she was admitting liability.

19. Following her injury and initial medical treatment with Mr. Harkreader, the claimant returned to work and attempted to continue to perform her job duties. However, because of the 20 pound lifting restriction assigned by Mr. Harkreader, the claimant was unable to continue her employment.

20. On August 14, 2017, the claimant was again seen by Mr. Harkreader. The claimant reported that she was unable to comply with the 20 pound lifting restriction while performing her job duties for Ms. Wales. Based upon this information the claimant was taken off of work completely by Mr. Harkreader.

21. On August 15, 2017, the claimant notified Ms. Cargile and she was unable to continue in her position because of her work restrictions. Thereafter, Ms. Cargile moved Ms. Wales from her residence in Colorado to a nursing home in Vernal, Utah.

22. The ALJ is not persuaded that the claimant was fired by Ms. Cargile. The ALJ finds as true the claimant's testimony that she informed Ms. Cargile that she was unable to continue the employment. The claimant testified that she has not worked since August 15, 2017.

23. Following the August 8, 2017 MRI, both Mr. Harkreader and Dr. Craig Stagg (also with St. Mary's Occupational Medicine) made referrals for the claimant to be seen by a neurosurgeon for consultation. Ultimately the claimant was referred to Dr. Robert Replogle with St. Mary's Neurosurgery.

24. On August 23, 2017, the claimant was first seen by Dr. Replogle who noted that the claimant had compression of her spinal cord from a large disc herniation and myelopathic symptoms. At that time, Dr. Replogle recommended that the claimant undergo surgery that would include C4-C5 anterior cervical discectomy and fusion (ACDF).

25. Dr. Replogle's office contacted Ms. Cargile by telephone and requested authorization for the recommended surgery because she was identified as having authority to authorize or deny the claimant's medical treatment for this claim. The ALJ finds no persuasive evidence in the record that Ms. Cargile was presented with a written request for authorization for the recommended surgery.

26. Upon learning of the recommended surgery, Ms. Cargile verbally notified St. Mary's Hospital that she was denying authorization for the surgery. In a handwritten notation made on a WC-164 form dated August 31, 2017, Ms. Cargile wrote:

> "I called St. Mary's [h]ospital with codes for said surgery. I was quoted [$]41,000 doctor [$]4,000 anesthesiologist overnight as out[ ]patient. I refused on the grounds that my Mom is 93 years old and as of 8/22 Mom (Mary) has been in a care center. She doesn't even remember Cindy McRobbie".

In her testimony, Ms. Cargile confirmed the information in the above notation and reiterated that she refused to authorize the recommended surgery.

27. Following Ms. Cargile's denial of authorization, the claimant chose to undergo the recommended surgery and did so on September 22, 2017. The cost of the surgery was paid for by the claimant and by the claimant's personal insurance.

28. At the request of the respondents, on January 13, 2018, the claimant attended an independent medical examination (IME) with Dr. F. Mark Paz. In connection with the IME, Dr. Paz reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Paz opined that the claimant's multilevel degenerative disc disease and multilevel degenerative joint disease predated the July 7, 2017 work injury. However, Dr. Paz further opined that the herniated disc at the claimant's C4-C5 level, the cord compression, and cervical myelopathy are related to the claimant's July 7, 2017 injury. Dr. Paz specifically noted that the incident on July 7, 2017 aggravated and accelerated the progression of the disc herniation, which resulted in the symptoms of left upper extremity discomfort and weakness. Dr. Paz was specifically asked to state his opinion regarding the reasonableness of the cervical surgery performed on September 22, 2017. Dr. Paz stated in his IME report that "the treatment for the herniated disc at the C4-5 level, was reasonable, necessary and causally related to the July 7, 2017, incident."

29. On May 14, 2018, Dr. Stagg determined that the claimant had reached maximum medical improvement (MMI). At that time, Dr. Stagg assessed permanent work restrictions of no lifting, pushing, or pulling greater than 30 pounds. In addition, Dr. Stagg assigned a whole person impairment rating of 19%.

30. Following the IME with Dr. Paz and Dr. Stagg's determination that the claimant had reached MMI, the respondents requested a Division-sponsored independent medical examination (DIME).[2]

31. Ms. Wales died on December 23, 2017. Ms. Wales' death certificate lists pneumonia and dementia as the cause of death.

32. On April 17, 2018, pleadings were filed to open a probate estate proceeding in Mesa County District Court for the Estate of Mary Wales. On June 8, 2018, attorney Charles F. Reams was appointed as the special administrator of Ms. Wales' estate.

33. Mr. Reams testified at hearing that in his role as the special administrator of Ms. Wales' estate he has the authority to represent any creditors of the estate, (which may potentially include the claimant). In addition, he has the authority to identify, locate, and garnish any estate assets.

34. Ms. Wales executed a Last Will and Testament on August 24, 2001 which directs that Ms. Wales' entire estate is to pass into the Mary E. Wales Revocable Trust. As evidenced by documents entered into evidence, Ms. Wales' trust (also dated August 24, 2001) appoints Ms. Cargile as trustee. At hearing, Ms. Cargile testified that she is the trustee of the Mary E. Wales Revocable Trust.

35. Ms. Cargile has asserted that her mother, Ms. Wales was the claimant's employer. Ms. Cargile further asserts that all actions she took on behalf of Ms. Wales were performed pursuant to a power of attorney. At hearing copies of a Durable Power of Attorney and a Medical Power of Attorney were admitted into evidence. However, these documents are not executed and no signed copies have been presented in this matter. The ALJ finds no persuasive evidence on the record that Ms. Cargile was acting as Ms. Wales' agent under a power of attorney.

36. Based upon records entered into evidence, the claimant's insurance, Rocky Mountain Health Plans has calculated that medical services totaling $64,580.36 have been billed related to the claimant's work injury and related surgery. In addition, as of the date of the hearing the claimant has personally paid a total of $8,996.00 for medical treatment.

37. The respondents have paid some of the claimant's medical expenses. Payments made by the respondents include: mileage payment to the claimant in the amount of $42.40; payment to St. Mary's Hospital in the amount of $1,170.25; payment of $728.20 to reimburse the claimant for the cost of x-rays; and payment of $500.00 as a travel advance for the claimant to attend the scheduled DIME. Payments for these medical expenses have been made from Ms. Wales' checking account, as signed by Ms. Cargile, as well as payments made by Ms. Cargile personally.

[2] On July 25, 2018, the claimant was informed that a DIME was scheduled with Dr. John Raschbacher. Based upon information submitted at hearing, the ALJ understands that the DIME was to have taken place on September 7, 2018.

38. The ALJ credits the claimant's testimony at hearing, the medical records, and the opinion of Dr. Paz that the need for cervical surgery is causally related to the claimant's July 7 2017 work injury. More specifically, the ALJ finds that the claimant has demonstrated that it is more likely than not that the lifting incident on July 7, 2017 aggravated, accelerated, and combined with the claimant's preexisting degenerative joint disease, resulting in the need for medical treatment including the need for surgery. Therefore, the ALJ finds that the claimant has demonstrated that it is more likely than not that the medical treatment she has received is reasonable and necessary to cure and relieve the claimant from the effects of the admitted July 7, 2017 injury.

39. The ALJ credits the claimant's testimony and the medical records and finds that she has demonstrated that it is more likely than not that she has not worked since August 15, 2017 because of her July 7, 2017 work injury and related permanent work restrictions. The ALJ also finds that the claimant has demonstrated that is it more likely than not that she has suffered a wage loss as a result of her work injury.

40. The ALJ finds no persuasive evidence in the record indicating that the claimant was responsible for termination of her employment. The claimant was unable to work because of her injury, and there was no further work available to her once Ms. Wales moved to Utah.

41. The ALJ credits the claimant's testimony and finds that the claimant has demonstrated that it is more likely than not that while she was providing caregiver services to Ms. Wales she earned $5,290.00 per month; (wages of $230.00 per day for 23 days each month). When this amount is multiplied by 12 months it results in annual wages of $63,480.00. The ALJ calculates an AWW of $1,220.77; ($63,480.00 divided by 52 weeks is a year)

42. The ALJ finds that the claimant has demonstrated that it is more likely than not that the respondents did not have workers' compensation coverage at the time of the claimant's July 7, 2017 work injury.

43. The ALJ finds no persuasive evidence in the record indicating that the respondents were provided with a written request for authorization related to the recommended ACDF surgery.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the

rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

4. "Employee" includes "every person in the service of any person, association of persons, firm or private corporation. . . under any contract of hire, express or implied." Section 8-40-202(b), C.R.S.

5. The joint employment theory of liability in worker's compensation law recognizes that a single employee may complete work on behalf of two employers simultaneously. *Evans v. Webster*, 832 P.2d 951, 955 (Colo. App. 1991); *Laborers and Hod Carriers Union, Local No. 341 v. Groothius*, 494 P.2d 808, 813 (Alaska 1972); *Ocean Acc. & Guarantee Corp. v. U.S. Fidelity & Guaranty Co.*, 162 P.2d 609, 614 (Ariz. 1945). Larson's Workmen's Compensation Law § 48.41 at 8—553 (1995) defines joint employment as follows:

> Joint employment occurs when a single employee, under contract with two employers, and under simultaneous control of both, simultaneously performs services for both employers, and when the service for each employer is the same as, or closely related to that for the other.

See Cook v. Recovery Corp., 911 S.W.2d 581, 581-82 (Ark. 1995).

6. Courts in different jurisdictions apply different versions of a multifactor test to evaluate whether two employers jointly employed an employee at the time of injury for the purpose of determining worker's compensation liability, but common components of those tests tend to include the (1) consent of the employee to work for both employers; (2) employers' control over the employee's work activities; and (3) power of the employers to terminate the work relationship. *Laborers and Hod Carriers Union*, 494 P.2d at 813; *Ocean Acc. & Guarantee Corp.*, 162 P.2d at 614; *Evans*, 832 P.2d at 955.

7. Furthermore, in situations where (1) an employee's work is for the common benefit of both employers; (2) it is difficult to distinguish which employer's interests are being furthered by the employee's actions; and (3) the work for both employers is identical or nearly so, courts have found that a joint employment situation

exists. *Brotherton v. White River Area Agency on Aging*, 220 S.W.2d 219, 221-24 (Ark. Ct. App. 2005) (finding that at the time of injury, the employee was engaged in a work task that was separable as to which employer's interest was being furthered, even though the employee performed the same task for both employers at different times); *Laborers and Hod Carriers Union*, 494 P.2d at 813; *Ocean Acc. & Guarantee Corp.*, 162 P.2d at 614; *Evans*, 832 P.2d at 955.

8. It is clear from the record that the claimant provided services to Ms. Wales and was compensated for those services. However, a question exists regarding the identity of the claimant's employer as of the date of the admitted July 7, 2017 work injury.

9. Based upon the testimony and evidence presented at hearing, the ALJ concludes that both Ms. Wales and Ms. Cargile employed the claimant. In reaching this conclusion the ALJ has considered the following facts. The ALJ finds no evidence of the existence of any executed power of attorney. All communication regarding the claimant's employment occurred between the claimant and Ms. Cargile. Ms. Cargile directed her personal accountant to draft documents identifying Ms. Wales' as the claimant's employer, yet used her own Utah address for those same records. Ms. Cargile identified herself as the claimant's employer on the GAL. Ms. Cargile personally paid some of the claimant's medical expenses, but also held signatory authority over Ms. Wales' bank account as checks were written from that account and signed by Ms. Cargile for the claimant's wages and reimbursement of some of the claimant's medical expenses.

10. Ms. Wales and Ms. Cargile sought a common benefit by employing the claimant to provide caregiver services to Ms. Wales. As the interest of each employer was identical, the interest of each was logically inseparable, and thus each interest was simultaneously furthered and a common benefit provided when the claimant carried out her duties.

11. It is not the intention of the ALJ that this order be construed to create a niche in the law for liability of adult children for their elderly parents. On the contrary, the ALJ's findings and conclusions in this case are factually specific and apply solely to this matter.

12. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008).

44. As found, the claimant has demonstrated by a preponderance of the evidence that the lifting incident on July 7, 2017 aggravated, accelerated, and combined with the claimant's preexisting degenerative joint disease, resulting in the need for

medical treatment including the need for surgery. As found, the claimant has demonstrated by a preponderance of the evidence that the medical treatment she has received is reasonable and necessary to cure the claimant from the effects of the admitted July 7, 2017 injury. As found, the claimant's testimony at hearing, the medical records, and the opinion of Dr. Paz are credible and persuasive.

13. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

14. There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician. Claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

15. As found, the claimant has demonstrated by a preponderance of the evidence that she suffered a wage loss beginning August 16, 2017 that was caused by her work injury. Therefore, the claimant has demonstrated by a preponderance of the evidence that she is entitled to TTD benefits beginning August 16, 2017 and ongoing until terminated by law. As found, the claimant's testimony and the medical records are credible and persuasive.

16. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

17. As found, the claimant's AWW is calculated to be $1,220.77. As found, the claimant's testimony is credible and persuasive.

18. Sections 8-42-105(4) and 8-42-103(1)(g), C.R.S., contain identical language stating that in cases "where it is determined that a temporarily disabled employee is responsible for termination of employment the resulting wage loss shall not be attributable to the on-the-job injury." In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P3d 1061 (Colo. App. 2002), the court held that the term "responsible" reintroduced into the Workers' Compensation Act the concept of "fault"

applicable prior to the decision in *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Hence, the concept of "fault" as it is used in the unemployment insurance context is instructive for purposes of the termination statutes. *Kaufman v. Noffsinger Manufacturing*, W.C. No. 4-608-836 (Industrial Claim Appeals Office, April 18, 2005). In that context, "fault" requires that the claimant must have performed some volitional act or exercised a degree of control over the circumstances resulting in the termination. *See Padilla v. Digital Equipment Corp.*, 902 P.2d 414 (Colo. App. 1995) *opinion after remand* 908 P.2d 1185 (Colo. App. 1995).

19. As found, the respondents have failed to demonstrate by a preponderance of the evidence that the claimant was responsible for the termination of her employment. As found, the claimant was unable to work because of her injury, and there was no further work available to her once Ms. Wales moved to Utah. As found, the claimant's testimony is credible and persuasive.

20. Rule 16-11 WCRP allows respondents seven days to contest a recommended medical treatment. Previously the panel has addressed the requirement that Rule 16 request for preauthorization include documents included in the provider's decision making process. *Lichtenberg v. J.C. Penney Corp.*, W.C. No. 4-814-897 (July 19, 2012); *Cross v. Microglide*, W.C. No. 4-355-764 (September 2, 2003) aff'd, *Cross v. ICAO*, 03CA1807 (Colo. App. 2004) (not selected for publication).

21. If respondents fail to comply with the requirements of Rule 16-11, the requested treatment is deemed authorized. Rule 16-11(B) provides, in part:

22.

> [i]f the payer is contesting a request for prior authorization for medical reasons, the payer shall, within seven (7) business days of the completed request: (1) Have all submitted documentation . . . reviewed by a physician or other health care professional, as defined in section 16-5(A)(1)(a), . . .
>
> (3) Furnish the provider and the parties with a written contest that sets forth the following information: (a) An explanation of the specific medical reasons for the contest, including the name and professional credentials of the person performing the medical review and a copy of the medical reviewer's opinion; (b) The specific cite from the Medical Treatment Guidelines exhibits to Rule 17, when applicable; (c) Identification of the information deemed most likely to influence the reconsideration of the contest when applicable; and (d) A certificate of mailing to the provider and parties.

23. WCRP 16-10(E) provides that for an authorization request to be "complete" the medical provider "shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation." WCRP 16-10(E) further identifies supporting medical

documentation as "documents used in the provider's decision-making process to substantiate the need for the requested service or procedure."

24. It is the claimant's burden to demonstrate that there was a "completed request" for purposes of assessing a penalty for violation of Rule 16. *See McDaniel v. Vail Associates. Inc.*, W.C. No. 3-111-363 (July 18, 2011). A respondent is not required to plead insufficiency of a request for authorization as an affirmative defense. *Id.*

25. Pursuant to Section 8-43-304(1), a claimant must first prove by a preponderance of the evidence that the disputed conduct constituted a violation of statute, rule, or order before a court can assess penalties against a respondent. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If respondent committed a violation of the statute, rule or order, penalties can be imposed only if respondents' actions were not reasonable under an objective standard. *Pioneers Hospital of Rio Blanco County v. Industrial Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003).

26. As found, the claimant has failed to prove by a preponderance of the evidence that the respondents violated Rule 16. The respondents were not provided with a written request for authorization of the recommended ACDF surgery. Therefore, the requirements of Rule 16 were not triggered.

27. Prior to July 1, 2017, Section 8-43-408(1), C.R.S., provided that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the compensation or benefits payable to the claimant were to be increased fifty percent.

28. However, effective July 1 2017, Section 8-43-408, C.R.S. was amended and the language regarding a fifty percent increase in claimant benefits was removed. The version of Section 8-43-408 C.R.S. in effect at the time of the claimant's July 7, 2017 work injury specifically states that in cases where the employer is subject to the provisions of the Colorado Workers' Compensation Act and has not complied with the insurance provisions required by the Act, the employer is subject to a penalty and additional twenty-five percent of the benefits ordered, which is payable to the Colorado uninsured employer.

29. As found, the claimant has demonstrated by a preponderance of the evidence that the respondents did not have workers' compensation coverage at the time of the claimant's July 7, 2017 work injury. For their failure to obtain and maintain workers' compensation insurance, the respondents shall pay penalties of $18,394.09, to the Colorado uninsured employer fund; (which is an amount equal to 25% of the total medical bills[3] owed of $73,576.36) and penalties of $10,224.00 to the Colorado

[3] This amount is calculated as the total of $8,996.00 the claimant has paid out of pocket, plus the $64,580.36 in unpaid medical bills related to the claimant's treatment.

uninsured employer fund; (which is an amount equal to 25% of total unpaid TTD benefits owed[4] as of August 2, 2018).

ORDER

It is therefore ordered that:

1. Mary Wales and Carolyn Cargile were the claimant's employers at the time of her July 7, 2017 work injury. Therefore, both the Estate of Mary E. Wales and Carolyn Cargile are liable for payment of the claimant workers' compensation benefits.

2. Respondents shall pay for reasonable and necessary medical treatment, including the C4-C5 anterior cervical discectomy and fusion surgery performed by Dr. Robert Replogle on September 22, 2017.

3. The claimant is entitled to TTD benefits beginning August 1, 2017 and ongoing until terminated by law.

4. The claimant's AWW is $1,220.77, (resulting in TTD benefits in the amount of $817.92 per week).

5. The claimant's request for a fifty percent increase in indemnity benefits is denied and dismissed.

6. The claimant's request for penalties for the employers' alleged violation of Rule 16 denied and dismissed.

7. The respondents shall pay $28,638.09 to the Colorado uninsured employer fund for failure to obtain and maintain workers' compensation insurance. The check shall be payable to the Division of Workers' Compensation. The check shall be mailed to Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention Iliana Gallegos, Revenue Assessment Officer.

8. The respondents shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

9. All matters not determined herein are reserved for future determination.

10. In lieu of payment of the above compensation and benefits to the claimant, the respondents shall:

> a. Within ten (10) days of the date of service of this order, deposit the sum of $144,000.00 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to:

[4] With an AWW of $1,220.77, the claimant's TTD benefits are $817.92 per week. The ALJ calculates that during the 50 weeks between August 15, 2017 and the August 2, 2018 date of hearing a total of $40,896 in unpaid TTD benefits has accrued.

Division of Workers' Compensation/Trustee. The check shall be mailed to the Division of Workers' Compensation, 633 17th Street, Suite 900, Denver, Colorado 80202, Attention: Gina Johannesman, Trustee; **OR**

b. Within ten (10) days of the date of service of this order, file a bond in the sum of $144,000.00 with the Division of Workers' Compensation within ten (10) days of the date of this order:

i. Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

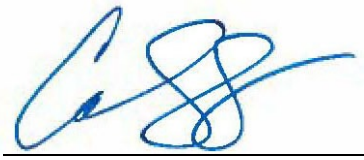
ii. Issued by a surety company authorized to do business in Colorado.

iii. The bond shall guarantee payment of the compensation and benefits awarded.

11. The respondents shall notify the Division of Workers' Compensation of payments made pursuant to this order.

12. The filing of any appeal, including a petition to review, shall not relieve the respondents of the obligation to pay the designated sum to the trustee or to file the bond. Section 8-43-408(2), C.R.S.

Dated: November 1, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For

statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

1. Determination of Claimant's permanent partial disability (PPD) rating attributable to his March 22, 2017 work related injury.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a general award of reasonable, necessary, and related medical benefits post maximum medical improvement (Grovers).

FINDINGS OF FACT

1. Claimant is a 54-year-old male who is employed by Employer as a tree grounds-man.

2. On March 22, 2017, Claimant sustained an admitted work related injury. On that date, Claimant was pushing a tree log on a dolly and the dolly got stuck. When Claimant and a coworker tried to move it, the dolly tipped and the log rolled, pinning Claimant's left leg and ankle against a wall. Most of the trauma and blunt force was to Claimant's left ankle and left lower leg and there was no trauma to his left toes.

3. On March 23, 2017 Brian Beatty, D.O. evaluated Claimant. Claimant reported that a large trunk of a tree fell off a dolly and hit him in the left ankle and left lower leg with sudden pain. Claimant reported left ankle pain, swelling, stiffness, and bruising. On examination, Dr. Beatty found tenderness with swelling over the ankle and mild ecchymosis. Dr. Beatty found decreased range of motion of the ankle. Dr. Beatty diagnosed left ankle contusion/sprain and recommended ice, elevation, and immobilization. *See* Exhibits 2, D.

4. On March 27, 2017, Claimant underwent x-rays of his left ankle. The findings included no fracture or dislocation with well-maintained joint spaces. Vascular calcification in the distal left leg and foot as well as atherosclerotic vascular calcification was identified in the x-rays. *See* Exhibit 6.

5. On May 18, 2017, Claimant underwent an MRI of his left ankle that was interpreted by David Solsberg, M.D. Dr. Solsberg provided the impression of: extensive edema in soft tissues including the interosseous muscles of the foot that could be seen with cellulitis or marked edema and inflammation and could also be seen with regional sympathetic dystrophy. Dr. Solsberg recommended correlation with inflammatory markers and clinical findings. His impression continued with: bone marrow edema in the base of the third, fourth, and fifth metatarsal, cuboid, external cuneiform, navicular, middle cuneiform, and around the margin of the talonavicular joint including the anterior process

of the talus. Dr. Solsberg noted this could be seen with trauma or with a neuropathic arthropathy and also could be seen less likely with osteomyelitis and cellulitis. Dr. Solsberg opined that the effusions in the tendon sheaths were probably due to the cellulitis and/or edema and arthropathy with tenosynovitis. Dr. Solsberg noted vascular calcification like that shown on prior radiograph. Dr. Solsberg also found the talonavicular joint subluxed on this study. *See* Exhibit 6.

6. On May 24, 2017, Stuart Myers, M.D. evaluated Claimant. Claimant reported left foot and ankle pain. Claimant reported limited but some improvement. On examination, Dr. Myers found Claimant's skin to be intact but found swelling and tenderness in the posteromedial ankle and over the tarsometatarsal joints and naviculocuneiform joints. Dr. Myers provided the impression of possible posterior tib tendinitis or tendon dysfunction. Dr. Myers provided an airlift brace and a prescription for an anti-inflammatory medication. *See* Exhibit E.

7. On June 1, 2017, Dr. Beatty evaluated Claimant. Claimant reported feeling a little bit better but with continued left ankle pain and stiffness. On examination, Dr. Beatty found tenderness but no swelling or ecchymosis. Dr. Beatty noted that Claimant appeared to have a paronychia or a slight infection involving the great toe. Dr. Beatty continued to diagnoses left ankle contusion/sprain and noted treatment would include a boot, H-wave, and consult with Dr. Meyers. Dr. Beatty noted Claimant would follow through with the recommendations and brace from Dr. Meyers. Dr. Beatty noted that Claimant appeared to have a great toe infection and encouraged Claimant to see his personal physician to have it looked at especially since Claimant was a diabetic. *See* Exhibit D.

8. On June 2, 2017, Claimant was evaluated at Denver Health Adult Urgent Care. Sarah Hemeida, M.D. evaluated Claimant. Claimant reported that his problems began two weeks prior when he had a crush injury from a fallen tree stump while at work. Claimant reported that he was a diabetic, that the nail of his toe fell off, and that in the last week he developed severe pain, erythema, pulsating sensation, and appearance of purulent material, which had not drained. On examination, Dr. Hemeida found the left great toe with swelling and erythema that was well demarcated with evidence of slight ecchymosis to the base of the left great toe and the apex of the toe with bulging purulent appearing material and area of fluctuance. Dr. Hemeida diagnosed bacterial skin infection, cellulitis of toe of left foot and prescribed cephalexin and oxycodone. *See* Exhibit 3.

9. On June 16, 2017, Claimant was admitted to Denver Health after he returned with worsening left great toe problems. X-rays showed osteomyelitis of the distal phalanx of the left great toe. It was noted that Claimant had type 2 diabetes uncontrolled with evidence of calcified vessels on x-ray. Claimant reported an injury in March of 2017 when a tree stump fell on his left foot and that on June 2 he went to the emergency room when his nail fell off the toe and he had severe pulsating pain. Claimant reported having immediate change in the structure of his foot with flattening after the injury and that he

started using arch supports and he noticed rubbing against his shoes and open wound. *See* Exhibit F.

10. On June 19, 2018 Kristine Hoffman, DPM, operated on Claimant's left toe and performed a left hallux amputation at mid aspect of the proximal phalanx. History provided to Dr. Hoffman was that a crush injury trauma from the work injury caused arch collapse, flat foot, and lead to the Charcot arthropathy changes in the foot structure. Dr. Hoffman indicated that the foot deformity caused by the Charcot arthropathy placed the foot at a high risk of ulceration/amputation. *See* Exhibits 4, G.

11. On June 22, 2017, Dr. Beatty evaluated Claimant. Claimant reported mild ankle pain. Claimant reported that since the last visit he went to Denver Health emergency room for his left great toe infection and was placed on antibiotics. Claimant reported, however, that the infection became worse and he ultimately had to amputate his great toe on June 19. Dr. Beatty opined that the amputation was not work related. Dr. Beatty noted that Claimant was currently in a very large bandage covering the entire left foot and wearing a postop shoe and using crutches. Dr. Beatty noted that interventions for Claimant's ankle were on hold due to the infection and amputation of the great left toe. *See* Exhibit D.

12. On June 23, 2017, Dr. Hoffman evaluated Claimant. She assessed diabetic ulcer of left foot associated with type 2 diabetes; uncontrolled type 2 diabetes with neuropathy; and history of amputation of lesser toe, partial left hallux amputation on June 19, 2017. Dr. Hoffman noted that Claimant was feeling well with mild pain and was able to ambulate in surgical shoe with crutches. *See* Exhibit 4.

13. On July 5, 2017, Albert Hattem, M.D. performed a medical records review. Dr. Hattem opined that Claimant's great toe infection was not causally related to the March 22, 2017 work injury. Dr. Hattem opined that the injury was to the ankle and not to the great toe and noted that Claimant was first noted to have paronychia involving the great toe approximately 2.5 months out from the ankle injury. Dr. Hattem opined that the interval of time between the injury in question and the first presentation of infection in the toe does not support a causal relationship. Dr. Hattem opined that Claimant was an insulin dependent diabetic who was at a high risk for foot infections regardless of the March 22, 2017 injury. *See* Exhibit C.

14. On July 13, 2017, Dr. Beatty evaluated Claimant. Claimant reported mild ankle pain. Claimant reported that Dr. Meyers had ordered a special ankle brace and repeat MRI. Claimant had tenderness in the left ankle but no swelling or ecchymosis. Dr. Beatty planned to see Claimant after MRI and follow up with Dr. Meyers. *See* Exhibit D.

15. On July 26, 2017, Dr. Myers evaluated Claimant. Claimant reported persistent posteromedial pain as well as numbness in his plantar foot. Dr. Myers noted Claimant's unusual course with amputation of the great left toe. Dr. Myers opined that the injury was slow to heal given Claimant's comorbidities and need for amputation. Dr. Myers opined that the MRI clearly showed changes suggestive of diabetic neuropathy

and that given the irregularity of the third, fourth, and fifth TMT joints, the spectre of Charcot was raised. Dr. Myers opined that clearly, Claimant's diabetes and neuropathy were not caused by the injury, but that it was very possible and perhaps probable that Claimant's current degree of pathology was precipitated by the injury. Dr. Myers recommended a good brace to provide stability and minimize the risk of progression of the deformity. *See* Exhibit E.

16. On August 31, 2017, Dr. Beatty issued a letter in response to a letter sent to him by Claimant's attorney. Dr. Beatty disagreed with Dr. Hoffman's opinion that Claimant's current problems were related to an aggravation of his diabetic neuropathy from the trauma at work on March 22, 2017. Dr. Beatty opined that the work injury was not that serious. Dr. Beatty opined that when he first saw Claimant there was some mild swelling and mild bruising of the ankle and lower leg, which were the only areas, affected. Dr. Beatty noted there were no fractures. Dr. Beatty opined that the findings from MRI were very consistent with diabetic neuropathy and not with trauma and therefore disagreed with Dr. Hoffman's assessment and conclusions regarding causation. *See* Exhibit D.

17. On September 6, 2017, Dr. Myers evaluated Claimant. The impression provided was: left foot and ankle injury; great toe amputation; diabetic neuropathy; Charcot arthropathy; and posteromedial ankle pain. Dr. Myers opined that given Claimant's MRI findings suggesting denervation and x-rays showing some subluxation it was reasonable to describe Claimant's condition as early Charcot. Dr. Myers recommended a crow walker boot. Given Claimant's diabetic neuropathy, Claimant was noted to be at high risk for progression of cuboid prominence and ulceration. Dr. Myers noted that since the boot was custom made and specific for the charcot and diabetic neuropathy, the insurance company may not authorize it and reviewed with Claimant that if it was not authorized he could work through Medicaid to get it. Claimant wanted a second opinion and believed he needed surgery on the cuboid. *See* Exhibit E.

18. On September 21, 2017, Eric Lindberg, M.D. issued a letter. Dr. Lindberg noted that the MRI in July of 2017 showed some bony edema and some malalignment of the fourth and fifth metatarsal bases suggestive to be neuropathic. Dr. Lindberg opined that given Claimant's history of injury and the insulin dependent diabetes, placement in a crow boot walker was very reasonable and most likely related to the initial injury. *See* Exhibit 5.

19. On October 4, 2017, Claimant was evaluated at Denver Health. Claimant reported a lump on the bottom of his left foot and that he had the deformity for over a year Claimant reported that about the same time of his surgery on his left great toe, he also had a lump on his foot. Claimant reported wearing a custom brace but that he wanted to have surgery so that he no longer had to wear the brace. It was explained to Claimant that removing the soft tissue on the bottom of the left foot was not recommended, as it would put Claimant at risk for ulcerations and other problems. It was explained that following his injury, his foot structure changed and that it was positive he still had a foot after the injury he had. *See* Exhibit F.

20. On October 23, 2017, Dr. Hoffman evaluated Claimant. Dr. Hoffman assessed: gait abnormality; left foot pain; uncontrolled type 2 diabetes with diabetic peripheral angiopathy without gangrene with long-term use of insulin; diabetic polyneuropathy associated with type 2 diabetes; Charcot's arthropathy, diabetic; acquired pes planus, left. Dr. Hoffman noted the partial left hallux amputation and that the surgical site was well healed. Dr. Hoffman opined that the history of left foot trauma led to the left midfoot charcot/pes planus and that the foot deformity placed Claimant at a high risk of ulceration/amputation. *See* Exhibit 4.

21. On November 13, 2017, Alexander Jacobs, M.D. performed an independent medical evaluation. Claimant reported that he had diabetes for nine years first diagnosed after he suffered temporary bilateral blindness. Claimant reported he subsequently regained vision but that his left eye continued to be problematic. Claimant reported his left eye is virtually blind now. Claimant reported that with this injury, a large piece of tree trunk fell off a dolly and pinned him against the wall of a house with most of the trauma and blunt force to his ankle and lower leg. Claimant reported that he continued working, finished dragging the log back onto the dolly and out into the street and helped cleanup. Claimant reported being evaluated the next day. Claimant reported that his toe was not symptomatic at that time. Dr. Jacobs noted that there were neuropathic changes consistent with Claimant's diabetes and perhaps an early Charcot foot. Claimant reported about a month and a half after the injury he began to develop some toe symptoms and that he went to Denver Health for treatment where an infection and cellulitis was identified in the left great toe. Claimant reported that he went back two weeks later and was told the infection was in the bone and that they would need to do a distal toe amputation. Claimant reported that his recovery was fast and healed faster than they expected given his diabetes. Claimant reported he returned to work and was currently working full duty. Claimant reported that he was given a brace for his Charcot foot, the rocker deformity, and loss of arch on the left foot. *See* Exhibit A.

22. Claimant reported that approximately two years ago he had problems with an ingrown toenail on the left great toe and that a physician removed the nails of his left great toe, right great toe, and right fifth toe. Dr. Jacobs reviewed medical records and performed a physical examination. Dr. Jacobs noted that x-rays on March 27, 2017 of Claimant's left ankle showed vascular calcifications in the distal leg and foot as well as atherosclerotic vascular calcification. Dr. Jacobs also noted that an MRI from May 18, 2017 found extensive edema in the soft tissues of the interosseous muscles of the foot either cellulitis or marked edema and inflammation and correlation with inflammatory markers was recommended. Dr. Jacobs noted that the MRI also showed bone marrow edema in the third, fourth, and fifth metatarsal, cuboid, and external cuneiform, navicular and middle cuneiform and around the margin of the talonavicular joint frequently seen in neuropathic arthropathy. The MRI also noted vascular calcification. Dr. Jacobs noted that by June 2, 2017 Claimant had an x-ray done on his left foot for swelling and possible infection and that the notes incorrectly state this happened one week after trauma when it was 70 days after the trauma. Dr. Jacobs also noted that by June 16, 2017 when Claimant went to the emergency room, it was noted that his diabetic foot ulcer was getting

worse and that there was concern about possibly abscess formation and early osteomyelitis was shown by x-ray. After reviewing all the medical records and performing a physical examination, Dr. Jacobs provided the impression of: diabetes mellitus, type II, with neuropathy and calcific vascular changes in the left leg and foot; charcot foot, left; left eye blindness due to diabetic complications; ankle injury from March 22, 2017, essentially resolved; and osteomyelitis left great toe tip with amputation of distal phalanx with transection through the mid portion of the proximal phalanx; history of prior ingrown toenail left great toe with toenail removal and issues with right great toenail and right fifth toenail; hypertension; and lipid elevation. *See* Exhibit A.

23. Dr. Jacobs opined that the toe infection was not in any way, shape, or form causally related to the March 22, 2017 work injury. He opined that the original injury took place almost three months before the toe infection and that the original evaluation of the foot did not demonstrate any injury to the toe nor was Claimant symptomatic as far as the toe was concerned. Dr. Jacobs opined that infections of the toes that spread to the bone are the rule rather than the exception in diabetics. He opined that Claimant's Charcot foot was not unusual in diabetics and entails remodeling of the bone, loss of the arch, flattening of the foot, and a rocker foot type deformity. *See* Exhibit A.

24. On December 26, 2017, Dr. Beatty evaluated Claimant. Dr. Beatty noted that Claimant's work related injury diagnosis was left ankle contusion and sprain. Dr. Beatty noted Claimant had negative x-rays and a negative MRI showing no acute fracture to the left ankle. Dr. Beatty noted that Claimant underwent conservative care including ice, elevation, boot, crutches, and physical therapy. Dr. Beatty noted that on June 1, Claimant appeared to have a great toe infection and was encouraged to see his personal physician and that the toe ultimately had to be amputated. Dr. Beatty opined that this was a non-work event. Dr. Beatty noted that Dr. Myers did not believe Claimant had a surgical problem with the left ankle and had released Claimant. Dr. Beatty opined that Claimant was at maximum medical improvement. Dr. Beatty assessed ankle sprain and provided an impairment of 12% left lower extremity. Dr. Beatty rated Claimant under Table 37 for abnormal motion of the hind foot (ankle joint) noting lost motion in dorsi-plantar flexion and under Table 38 for abnormal motion of the hind foot (subtalar joint) noting lost motion in inversion-eversion. The ankle joint and subtalar joint are areas where the log landed on Claimant in the work injury. Dr. Beatty opined that maintenance care after maximum medical improvement was not required. *See* Exhibit D.

25. Claimant requested a Division Independent Medical Evaluation.

26. On April 19, 2018, Kenneth Finn, M.D. performed a Division Independent Medical Evaluation (DIME). Claimant reported that he was working as a grounds maintenance man and was hauling a large log when it fell and struck him on the left shin, ankle, and foot. Claimant reported acute pain, swelling, and bruising and that he was in a brace for several months. Claimant reported that his symptoms worsened and that shortly after his injury he ended up with a blister on his left foot and due to his underlying diabetes, it progressed to the point where he required a partial toe amputation. Claimant reported the amputation healed up very well but that his ankle continued to remain painful.

Dr. Finn diagnosed: chronic left ankle pain status post work related injury to the foot; partial great toe amputation; non-work related history of diabetes requiring insulin, and non-work related Charcot arthropathy. Dr. Finn agreed with Dr. Beatty that Claimant was at maximum medical improvement on December 26, 2017. However, Dr. Finn felt the ratable impairments included the left ankle as well as the partial amputation. Dr. Finn opined that although Claimant had an underlying medical condition putting Claimant at higher risk for developing foot ulceration and subsequent amputation, Claimant developed the issue within a short time frame of his trauma, initially losing his nail, and subsequently part of his toe. Dr. Finn thought there was a temporal relationship that would relate the two and felt the partial toe amputation would be a work related condition and ratable. Dr. Finn opined that Claimant had a 19% left lower extremity impairment, with 5% impairment for loss of the great toe and 15% loss for range of motion at the ankle. Dr. Finn recommended maintenance care including follow up with Claimant's orthopedic surgeon. *See* Exhibits 1, B.

27. Respondents applied for hearing to challenge DIME physician Dr. Finn's rating.

28. Dr. Jacobs testified at hearing. He opined that Claimant's left great toe partial amputation was not even remotely related to the March 22, 2017 work injury. Dr. Jacobs testified that Claimant's diabetes was not well managed prior to the injury and that Claimant already had calcification of vessels. Dr. Jacobs testified that the MRI showed Claimant's damaged nerves and dissolved bones/tendons with micro fractures, neuropathy, and restructuring into flat foot. Dr. Jacobs testified that Claimant's left foot has Charcot foot with the loss of arch consistent with diabetics. Dr. Jacobs testified that trauma could cause the problem, but that here, the log did not touch Claimant's left foot so trauma did not cause it. Dr. Jacobs noted that Claimant reported to the podiatrist that he had a flat foot with a lump on the bottom for one year in October of 2017 so that the protrusion and flatfoot were present prior to the work related injury. Dr. Jacobs opined that the DIME physician was wrong regarding the short time frame, that March 22, 2017 to June 19, 2017 was not a short time, and that there was not a close temporal relationship. Dr. Jacobs opined that Claimant would have had the toe ulcer without the work related injury and that Claimant had issues with his feet before. Dr. Jacobs testified that Dr. Finn was mistaken. Dr. Jacobs also opined that although Claimant needs a lot of care and maintenance if he wants to save his left foot and leg, none of it is required based on the March 22, 2017 injury. Dr. Jacobs testified that Claimant was getting better from the injury and doing fine until he developed a new problem in the left toe.

29. Dr. Jacobs further testified that Claimant's limitation in range of motion at the ankle was not due to the March 22, 2017 injury and was due to Claimant's Charcot foot. Dr. Jacobs opined that the Charcot foot and Charcot arthropathy was not work related so any measurement and rating for that provided by the DIME physician was incorrect. Dr. Jacobs opined that the DIME opinion may have been tainted by bad information. Dr. Jacobs testified that the DIME physician believed there was close proximity and there wasn't, the DIME physician didn't realize that Claimant had a toenail removed two years prior on his left great toe, and the DIME physician didn't realize that

Claimant had bilateral foot problems in 2011, neuropathic leg pain in 2012, and prior left top of foot pain and cellulitis of the left foot. Dr. Jacobs pointed out that Claimant told providers that he developed the toe infection/problem a week after his injury but that it was actually almost three months after his injury. Dr. Jacobs opined that the DIME physician erred.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME on Permanent Partial Disability (PPD)

A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S.

Generally, the finding of a DIME physician concerning the claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

However, the increased burden of proof required by the DIME procedures is not applicable to scheduled injuries. Section 8-42-107(8)(a), C.R.S. states that "when an injury results in permanent medical impairment not set forth in the schedule in subsection (2) of this section, the employee shall be limited to medical impairment benefits calculated as provided in this subsection (8)." Therefore, the procedures set forth in §8-42-107(8)(c), C.R.S., which provide that the DIME findings must be overcome by clear and convincing evidence, are applicable only to non-scheduled injuries. The court of appeals has stated in this respect that: Scheduled and non-scheduled impairments are treated differently under the Act for purposes of determining permanent disability benefits. In particular, the procedures of § 8-42-107(8)(c), which states that a DIME finding as to permanent impairment can be overcome only by clear and convincing evidence and that such finding is a prerequisite to a hearing on permanent impairment, have been recognized as applying only to non-scheduled impairments. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998); *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000).

Claimant thus has the burden of showing the extent of his scheduled impairment by a preponderance of the evidence. *Maestas v. American Furniture Warehouse and G.E. Young and Company*, W.C. No. 4-662-369 (2007); *Burciaga v. AMB Janitorial Services, Inc. and Indeminity Care ESIS Inc*., W.C. No. 4-777-882 (2010). Respondents are not required to overcome the scheduled impairment rating assigned by the DIME and the usual preponderance of the evidence burden of proof applies for Claimant to prove entitlement to benefits. *Id.*

After review of the credible and persuasive evidence, the ALJ concludes that Claimant's left great toe partial amputation is not related to his March 22, 2017 work injury and that rating the toe amputation is not appropriate. Evidence demonstrates significant problems in the left foot pre-dated the work related injury and that Claimant has been high risk for developing infection/amputation of his bilateral feet for some time due to his significant uncontrolled diabetes.

Claimant's left toe infection and ultimate amputation did not occur immediately following the work injury. Rather, he was showing slight improvement in his left ankle pain prior to the toe infection setting in. Additionally, Claimant reported symptoms consistent with Charcot foot in his left foot had been present for several months prior to the work related injury. Claimant also had his left great toenail removed well before the work related injury. The state of his left foot, which was highly susceptible to infection, including the removed toenail existed well before the work injury. X-rays taken shortly after the work related injury showed calcification and studies also showed neuropathy that pre-existed the work injury to his left ankle.

The opinion of Dr. Beatty is persuasive that Claimant sustained an ankle contusion/sprain that was not significant or consistent with fracture. Studies show no traumatic acute fracture occurred on the date of injury. Although an acute fracture or injury could possibly lead to Charcot foot or infection, here it did not do so. Rather, Claimant's pre-existing underlying condition caused him to develop the toe infection and ultimate amputation. Therefore, the DIME physician was incorrect to rate the toe amputation and Claimant has not established an entitlement to a scheduled rating for the toe amputation.

However, Claimant has established an entitlement to a scheduled rating for his left ankle that was injured. Claimant's left ankle never fully recovered from injury. Although his underlying condition diabetic condition may have contributed to his lack of recovery, Claimant's work related ankle sprain combined with his pre-existing condition caused his current disability. The ALJ finds persuasive the rating of Dr. Beatty of 12% lower extremity as the ankle sprain combined with Claimant's poor circulation and ability to heal due to his diabetes has caused impairment. Dr. Beatty rated Claimant under Table 37 for abnormal motion of the hind foot (ankle joint) noting lost motion in dorsi-plantar flexion and under Table 38 for abnormal motion of the hind foot (subtalar joint) noting lost motion in inversion-eversion. The ankle joint and subtalar joint are areas where the log landed on Claimant in the work injury. The ALJ finds it credible and persuasive that the lost

motion in these areas is ratable and work related. The rating for the toe amputation is not work related.

The opinion of Dr. Beatty is ultimately the most persuasive. Claimant's left toe amputation is not work related, but his left ankle injury did result in permanent range of motion loss in the ankle joint and subtalar joint resulting in a 12% scheduled left lower extremity impairment.

Medical Maintenance

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

Claimant has failed to establish, by a preponderance of the evidence that future medical treatment will be reasonably necessary to relieve the effects of his injury or prevent further deterioration of his condition. Here, the work related injury was limited to an ankle sprain and ankle contusion. Although Claimant's ankle was slow to heal and he has permanent impairment in range of motion in his ankle, there is insufficient evidence that future treatment is needed to relieve his injury or prevent it from deteriorating. Claimant has been determined to have sustained no fractures in his ankle and is not a surgical candidate for his ankle. The continued maintenance care recommended by the DIME physician was for follow up with orthopedics, however, the orthopedist has released Claimant.

Claimant, undoubtedly, will need significant medical care and follow up for his non work related diabetic condition in his left lower extremity. Claimant needed significant medical care for this condition prior to his work related injury. Prior to the injury he had calcification issues, an ingrown toenail removed, and uncontrolled diabetes for many years. He is a high risk for further infections and amputations due to his diabetic state. However, he has failed to show by preponderant evidence that further maintenance care is necessary for the left ankle sprain and contusion. Therefore, his request for a general award of "grover" medical benefits is denied.

ORDER

IT IS HEREBY ORDERED that:

1. Claimant has established, by a preponderance of the evidence, an entitlement to a 12% left lower extremity impairment rating for his March 22, 2017 work related injury.

2. Claimant's left great toe partial amputation is not work related.

3. Claimant has failed to establish, by a preponderance of the evidence, an entitlement to medical maintenance benefits.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 1, 2018

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-070-710-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 10, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 10/10/18, Courtroom 3, beginning at 8:30 AM, and ending at 11:15 AM),

Claimant's Exhibits 1 through 5 were admitted into evidence, without objection. Respondents' Exhibits A through G were admitted into evidence, without objection.

ISSUES

The issues to be determined herein concern whether the Claimant sustained a compensable injury on October 10, 2017. If so, what are the consequences of the injury: medical benefits, average weekly wages (AWW), and temporary partial disability (TPD) benefits. By agreement, the parties struck issues concerning temporary total disability. (TTD).

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was born on July 21, 1966, and at the time of the hearing was 52 years old.

2. The Claimant worked as a Lessons and Studio Manager for the Employer.

Alleged Compensable Event

3. The Claimant alleges that he approached the Employer's Assistant Manager, Preston Nogar, to report numbers. Nogar proceeded to congratulate him and when the Claimant turned around, Nogar allegedly grabbed the Claimants butt. The Claimant claims that he turned around and told Nogar to stop and that he didn't want any part of their "games."

4. The Claimant then alleges that another coworker, Anthony Baughman, proceeded to follow him to his desk. At his desk, the Claimant states that Baughman tried to grab the Claimant's butt and the Claimant fell down when he was trying to save a guitar. The Claimant also alleges that several hours later, Baughman tried to "sexually" harass him again and he twisted Baughman's arm in self-defense.

5. Nogar and Baughman, as witnesses, reported a different set of events. First they indicate that none of the alleged "sexual harassment, " either verbally or physically, took place that day or any day while the Claimant was employed. Baughman alleged that the Claimant often bragged about his marital arts background and wrestled Baugham to the ground one day. Nogar claimed he was not at work on October 10, 2017, and that the incident between the Claimant and Baughman was "rough housing" and was not serious. Nogar stated that the type of altercation between the Claimant and Baughman was not typical and he had never witnessed anything like it. Nogar further testified that the Claimant had previous HR issues and since the altercation was on video, he was fired for fighting.

6. The Claimant called Patrick Davis as the rebuttal witness. Davis claimed to be in the Employer's store on October 10, 2017, and witnessed a male employee smack the Claimant on his butt. He testified that the Claimant turned around and clearly was angry and expressed his disapproval by shouting "stop" or "don't do that."

7. On February 28, 2018, the Claimant completed Worker's Claim for Compensation Form from the Colorado Department of Labor and Employment (CDLE). The Claimant alleged that the injury occurred when- "[he] had an altercation with a coworker that was sexually harassing him, walked away, coworker followed [him] and coworker tried to grab [him], and [he] tried to stop him and fell on top of him landing directly onto [his] knee" (Respondents' Exhibit A, p. 1).

8. The Employer alleged that they terminated the Claimant for "fighting with employees."

Relevant Medical

9. On October 12, 2017, the Claimant went to On Point Urgent Care for knee pain and was seen by Jonathan Mihok, D.O. The Claimant reported that "he was moving some boxes, one was falling and he tried to catch it but his knee 'gave out.'" Dr. Mihok preformed several X-Rays and prescribed some medicine.

10. On November 17, 2017, the Claimant went back to On Point Urgent Care for knee pain and was seen by Edwin Baca, M.D. On that day, Dr. Baca reported that the Claimant was no longer working and was pursuing a work injury claim although contrary to his prior visit. Dr. Baca took the following dictation during the visit:

> "[Patient] comes back into the office today for a follow up visit for his R Knee pain. [Patient] reports the knee pain is not improving and comes in today for a reevaluation of his R Knee. He notes there is not a valid WC Claim; however, he notes the injury happened at work and he has notified HR and they recommend filling out the proper WI paperwork to get a claim for the work injury. He notes that he has already retained an attorney and his counseled to attempt to go through WC for management. The [patient] notes today that he feels this is a valid work injury. The [patient] notes another coworker was playing around and fell directly onto his r anterior knee, injuring his r knee. He was initially seen in our office on 10/12/2017 with no mention of the injury happening at work. . . [Patient] reports that he was "fired" from his job because he wanted to file for a work injury claim."

(Claimant's Exhibit 2, p. 4). Dr. Baca prescribed a knee brace for support, cold therapy as needed, pain medication and to return for reevaluation.

11. The history given to Dr. Baca, concerning the events of October 10, 2017, is entirely inconsistent with the Claimant's testimony at hearing. The ALJ finds the history given to a medical provider for the purpose of receiving

treatment more reliable that the Claimant's testimony at hearing, which seems improbable as measured against a standard of reason and common sense.

Credibility

12. The Claimant undercuts his own credibility in his own exhibits. On October 12, 2017, the Claimant reported to Dr. Mihok that he injured his knee when "he was moving some boxes, one was falling and he tried to catch it but his knee 'gave out.'" On November 17, 2017, however, the Claimant reported to Dr. Baca that "another coworker was 'playing around' and fell, landing directly onto his anterior [right] knee, injuring his knee." This discrepancy is actually noted by Dr. Baca when he states that the Claimant "was initially seen in our office on 10/12/2017 with no mention of the injury happening at work." On Feb. 28, 2018, the Claimant modified his story once more to indicate that he "had an altercation with a coworker that was sexually harassing him, walked away, coworker followed me and coworker tried to grab me, and I tried to stop him and fell on top of him landing directly onto knee" (Respondents' Exhibit A, p. 1). The Claimant's description of the incident again changed during the hearing when he claimed that his manager sexually assaulted him and that five minutes later a different coworker who was not involved in the first assault followed him back to his desk. The Claimant adds that the coworker was trying to grab him at his desk and they fell on each other when he was trying to save a guitar from toppling over. The Claimant additionally adds that the same coworker attempted to sexually assault him a few hours' later and in self-defense the Claimant twisted his arm and made the coworker fall to the ground.

13. The ALJ finds the Claimant's version of events on October 10, 2017 entirely lacking in credibility. The ALJ further finds the testimony of Nogar and Baugham credible as found herein above.

Ultimate Findings

14. Based on the totality of the evidence, especially the Claimant's denials of work-relatedness to medical providers, the ALJ does not find the Claimant's claim of a work-related injury on October 10, 2017 credible. The fact that Claimant did not claim this as a worker's compensation issue until after he was fired, further reflects on his lack of credibility. Moreover, the Claimant also changed the description of the events as time progressed. The Claimant first told his doctor that the injury wasn't work related, only to change his story the next month when he visited the doctor after he was fired. Then he went on to describe the incident on a worker's compensation form as a "sexual assault" involving only one coworker. On the day of the hearing, the Claimant stated that there were three different incidents on that day, two different coworkers were involved and that he fell trying to save a guitar. The ALJ infers and finds that there are too many anomalies and inconsistencies in the Claimant's version of events to render his version of compensable injuries lacking in credibility. Furthermore, even if there was an injury

stemming from a physical altercation with a coworker, such event would be classified as "horseplay" and would be non-compensable.

15. On the other hand, the ALJ finds the testimony of Preston Nogar and Anthony Baughman to be more consistent, and although it may not be fully credible itself, it contradicts the inconsistent testimony of the Claimant. Indeed, their consistent descriptions and ongoing employment tends to enhance their credibility. Their testimony also elevates the anomalies in the Claimant's version of events to a level of incredulity. The Respondents' theory that this case is not compensable because it stems from non-compensable horseplay between co-employees seems likely. The ALJ finds that the case turns on overall credibility and, as found herein above, the Claimant's claim is not credible and if anything his injury arises from non-compensable horseplay.

16. Neither the Claimant nor the Respondent thought it was relevant to produce any relevant HR (Human Resources) documents concerning the Claimant's employment and termination; or, to discover the video that Nogar spoke about that supposedly depicted the altercation. Since this claim requires the Claimant to bear the burden of proof, by preponderant evidence, his claim lacks sufficient evidence for Claimant to sustain his burden. Coupled with the Claimant's lack of credibility, he failed to establish that hid injuries were clearly within the course and scope of employment.

17. For the reasons specified herein above, the ALJ finds that the Claimant has failed to prove that he suffered compensable injuries on October 10, 2017, arising out of the course and scope of his employment, thus, the Claimant has failed to sustain his burden of proof by a preponderance of the evidence.

18. The Claimant's knee injuries had no relation to his work-related functions. If anything, the injuries resulted from horseplay where the Claimant was the aggressor; and, this amounted to such a substantial deviation from work that it was outside the course and scope of employment.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo.

App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's claim is lacking in credibility on whether the October 10, 2017 incident amounted to a compensable event; or, was horseplay wherein the Claimant was the aggressor.

Compensability and Horseplay Doctrine

b. A claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his employment with employer. Section 8-41-301(1)(b) & (c), C.R.S*.; see Streeb*, 706 P.2d at 786. An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991); *Pansy Hubbard v. City Market,* W.C. No. 4-934-689-01 (I.C.A.O Nov. 21, 2014). As found, the incident, at best, amounted to horseplay wherein the Claimant was the aggressor.

c. The "arising out of " element is narrower and requires claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.; City of Brighton v. Rodriguez*, 318 P.3d 496, 502 (Colo. 2014). It is not essential to compensability that an employee's activity at the time of the injury result from a job duty if the activity is sufficiently incidental to the work to be properly considered as arising out of and in the course of the employment. *Panera Bread, LLC*

v. Indus. Claim Appeals Office, 141 P.3d 970 (Colo. App. 2006); *Mary Rodriguez v. Pueblo County* W.C. No. 4-911-673-01 (I.C.A.O Aug. 2, 2016). As found, the Claimant's injuries did not result from actions incident to his work duties.

d. If the Claimant's activity at the time of the injury constitutes such a substantial deviation from the circumstances and conditions of his employment that the activity is for the claimant's sole benefit, the injury does not arise out of and in the course of employment. *Kater v. Indus. Comm'n,* 728 P.2d 746 (Colo. App. 1986); *Mario Laroc v. Labor Ready, Inc.* W.C. No. 4-783-889 (I.C.A.O Feb. 1, 2010). As found, the Claimant's actions on October 10, 2017 amounted to such a substantial deviation from work duties that it was outside the course and scope of his employment.

e. Where, the alleged deviation from employment involves "horseplay," the courts apply a four-part test to determine whether the resulting injury is compensable. In *Lori's Family Dining v. Indus. Claim Appeals Office,* 907 P.2d 715, 718 (Colo. App. 1995), the Court of Appeals held that the relevant factors are:

(1) the extent and seriousness of the deviation;
(2) the completeness of the deviation, *i.e.,* whether it was commingled with the performance of a duty or involved and abandonment of duty;
(3) the extent to which the practice of horseplay had become an accepted part of the employment; and
(4) the extent to which the nature of the employment may be expected to include some horseplay.

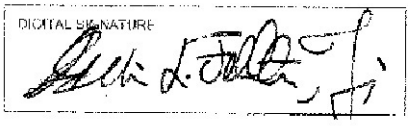
Mark Orist v. G4S Secure Solutions (USA), Inc. W.C. No. 4-886-126-01 [Indus. Claim Appeals Office (ICAO), August 17, 2012]. As found, the Claimant's injuries occurred "in the course of" employment. The issue presented here is whether the injury "arose out of" the Claimant's employment , *i.e.* whether there exists a causal connection between the work conditions and the injury. Since the Claimant departed from the scope of his employment by engaging in "horseplay," his injury does not arise out of employment. First, the Claimant's altercation with another coworker was a serious deviation from employment because physical altercations were not typical of his work place. As found, the Claimant was the aggressor. Second, the deviation was not commingled with any performance of duty. Although the Claimant testified that he fell because he was trying to save a guitar from falling, his testimony is not credible to that fact and not dispositive here. The root cause of the fall was the altercation that the Claimant initiated as the aggressor. Third, the practice of horseplay is not an acceptable part of employment as evidenced by the fact that the Claimant was fired for "fighting." Again, the Claimant attempted to justify that horseplay and harassment was common, but since his testimony is not credible, this element is also lacking. His version of events was simply not believable. Fourth, horseplay is not expected to be in the nature of musical instrument sales or musical lessons. Thus the Claimant's injuries did not arise out of his employment and therefore he did not sustain a compensable injury.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits arising out of the Claimant's October 10, 2017 incident, are hereby denied and dismissed.

DATED this 2nd day of November 2018.



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-066-313-001

ISSUES

1. A determination of Claimant's Average Weekly Wage (AWW).

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Partial Disability (TPD) benefits for the period May 5, 2017 through April 10, 2018.

3. Whether Claimant has established by a preponderance of the evidence that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. based on Respondents' failure to accurately calculate his AWW or amount of disability benefits.

4. Whether Claimant has produced clear and convincing evidence that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. for Respondents' unreasonable delay or denial of prior authorization pursuant to WCRP 16-11(F).

FINDINGS OF FACT

1. Claimant worked for Employer as a Carpenter. On May 1, 2017 he sustained an admitted industrial injury to his left hip during the course and scope of his employment. Clamant began receiving medical treatment for his injury and continued to work for Employer in a modified capacity because of temporary work restrictions.

2. On October 5, 2017 Claimant underwent an MRI of his left hip. The MRI revealed a vertical tear of the labrum along with degenerative changes and chondromalacia. Claimant's Authorized Treating Physician (ATP) recommended an arthroscopic labral reconstruction with Brian J. White, M.D. of Western Orthopaedics. Dr. White subsequently recommended surgical repair.

3. On October 25, 2017 Jennifer Laracca of Dr. White's Office sent a facsimile request to Insurer's Claims Adjuster Genie Gerardo regarding authorization for the proposed surgery. The document specified that the surgery would consist of "left hip; scope labral repair-reconstruction, femoral acetabular osteoplasty." The document listed CPT codes 29915, 29999 and 29914. The correspondence asked Insurer to pay "80% of billable charges for 29999-arthroscopic labral reconstruction." The facsimile request did not explain the reasonableness and medical necessity of the services requested and the record is devoid of supporting medical documentation.

4. Dr. White's office sent Claimant a document titled "Dr. White Hip Arthroscopy Surgical Packet." The document advised Claimant that the proposed surgery had not been fully coded by the America Medical Association and thus insurance companies would pay none or only a small amount of the cost. Claimant was therefore expected to pay for the procedure if Dr. White's request for reimbursement was denied. Claimant refused to sign the agreement.

5. The record reveals correspondence between Ms. Laracca and Ms. Gerardo regarding the requested surgery during January 2018. By February 28, 2018, e-mail correspondence between Forensic Claims Examiner Evie Maes of Claimant's counsel's office and Ms. Gerardo reflects that the proposed hip surgery had been authorized.

6. On March 21, 2018 Ms. Maes authored an e-mail that included Insurer's Adjuster Rick Davis as a recipient. Ms. Maes noted that Claimant's hip arthroscopy through had been approved by Insurer. However, she noted that Claimant had received a "hip arthroscopy financial contract" from Dr. White's office and the surgery would be canceled if Western Orthopedics did not receive a "Letter of Agreement" from Insurer. Ms. Maes remarked that the process did not "seem to be customary" and was "anticipating problems" in obtaining a letter from insurer.

7. Billing Manager Jackie Castillo from Dr. White's office testified that she became involved with Claimant's case on March 18, 2018. She noted that Dr. White's surgery scheduler Ms. Laracca had previously worked on Claimant's case but she became involved when payment could not be obtained. Ms. Castillo commented that Claimant was unwilling to sign paperwork that would obligate him to par for the proposed surgical procedure if payment was denied by Insurer. She remarked that she was trying to get Insurer to sign a Letter of Agreement because the requested surgical procedure involved an unlisted CPT code and there was thus no listed code for payment authorization.

8. Ms. Castillo testified that the proposed surgery was not yet fully coded and their office had been having a hard time getting reimbursed in most cases because they were using an unlisted code. Specifically, unlisted code 29999 was used by Dr. White's office to request reimbursement from insurers. Ms. Castillo noted that "it's basically not a real procedure code" and is referred to as a "dummy code."

9. On March 28, 2018 Respondents filed a General Admission of Liability (GAL) through Mr. Davis that acknowledged liability for medical benefits only. In the "Remarks" section of the GAL, Mr. Davis noted the following: "No lost time beyond the 3 day waiting period. No benefits currently due to injured worker. PPD not yet determined."

10. Ms. Castillo testified that beginning on April 24, 2018 she made multiple attempts to contact Mr. Davis to further arrange authorization. She explained that on April 25, 2018 she began e-mailing and leaving voicemails for Mr. Davis to request authorization but received no reply. By April 26-27, 2018 Ms. Castillo left voicemail messages with a manager of Insurer.

11. Mr. Davis testified that he began working on Claimant's claim at the end of March or beginning of April, 2018. His first record of communicating with Ms. Castillo was on April 19, 2018. They discussed approval for payment of the surgery that had been authorized. Mr. Davis explained that Ms. Castillo wanted Insurer to agree to pay for a dummy CPT code for Claimant's surgery because it was not a standard hip procedure. The dummy CPT code was 29999. Mr. Davis testified that an invalid CPT does not give a diagnosis code or procedure and therefore gets paid at zero percent.

12. Mr. Davis explained that there are two components for authorization of a procedure. The first is authorization to perform the procedure and the second is authorization for payment. Mr. Davis mentioned that he usually deals only with authorization to perform the procedure but anything to do with CPT codes is handled by someone else. Mr. Davis clarified that if a physician's office is contacting Insurer regarding billing and CPT codes, then authorization to perform the procedure has likely already been provided. He noted that it was his understanding from reviewing Claimant's file that the prior adjuster had authorized performance of the proposed surgery.

13. Mr. Davis testified that due to the billing difficulties with Dr. White's office, Insurer scheduled a second orthopedic evaluation with surgeon Nathan Faulkner, M.D. He commented that Insurer requested an evaluation with a second orthopedic surgeon to move forward with the surgery and restore Claimant to his preinjury status as quickly as possible. On May 14, 2018 Dr. Faulkner examined Claimant. He agreed with Dr. White that Claimant required hip surgery. However, because Dr. Faulkner did not perform the required surgery he recommended Claimant return to Dr. White. Notably, Dr. White is one of only two or three physicians in Colorado that performs the proposed surgical procedure.

14. Mr. Davis explained that, after the examination with Mr. Faulkner, it became clear that Claimant's only option for surgery was with Dr. White. Ms. Castillo sent Mr. Davis a Letter of Agreement requesting payment for the 29999 CPT code. Mr. Davis had to send the agreement to his supervisor and Employer for approval because the CPT code was not on the fee schedule.

15. Claimant continued working modified duty until he was laid off on April 20, 2018 due to a lack of work. Respondents filed a GAL on May 31, 2018 admitting to an Average Weekly Wage (AWW) of $895.00 and Temporary Total Disability (TTD) benefits from April 20, 2018 until "ongoing." Respondents provided wage records that covered a total of 14 weeks prior to Claimant's May 1, 2017 date of injury.

16. On June 13, 2018 Mr. Davis advised Ms. Castillo that Respondents would agree to the Letter of Agreement. Ms. Castillo signed the Agreement and faxed it to Mr. Davis for execution. On July 9, 2018 Claimant underwent the proposed surgery with Dr. White.

17. Claimant testified that he consistently earned overtime wages prior to his industrial injury. He explained that he worked approximately 9-11 hours each day and earned annual wages between $60,000-$70,000. Claimant noted that his work had been consistent for several years and he regularly earned overtime wages immediately before his May 1, 2017 hip injury.

18. Employer's Safety Manager Daniel Martin testified at the hearing in this matter. He explained that Employer provided Claimant with modified duty based on his work restrictions. He noted that Claimant was informed he could work up to 40 hours each week as long as work was available. Claimant, and approximately 20-30 other employees, was laid off by Employer on April 20, 2018 due to a lack of work.

19. Mr. Martin explained that Claimant's wages varied significantly from year to year based on available overtime. Overtime hours were never guaranteed and varied from project to project or between employees based on skillset. Mr. Martin commented that, even if Claimant had not been on modified duty, he would not have received overtime hours because his project was winding down.

20. On May 24, 2018 Claimant filed an Application for Hearing endorsing penalties under WCRP 16-11(F), WCRP 5-5(B) and WCRP 5-5(C). The 20 day period to cure any penalty was thus June 13, 2018.

21. Wage records for the 14 weeks prior to Claimant's May 1, 2017 industrial injury reveal that he earned a total of $18,397.66. Dividing $18,397.66 by 14 weeks yields an AWW of $1,314.12. However, Claimant asserts that his 2016 Form W-2 is a more accurate reflection of his earnings. Claimant's 2016 Form W-2 reflects wages of $70,509.16. Dividing $70,509.16 by 52 weeks yields an AWW of $1,355.95. Although Claimant seeks an AWW based on his previous year's earnings, the 14 weeks prior to his injury are a more accurate reflection of his wage loss after his May 1, 2017 work accident. Accordingly, an AWW of $1,314.12 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

22. Claimant has proven that it is more probably true than not that he is entitled to receive TPD benefits for the period May 5, 2017 through April 10, 2018. On May 1, 2017 Claimant suffered an admitted industrial injury and received work restrictions. The record reveals that Claimant was limited to working 40 hours per work while on modified duty employment. In contrast, Claimant testified that he consistently worked in excess of 40 hours each week for Employer prior to his injury. The wage records also reveal that Claimant regularly worked in excess of 40 hours per week prior to his industrial his injury but was generally limited to working 40 hours per week after May 1, 2017. Specifically, in the 14 weeks prior to his injury, Claimant worked 647.5 hours or an average of 46.25 hours per week. From May 5, 2017 through the date of the March 28, 2018 GAL Claimant worked a total of 1,801.5 hours in 48 weeks or an average of 37.53 hours per week. Accordingly, Claimant is entitled to receive TPD benefits to the extent that his AWW of $1,314.12 exceeded his weekly earnings during the period May 5, 2017 through April 10, 2018.

23. Claimant has failed to establish that it is more probably true than not that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. for Respondents' failure to accurately calculate his AWW or amount of disability benefits. Claimant's argument is premised on the assumption that Insurer was legally obligated to admit liability for a higher AWW and disability benefits. However, Insurer did not violate any provision of the Act when it initially failed to include Claimant's overtime pay in the AWW calculation. Although Insurer understated Claimant's AWW by over $400.00, the error does not support a claim for penalties. The reasoning of *Allison, Sanchez* and *Reves* reflects that, if a respondent admits liability, the respondent is only liable to pay benefits in accord with the admission. The amount of liability need not ultimately be determined to be correct to avoid penalties. Because §§8-42-102 & 8-42-105(1), C.R.S., WCRP 5.5(B) and WCRP 5.5(C) do not mandate an admission for a specific AWW or disability benefits, penalties cannot be imposed. There is simply no specific statutory violation in failing to admit for what is ultimately determined to be the correct AWW or amount of

disability benefits. Respondents conduct thus did not violate a provision of the Act or a Rule. Accordingly, Claimant's request for penalties is denied and dismissed.

24. Claimant has failed to demonstrate by clear and convincing evidence that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. for Respondents' unreasonable delay or denial of prior authorization pursuant to WCRP 16-11(F). Initially, because Claimant filed an Application for Hearing endorsing penalties on May 24, 2018 and Respondents executed the Letter of Agreement on June 13, 2018, Respondents cured the potential penalty violation. Therefore, the record must reveal clear and convincing evidence that the violator "knew or reasonably should have known" of the violation in order to impose penalties. Claimant asserts that he waited 257 days from the date of the first request for authorization for left hip surgery until the surgery was completed. He noted that there were also multiple surgical requests after October 25, 2017. Despite Claimant's contention, the record reveals that the document dated October 25, 2017 did not constitute a completed prior authorization request, the surgery was approved sometime prior to February 28, 2018 and the majority of the delay in surgery was attributable to the use of a dummy code that required a fee agreement before proceeding.

25. The October 25, 2017 document requesting authorization for the proposed surgery specified that the procedure would consist of "left hip; scope labral repair-reconstruction, femoral acetabular osteoplasty." The document listed CPT codes 29915, 29999 and 29914. However, the facsimile request did not explain the reasonableness and medical necessity of the services requested and the record is devoid of supporting medical documentation. The document thus did not constitute a completed prior authorization request and trigger a response from Respondents within seven days. Nevertheless, the record reveals that the surgery had been authorized by February 28, 2018. Despite the authorization, the majority of the delay in surgery was attributable to the use of a dummy code that required a fee agreement before proceeding.

26. The record reveals that Dr. White's office used dummy code 29999 for Claimant's arthroscopic labral reconstruction. Ms. Castillo noted that she became involved in the matter in an attempt to have Insurer sign a Letter of Agreement because the requested surgical procedure involved an unlisted CPT code. Claimant also refused to sign a document from Dr. White's office that obligated him to pay for the procedure if Insurer denied the request for reimbursement. Mr. Davis explained that Ms. Castillo wanted Insurer to agree to pay for a dummy CPT code for Claimant's surgery because it was not a standard hip procedure. The dummy CPT code was 29999. Mr. Davis testified that an invalid CPT does not give a diagnosis code or procedure and therefore gets paid at zero percent. After an independent medical examination with Dr, Faulkner in an attempt to facilitate surgery, Ms. Castillo sent Mr. Davis a Letter of Agreement requesting payment for the 29999 CPT code. Mr. Davis sent the Agreement to his supervisor and Employer for approval because the CPT code was not on the fee schedule. On June 13, 2018 Mr. Davis advised Ms. Castillo that Respondents would execute the Letter of Agreement.

27. The protracted negotiations over the use of a dummy code for the proposed surgery constituted the majority of the delay in Claimant's surgery. Insurer's actions in delaying a response until June 13, 2018 were not objectively unreasonable. Insurer's conduct in delaying Claimant's requested hip surgery was predicated on a rational argument based in law or fact. The October 25, 2017 correspondence did not constitute a completed prior authorization

request, the surgery was approved sometime prior to February 28, 2018 and the majority of the delay was attributable to the use of a dummy code that required a fee agreement before proceeding with the proposed surgery. Accordingly, Claimant has failed to demonstrate by clear and convincing evidence that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. for Respondents' unreasonable delay or denial of prior authorization pursuant to WCRP 16-11(F).

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Average Weekly Wage

4. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

5. As found, wage records for the 14 weeks prior to Claimant's May 1, 2017 industrial injury reveal that he earned a total of $18,397.66. Dividing $18,397.66 by 14 weeks yields an AWW of $1,314.12. However, Claimant asserts that his 2016 Form W-2 is a more accurate reflection of his earnings. Claimant's 2016 Form W-2 reflects wages of $70,509.16. Dividing $70,509.16 by 52 weeks yields an AWW of $1,355.95. Although Claimant seeks an AWW based on his previous year's earnings, the 14 weeks prior to his injury are a more accurate reflection of his wage loss after his May 1, 2017 work accident. Accordingly, an AWW of $1,314.12 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

TPD and TPD Benefits

6. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997).

7. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TPD benefits for the period May 5, 2017 through April 10, 2018. On May 1, 2017 Claimant suffered an admitted industrial injury and received work restrictions. The record reveals that Claimant was limited to working 40 hours per work while on modified duty employment. In contrast, Claimant testified that he consistently worked in excess of 40 hours each week for Employer prior to his injury. The wage records also reveal that Claimant regularly worked in excess of 40 hours per week prior to his industrial his injury but was generally limited to working 40 hours per week after May 1, 2017. Specifically, in the 14 weeks prior to his injury, Claimant worked 647.5 hours or an average of 46.25 hours per week. From May 5, 2017 through the date of the March 28, 2018 GAL Claimant worked a total of 1,801.5 hours in 48 weeks or an average of 37.53 hours per week. Accordingly, Claimant is entitled to receive TPD benefits to the extent that his AWW of $1,314.12 exceeded his weekly earnings during the period May 5, 2017 through April 10, 2018.

Penalties

8. A party may be penalized under §8-43-304(1), C.R.S. for up to $1,000 day for any failure, neglect or refusal to obey any lawful order of the director or panel. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. Ct. App. 2003). The moving party for a penalty bears the burden of proving that a person failed to take an action that a reasonable party would have

taken. *City of County of Denver v. Indus. Claim Appeals Office*, 58 P.3d 1162, 1164-65 (Colo. Ct. App. 2002). Once the prima facie showing of unreasonableness has been made, the burden of persuasion shifts to the party who committed the alleged penalty to show that the conduct was reasonable under the circumstances. *See e.g. Pioneers Hosp. of Rio Blanco County v. Indus. Claim Appeals Office*, 114 P.3d 97 (Colo. App. 2005); *Postlewait v. Midwest Barricade*, 905 P.2d 21, 23 (Colo. App. 1995).

9. The imposition of penalties under §8-43-304(1), C.R.S. requires a two-step analysis. *See In re Hailemichael,* W.C. No. 4-382-985 (ICAP, Nov. 17, 2004). The ALJ must first determine whether the disputed conduct violated a provision of the Act or rule. *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623, 624 (Colo. App. 1995). If a violation has occurred, penalties may only be imposed if the ALJ concludes that the violation was objectively unreasonable. *Colorado Compensation Insurance Authority v. Industrial Claim Appeals Office,* 907 P.2d 676, 678-79 (Colo. App. 1995). The reasonableness of an insurer's actions depends upon whether the action was predicated on a "rational argument based in law or fact." *In re Lamutt,* W.C. No. 4-282-825 (ICAP, Nov. 6, 1998).

10. Even if an insurer's actions are objectively unreasonable, a violation of §8-43-304(1), C.R.S. may be cured within 20 days after an application for hearing is filed. If a violation is cured no penalties may be imposed in the absence of "clear and convincing evidence" that the violator "knew or reasonably should have known" of the violation. §8-43-304(4), C.R.S. "Clear and convincing evidence" exceeds the preponderance standard and is evidence that "makes a proposition highly probable and free from serious doubt." *In re Barnes,* W.C. No. 4-632-352 (ICAP, Oct. 30, 2006). Whether a respondent's actions were objectively unreasonable and whether it knew or should have known of a violation are questions of fact for the ALJ. *In re Lamutt,* W.C. No. 4-282-825 (ICAP, Nov. 6, 1998).

Failure to Accurately Calculate AWW and Amount of Disability Benefits

11. In *Allison v. Industrial Claim Appeals Office,* 916 P.2d 623 (Colo. App. 1995) the court of appeals determined that the respondents' failure to admit liability for the correct temporary disability benefits did not support the imposition of penalties under §8-43-304, C.R.S. In *Allison* the respondents filed an admission of liability for TTD benefits but reduced the weekly disability payment based upon an asserted offset for the claimant's receipt of proceeds from a structured settlement. Although the claimant sought penalties because the respondents withheld the full weekly benefits, the court reasoned that the TTD statute does not create an express duty to pay benefits without regard to any applicable offsets. *Id.* at 624. The *Allison* court specifically noted that the respondents' obligations were limited "by statute only to admit or deny liability in a timely manner and pay benefits consistent with that admission." The claimant thus failed to establish a violation of the Act that would entitle him to recover penalties. *Id.*

12. In *Sanchez v. Pueblo Medical Investors,* W.C. No. 3-942-960 (ICAP, Dec. 14, 1998) the claimant sought penalties for the respondents' failure to include concurrent wages into her AWW. Relying on *Allison*, the ICAP reasoned that "where the respondents admit liability, they are only required to pay according to admitted liability." The ICAP thus "rejected the claimant's contention that if a respondent admits liability, the amount of admitted liability must

be correct to avoid penalties." There is therefore no specific statutory violation in failing to admit for what is ultimately determined to be the correct AWW. *Sanchez v. Pueblo Medical Investors,* W.C. No. 3-942-960 (ICAP, Dec. 14, 1998).

13. Similarly, in *Reves v. McCormick Excavation & Paving, LLC.*, W.C. No. 4-835-166-04 (ICAP, Jan. 2, 2013) the insurance adjuster intentionally omitted some of the claimant's actual wages and used her own calculation to approximate the claimant's earnings. Claimant was a seasonal employee with a short period of employment. The adjuster used the claimant's daily pay rate without including overtime pay. Relying on *Allison*, the ICAP explained that "if penalties cannot be imposed for an incorrect admission of TTD benefits, penalties cannot be imposed for an incorrect admission of AWW." The ICAP thus specified that "because the statute does not mandate an admission for a specific AWW, penalties cannot be imposed for failure to admit for a specific wage." *Reves v. McCormick Excavation & Paving, LLC.*, W.C. No. 4-835-166-04 (ICAP, Jan. 2, 2013).

14. Section 8-43-203(1), C.R.S. gives the respondents the option to admit or deny liability and require the claimant to prove his entitlement to benefits. Furthermore, the Act specifically assigns the claimant the burden of proving his entitlement to benefits. §8-43-201, C.R.S. Under the preceding statutory scheme, if a respondent admits liability for a claim, it need not be correct in order to avoid the imposition of penalties. Similarly, §8-42-102, C.R.S. does not describe a precise method for calculating a claimant's AWW and an insurer does not violate the Act when it fails to admit liability for a specific wage. *See Reves v. McCormick Excavation & Paving, LLC.*, W.C. No. 4-835-166-04 (ICAP, Jan. 2, 2013).

15. WCRP 5.5(B) provides that "an admission filed for medical benefits only shall state the basis for denial of temporary and permanent disability benefits within the remarks section of the admission." WCRP 5.5(C) specifies that "upon termination or reduction in the amount of compensation, a new admission shall be filed with supporting documentation prior to the next scheduled date of payment, regardless of the reason for the termination or reduction. An admission shall be filed within 30 days of any resumption or increase of benefits."

16. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. for Respondents' failure to accurately calculate his AWW or amount of disability benefits. Claimant's argument is premised on the assumption that Insurer was legally obligated to admit liability for a higher AWW and disability benefits. However, Insurer did not violate any provision of the Act when it initially failed to include Claimant's overtime pay in the AWW calculation. Although Insurer understated Claimant's AWW by over $400.00, the error does not support a claim for penalties. The reasoning of *Allison, Sanchez* and *Reves* reflects that, if a respondent admits liability, the respondent is only liable to pay benefits in accord with the admission. The amount of liability need not ultimately be determined to be correct to avoid penalties. Because §§8-42-102 & 8-42-105(1), C.R.S., WCRP 5.5(B) and WCRP 5.5(C) do not mandate an admission for a specific AWW or disability benefits, penalties cannot be imposed. There is simply no specific statutory violation in failing to admit for what is ultimately determined to be the correct AWW or amount of disability benefits. Respondents conduct thus did not violate a provision of the Act or a Rule. Accordingly, Claimant's request for penalties is denied and dismissed.

Respondents' Unreasonable Delay or Denial of Prior Authorization

17. WCRP 16-10(C) provides, in relevant part, that the payer shall respond to all providers requesting prior authorization within seven business days from receipt of the "provider's completed request as defined in Rule 16-10(E)." WCRP 16-10(E) specifies that "to complete a prior authorization request the provider shall concurrently explain the reasonableness and the medical necessity of the services requested, and shall provide relevant supporting medical documentation." Under WCRP 16-11(E) the failure of a payer to timely respond to a request for prior authorization shall be "deemed authorization for payment of the requested treatment" unless the payer has scheduled an independent medical examination and notified the provider of the examination within the prescribed time period. Finally, WCRP 16-11(F) provides that any "unreasonable delay or denial of prior authorization" may subject the payer to penalties. An incomplete prior authorization request does not trigger an insurer's duty to respond. Thus no penalty can be imposed pursuant to §8-43-304(1), C.R.S. *See Skelly v. Wal-Mart Stores, Inc.,* W.C. No. 4-632-887 (ICAP, July 31, 2008).

18. As found, Claimant has failed to demonstrate by clear and convincing evidence that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. for Respondents' unreasonable delay or denial of prior authorization pursuant to WCRP 16-11(F). Initially, because Claimant filed an Application for Hearing endorsing penalties on May 24, 2018 and Respondents executed the Letter of Agreement on June 13, 2018, Respondents cured the potential penalty violation. Therefore, the record must reveal clear and convincing evidence that the violator "knew or reasonably should have known" of the violation in order to impose penalties. Claimant asserts that he waited 257 days from the date of the first request for authorization for left hip surgery until the surgery was completed. He noted that there were also multiple surgical requests after October 25, 2017. Despite Claimant's contention, the record reveals that the document dated October 25, 2017 did not constitute a completed prior authorization request, the surgery was approved sometime prior to February 28, 2018 and the majority of the delay in surgery was attributable to the use of a dummy code that required a fee agreement before proceeding.

19. As found, the October 25, 2017 document requesting authorization for the proposed surgery specified that the procedure would consist of "left hip; scope labral repair-reconstruction, femoral acetabular osteoplasty." The document listed CPT codes 29915, 29999 and 29914. However, the facsimile request did not explain the reasonableness and medical necessity of the services requested and the record is devoid of supporting medical documentation. The document thus did not constitute a completed prior authorization request and trigger a response from Respondents within seven days. Nevertheless, the record reveals that the surgery had been authorized by February 28, 2018. Despite the authorization, the majority of the delay in surgery was attributable to the use of a dummy code that required a fee agreement before proceeding.

20. As found, the record reveals that Dr. White's office used dummy code 29999 for Claimant's arthroscopic labral reconstruction. Ms. Castillo noted that she became involved in the matter in an attempt to have Insurer sign a Letter of Agreement because the requested surgical procedure involved an unlisted CPT code. Claimant also refused to sign a document from Dr. White's office that obligated him to pay for the procedure if Insurer denied the request

for reimbursement. Mr. Davis explained that Ms. Castillo wanted Insurer to agree to pay for a dummy CPT code for Claimant's surgery because it was not a standard hip procedure. The dummy CPT code was 29999. Mr. Davis testified that an invalid CPT does not give a diagnosis code or procedure and therefore gets paid at zero percent. After an independent medical examination with Dr, Faulkner in an attempt to facilitate surgery, Ms. Castillo sent Mr. Davis a Letter of Agreement requesting payment for the 29999 CPT code. Mr. Davis sent the Agreement to his supervisor and Employer for approval because the CPT code was not on the fee schedule. On June 13, 2018 Mr. Davis advised Ms. Castillo that Respondents would execute the Letter of Agreement.

21. As found, the protracted negotiations over the use of a dummy code for the proposed surgery constituted the majority of the delay in Claimant's surgery. Insurer's actions in delaying a response until June 13, 2018 were not objectively unreasonable. Insurer's conduct in delaying Claimant's requested hip surgery was predicated on a rational argument based in law or fact. The October 25, 2017 correspondence did not constitute a completed prior authorization request, the surgery was approved sometime prior to February 28, 2018 and the majority of the delay was attributable to the use of a dummy code that required a fee agreement before proceeding with the proposed surgery. Accordingly, Claimant has failed to demonstrate by clear and convincing evidence that he is entitled to recover penalties pursuant to §8-43-304(1), C.R.S. for Respondents' unreasonable delay or denial of prior authorization pursuant to WCRP 16-11(F).

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant earned an AWW of $1,314.12.

2. Claimant shall receive TPD benefits to the extent that his AWW of $1,314.12 exceeded his weekly earnings during the period May 5, 2017 through April 10, 2018.

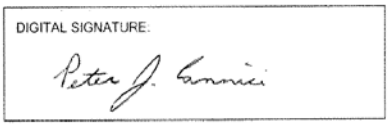
3. Claimant's request for penalties pursuant to §8-43-304(1), C.R.S. for Respondents' failure to accurately calculate his AWW or amount of disability benefits is denied and dismissed.

4. Claimant's request to recover penalties pursuant to §8-43-304(1), C.R.S. for Respondents' unreasonable delay or denial of prior authorization pursuant to WCRP 16-11(F) is denied and dismissed.

5. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 2, 2018.



Peter J. Cannici
Administrative Law Judge

ISSUE

I. Whether Respondents' have established by a preponderance of the evidence that Claimant's injury was caused by his willful violation of a safety rule adopted by Employer for the safety of the employee and are therefore entitled to reduce Claimant's compensation benefits by fifty percent (50%).

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. This admitted claim involves a June 26, 2018 injury to multiple body parts.
2. On June 26, 2018, Claimant was working as an apprentice electrician when he was electrocuted and then fell approximately ten feet. Respondents allege Claimant committed a safety rule violation at the time of his June 26, 2018 industrial injury.
3. Respondents allege Claimant's injury was caused by his willful failure to obey the Employer's safety rules, including wearing electrical gloves and a hard hat and for working on an energized or "live" electrical wire.
4. In September 2017, Claimant was hired by Employer to work as an apprentice electrician. Prior to working for Employer, Claimant worked as an apprentice electrician for another employer for a little over one year.
5. When Claimant was hired, he signed Regency Electric's Company Policy ("the Policy"). The Policy provided, among other things, the following safety rules:

   > HARD HATS AND TOOL BELTS MUST BE WORN AT-ALL-TIMES, WHEN ON SITE. ELECTRICAL GLOVES AND SAFETY GLASSES ARE RQUIRED WHEN WORKING IN ENERGIZED ELECTRICAL PANELS.

   (Ex. F)
6. Claimant testified his job duties included general electrical work. Claimant testified he worked under the direction of a licensed, journeyman electrician, who essentially told him what to do, when to do it, and how to do it. Claimant testified that the journeyman electrician is allowed to work on energized equipment (or live wires), while he and other apprentice electricians are not allowed to work on live wires. Claimant testified apprentice electricians are required to work one-to-one with a journeyman electrician, but on many occasions, including his date of injury, he often worked with another apprentice electrician and one journeyman

electrician or just with another apprentice electrician and no journeyman electrician.

7. Claimant testified safety is fundamental in electrical work. Claimant testified no one from Employer told him not to work on energized or live wires, but it is just generally known in the field that apprentice electricians are not allowed to work on energized or live wires and he knew that. Claimant credibly testified that the journeyman on the job site is responsible for turning off any energized or live wires.

8. Claimant was provided safety gloves by Employer. However, the gloves were not "electrical gloves" which could protect against an electric shock if working on an energized electrical panel as referenced in the written Policy – safety rules- outlined above. Claimant was not working on an energized electrical panel when he was injured. The safety gloves provided to Claimant merely protected Claimant's hands against scrapes and cuts when working with electrical components such as conduit and wires, etc. Therefore, Claimant was not required at any time to wear the type of "electrical gloves" referenced in the Policy.

9. Claimant was also required to wear a hard hat, except when wearing it was not practical based upon the conditions in which he was working or the task that had to be accomplished.

10. Approximately 5 months before the accident, Employer started working on a commercial project on the 4th floor of the Catalyst building which is located in Denver. This is the project on which Claimant was working when he was injured. Pursuant to Denver Regulations, Employer was required to have one journeyman onsite for each apprentice electrician. Based on the testimony presented at hearing, Employer was not able to have a 1-to-1 ratio of journeymen to apprentices while working on the Catalyst project.

11. The Catalyst project required Claimant to help install conduit, junction boxes, wiring, and lighting, etc.

12. Claimant was working on the Catalyst building for approximately 3 months before the accident occurred. Up until the accident, the majority of the work Claimant performed at the Catalyst building involved working with electrical circuits and electrical components that were not energized at any time during the extensive project. In other words, the majority of the work Claimant performed day in and day out for months did not involve energized wire or electrical components that had to be turned off before Claimant could perform his work tasks.

13. Claimant's usual assortment of tools he carries also includes a "tic tracer" or "tester." This device is used to detect electricity in wires and other electrical components. However, Employer did not have a written or verbal rule that required Claimant to use his tic tracer or tester at any time, let alone before working with each and every electrical component he touched throughout each and every day.

14. Mr. Chad Thompson is a journeyman electrician who also works for Employer. While working on the Catalyst project, Mr. Thompson was Claimant's supervisor.

15. A few days before the accident, Mr. Ryan Seifried, who is one of the owners of Regency Electric, and a journeyman electrician, stopped by the Catalyst project because Mr. Thompson was unable to work that day and there was not a supervising electrician, i.e., journeyman, on the project. Mr. Seifried testified that while he was visiting the jobsite, he specifically reminded Claimant to not work on live wires.

16. Contrary to Mr. Seifried's testimony, Claimant credibly testified that Mr. Seifried did not discuss any safety issues, but did discuss having Claimant try to get other electricians who were working on other projects to work for Employer by touting their great compensation package which included generous benefits. Moreover, despite not having a journeyman electrician onsite that day, Mr. Seifried left after his visit and allowed Claimant and another apprentice to work without the supervision of a journeyman electrician.

17. Mr. Seifried also testified that while Denver technically requires a 1-to-1 ratio of journeymen to apprentices on each jobsite, Denver does not strictly enforce the regulation due to a shortage of journeyman electrician in the local labor market. However, Claimant credibly testified that despite Mr. Seifried's testimony that Denver does not really enforce the 1-to-1 ratio for journeymen to apprentices, his supervisor would routinely tell the apprentices to take a break when an inspector would arrive and would text them to return to the jobsite after the inspector left.

18. On June 26, 2018, Claimant, and another apprentice electrician, were working with Mr. Thompson on the Catalyst project. When Claimant arrived at work that morning, Mr. Thompson told Claimant and the other apprentice what work had to be done that day. Mr. Thompson told them that they also had to install two illuminated exit signs before noon, which was when the building inspector was going to arrive and inspect the work that had been performed.

19. After Claimant was told what to do, Mr. Thompson started performing other work at the jobsite and Claimant and the other apprentice started working on installing the exit signs.

20. As usual, the circuit on which Claimant was working was not energized and Claimant began installing the first exit sign. After the sign was hung and the wire run, Claimant tied in the final wire into a junction box or to the home run. Claimant then found Mr. Thompson and told him that he was finished installing the first sign. Mr. Thompson, who was in charge of the project and was managing the circuits in the electrical control room, went to the control room and turned the power back on. He then met Claimant and the other apprentice by the exit sign to confirm it was properly installed and illuminated.

21. Unbeknownst to Claimant, the circuit that controlled the power to the each of the exit signs also controlled the power to the lights in the electrical control room.

22. Upon Claimant successfully installing the first sign, Mr. Thompson left the area and went to do some work in the electrical control room while the power was on and the lights were on in the control room.

23. Mr. Thompson testified that he told Claimant and the other apprentice to tell him when they were ready to tie in the second light so he could de-energize the circuit. Claimant, however, disputes he was ever told to do so and the ALJ finds Claimant's testimony to be credible. Under Mr. Thompson's contention that Claimant and the other apprentice were told to come tell him when they were going to tie in the second sign and have him turn off the power, the ALJ is being asked to infer or find that both Claimant and the other apprentice decided to disregard such a command and both decided to work on the energized wires that controlled the exit sign.

24. Claimant credibly and persuasively testified that he assumed when Mr. Thompson left the area after seeing the first sign had been properly installed, that Mr. Thompson was going to the control room to turn off the power so Claimant and the other apprentice could safely install the second exit sign.

25. Unfortunately, Mr. Thompson did not de-energize the circuit. Instead, Mr. Thompson started working in the electrical control room since the circuit was energized and the lights were on and Claimant, thinking the circuit had been de-energized, began working on installing the second sign.

26. In order to tie in the wires to the junction box that was contained in the ceiling, Claimant had to climb up on a ladder and get his arms and head into a narrow space. Claimant was unable to perform this task without removing his hard hat. Therefore, Claimant removed his hard hat and climbed up the ladder and into the narrow space. While on the ladder, Claimant grabbed the energized wire which came from the control panel to tie into the wire from the sign at the junction box and while attempting to strip the wire, Claimant was electrocuted.

27. Due to being electrocuted, Claimant fell off the ladder and hit his head on the ground. Claimant suffered serious electrical burns to his hands and a laceration to his head.

28. When Claimant grabbed the energized wire, he had no idea it was energized. Claimant did not willfully intend to work with an energized wire while installing the second exit sign. Claimant reasonably believed the power was off and started installing the second exit sign as if the power had been turned off. There was a lack of credible or persuasive evidence submitted at hearing which indicated Claimant habitually, or even occasionally, intentionally worked with energized wires at any time, let alone at the time of the accident.

29. There was a lack of credible testimony or evidence presented at hearing which established Claimant knew the wires for the second exit sign were energized and that he intentionally tried to install the sign while the wires were energized.

30. Mr. Thompson testified that it was not unreasonable for Claimant to take off his hard hat to complete the task he was performing at the time of the accident and he was not enforcing the hard hat rule at that time. Claimant had to take his hard

hat off in order to tie in the wires of the exit sign at a junction box which was located in a confined area. Mr. Thompson also admitted that he was not enforcing the hard hat rule during this portion of the project due to the work that was being done.

31. The use of the safety gloves Employer provided Claimant would not have prevented the accident or Claimant's injuries. There was a lack of credible and persuasive evidence submitted at hearing that Claimant was required to wear the type of "electrical gloves" cited in the Policy which can prevent an electrical injury and would have prevented Claimant from being electrocuted on the day of the accident. Moreover, Claimant's gloves had worn out and he had been requesting new gloves from Employer for quite some time and had yet to receive them as of the day of the accident.

32. The ALJ does not credit Mr. Seifried's testimony that he specifically told Claimant a few days before the accident to not work on live wires and to double check everything. In essence, Mr. Seifried attempts to paint a picture of an Employer that implements and enforces safety rules for the safety of its employees and that Claimant is not only responsible for the accident, but was indifferent to the risks associated with working on energized wires. On the other hand, Mr. Seifried minimizes or downplays the Denver regulation that requires a one-to-one ratio between journeymen and apprentices. Mr. Seifried contends that Denver does not enforce the regulation in an attempt to insinuate that the regulation is unreasonable and not necessary for the safety of the apprentice electricians. However, despite his contention, Claimant credibly testified that when the ratio was not being followed, and an inspector was going to show up, his supervisor, i.e., a journeyman electrician, would tell the apprentices to "disappear" until the inspector left and then they would be sent a text message to return to the jobsite after the inspector left. Had the 1 to 1 regulation been followed by Employer, and the proper number of journeymen electrician been on the jobsite during the lengthy Catalyst project, Employer might have implemented and enforced safety measures and protocols and Claimant might not have been injured.

33. In addition, as credibly testified to by Claimant, Employer did not have a safety plan for managing work on "live circuits." Although the majority of the project was not energized, on the day of the accident, sections of the project were starting to be energized. Despite this change of events, there was no plan put in place by Employer or the managing journeyman to manage that risk. For example, Employer did not have a lock out tag out kit on the jobsite and did not require its use on any circuit that was energized and had to be turned off so work could be performed safely on the circuit.

34. There was some testimony offered by Mr. Thompson that there was a safety rule that required each electrician to test every component or wire with their tick tracer or tester before working on it and had Claimant done so, he would not have been injured. However, such testimony was very weak and neither credible nor persuasive. Mr. Thompson appeared to be uncomfortable while testifying about this alleged rule and used numerous qualifiers when testifying about this alleged rule and alleged enforcement of the alleged rule. Moreover, on cross

examination he was unable to convincingly and persuasively articulate when and how this alleged rule was specifically conveyed to Claimant and how he, or anyone else, enforced the alleged rule. In fact, he could not definitively confirm that he had ever seen Claimant use a tester at any time.

35. In addition, Claimant denied such a rule existed. Moreover, having such a rule in place on the Catalyst project and requiring Claimant to follow such a rule does not seem reasonable – on the Catalyst project - since the majority of the work Claimant performed involved circuits that had never been energized and did not have to be turned off. Therefore, based on the testimony presented at hearing, the ALJ finds the Employer did not have a rule that required Claimant to test each wire and electrical component before working on it and the Employer did not enforce such a rule.

36. Based on the evidence presented at hearing, the ALJ finds Claimant did not willfully violate any safety rules.

37. Based on the evidence presented at hearing, the ALJ finds Employer did not implement and enforce any of the safety rules Employer contends Claimant violated and alleges were the cause of his accident and injuries.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. Respondent, however, bears the burden of establishing Claimant's injury was caused by a willful violation of a safety rule. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. § 8-43-201 (2008) C.R.S.

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or

improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Safety Rule Violation

C.R.S. § 8-42-112(1)(a) provides for a 50% reduction in compensation to Claimant where Respondent proves that Claimant's injury was caused by the willful failure to obey any reasonable rule adopted by Employer for the safety of the employee.

The safety rule penalty is only applicable if the violation is willful. The question of whether Respondents proved willful violation of a safety rule by a preponderance of the evidence is one of fact for the ALJ. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715 (Colo. App. 1995). Violation of a rule is not willful unless Claimant did the forbidden act with deliberate intent. A violation which is the product of mere negligence, carelessness, forgetfulness or inadvertence is not willful. *Bennett Properties Co. v. Industrial Commission*, 437 P.2d 548 (Colo. 1968); *Johnson v. Denver Tramway Corp.,* 171 Colo. 214, 171 P.2d 410 (1946); *In re Alverado,* W.C. No. 4-559-275 (ICAO December 10, 2003). Moreover, Conduct which might otherwise constitute a safety rule violation is not willful misconduct if the employee's actions were intended to facilitate accomplishment of a task or of the Employer's business. *Grose v. Riviera Electric*, W.C. No. 4-418-465 (ICAO August 25, 2000). A violation of a safety rule will not be considered willful if the employee can provide some plausible purpose for the conduct. *City of Las Animas v. Maupin*, 804 P.2d 285 (Colo. App. 1990).

The Respondents carry the burden of establishing all five elements of a safety rule violation, which are:

1. There must be a specific, unambiguous and definite safety rule adopted by the employer.
2. The safety rule must be reasonable.
3. The safety rule must be “brought home” to the employee and diligently enforced.
4. Violation of the safety rule must be willful.
5. The violation of the safety rule must be a cause of the claimant’s injury.

In this case, Claimant, as an apprentice electrician, knew he was not allowed to work on energized circuits or energized components such as the wire that he grabbed and attempted to strip while trying to install the second exit sign.

However, one of the primary elements Respondents must establish is that Claimant willfully violated a safety rule and the violation of that rule caused his injuries. As found, Claimant did not willfully work with energized wires while attempting to install the second exit sign. Claimant credibly testified that when he went to install the second exit sign, he thought Mr. Thompson had turned the circuit off and that he could safely install the second exit sign. And, based on the totality of the evidence, the ALJ finds Claimant's testimony to be credible and highly persuasive.

Respondents contend Claimant should have tested the wire to make sure it was not energized before installing the second exit sign. But, as found, there was no safety rule that required Claimant to test every wire or circuit before working on it. As found, the majority of the project involved Claimant working on circuits and items that had never been energized and did not have to be turned off. Therefore, Claimant's contention that such a rule did not exist – and was therefore not enforced – seems reasonable and consistent based on the totality of the evidence presented at hearing.

Respondents also contend Claimant could have confirmed with Mr. Thompson that he turned the power off before installing the second sign. However, Respondents contention of what Claimant could have done to prevent the accident is really an attempt to cast blame or assign negligence to Claimant. Such contention is not credible and persuasive evidence that Claimant willfully violated a safety rule.

Respondents also contend Claimant should have been wearing his hard hat at the time of the accident and that violation of that safety rule caused his head injury. However, as found, it was impractical for Claimant to perform the task he was performing at the time of the accident while wearing his hard hat. This finding was also supported by the testimony of Claimant's supervisor, Mr. Thompson. Mr. Thompson credibly testified that he was not enforcing the hard hat rule at the time of Claimant's accident due to the type of work Claimant was performing when the accident occurred. Therefore, Claimant did not violate the safety rule which required him to wear a hard had since it was not applicable at the time of the accident

Respondents also contend Claimant violated a safety rule that required Claimant to wear "electrical gloves" while working. However, as found, the Policy - safety rule - that required Employees to wear "electrical gloves" did not apply to Claimant. The rule only applied to Employees working on an energized electrical panel and Claimant, as an apprentice, was not allowed to work on an energized electrical panel, and was not working on an energized electrical panel at the time of the accident. Furthermore, the "electrical gloves" referenced in the rule are specialized gloves used for working on an energized panel and not the type of safety gloves that Claimant was provided by Employer and wore at times to prevent against cuts and abrasions. Moreover, the safety gloves provided by Employer to Claimant would not have insulated Claimant from being electrocuted. Lastly, Claimant's safety gloves had worn out and he had asked Employer for new gloves and had yet to be provided new safety gloves as of the day of the accident.

The ALJ concludes that Respondents failed to establish by a preponderance of the evidence that the Claimant's injuries resulted from his willful failure to obey any reasonable rule adopted by the Employer for his safety.

Based on the findings and conclusions above, the remaining elements necessary to establish a safety rule violation will not be addressed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to establish that Claimant's injuries resulted from his willful failure to obey any reasonable safety rule adopted for the safety of the employees and therefore Respondents are not entitled to a reduction in benefits pursuant to §8-42-112(1).
2. Respondents shall pay the Claimant in full for all admitted temporary or permanent disability benefits with no reduction.
3. Insurer shall pay eight percent (8%) per annum on all compensation not paid when due.
4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 5, 2018

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove she suffered a compensable injury on November 19, 2017?
- If Claimant proved a compensable injury, did she prove entitlement to TTD benefits commencing December 4, 2017?
- Did Respondent prove Claimant was responsible for termination?
- Did Claimant prove the right shoulder surgery performed by Dr. Hunter on July 23, 2018 was reasonably necessary and causally related to her compensable injury?
- The parties stipulated to an average weekly wage of $1,094.41.
- The parties stipulated Dr. Schaler and Dr. Hunter are authorized providers.

FINDINGS OF FACT

1. Claimant worked for Employer as a convenience store manager for approximately 15 years.

2. Her claim arises from an incident on November 19, 2017. Claimant was working in the storeroom, placing stacks of 16-ounce paper cups into a box on a shelf at approximately eye level. She was using her right hand to remove the sleeves of cups from a box on a cart beside her and placing the sleeves in the box on the shelf with her left hand. The box extended slightly forward over the edge of the shelf. It became unbalanced, tipped and fell toward her. She raised her right arm quickly to stop the box, but it hit her forehead before she pushed it back onto the shelf.[1] Claimant was standing close to the shelf, so the box only fell approximately six inches before striking her head. Claimant does not allege a head injury but claims she injured her neck and right shoulder.

3. Claimant testified she felt "minor pain" in her neck immediately after the incident, which progressively worsened over the next few days.

4. Claimant was already receiving treatment for a prior work-related injury that occurred on October 3, 2016. She fell down several steps, landing on her hands and knees. Dr. Schaler was the ATP for the October 2016 claim. Claimant received conservative treatment, primarily physical therapy, a TENS unit, and medications. She was put on work restrictions of no more than ten pounds lifting and shifts no longer than eight hours. She continued working despite the restrictions and frequently exceeded the eight-hour shift limitation due to staffing issues at the store.

[1] The ALJ infers from conflicting evidence that the box likely weighed 20-30 pounds.

5. The primary injured areas from the October 2016 accident were the thoracic and lumbar spines, but the records also document scapular, trapezius and neck pain. For example, in June 2016 Claimant reported pain in multiple areas including the bilateral shoulders and neck. She had an IME with Dr. Rook on August 25, 2017, who observed, "she was repeatedly holding the right side of her neck during the history portion of today's evaluation." A physical examination on September 14, 2017 documented tenderness and tension in the trapezius and paracervical musculature. On October 11, 2017, Dr. Schaler documented "she continues to have back pain from her neck to her low back." His examination that day showed tenderness "along the spine in the paraspinal musculature from the neck to the SI region," and his diagnoses included "cervicalgia." Additionally, Claimant has a pre-injury history of fibromyalgia.

6. Claimant did not immediately report the November 19, 2017 incident to Employer or request any medical treatment. She saw Dr. Schaler on November 22, 2017 for an already-scheduled follow-up for the October 2016 injury. She had not planned to mention the incident with the box of cups, but Dr. Schaler saw her rubbing her neck and asked why. Dr. Schaler noted,

> On 11/13/17 [sic] she states she was working and went into the storeroom to grab some cups. When she pulled a sleeve of cups down from the shelf, it disrupted the balance of a box that fell down and hit her on the head. There was no LOC but this incident has caused neck pain which she ranks as 10/10 and shooting pain when she moves her head and neck. The pain is worse on the left than the right. The pain is both at the base of the neck and at the insertion of the paracervical neck musculature into the base of the neck. She complains of pain with turning her head from side to side.

7. Examination of her neck revealed "tense" muscles with tenderness along the paracervical spine, and reduced range of motion in all planes, particularly cervical flexion. There was no palpable focal cervical spine tenderness. Palpation of her back showed tenderness along the full length of the paraspinal musculature.[2] Dr. Schaler also documented "discomfort with some limitation in range of motion in the right shoulder especially with abduction and internal rotation."

8. Dr. Schaler reiterated the diagnosis "cervicalgia" he gave on October 11, but provided no other diagnosis relatable to November 19 incident. Dr. Schaler opined, "[Claimant] has not made much of any significant improvement in her work, in fact it may be a little worse. She continues to work long hours up to 10 to 13 hours a day as the work needs to get done and her boss has not been supportive in this regard. I do not think she is at MMI and would benefit from continuing therapeutic modalities such as PT, acupuncture, deep tissue massage and possibly chiropractic." Dr. Schaler did not suggest any of the treatment he recommended was related to the November 19 incident as opposed to the October 2016 injuries. He continued the same work restrictions of 10 pounds lifting with shifts limited to eight hours per day, 40 hours per week.

[2] The ALJ notes these exam findings are similar to those documented on October 11, 2017.

9. Claimant realized Dr. Schaler would document the incident in his report, so she decided to report it to Employer. She reported the accident to her manager, Kevin Ortiz, via telephone on November 24, 2017.

10. Claimant completed a written accident report on November 27, describing the accident as, "putting sleeves of 16oz cups into empty box overhead as I cannot lift over 10 lbs. The box got heavy in front and fell forward and landed on my head." She stated she suffered a "head/neck injury" which resulted in "neck pain." She said nothing about any shoulder issues.

11. Mr. Ortiz gave Claimant a designated provider list. She selected Dr. Schaler but did not immediately go to see him.

12. Also on November 27, Mr. Ortiz administered an oral swab drug test in compliance with Employer's policy mandating a post-accident drug screen. After swabbing her mouth, Claimant placed the swab in a vial Mr. Ortiz was holding in his hand. Mr. Ortiz then replaced the cap, sealed it and placed it into a sealed bag for transmission to the testing facility.

13. The drug test came back positive for cocaine. When the lab called to inform Claimant of the results, she argued with the individual and stated there was "no way" her test should have been positive for cocaine.

14. Claimant testified some of the liquid in the vial spilled out when Mr. Ortiz opened it. Mr. Ortiz testified he did not recall spilling any liquid. In any event, even if some of the liquid spilled, no persuasive evidence was presented to show if or how that could affect the test results.

15. In accordance with its "zero tolerance" drug policy, Employer terminated Claimant after learning of the positive drug test. The termination notice explained:

> Due to a failed drug test you are in violation of Policy No. 1-01-17. Your work-related injury was also reported a week late as you stated that you had a follow-up doctor's appointment due to a previous work-related injury, and it was at this time you stated to your doctor of the new work-related injury that took place at your store. However, this injury was never reported or documented tell me your direct supervisor or to the Loaf 'N Jug Division and the expectation is that you file a report within 24 hours of the injury and notify your direct report. You notified me of the injury on 11-27 [sic] because your doctor documented it and you believed it would be reported to Sedgwick and would get back to Loaf 'N Jug. You stated the injury took place on 11-19-17 at approximately 6am but again he did not report it to me until Friday 11-24-17.

16. Claimant was given a copy of the termination notice but refused to sign it. She wrote, "I am not guilty of doing any kind of drugs therefore I will not sign."

17. Claimant went to see Dr. Schaler the next day, on December 5, 2017. The impetus for the appointment was the positive drug test rather than any medical issue. She asked Dr. Schaler to administer another test to bolster her position she did not use drugs. Claimant did not mention any physical problems relating to the November 19 incident. She gave a urine sample, which ultimately came back negative for any illegal drugs.

18. Claimant next saw Dr. Schaler on December 14, 2017. The reason for the visit was listed as "pain in the left hand, wrist and forearm [that] seems to have progressed slowly since the accident when box fell on her at work on 11/13/17. She states in the last week the pain has become excruciating to the touch and pain with grabbing and lifting." The discussion of the left upper extremity is puzzling because Claimant described no injurious mechanism to her left wrist or forearm. Claimant's claim is based on alleged injuries to her neck and right shoulder, not the left wrist or arm. Dr. Schaler's report references no neck or shoulder symptoms.

19. Similarly, Claimant said nothing about her neck or shoulder when she saw Dr. Schaler again on December 26, 2017. Instead, the documented complaints and abnormalities were limited to the thoracic and lumbar spines and the SI joints. Dr. Schaler opined Claimant's ongoing symptoms were probably due to "worsening fibromyalgia" which was "triggered" by the October 2016 accident. He thought claimant was not yet at MMI (for the October 2016 injury) but explained: "at this point she will very likely have to live with some degree of pain." There is no indication he attributed any of her symptoms to the November 19 incident.

20. On January 25, 2018, Dr. Schaler placed Claimant at MMI. He opined, "[Claimant] has mild pre-existing myofascial pain [ ] which . . . was subsequently aggravated after her accident. The duration of her pain has now been 15 months since her accident on 10/2/16 [sic]. . . . She is likely at MMI and would benefit from an IME for a disability/impairment rating." The report contains no reference to the November 19 incident, nor any neck or shoulder symptoms.

21. Claimant subsequently saw Dr. Schaler on February 8, March 20, March 27, and April 5, 2018. None of his reports reference shoulder or neck problems.

22. Claimant saw Dr. John Burris for an impairment rating on March 8, 2018. She reported "diffuse pain over her entire posterior torso extending from the neck through the thoracic and lumbar spines into the buttocks in the back of both legs below the knees." She said her pain was "better with lying on her right side." Although the physical exam primarily focused on the thoracic, lumbar, and SI areas, Dr. Burris documented "full range of motion of the cervical spine with no localized muscle spasms or trigger points." He also noted no radiating symptoms into the upper extremities. Dr. Burris opined, "she has significantly elevated subjective complaints with no objective findings on examination, negative diagnostic workup, and a nonphysiologic presentation." He determined Claimant was at MMI with no impairment.

23. Dr. Schaler gave a diagnosis related to the right shoulder for the first time on April 16, 2018. At that visit, he documented "tense musculature along the base of the

right side of the neck to the shoulder" and "decreased [right shoulder] internal rotation and abduction with weakness and discomfort." Based on these findings, he diagnosed "pain radiating to right shoulder." He referred Claimant to physical therapy but did not indicate whether the referral was related to the November 2017 incident.

24. Claimant saw Dr. Timothy Hall for an IME on May 8, 2018 at the request of her counsel. Dr. Hall noted, "I have numerous records, but none of them appear to pertain to this [November 2017] date of injury." Claimant described severe right shoulder pain and limited range of motion. She also reported "a lot of neck pain, more right side and some left side." Dr. Hall observed, "she moves very stiffly. When she walks, there is very little arm swing. Her right shoulder is protracted and elevated compared to the left." The scalenes, upper trapezius, levator scapulae, and splenius capitis were severely tender with active trigger points. Cervical and right shoulder range of motion was markedly limited. Dr. Hall diagnosed a "whiplash-type injury" involving primarily the right lateral neck, myogenic thoracic outlet syndrome, a shoulder sprain with bicipital tendinitis, and periscapular cervicothoracic myofascial pain. He opined the diagnoses "relate directly to the November 19, 2017 event at work." Dr. Hall recommended a shoulder MRI to investigate any other pathology in the shoulder. He noted her situation was "complicated" by concussion symptoms, which he opined "would be hard to relate to the November 2017 event." Dr. Hall concluded Claimant was not at MMI, and recommended therapy for the neck and parascapular area.

25. Dr. Tashof Bernton performed an IME for Respondent on May 10, 2018. Claimant told Dr. Bernton "she felt a little tug at the right side of the neck" after the November 19 incident, but finished her shift and was only feeling "sore" at the end of the day. She provided no clear explanation of when her shoulder became painful. Regarding current symptoms, Claimant reported right arm pain "from her neck to her shoulder," with the worst pain in the shoulder. Her neck pain was predominantly right-sided. On examination, Dr. Bernton was most impressed with significant findings involving the right shoulder. She was tender over the anterior shoulder, proximal biceps attachment, and lateral shoulder. Shoulder range of motion was severely limited, and she had weakness with rotator cuff testing. Dr. Bernton observed, "at rest, the patient holds the shoulder flexed and the elbow flexed to 90 degrees and the shoulder internally rotated." He appreciated no specific tenderness on palpation of the neck, but there was increased trapezius tone on the right and tenderness in the right supraclavicular fossa.

26. Dr. Bernton searched Amazon.com and determined a sleeve of fifty 16oz cups weighs 1.7 pounds. So, if the box contained 16 sleeves of cups, that would be approximately 27 pounds plus the weight of the box. He noted, "the box did not fall off the shelf" and resulted in "a minimal impact that would not be anticipated to cause injury." Dr. Bernton pointed out Claimant's current complaints focused on the right side were inconsistent with Dr. Schaler's November 22, 2017 report, which documented neck pain "worse on the left than the right." He opined any accident-related shoulder complaints should have been the worst shortly after the incident, but noted there was "no indication of shoulder pain [ ] in the records."

27. Dr. Bernton ultimately concluded, “there is no reasonable mechanism by which the episode as described by the patient could result in her current complaints.” He further opined,

> The patient’s current complaints are centered in the shoulder. The clinical examination is most consistent with diabetic frozen shoulder/adhesive capsulitis, and possible right rotator cuff tear.
>
> There is no mechanism at all by which a box hitting the patient in the middle of the forehead would have anything to do with shoulder complaints, whether due to rotator cuff tear, adhesive capsulitis, or any other entity.
>
> Records clearly reflect subjective complaints out of proportion to objective findings multiple times with respect to the patient’s pre-existing complaints.
>
> To a reasonable degree of medical probability, it is my assessment that no injury requiring medical treatment was caused by the episode on November 19, 2017. To the extent that there was any injury at all (which I believe is not medically probable), it would have been a slight contusion to the forehead and potentially mild and self-limited muscular strain of the neck.
>
> The patient’s current complaints are not due to that episode. She appears to have predominantly focal problems in the right shoulder and associated muscle spasm. Most probable causes or diabetic frozen shoulder and possible rotator cuff tear.

28. Dr. Bernton recommended a shoulder MRI outside of the worker’s compensation claim but opined no treatment was warranted on a work-related basis.

29. Claimant saw Dr. Schaler on May 21, 2018 and described “chronic pain involving the right neck and shoulder as well as the mid to low back.” She could not abduct the arm above shoulder height. Dr. Schaler diagnosed “right rotator cuff syndrome” and referred Claimant for an MRI.

30. The MRI was performed on June 11, 2018. The report notes a history of “chronic right shoulder pain x6 months. No known injury.” The MRI demonstrated significant pathology including: (1) a large full thickness insertional tear of the supraspinatus tendon; (2) subscapularis, supraspinatus, and infraspinatus tendinosis with associated intrasubstance delamination; (3) a prominent SLAP tear of the biceps tendon anchor with marked attenuation of the posterior labrum; and (4) “relatively severe” acromioclavicular arthritis.

31. Claimant saw Dr. Schaler on June 13, 2018 to review the MRI. He noted, “she continues to have pain since a heavy box shelved in a storage room fell against her

right shoulder."[3] He referred Claimant to Dr. Hunter for a surgical evaluation. Dr. Schaler offered no opinion regarding the etiology of the pathology demonstrated on the MRI.

32. Claimant underwent a right shoulder arthroscopy with Dr. Hunter on July 23, 2018.

33. Dr. Hall and Dr. Bernton testified at the hearing to elaborate on the opinions expressed in their IME reports. Both physicians had the opportunity to review the MRI report and each other's IME reports before testifying. Both experts agreed the shoulder surgery was reasonably necessary but disagreed regarding causation.

34. Dr. Hall outlined his theory of how the incident caused Claimant's injuries. He opined the shoulder joint is most susceptible to injury during abduction and external rotation because the space between the acromion and the humeral head narrows. Based on Claimant's description of the incident, he believed the rotator cuff was torn when Claimant reached up to push the box back onto the shelf. He opined the bone marrow edema seen on the MRI suggests a traumatic tendon avulsion as opposed to a chronic tear. He opined being struck in the head and her head snapping backward likely caused the myofascial injury to the neck.

35. Dr. Bernton reiterated his opinion that the mechanism of injury described by Claimant caused no physiologic injury to her right shoulder. The box did not hit Claimant's shoulder and did not fall from any height. Raising her arm and pushing the box back onto the shelf would not cause any of the pathology on the MRI. Dr. Bernton opined the MRI findings were all degenerative, not traumatic. He explained the degree and extent of degenerative changes, the nature of the tears, osseous hypertrophy, thinning, marrow edema, and tendon delamination convinced him the pathology is unrelated to the November 19 incident. He also found the absence of reported right shoulder symptoms for many months "extremely significant" because if any of the significant findings occurred on November 19, they would have manifested much more quickly. Dr. Bernton concluded a degenerative rotator cuff tear "is the only conclusion that fits the data."

36. Dr. Bernton's opinions are credible and persuasive.

37. Claimant failed to prove that the November 19, 2017 incident caused a compensable injury. Although an accident occurred, it did not cause a need for medical treatment or disability. She suffered a minor neck strain that was not disabling and required no specific treatment. The July 23, 2018 arthroscopy was reasonably necessary but not causally related to the incident at work.

CONCLUSIONS OF LAW

To receive compensation or medical benefits, a claimant must prove she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App.

[3] This history is inaccurate, as there is no persuasive evidence the box made contact with Claimant's right shoulder.

2000); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). A preponderance of the evidence is that which leads the trier-of-fact, after considering all the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the claimant or the respondents. Section 8-43-201.

The Workers' Compensation Act recognizes a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence," whereas an "injury" is the physical trauma caused by the accident. Section 8-40-201(1). In other words, an "accident" is the cause, and an "injury" is the result. *City of Boulder v. Payne*, 426 P.2d 194 (Colo. 1967). Workers' compensation benefits are only payable if an accident results in a compensable "injury." The mere fact that an incident occurred at work and caused symptoms does not establish a compensable injury. Rather, a compensable injury is one that requires medical treatment or causes a disability. *E.g., Montgomery v. HSS, Inc*., W.C. No. 4-989-682-01 (August 17, 2016).

As found, Claimant failed to prove she suffered a compensable injury on November 19, 2017. Although Claimant probably suffered a neck strain on November 19, she received no treatment for it. The November 22 office visit with Dr. Schaler was not prompted by the incident, but was simply the next scheduled visit for her October 2016 injury. Claimant did not even plan to mention the incident to Dr. Schaler, and it only came up because he noticed she was rubbing her neck and asked her about it. Dr. Schaler did not prescribe any treatment specifically related to the incident. Thereafter, she reported no significant neck symptoms for many months, consistent with a minor strain that resolved on its own. The ALJ can appreciate no substantial difference in Claimant's medical condition as documented before and after November 19, 2017, and there is no persuasive evidence the incident proximately caused a need for any treatment. Furthermore, Claimant returned to work with the same restrictions as before the incident, and kept working in the same capacity until she was terminated for unrelated reasons on December 4, 2017.

Although Claimant appropriately underwent surgery on her right shoulder, the ALJ is not persuaded the surgery was causally related to the November 19 incident. As an initial matter, the incident was relatively minor and not the sort of event the ALJ would expect to cause a torn rotator cuff, SLAP tear, or other significant pathology. In any event, the ALJ is more impressed by the dearth of documentation suggesting a significant shoulder injury for many months after the accident. Claimant did not reference a shoulder injury on the accident report she completed on November 27; she only listed her "neck" as the injured body part. Admittedly, Dr. Schaler documented "discomfort" and reduced right shoulder range of motion on November 22, but those findings appear incidental because Claimant did not report any right shoulder issues and Dr. Schaler provided no diagnosis related to the right shoulder. When she saw Dr. Burris in March 2018, she said nothing about any right shoulder injury. In fact, she told Dr. Burris her pain was better when laying on her right side, which seems unlikely if she was suffering from a painful

right rotator cuff tear or SLAP tear. After the November 22 note, Claimant's shoulder was not mentioned again until Dr. Schaler's April 16, 2018 note, when he documented "discomfort" and reduced ROM. Dr. Schaler gave a non-specific diagnosis of "pain radiating to right shoulder," but the report contains no suggestion the shoulder pain was related to the November 19 incident. Although the June 2018 MRI showed objective pathology, the ALJ is not persuaded any of the MRI findings were caused by the November 19, 2017 incident. The ALJ finds it unlikely a traumatic rotator cuff tear, SLAP tear, or other pathology severe enough to warrant surgery would go unmentioned and undocumented for several months despite multiple medical appointments. As Dr. Bernton persuasively explained, the right shoulder pathology is most likely chronic and degenerative, and Claimant's symptoms represent the natural progression of her underlying condition.

The November 19, 2017 incident did not proximately cause a need for treatment or disability. Accordingly, there was no compensable "injury."

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 6, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-070-414-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 25, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 9/25/18, Courtroom 3, beginning at 8:40 AM, and ending at 12:30 PM).

Ruling was reserved on Claimant's Exhibit 1, and it is hereby rejected in evidence in light of the fact that medical benefits are not germane because of the determination of non-compensability herein below. Respondents' Exhibits A through O were admitted into evidence, without objection.

At the conclusion of the hearing, the record was left open pending receipt of the written transcripts of the post-hearing evidentiary depositions of Craig Wenninger (referenced as "Wenninger Depo.," followed by a page number) and Brian J. Beatty, D.O (referenced as "Beatty Depo., "followed by a page number). Both depositions were taken on October 24, 2018 and written transcripts thereof were filed on October 29, 2018, at which time the matter was submitted for decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained an alleged compensable head injury on January 12, 2018. If so, what are the consequences of the injury: *i.e.,* entitlement to medical benefits, average weekly wage (AWW), and temporary partial disability (TPD) benefits.

The Claimant bears the burden of proof on all issues by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. On January 12, 2018, the Claimant was working as a traffic control flagger on a project run by Northern Colorado Traffic Control (NCTC) near Boulder, Colorado. Claimant was employed by the Employer as a day laborer. NCTC engaged the Employer to provide workers to staff its construction projects.

2. The Claimant and the Employer agree that the Claimant had a tense encounter with a local resident driver on the afternoon of January 12, 2018. The parties characterize the encounter differently.

The Incident

3. The Claimant asserted in different points in her testimony that the driver hit her traffic control paddle; hit her body with his vehicle; and/or nearly hit her body with his vehicle.

4. The Claimant further asserted all of the following versions of the incident at different points in her testimony: That the driver approached her at “full speed;” that he accelerated and then braked suddenly before reaching her; that she had her back turned and could not see what behavior the driver engaged in but could only hear it; and that the driver was trying to scare her and apologized to her after the incident occurred.

5. The Claimant reported the encounter to Andy Horner, the responsible NCTC Traffic Control Supervisor (TCS), within minutes of the occurrence of the

incident. The Claimant then worked the remainder of her shift. She told TCS Horner that she was not injured and denied that she required medical treatment following the incident. The Claimant worked the following day, and every day, until February 7, 2018.

6. The Employer's understanding of the incident is based on the Claimant's reports and the reports and information obtained from NCTC employees and other employees following the incident.

7. The Claimant's first Employee Report of the Incident is dated January 24, 2017 [sic] (the Claimant identified the wrong year on the form as it was the first month of 2018. Neither party contends the incident or any matter related to this incident occurred prior to the start of 2018.

8. The Claimant reported the incident to the Colorado State Patrol (CSP) on January 26, 2018. Sergeant M. Hill stated at hearing that he began investigating the matter the same day.

9. The Claimant first sought medical attention related to the incident on January 27, 2018.

10. The Claimant submitted a corrected incident report, dated February 1, 2018. She submitted a third incident report, dated February 7, 2018.

11. On February 7, 2018, the Claimant was informed that two of the contractors who used the Employer to staff its projects, of which NCTC was one, had designated Claimant as "Do Not Return" (DNR) and consequently the Employer was the Claimant was effectively terminated by the Employer.

12. The Claimant has not worked for a wage since February 7, 2018.

13. The Employer's First Report of Injury form was dated February 15, 2018.

14. Sergeant Hill of the CSP completed his report regarding the incident on March 2, 2018. The report concluded that there was insufficient evidence to issue a citation to the driver, and that the officer's experience suggested that Claimant had not suffered an injury due to the incident. Sergeant Hill based these conclusions on his experience and on the Claimant's own reports of her behavior and the reports of others regarding her behavior subsequent to the incident.

15. The Claimant's Worker's Claim for Compensation was dated March 7, 2018.

Medical

16. Dr. Beatty conducted an Independent Medical Examination (IME) on July 18, 2018. Dr. Beatty considered reports from the Claimant's 2018 visits with a neurologist, a physical therapist, a primary care physician, and a chiropractor, all of which the Claimant alleges are for treatment related to the January 12, 2018 incident.

17. Dr. Beatty also considered two 2016 evaluations undertaken by the Colorado Division of Vocational Rehabilitation to assess the Claimant's work capabilities related to a separate worker's compensation claim: a physical evaluation at the Rocky Mountain Health and Back Center on October 3, 2016, by Susan Santilli, M.D., and a psychological evaluation by David Kalis, LCSW, Ph.D., a licensed psychologist on November 9, 2016 (collectively, the "2016 Evaluations").

18. The 2016 Evaluations found that the Claimant suffered from headaches, vague neurological complaints, gastrointestinal complaints, fatigue, confusion, memory problems, distractibility, and difficulty concentrating. The Santilli evaluation also found that the Claimant suffered from neck pain related to a car accident. At hearing, the Claimant denied being involved in a car accident in 2016. The Santilli evaluation further documented that the Claimant had suffered from lower back pain for 26 years.

19. IME Dr. Beatty diagnosed the Claimant with cervical strain, lumbar strain, and headaches. Dr. Beatty stated that the Claimant may have suffered an initial mild injury due to the incident but that the symptoms or consequences of any January 12, 2018 incident should have lasted 3-4 weeks at most and would have been expected to resolve no later than February 12, 2018. In attributing the Claimant's condition to the January 12, 2018 incident, Dr. Beatty relied on the Claimant's history, which the ALJ has found to be unreliable.

20. IME Dr. Beatty designated February 12, 2018 as the date of maximum medical improvement (MMI). He did not impose any restrictions related to the January 12, 2018 incident and did not find that there was any permanent impairment.

Ultimate Findings

21. The ALJ did not find the Claimant to be persuasive or credible because of the inconsistent nature of her claims and testimony. her written accounts related to the incident were inconsistent; her testimony was inconsistent with her written statements; and her testimony was self-contradictory.

22. The ALJ finds that the Claimant's ability to finish her shift following the incident and the fact that she continued to work every day for the Employer until she was informed that she had received multiple DNRs and could not be promised work on a regular basis, in part, detracts from her credibility.

23. The ALJ finds that the Claimant's failure to seek medical care for more than two weeks after the incident occurred suggests that the January 12, 2018 incident had at most a negligible effect on her physical well-being.

24. Between conflicting evidence, the ALJ makes a rational choice, based on substantial evidence, to reject the Claimant's testimony regarding the work-relatedness of her alleged injuryand to accept evidence to the contrary..

25. The ALJ finds that the preponderance of the evidence suggests that any negative health effects that Claimant suffered as a result of the January 12, 2018 incident were at most negligible. The ALJ infers and finds that the Claimant's current health problems have afflicted her from at least the time of the 2016 Evaluations, and perhaps prior to that time.

26. The ALJ finds that the IME Dr. Beatty's determination of no permanent impairment, and that MMI was reached on or before February 12, 2018, further "chips away" at the Claimant's assertion of suffering a work-related injury. Claimant offered no medical evidence in support of overturning or otherwise challenging the Dr. Beatty's determination of MMI and his zero permanent impairment rating.

27. The ALJ finds that there is no persuasive evidence to support a contention that the January 12, 2018 incident aggravated or accelerated any pre-existing condition from which the Claimant had already suffered at the time of injury.

28. The ALJ finds that there are too many anomalies in the Claimant's version of events, along with the confluence of events generally and the totality of other evidence, to render the Claimant's version of events credible and to find a compensable injury.

29. For the reasons specified herein above, the ALJ finds that the Claimant failed to prove that she suffered compensable injuries on January 12, 2018, arising out of the course and scope of her employment. She failed to meet her burden of proof by a preponderance of the evidence.

30. The Claimant was not a credible witness due to her changing and inconsistent recounting of the facts of the case. Because she was the only witness to the incident, her behavior subsequent to the incident, in conjunction with independent corroborating facts in evidence, provides the a great part of the basis for determining whether Claimant suffered a compensable injury

31. The Claimant offers a theory positing that the January 12, 2018 incident caused an injury resulting in vague complaints of migraine headaches and body aches.

There was no persuasive evidence, aside from Claimant's unsubstantiated and contradictory testimony, proffered in support of the finding of a compensable injury. In fact, the earliest medical report in evidence, the UC Health Services (UCHS) Emergency Room (ER) report, dated January 27, 2018, states that Claimant "has no evidence of injury on exam." It defies reason, under the facts of this case, to suggest that the Claimant sustained an injury related to the January 12, 2018 incident which did not manifest itself until after the January 27, 2018 ER examination.

32. Reports by the Claimant and NCTC employees support the contention that the Claimant was frightened or "shaken up" by the aggressive driving behavior exhibited by the resident driver on the afternoon of January 12, 2018. The Claimant's failure, however, to ask for or seek out medical care or otherwise officially report the incident for more than two weeks after it occurred supports a plausible inference that any harm she may have suffered was minimal and did not necessitate medical treatment in and of itself. This conclusion is further supported by the January 27 ER examination which found no evidence of injury to Claimant, suggesting that any harm caused by the January 12 incident had resolved by the time she sought medical attention on January 27, 2018.

33. There is no persuasive evidence to suggest that the complaints from which Claimant suffered at the time of the 2016 Evaluations, which are nearly identical to her present complaints, were aggravated or accelerated by the January 12, 2018 incident.

34. The ALJ finds that the totality of the circumstances surrounding the January 12, 2018 incident and its aftermath demonstrate that the Claimant lacks credibility in her claims against the Employer.

35. The ALJ further finds that there is no persuasive evidence to support the reasonable probability that the Claimant suffered a compensable work-related injury on January 12, 2018. Therefore, the ALJ finds that the Claimant failed to prove, by preponderant evidence, a compensable injury on January 12, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's assertion of sustaining a compensable work-related injury on January 12, 2018 lacks credibility. The totality of the evidence shows that the Claimant was dilatory in pursuing treatment for her supposed injury until she was informed that she could no longer expect regular employment from the Employer.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting evidence, the ALJ made a rational choice, based on substantial evidence, to reject the Claimant's evidence and testimony regarding the work-relatedness of the alleged injury, and accepted evidence to the contrary..

Burden of Proof

c. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain her burden of proving a compensable injury on January 12, 2018.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this_____day of November 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant proved, by a preponderance of the evidence, that he sustained compensable injuries to his left upper extremity, his left shoulder, back and left ankle on September 13, 14, or 16, 2017 and/or on December 21, 2017.

II. If Claimant established that he suffered compensable injuries, whether he also established entitlement to reasonable, necessary and related medical care.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

Background

1. On August 3, 2017 Claimant completed an employment application for an executive chef position with Employer. Respondents Exhibit H, page 1.

2. Claimant was hired with a start date of August 21, 2017. Respondents Exhibit H, page 5.

3. Claimant's salary was $55,000 a year, paid biweekly, at $2,115.38.

4. Based on that, the parties stipulated to an average weekly wage (AWW) of $1,057.69, while reserving the issue of TTD would start; should Claimant prove the compensable nature of his claimed injuries.

5. Claimant's work site was at the commercial kitchen inside of the Pueblo Convention Center. His co-workers included: Prep Cook/Kitchen Manager, Marella Wheaton, and Sous Chef, Natasha Romero. He also worked with Veronica Gomez who was brought on as a temporary cook to help the kitchen manage a heavy workload shortly after Claimant was hired.

Claimant's September 13, 2017, left elbow/arm Injury
W.C. No. 5-068-410

6. On September 13, 2017, Ms. Wheaton was exiting a walk-in cooler while carrying a heavy tray in her hands. Unable to use her hands to open the door, Ms. Wheaton testified that she backed into the door hard enough to break the seal so she could push the door open and go about her duties. She did not ram into the door in

order to force it open. According to Ms. Wheaton, the door is large (6 x 3 feet), heavy and naturally swings open fast. Claimant described the door as being 7 feet tall and 3 ½ to 4 feet wide, weighing approximately 200 pounds.

7. Unbeknownst to Ms. Wheaton, Claimant was on the other side of the door checking the temperatures of the kitchen's various freezers/coolers. As he was passing the cooler Ms. Wheaton was exiting, the door suddenly swung open hitting Claimant on the left arm. According to Claimant, the door hit him above the elbow while the outside handle hit him below the elbow. The incident gave rise to W.C. No. 5-068-410.

8. Claimant testified that after getting hit, his arm tingled for the balance of the day. Nonetheless, he did not seek immediate treatment and was able to finish his shift. Claimant testified that the next day he was unable to make a fist and could barely move his arm. Despite this claim, the evidence presented fails to demonstrate that Claimant asked to see a doctor. The evidence also establishes that he did not seek treatment on the day after this accident.

9. Ms. Wheaton testified that Claimant was very angry with her. He yelled that she didn't open the door correctly by knocking on it before exiting to warn others on the outside that the door would be opening. Ms. Wheaton apologized and went on with her day. When she saw Claimant at work in the days that followed this incident, she never observed any bruising on his arm.

Claimant's September 14, 2017, back, Shoulder and left Ankle Injury.
W.C. No. 5-058-861

10. Claimant testified that on September 14, 2017, he slipped on water and fell while stepping into a walk-in cooler. In describing how he fell, Claimant testified that his left foot slid forward, while his right foot stayed in place, as if he were going to do the splits. However, as this happened very quickly, Claimant explained that he extended backward, rotated slightly and fell on his buttocks and left upper back/side causing him to hit his head on a metal cart in the cooler. Claimant alleged injuries to his left upper back, left shoulder/arm and left ankle giving rise to W.C. No. 5-058-861.

11. Ms. Wheaton testified that she witnessed this incident. She testified that she and Claimant both walked over to the cooler to retrieve items necessary to finish a dessert. According to Ms. Wheaton, when Claimant stepped into the cooler he slipped on the stainless steel floor; went down on his right knee with the other leg behind him and slid to the back of the cooler where he hit some shelving. Per Ms. Wheaton, Claimant never fell onto his bottom, nor did he hit his head on anything. Ms. Wheaton asked if Claimant was 'OK', and he said he was, after asking her what he slipped on. Ms. Wheaton testified that she looked around the cooler floor but found nothing obvious to cause Claimant to slip.

12. Claimant disputes Ms. Wheaton's description of the event testifying that

Ms. Wheaton was not present when he slipped and fell, suggesting further that her testimony is unreliable because he would never do something as menial as going into a cooler to get a food item as others were there to do that for him.

13. Claimant would experience a second near fall later the same day in the same cooler after walking into it with two temporary workers.

14. Ms. Romero testified she worked as a sous chef for the employer from August 2017 to January 2018. She left Employer to take a lateral position at Parkview Hospital because she did not like the direction Claimant was taking the kitchen. At the time Claimant first slipped in the cooler, Ms. Romero was using a mixer that was located to the left of the cooler. She testified that she had a clean line of sight to the open cooler where she saw Claimant, Marella, and a temporary worker. Ms. Romero testified that she saw Claimant slip and slide in the cooler in a 'lunge' position. She did not see him fall or hit his head on anything.

15. As noted above, Claimant had a second incident where he almost fell in the same cooler, this time in the presence of two temporary workers, one of whom was Ms. Gomez.

16. Ms. Gomez testified she was a temporary cook for Employer. She and Claimant had worked together previously at El Pueblo Boys & Girls Ranch (El Pueblo). According to Ms. Gomez, Claimant reached out to her to see if she could work for Employer on a temporary basis as the Convention Center was particularly busy at the time. She accepted the position and so was present for Claimant's 'near fall' later in the day on September 14, 2017. Ms. Gomez testified that as she and Claimant were exiting the cooler, he slipped in a puddle of water. She 'caught' Claimant as he slipped and prevented him from falling. Ms. Gomez testified that Claimant appeared startled and was upset.

Claimant's September 16, 2017, back Injury
W.C. No. 5-057-385

17. On September 16, 2017, the Convention Center hosted a large banquet for retired military service members. A second chef, Tom Agius, was brought on to assist with the dinner service. Mr. Agius testified he was working the ovens behind Claimant and had his back to him. He testified that he was assigned to cook the chicken for plating by Claimant. Mr. Agius testified that as he removed a large pan of chicken from the oven, the juices sloshed to one end of the pan and began to burn his hand. Mr. Agius testified that while holding the pan, he stepped back in order to it and in process bumped into Claimant. He was unsure if he bumped into Claimant bottom to bottom or back to back; noting that it was possible that his elbow could have made contact with Claimant's back. While he was not sure how he contacted Claimant, Mr. Agius was adamant that the impact was not severe, describing it more as a slight "nudge". This incident gave rise to W.C. No. 5-057-385.

18. According to Mr. Agius, a few seconds after he bumped into Claimant, he let out a scream as if he was in agonizing pain. Ms. Wheaton, who was further down the service line testified that she witnessed this incident. Per Ms. Wheaton, Chef Agius was removing a pan of chicken from the lower oven and bumped into Claimant. She testified that seconds after the chef grazed Claimant, he let out a scream. Claimant disputes Ms. Wheaton's testimony asserting that the table she was working at would have blocked her view. Claimant contends that for reasons unknown, Ms. Wheaton is angry at Claimant suggesting further that her testimony is contrived.

19. Claimant testified the September 16, 2017 incident greatly increased the back pain caused by his September 14, 2017 slip and fall. Claimant testified that he completed the dinner service but left work at 9:30 p.m. due to increased back pain. Mr. Agius testified that Claimant continued working without apparent problems after being bumped in the back. He did not ask Claimant if he was hurt because he didn't think the tap on the back was significant.

Claimant's December 21, 2017 back injury
W.C. No. 5-066-267

21. On December 21, 2017, Claimant was tasked with preparation and service of a VIP breakfast. He expected to have assistance from the sous chef, Ms. Romero, as he was on restricted duty. He came to the kitchen early to discover that Ms. Romero had not reported to work. Rather than skip the service, Claimant testified that he chose to violate his physical restrictions and do his best to get breakfast out. Claimant testified that he was rushing to get things cooked and served. In doing so, he lifted three trays of uncooked bacon weighing an estimated 18 pounds from a rack and attempted to lower them to a kitchen island. Claimant testified he lost control of the weight and had to abruptly twist his body to get the trays onto the island. Claimant asserts that he aggravated his back condition in the process. This incident was unwitnessed and gave rise to W.C. No. 5-066-267.

The Medical Record Evidence

22. Claimant first sought care for the above referenced injuries on September 18, 2017. He presented to the offices of his family physician, i.e. Comfort Care Family Practice at 1:43 p.m. where he was evaluated by certified Physician Assistant (PA-C) Robert Dawson. Claimant reported that he was "walking into a dairy cooler with a co-worker when he slipped and fell due to water on the floor". According to the history provided, Claimant reported that "his left leg went out like the splits and he fell straight on his back hitting his head on a supply rack resulting in a small bump on the back of his head". He did not lose consciousness. He complained of a 4-day history of "mid back pain between [his] shoulder blades and left ankle pain along with shoulder pain." Claimant described the pain as constant, sharp, numbing and shooting. It extended from the back down the left arm to the hand. Claimant did not mention any injury to his left elbow from being hit by a cooler door on the job. Rather, at 1:59 p.m. he reported a second injury to his mid back after a co-worker fell into him. The report

taken as part of this injury includes the following history: “Pt is here for WC claim-he is executive chef for Pueblo Convention Center. Pt states he was at the serving counter when the chef behind him had a hot pan walking down the line when he slipped and fell into Casimiro’s back with his body”. Again, there is no mention in the record that Clamant reported an injury to his left arm/elbow from being hit by a cooler door at work.

23. Physical examination revealed a pleasant, morbidly obese 43-year-old male in no acute distress. Inspection and/or palpation of the left upper extremity revealed a “small contusion” on the lateral portion of the left elbow and tenderness throughout the joint with palpation. Several contusions were present on the mid and upper portions of the back, with the largest appearing on the left side of the upper back. Claimant also had tenderness to palpation (TTP) where he was struck by Chef Agius. Based upon the description of the event and the nature of Claimant’s contusion, it was suspected that he was struck by an elbow, as the contusion was consistent with focused blunt force trauma.

24. Claimant was evaluated by Nurse Practitioner (NP), Lileya Sobechko at the Centura Centers for Occupational Medicine (CCOM) on September 20, 2017. During this visit the following history was obtained: “The patient reports multiple injuries while at work 9/13, 9/14, and 9/16. He states that on September, 16 he was working, preparing the food plates and his co-worker collapsed, fell and hit his back in the area, where he already received steroid shot not long ago and his entire back started to hurt. Claimant verbalized concern “regarding possible disc displacement”. He also reported that he had seen his primary care provider (PCP) but that no imaging was performed. Physical examination revealed, pain to palpation of the lumbar and thoracic spine. Although range of motion was limited in both the lumbar and thoracic regions of the spine, no abrasions, bruising, swelling rashes or erythema was present. Moreover, no spasms were detected in the thoracic spine. Claimant was provided with work restrictions of no lifting, pushing or pulling greater than 5 pounds as well as a referral for x-rays and physical therapy.

25. Claimant returned to CCOM on September 21, 2017, where he was evaluated by Dr. Thomas Centi. The record from this visit constitutes the first time that Claimant’s report of being injured after being hit by a freezer door” appears in the record formally. Claimant described pain, tingling, and numbness in the left shoulder down the arm. He was provided with physical restrictions of no lifting, carrying, pushing, or pulling greater than 20 pounds with the left arm; however, the record is devoid of any specific treatment rendered to Claimant for this alleged injury. Rather, Claimant was simply scheduled for a return visit on September 26, 2017 @ 11:00 a.m.

26. Claimant was evaluated by Physical Therapist, Francis Osita Onukwuli for his back on the referral of NP Sobechko on September 21, 2017. Claimant exhibited thoracolumbar muscle tenderness/tightness. Formal physical therapy (PT) to include modalities, neuromuscular re-education, therapeutic exercise, gait training,

massage and manual therapy was recommended two times a week for 3-4 weeks.

27. Claimant was also seen at St. Mary Corwin Hospital for x-rays on September 21, 2017. The noted indication for x-rays of the forearm, elbow and lumbar spine was listed as left elbow, forearm and back pain "after fall". Based upon the evidence presented, the ALJ finds that the x-rays obtained September 21, 2017 were probably those requested by NP Sobechko after Claimant's September 20, 2017 appointment.

28. Elbow x-rays showed no fracture with mild elbow degenerative changes. There was no focal soft tissue abnormality nor any significant elbow joint effusion. Lumbar x-rays showed degenerative changes with minimal L1 compression deformity, age indeterminate.

29. Claimant was reevaluated by Dr. Centi on September 25, 2017. During this visit, Claimant reported that on September 14, 2017 he "slipped on a wet floor and fell backward hitting back and sstraing (sic) left side of back. Despite the passage of 11 days of time, Claimant reported ongoing pain and stiffness in his left shoulder and back. Claimant's spinal examination revealed no abrasions, bruising, erythema, wounds, rashes or swelling. His range of motion was normal and he had no pain to palpation. Focused examination of the thoracic spine yielded similar results, as well as "no spinal tenderness, left side muscle tenderness, no spasms, full range of motion (FROM) of the neck and upper extremity". There were no radicular symptoms but claimant demonstrated difficulty with full torsion and rotation movements. Dr. Centi assessed Claimant with a sprain of the ligaments of the thoracic spine and ordered physical therapy.

29. Claimant kept his September 26, 2017, appointment for follow-up on his left elbow/arm with Dr. Centi after seeing him on September 21, 2017. During this visit, Claimant reported continued, but improved, pain in the left arm and left neck. Physical examination of the left upper extremity yielded normal results. Claimant's restrictions were liberalized to no lifting, carrying, pushing or pulling greater than 30 pounds with the left arm. He was instructed to apply ice and add heat and take Ibuprofen 2-3 times daily.

30. Claimant returned to the offices of his PCP on October 3, 2017. During this encounter he reported ongoing back and left arm pain. He presented to re-establish care reporting that he wanted pain medication and an MRI performed. He reported that he was "kicked out" of CCOM because his injury was not work related. Examination revealed normal range of motion (ROM) but with left sided muscle spasms and tenderness in the upper back and thoracic region. Claimant was provided with non-narcotic medication and an order for "physical therapy for mid back pain".

31. Despite the suggestion that he was "kicked out" of CCOM, the medical record indicates that Claimant returned there for a follow-up appointment for his left

elbow/arm on October 4, 2017. Claimant's examination was unchanged from September 26, 2017. No treatment was directed to the arm/elbow and Claimant was placed at maximum medical improvement (MMI) and released to "regular" work duty without restriction.

32. Claimant was treated at Momentum Physical Therapy (Momentum) from his initial evaluation on October 17, 2017 to November 24, 2017. Treatment focused on Claimant's low back, upper back and left shoulder complaints based upon his report that he "had two accidents at work where [he] injured [his] left shoulder and upper back a month ago in a fall" and a second injury "where I fell on my back and injured my low back." Based upon the evidence presented, the ALJ finds it likely that Claimant's reported history concerning his second accident was documented incorrectly. The evidence presented supports that Claimant likely intended to impart to his therapist that a co-worker fell into his low back injuring it.

33. Claimant was discharged from therapy at Momentum on November 24, 2017, due to a "plateau of progress."

34. Dr. Douglas Bradly performed the initial evaluation of Claimant following the December 21, 2017 incident wherein he twisted abruptly to lower the trays of uncooked bacon to the kitchen island on January 5, 2018. Dr. Bradly obtained the following history: "Pt states he was injured by falling on his back at work, then reinjured himself on 12/21/17. Pt states he was on work restrictions at the time of second injury, he was grabbing trays from a shelf when he twisted wrong and felt pain and spasms throughout his back". Physical examination revealed "slight weakness on left arm, tenderness . . . [of] the left shoulder, decreased extension AROM of the left shoulder, decreased external rotation ROM of the left shoulder, moderate tenderness . . . to posterior paraspinals on the left [and] tenderness . . . to the thoracic paraspinal musculature". Following injections and x-rays of the thoracic spine, cervical spine and left shoulder, Claimant was assessed with strains of the low back, neck left shoulder and thorax and referred to physical therapy.

35. Based upon the medical record presented, the ALJ finds objective evidence to support Claimant's alleged injuries to his left elbow, upper back and low back. Indeed, examination by trained medical professionals revealed the presence of several contusions on the mid and upper portions of the back, with the largest appearing on the left side of the upper back, a small contusion on the left elbow and a contusion on the low back consistent with being stuck by an elbow, in addition to increased muscle tone (spasm) and decreased range of motion.

Claimant's Prior Work-Related Injury History

36. Claimant has a history of prior work related injury to his left side and back. In 2011, Claimant slipped and fell on some water in a bathroom while on a business trip. Similar to the injuries suffered in the current cases, Claimant sustained injuries to his thoracic spine and left side in the 2011 incident. Claimant went through

a Division Independent Medical Examination as part of his 2011 injury. He ultimately settled that case on a full and final basis.

Additional Findings

37. In challenging the compensable nature of Claimant's asserted injuries, Respondents cite to the similarities between the mechanism of injury (MOI) from 2011 and the current case involving Claimant's slip and fall on water in the cooler. Respondents also point to the similarities between Claimant's pain complaints and the pain diagrams he completed for the 2011 injury and the instant claims, to suggest that Claimant's current symptoms are emanating from pre-existing neck, shoulder, arm, back and ankle pain.

38. Respondents urge the ALJ to find Claimant's testimony incredible and unpersuasive because he made a "miraculous recovery" from his 2011 injury to return to work in a position requiring heavy lifting on a regular basis without interim medical care. Respondents further contend that Claimant is not credible because he has a sporadic job history, was fired from a job for not building working relationships with his team, is litigious and has/continues to use marijuana to control pain similar to that he is claiming is related to his current injuries. To find Claimant's testimony incredible for the aforementioned reasons requires the ALJ to ignore significant corroborating evidence, including the testimony of Ms. Wheaton and Chef Agius as well as the objective findings documented by unbiased/impartial medical professionals on physical examination.

39. Given the totality of the medical records and evidence presented, the ALJ finds that Claimant has proven, by a preponderance of the evidence, that he sustained compensable injuries at work on the four occasions cited above.

40. Claimant's symptoms, need for treatment and disability, as exhibited by the imposition of work restrictions are related to the aforementioned work accidents. Moreover, the evidence presented persuades the ALJ that the treatment and physical restrictions imposed were reasonable and necessary to cure and alleviate Claimant of the effects of the aforementioned injuries.

41. Testimony or evidence to the contrary is unconvincing.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers,

without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

Compensability

C. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR*, et al., W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, *supra*; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish, by a preponderance of the evidence, that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); Section 8-41-301(I)(b), C.R.S.

D. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001).

E. As noted it is Claimant's burden to establish causation by a preponderance of the evidence. *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). There is no presumption than an injury which occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable probability, but it need not establish it with medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado, 717 P.2d 1000* (Colo. App. 1986). In this case, there is little question that Claimant produced sufficient evidence to support a conclusion that his symptoms occurred within the time and place limits of his employment as a chef for Employer. Rather, the question for determination here is whether Claimant's symptoms, need for treatment and disability arose out of and are sufficiently connected to his employment such that they may be deemed compensable.

F. In this case, Claimant asserts that he suffered four separate accidents causing injury to his left arm/elbow, left side, as well as his mid, upper and lower back. As found, the totality of the evidence presented, including the testimony of Ms. Wheaton and Chef Agius persuades the ALJ that the accidents giving rise to Claimant's asserted injuries occurred. Indeed, Ms. Wheaton conceded that the cooler door swung open and struck Claimant in the left arm/elbow. While she did not see any bruising/contusions to the arm/elbow, a trained medical professional documented a small contusion on the lateral portion of the left elbow along with tenderness throughout the joint with palpation for which self-treatment recommendations were made and work restrictions imposed. Ms. Wheaton also conceded that Claimant slipped in the cooler. While she testified that Claimant did not fall as he slipped forward, objective findings consistent with trauma, i.e. contusions on the mid and upper portions of the back, were present on medical evaluation four days later. Claimant testified that he fell. Ms. Wheaton disputes this, contending that he slid forward and hit the shelving in the back of the cooler. Although the testimony concerning this detail is inconsistent between Claimant and Ms. Wheaton, the ALJ is convinced that Claimant slipped in the cooler and either fell onto his back or struck the shelving in the rear of the cooler with his mid and upper back causing injury requiring medical treatment and the imposition of physical work restrictions. Concerning his back injury from being struck from behind by Chef Agius, the physical evidence is similar to that presented concerning Claimant's September 14, 2017 slip and fall. Specifically, Mr. Agius, similar to Ms. Wheaton, acknowledged that the accident happened. Although he characterized the contact as a "nudge", the medical documentation reveals that an unbiased medical professional documented that Claimant had tenderness to palpation where he had been struck and a contusion on the back which was consistent with being struck by an elbow. Claimant was referred to therapy and work restrictions were continued in an effort to ameliorate the effects of this injury. Finally, while the December 21, 2017 accident was unwitnessed, Dr.

Bradly's physical examination revealed "slight weakness on left arm, tenderness . . . [of] the left shoulder, decreased extension AROM of the left shoulder, decreased external rotation ROM of the left shoulder, moderate tenderness . . . to posterior paraspinals on the left [and] tenderness . . . to the thoracic paraspinal musculature", prompting him to perform injections, request x-rays, refer Claimant to physical therapy and continue his physical work restrictions. Based upon the totality of the evidence presented, the ALJ concludes that Claimant has established the requisite causal connection between his work duties and the injuries forming the basis of his claims. Consequently, the ALJ finds and concludes that these injuries are compensable.

Medical Benefits

G. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949); *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970)*;* § 8-41-301(1)(c), C.R.S. Ongoing benefits may be denied if the current and ongoing need for medical treatment or disability is not proximately caused by an injury arising out of and in the course of the employment. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997). In other words, the mere occurrence of a compensable injury does not require an ALJ to find that all subsequent medical treatment and physical disability was caused by the industrial injury. To the contrary, the range of compensable consequences of an industrial injury is limited to those which flow proximately and naturally from the injury. *Standard Metals Corp. v. Ball*, *supra*.

J. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he probably sustained acute soft tissue injuries to the left elbow, low, mid and upper back in addition to a sprain of the thoracolumbar spines in injuries occurring on September 13, 14 and 16, 2017. Furthermore, the evidence presented persuades the ALJ that Claimant probably aggravated the condition of his thoracolumbar spine in the incident occurring December 21, 2017. The ALJ is convinced that these compensable "injuries" are the proximate cause of Claimant's need for medical treatment and the imposition of physical work restrictions. Moreover, the totality of the evidence presented establishes that the care

received was reasonable and necessary in light of Claimant persistent symptoms and functional decline.

ORDER

It is therefore ordered that:

1. Claimant has proven, by a preponderance of the evidence, that he sustained compensable injuries to his left elbow, left mid and upper back, and low back on September 13, 14, and 16, 2017 as well as a compensable aggravation of his thoracolumbar condition of December 21, 2017.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation Medical Benefits Fee Schedule, to cure and relieve Claimant from the effects of the aforementioned compensable injuries, including but not limited to the care provided at CCOM, Centura Center for Rehabilitation, EmergiCare, and Excel Physical & Occupational Therapy.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 7, 2018

Colorado Springs, CO 80906

ISSUES

1. Has the Claimant established by a preponderance of the evidence that he suffered a work related injury on January 17, 2018?

2. Has the Claimant established by a preponderance of the evidence that he is entitled to medical care for a work related injury?

3. Has Claimant established by a preponderance of the evidence that he is entitled to temporary disability benefits?

4. Have Respondents shown, by a preponderance of the evidence, that Claimant's Workers Compensation benefits should be reduced by 50%, for his violation of C.R.S. 8-42-112(1)(d)?

5. Is the Claimant entitled to a change of physician from Dr. Bradley back to Dr. Dallenbach?

STIPULATIONS

At the beginning of the hearing, the parties agreed that Claimant's Average Weekly Wage ("AWW") is $648.00. The ALJ accepted this stipulation.

In Respondents' Position Statement, Respondents concur that Claimant may change his designated ATP from Dr. Bradley to Dr. Dallenbach, since both physicians are providers in the same facility. The ALJ accepts this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant began work for Employer in 2016 as a "Traffic Maintenance 1" ("TM1"). The position of TM1 requires that an employee have and maintain a commercial driver's license. (Ex. I, pg. 69).

2. Claimant testified the TM1 position is a very physical job, which included operating heavy equipment, lifting materials, fixing fences, fixing the roadways, and pouring asphalt. He would also repair guardrails, shovel asphalt and dig holes. Claimant testified he'd have to lift stacks of heavy guardrails weighting 190 pounds, and

rolls of wire for fencing which weighed 80 pounds. Claimant testified he could lift them on his own.

3. Claimant testified that on January 17, 2018 he started work at 7:00 a.m. He was on Highway 10 east of mile marker 13. Right before lunch, at about 11:30 a.m., he was working by himself. A co-worker was operating a motor grader about 150 yards away. All of the delineator posts were in the path of the grader. He was pulling up a whole section of these delineator posts. One post was lying on the ground. This post was not bent in any way, so Claimant did not think it was attached to the ground.

4. Claimant saw the post, exited his vehicle and ran over to pick it up. He thought it was lying on the ground, but it was actually buried into the ground. When he ran to grab it, while circling the post, he was pulled back by the post, because it was still buried in the ground. Claimant testified "it rang my bell" but that he was able to dislodge it, put it into the truck and headed east to do different job.

5. Claimant testified that even though he felt pain in his neck, and felt like he had been punched, he continued working that day until about 4:40 pm. Claimant didn't report the incident to his employer that same day. Instead he went home and went to bed early.

6. Claimant testified he fell asleep for a few hours. He then felt burning inside his fingers and into the palm of his hand. He felt like his fingers were "10 times bigger than they normally were."

7. Claimant testified he went to work the following day and advised his immediate supervisor of the incident. The supervisor asked him to "run the blade that day". He also asked the Claimant if he wanted to report it and go to see a doctor to see what's wrong. Claimant said he did.

8. Claimant worked the blade that day until 3:30 p.m. when his supervisor picked him up and took him to the shop. Claimant filled out a report and went home.

9. Claimant picked up his wife, who drove him to Pueblo, where he was seen by Dr. Dallenbach at Emergicare. Claimant testified he was having neck pain. The records from Dr. Dallenbach of January 18, 2018 note that Claimant reports "lumbar, thoracic spine; now-9; injury pain to the shoulder including tingling, numbness, tenderness and tingling, numbness stiffness and pain in the right hand: now -10". (Ex. 12 pg. 188). At this visit, Claimant did not disclose his prescription for Oxycodone nor did he report his history of chronic lumbar pain.

10. On this initial visit, on January 18, 2018, Claimant complained of tenderness in the neck, right shoulder, right elbow and right hand. Claimant underwent x-rays of the neck, thoracic spine, lumbar spine, shoulder, elbow and hand. All of the results were

normal. (Ex. 12, pp. 178-182). Regarding the cervical spine, there was facet sclerosis without significant hypertrophy. No evidence for acute cervical spinal fracture…and no prevertebral soft tissue swelling…. (Ex. 12, p. 184). *The diagnosis was strain of the neck, wall of thorax, fascia and tendons of the lower back, right shoulder, upper arm, and forearm.* (Ex. 12, p. 179). Dr. Dallenbach prescribed physical therapy, theragesic cream, Methocarbanol, and Ibuprofen. (Ex. 12, p. 175) (emphasis added).

11. On January 25, 2018 Claimant returned to Dr. Dallenbach. The physician's notes indicate that the Claimant "wouldn't let Dr. Dallenbach examine him thoroughly". (Ex. 12, p. 170). It was also reported the following: "severe subjective pain is more than observed pain, patient concerned, patient appears to be upset". (Ex. 12, p. 170). It was noted that Claimant was "unwilling to be examined or corporate (sic) until he was sure there was nothing else going on." Dr. Dallenbach spoke with Respondents' adjuster, Lisa Biggs. He requested "Stat MRIs" as the most expeditious way to proceed with the patient's care. (Ex. 12, p. 171).

12. On January 26, 2018 Claimant returned for care. This time, he was seen by Dr. Bradley. He continued to complain of pain in neck, shoulder, thoracic spine, arm and hand. He was given trigger point injections in the upper back. He was "taken through a full ROM following the procedure significant decrease in pain and increase in ROM". (Ex. 12, p. 164).

13. Claimant underwent an MRI at Parkview Medical Center on January 25, 2018. The 'impression' from this MRI was diffuse degenerative disc disease with no evidence of cord or nerve compression (Ex. H, p. 152). The radiologist didn't identify any acute pathology.

14. On follow up with Dr. Bradley on February 2, 2018, Claimant reported pain in the neck, hand, elbow, back and shoulder. He complained of sharp and shooting pain in right hand and began reporting numbness in his left hand as well. This was not previously reported as a symptom. (Ex.12, p. 156). Dr. Bradley referred the Claimant to Dr. Bhatti for evaluation. He recommended Claimant participate in physical therapy. Claimant was given the phone number to schedule physical therapy, if they did not contact him within 48 hours. (Ex. 12, p. 157).

15. On March 7, 2018 Claimant was seen again by Dr. Bradley. On exam, Claimant has all his previous complaints but now complained of *abnormal numbness in both extremities.* (Ex. 12, pg. 153). There is no new event or accident to explain this new symptom. Dr. Bradley recommended an EMG. The EMG performed on March 22, 2018 demonstrated carpal tunnel syndrome. It did not demonstrate any cervical radiculopathy. (Ex. F, p. 127).

16. On March 26, 2018 Dr. Bradley confirmed the reports that the EMG of the right upper extremity showed carpal tunnel syndrome.

17. Dr. Rauzzino examined the Claimant on May 21, 2018 for an IME at the request of Employer. Dr. Rauzzino has been a neurosurgeon for 18 years. In his practice, 90% of his time is spent treating patients and about 10% performing evaluations. He is a fellowship-trained neurosurgeon with special training in the spine. He performs all types of surgery on the neck and lumbar spine including discectomies, decompressions, and fusions.

18 As part of the IME process Claimant was asked to fill out a pain diagram. (Ex. A, p. 19; Depo. p. 9). Claimant noted diffuse pain in multiple myotomes and dermatomes. (Ex. A, p. 19). Dr. Rauzzino explained that the cervical spine is similar to a fuse box, insofar as specific nerves come out of the cervical spine, and go to specific places, and do specific things. For example, pain that shoots down the arm and goes to the thumb is typically a C6 problem, pain into the middle finger connotes a C7 problem and pain into the little finger is typically C8. (Depo. pg. 9).

19. Claimant's pain diagram noted pain in both arms, every part of his arm, every finger, and every part of the upper extremities. (Ex. A, p. 19 and Depo. pg. 9). In order to have this type of symptomatology, a person would have to have an injury or reaction from all of the cervical nerve roots of the cervical spine. (Depo. p. 9). When you see a pain diagram which shows diffuse pain in multiple myotomes and dermatomes, it makes the pain not likely relatable to a direct structural defect which would require treatment. (Depo. p. 9).

20. Dr. Rauzzino performed a physical examination. Claimant demonstrated breakaway weakness as to both of his upper extremities. Dr. Rauzzino felt that Claimant did not put forth maximal effort when tested. (Depo. p. 11). There was also apparent weakness while testing the C8 dermatome although Dr. Rauzzino had difficulty telling whether that was factual or due to lack of effort. (Depo. p. 11). Pain typically does not cause breakaway weakness or difficulty with hand intrinsics. (Depo. p. 12). Dr. Rauzzino opined that Claimant's strength was normal and he did not have any focal motor deficits. He felt this was consistent with the exams from the other neurosurgeons who treated Claimant. (Ex. A p. 12; Depo. p. 12). Dr. Rauzzino also performed sensory testing. Claimant told him all five fingers were numb. Since the nerves are overlapping, Dr. Rauzzino picked the middle to note the middle fingers had the most decrease in sensation. (Depo. p. 13).

21. Claimant also indicated he had chronic back pain. He described it as 75% back pain and 25% leg pain. Later he said no leg pain. Then he described some numbness in

his left thigh on the pain diagram. (Ex. A, p. 19; Depo. p. 15). Although Claimant has been prescribed Norco for chronic low back pain, Dr. Rauzzino did not detect any abnormalities on physical exam of the lumbar spine. Nor did he find any pathology which would justify the use of Norco. (Depo. p. 16).

22. Dr. Rauzzino reviewed the MRI from January 2018 to determine if there was a defect in the Claimant's cervical spine. The initial MRI was done by Front Range Diagnostic Radiology and was read by a Chiropractor. The other MRI was taken at Parkview Medical Center. According to Dr. Rauzzino was done on a machine which does not yield the best resolution. There was also possible patient movement during the test which rendered the images difficult to interpret (Depo. p. 18). In order to definitively determine whether there were any acute structural changes, broken bones, ruptured ligaments rendering the spine unstable, Dr. Rauzzino requested that a new MRI be taken on a high quality machine and read by a dedicated neuroradiologist. (Ex. A p.3; Depo. pp. 17-18).

23. The updated MRI was performed on June 27, 2018 and interpreted by neuroradiologist David Solsberg, MD. (Ex. H, pp. 150-151). Dr. Rauzzino opined that the MRI demonstrates that Claimant does not have an acute foraminal disc herniation anywhere in the cervical spine including at C6-7. (Depo. p. 19). Claimant has multiple levels of degenerative changes, but does not have an acute structural change to the spine which would be relatable to an injury. (Depo. p. 20).

24. An acute disk herniation which is focal would have a certain shape to it as it protrudes out. Claimant's discs are broader, which tend to be chronic. Dr. Rauzzino agrees with the Dr. Solsberg that there is not an acute focal disk herniation. (Ex. H, p. 151 and Depo. p. 20,). The MRI does show findings at multiple levels; however, they appear to be chronic in nature and not acute. Claimant has osteophytes which are chronic. There are protrusions at multiple levels but these are chronic which have existed for quite a period of time. (Depo. p. 22). These documented osteophytes take a long time to form. (Depo. p.22).

25. Claimant also has stenosis at multiple levels which occurs over time. This is a degenerative process that results in narrowing of the hole in the spine where the nerve roots exit. (Depo. p. 23). The bilateral foraminal stenosis with compression of the nerve roots described in the report was not a result of specific trauma, nor is it new. These findings are related to age and the degenerative process. (Depo. p. 24).

26. Dr. Rauzzino testified that the Claimant's report of lifting a delineator post off the ground (which Claimant thought was unattached) would not cause the disc protrusions or osteophytes seen on the MRI. This activity did not change the structure of the

Claimant's spine or change the disk protrusions or osteophytes. Such activity would not cause ongoing symptoms for a prolonged period of time because Claimant's spine is unchanged from what it was prior to the reported injury. (Depo. p. 24-25).

27. Dr. Rauzzino explained that Claimant's complaints of myofascial pain are subjective, and do not correlate anatomically. (Depo. p. 25). In order for Claimant to have all of the symptoms he reported on his pain diagram, all of the different nerve roots would have to have been injured, and that scenario is not realistic. That does not happen from the type of mechanism described by Claimant. There are not forces at play which would involve all of the nerve roots on both sides of Claimant's spine that go down both his arms. Dr. Rauzzino testified that Claimant's activity in picking up the delineator post did not realistically cause the claimant's reported complaints. (Depo. p. 25; Depo. Exhibit B/pain diagram).

28. On the pain diagram generated at the time of Dr. Rauzzino's IME, Claimant indicated he had weakness from the neck down through the shoulders and down both the right and left upper extremities. It indicated Claimant has aching in the neck and back area. It also indicated Claimant had numbness in both hands, with burning in the right hand. He also labeled shooting pain in his right and left shoulders and shooting pain in his right arm. (Ex. A, p. 19).

29. Dr. Rauzzino also notes that Claimant's complaints changed over time. When Dr. Rauzzino wrote his initial report, he was concerned about a disk herniation on the right. Then Claimant had left sided symptoms which came later. There's no reason for him to have left sided symptoms occurring later if he had a right sided disk herniation. (Depo. p. 26). The most recent MRI showed that Claimant doesn't have a disc herniation on either side, which makes his complaints even harder to explain. (Depo. pg. 26).

30. Dr. Rauzzino testified that the Claimant did not do anything to his cervical spine which would require treatment. There is no change in the structure of the spine (Depo. p. 27). Claimant's subjective complaints are difficult to understand because he has pain in so many areas. (Depo. p. 27). There is not a single treatment that would be helpful given the type of diffuse pain and the absence of an abnormality to cause it. (Depo. p. 27). Claimant is not a surgical candidate because he does not have an acute herniated disc or acute structural injury to his spine. (Depo. p. 29).

31. Claimant did undergo an EMG study. (Ex F. pg. 137). Dr. Rauzzino opined that the EMG ruled out any acute injury to the nerves coming from the cervical spine. (Depo. p. 27).

32. Dr. Rauzzino testified that the anatomical findings on the MRI likely were present for a long time, even a year earlier. (Depo. p. 45). Dr. Rauzzino does not believe the Claimant's current pain and symptoms arise from that disc pathology, because unless Claimant's anatomy is structurally changed in a permanent fashion, one would not

expect symptoms to persist. One would also expect the Claimant to have very specific symptoms specific to a particular nerve root. Claimant would not have diffuse pain for the entirety of both arms and both hands. (Depo. pg. 44).

33. Dr. Rauzzino explained that just because there is a central disc protrusion, this does not mean that protrusion would cause pain down both arms. (Depo. p.46). A central disc protrusion does not touch the nerve roots. It splits the nerve roots. So it would not be expected to produce pain on either side. (Depo. p. 46).

34. Claimant has central disc protrusions at several levels of the cervical spine (C3-4, C4-5 and C5-6). Dr. Rauzzino testified that these protrusions are not soft, malleable material. They are not pieces of soft extruded material. (Depo. p. 47). The discs are not floating or easily moved. Claimant did not cause injury to four different discs in the purported work event. According to Dr. Rauzzino this is not a reasonable conclusion to draw. (Depo. pp. 47, 58).

35. Dr. Rauzzino respectfully disagrees with the opinion of Dr. Massey that the MRI of the cervical spine showed a right C6-C7 disc herniation. Since there is no acute disc herniation at C6-C7, there would be no reason to do a C6-C7 epidural. (Depo. p. 52).

36. Dr. Rauzzino testified that if the Claimant injured a nerve root as the result of the work event, one would expect symptoms to occur immediately. The symptoms would not come on later. This is why the left sided pain was problematic, because it developed much later in the treatment when there was no new structural reason for it to occur. If the Claimant sustained an injury to the C7 nerve specifically, one would have expected that to be manifested immediately on the examinations. However, it was not. (Depo. p. 57).

37. Dr. Rauzzino testified that it is not reasonable to conclude that Claimant suffered an injury to all of the nerves coming out of the cervical spine due to the described work event. That would indicate an injury of such catastrophic proportions that he has not seen it in his 18 years of practice. (Depo. p. 58).

38. Lifting something that is stuck in the ground doesn't apply significant force to the nerve roots of the spine. Typically, if the spine fails, it fails in one space, just as a stick would snap when force is applied to it. It won't disintegrate. (Depo. p. 59). The same is true for the cervical or lumbar spine. It generally fails at the weakest point. The force described by the Claimant is not consistent with the kind of symptoms being reported by the Claimant.

39. While it is possible that Claimant could have reached for something that would result in a pulled muscle, that would be expected to resolve over time. Claimant's symptoms haven't improved. Instead the symptoms have expanded over time and have

moved to the opposite side of the body. Now they involve the left arm. The claimed mechanism of injury doesn't account for the Claimant's symptoms. (Depo. p. 59).

40. However, during his deposition, Dr. Rauzzino acknowledged that he had no reason to doubt that Claimant's symptoms, as noted by Dr. Dallenbach on January 18, 2018 (the day following the injury) were due to his injury the day before.

41. Dr. Rauzzino opined that Claimant's radiographic findings of chronic degenerative changes should not produce such pain that one could not participate in physical therapy. Such a refusal would be concerning for a psychological overlay and secondary gain. This is because there is nothing on Claimant's radiographs which would produce that kind of pain. (Depo. p. 63). The distribution of pain, the proportion of pain and the expanding nature of the complaints are all inconsistent with what is seen in imaging studies, and the mechanism of injury. (Depo. p. 64).

42. Claimant was referred by Dr. Bradley to Dr. Sana Bhatti, also a neurosurgeon, on March 5, 2018 and then again on April 2, 2018. The histories and exam findings on each exam are quite similar. (Ex. C, p. 84-91). Claimant reported neck pain and headache, "which feels like his head will explode." He rates his pain at 8/10, which is worsened with movement. He also complained of low back pain with complaints of numbness and parasthesisias in his hands and all fingers, which are worse on the right. Claimant complained of weakness in the right hand and difficulty sleeping. He had difficulty with daily activities such as getting dressed and brushing his teeth. "He feels his symptoms are worsening with time". (Ex. C, pp. 85, 90).

43. Dr. Bhatti also noted on physical exam on March 5, 2018 'give away' weakness in the deltoids. (Ex. C, p. 90) On March 5, 2018 Dr. Bhatti noted that Claimant was complaining of neck pain, headache and "has subsequently developed significant right arm pain with burning pain in the right hand with numbness and weakness. Dr. Bhatti stated "the etiology of his pain is unclear. (Ex. C, p. 91).

44. Upon follow-up, on April 2, 2018 Dr. Bhatti's assessment changed. He noted that Claimant now also complains of pain in the left shoulder and numbness in the left hand. He opined that the "etiology of this pain is unclear." (Ex. C, p. 85). After reviewing the EMG Dr. Bhatti concluded that the disc at C6-7 "does not explain his symptoms (sic) complex". Dr. Bhatti also noted that the EMG showed mild to moderate right carpal tunnel syndrome which he felt was an "incidental finding and not related to his symptoms". (Ex. C, p. 85). Dr. Bhatti concluded that Claimant does not have a condition amenable to surgical treatment.

45. The medical records from Dr. Solomon Villalon dating back at least to May 31, 2013 show that Claimant has been consistently seeing Dr. Solomon for the treatment of chronic low back pain (Ex. C, pp. 92-122). Dr. Villalon has noted complaints of chronic

low back pain, muscle spasm and tenderness in the lumbar area of the back. (Ex. D, pp. 92-122).

46. Dr. Villalon has also noted intermittent complaints of left sided leg pain and left-sided sciatica. (Ex. D, pp. 119, 120). Claimant's physical examinations by Dr. Villalon have also identified positive straight leg raises. (Ex. D, p. 120).

47. Claimant consistently reported that his pain level at its worst without medications ranged from 6 to 8 out of 10 without the medication, and at its least, 2 out of 10. Claimant repeatedly reported "relief with the Hydrocodone." (Ex. D, pp. 92, 98, 104, 106).

48. Pharmacy records show that Claimant filled prescriptions for Hydrocodone, Flexeril and Ibuprofen consistently between January 1, 2011 and May 18, 2016. (Ex. N, pp. 207-225). The pharmacy records for Star Mart Healthmart end in May 2016. However, the records from Dr. Villalon continue to document the prescriptions through April 2018. (Ex. D, pp. 92-107).

49. On February 10, 2015 Dr. Villalon discussed with Claimant the Consent for Chronic Opioid Therapy, and answered all of Claimant's questions. Claimant signed this consent form. (Ex. D, p. 114; Ex. 1, pp. 3-4)

50. On July 12, 2016 Claimant reported to Dr. Villalon that he has low back pain and muscle spasms secondary to his degenerative disc disease of the lumbar spine. Claimant also reported that he had started "to have numbness and pain down his left lower extremity including mild weakness. He reported relief from his back pain with Hydrocodone." (Ex. D, p. 107). At that time Dr. Villalon discussed a trial of Neurontin for the discomfort in his left leg. Claimant indicated he would like "to think about it". (Ex. D, p. 107). Dr. Villalon issued a prescription for "Norco x 3 mos." (Ex. D, p. 107).

51. Claimant was seen October 13, 2016 by Dr. Villalon and report that he "gets 50% relief with his Norco, Flexeril and Ibuprofen." On exam he continued to have muscle spasm, tenderness in the lumbar back and a "positive SLR on the left". Dr. Villalon again discussed using Neurontin for the sciatica but Claimant does not feel his discomfort is bad enough to take any medication for the problem. Norco was prescribed for another three months with instructions to continue the other meds and recheck in three months. (Ex D, p. 106).

52. Claimant testified at hearing he did not take all of the Hydrocodone prescribed for him by Dr. Villalon. He used it on as "as-needed" basis only- not every day. He also felt that he was not exceeding any allowable limits when he drove any commercial vehicles on days when he felt it was needed.

53. Pharmacy records from Star Drug Healthmart reflect that Claimant refilled his prescription for Hydrocodone every month, for four and a half years. (Ex. N, pp. 207-226). Dr. Villalon's medical records show Claimant repeatedly stating that he gets pain relief when taking the Hydrocodone, ibuprofen and flexeril. (Ex. D, pp. 92-122).

54. Claimant's Commercial Drivers License records were admitted. On April 7, 2015, the Claimant denied that he had a spinal injury or disease. He denied he had chronic low back pain and he denied narcotic or habit forming drug use. (Ex. O, p. 229). The examiner discussed Claimant's health condition with the Claimant and the handwritten entry states that Claimant "denies any medical condition." (Ex. O, pg. 229). Claimant's commercial license was renewed for only three months at that time due to high blood pressure concerns. (Ex. O, pp. 227-228).

55. Claimant made a similar representation two years earlier in the Medical Examination Report for Commercial Driver Fitness Determination dated April 8, 2013. (Ex. D, pg. 125). Claimant signed his name to a report wherein he denied having a spine injury, denied having chronic pain and denied taking narcotic or habit forming drugs. (Ex. D, pg. 125). Dr. Villalon also denied that Claimant had longstanding and chronic low back pain, spasm and radiculopathy.

56. Claimant testified that he was aware that he required a commercial driver's license in order to work as a Traffic Maintenance 1. Claimant acknowledged receipt of the Federal Motor Carrier Safety Regulations Pocketbook and agreed to familiarize himself with the contents of it on November 11, 2016. (Ex. M, p. 173). The regulations preclude the operation of a commercial vehicle by one who has taken controlled substances including opioids, unless a specific exemption applies. See, Part, 382.213.

57. Claimant attended one visit to Excel Physical and Occupational Therapy. (Ex. B, p. 66). Claimant denied any low back problems in the past. (Ex. B, p. 66). He told the physical therapist that *"he was perfectly healthy before all this happened".* (Emphasis added, Ex. B, p. 66). However, Claimant did not want to participate in physical therapy before seeing a spine specialist to be cleared for moving. (Ex. B, p. 69).

58. On the initial appointment with the physical therapist on February 5, 2018, the Claimant had high fear avoidance behavior and refused to move his neck, shoulders, elbows, forearms and hand/ fingers because everything increased his pain. *"Pt [patient] stated he would like to try the movements but he knows that everything will increase his pain"* (Ex. B, p. 67) (emphasis added). Claimant put his own therapy on hold until he was cleared by a specialist. (Ex. B, p. 69). Claimant also refused to undergo any passive range of motion testing of any of his extremities by Dr. Bradley. (Ex. B, p. 67).

59. At this February 5, 2018 appointment, Under Assessment/Plan, Dr. Bradley noted: "Strain of muscle, fascia and tendon at neck level, subsequent encounter", "Strain of muscle and tendon of wall of thorax", "Strain of muscle, fascia and tendon of

lower back“, “Strain of muscle, fascia and tendon at shoulder and upper arm level, right arm”, ”Strain of muscles of fascia and tendons at forearm level, right arm” Claimant was given work restrictions of lift/carry/push/pull of up to 2 lbs. (Id).

60. Claimant’s pain diagram on February 5, 2018 showed pain in the neck, low back and right arm. (Ex. 2, p. 43).

61. Despite Claimant’s apparent dissatisfaction with Dr. Bradley, Claimant attended regular follow up visits with his office on a regular basis. He was seen on March 7, 2018 (Ex. B, pp. 62-65). Claimant was again given work restrictions of lift/carry/push/pull of up to 2 lbs. His Assessment/Plan reads the same as February 5, 2018. (Id).

62. Claimant next visited Dr. Bradley on March 26, 2018. He was still assessed as a “Work Accident”, with the same work restrictions. His Assessment/Plan remained the same. He was noted to have a “general loss of motion of all extremities and spine”. Work restrictions remain unchanged. (Ex. B, pp. 56-60).

63. Claimant’s next visit was April 19, 2018. Work restrictions, Assessment remain unchanged. (Ex. B, pp. 50-55).

64. Claimant’s next visit to Dr. Bradley was May 14, 2018. At this exam, there were noted a number of abnormalities in his musculoskeletal exam. In addition to the prior diagnoses, he was also diagnosed with “generalized anxiety disorder”, and prescribed medication for it. MMI date is projected to be 9/10/18. Restrictions remain in place. (Ex. B, pp. 43-48)

65. At Claimant’s next visit of May 28, 2018, his existing 2-lb work restrictions were supplemented with standing and walking up to one hour a day, sitting up to 5 hours a day, and ‘working’ up to 6 hours a day. His MMI date was estimated to 8/10/18. (Ex. B, pp. 38-42).

66. Claimant’s next follow-up was June 11, 2018, with similar results as the May 28 visit.

67. Claimant next saw Dr. Bradley on July 2, 2018. His exam continues to note “ABNORMAL: Neck is stiff, Decreased cervical range of motion noted, Tender Posterior Neck Bilaterally” MMI date moved back to 9/10/18. (Ex. B, pp. 28-32).

68. Claimant underwent a C5,6,7 epidural injection with Dr. Benjamin Massey on July 31, 2018. Prior to the injection, Dr. Massey noted that Claimant had complained of weakness, numbness and tingling in his arms. Dr. Massey noted that upon exam, Claimant showed “decreased sensation medially and laterally along the right forearm into the hand and fingers to light touch compared to the left.” (Ex. 7, pp. 84-85).

69. Claimant's next visit to Dr. Bradley on August 6, 2018 notes that that he was given a steroid injection on 7/31/18, with noted improvement. Patient states that he is doing physical therapy at home and there is no improvement. He also states that he is trying to remain active. MMI date is set at 9/10/2018. His musculoskeletal exam was mostly normal, except for tenderness over the spine noted. Work Restrictions remain in place. (Ex. B, pp. 23-27). This 8/6/18 is last available report from Dr. Bradley.

70. On February 8, 2018 Claimant saw his own chiropractor, Dr. Youngren. On this date, Claimant tolerated a complete physical examination and series of x-rays. (Ex. 3, pp. 51-54). The exam was performed while Claimant was supine and also sitting up. The majority of the results were within normal limits. (Ex. 3, pp. 51-54) The pain diagram Claimant filled out was limited to pain in the head, neck, right shoulder and arm. (Ex. 3, p. 61). This pain diagram also varied from the one provided to Dr. Rauzzino. (Ex. A, p. 19).

71. Dr. Youngren then referred the Claimant to neurosurgeon Dr. Ted Villavicencio. (Ex. 3, p. 54). On March 22, 2018 Claimant was seen Dr. Villavicencio. (Ex. G. pp. 140-148). Claimant described his event of pulling on the delineator post. He complained primarily of neck and right shoulder and arm pain but also said the symptoms are "now moving into the left arm as well". He also talked about having blurred vision, difficulty with his speech and finding words". Claimant still reported being unable to participate in PT and rated his pain at 9 out of 10. (Ex. G, p. 140).

72. Claimant also gave Dr. Villavicencio a history of his low back. Claimant reported *"ongoing LBP as well as left anterior thigh numbness/pain since the incident at work. He reported trying Gabapentin, nerve medication, NSAIDS and activity modifications without relief".* (Emphasis added). (Ex. G, p. 140).

73. Dr. Villavicencio's examination was essentially normal, with normal strength in the upper extremities, normal sensation in the arms and legs, and essentially normal reflexes. (Ex. G, p. 141). Dr. Villavicencio found no surgical lesions, and recommended conservative care. He also arrived at the diagnosis of cervical degenerative disc disease- the same diagnosis reached by Dr. Rauzzino. (Ex G., p. 142).

74. At hearing, Claimant clarified that now he was not claiming an injury or aggravation to the low back from the work incident, nor is his carpal tunnel syndrome related to this injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion).

D. In this case, the ALJ finds Claimant to be credible overall. While issues of secondary gain have been raised, the ALJ does not see that this has been a driving force in Claimant's case. Claimant, quite reasonably, thought he could "shake off" the injury when it occurred, and did not report it the day it occurred. He did the following day, and the ALJ finds that he reported what he was feeling to Dr. Dallenbach upon examination. Claimant is far from a perfect historian, and his symptoms did wax and wane, confounding his providers on occasion. He reported relief from the epidural injection to Drs. Massey and Bradley, and the ALJ is hard-pressed to conclude that

Claimant underwent this procedure for dramatic effect. While his complaints of pain have often been out of proportion to his objective symptoms, it does not mean he was not experiencing them. Further, the ALJ finds that, while Claimant-and his personal physician-might well have been playing fast and loose with the painkillers for his back, his explanation is satisfactory: to wit; he was just hoarding them for a rainy day.

Compensability

E. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1) (b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

F. The ALJ finds Dr. Rauzzino to be credible and thorough in his diagnosis. He quite reasonably requested a state-of-the-art MRI for Claimant. Neither he, nor Dr. Bhatti, could identify a target that could be surgically repaired. The could not find an objective source of his symptoms. In effect, despite their best efforts, they could not find a way to help Claimant within their specialties. Dr. Rauzzino could not explain the persistence of Claimant's symptoms, if they were due to multiple muscle strains. Nonetheless, that is plainly the diagnosis of the ATP Dr. Bradley, who likewise imposed work restrictions consistent with this injury. Even Dr. Rauzzino did not doubt that the symptoms displayed the day following the injury were accurately stated by Dr. Dallenbach. Certain of Claimant's symptoms were observed by providers well after the fact. The ALJ finds, by a preponderance of the evidence, that Claimant suffered a compensable injury while at work.

Medical Benefits

G. The Claimant has the burden to prove her entitlement to medical benefits by a preponderance of the evidence. C.R.S. §8-43-201. The Respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. C.R.S. §8-42-101(1) (a). The Claimant is not entitled to medical care that is not causally related to his work-related injury or condition. As noted in *Bekkouche v. Riviera Electric*, W.C. No. 4-514-998 (May 10, 2007), "A showing that the compensable injury caused the need for treatment is a threshold prerequisite to the further showing that treatment is reasonable and necessary." Where the relatedness, reasonableness or necessity of medical treatment is disputed, the claimant has the burden to prove that the disputed treatment is causally related to the injury, and

reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc.,* W.C. No. 4-117-758 (ICAO April 7, 2003).

H. In this case, the ALJ finds, by a preponderance of the evidence, that Claimant is entitled to Medical Benefits in connection with this case. As noted previously, there don't appear to be viable surgical alternatives, but the ATP will be tasked with sorting that out. As of this Order, Claimant appears to be suffering the continuing effects of a series of muscle strains incurred while twisting awkwardly and unexpectedly. He reported significant, if not total, relief from this epidural injection, which the ALJ finds was reasonable, necessary, and related to his work injury, despite a lack of a clear pathology in the most recent MRI. It certainly appeared on the MRI prior, which is what his providers had to work with at the time. Prior to this injury, Claimant had never experienced pain or injury to his cervical region, nor to his shoulders, arms, or hands. The ALJ has not heard of an alternative injury which would cause his ongoing symptoms, if indeed one exists.

Temporary Total Disability

I. To prove entitlement to temporary total disability ("TTD") benefits, the Claimant must prove: that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). C.R.S. § 8-42-103(1)(a), requires a Claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998)

J. The ALJ finds, by a preponderance of the evidence, that Claimant is entitled to TTD benefits. He suffered a compensable injury, and has been placed on restrictions by his ATP which prevent him from returning to work. There is no evidence of modified duty being offered to him by employer. The work restrictions provided by his ATP remain in effect as of this Order.

Reduced TTD Benefits / Misrepresentation of Ability to Perform Required Work

K. C.R.S. 8-42-112(1)(d) provides for a 50% reduction in compensation:

> Where the employee *willfully* misleads an employer concerning the employee's physical ability to perform the job, and the employee is subsequently injured on the job *as a result of* the physical ability about which the employee willfully misled the employer. (emphasis added).

The ALJ does not find that Claimant *willfully* misled the DMV about his periodic issues with this back. As noted by Claimant, since Claimant's own personal physician did not see any 'red flags' with his continuing his CDL status, it would be quite a stretch to conclude that Claimant willfully did so anyway. Claimant quite reasonably relied upon his clearance by his own physician in making this CDL application. Assuming, arguendo, that Claimant willfully misled the DMV, there is nothing in the record showing that Claimant misled his *employer.* The ALJ reads the statute to require misleading the *employer,* and not the result of indirectly getting the job as a result of misleading a licensing authority.

L. Further, and as noted by Claimant, and assuming, arguendo, that Claimant willfully misled his employer by failing to disclose his back issues, *Claimant injured his neck and shoulders- not his lower back.* The ALJ reads this statute to apply only if Claimant had prior, significant issues with his *neck and shoulders, willfully* failed to disclose them *to his employer*, and then re-injured the *same body parts* <u>*as a result*</u> of his work duties. That did not occur here. The ALJ finds that the elements of this statute have not been proven by Respondents, by a preponderance of the evidence.

ORDER

It is therefore Ordered that:

1. Claimant's injuries from January 17, 2018 are compensable.

2. Respondents shall provide all reasonable, necessary, and related medical care to relieve Claimant of the effects of the work injuries. Such care includes, but is not limited to, the epidural injection provided by Dr. Massey.

3. Claimant's Average Weekly Wage is $648.00.

4. Claimant may designate Dr. Dallenbach as his Authorized Treating Physician.

5. Claimant is entitled to Temporary Total Disability Payments, effective January 19, 2018 and ongoing, until terminated by law. Such benefits are subject to any applicable offsets, but are not subject to a 50% reduction.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-075-853-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 17, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 10/17/18, Courtroom 5, beginning at 8:30 AM, and ending at 11:20 AM)

Claimant's Exhibits 1 through 8 were admitted into evidence, without objection. Respondents' Exhibits A through D were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant. which was filed, electronically, on October 22, 2018. On October 23, 2018, Respondents indicated that they had no objections to the proposed decision, at which time the matter was deemed submitted for decision. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern compensability, specifically, whether the Claimant sustained a compensable to her left shoulder, arising

out of and in the course and scope of her employment with the Employer on March 21, 2018; and, whether the Employer provided the Claimant with list of authorized medical providers in accordance with § 8-43-404(5)(a)(I)(A), C.R.S.

The Claimant bears the burden of proof, by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The parties stipulated to the following fact prior to commencement of the hearing: that the Employer did not furnish a list of medical providers to the Claimant in accordance with § 8-43-404(5)(a)(I)(A)., C.R.S., and the ALJ so finds.

2. The Claimant was born on February 2, 1977 and was 41 years of age on the date of the hearing.

3. The Claimant was hired by the Employer on May 9, 2017 and employed as a Project Consultant. Claimant remains employed by Employer.

4. The Employer is a roofing company specializing in roofing, siding, and gutter installation and repair for residential, new construction, and commercial properties.

The Injury

5. On March 21, 2018, the Claimant was performing the final inspection of a roof at a residential property located at 4410 Bryant, St. Denver, CO 80211 on behalf of the Employer.

6. Michael Austell accompanied the Claimant at the inspection and was assisting the Claimant with material pick-up and final inspection of repairs.

7. Austell was the Claimant's supervisor on March 21, 2018.

8. The Claimant ascended a ladder on the side of the 4410 Bryant residence in order to inspect the roof and photograph repairs.

9. Around 11:30 AM, the Claimant began descending the ladder in order to photograph the underlayment of the roof and slipped on the lower rungs of the ladder.

10. As the Claimant fell, she reached up with her left arm and grabbed one of the rungs of the ladder above her in an attempt to brace her fall.

11. The Claimant immediately felt pain in her left shoulder after she made impact with the ground and yelled out an expletive.

Medical

12. On April 4, 2018, the Claimant presented to Angelique Poturalski, M.D. at Centennial Family Care with a chief complaint of left shoulder pain. The history noted that the Claimant believed her injury occurred approximately one-month prior with an incident involving a ladder. The ALJ infers and finds that the Claimant was actually referring to the March 21, 2018 incident.

13. On April 23, 2018, the Claimant returned to Centennial Family Care complaining of persistent left shoulder pain.

14. On April 23, 2018 Claimant also presented at Touchstone Imaging Highline for X-ray imaging of the left shoulder upon referral from Dr. Poturalski. The clinical indication described that the patient fell from a ladder injuring her left shoulder.

15. On April 30, 2018, Dr. Poturalski documented that the Claimant returned for continued left shoulder pain along with back muscle spasms, mostly on the left. The Claimant was waiting for a referral to an orthopedist for shoulder pain.

16. On May 4, 2018, the Claimant met with Steven E. Horan, M.D. at OrthoONE. Dr. Horan documented that the Claimant presented with left shoulder pain, weakness, and limited range of motion. The Claimant reported she slipped off a ladder and tried to catch herself from falling. Her full weight was hanging by her left arm. She originally thought it would get better with time, but it has not. The assessment included acute pain due to trauma and acute pain of the left shoulder.

17. Dr. Horan ordered an MRI (magnetic resonance imaging) of the left shoulder. The imaging study was performed on May 9, 2018. The indication accompanying the MRI was documented as shoulder pain after a fall from a ladder on March 21, 2018.

18. The Claimant returned to Dr. Horan on May 14, 2018. A Kenalog injection was administered to the left shoulder.

19. The Claimant returned to Dr. Horan again on May 23, 2018. The injection did not help and a decision was made to proceed with subacromial decompression.

20. On June 18, 2018, the Claimant presented to Centennial Family Care again due to continued back and neck pain. Surgery was noted to occur on July 12, 2018.

21. Dr. Horan performed debridement of the labrum, subacromial decompression, and distal clavicle excision at Rocky Mountain Surgery Center on July 12, 2018.

22. On July 24, 2018 Dr. Horan performed a post-surgical examination of the Claimant and noted the she could not sleep on her shoulder. A prescription for physical therapy (PT) was provided.

23. Between August 22, 2018 and September 5, 2018, the Claimant presented for four sessions of PT at ProActive Physical Therapy upon referral from Dr. Horan. Subjective complaints described that he Claimant fell from a ladder leading to the surgical procedure. The date of onset was noted as March 21, 2018.

The Notice of Injury

24. The Claimant verbally reported to her supervisor, Austell, that she fell off the ladder on March 21, 2018.

25. Due to pain in her left shoulder, the Claimant asked Austell to complete the inspection of the premises. Austell completed the inspection after which time he and the Claimant left the property.

26. A list of physicians was never provided to the Claimant and Austell did not refer the Claimant to any medical provider.

27. On April 23, 2018, the Claimant remitted email correspondence to the Employer's Employee Services Manager, Sharon Shockley. Claimant's correspondence identified that she slipped off a ladder at one of her builds on March 21,2018 and, as she was falling, reached up and grabbed the ladder and injured her left shoulder. She informed Shockley that she was unable to lift her arm above her shoulder height, and could not carry significant weight.

28. On April 25, 2018, the Employer's National Production Manager, Lucas Mullis, remitted email correspondence to the Claimant identifying that, "due to the time that has passed since the injury, the only option would be filing short-term disability." The ALJ finds that Mullis was mistaken in his interpretation of the law regarding work injuries.

29. On April 26, 2018, the Claimant completed a Colorado Department of Labor and Employment Worker's Claim for Compensation. She described that she had sustained an injury to her left shoulder on March 21, 2018 when she slipped off a ladder.

30. On June 8, 2018, the Employer filed a Notice of Contest "due to further investigation for medical records."

Michael Austell

31. Michael Austell was called to testify on behalf of Claimant. He was located near the Claimant at the time she slipped. He did not see the Claimant fall; however, he heard the Claimant yell an expletive.

32. Austell ran to the Claimant's location in response to hearing her shout an expletive.

33. Austell is not only the Claimant's supervisor, but is also Claimant's fiancée. The ALJ finds that this fact did not affect his credibility.

34. Austell witnessed demonstrable limitations in the Claimant's left shoulder immediately following her fall from the ladder. He performed the remainder of her job related duties at 4410 Bryant, St. Denver, CO 80211, including inspection of the garage and removal of the ladder from the residence. The Claimant has not returned to work since the March 21, 2018 injury.

35. Austell witnessed limitations in the Claimant's ability to perform household duties and activities of daily living (ADLs) since March 21, 2018, due to her left shoulder injury. Prior to March 21, 2018, Austell did not observe any complaints or limitations to the Claimants left shoulder.

Ultimate Findings

36. The the Claimant's overall presentation was persuasive and credible. As found, the testimony of the Claimant concerning her lack of physical symptoms and medical treatment prior to March 21, 2018 pertaining to her left shoulder was undisputed. Having reviewed the Claimant's medical records, the ALJ makes a rational choice to accept the overall consistency in her medical records that the mechanism of injury included slipping from a ladder supports her medical condition thereafter. The date of injury was March 21, 2018.

37. Austell's testimony – that he heard the Claimant scream at the job site and had to complete her job related duties due to her injury following her fall from the ladder is highly persuasive, credible, and undisputed.

38. The ALJ hereby finds the Claimant sustained a compensable injury on March 21, 2018.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Uncontradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant's testimony was undisputed and the ALJ is not free to disregard any part of it. As further found, the Claimant's overall presentation was persuasive and credible. The testimony of the Claimant Austell concerning the nature of her injury, work related duties, and treatment was credible and persuasive.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, there were no conflicting testimonies, and the Claimant's reporting of the date and location of her injury to her medical providers was overall consistent. Although not required to do so and stand on the Claimant's burden of proof the Employer pointed to no plausible alternative event or injury that would make the Claimant's left shoulder condition non-compensable. The ALJ made a rational choice to accept the testimony of the Claimant and Austell. and to reject any evidence to the contrary.

Compensability

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred but for the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7.** Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41- 301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000); *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399 (Colo. App. 2009); *Cabe/av. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant sustained injuries on Mach 21, 2018, arising out of the course and scope of her employment for the Employer.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden with regard to compensability of the March 21, 2018 incident.

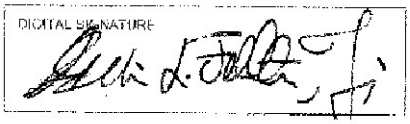
ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant sustained compensable injuries on March 21, 2018, arising out of the course and scope of her employment for the Employer.

B. Any and all issues not determined herein are reserved for future decision.

DATED this 8th day of November 2018.



_____
EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on December 22, 2017.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical benefits for the December 22, 2017 injury including the MRI of his wrist recommended by Dr. Pater.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from December 28, 2018 through January 2, 2018 and from February 10, 2018 and ongoing.

4. Whether Respondents have established that Claimant was responsible for his termination and that his TTD benefits should terminate due to responsibility for termination.

STIPULATIONS

Claimant's average weekly wage is $271.81.

FINDINGS OF FACT

1. Claimant was employed by Employer as a part time courtesy clerk with duties that included assisting in the front of King Soopers. Claimant regularly, as part of his job duties, bagged groceries.

2. On December 22, 2017, Claimant was working a scheduled part time shift. Claimant was bagging groceries for co-worker/cashier, Alex Vigil.

3. Video from that evening shows Claimant bagging at a check stand with cashier Mr. Vigil.

4. Claimant testified that while bagging for Mr. Vigil, he picked up a bag and felt a sharp pain in his wrist for about 30 seconds that then went away. Claimant testified that it was a sharp twinge in his wrist around the upper right part underneath his thumb and felt kind of fiery and sharp and then went away. Claimant testified that when it happened he was groaning a little bit and told Mr. Vigil that his wrist hurt a little bit.

5. Mr. Vigil testified that he recalled Claimant grimacing while Claimant was bagging groceries at his check stand. Mr. Vigil testified that he asked Claimant what happened and Claimant stated he may have hit his wrist while doing carts or could have hit it at home prior to work.

6. Claimant completed his shift the night of the 22nd and did not report an injury that night.

7. Claimant worked the next day, December 23, 2017. During his shift, his wrist became red, agitated, and painful. Claimant noticed a good pea size lump on his wrist toward the end of his shift under his skin on the upper right side of his wrist under his thumb. Claimant did not report an injury on the 23rd.

8. On December 24, Claimant attempted to "call in" before his shift due to the pain in his wrist but he was asked to come in anyways. Claimant worked that day. Claimant alleges that he reported his injury verbally to a front-end manager, Ms. Blake on the 24th.

9. Ms. Blake testified at hearing. She indicated that Claimant did not verbally report an injury to her on the 24th and that every time an injury is reported to her she follows the same protocol. Ms. Blake testified she will immediately take the reporting employee off the sales floor and have them fill out paperwork and that she brings the employee to management that is more senior.

10. On December 25, 2017, the store was closed. Claimant was not scheduled to work on December 26, 2017.

11. On December 27, 2017, Claimant went to the emergency room at Good Samaritan due to his wrist pain. At the emergency room, Claimant reported sharp right thumb pain at an 8/10 since the 23rd after bagging groceries at King Soopers. Claimant reported that the pain was worse with movement, that the swelling had gone down, but that the pain had not improved. X-rays of the right hand showed no fracture, dislocation, osseous, or soft tissue abnormalities. On examination, Claimant's right thumb was tender to palpation along the base with minimal swelling. Claimant's function was noted to be intact but limited by pain. Tendonitis was suspected and Claimant was placed in a thumb spica. It was recommended that Claimant follow up with his primary care provider if the pain continued. Claimant was placed on restrictions of working light duty or returning to work on January 5, 2018 if light duty was not available. *See* Exhibits 4, I.

12. On December 28, 2017, Claimant came into the store to provide Employer with the papers from his emergency room visit. Claimant filled out an "Associate Work Related Injury / Illness Report." Claimant reported that he was injured at the check stand while bagging groceries and that he had a strain (tendonitis) of his wrist. Claimant reported the injury occurred December 22, 2017 at 7:00 p.m. and that he reported it verbally to Kaylee on December 24 at 11:20 a.m. Claimant stated, "I was bagging groceries I believe check stand 13 for Alex Vigil. I lifted the groceries into the cart, then

a sharp pain erupted in my wrist which lasted for about 30 seconds." Claimant was provided with a designated medical provider list and was referred for treatment. *See* Exhibits L, M.

13. Ms. Blake (Kaylee) testified that she first learned of the alleged injury several days later when Claimant came into the store to turn in an injury report. Ms. Blake testified that when she asked Claimant what happened, Claimant shrugged his shoulders and stated "I don't know," and that he seemed nonchalant about the alleged injury.

14. On January 2, 2018, John Ogrodnick, M.D. evaluated Claimant. Claimant reported that on December 22, 2017 he was bagging groceries at King Soopers and may have lifted wrong as a sharp pain erupted in his wrist. Claimant reported that it did not feel too bad the next day but that on December 24 it was more painful. Claimant reported some slight improvement since visiting the emergency room and that his pain was 6/10 on the volar right wrist. Claimant reported a knot on his wrist that was very tender and that his thumb and index finger would go numb as if falling asleep. On examination, Dr. Ogrodnick found subtle fullness over the volar/radial right wrist, a pea-sized discreet tender nodule, positive carpal compression and Tinel's for localized tenderness, decreased grip strength, and tenderness over the first web space and the extensor policies. Dr. Ogrodnick recommended Claimant continue to splint, ice, and undergo therapy. He referred Claimant to therapy for muscle strain of tight wrist. He opined that Claimant could return to work with restrictions of no right handed lifting. *See* Exhibits 5, G.

15. On January 4, 2018, Claimant underwent occupational therapy. Claimant reported that he was bagging groceries when he felt a sharp pain in his right wrist. Claimant reported that he continued working for the next two days but his pain increased until he went to the emergency room and was given a wrist brace. The assessment was that Claimant's symptoms were consistent with a wrist sprain and possible cyst formation at scapholunate interval. Range of motion exercises and an orthotic support was recommended to stabilize and strengthen. *See* Exhibit 6.

16. On January 8, 2018, Dr. Ogrodnick evaluated Claimant. Claimant reported increasing pain after being tasked to clean the flour shelf, losing his balance while crouching, and falling forward on his outstretched right wrist to break his fall. Claimant reported right wrist pain at an 8/10 that was disturbing his sleep. Claimant remained tender on examination over the volar/radial right wrist with a soft semi-mobile pea sized mass. Claimant held his wrist in a guarded fashion and reluctantly performed some limited wrist range of motion. Dr. Ogrodnick assessed ganglion of wrist, right. Dr. Ogrodnick recommended consultation with an orthopedist and continued the work restrictions of no use of right hand. *See* Exhibits 5, G.

17. On January 17, 2018 orthopedist Timothy Pater, M.D. evaluated Claimant. Claimant reported that on December 22, 2017 he was bagging groceries when he felt a pop in his wrist and had a sudden onset of pain. Claimant reported that any movement aggravated the wrist pain. On exam, Dr. Pater found generalized swelling in the right

wrist, decreased range of motion, positive Watson test, and tenderness. Dr. Pater ordered an MRI of Claimant's joint upper extremity and recommended Claimant continue with work restrictions. Dr. Pater noted that Claimant had a painful pop in his right wrist while bagging groceries and that things had not sufficiently calmed down with immobilization and rest. Dr. Pater noted a report of a large mass lesion that had since regressed and may represent a ganglion cyst or some other structural abnormality such as a ligamentous tear. Dr. Pater recommended getting an MRI scan to see if there were any anatomical abnormalities. On the procedure form, right volar carpal ligament tear and ganglion cyst were noted as diagnoses and right wrist MRI was noted as recommended procedure. *See* Exhibits 7, J.

18. On January 22, 2017, Dr. Pater's office sent Insurer a request for authorization for the right wrist MRI. *See* Exhibits 7, J.

19. On January 22, 2018, Dr. Ogrodnick evaluated Claimant. Claimant reported feeling about the same with 5-6/10 wrist pain. Claimant reported that his modified duties included using a shop vacuum and restocking return or surplus items. Dr. Ogrodnick assessed muscle strain of right wrist and noted it was unusual that Claimant was not improving simply from rest. Dr. Ogrodnick noted that an MRI was pending and recommended follow up with Dr. Pater after the MRI. Dr. Ogrodnick noted that Claimant could return to work with the same restrictions. *See* Exhibits 5, G.

20. On February 9, 2018, Respondents filed a notice of contest for the reason that the injury/illness was not work related. *See* Exhibit 2.

21. On March 30, 2018, Claimant filled out a "3 Day or More Sick Pay Request" form. Claimant filled out part I- general information and part II requesting sick pay. Claimant signed below part I and part II. Claimant also filled out portions of part IV- physician's statement including date of illness, date first consulted, date first unable to work, that the condition was due to an employment injury, the dates partially disabled, the diagnosis, and that the treatment induced physical therapy. Claimant did not fill out portions regarding referrals, work restrictions, re-evaluation dates, and did not sign where it asked for physician signature. *See* Exhibits 3, M.

22. On April 12, 2018 Ellen Fuchigami, NP evaluated Claimant. NP Fuchigami diagnosed tendinitis of right wrist and noted that Claimant was placed off work for that day, April 12. NP Fuchigami referred Claimant to physical therapy and recommended Claimant avoid any activities involving repetitive use of his right wrist/hand for now. Claimant was provided with instructions for wrist tendinitis exercises. *See* Exhibits 9, H, M.

23. On April 23, 2018, NP Fuchigami issued a letter directed to Employer. NP Fuchigami noted that she saw Claimant once on April 12 for a complaint of right wrist pain and referred Claimant to physical therapy. NP Fuchigami noted that she did not determine Claimant to be disabled, partially or otherwise, and was unable to fill out paperwork regarding Claimant's absence from work starting four months ago. She noted

that Claimant had reported seeing a workers' compensation physician who might be able to complete paperwork and address the question of employment related injury. *See* Exhibits 9, M.

24. On May 3, 2018, Employer terminated Claimant's employment. The termination form checks reason code 43, discharged, dishonesty as the reason for termination. A behavior notice dated May 3, 2018 stated that Claimant had been out due to a wrist injury since December 22 and after the injury was denied, Claimant was told to fill out the 3-day or more sick pay form. The behavior notice alleges that when Claimant turned in the paperwork, it was determined to be falsified and that the doctor corroborated not having seen Claimant on the date listed on the paperwork. The behavior notice stated that Claimant was being terminated for dishonesty. *See* Exhibit M.

25. Claimant testified at hearing that prior to this incident he had no problems with his right wrist or hand. Claimant testified that when he was bagging he picked up a bag and felt a sharp pain in his wrist for about 30 seconds and that it went away. Claimant testified that the next day he worked but was kind of sore and the wrist got red and painful as his shift went on and that at the end of his shift on the 23rd he noticed a pea sized bump. Claimant testified that he was not sure what time the injury happened on the 23rd or what check stand he was at, but was absolutely sure that he was bagging for Mr. Vigil at the time the injury occurred.

26. Claimant testified that after he was referred to a workers' compensation doctor on December 28, 2017, it took a while to get in and the first appointment was January 2. Claimant testified that between the 28th and 2nd, he was not working and no light duty work was offered to him. Claimant testified that he worked light duty and was accommodated afterwards until February 9, 2018. Claimant testified that when his claim was denied on February 9, Employer did not accommodate his light duty work and told him he could not come back to work unless he was released to normal duty and that he was asked to get a 3 day release form filled out.

27. Claimant testified that the doctor didn't feel comfortable signing or filling out the form until she had done her own workup. Claimant testified that he turned in the form to Employer but that the doctor had not signed it. Claimant testified that Employer didn't accept the form because it was not signed or dated by a doctor and that he then got a letter from NP Fuchigami, dated April 23, 2018, to bring to Employer. Claimant testified that he picked up the April 23 letter at Kaiser and brought it to Employer.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to

benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of

whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ finds Claimant, overall, to be credible and persuasive. Claimant has met his burden to show that he sustained an acute work related injury to his wrist on December 22, 2017. Claimant's testimony and reports to medical providers throughout the claim has been consistent regarding the mechanism of injury. Although Claimant confuses the time of injury and the check stand he was working at, Claimant is credible that while working with Mr. Vigil he sustained an acute sharp pain to his wrist. Mr. Vigil confirmed Claimant groaning. Although Mr. Vigil testified that Claimant reported he could have hurt his wrist doing buggies or at home, the ALJ finds this not as persuasive as Claimant's credible testimony surrounding the acute incident while bagging. Overall, the ALJ finds Claimant's testimony surrounding the injury and acute nature of injury on December 22, 2017 to be persuasive and consistent with video showing him working as a bagger for Mr. Vigil on that date and consistent with Claimant's reports to various providers. Claimant has established, more likely than not, that he sustained a compensable injury.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Medical "treatment" encompasses both diagnostic and curative medical procedures. *Merriman v. Industrial Commission,* 120 Colo. 400, 210 P.2d 448 (1949). Reasonable diagnostic procedures have been held to be a prerequisite to maximum medical improvement if they have reasonable prospect for defining claimant's condition and suggesting further treatment. *Villela v. Excel Corp.,* W.C. No. 4-400-281 (ICAO February 1, 2001). A Claimant bears the burden to establish by a preponderance of the evidence that the conditions for which they seek medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S.

Claimant has met his burden to establish that he sustained a work related injury to his wrist. Claimant is entitled to medical treatment reasonably necessary to cure and relieve the effects of the injury, including the MRI recommended by Dr. Pater. As found above, Claimant's authorized treating provider Dr. Ogrodnick sent Claimant by referral to orthopedist Dr. Pater who recommended an MRI. Claimant is entitled to a general award of medical benefits to treat his wrist and Respondents shall authorize the MRI recommended by Dr. Pater who is in the chain of referral from authorized treating provider Dr. Ogrodnick. Claimant shall be allowed to resume treatment.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. The existence of disability presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Claimant has established, by a preponderance of the evidence, an entitlement to TTD benefits from December 28, 2017 through January 2, 2018 and from February 10, 2018 and ongoing until terminated by law. Claimant's wrist injury caused him to be medically incapacitated due to the restriction on the use of his hand. Employer did not offer Claimant light duty work or accommodate his restrictions between December 28 and January 2. Employer then started to accommodate Claimant and his work restrictions until February 9, 2018. Claimant's wage earning capacity was impaired and he was unable to perform his normal job duties due to the injury and restriction placed on the use of his injured hand. Claimant still needs medical treatment and has never been released from restrictions placed on him and has established an ongoing entitlement to TTD benefits from February 10, 2018 and ongoing.

Termination

Section 8-42-103(1)(g), C.R.S., and § 8-42-105(4)(a), C.R.S., provide that if a temporarily disabled employee "is responsible for termination of employment, the resulting wage loss shall not be attributable to the on-the-job injury." Because these statutes provide a defense to an otherwise valid claim for TTD benefits, the respondents shoulder the burden of proof by a preponderance of the evidence to establish each element of the defense. *Gilmore v. Industrial Claim Appeals Office,* 187 P.3d 1129 (Colo. App. 2008); *Brinsfield v. Excel Corp.,* W.C. No. 4-551-844 (I.C.A.O. July 18, 2003). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

In *Colorado Springs Disposal v. Industrial Claim Appeals Office*, 58 P.3d 1061 (Colo. App. 2002), the court held the term "responsible" as used in the termination statutes reintroduces the concept of fault as it was understood prior to the Supreme Court's decision in *PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). Consequently, the concept of fault used in the unemployment insurance context is instructive. Fault requires a volitional act or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corp.,* 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995); *Brinsfield v. Excel Corp., supra.*

Violation of an employer's policy does not necessarily establish the claimant acted volitionally with respect to a discharge from employment. *Gonzales v. Industrial Commission,* 740 P.2d 999 (Colo. 1987). However, a claimant may act volitionally if he is aware of what the employer requires and deliberately fails to perform accordingly. *Gilmore v. Industrial Claim Appeals Office, supra*. This is true even if the claimant is not specifically warned that failure to comply with the employer's expectations may result in termination. *See Pabst v. Industrial Claim Appeals Office,* 833 P.2d 64 (Colo. App. 1992). Ultimately, the question of whether the claimant was responsible for the termination is one of fact for determination by the ALJ. *Gilmore v. Industrial Claim Appeals Office, supra.*

Respondents have failed to establish, by a preponderance of the evidence, that Claimant was responsible for his termination. As found above, after his claim was denied, Claimant was told to submit a return to work form. Claimant filled out the paperwork himself. Although Claimant filled out part of the section that was intended to be filled out by a physician, Claimant did not sign the physician's name nor was there sufficient evidence to establish that Claimant tried to represent that the physician had actually filled out the form. Although Claimant may be unsophisticated, Claimant did not volitionally act to deceive Employer. Rather, Claimant attempted to comply with Employer's requirements by bringing in the document as directed and filling out the information that he could despite not being able to get a physician to sign it. Claimant filled out dates he was first treated for the injury and filled out the information he could. Claimant, significantly, did not fill out restrictions, recommended referrals or treatment, and did not sign the doctor's name. Although the section filled out was meant to be filled out by a physician, Claimant did not intend to pass off the information as from a physician and did not forge the physician's signature. Respondents have failed to establish anything other than a misunderstanding by Claimant as to what was required and have not established fraud or deceit on the part of Claimant.

ORDER

1. Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on December 22, 2017.

2. Claimant has established by a preponderance of the evidence an entitlement to reasonable, necessary, and causally related medical benefits for the December 22, 2017 injury including the MRI of his wrist recommended by Dr. Pater.

3. Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from December 28, 2018 through January 2, 2018 and from February 10, 2018 and ongoing.

4. Respondents have failed to establish that Claimant was responsible for his termination and that his TTD benefits should terminate due to responsibility for termination.

5. Respondents shall pay interest of 8% per annum on all benefits not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 8, 2018 /s/ Michelle E. Jones

Denver, CO 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that a left shoulder MRI arthrogram and arthroscopy are reasonable, necessary and causally related to her June 13, 2016 admitted industrial injury.

FINDINGS OF FACT

1. Claimant worked as a Housekeeper for Employer. Her job duties involved cleaning guest rooms, emptying trash and maintaining restrooms.

2. Claimant testified that on June 13, 2016 she was pushing a cart full of cleaning supplies, sheets and towels on the second floor of Employer's hotel. She attempted to push the cart onto an elevator but its wheels became stuck in the crease of the elevator door. Claimant lifted the cart with her left hand but felt a pop and experienced pain in her left shoulder. She subsequently completed her work shift.

3. On June 22, 2016 Claimant visited primary care provider SCHC Monfort Family Clinic. Claimant reported that she had been suffering left arm pain for eight days. Her associated symptoms included left-sided back pain. Although Claimant noted that she worked in a hotel cleaning rooms, she denied any specific work injury. Hannah Sellnow, PA-C assigned Claimant a 15-pound lifting restriction for 10 days.

4. After Claimant returned to full duty employment she experienced increased left shoulder symptoms. Employer subsequently referred Claimant for medical treatment. Physical therapy improved her symptoms. However, while operating an arm bicycle during treatment Claimant suffered increased left shoulder pain. A subsequent left shoulder injection and medications did not alleviate Claimant's symptoms.

5. On October 12, 2016 Claimant visited Authorized Treating Physician (ATP) James E. Rafferty, D.O. at University of Colorado Health for an examination. Claimant reported the sudden onset of left-sided, anterior shoulder pain as she attempted to push and slide a heavy cleaning cart into an elevator. She also developed posterior left shoulder pain as a result of her physical therapy sessions. Dr. Rafferty noted that a September 6, 2016 MRI reflected a normal rotator cuff, biceps tendon and labrum. He diagnosed Claimant with a left shoulder strain that included myofascial and bicipital tendinitis. Dr. Rafferty summarized that the temporal association between the event at work on June 13, 2016 and the "sudden onset of symptoms supports work-relatedness."

6. On October 18. 2016 Claimant visited David A. Beard, M.D. for an examination. Claimant reported that while working for Employer on June 13, 2016 she pushed a cart and suffered left shoulder pain. Despite modified activities and medications

Claimant continued to suffer left shoulder symptoms. A left shoulder MRI did not reflect any evidence of "cuff, labral or biceps tendon tearing." A physical examination of the left shoulder revealed full range of motion "in all planes, including forward flexion, abduction, internal and external rotation." Dr. Beard diagnosed Claimant with left shoulder subacromial bursitis and administered a subacromial steroid injection to reduce inflammation.

7. On November 30, 2016 Claimant visited Eric E. Young, M.D. for an examination. Claimant reported that she felt a pop in her left shoulder while pushing a cleaning cart onto an elevator when working for Employer. She remarked that her left shoulder pain had persisted despite physical therapy and injections. A physical examination revealed full range of motion but rotator cuff strength was difficult to assess because of "sub-optimal effort." Dr. Young diagnosed Claimant with multidirectional instability of the left shoulder. He taped Claimant's left shoulder and she reported significant symptom relief. Dr. Young recommended additional physical therapy concentrated on left shoulder stabilization.

8. On December 9, 2018 Claimant returned to Dr. Rafferty for an evaluation. Dr. Rafferty noted that Dr. Young had diagnosed Claimant with "multidirectional instability and secondary impingement of the left shoulder." He assessed Claimant with a left shoulder strain that included myofascial and bicipital tendinitis, "multi-directional instability per Dr. Young" and impingement syndrome. In considering causation, Dr. Rafferty determined that multidirectional instability was not a work-related problem. However, he explained that the temporal association between Claimant's June 13, 2016 work incident and the sudden onset of pain suggested that her symptoms were work-related. Dr. Rafferty also remarked that Claimant's symptoms were "most likely multi-factorial in origin."

9. On January 24, 2017 Claimant returned to Dr. Young for an evaluation. She noted that left shoulder taping decreased her symptoms but physical therapy did not provide significant improvement. A physical examination of the left shoulder revealed nearly full range of motion but the humeral head could be "translocated anteriorly." Dr. Young recommended a left shoulder "arthroscopy with capsulorraphy."

10. On February 2, 2017 Claimant visited I. Stephen Davis, M.D. for an independent orthopedic evaluation. Claimant reported that she immediately experienced left shoulder pain while lifting a cart over an obstacle to an elevator while working for Employer. Dr. Davis reviewed Claimant's medical history and performed a physical examination. He noted that a left shoulder MRI from September 6, 2016 was normal "without apparent injury to the rotator cuff or the biceps." Upon examining the left shoulder, Dr. Davis remarked that there was "no apprehension with stress of the glenohumeral joint, and the degree of laxity with glenohumeral stress testing is symmetrical, comparing left to right shoulder." Dr. Davis determined that Claimant suffered a left shoulder strain/sprain injury and adhesive capsulitis from disuse as a result of her June 13, 2016 industrial incident. Although Claimant reported worsening left shoulder pain, she did not "present a history of shoulder instability subluxation or dislocation." Moreover, Claimant's left shoulder MRI was normal "with no objective

findings of specific structural damage." Furthermore, based on the physical examination Dr. Davis did not "appreciate the multi-directional instability as previously reported by Dr. Young." Dr. Davis summarized that "he was not convinced" that Claimant's left shoulder was unstable. He remarked that, if the June 13, 2016 lifting incident had caused a dislocation or subluxation, Claimant would have obtained prompt medical treatment. Although Dr. Davis noted that an MRI arthrogram might provide helpful information regarding future treatment, he disagreed with Dr. Young's request for an arthroscopic capsulorraphy.

11. On March 1, 2017 Claimant returned to Dr. Rafferty for an examination. Dr. Rafferty maintained that Claimant suffered a left shoulder strain, "multi-directional instability per Dr. Young" and impingement syndrome. He maintained that Claimant's June 13, 2016 work activities did not cause multi-directional instability. However, her multi-factorial symptoms were related to her work activities because of their temporal onset. Dr. Rafferty noted that there was no evidence that Claimant demonstrated generalized ligamentous laxity based on his examination of her extremities.

12. On June 26, 2017 Claimant visited Mark Grossnickle, M.D. at the request of her attorney. Dr. Grossnickle determined that Claimant suffered left shoulder instability with secondary impingement. He noted that Claimant's subacromial injection was likely ineffective because it did not address her underlying pathology. Dr. Grossnickle reasoned that Claimant would most likely require some type of capsulorraphy but recommended a return to Dr. Young because he is a subspecialist in shoulder surgeries. Dr. Grossnickle recommended a left shoulder MRI with contrast because the previous MRI had occurred in September 2016.

13. On March 14, 2018 Claimant underwent an independent medical examination with William Ciccone, M.D. Dr. Ciccone reviewed Claimant's medical records and performed a physical examination. He noted that Claimant complained of left shoulder pain after lifting a house-cleaning cart over an elevator threshold while working for Employer. He explained that lifting the back wheel of the cart was unlikely to cause a left shoulder injury. Specifically, lifting a cart would not cause multidirectional shoulder instability. Instead, shoulder instability is usually related to "genetics with shoulder capsular laxity." Furthermore, although Claimant exhibited pain to palpation in the interior and posterior aspects of the left shoulder, Dr. Ciccone emphasized that "palpation is not a finding associated with shoulder instability." Furthermore, he explained that Claimant's imaging studies were negative for any acute shoulder injury. Claimant thus did not likely suffer a dislocation or subluxation of her left shoulder on June 13, 2016. Dr. Ciccone concluded that Claimant did not warrant the proposed left shoulder surgery because she does not suffer from shoulder instability.

14. On May 30, 2018 the parties began the post-hearing evidentiary deposition of Dr. Ciccone. The parties completed Dr. Ciccone's deposition on August 8, 2018. He maintained that the left shoulder MRI arthrogram and arthroscopy was not reasonable, necessary or causally related to Claimant's June 13, 2016 industrial incident. He reasoned that the activity of lifting the cleaning cart would not likely cause shoulder instability, dislocation or a labral tear. Dr. Ciccone commented that, although an MRI

arthrogram might reveal a labral tear, the condition would not be related to her work activities based on the mechanism of injury. Furthermore, lifting a cart also would not aggravate any pre-existing condition because it was not an "instability event." Dr. Ciccone also detailed that Claimant did not exhibit the symptoms that would be associated with an unstable shoulder. Finally, Claimant's left shoulder MRI did not reveal any pathology.

15. Claimant has failed to establish that it is more probably true than not that a left shoulder MRI arthrogram and arthroscopy are reasonable, necessary and causally related to her June 13, 2016 admitted industrial injury. Initially, Claimant injured her left shoulder while working for Employer when she lifted a cleaning cart with her left hand because the wheels of the cart were stuck in the crease of an elevator door. Dr. Rafferty diagnosed Claimant with a left shoulder strain that included myofascial and bicipital tendinitis. He noted that the temporal association between the event at work on June 13, 2016 and the "sudden onset of symptoms supports work-relatedness." Claimant's left shoulder pain persisted despite physical therapy and injections. Dr. Young determined that Claimant suffered from multidirectional instability of the left shoulder. He subsequently recommended a left shoulder "arthroscopy with capsulorraphy." Moreover, both Drs. Davis and Grossnickle recommended an MRI arthrogram of Claimant's left shoulder to ascertain useful information for determining future treatment. However, the bulk of the medical evidence reflects that Claimant likely did not suffer left shoulder instability as a result of the June 13, 2016 lifting incident. Therefore, the requests for an MRI arthrogram and an arthroscopy are not causally related to Claimant's work activities.

16. Dr. Ciccone persuasively explained that lifting the back wheel of a cleaning cart was unlikely to cause a left shoulder injury. He summarized that the left shoulder MRI arthrogram and arthroscopy were not reasonable, necessary or causally related to Claimant's June 13, 2016 industrial incident. Dr. Ciccone reasoned that the activity of lifting the cleaning cart would not likely cause shoulder instability, dislocation or a labral tear. He commented that, although an MRI arthrogram might reveal a labral tear, the condition would not be related to her work activities based on the mechanism of injury. Furthermore, Dr. Davis determined that Claimant suffered a left shoulder strain/sprain injury and adhesive capsulitis from disuse as a result of her June 13, 2016 industrial incident. Although Claimant reported worsening left shoulder pain, she did not "present a history of shoulder instability subluxation or dislocation." Moreover, Claimant's left shoulder MRI was normal "with no objective findings of specific structural damage." Based on a physical examination Dr. Davis did not "appreciate the multi-directional instability as previously reported by Dr. Young." Finally, Dr. Rafferty maintained that Claimant's June 13, 2016 work activities did not cause multi-directional instability in her left shoulder. Nevertheless, he noted that Claimant's multi-factorial symptoms were related to her work activities based on temporal onset.

17. The preceding opinions from Drs. Ciccone, Davis and Rafferty reveal that, although Claimant experienced a left shoulder strain while lifting the cleaning cart on June 13, 2016, she did not suffer shoulder instability, dislocation or a labral tear that warranted an arthroscopy. Moreover, although an MRI arthrogram might reveal left shoulder structural changes, the mechanism of injury demonstrates that they would not be related to the June 13, 2016 incident. Claimant has thus failed to demonstrate that a left shoulder

MRI arthrogram and arthroscopy are causally related to her admitted industrial injury. Accordingly, Claimant's MRI and surgical requests are denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has failed to establish by a preponderance of the evidence that a left shoulder MRI arthrogram and arthroscopy are reasonable, necessary and causally related to her June 13, 2016 admitted industrial injury. Initially, Claimant injured her left shoulder while working for Employer when she lifted a cleaning cart with her left hand because the wheels of the cart were stuck in the crease of an elevator door. Dr. Rafferty diagnosed Claimant with a left shoulder strain that included myofascial and

bicipital tendinitis. He noted that the temporal association between the event at work on June 13, 2016 and the "sudden onset of symptoms supports work-relatedness." Claimant's left shoulder pain persisted despite physical therapy and injections. Dr. Young determined that Claimant suffered from multidirectional instability of the left shoulder. He subsequently recommended a left shoulder "arthroscopy with capsulorraphy." Moreover, both Drs. Davis and Grossnickle recommended an MRI arthrogram of Claimant's left shoulder to ascertain useful information for determining future treatment. However, the bulk of the medical evidence reflects that Claimant likely did not suffer left shoulder instability as a result of the June 13, 2016 lifting incident. Therefore, the requests for an MRI arthrogram and an arthroscopy are not causally related to Claimant's work activities.

6. As found, Dr. Ciccone persuasively explained that lifting the back wheel of a cleaning cart was unlikely to cause a left shoulder injury. He summarized that the left shoulder MRI arthrogram and arthroscopy were not reasonable, necessary or causally related to Claimant's June 13, 2016 industrial incident. Dr. Ciccone reasoned that the activity of lifting the cleaning cart would not likely cause shoulder instability, dislocation or a labral tear. He commented that, although an MRI arthrogram might reveal a labral tear, the condition would not be related to her work activities based on the mechanism of injury. Furthermore, Dr. Davis determined that Claimant suffered a left shoulder strain/sprain injury and adhesive capsulitis from disuse as a result of her June 13, 2016 industrial incident. Although Claimant reported worsening left shoulder pain, she did not "present a history of shoulder instability subluxation or dislocation." Moreover, Claimant's left shoulder MRI was normal "with no objective findings of specific structural damage." Based on a physical examination Dr. Davis did not "appreciate the multi-directional instability as previously reported by Dr. Young." Finally, Dr. Rafferty maintained that Claimant's June 13, 2016 work activities did not cause multi-directional instability in her left shoulder. Nevertheless, he noted that Claimant's multi-factorial symptoms were related to her work activities based on temporal onset.

7. As found, the preceding opinions from Drs. Ciccone, Davis and Rafferty reveal that, although Claimant experienced a left shoulder strain while lifting the cleaning cart on June 13, 2016, she did not suffer shoulder instability, dislocation or a labral tear that warranted an arthroscopy. Moreover, although an MRI arthrogram might reveal left shoulder structural changes, the mechanism of injury demonstrates that they would not be related to the June 13, 2016 incident. Claimant has thus failed to demonstrate that a left shoulder MRI arthrogram and arthroscopy are causally related to her admitted industrial injury. Accordingly, Claimant's MRI and surgical requests are denied and dismissed.

ORDER

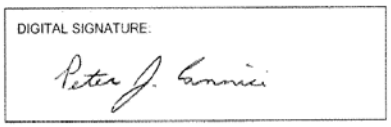
Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's requests for a left shoulder MRI arthrogram and arthroscopy are denied and dismissed.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 7, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

I. Have Respondents overcome the DIME opinion on permanent partial impairment of Dr. Hall by clear and convincing evidence?

II. Is Dr. Hall's DIME opinion on permanent partial impairment supported by substantial evidence?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 41-year-old service manager who suffered an admitted injury from a slip-and-fall at work on July 3, 2015. Claimant reported injuries to her head, neck, back, right shoulder, right wrist, and knees. (Ex. B). Claimant's medical history reflects a history of neck, upper back, lower back and shoulder pain dating back to 2009, for which she sought treatment. (Ex. L). Claimant had chiropractic treatment for complaints of left neck pain, shoulder tightness, and low back pain as recently as December 11, 2014, prior to her report of this admitted injury.

2. Claimant received treatment for this injury at Concentra, beginning on July 6, 2015. (Ex. L). Claimant had conservative therapies for complaints which focused primarily in the neck and shoulders.

3. An MRI of the cervical spine on December 1, 2015 showed moderately pronounced C5-6 degenerative disc space height narrowing and minimal retrolisthesis of C5 on C6, central bulging discs at C3-4 and C4-5. (Ex. N).

4. Nicholas Kurz, D.O., placed Claimant at MMI on February 22, 2016, with no permanent impairment or work restrictions. (Ex. X). Claimant's diagnoses included: contusion of the left and right knees; neck strain; strain of the thoracic region; and trapezius strain. Dr. Kurz stated that Claimant had full cervical range of motion upon examination. Dr. Kurz indicated that Claimant should follow up with her primary care provider for "preexisting, non-work-related, degenerative issues."

5. Claimant underwent a DIME with Timothy Hall, M.D., on June 27, 2016. (Ex. Y). Dr. Hall found Claimant not to be at MMI. He recommended additional medical

evaluation of the neck, as well as physical and chiropractic therapy for the low back. Dr. Hall assigned a 10% cervical impairment rating, with a 4% impairment for the right shoulder, to combine for a provisional 14% whole person impairment rating. In this initial DIME report, Dr. Hall stated that there were clearly notes missing from his examination, including the MMI report from Dr. Kurz.

6. Eric Ridings, M.D., performed a "Respondent IME" on November 4, 2016. He opined that Claimant's cervical condition was *not causally related* to the reported mechanism of injury. (Ex. Z). Dr. Ridings also noted that Claimant, in his exam, showed "slight decrease in cervical range of motion" *Id at p.280.* He also noted that Claimant had been seeing a physiatrist, Dr. Jenks, for "cervical pain, shoulder pain…." *Id at p. 282.* Claimant had also been seen by orthopedist Michael Simpson in 2015 for "significant stiffness in her neck". *Id at p. 282.* Dr. Ridings indicated that Dr. Hall's IME report was missing medical records which would likely change his opinion on causation and relatedness of further treatment. It is unclear from the record what such records consist of.

7. Claimant underwent a "Claimant IME" with Miguel Castrejon, M.D., on December 6, 2016. (Ex. AA). Dr. Castrejon assigned Claimant a 12% impairment rating for the cervical spine, but with no impairment to other body parts.
8. A repeat MRI of the cervical spine, taken on September 25, 2017, showed cervical spondylosis with canal and foraminal narrowing at C5-6, and multilevel facet arthropathy. (Ex. N). An EMG of the left upper extremity was normal. (Ex. L).

9. On November 21, 2017, Claimant's chiropractor, Randy Knoche, D.C., reported that Claimant "was able to demonstrate virtual full range of motion during cervical rotation bilaterally." (Ex. CC).

10. Dr. Kurz saw Claimant for a follow-up visit on January 26, 2018. He placed Claimant at MMI on this date, again with no permanent impairment. (Ex. X). He found that Claimant had full cervical range of motion in all directions. He also noted that "the degree of impairment is not likely to change by more than 3% within the next year." Claimant was working full duty at this time without complaints and had no work restrictions. Dr. Kurz indicated that further treatment for the cervical spine would not be work-related and should be performed through Claimant's personal care physician.

11. Dr. Hall saw Claimant for a follow-up DIME on March 27, 2018. (Ex. Y). In this follow-up DIME report, Dr. Hall notes "I have received additional records". (Ex. Y, p. 277), but it is unclear what records those were. Dr. Hall opined that Claimant was at MMI effective January 11, 2018 with no recommendations for further medical treatment.

12. Dr. Hall's DIME notes from this 3/27/18 visit show:

> I met with Holly Phillips today. I went over the treatment she has had since I saw her in June 2016…..She is a little bit better, but is still symptomatic on a daily basis. She complains of *neck,* trapezius, and parascapular *pain,* a bit more left than right side. The pain usually increases with activity, but fixed positioning can flare it as well. (Ex. Y, pp. 278-279) (emphasis added).

13. Under Physical Examination, Dr. Hall notes:

> *Neck range of motion is limited and specifically evaluated on the worksheet.* There are *local trigger points* and adhesions bilaterally, mid and *upper* trapezius. She is *tight* through the levator scapulae and splenius capitus. *Id at 278.* (emphasis added)

14. Under Impression, Dr. Hall states:

> Chronic myofascial pain in the *cervicothoracic* area *related to fall.* (Ex. Y, p. 278) (emphasis added).

15. Under Discussion, Dr. Hall then states, in pertinent part:

> She still has daily problems with the neck and parascapular area with associated range of motion deficit. I have done range of motion, *which is valid.* She has an 8% range of motion impairment combined with a IIB table 53 impairment for a total of 12% whole person impairment. *Id at 278* (emphasis added).

16. Frank Polanco, M.D., performed an IME on August 2, 2018. (Ex L). At the time of examination, Claimant denied any preexisting relevant history other than migraines. Dr. Polanco agreed with the MMI date, and indicated that Claimant had no permanent impairment to any body parts. Dr. Polanco noted that the alignment of Claimant's spine was normal. He indicated that there were no findings to support that Claimant had a 'structural injury' to the cervical spine; therefore, she did not qualify for impairment under Table 53 of the *AMA Guides*.

17. Dr. Polanco noted that, according to the Division "*Impairment Rating Tips*," there must be objective evidence of pathology and impairment in order for a patient to qualify for a rating under Table 53. Dr. Polanco opined that, as there were no clinical findings supporting objective, work-related pathology, there should be no Table 53 rating. Dr. Polanco further indicated that the MRI findings were

degenerative in nature, and not work-related. Further, he opined that Claimant had no limitation in range of motion or function for the cervical spine.

18. Respondents took the deposition of Dr. Polanco on September 27, 2018. (Deposition Transcript of Polanco [Tr.]). Dr. Polanco testified as a Level II accredited physician in Colorado and expert in occupational medicine with 27 years of experience as a DIME panel examiner. (Tr., p.5). Dr. Polanco testified that Claimant had no specific dermatomal pattern to support her complaints of burning and stabbing shoulder pain, or radicular-type back pain into the left leg. (Tr., p. 8). Dr. Polanco opined that Claimant had *self-restricted* her cervical motion examination, as her observed greater range of motion when she was not aware she was being observed, than when she was conscious that her motion was being measured. (Tr., p.9).

19. Dr. Polanco testified that Claimant suffered a myofascial injury (consistent with the diagnosis of Dr. Hall) but did not suffer any 'structural' injury which would warrant a Table 53 diagnosis. (Tr., p.10). Dr. Polanco testified that, because the clinical examination findings and medical history did not support objective evidence of structural impairment, Claimant did not meet the criteria for a Table 53 diagnosis. Claimant was therefore ineligible for impairment under the *AMA Guides*. (Tr., pp. 11-13). Dr. Polanco testified that, without a Table 53 diagnosis, any deficit in range of motion was not a reportable impairment. Dr. Polanco testified that the findings, including retrolisthesis, on the MRI, were degenerative in nature and not related to the work injury. (Tr., p. 17). Dr. Polanco testified that Claimant did not report any history of preexisting neck issues during her examination.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every

item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002).

Overcoming the DIME regarding MMI and Impairment Rating, Generally

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* A mere difference of medical opinions is insufficient. *Medina-Weber v. Denver Public Schools* W.C. No. 4-782-625 (ICAO, May 24, 2010).

E. A DIME physician must apply the AMA Guides when determining the claimant's medical impairment rating. §8-42-101(3.7); §8-42-104(8)(c) C.R.S. The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clean and convincing evidence, present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Indus. Claim Appeals Office* 17 P.3d 202 (Colo. App. 2000). Deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Indus. Claim Appeals Office*, 81 P.3d 1117 (Colo. App. 2006); *Adams v. Manpower,* W.C. No. 4-389-466 (I.C.A.O. Aug. 2, 2005).

Overcoming the DIME/Dr. Hall's Range of Motion Measurements

F. Each physician who examined Claimant came up with different range of motion figures. Dr. Kurz came up with 0%. Dr. Castrejon came up with 8%. Dr. Ridings merely noted that in his narrative that Claimant had a "slight decrease of cervical range of motion", but his worksheet did not go on to calculate a percentage. Claimant's chiropractor at one point noted no diminution in range of motion. Dr. Polanco performed range of motion testing, and placed the figures on a worksheet, but declined to provide a range of motion numerical rating, since 1). He opined that Claimant self-restricted her own cervical range of motion, thus invalidating the data, and 2). Felt that Claimant did not meet the criteria for Table 53IIB anyway, so, in effect, 'what's the point?' Dr. Hall's initial provisional cervical range of motion rating, before MMI, was 10%.

G. For the range of motion component, the ALJ considers Dr. Hall's supplemental, post-MMI DIME from 3/27/18 as the official report that Respondents must overcome. Dr. Hall notes in his narrative that he *validated* his figures, i.e., they fell within tolerances. The ALJ's review of his worksheet confirms this. The validation ranges are designed to prevent a Claimant from 'sandbagging'. While imperfect, they exist for a valid reason. Dr. Polanco felt that Claimant was self-restricting. That is indeed a possibility that cannot be eliminated entirely. However, Dr. Hall made no such note of this, and Dr. Hall was appointed as the DIME physician. In the end, these two physicians hold differing opinions on Claimant's effort at this testing. The ALJ cannot conclude that Dr. Hall's range of motion figures are *highly probably incorrect,* based upon his alleged failure to notice that Claimant was self-restricting.

Overcoming the DIME/Applicability of Table 53IIB

H. In a nutshell, Respondents' case hinges on the inapplicability of Table 53IIB to Claimant's case. Dr. Polanco would require objective evidence of a structural pathology before the additional 4% rating could apply at all. Respondents would thereby limit Table 53IIB to such circumstances. The ALJ is not convinced of this interpretation. Table 53IIB refers to "Intervertebral Disc **or other soft-tissue lesions**". Claimant has a cervical muscle strain which has not resolved. She has reported pain for over two years. In its entirely, 53IIB reads:

> Unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity *with or without muscle spasm*, associated with none-to-minimal degenerative changes on structural tests.

I. Parsing the language, 53IIB allows that *rigidity* can exist without the existence of muscle spasm. It also contemplates that a rating is possible ***without any changes*** *on structural tests.* To require objective changes on structural tests, as Respondents urge, would invalidate this provision entirely. In a given

case, if there are in fact structural changes noted, one then goes to 53IIC, with its correspondingly higher impairment ratings.

Physiologic Correlation and Rigidity

J. Under Section 8-42-107(8), “For purposes of determining levels of medical impairment, the physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation.” §8-42-107(8), C.R.S.; *see* also the Impairment Ratings Tips Sheet (Rev’d July 2016). In this instance, Table 53, II, B requires a medically documented injury (which the ALJ so finds), **and** a minimum of six months of medically documented pain (which the ALJ so finds) **and *rigidity***, with or without spasm…." (emphasis added).

K. Taber's Cyclopedic Medical Dictionary defines "**Rigidity**" as 1. *Tenseness,* immovability: *stiffness*; *inability to bend or be bent.* (emphasis added).

L. The American Heritage Stedman's Medical Dictionary defines "**Rigidity**" as 1. The quality of *stiffness **or** inflexibility*. (emphasis added).

M. Arguably, the *stiffness* which Claimant consistently reported-which carries a subjective component- to her providers for well over six months after her injury might not meet the criteria of anatomic or physiologic correlation. However, the *inflexibility,* which was documented by Dr. Hall’s range of motion calculations *does* constitute the needed physiologic correlation.

N. Further, Dr. Hall noted *trigger points* in the upper trapezius in his exam, and *tightness* in the lavatory scapulae and splenius capitus. This would constitute objective evidence of rigidity, albeit without spasm.

O. There is thus ample evidence in the records to support the DIME physician's findings of at least 6 months of pain and rigidity, up to and including the date of the DIME exam. Further, this unresolved cervical muscle strain to Claimant’s soft tissue-without objective evidence of structural changes- is within the orbit of pathologies contemplated by Table 53IIB.

P. The ALJ concludes that Respondents have not overcome the DIME opinion of Dr. Hall by clear and convincing evidence. Dr. Hall’s DIME opinion is supported by substantial evidence. Claimant’s Whole Person Impairment Rating is 12%, without apportionment.

####

ORDER

It is therefore Ordered that:

1. The DIME opinion of Dr. Hall has not been overcome. Claimant's Permanent Partial Impairment Rating for her cervical injury is 12% of the Whole Person, without apportionment.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Colorado 80906

ISSUE

. Whether Claimant has demonstrated by a preponderance of the evidence that the right knee total arthroplasty recommended by Authorized Treating Physician Pinak Shulka, M.D. is reasonable, necessary and related to his June 15, 2017 admitted industrial injury.

FINDINGS OF FACT

1. Claimant works for Employer as an EREM team member. On June 15, 2017 Claimant's job duties involved repairing the liner of a lagoon embankment. While walking down the steep embankment he slipped on loose sand and fell to the bottom of the embankment. Claimant twisted his right knee and struck the ground when he fell. He experienced a pop and immediate pain in his right knee.

2. In 1985 Claimant twisted his right knee while walking in his yard. He underwent surgery to repair torn ligaments and insert a metal staple into his patellar tendon. Claimant was discharged from care sometime in 1986.

3. In 1996 Claimant suffered a second right knee injury when he tore his meniscus while bird hunting with his son. He had meniscal repair surgery and was discharged from care in late 1996 or early 1997. Claimant testified that he had no subsequent right knee problems or functional limitations after his surgery and was able to work full duty.

4. On June 19, 2017 Claimant underwent his initial evaluation with Authorized Treating Physician (ATP) Julia Trevino-Emerson, M.D. at Valley Medical Center. Dr. Trevino-Emerson noted Claimant presented with right knee pain that began after he fell on June 15, 2017 while walking down an incline at work. Claimant disclosed his two prior right knee surgeries. Testing revealed limited range of motion, swelling and pain in Claimant's right knee. X-rays reflected severe arthritis, a broken metal cannula from his prior surgery and a suprapatellar effusion. Claimant received crutches, a knee brace and work restrictions.

5. On June 20, 2017 Claimant began working restricted duty for Employer.

6. On June 26, 2017 Claimant returned to Dr. Trevino-Emerson for an evaluation. She diagnosed Claimant with a sprain of the Lateral Collateral Ligament (LCL) in his right knee. Dr. Trevino-Emerson recommended physical therapy.

7. On July 7, 2017 Claimant began physical therapy with Wes Harens, MPT CSCS at SCHC PT. Claimant reported a right knee injury after falling while working on a

lined lagoon. He disclosed his two prior right knee injuries. Mr. Harens found medial to lateral instability in Claimant's right knee.

8. On July 10, 2017 Claimant returned to Dr. Trevino-Emerson for an examination. Claimant reported that his right knee "locks up" and he has to "jiggle his knee with his hands in order to loosen the joint." He also noted that he is "unable to fully flex his knee." Dr. Trevino-Emerson remarked that the preceding symptoms were not present prior to Claimant's work injury. She suspected an LCL injury and recommended a right knee MRI.

9. On July 21, 2017 Claimant underwent a right knee MRI without contrast. However, the imaging was very limited because of the metallic artifact in his right knee.

10. On July 26, 2017 Claimant returned to Dr. Trevino-Emerson for an examination. He reported consistent pain with occasional popping in the right knee, tenderness over the lateral area and laxity of the LCL. After discussing the difficulties with the MRI Dr. Trevino-Emerson referred Claimant to an orthopedic specialist.

11. On August 17, 2017 Claimant began treatment with orthopedic specialist Pinak Shulka, M.D. at Great Plains Orthopaedics. Claimant reported right knee pain with popping that began in June 2017 after suffering a fall with a twisting motion. He disclosed his prior right knee injuries and surgeries. Dr. Shulka reviewed the diagnostic testing and assessed Claimant with a lateral meniscus tear. .He determined he would treat Claimant's work injury as an arthritic exacerbation that would likely require a knee replacement. However, Dr. Shulka first administered a right knee injection. He instructed Claimant to continue physical therapy.

12. On August 31, 2017 Claimant returned to Dr. Shulka for an examination. He noted that Claimant's right knee pain had persisted despite the injection. Dr. Shulka determined that it would be reasonable to attempt meniscal surgery. However. the procedure would not likely reduce Claimant's arthritic symptoms and could increase his symptoms to the point where he would require a total knee replacement. Dr. Shulka also commented that, despite preexisting arthritis, Claimant's right knee was asymptomatic prior to suffering his work injury.

13. On September 8, 2017 Claimant underwent right knee arthroscopic surgery with partial medial and lateral meniscectomy and plica excision with Dr. Shulka. Dr. Shulka noted significant arthritis but Claimant had been doing well until he suffered a new acute injury while at work. .He documented fraying of the medial meniscus, an oblique tear of the anterolateral meniscus and plica on the patellofemoral joint.

14. On September 22, 2017 Claimant returned to Dr. Shulka for his first post-operative visit. Claimant reported that the painful popping in his right knee had ceased. Dr. Shulka informed Claimant he would need a total knee replacement if the pain returned.

15. On December 5, 2017 Claimant reported to Dr. Shulka that he was slowly progressing with physical therapy. Dr. Shulka commented that Claimant's continuing symptoms were mostly due to his persistent arthritis. He recommended an injection and

more physical therapy. However, if the treatment did not relieve Claimant's symptoms, Claimant might warrant a a total knee replacement. Claimant received an injection.

16. On January 17, 2018 Claimant returned to Dr. Shulka to address his continuing right knee issues. Dr. Shulka diagnosed Claimant with osteoarthritis exacerbation in his right knee as a result of his work injury. .He remarked that Claimant's right knee arthritis exacerbation had not improved. Furthermore, all less invasive options, including arthroscopy and nonsurgical treatments, had failed. Dr. Shulka thus requested authorization for a right total knee arthroplasty.

17. On January 26, 2018 orthopedic surgeon Robert L. Messenbaugh, M.D. performed a records review of Claimant's case to assess the proposed right knee arthroplasty. He explained that Claimant suffered from the pre-existing condition of severe, advanced tricompartmental arthritis in his right knee. Dr. Messenbaugh remarked that Claimant began experiencing mechanical symptoms, including catching and locking, in his right knee. He commented that the mechanical symptoms could have been caused by an acute meniscus tear or the aggravation of an acute, lateral meniscus tear during Claimant's fall at work on June 15, 2017. However, Claimant's work accident did not cause any fracturing of his right knee or the severe, tricompartmental, osteoarthritis.

18. Dr. Messenbaugh explained that Dr. Shulka's September 8, 2017 partial meniscectomy was at least plausibly related to Claimant's June 15, 2017 fall at work. However, the surgery had no chance of providing any benefit for Claimant's severe, chronic, tricompartmental degenerative arthritis. Moreover, Dr. Messenbaugh concluded that the total right knee arthroplasty proposed by Dr. Shulka was necessary for Claimant's pre-existing degenerative osteoarthritis but not related to the June 15, 2017 work accident. Notably, the proposed surgery would have been required regardless of whether Claimant fell at work.

19. On February 15, 2018 Respondents denied liability for the total right knee arthroplasty proposed by Dr. Shulka. The denial was based on Dr. Messenbaugh's records review report.

20. On May 9, 2018 Dr. Shulka wrote a letter to Respondents specifically addressing the denial of the requested surgery and Dr. Messenbaugh's report. Dr. Shulka commented that Claimant "has had an exacerbation of his underlying osteoarthritis of the right knee which has not receded since the injury at work." He continued that Claimant "had been doing very well with the pre-existing arthritis prior to this exacerbation and had been working full-time without any issues or restrictions. While he did have pre-existing arthritis it seems that the injury has led to recalcitrant symptoms necessitating a total knee replacement in order to resolve."

21. On June 4, 2018 Dr. Shulka wrote a letter to Respondents" counsel. The letter was in response to a May 30, 2018 letter in which counsel again informed Dr. Shulka that his request for a total knee replacement had been denied. The correspondence also inquired as to whether Claimant had reached Maximum Medical Improvement (MMI) or suffered any permanent impairment. Dr. Shulka responded that Claimant had not

reached MMI because he was still suffering symptoms from his arthritis exacerbation as a result of his work injury. He noted that a total knee arthroplasty would improve Claimant's symptoms.

22. Claimant has demonstrated that it is more probably true than not that the right knee total arthroplasty recommended by Dr. Shulka is reasonable, necessary and related to his June 15, 2017 admitted industrial injury. Initially, on June 15, 2017 Claimant slipped on loose sand and fell down to the bottom of an embankment while performing his job duties for Employer. Claimant twisted his right knee and suffered immediate pain. He was diagnosed with a right knee LCL sprain. The record reflects that Claimant had undergone prior right knee surgeries and suffered from severe, pre-existing, degenerative osteoarthritis. However, Claimant credibly explained that he did not have any right knee problems or functional limitations after his 1997 surgery and was able to work full duty.

23. Claimant underwent physical therapy but continued to suffer right knee pain and occasional popping. Dr. Shulka reviewed the diagnostic testing and assessed Claimant with a lateral meniscus tear. .He determined he would treat Claimant's work injury as an arthritic exacerbation that would likely require a knee replacement. After additional physical therapy and injections failed to alleviate Claimant's symptoms, Dr. Shulka performed right knee arthroscopic surgery with partial medial and lateral meniscectomy and plica excision. Dr. Shulka noted significant arthritis but Claimant had been doing well until he suffered a new acute injury while at work. After continuing right knee problems, Dr. Shulka diagnosed Claimant with osteoarthritis exacerbation as a result of his work injury. .He remarked that Claimant's right knee arthritis exacerbation had not improved and all other treatment had failed. Dr. Shulka thus requested authorization for a right knee total arthroplasty.

24. Dr. Messenbaugh explained that Claimant suffered from the pre-existing condition of severe, advanced tricompartmental arthritis in his right knee. He explained that the right knee total arthroplasty proposed by Dr. Shulka was necessary for Claimant's pre-existing degenerative osteoarthritis but not related to the June 15, 2017 work accident. Notably, the proposed surgery would have been required regardless of whether Claimant fell at work and had no chance of providing any benefit for his chronic, tricompartmental degenerative arthritis. However, Dr. Messenbaugh failed to consider whether Claimant's June 15, 2017 work accident aggravated or accelerated his pre-existing right knee osteoarthritis. Specifically, Dr. Shulka noted that Claimant suffered an exacerbation of his underlying right knee osteoarthritis as a result of his work accident. Furthermore, prior to the June 15, 2017 accident Claimant had been working full-time without any issues or restrictions. Dr. Shulka summarized that, despite Claimant's pre-existing right knee osteoarthritis, his work injury caused "recalcitrant symptoms necessitating a total knee replacement." Based on the medical records and persuasive opinion of Dr. Shulka, Claimant's June 15, 2017 industrial injury aggravated, accelerated or combined with his pre-existing right knee condition to produce a need for medical treatment. Accordingly, Claimant's request for a right knee total arthroplasty is granted.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. As found, Claimant has demonstrated by a preponderance of the evidence that the right knee total arthroplasty recommended by Dr. Shulka is reasonable, necessary and related to his June 15, 2017 admitted industrial injury. Initially, on June 15, 2017 Claimant slipped on loose sand and fell down to the bottom of an embankment while performing his job duties for Employer. Claimant twisted his right knee and suffered immediate pain. He was diagnosed with a right knee LCL sprain. The record reflects that Claimant had undergone prior right knee surgeries and suffered from severe, pre-existing, degenerative osteoarthritis. However, Claimant credibly explained that he did not have any right knee problems or functional limitations after his 1997 surgery and was able to work full duty.

6. As found, Claimant underwent physical therapy but continued to suffer right knee pain and occasional popping. Dr. Shulka reviewed the diagnostic testing and assessed Claimant with a lateral meniscus tear. .He determined he would treat Claimant's work injury as an arthritic exacerbation that would likely require a knee replacement. After additional physical therapy and injections failed to alleviate Claimant's symptoms, Dr. Shulka performed right knee arthroscopic surgery with partial medial and lateral meniscectomy and plica excision. Dr. Shulka noted significant arthritis but Claimant had been doing well until he suffered a new acute injury while at work. After continuing right knee problems, Dr. Shulka diagnosed Claimant with osteoarthritis exacerbation as a result of his work injury. .He remarked that Claimant's right knee arthritis exacerbation had not improved and all other treatment had failed. Dr. Shulka thus requested authorization for a right knee total arthroplasty.

7. As found, Dr. Messenbaugh explained that Claimant suffered from the pre-existing condition of severe, advanced tricompartmental arthritis in his right knee. He explained that the right knee total arthroplasty proposed by Dr. Shulka was necessary for Claimant's pre-existing degenerative osteoarthritis but not related to the June 15, 2017 work accident. Notably, the proposed surgery would have been required regardless of whether Claimant fell at work and had no chance of providing any benefit for his chronic, tricompartmental degenerative arthritis. However, Dr. Messenbaugh failed to consider whether Claimant's June 15, 2017 work accident aggravated or accelerated his pre-existing right knee osteoarthritis. Specifically, Dr. Shulka noted that Claimant suffered an exacerbation of his underlying right knee osteoarthritis as a result of his work accident. Furthermore, prior to the June 15, 2017 accident Claimant had been working full-time without any issues or restrictions. Dr. Shulka summarized that, despite Claimant's pre-existing right knee osteoarthritis, his work injury caused "recalcitrant symptoms necessitating a total knee replacement." Based on the medical records and persuasive opinion of Dr. Shulka, Claimant's June 15, 2017 industrial injury aggravated, accelerated or combined with his pre-existing right knee condition to produce a need for medical treatment. Accordingly, Claimant's request for a right knee total arthroplasty is granted.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

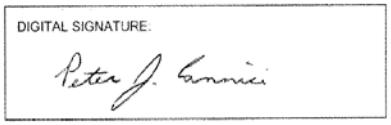
1. Claimant's request for a right knee total arthroplasty is granted.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you

mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: November 9, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
633 17th Street Suite 1300
Denver, CO 80202

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that surgery recommended by Dr. Davis is reasonable, necessary, and causally related to her June 27, 2016 work injury.

STIPULATIONS

1. Claimant sustained a compensable work related injury on June 27, 2016.

FINDINGS OF FACT

1. Claimant was employed by Employer and was initially hired in 2008. In 2011, Claimant became an animal control officer for Employer. Claimant's duties included responding to calls to protect citizens and animals and could involve removing hinder some wildlife from the city, responding to bite calls, and removing dead animals.

2. On June 27, 2016 while so employed, Claimant responded to a call requesting removal of a snake. On arrival, the snake was on a sport utility vehicle's bumper. The tail of the snake was at one side and head at the other side of the bumper and the snake was the length of the bumper. The snake was approximately 3 feet long and the width of a baseball bat.

3. Claimant was unable to move the snake from the bumper due to the risk to personal property. Claimant was called back to the location later when the snake had moved off the vehicle. When Claimant returned, the snake was on a patio.

4. Claimant picked up the snake with a grabber tool provided by Employer. The tool has a trigger on one end and grabbers on the other end and is approximately 3 feet long. Claimant extended her right arm, grabbed the snake around its head, and lifted her right arm with the grabber and snake to about chest level.

5. Claimant felt a burning sensation in her right elbow when she lifted the snake. Claimant's right arm buckled and she had to use her left hand to support her right hand, which was still holding the snake and grabber. Claimant walked the snake with her arm extended through the condominium complex, across a grass area, more condominiums, and a road to reach open space area nearby. While walking, Claimant's elbow was burning. After she got to the open space area, Claimant released the snake and was able to lower her arm.

6. Claimant immediately called her supervisor to report the injury and was instructed to go to Concentra for medical treatment.

7. On June 27, 2016, Susan Wiechelman, PA evaluated Claimant. Claimant reported that she was lifting with her right arm fully extended as an animal control officer removing a snake. Claimant reported that when she pulled the trigger and grabbed and lifted the snake that weighed approximately 5 pounds, she felt a sharp bolt of pain from her elbow down into her right hand. Claimant reported pain at a 5/10. Claimant reported some numbness and tingling at first but that she now just had burning from the outside of the elbow that was worse with movement. Claimant reported her belief that she could still perform her job. PA Wiechelman opined that Claimant sustained an acute injury as a result of extending and lifting. PA Wiechelman noted that the symptoms were at the radial aspect of the right elbow and the ulnar aspect of the right elbow and were constant with burning and radiation to the right wrist. PA Wiechelman noted tenderness in the lateral epicondyle and medial epicondyle. PA Wiechelman assessed strain of right elbow and recommended ice, Tylenol, and bandit. PA Wiechelman opined that Claimant could return to regular duty work. *See* Exhibits 1, H.

8. On July 11, 2016, Claimant returned to Concentra. Casey McKinney, PA evaluated Claimant. Claimant reported improvement with slight pain when extending her arm out and holding onto items and that the pain began in her elbow and traveled down toward her anterior wrist. Claimant reported pain was still at a 4-5/10. Claimant reported mild overall improvement and that the bandit provided some relief. Claimant was noted to have tenderness over the lateral aspect of the right elbow worse with extension against resistance. The lateral epicondyle was tender and range of motion in flexion and extension were painful on exam. PA McKinney also assessed strain of right elbow and recommended physical/occupational therapy. PA McKinney opined that Claimant could continue working normal duty. *See* Exhibits 1, H.

9. Claimant first underwent therapy on July 11, 2016. Claimant reported pain at a 6/10 Claimant reported her right elbow was painful with any use. The therapist noted the symptom location as the lateral epi, extensor mass, and olecranon. On examination, the olecranon had moderate tenderness, the lateral epicondyle had moderate tenderness, and the common extensor tendon had mild tenderness. *See* Exhibit 3.

10. On July 18, 2016, PA McKinney evaluated Claimant. Claimant reported occupational therapy provided improvement and that she felt mild improvement overall. Claimant reported pain at a 3/10 but with continued burning from the outside of the elbow radiating to the right wrist worse with movement and particularly with a straight arm. Claimant continued to have tenderness over the lateral epicondyle and lateral aspect of the right elbow, and continued to have painful flexion and extension. PA McKinney continued to assess strain of right elbow and added the assessment of right lateral epicondylitis. PA McKinney referred Claimant to a hand specialist due to persistent lateral epicondyle symptoms. *See* Exhibits 1, H.

11. On July 22, 2016 orthopedic hand specialist Tracy Wolf, M.D. evaluated Claimant. Claimant reported that she had a long metal stick with a grabber and handles and was using the trigger to remove a snake that weighed about 5 pounds and that as she was extending and clamping she felt a jolt go up in her arm both volar and dorsal that turned into tingling and then burning. Claimant reported that her pain currently was mainly over the lateral aspect of the elbow and that she could not pick up anything if her elbow was in extension and was better when the elbow was flexed. Claimant reported some numbness and tingling occasionally in the small and ring finger but not all the time and that she gets some medial sided elbow pain not that bad any more that comes and goes. Claimant reported using a compression sleeve and counter force band over the elbow. Dr. Wolf found discomfort with full elbow extension on exam as well as tenderness laterally especially over the anterior lateral epicondyle. Dr. Wolf found slight tenderness over the anterior medial epicondyle. Dr. Wolf assessed right lateral epicondylitis with mild medial. Dr. Wolf discussed the importance of activity modifications to give it a chance to heal and that the best thing would be to use her left side as much as possible. Dr. Wolf performed a steroid injection into Claimant's right lateral epicondylar region. *See* Exhibits 1, H.

12. On July 25, 2016, Claimant returned to Concentra and was evaluated by Theodore Villavicencio, M.D. Claimant reported feeling good after the injection with much improvement and that her pain was at a 0/10. *See* Exhibits 1, H.

13. On September 9, 2016, Dr. Wolf evaluated Claimant. Claimant reported that the last injection helped and lasted for three weeks. Claimant reported that she traveled to South Africa and did a lot of packing and carrying suitcases that seemed to start bothering her. Dr. Wolf noted that Claimant had tenderness mainly over the anterior and lateral epicondylar region. Dr. Wolf continued to assess right lateral epicondylitis. Claimant hoped to get another injection since the last one helped so well. Dr. Wolf discussed that they could do one more injection and that Claimant should not use the arm and avoid repetitive wrist motion, lifting, and gripping. A second steroid injection was performed. Dr. Wolf noted that Claimant needed to gradually begin increasing use of her arm and be careful about re-flaring it. Dr. Wolf recommended Claimant wear a splint to remind her she is not to use her right arm and recommended wearing the splint/brace constantly up to 8 hours or greater per day. *See* Exhibits 1, H.

14. On September 9, 2016, Dr. Villavicencio evaluated Claimant. Claimant reported another injection earlier that day with Dr. Wolf. Dr. Villavicencio noted that Claimant was making good progress. *See* Exhibits 1, H.

15. On October 14, 2016, Dr. Villavicencio evaluated Claimant. Claimant reported much improvement and that she had been on vacation for the past several weeks and not using her forearm/elbow for difficult tasks. Dr. Villavicencio released Claimant to as needed care with Dr. Wolf and recommended she continue kinesiology tape of her right forearm when needed. Dr. Villavicencio recommended Claimant recheck in one month. *See* Exhibits 1, H.

16. On October 14, 2016, Dr. Wolf also evaluated Claimant. Claimant reported overall that the right lateral epicondyle was good but bothered her occasionally and that sometimes the pain was a little more distal in the muscle than where it previously was. Dr. Wolf noted Claimant still had a little tenderness over the anterior and lateral epicondyle and some into the extensor wad on exanimation. Dr. Wolf discussed the right epicondylitis with Claimant noting it was not completely gone, but 80% gone per Claimant. Dr. Wolf opined that there was a risk of recurrence and that in some people, it comes and goes. Dr. Wolf opined that they would not want to do another injection. Dr. Wolf opined that Claimant needed to be careful a lot so as to not cause it to flare. Dr. Wolf noted she would see Claimant back as needed. *See* Exhibit H.

17. On November 11, 2016, Dr. Villavicencio evaluated Claimant. Claimant reported overall being significantly improved with pain resolving. Dr. Villavicencio opined that Claimant had a normal examination with normal elbow appearance. He noted "lateral epicondyle, but not the olecranon bursa" on examination of the right elbow without explanation of meaning behind that statement. Dr. Villavicencio assessed strain of right elbow and history of right lateral epicondylitis. He opined that Claimant was at maximum medical improvement and released her from care. He indicated that he discussed functional restoration and post discharge plans with Claimant. Dr. Villavicencio filled out a physician's report of worker's compensation injury form listing maximum medical improvement at November 11, 2016 and noting that Claimant did not require maintenance care. He also opined that Claimant had no permanent impairment. *See* Exhibits 1, H.

18. On September 27, 2017, PA McKinney evaluated Claimant. PA McKinney noted that Claimant had been discharged approximately one year prior for right epicondylitis. Claimant reported that she continued to work in animal control until July of 2017 and that her left arm became progressively more sore over time in the medial and lateral elbow areas. Claimant reported stopping work as an animal control officer in July and beginning work in a phone bank in August where she has a head set and speaks on the phone and does not type or have any tasks with use of hand while working. Claimant reported that her elbow continued to ache with pain at a level of 8/10 and that it has seized up and frozen at times. Claimant denied any trauma or acute re-injury to her elbow. On examination, PA McKinney found Claimant to have tenderness in the lateral epicondyle and the medial epicondyle, pain with extension and flexion and pronation. PA McKinney assessed history of right lateral epicondylitis and strain of right elbow. PA McKinney opined that Claimant had symptoms and exam consistent with epicondylitis of the elbow, was working in a position that did not require use of her right arm, and had not sustained a new injury. PA McKinney opined that it was likely that this was a flare of Claimant's prior epicondylitis injury. PA McKinney recommended a recheck with Dr. Wolf under maintenance to consider repeat injection vs. other treatment. PA McKinney noted that Claimant was released from care but could return to the clinic under maintenance. *See* Exhibits 1, H.

19. On September 27, 2017, Dr. Villavicencio completed a physician's report of worker's compensation injury. He opined that Claimant reached maximum medical improvement on September 27, 2017 with no permanent impairment. He recommended

maintenance care including a one-time evaluation with Dr. Wolf to consider repeat injection versus other treatment. *See* Exhibits 1, H.

20. On November 10, 2017, Dr. Wolf evaluated Claimant. Dr. Wolf noted she had last seen Claimant in October of 2016 when Claimant was doing well following two injections. Dr. Wolf noted that unfortunately, Claimant's symptoms started reoccurring back in May. Claimant reported she had tried her splint and was doing stretches. On exam, Dr. Wolf found very slight tenderness over the anteromedial epicondyle, some tenderness in the anterolateral epicondyle, but the worst place along the posterior epicondyle. Dr. Wolf assessed recurrent right lateral epicondylitis. Dr. Wolf noted that Claimant would try one more injection since she responded previously. Dr. Wolf injected the posterior joint line and noted that the injection would not be the same place as the anterior in order to decrease the risk of any ligament or tendon injury. The injection was performed. *See* Exhibits 1, H.

21. On November 30, 2017, PA McKinney evaluated Claimant. Claimant reported that after the injection, her pain improved to a 4/10 from a 6/10 and that she was more capable of elbow extension but continued to have discomfort and weakness with full extension and with lifting objects while gripping them. PA McKinney noted that Claimant was at function goal but not at end of healing. PA McKinney recommended a referral to hand specialist Dr. Davis for a second opinion. *See* Exhibits 1, H.

22. On December 21, 2017, PA McKinney evaluated Claimant. Claimant reported continued discomfort and weakness with full extension and with lifting objects while gripping them and that her pain remained unchanged at 4/10. On exam, PA McKinney found tenderness in the lateral epicondyle and pain with extension. PA McKinney opined that roughly 50% of anticipated healing had taken place. PA McKinney again recommended referral for a second opinion with a hand specialist. *See* Exhibits 1, H.

23. On January 9, 2018, Craig Davis, M.D. evaluated Claimant. Claimant reported sudden pain in her right lateral elbow when using a long grasper to grab a snake. Claimant reported treatment included therapy, a forearm strap, and two steroid injections. Claimant reported that the injections both gave her excellent relief, lasting for a few months. Claimant reported that in May of 2017 she had a significant recurrence of pain which had gradually worsened and that recently she had significant activity related pain and a popping sensation over the lateral aspect of her elbow worse with activity. On examination, Dr. Davis found Claimant's right elbow to be tender directly over the lateral epicondyle and more distally over the extensor musculature of the dorsal forearm. He noted full motion but pain in extremes and pain with resisted wrist and finger extension and with varus stress of the elbow. Dr. Davis provided the impression of right lateral epicondylitis with recurrent pain following two previous injections. He noted that Claimant may have a significant tear of the extensor origin based on the mechanism of injury and that Claimant could also have an injury to the collateral ligament on the lateral side of the elbow based on the mechanism of injury. Dr. Davis recommended an MRI. *See* Exhibit 2.

24. On January 12, 2018 Allison Hedien, NP, evaluated Claimant at Concentra. Claimant reported the same constant pain and that it hurt to fully extend her arm. Claimant reported she felt unable to fully extend her arm due to stiffness and that her arm locked up at times when she tried to bend it. NP Hedien noted that Claimant had been seen by Dr. Davis for a second opinion and that Dr. Davis had recommended an MRI. Claimant reported no new concerns but frustration that her injury was 1.5 years old and never had any improvement. On exam, NP Hedien found tenderness in the lateral epicondyle, and pain in range of motion in all directions against resistance and pain on extension. NP Hedien requested an MRI of the right elbow and recommended ice/head/meds as helpful. NP Hedien noted an anticipated date of maximum medical improvement of March 30, 2018. *See* Exhibits 1, H.

25. On January 24, 2018, Claimant underwent an MRI of her right elbow that was interpreted by Steven Ross, M.D. The impression was low to moderate grade partial thickness tear of the common extensor tendon at the lateral epicondyle with distal delamination of the medial fibers approximately 5 mm. *See* Exhibit 4.

26. On February 16, 2018, PA McKinney evaluated Claimant. PA McKinney noted that the MRI was reviewed with Claimant and showed a partial tear of the extensor complex. Claimant reported the same constant pain and continued discomfort and weakness with full extension and lifting objects while gripping them. PA McKinney recommended Claimant follow up with Dr. Davis. PA McKinney noted that roughly 75% of anticipated healing had taken place and that Clamant was anticipated to reach maximum medical improvement on March 30, 2018. *See* Exhibits 1, H.

27. On February 27, 2018, Dr. Davis evaluated Claimant. He reviewed the MRI of Claimant's right elbow and opined that the MRI demonstrated a partial tear of the extensor origin at the lateral epicondyle after reviewing both the films and the report. He noted Claimant continued to have pain localized to the lateral epicondylar area. Claimant again was tender at the lateral epicondyle on exam. Dr. Davis provided the impression of chronic right lateral epicondylitis with a partial tear of the extensor origin at the lateral epicondyle. He opined that Claimant was a reasonable candidate for surgical intervention at this point for an extensor origin debridement and repair. Dr. Davis noted that approximately 80-90% of patients had significant improvement in symptoms post-operatively. Claimant indicated she would like to proceed with surgery. *See* Exhibit 2.

28. On March 13, 2018, Jonathan Sollender, M.D. issued a causation report after a medical authorization review. Dr. Sollender reviewed medical records. Dr. Sollender opined that since Clamant never returned with recurrent injury or complaints of any type once she was discharged at MMI in November of 2016, it seemed that Claimant's right elbow healed. Dr. Sollender opined that when Claimant stopped working for Employer on May 6, 2017 there were no lasting effects of her prior right elbow symptoms from 2016 and that he would have the 2016 claim put to rest in a closed fashion. Dr. Sollender opined that something Claimant did after stopping work for Employer caused a

new condition in September of 2017, not an aggravation of her old condition. *See* Exhibit I.

29. Dr. Sollender found it hard to believe at face value Claimant's report that she currently worked at a call center but had no requirement to use her hands for activity. Dr. Sollender opined that something must have contributed to her symptoms. He noted that Claimant's frustration and report of 1.5 years of symptoms with no improvement was factually inaccurate. Dr. Sollender opined that Claimant not returning from November of 2016 to September of 2017 showed that Claimant was doing fine and was not symptomatic at all. Dr. Sollender opined that the right lateral epicondyle release surgery would be reasonable and necessary care for Claimant's right lateral epicondylitis, but that it was not causally related to the injury. Dr. Sollender opined that with some other activity causing Claimant's current symptoms that started in September of 2017, the current symptoms were unrelated to the old claim. Dr. Sollender opined Claimant had done something unrelated to her employment with Employer to cause this new condition and that the surgery being requested was unrelated to the June 27, 2016 injury. *See* Exhibit I.

30. On March 22, 2018 Respondents filed a notice of contest indicated liability was being contested/denied for further investigation to determine causation/compensability. *See* Exhibit 6.

31. Respondents denied authorization for the surgery submitted by Dr. Davis. In response, Dr. Davis issued a letter on March 27, 2018. Dr. Davis indicated that Claimant's right lateral epicondylitis was clearly related to her job activities and reviewed the mechanism of injury and immediate pain. Dr. Davis opined that the injury and partial tear of extensor origin at the lateral epicondyle (documented by MRI on January 24, 2018) occurred on June 27, 2016. Dr. Davis disagreed with Dr. Sollender's opinion that Claimant's current symptoms were not work related. Dr. Davis noted that Dr. Sollender based his opinion on the fact that Claimant became asymptomatic after injection and then developed recurrent symptoms later but he opined that was entirely within the typical clinical course that occurs when a patient responds well to injection and then subsequently the injection gradually wears off. Dr. Davis noted that Claimant responded well to the injection and her case was closed but that when it wore off, her symptoms recurred as is typical and opined that Claimant's symptoms were a result of the initial injury. Dr. Davis opined that the current symptoms were directly related to the initial injury and that the condition should be covered. *See* Exhibit 2.

32. On April 17, 2018, Dr. Villavicencio filled out a physician's report of worker's compensation injury form. Dr. Villavicencio opined that Claimant was not at maximum medical improvement.

33. Dr. Davis and Dr. Sollender both testified by deposition.

34. Dr. Sollender testified by deposition on July 20, 2018. Dr. Sollender opined that the complaints Claimant reported in 2017 were not related to Claimant's 2016 injury.

Dr. Sollender opined that Claimant's work related diagnosis of lateral epicondylitis was treated successfully, that Claimant was released at MMI in November of 2016, and that no further care was deemed necessary. Dr. Sollender noted that the examination in November of 2016 reflected that Claimant was normal with no focal complaints requiring ongoing care. Dr. Sollender opined that Claimant developed similar symptoms almost a year later while working for a different employer. Dr. Sollender agreed with Dr. Davis that surgery was reasonable and necessary, but opined the surgery was not work related. Dr. Sollender opined that when placed at MMI, Claimant had good strength, no tenderness, and no difficulty with range of motion and that her complaints in January of 2018 were clearly different. He also testified that it was hugely significant that Claimant did not have any treatment between November of 2016 and September of 2017 and opined that Claimant clearly did not have any symptoms during those ten months until she started a new job. He opined that Claimant's lateral epicondylitis had fully resolved and that she had a new condition when she started her new job.

35. Dr. Sollender opined that Claimant's steroid injection would only provide two to three months of benefit but that other healing that goes on can provide permanent relief. He testified and opined that here, after the second injection, there were no symptoms or reports for ten months, showing that Claimant's work related condition healed and that something new occurred to cause her current complaints. Dr. Sollender also testified that he didn't think a singular injury of lifting a five pound snake would cause Claimant's condition. Dr. Sollender testified that if Claimant had torn her lateral epicondylar tendon insertion in June of 2016, Claimant would not have gotten better to be able to be placed at MMI in November of 2016 and would have had ongoing symptoms reported thereafter.

36. Dr. Davis testified by deposition on August 7, 2018. Dr. Davis testified that Claimant had damage to the tendon attachments over the lateral aspect of the elbow caused by lifting the snake. He testified that an activity involving forceful extension of a wrist or grasping or both puts a lot of strain on that particular muscle. Dr. Davis testified that in Claimant's case there was a device used at a distance and much more lever arm and much more force at the level of the hand and therefore much more force pulling on the muscles. Dr. Davis testified that it was also a relatively sudden activity because Claimant was trying to deal with an animal that was moving unpredictably and that a large amount of force pulling on the tendon attachment for a small amount of time is all that it takes to damage the tendon whether straining it or partially tearing it or completely tearing some of the fibers off the bone. Dr. Davis testified that in Claimant's case some of the fibers were torn off the bone as seen in the MRI.

37. Dr. Davis opined that the steroid injections decrease inflammation and make it feel better temporarily and last several months for most patients. Dr. Davis opined that when injections wear off symptoms can come back. He opined that Claimant had significant improvement temporarily following both injections. Dr. Davis opined that the lateral epicondylitis he saw Claimant for in January of 2018 was the same condition as the epicondylitis Claimant developed in June of 2016 and that simply the injection had worn off. Dr. Davis opined that Claimant was injured, had a partial tear in the tendon

when she lifted the snake, and had a number of treatments that gave her temporary relief, but no permanent cure. Dr. Davis noted the MRI showed a partial tear of the tendon where it should be attached to the bone and that he recommended surgery since Claimant had had several other conservative treatments. He testified that surgery would be to reattach the tendon to the bone. He opined that the tear occurred when Claimant lifted the snake.

38. Dr. Davis disagreed with Dr. Sollender's report. He noted that Dr. Sollender's opinion did not make sense to him and that he was not sure why Dr. Sollender concluded that this wasn't related or a continuation of the same condition. Dr. Davis reviewed the report from Dr. Villavicencio when Claimant was placed at MMI and noted that Claimant was feeling good at the time that she saw Dr. Villavicencio and was noted to be significant improved but he disagreed that no provision for maintenance care or further treatment was provided in the case that symptoms recurred. Dr. Davis opined that had it not been for Claimant's original injury with the snake, she would not have had symptoms in January of 2018 when she saw him. Dr. Davis testified that he had no issues with the timeliness of Claimant's complaints and that it was a very typical timeline with epicondylitis. Dr. Davis testified that Claimant's pain recurred in May of 2017 before starting work at the call center and that the pain was related to the original injury. Dr. Davis opined that there was no specific cutoff of when symptoms would be considered a recurrence versus an entirely new diagnosis but that if it was within the same year, then it would certainly be within the realm of how long a steroid injection might last and that if it was five years later, he would assume it was a new injury asymptomatic for five years. He opined that in Claimant's case, everything was within the year and within the typical length of time that a steroid injection might last.

39. Prior to her injury, Claimant received high ratings in her annual performance review for the position of Animal Control Officer. She was rated highly successful in 2012, successful in 2013, highly successful in 2014, and successful in 2015. *See* Exhibit 8.

40. In November of 2016, after her injury, Claimant was placed on a performance improvement plan. The plan noted that her performance at a needs improvement level was not acceptable and that she would be placed on a performance improvement plan for 365 days. The plan indicated that would provide Claimant time to demonstrate improvement in her performance and that the improvement would be sustainable. Claimant was advised that her performance had to demonstrate immediate, sustained, and significant improvement and that any unsatisfactory performance or inappropriate behavior would result in disciplinary action up to and including termination. *See* Exhibit C.

41. In June of 2017, Claimant resigned from employment with Employer effective July 1, 2017. Employer records note that she resigned prior to discipline. *See* Exhibits D, E.

42. Claimant testified at hearing that in November of 2016 she had a light dull pain in her right elbow but was able to work full duty despite decreased grip on the right.

Claimant testified that by February-March the pain had come back and got worse and her elbow started locking up. Claimant testified that the pain was the same type of pain and that it came back gradually. Claimant testified that during early 2017 she was working the same job in animal control and lifting dead animals off the roads.

43. Claimant testified that work was stressful at that time and that she thought it would be detrimental to her job in February of 2017 to seek more medical treatment or go to light duty work. Claimant testified that she has a high pain tolerance and kept working. Claimant testified that she was placed on administrative leave in May of 2017 and then resigned effective July 1, 2017.

44. Claimant testified that during the summer of 2017 she had continued pain in her right elbow and eventually sought treatment in September of 2017 because of the pain and locking of her elbow. Claimant testified that she sustained no new injuries, no acute instances of pain, and nothing new. Claimant testified that after the injections she underwent the pain was better in her right elbow but that the pain never went away and that she was never 100%.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations,

the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). Medical "treatment" encompasses both diagnostic and curative medical procedures. *Merriman v. Industrial Commission,* 120 Colo. 400, 210 P.2d 448 (1949). Reasonable diagnostic procedures have been held to be a prerequisite to maximum medical improvement if they have reasonable prospect for defining claimant's condition and suggesting further treatment. *Villela v. Excel Corp.,* W.C. No. 4-400-281 (ICAO February 1, 2001). A Claimant bears the burden to establish by a preponderance of the evidence that the conditions for which they seek medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S.

Claimant has established, by a preponderance of the evidence, that the right elbow surgery requested by Dr. Davis is reasonable, necessary, and causally related to her June 27, 2016 injury. Dr. Davis is found credible and persuasive that the mechanism of injury in lifting the snake with extension grabbers is consistent with the tear in Claimant's tendon shown by MRI. The ALJ finds, more likely than not, that Claimant partially tore the tendon off the bone at the time of the snake lifting incident. Further, it is credible and persuasive that despite improving by November of 2016 after two steroid injections, Claimant was not healed nor did her tear heal. Rather, Claimant is credible and persuasive that she was better but not 100% in November of 2016 and continued to have dull pain in her elbow. This is consistent with a medical record from October of 2016 showing that Claimant's right lateral epicondyle was overall good but bothered her occasionally and with the examination in October of 2016 showing continued tenderness over the anterior and lateral epicondyle and into the extensor wad. Claimant is credible and persuasive that she became more symptomatic again in February or March but deferred medical treatment due her stressful job situation and high pain tolerance. Dr. Davis is credible and persuasive that her condition and need for surgery is casually related to the June 2016 injury. This opinion is consistent with the opinion of PA McKinney who opined that it was likely Claimant's pain in September of 2017 was a flare of Claimant's initial epicondylitis injury. Dr. Sollender is not found as credible or persuasive. His belief that Claimant had no symptoms for 10 months and was healed from the original injury before sustaining a new injury is not substantiated by the credible testimony and evidence.

Claimant is credible that she had symptoms beginning in February or March that gradually got worse before she eventually sought medical treatment.

Although tears can sometimes heal on their own with conservative treatment and rest, Claimant's tear has not. This acute tear, sustained on June 27, 2016, requires surgical treatment as recommended by Dr. Davis. Dr. Davis is credible and persuasive and Claimant's symptoms and timeline are typical with epicondylitis and the typical clinical course. The credible and persuasive evidence establishes that the surgical recommendation is causally related to her original injury on June 27, 2016 where her tendon tore. Conservative treatment has not worked and the surgery is reasonable and necessary to cure and relieve the effects of her injury.

ORDER

1. Claimant has established by a preponderance of the evidence that surgery recommended by Dr. Davis is reasonable, necessary, and causally related to her June 27, 2016 work injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 12, 2018 /s/ Michelle E. Jones

1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Did Claimant prove by a preponderance of the evidence a trial SCS is reasonably necessary post-MMI treatment to relieve the effects of his industrial injury?

- Did Respondents prove Claimant waived the right to seek an SCS by not pursuing it before MMI?

- Did Respondents prove Claimant's request for a trial SCS is barred by the equitable doctrine of laches?

FINDINGS OF FACT

1. Claimant suffered an admitted low back injury on July 17, 2014. He was shoveling sand off a conveyor belt when he felt a pop in his low back. He developed severe sciatic pain in the right leg that made it difficult to walk. He managed to finish his shift and went home. That night his right leg gave out and caused him to fall, so he went to the emergency room the next morning. The ER diagnosed "low back pain," prescribed muscle relaxers and Percocet, and advised him to avoid heavy lifting.

2. Approximately a month later, Claimant started treating with Dr. Frank Polanco. By that time, the pain was becoming more severe and radiating into the right buttock, calf, anterior thigh, and sciatic area. Dr. Polanco diagnosed a lumbar strain and ordered a lumbar MRI. The MRI was performed on August 29, 2014 and showed multilevel degenerative disc and facet changes.

3. Dr. Baptist took over as Claimant's ATP on September 19, 2014. After two months of physical therapy, Claimant was no better, so Dr. Baptist requested a repeat MRI.

4. The second MRI was performed on December 10, 2014. Compared to the prior study, it showed increased synovitis and reactive edema around the right L4-5 facet joint. The edema tracked into the L4-5 foramen, possibly irritating the exiting right L4 nerve root. There was also "borderline" central canal stenosis at L4-5.

5. A few days later, Dr. Scheper administered bilateral SI joint injections, which were not helpful.

6. Claimant saw Dr. Sparr on December 18, 2014 for bilateral lower extremity electrodiagnostic testing. Claimant described ongoing pain in his back, right buttock, and both legs, and numbness and tingling diffusely in his legs. The electrodiagnostic testing was "markedly abnormal," and Dr. Sparr opined, "the findings . . . are evidence of a long-standing process. He likely has sensory/motor, axonal and demyelinating peripheral neuropathy which has caused denervation diffusely within the lower extremity. These

findings are not related to his work in any way." Dr. Sparr discussed the findings with Claimant and noted, "he reports that he did not have lower extremity symptoms until after his work injury. I find that hard to fathom given the global nature of the findings and chronic denervation." Dr. Sparr told Claimant it was likely either diabetic or alcoholic polyneuropathy and referred him to his PCP.

7. Notwithstanding Dr. Sparr's suppositions, the ALJ received no persuasive evidence demonstrating Claimant was symptomatic or required any treatment for polyneuropathy before the accident at work. Moreover, Claimant maintained a physically demanding job with Employer for more 20 years.

8. Although Dr. Sparr thought Claimant leg pain was unrelated, he opined the low back pain was caused by the accident and recommended "aggressive physical therapy."

9. Dr. Shireen Rudderow took over as Claimant's ATP in January 2015 after Dr. Baptist left CSHP. At her initial evaluation on January 8, 2015, Claimant reported ongoing back pain and "occ[asional] shooting pain along L4 dermatome." Dr. Rudderow referred Claimant to Dr. Steven Murk for a neurosurgical evaluation. She also noted Dr. Sparr's opinions regarding the peripheral neuropathy, and recommended Claimant discuss it with his PCP.

10. Claimant returned to Dr. Rudderow on February 3, 2015, who noted, "Dr. Sparr told pt neuropathy from DM or alcoholism, was checked at PCP office recently (per pt does not drink and does not have DM)." Dr. Rudderow "explained to the patient again, his current symptoms are mostly from a reactive synovitis unrelated to his back strain."

11. Claimant saw Dr. Murk on February 18, 2015. Dr. Murk described Claimant's low back pain as "quite complex," with pain throughout the lumbar spine, and radiating pain and numbness into the leg. Claimant recounted the incident at work and the significant right lower extremity symptoms that developed immediately thereafter. He also told Dr. Murk about a prior 2009 work injury "where he was twisting, resulting in lumbar and low back pain, and says that from time to time his muscles will give me some trouble but his work comp case was closed, and overall he thinks things were going very well until the more recent injury in July."[1] After completing a physical examination, Dr. Murk opined Claimant had "very complex pain, most of which may well be myofascial in nature, with some elements of radiation of the right lower extremity . . . somewhat reminiscent perhaps of an L4 distribution." Noting that the December 2014 MRI showed possible L4 nerve root irritation, Dr. Murk requested a repeat EMG, a selective right transforaminal L4-five nerve root injection, and a selective facet block at L4-5.

12. Dr. Ross performed the recommended injections in April and May 2015, but they were not helpful.

[1] The ALJ received no persuasive evidence to contradict Claimant's assertion he was doing well with no significant low back or leg problems before the July 2014 admitted work injury.

13. A repeat EMG on June 22, 2015 was again consistent with polyneuropathy.

14. Claimant returned to Dr. Muck on July 10, 2015. Dr. Murk did not believe Claimant was a surgical candidate but referred him to Dr. Bhatti for a second opinion and consideration of an SCS.

15. Dr. Bhatti evaluated Claimant on July 14, 2015. Claimant described pain in the low back, right buttock, right anterior thigh, right posterior calf, and occasional left leg pain. He also complained of numbness in the right leg and right buttock. He reported right leg weakness "and states that it can give out on him." Lower extremity motor strength was normal except 4/5 strength with right ankle dorsiflexion. The right leg was painful on examination, and pinprick sensation was decreased on the right anterior foot. Claimant's gait was guarded, favoring the right leg. Straight leg raise was positive bilaterally. Dr. Bhatti diagnosed right L4 lumbar radiculopathy and lumbar degenerative disc disease. Dr. Bhatti concluded,

> About 70% of his pain is in the lower back. The etiology of his pain is unclear. He has mild multilevel degenerative disc disease. There is no evidence of neural compression on his lumbar spine MRI scan. . . . His EMG study is consistent with a peripheral polyneuropathy. I feel that we do not have a surgical option of treatment. . . . Patient may be a candidate for epidural spinal cord stimulation. I have recommended that he be evaluated for a trial for stimulation.

16. Dr. Bhatti referred Claimant to Dr. Lippert for the SCS trial, and to Dale Mann, Ph.D. for a pre-trial psychological evaluation.

17. Claimant followed up with Dr. Rudderow on July 21, 2015. She noted Claimant received no relief from injections or PT and his physical examination was "relatively unchanged in the last several months." She opined, "while a neuro-stimulator recommended by Dr. Bhatti may improve patient's pain, I believe he is stable from his work comp injury and it is appropriate to do an FCE at this time. The neurostimulator could be ordered under the patient's regular medical insurance, as a good portion of his findings are due to underlying medical problems."

18. Claimant saw Dr. Mann for the psychological evaluation on August 3, 2015. Claimant reported "no history of any alcohol abuse or treatment." Dr. Mann indicated the clinical interview and psychological testing showed Claimant was "currently experiencing minimal depression, minimal anxiety, average somatic distress, and moderately high functional distress." Claimant told Dr. Mann "he does hope to have his pain reduced to a level of 3-4, which seems reasonable." Dr. Mann saw no psychological contraindications to proceeding with the trial SCS.

19. Claimant was evaluated by Dr. Lippert[2] on September 11, 2015. Dr. Lippert noted "low back and bilateral leg pain, right greater than left." Based on his evaluation, Dr. Lippert opined Claimant "is a good candidate . . . for spinal cord stimulation trailing."

20. Respondents had Dr. Lippert's request reviewed by Dr. Scott Primack on September 18, 2015. Dr. Primack opined SCS was not related to Claimant's work injury. Dr. Primack concluded SCS may be reasonable to address the polyneuropathy, but opined, "in no way, shape, or form would a spinal cord stimulator be considered specific to this work injury."

21. Respondents denied the trial SCS based on Dr. Primack's report.

22. Claimant followed up with Dr. Rudderow on October 13, 2015. He was angry because the SCS was denied. He described severe functional limitations, primarily due to unremitting low back pain. He was still having numbness and tingling in his buttocks, and burning, achy pain in his feet and legs. Dr. Rudderow noted, "patient's peripheral neuropathy and back pain is significant and would recommend he pursue a neurostimulator through his private insurance. His peripheral neuropathy and synovitis is unrelated to his back injury."

23. Dr. Rudderow put Claimant at MMI on November 10, 2015 and recommended "pain management" for maintenance care. Dr. Rudderow referred Claimant to Dr. Baptist (who apparently had recently rejoined the CSHP occupational medicine practice) for an impairment rating.

24. Dr. Baptist evaluated Claimant on December 10, 2016 and opined,

> [T]his patient is a very complex patient, almost totally refractory to any treatment modalities. I think his prognosis for improvement is extremely poor. He does have a pre-existing polyneuropathy which undoubtedly contributed to his problems . . . . [H]is only helped for pain relief I believe at this point, it is the implantable spinal stimulator, as recommended by Drs. Murk, Leppard [sic] and Mann. I realize that he had an IME which opines that a spinal stimulator was not indicated; however, I do not agree with this, and I am currently siding with the other 3 specialists who did recommend it, confirmed the need."

25. Dr. Baptist's final work-related diagnosis was "lumbosacral myofascial pain with apparent L4 nerve root irritation and L4-5 facet involvement." Dr. Baptist recommended maintenance care and opined, "he must be allowed to get an implantable spine stimulator as specified above." Dr. Baptist assigned a 29% whole person impairment rating. Part of the rating was based on lower extremity neurologic deficits, which Dr. Baptist justified as follows:

> While it is true that the patient has a polyneuropathy of both lower extremities, these are demonstrably old. His MRI did confirm, or at least

[2] Some medical records reference Dr. Katherine Leppard, but Claimant has never seen Dr. Leppard and the ALJ finds those entries were intended to refer to Dr. Lippert.

> strongly suspected that there was sufficient inflammation and fluid collection at the L4 nerve roots to produce acute radiculopathy at that level. I will, therefore, use Table 49 to give a rating . . . .

26. The ALJ finds Dr. Baptist's rationale for the neurological component of the rating persuasive.

27. Respondents requested a DIME after receiving Dr. Baptist's rating. Dr. Richard Stieg performed the DIME on June 21, 2016. Dr. Stieg opined Claimant's presentation was exaggerated, "nonphysiologic," and inconsistent with objective findings. He diagnosed mild to moderate degenerative lumbar disk and facet disease without radiculopathy, peripheral neuropathy unrelated to the injury, somatic disorder with predominant pain, and evidence of symptom magnification. He assigned a 5% whole person impairment rating under Table 53. He did not include a neurological rating, because "while there are some suggestions that the patient may have radiculitis, there is no objective evidence for radiculopathy." He assigned no rating for lumbar range of motion based on to his perception of Claimant's exaggerated and nonphysiologic presentation.

28. Although not specifically an issue for the DIME, Dr. Stieg commented on the recommendation for an SCS. He agreed with Dr. Primack that,

> The patient is not a candidate for spinal cord stimulation. The majority of his leg symptoms are related to a polyneuropathy, which is not claim-related. The majority of his pain at any rate is in the back, not the legs, making him a poor candidate for response to spinal cord stimulation, which would be largely ineffective for nociceptive pain coming from back structures and ineffective for the symptoms in the legs due to the polyneuropathy.

29. Respondents filed a Final Admission of Liability based on Dr. Stieg's DIME report. Claimant challenged the FAL, and a hearing was held before ALJ Lamphere in February 2017. ALJ Lamphere found Claimant overcame the DIME rating by clear and convincing evidence, and awarded PPD based on Dr. Baptist's original 29% whole person rating. ALJ Lamphere's order also reserved jurisdiction over all issues not decided.

30. On May 31, 2018, Claimant applied for a hearing seeking approval of the trial SCS recommended by Dr. Lippert.

31. Dr. Rudderow testified in an evidentiary deposition on September 10, 2018 at Respondents' request. Dr. Rudderow reconsidered and changed some of the causation opinions expressed in her reports. When asked whether the SCS trial was related to Claimant's work injury, she opined, "I think a neurostimulator would help his back pain. I don't think it would help his neuropathy." When Respondents' counsel pointed out she had previously recommended Claimant pursue an SCS under his health insurance, Dr. Rudderow testified,

> I think my opinion then and my opinion now might slightly differ. Because of the time I wrote that, I did feel like most of his findings were from an

> underlying medical problem. But as I reflect on his injury, I think that his pain was real and his pain does seem to have been triggered by the Worker's Compensation injury. And if a neurostimulator would help that, I think it's reasonable.

32. Ultimately, Dr. Rudderow opined, "I think spinal stimulation is appropriate for pain management" for the underlying work-related back injury. Dr. Rudderow maintained that Claimant is at MMI, and does not expect the SCS to significantly increase his functioning, except incidentally due to pain relief.

33. Dr. Primack testified at hearing on behalf of Respondents. Dr. Primack testified, "the main contraindication for someone with spinal stimulation is . . . axial low back pain . . . . [T]he last thing that you ever want to do is to do a trial or implant for someone with back pain." He opined the purpose of an SCS is to remedy leg pain and "[it] does nothing for your back." He cited the Chronic Pain MTGs for the proposition that SCS is "never" appropriate for a patient with predominantly axial back pain. Dr. Primack reiterated SCS might be appropriate to Claimant's treat peripheral neuropathy but is not related to the admitted injury. Regardless of causation, Dr. Primack opined SCS "isn't a maintenance care procedure. That's like saying a hip replacement is maintenance care for hip pain, and there's no way we would treat such a dramatic procedure as maintenance care."

34. The opinions of Dr. Baptist, Dr. Lippert, Dr. Bhatti, and Dr. Rudderow (as expressed in her deposition) on the questions of reasonable necessity and causation are more persuasive than the contrary opinions expressed by Dr. Primack and Dr. Stieg.

35. Claimant proved a trial SCS is reasonably necessary post-MMI treatment to relieve the effects of his industrial injury.

36. Respondents failed to prove Claimant waived his right to pursue the trial SCS.

37. Respondents failed to prove Claimant's request for a trial SCS is barred by the equitable doctrine of laches.

CONCLUSIONS OF LAW

A. Claimant proved the trial SCS is reasonably necessary to relieve the effects of his industrial injury.

The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101; *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond MMI if the claimant requires further treatment to relieve the effects of the injury or prevent deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

As found, Claimant proved the trial SCS is reasonably necessary to relive the effects of his industrial injury. The ALJ credits the opinions of Dr. Baptist, Dr. Lippert, Dr. Bhatti, and Dr. Rudderow in finding the trial reasonably necessary and causally related to Claimant's admitted injury.

The ALJ recognizes surgery is frequently directed to "curing" a claimant's condition rather than simply "relieving" or preventing deterioration of their condition. But the type of treatment is not determinative of liability for post-MMI treatment. The dispositive question is the ***purpose*** for which treatment is provided rather than the "nature" of the treatment. *Milco Construction v. Cowan*, 860 P.2d 539, 542 (Colo. App. 1992). If the treatment is designed to relieve the effects of the work injury, the insurer must cover it. Furthermore, liability is not limited only to treatment that "maintains" a claimant's condition. *Karathanasis v. Chili's Grill & Bar*, W. C. No. 4-461-989 (August 8, 2003); *Hayward v. UNISYS Corp.,* W.C. No. 4-230-686 (July 2, 2002), *aff'd, Hayward v. Industrial Claim Appeals Office*, (Colo. App. No. 02CA1446, January 9, 2003) (not selected for publication). Surgery can be a permissible form of post-MMI treatment, if it is undertaken for the purposes outlined in *Grover*. *E.g., Shipman v. Larry's Transmission Center*, W.C. No. 4-721-918 (August 25, 2008) (surgery to correct a leg-length discrepancy approved as post-MMI treatment); *Hayward v. UNISYS Corp., supra* (knee surgery may be curative or may be *Grover*-style maintenance treatment designed to alleviate deterioration of the claimant's condition).

Dr. Primack's opinions are unpersuasive because he relied on an outdated version of the MTGs.[3] The Chronic Pain MTGs were recently revised, effective November 30, 2017. Dr. Primack did not state which version he used, but the ALJ concludes he relied on the 2012 guidelines, for two reasons. First, he cited "section G," which tracks the 2012 version; the discussion of neurostimulation has been moved to section H in the 2017 version. Second, Dr. Primack stated SCS is unequivocally "contraindicated" to treat axial low back pain, which is consistent with the 2012 guidelines but not with the 2017 version.

A side-by-side comparison of the 2017 and 2012 versions of the Chronic Pain MTGs shows significant changes regarding the use of SCS to treat axial back pain. Whereas the 2012 MTGs simply state SCS is "not recommended" for patients with axial back pain, the 2017 guidelines distinguish between so-called "traditional" SCS and "high frequency" SCS. According to the 2017 MTGs, "There is some evidence that a high frequency, 10KHz spinal cord stimulator is more effective than a traditional low-frequency 50 Hz stimulator in reducing both back pain and leg pain in patients who have had a successful trial of an external stimulator. Two-thirds of the patients had radiculopathy and one half had predominant back pain." The ultimate conclusion in the 2017 MTGs is:

[3] Although Dr. Primack referenced both the Low Back Pain MTGs and the Chronic Pain MTGs, he stated the Chronic Pain guidelines are most appropriate to Claimant's situation. Indeed, the Low Back MTGs provide a very cursory discussion of neurostimulation and refer the reader to the Chronic Pain guidelines.

> Traditional SCS is ***not recommended***[4] for patients with the major limiting factor of persistent axial back pain. High-frequency stimulators ***may be used***[5] for patients with predominately axial back pain.

Dr. Primack's failure to mention or discuss the MTG revisions significantly detracts from the overall persuasiveness of his opinions.

Additionally, Claimant proved a causal nexus between his chronic leg pain and the industrial accident. Claimant's leg pain likely results from a combination of peripheral polyneuropathy and L4 nerve root irritation as noted by Dr. Baptist. It is impossible to tease out the precise percentage of contribution from each factor, but the ALJ is persuaded Claimant's injury substantially contributed to the persistence and severity of his leg pain. An injury need not be the sole cause of a claimant's need for treatment, as long as there is a "direct causal relationship" to the industrial accident. *Seifreid v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1996); *Munoz v. JBS Swift & Co. USA, LLC,* W.C. No. 4-780-871-03 (October 7, 2014); *Reynolds v. U.S. Airways, Inc*., W.C. No. 4-352-256, 4-391-859, 4-521-484 (May 20, 2003). Claimant's work accident either caused new pathology and led to the development of leg pain, or substantially aggravated his pre-existing polyneuropathy, or both. Thus, Claimant proved the requisite "direct causal relationship" to support an award of medical benefits.

Finally, the ALJ credits Dr. Baptist and Dr. Rudderow's opinions that a trial SCS is an appropriate form of post-MMI pain management. Both physicians persuasively opined Claimant's condition is stable and unlikely to improve. The SCS is primarily intended to relieve Claimant's pain, rather than cure any underlying pathology. The mere fact that palliative treatment may incidentally increase Claimant's level of function does not negate the fact it is being prescribed for a purpose consistent with *Grover*. Dr. Primack's opinions on this point are not persuasive because they are based on a misunderstanding of the law regarding the permissible scope of post-MMI benefits.

B. Claimant did not waive his right to pursue the trial SCS

A waiver is the intentional relinquishment of a known right, which may be express or implied. *Johnson v. Industrial Commission*, 761 P.2d 1140 (Colo. 1988). To constitute an implied waiver, conduct must be free from ambiguity and clearly manifest the intent not to assert the benefit. *Burlington Northern Railroad Company v. Stone Container Corporation*, 934 P.2d 902 (Colo. App. 1997). Waiver is an affirmative defense and must be proved by a preponderance of the evidence. *E.g*., CRCP 8(c); *Pfaff v. Broadmoor Hotel*, W.C. No. 4-105-774 (October 15, 2003).

Respondents argue Claimant waived his right to pursue the trial SCS by failing to try the issue at the hearing before ALJ Lamphere. The disagrees with Respondents' argument, and finds *Hire Quest, LLC v. Industrial Claim Appeals Office*, 264 P.3d 632 (Colo. App. 2011) dispositive on this issue.

---

[4] Emphasis in original.
[5] Emphasis added.

In *Hire Quest*, the parties had previously gone to hearing on the respondents' challenge to a DIME rating. The ALJ found the respondents failed to overcome the DIME and awarded PPD benefits. The claimant had not raised any issue of *Grover* benefits, so the ALJ did not address it. But the order expressly reserved jurisdiction over all issues not decided.

Six months later, a second ALJ held a hearing on the claimant's request for *Grover* benefits. Citing *Hanna v. Print Expediters*, 77 P.3d 863 (Colo. App. 2003), the second ALJ determined the claimant had waived the right to post-MMI medical benefits by failing to try the issue at the prior hearing. The ICAO reversed based on the reservation clause in the first ALJ's order. The Court of Appeals affirmed and held, "under the clear and unambiguous language of that order, the issue of *Grover* medical benefits was reserved for future determination and therefore not waived by claimant." The court further stated, "we are unwilling to presume that the reservation clause at issue here was 'mere surplus,' especially given the absence of any evidence in the record indicating that the first ALJ added that clause to his order without any basis for doing so."

The ALJ sees no meaningful distinction between *Hire Quest* and the situation in Claimant's case. ALJ Lamphere's order explicitly reserved jurisdiction over all issues not decided, which necessarily includes post-MMI medical treatment. Accordingly, the ALJ rejects Respondents' argument Claimant waived his right to pursue the trial SCS.

C. The trial SCS is not barred by laches

The equitable doctrine of laches may be used to deny relief to a party whose unconscionable delay in enforcing his rights has prejudiced the party against whom enforcement is sought. *Safeway, Inc. v. Industrial Claim Appeals Office*, 186 P.3d 103 (Colo. App. 2008); *Burke v. Industrial Claim Appeals Office*, 905 P.2d 1 (Colo. App. 1994). The prejudice "must necessarily result from reliance which is justifiable under the circumstances." *City of Thornton v. Bijou Irrigation Co.*, 926 P.2d 1, 74 (Colo. 1996). The Respondents have the burden of proof to establish laches. *Johnson v. Industrial Commission*, 761 P.2d 1140 (Colo. 1988).

Respondents presented no persuasive evidence to show they were prejudiced by Claimant's delay in pursuing the trial SCS. Although Respondents' counsel alleges several potential forms of prejudice, statements of counsel are not evidence. The ALJ is not persuaded by the assertion that Dr. Rudderow's changed opinions resulted from the delay in pursuing the issue. Dr. Rudderow clearly remembered Claimant's case and testified she changed her opinions based on further "reflection," rather than lack of familiarity. Thus, Respondents failed to prove laches.

ORDER

It is therefore ordered that:

1. Respondents shall authorize and pay for the trial SCS.

2. All issues not determined herein, or otherwise closed by operation of law, are reserved for future determination.

DATED: November 13, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

The issue addressed in this decision involves Claimant's entitlement to permanent impairment benefits. The specific question to be answered is:

I. Whether Respondent established, by a preponderance of the evidence, that Dr. Anjmun Sharma erred when he assigned impairment for loss of strength as part of his Division Independent Medical Examination rating.[1]

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was employed as a Firefighter Driver/Engineer by Respondent; specifically, the City of Colorado Springs Fire Department. He was hired in May, 1998. His job duties in 2016 included driving vehicles for the Fire Department, as well as performing all duties of a Firefighter. He initially injured his right elbow in March, 2016 while engaged in Respondent-sponsored exercise activities. He was performing a "tricep push up" and felt a pop in his right elbow. At the time he believed the injury to be minor; he applied ice and the situation was "tolerable." Then on or about September 6, 2016 Claimant injured his right elbow again. Respondent admitted liability for the injury.

2. Claimant initially presented to the City of Colorado Springs Occupational Health clinic on September 27, 2016. Paula Homberger, PA-C, reported, "…Mr. Meador was doing TRX at the station about 6 months ago and had a pop in his elbow. It was popping periodically, but would feel okay. He was doing a pull-up a few weeks ago & felt increased pain. He only notices pain with specific movements…" (Claimant's Exbs. pg. 93. Ms. Homberger diagnosed right lateral epicondylitis. She recommended physical therapy, use of Voltaren gel, and application of ice and heat. (Id.)

3. Claimant participated in physical therapy on October 17, 2016. The therapist noted that one of Claimant's symptoms was "Sharp pain with overhead activity, gripping 8/10." She noted that one of the long term goals of therapy was "80% better with grip." She recommended "Rest from gripping as much as possible." (Id. at 133).

4. In a physical therapy session on October 31, 2016, the therapist noted Claimant's objective findings included "Grip strength decreased. ROM [range of motion] same." (Id. at 132). In a "Symptom Review" sheet the therapist noted Claimant's

[1] Respondents did not contest any other part of the impairment rating issued by Dr. Sharma, including the range of motion aspect of the impairment rating.

strength was “worse” and the therapist hand-wrote “grip [decreased] to 55#...L side 100#.” (Id. at 131).

5. On November 17, 2016 Ms. Homberger noted Claimant was “…feeling about the same, a little worse today.” She referred him for an MRI of the elbow, and for evaluation by Dr. Larsen. (Id. at 82).

6. Also, on November 17, 2016 a physical therapist documented “painful grip.” (Claimant’s Exbs. at 125). A “Symptom Review” sheet noted one of Claimant’s “Primary Functional Deficits” was “handshakes.” (Id. at 124)

7. MRI of the right elbow was performed on November 21, 2016. (Id. at 176).

8. Claimant saw orthopedic surgeon Dr. Karl Larsen on December 7, 2016. Dr. Larsen reported, “…He is having persistent symptoms while he is working. It is painful for him to do gripping or lifting activities. He has intermittent popping about the elbow as well as intermittent numbness in the ulnar digits of the hand. He has had an MRI. He is here for discussion of additional treatment options.” (Id. at 37). Dr. Larsen reviewed the MRI and concluded, “…Mr. Meador has right elbow pain. He has what appears to be some type of traumatic aggravation of osteoarthritis possibly an injury to lateral ulnar collateral ligament and ulnar neuropathy likely related to his elbow effusion. I have recommended that we obtain electrodiagnostic studies to study his ulnar nerve.” (Claimant’s Exbs. at 38).

9. Dr. Larsen administered a corticosteroid injection on December 9, 2016. (Id. at 36).

10. Dr. Larsen saw Claimant on January 11, 2017 and reported, “…I saw Justin Meador today in followup for his right elbow traumatic aggravation of arthritis with ulnar neuropathy and lateral epicondylitis. The corticosteroid injection I performed last time relieved all of his pain symptoms. He still has some mild residual numbness and tingling but it is not severe and is less than it was before. His pain is starting to come back to some degree but it is nowhere near as bad as it was. He has improved motion but still cannot achieve full elbow extension…Right now, I think it remains to be seen how long the corticosteroid injection will last. If his symptoms return here over the next month or two, then I would advocate for repeat corticosteroid injection, possibly even with Dep-Medrol to see if we can get this to last longer. He is also going to keep an eye on his numbness and tingling. If it worsens, then I think he ought to consider ulnar nerve decompression or transposition…” (Id. at 33).

11. Dr. Michael Sparr performed electrodiagnostic testing of Claimant’s right upper extremity on January 19, 2017. Dr. Sparr concluded the testing was normal, but added, “…There are obvious abnormalities within the elbow. He may consider surgical intervention…” (Id. at 112).

12. Also on January 19, Claimant saw Dr. Jay Neubauer at CCOM Broadmoor. Dr. Neubauer noted, "…He continues to have both lateral and posterior elbow pain. Range of motion of the elbow is painful and he still does not have full extension. He has milder lateral elbow pain which is increased with repetitive gripping and touching the area…" (Id. at 69)

13. Claimant returned to Dr. Larsen on March 15, 2017 and the doctor noted Claimant was "…having persistent aching discomfort. He notices this when he bends his elbow. He cannot even drive his car to full distance to work without having to let go the steering wheel and shake his arm. His symptoms are combination of numbness in the ulnar side of his hand and aching discomfort in the elbow. He gets a lot of pain laterally especially if he tries to weightbear and twist on it. He has been able to continue in his job duties as a driver but is concerned about his ability to perform firefighter qualification which is coming up soon…" (Id. at 31). Dr. Larsen discussed surgical options but concluded, "…I still think we have not maximized the nonsurgical treatment and I recommend we go ahead and perform another elbow corticosteroid injection with a little bit of higher dose of steroid to see if we can get a more prolonged response…" Dr. Larsen administered another injection. (Id.)

14. On April 28, 2017 Dr. Larsen reported that, "…The corticosteroid injection we performed last time took several days to be effective but has given him very good pain relief…Mr. Meador is doing relatively well. It is unpredictable how long this injection will benefit him. As long as he is doing okay and can cope with it, that is probably the best answer. If for some reason he has persistent numbness and tingling and chooses to cope with this elbow pain which I thing (sic) would be a reasonable plan, then I think he probably would have to pursue treatment of his ulnar nerve to protect it and just work with the elbow arthritis until such point as he needs more aggressive treatment…He can have one more injection from my view, but again we are not going to achieve curative relief. We discussed the nature of corticosteroid injections and the limits on using corticosteroid injections. I do not think it is reasonable to consider 3 or 4 injections a year on a permanent basis as this is probably just going to lead to accelerated ligamentous and cartilage degeneration, so hopefully he will get a long period of relief from the last injection and we would not have to do anything…" (Id. at 29).

15. Claimant credibly testified that the two injections administered by Dr. Larsen gave good, but temporary, relief of the pain and swelling in his right elbow.

16. On July 11, 2017 Dr. Neubauer imposed temporary work restrictions; "…recommend no repetitive motions with R arm limit typing to less than 50%, limit work shifts to 2 days/week, limit lifting to 30 lbs." (Id. at 60). Up to this point, Claimant had consistently been released to regular duty work.

17. Claimant returned to Dr. Larsen on July 31, 2017 and the doctor noted, "…He is having persistent pain in his elbow. He is trying to return to work but cannot get his arm extended enough to appropriately handle the steering wheel. He does not have a lot of confidence and ability to use his elbow. He has been unable to work out because

of the persistent pain and popping posterolaterally. His numbness and tingling is not as bad as it was and really feels like he is not able to use his arm the way he wants to participate in a regular career as a firefighter. He is actually thinking about the potential that he might need to change to a different occupation…" (Id. at 26). On examination Dr. Larsen noted, "…He is quite tender over the radiocapitellar joint. I am able to feel popping and clicking consistent with crepitance and synovitis there both at pronosupination and attempted flexion and extension…" Regarding treatment options, Dr. Larsen noted, "…We could do one more corticosteroid injection but just for the couple of months benefit he might get, it may not be worthwhile. He would rather save that for later if he needs it. I think his decision point is just to see if he can change jobs and just live with his elbow as is or consider osteocapsular arthroplasty with arthroscopic debridement of the elbow joint and release of the capsule…" (Id.)

18. Claimant underwent a functional capacity evaluation ("FCE") on September 26, 2017. The examiner reported "…Grip tests indicate a 30% Right side deficit at position 2 when compared with the opposite hand, with less than 15% considered within normal limits." (Id. at 98). Claimant's overall level of effort during the FCE was deemed "reliable." (Id. at 100).

19. Claimant was examined by several physicians in conjunction with his claim for benefits from the Fire and Police Pension Association ("FPPA"). Dr. John McBride examined Claimant on October 4, 2017 and noted his complaints were; "…Right elbow pain. It is worse with lifting as well as with reaching, extension, and flexion of his elbow. His pain level was 3/10, but it goes up to 8/10 when he is attempting to reach, especially going overhead. He also has occasional numbness and tingling into his fingers mostly in the ulnar nerve distribution, but occasionally into his index finger." (Id. at 168). Dr. McBride concluded Claimant qualified for permanent occupational disability since Claimant was; "unable to lift, use right elbow fully to assist victim, perform CPR, fight fires, wear gear." (Id. at 174).

20. Dr. Sean Griggs examined Claimant on October 9, 2017 and noted, "…Strength on the right was limited due to pain." (Id. at 162). Dr. Griggs noted that, "…His EMG/nerve conduction study was negative for cubital tunnel syndrome; however, his physical examination is positive for this problem. This, too, is a problem that typically can be addressed and corrected surgically." (Id. at 163). Dr. Griggs opined Claimant qualified for temporary occupational disability even though "FCE at this time shows inability to work as Engineer." (Id. at 166). Dr. Griggs recommended; "He needs to have further evaluation as to the cause of this elbow pain and possible future treatment. (Id.)

21. Dr. Robert Rokicki examined Claimant on October 19, 2017. Dr. Rokicki reported, "…His chief complaint is right elbow pain, weakness of grip, an inability to lift or carry heavy objects, locking and clicking, swelling of the elbow, and numbness and tingling in the fourth and fifth fingers, which frequently awakens him at night." (Id. at 153). On examination, Dr. Rokicki noted "…Grip strength is diminished as is noted on his dynamometer testing…" (Id. at 156). Dr. Rokicki concluded, "…The specific duties

that he is incapable of doing are all related to firefighting. He is absolutely incapable of lifting heavy objects or anything that requires grip strength; essentially all the aspects of a firefighting job." (Id.) Dr. Rokicki recommended permanent occupational disability based on "…loss of grip strength, unable to lift heavy objects, marked limited motion." (Id. at 159).

22. Dr. Clarence Henke commented on November 15, 2017 that the FCE "…revealed profound weakness of right grip strength, light to medium lifting and carrying capabilities, and decreased range of motion in all planes." (Id. at 145). Dr. Henke recommended "…a treatment plan to include treatment by a hand physical therapist." (Id. at 151).

23. Claimant took a medical retirement from Respondent at the end of November, 2017.

24. Dr. Larsen met with Claimant on December 1, 2017 and noted, "…I would be very interested in hearing what kind of treatment any physician would like to recommend that is going to return Mr. Meador to the physical activities required in his duty as a firefighter. I would happily discuss these options with Mr. Meador and implement them if we agree that this was something that might benefit him. That being said my experiences over the past 15 years taking care of elbow conditions does not point to any such treatment that I am aware of on a routine basis and thus my interest in hearing other options…" (Id. at 124).

25. Dr. Neubauer placed Claimant at MMI on December 5, 2017 and issued a 5% upper extremity impairment rating, based solely on loss of range of motion. (Id. at 44-47).

26. Respondent filed a FAL consistent with Dr. Neubauer's findings on May 10, 2018. Claimant objected and requested a DIME.

27. Dr. Anjmun Sharma performed the DIME, according to the American Medical Association *Guides to the Evaluation of Permanent Impairment, 3rd Edition, Revised* (AMA Guides) on April 6, 2018. On physical examination Dr. Sharma noted, "…The grip strength was significantly reduced in the right side compared to the left side presumably because of the long flexors that could be impacted as a result of the traumatic arthritis. Overall, they do think that there is a significant impairment in the elbow and the physical examination findings certainly point to that as well objectively." (Id. at 13).

28. Dr. Sharma issued a 13% rating for loss of range of motion. He added, "…The patient does meet criteria for other disorders in the elbow, particularly reduction in grip strength. Referencing page 54, table 23 of the AMA Guides, the patient had a normal left hand at 50 kg of strength, the right hand had grip strength of 30 kg. This is divided by the normal hand, which is 50 kg and this case there is 20 divided by 50, which is 0.4 corresponding 40% strength index per page 54, table 23 corresponds to a

20% upper extremity impairment."[2] Dr. Sharma combined 13% for loss of range of motion with 20% for loss of grip strength to arrive at a total upper extremity rating of 30%. (Id. at 13).

29. Respondent applied for a hearing to challenge Dr. Sharma's impairment rating, in particular the grip strength element of his rating.

30. Dr. Sharma testified by deposition on July 6, 2018. He explained that he assigned 20 percent right upper extremity impairment for loss of grip strength in the right hand. According to Dr. Sharma he utilized a "Jamar dynamometer" (as is required by the AMA Guides) to measure Claimant's grip strength in both the injured and non-injured hand. He testified that he took three measurements from each hand, noting further that all three measurements from the same hand were consistent, i.e., "…they were all within 1 to 2 kilograms of each other." He then compared the readings from the affected right hand with the readings with of the left hand, acting as the baseline, to carry forward the impairment rating formula referenced at ¶ 28 above to arrive at the 20 percent impairment. According to Dr. Sharma, the grip strength measurements were "valid and reliable." (Id. at pg. 18, ll. 1-5).

31. The AMA Guides provide that, "Impairment ratings for loss of strength of the upper extremity due to various disorders of the peripheral or central nervous system are derived according to the guidelines described in Sections 3.1h and 4.1b[3] and to avoid duplication in the impairment, separate strength impairment values are not applied." (Claimant's Exbs. pg. 184).

32. Similarly, the AMA Guides also provide that "[h]and strength and its measurement are affected in the presence of amputations and loss of motion of the digits, and by disorders of bones, joints, and musculotendinous units" and that impairment associated with the aforementioned conditions are rated without separate strength values given. Indeed, AMA Guides provide, with emphasis, that "[i]t must be stressed that, in general, grip and pinch measurements are functional tests and are not to be used for evaluating impairment." However, the AMA Guides also provide that "if loss of strength is felt to represent an additional impairing factor not already taken into account, this may be measured and the loss rated…" (Claimant's Exbs. pg. 185).

33. The ALJ interprets the AMA Guides to provide that regardless of whether the primary condition to be rated is neurologic or as in this case, the probable result of a

[2] Based upon the evidence presented, the ALJ finds that Dr. Sharma properly applied the *AMA Guides*' formula for calculating loss of grip strength; normal strength [50] minus abnormal strength [30] = 20, then divide 20 by normal strength [50] to arrive at 0.4, or 40%. A strength index of 40% corresponds to 20% impairment of the upper extremity. (See Claimant's Exbs. pg. 186 for the formula, and Table 53 for determination of impairment).

[3] Pursuant to *Mendicelli v. Nor-Mar, Inc/Burger King*, W.C. No. 4-785-225 (ICAO 10/6/10), the ALJ takes administrative notice of the fact that Section 3.1h (pg. 39 of Chapter 3 of the AMA Guides) concerns "Impairment of the Upper Extremity Due to Peripheral Nervous System Disorders," and Section 4.1b (pg. 106 of Chapter 4 of the AMA Guides) concerns impairment ratings of "The Spinal Cord."

degenerative arthritic (bone/joint) condition affecting the musculo-tendinous units, the rating physician is given the discretion to rate loss of strength secondarily if this loss is felt to represent an additional impairing factor not otherwise accounted for by the rating associated with the primary impairing condition. In this case, Dr. Sharma was asked to explain why he elected to rate Claimant's loss of grip strength during his deposition. In doing so, the following colloquy took place;

> *Q: So, this would be the second paragraph. It says: It must be stressed that, in general, grip strength measurements are functional tests, and they are not to be used for evaluating impairment. And why did you choose to do that in this case?*
>
> *A: Yeah, that's a very good question, one that I had anticipated. I took into consideration that, while range of motion, in general, was used for impairment rating, that, there was a significant discrepancy in his ability to grip with his right. Now, I understand that grip strength, functionally, has multiple contributing factors -- forearm strength/tone -- but, because of the fact that he had had an elbow injury, that he had traumatic arthritis, that there was some discrepancy or some, you know, range of motion deficit -- that was the reason why I felt that that -- the grip strength was an accurate assessment of his functional ability, long-term. And so I felt that it would be important to include that, to provide a fair and balanced impairment rating for him, only because he -- his arm had been injured.*
>
> *He does have traumatic arthritis. I think, long-term, we had talked about in the report that, you know, he would need some type of definitive surgery in the future -- specifically, an elbow replacement -- but he and I had talked that that's probably not the best route with his age being so young at this point in time.*
>
> *And so, my -- my whole reason for including the grip strength -- was just to get an accurate assessment of what I thought his functional ability was, understanding that range of motion may not necessarily be enough to take into consideration a true impairment that he had in his upper arm.* (Depo. tr. pg. 18, l. 13 – pg. 20, l. 3).

34. Respondent commissioned a "medical record review" by Dr. William Ciccone. Dr. Ciccone did not examine Claimant. Rather, he reviewed Claimant's medical records and authored a report dated August 8, 2018. In his report, Dr. Ciccone opined, "…I disagree with Dr. Sharma's use of grip strength in his impairment rating as degenerative change in the elbow is not associated with a loss of grip strength and according to the Guides the use of strength in impairment is limited to that associated with nerve injury." (Respondent's Exbs. pg. 71). Dr. Ciccone further opined that, "…Within the AMA Guides the only times that the use of strength for impairment is discussed is in the

context of nerve injury. This claimant had no nerve injury that was work related. In fact, he had EMG studies that confirmed no nerve involvement and Dr. Sharma noted no muscle atrophy…" (Id.)

35. Based upon the evidence presented, the ALJ finds that Dr. Sharma credibly explained his rationale for rating grip strength. Indeed, he clarified that that the basis for "*including the grip strength -- was just to get an accurate assessment of what I thought his functional ability was, understanding that range of motion may not necessarily be enough to take into consideration a true impairment that he had in his upper arm."* (Depo. tr. pg. 18, l. 13 – pg. 20, l. 3). In this case, the evidence presented persuades the ALJ that Dr. Sharma correctly applied the AMA Guides in exercising his discretion to include Claimant's grip strength loss as part of his overall impairment rating. Consequently, the ALJ finds Dr. Sharma's testimony credible, persuasive and in keeping with the AMA Guides.

36. Dr. Ciccone's opinions to the contrary are not persuasive. The ALJ finds the opinions of Dr. Ciccone to constitute a mere difference of opinion as to whether it is appropriate to rate the loss of strength associated with and caused by Claimant's primary condition in this case. As found, Dr. Sharma's opinions are more persuasive than Dr. Ciccone's and in keeping with the AMA Guides. Accordingly, Respondents have failed to meet their burden of proving, by a preponderance of the evidence, that Dr. Sharma erred in including an impairment for Claimant's loss of strength in this case.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). As found here, the opinions of Dr. Sharma regarding Claimant's grip strength impairment rating are more persuasive than the contrary opinions of Dr. Ciccone.

Overcoming the DIME Physician's Scheduled Impairment Rating

E. While a DIME physician's opinions are entitled to special weight on issues of MMI and whole person impairment, they are not entitled to any special weight when it comes to extremity ratings. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. APP.1998) (DIME provisions do not apply to the rating of scheduled injuries); see also, *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Wagoner v. City of Colorado Springs*, W.C. No. 4-817-985-03 (Oct. 21, 2013) (no presumptive weight afforded DIME physician concerning scheduled injuries), *aff'd Wagoner v. Industrial Claim Appeals Office*, (Colo. App. No. 13CA1983, Oct. 23, 2014) (not published pursuant to C.A.R. 35(e)). Consequently, for extremity ratings, a DIME opinion merely has to be rebutted by a preponderance of the evidence to be overcome.

F. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. § 8-42-107(8)(c), C.R.S.; *Wilson v. ICAO,* 81 P.3d 1117, 1118 (Colo. App. 2003). Deviations from the *AMA Guides* do not necessarily mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (Nov. 13, 2006). Rather, the ALJ must consider whether the deviation casts substantial doubt on the validity of that portion of the rating. *See Sutton v. Alpen Construction*, W.C. No. 4-225-415 (Apr. 1, 1997). Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *See In Re Goffinett,* W.C. No. 4-677-750 (Apr. 16, 2008).

G. Respondents assert that the evidence, including the opinions expressed by Dr. Ciccone, supports their contention that Dr. Sharma erred when he elected to provide a rating for loss of strength in this case. As found, the ALJ is not persuaded. Here, the ALJ concludes that Dr. Sharma properly exercised his discretion to include a loss of strength rating as part of Claimant's impairment based on the impact that his traumatic arthritis was having on the musculo-tendinous units, specifically the long flexors of the right hand, forearm and elbow. The evidence presented persuades the ALJ that Dr. Sharma did not believe that rating Claimant solely for range of motion loss adequately addressed the functional impairment of the upper extremity. Consequently, he chose to measure and rate Claimant's loss of strength, as provided for in the AMA Guides, because this impairing factor was not already taken into account by Claimant's documented range of motion loss. While Dr. Sharma's decision to rate loss of strength may not be typical or even preferred, the ALJ is not convinced that he deviated from the AMA Guides in this case, since the evidence presented supports Claimant's profound loss of strength and the AMA Guides clearly note that loss of strength can be measured and rated if it is "felt to represent an additional impairing factor not already taken into account" as explained by Dr. Sharma in this case. Contrary to Respondent's assertion, the ALJ concludes that Dr. Sharma clearly delineated the medical justification for his loss of strength rating. Accordingly, the ALJ is unable to conclude that Dr. Sharma erred in rating Claimant's loss of strength as part of his DIME. Based upon the persuasive evidence presented, the ALJ concludes that Respondents have failed in their effort to overcome Dr. Sharma's grip strength rating in this case.

ORDER

It is therefore ordered that:

1. Respondent's request to set aside that portion of Dr. Sharma's rating assigning impairment for loss of strength is denied and dismissed.

2. Respondent shall pay Claimant permanent partial disability benefits consistent with the 30% upper extremity rating issued Dr. Sharma.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding

procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-078-332-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 3, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 10/3/18, Courtroom 3, beginning at 8:30 AM, and ending at 11:45 AM).

Claimant's Exhibits 1 through 4 were admitted into evidence, without objection. Respondent's objections to Exhibits 5, 6 and 16 were sustained and the Exhibits were refused. Respondents' Exhibits A through E were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ took the matter under advisement. On October 25, 2018, the ALJ's Summary Order was mailed to the parties. On November 2, 2018, the self-represented Claimant mailed and filed a Request for Specific Findings of Fact and Conclusions of Law. Pursuant to the Claimant's Request, Full Findings of Fact, Conclusions of Law and Order are hereby issued.

ISSUES

The issues to be determined by this decision concern compensability of an alleged back injury of May 29, 2018, and medical benefits.

The Claimant bears the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant alleges a work injury to her low back on May 29, 2018, at which time she was working for the Employer.

2. Medical records reveal that the Claimant has a long history of low back issues for which she received chiropractic and massage therapy:

- In a letter from her personal chiropractor, Moyer Total Wellness, Dr. Janea L. Rather, D.C., dated January 12, 2016, the Claimant was noted to have joint restrictions in the lumbar spine and sacroiliac joints, mild injury to her hips and low back, and had been diagnosed with mild lumbar joint dysfunction with myofascial pain syndrome of the low back musculature (Respondent's Exhibit B, pp. 10-12).
- On January 20, 2016, the Claimant reported trouble sitting and standing, which bothered her lower and upper back. (*See Id*. at p. 13).
- According to the letter authored by the Claimant's chiropractor, Dr. Randy Moyer, D.C., on August 20, 2018, the Claimant's treated for two motor vehicle accidents in 2015, and it lasted until April 2016 at which point the Claimant indicated that she was "pain free". (Respondent's Exhibit 9).
- Contrary to Chiropractic Dr. Moyer's opinion, medical records continue to show that the Claimant had low back complaints after April 2016. On July 19, 2016, she reported that her low back was "tight." (Respondent's Exhibit B, p. 17).

- On August 8, 2016, treatment the was focused on the Claimant's back, which was "tight," and it was noted that Claimant had just traveled. (*Id*. at p. 18).
- The Claimant reported low back pain on October 4, 2016 (*Id*. at p. 19).
- The Claimant reported her low back was "tight but better" and that she was going out of town on October 18, 2016 (*Id*. at p. 20).
- On March 31, 2017, the Claimant presented to her chiropractor for a "tune up". She denied any new injury or trauma since her last visit. At that time, the Claimant was assessed with "segmental and somatic dysfunction of lumbar region" and treatment was performed in her lumbar region (*Id*. at p. 22).
- The Claimant's massage therapist noted, "daily use of foam roller recommended for low back" for a tight back (*Id*. at p. 23).
- On May 5, 2017, the Claimant's massage therapist recommended another massage "needed in 3 weeks after long flight back home to Denver" (*Id*. at p. 24).
- The Claimant reported a "stiff and achy" low back on June 7, 2017. She was again assessed with "segmental and somatic dysfunction of lumbar region" by the chiropractor (*Id*. at p. 25).
- On July 5, 2017, the Claimant reported to her chiropractor that her low back was "doing 'ok, but needs a little tune up.'" She was once again assessed with "segmental and somatic dysfunction of lumbar region" (*Id*. at p. 27).
- On July 17, 2017, the Claimant's massage therapist noted "hypertension in area of concern with more noticeable HT in low back" (*Id*. at p. 29).
- On September 12, 2017, the Claimant reported "feeling tight in shoulders and lower back from traveling". Treatment was focused on her lower back (*Id*. at p. 31).
- On December 8, 2017, the Claimant reported that she felt "tight everywhere from sitting". She was once again assessed with segmental and somatic dysfunction of lumbar region". Chiropractic treatment was performed in the lumbar area (*Id*. at p. 34).
- On May 16, 2018, two weeks before the alleged work injury, the Claimant's massage therapist noted her "left low back still tight but improved since start of session". It was noted "another massage needed in 2-3 weeks" or "sooner if low back issue persists or worsens" (*Id*. at p. 37).

3. At hearing, the Claimant testified that she had just returned from a trip to the East Coast two days before.

4. According to the Claimant, her Employer was moving from one office building to another. Due to the move, employees, including the Claimant, were required to move their personal belongings to the new building.

5. The Claimant's first day in the new building was May 29, 2018. As she was lifting a box weighing approximately 4 lbs., containing her personal belongings, out of the trunk of her personal vehicle she felt a "tweak" in her low back (Respondent's Exhibit A, p. 1).

6. According to the Claimant, she weighed this same box of items and it weighed less than 4 lbs.

7. The Claimant reported the incident to her Employer and received a designated medical provider list on May 29, 2018.

8. The Claimant also testified that she scheduled an appointment to see her personal chiropractor the afternoon of May 29, 2018.

9. The Claimant further testified she was able to continue to work on May 29, 2018-- after the incident.

Medical

10. On May 30, 2018, the Claimant presented to the authorized treating provider (ATP), Midtown Occupational Health Services, for evaluation. The Claimant reported that she was moving offices and had to move some of her personal effects in boxes. She stated that she was moving one of the light boxes from her car to the new office when the alleged injury occurred. She was in a bent over position picking the box up when she felt pain in her lower back. The Claimant reported a history of scoliosis, but did not disclose her other low back issues (*See* Respondent's Exhibit E).

11. The Claimant was diagnosed with a lumbar strain and released to return to full duty work without restrictions (Respondent's Exhibit E, p. 62). Based on the Claimant's lengthy history of low back problems, the ALJ finds that the diagnosed lumber strain is attributable to the natural progression of her long-standing back problems; and, it did **not** amount to an acceleration or aggravation of her underlying back issues.

12. The Claimant returned to work and continued to work her normal job duties up through the date of hearing.

13. Lawrence Cedillo, D.O., saw the Claimant on May 30, 2018. He did not render an opinion concerning whether the May 29, 2018 incident aggravated or accelerated the Claimant's long-standing back problems.

14. The ALJ finds that the Claimant did not report her long-standing history of low back issues, for which she had been treating as recently as two weeks prior to the work incident, to either PAC (Certified Physician's Assistant) Kraus or Dr. Cedillo at Midtown.

Independent Medical Examination (IME) by Lawrence Lesnak, D.O.

15. Dr. Lesnak performed an IME of the Claimant on August 27, 2018 and issued a report. Dr. Lesnak also testified at the hearing and was accepted as a Level II Accredited physician, specializing in physical medicine and rehabilitation.

16. Dr. Lesnak reviewed the Claimant's medical records and performed a physical examination of the Claimant. He noted that the Claimant only reported a history of neck injury from prior motor vehicle accidents. He also noted that since May 2016, the Claimant had been receiving chiropractic treatments 1-3 times per month. He further noted that a medical report, dated May 17, 2018, indicated that the Claimant was going on vacation "tomorrow" and "moving offices – stressful transitions. Not focusing well. Not sleeping well" (Respondent's Exhibit A).

17. Dr. Lesnak testified that the Claimant's report to PAC Kraus on May 30, 2018 was consistent with her low back complaints, prior to the alleged work incident.

18. According to Dr. Lesnak, following the Claimant's May 30, 2018 evaluation with PAC Kraus, medical records indicate that her next treatment visit with anyone was not until June 26, 2018, at which point she saw her chiropractor at Moyer Total Wellness. Dr. Lesnak was of the opinion that this was more consistent with her "wellness" visits and treatment for an acute injury.

19. Dr. Lesnak was of the opinion that, while there may have been an incident, there was no evidence of any specific injury occurring on May 29, 2018. He further stated there was "no medical evidence to support that the patient had an actual injurious event occur on 05/29/18." He was of the opinion that without evidence of a specific injury related to work activities, no medical evaluations or treatments were reasonably necessary or causally related to the reported incident (Respondent's Exhibit A, p. 8).

20. The ALJ finds Dr. Lesnak's medical opinion that there was "no medical evidence to support that the patient had an actual injurious event occur on 05/29/18" to mean that the described May 29, 2018 incident of lifting a box weighing less than 4 lbs. was not sufficient to cause a compensable injury.

21. The ALJ credits Dr. Lesnak's opinion that the May 29, 2018 incident did not result in the need for medical treatment. The ALJ finds that the Claimant's symptoms and treatment following the May 29, 2018 incident were more likely the

cause of the natural progression of the Claimant's long-standing pre-existing back issues.

22. Further, the ALJ finds the fact that the Claimant returned to her regular employment immediately following the incident, as such, she suffered no disability due to the May 29, 2018 incident.

Ultimate Findings

23. The ALJ finds the opinions of Dr. Lesnak credible and more persuasive than any medical opinion or lay testimony (The Claimant's testimony) to the contrary. As such, the ALJ finds that **no** compensable injury occurred as the result of the May 29, 2018 incident.

24. The Claimant's visit to Midtown on May 30, 201`8, was for the purpose of an evaluation not for medical treatment.

25. Between conflicting opinions and testimony, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of Dr. Lesnak and to reject any opinions to the contrary.

26. The ALJ finds that the Claimant has failed to establish, by preponderant evidence that she sustained a compensable work-related injury on May 29, 2018.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply

to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Lesnak were credible and more persuasive than any medical opinions or lay testimony (The Claimant's testimony) to the contrary. As such, Dr. Lesnak's opinions support the proposition that **no** compensable injury occurred as the result of the May 29, 2018 incident.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions and testimony, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Lesnak and to reject any opinions to the contrary.

Compensability/Sufficiency

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, the light box lifting event of May 29, 2018 was neither disabling nor did it require medical treatment. As found, the Claimant's visit to Midtown on May 30, 201`8, was for the purpose of an evaluation not medical treatment.

Burden of Proof

d. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant failed to sustain her burden on compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

Any and all claims for workers' compensation benefits are hereby denied and dismissed.

DATED this 14th day of November 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of November 2018, electronically in PDF format, addressed to:

Division of Workers' Compensation

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered permanent impairment due to his work related injury.

II. Whether Claimant established by a preponderance of the evidence that his scheduled impairment rating should be converted to a whole person rating.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant suffered an admitted work-related injury while working for Employer on November 8, 2016. Claimant suffered an injury to his bilateral lower extremities when a number of the wheels of his 18-wheeler semi-truck rolled over and crushed his legs. Claimant was rushed to Parker Adventist Hospital for treatment for his crushed lower legs, where he was diagnosed with a distal tibial fracture and medial malleolar fracture of the left distal tibia. **Ex. 1:7**. Claimant also had extensive contusions across his lower extremities where the semi-truck ran over him. **Ex. 1:8**. Although Claimant did not have surgery due to his fractured tibia, he did go on to develop vascular problems, as well as other problems, due to the crush injury to his lower extremities.

2. Claimant was eventually discharged to Spalding Rehabilitation Hospital on November 10, 2016. **Ex. 1:8**. Claimant stayed at the Rehabilitation Hospital until November 25, 2016 and began receiving home nursing care. **Ex. 1:8**.

3. Claimant began treating with Midtown Occupational Clinic and Dr. Raschbacher on November 30, 2016. **Ex. 1:9**. Claimant also followed up with Dr. Thomas McDonough, M.D. for an orthopedic evaluation on December 6, 2016. **Ex. 1:9**. Dr. McDonough diagnosed Claimant with a metatarsal fracture on the left side. **Ex. 1:9**. Dr. McDonough declined to pursue surgery as x-rays showed that Claimant's fracture was healing. **Ex. 1:9**.

4. Claimant returned to Midtown Occupational Medicine on December 15, 2016 after his nurse case manager noted significant swelling in the left leg. **Ex. 1:9**. Dr. Lon Noel, M.D. recommended an ultrasound study of the left lower extremity, which was performed that day and showed no evidence of deep vein thrombosis. **Ex. 1:9**.

5. Claimant presented to Dr. Raschbacher on January 2, 2017. Dr. Raschbacher noted that Claimant had a non-infected appearing eschar on his left ankle and left knee. **Ex. 1:10**.

6. Claimant underwent another imaging study on January 6, 2017 of the lower extremities. The ultrasound again showed no DVT, but did show fluid collection in the left upper thigh. **Ex. 1:10**.

7. Claimant had his left upper thigh drained on February 2, 2017. **Ex. 1:10**. However, Claimant also complained of swelling in his left lower leg in a different area. **Ex. 1:10**. He continued to have fluid drained from his left lower extremity throughout early 2017. **Ex. 1:10-11**.

8. Claimant saw Dr. Braden Reiter, M.D. on March 10, 2017. Dr. Reiter noted Claimant's continued issues with swelling on the left side of his chest and tenderness around the left breast. **Ex. 1:12**.

9. Claimant followed up with Dr. Jeffrey Harr, M.D. on March 10, 2017. Dr. Harr performed a neurological examination which was "basically normal." **Ex. 1:12**. There was some left thigh swelling but otherwise Claimant's lower extremities did not appear deformed. **Ex. 1:12**. Dr. Harr, however, was concerned about potential venous insufficiency. **Ex. 1:12**.

10. Claimant underwent an EMG of the bilateral lower extremities, along with a bone scan. The bone scan noted moderately increased activity along the right ankle and moderate left mid-foot activity, but no evidence of a fracture. **Ex. 1:13**.

11. Claimant saw an infectious disease consultant Dr. Wendy Gill, M.D. on April 20, 2017. Dr. Gill diagnosed Claimant with left leg cellulitis - of his skin - and prescribed antibiotics. **Ex. H:128**. A follow up visit on May 3, 2017, Dr. Gill suggested Claimant might have lymphedema and noted that his cellulitis had improved. **Ex. H:130**. She recommended a course of doxycycline, an antibiotic. **Ex. H:131**.

12. Claimant presented to RIA Endovascular on July 13, 2017 to see William Grande, M.D. for an evaluation of his venous insufficiency. **Ex. J:144**. Dr. Grande diagnosed Claimant with class V venous disease related to, "a combination of benign central venous obstruction, related to his weight and superficial venous insufficiency." **Ex. J:144**. He recommended an ablation of both lower great saphenous veins. **Ex. J:145**.

13. Due to his work injury, Claimant underwent a radiofrequency ablation of the veins of both lower extremities on August 9, 2017. **Ex. J:151.**

14. Claimant continued to see Dr. Reiter and Dr. Grande for post-ablation vein care due to his work injury. He was eventually placed at MMI on November 16, 2017 by Dr. Reiter, who returned Claimant to full duty without permanent impairment. **Ex. E:58**. Dr. Reiter stated that Claimant did have a "resolving rash on both calves" but that there was no erythema or discharge. **Ex. E:58**. There was, however, swelling in both calves. **Ex. E:58.**

15. On January 29, 2018, Claimant was seen at the Medical Center of Aurora for a fever. **Ex. 1:17**. Claimant was noted as having a right lower extremity erythema with scabbing of the right lower extremity. **Ex. 1:17**. He was diagnosed as suffering from popliteal deep vein thrombosis ("DVT") and discharged with another round of antibiotics and a blood thinner Coumadin. **Ex. 1:17**.

16. Claimant returned to Dr. Reiter on February 12, 2018. Claimant reported that his leg was doing better. **Ex. D:60**. There was, however, swelling in the calves. **Ex. D:61**. At that time, Dr. Reiter again placed Claimant at MMI with no permanent impairment, and no restrictions. **Ex. D:61**. He did, however, recommend maintenance medications and for Claimant to follow up with his vascular specialist due to his work related vascular problems. **Ex. D:61.**

17. Claimant obtained an Independent Medical Evaluation with Dr. John Hughes, M.D. on March 8, 2018. **Ex. 2**. Dr. Hughes assessed Claimant with a work-related bilateral lower extremity crush injury, fractures of the left metatarsal, diffuse right lower extremity soft tissue crush with chronic DVT and venous insufficiency, and left thigh seroma due to the same. **Ex. 2:24**.

18. Dr. Hughes also assessed Claimant's skin. Dr. Hughes noted the numerous problems with Claimant's skin. He noted erythema, excoriation and scabs on the skin of both lower extremities. **Ex. 2:24**. Finally, Dr. Hughes noted that Claimant weighed 325 pounds compared to 310 pounds measured by Dr. Lesnak, which may be the result of fluid overload "in the setting of tense lower extremity edema." **Ex. 2:24**.

19. Dr. Hughes stated that Claimant was not at MMI for his work related conditions on the basis that Claimant has ongoing edema and probable systemic fluid overload. **Ex. 2:24**. Further, Dr. Hughes was concerned about an occult bacterial infection as well as findings suggestive of a nerve injury to one of Claimant's lower extremities. **Ex. 2:24**.

20. Dr. Hughes provisionally rated Claimant's bilateral lower extremities using Table 52, *Impairment of the Lower Extremity Due to Peripheral Vascular Disease*, from the *AMA Guide to the Evaluation of Permanent Impairment, 3rd Edition (Revised),* that would place Claimant's impairment rating in the 40-65% scheduled rating for each lower extremity for "marked edema" pursuant to Table 52. **Ex. 2:25**.

21. Dr. Hughes also stated that due to Claimant's work injuries, which included injuries to his vascular system due to the crush injury, Claimant should be restricted from standing and walking to no more than 2 hours in an 8-hour workday. **Ex. 2:25.** He also concluded that although Claimant would appear to be able to continue working as a truck driver, Claimant may have functional problems performing all aspects of his job such as chaining up the tires for mountain passes in winter conditions and walking or standing for more than 2-hours in an 8-hour workday. **Ex. 2: 25.**

22. The ALJ credits Dr. Hughes' opinions and finds them persuasive in finding that Claimant's injury caused a vascular injury and the vascular injury has resulted in functional impairment that impacts Claimant's vascular system and entire body, i.e., fluid overload, as well as his skin and that Claimant's injury and resulting functional impairment restricts Claimant from performing all aspects of his job, such as chaining up his truck tires during the winter and walking and standing for more than 2-hours in an 8-hour workday, etc.

23. Claimant also underwent a Division IME examination with Dr. Stanley Ginsburg, M.D. on March 29, 2018. **Ex. 1**. In order to make sure he properly evaluated the case, Dr. Ginsburg asked Claimant to return for an additional visit, at no charge, so he could clarify some historical points and re-examine Claimant's lower extremities and properly analyze Claimant's case and determine whether Claimant was at MMI and the extent of his impairment.

24. Dr. Ginsburg noted that Claimant filled out a form in his office stating that his legs were his problem. **Ex. 1:7**. Claimant characterized his problems as being of a "moderate severity" with itching, burning, pain, and swelling. **Ex. 1:7**. Dr. Ginsburg also examined Claimant's lower extremities.

25. Dr. Ginsburg also observed numerous problems with Claimant's skin which developed due to Claimant's work injuries. In addition to the marked edema of Claimant's lower extremities, Dr. Ginsburg noted that Claimant's skin had developed:

> [A] punctuate rash, some of which seems made up of small scab-like processes, and this rash is present bilaterally, primarily below the knees, but on the left it extends to the knee and above. There are scabs, however, of larger size on the right side in the distal right lower extremity below-the-knee and particularly just above the lateral malleolus, but more prominently so on the right and more prominently laterally. For the most part, skin above the knees seems more normal. There is a red coloring below-the-knee, which is more prominent on the right but is present on the left.

26. Dr. Ginsburg also reviewed the medical documentation. After evaluating Claimant on two occasions and reviewing Claimant's medical records, he agreed with Dr. Reiter that Claimant had reached MMI as of February 2, 2018. **Ex. D:21**. However, he disagreed with Dr. Reiter that Claimant did not have permanent impairment. Rather, Dr. Ginsburg opined that Claimant's bilateral lower extremities should be rated pursuant to the *AMA Guides* and Table 52, *Impairment of the Lower Extremity Due to Peripheral Vascular Disease*, due to the vascular injury that was caused by the crushing of his legs. Dr. Ginsburg reasoned that, "The patient does not use elastic supports, insofar as I know. I am not certain if this would be possible in any event, but I would classify this as 65% in each lower extremity" due to "marked edema," which was caused by the crush injury to Claimant's lower extremities and resulted in venous insufficiency. Therefore, Dr. Ginsburg provided Claimant a 65% lower extremity impairment rating for each lower extremity, which converted to 26% whole person impairment rating for each lower extremity and combined to a 45% whole person impairment rating. **Ex. 1 and D**.

27. Respondents obtained a records review from Dr. John Sanidas, M.D. on August 8, 2018. **Ex. C**. Dr. Sanidas did not examine Claimant's legs. **Ex. C.** He opined that he agreed with Dr. Ginsburg's Division IME Opinion that Claimant had reached MMI as of February 12, 2018. **Ex. C:18**. However, even though it does

not appear he reviewed any photographs of Claimant's legs in order to determine the extent of edema and skin problems, Dr. Sanidas disagreed with Dr. Ginsburg's scheduled impairment rating. Specifically, he agreed with the use of the *AMA Guide* and Table 52, *Impairment of the Lower Extremity Due to Peripheral Vascular Disease*, but disagreed with Dr. Ginsburg's assessment of a Class III impairment based on "marked" edema. **Ex. C:18**. Instead, Dr. Sanidas would have assessed a Class II impairment on the basis that Claimant experienced persistent edema of a "moderate" degree incompletely controlled by his elastic supports. **Ex. C:18**. Further, Dr. Sanidas noted that while Claimant did not have amputations he did have vascular disease which caused ulcers, which had healed at some point. **Ex. C:18**. Again, Dr. Sanidas disputed the classification of Claimant's edema as "marked," even though he could not see and evaluate the extent of Claimant's edema.

28. At hearing Claimant testified that he had suffered bilateral crush injuries to his lower extremities. Claimant testified he did not have any problems with his legs prior to the accident or any swelling or edema prior to the accident. But, after the accident, he developed swelling in both of his lower extremities, along with periodic ulcers and problems with his skin. Consistent with Dr. Hughes' concern of fluid overload, Claimant also testified that he felt his whole body was swelling. Claimant also testified that he experiences skin problems which includes flakiness and itching. He also testified that his skin continues to break open and bleed.

29. At hearing, Claimant showed his bilateral lower extremities to the ALJ and to Dr. Sanidas, who was present. Claimant's legs were very swollen. Moreover, Claimant's skin on his lower extremities looked severely impaired. His skin was red, flakey, dry, inflamed, and was very irritated. His skin also had numerous scabs, some of which looked like they had recently bled.

30. In order to show the condition of his legs and skin to the ALJ, Claimant had to get up from the witness stand and walk around the witness stand to appear in front of the ALJ. The ALJ was able to observe how Claimant walked due to the vascular insufficiency which has caused problems with his legs, skin, and ability to regulate his bodily fluid as described by Dr. Hughes and Claiamant. The ALJ noted that Claimant walked and carried himself in a manner that was impaired and in a way that extended beyond his lower extremities. In other words, Claimant's vascular insufficiency has impacted Claimant's overall functioning and movement of his entire body and caused more than just an altered gait or limp. While walking, Claimant's irregular body movement indicated that his overall body movement was labored and limited by pain, swelling, and overall discomfort.

31. The ALJ also noticed the extreme discomfort and despair exhibited by Claimant when he walked and as he pulled up each pant leg to show the swelling of his legs and his extensive skin problems.

32. Dr. Sanidas testified on behalf of Respondents at hearing. He reiterated his position that Claimant should have received a scheduled impairment rating for

his bilateral lower extremities. However, he disagreed regarding the classification of that impairment on Table 52. Specifically, he stated that Claimant's edema was "moderate" instead of "marked." He further stressed that Class 2 included "vascular damage as evidenced by a sign, such as that of… a healed ulcer." In his assessment, Claimant's legs had healed ulcers rather than superficial ulceration as he noted were indicated in a section of Class 3 of the AMA Guides. Therefore, he would have assessed a 35% lower extremity rating pursuant to the maximum value in Class 2 for each lower extremity.

33. Dr. Sanidas addressed Claimant's contention that his "whole body was swelling." Dr. Sanidas opined that whole body swelling was not consistent with Claimant's peripheral vascular disease or with the work injury generally. However, Dr. Sanidas did not explain the medical basis for such a conclusion.

34. On cross examination Dr. Sanidas admitted that his "mental picture" of Claimant's legs differed from his actual presentation in court. Dr. Sanidas had never before examined Claimant's legs. However, even after viewing Claimant's legs he maintained that Class 2 was appropriate on the basis that Claimant had healed ulcers rather than superficial ulcerations as required in Class 3. Therefore, he maintained his position that a 35% scheduled rating was appropriate for each lower extremity.

35. Braden Reiter, M.D. was Claimant's primary treating physician. Respondents took the post-hearing deposition of Dr. Reiter on September 26, 2018. Dr. Reiter explained that he did not give an impairment rating to Claimant on February 12, 2018 on the basis that Claimant did not have any impairment or limitations due to the fractures of his feet and ankle. **Reiter Depo. Pg. 6, ll. 21-25**.

36. Dr. Reiter explained that while there was swelling of Claimant's legs and "excoriations" where Claimant had scratched his legs, this was not something that required any acute treatment. **Reiter Depo. Pg. 7, ll. 5-14**. Dr. Reiter related Claimant's continued swelling to his morbid obesity as well as his venous insufficiency. **Reiter Depo. Pg. 7, ll. 15-25.**

37. Dr. Reiter stated that he did not use Table 52, *Impairment of the Lower Extremity Due to Peripheral Vascular Disease,* of the *AMA Guides* on the basis that he could not relate all of Claimant's peripheral vascular disease to the work injury. **Reiter Depo. Pg. 10, ll. 1-15**.

38. However, as stated below, Dr. Reiter's testimony generally supported the DIME physician's conclusion that an impairment rating was warranted and the functional impairment of Claimant's vascular system and skin. Dr. Reiter's post-hearing deposition testimony included the following:

    - When asked if Mr. Gregory had severe bilateral edema in his legs during the course of treatment and up through the point of MMI, Dr. Reiter conceded "yes, I did see it at times where it was – – I would say it was severe…" **Reiter Depo. Pg. 15, ll. 16-21**.
    - As for whether claimant's edema would fall under Class 2 or class 3, Dr. Reiter testified "I could see how he would give him a class 3 rating… The

good days I saw him, you know Class 2 would have been appropriate. So it's – – it's a hard thing to say.… They kind of fluctuated up and down." **Reiter Depo. Pg. 13, ll. 10-18.**

- Dr. Reiter testified: "In reading the other physicians' evaluations ..., I can see where they would bring up ... the chart with the needing the peripheral vascular disease impairment due to his ongoing swelling and his having had the venous ligations done. So I guess I could say that would probably be something that I would think could be added to this – – to give him impairment" **Reiter Depo. Pg. 16, ll. 11-20.**

39. Dr. Reiter also explained how the vascular injury suffered by Claimant has also resulted in the functional impairment of Claimant's skin. Dr. Reiter testified that Claimant's stasis dermatitis, which Dr. DeVito diagnosed in June of 2017 (due to venous insufficiency) and which was also diagnosed by Dr. Heinz in July of 2017, is a result of the blood not flowing properly through Claimant's arteries. He further explained that this abnormal blood flow causes abnormal pressure which in turn causes Claimant's skin to not function properly and break down. **Ex 2. Pg. 22; Reiter Depo. Pg. 12.** Therefore, the functional impairment of the skin results in ulcers, excoriations, itching, burning, and bleeding, etc.

40. Regarding Claimant's report of "whole body swelling" at hearing and to Dr. Hughes, Dr. Reiter opined that he was not aware of that complaint during his treatment of Claimant. **Reiter Depo. Pg. 14, ll. 1-11.** He also stated that based on his knowledge he did not think venous insufficiency or peripheral vascular disease were consistent with Claimant's reports of whole body swelling. However, he also testified that he is not a vascular specialist. **Reiter Depo. Pg. 14, ll. 12-16; Pg. 10, ll. 19-20.**

41. At hearing Claimant's legs were observed and they were extremely swollen, red, dry, flakey, and covered with scabs. Whether Claimant's legs were "moderately" swollen per Class 2 or "markedly" swollen per Class 3 is a medical determination. After viewing Claimant's legs, the ALJ finds that Dr. Ginsburg's and Dr. Hughes' opinions that Claimant suffered from "marked" edema – in Class 3 – is credible and persuasive and consistent with the medical evidence and what the ALJ observed at hearing.

42. Claimant also credibly testified at hearing that the injury has resulted in the following functional impairments:

    a. Resistance in his legs which makes it difficult to walk.

    b. Swelling in his legs.

    c. Development of open sores on his skin on his legs. Claimant indicated the open sores, when they occurred, would result in drainage that felt like water was rolling out of the sores and down his legs.

    d. Flakiness and itching of his skin.

e. Sores on his skin that would break open and start bleeding, which may be due to, or aggravated by, scratching which was caused by the itching of his skin.

f. Pain in his lower extremities which also makes it difficult to walk very far without stopping.

g. Difficulty with hygiene such as showering.

h. Difficulty getting dressed.

43. Claimant also explained his understanding of how he developed a second skin infection, i.e., cellulitis, over his legs, in March of 2018, due to the condition of his skin and how it ultimately went viral throughout his entire body. **See also Ex. 5. Pg. 26.**

44. The Court finds that Claimant's testimony at hearing was credible, reliable, and consistent with the medical evidence. Furthermore, as found above, Claimant's legs were viewed by the Court at hearing and the Court observed marked and severe edema which is consistent with the provisional impairment rating provided by Dr. Hughes and the ultimate impairment rating provided by Dr. Ginsburg pursuant to Table 52 of the AMA Guides.

45. The Court finds the testimony and opinions of Dr. Hughes and Dr. Ginsburg credible in that they physically examined Claimant, whereas Dr. Sanidas initially performed a records review and determined he could provide an impairment rating based on the extent of Claimant's edema based on the medical records he reviewed and then stood by such rating at hearing, despite his concession that Claimant's legs looked worse than he envisioned.

46. The Court finds credible and persuasive the opinion of the DIME physician, Dr. Ginsburg, and finds that under the AMA Guides, Table 52, *Impairment of the Lower Extremity Due to Peripheral Vascular Disease,* a Class 3 impairment of 65% for each lower extremity is appropriate given the degree of marked edema in Claimant's legs.

47. The ALJ credits Dr. Ginsburg's findings and conclusions regarding the extent of Claimant's impairment which was caused by the industrial accident and rated pursuant to the AMA Guides. As determined by Dr. Ginsburg, and found by the ALJ, the injury to Claimant's right lower extremity resulted in a 65% scheduled impairment rating, which equates to a 26% whole person impairment rating. The injury to Claimant's left lower extremity also resulted in a 65% scheduled impairment rating, which equates to a 26% whole person impairment rating. And, combining the 26% whole person impairment rating for his right lower extremity with the 26% whole person impairment rating for his left lower extremity results in a 45% whole person impairment rating. **Ex. D.**

48. Claimant's crush injury to his legs caused serious and permanent damage and functional impairment to his vascular system. The damage to his vascular system has resulted in marked edema in both lower extremities as well as pain. The injury has also resulted in fluid overload and swelling in areas beyond his

lower extremities. The marked swelling and pain functionally impairs Claimant's ability to walk, work (as described by Dr. Hughes), shower, and get dressed.

49. The damage to his vascular system has also resulted in damage and functional impairment to his skin. The functional impairment of his skin has resulted in his skin turning red, becoming inflamed and flakey, chronic itching, and breaking open and bleeding which then results in scabbing. The functional impairment to his skin has also resulted in the development of skin infections – cellulitis.

50. The ALJ finds Claimant has proven that it is more likely than not that he sustained a permanent impairment that is not contained on the schedule of impairment set forth at Section 8-42-107(2), C.R.S. The ALJ therefore finds Claimant has established that he is entitled to a 45% whole person award based on the impairment rating provided by Dr. Ginsburg.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see

also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Permanent Partial Disability Benefits

Section 8-42-107(1) states in pertinent part:

(a) When an injury results in permanent medical impairment and the employee has an injury or injuries enumerated in the schedule set forth in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (2) of this section.

(b) When an injury results in permanent medical impairment and the employee has an injury or injuries not on the schedule specified in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (8) of this section.

It is Claimant's burden of proof by a preponderance of the evidence to establish both that he suffered a permanent impairment and that the permanent impairment is either contained on the schedule set forth at subsection (2) or not on the schedule specified in subsection (2). Further, it is Claimant's burden to prove by a preponderance of the evidence the extent of the permanent impairment. *See Delaney v. Indus. Claim Appeals Office*, 30 P.3d 691 (Colo.App. 2000); *Morris v. Olson Heating & Plumbing Co.*, W.C. No. 4-980-171-02 (July 6, 2018).

The term "injury" as used in the schedule of disabilities refers to the manifestation in a part or parts of the body which have been impaired or disabled as a result of the industrial accident. *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996) Therefore, when evaluating functional impairment, it is appropriate for an ALJ to look at, not only the alteration of Claimant's abilities by medical means, but also by non-medical means of the impact the injury has had on Claimant's capacity to meet personal, social and occupational demands. *See*, *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). The existence of permanent restrictions imposed by a doctor is some evidence which the ALJ may consider in determining the nature and extent of Claimant's functional impairment. *See, Strauch v. PSL Swedish Healthcare System, supra*. However, an ALJ may or may not find the existence of permanent restrictions to be persuasive when balanced against other evidence concerning Claimant's ability to function.

In addition, skin disorders are ratable under the AMA Guides as functional impairments of a body system and not as an impairment of the portion of the body the impaired skin covers. *See Galvan v. Elitch Gardens Park*, W.C. No. 4-806-495 (I.C.A.O. March 9, 2011) and *Kanyo v. Keebler Co.*, W.C. No. 4-417-093 (I.C.A.O. June 25, 2002); *See also* Chapter 13 of the AMA Guides; and *Serena v. SSC Pueblo*

Belmont Op Co., LLC, W.C. No. 4-922-344-01, (I.C.A.O. December 1, 2015)(ALJ can take judicial notice of the AMA Guides.)

Claimant credibly testified that he did not have any problems with his legs and skin prior to the accident. But, after the accident, Claimant developed swelling and pain in both of his lower extremities, along with periodic ulcers and problems with his skin. Consistent with Dr. Hughes' concern of fluid overload, which the ALJ credits, Claimant also indicated that he felt like his whole body was swelling. Claimant also testified that he experiences flakiness on the skin covering his legs and itching. He also testified that his skin continues to break open, bleed, and develop scabs.

At hearing, Claimant showed his bilateral lower extremities to the ALJ and to Dr. Sanidas who was also present. Claimant's legs were extremely swollen. Moreover, Claimant's skin on his lower extremities was severely impaired. His skin was red, flakey, dry, inflamed, and very irritated. His skin also had numerous scabs, some of which looked like they had recently bled.

In order to show the condition of his legs and skin in court, Claimant had to get up from the witness stand and walk around the witness stand to appear in front of the ALJ. The ALJ was able to observe how Claimant walked due to the vascular insufficiency which has caused problems with his legs, skin, and ability to regulate his bodily fluid as described by Dr. Hughes and Claimant. The ALJ noted that Claimant walked and carried himself in a manner that was functionally impaired and in a manner which extended beyond his lower extremities. In other words, Claimant's vascular insufficiency, which has caused his edema, pain, and fluid overload has impacted Claimant's overall functioning and movement of his entire body and caused more than just an altered gait or limp. While walking, Claimant's overall body movement was functionally limited and altered by pain, swelling, and overall discomfort.

The ALJ also credits Dr. Hughes' opinion as set forth in his report that Claimant's work injury has resulted in functional impairment which prevents Claimant from performing all aspects of driving a truck, such as putting on chains during the winter months and also functionally impairs Claimant's ability to stand or walk for more than 2-hours in an 8-hour workday. The ALJ also credits Claimant's testimony that his work related injury, which has resulted in pain and difficulty in moving his legs, functionally impairs his ability to walk, take a shower, and get dressed.

The ALJ also credits that portion of Dr. Reiter's testimony in which he described how the vascular insufficiency has caused Claimant's skin to become functionally impaired and break down. Dr. Reiter explained how the vascular injury suffered by Claimant has also resulted in the functional impairment of Claimant's skin. Dr. Reiter testified that Claimant's stasis dermatitis, which Dr. DeVito diagnosed in June of 2017 (due to venous insufficiency) and which was also diagnosed by Dr. Heinz in July of 2017, is a result of the blood not flowing through Claimant's arteries properly. He further explained that this abnormal blood flow causes abnormal pressure which in turn causes Claimant's skin to not function properly and break down. Therefore, the functional impairment of Claimant's vascular system and skin results in ulcers, excoriations, itching, burning, and bleeding, etc.

The ALJ also credits Dr. Ginsburg's findings and conclusions regarding the extent of Claimant's impairment which was caused by the industrial accident. As determined by Dr. Ginsburg, and found by the ALJ, the injury to Claimant's right lower extremity resulted in a 65% scheduled impairment rating, which equates to a 26% whole person impairment rating. The injury to Claimant's left lower extremity also resulted in a 65% scheduled impairment rating, which equates to a 26% whole person impairment rating. Combining the 26% whole person impairment rating for his right lower extremity with the 26% whole person impairment rating for his left lower extremity results in a 45% whole person impairment rating.

The ALJ also concludes that based on the totality of the evidence, Claimant has established by a preponderance of the evidence that his functional impairments which were caused by the industrial accident extend beyond the schedule. As found, Claimant's injury caused functional impairment to his vascular system. The damage to his vascular system caused marked and severe edema and chronic pain in his lower extremities as well as additional swelling over his entire body which functionally impaired Claimant's ability to walk, work, and manage his hygiene, such as shower. The damage to his vascular system also resulted in functional impairment to his skin. The vascular injury - venous insufficiency - caused Claimant's skin to break down and caused Claimant to develop skin ulcers, skin infections, and scabs.

Additionally, Claimant's overall presentation and testimony regarding his limitations and functional impairment regarding his ability to walk, shower and get dressed were consistent with the medical records and his physical presentation at hearing, regardless of whether permanent restrictions were imposed by a treating physician.

Therefore, the ALJ concludes Claimant has established by a preponderance of the evidence that he is entitled to a 45% whole person impairment rating due to his industrial accident.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. The Respondent-Insurer shall pay Claimant permanent partial disability benefits based on a 45% whole person impairment rating.
2. The Respondent-Insurer shall pay statutory interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.
3. Any and all issues not determined herein, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That

you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 14, 2018

/s/ *Glen Goldman*

Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he suffered a compensable injury to his right shoulder on February 16, 2018.

II. If Claimant established that he suffered a compensable right shoulder injury, whether he also proved by a preponderance of the evidence entitlement to reasonable, necessary and related medical benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works as an over the road truck driver for Employer. He delivered materials between Denver and Salt Lake City. Claimant testified that on February 16, 2018, while driving to Salt Lake City, he stopped in Evanston, Wyoming to get some fuel and clean his windshield. Claimant was standing on the driver's side running board of the truck holding onto the mirror bracket with his right hand as he proceeded to clean the windshield with his left arm/hand. According to Claimant, the tractor door unexpectedly popped open and knocked him off balance causing him lose his footing on the running board. Claimant testified that he hung from the mirror with his right arm until he was able to regain his balance and close the door. Claimant testified that he experienced immediate pain in the right shoulder and has had constant pain and functional decline in the shoulder since the aforementioned incident. He cannot lift anything overhead and the pain affects the quality of his sleep.

2. Claimant inspected the door latch following the incident in question and noticed that the mechanism which comes out of the body of the truck and wraps around the pin, was closed. Claimant believes that the mechanism on the door failed to lock causing the door to pop open as he was holding/pulling on the mirror to wipe down the windshield with his left hand. Claimant was able to manually manipulate the mechanism to insure that it would lock around the pin so he could close the door and trust that it would stay shut. After he made sure the door was secure and the tractor-trailer was safe to drive, he continued on to Salt Lake City without stopping where he stayed the night. He drove back to Denver the next day.

3. Upon returning to Denver on February 17, 2018, Claimant testified that he verbally notified his on-duty supervisor, Keith Campbell, that he had hurt his shoulder. Claimant also completed a written statement regarding the incident. The written statement is date and time stamped "17FEB22:08", indicating that it was completed February 17 at 10:08 p.m. (Claimant's Exhibit 1, p. 1). It was Claimant's understanding

that Mr. Campbell would put the written statement in the operation manager's mailbox. Claimant testified that he wished to forego medical treatment for a few days to see if his shoulder pain would improve before he filled out any worker's compensation paperwork. He testified that he knew he had four days to complete the paperwork necessary to report his claim When his shoulder pain did not improve over the next few days, Claimant decided to notify his employer regarding his condition and complete the "ABF Freight Injured Employee Statement" on February 20, 2018.

4. Claimant provided the following statement regarding his alleged injury:

> I stopped at the Pilot truck stop in Evanston, Wyoming to get fuel and wash the windshield. When I exited the truck, I secured the door and began fueling. After fueling I climbed up on the running boards so I could dry the windshield where the squeegee wasn't effective. As I got onto the running boards, I used the mirror arms for support. As I began to dry the windshield, the driver's door popped open causing me to lose my footing. I was hanging by the mirror arm. I was able to regain my footing on the running board, but could not secure the door. I climbed down and physically manipulated the door latch to get it to work properly.

5. Upon his formal injury report, Claimant was afforded a list of authorized providers from which to choose to treat his injury. Claimant chose Dr. Frank Polonco as his authorized treating physician. He saw Dr. Polonco for an initial appointment on February 21, 2018.

6. Dr. Polanco obtained a medical history similar to that Claimant provided in his injured employee statement and at hearing. He also completed a physical examination which revealed painful range of motion of the right shoulder. Dr. Polanco diagnosed a right shoulder strain and referred Claimant for physical therapy. Claimant started physical therapy and was seen again by Dr. Polonco on February 23, 2018.

7. During Claimant's February 23, 2018 appointment, x-rays of the right shoulder were obtained. The x-rays demonstrated age related degeneration of the acromioclavicular (AC) joint. It was noted that Claimant had suffered an "acute injury", that maximum medical improvement (MMI) was unknown and Claimant's AC degeneration "may prolong his recovery". Claimant was restricted to no driving or overhead reaching and no lifting over 25 pounds.

8. Claimant returned to Dr. Polanco on March 9, 2018 with complaints of persistent 4/10 sharp and dull pain in the right shoulder and upper arm. Physical examination revealed a positive Hawkins test prompting Dr. Polanco to request an MRI of the right shoulder.

9. After approximately eight physical therapy sessions and prior to the MRI taking place, Claimant's medical treatment was cancelled by the Respondents. When the Claimant called his employer's risk manager to see why his treatment had been

canceled, he was told that his claim was denied and that he needed to use his private health insurance for any further treatment. The Claimant followed up with his general physician, Dr. Dara Lowe (Davita Medical Group, Claimant's Exhibit 8) on March 29, 2018. Dr. Lowe also recommended an MRI.

10. The recommended MRI was completed on April 20, 2018. It revealed a SLAP tear, fluid in the subacromium subdeltoid bursa and mild to moderate degenerative changes of the AC joint. Dr. Lowe referred the Claimant to an orthopedic surgeon, Dr. Kam. The Claimant testified that Dr. Kam recommended surgery to repair his shoulder. Claimant testified that he never underwent the surgery because his health insurance was also cancelled by Employer. Based upon the evidence presented, the ALJ finds Claimant's treatment with Dr. Polanco to be reasonable, necessary and a direct consequence of his right shoulder injury.

11. The last day Claimant worked for Employer was February 17, 2018. He has not returned to work as a truck driver for any other company since that time. He does have a second job as a freight agent where he solicits freight from customers and brokers it out to carriers. It is a sedentary job and he does no lifting to fulfill his duties as part of this job.

12. Although he testified that he has never had any prior medical treatment on his right shoulder, Claimant disclosed that he suffered a prior injury to the right shoulder in a motor vehicle accident approximately two weeks for the incident giving rise to the injury claimed in this case. According to Claimant, he rested his right arm and the pain associated with this prior injury subsided and he was left without limitation.

13. Claimant also admitted to three prior workers' compensation injuries, including an injury to his right knee, his neck and a remote injury in 1997 involving his right leg.

14. Cindy Barr testified as the lead resolution administrator for Employer. She has held this position for the past nine years. Ms. Barr investigated Claimant's reported injury, testifying that she had concerns about how the claim was reported. She took a recorded statement from Claimant during which she testified that Claimant was uncooperative and not forthcoming with regard to his injury. She testified that Claimant became angry and combative with her after she shut the recorder off. Claimant disputes Ms. Barr's characterization of the verbal exchange after the recording ended. He testified that he simply refused to answer questions about his medical condition because he is not a doctor and could not provide the information Ms. Barr was requesting.

15. Kurt Johnson testified as the acting operations manager for Employer at the time of Claimant's alleged industrial injury. He has 34 years of experience in the trucking industry. Although Mr. Johnson was living in Denver at the time of Claimant's alleged injury, he has since taken another position with Employer and has moved out of state. Mr. Johnson testified that he had given Claimant a warning with regards to his driving due to his involvement in a preventable jackknife accident in Wyoming on

January 21, 2018[1]. He testified that Mr. McArdle became upset and irate with him when he told him that the accident was preventable and that he would be receiving a warning letter. Mr. Johnson testified that Claimant said the company could "screw themselves," that he knew how to "fix this" by threatening to no longer drive in winter conditions. Mr. Johnson indicated that if the Claimant testified under oath to the Court that he was not angry or upset that would be "a lie." He also testified that he is not aware of any other instances where a door on a truck has popped open unless the door wasn't closed all the way. Mr. Johnson testified that Keith Campbell was a direct supervisor of Mr. McArdle at the time of the incident.

16. Keith Campbell testified as an operation supervisor for Employer. He was Mr. McArdle's direct supervisor at the time of the February 16, 2018 incident. He testified that he instructed Claimant to complete workers' compensation forms after Claimant told him about his injury. Mr. Campbell testified he provided Claimant with the necessary forms for completion but that he did not fill out worker's compensation paperwork as instructed. Claimant denies that he was given instructions to complete workers' compensation forms.

17. Mr. Campbell testified that he was not aware that Claimant ever provided any written statement to Employer nor was he aware that Claimant completed the ABF Freight Injured Employee Statement. He was also unaware that an ABF Freight Incident Investigation form was filled out and signed by the line haul driver Ops Supervisor (Claimant's Exhibit 1, Bates Stamp 03). Clearly, the date stamp on this document shows that the Claimant reported the incident to his supervisor on February 17, 2018 at 2100 hours (9:00 p.m.)

18. Dr. Polonco testified by deposition on August 28, 2018. Dr. Polonco is an expert in the field of occupational medicine and has worked in the field for over twenty-seven years. Dr. Polonco opined that the changes noted on the MRI of the right shoulder were suggestive on an acute injury. He testified that he originally thought that the Claimant sustained only a strain to his right shoulder but when his condition did not improve with physical therapy, he referred him for an MRI. He further opined that the mechanism of injury (MOI) as described by the Claimant was consistent with the findings on the MRI because "typically a labral tear is caused by an abduction type of an injury to the shoulder, similar to a throwing type motion. So hanging from a door would be a similar type mechanism of injury stressing the labrum." He explained that the fluid in the subacromium subdeltoid bursa indicates that there was an active bursitis or inflammatory process going on at the time of the MRI. The presence of fluid is suggestive of an acute and ongoing process. (Deposition of Dr. Polonco p. 9-10, ll. 10-2). In response to questioning regarding the likelihood that Claimant's labral tear was preexisting, Dr. Polanco testified while it was possible that Claimant's tear pre-existed the February 16, 2018 incident, by the history provided, Claimant was asymptomatic and not functionally limited prior to the February 16, 2018 incident. In assuming the tear to be preexisting, Dr. Polanco reiterated that the MOI, as asserted, "would have placed a strain on the labrum and would have aggravated a preexisting tear".

[1] This is the incident giving rise to Claimant's prior right shoulder injury as referenced in ¶12 above.

19. Dr. Polonco reviewed the surveillance of the Claimant which was taken on July 22, 2018. Dr. Polonco testified that even though it appeared the Claimant may have lifted over 25 pounds (with the assistance of another individual) in the video, the surveillance does not change his opinion with regards to causation of the Claimant's right shoulder injury. He explained that the 25 pound lifting restriction was merely a precautionary measure to prevent further injury and the actual weight of the bags the Claimant was seen lifting and/or manipulating is not exceptionally relevant because lifting from the ground to the waist position doesn't place an unusual load on the labrum. The weight restriction is more relevant to lifting above the waist and overhead. (Depo. Dr. Polonco, p. 31).

20. The ALJ has reviewed the surveillance video tape carefully. The video reveals that Claimant to be engaged in material handling with the assistance of another person to lift bags of top soil and a soil amendment to/from a loading pallet into the back of a pickup truck. It also depicts Claimant maneuvering these bags, albeit with difficulty, by himself. Finally, the video demonstrates Claimant to be engaged in lawn care involving the amendment and re-seeding of patches of his yard with soil and seed from a partially filled 5-gallon bucket. While the ALJ agrees with Dr. Polanco that Claimant likely exceeded his 25 pound lifting restriction by lifting and lowering the bags of soil/amendment onto the loading pallet and from the pallet into his truck, the ALJ finds no evidence that Claimant engaged in any lifting overhead. Indeed, all lifting appears to be below shoulder level. Based upon the testimony of Dr. Polanco, the ALJ finds the surveillance video tape of limited evidentiary value, especially as it relates to causation and Claimant's need for treatment.

21. Based upon the evidence presented, the ALJ is persuaded that Claimant's right shoulder injury was probably precipitated by his hanging from his right arm by the support bracket attaching the mirror to the truck door as described in the injured employee statement completed for Employer on February 20, 2018. While the MOI in this case is unusual, the ALJ finds it plausible and infers from the evidence presented, that although Claimant assumed he had secured the door, it had malfunctioned permitting it to pop open as he was wiping down the windshield of his truck. Accordingly, the ALJ finds that Claimant has met his burden of proof to establish by a preponderance of the evidence that he sustained an injury to his right shoulder arising out of and in the course of his employment as an over the road driver for Employer.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the

burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

D. The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968). When considered in its totality and in conjunction with Claimant's testimony, the ALJ concludes that the testimony of Dr. Polanco is credible and more persuasive than Respondents alternative theory that Claimant filed a retaliatory claim for being reprimanded after being involved in a preventable accident in order to obtain medical benefits for a pre-existing degenerative SLAP tear unrelated to any industrial cause.

Compensability and Medical Benefits

E. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately

caused by an “injury” arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff’d Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

F. The phrases "arising out of” and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). In this case, there is little question that Claimant’s alleged injuries occurred within the time and place limits of his employment and during an activity connected to his job-related functions as a truck driver for Employer. Rather, the question presented is whether Claimant’s alleged injury arose out of his employment.

G. The existence of a causal relationship between the Claimant’s right shoulder injury and his duties at ABF is a question of fact. *F.R. Orr Construction v. Rinta, 717 P.2d 965 (Colo. App. 1985).* The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact which the ALJ must determine based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). The evidence presented supports a causal relationship between Claimant’s work duties, his right shoulder condition and his need for treatment. Indeed, the persuasive evidence demonstrates that Claimant probably injured his right shoulder after hanging by his right arm from the mirror bracket when the driver’s side door of his truck unexpectedly popped while he was cleaning the windshield of his semi-tractor. Respondent’s alternate theory, supported primarily by testimony of Ms. Barr and Mr. Johnson, suggesting that Claimant filed a retaliatory claim against Employer for being reprimanded for causing a preventable accident two weeks earlier is not persuasive. Rather, the ALJ credits the opinions of Dr. Polanco to conclude that the changes noted on MRI of the right shoulder are suggestive of an acute injury or an aggravation of an asymptomatic pre-existing condition, possibly a pre-existing, yet at the time of the February 16, 2018 incident, asymptomatic tear occurring two weeks earlier during Claimant’s prior accident in Wyoming. Consequently, this ALJ concludes that the Claimant has proven by a preponderance of the evidence that his right shoulder injury is compensable.

H. Once a claimant has established the compensable nature of his/her work

injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his right shoulder. The evidence presented persuades the ALJ that this compensable "injury" is the proximate cause of Claimant's need for medical treatment, including his treatment with Dr. Polanco.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that he sustained a compensable injury to his right shoulder on February 16, 2018.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation Medical Benefits Fee Schedule, to cure and relieve Claimant from the effects of her left shoulder injury, including, but not limited to the care provided by Dr. Polanco.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

What is Claimant's average weekly wage (AWW) and should Claimant's AWW be increased to $900.00 per week.

FINDINGS OF FACT

1. Claimant suffered admitted work injuries on May 30, 2018, after falling from the bed of a truck to the ground while attempting to move a mattress for the Employer.

2. Respondents filed a General Admission of Liability on June 22, 2018, and admitted for an average weekly wage of $240.00. This amount was based on a daily rate of $120.00 for two days of employment.

3. Claimant testified at hearing that he responded to a Craig's List advertisement for the position of mattress delivery helper and contacted Tye Tennyson who hired him over the telephone. Claimant admitted he was hired at $120.00 per day.

4. It is undisputed that a Craig's List advertisement was published by the Employer's hiring manager, Tye Tennyson. In bold letters it states "We Need help NOW Mattress Delivery $120.00 flat Rate Cash (Denver)." In the body of the advertisement it stated: "$120 for the day Cash at the end of day". In the corner of the advertisement it stated: "compensation: Position pays helper $120.00 at end of day cash."

5. After being hired, Claimant showed up and performed the job duties of a delivery helper and was paid cash at the end of the day in the amount of $120.00. The following day, he showed up again to help deliver mattresses at which time he suffered his work related injury.

6. At hearing, Claimant was confused and inconsistent about the date of his work injury. After reviewing the medical records from Lutheran Hospital, he agreed that he was injured on May 30, 2018.

7. Claimant testified he had a subsequent conversation with Mr. Tennyson where he was told he was going to earn $150.00 per day on a full time basis.

8. Ronald Smith testified at hearing and is a close, personal friend of Claimant who took over Claimant's duties as a delivery helper after Claimant's work injury. Mr. Smith remains an employee of the Employer since May of 2018 and now makes $150.00 per day and works up to six days per week. He is now on the payroll of the Employer and

receives paychecks every two weeks. Mr. Smith agreed that initially he was paid $120.00 per day in cash. Subsequently, he underwent a background check and was hired on a full time basis by Mr. Tennyson. Mr. Smith agreed that he was not present when Mr. Tennyson hired Claimant.

9. Mr. Tennyson explained that employees are either hired as delivery helpers or drivers and can be hired on a temporary or permanent basis. Temporary employees are paid in cash on a daily basis. Permanent employees are paid by paycheck every two weeks. While permanent drivers can earn $150.00 per day, temporary delivery helpers only make $120.00 per day, and are typically only used for one or two days depending on the work load. Some temporary employees are hired as permanent employees after there has been sufficient time to evaluate their performance and they pass a background check. Mr. Tennyson testified the majority of temporary employees are used for only one or two days, and Claimant was only going to be used for two days.

10. Mr. Tennyson agreed he had a subsequent conversation with Claimant about the possibility of becoming a permanent employee and explained that a background check would need to be conducted first. They discussed how much permanent employees are paid. Additionally, Mr. Tennyson credibly testified that he had not determined to hire Claimant on a full time basis at that point because he only had one day to evaluate him and no background check had been conducted yet. However, Mr. Tennyson did conduct a background check of Mr. Smith and appreciated his work performance. Mr. Tennyson credibly explained that is why Mr. Smith was subsequently hired as a permanent employee, making up to $150.00 per day as a driver.

11. Steven Willingham, a supervisor for the Employer, credibly testified that he was present and was able to listen to the initial phone conversation when Mr. Tennyson hired Claimant. Claimant was hired at $120.00 per day as a temporary delivery helper and was only going to be used for two days. Claimant was not hired as a permanent employee and there had been no decision to make Claimant a permanent employee by the time Claimant suffered his injury on the second day of work.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado, sections 8-40-101, et seq., C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. See Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefit by a preponderance of the evidence. See Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

2. The injured worker has the burden of proof by a preponderance of the evidence to establish entitlement to benefits. Sections 8-43-201 and 8-43-210, C.R.S. *See City of*

Boulder v. Streeb, 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office*, 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office*, 24 P.3d 29 (Colo. App. 2000); *Kieckhafer v. Indus. Claim Appeals Office,* 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979); *People v. M.A*., 104 P. 3d 273 (Colo. App. 2004). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

Average Weekly Wage

3. Section 8-42-102(1) C.R.S., governs how Claimant's AWW should be calculated. Where the employee is rendering service on a per diem basis, the weekly wage shall be determined by multiplying the daily wage by the number of days and fractions of days in the week during which the employee under a contract of hire was working at the time of the injury or would have worked if the injury had not intervened. Section 8-42-102(1)(c), C.R.S. Additionally, under Section 8-42-102(3), the ALJ has discretion to determine AWW by any method that will "fairly" calculate the claimant's earnings. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity as a result of the industrial injury. *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993).

4. In this case, Claimant failed to demonstrate that he would have earned more than $120.00 per diem for two days of work as a delivery helper. While it is conceivable that Claimant was under the impression he was going to be hired on a permanent basis earning up to $150.00 as a delivery driver, the credible testimony of Mr. Tennyson and Mr. Willingham support the conclusion that at the time of Claimant's injury, Claimant was only hired on a temporary basis for $120.00 per diem for two days. It is concluded that there was no agreement between the parties or determination that Claimant would be hired on a permanent basis at the time of his injury.

5. Claimant attempts to rely on the testimony of Mr. Smith to support his allegations of increased AWW. However, the testimony of Mr. Smith actually supports the position of Respondents. The Employer had the opportunity to evaluate Mr. Smith's performance and Mr. Smith passed a background check, which explains why he subsequently made $150.00 per pay as a permanent driver. He only made $120.00 per diem as a temporary employee prior to going through this hiring process.

6. It is concluded that Claimant was hired as a temporary delivery helper for no more than two days, earning $120.00 per diem. The Respondents' average weekly wage calculation of $240.00 based on $120.00 per diem for two days of work, therefore, is consistent with the statutory formulation of Section 8-42-102(1)(c), C.R.S. and is a fair approximation of Claimant's actual wage loss and diminished earning capacity as a delivery helper for the Employer.

ORDER

Claimant has failed to demonstrate by a preponderance of the evidence that his admitted average weekly wage of $240.00 should be increased.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Denver, CO 80203

ISSUES

I. Whether Claimant proved by a preponderance of the evidence the total right hip arthroplasty recommended by Dr. Dayton is reasonably necessary medical treatment related to the September 16, 2016 work injury.

FINDINGS OF FACT

1. Claimant is a 64 year old male who worked for Employer as a program manager.

2. Claimant has a documented prior medical history significant for chronic low back pain requiring continuous use of narcotic pain medications since approximately 2000, a three level lumbar fusion in May 2013, post fusion continued right sacroiliac pain and some right anterior thigh pain, and right hip trochanteric bursitis. Claimant has been a cigarette smoker for the majority of his life.

3. Claimant suffered an admitted right inguinal hernia at work on September 16, 2016. While lifting a desk weighing in excess of 200 pounds, Claimant attempted to kick cable cords with his right foot and immediately felt pain in his right groin area. Claimant testified he initially believed he pulled his groin but by the following day developed a noticeable bulge in his right groin area.

4. On September 19, 2016, Claimant reported the injury to Employer and was sent to Employer's designated provider at Salida Family Medicine. Claimant presented with complaints of right inguinal pain and bulging. Stephanie Earhart, M.D. did not document specific right hip complaints or exam findings. She assessed Claimant with a right inguinal hernia and referred him for a surgical evaluation with Karen Johnson, M.D. Claimant saw Dr. Johnson the same day, who also identified a right inguinal hernia requiring surgical repair. Dr. Johnson did not document right hip area complaints or exam findings.

5. On September 20, 2016, Claimant was seen by Susan Estes, N.P. at UCHealth for a follow-up of chronic low back pain and bilateral anterior thigh pain. Prior to the September 16, 2016 work injury, Claimant treated with NP Estes for pain management. NP Estes thought disc degeneration at L3-4 could be the source of Claimant's midline back pain that radiated outward down to the anterior and medial aspect of his thighs. On examination, NP Estes noted a negative FABER test as well as normal and non-painful hip range of motion.

6. Between October 3, 2016 and December 13, 2016, Claimant was evaluated by Mark Keller, M.D., Heather Eden Carmichael, M.D. and twice by Dr. Earhart. No specific right hip complaints or hip area exam findings were documented during this time period.

7. On January 10, 2017, Claimant underwent a right inguinal hernia repair performed by Maria Albuja Cruz, M.D.

8. Dr. Earhart performed a post-surgery evaluation on January 30, 2017. Claimant complained that since the surgery he continued to experience pain in the hernia region along with shooting pain into his scrotum on the right side. No specific right hip area complaints or exam findings were documented. Dr. Earhart was concerned about the possibility that some of Claimant's right inguinal/groin pain might be referred radiculopathy from his spine, noting Claimant may have sustained a new back injury as a result of the September 16, 2016 incident.

9. Between March 2, 2017 and June 26, 2017 Claimant underwent work-up and treatment at UCHealth for his groin and scrotum region, including a scrotal ultrasound, the administration of a somatic nerve injection for ilioinguinal neuralgia, a right ilioinguinal nerve block, and then the administration of a Transversus Abdominis Plane (TAP) block. This treatment did not completely relieve Claimant's ongoing groin area pain. During this same period, Claimant also underwent a lumbar MRI and received two sets of bilateral sacroiliac injections for his chronic low back pain. These injections also failed to fully relieve Claimant's groin pain. Positive FABER test results were noted by NP Estes on April 18, 2017 and Jennie Johnson, PA-C on May 8, 2017.

10. Claimant's pain medicine provider, Rachael S. Rzasa Lynn, M.D., subsequently recommended Claimant undergo an MRI of his right hip to rule out any injury to the hip resulting from the September 16, 2016 work injury.

11. On July 19, 2017, Dr. Earhart reevaluated Claimant, noting Claimant's chronic right inguinal/groin pain had not resolved, none of the injections had helped, and his surgeon suggested removing the hernia surgery mesh though Claimant was reluctant to pursue that procedure. Dr. Earhart further noted Claimant's pain management physician recommended a right hip MRI. Dr. Earhart did not identify any specific right hip issues on exam on that date. She noted that if pain management did not help, Claimant may need to return to his surgeon and have the hernia mesh removed.

12. On July 27, 2017, Claimant's pain management providers at UCHealth evaluated Claimant for issues that included coronary artery disease, hypertension, chronic pain, and right groin area pain. They did not document any specific right hip area complaints or findings. On July 28, 2017, Claimant called UCHealth checking on the authorization of the hip MRI and requesting a referral to a general surgeon for his hernia. The nurse at UCHealth explained to Claimant that Dr. Rzasa Lynn wanted to make sure there was nothing wrong with his hip first.

13. On August 4, 2017, Claimant underwent a right hip MRI that revealed an anterior superior labral tear, mild rectus femoris tendinosis and grade 2 cartilage fissuring of the acetabulum and femoral head.

14. On August 22, 2017, David Orgel, M.D., Insurer's physician advisor, reviewed a request that Claimant be referred to a hip orthopedist. Dr. Orgel noted Claimant's right hip MRI showed a "cam type morphology and a labral tear." Dr. Orgel opined Claimant had been appropriately treated for the inguinal hernia, reached maximum medical improvement (MMI), and additional treatment for his pre-existing chronic pain should be denied as non-work-related.

15. On August 24, 2017, Dr. Earhart reevaluated and opined Claimant's right hip labral tear was the cause of Claimant's continuous pain. She gave the following assessment: articular cartilage disorder of the pelvis/hip/femur and joint derangement of the pelvis/hip. Dr. Earhart agreed Claimant should see an orthopedic specialist for his right hip labral tear.

16. On September 7, 2017, Claimant presented to Amy Harlow, M.D. and Michael Rex Dayton, M.D., orthopedic surgeons at UCHealth. In conjunction with this evaluation, right hip x-rays were obtained, which revealed minimal osteoarthritis of the bilateral hips without significant joint space narrowing. Dr. Harlow noted she personally reviewed and interpreted Claimant's x-rays and MRI. She opined Claimant had right hip osteoarthritis as well as a possible right hip labral tear. Dr. Harlow wrote, "Given his extensive history of trying to identify the source of his pain, we would like to confirm that a surgical intervention would address the underlying problem." Drs. Harlow and Dayton recommended Claimant undergo a hip diagnostic injection and a total hip replacement if the injection completely relieved Claimant's pain, noting solely performing a labral repair may offer only minimal relief and may actually worsen Claimant's arthritis.

17. On September 11, 2017, Dr. Earhart noted Claimant's right hip range of motion was significantly decreased due to pain in the right groin area. She agreed Claimant should see Dr. Dayton and undergo a hip injection. Dr. Earhart opined that Claimant's symptoms were the result of the September 16, 2017 work injury stating,

> [Claimant's] right inguinal/groin pain was non-existent prior to his date of injury when he lifted a desk; his new inguinal hernia was obvious and was repaired, but the right inguinal/groin pain has persisted. [Claimant] is admittedly a chronic pain/low back pain patient, but it is entirely feasible and likely that he sustained the right hip labral tear at the same time as the hernia, but since was not visible it was unknown. It would cause pain in the same area as he is describing ongoing pain. I thus am still advising and requesting authorization for him to see a hip surgeon for evaluation, and to have surgery IF the hip specialist advises. If the hip surgeon does not believe that surgery is indicated/warranted, then I would advise that he is at MMI and would need to see a level 2 work comp provider for a permanent rating.

18. Claimant returned to Dr. Dayton for a follow-up visit on October 19, 2017. Dr. Dayton opined Claimant has right hip osteoarthritis with an associated labral tear and recommended Claimant consider another steroid injection or proceed with a total hip

replacement to address both the labral tear and osteoarthritis. Regarding the work-related nature of Claimant's condition Dr. Dayton stated, "[i]t is unclear how much of his hip pain and arthritis is related to his injury at work, but it is clear that contributed to and accelerated the degenerative process."

19. On October 31, 2017, Kathy McCranie, M.D. performed an Independent Medical Evaluation (IME) at the request of Respondents, reviewing medical records and physically examining Claimant. Claimant reported feeling a strain in his right groin when moving a 300-400 pound desk approximately six inches and kicking cables underneath the desk with his right foot. Claimant complained of deep groin pain radiating to the right hip. On exam, Patrick's maneuver and straight leg raise were negative. Hip rotation increased pain while axial compression did not. Referring to the MTG, Dr. McCranie noted labral tears may accompany impingement or result from high energy trauma, or overuse. She noted Claimant did not sustain a high energy trauma or overuse injury and, as such, Claimant's mechanism of injury did not cause or aggravate his osteoarthritis and associated labral tear. Dr. McCranie concluded Claimant solely sustained a right inguinal hernia as a result of the September 16, 2016 work incident and had reached maximum medical improvement (MMI) with 5% whole person impairment.

20. Claimant continued to see Dr. Earhart, who continued to opine Claimant's right hip condition was related to the September 16, 2016 work incident. On November 2, 2017 Dr. Earhart wrote,

> Given [Claimant] had no groin pain prior to lifting the desk, it makes sense that he injured the hip (right labral tear) at the time of lifting the desk, even though we only recognized the right inguinal hernia at that time. I believe the hip should be repaired or replaced (whatever the orthopedic surgeon advises) under work comp b/c of the definite onset of pain at time of lifting the desk.

21. On November 21, 2017, Dr. Earhart remarked that Claimant has a "new labral tear (from lifting desk) but also has underlying osteoarthritis which may preclude just repair of the labral tear. Of course the arthritis was pre-existing, but was ASYMPTOMATIC until the acute labral tear caused pain which is ongoing. (Emphasis not added). She further stated,

> I have seen prior labral tears of the hip with less trauma than might be expected, and they can be difficult to truly diagnose.
>
> ***
>
> I do not believe he is at MMI given that I believe the labral tear does date to his work comp injury date, and coincided with the right inguinal hernia, which masked discovery of the right hip labral tear. In addition, patient's admitted chronic pain/lumbar spine issues have complicated this case, but his right groin pain did not predate the date of injury.

22. On December 21, 2017, Dr. Earhart responded to a letter from Insurer within which Insurer supplied her with Dr. McCranie's IME report, and requested that she provide updated opinions. Dr. Earhart reiterated her opinion that Claimant's right hip labral tear was work-related. She agreed with Dr. McCranie that most labral tears are caused by higher force/impact, but noted that is not always the case, stating, "…certainly the force from lifting the desk would be enough to cause a larger tear with acute onset of pain- this matches his presentation." Dr. Earhart concluded Claimant reached MMI for the right inguinal hernia injury as of May 11, 2017, but was not at MMI for his right groin pain, which she opined "simultaneously occurred with the inguinal hernia but was not recognized until recent months as the cause of his ongoing pain." She wrote,

> I believe we cannot ignore or deny the fact that he had NO right inguinal pain prior to lifting the desk, and his persistent pain definitely can be attributed to and accounted for by a right labral tear, which he does have Claimant's pain medications he took for chronic back pain issues increased after the injury. (Emphasis not added).

23. Dr. Earhart advised that Claimant continue follow-up with an orthopedic surgeon and possibly see a second orthopedist hip specialist regarding the relatedness of the labral tear, noting patients do not always fit classic mechanisms of injury or the MTG.

24. Claimant returned to Dr. Dayton for a follow-up evaluation on February 1, 2018. Noting that Claimant failed nearly 12 months of conservative treatment, Dr. Dayton opined that Claimant's only option for both pain control and functional restoration was a total hip joint replacement.

25. Albert Hattem, M.D. reviewed Dr. Dayton's right hip joint replacement recommendation at the request of Insurer. In his report dated February 7, 2018, Dr. Hattem agreed with Dr. McCranie's opinion that Claimant's right hip condition was not causally related to the work injury. In support of this opinion, Dr. Hattem noted that lifting a desk was not a mechanism consistent with causing a labral tear, Claimant's labral tear was likely a degenerative issue, Claimant's failure to report any hip pain for more than ten months post injury did not support a causal relationship, and that it was even unclear to Dr. Dayton how much of Claimant's hip pain was the result of arthritis versus the work injury.

26. On June 27, 2018, Dr. McCranie performed an additional medical record review of medical records dating back to April 2013 noting complaints of chronic low back pain, bilateral anterior thigh pain, and trochanteric bursitis. She concluded Claimant's prior hip and thigh symptoms were likely the same pain Claimant described to her as part of his current symptomatology.

27. On July 16, 2018, Dr. Earhart continued to opine Claimant was not at MMI for the September 16, 2016 work injury due to his right hip labral tear. She again explained that Claimant's right hip labral tear was not initially identified due to the "overlap of

symptoms." Dr. Earhart opined that Claimant continued to need the right hip surgery. She also noted the risk of Claimant undergoing surgery if he continued smoking.

28. Dr. McCranie testified at hearing as a Level II expert in physical medicine and rehabilitation and pain management. Dr. McCranie continued to opine that Claimant's right hip labral tear was not caused or aggravated by the September 16, 2016 desk lifting incident. Dr. McCranie testified that labral tears can be degenerative or traumatic, and degenerative tears are more common in patients who are older. She stated traumatic labral tears are more frequently seen in younger patients, usually associated with contact sports or high impact or high velocity injuries such as motor vehicle accidents or falls that impact the hip such that there is a subluxation or dislocation of the hip. Dr. McCranie testified that Claimant's mechanism of injury was not consistent with a traumatic labral tear. Her opinion was based on her review of the MTG and medical literature, as well as Claimant having hip pathology prior to his date of injury, which she indicated suggested a symptomatic unrecognized degenerative hip condition. Dr. McCranie indicated that probably the most significant record supporting her causation opinion was the September 20, 2016 report from Ms. Estes, generated just four days after the work injury, which identified Claimant as having full, pain-free hip range of motion. Dr. McCranie explained that an acute labral tear would result in immediate and acute symptomatology including reduced and very painful range of motion, and that it is not medically probable Claimant would have full, pain free range of motion on exam four days after an acute labral tear.

29. Claimant testified at hearing that after his hernia surgery he continued to report pain in the area of his right groin and hip. Claimant acknowledged that, prior to the work injury, he had some pre-existing pain in his anterior right thigh as well as pre-existing SI pain that radiated to his low back, buttocks and legs bilaterally. Claimant stated, however, that he had no prior treatment to his hip, and that the pain he suffered in his right hip area as of September 16, 2016 was different from the pain that he suffered before the work injury. Claimant testified he has not yet scheduled the recommended hip surgery because he believes it should be covered under workers' compensation insurance.

30. Claimant's testimony is found credible and persuasive.

31. The ALJ finds the opinions of Claimant's authorized treating physicians Drs. Earhart and Dayton, as supported by the medical records and Claimant's testimony, more credible and persuasive than the opinions and/or testimony of Drs. McCranie, Hattem and Orgel.

32. Claimant proved it is more probable than not the total right hip arthroplasty recommended by Dr. Dayton is causally related to the September 16, 2016 work injury, and is reasonably necessary to cure and relieve Claimant from the effects of the work injury.

33. Evidence and inferences contrary to these findings were not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally*

Parker v. Iowa Tanklines, Inc., W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the MTG because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the MTG is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the MTG such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008); Section 8-43-201(3), C.R.S.

While a right hip injury was not identified until 10 months post-work injury, the preponderant evidence persuades the ALJ the September 16, 2016 work incident caused Claimant's current need for hip surgery. Although Claimant had some pre-existing hip symptoms, Claimant credibly testified the pain he experienced after the work injury is different than his pre-existing hip and thigh pain. Following the September 16, 2016 work injury, Claimant initially and continuously reported pain in his right groin area. A right inguinal hernia was readily identified at Claimant's initial evaluation and thought to be the primary cause of Claimant's pain, thus becoming the focus of further evaluation and treatment. However, despite undergoing multiple modalities of treatment, Claimant continues to experience pain that has been present since the date of injury.

A right hip MRI provided objective evidence of a labral tear. Dr. McCranie and Dr. Hattem opine that the mechanism of injury would not cause a labral tear or otherwise aggravate Claimant's pre-existing degenerative condition. The ALJ credits Dr. Earhart's opinion that, while most labral tears are the result of high impact/force, that is not always the case, and was not the case for Claimant. Dr. Earhart credibly opined that Claimant sustained an acute labral tear as a result of lifting the desk on September 16, 2018, and that the tear caused Claimant's pre-existing arthritis to become symptomatic. Dr. Earhart further credibly opined that a labral tear would cause pain in the same area Claimant is experiencing ongoing pain, and that the labral tear was initially overlooked due to an overlap of symptoms. Although Dr. Dayton opined he could not discern "how much" of Claimant's hip pain and arthritis is related to the work injury, he specifically stated it was "clear" the work injury "contributed to and accelerated the degenerative process." That the September 20, 2016 exam was negative for specific hip complaints and findings is not dispositive proof Claimant did not sustain a hip injury on September 16, 2016, in light of the other credible and persuasive evidence.

The medical records clearly document Claimant's continued right hip symptoms. Claimant has undergone extensive treatment to no avail. Dr. Earhart and Dr. Dayton credibly and persuasively opined Claimant requires a total hip joint replacement, which Dr. Dayton concluded was the only option to control Claimant's pain and restore function. Based on the totality of the evidence, Claimant has met his burden to prove that the total right hip arthroplasty recommended by Dr. Dayton is related to the September 16, 2016 work injury and is reasonably necessary to cure and relieve Claimant from the effects of the injury.

ORDER

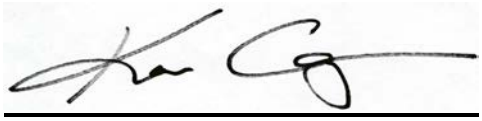
It is therefore ordered that:

1. The total right hip arthroplasty recommended by Dr. Dayton is reasonable, necessary and related to Claimant's September 16, 2016 work injury. Insurer shall authorize the proposed total right hip arthroplasty recommended by Dr. Dayton.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 16, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Have Respondents overcome, by clear and convincing evidence, the DIME opinion of Dr. Higginbotham on Claimant's Whole Person Impairment Rating?

II. If the DIME opinion has been overcome, what is the correct Whole Person Impairment Rating?

III. Have Respondents shown, by a preponderance of the evidence, that Claimant is responsible for a Safety Rule violation under C.R.S. 8-42-112(1)(a), thus reducing his applicable Workers Compensation benefits by 50%?

IV. Assuming such Safety Rule violation is shown, are Respondents nonetheless barred from asserting this defense, by failure to assert it when they filed their Final Admission of Liability?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant suffered admitted work related injuries when he rolled the cement mixer he was operating for employer on September 11, 2017. (Ex. A). At the time of the accident Claimant was treated for a laceration over his eye and complaints of wrist pain. (Ex. 4, p. 21).

2. Claimant's accident was described in Dr. Higginbotham's DIME report as follows, "the force of the rollover caused him to be thrown against the passenger door and window. He denies loss of consciousness. He hit his head against the cabin, causing an abrasion on the top of his head and a laceration above his left eye." (Ex. H, p. 55).

3. Claimant's initial visit to CCOM occurred on the date of the incident and he was seen by Steven Byrne, PA-C. (Ex. 4, p. 21). Little detail was provided in the First Report of Injury besides the diagnoses of "laceration left eyelid" and "laceration left hand".

4. On September 13, 2017, two days later, Claimant reported to the emergency room complaining of neck pain, although his range of motion in the neck was described as "normal". Imaging was taken which showed no acute abnormalities and conservative care was recommended. Intake reports from the ER note that at the time of the rollover, Claimant was unrestrained. (Ex. D, pp. 15-17).

5. Upon his return to CCOM on September 18, 2017, Claimant was reporting that he was "feeling much better but still having considerable amount discomfort through the left cervical paraspinal and posterior shoulder girdle." (Ex. 4, p. 22).

6. Claimant's initial visit with his ATP, Dr. Neubauer was September 25, 2017 (Ex. 4, pp. 26-29). At this visit, it was noted that he reported lower back and left leg pain. Claimant's neck paraspinals were tender to palpation, with pain in all planes upon range of motion. The paraspinals were tender in his lower and upper back. Physical therapy continued to be recommended.

7. Medical records indicate that Claimant improved from his diagnosed strain injuries. By October 23, 2017, Claimant was reporting 2-3 of 10 pain, reported by him as "mild", and consisting of mostly aching/stiffness/tightness. (Ex. F, p. 31).

8. In the interim, Respondents filed a General Admission of Liability ("GAL") on October 18, 2017 admitting for medical benefits, but denying Temporary Total Disability ("TTD") benefits as "*claimant was responsible for his own termination."* It is unclear from the record if Claimant was terminated for failure to wear his seat belt, or simply from rolling a full cement truck.

9. Claimant also underwent a short course of physical therapy between September 20 and October 16, 2017. (Ex. E, Ex. 6). Claimant reported having cervical pain, pain in both shoulders, and lower back pain. *Id.* As of his physical therapy visit on October 6, 2017, Claimant was still reporting a high level of pain with end range cervical motion and difficulty sleeping due to the neck pain. Claimant also reported that he continued to have low back pain and stiffness. *Id.* at 79.

10. Claimant returned to Dr. Neubauer on October 9, 2017, still complaining of ongoing neck and back pain. (Ex. 4, p. 30). It was noted that Claimant was having pain with activity and movement of his back and his neck, and the back was specifically described in this note as being *tight. (emphasis added).* Physical exam documented pain in the neck with all planes of motion. Examination of the back documented tenderness to palpation in the low back and buttocks and decreased/painful forward flexion, extension, rotation, and lateral flexion; the mid-back symptoms were no longer noted.

11. Dr. Neubauer recommended continued therapy, heat to the back and the neck, and also referred Claimant to Dr. Chad Abercrombie for chiropractic care. *Id.* at 32. Prior to his first appointment with Dr. Abercrombie, Claimant had another visit at CCOM with Dr. Neubauer on October 23, 2017 that documented ongoing complaints of back and neck pain that was described as "*aching/stiffness/tightness"* and that he was having *pain/stiffness* with activity and movement of the back and the neck. *Id.* at 35. (emphasis added).

12. Chiropractic care began on October 26, 2017, with Dr. Chad Abercrombie. At the initial visit, he reported overall improvement, but still had "some lower back, neck and left shoulder pain." (Ex. G, p. 50, Ex. 7, pp. 86-88). "Moderately" reduced range of motion was noted in his lumbar and cervical regions. A medical history noting a 2014 lower back lifting injury which "stabilized" and a 1993 motor

vehicle accident with residual left shoulder injuries is noted on the initial chiropractic intake. *Id.*

13. On November 29, 2017, Dr. Neubauer documented that Claimant was still reporting 3 out of 10 neck and low back pain and that "He continues to have *stiffness* with motion of the neck and low back…." (Ex. F, p. 40). When Dr. Neubauer placed Claimant at MMI on January 4, 2018, it was again noted that Claimant was reporting low back pain and tightness. *Id.* at 54. His closing comments indicated that Claimant still had neck and low back tightness, but he released Claimant at MMI with no impairment and instruction to finish his chiropractic care. *Id.* at 56. Dr. Abercrombie's final note from January 24, 2018 indicates that Claimant was greatly improved, but that he continued to have *minimal objective residual* problems as noted in his report. (Ex. 7, p. 89) (emphasis added).

14. By December 14, 2017, Claimant was reporting pain of 1 out of 10, reported as "mild" and intermittent, and noted increased pain in his lower back when lifting over 100 pounds. At the same time, Claimant reported he was not talking pain medications and was sleeping ok. (Ex. E, p. 45). Though Claimant by this time had been terminated by Employer, he was released to work without restrictions on December 14, 2017. (Ex. E. p. 47.)

15. On January 4, 2018, after completing a course of physical therapy, and continued conservative care, Claimant was released at MMI by Dr. Jay Neubauer at CCOM. Dr. Neubauer's report indicates that Claimant was reporting slight tightness in his neck and back which Claimant described as "infrequent," and therefore released Claimant at MMI with no impairment rating, but with a recommendation to continue chiropractic care under maintenance treatment. (Ex. C. pp. 12-14).

16. After his release at MMI, Claimant's chiropractor, Dr. Abercrombie released Claimant on January 24, 2018. (Ex. G. p. 53). At this time Dr. Abercrombie noted:

> Overall, he has responded very well to treatment noting very minimal symptoms at this time. He had some lower back stiffness this past week of unknown cause however denies pain, and the stiffness resolved. Otherwise, he denies neck or mid back symptoms. He is performing at this time all activities of daily living without difficulty.
>
> Examination on today's visit reveals normal spinal/paraspinal symmetry. Range of motion is full and all cervical, thoracic and lumbar planes and *without symptoms*. . . .

Id, (emphasis added).

17. In accordance with Dr. Neubauer's release at MMI, Respondents submitted a **Final** Admission of Liability, admitting for 0% impairment on January 25, 2018.

The Final Admission indicates that Claimant received $11,565.48 in TTD from September 12, 2017, through December 13, 2017, the date he was released to work without restrictions. (Ex. C). This FAL made no mention of any alleged violation of a safety rule. For reasons unclear from the record, this FAL appears to be a reversal of Respondents' prior position in the GAL, wherein all TTD had been denied due to his termination for cause.

18. The Final Admission of Liability admitted to a general award of maintenance care and the attached MMI report from Claimant's ATP indicated the claim related diagnoses were: 1.) laceration of the left eyelid; 2.) laceration of the left wrist; 3.) strain of muscle, fascia, and tendon at the neck; 4.) strain of muscle and tendon at the back wall of the thorax; 5.) strain of muscle, fascia, and tendon of the lower back, and; 6) sprain of interphalangeal joint of right middle finger. (Ex. 3, p. 14).

19. Claimant promptly objected and sought a DIME. The DIME exam occurred with Dr. Thomas Higginbotham on April 24, 2018. (Ex. H). At the time of the DIME, Claimant reported that he had been employed with Safeco, which contracted with Comcast placing underground digital cable. This full-time work required him to use a shovel and pick frequently. (Ex. H, p. 55). Dr. Higginbotham cites Claimant's subjective symptom checklist, which includes, "Clicking and popping and pain of the jaw; asthma with shortness of breath; muscle cramps; joint swelling, pain, and stiffness; depression and nervousness." (Ex. H, p. 59). Claimant also reported, "nausea, blurred vision, tingling of the hands and feet; swelling of the feet; trouble falling asleep and staying asleep; and mood swings;" in addition to *stiffness* in his lower back and a sharp pull in the left side of his neck and back when he increases his physical activity." *Id.* at p. 60.

20. Claimant's lack of a use of seatbelt was discussed with Dr. Higginbotham:

> He was the driver of a large cement truck, not wearing seatbelt and shoulder harness. He relates that the seatbelt mechanism was not functional. He had the intent of reporting the malfunction the morning he had his incident. However, he got busy with getting his vehicle prepped and then was assigned a delivery route. He was pressed to get his work down [done] and forgot about recording the seatbelt mechanism malfunction.

21. Dr. Higginbotham provided impairment ratings of 7% for the cervical spine resulting from 3% range of motion deficit, combined with 4% from Table 53IIB. He also assigned 10% for the lumbar spine, noting 5% from Table 53IIB and 5% range of motion deficit. These two ratings combined for a 16% impairment rating of the whole person. (Ex. H, pp. 62-63). This impairment rating was made in agreement the ATP, Dr. Neubauer, that Claimant had reached MMI on January 4, 2018. (Ex. H. p. 62).

22. Dr. Higginbotham's narrative of his physical exam makes several references to *tenderness* in the lumbar and cervical regions. At no point in his physical examination does Dr. Higginbotham refer to any symptom which would constitute *rigidity.* No observed stiffness, trigger points, spasm are noted anywhere in the

report. On Page 8 of his report (Ex. 9, p. 97) he states "There is <u>no</u> *muscle tone asymmetry or spasm*." It is unclear to the ALJ where the lack of spasm is noted to be *absent.*

23. Dr. Higginbotham further noted: "A TENS unit would be appropriate to *decrease discomfort and decrease spasm and assist with range of motion* as needed. (Ex. 8, p. 99) (emphasis added). At no point in his DIME exam does he indicate what *spasm* he is now referring to, its location, or duration.

24. In response to Dr. Higginbotham's report, on June 13, 2018, Respondents filed an Application for Hearing endorsing the issues of "Overcoming Division IME; and Failure to Utilize Safety Device/Violation of a Safety Rule; Causation; and Set-offs." (Ex. 1, p. 1).

25. In advance of the hearing, Respondents obtained a Medical Record Review from Dr. Kathy Fine McCranie. (Ex. 9). Respondents also obtained and disclosed a video demonstrating the functionality of the vehicle's seat-belt. (Ex. K).

26. Claimant also obtained an IME with Dr. Jack Rook. In his report dated September 3, 2018, Dr. Rook states that upon rolling his cement truck, Claimant fell 6 feet from the driver's seat to the passenger door, rotating as he fell and striking the back side of the passenger side door. Though Claimant denied loss of consciousness throughout the treatment records and his DIME with Dr. Higginbotham, Claimant reported to Dr. Rook that he probably did have a loss of consciousness. (Ex. 10, p. 111).

27. Dr. Rook's report also contains an opinion that Claimant's post-MMI job at Safeco was "more physically demanding than his cement truck driving job." (Ex. 10, p. 116). However, he further noted that although Claimant was able to lift 130 pounds at MMI, he was able to deadlift over 450 pounds prior to the accident, indicating a severe drop in functionality from his baseline. *Id*

28. On physical examination of the neck, Dr. Rook found moderate to severe tenderness associated with *increased muscle tone* on palpation of the left sternocleidomastoid muscle. *Id.* at 117. Evaluation of the lower back documented *increased muscle tone* with moderate tenderness of the left-sided lower paralumbar musculature overlying the L4, L5, and S1 facet joints. Back pain was increased when elicited with spinal extension and bending to the left. The same maneuver was negative on the right.

29. Dr. Rook also addressed the final chiropractic report from Dr. Abercrombie from January 24, 2018. He explained how Dr. Abercrombie's report documented increased muscle tone in the same muscles that Dr. Rook had identified eight months later. Dr. Abercrombie also found problems with the left-sided facet joints based on provocative testing at that visit. Dr. Rook identified those same findings on his examination. (Ex. 10, p. 118). "These constitute *objective findings* and therefore Dr. Higginbotham was correct in providing the patient with a table 53 rating." Dr. Rook disagreed with Dr. McCranie regarding her opinion on a lack of

objective findings, and her opinion was just that: a mere difference of opinion with the DIME physician.

30. Dr. McCranie testified at hearing. Dr. McCranie explained that Dr. Higginbotham's DIME report did not comply with the AMA Guides and Level II training, which require "objective" findings in order to provide an impairment rating. "Specifically, 'Impairment Ratings are given when a specific diagnosis and objective pathology is identified.'" (Ex. 9, p. 109, citing the Rating Tips found at Desk Aid 11, https://www.colorado.gov/pacific/cdle/workers-compensation-document-library-desk-aids-0).

31. In explaining her position, Dr. McCranie noted that the Claimant's records were devoid of any objective findings of pathology, and only reflected Claimant's *subjective* complaints of pain and occasional stiffness.

32. In noting a lack of objective support for Claimant's impairment rating, Dr. McCranie found that Claimant's sole diagnoses, which were echoed by Dr. Higginbotham, were muscular strains. She opined that, by their nature, muscle strains were temporary. (Ex. 9 p. 110).

33. After her medical records in this matter, Dr. McCranie testified at hearing that the records demonstrated what should be expected from diagnosed muscular strains, with a progression of conservative care to a release at MMI, but without any residual range of motion deficits. The lack of residual range of motion deficits are echoed in the January 4, 2018, MMI report of Dr. Neubauer, finding full range of motion in the back and noting *"The condition has resolved,"* (Ex. C, pp. 12-14) (emphasis added). Further the post-MMI release report of Dr. Abercrombie indicated transient low back stiffness "of unknown cause," with a complete resolution of symptoms and full range of motion in the lumbar, thoracic and cervical spines. (Ex. G, p. 53). Dr. McCranie opined that findings of mild tenderness and tightness on palpation are not objective findings that would support a rating under the AMA Guides or Level II training.

34. Dr. McCranie concluded her testimony by noting that available medical records, including Dr. Higginbotham's report, were devoid of objective evidence to support an impairment rating in accordance with the AMA guides and Level II training. Dr. McCranie clarified that Claimant's subjective complaints of stiffness and pain, coupled with the diagnoses of muscular strain injuries were insufficient to support a Table 53 rating.

35. Dr. McCranie also found that if Claimant was not entitled to a Table 53 rating, a range of motion rating would be inapplicable. [The ALJ notes that this statement is correctly supported by Desk Aid 11's tips on Spinal Rating, "Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established. (References: Spine section of the *AMA Guides, 3rd Edition (rev.)*; Level II Accreditation Curriculum, Spine and Pelvis Impairment)."]

36. Jason Gordon also testified at hearing. Mr. Gordon is the Human Resources and Payroll manager for Transit Mix Concrete. Mr. Gordon testified that the safety policies found at Exhibits I and J, contain numerous requirements concerning the consistent use of seat-belts. These requirements and safety procedures are consistently reinforced in regular driver training. Mr. Gordon noted that seatbelt use is specifically required in p. 109, and p. 111 of Exhibit J.

37. Mr. Gordon noted that if a seatbelt was not working at the time of pre-trip inspection, a vehicle would be deemed unsafe to operate and a driver would not be expected to utilize the vehicle.

38. Mr. Gordon further noted that Claimant never reported a seatbelt malfunction. Mr. Gordon indicated that drivers become very familiar with their vehicles through regular use. Though a pre-trip inspection has many small points, a driver should be able to complete the pre-trip inspection to ensure their vehicle was safe.

39. Respondents also presented the testimony of Curt Young. Mr. Young is a maintenance technician with Transit Mix. Mr. Young explained that Respondents' Exhibit K (video) demonstrates his opinion that the seatbelt was functional at the time of his inspection-months after the accident. This video was taken in June of 2018. Considerable effort was initially required to move this belt from its retracted position. Mr. Young indicated that no repairs had been conducted on the vehicle since Claimant's workplace accident.

40. Mr. Young testified that he was directed to assess the functionality of the seatbelt at the time he made the video, and that no one had touched the truck prior to that time.

41. Mr. Young noted that the air-supported driver's seat had lost all of its air, resulting in a fully lowered position. Mr. Young noted that because the pneumatic seat had dropped completely, the seatbelt was fully tensioned. Also, Mr. Young testified that the seatbelt was completely retracted and in the locked position when he inspected it. This, he opined, indicated that it was in a retracted, non-used, position when the accident occurred.

42. Mr. Young clarified that upon lifting the seat to relieve tension on the seatbelt, he was able to free the seatbelt from the locked position, and thus demonstrated that the seatbelt was functional. Mr. Young concluded that the seatbelt was fully functional at the time of the incident.

43. Claimant testified on his own behalf. Claimant testified that he had incurred multiple small cuts and bruises. He described his whole body as being sore after the accident. Claimant testified that he continues to experience neck and lower back symptoms that he attributes to the motor vehicle accident. Regarding the neck, Claimant continues to experience tightness and a pulling sensation in his neck when he attempts to turn to the right, indicating both ongoing tightness and pain.

44. Claimant reported ongoing tightness in his lower back throughout the day, and reported discomfort with prolonged sitting. Claimant testified that he continued to

have pain in his neck and back to this day. He has not sustained any new injuries to his neck or back since his work accident. Claimant testified that he never had problems with his neck or back prior to this incident. Moreover, although Claimant was limited to lifting up to 130 pounds, that remains functionally limiting to him. as he used to work out daily and was able to deadlift 455 pounds and squat 450 pounds.

45. At hearing, Claimant testified that he found the seatbelt "difficult to put on." Claimant admitted that he was not wearing a seatbelt at the time of the incident. Claimant stated that he noticed the seatbelt was more difficult to pull, requiring more force than usual, on Friday afternoon before the Monday accident. He assumed it would be easier to have it repaired the following Monday.

46. Before Claimant exited the yard that morning, he was already running late by about ten to fifteen minutes due to complications at the plant and having to wash excess concrete mix off his truck. Claimant then called dispatch to let them know he was running late. He testified that he wrestled with the seatbelt to put it on before leaving the facility. He then drove to his destination and stopped about five to eight miles from the destination to stop and check the consistency of the "slump"[1] to make sure it was exactly what the customer had ordered, which is required by the Employer. Claimant had to exit the vehicle to do this. If the slump is not correct, the purchaser is likely to reject it, which could result in a write up for the employee. Claimant checked the slump and it was still the proper consistency. He then, in the interest of time, proceeded towards his destination, without taking the time to struggle with the seat belt further. It was Claimant's intention to report the malfunctioning seatbelt after he returned to the yard from this visit.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case are not interpreted liberally in favor of either party. Section 8-43-201, C.R.S. (2016).

B. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. Pursuant to Section 8-43-215, C.R.S., the decision of the ALJ contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has discretion to make credibility determinations, draw plausible inferences from the record, and resolve conflicts in the evidence. *Davison v. Indus. Claim Apps. Office*, 84

P.3d 1023, 1025 (Colo. 2004). This decision does not address every item contained in the record, and incredible or implausible testimony or unpersuasive inferences that have not been specifically addressed have been implicitly rejected. *Magnetic Eng'ng, Inc. v. Indus. Claim Apps. Office*, 5 P.3d 385, 389 (Colo. App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. Colorado Jury Instructions, Civil, 3:16 (2018). The ALJ, as fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441 P.2d 21 (Colo. 1968); see also *Dow Chemical Co. v. Industrial Claim Appeals Office*, 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). To summarize, the ALJ finds the witnesses, including Claimant, to have testified sincerely and credibly at the hearing.

Overcoming a DIME Opinion, Generally

D. A DIME physician's findings of causation, MMI and whole person impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning impairment is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

E. Stated differently, to overcome a DIME physician's opinion regarding impairment, the party challenging the DIME must demonstrate that the physicians' determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.* Proof of a deviation from the rating protocols provides some evidence from which the ALJ may infer that the DIME physician's rating has been overcome*. Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003).

F. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME

physician properly applied the AMA Guides. *See Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

Dr. Higginbotham's Application of Table 53IIB

G. Desk Aid 11, paragraph 1 states, "Impairment ratings are given when a specific diagnosis and objective pathology is identified. *(Reference: C.R.S. §8-42-107(8)(c)*. Further, when addressing Spinal Ratings, Desk Aid 11 states:

> In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established.

H. The medical records contain sufficient references to pain-*and rigidity*-from the date of the accident, up through Claimant's final visit with his chiropractor on January 24, 2018-a period of just over 4 months. The DIME exam occurred just over 7 months after the accident. All Dr. Higginbotham was required to do to support a Table 53IIB impairment rating was medically document some kind of *rigidity* in his physical exam of Claimant for his cervical and lumbar regions. *This he <u>did not</u> do*. At most, he noted Claimant's self-reported complaints of stiffness. Without further explanation or sufficient documentation of objective pathology, he then combined Claimant's range of motion values (which the ALJ finds have not been overcome) with the additional ratings from Table 53IIB. *This he <u>cannot</u> do.* Pain for 6 months is not enough to qualify, even when combined with 6 months of *self-reported* rigidity.

I. The ALJ concurs with Dr. McCranie in this case that there is simply no basis to apply Table 53IIB with the objective evidence available. There is not 6 months of medically documented *objective* pathology-expressed as *rigidity*-here. While Dr. Rook purports to have noted some objective evidence of rigidity at his IME months later, this was not known to Dr. Higginbotham at his DIME exam, since this report didn't yet exist. There is no evidence that Dr. Higginbotham supplemented his findings based upon what Dr. Rook may have observed. The ALJ finds, by clear and convincing evidence, that Dr. Higginbotham's DIME opinion has been overcome by Respondents, due to his improvident application of Table 53IIB to Claimant.

J. After the ALJ determines that the DIME physician's opinion has been overcome with clear and convincing evidence, the question of the Claimant's correct medical impairment rating then becomes a question of fact for the ALJ. The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols. Therefore, once the ALJ determines that the DIME's opinion has been overcome in any respect, the ALJ is free to calculate the Claimant's

impairment rating based upon the preponderance of the evidence. *Garlets v. Memorial Hospital,* W.C. No. 4-336-566 (September 5, 2001). In this case, as the reports and testimony of Dr. Abercrombie, Dr. McCranie, and Dr. Neubauer, constitute sufficient evidence. As the record is devoid of objective and persuasive findings sufficient to support an impairment rating, the ALJ accepts the 0% rating previously provided in accordance with the AMA Guides as explained herein.

Claimant's Willful Violation of Safety Rule

K. Section 8-42-112(1)(a), C.R.S. provides as follows:

> (1) The compensation provided for in articles 40 to 47 of this title shall be reduced fifty percent:
>
> (a) Where injury is caused by the willful failure of the employee to use safety devices provided by the employer

L. Whether the Respondents proved the Claimant's failure to use a safety device was a proximate cause of the injury is one of fact for determination by the ALJ. *Tatum-Reese Dev.Corp. v. Indus. Comm'n*, , 490 P.2d 94 (1971). Concurrence of an injury in conjunction with an alleged cause permits, but does not require, an inference of causation. See *Saikh v. Colo. Spgs. Transp.*, W.C. No 4-968-013-02 (ICAP Oct, 24, 2016).

M. Claimant has admitted that he was not wearing a seatbelt at the time of the accident. While the ALJ finds Mr. Young to be sincere and credible in his analysis of the seat belt operation at the time of he examined the wreckage, it is not necessary to decide if the seat belt was "fully operational" right after Claimant got back in after his "slump check", or if it required considerable effort to put it back on. The ALJ is prepared to find, by a preponderance of the evidence, that Claimant felt pressure to make his delivery, but that he also didn't try hard enough to belt in. If it could not be put on at all, all Claimant had to do was call dispatch, report the issue, and await instructions. The onus then would have fallen directly on Respondents to decide what to do next: Order him to drive on to his customer without a belt on, drive it back to the shop without a belt on, or sit and wait for a mechanic while his load of cement hardens- all bad choices, but not Claimant's to make. Claimant's choices were to either wrestle the seatbelt on, or call headquarters. He did neither.

N. Claimant argues that he had to follow two directives that are in direct conflict with one another, to wit: "Always wear your seat belt" vs. "*Do everything you can* to be on time for your first delivery." The ALJ is not persuaded that the latter is to be taken literally, at the expense of the former. To conclude otherwise would justify speeding, running red lights, and for that matter, skipping the "slump check" for quality, in order to "do everything you can". A more reasoned interpretation of the rule is simply to 'waste no time unnecessarily'.

O. Respondents have provided substantial evidence that they have, and consistently enforce the safety rules requiring the use of seatbelts by their drivers as noted in Exhibits I and J, and the testimony of Jason Gordon. Claimant's failure to wear his seatbelt at the time of the incident, despite wearing it earlier in the day, coupled with other cited testimony indicates that Claimant *willfully* violated an explicit and enforced safety rule in violation of §8-42-112(1)(a), and the ALJ so finds by a preponderance of the evidence.

P. Records in evidence, including the report of Dr. Higginbotham and Rook, indicate that Claimant was injured when he fell 6 feet or was thrown from his driving position to the passenger side door, landing on his left side. It is reasonable to infer from the records that the extent of Claimant's injuries to his head, neck, back and wrist was the direct result of his willful failure to wear his seatbelt. By a preponderance of the evidence, the ALJ finds that the extent and nature of Claimant's injuries were due to his lack of being belted in correctly.

Respondents' Waiver of the Safety Rule Provision, by Omitting it on the FAL

Q. The ALJ has made Conclusions of Law K through P in the event that a waiver to litigate the Safety Rule Violation is ultimately deemed not to have occurred. However, Claimant's contention deserves a full examination. Pursuant to § 8-43-203(2)(b)(II)(A):

> An admission of liability for final payment of compensation must include a statement that this is the final admission by the workers' compensation insurance carrier in the case, that the claimant may contest this admission if the claimant feels entitled to more compensation, to whom the claimant should provide written objection, and notice to the claimant that the case will be automatically closed as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on *any disputed issues that are ripe for hearing*, including the selection of an independent medical examiner pursuant to section 8-42-107.2 if an independent medical examination has not already been conducted. If an independent medical examination is requested pursuant to section 8-42-107.2, the claimant is not required to file a request for hearing on disputed issues that are ripe for hearing until the division's independent medical examination process is terminated for any reason. Any issue for which a hearing or an application for a hearing is pending at the time that the final admission of liability is filed shall proceed to the hearing without the need for the applicant to refile an application for hearing on the issue. (emphasis added).

R. According to this statute, the filing of a Final Admission of Liability results in *closure* of the claim if the Claimant does not object and either file for a DIME, or request a hearing on issues *ripe for hearing at the time of the filing of the final admission*. At the time Respondents filed their final admission of liability, there was no assertion of a safety rule violation. By filing a Final Admission of Liability, Respondents were not disputing whether Claimant violated a safety rule. For clarification *the ALJ finds herein that the*

safety rule violation was in fact, ripe for adjudication at the time of the FAL, as the term 'ripeness' is defined by *Jose Aguilera, WC 4-553-571 (2004)*:

> We held the term "ripe for hearing" refers to a disputed issue concerning which there is no legal impediment to immediate adjudication. Thus, the statutory reference to "ripeness" recognizes that although a party may be able to present a "legitimate factual dispute" concerning some aspect of the FAL, the law itself may impose a barrier to adjudication of the dispute pending the completion of a legal or procedural process. (emphasis added).

S. There were no *legal impediments* to "checking the box" for Safety Rule Violations at the time Respondents filed their FAL. A DIME was not pending at the time. Perhaps not unreasonably, Respondents wanted to await the potential DIME results to see if the safety rule violation would be worth pursuing. If so, they could have checked the box, then withdrawn it later if that were appropriate. Respondents certainly had no compunction about denying all TTD in the GAL, then reinstating it at the FAL. Things change. The ALJ finds that this safely rule violation issue did not suddenly become "ripe" after the FAL was filed, merely because the financial calculus had shifted once the DIME results came back. This issue, if Respondents wanted to assert it, was *ripe* at the time the FAL was filed.

T. Respondents cite *Arenas v. ICAO, 8 P. 3d 538 (Colo. App. 2000)* in support of their argument that a 50% intoxication penalty was made retroactive to the date the Claimant first received benefits, despite this not being listed in the GAL. By analogy, the safely rule penalty should apply similarly herein. The ALJ does not concur. The filing of a *GAL*, as in *Arenas*, does not have the same closure mechanism that a *FAL* does, as discussed above. Thus, despite the policy considerations of deterring employee misconduct as discussed in *Arenas,* this reasoning does not extend to this case where the defense, however meritorious, was omitted from the FAL.

U. Additionally, the ALJ finds that the equitable relief of *waiver* of Respondents' right to assert a safety rule violation also applies. Waiver is the intentional relinquishment of a known right and may either be established through a writing abandoning such right, or engaging in conduct which manifests an intent to relinquish a known right. It is likely that Respondents were well aware of Claimant's safety-rule violation, as he was reportedly terminated for cause on Respondents' initial GAL. When Respondents filed their FAL, this constituted a writing abandoning the safety rule violation defense. Had Claimant not objected and challenged MMI and the impairment rating, the claim would have closed on the final admission. At the time of the FAL, it remains possible that Claimant might not have asked for the DIME at all, had he known that this safety rule issue could then be added at the 11th hour. If so, Claimant relied to his detriment upon the FAL. Since Respondents had not asserted a safety rule violation at that time, they waived their known right to assert this defense.

V. The ALJ concludes that, despite the existence of a facts which support a safety rule violation, the failure of Respondents to cite it in their Final Admission of Liability constituted a waiver to asserting it, and they are barred from doing so now.

ORDER

It is therefore Ordered that:

1. The DIME report of Dr. Higginbotham has been overcome. Claimant's Impairment Rating of the Whole Person is 0%.

2. Respondents are barred from asserting the 50% penalty for Safety Rule Violation. No such penalty may be assessed against Claimant.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-069-177-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on September 5, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 9/5/18, Courtroom 3, beginning at 1:30 PM, and ending at 5:00 PM).

Claimant's Exhibits 1 through 13 (hereinafter "Claimant's Ex." followed by a page number) were admitted into evidence, without objection. Respondents' Exhibits A through I (hereinafter "Respondents' Ex." followed by a page number) were admitted into evidence, without objection.

At the conclusion of the hearing, the record was left open for the taking of, and filing a written transcript of the evidentiary deposition of Dr. Ryan Probasco, D.C. The deposition was taken on October 9, 2018, and a written transcript thereof was filed on October 29, 2018, at which time the ALJ took the matter under advisement. Respondents and the Claimant filed timely post hearing briefs. The matter was deemed ready for decision on October 29, 2018.

ISSUES

The issues to be determined by this decision concern whether or not the Claimant sustained compensable injury, arising out of the course and scope of his employment, on January 15, 2018, when he was hit by an automobile; if compensable, additional issues concern medical benefits; average weekly wage (AWW); temporary total disability (TTD) benefits; and, temporary partial disability (TPD) benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence on all issues,

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the time of the Claimant's injury, he worked as a roll-off driver for the Employer.

2. The Claimant began work on the date of the injury at the Employer's facilities as a roll-off driver at 5:00 AM on January 15, 2018 (Respondent's Ex. D at p. 9).

3. During the performance of his regular duties for the Employer, the Claimant was injured on January 15, 2018, after being hit by a car while crossing an intersection (Claimant's Ex. 1, p. 1).

4. At the site of the accident on January 15, 2018, driving conditions were poor. There was ice on the roads, traffic at the intersection was heavy, and it was snowing (Respondent's Ex. B, p.6; and, Claimant's Ex. 3, p. 6).

Compensability/The Incident

5. Shortly after the Claimant began work, he began driving his truck toward a job site (Respondent's Ex. D, p. 9).

6. The Claimant witnessed another driver hit the "crosswalk" at the intersection of Dillon Road and Highway 287 (Respondent's Ex. D, p. 9).

7. The Claimant then pulled his vehicle over, exited the vehicle, and crossed the road to check on the safety of the other driver (Respondent's Ex. D, p. 9; Claimant's Ex. 4, p. 7). At this time, the other driver indicated she was "ok" (Respondent's Ex. D, p. 9; Respondent's Ex. H, p. 19).

8. The Claimant then noticed another vehicle heading toward him (Respondent's Ex. D, p. 9; Claimant's Ex. 4, p. 7). The Claimant began running away from the vehicle and was hit by the vehicle (Respondent's Ex. D, p. 9; Claimant's Ex. 4, p. 7). The Claimant was subsequently taken to Good Samaritan Hospital and treated for injuries (Respondent's Ex. E, p. 11; Claimant's Ex. 4, p. 8).

Employer's "Good Samaritan" Policy

9. The Employer's "Employee Handbook," under the section entitled "Purpose," states that "honoring our commitments provides our stakeholders peace of mind . . . . This creates a safe and rewarding environment for our employees while **protecting the health and welfare of the communities we serve.**" (emphasis supplied) [Claimant's Ex. 6, p. 44]

10. The Employer's "Employee Handbook," under a subsection entitled "Safety," states "[w]e strive to assure complete safety of our employees, our customers, **and the public** (emphasis supplied) in all of our operations. Protection from accident or injury is paramount in all we do" (Claimant's Ex. 6, p. 44).

11. The Employer's "Employee Handbook," under a section entitled "health and safety," states " [Employer's] # 1 Operating Value, and first priority, is the safety of our employees, customers, and **others in the communities we serve**" (emphasis supplied) [Claimant's Ex. 6, p. 66)].

12. The Employer's "Employee Handbook," under the section entitled "Employees Who Drive on Company Business," states that there is an affirmative duty to stop a company vehicle "after an accident" (Claimant's Ex. 6, p. 67). The policy does not specify "an accident" involving a company vehicle. The ALJ infers and finds that the

only reasonable meaning of “stopping after an accident” is any accident involving another vehicle whether or not the employee (Claimant) was directly involved in the accident. Such a reading is consistent with the Employer’s community mindedness and what the ALJ labels as its “Good Samaritan” Policy.

13. The Employer's "Internet Brochure," entitled “[Employer’s] Culture Matters," includes numerous statements that indicate a focus on "safety" and "community" (Claimant's Ex. 7, pp. 96-115).

Course and Scope of Employment

14. Although the principal defensive argument of the Respondents was that the Claimant’s “Good Samaritan” actions of crossing an icy and busy intersection to help a motorist in distress were unsafe and removed him from the “course and scope of employment,” the Respondents argument in this regard is misplaced. Respondents never designated “safety violation” as an issue.

15. The Respondents’ supervisory witnesses testified that the Claimant’s actions were unsafe as far as they were concerned but they conceded that the Claimant’s actions amounted to a judgment call on his part.

16. The ALJ finds that the Claimant’s actions in helping a distressed motorist were in furtherance of his Employer’s “Good Samaritan” policy and, thus, were within the course and scope of his employment.

17. The ALJ finds that the Claimant sustained a work-related injury, during the course and scope of his employment, thus, he sustained a compensable injury on January 15, 2018, when he was hit by a vehicle on January 15, 2018, while attempting to help a distressed motorist in furtherance of his Employer’s “Good Samaritan” policy.

Medical Benefits, Temporary Total (TTD) and Temporary Partial (TPD) Benefits

18. After reporting the accident to his Employer, the Employer made no timely medical referrals.

19. The Claimant was taken to Good Samaritan Hospital[1] emergency room (ER) immediately after the accident occurred on January 15, 2018 (Respondent's Ex. D, p. 9; Claimant’s Ex. 8, p. 116)). At the Good Samaritan Hospital, the Claimant was examined by Travis James Guthrie, M.D. at 7:05 AM (Respondent's Ex. E; Claimant's Ex. 8). Dr. Guthrie gave the Claimant an X-Ray and CT Scan (Respondent's

[1] The name of the medical facility is fortuitous in light of the fact that Claimant was injured when acting as a “Good Samaritan” in furtherance of his Employer’s policies.

Ex. E). The Claimant was diagnosed with a strain of the lumbar region (Respondent's Ex. E, p. 14; Claimant's Ex. 8, p. 122). He was prescribed Valium, Colace, and Norco (Claimant's Ex. 8, p. 123). The ALJ infers and finds that Claimant's visit to the Good Samaritan Hospital was emergency care.

20. Subsequently, the Claimant saw Dr. Ryan K. Probasco, D.C. as his continuing chiropractic treatment provider. Dr. Probasco saw the Claimant on January 19, 2018 (Claimant's Ex. 9, p. 134). Dr. Probasco became the Claimant's authorized treating provider (ATP). Dr. Probasco recommended that the Claimant visit him for chiropractic treatment "3 times a week for 4 weeks" (Claimant's Ex. 9 at 136). The Claimant continued with chiropractic treatment until July 30, 2018 (Claimant's Ex. 9, p. 203). Dr. Probasco was not Level 1 Accredited at the time of the Claimant's visit (Probasco Depo., p. 8). Dr. Probasco cleared the Claimant to return to work "without restrictions" on March 1, 2018 (Respondent's Ex. G, p. 18). Dr. Probasco made no referrals.

21. The Claimant was examined by Jennifer Horsley, D.O. of New West Physicians on February 14, 2018 (Respondent's Ex. F, p. 15; Claimant's Ex. 10, p. 205). Dr. Dr. Horsley concluded that the Claimant still had residual hip and back pain from the accident and should continue to see his chiropractor (Respondent's Ex. F, p. 15; Claimant's Ex. 10, p. 205). Dr. Horsley referred the Claimant back to Dr. Ryan Probasco, D.C.

22. The Claimant was examined by Ann K. Smith-Rudnick, M.D. at "Injury Rehabilitation Specialists" on February 27, 2018 (Claimant's Ex. 12, p. 216). Dr. Smith Rudnick determined that the Claimant had a "cervical, thoracic and lumbar sprain/strain," "left lower rib and right hip injuries," "right hip sprain/strain," and "adjustment disorder due to accident, injuries and out-of-work status" (Claimant's Ex. 12, p. 216). The Claimant was instructed not to return to work during this evaluation and to attend physical therapy (PT) (Claimant's Ex. 12, p. 216).

23. The Claimant was examined by Tara Luke, N.P. (Nurse Practitioner) at "Injury Rehabilitation Specialists" on March 12, 208 (Claimant's Ex. 12, p. 218). Luke determined that Claimant was cleared to return to work at that time (Claimant's Ex. 13, p. 224).

24. The Claimant had a "follow-up visit" with Dr. Smith-Rudnick on April 26, 2018 (Claimant's Ex. 12, p. 219). Dr. Smith-Rudnick was of the opinion that most of the Claimant's injuries were resolved at the time, though she recommended that the Claimant see a neuropsychologist regarding his cognitive deficiencies (Claimant's Ex. 12, p. 219; Claimant's Ex. 13, p. 225).

25. Claimant was examined by Alexander Feldman, M.D. on July 26, 2018 (Claimant's Ex. 11) on referral from Dr. Smith-Rudnick (Claimant's Ex. 11, p. 206).

Dr. Feldman concluded that Claimant suffered a concussion and "mild cognitive impairment" related to the accident. (Claimant's Ex. 11 at 208).

26. The physicians described in Findings Nos.22 through 26 hereinabove were neither authorized nor were they in the chain of authorized referrals.

27. The ALJ finds that the Claimant suffered work-related injuries as a result of the January 15, 2018 and these injuries required medical treatment. The ALJ further finds that all of the medical treatment reflected in the evidence is causally related to the January 15, 2018 accident and it has been reasonably necessary to cure and relieve the effects of those injuries.

Average Weekly Wage (AWW)

28. From January 9, 2017 until January 7, 2018, Claimant earned a total of $72,544.77 gross (Claimant's Ex. 5) This results in an AWW of $1, 395.09 per week, or a daily total of $199.30. This results in a temporary total disability (TTD) benefit rate of $930.05 per week, which is less than the capped rate of $948.15 for Fiscal Year (FY) 2017/2018. $930.15 calculates to a daily rate of $132.88 per day.

Temporary Total (TTD) and Temporary Partial (TPD) Disability

29. Claimant was unable to work from January 15, 2018 through February 28, both dates inclusive, a total of 45 days. He had not been released to return to work, earned no wages, and had not been declared to be at maximum medial improvement (MMI), during this period of time. His disability began on the day of the injury January 15, 2018, and ended after Dr. Probasco, D.C. found that the Claimant could return to work "without restrictions" on March 1, 2018. During the period when the Claimant was temporarily and totally disabled, he is entitled to TTD benefits at the rate of $930.15 per week, or $132.88 per day, in the aggregate amount of $5,979.60. After March 1, 2018, the Claimant failed to establish temporary disability or a temporary wage loss.

Respondents' Witnesses

30. Adam Meyer, the Employer's operations manager, testified that the Employer had no specific policy to help people in distress other than the "Good Samaritan" policies outlined in Findings Nos.10 through 14 hereinabove. The ALJ finds that Meyer's testimony in this regard begs the question and is, therefore, not persuasive. Meyer further offered the opinion, without giving specifics, that the Claimant crossing the street to help a distressed motorist was not safe. The ALJ finds that Meyer's testimony lacks credibility for the reasons specified herein.

31. Josh Lopez, an operations supervisor with the Employer, offered the opinion that the Claimant's crossing a snowy intersection to help a distressed motorist was not safe. He offered no specifics nor did he point to a specific company policy concerning the crossing of intersections in the wintertime. Lopez ultimately conceded that the Claimant's actions amounted to a judgment call on the Claimant's part. In this regard, the ALJ finds that Lopez's opinion supports the fact that the Claimant was acting within the course and scope of his employment for the Employer.

Being a "Good Samaritan"/ Implementing Company Policy

32. The Claimant's medical benefits are compensable. The Claimant, a roll-off driver, was injured in an accident involving a vehicle on a day in which driving conditions were especially poor. The injury occurred while Claimant was clocked in, near his work vehicle, and while engaged in an activity sufficiently related to his employment. Claimant's position as a roll-off driver necessarily implicates that he might be involved in any number of duties related to driving on public roads. While the State of Colorado does not impose an affirmative duty on drivers to assist others involved in an accident, the Employer's broad commitment to community and safety support the proposition that the Claimant's response to another motorist's accident is within the actions contemplated by the Employer. The Employer cannot have its cake and eat it too. The ALJ infers and finds that the Employer enjoys a number of benefits by marketing itself as a company that supports safety in the communities it operates in. By having these broad operating values, the Employer has extended the Claimant's work-related functions to being a "Good Samaritan., at least as far as the Claimant's actions in the present case are concerned.

Ultimate Findings

33. As found, the Claimant's testimony was persuasive and credible. The testimony of Josh Lopez was persuasive and credible insofar as he was of the opinion that the Claimant made a judgment call with respect to crossing the snowy intersection to help a distressed motorist, at which time the Claimant's accident occurred. The ALJ finds the opinions of Dr. Ryan Probasco, D.C., with respect to the Claimant's release to return to work without restrictions on March 1, 2018 more persuasive and credible than the other opinions of physicians in the record, whose opinions establish compensability but are vague concerning a release to return to work without restrictions.

34. Between conflicting opinions and evidence, the ALJ makes a rational choice, based on substantial evidence, and resolves the conflicts in favor of the Claimant's testimony and the opinion of Dr. Ryan Probasco, D.C., concerning a full duty release on March 1, 2018, and rejects all opinions to the contrary.

35. As found hereinabove, the Claimant's injuries were sustained when he was struck by a vehicle, while assisting a motorist in distress, thus, furthering the Employer's "Good Samaritan" policies. Therefore, the Claimant's injuries arose out of the course and scope of his employment with the Employer. Consequently, he sustained compensable injuries on January 15, 2018.

36. The Claimant's authorized medical benefits are compensable. Claimant was entitled to select his medical provider because his employer. made no medical referrals when the Claimant reported the accident. Claimant selected Dr. Ryan Probasco, D.C., a chiropractor, who is not level 1 accredited. Therefore, the Respondents are only liable for the first twelve visits.

37. The Claimant's treatment at the Good Samaritan Hospital ER was of an emergent nature and, thus, authorized.

38. As found hereinabove, the physicians described in Findings Nos. 22 through 26 hereinabove were neither authorized nor were they in the chain of authorized referrals. Therefore, the Respondents are not liable for their costs.

39. All of the medical care and treatment for the Claimant's compensable injuries is causally related to the January 15, 2018 accident, and it is reasonably necessary to cure and relieve the effects thereof.

40. The Claimant's AWW is $1,395.09, thus, yielding a TTD rate of $930.05 per week, or $132.88 per day.

41. The Claimant experienced a 100% temporary wage loss during the period of time specified herein and he was, therefore, temporarily and totally disabled from January 15, 2018 through February 28, 2018, both dates inclusive, a total of 45 days.

42. The Claimant failed to prove any temporary disability from March 1, 2018 through the hearing date of September 5, 2018.

43. The Claimant bears the burden by a preponderance of the evidence on all issues heard. He sustained his burden on compensability; authorization of Dr. Ryan Probasco, D,.C; and, the causal relatedness and reasonable necessity of medical treatment related to the injuries sustained in the January 15, 2018 accident. He failed to prove the authorization of any medical providers other than Dr. Ryan Probasco, D.C.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony was persuasive and credible. The testimony of Josh Lopez was persuasive and credible insofar as he was of the opinion that the Claimant made a judgment call with respect to crossing the snowy intersection to help a distressed motorist, at which time the Claimant's accident occurred. The ALJ finds the opinions of Dr. Ryan Probasco, D.C., with respect to the Claimant's release to return to work without restrictions on March 1, 2018, more persuasive and credible than the other opinions of physicians in the record, whose opinions establish compensability but are vague concerning a release to return to work without restrictions.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions and evidence, the ALJ made a rational choice, based on substantial evidence, and resolved the conflicts in favor of the Claimant's testimony and the opinion of Dr. Ryan Probasco, D.C., concerning a full duty release on March 1, 2018, and rejected all opinions to the contrary.

Compensability

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant's injury occurred while he was performing his work duties and implementing his Employer's "Good Samaritan" policy by helping a motorist in distress when he was hit by a vehicle. The Respondents' defense that the Claimant's actions were unsafe and, thus, outside the course and scope of his employment are without merit.

Emergent Medical Care

d. A medical emergency allows an injured worker the right to obtain treatment without undergoing the delay inherent in notifying the employer and awaiting approval. However, once the emergency has ended, the employee must give notice to the employer of the need for continuing care. *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's treatment at the Good Samaritan Hospital ER was of an emergent nature and the Respondents are liable for it.

Medical

e. An employer's initial right to select the treating physician is triggered once the employer has some knowledge of the facts concerning the injury or occupational disease with the employment and indicating "**to a reasonably conscientious manager**" that a **potential** workers' compensation claim may be involved. *Bunch v. Indus. Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006). As found, The Employer made no medical referrals and the Claimant made a first selection of Dr. Ryan Probasco, D.C., as permitted by § 8-43-404 (5) (a) (I) (A), C.R.S. Pursuant to § 8-42-101 (3) (a) (III), C.R.S., Respondents liability for Dr. Probasco, D.C., who was not Level I accredited, is limited to no more than the first 90 days or the twelfth treatment, whichever came first.

f. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, Dr. Probasco, D.C. made no referrals. Consequently, treatment providers other than Dr. Probasco, D.C. were not authorized and the Respondents are not liable for their costs.

g. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment is causally related to his injuries of January 15, 2018. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment was and is reasonably necessary to cure and relieve the effects of his compensable injuries.

Average Weekly Wage (AWW)

h. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. As found, Claimant's AWW is $1,395.09, thus, yielding a TTD rate of $930.05 per week, or $132.88 per day. *Also see Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). As found, the Claimant sustained a temporary total wage loss from January 15, 2018 through February 28, 2018, both dates inclusive.

Temporary Disability

i. To establish entitlement to temporary disability benefits, a claimant must prove that the industrial injury has caused a "disability," and that he has suffered a wage loss that, "to some degree," is the result of the industrial disability. § 8-42-103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Disability from employment is established when the injured employee is unable to perform the usual job effectively or properly. *Jefferson Co. Schools v. Headrick*, 734 P.2d 659 (Colo. App.1986). This is true because the employee's restrictions presumably impair his opportunity to obtain employment at pre-injury wage levels. *Kiernan v. Roadway Package System*, W.C. No. 4-443-973 [Indus. Claim Appeals Office (ICAO), December 18, 2000]. There is no statutory requirement that a claimant must present medical opinion evidence from of an attending physician to establish her physical disability. See *Lymburn v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary "disability." *Id*. As found, the Claimant's testimony and the opinions of Dr. Ryan Probasco, D.C., establish that the Claimant was temporarily and totally disabled from January 15, 2018 through February 28, 2018, both dates inclusive, a total of 45 days.

j. Once the prerequisites for TTD are met (*e.g.,* no release to return to full duty, MMI has not been reached, a temporary wage loss is occurring and there is no actual return to work), TTD benefits are designed to compensate for a 100% temporary wage loss. *See Eastman Kodak Co. v. Indus. Comm'n,* 725 P. 2d 107 (Colo. App. 1986); *City of Aurora v. Dortch,* 799 P. 2d 461 (Colo. App. 1990). As found, the Claimant experienced a 100% temporary wage loss during the period of time specified herein and he was, therefore, temporarily and totally disabled from January 15, 2018 through February 28, 2018, both dates inclusive, a total of 45 days.

Burden of Proof

k. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained his burden with respect to compensability; medical benefits at the hands of Dr. Ryan Probasco, D.C. (limited to 90-days or 12 visits whichever comes first); AWW; and, TTD benefits from January 15, 2018 through February 28, 2018, both dates inclusive, a total of 45 days.

l. The Claimant failed to meet his burden with respect to the authorization of any medical providers other than Dr. Ryan Probasco, D.C. Therefore, Respondents are not liable for medical costs other than the Good Samaritan ER costs and the costs of Dr. Ryan Probasco, D.C.

m. The Claimant also failed to meet his burden with respect to temporary disability benefits from March 1, 2018, through the hearing date, September 5, 2018.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay the medical costs of the Good Samaritan Hospital Emergency Room and for the causally related and reasonably necessary medical care and treatment of Dr. Ryan Probasco, D.C., limited to 90 days or 12 treatments, whichever came first, subject to the Division of Workers' Compensation Medical Fee Schedule. All other request for medical benefits are hereby denied and dismissed.

B. Respondents shall pay the Claimant temporary total disability benefits of $930.05 per week, or $132.88 per day, from January 15, 2018 through February 28, 2018, both dates inclusive, a total of 45 days, in the aggregate amount of $5,979.60, which shall be paid retroactively and forthwith.

C. Any and all claims for temporary disability benefits from March 1, 2018 through September 5, 2018 are hereby denied and dismissed.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts of indemnity benefits due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of November 2018.

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Whether Claimant established by a preponderance of the evidence that she was the common law spouse of Decedent?

- If Claimant is the common law spouse of Decedent, is she entitled to benefits?

STIPULATION

- The parties stipulated to an applicable average weekly wage of $737.85.

STATEMENT OF THE FACTS

1. This case involves a death claim and associated application for death benefits. Decedent was injured in the course and scope of his employment on May 30, 2017. After a protracted hospital stay, Decedent passed away on June 30, 2017 because of his work related injuries.

2. Decedent's death certificate indicates his marital status to be "divorced." The published obituary makes no mention of claimant as a surviving spouse.

3. Claimant filed a claim for death benefits on July 28, 2017. Claimant and Deceased legally married in the early 1980s. Claimant could not remember the precise year they married, but testified they were married only four or five months. They legally divorced on May 27, 1983. While married to Decedent, Claimant used Decedent's surname as her own. At the time of the divorce, Claimant successfully petitioned the court to restore her maiden name. Subsequently, Claimant never used Decedent's surname. Claimant and Decedent have no children together.

4. After their divorce, Claimant and Decedent dated and/or lived together off and on until December 2015. Claimant described the relationship in various ways during her testimony. During the 1980's after the divorce, Claimant testified that they dated off and on. The longest period of time they were consistently together was "two or three years, if that."

5. Claimant bought her house some time in approximately 1988 when she and Decedent were not together. The house was in her name alone. However, two or three years ago, Claimant added her daughter, C. G., to the deed.

6. Between approximately 1988 and 1991 or 1992, Claimant and Decedent remained apart. After 1991 or 1992, the two again began to date "off and on." During the 1990's, the two worked at the same packing plant. Claimant explained that they still saw each other and that he would come and stay with her on his days off.

7. Claimant alleges that Decedent moved back in "permanently" in

approximately 2000 or 2001. Claimant admits however that any time they fought; he would leave and stay with someone else. Generally, this would be a family member such as a sister or brother or one of his children. He would be gone for months at a time. During that period, they would still have lunch together at work on occasion.

8. Claimant testified Decedent helped her with bills. She did not consider that to be "rent." He gave claimant $100 per week in cash to help with bills such as gas, electricity, water and cable TV. He also bought some groceries but only when he was living there. When Decedent moved out, he stopped making any payments. Claimant offered no persuasive evidence that Decedent provided for her needs.

9. Claimant testified that she considered herself common law married. However, she did not state when, after their divorce, this alleged common law marriage allegedly commenced. Decedent sometimes called her his "old lady" but did not use the term "wife." They had a joint bank account, but Claimant also maintained her own separate bank account. She did not have access to Decedent's credit cards. They had no other accounts together, and the utilities at her house were in her name alone. Claimant and Decedent never filed joint tax returns. Decedent's tax returns identified himself as "single." In addition, despite Claimant's insistence she was common law married, she never filed a claim for widow's benefits with Social Security Administration. When asked specifically why she believed she was common law married, she responded: "Because we spent years together. We raised my [great-] grandson since A. was two years old. He is now nine."

10. Claimant receives social security retirement benefits of $900 per month, and she owns her house free and clear. She receives $120 per month from social services for support of her great grandson of whom she has sole custody. During the process to obtain this custody, she proceeded by herself and Decedent was not included in those legal proceedings. The ALJ finds it unlikely Decedent would not have been included in those proceedings if he were Claimant's husband.

11. Decedent moved out of Claimant's home in late 2015. Claimant testified that he left after an argument with her grandson Jeremiah stating that when all the "shit is done with Jeremiah," they would "see what happens. If he's going to go to rehab or what he's going to do, he says, then we'll see when I come home." Jeremiah had been living with Claimant from the time he was a late teen. Jeremiah is the father of the great grandson who now lives with Claimant in her custody. Shortly after that incident, Jeremiah went to jail where he remains. Claimant's daughter, C.G., testified inconsistently with Claimant regarding why Decedent moved out of Claimant's house. Claimant's testimony implies that Decedent made this decision on his own. However, C.G. testified that she asked Decedent to leave as he had made threats toward Jeremiah. The ALJ finds it unlikely that C.G. would ask her mother's husband to leave his own home. C.G. was unaware why Decedent did not move back into Claimant's house since Jeremiah was no longer there, and Claimant offered no persuasive explanation. Claimant's testimony was also inconsistent with that of Decedent's daughter, E.S. When

Decedent moved into E.S.'s house after this argument, he advised her he was moving out because he and Claimant had had a fight regarding Jeremiah. The uncontroverted evidence supports a finding that from that time through the date of his accident and subsequent death, Decedent lived with his adult daughter E.S., and never moved back into Claimant's house.

12. Claimant presented testimony from her neighbor, V.M., who lived in the house next to Claimant's house. She testified she knew Decedent from visiting over the fence and waving when he would go by. V.M. described her relationship with Claimant and Decedent over the last ten years as saying hello while doing yardwork, letting them know if their dog got out, coming over to borrow something, etc. In the 1980's and 1990's she described seeing Decedent's vehicle there frequently. V.M.'s testimony is of limited probative value because knew Claimant and Decedent only as superficial acquaintances. V.M. did not notice the times Decedent was admittedly not living at Claimant's house. Her references to Decedent referring to Claimant as his "wife" were limited to trite colloquial phrases and sayings made to her several times over the course of decades. V.M. gave no specific periods for these references. The last time she recalled any such statement was in 2013 or 2014. V.M. did not know Decedent was not the father of Claimant's daughter, and she mistakenly believed that Decedent was included in Claimant's legal battle to gain custody of her great grandson. Decedent's daughter E.S. testified that she did not know V.M. The ALJ finds V.M.'s testimony is not persuasive as to the common law status of Claimant and Decedent as her knowledge of the couple's lives is significantly limited. V.M. did not testimony that she ever heard Claimant refer to Decedent as her husband.

13. Dan Rinker is Employer's shop foreman and safety manager and worked in that capacity on the date of Decedent's accident. It was part of his job to notify Decedent's family of the accident, which he attempted to do once the ambulance left the yard. He pulled the most recent emergency contact form, dated February 24, 2017, from Decedent's personnel file. Decedent had not listed anyone as an emergency contact. Decedent's next most recent contact sheet, dated August 31, 2015, before he moved out of Claimant's house. That document listed Claimant as an emergency contact but did not identify her as his spouse. Mr. Rinker called Claimant to inform her of the accident. Claimant seemed surprised to receive the call because Decedent had been living with his daughter for approximately eighteen months.

14. Mr. Rinker went to the hospital to make sure someone was there for Decedent and to make sure the Insurer's claim information was available to hospital personnel. At the hospital, he was introduced to Claimant as "the person he had called." At no time during his interaction with her did Claimant indicate she was Decedent's wife. Mr. Rinker stated that Decedent's son picked up his paycheck and personal belongings from the company.

15. When Decedent was injured, Claimant only had a telephone number for Decedent's son, E.S.J. This fact is at odds with C.S.'s testimony that she and Claimant

had a close and loving relationship. It also conflicts with Claimant's testimony that she called A.S., another of Decedent's daughters, because "that is the only phone number I had."

16. C.S. testified that at the time Decedent was living with E.S., he was exploring affordable places to live other than with Claimant. C.S.'s testimony supports the inference that Decedent had no plans to move back into Claimant's house. When asked if she ever heard her father talk about Claimant as his wife, C.S. sidestepped the question and instead provided several other names he referred to her as, none of which indicated a spousal relationship. She testified that her father referred to Claimant as "the feo" (meaning "the ugly"), the babe, or the landlord. C.S. verified that during the 2000's, Decedent lived with his siblings, with E.S., and at times had his own apartments in Loveland, in Greeley and in Evans. The fact that Decedent referred to Claimant's place as his home is not dispositive. The ALJ notes that many people who live in rented residences refer to that location as their "home."

17. Decedent's adult son, E.S.J., testified that in the couple of years prior to his father's death they spoke frequently either in person or by phone, usually at least once a week. When E.S.J. would visit his father at Claimant's house, he noted that Decedent had his own rented room in which he kept all his belongings, such as pictures, knickknacks, cards, and other personal property. Decedent did not have any belongings or keepsakes in the common portions of the house. The main living areas contained Claimant's own possessions and pictures of her children and her family. He saw no pictures of Claimant and Decedent together displayed anywhere in the house. In his opinion, the relationship appeared to be one of convenience instead of an actual spousal relationship. E.S.J. based his opinion on their interactions with each other, as well as the fact that Claimant needed the help and Decedent was willing to rent from her and give her money, and his father had a place to rest his head after work. It was also convenient as it allowed Claimant, when things were not going well, to kick him out or let him walk out, which in E.S.J.'s experience is inconsistent with a marital relationship. Decedent also told E.S.J. during these visits that he had a couple of girlfriends that he would visit with and take out on dates.

18. Decedent and E.S.J. rode to work together every day during the last year of Decedent's life. During these rides, they would talk about their personal lives. Decedent told E.S.J. that there was nothing between him and Claimant. He told E.S.J. they were not getting back together and that he had no plans to move back into her house. The only reason deceased visited there was to visit the great grandson, and to help him if needed. Decedent referred to Claimant during these conversations as Margaret or "the landlord." His father specifically told him that for the last five years or so, he and Claimant were not together, they were not a couple, and he just rented the room from her there. He came and went as he pleased and paid her a set amount of rent, or money to help with bills. He never spoke of her as his wife to E.S.J.

19. On one specific occasion, Decedent specifically referred to himself as

single. Although E.S.J. does not recall exactly when, he was certain it was after Decedent moved out of Claimant's house. While discussing life insurance, E.S.J. understood that his father would never get married again and that he would just stay single and keep his daughters as beneficiaries.

20. When E.S.J. received messages from Claimant informing him of his father's accident, he called Claimant and found that she already knew which hospital he should go to. Claimant did not arrive at the hospital until after E.S.J. and his two sisters. While Decedent was hospitalized, E.S.J. made all medical decisions. Claimant never challenged him as to his authority to do that. Had she done so, E.S.J. testified it "wouldn't have sat good" with him or his sisters. E.S.J. was at the hospital "pretty much from start to finish" and he never referred to Claimant as Decedent's wife. He considers her just to be "Margaret." Claimant did not stay long after Decedent finally passed away. E.S.J. and his sisters were the last ones present in the hospital room.

21. Silvia Gomez testified on behalf of Respondents. Ms. Gomez and Decedent were married. It is unclear to the ALJ whether Ms. Gomez is the biological mother of E.S.J., C.S. and E.S. Ms. Gomez and Decedent legally divorced but the two stayed in touch. He visited her in South Dakota and he would send her money so she could come to Colorado to visit him. She described this as an ongoing intimate relationship, which continued through the time Decedent was injured. They spoke weekly when they were apart, and during their conversations, Decedent would refer to Claimant as his landlord. Decedent never represented to Ms. Gomez that Claimant was his wife.

22. The last time Ms. Gomez came to visit Decedent was in May 2017 shortly before his accident. They stayed together at E.S.'s house. During this visit, Decedent stated to her, in reference to the Claimant, "[S]he's not married to me, and I'm not married to her…" Ms. Gomez and Decedent planned for her to return in July to talk to a friend of Decedent's about tearing down the house she inherited from her mother. They planned to place a mobile home there and live together so Ms. Gomez could retire. Ms. Gomez testified she had received a call from C.S. and as a result, she felt threatened regarding her decision to testify at the hearing.

23. E.S. is Decedent's youngest adult daughter. E.S. visited Decedent prior to 2015 while he lived at Claimant's house. She described the living situation there as Claimant and Decedent having separate rooms. In Decedent's room were his personal belongings, pictures of his kids, his collectible eagles, his clothing and his gun safes. In the main part of the house, the only things displayed were pictures of Claimant's family and her Native American pictures. No pictures of Claimant and Decedent together appeared anywhere in his room or the main part of the house. E.S. observed nothing of the living arrangement to indicate that Claimant and Decedent were cohabitating as man and wife.

24. E.S. has lived in Colorado continuously since 2000 and has been in contact with family members continuously during that time. She testified that Decedent lived at

Claimant's "off and on" from 2000 to 2015. During that period, she was aware that her father also lived with a cousin, her sister, and with her. In addition, he had his own apartment on several occasions. Besides the times Decedent moved out of Claimant's house, there was also a time that Claimant moved out of her own house and lived at a house owned by her son. During this time, Decedent did not live with Claimant.

25. Decedent moved in with E.S. and her family in December 2015. Decedent discussed with E.S. that he had gotten into an argument with Claimant over Claimant's grandson and he wanted to stay somewhere else. E.S. testified that when he moved in, he brought "[e]verything of his. His gun safe, some important papers, clothes. The only thing I think he left behind were some knickknacks maybe." E.S. believed he intended to stay there indefinitely as he asked her permission to enclose the awning on the side of her house to create a safe place to store his tools, which in fact he did. He also had E.S. assist him with changing the mailing address on his bills so he would receive them at her address.

26. Sometime after he moved in, Decedent came home after work and found E.S. upset. He was concerned and E.S. explained she was worried that he was going to move back into Claimant's house. He stated to her he was not intending to move back to Claimant's and that he would stay with E.S. as long as she would let him stay. Decedent always referred to himself as single when speaking with E.S. He referred to Claimant as feo or as his landlord. E.S. was also aware that her father was dating other women. He had asked permission of E.S. to ask one of her friends on a date.

27. E.S. corroborated the incident E.S.J. testified to during a discussion regarding purchasing life insurance. Decedent stated he was never getting married again and would stay single. This conversation occurred at E.S.'s house in May 2017, just prior to Decedent's accident. Ms. Gomez was also present during the conversation as she was visiting from South Dakota. E.S. clarified that the insurance letter (which appears at Cl. Ex. 2, Bates 22) was from an insurance policy that was a benefit of one of Decedent's credit cards. E.S. received a bill in the mail and contacted the company. They requested that she send Decedent's death certificate, which she did.

28. E.S. testified regarding a journal Decedent kept and referred to as his notebook or "little black book." This is a book kept by the deceased in which he logged all payments he made on a weekly basis for bills, rent, etc., money he lent to family members or friends and payments they made to pay him back. The journal covers the period from December 2009 through the time of his death. Journal entries included payments to M.A., which E.S. presumes refers to Claimant. The vast majority of payments to MA are $100 per week. Beginning in roughly January 2016, regular entries of $100 payments to "Liz" began to appear. Decedent paid E.S. $100 every week after he moved in with her. This initial payment corresponds generally with the last documented payment to M.A. The ALJ entered into evidence an additional book identified as being in Decedent's handwriting. In this book, the entries were not marked through as the entries in the prior book were. E.S. had observed her father using the book in the

past. She testified that she observed him marking off payments as he made them. These final entries were not marked off, as they were entries Decedent had intended to make each week but did not make due to his accident. No planned future payments to M.A. appear in the additional notebook.

29. The two notebooks establish that Decedent made $100 weekly payments to Claimant (M.A.) with some regularity between July 8, 2010 and February 12, 2016. During that time, gaps exist during when Decedent did not make payments to Claimant. For example:

- In 2012, there were several months during which Decedent made the same regular payments of $100 per week C.S. rather than to Claimant.
- Beginning in January 29, 2016, Decedent documented $100 per week payments to E.S.
- The last documented payment to Claimant in any amount on February 12, 2016.
- From February 12, 2016 until June 23, 2017, Decedent paid or planned to pay E.S. $100 per week.
- When Decedent gave any additional funds to Claimant in addition to the $100 per week he paid for rent, Decedent recorded those amounts in his notebook.

30. The ALJ finds that Decedent paid Claimant rent when he keep a room at Claimant's house. The ALJ also finds that Decedent was not contributing to Claimant's support during the year and a half prior to his accident.

31. Claimant visited Decedent during the first week he was hospitalized, but then her visits diminished. Claimant was not involved in medical decisions regarding Decedent's care. Claimant was also not involved in planning Decedent's funeral.

STATEMENT OF APPLICABLE LAW

The purpose of the Workers' Compensation Act of Colorado (Act) §§8-40-101, *et seq*. C.R.S., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. §8-40-102(1), C.R.S. The claimant bears the burden of proving by a preponderance of the evidence that she is entitled to death benefits. §8-43-201(1), C.R.S.; *Faulker v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be

interpreted neutrally, neither in favor of the rights of a claimant nor in favor of the rights of respondents. §8-43-201, C.R.S. A workers' compensation claim is decided on its merits. §8-43-201, *supra*.

In accordance with section 8-43-215, C.R.S., this decision contains specific findings of fact, conclusions of law and an order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice, or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16.

The determination of whether a common-law marriage existed is one of fact for determination by the ALJ. *In Re Custody of Nugent*, 955 P.2d 584, 588 (Colo. App. 1997) (determination of the existence of a common-law marriage turns on issues of fact and credibility).

According to section 8-41-503, C.R.S., dependency shall be determined as of the date of the industrial injury. Under section 8-41-501(1)(a), C.R.S., a widow is presumed wholly dependent unless it is shown that she was voluntarily separated and living apart from the spouse at the time of the injury or death or was not dependent in whole or in part on the deceased for support. Such presumptions may be rebutted by competent evidence. § 8-41-501(1), C.R.S.

The existence of a common-law marriage "is established by the mutual consent or agreement of the parties to be husband and wife, followed by a mutual and open assumption of a marital relationship." *People v. Lucero*, 747 P.2d 660, 663 (Colo. 1987). Currently, recognition of the common-law marriage "serves mainly as a means of protecting the interests of parties who have acted in good faith as husband and wife." *Id.* at 664. This test contemplates the parties will exhibit conduct manifesting their agreement to become man and wife. The two most important factors demonstrating the parties' agreement are cohabitation and reputation among persons in the community that the parties hold themselves out as man and wife. Numerous behaviors may be considered as evidence of the parties' intention, including maintenance of joint bank accounts, ownership of joint property, use of the man's surname by the woman, and the filing of joint tax returns. However, none of these behaviors is determinative, and the court may

consider any type of evidence that manifests the intentions of the party. Conduct in the form of mutual public acknowledgment of marital relationship is not only important evidence of existence of mutual agreement, but is essential to establishment of common-law marriage. *People v. Lucero, supra*.

Evidence of whether the decedent provided financial support to the claimant is relevant in determining whether there was a common-law marriage. *Marquez v. LVI Environmental Services, Inc.*, W.C. No. 4-425-155 (April 5, 2001) *aff'd. LVI Environmental Services, Inc., v. Industrial Claim Appeals Office*, (Colo. App. No. 01CA0731, November 1, 2001) (not selected for publication).

The very nature of a common law marital relationship makes it likely that in many cases express agreements will not exist. The parties' understanding may be only tacitly expressed, and the difficulty of proof is readily apparent. Courts have recognized that "the agreement need not have been in words." *Smith v. People,* 64 Colo. 290, 293, 170 P. 959, 960 (1918); *see also Rocky Mountain Fuel Co. v. Reed,* 110 Colo. 88, 130 P.2d 1049 (1942). Then the issue becomes what sort of evidence is sufficient to prove the agreement. If the agreement is denied or cannot be shown, its existence may be inferred from evidence of cohabitation and general repute. *See, e.g., Graham v. Graham,* 130 Colo. 225, 227, 274 P.2d 605, 606 (1954); *James v. James,* 97 Colo. 413, 414, 50 P.2d 63, 64 (1935). In such cases, the conduct of the parties provides the truly reliable evidence of the nature of their understanding or agreement.

The cases in Colorado have used language suggesting that such an agreement "may be proven by, and *presumed* from, evidence of cohabitation as husband and wife, and general repute," *Taylor v. Taylor,* 10 Colo.App. at 305, 50 P. at 1049 (emphasis added), interchangeably with language stating that "mutual consent may be *inferred* from cohabitation and repute," *Smith v. People,* 64 Colo. at 293, 170 P. at 960 (emphasis added). In applying these standards to particular facts, the Colorado Supreme Court has generally not treated evidence of cohabitation and repute as creating a presumption of a common law marriage. *See Graham v. Graham,* 130 Colo. 225, 274 P.2d 605 (1954); *Moffat Coal Co. v. Industrial Comm'n,* 108 Colo. 388, 118 P.2d 769 (1941). Instead, sufficient evidence of cohabitation and reputation may give rise to a permissible inference of common law marriage. *People v. Lucero,* 747 P.2d 660, 664 n.5 (Colo. 1987). Evidence concerning a common law marriage should be "clear, consistent and convincing." This requirement stresses that the parties must present more than vague claims unsupported by competent evidence. *People v. Lucero,* 747 P.2d 660, 664 n.6 (Colo. 1987).

Claimant has not established by a preponderance of the evidence that she was the common law spouse of Decedent. The case law requires that the proponent of a common law marriage must produce evidence of "cohabitation as husband and wife." Multiple witnesses testified that Decedent kept his own room in Claimant's house where he slept and kept his clothes and other possessions. Nowhere in Claimant's house were any pictures of the two together displayed, no joint possessions or keepsakes held out as

evidence of their alleged marriage. The evidence in the record is more indicative of a landlord-tenant relationship than a marriage. It is uncontroverted that Decedent came and went as he pleased and dated other women. He lived in a number of places at various times, and sometimes rented his own apartment. He planned to buy a mobile home and move in with his ex-wife S.G. in a place she inherited from her mother. This behavior is inconsistent with holding oneself out to the public as being a married man.

Substantial evidence in the record establishes that Decedent in fact did not hold himself out as Claimant's spouse. He did not indicate such a relationship on his employment documents or tax returns. He gave Claimant cash for rent or for "bills," but only when he actually lived in a room at the house. While Claimant testified that she and Decedent had a joint bank account, Claimant presented no persuasive evidence of such account. Further, because Decedent paid Claimant in cash, Claimant gave no plausible explanation of such account's purpose.

The evidence entered into the record supports the following reasonable inferences. The couple owned no joint property, never filed joint income tax returns, and Decedent did not list Claimant as his spouse on his employment documents. Claimant owned her own house since the 1980s and never added Decedent to the deed. However, Claimant added her daughter to the deed. Claimant maintained her own bank account and had no access to credit cards held by Decedent. Decedent filed tax returns indicating he was "single." Decedent was apparently excluded from legal custody proceedings in which Claimant sought sole custody of her great grandson. When Decedent and Claimant's grandson got into an argument, Claimant's daughter asked Decedent to leave the house, a request one would not expect a stepchild to make of her parent's spouse. Claimant could not recall what day they were married (or divorced) and offered no date as of which the two made a mutual decision or reached a mutual agreement to become common law married.

The ALJ finds and concludes Claimant made no showing of mutual consent as required under the law. Claimant did not use Decedent's surname at any time after they were legally divorced, though she did use it when they were married. She also never filed for Social Security widow's benefits when Decedent died. Decedent's death certificate does not list Claimant as a spouse. Decedent's published obituary does not mention Claimant. Claimant did not issue her own obituary of Decedent's life, nor did she make any follow up attempt to plan his funeral services. E.S.J. made all the medical decisions for his father during his approximately month long hospital stay. Claimant did not attempt to take over or even be involved in medical decision-making. When Decedent passed away, Claimant left the hospital and did not stay with Decedent's body as his children did.

Additionally, Claimant admitted that Decedent had not lived in her house for approximately eighteen months prior to his accident. According to section 8-41-503, C.R.S., dependency shall be determined as of the date of the industrial injury. Under section 8-41-501(1)(a), C.R.S., a widow is presumed wholly dependent unless it is shown that she was voluntarily separated and living apart from the spouse at the time of the

injury or death or was not dependent in whole or in part on the deceased for support. Such presumptions is rebuttable by competent evidence. § 8-41-501(1), C.R.S. The uncontroverted evidence is that Claimant and Decedent were living separate and apart for a year and a half prior to his accident. Substantial evidence in the record also rebuts any presumption of dependence. Claimant offered no persuasive evidence that Decedent was supporting her, even partially, at the time of his accident.

Rather, the evidence establishes that at the time of the accident, Claimant was not dependent on Decedent for support in any way. The fact that he would bring groceries if he came to visit on the weekends is insufficient to base a finding of common law marriage and/or spousal support. Though Claimant denies that Decedent paid her "rent" when he lived at the house, the evidence establishes otherwise. Once he moved out in December 2015, the regular payments of $100 per week Decedent previously made to Claimant ended and he began making $100 per week payments to E.S. with whom he was living from December 2015 until his injury in May 2017. Claimant has failed to establish that she received significant support from Decedent or that she was dependent upon Decedent in any manner at the time of the accident. Decedent's notebook is clear and persuasive evidence that he was not providing any support to Claimant. He recorded even the smallest of payments or loans made to family members in his notebook. There were no ongoing payments of any type to Claimant for a year and a half prior to his accident.

ORDER

The ALJ orders the following:

1. Claimant has failed to establish by a preponderance of the evidence that she was the common law spouse of Decedent on the date of his accident.

2. Claimant's claim for death benefits is therefore denied and dismissed.

November 19, 2018.

Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

NOTE: If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has proven by a preponderance of the evidence that she sustained a compensable work injury.

- Whether claimant has proven by a preponderance of the evidence that medical benefits, including the knee surgery requested by Dr. Mark Failinger, are reasonable, necessary and related to her work injury.

- Determination of claimant's average weekly wage.

FINDINGS OF FACT

1. Claimant is a 48-year-old female who began working for Employer on January 30, 2018, as a Certified Nursing Assistant (CNA). Claimant concurrently worked as a CNA at the facility of employer B.

2. Employer's Director of Human Resources, Crystal Rose, testified that immediately after her hire, Claimant had attendance issues. Ms. Rose testified she phoned Claimant on February 27, 2018 and advised her that Employer was putting her on a performance plan due to her absenteeism. Ms. Rose instructed Claimant to sign the performance plan on March 4, 2018.

3. Claimant testified that on Saturday, March 3, 2018 she and coworker Doris Latorre were transferring a facility resident from the shower to his bed when Doris was unable to hold up her side of the weight and lost her grip. Claimant testified the resident fell on her and she felt pain in her back and felt and heard a "pop" in her right knee. Claimant testified that prior to this incident she never had back or right knee symptoms.

4. Claimant testified she reported this injury to her supervisor, Sarah, on March 3, 2018 but Sarah was unable to find the paperwork to report an injury. A co-worker advised Claimant to report the injury to Ms. Rose. Claimant offered no persuasive evidence to explain why Claimant did not report the alleged injury to Ms. Rose on March 4, 2018 when Ms. Rose instructed Claimant to sign her performance plan.

5. Claimant testified her low back hurt and her right knee became very swollen on March 4, 2018, and she was unable to work at Harmony Pointe from March 5, 2018 through March 9, 2018.

6. Claimant reported her injury to Ms. Rose on March 10, 2018, when their paths crossed in a hallway. Ms. Rose sent Claimant for evaluation and treatment.

7. Claimant presented to Concentra Medical Centers on March 12, 2018 for medical treatment. She reported injuring her back and right knee when a resident fell on

her during a transfer at work. She did not report feeling and hearing a "pop" in her knee. Claimant denied having prior low back and right knee symptoms. The Concentra report noted Claimant's right knee and low back were normal in appearance, though Claimant reported diffuse pain over the right knee. Her provider assessed a lumbar strain and right knee sprain.

8. Concentra's provider placed Claimant on work restrictions that Employer was able to accommodate. However, employer B was not able to do so. Claimant testified she sustained no wage loss from Employer, but had lost wages from employer B because she was not able to work for employer B while on restrictions.

9. Claimant underwent a right knee MRI on April 30, 2018, which revealed a complex tear of the posterior horn of the medial meniscus with radial components at the posterior root, Baker's cyst with mild rupture, and degenerative cartilage changes in the patellofemoral compartment.

10. Claimant presented to Dr. Mark Failinger on May 24, 2018 after referral by her authorized treating physician for an orthopedic evaluation. Claimant told Dr. Failinger she injured herself while performing a resident transfer at work. She denied having any prior right knee injuries or symptoms. She described experiencing knee pain and swelling, but did not report feeling and hearing a "pop" in the right knee.

11. Dr. Failinger reviewed Claimant's April 30, 2018 MRI and opined it showed a medial meniscus tear with medial compartment chondromalacia and some patellar chondromalacia. Dr. Failinger advised Claimant she could try a cortisone injection or proceed with an arthroscopy, but cautioned the results from the arthroscopy would depend on the amount of chondromalacia in the knee. Dr. Failinger also noted Claimant had thinning of the medial compartment and that results are not always as good with that condition. Claimant indicated she wanted to proceed with surgery.

12. Dr. Failinger requested approval to perform a knee arthroscopy, meniscectomy, and chondroplasty. Insurer denied the request.

13. Doris Latorre testified at hearing and confirmed she and Claimant worked together to transfer the resident. However, Ms. Latorre denied losing her grip on the resident, that he fell onto Claimant, and that Claimant had to hold up the resident's full weight. Ms. Latorre testified the event described by Claimant did not occur.

14. Ms. Latorre testified Claimant asked her for help on Saturday, March 3, 2018, and the two of them worked about eight hours together that day. Ms. Latorre testified that while working together *prior* to transferring the resident, Claimant had complained of back and knee pain. Ms. Lattore testified that after transferring the resident, Claimant told her she hurt her back but did not say anything about an injury to her right knee.

15. Claimant's reports to her treating providers that that she had no prior symptoms or injuries to her low back or right knee was inconsistent with her medical records.

16. Prior to her beginning her employment with Employer, Claimant treated at the Colorado Coalition for the Homeless on October 17, 2017 for right knee pain that began a month earlier when a power wheelchair ran into her. Records indicated Claimant's knee pain had been increasing since that injury. At that appointment, her provider gave Claimant a knee brace and advised Claimant to wear the brace during the daytime. Claimant testified she decided, against medical advice, that she did not need to wear the knee brace and therefore did not use it.

17. Claimant's medical records from Colorado Coalition for the Homeless detail chronic low back pain, with treatment starting in July 2011, with a note that her pain began in July 2005 following a motor vehicle accident. Claimant treated her low back pain consistently through September 2016.

18. The parties deposed Dr. Tim O'Brien on August 28, 2018. The parties stipulated that Dr. O'Brien is an expert in orthopedic surgery and is Level II accredited.

19. Dr. O'Brien testified he reviewed Claimant's medical records for Respondents. The review included records from before and after Claimant's alleged work injury, as well as radiology reports. Dr. O'Brien testified Claimant's MRI report noted degeneration of the meniscus but no evidence of an acute meniscal tear. The degeneration of the meniscus resulted in fissuring and fraying which occur over time.

20. Dr. O'Brien testified Claimant's described mechanism of injury would not likely cause the findings seen in Claimant's right knee MRI report. Dr. O'Brien explained that when a meniscus tears acutely, tissue breaks causing excessive fluid accumulation and effusion of the knee joint. Dr. O'Brien testified the reading radiologist did not observe those findings in Claimant's MRI. Dr. O'Brien noted that the March 12, 2018 records of Claimant's physical examination indicated the knee looked normal, and opined it would be virtually impossible for the right knee to look normal if the meniscus had torn acutely.

21. Dr. O'Brien testified that Claimant described having to stop a body falling towards the ground, and that such an incident could result in a minor strain or sprain. He based his opinion on Claimant's description of the incident and her subjective pain complaints.

22. Dr. O'Brien testified that regardless of what caused Claimant's meniscal tear, Dr. Failinger's surgical recommendation was not a reasonable approach to address Claimant's symptoms. Dr. O'Brien cited various medical studies detailing the risks and negative outcomes following arthroscopic surgery of an arthritic knee, such as Claimant's.

23. Dr. O'Brien reviewed Claimant's statements that she had been asymptomatic prior to her alleged injury. He opined that given the degree of degeneration and arthritis in her knee it was unlikely she would have had no symptoms as claimed.

24. Dr. O'Brien testified Claimant's alleged work injury, if it occurred, would have at most resulted in a minor injury that would have quickly resolved and the knee would have returned to its pre-injury level by April 10, 2018.

25. Claimant's wages from Employer for the 4.714 weeks from the time of her hire on January 30, 2018 to the period ending prior to the March 3, 2018 injury amounted to $776. Claimant's AWW from Employer equals $164.62 ($776 / 4.714).

26. Claimant's wages from Harmony Pointe for the 13 weeks from pay period beginning September 16, 2017 to pay period ending December 15, 2017, amounted to $6,526.85. Claimant's AWW from Harmony Pointe equals $502.07 ($6,526.85 / 13).

27. The ALJ finds Claimant's combined AWW from both jobs is $666.69 ($164.62 + $502.07).

28. The ALJ finds the testimony of Dr. O'Brien credible and persuasive. Dr. O'Brien had the benefit of reviewing Claimant's full medical history at the time he rendered his opinions on Claimant's injuries and need for medical treatment. Claimant's authorized treating providers had imperfect and incomplete information upon which to formulate opinions regarding diagnoses, causation and reasonably necessary medical treatment, because Claimant was not transparent regarding her medical history. Although Dr. O'Brien opined Claimant sustained an injury, he did so based on her description of the alleged incident and her subjective pain complaints. Based on the opinions of Dr. O'Brien, the ALJ finds the surgery recommended by Dr. Failinger is not reasonable, necessary and related to Claimant's alleged work injury.

29. The ALJ agrees with Dr. O'Brien that even if Claimant did sustain an injury, she would have returned to her baseline condition by April 10, 2018. Continuing medical benefits beyond that date would not be reasonable, necessary and related to Claimant's work injury.

30. The ALJ finds the testimony of Ms. Lattore to be more credible and persuasive than that of Claimant. Ms. Lattore had no motivation or incentive to testify in a dishonest manner and conceded Claimant indicated her back hurt after the resident transfer.

31. The ALJ finds the Claimant's testimony to be incredible and not persuasive. Claimant had motive and incentive to testify dishonestly and to report a fabricated injury. Claimant was a newly hired employee and immediately had attendance issues with Employer that were of such significance she was placed on an Action Plan less than one month after her hire. Claimant knew of the Action Plan on February 28, 2018 and was to sign the Action Plan on March 4, 2018. Claimant then alleged an injury on March 3, 2018, which her coworker testified did not occur as alleged. Claimant knew to report the injury to Ms. Rose but did not do so for nearly a week after the claimed injury, and only did so at that time when she happened to see Ms. Rose in the hallway. When Claimant presented for medical treatment she was not forthcoming with her treating providers regarding her medical history. She omitted the fact she had a right knee injury in the months prior to starting with Employer and that her medical provider prescribed a knee brace which Claimant claims not to have worn. Claimant also did not tell her treating providers she was treated for chronic low back pain dating back to a motor vehicle accident in 2005. The medical record reflects that when Claimant reported for treatment

after reporting her injury, her low back and right knee appeared "normal" with only mild diffuse pain. These findings are inconsistent with Claimant's reports of extreme pain and swelling. For these reasons, Claimant has failed to prove by a preponderance of the evidence that she sustained a compensable work injury to her low back or right knee.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

General Legal Principles

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Claimant Did Not Sustain a Compensable Injury to her Low Back or Right Knee

A claimant's right to compensation initially hinges upon a determination that "at the time of the injury, the employee is performing service arising out of and in the course of the employee's employment." C.R.S. § 8-41-301(1)(b). The "arising out of" test is one of causation that requires that the injury have its origins in an employee's work-related functions. There is no presumption than an injury that occurs in the course of employment arises out of the employment. *Finn v. Industrial Commission,* 165 Colo. 106, 437 P.2d 542 (1968). The evidence must establish the causal connection with reasonable

probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

Whether a compensable injury has been sustained is a question of fact to be determined by the ALJ. *Eller v. Industrial Claim Appeals Office*, 224 P.3d 397 (Colo. App. Div. 5 2009). The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2013). See City of *Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Industrial Claim Appeals Office*, 24 P.3d 29 (Colo. App. 2000).

The fact that a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the logical and recurrent consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); see also *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008)(simply because a claimant's symptoms arise during the performance of a job function does not necessarily create a causal relationship based on temporal proximity).

As found, Claimant has failed to prove by a preponderance of evidence that she sustained a compensable injury to her low back or right knee.

Claimant Is not Entitled to Dr. Failinger's Requested Surgery or to Continuing Medical Benefits

Regardless of the filing of an admission for medical benefits or an order containing a general award of medical benefits, respondents retain the right to dispute liability for medical treatment on grounds that the treatment is not authorized or reasonably necessary. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997); *Williams v. Indus. Comm'n*, 723 P.2d 749 (Colo. App. 1986). The filing of an admission does not prevent respondents from contesting whether a claimant is in need of any continued medical treatment because of the compensable injury. *Ford v. Regional Transp. Dist.*, W.C. No. 4-309-217 (I.C.A.O., Feb. 12, 2009). Respondents remain free to dispute the cause of the need for medical treatment, and respondents' election to do so does not shift the burden of proof away from the claimant. See *Snyder*, supra; *Velarde v. Sunland Construction*, W.C. No. 4-412-975 (I.C.A.O., Dec. 4, 2001). This principle recognizes that even though an admission is filed, the claimant bears the burden of proof to establish the right to specific medical benefits, and the mere admission that an injury occurred and treatment is needed cannot be construed as a concession that all conditions and treatments which occur after the injury were caused by the injury. *Cf. HLJ Mgmt.*

Group, Inc. v. Kim, 804 P.2d 250 (Colo. App. 1990) (filing of admission does not vitiate respondents' right to litigate disputed issues on a prospective basis).

A claimant must prove a causal relationship between the work injury and the medical treatment for which he is seeking benefits. *Snyder*, 942 P.2d at 1339. Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim Appeals Office*, 49 P.3d 1187, 1189 (Colo. App. 2002). The claimant shoulders this burden and must establish his entitlement to benefits by a preponderance of the evidence. *Snyder*, 942 P.2d at 1339. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979).

As found, Claimant has failed to show it is more probably true than not that the knee surgery recommended by Dr. Failinger is reasonable and necessary to cure and relieve the effects of the claimed work injury.

As found, Claimant has failed to show it is more probably true than not that the need for medical treatment of her low back condition and symptoms is reasonable and necessary to cure and relieve the effects of the work injury.

Determination of Claimant's Average Weekly Wage

As found, Claimant's combined AWW from both jobs is $666.69.

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. Claimant failed to prove by a preponderance of the evidence that she sustained a compensable injury to her back or her knee. As a result, the claim is denied and dismissed with prejudice.

2. If you are dissatisfied with the Judge's order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a Petition to Review form at:** http://www.colorado.gov/dpa/oac/forms-wc.htm.

DATED this 20th day of November, 2018.

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he sustained a compensable industrial injury arising out of and in the course of his employment on April 19, 2018.

II. If Claimant sustained a compensable injury, whether he established, by a preponderance of the evidence, entitlement to reasonable and necessary medical benefits.

III. If Claimant sustained a compensable injury, whether he established, by a preponderance of the evidence, entitlement to temporary total disability benefits ("TTD").

IV. If Claimant sustained a compensable injury and is entitled to TTD benefits, determination of Claimant's average weekly wage ("AWW").

FINDINGS OF FACT

1. Claimant is a 44 year old man who works for Employer as an electrical maintenance worker. Claimant is responsible for repairing parking meters.

2. Claimant was involved in a motor vehicle accident during the course and scope of his employment on April 19, 2018 when he was rear-ended by a 2003 Honda Accord while slowing to a stop at the intersection of Sherman Street and 19th Street in Denver. Claimant was driving his work vehicle, a 2002 Ford Ranger pickup truck, and wearing a shoulder and lap seatbelt at the time of the accident. The airbags of Claimant's work truck did not deploy.

3. The driver and passenger of the Honda Accord fled the scene on foot. Claimant exited his vehicle and did not immediately experience any pain or identify any injury. The police report notes moderate damage to the front of the Honda Accord and slight damage to the back/bumper area of Claimant's work vehicle. The police report further notes there were no injuries and no ambulance was called.

4. Photographs from the accident scene show various items in the bed of Claimant's work truck, including two enclosed truck tool boxes and parking meter parts stacked above the brim of the truck bed. Approximately three parking meter parts are seen on the ground behind the truck, which fell out of the truck due to the impact. The bumper of the work truck is slightly bent at the middle and downturned. The hood of the Honda Accord is slightly pushed back.

5. Employer mounts video cameras in their work trucks to take video of both the exterior and interior of the vehicles. The DriveCAM video tracks time, lateral acceleration and forward acceleration of the work vehicle. The dash camera video of the incident shows Claimant's work truck slowing at an intersection, but not coming to a full stop, and then being pushed slightly forward into the crosswalk. The second camera, which was recording the interior of the vehicle, was occluded.

6. Claimant immediately notified Employer of the accident by calling the "ouch line." Claimant's supervisor, Michael Humenik, testified at hearing he went to the accident scene and asked Claimant if he was injured. Mr. Humenik testified Claimant said he felt fine and appeared to not be in any pain or distress. Mr. Humenik testified it is Employer's policy to send an employee for a medical evaluation under such circumstances as a precautionary measure. As such, Employer sent Claimant to Employer's designated healthcare facility, Denver Health.

7. Cynthia Kuehn, M.D. evaluated Claimant on the day of the accident. Claimant reported being rear-ended while stopped at a stop sign and that his vehicle was pushed 20-30 feet into the intersection. Claimant reported he did not hit his head, but was unsure if he blacked out. He complained of bilateral shoulder pain, lower and upper back pain, anxiety, numbness in his lower back, stiffness, difficulty lifting his arms above his shoulders, weakness in his hands, headaches, and his vision being out of focus. On examination, Dr. Kuehn noted reported tenderness in the paracervical muscles, trapezius muscles, paralumbar muscles and bilateral biceps, all without spasm. Claimant had good cervical and shoulder range of motion, along with a negative straight leg raise and full extension at the lumbar spine. Dr. Kuehn gave the following assessment: neck strain, lower back strain, bilateral shoulder strain and headache. She recommended Claimant use over the counter medications and released Claimant to full duty with instructions to return to the clinic if he felt he could not work full duty.

8. On April 23, 2018, Claimant returned to Dr. Kuehn reporting improved but continued pain in his neck, low back and shoulders, headaches, episodes of lightheadedness, and problems with his right eye focusing. She noted Claimant did not go to work the past few days, which she could not retroactively authorize. Dr. Kuehn noted minimal tenderness on exam without spasm and a normal evaluation of the right eye. She recommended Claimant undergo a trial of medical massage and placed Claimant on temporary work restrictions of no lifting greater than 15 pounds.

9. On April 26, 2018, Claimant returned to Dr. Kuehn for reexamination at the request of his supervisor, as Claimant had been missing work despite being released to modified duty. Claimant reported increased pain in his neck and upper back area, right shoulder pain, mild low back pain, mild headaches, and intermittent difficulties focusing with his right eye. Dr. Kuehn again noted reported tenderness on exam with no spasm. She prescribed Claimant Mobic and Robaxin and continued his work restrictions.

10. Dr. Kuehn reevaluated Claimant on May 15, 2018. Claimant reported improvement of his neck, lower back and right shoulder pain with massage therapy and medication. He complained of some right upper extremity weakness and intermittent

paresthesias, and increased low back pain when walking more than two blocks. Dr. Kuehn referred Claimant to physical therapy and increased his lifting restrictions to 20 pounds.

11. Respondents filed a Notice of Contest on May 16, 2018.

12. On July 6, 2018, Claimant returned to Dr. Kuehn reporting overall improvement. Dr. Kuehn wanted Claimant to attempt a trial of full duty work. She noted Claimant felt he was probably physically able to perform full duty work, but repeatedly expressed his desire to remain on leave under the Family and Medical Leave Act. Dr. Kuehn recommended Claimant complete his remaining sessions of physical therapy and ordered six additional sessions of massage therapy. She noted Claimant was making good progress and that the motor vehicle accident was "fairly low energy."

13. Insurer denied Dr. Kuehn's request for an additional six sessions of massage therapy.

14. On July 19, 2018, Dr. Kuehn again noted overall improvement in Claimant's pain. Claimant had been able to tolerate full duty work. Dr. Kuehn expected Claimant's mild residual symptoms to resolve. Dr. Kuehn placed Claimant at maximum medical improvement ("MMI") and recommended six additional massage therapy sessions over the next six months as maintenance treatment.

15. On July 30, 2018, Zachariah Weimer, MS, PE, conducted an accident reconstruction analysis. In drafting his report, Mr. Weimer reviewed the traffic accident reports, DriveCAM video, one photograph of the 2003 Honda Accord, two photographs of Claimant's work vehicle, a witness statement of Todd Brocesky, and the vehicle dimension, weight and specification data. He also conducted an in-person inspection of the Honda Accord at the police impound facility.

16. Mr. Weimer, a forensic engineer, testified at hearing as an expert in accident reconstruction. He testified the work truck's rear bumper was pushed down and in, while the Honda Accord sustained damage to the hood, front grill and right headlight. Mr. Weimer stated that the Honda Accord's reinforcement system, which is made of steel and is the actual structural component of the vehicle, was not damaged. Mr. Weimer testified the accident was not bumper-to-bumper, but rather an "underride impact," with the top edge of the Honda Accord's hood interacting with the bottom edge of the work truck's rear bumper. Specifically, there was bumper misalignment between the two vehicles at impact, with the Honda Accord going slightly under the Ford Ranger. Mr. Weimer testified that based on the overall minimal damage, and complete lack of damage to the reinforcement system of the Accord, the accident was low speed and low force.

17. Mr. Weimer explained Claimant's work truck was not at a stop and was traveling at 9 miles per hour at the time of the accident. He estimated the Honda Accord was going 8 – 12 miles per hour faster than Claimant's work truck at the time of the accident. Per Mr. Weimer's calculations, Claimant's work truck experienced a velocity change of

4.5 – 6 miles per hour, which he stated is considered a low severity and low speed impact. Mr. Weimer testified the collision was similar to that of a bumper car collision. He opined that no secondary contacts into the steering wheel, instrument panel or windshield would be expected by a belted driver under these conditions.

18. On August 7, 2018, Tashof Bernton, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Bernton interviewed and physically examined Claimant, as well as reviewed Claimant's medical records, the accident reports, and Mr. Weimer's accident reconstruction report. Claimant reported to Dr. Bernton that he may have lost consciousness for a few seconds during the accident. Claimant reported overall improvement, but some continued discomfort in his bilateral shoulders, pain in his lower back with lifting, leg cramps, headaches, and sensitivity to light. On examination, Dr. Bernton noted good back and shoulder range of motion with reported tenderness in the shoulders, and multiple positive Waddell signs. Dr. Bernton noted the clinical examination was entirely benign with the exception of prominent Waddell signs.

19. Dr. Bernton also administered a Battery for Health Improvement-2 psychological assessment. Claimant scored in the 10th percentile of self-disclosure, 87th percentile in somatic complaints, and 71st percentile in pain complaints. Dr. Bernton opined that Claimant's scores indicate a very high likelihood that somatoform complaints represent a significant portion of Claimant's pain complaints and are consistent with an individual who may be assuming a disabled identity. Dr. Bernton opined that the April 19, 2018 accident did not result in any injury sufficient to require medical care, and that Claimant's persistent subjective complaints are not supported by objective findings. Dr. Bernton concluded Claimant does not require work-related medical care, work-related restrictions, or permanent impairment.

20. Dr. Bernton testified by post-hearing deposition as an expert in internal medicine and occupational medicine. Dr. Bernton testified consistent with his IME report, continuing to opine Claimant did not sustain any injury as a result of the April 19, 2018 accident. Dr. Bernton explained that there were no objective abnormalities noted on Dr. Kuehn's evaluations of Claimant, only subjective complaints, which was consistent with his examination of Claimant. Dr. Bernton testified Claimant had the highest possible score, five out of five, on Waddell's signs, which is an indicator that psychologic factors likely play a large role in Claimant's pain complaints. Dr. Bernton testified one would not expect any injury to result from a low impact collision such as the April 19, 2018 accident, and there is no reasonable probability "at all" of shoulder complaints, neck complaints, low back complaints, leg cramps, light sensitivity, and headaches as a result of the incident. Dr. Bernton opined that Claimant's spectrum of complaints is not consistent with the mechanism of injury, and that his diffuse array of persistent physical complaints reasonable medical sequelae from a minor rear-end motor vehicle accident. Dr. Bernton stated that it is not medically probable the accident would have resulted in vision changes or injury to Claimant's eyes, optical pathways or brain, which indicates at least some of Claimant's medical history is either unreliable or due to psychological factors.

21. Dr. Bernton explained that the Battery for Health Improvement-2 test is designed to evaluate the presence of non-physically-based factors in a patient's pain presentation, and that Claimant's profile was,

> [v]ery strong in terms of presenting evidence for the presence of somatoform complaints. Meaning, this is an individual who is extremely likely to indicate the presence of physical problems that may be unrelated to any underlying physical pain generator and may be present on a psychological basis. And that is extraordinarily consistent with the remainder of the findings that we've discussed: The initial history, the lack of correlation between the mechanism of injury, and the patient's complaints and the patient's presentation; when he saw me, with multiple pain complaints and no findings on examination that were abnormal except for the multiple positive Waddell signs.

22. Dr. Bernton testified that, from his review of Mr. Weimer's report, the impact was of a nature routinely experienced by individuals on a daily basis without injury, and that the magnitude of force would not be anticipated to cause injury. Dr. Bernton opined Claimant had pain complaints without objective evidence of injury and Claimant did not sustain an injury in the accident sufficient to require medical treatment or cause disability. Dr. Bernton stated his opinion was "extremely strongly supported" by multiple factors, including the accident reconstruction analysis, Claimant's multiple complaints with no physical relationship to the incident, the persistence of complaints not to be expected even if there was a self-limited muscular strain, and psychological factors.

23. Claimant testified at hearing he was rear-ended when stopped at a stop sign. Claimant testified he had been sitting at the stop sign for approximately two to five minutes at the time of the collision. Claimant testified it is possible he struck his head and maybe lost consciousness for a few seconds, although there no bruises or bumps on his head. He testified it is also possible he struck his knees, arms and hands, but he did not notice any contusions on his knees. He stated he did not feel pain at the time of the accident, but later that evening began to experience pain, dizziness and blurred vision. Claimant testified he experienced "whiplash" symptoms with pain and stiffness in his neck and shoulders, headaches, blurred vision, leg pain and cramps, arm weakness, and low back pain. Claimant testified he continues to have a "little pain" in his shoulder, neck, back, and leg, along with back spasms and leg weakness. Claimant testified he does not feel as strong as he did before the accident, despite physical therapy and massage therapy being helpful. Claimant testified he did not have any injuries or treatment to his shoulders, back, neck or legs prior to the April 19, 2018 accident. Claimant agrees he is at MMI without work restrictions and without permanent impairment and wants to undergo the six additional massage therapy sessions recommended by Dr. Kuehn as maintenance treatment.

24. Claimant testified he did not work for approximately a week after the accident, then worked modified duty from late April 2018 to early May 2018. Claimant testified he also did not work from May 20, 2018 to July 19, 2018 due to the accident.

25. For the sixteen-week period from December 23, 2017 through April 14, 2018, claimant earned a total of $17,822.99 in gross wages, resulting in an average weekly wage of $1,113.94.

26. The ALJ finds the testimony and opinions of Dr. Bernton and Mr. Weimer, as supported by the medical records, police reports, accident photographs, and DriveCAM footage, more credible and persuasive than the testimony of Claimant, and the opinion of Dr. Kuehn, who relied on Claimant's subjective reporting of the mechanism of injury and symptoms.

27. The ALJ finds Claimant failed to prove, by a preponderance of the evidence, that he sustained an injury requiring medical treatment or causing a disability as a result of the April 19, 2018 motor vehicle accident.

28. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo.

App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968). Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undersigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967); *Wherry v. City and County of Denver,* W.C. No. 4-475-818 (ICAO March 7, 2002).

The question of whether the claimant met his or her burden to prove a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to prove by a preponderance of the evidence that he sustained a compensable injury as a result of the April 19, 2018 motor vehicle accident. It is undisputed Claimant was involved in a rear-end motor vehicle accident during the course and scope of his employment on April 19, 2018. However, the mere fact the accident occurred does not, by itself, establish Claimant sustained an injury requiring medical treatment or causing disability. As revealed in the medical records and noted by Dr. Bernton, there is no objective evidence of an injury. The only exam findings are Claimant's subjective reports of an array of symptoms, including bilateral shoulder pain, back pain, back numbness, back stiffness, hand weakness, vision problems, headaches and leg cramps. On her initial evaluation of Claimant, Dr. Kuehn noted no muscular spasms, good cervical, lumbar and shoulder range of motion, and negative straight leg raise results. While Dr. Kuehn diagnosed Claimant with strains and recommended massage therapy, Dr. Kuehn's opinion appears to be based solely on Claimant's

subjective reporting of symptoms, which becomes problematic when considering the entirety of the evidence.

The nature and severity of Claimant's alleged injury is called into question due to various factors. In his reports to Dr. Kuehn and in his testimony, Claimant stated he was hit while stopped at a stop sign and pushed 20-30 feet into an intersection. DriveCAM footage of the incident clearly shows Claimant was not stopped at a stop sign, but was slowing to a stop at the time of impact. Both the DriveCAM footage and photographs from the accident scene do not show Claimant's vehicle being pushed 20-30 feet into an intersection. Mr. Weimer conducted a thorough analysis of the accident and credibly and persuasively opined that this was a low speed and low impact accident similar to a bumper car collision, and that no secondary contacts inside the vehicle would be expected by a belted driver.

Dr. Bernton credibly and persuasively testified there is no reasonable probability a low impact collision such as the April 19, 2018 accident would result in Claimant's diffuse and persistent array of physical complaints. Claimant had the highest possible score on Waddell's signs, which Dr. Bernton credibly explained is an indicator that psychologic factors likely play a large role in Claimant's pain complaints and is consistent with an individual who may be assuming a disabled identity. Thus, while Claimant may not be consciously misrepresenting his version of events and his reported symptoms, the ALJ is persuaded by Dr. Bernton's credible testimony, as supported by the medical records and accident reconstruction analysis, that Claimant's reported physical problems are unrelated to any physical injury caused by the April 19, 2018 accident.

Based on the totality of the evidence, Claimant failed to meet his burden to prove he suffered an injury sufficient to require medical treatment or cause disability. As Claimant failed to meet his burden to prove he sustained a compensable injury, the remaining issues are moot.

ORDER

It is therefore ordered that:

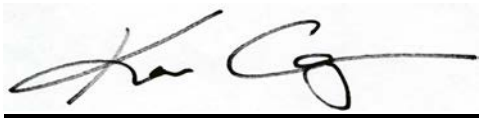
1. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 20, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Claimant has established by a preponderance of the evidence that his right shoulder surgery performed on April 3, 2018 by Eric McCarty, M.D. was authorized, reasonable, necessary and causally related to his September 1, 2017 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 75-year-old male who works for Employer as a Courtesy Clerk. His job duties involve emptying trash, cleaning spills and retrieving shopping carts from Employer's parking lot.

2. On September 1, 2017 Claimant suffered an admitted industrial injury to his right shoulder during the course and scope of his employment. Claimant was retrieving shopping carts from Employer's parking lot. He used a safety strap that he secured onto the carts to keep them together. When Claimant pulled on the strap to secure the carts, he suffered a pain in his right shoulder area. He also heard a snapping sound in the right shoulder region.

3. Claimant reported the September 1, 2017 right shoulder incident to Employer and chose NextCare Urgent Care for treatment. He also designated Workwell Occupational Health Clinic Longmont as his authorized medical provider.

4. On September 5, 2017 Claimant visited David Kistler, M.D. at Workwell for an examination. Claimant reported that he injured his right shoulder area at work while securing a strap to shopping carts to retrieve them from Employer's parking lot. Dr. Kistler diagnosed Claimant with a sprain of the right shoulder joint and assigned work restrictions.

5. Claimant subsequently underwent conservative treatment for his shoulder symptoms. However, because Claimant continued to report pain and weakness, he underwent a right shoulder MRI on September 29, 2017. The MRI reflected a full-thickness tear of the right rotator cuff.

6. On November 2, 2017 Claimant underwent an independent medical examination with John R. Burris, M.D. Dr. Burris issued a report on November 2, 2018 and an addendum after reviewing additional medical records on March 17, 2018. He concluded that Claimant's work activities on September 1, 2017 did not cause his right rotator cuff tear.

7. Initially, Dr. Burris detailed the mechanism of Claimant's injury. Claimant reported that on September 1, 2017 he was retrieving grocery carts from Employer's

parking lot. After connecting six carts, Claimant applied a safety strap at waist level to a handle of the carts to hold them together. While pulling up on the strap Claimant felt pain in the right upper arm and shoulder region. Claimant demonstrated that, while holding his elbows to the side, he flexed his elbows in a "curl" type of maneuver. Dr. Burris explained that Claimant's position would "not put the rotator cuff at risk" and the force exerted on the strap would "not be sufficient to cause a rotator cuff injury." He reasoned that Claimant's normal range of right shoulder motion within days of the September 1, 2017 work incident and the frequency of rotator cuff tears in individuals in Claimant's age group suggested a high probability that the MRI findings existed prior to the September 1, 2017 work event. Furthermore, regardless of the cause of Claimant's right rotator cuff tear, Dr. Burris determined that Claimant would not benefit from surgical intervention because he exhibited full range of right shoulder motion.

8. Claimant continued to attend physical therapy and performed recommended home exercises. Nevertheless, Claimant's right shoulder symptoms continued to worsen. Dr. Kistler thus referred Claimant to Orthopedic Surgeon Joseph Hsin, M.D. at Cornerstone Orthopaedics and Sports Medicine for an evaluation.

9. On December 6, 2017 Claimant visited Dr. Hsin for an examination. Dr. Hsin noted that Claimant exhibited "good function and excellent range of motion" He cautioned that he could not guarantee that surgical repair of the rotator cuff would improve function or range of motion.

10. On December 13, 2017 Respondents filed a General Admission of Liability (GAL) acknowledging Claimant's right shoulder strain. However, Respondents specifically denied liability for any injury to Claimant's right rotator cuff. The GAL stated "the rotator cuff is not accepted."

11. Claimant testified at the hearing in this matter that he had been researching rotator cuff surgery in 2017 because of his continuing right shoulder symptoms. He specifically remarked that in a sample of 24 patients only two did well without surgery. Claimant thus sought to pursue surgical options.

12. On January 31, 2018 Claimant returned to Dr. Hsin for an examination. Dr. Hsin determined that Claimant's rotator cuff tear "appear[ed] to be amenable to repair." After discussing the "pro and cons of operative versus nonoperative treatment" Claimant sought to proceed with surgery. Therefore, on February 1, 2018 Dr. Hsin requested authorization for surgical repair from Insurer.

13. On February 1, 2018 Insurer denied Dr. Hsin's surgical request. Relying on the analysis of Dr. Burris, Insurer noted that Claimant's right rotator cuff tear was not related to his work activities for Employer.

14. On February 26, 2018 Claimant sought a surgical opinion from Eric McCarty, M.D. from outside of the Workers' Compensation system. Claimant had not been referred to Dr. McCarty by an Authorized Treating Physician (ATP). Dr. McCarty

determined that Claimant was a good surgical candidate and recommended surgery as soon as possible to prevent further right shoulder atrophy.

15. Claimant decided to proceed with surgery through his private Blue Cross/Blue Shield insurance with Dr. Mccarty. On April 3, 2018 Dr. McCarty performed Claimant's right rotator cuff repair.

16. On October 8, 2018 the parties conducted the pre-hearing evidentiary deposition of Dr. Burris. Dr. Burris maintained that Claimant's work activities on September 1, 2017 did not cause his right rotator cuff tear. He reiterated that Claimant's mechanism of injury would not cause a rotator cuff tear. Moreover, Claimant's MRI revealed degenerative and chronic changes in the right shoulder and did not suggest that an acute tear occurred on September 1, 2017. Although surgery was eventually recommended, Dr. Burris suggested that it proceeded with some expressed reluctance. He explained, "Dr. Kistler, discussed the findings of the MRI and said, you know, he's very functional. So, again, focusing on function, he didn't think that surgery was the – the best solution. And, likewise, orthopedic surgeon Dr. Hsin noted that he's got a full range of motion. He's got full function. Doesn't know that he would really benefit from surgery. And there's a chance that surgery could potentially make it worse. So at the time Dr. Hsin recommended conservative care." Dr. Burris thus noted that the surgery performed by Dr. McCarty was neither reasonable nor necessary.

17. Claimant has failed to establish that it is more probably true than not that his right shoulder surgery performed on April 3, 2018 by Dr. McCarty was authorized. Initially, on September 1, 2017 Claimant suffered an admitted industrial injury to his right shoulder while retrieving shopping carts from Employer's parking lot. Claimant reported the incident to Employer and chose NextCare Urgent Care for treatment. He also designated Workwell Occupational Health Clinic Longmont as his authorized medical provider. After receiving conservative treatment and diagnostic testing through Dr. Kistler at Workwell, Claimant continued to suffer right shoulder symptoms. Dr. Kistler thus referred Claimant to Orthopedic Surgeon Dr. Hsin at Cornerstone for an evaluation. As an ATP Dr. Hsin requested authorization for right rotator cuff surgery. However, relying on the analysis of Dr. Burris, Insurer noted that Claimant's right rotator cuff tear was not related to his work activities for Employer and denied the request.

18. Claimant did not subsequently submit a written request to change physicians. Instead, on February 26, 2018 Claimant sought a surgical opinion from Dr. McCarty outside of the Workers' Compensation system. Claimant had not been referred to Dr. McCarty by an ATP. Dr. McCarty determined that Claimant was a good surgical candidate and recommended surgery as soon as possible to prevent further right shoulder atrophy. Claimant decided to proceed with the surgery through his private Blue Cross/Blue Shield insurance. On April 3, 2018 Dr. McCarty performed Claimant's right rotator cuff repair.

19. The preceding chronology reflects that Dr. McCarty was not in the authorized chain of physician referrals. Instead, of proceeding within the Workers' Compensation system by seeking a change of physician through the procedures

delineated in W.C.R.P. Rule 8-7, Claimant sought treatment and surgery from Dr. McCarty because Insurer denied the surgical request of his ATP. Any treatment and medical expenses that Claimant incurred by proceeding with Dr. McCarty, including right shoulder surgery, were thus unauthorized. Because Claimant obtained unauthorized medical treatment through Dr. McCarty, Respondents are not liable for the costs of care and surgery. Dr. McCarty lacked the legal authority to treat Claimant with the expectation that Insurer would provide reimbursement. Claimant's request for Respondents' financial liability for treatment and surgery from Dr. McCarty is thus denied and dismissed. It is therefore unnecessary to determine whether Dr. McCarty's right rotator cuff surgery on Claimant was reasonable, necessary and related to the September 1, 2017 industrial injury.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). It is the Judge's sole prerogative to assess the sufficiency and probative value of the evidence to determine whether the claimant has met his burden of proof. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251, 252 (Colo. App. 1999).

5. Section 8-43-404(5)(a), C.R.S. permits an employer or insurer to select the treating physician in the first instance. *Yeck v. Indus. Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999). However, the Colorado Workers' Compensation Act requires that respondents must provide injured workers with a list of at least four designated treatment providers. §8-43-404(5)(a)(I)(A), C.R.S. Section 8-43-404(5)(a)(I)(A), C.R.S. states that, if the employer or insurer fails to provide an injured worker with a list of at least four physicians or corporate medical providers, "the employee shall have the right to select a physician." W.C.R.P. Rule 8-2 further clarifies that once an employer is on notice that an on-the-job injury has occurred, "the employer shall provide the injured worker with a written list of designated providers." W.C.R.P. Rule 8-2(E) additionally provides that the remedy for failure to comply with the preceding requirement is that "the injured worker may select an authorized treating physician of the worker's choosing." An employer is deemed notified of an injury when it has "some knowledge of the accompanying facts connecting the injury or illness with the employment, and indicating to a reasonably conscientious manager that the case might involve a potential compensation claim." *Bunch v. industrial Claim Appeals Office,* 148 P.3d 381, 383 (Colo. App. 2006).

6. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

7. W.C.R.P. Rule 8-7 specifies the proper procedure when a claimant seeks to change medical providers. Specifically, W.C.R.P. Rule 8-7(A) delineates that "an injured worker may submit a written request to change physicians to the insurer or employer's authorized representative if self-insured. Such a request must be on the form prescribed by the division of workers' compensation." Under W.C.R.P. 8-7(b) the insurer then has 20 days from the date of the request "to either grant permission for the requested change of physician or object in writing on the form."

8. Section 8-43-404(7)(a), C.R.S. provides that "an employer or insurer shall not be liable for treatment provided pursuant to article 41 of Title 12, C.R.S. unless such treatment has been prescribed by an authorized treating physician." If the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. *In Re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAP, June 18, 2010); see *Yeck v. Industrial Claim Appeals Office,* 996 P.2d 228 (Colo. App. 1999)*; Pickett v. Colorado State Hospital,* 32 Colo. App. 282, 513 P.2d 228 (1973). The court in *Pickett* explained:

> The Workmen's Compensation Act does not permit an injured employee to change physicians or to employ additional physicians without notice to his

> employer or its insurer and consent of the Division of Labor. When an injured employee incurs unauthorized medical expenses, the employer or its insurer is not liable for such expenses.

Pickett, 32 Colo. App. at 285, 513 P.2d at 229-30.

A physician's status as "authorized" and whether a particular treatment was provided by an authorized physician are generally questions of fact for resolution by the ALJ. *In Re Patton*, W.C. Nos. 4-793-307 and 4-794-075 (ICAP, June 18, 2010); *see Popke v. Industrial Claim Appeals Office,* 944 P.2d 677 (Colo. App. 1997).

9. As found, Claimant has failed to establish by a preponderance of the evidence that his right shoulder surgery performed on April 3, 2018 by Dr. McCarty was authorized. Initially, on September 1, 2017 Claimant suffered an admitted industrial injury to his right shoulder while retrieving shopping carts from Employer's parking lot. Claimant reported the incident to Employer and chose NextCare Urgent Care for treatment. He also designated Workwell Occupational Health Clinic Longmont as his authorized medical provider. After receiving conservative treatment and diagnostic testing through Dr. Kistler at Workwell, Claimant continued to suffer right shoulder symptoms. Dr. Kistler thus referred Claimant to Orthopedic Surgeon Dr. Hsin at Cornerstone for an evaluation. As an ATP Dr. Hsin requested authorization for right rotator cuff surgery. However, relying on the analysis of Dr. Burris, Insurer noted that Claimant's right rotator cuff tear was not related to his work activities for Employer and denied the request.

10. As found, Claimant did not subsequently submit a written request to change physicians. Instead, on February 26, 2018 Claimant sought a surgical opinion from Dr. McCarty outside of the Workers' Compensation system. Claimant had not been referred to Dr. McCarty by an ATP. Dr. McCarty determined that Claimant was a good surgical candidate and recommended surgery as soon as possible to prevent further right shoulder atrophy. Claimant decided to proceed with the surgery through his private Blue Cross/Blue Shield insurance. On April 3, 2018 Dr. McCarty performed Claimant's right rotator cuff repair.

11. As found, the preceding chronology reflects that Dr. McCarty was not in the authorized chain of physician referrals. Instead, of proceeding within the Workers' Compensation system by seeking a change of physician through the procedures delineated in W.C.R.P. Rule 8-7, Claimant sought treatment and surgery from Dr. McCarty because Insurer denied the surgical request of his ATP. Any treatment and medical expenses that Claimant incurred by proceeding with Dr. McCarty, including right shoulder surgery, were thus unauthorized. Because Claimant obtained unauthorized medical treatment through Dr. McCarty, Respondents are not liable for the costs of care and surgery. Dr. McCarty lacked the legal authority to treat Claimant with the expectation that Insurer would provide reimbursement. Claimant's request for Respondents' financial liability for treatment and surgery from Dr. McCarty is thus denied and dismissed. It is therefore unnecessary to determine whether Dr. McCarty's

right rotator cuff surgery on Claimant was reasonable, necessary and related to the September 1, 2017 industrial injury.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's request for Respondents' financial liability for the treatment and surgery through Dr. McCarty is denied and dismissed.

2. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his left shoulder on November 18, 2017.

2. Whether the left shoulder surgery recommended by Daniel White, M.D. is reasonable, necessary, and causally related to Claimant's November 18, 2017 injury.

FINDINGS OF FACT

1. Claimant is a forty-one year old manager for Employer who worked as a "rough neck" on an oil rig.

2. Claimant's duties included drilling fluid, maintaining equipment, pulling pipe, and generally ensuring the oil and gas drilling process functions smoothly. Claimant regularly lifted and moved heavy items including pipes.

3. On November 18, 2017, Claimant sustained an admitted work related injury to his left forearm and wrist. White at the top of a rig and unhooking a saddle from the blocks, the metal cable broke loose, swung freely, and pinned Claimant's left forearm and wrist against an I-beam. This crushed and pinned Claimant's left arm. Claimant pulled on his arm in every direction while alone on the platform. Claimant had no help and eventually was able to pull his arm out. Claimant testified that he felt the bones break on impact when he was pinned between the two pieces of metal. After getting free, Claimant climbed down a ladder with his severely broken arm.

4. Claimant was evaluated at the emergency department of Wyoming Medical Center on November 19, 2017. Claimant reported smashing his left arm between two plates of metal. Claimant reported pain at a 7/10 with all the pain localized in his forearm. Claimant was noted to have visible deformity to his left forearm with diminished grip strength. Claimant was given iv morphine for his pain. X-rays were taken and showed fractures of the ulnar styloid and distal radius. A closed reduction was performed and improved anatomical alignment was obtained. Claimant was placed in a splint and it was noted that he would need to follow up with orthopedics and likely would need an open reduction and internal fixation (ORIF) surgery. Claimant was also instructed to use a sling.

5. On November 21, 2017, Claimant underwent ORIF surgery performed by Daniel White, M.D. Dr. White noted the placement of screws and a plate. The

postoperative plan included elevating the wrist for the next week or so with follow up x-rays. Dr. White noted that Claimant would be planned for limited activity with the left wrist until evidence of fracture healing and then would progress with normal activities. *See* Exhibit C.

6. On December 5, 2017, Respondents filed a general admission of liability for the November 18, 2017 injury. *See* Exhibit 3.

7. On December 13, 2017, Claimant underwent occupational therapy. It was noted that he was involved in a traumatic crush with loss of function, loss of motion, and weakness and that Claimant presented in a wrist cock brace. Two months of skilled therapy was estimated to be needed. Goals of returning to his overall function prior to the injury were noted. *See* Exhibit 5.

8. On December 22, 2017 at occupational therapy, Claimant's wrist was stiff in all directions and he had trouble with in hand manipulation of putty. On December 26, 2017 at occupational therapy, Claimant was unable to make a tight fist yet. The therapist recommended continuing with rehabilitation and progression with advancement as tolerated. *See* Exhibit 5.

9. In January of 2018 occupational therapy notes show that Claimant continued to have stiffness and although overall was improving, was still unable to work due to his dysfunction. Claimant's range of motion was noted to be progressing slowly. *See* Exhibit 5.

10. On April 6, 2018, Claimant underwent therapy. Claimant reported left shoulder pain that he associated as being aggravated by the pulling motion during his injury and aggravation of prior clavicle fracture and presumed arthritis. Claimant reported left shoulder pain with reaching and lifting activity. *See* Exhibit D.

11. On April 18, 2018, Claimant underwent a work hardening session. Claimant reported that his left distal forearm/hand was caught between equipment with a pulling effort to free his arm. Claimant reported residual numbness and weakness at the left hand. Claimant reported left shoulder pain that he associated as being aggravated by pulling motion during his injury and believed it to be aggravation of a prior clavicle fracture and what he presumed was arthritis. Claimant continued at this visit to mention shoulder pain with lifting. Claimant reported that his pain was aggravated in the left shoulder with reaching and lifting activities and eased with activity modification. Claimant was found to have tightness/tenderness in the left pectoral major, mild crepitus at the AC joint, and shoulder hiking with overhead lifting. Claimant reported the ability to eliminate joint pain with overhead lifting when consciously maintaining good scapular positioning of the left shoulder. *See* Exhibits 6, D

12. On April 18, 2018, Claimant underwent a work hardening session. Claimant continued to mention shoulder pain with lifting but not enough to end activity. *See* Exhibits 6, D.

13. On April 20, 2018, Claimant underwent a work hardening session. Claimant reported more severe shoulder pain with most activities and was unable to join in most activities. *See* Exhibits 6, D.

14. On May 7, 2018, Dr. White ordered a CT scan of Claimant's left shoulder noting an injury to the left arm 6 months ago with a distal radius fracture and persistent shoulder pain despite therapy. Dr. White noted in the order a suspected biceps SLAP tear versus rotator cuff injury. *See* Exhibit 7.

15. The CT scan was performed on May 15, 2018. The impression provided by Michael Sloan, M.D. was subtle irregularity of the superior as well as the anteriosuperior and posterosuperior labrum compatible with the clinical suspicion of SLAP tear. *See* Exhibit 8.

16. On May 16, 2018, Dr. White evaluated Claimant. He noted that Claimant had been injured when his left arm was caught between two large pieces of metal and that Claimant had a Galeazzi fracture of the forearm. Dr. White noted that Claimant had been working with therapy and was progressing well except for persistent anterior left shoulder pain that had really limited Claimant's ability to functionally return to work. On examination, Dr. White found mild tenderness at the AC joint with a positive cross arm test, positive Yergason test, positive Speed's test, and positive O'Brien test with tenderness to palpation in the bicipital groove as well as significant tenderness in the pectoral biceps region. Dr. White reviewed x-rays noting a healed prior displaced clavicle fracture and very mild AC joint arthritis. Dr. White also reviewed the CT scan and noted that it revealed dye leak into the superior labrum region consistent with a SLAP tear. Dr. White provided the impression that Claimant was six months post left upper extremity trauma with persistent shoulder pain with evidence of a symptomatic SLAP tear and mild AC joint arthritis. Dr. White opined that Claimant had undergone therapy and tried conservative management but had persistent symptoms over six months. Dr. White recommended surgery to include AC joint resection, biceps tenodesis, and shoulder debridement arthroscopically. *See* Exhibits 7, F.

17. On July 11, 2018, Allison Fall, M.D. issued a Rule 16 review report. Dr. Fall opined that the requested surgery was not medically reasonable, necessary, and related to the work related injury. Dr. Fall noted first that there was no documented injury to the left shoulder and questioned causation. Dr. Fall also noted that even if there were a causal relationship, Claimant had not yet failed conservative treatment for the shoulder. *See* Exhibit A.

18. On August 16, 2018, Dr. Fall performed an independent medical examination. Claimant reported that his left arm was pinned between two pieces of metal, that he tried to pull it out but it was wedged in there, and that he used his knees and feet and eventually pulled out his left arm. Claimant reported that he had surgery within a few days and later underwent physical therapy for his forearm. Claimant reported that after physical therapy, Dr. White wanted him to do work conditioning. When he started work

conditioning, Claimant realized that when reaching with the left arm or stretching his arm behind his head, he had a hard time lowering his arm down, had discomfort in his shoulder, and thought he had probably injured his shoulder while pulling his arm out. Claimant reported a doctor told him his biceps was torn and that he had not had any injections or physical therapy addressing his shoulder. *See* Exhibit B.

19. Claimant reported he was "getting old" and that everything aches sometimes. Claimant was noted to be 41 years old. Claimant reported that he did not have any ongoing problems with his left shoulder before this incident. Claimant reported pain at a 3/10 worse in the morning. Claimant reported that he essentially had not been using his left arm very much and that it was weak diffusely. Dr. Fall reviewed medical records and performed a physical exam. Dr. Fall opined that Claimant sustained a Galeazzi fracture to his left distal radius as well as an ulnar styloid fracture that had healed after surgery. Dr. Fall noted that the records did not document any concerns about Claimant's shoulder or any symptoms in his shoulder immediately following the date of injury and opined it was unlikely that Claimant sustained an acute injury to his left shoulder at the time of his forearm fracture. Dr. Fall opined that the mechanism of injury of pulling his arm to the left side would not be expected to cause an injury to the labrum or biceps. She opined that there were no complaints regarding the left shoulder until five months after the injury, making it unlikely to be an acute injury. Dr. Fall further opined that even if Claimant had an injury to his left shoulder, surgery would not be indicated at this time given that Claimant had not had any conservative treatment to his shoulder. She opined that Claimant would likely benefit from some physical therapy addressing body mechanics and scapular stability outside of workers' compensation. *See* Exhibit B.

20. Claimant and Dr. Fall both testified at hearing.

21. Claimant testified that prior to this injury, he had to lift, push, and pull heavy items on a daily basis with weights of 25 to 100 pounds and could lift up to 400 sacks. He also testified that he had to pull and latch heavy pipe. Claimant testified that he worked approximately 84 hours per week and had a schedule that was on 14 days and then off 14 days. He testified that he was able to work full duty without problem. Claimant testified that on the day of the injury he worked with no problems. Claimant testified that the injury occurred approximately 17 hours into his shift and that it happened fast and he was not able to immediately move his arm out from the metal it was crushed in between. Claimant testified that he tried several times to get his arm out by moving it up, moving it to the side, and finally was able to get his boots up to push back and get his arm free. Claimant testified that it felt like forever but probably took about 5 minutes to free his arm. Claimant testified that he felt his arm break on impact and that it was throbbing in the forearm area and that he didn't notice pain anywhere else.

22. Claimant testified that he was in a sling until his surgery and after his surgery and was on pain medications. Claimant testified that he was not using his shoulder at all during this time because he was immobilized. Claimant testified that approximately 2-3 months after the injury, he was told to use his arm more and that he noticed pain in his shoulder with movement. Claimant testified that at one point he had to stop physical

therapy for 4 weeks because his break was not healing and he stopped to give it more healing time. Claimant testified that he thoroughly noticed the shoulder pain when he started work conditioning and that he struggled to lift even light weights.

23. Dr. Fall testified consistent with her written reports. She opined that Claimant did not sustain an acute shoulder injury and a lso that he had not yet had therapy or conservative care for his shoulder yet so surgery was premature. Dr. Fall opined that if Claimant had an acute labral tear she would have expected acute shoulder pain and swelling as well as difficulty moving and lifting the arm immediately after the injury. She opined that labral tears can be expected with aging. Dr. Fall also opined that the mechanism was not consistent with a labral tear and typically a labral tear involves some type of compression in the joint. She also opined that Claimant's complaints at her independent medical examination were not all that significant and she thought symptoms were more consistent with impingement or rotator cuff issues. Even if related to the injury, Dr. Fall opined surgery was not yet reasonable and necessary and that the problem could likely be easily addressed with exercise and therapy. Dr. Fall opined that going straight to surgery was a jump when therapy/injections/conservative treatment might fix.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations,

the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Left Shoulder- relatedness/compensability

A Claimant bears the burden to establish by a preponderance of the evidence that the conditions for which they seek medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. A claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established by a preponderance of the evidence that he sustained an injury to his left shoulder proximately caused by the November 18, 2017 work injury. Prior to November 18, 2017 Claimant is credible that he was regularly performing heavy work including lifting various heavy items and pipes without trouble. Claimant was working a vigorous schedule doing this heavy work. Now, Claimant is unable to lift items with his left shoulder without trouble. Claimant sustained a severe injury when his left forearm was crushed between two pieces of metal. This happened quickly and Claimant, alone, tried several ways to get his arm free. The ALJ finds, more likely than not, that his left shoulder was injured during this event. As found above, Claimant was immobilized for a period of time after his injury and after his surgery to fix the severe break in his forearm. Claimant then began physical/occupational therapy where he still had minimal movements to his forearm and wrist. Once Claimant was advised several months after the injury to use his left arm more, he began to notice discomfort in his left shoulder that was not present prior to the injury. As he began work hardening, it became apparent that Claimant could not perform the heavy lifting and work duties that he had performed prior to this incident. The opinion of Dr. Fall is not credible or persuasive that there was no acute injury to the left shoulder. Rather, the testimony of Claimant surrounding his function prior to the November 18, 2017 injury and his function as he began to use his left arm more is the most persuasive evidence. Preponderant evidence established an injury to the left shoulder on November 18, 2017.

Medical Benefits- surgery recommended by Dr. White

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.

Claimant has failed to establish, at this point, that the left shoulder surgery recommended by Dr. White is reasonable and necessary. Although the ALJ finds that the left shoulder was injured on November 18, 2017, there is insufficient evidence that more conservative measures have been taken to address the left shoulder prior to a surgical procedure. Records establish no therapy, injections, or any care to the left shoulder. Rather, all the care has been aimed at the severe and significant break in the forearm.

Respondents shall provide treatment aimed to cure and relieve the effects of Claimant's left shoulder injury. These treatments shall include conservative measures aimed at the left shoulder. This order does not preclude surgery in the future should conservative measures fail to cure and relieve the left shoulder. Any future specific medical benefits that are recommended may be subject to dispute by the parties as to whether the recommendations are, in fact, reasonable and necessary. However, the left shoulder injury is found to be causally related to the November 18, 2017 injury and Respondents shall provide treatment that is reasonable and necessary.

ORDER

1. Claimant has established by a preponderance of the evidence that he sustained a compensable injury to his left shoulder on November 18, 2017.

2. Respondents shall provide reasonable and necessary medical benefits to treat Claimant's left shoulder injury.

3. The surgery recommended by Dr. White for Claimant's left shoulder is not yet reasonable and necessary, as Claimant has not had conservative treatment to his left shoulder.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the

certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 21, 2018 /s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

The issue raised at hearing concerns Claimant's entitlement to additional medical benefits. The precise question is whether Respondent's are liable to provide and pay for treatment, including surgery for a nonindustrial right hip condition, which Claimant contends is necessary to optimize her treatment for and recovery from her compensable left knee injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant suffered an injury to her left knee on November 18, 2016, when "she was loading 50 lb. mortar into a customer's vehicle. She was on the 3rd bag and turned to the left and heard a pop in her left knee." Liability for the injury was admitted and Claimant was referred for treatment.

2. Claimant was initially seen by Brian Sefcik, DO, on November 19, 2016. [Claimant Exhibit 7, p. 198]. X-rays of the knee were obtained and were interpreted as "showing minimal degenerative changes and preservation of joint spaces."

3. Claimant was referred to physical therapy (PT), which she started on December 20, 2016.

4. During the initial PT visit on December 20, 2016, besides reporting posterorlateral knee pain, Claimant reported "pain beginning at anterior left hip/groin in the past 3 weeks" which she believed was related to "walking different due to pain in knee". There were findings of antalgic gait and left knee strain with "suspected involvement of the hamstring muscles".

5. Claimant was seen by Douglas Bradley, MD, at Emergicare on December 23, 2016. There was documentation of the physician records of dull ache to the left hip without associated symptoms. The left hip pain was not addressed at this visit. It was also noted that she was no longer having antalgic gait.

6. Claimant returned to Emergicare in follow-up on January 7, 2017, at which time it was noted she had "intermittent L hip pain as well with a pain intensity of 2/10 in severity."

7. Claimant underwent MRI of the left knee on February 11, 2017. The imaging revealed "mild osteoarthritis of the left knee with chondromalacia patellae type

III, lateral patellofemoral spurring, lateral patellar tracking, moderate joint effusion, a "small horizontal tear on the body of the lateral meniscus" and a mild strain versus mucoid degeneration of the ACL. No Tear."

8. Claimant was seen at Emergicare on February 25, 2017. The record generated from this date of visit is devoid of any mention of complaints regarding her hips specifically. Physical examination revealed edema in the legs bilaterally, left greater than right.

9. Claimant returned to Emergicare on March 18, 2017, with continued complaints of "achy" pain in the left knee and with a new report that her "right knee and hip [were] also starting to feel sore as well". Claimant's right hip was "tender" to palpation as were both of her knees. Claimant was referred to Dr. David Walden for an orthopedic evaluation.

10. Claimant presented to the offices of Dr. Walden on April 17, 2017 where she was evaluated by Physician Assistant (PA), Rachel Cerchia. In the history of present illness provided by Claimant it is documented that she reported radiating pain "down the outside lateral portion of her left leg and now her opposite hip is bothering her." Claimant was assessed with "primary osteoarthritis of left knee." Claimant's MRI imaging was reviewed which, according to PA Cerchia, demonstrated osteoarthritic changes in the patellofemoral joint and a meniscal tear. PA Cerchia recommended MRI review with Dr. Walden.

11. Dr. Walden evaluated Claimant on April 25, 2017, after which he recommended arthroscopic surgery of the left knee. Dr. Walden noted: "I talked to her about a possible arthroscopic partial lateral meniscectomy versus repair. She understands that arthritis is not curable by arthroscopy." It was also noted motion at the right hip was painful and she had a slight antalgic gait.

12. Claimant underwent a partial lateral meniscectomy and chondroplasty of both the patellofemoral joint and medial femoral condyle with Dr. Walden on June 28, 2017. She was referred to post-surgical PT.

13. Claimant returned to Emergicare on August 17, 2017, with complaints of constant sharp pain affecting her pain along with an associated "locking" sensation in the hip. An injection of lidocaine mixed with 20 mg of Decadron was administered to the right hip (bursa) and SI joint.

14. Claimant was seen at Emergicare for follow-up on her left knee on September 7, 2017. During this visit, Claimant reported that her knee was not feeling "good" and her condition was otherwise unchanged since her last appointment. She also reported that her "gait [was] still off" along with continued pain to her right hip. Physical examination revealed an antalgic gait and tenderness over the right hip. Claimant was assessed with, among other diagnoses, sprain of the right hip for which an MRI was ordered.

15. The aforementioned MRI was performed on September 23, 2017. The MRI demonstrated the following right hip findings: Severe right hip degeneration; large hip effusion; marginal osteophytes; maceration of the labrum and bilateral trochanteric bursitis

16. Claimant returned to Dr. Walden's care on October 3, 2017, during which appointment Dr. Walden documented the following: ". . . she reports that her hip is become (sic) significantly worse (no pain prior to injury) and she believes that it is due to her left knee". Dr. Walden noted that Claimant's MRI "showed severe right hip degeneration, cam femoral acetabular impingement and trochanteric bursitis". Dr. Walden also noted that Claimant felt as though an altered gait "exacerbated her right hip". Finally, Dr. Walden stated:

> Although her knee is somewhat better, she is still getting some muscular pain around the leg. Hopefully these will improve with independent exercises but it is difficult to know… At this point, I would recommend that the patient utilize independent exercises for stretching and strengthening and over the counter remedies for her left knee. No further orthopedic care is indicated at this point with regard to the left knee. She can be placed at maximum medical improvement after her workup is complete with regard to her additional problems.

17. Based upon the evidence presented, the ALJ finds that Dr. Walden's mention that Claimant could be placed at maximum medical improvement (MMI) after workup of her "additional problems" is, more probably than not, a reference to her right hip condition.

18. The claimant was referred from Emergicare to Scott Primack, DO, who saw her on November 10, 2017, for a comprehensive consultation of her left knee pain and right hip discomfort. Upon completion of his workup, Dr. Primack stated:

> This is a very complicated case. There are work-related issues and non-work-related issues. First and foremost, from a causality prospective, as I reviewed with Ms. Houston, her right hip OA is not work-related. This is due to the mechanism of injury, the clinical examination, the imaging studies, and the pathophysiology of osteoarthritis of the hip. Therefore, treatment would not be considered work-related. She has been through a hip injection, but this did not give her significant pain control. This would make sense; in that her OA is rather severe. Her final common pathway at right hip would be a hip replacement. However, as I reviewed with Mr. and Mrs. Houston, this would not be considered work-related.

> In reference to the work-related left hip[1] problem, the claimant's options include an impairment rating versus viscosupplementation versus regeneration options such as mesenchymal stem cells or plasma—rich protein. A knee replacement would not be considered work-related given the mechanism of injury and degree of degenerative changes. The patient will weigh out her options for the left knee. . . . Another option would be for her to undergo her non-work-related hip replacement and see what that "does to her left knee".

19. Claimant was evaluated by Dr. Nakamura on February 23, 2018. X-rays of the right hip showed "advanced degenerative changes of the right hip with bone—on bone arthritis." After evaluation, Dr. Nakamura recommended a right total hip replacement "at some point" and "noted that she could also have a right hip steroid injection." He recommended the arthroplasty. At the left knee, he noted that she had degenerative joint disease and some point would need a total knee replacement. He added, "At this time, her hip is much worse than her knee. I recommend she hold off on treatment for her knee symptoms. She is going to have some stem cell therapy done in Denver, and I recommend that she continue with stem cell therapy in Denver."

20. Dr. Primack authored a letter concerning Claimant's condition on April 30, 2018. In his April 30, 2018 letter, Dr. Primack notes that Claimant suffers from a non-work-related right hip problem secondary to "osteoarthritis". He went on to state, "As a rehabilitation position, wanting to optimize Ms. Houston's recovery, I would recommend the right hip arthroplasty, gets done first." He goes on to state, "Once she recovers, we can talk about the care and treatment for her work-related left knee injury. This may include regenerative medicine as option".

21. Dr. Nakamura issued a similar letter on May 9, 2018, which stated:

> It is my medical opinion, that the patient, Erma Houston, date of birth 4-24-1967, should have a right total hip arthroplasty. From a rehabilitation position, we want to optimize Ms. Houston's recovery process. I recommend that she have a right hip arthroplasty procedure first, before addressing the left knee-work-injury issue. The patient's non-work-related right hip osteoarthritis is significant enough to be addressed initially. After patient has recovered from the hip procedure, we can discuss care and treatment for her work-related left knee injury.

[1] The ALJ finds that reference to "left hip" in the note is likely an error and that Dr. Primack probably meant to reference Claimant's "work-related left knee problem.

22. Respondents requested an independent medical examination (ME) with Dr. Eric Ridings. Dr. Ridings performed his IME on August 27, 2018, and he noted that "[Claimant] complained that her right hip pain is much more severe than her left knee pain and is progressively worsening". He agreed with Dr. Primack and Dr. Nakamura that Claimant's right hip pain is due to non-work-related severe end stage osteoarthritis and concurred that the appropriate treatment for that would be a right hip replacement surgery.

23. Dr. Ridings concluded that Claimant's left knee osteoarthritis was not caused, aggravated or accelerated by her meniscal injury and that the severity of her right hip arthritis is a contributor to the severity of her left knee complaints. Because the right hip arthritis is unrelated to Claimant's work duties and is, according to Dr. Ridings, a contributor to the severity of the osteoarthritic complaints in the left knee, he concluded that "any and all treatment directed toward the osteoarthritis of the left knee is also, therefore, not work related. Accordingly, Dr. Ridings concluded that any request for additional injection therapy is unrelated to this claim and should be performed outside of the workers' compensation system.

24. While Dr. Ridings provided a thorough analysis concerning the relatedness of Claimant's need for additional left knee treatment, to the original injury this case, the ALJ finds that his report does not address the precise question presented here. Indeed, Dr. Ridings report is devoid of any analysis concerning whether Claimant should be afforded a right hip arthroplasty on the theory that it is necessary to optimize the treatment of and recovery from her work-related left knee injury. Rather, Respondents argue that because Dr. Ridings opined that the only treatment recommended for the left knee relates to Claimant's personal degenerative condition, there is no causal connection between her need for the right hip surgery and her admitted left knee injury nor is there a medical basis to address Claimant's right hip condition before placing her at MMI for her left knee condition. Accordingly, Respondents urge the ALJ to deny the requested right hip arthroplasty.

25. The ALJ rejects Dr. Ridings opinions concerning the relatedness of her need for additional left knee treatment to her industrial injury as unconvincing. Based on the evidence presented, the ALJ credits the opinions of Dr. Primack to find that Claimant is not currently at MMI and remains a candidate for additional treatment designed to cure and relieve her of ongoing injury related pain and dysfunction. Moreover, the evidence presented persuades the ALJ that Dr. Primack and Dr. Nakamura are of the opinion that the efficacy of this treatment and Claimant's recovery from his knee injury cannot be optimized without first treating Claimant's right hip condition. Consequently, while Claimant's right hip arthritic condition is non-work-related in origin, the ALJ is convinced that her right hip condition must be addressed surgically, as ancillary to the work-related injury in this case, in order for her to achieve optimum treatment for and recovery from her compensable left knee injury. Consequently, the ALJ finds Respondents are liable for the recommended right hip arthroplasty.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law, and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Clam Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing the weight, credibility and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). When considered in its totality, the ALJ concludes that the evidence in this case supports a reasonable inference/conclusion that Claimant remains a candidate for additional treatment, including regenerative medicine options to cure and relieve her of the ongoing effects of her work-related left knee injury. Dr. Ridings' contrary opinions are not persuasive. As presented, the ALJ finds/concludes that the opinions expressed by Drs. Primack and Nakamura support a conclusion that addressing Claimant's right hip condition surgically will optimize the care/treatment necessary to improve Claimant's chances of having a

successful outcome concerning her left knee injury by enhancing her recovery and hastening MMI.

Claimant's Request for a Right Hip Arthroplasty

D. The claimant in a workers' compensation case bears the burden of establishing entitlement to medical treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997); *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). Once a claimant has established a compensable work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable and necessary medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Nonetheless, a claimant is only entitled to such benefits as long as the industrial injury is the proximate cause of his/her need for medical treatment. *Merriman v. Indus. Comm'n*, 210 P.2d 448 (Colo. 1949). In other words, Respondents generally cannot be charged with the cost of treating non-work related conditions even if those conditions are discovered during the course of treatment for an industrial injury. See, *Antonio Prieto v. United Subcontractors, Inc.*, W.C. No. 4-572-001 (June 22, 2007), citing *5 Larson, Workers' Compensation Law*, § 94.03(5). However, the duty to furnish medical treatment under the workers' compensation act has been extended to include paying for treatment of non-work-related conditions when such treatment is necessary to achieve optimum treatment of the industrial injury. *Merriman v. Industrial Commission,* 120 Colo. 400, 210 P.2d 448 (1949); *Public Service Co. v. Industrial Claim Appeals Office,* 979 P.2d 584 (Colo. App. 1999).

E. In concluding that Claimant has proven, by a preponderance of the evidence, that she is entitled to the right hip arthroplasty suffered a compensable work injury, the ALJ finds the opinion of the Industrial Claims Appeals Panel in *Jamie Gardea v. Express Personnel Professionals,* W.C. No. 4-650-961 (October 28, 2011), instructive. In *Gardea,* Claimant sought the provision of a gastric bypass procedure after injuring his ankle in an industrial accident. At the time of his injury, Claimant weighed approximately 500 pounds. Surgery for the ankle was recommended but Claimant needed to lose a significant amount of weight for the surgery to be successful. Claimant failed in his bid to lose weight prompting his physician to recommend bypass surgery before placing him at MMI. Respondents denied a subsequent request for bypass surgery asserting that Claimant's need for this procedure was unrelated to his industrial injury and the facts of the case were distinguishable from the precedent set forth by the Court of Appeals in *Public Service*, supra. Respondents argued that because claimant was obese prior to his ankle injury, the need for bypass surgery was not "ancillary" to the work-related injury, as was the need for mental health treatment prior to proceeding with surgery as articulated in *Public Service*. In essence, respondents suggested that claimant's need for bypass surgery predated his industrial injury and because he needed it prior to injuring his ankle, there was no causal relationship to the work injury. In affirming the ALJ, the Panel found respondents' notion of the term "ancillary" overly narrow, concluding that it was not necessary for there to be a direct causal relationship in order for the bypass procedure to be compensable.

Rather, as the Panel noted, in affirming the ALJ, all that is necessary for such treatment to be compensable is a finding/conclusion that it is necessary to achieve optimum treatment of the industrial injury.

F. Here, the ALJ concludes that the evidence presented is analogous to the situation presented in *Gardea.* Similar to Mr. Gardea, whose weight problem was not directly causally connected to his industrial injury, Claimant suffers from non-work-related osteoarthritis in the right hip. Nonetheless, per the opinions of Drs. Primack and Nakamura, right hip surgery is necessary to optimize the care/treatment necessary to improve Claimant's chances of having a successful treatment outcome concerning her left knee injury by enhancing her recovery and hastening MMI. Akin to the ALJ's conclusion in Gardea, the undersigned credits the opinions of Drs. Primack and Nakamura as credible and persuasive to find/conclude that the recommended right hip surgery is necessary to achieve optimum treatment for the left knee injury in this case.

ORDER

It is therefore ordered that:

1. Respondents are liable for the costs associated with the recommended right hip arthroplasty in this case.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 21, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts

Colorado Springs, CO 80906

ISSUES

- Did Claimant prove his claim should be reopened based on a mistake, error, or change of condition?

- Did Claimant prove the left shoulder surgery performed by Dr. FitzPatrick on October 20, 2017 was reasonably necessary authorized treatment for his industrial injury?

- Did Claimant prove entitlement to TTD benefits commencing October 20, 2017?

FINDINGS OF FACT

1. Claimant worked for Employer as a distribution sales manager. He suffered admitted injuries on August 24, 2016 when he stepped backward through an open trapdoor and fell down a flight of approximately 20 wooden stairs.

2. Claimant's co-worker, Judson Carter, witnessed the accident. When Claimant came back up the stairs, he was obviously in pain and seemed to have trouble catching his breath. Claimant rested for a while, and then he and Mr. Carter went to the next stop on their schedule. Claimant remained in the vehicle because he was in too much pain to get out and walk around. Shortly after that, Claimant asked Mr. Carter to take him to the emergency room.

3. According to the ER report, Claimant complained of "left-sided rib, left hip/thigh pain, and mid-back pain." He was having difficulty breathing and speaking because of the rib pain. On physical examination, he had midline tenderness of the neck, tenderness around the ribs on the left side, tenderness to the left thigh, and the left great toe. He was reported to have full range of motion of all extremities.

4. The ER physician ordered essentially head to toe imaging. A head CT was normal. CT of the chest, abdomen, and pelvis showed no evidence of acute trauma. There were old, healed rib fractures, but no new fractures. Foot x-rays showed a nondisplaced fracture of the left big toe. The cervical spine CT showed degenerative changes with no acute abnormality. The ER physician diagnosed a left big toe fracture, cervical strain, thoracic spine strain, and thigh contusion. Claimant was given a prescription for Percocet, advised to wear a wooden sole shoe, and discharged.

5. Claimant had a lengthy history of medical issues before his industrial accident, including two motorcycle accidents several years ago, chronic low back pain and sciatica, right hip pain, gout, diabetes, cardiac conditions, and leukemia. Dr. Bryan Hynes has been his PCP since approximately 2011. Dr. Hynes' records are frustrating because they contain copious information that is obviously "cloned" from prior records. Once information is entered into Dr. Hynes' records, it frequently repeats continuously,

regardless of whether that issue was actually addressed at a particular visit. One such cloned note states Claimant exhibited,

> Multiple pressure points of the cervical/thoracic/lumbar spine and paraspinal muscles. Decreased range of motion secondary to pain and stiffness.

6. Those two sentences first appeared in Dr. Hynes' May 31, 2013 office note. At that appointment, Claimant was primarily concerned about a gout flare, with no indication of any neck problem. Dr. Hynes gave no diagnosis pertaining to the neck. The notation subsequently reappears in Dr. Hynes' January 21, 2016 record, when Claimant was seen for "dry cough, dizzy, lightheaded, nausea, and left ear feels itchy." Claimant's neck was "supple" with "full range motion." No cervical diagnosis was given. Nevertheless, those sentences repeat in every subsequent record.

7. To cut through the noise from cloned notes, ALJ carefully parsed Dr. Hynes' records to discern when various issues were first documented and when changes were made to the text entries. Based on that review, the ALJ finds Claimant had no significant neck symptoms before the work accident.

8. The day after his accident, Employer referred Claimant to its designated provider, CCOM. When he arrived at the clinic on August 25, 2016, Claimant was given a pain diagram to complete. Initially, he circled the entire body because he felt pain "all over." The staff asked him to re-do the form and mark specific areas that were most bothersome that day. Claimant marked the neck, right shoulder, both elbows, the right forearm, his low back and buttocks, lateral left thigh, and right Index finger, and left foot.

9. Claimant saw PA-C Steven Byrne at the first CCOM appointment. Claimant's chief complaints were described as "right shoulder pain, left ribs, hip, back, left thigh," but he also reported "overall body aches and pains." Mr. Byrne reviewed the ER records and noted, "with the exception of the fractured toe there does not appear to be any acute injury noted during the workup by the emergency department." On physical examination, Mr. Bryne noted "range of motion of both arms with some discomfort." Claimant's back was tender to palpation from the neck to the lumbosacral area. He was wearing a surgical shoe to support the broken toe. Mr. Byrne was most impressed with a "very large" hematoma on the left lateral thigh. He diagnosed a nondisplaced fracture of the left great toe, right shoulder contusion, and left thigh contusion.

10. Claimant next saw Mr. Byrne on August 29, 2016. He completed a pain diagram very similar to the one from the first appointment. Claimant marked his neck, right shoulder, bilateral ribs, mid back, low back and buttocks, left thigh, left knee, and left foot. Claimant had tenderness to palpation at the insertion of the left paraspinal muscles to the base of the skull, and along the paraspinals throughout the cervical spine. Mr. Byrne noted a "very large rigid fluid mass of the lateral thigh," and ordered a "stat" ultrasound to rule out hematoma or DVT.

11. Claimant returned to Mr. Byrne on September 1, 2016. His neck was tender to palpation along the paraspinals at the base of the skull. Mr. Byrne referred Claimant to Dr. Alex Romero for evaluation and potential evacuation of the large hematoma on the left thigh.

12. Mr. Byrne's note from September 7, 2016 states Claimant was "able to demonstrate near full range of motion of both arms above 90°." Neither Claimant nor his wife can recall Mr. Byrne examining Claimant's left shoulder or demonstrating full range of motion. Nor do they recall Claimant being capable of raising his left arm above 90° around that time.

13. Dr. Romero ultimately performed two hematoma evacuation surgeries in early October 2016.

14. Claimant followed up with CCOM on October 11, 2016. Mr. Byrne focused almost entirely on residuals from the hematoma surgeries. Despite the fact Claimant's corresponding[1] pain diagram reflects ongoing neck pain, Mr. Byrne stated, "He has recovered from the other injuries produced from this incident."

15. Claimant saw Mr. Byrne again on October 18, 2016. Although he marked continued neck pain on the pain diagram, Mr. Byrne stated, "with the exception of the hematoma . . . he has recovered from the other injuries that were sustained during this incident." Claimant felt ready to return to modified work, so Mr. Byrne released him to half days of sedentary duties.

16. Claimant's last visit with Mr. Byrne was on November 14, 2016. As he had done at every other visit, Claimant completed a pain diagram showing pain in his neck and left lateral thigh. Claimant indicated he was in pain 40% of the time and rated his pain that day as 4/10. Mr. Byrne stated, "The only residual from this injury is some achiness of the left five from where the hematoma [was] surgically evacuated. The patient feels that he is back to his pre-injury state for this injury. His pain level is 0." Mr. Byrne opined Claimant had fully recovered and was at MMI with no impairment, no work restrictions, and no need for further care related to the industrial accident. Claimant disagreed he had recovered and asked about additional therapy or other options. Mr. Byrne advised Claimant he had completed treatment for the work-related injuries and any ongoing symptoms were due to pre-existing problems, for which he should see his personal providers. Mr. Byrne told Claimant Dr. Olson would come in shortly to "sign off" on his release. Claimant was surprised because up to that point he assumed Mr. Byrne was a physician. Mr. Byrne left the exam room, and Claimant and his wife waited approximately 20 minutes for Dr. Olson. Eventually, a nurse entered, told them Dr. Olson would not be coming, and asked them to leave.

17. Respondents point to Claimant's pain diagrams as compelling evidence he did not injure his left shoulder in the August 2016 accident. Claimant consistently circled

[1] The pain diagram from that visit is dated "9-11-16," but the ALJ finds this was an error, because Claimant had no CCOM appointment on September 11, and there is no pain diagram dated October 11, 2016. The most likely explanation is Claimant mistakenly wrote "9-11" when he meant "10-11."

his left neck from the initial visit through the final visit on November 16, 2016, but never marked his left shoulder on any pain diagram.

18. Claimant and his wife explained at hearing why he did not mark left shoulder symptoms on the diagrams. Claimant explained he circled his entire body at the first appointment, but was asked to redo the form with specificity. Claimant then marked everything he could remember being addressed at the ER. At the next appointment, he tried to mark additional areas but was told he could not add new body parts. After that, he confined himself to areas he had previously noted, removing issues as they resolved, but not adding anything new. He mentioned the left shoulder to Mr. Byrne, but Mr. Byrne did not document it.

19. Claimant's wife corroborated Claimant's testimony about the reason for not marking the left shoulder on the pain diagrams. She also corroborated that Claimant reported left shoulder pain and limitation to Mr. Byrne before being released at MMI. Ms. Rinn further testified she observed Claimant having difficulty with his left shoulder, starting shortly after the accident. She observed that his shoulder continued to become more painful and more limiting over time.

20. Respondents filed a Final Admission of Liability ("FAL") on December 2, 2016. The FAL denied liability for post-MMI treatment as "not reasonable, necessary, or related to the compensable injury."

21. Claimant did not object to the FAL and the claim closed.

22. After receiving the FAL, Claimant spoke with his supervisor, Ray Young. Claimant told Mr. Young he was not recovered and wanted additional treatment, but nothing came of the conversation.

23. Claimant's neck and left shoulder pain steadily worsened during 2017. In January or February 2017, he had an appointment with a pain management specialist, Dr. Hess, regarding his ongoing neck and left shoulder pain. Unfortunately, Dr. Hess had a stroke, so Claimant's appointment was canceled. Approximately one month later, he saw Dr. Hess' partner, Dr. Bell. Over the next several months, [2] Claimant received steadily increasing doses of pain medication, to the point he eventually felt the medication was causing more problems than the pain.

24. In March 2017, Claimant saw Dr. Hynes and reported feeling "incapacitated with stress, depression, anxiety, panic as well as profound fatigue, shortness of breath, cardiac symptoms." Because of these multiple issues, Claimant was "overwhelmed and ready to have a breakdown." His cardiologist had recently suggested changing jobs because the stress was too much for his heart condition. Dr. Hynes took Claimant off work because "he is unable to work effectively at this point and needs a break." Although

[2] Claimant has several preexisting, non-injury related medical conditions, and the ALJ infers Dr. Bell was prescribing medications for a combination of preexisting and injury-related conditions.

Dr. Hynes did not mention it, the ALJ infers from Claimant's testimony that the progressive neck and left shoulder pain contributed to his incapacity at that time.

25. On May 15, 2017, Claimant met with Dr. Hynes to explore options besides simply escalating his pain medication. Claimant's complaints included "left shoulder pain." On examination, Dr. Hynes noted left shoulder tenderness to palpation and "minimal active or passive range of motion." He also appreciated popping and clicking of the shoulder, and "bogginess" of the tendons. He administered a left shoulder cortisone injection, which gave Claimant immediate relief.

26. Claimant returned to Dr. Hynes on June 1, 2017 and reported "increased neck pain and left shoulder pain for the last several months after he fell down some stairs." Claimant had "difficulty using the left shoulder" and characterized the pain as "incapacitating." The previous cortisone injection had helped "some," but he still had "significant inability to move the shoulder." On physical examination, "[the] cervical spine was particularly tender on the left side with markedly decreased range of motion." Dr. Hynes diagnosed "cervicalgia." He ordered MRIs of the left shoulder and cervical spine. Regarding the psychological issues, Claimant had received counseling which seemed to be helping. Although his mental status was "improving," he was not ready to return to work.

27. Claimant next saw Dr. Hynes on June 26, 2017. He said his neck and shoulder pain "has been getting much worse" and "is beyond what can be controlled with pain management at this point and is affecting his activities of daily living."

28. The MRIs were completed on July 14, 2017. The cervical MRI was not particularly notable, but the left shoulder MRI showed a full thickness supraspinatus tear, a small joint effusion, and mild to moderate degenerative changes of the left acromioclavicular joint.

29. On August 4, 2017, Claimant had a lengthy discussion with Dr. Hynes regarding his multiple medical issues, including the neck and shoulder injuries. Dr. Hynes noted,

> He does have a history of a fall while working when he stepped into a hole or opening on the floor which was not covered with a latch door and sustained multiple trauma including head injury, cervical injury with strain, left shoulder injury, left thigh, broken left foot. . . . [L]eft shoulder pain chronically and worsening over time found on MRI to have rotator cuff [tear] . . . . Patient continues to have chronic pain worsening in his neck and left shoulder since his accident. He never had this pain before the accident in these areas. . . . [T]he pain he is experiencing in his shoulder and neck is incapacitating and affecting his ability to return to work as well.

30. Dr. Hynes recommended an orthopedic evaluation of the left shoulder "due to worsening of pain."

31. Claimant followed up with Dr. Hynes on August 22, 2017 for daily left-sided headaches, severe left shoulder pain, and severe neck pain "which is getting worse." Dr. Hynes again documented "these problems . . . happened after he slipped and fell into a hole in the floor." He referred Claimant to Dr. FitzPatrick to evaluate the shoulder.

32. Dr. Hynes' note from September 20, 2017 documented Claimant's neck pain and headaches were "getting worse." He again noted Claimant "continues to have left shoulder as well as neck pain and headache ever since falling into a hole in the floor at work." Dr. Hynes administered several left paracervical trigger point injections.

33. Claimant was evaluated by Dr. Jennifer FitzPatrick, an orthopedic surgeon, on September 25, 2017. Claimant said he injured his shoulder "at work almost one year ago. Patient has multiple problems after he fell through a hole. . . . He continues to have left shoulder pain as well as neck pain." She also noted, "Patient reports no injury since the time of his work injury." Dr. Fitzpatrick personally reviewed the MRI and appreciated a full thickness supraspinatus tear and biceps tendinosis. She opined, "[the] examination and MRI findings are consistent with an acute tear within the last year." Dr. Fitzpatrick scheduled surgery for October 20, 2017.

34. Claimant met with Dr. Hynes on October 6, 2017 to discuss his work status. The report states,

> Patient with initial stress reaction that occurred in March with profound depression, anxiety, which incapacitated and in a way, such that he could not focus or concentrate or calculate or mentating appropriately for his job, became very agitated frequently which affected his ability to perform his duties or activities of daily living. The symptoms have improved and lessened but [are] still present. . . . He has also been told . . . he might be losing his job if he does not get back to work soon. Patient was seen by orthopedic surgery [and] is scheduled to have surgery on October 20 for a rotator cuff which is at this time severely painful. He is unable to use the left shoulder. He is in constant pain from his left shoulder, his neck, his back, and osteoarthritis in his legs which affects his ability to focus, concentrate, mentating, participate in work and in life generally. Patient will have surgery and then subsequent recovery period to rehabilitate from his surgery. . . . The patient at this point because of the multiple symptoms is still unable to perform his job even at a minimal level secondary to profound fatigue, severe pain, stress and anxiety, weakness, and does not feel he can perform any job at this time.

35. Employer terminated Claimant on October 17, 2017 because he had missed too much work and exhausted his medical leave.

36. Dr. FitzPatrick performed a left shoulder arthroscopy on October 20, 2017. She confirmed a full thickness tear involving the supraspinatus and superior border of the subscapularis. The biceps tendon and bicipital sling were unstable "due to injury." She opined, "This did appear to be a traumatic tear without evidence of degenerative nature

to the rotator cuff. It did appear that this had occurred within the last 1 to 2 years given the good quality of the tissue overall." She further opined, "it was evident . . . this is most likely a traumatic rupture of the left shoulder rotator cuff." Dr. FitzPatrick's opinions regarding the probable traumatic nature of the rotator cuff tear are credible and persuasive.

37. After surgery, Dr. Fitzpatrick entirely restricted Claimant from using his left arm, and advised he use a sling for six weeks.

38. Claimant returned to CCOM on November 16, 2017, but this time he saw Dr. Daniel Olson. Dr. Olson has treated Claimant since then. Dr. Olson noted, "It was felt by the provider here at the clinic that he had reached his underlying baseline and was released from care. However he continued to complain of left shoulder pain running up to his neck and down into his arm. He eventually had an MRI scan that showed a rotator cuff tear." Claimant also reported "continuing" pain in the left side of his neck. Claimant was still in a sling from surgery. On examination, there was tenderness to palpation in the scapular muscles and trapezius, and along the left side of the lateral neck into the occipital area. Dr. Olson indicated he would "check the status" of the claim because "he will need to restart PT soon for the left shoulder and to the neck." He also took Claimant off work.

39. Claimant's next appointment was November 30, 2017. CCOM had called Respondent-Insurer about the case but had received no response. Dr. Olson noted, "His wife now has insurance so he should be able to do some therapy through her insurance." He recommended physical therapy and acupuncture for the shoulder and neck, and continued the restriction of "off work."

40. On December 20, 2017, Dr. Olson referred Claimant to Dr. Caughfield for the headaches and neck pain. Although the ALJ received no records from Dr. Caughfield, it appears he saw Claimant in late January or early February 2018. According to Dr. Olson, Dr. Caughfield recommended Botox injections.

41. The most recent CCOM records submitted into evidence is dated April 6, 2018. Claimant was slowly improving, although his progress was hampered by lack of authorization for various treatment recommendations. Dr. Olson also liberalized Claimant's restrictions, allowing him to return to modified work requiring no over 5 to 10 pounds lifting with the left arm.

42. In his opening remarks, Claimant's counsel stated Claimant returned to work at a new job in April 2018. The ALJ presumes this was after Dr. Olson released him to modified duty. No evidence was presented to show the exact date Claimant returned to work.

43. Dr. Timothy O'Brien performed an IME for Respondents on February 6, 2018. Dr. O'Brien agreed with the MMI date originally assigned by Mr. Byrne. He opined Claimant suffered only a "minor cervical spine injury" in the accident but reached "the definitive end of healing" by November 14, 2016. Dr. O'Brien opined the lack of documented left shoulder symptoms after the accident shows Claimant did not injure his

left shoulder when he fell down the stairs. He disagreed with Dr. Fitzpatrick that the rotator cuff tear was traumatic, characterizing it as "chronic" and degenerative. He opined, "it would be nearly impossible for a rotator cuff tear to occur on August 24, 2016 and not be detected. . . . The reason [Claimant] did not note shoulder pain on the date of his injury . . . was due to the fact that he did not sustain a shoulder injury." He opined the mere fact Claimant's left shoulder pain developed some time after the work accident not establish a causal connection.

44. Dr. Olson testified at hearing on Claimant's behalf. Dr. Olson has been the supervising physician at CCOM in Pueblo for several years. He knew nothing of Claimant before he took over care in November 2017, even though CCOM's policy in 2016 was for a physician to see a patient after three visits. He acknowledged, "that was one of Steve Byrne's failings, he would keep the cases too long no matter how often we'd tell him you've got to send the cases to us." Based on his treatment of Claimant since November 2017 and his review of Mr. Byrne's records Dr. Olson opined Claimant should not have been put at MMI on November 14, 2016. Dr. Olson noted Claimant "primarily" fell on his left side, so "it doesn't surprise me that his left shoulder would be involved." He stated Mr. Byrne's notes were "not very complete as far as doing a good shoulder examination." Dr. Olson expressed "frustration" with Mr. Byrne because his MMI report did not track the contemporaneous pain diagram, "so I don't know where he got zero level pain from." Dr. Olson testified patients with rotator cuff tears usually present with pain in the shoulder and neck. He conceded the neck markings on the pain diagrams do not jump out as suggestive of a rotator cuff tear. But he also pointed out that shoulder and neck pain frequently occur together and "it's a challenge diagnostically to separate them."

45. Mr. Byrne testified in a deposition for Respondents between the first and second hearing. He did not recall seeing the first pain diagram where Claimant circled his entire body, but agreed, "my girls might have . . . given that back to him, told him to redo it." Mr. Byrne disputed Claimant had ever mentioned left shoulder pain to him. He testified he examined Claimant's left shoulder looking for rotator cuff pathology but found none. Mr. Byrne testified he "specifically" recalled Claimant said he had "no pain" and was "back to his pre-injury state" at the final appointment on November 14, 2016. He had no explanation for the discrepancy with the pain diagram from that date. Mr. Byrne testified Claimant presented as "straightforward" and "a very up front guy."

46. Dr. O'Brien testified at hearing consistent with his report. He emphasized the ER workup had been "meticulous" and documented no left shoulder problem despite leaving "no stone unturned." He described Mr. Byrne's exam as "very thorough." He opined Mr. Byrne's September 7, 2016 note documenting 90° of shoulder motion made it "almost 0%" likely Claimant had a rotator cuff tear at that time. He reiterated Claimant's injuries had resolved by November 14, 2016 and he was appropriately released at MMI. He thought the shoulder surgery was reasonable but in no way related to the work accident.

47. Claimant and his wife's testimony is credible and persuasive. Claimant's accounts of his interactions with Mr. Byrne are more credible than Mr. Byrne's testimony.

48. Dr. Olson's testimony is credible and persuasive.

49. Dr. O'Brien's opinions regarding causation of the neck and shoulder are not persuasive.

50. Claimant proved by a preponderance of the evidence he injured his neck and left shoulder in the August 24, 2016 accident, and the accident proximately caused his ongoing neck and left shoulder problems.

51. Claimant proved his neck and left shoulder injuries worsened after he was put at MMI in November 2016. Claimant was no longer at MMI as of September 25, 2017, when Dr. FitzPatrick recommended shoulder surgery.

52. The October 20, 2017 surgery was reasonably necessary and causally related to his industrial accident.

53. Dr. FitzPatrick was an authorized provider when she performed surgery. Mr. Byrne advised Claimant to follow up with his personal providers when he released Claimant in November 2016. Dr. FitzPatrick became authorized by the referral from Dr. Hynes.

54. The treatment recommended by Dr. Olson since November 21, 2017 was reasonably needed to treat Claimant's compensable injuries.

55. Claimant's worsened condition caused a greater impact on his work capacity as of October 20, 2017, the date of surgery. Claimant is entitled to TTD commencing October 20, 2017.

56. Claimant's counsel admitted at hearing Claimant returned to work in April 2018, and requested a closed period of TTD. No evidence was presented regarding the exact date Claimant returned to work.

57. Claimant's admitted average weekly wage is $2,802.23. The maximum TTD rate for his date of injury is $939.82.

CONCLUSIONS OF LAW

A. Reopening

Section 8-43-303 authorizes an ALJ to reopen any award on the grounds of error, mistake, or a change in condition. The allowance for reopening reflects a "strong legislative policy" that the goal of achieving a fair and just result overrides the interests of litigants in obtaining final resolution of their dispute. *Padilla v. Industrial Commission*, 696 P.2d 273, 278 (Colo. 1985). Thus, a "final" award means only that the matter has been concluded subject to reopening if warranted under the applicable statutory criteria. *Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). The authority to reopen a claim is permissive, and whether to reopen a claim if the statutory

criteria have been met is left to the ALJ's discretion. *Id*. The party requesting reopening bears the burden of proof. Section 8-43-304(4).

Claimant requests his claim be reopened based on mistake, error, or a change of condition. Because the ALJ finds reopening is warranted on the grounds of change of condition, there is no need to address the error/mistake issue.

A "change in condition" refers either to a change in the condition of the original compensable injury, or a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). If a claimant's condition is shown to have changed, the ALJ should consider whether the change represents the natural progression of the industrial injury, or results from an intervening cause. *Goble v. Sam's Wholesale Club*, W.C. No. 4-297-675 (May 3, 2001).

As found, Claimant proved his condition has worsened since the claim closed. Multiple providers documented progressive worsening of his neck and left shoulder pain during 2017, and provided treatment related to his increasing symptoms.

Claimant also proved his worsened condition is causally related to the admitted injury. The ALJ has no difficulty concluding Claimant's ongoing neck problems are causally related to the accident because he has consistently complained of neck pain, from the initial ER visit throughout his course of care. Dr. O'Brien's opinion the neck pain "resolved" by November 2016 is not persuasive and is belied by the November 14, 2016 pain diagram on which Claimant specifically noted ongoing left-sided neck pain. The ALJ also concludes the headaches are probably due to the neck pain.

The more challenging question here is causation of the left shoulder. Admittedly, Claimant did not indicate left shoulder pain on his pain diagrams between August and November 2016. But Claimant and his wife persuasively explained he mentioned left shoulder pain to Mr. Byrne more than once, but was led to believe he could not add new body parts to the claim. When Claimant first discussed these issues with Dr. Hynes several months later, he stated they were due to the fall at work. He said the same to Dr. FitzPatrick in September 2017. Dr. FitzPatrick persuasively opined the rotator cuff tear was traumatic rather than degenerative, and probably occurred within one to two years before surgery. Dr. FitzPatrick was in the best position to make that determination, having observed Claimant's tissues firsthand during surgery. Claimant's fall down the stairs was very traumatic, and there was no other known event within the last year or two equally or more likely causative. Respondents argue the tear must have developed after November 2016 because no left shoulder problems were documented before then. But there is no persuasive evidence of any traumatic event between November 2016 and October 2017. It is far more likely Claimant injured his rotator cuff when he fell down the stairs rather than a spontaneous and coincidental rupture with no identifiable cause, as postulated by Dr. O'Brien.

Claimant probably injured his left shoulder in the fall but did not focus on it immediately because the shoulder pain was less severe than the other injuries. Moreover, at that early stage, he probably had difficulty differentiating left neck from left shoulder pain. After the initial appointments at CCOM, inertia took over and prevented Claimant from revisiting the list of injured body parts. Claimant has a history of chronic pain and appears to be relatively stoic, so he probably resigned himself to some level of pain, hoping it would get better with time. Although Claimant remained symptomatic when Mr. Byrne released him, his left shoulder pain was probably less painful in November 2016 than it became over the ensuing several months. As Dr. Hynes repeatedly documented, Claimant's left shoulder became more painful and less functional as 2017 progressed, ultimately causing him to seek definitive treatment with surgery.

B. Medical treatment

Even if a claimant proves an error, mistake, or change in condition, he is not automatically entitled to have his claim reopened. Rather, reopening is only appropriate if additional medical or indemnity benefits will be awarded. *Richards v. Industrial Claim Appeals Office*, 996 P.2d 756 (Colo. App. 2000).

The respondents are liable for medical treatment reasonably necessary to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). Even if the respondents admit liability, they retain the right to dispute the relatedness of any particular treatment, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (July 2, 2010). Where the respondents dispute the claimant's entitlement to medical benefits, the claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997).

As found, the treatment Claimant received for his neck and left shoulder after being released by Mr. Byrne in November 2016 was reasonably necessary and causally related to the industrial accident.

Besides proving medical treatment was reasonably necessary and causally related, a claimant must prove the treatment was "authorized." "Authorization" refers to a physician's legal authority to treat the injury at the respondents' expense. *Popke v. Industrial Claim Appeals Office*, 944 P.2d 677 (Colo. App. 1997). Section 8-43-404(5) gives the employer the right to select the claimant's treating physician "in the first instance." Once the respondents have exercised their right of selection, the claimant may not change physicians without permission from the insurer or an ALJ. *Giannetto Oil Co. v. Industrial Claim Appeals Office*, 931 P.2d 570 (Colo. App. 1996). A physician who treats a claimant on referral from an ATP in the "normal progression of authorized treatment" becomes authorized. *Bestway Concrete v. Industrial Claim Appeals Office*, 984 P.2d 680 (Colo. App. 1999); *Greager v. Industrial Commission*, 701 P.2d 168 (Colo. App. 1985).

Respondents argue that even if this claim is reopened, they are not liable for the shoulder surgery because Dr. FitzPatrick was not authorized. The ALJ disagrees with this argument, based on the rule enunciated in *Cabela v. Industrial Claim Appeals Office*, 198 P.3d 1277 (Colo. App. 2008). In *Cabela*, the Court of Appeals held that if an ATP determines a claimant's condition is not work-related and instructs the claimant to pursue treatment with personal physicians, the treatment will be deemed authorized if it is later determined the condition was compensable. The court held that "the risk of mistake by an ATP in concluding that an injury is noncompensable lies with the employer" rather than the claimant.

As found, Dr. Hynes became authorized because Mr. Byrne advised Claimant to follow up with his personal physicians when he released Claimant from care. Mr. Byrne apparently believed Claimant's ongoing pain in November 2016 reflected a pre-existing "baseline" condition, an opinion the ALJ has found to be erroneous. Therefore, under *Cabela*, Claimant's personal physician became authorized as of November 14, 2016. Dr. FitzPatrick subsequently became authorized on referral from Dr. Hynes.

C. TTD benefits

A claimant's entitlement to TTD benefits after a reopening is governed by *City of Colorado Springs Disposal v. Industrial Claim Appeals Office*, 954 P.2d 677 (Colo. App. 1997). *City of Colorado Springs* held that a worsening after MMI does not automatically entitle a claimant to additional TTD benefits, unless the worsened condition causes a "greater impact upon [the] claimant's temporary work capability." The dispositive question is whether the claimant proves "increased disability, as measured by [their] capacity to earn wages." *Friesz v. Wal-Mart Stores, Inc*., W.C. No. 4-823-944-01 (July 26, 2012). The ICAO has repeatedly held that *City of Colorado Springs* does not require a claimant to establish an "actual wage loss," and a claimant may recover TTD even if he not working immediately before his condition worsened. *E.g.*, *Hebert v. Blac Frac Tanks, Inc*., W.C. No. 4-919-279-01 (October 19, 2018); *Garcia v. Frontier Airlines*, W.C. No. 4-677-511 (August 17, 2011); *Moss v. Denny's Restaurants*, W.C. No. 4-440-517 (September 27, 2006). As the Panel explained in *Friesz v. Wal-Mart, supra*,

> [T]he critical issue in cases controlled by *City of Colorado Springs* is not whether the worsened condition actually resulted in additional temporary wage loss, but whether the worsened condition has had a greater impact on the claimant's temporary work "capacity." . . . It therefore follows that it is the impact on the claimant's work "capacity," not proof of an actual wage loss, which determines whether the claimant has established entitlement to TTD benefits in connection with a worsening of condition after MMI. [Internal citations omitted].

As found, Claimant's worsened condition caused a greater impact on his work capacity as of October 20, 2017, the date of surgery. Claimant was taken off work in March 2017 primarily because of anxiety, depression, and exhaustion, although the pain from his neck and left shoulder were at least contributing factors in his inability to work. Moreover, his mental status improved and he probably could have returned to work in some capacity

before October 2017 but for the severe and worsening neck and left shoulder problems. After surgery, Claimant required at least a brief period of convalescence during which he could not have worked in any capacity. After that, he was restricted from using his left arm for work tasks for six weeks. Dr. Olson thought the left shoulder and neck were bad enough to take Claimant completely off work, without regard to any unrelated medical conditions. The persuasive evidence demonstrates the surgery proximately caused a substantial additional reduction in Claimant's work capacity, which entitles him to TTD benefits.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen his claim is granted.

2. Insurer shall cover reasonably necessary treatment to cure and relieve the effects of Claimant's compensable neck and left shoulder injuries, including but not limited to treatment rendered by Dr. Olson and his referrals, and the October 20, 2017 surgery performed by Dr. FitzPatrick.

3. Insurer shall pay Claimant TTD benefits at the rate of $939.82 per week, from October 20, 2017 until the date he returned to work in April 2018. Claimant shall provide Respondents with documentation of his return to work date as soon as possible, and no later than December 5, 2018. Respondents' obligation to pay TTD benefits is stayed pending receipt of the documentation from Claimant. Insurer shall pay the TTD benefits within 30 days of receiving the documentation from Claimant.

4. Insurer shall pay statutory interest of 8% per annum on all benefits not paid when due.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 21, 2018

s/Patrick C.H. Spencer II

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion on the issues of MMI and Whole Person Impairment Rating of 12% for Claimant's admitted lumbar spine injury?

II. Has Claimant, by a preponderance of the evidence, overcome the DIME opinion that Claimant should not be awarded an Impairment Rating for her right shoulder, due to a lack of showing her shoulder injury was *causally related* to her admitted back injury?

III. If such shoulder injury is deemed to be work-related, shall Claimant be reimbursed past medical expenses in connection therewith, as well as maintenance treatment for her shoulder?

IV. If such shoulder injury is deemed to be work-related, shall Claimant be awarded for disfigurement?

V. Respondents have agreed that since this is an admitted injury to Claimant's lower back, she is entitled to medical maintenance treatment that is reasonable, necessary, and related to her back injury.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Work Accident

1. This is an admitted injury. On June 9, 2014, Claimant slipped on water and fell while answering the call light for a resident of Employer's nursing facility. Claimant was taken to the St. Mary Corwin Hospital Emergency Department where she complained of diffuse, non-radiating pain from her thoracic spine to lumbar spine, and in her left hip. The records from American Medical Response ("AMR") from June 9, 2014 [the date of the incident] documented that Claimant was complaining of severe pain at a level of 10 out of 10 at the time of the incident with pain radiating down her left leg with some hip pain. (Claimant's Ex. 5, p. 20). She had been lying in the same position from the time of the fall until the paramedics arrived. *Id.* The paramedics administered fentanyl to Claimant to alleviate the severe pain. *Id.*

2. An X-ray of Claimant's lumbar spine was taken and compared to a prior lumbar spine X-ray from September 6, 2013. The X-ray showed no acute findings and degenerative changes from L4-S1. Claimant was diagnosed with acute back pain and a left hip contusion.

Claimant's Prior Reports of Back Pain

3. Claimant had a prior work compensation claim for an injury on April 11, 2011. She ultimately underwent a Division IME with Dr. Jeffrey Jenks on February 8, 2012. At the time of the DIME, Claimant advised Dr. Jenks she was having continued pain in the left side of her neck, thoracic region, lumbosacral region and radiation into her left leg to her heel.

4. Claimant was seen by her primary care physician, Dr. Jamie Pollock, on August 27, 2013 for complaints of bilateral lower extremity numbness. She returned to Dr. Pollock on September 5, 2013 and was given a diagnosis of low back pain and radiculopathy. Dr. Pollock requested X-rays of Claimant's cervical and lumbar spine.

5. On September 6, 2013 Claimant presented to St. Mary Corwin to obtain the requested X-rays. On arrival, Claimant filled out an "Outpatient Fall Risk Tool" in which she checked a box indicating she was having difficulty with walking or balance. Notes from the visit indicate the reason for the X-rays was "LBP Radiculopathy." Claimant returned to Dr. Pollock on September 19, 2013 and assessed with "degeneration of lumbar or lumbosacral intervertebral disc"

6. As part of the discovery process in this case, Respondents sent Claimant a letter requesting that she disclose all healthcare providers who treated the parts of her body or the conditions alleged to be related to the claim. Claimant provided a list of medical providers but omitted Dr. Pollock from the list. At hearing, Claimant indicated that Dr. Pollack's name, possibly other medical providers, appeared on a second page, which was provided to her attorney. Claimant offered to retrieve a copy of this second page from her personal file at home, but this was not requested by any party. [The ALJ notes that the production, or non-production, of this alleged second page would be of extremely limited value to the fact finder. Without proof of prior conveyance, there would be no way to forensically determine when such second page was initially prepared].

Treatment Through Workers Compensation for Lumbar Injuries

7. Claimant presented to Dr. Terrence Lakin of the Southern Colorado Clinic/Occupational Medicine on June 10, 2014 to receive treatment for her work injury. Claimant described the events of June 9, 2014 to Dr. Lakin, and was diagnosed with a lumbar strain. Claimant filled out a medical history for Dr. Lakin. Therein, she indicated she never had back pain prior to the injury, and that she quit smoking in October, 2013. [The ALJ finds both statements to be misleading, at best]. (Ex. 6).

8. Dr. Lakin prescribed physical therapy, medications, and provided Claimant with temporary restrictions of no lifting more than 15 to 20 pounds, walking and standing as tolerated, with limited bending and no violent or physical patient contact. *Id.* Claimant continued with her physical therapy, but as of August 20, 2014, she continued to complain of pain at a level of 6 out of 10 along with tenderness over the L5-S1 region

and pain radiating into her left buttocks. *Id.* at 33. An MRI was recommended at this time.

9. A lumbar MRI was performed on August 22, 2014. (Ex. 7, pp. 246-247). The *Findings* showed:

> L4-L5: *Mild* right foraminal stenosis and minimal right lateral recess encroachment secondary to moderate right disc bulge and facet arthropathy. No definitive nerve impingement. No central canal or left foraminal stenosis.
>
> L5-S1: *Mild to moderate* left foraminal stenosis and minimal left lateral recess encroachment secondary to moderate left disc bulge and facet arthropathy. Possible impingement of the exiting left L5 nerve root. No central canal or right foraminal stenosis. (emphasis added).

10. Claimant was referred to Dr. Roger Sung for an orthopedic consultation on February 5, 2015. (Ex. 9, pp. 267-270). Claimant told Dr. Sung she had undergone physical therapy and injections, but nothing had relieved her pain. Dr. Sung noted Claimant had stated that prior to the June 9, 2014 accident she had never had any back related issues and never saw anyone for back related problems. Dr. Sung reviewed Claimant's MRI results with her and discussed that she had underlying degenerative changes which had been longstanding. Claimant told Dr. Sung she smoked a couple cigarettes a day, but she still felt very comfortable that she could quit. Dr. Sung recommended a L4-S1 anterior and posterior fusion.

11. Claimant underwent an EMG and nerve conduction test on February 17, 2015 with Dr. Dwight Caughfield. The EMG was normal, with no evidence of nerve entrapment or lumbar radiculopathy.

12. Dr. John McBride performed a Respondent Independent Medical Examination ("IME") on May 28, 2015. Dr. McBride noted Claimant had significant degenerative disc disease and recess stenosis at L4-L5 and L5-S1. He opined that the degenerative changes to be addressed by this surgical fusion had occurred over time; not from the June 9, 2014 fall. If Claimant did have an acute disc injury from her slip and fall, she would have responded more profoundly to epidural injections. Dr. McBride opined the cause of Claimant's pain was wear and tear of her lumbar spine, based on her BMI of 38, and an acute exacerbation with the slip and fall on June 9, 2014. Dr. McBride further opined Claimant would be a surgical candidate, unless further information regarding previous low back pain came to the surface.

13. Claimant returned to Dr. Sung on January 14, 2016, and advised him that none of her treatment provided lasting relief. She wanted to move forward with surgery. Dr. Sung requested an updated lumbar MRI, which was performed on January 25, 2016. This MRI was then compared to the August 22, 2014 MRI. Under *Findings*, it was then noted:

> L4-L5: There is *advanced* degenerative disc disease with disc desiccation and predominately right-sided disc space height loss with associated endplate

degenerative changes and degenerative spurring….. There is a posterior disc bulge with mild midline extension, mild to moderate right neural foraminal extension and mild left neural foraminal extension….

L5-S1: There is *advanced* degenerative disc disease with disc desiccation and predominately left-sided disc space height loss with associated endplate degenerative changes and degenerative spurring….There is *severe* left foraminal stenosis. (Ex. 9, p. 275) (emphasis added).

14. Claimant returned to Dr. Sung on February 25, 2016 and reported to him that she had quit smoking. Dr. Sung recommended Claimant undergo a L4-S1 fusion procedure. This request was denied by Respondents.

15. On February 28, 2016, Respondents obtained video surveillance of Claimant. This video surveillance clearly showed Claimant smoking a cigarette.

Claimant's Right Shoulder Injury

16. Claimant presented to Colorado Center for Orthopedic Excellence on August 29, 2016 and reported right shoulder pain and weakness. She indicated the symptoms started on or about July 16, 2016 when she fell onto her right shoulder. She felt the reason for her fall was numbness and tingling in her left leg that was *caused by* her June 9, 2014 low back injury. Dr. Ky Kobayashi reviewed a MRI of Claimant's right shoulder and found it to show a massive right shoulder rotator cuff tear. Surgical treatment for this claim was denied, and Claimant had it performed outside the Workers Compensation system.

Testimony of Dr. Sung

17. The parties herein went to hearing on August 16, 2016, on the issue of authorization of the surgery recommended by Dr. Sung. Claimant took the post-hearing evidentiary deposition of Dr. Sung on August 24, 2016. Dr. Sung testified he diagnosed Claimant with L4 to S1 degenerative disc disease, disc bulging, neuroforaminal stenosis and left leg radiculopathy. He recommended a L4-S1 anterior and posterior fusion to relieve claimant's pain down her leg and some of the pain in her low back.

18. Dr. Sung reviewed Claimant August 22, 2015 and January, 2016 lumbar MRIs. He testified that many the findings in the MRIs were degenerative in nature, and had been present prior to Claimant's fall of July 16, 2016.

19. Dr. Sung testified that he recommended that Claimant quit smoking entirely, prior to him performing the fusion surgery. He testified that with a fusion surgery it is necessary to get bone to heal to bone, and smoking inhibits this bone healing process. Dr. Sung testified that even smoking one a week was too much smoking If a patient was committed to getting better, they would quit smoking entirely. Dr. Sung's recommendation was for Claimant to quit smoking, be tested to prove nicotine sobriety, and then move forward with surgery.

20. Dr. Sung testified if Claimant were to start smoking following surgery, it would decrease the chance of spine fusion and increase the risk of infection. Dr. Sung testified he was concerned that Claimant would resume smoking after surgery, given her 23-year history of smoking 1 ½ packs a day. It was noted that Claimant had previously tried to stop smoking, but had been unsuccessful.

21. Dr. Sung initially testified Claimant's pain complaints were not related to a preexisting personal health condition. His basis for this opinion was that Claimant had no pain prior to the accident, and she had very clearly told him at her first visit she had never had back related problems. However, Dr. Sung also testified he did not review records from other medical providers, did not perform a detailed causation analysis, and was more focused on whether to perform surgery than determining how Claimant was injured. Dr. Sung testified he is not level II accredited by the Colorado Division of Workers' Compensation for purposes of making a causation analysis.

22. Dr. Sung was provided with the September, 2013 medical records indicating Claimant had low back pain and radiculopathy. He expressed surprise at the existence of these medical records. He testified that, based on those medical records, it was *difficult to tell* whether Claimant would have required a lumbar fusion in September, 2013.

23. Dr. Sung testified a patient's credibility and veracity plays an important role in his decision whether to perform an operation, because he has to believe the patient's subjective complaints of pain. Dr. Sung reviewed the letter from Claimant to Respondent's counsel in which she was asked to disclose her prior medical providers but declined to disclose her treatment with Dr. Jamie Pollock, her primary care physician. Dr. Sung testified this omission made Claimant less credible in his opinion, and it made him less comfortable making a decision to operate on Claimant based on her subjective pain complaints. Dr. Sung testified his level of confidence, based on Claimant's subjective complaints, was "low."

24. Dr. Sung testified Claimant was incorrect when she testified no one ever told her to stop smoking. Dr. Sung reviewed an interrogatory response by Claimant in which she stated "I don't feel my current smoking habits have anything to do with this claim. Smoking cessation was recommended by Dr. Sung, but I was never told that I had to stop smoking." Dr. Sung testified this was a false statement from Claimant and he had told her to stop smoking. Dr. Sung testified he had been shown a video of Claimant smoking on February 28, 2016, and the video was inconsistent with Claimant telling him on February 25, 2016 she had stopped smoking.

25. Dr. Sung testified that after reviewing Claimant's September, 2013 medical records he had to agree that Claimant's statement to him she never had prior low back pain was false. Dr. Sung testified that now that he has evidence Claimant had a prior back problem he cannot say whether the need for surgery is related to the June 9, 2014 injury. Dr. Sung testified that regardless of the causation issue, he would not presently operate on her because she continued to smoke.

ALJ Nemechek's Order on Fusion Surgery Originally Proposed by Dr. Sung, and other Authorized Treatment

26. ALJ Timothy Nemechek issued a Summary Order on November 30, 2017 finding Claimant failed to prove the recommended surgery was reasonable and necessary. In this Order, the ALJ summarized the findings of Dr. John McBride, who had performed an IME on behalf of Respondents.

> He (Dr. McBride) opined the degenerative changes in her lumbar spine had occurred over time and were *not the result* of the June 9, 2014 fall. *These were aggravated by the fall*.…The Medical Treatment Guidelines required a significant change in the radiographs over a period of two years to consider aggravation of a pre-existing osteoarthritis as an etiology. (Ex Q., Finding of Fact #14) (emphasis added).

In Finding of Fact #27, the ALJ found:

> Claimant had *degenerative changes* in her lumber spine, which were *exacerbated by the June 9, 2014 fall.* (emphasis added).

Lastly, in Finding of Fact #30 of his Summary Order, the ALJ found:

> Finally, Respondents requested an Order terminating Claimant's medical benefits, including any further treatment for her low back. The ALJ determined Respondents are not entitled to this relief. On balance, *the medical records showed Claimant's industrial injury aggravated her pre-existing degenerative condition for which she required treatment.* This conclusion was supported by Drs. McBride and Douthit. It is incumbent upon Claimant's ATPs to determine what treatment, if any, she requires to reach MMI. (emphasis added).

Continued Treatment / Knees and Shoulder

27. Claimant underwent right shoulder arthroscopic rotator cuff repair on March 24, 2017 with Dr. Kobayashi. Claimant's private insurance paid for this procedure.

28. Claimant presented to Dr. Lance Farnsworth on July 27, 2017 for follow-up of treatment for left knee osteoarthritis. Dr. Farnsworth had previously performed a right total knee arthroplasty in March, 2014. Claimant recovered with no complaints. Dr. Farnsworth discussed Claimant's option for the left knee and she elected to proceed with a total knee arthroplasty. The left knee surgery was performed on or about August 7, 2017. Claimant's private insurance paid for this procedure.

MMI and Impairment Rating by Dr. Lakin

29. Claimant returned to Dr. Lakin on January 19, 2018. In his report Dr. Lakin noted he reviewed the ALJ's Order denying Dr. Sung's surgery. (Ex. 6, p. 233, 235). Claimant continued complaining of lower back pain, reporting an 8 out of 10 level pain at the time

of MMI. *Id.* at 236. Physical examination of Claimant's back documented moderate to severe tenderness to palpation of paralumbar muscles with mild muscle spasms. *Id.* at 237. Dr. Lakin's final diagnosis regarding the back was a lumbar strain with aggravation of Claimant's underlying DDD/DJD. *Id.* Dr. Lakin's ongoing treatment during his assignment as an ATP notes that Claimant was prescribed Flexeril for back spasms.

30. Dr. Lakin assigned a 14% lumbar rating, 8% for range of motion loss combined with 7% for a Table 53IIC rating, based upon aggravation of her degenerative disc disease resulting from this fall. *Id.* at 238. Dr. Lakin based his impairment rating, in part, on an FCE performed that was deemed "relatively reliable". (Ex. 6, p. 221). The FCE reported that Claimant was experiencing lower back pain throughout the evaluation. *Id.* at 222. Dr. Lakin opined that given that Claimant had exhausted all means of treatment, except for surgical intervention, she had reached MMI, effective that day. Respondents contested Dr. Lakin's final report and applied for a Division IME.

Division IME by Dr. Watson

31. Dr. Robert Watson was selected as the DIME physician. A thorough records review is noted in his report. He conducted the exam on April 23, 2018. Like ATP Lakin, he opined that Claimant reached MMI for the lumbar spine on January 19, 2018. Dr. Watson noted Claimant had a history of left knee osteoarthritis, and she was very clear with him that her left knee was not injured as a result of her work injury.

32. Claimant reported having a fall on or about July 16, 2016 when her left leg went numb and caused her to fall and injure her right shoulder. Dr. Watson noted the injury occurred over 2 years after Claimant's work injury, and she had objective inconsistencies in her evaluations. She did not report left leg pain and numbness until at least December 29, 2014, but her EMG with Dr. Caughfield was negative for radiculopathy. She also had significant nonphysiologic findings in her evaluation.

33. Dr. Watson noted that his exam of Claimant's lower extremities was significant for inconsistent sensory changes throughout both the left and right lower extremities. Dr. Watson ultimately concluded:

> There does not appear to be a temporal relationship to the low back injury and the onset of her [Claimant's] complaints of left leg pain. Because of these inconsistencies, I am unable to say, within a reasonable degree of medical probability that her fall [and subsequent right shoulder injury] was related to her work injury. (Ex. 13, p. 321).

34. In his DIME report, Dr. Watson noted the Colorado Division of Workers' Compensation requires an impairment rating be given for all body parts listed on the DIME application form.

35. Dr. Watson provided a 33% left lower extremity impairment rating and 3% right upper extremity impairment rating, even though his report made clear these body parts were not related to claimant's work injury.

36. For the lumbar complaints, Dr. Watson provided 8% whole person lumbar impairment utilizing Table 53IIC of the *American Medical Association Guides to the Evaluation of Permanent Impairment, 3rd Ed.* Specifically, he found that two lumbar levels required a rating; the first level from Table 53IIC was for 7%, and the second level added 1%. Combined, this constitutes 8% from this Table. He then combined this 8% with a 4% whole person lumbar impairment for loss of range of motion. The total combined lumbar impairment rating was 12% of the whole person.

37. In this diagnosis component of his DIME opinion, Dr. Watson noted:

> 1. *Lumbosacral strain, aggravation of underlying degenerative disc disease* L4-5, L5-S1. (emphasis added).

He also noted:

> "[Claimant] has had previous difficulties with her low back in 2013 as documented by her private physician. However, there does not appear to be any record of her receiving treatment following this evaluation. There is no indication that she was independently disabled at the time of her work related injury." *Id.* at 322.

Ensuing Litigation

38. Respondents filed an Application for Hearing, contesting Dr. Watson's impairment rating for the lumbar spine. Claimant filed a Response to Application for Hearing, contesting Dr. Watson's impairment rating for the shoulder, and date of MMI.

39. The parties took the deposition of Dr. Watson on August 13, 2018. Dr. Watson testified the Application for DIME asked him to review claimant's lumbar spine, left lower extremity and right upper extremity. He testified the only body part that was related to Claimant's work injury was the lumbar spine and 12% whole person rating, but he still provided impairment ratings to claimant' left lower extremity and right upper extremity because the Division of Workers' Compensation requires him to provide ratings for every part listed on the Application for DIME.

40. Claimant testified at hearing. She described her slip and fall on water on June 9, 2014 in which she injured her low back. She testified that in May, 2015 she was out for an evening walk when she felt pain in her left lower back and her entire left leg went numb and caused her to fall. She testified she had another such fall in July, 2014 due to left leg numbness and landed directly on her right shoulder and was unable to move her arm away from her side following the fall. Claimant testified she had bad knees and longstanding knee pain but felt she could differentiate between knee pain and pain and numbness from her low back. She testified the left knee was not causing her pain at the time of her injury on June 9, 2014.

41. Claimant testified she never had radiating pain into her left leg prior to her work injury. She could only recall one prior instance of low back pain. Claimant testified she did not tell any of her workers' compensations providers of her prior low back pain or lower

extremity pain and numbness. At hearing, Claimant explained that he did not consider her prior back pain to carry great significance, since it did not impede her ability to work until her fall on 6/9/2014.

42. Claimant testified she did not lie to Dr. Sung regarding her smoking cessation and that Dr. Sung never told her to stop smoking.

Medical Opinions of Dr. Lesnak

43. Dr. Lawrence Lesnak reviewed Claimant's medical records to provide an opinion regarding Dr. Watson's impairment rating. He reviewed Claimant's records both prior to, and after, her June 9, 2014 work injury. He noted she had a history of low back pain and pain and numbness into her lower extremities. Dr. Lesnak noted Claimant's records documented nonorganic/nonphysiologic findings both before and after her injury.

44. Dr. Lesnak agreed with Dr. O'Brien that Claimant's slip and fall may have resulted in a "very mild" lumbosacral strain or sprain, but that any injury would have resolved no later than 3 months following the incident. Dr. Lesnak opined that Claimant's symptoms did not improve, and actually seemed to steadily worsen. Combined with a lack of objective findings to support her complaints would seem to strongly indicate the presence of significant psychologic/psychosocial issues.

45. Dr. Lesnak opined Dr. Watson's lumbar impairment rating was incorrect. He noted Claimant did not have a Table 53 diagnosis that would be related to her work injury given that there was no objective evidence of an injury to her spine and she reported no response to all diagnostic and non-therapeutic testing. Dr. Lesnak opined that this confirmed that Claimant's symptoms are not coming from her lumbar spine or SI joint.

46. Dr. Lesnak noted the only consistency in Claimant' claim had been her myriad subjective pain complaints, without any objective findings to support those complaints. No treatment directed at her lumbar spine provided any type of improvement in her subjective complaints or function.

47. Dr. Lesnak indicated that utilizing the *AMA Guides to the Evaluation of Permanent Impairment, 3rd Ed.* a patient with only subjective pain complaints does not qualify for a permanent impairment rating. Dr. Lesnak opined there was absolutely no evidence to indicate Claimant qualifies for any type of impairment rating related to her work injury.

Medical Opinions of Dr. O'Brien

48. Orthopedic surgeon Dr. Tim O'Brien reviewed Claimant's medical records in order to provide an opinion regarding Dr. Watson's impairment rating. Dr. O'Brien is board certified in orthopedic surgery and Level II accredited by the Colorado Division of Workers' Compensation. Dr. O'Brien was admitted as an expert in orthopedic surgery.

49. Dr. O'Brien opined claimant's June 9, 2014 injury caused a *minor and temporary* aggravation of her underlying degenerative disc disease. Dr. O'Brien testified the surgery recommended by Dr. Sung would not be reasonable, necessary and related to

claimant's work injury and opined claimant would have healed within 3 months of the date of injury.

50. Dr. O'Brien testified he had reviewed the DIME report of Dr. Watson. He disagreed with the ratings for Claimant's right shoulder and left knee. Dr. O'Brien testified it was clear Dr. Watson opined those body parts were not claim related and he was not aware of a Division requirement to provide impairment ratings for all body parts listed in the Application for DIME.

51. Dr. O'Brien testified there would have been no permanent impairment to Claimant's lumbar spine. Claimant would not have been entitled to a permanent impairment rating under Table 53 because she did not fail to heal, and her ongoing pain was not supported by objective findings.

52. Dr. O'Brien reviewed an Independent Medical Examination report that Dr. Jack Rook performed on behalf of claimant. Dr. O'Brien testified he disagreed with Dr. Rook's opinion claimant should undergo surgery because it was apparent he [Dr. Rook] had not reviewed all the medical records, and because Dr. Rook is not a surgeon.

Medical Opinions of Dr. Rook

53. Claimant went to Dr. Jack Rook for an independent medical examination which took place on July 9, 2018. (Ex. 14). Dr. Rook documented that Claimant continued to complain of constant low back pain that increases with prolonged sitting, bending, twisting, and prolonged standing. Physical examination documented a positive straight leg raise on the left, negative on the right. Dr. Rook recognized that Claimant was only placed at MMI given the denial of the lumbar fusion surgery.

54. Regarding Claimant's back, Dr. Rook diagnosed her with the following work-related conditions: chronic low back pain with left lower extremity radiculopathy; severe degeneration at the L4-5 and L5-S1 levels with retrolisthesis at L5-S1; severe left L5 neural foraminal narrowing; lumbar herniated disc; and lumbar spinal stenosis. He also noted that ALJ Nemechek had previously decided the issue of a permanent aggravation of Claimant's underlying condition when he denied Respondents' request to terminate all medical benefits for the back condition.

55. Claimant reported the same history of falls, sharp back pain, and the left leg numbness to Dr. Jack Rook during an IME on November 21, 2016. (Ex. 12, pp. 301-02). It was noted that Dr. Lakin had told Claimant that her left leg was giving out due to the spinal nerve root impingement identified on the lumbar MRI. *Id.* at 302. Dr. Rook indicated the MRI showed evidence of foraminal stenosis most significant on the *left* side at L5-S1. His physical exam documented an absence of left knee reflex, suggesting a left L4 radiculopathy that could account for the weakness of her left quadriceps seen on physical exam and her leg giving out on multiple occasions.

56. Dr. Rook performed a second IME on July 9, 2018 and he disagreed with Dr. Watson's assessment that the right shoulder was not work related. (Ex. 14, p. 340). Dr. Rook disagreed with the DIME's statement that there was not early documentation of

Claimant's left leg problems. Dr. Rook felt that the left hip x-rays taken on the date of the injury at the emergency room, and an MRI of the lumbar spine two months after the injury demonstrated possible nerve root impingement of the exiting left L5 nerve root at the L5-S1 level.

Disfigurement

57. Claimant displayed four arthroscopic surgical scars surrounding the upper portion of her right shoulder, each being approximately 10 mm by 1 mm, and each being darker than the surrounding skin.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with §8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals*

Office, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

D. The ALJ in this case finds that the medical opinions presented by both parties were presented credibly, professionally and in good faith. The *persuasiveness* of those opinions will be addressed for each issue moving forward. The ALJ concludes that Claimant is lacking in credibility and reliability as a medical historian. She claimed to have quit smoking, but she hadn't. Claimant wanted to 'finesse' her way to a fusion surgery, which could have caused harm to her. She got caught. Claimant now professes to distinguish between pre-existing back problems, and those which actually prevented her from working. This is perhaps a valid distinction, but it required her disclosure. The ALJ finds that Claimant wanted to 'finesse' her way to Workers Compensation benefits without making full disclosures. Her credibility has been compromised. However, as discussed herein, this does not mean Claimant was not seriously injured - nor does it mean she exaggerated her symptoms from day one. Nor could it possibly mean that the objective symptoms noted in testing and examinations did not occur.

DIME Process / Whole Person / Generally

E. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005).

F. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

G. A DIME physician's findings of MMI, causation, and impairment *of the whole person* are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must

be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

DIME Process / Scheduled Ratings / Burden of Proof

H. While a DIME physician's opinions are entitled to special weight on issues of MMI and whole person impairment, they are not entitled to any special weight when it comes to *extremity* ratings. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. APP.1998) (DIME provisions do not apply to the rating of scheduled injuries); see also, *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691, 693 (Colo. App. 2000); *Wagoner v. City of Colorado Springs*, W.C. No. 4-817-985-03 (Oct. 21, 2013) (no presumptive weight afforded DIME physician concerning scheduled injuries), *aff'd Wagoner v. Industrial Claim Appeals Office*, (Colo. App. No. 13CA1983, Oct. 23, 2014) (not published pursuant to C.A.R. 35(e)). Consequently, for extremity ratings, a DIME opinion merely has to be rebutted by a preponderance of the evidence to be overcome.

DIME Physician's Assignment of Impairment Ratings to Left Knee and Right Shoulder

I. Respondents assert that the DIME should be overcome in its entirety, since the DIME physician assigned impairment ratings not only to Claimant's lumbar region (an admitted component of this claim) but also the knee (by all accounts, not causally related to this claim), and the shoulder (which the DIME says is not causally related, but for which Claimant differs). Then the DIME combined all three, then assigned a Whole Person rating for all of it. The ALJ does not concur with Respondents' analysis that this renders the DIME report a nullity. The Division's DIME request is not part of the record before the ALJ, but the DIME report, and Dr. Watson's testimony, indicates that the Division made such a request. Regardless of Dr. Watson's interpretation of the scope of his assignment, the ALJ interprets this DIME report as having additional calculations which are simply unnecessary - but which do not undermine the integrity of the report. Such calculations are not unlike provisional impairment ratings for a Claimant not yet at MMI. They can be disregarded, and the rest sorted out.

J. The Claimant's left knee impairment rating is easy. There is not even a dispute that the Claimant's left knee injury is not causally related to this work injury. The DIME report itself says so. The Impairment Rating for Claimant's left knee is zero.

K. Claimant's challenge the DIME's opinion that her right shoulder injury was not causally related to her June 9, 2014 injury. If Claimant's right shoulder is deemed related, it would be done so under the quasi-course of employment doctrine as a compensable consequence of the original injury:

> The quasi-course of employment doctrine was created to provide the requisite connection between the employment and an injury that would not otherwise be considered to have arisen out of and in the course of employment. *See* 1 *Larson's Workers' Compensation Law* § 10.05 et seq. (2002). It was designed to attenuate the usual requisites of compensability, and thus, injuries received while undergoing authorized medical treatment for an industrial injury are considered compensable even though they occur outside the ordinary time and space limits of normal employment.

Price Mine Serv., Inc. v. Indus. Claim Appeals Office of State of Colo., 64 P.3d 936, 938 (Colo. App. 2003) (emphasis added); *citing Excel Corp v. Indus. Claim Appeals Office,* 860 P.2d 1393 (Colo. App. 1993).

L. Even with the 'preponderance' burden of proof facing Claimant on this scheduled rating, Claimant's evidence falls short. The ALJ concurs with the DIME physician's ultimate conclusion that there is an insufficient temporal relationship to the low back injury and the onset of Claimant's left leg pain complaints. As noted, Claimant is a highly suspect historian, by her own admission. When she fell, she fell hard, and the ALJ is not prepared to now adopt Claimant's theory of why it occurred. Thus, the ALJ cannot conclude, by a preponderance, that Claimant then fell and injured her shoulder due to this back injury, and not due to failure of her left knee [which was badly in need of an arthroplasty], obesity, and a host of other possibilities.

M. Thus, since causation has not been shown on the right shoulder issue, the Impairment Ratings supplied by the DIME physician are merely surplus figures, and will be disregarded. The ALJ finds that Claimant's Impairment Rating for this injury for her right shoulder is zero.

DIME Opinion on MMI for Lower Back

O. Dr. Watson concurred with the ATP Dr. Lakin that Claimant had reached MMI on January 19, 2018. Dr. Lakin's reasoning, and adopted by the DIME, is that there is now nothing more that can be done to improve Claimant's condition, since the fusion proposed by Dr. Sung would not be performed. Make no mistake - Claimant's continued smoking and lack of candor about it brought this result upon her. For her conduct, she was rightfully deemed an unsuitable candidate for surgery by ALJ Nemechek. But contrary to Respondents' assertions, while ALJ Nemechek found the surgery not to be *reasonable and necessary,* he did **not** find that the proposed surgery was *unrelated* to her back injury. Quite the contrary. He found that this work injury aggravated her pre-existing degenerative back issues, resulting in her need for additional treatment - just not the fusion. Claimant was then directed to her ATP to try to bring her to MMI. This Order issued on 11/30/2017. Dr. Lakin concluded, less than two months later, that her medical options had been exhausted. Dr. Watson concurred.

P. Respondents presented opinions from medical experts - which the ALJ finds were sincerely and professionally rendered - that Claimant had already reached MMI a few months after her work injury. They are, however, exactly that: *opinions* which differ from the DIME's. Substantial evidence supports the DIME's MMI

determination, including the concurrence of the ATP who has treated Claimant since 2014, the records review, and the Summary Order of the ALJ. This ALJ finds that Respondents have not overcome the DIME opinion on MMI by clear and convincing evidence. Claimant's MMI date is January 19, 2018.

DIME Opinion for Impairment Rating on Lower Back

Q. A physician shall not render a medical impairment rating based on chronic pain without anatomic or physiologic correlation. Anatomic correlation must be based on objective findings. §8-42-101(3.7), C.R.S. Table 53IIB of the AMA Guides assigns whole-person ratings where an injured worker suffers an "intervertebral disc or other soft tissue lesion" in the lumbar spine which is unoperated, with a medically documented injury and, "[A] minimum of six months of medically documented pain and rigidity with or without muscle spasm." The determination of whether a claimant meets the criteria of Table 53IIC is made at the time of MMI and not at the time of any subsequent evaluation. *Lopez v. Cargill Meat Solutions*, W.C. Nos. 4-757-408 and 4-758-952 (Sept. 9, 2010). In order to receive a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established.

R. The ALJ finds that substantial evidence exists in support of the DIME physician's application of Table 53IIC. The subjective complaint of pain has been documented since the onset of the injury. There is ample evidence in the medical records to support objective symptoms of rigidity for well in excess of six months. This is an unoperated injury, with the likelihood of remaining unoperated. There is ample evidence of at least moderate degenerative changes on structural tests, as the MRI's have shown.

S. While Respondents' experts now assert this this was nothing more than a strain (thus removing it from Table 53IIC entirely), there is substantial evidence for the DIME to conclude otherwise: The ATP concluded quite similarly to the DIME, and ALJ Nemechek concluded that her preexisting lumber condition was aggravated by this fall, requiring additional treatment. The DIME may reasonably rely upon such opinions.

T. While Claimant has been found to be an unreliable historian, her prior back issues from 2013 as reported to her PCP were duly noted by the DIME. Claimant was less than candid about her smoking and existing back problems with Dr. Sung - and she paid the price for it. The DIME physician did not have to rely heavily upon Claimant's credibility to render his opinion. He reasonably relied, in part, upon the opinions of others - to include, derivatively, the opinions of Drs. McBride and Douthit. Once again, Respondents have presented well-reasoned medical opinions which differ from the DIME physician. Once again, they are merely differing *opinions*. Were Respondents facing a preponderance standard, arguably a different result could be reached. But the ALJ cannot conclude that Dr. Watson's application of Table 53IIC is highly probably incorrect. Therefore, the DIME's Impairment Rating opinion has not been overcome. The ALJ finds that Claimant's Whole Person Impairment Rating is 12%, without apportionment, for this work injury.

Disfigurement

U. Claimant's injury to her shoulder is not related to her work injury. Her Disfigurement award is $0.

Grover Medical Treatment

V. A claim for medical treatment beyond the point of maximum medical improvement is governed by *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). In *Grover*, the Colorado Supreme Court authorized maintenance care to maintain MMI or prevent further deterioration of a Claimant's Condition. An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended, nor a finding that Claimant is actually receiving medical treatment. *Holly Nursing Care Center v. ICAO*, 992 P.2d 701 (Colo. App. 1999). Claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.*, 865 P.2d 915 (Colo. App. 1993). Medical treatment must be reasonably necessary to cure and relieve the effects of an industrial injury §8-42-101(1)(a), C.R.S., *Snyder v. Indus. Claim. Apps. Office*, 942 P.2d 1337 (Colo. App. 1997) and must be causally related to the industrial injury. *Dependable Cleaners v. Vasquez*, 883 P.2d 583 (Colo. App. 1994).

W. Claimant has failed to prove entitlement to post-MMI medical treatment to her left knee and right shoulder. Those body parts were not injured as a result Claimant's work injury. However, Claimant is entitled to an award of post-MMI medical treatment for her lumbar spine that is reasonable, necessary and related to her work injury.

ORDER

It is therefore Ordered that:

1. Claimant's Whole Person Impairment Rating for her lumbar spine is 12%. Claimant reached Maximum Medical Improvement on January 19, 2018.

2. Claimant's request for a right shoulder impairment rating is denied and dismissed. Claimant's request for all medical costs in connection with her right shoulder injury is denied and dismissed.

3. Claimant's request for a disfigurement award is denied and dismissed.

4. Claimant is entitled to any medical maintenance benefits for her lower back which are reasonable, necessary, and related to her work injury.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant made a "proper showing" that she is entitled to a change in her Authorized Treating Physician?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

1. Claimant suffered an admitted work injury to her right lower leg on June 13, 2017. She presented to Parkview Medical Center after "coming down a ladder when she thinks she missed a step causing her to fall down approximately 2 steps of the ladder." (Ex. A, p. 1).
2. Claimant was evaluated for a tibia plateau fracture, and placed into a knee immobilizer. The final diagnosis was "acute closed fracture of the right tibia and fibula." (Ex. A, pp. 10-11). Given the seriousness of Claimant's injury, she was admitted to Parkview Hospital.
3. A CT scan revealed additional fractures than what was noted on x-ray. (Ex. A, p. 8).
4. On June 14, 2017, Dr. Thomas performed surgery to repair the fractures, which consisted of open reduction and internal fixation. (Ex. A, p. 15)
5. After surgery, Claimant was treated by Dr. Agnes Flaum at the Pueblo Emergicare Clinic ("Emergicare"). (Ex. B). Claimant continued to treat with Dr. Flaum as an ATP through November 2017.
6. Claimant reported to Dr. Flaum sharp shooting pains, swelling, ecchymosis and tenderness in her right leg. (Ex. B, p. 16). Claimant was advised to keep her right leg elevated, and not to use it. (Ex. B, p. 18).
7. Dr. Flaum continued to document problems with severe swelling in Claimant's right leg, as well as ecchymosis and tenderness, (Ex. B, pp. 20, 23), which resulted in Dr. Flaum referring the Claimant to orthopedic surgeon Dr. David Walden on October 26, 2017, for consultation. (Ex. B, p. 27).
8. Dr. Michael Schuck, an orthopedic surgeon, evaluated Claimant on January 4, 2018. Dr. Shuck noted that Claimant's primary care provider was now "J. Douglas Bradley, M.D." Dr. Shuck also noted that "knee replacement surgery was discussed in detail." (Ex. C, pp. 33-35).
9. Dr. Schuck found that "because of the intraarticular nature of the fracture," the Claimant had developed post-traumatic arthritis in her right knee. In Dr. Schuck's

assessment, the Claimant continued to have "significant debilitating symptoms." As a result, Dr. Schuck recommended knee-replacement surgery. *Id*. On physical examination, her range of motion was limited, and joint effusion was present. (Ex. B, p. 35).

10. On January 19, 2018, Claimant was evaluated by Dr. Douglas Bradley, also with Emergicare. Dr. Bradley noted that Claimant has swelling and pain in her right knee and that she was "waiting for approval of surgery." (Ex. D, p. 36). Dr. Bradley prepared a lengthy report that also noted that Claimant should continue physical therapy; he also provided her with restrictions. It was noted that she was continuing light duty with her employer. At this date, MMI was estimated to "onset" 6/20/2018. *Id* at p. 36

11. On March 2, 2018, Dr. Bradley noted that Claimant has been using a cane and that Dr. Schuck was "planning on right total knee." (Exhibit D, p. 043). The notes still show that MMI was "onset" for 6/20/2018.

12. On March 12, 2018, Dr. Bradley again evaluated Claimant and recommended continued physical therapy. Notes continue to indicate that MMI had expected onset as of 6/20/2018. (Ex. D, p. 46). "Normal" range of motion appears in the physician's notes.

13. Claimant was evaluated by Dr. Timothy O'Brien at Respondents' request on March 13, 2018. Dr. O'Brien agreed with the recommended request for total knee replacement surgery on her right knee, and noted the likelihood that the tibial fracture became an accelerating event for her osteoarthritis. (Ex. E). Dr. Schuck's surgery was scheduled for May 17, 2018. (Ex. F).

14. During the examination of the Claimant, Dr. O'Brien observed the Claimant to walk "with an abbreviated stance phase on the right." (Ex 1, p. 4). Dr. O'Brien further documented that the Claimant was walking with a cane, and had "swelling diffusely about the right lower extremity…." *Id* at pp. 4-5. In addition to noting the swelling in Claimant's leg, Dr. O'Brien documented that the Claimant had significantly reduced range of motion in her right knee, especially when compared to her uninjured left knee.

15. Dr. O'Brien specifically stated that the fractures that the Claimant sustained are "devastating," and that in every patient he has treated with similar fractures, they have gone on to need a total knee replacement. (Ex. 1, pp. 5-6). Dr. O'Brien recommended a total knee replacement; however, he wanted the Claimant to undergo strengthening exercises before her surgery in order to have a good outcome.

16. On March 23, 2018, Dr. Bradley again saw the Claimant, and this time, his notes indicate that the Claimant had a 'normal' gait and stance. (Ex. D, p. 49). He noted, however, increased swelling, tenderness to right knee, and decreased range of motion and strength to right knee. While MMI was noted to

be “expected” on 6/20/2018, he fully documented that surgery for knee replacement was scheduled with Dr. Schuck.

17. On April 19, 2018, Dr. Bradley’s notes show that the Claimant was expected to reach MMI on June 20, 2018. (Ex. D, p. 52). On this visit, however, Dr. Bradley documented that the Claimant was using a cane, had an antalgic gait, as well as decreased range of motion in her right knee. *Id* at 53.

18. On May 16, 2018, Dr. Bradley’s notes again indicate that Claimant was going to reach MMI on 6/20/2018. (Ex. 2, p. 13).

19. The Claimant underwent total knee replacement surgery with Dr. Schuck on June 19, 2018. (Ex. 3, pp. 34-36).

20. Dr. Bradley then evaluated Clamant following the surgery, noting on July 9, 2018. “continued physical therapy.” (Ex. D, p. 58).

21. On August 20, 2018, Dr. Bradley’s notes indicate “Physical therapy [Frequency: Twice a Week]” At this visit MMI was now noted to be 9/20/2018. It was further noted as an addendum at 10:34 a.m.

> *Contact in IM-Dr. Schuck*. She [Claimant] should be able to do light duty. *Patient called*. Information given to her, trial light duty. Will send to Lifecare Center and see what their response is. (Ex. 2, p. 31) (emphasis added).

22. On September 17, 2018, Dr. Bradley noted that Claimant was “having some swelling in her leg other than that doing well since last visit and the pain is still present.” (Exhibit D, p. 60). Claimant was provided with continued restrictions at this visit.

23. Claimant has since returned to light duty work after the right knee replacement surgery, under restrictions given by Dr. Bradley.

24. Claimant has never formally requested a Change of Physician on the Division of Workers’ Compensation prescribed form. That process was bypassed, and an Application for Hearing on this issue was filed.

25. Claimant testified at hearing. She felt that Dr. Bradley delayed Claimant’s physical therapy for weeks after the physical therapy was arranged by Dr. Schuck, the surgeon. The Claimant further testified that her physical therapy was transferred to a facility connected with Dr. Bradley’s office. Claimant has drawn the inference is that Dr. Bradley wanted to financially benefit his office, by having the physical therapy relocated to a facility associated with him.

26. Claimant testified that she has gotten along well with all of her providers, with Dr. Bradley being the sole exception. Claimant no longer wants to be treated

by Dr. Bradley and does not feel that he pays adequate attention to her concerns.

27. The Claimant at the start of the hearing requested that her treatment either be transferred to the Hanson Clinic, or she would be willing to negotiate with the Respondents on a mutually agreeable provider, other than Dr. Bradley.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act) §§8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section* 8-40-102(1), C.R.S. The claimant bears the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-43-301(1), C.R.S.; *Faulker v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo.App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of a claimant nor in favor of the rights of respondents. Section 8-43-201, C.R.S. A workers' compensation claim is decided on its merits. Section 8-43-201, *supra*.

B. In accordance with §8-43-215, C.R.S., this decision contains specific findings of fact, conclusions of law and an order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

C. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory,

opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice, or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ finds that Claimant's testimony seems sincere enough in describing her impressions and feelings, but lacking in specifics and persuasiveness.

Change of Physician

D. Section 8-43-404(5)(a)(VI)(A), C.R.S. (2018), allows for a change of physician, at any time, upon a "proper showing." "Section 8-43-404(5), C.R.S.,,,does not contain a specific definition of a 'proper showing.'" *Loza v. Ken's Welding*, W.C. No. 4-712-246 (January 7, 2009). "Consequently, it has been previously held that the ALJ possesses broad discretionary authority to grant a change of physician depending on the particular circumstances of the claim."

E. An unsatisfactory interaction between a claimant and her authorized treating physician *can* support a proper showing for a change of physician. *Szocinski v. Powderhorn Coal Co.*, W.C. No. 3-109-400 (December 14, 1998). "[E]vidence of a poor relationship between the claimant and the authorized treating physician *may* support a finding that the claimant made a proper showing for a change of physician."

F. However, an ALJ is not compelled to grant a change of physician based upon the Claimant's personal dissatisfaction with a physician. *Greager v. Industrial Commission,* 701 P.2d 168 (Colo. App. 1985). An argument that a claimant has "lost confidence" in an ATP has been raised prior. *Loza v.Ken's Welding,* W.C. 4-712-246 (January 7, 2009); *Zolman v. Horizon Home Care, LLC, Inc.,* W.C. 4-636-044 (November 3, 2010). In *Loza,* the Panel affirmed the denial of a change of physician where the ALJ found Claimant had not introduced persuasive evidence that he developed mistrust of the ATP or had been unable to communicate with the physician

G. Initially, the ALJ concludes that Claimant has been sufficiently specific in her request, to wit: Anyone but Dr. Bradley, but would like the Hansen Clinic. The ALJ concludes that granting this request, as stated, would not necessarily lead to a disruption in Claimant's care. The ALJ further finds that the location of the facility, thus the drive required, is not a relevant factor in this case.

H. Secondly, while the Claimant did not avail herself of the process set forth by Rule 8-7 of the Rules of the Division, the ALJ will address the merits of her claim here, and not the procedural application of the Rules.

I. The ALJ concludes that Claimant has failed to prove she is entitled to a change in physician. Emergicare physicians have treated her since the date of the incident. The APT at issue, Dr. Bradley, has treated Claimant for the past nine (9) months. A prior Emergicare physician, Dr. Flaum, treated Claimant during 2017. Claimant has undergone two surgeries during the duration of the claim, albeit the initial procedure was prior to Claimant's first contact with Emergicare. The knee replacement appears to have been due to the referral from Dr. Bradley himself. Claimant has also now returned to work for the employer in a light duty capacity, with reasonable restrictions placed by her ATP. Claimant continues to receive uninterrupted post-surgical treatment. The file reveals that Dr. Bradley communicated appropriately with Dr. Schuck to monitor Claimant's post-surgical progress, then communicated that information to Claimant.

J. Claimant's allegations that Dr. Bradley's medical records were inaccurate on some issues several months ago are insufficient to now make a "proper showing." Claimant's concerns that the MMI date was "wrong" in certain records did not alter the care she actually received. While the ALJ's review of the medical records finds the projected MMI dates to have been inaccurate in hindsight, there is little cause for alarm. In all likelihood, the MMI date was simply carried over as a "placeholder" until her prognosis became more clear. At no point was Claimant actually, inappropriately, placed at MMI. Nor is there any evidence that her medical care was adversely affected.

K. Claimant did not testify she reviewed each medical record and then became concerned over this issue. Nor did she testify that her range of motion and gait notes (which the ALJ does conclude were likely inaccurate on a couple of occasions) caused any alarm at the time they were generated. This alarm appears to have arisen after the fact. Had Claimant expressed her concern to Dr. Bradley, the matter could likely have been cleared up in short order. Bare testimony that Dr. Bradley "wrote something down wrong" does not rise to the 'proper showing' required. Despite an after-the-fact review of the admittedly imperfect records, the ALJ concludes that Claimant's medical care was unaffected by these entries.

L. Any confusion regarding the locality of physical therapy did not deny such treatment itself, as Claimant acknowledged that she did actually receive the therapy. The notes from Dr. Bradley indicate that physical therapy was recommended. Claimant has not established that any physical therapy confusion was somehow the fault of Dr. Bradley. For all the ALJ is aware, Dr.

Bradley might not have the greatest bedside manner. While Claimant may be sincere in her subjective beliefs that Dr. Bradley harbored some ulterior financial motive in his recommendation of physical therapists, no evidence to this effect has been put forth. There is no reason to assume that this referral was anything more than Dr. Bradley being comfortable with the known quality of care Claimant would receive from them.

M. While Claimant has not made a "proper showing" to the ALJ that Dr. Bradley must be relieved as her ATP, nothing herein would prevent Claimant from negotiating an internal reassignment of a different ATP within Emergicare's ranks. Perhaps this would be better for everyone, but such process will not involve the ALJ.

ORDER

It is therefore Ordered that:

1. Claimant's request for a change of physician is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 27, 2018

Colorado Springs, Colorado 80906

ISSUES

- Whether Claimant has proven by a preponderance of evidence that he is entitled to reopen his claim due to a change in condition related to the work injury.

- Whether Claimant has proven by a preponderance of evidence that North Suburban chiropractic care is reasonable, necessary and related to his work injury. And whether any outstanding medical bills should be paid by Respondents.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. Claimant is a 30-year-old part-time dockworker for Employer. He began working for Employer in 2010. Claimant's current position is dock lead and he supervises and manages the freight flow.

2. Claimant testified that he has continued to work full-duty for Employer.

3. Claimant had a prior lumbar spine injury in 2012 after a fall, and he injured his coccyx and low back. This injury to his low back occurred in the year before the work injury.

4. Claimant was operating a forklift for Employer at the time of the February 18, 2013 accident. Another employee was also driving a forklift and ran into Claimant's vehicle. Claimant initially reported to his physician that he was "tossed around a little bit."

5. On February 18, 2013, Claimant informed Dr. Jeffrey Hawke at HealthOne that he had pain over the tops of both shoulders into his upper back and across his low back. Dr. Hawke examined Claimant and diagnosed cervical, thoracic and lumbar strains.

6. Contrary to this medical report about being tossed around a little bit, Claimant testified that the other forklift struck Claimant's forklift and spun him around 180 degrees. Claimant testified that the impact was so severe that it caused him to hit his head on the back of the crossbar and then forward on the steering wheel. The other forklift was admittedly not going more than 9 miles per hour, which makes Claimant's testimony about the severity of the impact unlikely.

7. One month after the incident on March 19, 2013, Claimant continued to complain of neck, upper back and low back pain, reaching nine out of ten on the pain scale.

8. On March 26, 2013, Claimant underwent an MRI that revealed a shallow protrusion at L5-S1 with no nerve root abutment or impingement and no central canal stenosis. Claimant's provider released Claimant to work without restrictions.

9. On April 1, 2013, Claimant requested reinstatement of work restrictions, after returning to full duty.

10. Claimant also requested another lumbar spine MRI from a different facility because the first facility did not do a good job and likely missed something.

11. Dr. Chan. evaluated Claimant on May 3, 2013. Dr. Chan counseled Claimant that his clinical examination findings were most suggestive of myofascial type complaints. Dr. Chan instructed Claimant to continue with an active exercise program, emphasizing flexibility. On May 24, 2013, Dr. Chan reiterated that Claimant's examination indicated muscular pain and that the best treatment was an active exercise program. Dr. Chan repeatedly confirmed that Claimant's only injuries were muscular in nature.

12. Due to Claimant's ongoing complaints of significant pain, Claimant underwent an upper extremity EMG/NCS on July 26, 2013. The testing reported normal results. Dr. Chan found no evidence of cervical radiculopathy, brachial plexopathy, or neurogenic thoracic outlet syndrome on the EMG testing. Dr. Chan also reported no evidence of other peripheral entrapment neuropathy such as carpal tunnel syndrome, ulnar or radial entrapment neuropathy bilaterally. As a result, Dr. Chan and the other physicians continued to diagnose Claimant with nothing more than a muscle strain from the work injury.

13. On August 23, 2013, Dr. Hawke placed Claimant at MMI for his work injury. He assigned no impairment rating because Claimant's injury was muscular in nature and did not warrant an impairment rating. Dr. Hawke noted Claimant's lumbar strain had resolved and Claimant was at MMI for his cervical and thoracic strain. Dr. Hawke recommended maintenance care of following up with Dr. Chan for injections, massage therapy, and pain management. Respondents filed a Final Admission on August 28, 2013 based on Dr. Hawke's opinions.

14. Claimant did not object to the Final Admission and the claim closed.

15. Claimant initially testified that he had been treating with a chiropractor twice a week over the four years after reaching MMI. However, the medical records did not support Claimant's testimony. Rather, the medical records support a finding that Claimant went a long time without medical treatment and did not receive consistent chiropractic care.

16. Claimant ultimately admitted that he went a year and a half without any medical treatment immediately following his placement at MMI. This history of no treatment for at least a year and a half is inconsistent with a finding of an ongoing work injury. When Claimant did seek treatment with his private physicians, his complaints were of intermittent pain.

17. On September 21, 2016, three years post MMI, Claimant presented to HealthOne for evaluation of his prior muscle sprains. Claimant reported an increase in pain beginning over the last couple of months.

18. In an attempt to support the alleged reopening, Claimant testified at the hearing that his most pressing physical problem now was his lumbar spine. Specifically, the lumbar spine was the body part that was causing him the most pain. This report of intense pain in the lumbar spine was inconsistent with Claimant's work injury. Specifically, Claimant had admitted that his low back condition had resolved when he reached MMI. The ALJ finds Claimant's claim of worsened low back condition was unrelated to the work injury.

19. Claimant reported a new onset of left upper extremity numbness and tingling in 2016. Claimant underwent a cervical spine MRI on October 14, 2016, which was essentially normal. Claimant admitted that he developed left arm tingling for the first time a few weeks prior to his evaluation with his primary care physician in August 2016. The ALJ finds the left arm tingling was a new symptom unrelated to the work injury.

20. Claimant underwent another EMG/NCS on April 13, 2017, which revealed mild to moderate cubital tunnel on the left. This finding was not present on the original EMG taken in 2013. Dr. Drapeau found Claimant's cubital tunnel symptoms not related to the 2013 work injury because the 2013 EMG was negative. The ALJ finds Claimant's new diagnosis of cubital tunnel syndrome was unrelated to the original work injury.

21. Although Dr. Drapeau initially recommended reopening the claim, she later clarified that she based her initial recommendation on Claimant's statements that he was currently experiencing pain that he thought related to his 2013 work injury. Dr. Drapeau admitted she did not review Claimant's pre-existing records in order to determine whether Claimant's condition had worsened or whether Claimant's condition causally related to the 2013 injury.

22. Dr. D'Angelo, a Level II accredited occupational medicine physician, testified that after a review of the medical records and examination she agreed with Dr. Chan's assessment from 2013 that Claimant's injuries were limited to muscular or myofascial pain. Dr. D'Angelo credibly testified that Claimant's diagnosed myofascial pain from the 2013 injury could not have worsened three years later. Dr. D'Angelo further testified that the basis of myofascial irritation is from blunt trauma that causes biochemical changes, which in turn causes irritation of the muscle. Dr. D'Angelo continued that the inflammatory reaction dissipates and so does the musculature spasm.

23. Dr. D'Angelo credibly testified that Claimant's condition had not worsened between MMI in 2013 and 2016 when Claimant alleged his condition worsened.

- Dr. D'Angelo explained that Claimant experienced different symptoms, which did not mean his original injury was worse.

- Dr. D'Angelo also testified that based on Claimant's report of pain at the time of hearing compared to when he reached MMI, his pain levels had improved.

- Dr. D'Angelo testified that no further treatment would be necessary and Claimant should engage in an active exercise program because it would release the muscle tension.

24. Dr. D'Angelo testified that Claimant's current low back pain complaints are unrelated to his 2013 work injury. Dr. D'Angelo persuasively testified that Claimant's current low back pain is unrelated because the 2013 MRI showed no structural damage and no significant pathology.

25. Dr. D'Angelo also testified that Claimant worked two jobs for three years without restrictions, which would not be consistent with low back pain related to the 2013 injury. Dr. D'Angelo testified there is no medical basis to relate Claimant's low back pain to an injury from three years earlier.

26. Dr. D'Angelo also credibly testified Dr. Drapeau's acknowledgement that she did not have claimant's prior medical records from the initial 2013 would affect a causation analysis under the Medical Treatment Guidelines.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law.

The purpose of the Workers' Compensation Act of Colorado (Act), sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. §8-43-201, C.R.S. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

In order to reopen the claim for further benefits, claimant must prove a worsening of his condition related to the work injury. C.R.S. section 8-43-303(1) authorizes reopening of a claim based upon a change in condition. The claimant has the burden of proof by a preponderance of the evidence to establish a change in condition in order to have his claim reopened. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. Ct. App. 1997); *Savio House v. Dennis*, 665 P.2d 141 (Colo.App. 1983). The change of condition must be causally related to the industrial injury. *Lymburn*, 952 P.2d at 831; *Savio House*, 665 P.2d at 141.

Claimant was involved in a minor relatively low speed accident in 2013 and suffered nothing more than minor muscle strains. Minor muscle strains do not become worse three or four years later. Moreover, his low back condition had completely resolved when he was placed at MMI with a 0% rating on August 23, 2013. The 0% rating was appropriate, as claimant suffered nothing more than a myofascial injury. After being placed at MMI, Claimant did not seek any medical treatment for at least a year and a half. This delay in seeking medical care for a year and a half is inconsistent with an alleged ongoing work injury.

When claimant ultimately sought medical treatment with his personal providers, his complaints were limited with only intermittent pain reported. Contrary to Claimant's reports to his physicians, he had not be regularly treating two times per week with a chiropractor.

Claimant did not seek any formal care with the workers' compensation providers for nearly three years. Again, this is inconsistent with an ongoing work injury. When Claimant ultimately alleged a worsening of condition, he alleged that his primary problem was with his low back. However, Claimant reported that his low back condition resolved when he was placed at MMI in 2013. A resolved medical condition placed at MMI cannot subsequently worsen. In addition, Claimant had low back problems before the work injury.

Claimant developed new pain in his elbow/arm in 2016 and was diagnosed with cubital tunnel syndrome in 2017 based on objective EMG testing. The same type of objective EMG testing performed in 2013 was normal. As a result, Claimant had a new condition that developed in 2016 and was clearly not work-related.

Dr. Drapeau attempted to reopen the claim in September 2016, based on Claimant's statements that his current condition was both related to the original work injury from 2013 and had worsened over the last three years. Dr. Drapeau confirmed that she did not review any of Claimant's prior medical records from the 2013 claim to confirm what Claimant had told her.

Dr. D'Angelo credibly testified that based on the medical records and her examination, Claimant's condition had not worsened. Dr. D'Angelo persuasively testified that in 2013 Dr. Chan diagnosed Claimant with myofascial pain, a muscle strain. As such, the blunt trauma that Claimant suffered in 2013 had caused his muscles to hurt. Dr.

D'Angelo testified that this inflammatory reaction dissipates and the spasms cease. She confirmed that muscle injuries do not get worse three to four years after resolving.

Additionally, Dr. D'Angelo opined that even if Claimant's condition had "worsened" since 2013, none of claimant's complaints related to the 2013 injury. Dr. D'Angelo persuasively explained that the objective testing, including the MRI and EMG, was negative and claimant had no structural damage in which to relate his current complaints.

The ALJ finds and concludes Claimant has not met his burden of proving a worsening of condition related to the work injury in 2013.

ORDER

IT IS, THEREFORE, ORDERED THAT:

1. Claimant failed to prove by a preponderance of the evidence that his condition worsened from his 2013 work injury. Claimant's petition to reopen is denied and dismissed with prejudice.

2. Respondents are not liable for any outstanding chiropractic medical bills from North Suburban.

DATED this 27th day of November 2018.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-070-787-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on October 17, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 10/17/18, Courtroom 5, beginning at 1:30 PM, and ending at 3:30 PM).

Claimant's offered no exhibits. Respondents' Exhibits A – C were objected to by the Claimant. During the hearing, the ALJ admitted only pg. 46 of Exhibit A and all of Exhibit C (a video) into evidence.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. The Claimant's opening brief was filed on October 22, 2018. Respondents' answer brief was filed on October 29, 2018. Claimant's reply brief was filed on October 29, 2018, at which time the matter was deemed submitted for decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable injury on January 23, 2018. If so, the consequences of the injury will be determined at another hearing, pursuant to the request of the parties.

The Claimant bears the burden of proof on compensability by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was hired by the Employer as an Interior Aircraft Cleaner on January 1, 2018, and he began working on January 22, 2018.

Compensable Event

2. The Claimant arrived at the "Southwest Employee Parking Lot" in his sister's car on January 23, 2018. He arrived with his mother, Kesia Taylor, and his sister, Mariah Taylor.

3. While the Claimant and his family were approaching the Employee Shuttle, a woman whom he did not know came up to his sister and yelled "Who's Mariah." Claimant's sister replied "I am" and the unknown women then shouted "You're messing with my momma at work" and punched the Claimant's sister in the face. The Claimant's sister and the unknown woman then started to fight. While attempting to break up the fight, the Claimant's mother was attacked by an unknown man. The Claimant came to his mother's defense and he was assaulted with multiple punches, by a man.

4. After the altercation, the Claimant and his family went onto the shuttle bus. There was another altercation on the bus but the Claimant did not witness it because he was searching for his phone. The Claimant and his family then returned to their car and went to a gas station to meet with police officers and file a police report.

5. Although the Claimant was going to work on January 23, the altercation and subsequent actions of management intervened and the Claimant did not work on that day and he did not return to work thereafter.

6. The Claimant presented credibly and straight forwardly at hearing. His version of events during the incident is undisputed by any **credible** evidence. His actions after the incident, as described in paragraph 4 above, are consistent with the actions of a victim—not an aggressor. The ALJ finds the Claimant's testimony persuasive and credible,

7. According to the Claimant, he suffered injuries to his jaw, his left arm and has persistent paranoia and anxiety that has led him to develop Post Traumatic Stress Disorder (PTSD) from the assault.

8. The Claimant sought treatment at University Hospital (UCHSC) Emergency Room (ER) and he is now participating in therapy.

9. Gwen Osteen, Office Manager for the Employer, testified that the Employer contracts with Southwest for the parking lot and that the public cannot "technically" park there. Although the Employer does not own the parking lot, Osteen identified it as employee parking.

10. Osteen investigated the incident that took place in the parking lot on January 23, and processed statements of the employees that were involved in the incident

11. Diane Hernandez, Interior Aircraft Manager for the Employer, testified that there were employees in the parking lot that were not on schedule to work on January 23, 2018. When playing Exhibit C (a videotape of the incident), Hernandez purportedly identified several current and past employees in the video, both involved in the altercation and those who just witnessed it. Hernandez states that "everyone who was in the altercation was suspended until further notice" indicating that several of the people involved on both sides were employees. Hernandez purportedly identified the Claimant as the aggressor. The ALJ watched the video and could only observed vague, non-descript shadows, and the ALJ so stated on the record. The ALJ infers and finds that absent paranormal abilities (no foundation for such was laid), it would be **impossible** for Hernandez to identify anyone in the video. Therefore, the ALJ finds Hernandez's testimony lacking in credibility.

12. The Employer states that the Claimant was fired for misconduct for fighting in the parking lot. The Employer offered no company policies providing that being an assault victim was a ground for firing.

Ultimate Findings

13. The ALJ finds the testimony of the Claimant to be credible. His testimony concerning the altercation was internally consistent during the hearing and it was consistent with the Claimant's near contemporaneous statement attached to the police report, admitted into evidence (Respondents' Exhibit A, p. 46)..

14. On the other hand, the ALJ does not find Osteen and Hernandez to be credible. Osteen wavered on whether the employee parking lot was actually designated

for employees, when it was clearly established that it was designated for employees. Osteen later indicated that the parking lot in question was for the Employer's employees.

15. Hernandez indicated that she was able to identify employees from a grainy, short, and dark cell phone video. The video was not the entire clip of the altercation and Hernandez making brash sweeping judgments is not credible. The Employer investigated the matter as if it was inherently connected to its operations. As such, the assault was inherently connected to the Claimant's employment. Furthermore, the parking lot was designated as an employee parking lot and routinely had employees park and wait for shuttle before beginning work. As such, the injuries suffered by the Claimant arose out of the course and scope of his employment.

16. Between conflicting evidence, the ALJ makes a rational choice to accept the Claimant's testimony concerning the incident of January 23, 2018, based on substantial evidence, and to reject all evidence to the contrary.

17. The ALJ finds that the Claimant was the victim of an assault, which involved a "neutral force" within the meaning of workers' compensation case law, and not an imported danger of a personal nature.

18. Although the Claimant did not provide medical records or medical evidence of his injuries at the hearing, it is not needed for this sole issue of compensability. Sufficiency of an injury to be compensable is only that it necessitates medical treatment and does not require proof of disability.

19. The Claimant's lay testimony alone establishes compensability.

20. For the reasons specified herein above, the ALJ finds that the Claimant has proven that he suffered a compensable injury on January 23, 2018, arising out of the course and scope of his employment.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. *Also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). As found in Finding No. 13 hereinabove, the Claimant was credible in his testimony. The Claimant's testimony is undisputed by any evidence other than Hernandez's paranormal, purported identification of everyone in the video, including the Claimant as aggressor. As found, Hernandez's testimony in this regard was not credible. Findings Nos. 14 and 15 herein above.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985).

It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting evidence, the ALJ made a rational choice to accept the Claimant's testimony concerning the incident of January 23, 2018, based on substantial evidence, and to reject all evidence to the contrary.

Parking Lot Injuries

c. The courts have consistently ruled that a parking lot provided by the employer is considered to be an extension of the employer's premises, and that injuries occurring in such parking lots are within the course of employment. *See Matter of Welham,* 653 P.2d 760 (Colo. App. 1982). *Also see Stewart v. U.S.,* 716 F.2d 755 (10th Cir. 1982). As found the Claimant sustained his injuries in the Employer's parking lot—while the Claimant was waiting for the Employer's shuttle to take him to work. As ultimately found, the Claimant sustained his injuries in the course and scope of his employment

d. If special circumstances demonstrate a causal connection between the circumstances under which the work is performed and the "off premises" injury, the resulting injury arises out of and in the course of the employment. *Woodruff World Travel v. Indus. Claim Appeals Office,* 38 Colo. App. 92, 554 P.2d 705 (1976); *Flo Rodriguez v. Exempla Healthcare, Inc.* W.C. No. 4-705-673 [Indus. Claim Appeals Office (ICAO), April 30, 2008)]. Special circumstances may be found if the employer provides a parking area as a fringe benefit to the employees and the claimant sustains injury while using the lot. *Id.* It is not essential to a finding of compensability that the employer actually own or physically operate and maintain the lot for this exception to apply. *Id.* Similarly, special circumstances may be found where the employer, for its own benefit, intervenes in the employee's parking choices as a matter of policy. *Friedman's Market, Inc. v. Welham, supra.* In such circumstances selection or use of a parking area is not a purely personal choice. *Id.* Further, in order for an employee's action to "arise out of" the employment it is not necessary that the activity be a strict duty or requirement of the employment. *Panera Bread v. Indus. Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). Rather if the injury arises out of a risk that is reasonably incidental to the conditions and circumstances under which the employment is usually performed the resulting injury arises out of the employment. *Id.* As found, this parking lot injury arose from and in the course of the Claimant's employment.

“Neutral Force” as Opposed to Imported Danger

e. Citing *Horodysyj v. Karanian,* 32 P.3d 470 (Colo. 2001), Respondents argue that the Claimant’s victimization from the assault was a purely personal nature and outside the “course and scope of employment,” and, therefore it was not compensable. The ALJ concludes that this argument is inapposite to the facts in the present case. In *Horodysyk,* the Claimant’s boss sexually harassed her, and underlying the Supreme Court’s rationale is an undertone that this was personal and not an anticipated risk of employment. In the present case, the Claimant was assaulted by a stranger in the employer-provided park lot. The present facts are analogous to the facts in *Tolbert v. Martin Marietta,* 759 P.2d 17 (Colo. 1988), where the employee was raped on an elevator by a stranger, while leaving work. The Supreme Court determined that the woman could not sue in tort and was limited to her remedy under the Workers’ Compensation Act. To apply the holding in *Horodydyj* to the present case would undermine the beneficent purpose of the Workers’ Compensation Act and relegate the Claimant to a suit in tort against an unknown assailant who may be judgment proof. Such a situation would have a bad smell by affording the Claimant a meaningless remedy.

Compensability

f. Compensation can be awarded where there is competent evidence other than expert opinion. *Martin Marietta Corp. v. Faulk*, 158 Colo. 441, 407 P.2d 348 (1965). Such competent evidence includes lay testimony. *See Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *Colorado Fuel & Iron Corp. v. Alitto*, 130 Colo. 130, 273 P.2d 725 (1954). *Also see Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997). As found, the Claimant’s lay testimony alone establishes compensability.

g. In order for an injury to be compensable under the Workers’ Compensation Act, it must “arise out of” and “occur within the course and scope” of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury “arises out of’ employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured.” Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant established a compensable injury on January 23, 2018.

Compensability/Crime of Violence

h. Assaults are compensable under workers' compensation law if the assault arose out of employment. An assault could arise out of employment if it either bears an **inherent connection to the employment** or if it results from a "neutral force." *See e.g., Portofino Apartments v. Indus. Claim Appeals Office of State of Colo*., 789 P.2d 1117, 1119 (Colo. App. 1990); *In re Question Submitted by the U.S. Court of Appeals for the Tenth Circuit (Tolbert v. Martin Marietta)*, 759 P.2d 17, 21 (Colo. 1988). An assault that results from a neutral force is one that is not connected with an out-of-work incident, but rather "would have happened to the employee who happened to be in that particular place at that particular time." *Martin Marietta*, 759 P.2d at 21.

i. The first factor Colorado courts consider when determining whether an assault arose out of employment is time: Whether the assault occurred "at a time during which the worker is employed, doing what he or she may reasonably do[.]" *Martin Marietta,* 759 P.2d at 22. Here, the assault occurred when Claimant was arriving to work at a designed employee parking lot. Courts next consider whether the assault "occurred at a place where the worker may reasonably be." *Id*. at 23. Here again Claimant arrived at the approved and designed employee parking lot in order to be picked up by a shuttle to be transported to the airport to begin work. In fact this was so common that there were numerous employees waiting in the same area.

j. Finally, courts consider whether the assault was caused by a neutral force or by inherent connection to the employment. *Id*. Claimant did not have a personal relationship with assailants and did not know who assault him. However, the assailants were previous employees and the dispute arose from work related conditions. In fact, Employer and Respondent's witnesses claim that the altercation involved several employees, past employees and rose from a dispute at work. Although the Claimant was not a part of the dispute at work, there was an inherent connection with his employment. Furthermore, the altercation was so employment related that the Employer found it necessary to suspend the multiple employees who were on and off the clock during the altercation and conduct a full internal investigation. As found, the Claimant has proven that he suffered a compensable work-related assault as a victim of the assault.

Burden of Proof

k. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205 (Colo. App. 2012). A

"preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 (Indus. Claim Appeals Office (ICAO), March 20, 2002). *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). The question of whether a claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *Streeb*, 706 P.2d at 786; *Faulkner,* 12 P.3d at 844; *Loofbourrow v. Indus. Claims Office*, 321 P.3d 548, 552 (Colo. App. 2011). As found, the Claimant met his burden of proof. on compensability.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Claimant suffered a compensable injury under the Worker's Compensation Act.

B. Any and all issues not determined herein are reserved for future decision.

DATED this 30th day of November 2018.

DIGITAL SIGNATURE

EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

STIPULATIONS

At the commencement of hearing, the parties stipulated that should the injury in this case be determined to be compensable, Claimant's average weekly wage, at the time of the injury was $973.15. The parties also agreed to hold the issue of Claimant's entitlement to temporary disability benefits in abeyance pending the outcome the compensability hearing. Finally, the parties stipulated that the only medical benefits requiring determination under the current application for hearing were Claimant's request for an EMG and physical therapy. The stipulations are approved.

REMAINING ISSUES

I. Whether Claimant sustained a compensable injury to her left elbow on June 13, 2018.

II. If Claimant sustained a compensable left elbow injury, whether she is entitled to physical therapy and an EMG under the June 13, 2018 claim.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant works for Respondent-Employer as a recreational therapist. She regularly takes patients/inmates confined to the state mental hospital on recreational outings. Claimant uses a large 15 passenger van to transport these patients to and from the pre-selected activity venue. The van is equipped with power steering.

2. Claimant testified that on June 13, 2018, while driving the van to a patient luncheon, she was making a left turn with her left arm when she felt a pop and experienced immediate pain in her left elbow. Claimant did not strike her elbow or experience any direct trauma to her elbow while making the turn. Claimant did not immediately report her injury nor did she seek medical treatment despite claiming that the pop caused excruciating 10/10 elbow pain. Claimant continued to work. She did not report her alleged injury to her employer until June 22, 2018, 10 days later.

3. At the time she completed her on the job injury/exposure form on June 22, 2018, Claimant specifically reported that she had suffered an "occupational disease where repetitive motion, especially operating a van caused left elbow pain." She did not describe a specific event/incident involving a "pop" as the cause of her left elbow pain/dysfunction.

4. Claimant sought medical treatment from her personal physician on June 28, 2018, 16 days after her alleged driving injury, for nerve pain in her hand. She reported that she performed "physical work" and was "unable to type with her left hand." She also reported prior work related injuries involving rotator cuff surgeries. Claimant also complained of daily shoulder pain from driving, difficulty sleeping, fatigue, anxiety, indigestion, joint pain, muscle weakness, loss of strength, skin discoloration, tingling, hot flashes, and depression. While she testified that she reported her left elbow injury, the report from this date of visit does not mention the same and is devoid of any indication that Claimant complained of left elbow pain. Physical examination of her extremities was unremarkable. Claimant requested short term disability paperwork for her ongoing shoulder pain. The nurse practitioner who saw Claimant was unsure whether they could complete that paperwork or if the request should be deferred to occupational medicine or orthopedics.

5. On July 2, 2018, Claimant was evaluated, in conjunction with Physician Assistant (PA), Megan Southward, by Dr. Martha Ann Taylor who documented that Claimant was "driving a van, turned left and felt pain over the left lateral elbow". Claimant reported that she could not recall turning the wheel exceptionally fast, stating further that it was an old van requiring some force on the steering wheel to get it to turn. Careful review of this report fails to indicate that Claimant reported any popping sensation in the left elbow. Rather, the report from this date of visit indicates that Claimant reported she was simply driving the van and when she went to turn it she "must have strained my elbow or really tweeked (sic) it". Physical exam revealed normal range of motion, no swelling, no effusion, but some tenderness at the lateral epicondyle and bicipital insertion. Claimant was assessed with a left elbow, biceps and forearm strain. Occupational therapy was recommended.

6. Claimant went to occupational therapy on July 10, 2018. During this appointment, Claimant reported that she injured her left elbow while helping people in and out of the van at work rather than injuring it after experiencing a popping sensation while making a left hand turn with her left arm.

7. On July 12, 2018, Claimant was required to participate in a team building low ropes course at the behest of her supervisor. According to Claimant, participation in this exercise exceeded her physical limitations and violated her work restrictions. Claimant testified that she endured forceful jerking of her left arm/elbow resulting in severe pain extending from the elbow down the forearm and into the left hand. Claimant testified that previous to this her pain was confined to the area surrounding the left elbow.

8. Claimant was reevaluated by Dr. Taylor on July 16, 2018 after her participation in the aforementioned ropes course. During this appointment, Claimant reported that after the ropes course, she had an increase in her pain "over the left forearm into the wrist". Dr. Taylor ordered an MRI of the left elbow and wrist and referred Claimant to Dr. Karl Larsen, an upper extremity and hand specialist.

9. Claimant was seen by Dr. Taylor on July 30, 2018 at which time Claimant reported that the adjuster assigned to her case was questioning whether to cover the injury, indicating further that the injury was being contested as a "possible exacerbation of a previous shoulder injury for which she had surgery".[1]

10. Claimant was evaluated by Dr. Larsen on August 6, 2018. At this appointment, Dr. Larsen documented that Claimant was using her left hand to make a right hand turn rather than what consistently had been reported previously as her making a left hand turn. Based upon the evidence presented, the ALJ finds that the reference to Claimant making a right hand turn is probably a documentation error. The report also documents, for the first time, that Claimant "felt a painful pop in her elbow and developed reduced motion. The report from this encounter fails to reference Claimant's increased pain complaints extending down the left forearm into the wrist and hand after her participation in the ropes course. Indeed, the report is devoid of any mention of the ropes course or Claimant's testimony that she experienced violent jerking on the left arm as a consequence of her participation. Based upon the content of the report, the ALJ finds that Claimant, more probably than not, failed to mention her participation in the ropes course or her increased symptoms after.

11. Following his physical examination, Dr. Larsen opined that although Claimant was being treated for lateral epicondylitis, the contribution to her symptoms from it was "actually relatively minor". He expressed concern that Claimant's examination was indicative "for an injury to the pronator with possible irritation at the median nerve at that level". Without the additional information concerning, what the Claimant described was aggressive yanking on her arm during the ropes course or the results of the MRI, Dr. Larsen opined that turning a steering wheel "could" cause a pronator injury, assuming that some type of resistance was encountered while doing so. Dr. Larsen recommended an MRI and an electrodiagnostic (EMG) study.

[1] Claimant has a history of a prior admitted work related injury to her left upper extremity. On January 22, 2016 when she fell onto her hands and knees while working for Respondent-Employer injuring her shoulders in the process. On August 29, 2017, Claimant complained of shaking of her left hand and arm. Dr. Lakin noted that her new symptoms were unusual and extremely remote from the date of her fall. He believed Claimant's new symptoms were more likely related to carpal tunnel syndrome, an interosseous nerve dysfunction, or arthritic in origin so he referred her to Dr. Caughfield for evaluation and nerve conduction studies despite his belief that her symptoms were unrelated to her January 22, 2016 work injury. Claimant saw Dr. Caughfield on September 25, 2017, with complaints of stiffness and clumsiness in her left hand with distal volar forearm pain. Nerve conduction studies revealed evidence of an NMJ (neuromuscular junction) disorder such as myasthenia, so Dr. Caughfield recommended that Claimant be seen by a neurologist. Dr. Caughfield also agreed that Claimant's condition was not related to her January 22, 2016 work injury. Respondent-Employer denied the referral to the neurologist since both Dr. Lakin and Dr. Caughfield opined that the need for the referral was unrelated to the January 22, 2016 work injury. As a result, Claimant was placed at MMI and a final admission of liability filed. Claimant requested a DIME and asked that the DIME evaluate her bilateral shoulders, left arm, left hand, left wrist, right wrist, and right hand. Before the DIME occurred, Claimant agreed to settle her January 22, 2016 claim.

11. MRI of the left elbow was performed August 15, 2018. The MRI demonstrated a bifid biceps tendon. There was edematous change within the bone of the radial tubercle where the long head of the biceps tendon attached. There was fluid surrounding a complete tear, with minimal retraction, of the short head of the distal biceps tendon at its insertion. There was also a small amount of edema surrounding the ulnar nerve within the cubital tunnel, which the interpreting radiologist felt could explain Claimant's distal symptoms.

12. Claimant underwent an independent medical examination (IME) with Dr. Ridings on September 5, 2018 at the request of Respondent-Employer. Claimant reported to Dr. Ridings that while turning left she experienced an acute onset of a sharp pain at her left lateral elbow that extended down into the proximal volar forearm. Claimant did not report a pop. Upon obtaining a detailed history of Claimant's present illness, Dr. Ridings undertook an extensive review of her medical records. He also discussed with Claimant all of her job duties and obtained a listing of her current medical complaints. Based upon the information collected, Dr. Ridings opined that Claimant did not sustain a traumatic work related injury or an occupational disease to her left elbow on or about June 13, 2018.

13. Dr. Ridings explained that tearing of the distal biceps tendon from its attachment is a highly unusual diagnosis which he would typically expect to be related to an episode of significant trauma involving significant force opposing a voluntary contraction of the biceps muscle. Claimant's counsel concedes that the biceps rupture likely did not occur while driving but rather while Claimant was participating in a team building ropes course on July 12, 2018.

14. Respondent-Employer suggests that the forearm pain described to Dr. Taylor by Claimant from July 16, 2018 through September 11, 2018 is the same complaint she was having before being placed at MMI for her prior workers' compensation claim. Because Claimant had similar complaints and physical examinations of her left elbow and forearm as part of her prior workers' compensation claim, Respondent-Employer contends that the precipitating cause of her injury is a pre-existing health condition that the she brought to the workplace, namely neuropathic pain caused by a heretofore undiagnosed neuromuscular junction disorder such as myasthenia. Accordingly, Respondent-Employer argues that Claimant's injury does not "arise out of" the employment unless a special hazard of the employment combines with the pre-existing condition to contribute to the injury. See *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Gates Rubber Co. v. Industrial Comm'n.*, 705 P.2d 6, 7 (Colo. App. 1985). *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992). Because making a left hand turn in a van with power steering is not a special hazard of employment, Respondent-Employer contends that Claimant's left elbow injury does not arise out of her employment. Consequently, Respondent-Employer asserts that the claim must be denied and dismissed.

15. While the ALJ finds that Respondent's counsel correctly articulates the current state of the law concerning work place injuries precipitated by pre-existing

conditions, he is not persuaded that Claimant's 2018 left elbow injury was occasioned by a pre-existing condition she brought to the workplace. Rather, the evidence presented persuades the ALJ that Claimant's left elbow symptoms arose from a specific incident directly connected to her work duties as a van driver for Respondent-Employer on June 13, 2018 as opposed to a nondescript and undiagnosed, but supposed pre-existing condition.

16. Based upon the evidence presented, the ALJ finds that Claimant likely suffered a strain injury involving her left elbow and biceps on June 13, 2018, while turning the steering wheel of her work van. This "injury" prompted, what the ALJ finds was reasonable, necessary and related treatment, including one visit to occupational therapy. Nonetheless, the ALJ is convinced that Claimant suffered a second, more serious injury to her left elbow/forearm on July 12, 2018, as evidenced by the acute nature of the findings on her August 15, 2018 left elbow MRI, the need for which arose after Claimant's July 12, 2018 injury.

17. Based upon the evidence presented, the ALJ finds that this second injury, the compensability of which is not before the ALJ, constitutes an efficient intervening event which severed the causal connection between Claimant's June 13, 2018 industrial injury and her need for subsequent treatment, including additional physical therapy and an EMG. Indeed, the evidence presented persuades the ALJ that the need for additional physical therapy and diagnostic testing in the form of an EMG arose after Claimant's involvement in the ropes. Consequently, the ALJ is persuaded that the need for this treatment/testing is unrelated to Claimant's elbow/biceps stain occurring June 13, 2018. The contrary opinion of Dr. Larsen, to the extent that he opines on the cause of Claimant's need for treatment, is unpersuasive as it is based upon an incomplete understanding of Claimant's injurie(s) since she failed to inform him of her participation in the ropes course and the results of her MRI were pending.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a

workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

C. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

D. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). Based upon the evidence presented, the ALJ finds ample evidence to conclude that Claimant's left elbow/biceps injury occurred in the course of her employment on June 13, 2018. Indeed, Respondent does not challenge that Claimant's injury occurred in the scope of employment. Rather, Respondent argues that Claimant's injury did not "arise out" of his employment because it was precipitated by a personal preexisting condition which she imported to the workplace. Consequently, the ALJ has analyzed

the compensable nature of Claimant's injury pursuant to the decision announced by the Colorado Supreme Court in *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014) and the "special hazard" rule announced by the Court of Appeals in *Ramsdell v. Horn,* 781 P.2d 150 (Colo. App. 1989).

E. In *City of Brighton*, the Colorado Supreme Court identified three categories of risk that cause injuries to employees: (1) employment risks directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment related nor personal. 318 P.3d 496 (Colo. 2014). The second category includes risks that are entirely personal or private to the employee. Such risks would include an employee's pre-existing or idiopathic condition that is completely unrelated to her employment. Idiopathic conditions have been defined to mean "self-originated." *Id.* at 503. Purely idiopathic personal injuries generally are not compensable unless an exception applies. *Id.* at 503. One exception is when a pre-existing or idiopathic condition precipitates an accident and combines with a hazardous condition of employment to cause an injury. Referred to as the "special hazard rule", the Colorado Court of Appeals held that a claimant may be compensated if a preexisting injury, infirmity, or disease is exacerbated by "the concurrence of a pre-existing weakness and a hazard of employment." *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Gates Rubber Co. v. Industrial Comm'n.*, 705 P.2d 6, 7 (Colo. App. 1985). The rationale for this rule is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of the employment. *Gates Rubber Co. V. Industrial Commission, supra; Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999). In such cases, the existence of a special hazard, which elevates the probability of injury or the extent of the injury incurred, serves to establish the required causal relationship between the employment and the injury. *See Ramsdell v. Horn, supra.* In order to be considered a special hazard, the employment condition cannot be a ubiquitous one; it must be a special hazard not generally encountered. *Id.* The rationale for this exception is that unless a special hazard of employment increases the risk or extent of injury, an injury due to a claimant's personal or idiopathic condition does not bear a sufficient causal relationship to the employment to "arise out of" the employment. *Gates, supra* at 7.

F. As found, the evidence presented persuades the ALJ that Claimant has established the requisite causal connection between her work duties as a van driver and her left elbow strain. In concluding as much, the ALJ finds Respondent's compensability defense rests principally on the suggestion that Claimant's 2016 left shoulder injury left her with a neuromuscular junction disorder giving rise to neuropathic pain that Respondent contends precipitated the injury in this case. As found above, the ALJ is not persuaded. Here, the evidence presented convinces the ALJ that Claimant's injury was caused by using her left arm to turn the wheel of an older van requiring more force than usual to maneuver. There is a dearth of evidence to support a conclusion that a pre-existing condition played any causative role in the development of Claimant's pain and/or her left elbow strain. Consequently, the ALJ is not persuaded that Claimant's injury arose out of a risk inherently personal to herself. Therefore, the

"special hazard" rule does not apply to the facts presented here. Moreover, the ALJ is not convinced by any suggestion that there is nothing unique about the van in question and as such, Claimant's injury is not compensable because it could have happened by driving/maneuvering any van outside of work. Merely because Claimant was engaged in activity, specifically driving/turning a passenger van, which is performed many times a day outside of work without incident does not compel a finding that Claimant's injury is not work-related. Claimant is not required to prove the occurrence of a dramatic event to prove a compensable injury. *Martin Marietta Corp. v. Faulk,* 158 Colo. 441, 407 P.2d 348 (1965). In keeping with the decision announced by the Court in C*ity of Brighton,* the ALJ concludes that Claimant's left elbow/biceps strain is causally connected to an employment risk tied directly to Claimant's work itself. Specifically, the risk associated with driving an older van requiring more effort than usual to maneuver. But for the condition of the van combined with Claimant's obligation to drive it, the ALJ concludes that the asserted injury probably would not have occurred. As noted above, the mere fact that Claimant had performed this activity without injury previously does not negate the causal connection between her work activity and her injury on June 13, 2018. Consequently, the ALJ finds that Claimant has proven, by a preponderance of the evidence, that her injury arose out of her employment. The injury is compensable.

Medical Benefits

G. Under § 8-42-101(1)(a), C.R.S. 2007, respondents are liable for medical treatment that may reasonably be needed at the time of the injury and thereafter during the disability to cure and relieve the employee from the effects of the injury. That includes furnishing treatment for conditions due to a natural development of the industrial injury. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187, 1188 (Colo. App. 2002). In contrast, no liability exists when a later accident occurs as the direct result of an intervening cause. *Post Printing and Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934). The determination of whether the need for medical treatment is the result of an independent intervening cause is a question of fact for resolution by the ALJ. *Owens v. Industrial Claim Appeals Office, supra.* As found, Claimant's participation in the ropes course on July 12, 2018 dramatically increased her symptoms and extended the indications of additional injury and need for treatment to body parts beyond the elbow. Consequently, the ALJ concludes that Claimant's participation in the ropes course constitutes an efficient intervening event which severed the causal connection between her June 13, 2018 industrial injury and the need for additional treatment including additional therapy and an EMG. Also as found, any suggestion that Claimant's need for additional therapy and the EMG based upon the opinions of Dr. Larsen is not unpersuasive as his diagnostic opinions were based upon an incomplete understanding of Claimant's injurie(s), since she failed to inform him of her participation in the ropes course and the results of her MRI were pending.

ORDER

It is therefore ordered that:

1. Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her left elbow on June 13, 2018, while driving a van as part of her work duties for Respondent-Employer.

2. Claimant's request for additional physical therapy and an EMG under the June 13, 2018 claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 30, 2018

/s/ Richard M. Lamphere

Richard M. Lamphere
Administrative Law Judge
Office of Administrative Courts

Colorado Springs, CO 80906

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the spinal fusion surgery recommended by Michael Drewek, M.D. is reasonable, necessary, and causally related to her April 1, 2017 work injury.

FINDINGS OF FACT

1. Claimant is employed by Employer as a car salesperson and has been so employed for approximately 5 years.

2. On April 1, 2017 while so employed, Claimant was preparing a vehicle for a customer during a "lease buyout." Claimant took the car to wash and vacuum it and accidentally stepped out of the vehicle without putting in fully into park. The car began rolling away. Claimant attempted to get back into the car to put her foot on the brake and was knocked over by the vehicle. The rear tire rolled over her left leg which caused her to twist and fall onto her back and elbow.

3. Paramedics arrived on scene. Claimant reported left knee pain and tenderness. Claimant denied any head, neck, or back injury. Claimant reported a history of lower back surgery and told the paramedics that she felt like her back was having spasms due to laying on the ground for a while. *See* Exhibits 5, D.

4. Paramedics noted that Claimant was lying half on her back and half on her right side when they arrived. Claimant had no evidence of trauma or tenderness to her head, face, neck, back, or chest. Claimant's left knee showed multiple small abrasions that looked like tire marks with redness and hematomas beginning to form and her knee was tender all the way around. Claimant was transported to Swedish Medical Center. *See* Exhibits 5, D.

5. At the Emergency Department of Swedish Medical Center, Claimant reported knee pain due to being run over by a car. Claimant denied any other injury or trauma from the incident. Claimant reported no prior injuries to her left knee but reported a history of chronic back pain. She reported prior back/neck surgery and prior hip replacement. X-rays of her knee were taken and negative for fracture, dislocation, NV compromise, or compartment syndrome. Claimant was noted to be stable for discharge to home and was advised that the plain x-rays would miss soft tissue injuries but that an emergent MRI was not indicated and may be needed as an outpatient option for further evaluation of her knee. Claimant was discharged approximately 1.5 hours after her arrival. *See* Exhibits 6, E.

6. On April 7, 2017, Mary Zickefoose, M.D. evaluated Claimant. Claimant reported constant severe left leg pain since being run over by a car on April 1. Claimant reported that she had continued to work but that her knee was extremely swollen the day prior. Claimant reported a prior left hip replacement in 2013 with a repair in 2014, and a right hip labrum tear that had not yet been repaired. Claimant also reported her left elbow was bruised and swollen and that she jammed her 3rd and 4th fingers on her right hand. Claimant reported pain at a 4/10. Claimant reported prior left knee surgeries, bilateral shoulder surgeries, left hip replacement surgeries, a right ankle surgery, lower back surgery, and neck surgery. On examination, Dr. Zickefoose found Claimant's left lower extremity to be swollen from the knee down. She also found tender PIP joint in the right middle finger that was swollen, pain in both hips with internal and external rotation, swollen left knee, limping, and abrasions of the skin on the lateral aspect of the left knee. Dr. Zickefoose diagnosed crushing injury of left knee, crushing injury of left lower leg, contusion of left elbow, and pain in right hip. Dr. Zickefoose recommended an MRI of the left knee as well as an MRI of the right hip. *See* Exhibit 7.

7. On April 21, 2017, Dr. Zickefoose evaluated Claimant. Claimant reported continued pain in the left leg and that her April 19 left knee MRI showed tibial plateau fracture and meniscal tears. Claimant reported that her left lateral thigh was starting to hurt only with weight bearing. On examination, Dr. Zickefoose found Claimant's left knee to be swollen and found Claimant's buttocks to have spasms. Dr. Zickefoose diagnosed non-displaced fracture of lateral condyle of left tibia, complex tear of lateral meniscus, and pain in right hip. *See* Exhibit 7.

8. On May 8, 2017, Dr. Zickefoose evaluated Claimant. Claimant reported that she had a synvisc injection that day. Claimant reported that her symptoms were not getting any better and was concerned about her progress. Claimant had not yet received the right hip MRI comparison report. Claimant reported that her right hip pain and her low back pain were worse since lying down for a left knee MRI. Dr. Zickefoose questioned the SI joint vs. lumbar spine vs. hip joint as causing the pain. On examination, Dr. Zickefoose found Claimant's left knee to be swollen and Claimant's upper buttocks and lower back to have spasms bilaterally. Dr. Zickefoose diagnosed complex tear of lateral meniscus, non-displaced fracture of lateral condyle of left tibia, pain in right hip, and low back pain. *See* Exhibit 7.

9. On June 6, 2017, Claimant underwent an MRI of her lumbar spine. The impression provided was: protrusions and/or osteophytes and zygapophyseal joint arthritis at T12-L1, L1-2, L2-3, and L3-4; mild right lateral recess stenosis at T12-L1; mild left lateral recess and mild canal stenosis at L1-2; mild canal stenosis and severe left lateral recess stenosis at L2-3 with mild inferior left foraminal stenosis; severe canal, severe right, and moderate left lateral recess stenosis and mild right foraminal stenosis at L3-4; scoliosis present convex to the right with the apex at the L2-3 level with osteophytes present along the concave aspect of the curve. *See* Exhibits 10, H.

10. On June 7, 2017, Dr. Zickefoose evaluated Claimant. Claimant reported that she had an MRI of her back done the day prior. Claimant reported that she had no

long lasting relief of the pain in her left knee, that her back continued to hurt, and that her hip was extremely bad. Dr. Zickefoose noted a plan for Claimant to see Dr. Drewak for an opinion. Dr. Zickefoose noted that after reviewing the back MRI, she did not believe Claimant's pain was coming from the back, but wanted Dr. Drewak's opinion. *See* Exhibit 7.

11. On August 8, 2017, Michael Drewek, M.D. evaluated Claimant. Dr. Drewek assessed lumbar spine pain and lumbar stenosis. Dr. Drewek reviewed Claimant's imaging studies and recommended a bilateral L3-4 epidural injection. Dr. Drewek ordered a CT of the lumbar spine. *See* Exhibit 9.

12. On August 10, 2017, Dr. Zickefoose evaluated Claimant. Claimant reported that she had constant pain from her cervical spine down to the lumbar spine, dizzy spells at times when she looked down and back up, severe pain and muscle spasm with a hard time straightening up. Claimant reported that her leg continued to hurt and that the knee doctor suggested she might need a replacement. Claimant reported that the back doctor recommended a CT of her spine to evaluate whether the hardware had moved. On examination, Claimant had tender paraspinal muscles bilaterally from the cervical to the lumbar region. Dr. Zickefoose noted that she would await notes from the specialist. *See* Exhibit 7.

13. On September 8, 2017, Claimant underwent a CT scan of her lumbar spine. The impression was postsurgical changes of the lumbar spine and scoliosis changes with findings that mimic the prior MRI. *See* Exhibits 10, H.

14. On September 19, 2017, Dr. Drewek evaluated Claimant. Claimant reported mainly back pain that then shoots down into her legs. Clamant reported that the epidural injection did not help at all. Dr. Drewek reviewed the CT scan and noted that the imaging showed a solid fusion from her previous surgery years ago. Dr. Drewek discussed a L2-3, L3-4 TLIF surgery to help fix her deformity and to take out old screws from her previous surgery. Dr. Drewek noted that Claimant had severe deformity at the L2-3 level toward the left side and opined that the deformity was likely related to her trauma, as Claimant had no symptoms prior to the trauma. Dr. Drewek opined that Claimant clearly needed correction of the deformity at the L2-3 level because of loss of disc at the L2-3 level on the left side. Claimant reported that she wanted to proceed with the surgery of the L2-3, L3-4 TLIF with removal of hardware at L4-5. *See* Exhibits 9, G.

15. On September 25, 2017, Dr. Zickefoose evaluated Claimant. Claimant reported no improvement and that she was still having pain. Claimant reported that Dr. Drewek wanted to do surgery on her back. Dr. Zickefoose noted that Claimant would have to talk with Dr. Drewek and decide if she wanted to do surgery on her back first or her left knee first. *See* Exhibit 7.

16. On October 8, 2017, Douglas Scott, M.D. performed a utilization medical review regarding Dr. Drewek's surgical request. Dr. Scott reviewed medical records. Dr. Scott opined that Claimant did not injure her lower back on April 1, 2017 and that the first

responder specifically noted she had no injury to her back or neck. Dr. Scott noted that Claimant did not complaint of low back pain at office visits on April 7 and April 21. Dr. Scott noted that the CT scan of Claimant's lumbar spine showed degenerative changes at L1-2 and L2-3 and opined that the degenerative changes were pre-existing and probably accelerated mechanically by the prior fusion at L3-5 twenty years prior due to the mechanical shear stress experienced at the levels about Claimant's fusion. Dr. Scott opined that the shearing force was exacerbated by Claimant's scoliosis at L2. Dr. Scott opined that the lumbar fusion surgery requested by Dr. Drewek may be reasonable, but that it was not indicated to treat the effects of the April 1, 2017 injury. Dr. Scott opined that the surgery was to treat a complaint of low back pain with structural evidence of lumbar disc pathology that pre-existed Claimant's April 1, 2017 left knee injury. He opined that Insurer should deny authorization for the surgery because it was not related to or indicated to treat the effects of Claimant's April 1, 2017 injury. *See* Exhibits 11, I.

17. By November, Dr. Zickefoose noted that Claimant's back pain had gotten worse and was radiating on straight leg raise with stabbing pain in the right knee and down the lateral side of the calf. Dr. Zickefoose noted they were waiting for insurance authorization for back surgery. In December, Dr. Zickefoose noted that the back surgery was denied and that Claimant had scheduled an appointment with a lawyer. See Exhibit 7.

18. In 2018, Dr. Zickefoose continued to evaluate Claimant. Claimant's knee and low back pain continued to be noted. Dr. Zickefoose continued diagnoses pertaining to the knee and back and noted that Claimant had court dates scheduled. *See* Exhibit 7.

19. On March 20, 2018 Dr. Drewek evaluated Claimant. Claimant reported she was still fighting with workmens comp to get surgery approved. Dr. Drewek noted that Claimant was quite incapacitated by her back pain and lumbar radicular symptoms. Dr. Drewek noted that it was fairly clear that Claimant's problem was most likely related to the trauma from the work related injury as Claimant described she was not having problems prior to that event. *See* Exhibit 9.

20. Claimant had a long history of low back pain complaints and issues prior to the April 1, 2017 work injury including a fusion in 1995.

21. In August of 2011, Claimant was thrown down a flight of 15 stairs and had neck and back pain. An MRI of her lumbar spine was performed in September of 2011and showed multilevel diskogenic degenerative changes involving the lower thoracic and upper lumbar spines. At L1-2, Claimant had mild broad based disc bulging with more pronounced right foraminal component and mild facet hypertrophy. At L2-3 Claimant had mild broad based disk bulging, mild facet hypertrophy, and small right paracentral extruded component extending superiorly from the disc margin by approximately 7 mm. At L3-4 Claimant had mild to moderate broad based disc bulging with moderate facet degenerative and ligamentum flavum hypertrophy noted. Claimant had mild to moderate central canal stenosis and mild bilateral neural foraminal narrowing. *See* Exhibit C.

22. In December of 2014 following a revision of a left total hip arthroplasty performed in March of 2014, Claimant reported continued pain in the left hip area. Claimant reported left sided low back pain that was constant. In December of 2014, Claimant walked with a mild limp on the left and had a long legged gait on the left. Claimant had a little bit of weakness and pain with resisted straight leg raising. *See* Exhibit C.

23. In June of 2016, Claimant was evaluated for neck pain radiating down her back into her buttocks. On examination, Claimant was tender to palpation in her bilateral cervical musculature down into the thoracic and lumbar musculature. Claimant was advised to take over the counter medicine as needed for pain and to apply heat for up to 20 minutes 3 times daily. *See* Exhibit C.

24. Claimant testified at hearing. Claimant testified that in the 1990s she was involved in a serious motor vehicle accident where she was thrown through a windshield and down a 20-foot embankment with neck, back, arm, leg, and serious injuries. Claimant testified that she had a lumbar fusion surgery at that time and had occasional ongoing problems. She indicated that on the date of her April 1, 2017 injury, she had back spasms while on the ground after the car ran her over. Claimant testified that the focus at that time was on her left knee that had been run over. Claimant testified that she had increased pain in her back over the next few weeks that was definitely different than any pain she had before her injury.

25. Claimant testified that when she underwent an MRI in April of 2017 she had to lay on a hard flat table and that it hurt her back and that her back was again spasming. Claimant testified she did not have that type of back issue before the April 1, 2017 work injury. Claimant testified that she was not asymptomatic in her back and had very minor back pain before, but not the pain like she has now.

26. Dr. Scott also testified at hearing. He noted that Dr. Drewek wanted to fuse two levels, from L-2 to L4 and also wanted to remove old hardware at L4-5 from Claimant's prior fusion. Dr. Scott opined the surgery was not related to the April 1, 2017 injury and that the back pain was not due to the injury. Dr. Scott noted that Dr. Drewek's opinion was based partially on Claimant telling Dr. Drewek that she had no prior symptoms. Dr. Scott opined that if Claimant had a traumatic herniation at L2-3 on the left he would expect serious back pain with possible radiation into the left leg and that Claimant did not have such complaints. Dr. Scott opined that the condition of Claimant's lumbar spine was expected degenerative change due to the increased stress from her prior fusion in the 1990s and the stress over the time to the areas next to the prior fusion and the shear stress.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to

injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits- surgery recommended by Dr. Drewek

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.

Claimant has established by a preponderance of the evidence that the spinal fusion surgery recommended by Dr. Drewek is reasonable, necessary, and causally related to her April 1, 2017 work injury. Claimant is found credible and persuasive that when she was injured and her left leg was run over by the car, she twisted and fell backwards and that her back went into spasms while laying on the ground. Claimant was noted to have pain in both hips at her first evaluation with Dr. Zickefoose, spasms in her buttocks at her next appointment, and spasms in her upper buttocks and lower back at the third appointment with Dr. Zickefoose on May 6, 2017. Claimant is credible that she had back pain in the first few weeks following her work injury and that her back again

went into spasms when she had a left knee MRI on April 19, 2017 and had to lay flat on her back on a hard surface. As found above, Dr. Zickefoose noted on May 6, 2017 that Claimant's low back pain was worse. Dr. Zickefoose was uncertain whether the pain was coming from the SI joint, the lumbar spine, or the hip. Claimant is credible that at first after her injury she was unsure whether the pain was coming from her hip or her back. This is consistent with Dr. Zickefoose's records, showing Dr. Zickefoose was also unsure. Additionally, although Claimant has pre-existing history of low back problems including a low back fusion in the 1990s, Claimant is credible and persuasive that the April 1, 2017 work injury caused her new and different low back pain that did not exist prior to her injury.

The opinion of Dr. Drewek, overall, is credible and persuasive. Claimant was not having significant low back issues prior to the April 1, 2017 injury. Although Claimant had occasional issues with her low back and was not asymptomatic, Claimant was not symptomatic like she is now following injury. Dr. Drewek opined that the defect was likely related to trauma as Claimant had no symptoms prior to the injury. Although Respondents argue and note the equivocal language "likely related to trauma" due to "no symptoms" prior, the ALJ finds there is a significant change in symptoms after the trauma. Although Claimant had pre-existing back pain that she did not disclose to Dr. Drewek, Claimant is credible as to the degree of back pain and the difference in back pain following the April 1, 2017 injury. The symptoms were not to the severe degree they are now following injury and the difference in symptoms now and prior to April 1, 2017 support Claimant's contention that an injury or aggravation to her lumbar spine occurred on April 1, 2017. This is supported by the MRI studies that show a disc herniation that was not present on the 2011 MRI. Claimant had back spasms the date of injury and consistent reports of worse and ongoing back pain beginning one month after injury. Claimant has established, more likely than not, that she sustained an injury to her lumbar spine on April 1, 2017 and that the recommended surgery is casually related to her work injury.

Dr. Scott opined that the surgery was reasonable but not related and believed it was related to pre-existing degenerative issues. His opinion is not found to be persuasive. Although Claimant had pre-existing issues and degeneration in her lumbar spine, Claimant sustained an acute injury with new significant acute symptoms following her April 1, 2017 injury. The ALJ finds, more likely than not, that an acute injury or aggravation to Claimant's underlying lumbar spine occurred on April 1, 2017. Claimant's credible testimony, combined with the opinion of Dr. Drewek (although he believed she had no symptoms when she had low-level symptoms) is persuasive. Claimant had an acute event that took her low back problems to severe symptoms acutely on April 1, 2017. She has met her burden by a preponderance of the evidence.

ORDER

1. Claimant has established by a preponderance of the evidence that the lumbar fusion surgery recommended by Dr. Drewek is reasonable, necessary, and causally related to her April 1, 2017 work injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 30, 2018 /s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant has demonstrated by a preponderance of the evidence that the C3-4 disc replacement surgery requested by J. Paul Elliott, M.D. is reasonable, necessary and causally related to his admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 50 year old male who works for Employer as a plumbing foreman.

2. Claimant has a history of two prior cervical fusions. On March 11, 2014, Claimant underwent a C5-C6 anterior cervical discectomy and fusion ("ACDF"). By March 2015, Claimant continued to report neck pain as well as pain, weakness, numbness and tingling in his in left upper extremity and hand.

3. A July 11, 2015 cervical spine MRI revealed, in relevant part, mild residual bilateral foraminal narrowing at C5-C6, disc degeneration at C6-C7 with annular bulging and stenosis, annular bulging and uncinate ridging at C4-C5 with mild facet arthropathy and mild right-sided foraminal stenosis, and annular bulging and uncinate ridging at C3-C4 with mild facet arthropathy and mild central and bilateral foraminal stenosis.

4. On July 31, 2015, Claimant underwent an ACDF at C6-C7.

5. By February 15, 2016, Claimant was reporting that his arm pain resolved, but that he continued to experience some neck pain and headaches. William Biggs, M.D. noted that x-rays revealed Claimant was healing well, with degeneration above the areas of cervical fusion. Dr. Biggs recommended physical therapy and an epidural steroid injection ("ESI") if Claimant showed no improvement.

6. Claimant testified at hearing he did not recall Dr. Biggs' recommendation, but relocated few months later, and did not receive physical therapy or injections. Claimant testified that prior to March 20, 2017, although he had a history of previous fusions at C5-C6 and C6-C7 he had no symptoms, limitations, pain complaints or restrictions in his cervical spine or upper extremities leading up to the admitted industrial injury. The medical records are devoid of Claimant having any medical care for his cervical spine between February 15, 2016 and March 22, 2017.

7. On March 20, 2017, Claimant suffered an admitted industrial injury when he hit his head on a door jamb while ascending an 8-foot tall ladder. Claimant testified he "jammed" his head back and felt immediate pain in his neck. Claimant was carrying materials in each hand and wearing a hard hat at the time. He reported the incident to

Employer but did not seek medical care at the time because he was able to work the remainder of his shift. Claimant performed his usual job duties on March 21, 2017.

8. Subsequently, while unloading copper pipe with a co-worker, Claimant was struck on the right side of the head with a copper pipe measuring approximately 20 feet long and 2 inches in diameter. Claimant testified he fell to his knees for approximately five minutes after being hit. There are discrepancies in the record regarding exactly when the incident occurred. Claimant testified the incident occurred on March 22, 2017. An April 12, 2017 medical record notes Claimant was hit with the pipe "yesterday," while a May 24, 2017 medical record notes Claimant was hit with a copper pipe a week after the March 20, 2017 door jamb incident. Employer's First Report of Injury dated March 22, 2017 solely refers to Claimant "jamming" his head on a horizontal door frame while climbing a ladder.

9. Claimant sought medical treatment with authorized treating physician ("ATP") Brian Beatty, D.O. on March 22, 2017. Claimant reported experiencing an onset of neck pain after his head got caught on a piece of structure, pushing his head back and stretching his neck. He complained of neck stiffness. Dr. Beatty noted cervical spine x-rays revealed residual motion with increase in the interspinous space on the flexion compared to the extension view at both C5-6 and C6-7, which he opined may represent pseudarthrosis. On exam, Dr. Beatty noted tenderness and tightness without spasm. He diagnosed Claimant with a work-related cervical strain.

10. A March 31, 2017 cervical spine CT scan revealed, in relevant part, loosening of C6 screws and a fracture of the left C7 screw and mild scattered degenerative changes.

11. On April 12, 2017, Dr. Beatty noted Claimant "…was feeling fairly good with minimal pain up until yesterday when he was apparently hit upside the head with a 2 inch copper pipe by a coworker and developed increased pain and now is very sore." Dr. Beatty again diagnosed Claimant with a cervical strain and recommended Claimant proceed with physical therapy.

12. On May 20, 2017, Claimant underwent an MRI of cervical spine. The radiologist gave the following impression: "1. Moderate canal and moderate right foraminal stenosis are seen at C3-4 secondary to protrusion and osteophytes. 2. There is mild canal stenosis and a small protrusion at C4-5. 3. There is moderate right and mild left foraminal stenosis at the C6-7 level secondary to foraminal osteophytes."

13. During the course of care, Dr. Beatty referred Claimant to J. Paul Elliott, M.D. Dr. Elliott first evaluated Claimant on May 24, 2017. Claimant reported jamming his neck when hitting his head against a door jamb on March 21, 2017, and getting hit in the head with a copper pipe a week later, further aggravating his neck pain. Dr. Elliott noted Claimant had an acute onset of neck and trapezius pain following two work injuries and had experienced unremitting neck and trapezius pain since the incidents. Claimant denied upper extremity radiculopathy and focal weakness. Dr. Elliott noted Claimant has a history of ACDF at C5-C6 and C6-C7, and did well postoperatively with

minimal residual neck pain. On exam, Dr. Elliott noted cervical tenderness, reduced range of motion, and paraspinal and trapezius spasms. He reviewed the May 20, 2017 MRI, March 31, 2017 CT scan, and March 22, 2017 x-ray and concluded the imaging revealed C5-7 pseudarthrosis and residual spondylosis. Dr. Elliott opined that operative intervention was warranted to treat the workplace injury, as Claimant failed to experience relief with conservative measures. The surgery was not contested by Respondents.

14. On July 27, 2017, Dr. Elliott performed surgery comprised of:

1. Reoperation, removal of hardware C5-C6 anterior plate screw instrumentation and C6-C7 anterior plate screw instrumentation.
2. C5-C6 and C6-C7 anterior cervical diskectomy and removal of pseudoarthrosis with decompression of central canal and bilateral foraminal nerve root decompression.
3. C5-C6 and C6-C7 allograft arthrodesis.
4. C5-C6-C7 anterior plate screw instrumentation, Sofamor Danek Atlantis translational plate with fixed and variable screws.
5. Posterior C5-C6-C7 lateral mass screw rod instrumentation, Sofamor Danek vertex Instrumentation.
6. C5-C7 posterior spinal arthrodesis, local autograft and allograft, demineralized bone matrix.
7. Microdissection.

15. Both Respondents' expert and Claimant testified the purpose of the July 27, 2017 surgery was to address Claimant's neck pain and trapezius pain. Claimant testified that, while he experienced some relief from the surgery, it only decreased his pain level from an 8/10 to a 6/10.

16. On October 18, 2017 Respondents filed a General Admission of Liability.

17. On January 16, 2018, Dr. Beatty noted that, despite physical therapy, there had not been much improvement in Claimant's symptoms over the last month or two. Claimant complained of difficulty with any activity bending his neck for longer than 10 minutes and waking up four to five times per night. Dr. Beatty changed Claimant's prescription medications.

18. On January 25, 2018, Claimant reported to Dr. Elliott bilateral trapezii pain and neck pain that had not improved since the surgery. Claimant described the pain as tightness, denying radiculopathy, numbness/tingling or weakness. Dr. Elliott noted physical therapy and medications had not relieved Claimant's pain, and ordered a cervical CT scan and MRI for further evaluation.

19. Claimant underwent a cervical spine MRI on February 13, 2018, which revealed cervical spondylosis with multilevel foraminal stenosis, including moderate central stenosis at C3-C4, and a bony bridging across the disc spaces at C5-C7.

20. Dr. Elliott reevaluated Claimant on February 22, 2018. Claimant reported experiencing ongoing right greater than left trapezius pain since the July 2017 surgery. Dr. Elliott noted Claimant initially experienced improvement postoperatively, but plateaued about two months after the operation. He reviewed the February 13, 2018 MRI results, noting the MRI revealed C3-C4 right greater than left foraminal stenosis and no recurrent stenosis at C5-C7. Dr. Elliott recommended home cervical traction and a right C3-C4 transforaminal ESI for diagnostic and therapeutic purposes, and a C3-4 anterior cervical disc replacement if Claimant's symptoms ultimately did not improve.

21. On March 1, 2018, Dr. Beatty noted Dr. Elliott felt the surgery was doing very well, but that Claimant developed a spur at C3-C4 and was recommending an epidural steroid injection.

22. On April 17, 2018, Barry Ogin, M.D. performed a right C3-C4 transforaminal ESI and right C4-C5 transforaminal ESI. Dr. Ogin noted the following regarding the injection at the C3-C4 level:

> Interestingly, when I slowly injected contrast, there was filling of the C2-C3 facet space. Needle was repositioned slightly more inferior and additional filling was not documented though there was significant venous filling. The needle was repositioned slightly more medially and there was some filling along the lateral gutter of the epidural space. There was no obvious vascular uptake seen or spinal flow. The patient did report significant pain locally at the neck at that point. Given the challenge at the C3-C4 level, I did elect to proceed at the C4-C5 level as well as try to get better flow proximally.

23. Dr. Ogin noted that Claimant had reproduction of neck pain at the C3-C4 level in particular and reported that his pain went from 4-6/10 pre-injection to 1-2/10 post-injection. Dr. Ogin wrote, "This appeared to be good diagnostic response."

24. On April 19, 2018, Claimant reported to Dr. Beatty that the shooting pains down his right arm had resolved, but that he continued to experience a fair amount of pain and stiffness in his neck.

25. On April 30, 2018, Dr. Ogin noted that a co-worker dropped a large metal piece on Claimant's head, flexing Claimant's head forward. He further noted that he had performed a right-sided transforaminal ESI at C3-C4 and, because he was "unable to get satisfactory proximal flow," also at C4-C5 to improve the therapeutic yield. Claimant reported that his shoulder pain improved post-injection, but that he had developed new discomfort in his forearm. Claimant continued to experience some aching in his shoulders and neck. Dr. Ogin opined that Claimant's right lateral shoulder discomfort seemed to be related to some localized shoulder tendinopathy. He opined that Claimant

was likely approaching maximum medical improvement ("MMI") for his neck, and referred Claimant to Dr. Timothy Shea for pain management and cognitive behavioral training.

26. On May 17, 2018, Claimant reported to Dr. Beatty that his symptoms were about the same, with some of his right upper arm pain returning. Dr. Beatty noted he planned to set Claimant up with Dr. Elliott to see if there was anything that could be done surgically.

27. On May 21, 2018, Dr. Ogin noted Claimant continued to experience "baseline" pain along his neck with some radiation along his upper trapezius and lateral shoulder. He opined that Claimant would likely not get any lasting relief from further injections as Claimant seemed stable overall with fairly diffuse and axial pain.

28. On June 7, 2018, Dr. Elliott noted that Claimant initially had significant relief from the ESI but that his symptoms had since redeveloped. He reviewed the February 13, 2018 cervical spine MRI and CT scan and diagnosed Claimant with cervical spondylosis, opining that Claimant's right trapezius pain was attributable to right C3-4 foraminal stenosis. He noted that although Claimant remained "neurologically intact," he failed to experience lasting relief "with *myriad* conservative measures; thus, operative intervention is warranted for definitive treatment." (Emphasis not added). He noted Claimant elected to proceed with the surgery after discussion of the risks. He ordered Claimant to return to Dr. Beatty's office for medical clearance and that Claimant undergo cervical AP/lateral/flexion/extension x-rays to rule out dynamic instability.

29. On June 20, 2018 Dr. Beatty cleared Claimant for surgery.

30. On June 20, 2018, Dr. Elliott requested authorization for C3-C4 disc replacement surgery.

31. On June 27, 2018, Michael J. Rauzzino, M.D. performed a medical record review at the request of Respondents. Dr. Rauzzino did not interview or examine Claimant. Dr. Rauzzino opined that the proposed C3-C4 disc replacement surgery was not related to Claimant's admitted industrial injury. He noted the cervical MRI revealed previously existing pseudarthrosis without new injury. Dr. Rauzzino opined that because the C5-C7 fusion existed prior to the work injury, adjacent level disease was not caused by the work injury, specifically at C3-C4, as such level was not injured in the claim nor is adjacent to the C5-C7 fusion. Dr. Rauzzino further opined that the disc replacement surgery was not reasonable and necessary because a pain generator had not been clearly defined, noting that Dr. Ogin injected C4-C5 and C3-C4 and felt that the response was equivocal and that no further injections would be offered. Dr. Rauzzino further opined that the requested surgery could lead to worsening neck pain given Claimant's diffuse axial neck pain and facet arthropathy. He opined that no additional treatment was needed for Claimant's cervical spine under workers' compensation, stating he did not know that any additional treatment was likely to improve Claimant's pain complaints.

32. On June 29, 2018, Respondents denied Dr. Elliott's request for C3-C4 disc replacement surgery, relying on Dr. Rauzzino's report.

33. On September 12, 2018, Dr. Beatty noted that Claimant's symptoms were "quite severe," continued to worsen, and that Claimant opted to undergo cervical spine surgery with Dr. Elliott through his personal health insurance.

34. Dr. Rauzzino testified at hearing as a Level II accredited expert in neurosurgery. Dr. Rauzzino testified consistent with his IME report, continuing to opine that the recommended C3-C4 disc replacement is not reasonable, necessary or related to Claimant's work injury. Dr. Rauzzino testified Claimant's initial pain complaints centered on neck and trapezii pain without radiation to Claimant's arms, which he explained is more of a muscular or myofascial concern. Dr. Rauzzino stated that the imaging studies and medical reports did not support a finding of any acute injury to Claimant's C3-C4 level. Dr. Rauzzino explained that because there is a "skip level" at C4-C5, adjacent level disease could not explain any presence of C3-C4 pain, as level C3-C4 is not adjacent to the re-fused levels. Dr. Rauzzino testified that the noted disc bulging, facet arthrosis, and right sided foraminal stenosis were documented in records predating the work injury. Dr. Rauzzino acknowledged that his IME report did not contain reference to the copper pipe incident, stating that he had read about the incident, but that it did not change his opinion.

35. Regarding the reasonableness and necessity of the recommended surgery, Dr. Rauzzino noted that Dr. Ogin's injection report indicates that the C3-4 level was never adequately injected to allow a diagnosis that it was the pain generator. Dr. Rauzzino explained that Dr. Ogin's only effective injections occurred to Claimant's C4-C5 level, as Dr. Ogin was never able to achieve sufficient proximal flow at the C3-C4 level. Dr. Rauzzino opined that any injection to that level could not be considered diagnostic. Dr. Rauzzino testified the Medical Treatment Guidelines indicate that when facet arthrosis is found, which he described as arthritis in the back, a cervical disc replacement is inappropriate, or contraindicated. Dr. Rauzzino testified that because Claimant has presented with facet arthrosis throughout his neck since at least 2015, the cervical disc replacement would not be appropriate as it would not be anticipated to relieve Claimant's symptoms of diffuse neck pain. Dr. Rauzzino concluded that the surgery would not be expected to provide Claimant relief from his neck pain due to Claimant's diffuse axial neck pain without a specific radiculopathy and pre-existing arthritis.

36. Claimant testified his neck symptoms have not resolved since March 2017. Claimant testified he understands the risks of surgery, however, understanding those risks he still desires to pursue the recommended surgery as he does not want to live in pain.

37. The ALJ finds the testimony of Claimant credible and persuasive.

38. The ALJ finds the testimony and opinions of Drs. Elliott and Beatty, as supported by the medical records and Claimant's testimony, more credible and persuasive than the contrary opinion of Drs. Rauzzino and Ogin.

39. Claimant established it is more likely than not that the requested C3-C4 disc replacement surgery is related to Claimant's admitted work injury, and reasonably necessary to cure and relieve Claimant of the effects of the work injury.

40. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the Medical Treatment Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the Medical Treatment Guidelines such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008); Section 8-43-201(3), C.R.S.

The ALJ concludes Claimant proved by a preponderance of the evidence the requested C3-C4 disc replacement surgery is reasonable, necessary and related to the admitted March 2017 work injury. While Claimant had two prior cervical fusions at C5-C6 and C6-C7, as well as pre-existing annular bulging at C3-C4 with mild facet arthropathy central and bilateral foraminal stenosis, Claimant was credible in his testimony that he did not have symptoms, limitations, or restrictions in his cervical spine or upper extremities leading up to the admitted industrial injury. Although a February 15, 2016 record references neck pain, no medical records were introduced at hearing indicating Claimant continued to seek treatment for any cervical spine issues leading up to the industrial injury. On March 20, 2017, Claimant hit his head on a door jamb and immediately thereafter experienced neck pain, which was later exacerbated when he was struck in the head with a 20 foot pipe at work. Despite discrepancies in the record regarding the exact date of the copper pipe incident, the ALJ is persuaded the incident did occur and exacerbated Claimant's condition. The work incidents and related July 2017 surgery aggravated and exacerbated Claimant's condition, causing the need for medical treatment, specifically, the recommended disc replacement surgery.

Claimant underwent surgery in July 2017 to address the neck pain that resulted from his work-related injuries, yet continued to consistently report neck and right upper extremity pain. Dr. Elliott, who is one of Claimant's ATP and has treated Claimant throughout the course of his claim, is of the credible opinion Claimant had a diagnostic injection at C3-C4, which supports his recommendation for disc replacement surgery. Claimant has undergone extensive conservative treatment with no lasting improvement. Dr. Elliott credibly and persuasively opined that the recommended surgery is warranted at this time. Dr. Beatty, also an ATP, has given Claimant surgical clearance. Claimant credibly testified he understands the risks and wants the surgery.

The ALJ has considered the Medical Treatment Guidelines as they apply to Claimant's case; however, based on the totality of the evidence, the ALJ concludes it is more likely than not Claimant's need for C3-C4 disc replacement is related to his work injury, and is reasonable and necessary to cure and relieve Claimant of its effects.

ORDER

It is therefore ordered that:

1. Dr. Elliott's request for C3-C4 disc replacement surgery is reasonable, necessary and related to Claimant's work injury. Respondents shall pay for such surgery pursuant to the fee schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 30, 2018

Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the total left knee replacement surgery recommended by Philip Stull, M.D. is reasonable, necessary, and causally related to her December 18, 2016 work injury.

FINDINGS OF FACT

1. Claimant was employed by Employer as a barista. As part of her duties, Claimant was required to make coffee, handle the register, and clean the dining area.

2. On December 18, 2016 while working and cleaning the dining room, Claimant slipped and fell on water that was on the floor.

3. Claimant was transported by ambulance from work to Parker Adventist Hospital. Claimant was diagnosed with distal radial and ulnar fractures of her left arm and a left tibial plateau fracture of her left leg. *See* Exhibit 11.

4. At the hospital, x-rays of her left knee showed minimally displaced lateral tibial plateau fracture. Thomas McDonough, M.D. evaluated Claimant on December 19, 2016. He noted overall that her clinical alignment was good but that Claimant had tenderness over the anterolateral tibial plateau. He noted the x-rays showed anterolateral tibial plateau fracture that was depressed about 5 mm. Dr. McDonough noted that he discussed options for Claimant's left knee that included operative and non-operative treatment and that Claimant selected non-operative treatment. Dr. McDonough opined that based on the fairly minimal disk depression, he felt that non-operative treatment would yield a satisfactory result. He noted that he also explained the risk of degenerative changes within the knee. Dr. McDonough opined that Claimant should be toe-touch weight bearing using a platform walker. *See* Exhibit 11.

5. After approximately three days at Parker Adventist Hospital, Claimant was transported to Littleton Adventist Hospital for physical rehabilitation. Claimant was discharged on approximately December 31, 2016.

6. At discharge, Claimant was independent with the use of a platform walker and had a hinged knee brace on her left knee. *See* Exhibit 5.

7. After discharge, Claimant was followed regularly by Carrie Burns, M.D. On March 20, 2017, Dr. Burns noted that Claimant was making progress with her left knee and was out of her brace. *See* Exhibit 6.

8. On April 14, 2017, Dr. McDonough evaluated Claimant. Claimant reported that her pain was improving and was mild at a 1-2/10. Claimant denied night pain and reported doing well with very little pain but that the pain was exacerbated by walking. Claimant also reported limitation of motion. Dr. McDonough noted on examination that alignment of her knee was good and that the x-rays showed the fracture to be in a good position and healing well. Dr. McDonough advised Claimant that she could be weight bearing as tolerated. *See* Exhibit A.

9. On April 20, 2017, Dr. Burns evaluated Claimant. A lot of focus was on Claimant's left hand, concern for CRPS, and thermogram. Dr. Burns noted that Claimant had been released by Dr. McDonough for her left knee but that Claimant was still having pain and decreased range of motion in her left knee. *See* Exhibit 6.

10. On May 15, June 8, and July 6 of 2017, Dr. Burns evaluated Claimant. At the May 15 visit, Claimant reported some pain in her left knee with prolonged walking and that she was starting to use lidocaine patches on her left knee when having a painful day. At the June 8 visit, Claimant reported she continued to be able to walk without assistive devices but got sore and tired. At the July 6 visit, Claimant reported that overall her knee felt better but there was a fair amount of stiffness and occasional instability. *See* Exhibit 6.

11. On July 26, 2017, Claimant was evaluated at the emergency department of Parker Adventist Hospital. The assessment and plan noted that Claimant presented with an altered mental status and had known alcohol ingestion as well as questionable medication overdose. On arrival, Claimant was hypoxic and a chest x-ray and CT showed a right sided submassive pulmonary embolism with pulmonary infarct. Claimant was found to have persistently abnormal vital signs and was considered to be septic. Claimant was admitted to the intensive care unit. *See* Exhibit B.

12. Claimant's daughter reported that the night prior Claimant appeared altered in a telephone conversation and that she had a neighbor check on Claimant. The neighbor reported multiple empty bottles of wine. Claimant's daughter went to Claimant's house and believed Claimant appeared intoxicated and Claimant stated she had fallen once. Claimant's daughter put Claimant to bed and stayed the night. Claimant's daughter found two empty bottles of wine in the trash but was unsure when they were consumed. At 11 a.m. Claimant's daughter attempted to wake Claimant and had difficulty arousing Claimant and when she awoke was still altered so the daughter called 911. It was noted that they could not do a review of systems with Claimant due to mental status. Claimant was unable to follow commands, appeared lethargic, had slurred speech with some nonsensical sentences and occasional purposeful statements. Claimant had normal range of motion, normal muscle tone, and was able to move all extremities independently. Claimant was assessed with acute pulmonary embolism, pneumonia of right lung due to infectious organism, sepsis due to unspecified organism, and altered mental state.

13. Claimant was not discharged until July 31, 2017. During her stay, her mental state improved. As her mental state improved Claimant endorsed that she had attempted suicide with pills and had taken excess flexeril and maybe a med that starts with an A. Claimant reported that she had a fall in December of 2016 with a left tibial plateau fracture and was cleared from care 2 months prior by Dr. McDonough. While hospitalized, Claimant had an orthopedic consultation with Russell Presley Swann, M.D. Claimant reported laterally sided knee pain only and worse pain since the fall Tuesday prior to arrival. On exam, Dr. Swann found the pain to be around the lateral joint line. He noted that x-rays showed a valgus posttraumatic alignment with mal-union of the lateral tibial plateau and concern of a medial femoral condyle fracture. Dr. Swann noted that a CT scan of the knee showed post traumatic degenerative joint disease of the knee with a fractured anterior medial based osteophyte but not structural to weight bearing. Dr. Swann found the left knee to have no corroborating pulmonary embolisms findings and no tenderness to palpation over the medial condyle, and no effusion. Dr. Swann found pain laterally where Claimant's posttraumatic deformity was. He assessed left posttraumatic tibial plateau fracture with fractured osteophyte. Dr. Swann felt that the changes were likely related to the old tibial plateau fracture which led to arthritic changes and that the new fracture was of a bone spur. He recommended no surgery but noted consideration of an elective left total knee arthroplasty in the future. *See* Exhibit B.

14. The CT scan of Claimant's left lower extremity showed her bones to be diffusely demineralized. No displaced fracture was identified. Irregularity of the posterior medial femoral condyle appeared to be due to marginal osteophytosis. Remote posttraumatic deformity of the lateral tibial plateau with a 4 mm subchondral depression was identified. There was a questionable non-displaced fracture plane extending through the posterior medical femoral condyle and an MRI was recommended for further evaluation. Advanced tri-compartmental osteoarthritis was also identified and was most severe in the patellofemoral compartment where there was bone on bone contact. *See* Exhibit B.

15. On August 11, 2017, John Aschberger, M.D. evaluated Claimant. Claimant reported persistent knee pain and increased aggravation with ambulation. On exam, Dr. Aschberger found crepitation through motion and difficulty with flexion in the left knee. Dr. Aschberger assessed left knee tibial plateau fracture and noted a further orthopedic follow-up was scheduled. *See* Exhibit 8.

16. On August 14, 2017, Dr. McDonough evaluated Claimant. Claimant reported that the pain was getting worse and was moderate to severe at a 7-8/10 exacerbated by walking and standing. Claimant reported that she recently had a fall at the end of July that had exacerbated her knee pain and that she had been doing relatively well until the fall at the end of July and since then she had been having persistent pain as well as mechanical symptoms. Claimant also reported night pain. Dr. McDonough opined that recent x-rays showed the tibial plateau fracture was healed. Dr. McDonough assessed: tibial plateau fracture, left, closed, with routine healing as a subsequent encounter; and other tear of lateral meniscus of the left knee as a current injury, initial encounter. He provided the impression that the tibial plateau fracture was healed with a

recent re-injury in July. Dr. McDonough recommended an MRI scan to evaluate the lateral meniscus. *See* Exhibit A.

17. On August 24, 2017, Claimant underwent an MRI of her left knee. The impression provided was: healed lateral tibial plateau fracture with mild to moderate chondromalacia in the lateral femoral tibial compartment; severe chondromalacia and moderate osteoarthrosis of the patellofemoral compartment; and degenerative fraying of the inner margin of the medial meniscus with intact lateral meniscus. *See* Exhibits 9, C.

18. On September 8, 2017, Dr. Aschberger evaluated Claimant. Claimant reported persistent irritation at the left knee and that Dr. McDonough was not advising surgery. Dr. Aschberger noted that Claimant was not a likely candidate for a total knee arthroplasty given her anticoagulation and recent pulmonary embolus as well as her upcoming scheduling of a cholecystectomy. See Exhibit 8. Dr. Aschberger recommended a second opinion with Dr. Stull to clarify for potential for future intervention. *See* Exhibit 8.

19. On September 29, 2017, Phillip Stull, M.D. evaluated Claimant. Claimant reported a work related injury to her knee in December that was treated non-surgically with bracing and rehab. Claimant reported rather rapid deterioration in her knee since and described intermittent lateral soreness, pain, swelling, grinding, and popping. Dr. Stull noted that a recent MRI was consistent with moderate arthritic changes in the lateral and moderate to severe arthritic changes in the patellofemoral compartment. Dr. Stull provided the impression of moderate to advanced arthritis, left knee and he provided a cortisone injection. Dr. Stull opined that ultimately, Claimant may be best served with a knee replacement but that it was certainly reasonable to start with a cortisone injection. *See* Exhibits 7, D.

20. On October 6, 2017, Dr. Aschberger evaluated Claimant. Claimant reported that Dr. Stull performed an injection that provided good relief in her left knee but that just recently she has had some recurrent sharp pain. On exam, Claimant had tenderness in the left knee at the joint line. Dr. Aschberger discussed with Claimant viscosupplementation and her likely need for a total knee arthroplasty. *See* Exhibit 8.

21. On November 10, 2017, Dr. Stull evaluated Claimant. Claimant reported improvement in her knee with the injection. On exam, Claimant's lateral joint line was tender and crepitant and Claimant walked with mild antalgia. Dr. Stull's impression was posttraumatic osteoarthritis, left knee with valgus alignment and some improvement with injection. He recommended a lateral unloader brace, physical therapy, and intermittent injections. *See* Exhibit 7.

22. On November 17, 2018, Dr. Aschberger evaluated Claimant. Claimant reported that she was holding off on a total knee replacement while she was on anticoagulation for her pulmonary embolus. Claimant reported she would be on anti-coagulation probably through the end of January. Dr. Aschberger opined that if Claimant had to continue on anticoagulation or did not wish to consider surgery for her left knee,

he would expect maximum medical improvement. However, he opined that if Claimant was a candidate and wished to proceed he would not anticipate maximum medical improvement until recovery from knee arthroplasty. Dr. Aschberger opined that given that Claimant had a tibial plateau fracture, which structurally affected the knee, he would consider a knee arthroplasty workers' compensation related. *See* Exhibit 8.

23. On January 5, 2018, Dr. Stull evaluated Claimant. Claimant reported increasing stiffness, swelling, and soreness as well as poor function in her knee over the last few weeks and asked if they would consider re-injecting her knee. Dr. Stull agreed and injected Claimant's knee again. *See* Exhibit 7.

24. On January 30, 2018 Eric Ridings, M.D. performed an independent medical examination. Claimant reported her work related injury in December of 2016 and her later hospitalization in July of 2017 for pulmonary embolism, pneumonia, and sepsis. Claimant reported at the time she had been walking around okay and not great but could walk for ¼ of a mile. Claimant reported that an orthopedic surgeon who saw her during her July 2017 hospitalization who told her she would need a total knee replacement within six months. Claimant reported that she then saw Dr. Stull who wanted to treat her non-surgically but also told her that at some point she would need a knee replacement. Claimant reported relief with two knee injections and knee brace and that she could currently walk 30 minutes before having some aching but that her knee can catch and feel as though it will buckle. She reported it was difficult to get up from a kneeling position. Dr. Ridings reviewed medical records and performed a physical examination. Dr. Ridings opined that as a result of her fall at work on December 18, 2016 Claimant sustained a tibial plateau fracture with 5 mm of depression of the lateral tibial plateau. He opined that Claimant had valgus alignment of the left knee and that within a reasonable degree of medical probability, Claimant sustained acceleration of osteoarthritis of the left knee due to her work injury which was advanced in the lateral compartment and moderate in the patellofemoral compartment. *See* Exhibit 5.

25. On April 6, 2018, Dr. Stull evaluated Claimant. Claimant reported increasing stiffness and pain and that her left knee was really quite bothersome at the time. Claimant reported that she was limping on the knee daily and had difficult with activities of daily living and difficulties with work activities due to the pain, stiffness, and swelling. Dr. Stull noted that Claimant had been through good trail of conservative measures over an extended period of time but had not had significant improvement. Dr. Stull provided another cortisone injection for short term pain relief, but recommended a total knee replacement. Dr. Stull opined that Claimant would be best served with a left knee replacement and he put in a request for authorization for surgery. *See* Exhibit 7.

26. On May 11, 2018, Mark Failinger, M.D. performed an independent medical examination. Claimant reported falling at work on December 18, 2016 after slipping on the floor that was slick due to melting snow. Claimant reported that she was taken to a hospital and diagnosed with a tibial plateau fracture and was told it would heal on its own. Claimant reported going to a rehabilitation hospital following her fall for one month. Claimant reported seeing Dr. McDonough who told her that her knee fracture had healed

after three to four months. Claimant reported that she was improving in the left knee but never had a pain free left knee since her fall. Claimant reported that when walking, the knee would be unstable and have some popping with pain and that she never got back to a normal walk or gait. Claimant reported developing a blood clot, respiratory arrest, sepsis, and mild pneumonia in July of 2017 and saw Dr. Swann in the hospital and that he recommended a knee replacement. Claimant reported she was unsure why she saw Dr. Swann and was told by someone that she had a fall. Claimant reported that she currently could walk only about 30 minutes before needing to take a break due to fatigue and tiredness, that her knee sometimes popped with pain, and that her strength was improving. *See* Exhibits 4, E.

27. On examination, Dr. Failinger found patellofemoral crepitus with range of motion, reduced range of motion, mild to moderate medial joint line tenderness, and lateral joint line tenderness. Dr. Failinger reviewed medical records. Dr. Failinger provided an opinion that Claimant's patellofemoral arthritis of the left knee joint was not related to the December 18, 2016 fall. Dr. Failinger opined that Claimant sustained what appeared to be a minimally depressed tibial plateau fracture related to the December 18, 2016 injury. Dr. Failinger noted that Claimant was clearly having deficits in range of motion at physical therapy even after she was released by Dr. McDonough. Dr. Failinger opined that Claimant appeared to have sustained a setback in July of 2017 when she had an apparent fall. Dr. Failinger noted no evidence on the August 2017 MRI of an acute new injury from a supposed fall in July of 2017. Dr. Failinger opined that although Claimant had an exacerbation of pre-existing problems, she did not have any new pathology from a July 2017 fall, if there was one. Thus, he opined that it appeared as though any of the complaints of osteoarthritis from the lateral compartment of Claimant's knee would be due to the December 2016 injury. Dr. Failinger noted that Dr. Swann felt at the hospital that the pain and problems in Claimant's knee were due to the fall in December of 2016 and that he had no corroborating notes and/or studies or films to refute that. Dr. Failinger also noted that he could not refute Dr. Stull's opinion that the need for the knee replacement was created by the December 2016 fall. *See* Exhibits 4, E.

28. Dr. Failinger opined, therefore, that if Claimant wanted to proceed, Claimant's total knee replacement would be due to an acceleration of her pre-existing arthritis (the patellofemoral arthritis) due to her December 2016 fall. Dr. Failinger noted that it was not clear at his examination that Claimant was experiencing pain and dysfunction sufficient to proceed with a total knee replacement or that the pain in the knee was interfering with her lift so much that she wanted to proceed with knee replacement. However, he opined that if Claimant felt the knee was affecting her life so significantly that she could no longer continue with her daily life as it is, a knee replacement was a reasonable request and the acceleration of her condition was due to the fall of December 2016, with reasonable medical probability. *See* Exhibits 4, E.

29. On May 23, 2018, Dr. Failinger issued an addendum to his independent medical examination report after reviewing additional records. Dr. Failinger opined that the additional records did not alter his opinion. He opined that it appears as though Claimant had pre-existing patellofemoral arthritis but the fall created tibial plateau and

some traumatic osteoarthritis with acceleration of her arthritis disease, which never fully resolved. Dr. Failinger opined that Claimant's decision whether or not to proceed with a total knee replacement would determine whether she should be placed at maximum medical improvement or have her case left open until she completes the total knee replacement. He opined that if Claimant's symptoms were manageable, she should live with the knee pain but if they were not management, she should proceed with the total knee replacement. *See* Exhibits 4, E.

30. On July 10, 2018, Dr. Stull evaluated Claimant. Claimant reported no change in her symptoms. Dr. Stull found the joint line tender on examination and mild to moderate valgus alignment. He also noted a small effusion. Dr. Stull provided the impression of advanced arthritis of the left knee and opined that Claimant required knee replacement surgery as conservative measures had failed. *See* Exhibits 7, D.

31. Dr. Failinger testified at hearing. Dr. Failinger opined that based upon Claimant's reports on April 14, 2017 to Dr. McDonough, a total knee replacement was neither reasonable nor necessary as a direct and proximate result of the December 18, 2016 industrial injury. Dr. Failinger testified that the pathology in Claimant's patellofemoral compartment was not a result of her December 18, 2016 injury. Dr. Failinger testified that it was not possible to determine whether Claimant's symptoms were from the arthritis in her lateral femoral compartment or from the patellofemoral compartment. Dr. Failinger testified that Claimant had osteoarthritis in three compartments of her knee, only one of which was related to the tibial plateau fracture from December of 2016. He pointed out that Claimant was doing fairly well on April 14, 2017 but that by August 14, 2017 her symptoms had changed quite a bit and she was no longer doing well. He testified that a medial femoral condyle fracture can make a previously asymptomatic condition symptomatic. Dr. Failinger opined that the lateral compartment arthritis was reasonably related to the injury and was sped up by her work related fall. Dr. Failinger noted that the lateral area and work related tibial plateau fracture was at 5 mm after healing and that they like to get it to 2 mm to avoid arthritis. Dr. Failinger testified that the higher the number the greater the chance of developing arthritis. However, he opined that there was no question that the patellofemoral arthritis had been ongoing for many years. Dr. Failinger noted that a total knee replacement was reasonable to get Claimant back to baseline but that the condition was not life threatening and that he didn't know which compartment was causing the symptoms that required the knee replacement.

32. Claimant also testified at hearing. She testified that she had no prior problems or treatment to her left knee before December 16, 2018. Claimant testified that after Dr. McDonough released her and in June of 2017 she was still having problems in her knee and that her symptoms ranged from day to day. She testified that some days she had a lot of pain and some days her pain was tolerable. Claimant testified that in June of 2017 she felt unsteady on her left leg and felt like it would buckle but that Dr. McDonough advised it would get better over time.

33. Claimant testified that she has been in knee pain since her December 18, 2016 injury and wants a knee replacement. Claimant testified that she had pain with standing and that her pain is exacerbated by walking and that she cannot walk more than ¼ of a mile.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a),

C.R.S. A Claimant bears the burden to establish by a preponderance of the evidence that the conditions for which they seek medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. A claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). Similarly, the question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.

The question of whether the disability and need for treatment was caused by the industrial injury or an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002). Similarly, the question of which of two injuries caused a need for medical treatment is one of fact for the ALJ. *University Park Care Center v. Industrial Claim Appeals Office,* 43 P.3d 637 (Colo. App. 2001); *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). A claimant must prove causation to a reasonable probability. Lay testimony alone may be sufficient to prove causation. However, where expert testimony is presented on the issue of causation it is for the ALJ to determine the weight and credibility to be assigned such evidence. *Rockwell International v. Turnbull,* 802 P.2d 1182 (Colo. App. 1990).

Claimant has established, by a preponderance of the evidence, that the left total knee arthroplasty recommended by Dr. Stull is reasonable, necessary, and causally related to her December 18, 2016 work injury. Claimant is credible and persuasive that she had symptoms in her left knee immediately following her injury that waxed and waned but never went away. Conservative measures including two cortisone injections have failed and have not provided long-term relief for Claimant. Claimant's arthritis was accelerated by her December 18, 2016 fall. Her lateral tibial plateau fracture healed, but with malunion, a 5 mm depression, valgus alignment, and posttraumatic arthritis.

Dr. McDonough opined in April of 2017 that Claimant's left knee alignment was good and that her fracture was in a good position and healing well. He released Claimant from care. Despite Dr. McDonough's release, Claimant clearly had continuing problems with her left knee in May, June, and July of 2017 noted by Dr. Burns. Her continued left knee symptoms included pain, decreased range of motion, stiffness, occasional instability, being sore and tired in the left knee, and using lidocaine patches on her knee on painful days. These continuing symptoms existed prior to her July 2017 hospitalization. Similarly, in August of 2017 Dr. McDonough opined that Claimant's tibial plateau fracture was healed with routine hearing and noted his suspicion of a new lateral meniscus tear. Testing later showed no lateral meniscus tear. Dr. McDonough's reports and opinions in this case are not credible or persuasive or consistent with the weight of

the credible testimony and evidence. Although he opined that Claimant's tibial plateau fracture was healed with routine healing, Dr. Swann's opinion is more persuasive and consistent with the opinions of other providers. Dr. Swann noted that Claimant's lateral tibial plateau fracture did not heal with routine healing but that Claimant had valgus posttraumatic alignment and mal-union of the lateral tibial plateau. A CT scan showed remote posttraumatic deformity of the lateral tibial plateau with a 4 mm subchondral depression. Consistent with Dr. Swann's opinion, Dr. Stull also opined that Claimant had posttraumatic osteoarthritis and valgus alignment of the left knee. Dr. Aschberger opined that Claimant's tibial plateau fracture had structurally affected her knee. Similarly, Dr. Ridings opined that the tibial plateau fracture had 5 mm of depression and that Claimant had valgus alignment of the left knee. Dr. McDonough's statements in both April of 2017 and August of 2017 that Claimant's fracture was in good position and healing well and that she was healed with routing hearing are inconsistent with the weight of the evidence and are not persuasive. Claimant's lateral tibial plateau fracture did not heal normally. She did not have normal structural alignment after her December 2016 injury.

Rather, after her December 2016 injury Claimant had continued symptoms in her left knee. The ALJ finds that these continued symptoms were due to Claimant's subchondral depression, valgus posttraumatic alignment of the knee, malunion of her fracture in the tibial plateau, and posttraumatic arthritis which were all caused by her lateral tibial plateau fracture and work injury. Although Dr. McDonough released Claimant in April of 2017, Claimant's symptoms and problems were not healed.

It is unclear whether Claimant fell prior to her July 2017 hospitalization. Claimant told others that she had fallen, but Claimant notably was non sensical during the time she made this report. However, even if she sustained a new fall in July of 2017, the need for her left knee treatment pre-dated July of 2017. Prior to July of 2017, she had ongoing symptoms and problems in her left knee. While hospitalized, Dr. Swann noted that Claimant's pain in the left knee was laterally and was located where her posttraumatic deformity was from the December 2016 fall. Similarly, in September of 2017 Dr. Stull noted lateral soreness. Although Dr. Failinger testified that he could not tell which compartment Claimant's symptoms were currently coming from, the records demonstrate consistent lateral symptoms immediately after the December 2016 injury, prior to July of 2017, and after July of 2017.

Respondents argue that Claimant's symptoms in her left knee could just as likely could be related to arthritis in a different compartment of the knee, unrelated to the December 2016 fall. Their argument is not persuasive. Rather, Claimant has established more likely than not, that the need for her total knee replacement is causally related to her December 2016 injury. The opinions of Dr. Aschberger, Dr. Swan, Dr. Ridings, and Dr. Stull are persuasive. Taken together with Claimant's credible testimony, Claimant has met her burden by a preponderance of the evidence.

ORDER

1. Claimant has established by a preponderance of the evidence that the total left knee replacement surgery recommended by Philip Stull, M.D. is reasonable, necessary, and causally related to her December 18, 2016 work injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 16, 2018 /s/ Michelle E. Jones

Denver, CO 80203

ISSUES

1. Whether Claimant proved by a preponderance of the evidence he is entitled to an order awarding reasonably necessary and related medical benefits. Specifically, whether Claimant established by a preponderance of the evidence that Respondent failed to pay ATP David Reinhard MD and Select Physical Therapy for care and treatment Claimant received to treat his occupational injury?

2. Whether Claimant proved by a preponderance of the evidence that Has Claimant has reached Maximum Medical Improvement, and if so, has he has sustained permanent impairment and permanent partial disability as the result of his occupational injury, and what is the extent of such impairment and disability?

3. Is Claimant entitled to receive authorized, reasonable and necessary future ("Grover") medical care and treatment for his occupational injury?

4. Is Employer subject to penalties, pursuant to C.R.S. §8-43-408(1), for failing to procure and maintain Workers' Compensation insurance on July 8, 2015, the date that Claimant was injured?

5. Is Employer subject to pay interest on all amounts due, not paid when due?

All other issues set for hearing were withdrawn and reserved for determination at a later hearing.

FINDINGS OF FACT

1. On June 7, 2018, Claimant filed the application for hearing for which this hearing was set, and served the Respondent with a copy of said application by email to the following official address of the Employer he provided and which is on file with the OAC: j.pedersen.llc@gmail.com, and to jpeder13@hotmail.com, Respondent's previous address on file with the OAC. A copy of the transmission to Respondent of the application for hearing was submitted by Claimant and admitted into evidence by the ALJ at hearing.

2. Respondent did not file a Response to said Application for Hearing.

3. On July 6, 2018 the Office of Administrative Courts (OAC) set a hearing date and sent a Notice of Hearing to the Employer. OAC mailed the Notice of Hearing to the Employer at his surface address on file with the OAC: 7220 South Gaylord Street, #E, Centennial, CO 80112. OAC also electronically mailed the Notice of Hearing to the Employer at his address on file with the OAC: j.pedersen.llc@gmail.com. The Notice of Hearing specified that a hearing was scheduled for 1:30 p.m. on August 29, 2018. The Employer thus received notice of the scheduled hearing. A copy of the transmission to Respondent by the OAC

of said Notice of Hearing was submitted by Claimant and admitted into evidence by the ALJ at hearing.

4. Respondent Employer failed to attend or otherwise participate in the August 29, 2018 hearing; Respondent thus did not present any evidence or argument to the ALJ for consideration.

Relevant Prior Orders in this Claim

5. On May 13, 2016 ALJ Broniak issued a Summary Order in this claim. Claimant provided a copy of this Order to the ALJ at the August 29, 2018 hearing. In said Order, ALJ Broniak determined that on July 8, 2015 Claimant suffered industrial injuries when he fell from a ladder during the course and scope of his employment with Employer and that this claim was compensable. ALJ Broniak determined that Respondent was liable for all of Claimant's past reasonable, necessary and related medical treatment, subject to the Division of Workers' Compensation fee schedule. ALJ Broniak also ordered that Respondent was also financially responsible for all of Claimant's future reasonable, necessary and related medical treatment.

6. In said May 13, 2016 Order, ALJ Broniak found that Claimant worked 40 hours per week and earned $15.00 each hour with Employer. She determined that Claimant earned an Average Weekly Wage (AWW) of $600.00, and that his Temporary Total Disability rate was $400.00 per week. ALJ Broniak noted that Section 8-43-408(1), C.R.S. provides that an injured employee's benefits shall be increased by 50% when an employer fails to provide worker's compensation to employees under the insurance provisions of the Act. ALJ Broniak found that "The Respondent admitted he had no workers' compensation coverage on July 8, 2015. Thus, Claimant's compensation shall be increased by 50 percent. *See* § 8-43-408(1), C.R.S.") ALJ Broniak held that inclusion of said 50% penalty increased Claimant's benefit rate to $600.00 per week, and she so ordered.

7. Another hearing took place in this claim on December 28, 2016, ALJ Peter J. Cannici presiding. ALJ Cannici entered an Order on January 30, 2017. Claimant provided a copy of this Order to the ALJ at the August 29, 2018 hearing. In that Order, ALJ Cannici concluded and ordered that David Reinhard, M.D. was Claimant's authorized treating physician by referral from his prior authorized physician. Judge Cannici also awarded Temporary Partial Disability to the Claimant, which he computed by using the benefit rate of $600.00/week previously determined by ALJ Broniak.

8. The ALJ finds that determination of said issues in the referenced prior Orders are law of the case and control determination of those same issues in this hearing.

Claimant's Medical Treatment

9. David Reinhard, M.D., Colorado Rehabilitation and Occupational Medicine at 1390 S. Potomac Street, #128, Aurora, Colorado 80012 is Claimant's Authorized Treating Physician (ATP).

10. Dr. Reinhard initially evaluated and treated Claimant on April 18, 2017. Dr. Reinhard issued a billing statement on that date for $870.50. Dr. Reinhard provided follow up treatment to Claimant on May 23, 2017. Dr. Reinhard issued a billing statement on that date for $206.17. Dr. Reinhard next evaluated the Claimant on July 3, 2017, at which time he placed Claimant at MMI and issued an impairment report. Dr. Reinhard issued a billing statement for $355.00 for his July 3, 2017 services. Dr. Reinhard's medical records and billing charges for each of these three dates of service were offered as exhibits and accepted by the ALJ. The ALJ finds that Dr. Reinhard's evaluation and treatment on the above referenced dates were reasonable and necessary medical treatment for Claimant's occupational injury. The ALJ finds that Respondent owes, but has not paid Dr. Reinhard for any of his $1,431.67 in medical charges, and all such charges remain unpaid and outstanding.

11. On May 23, 2017, Dr. Reinhard referred Claimant to Select PT for physical therapy. The ALJ finds that Dr. Reinhard's referral of the Claimant to Select PT was reasonable, necessary, and authorized medical treatment for his occupational injury. Claimant testified that he attended the first session of physical therapy, but Select PT would not continue to schedule or treat him without receiving payment from Respondent for the treatment already provided. Claimant testified, and the ALJ finds, that Respondent owes but did not pay the medical bill for Claimant's first physical therapy session, in the amount of $242.00. Claimant testified, and the ALJ finds, that because Respondent has not paid for the Select PT charge, Select PT would not schedule him for further prescribed PT treatment.

12. Claimant testified, and the ALJ finds, that Respondent has not paid Dr. Reinhard for the $1,431.67 in charges made for care and treatment of Claimant's occupational injury, or Select PT for the $242.00 in charges for referred PT treatment.

MMI and Whole Person Impairment Rating

13. Dr. David Reinhard, Claimant's Authorized Treating Physician, is level II accredited. Dr. Reinhard issued a report on July 3, 2017, determining that Claimant was at Maximum Medical Improvement (MMI). His report of MMI, dated July 3, 2017, and related impairment worksheets, was offered by the Claimant and admitted by the ALJ. Dr. Reinhard reported: "[Mr. Stevens] receives a partial permanent impairment according to the Third Edition (Revised) of the AMA Guides to the Evaluation of Permanent Impairment. He has a Table 53 impairment for the thoracic injuries, which includes the left T2 and left T3 transverse process fractures. These are rated according to Table 53 IB which is 2% whole person. Since there are two levels of fracture, this would be a total of 4% whole person from Table 53 for the transverse process fractures. There are also two levels of

disk protrusions, including a T7-8 disk protrusion, which is rated from Table 53 IIB which is 2% whole person. For the additional level at T2-3, he receives a 1% whole person impairment from Table 53 IIF. When these various impairments from Table 53 are combined using the Combined Values Chart, the result is 7% whole person. There was also a range of motion impairment for the thoracic spine, which is 0% for angle of minimum kyphosis, 3% for thoracic flexion, 1.5% for right rotation, and 2% for left rotation. This yields a 6.5% range of motion impairment of the thoracic spine, which is rounded up to 7% whole person, per the Division of Workers' Compensation Impairment Rating Tips. The final overall impairment rating is found by combining the 7% Table 53 impairment of the thoracic spine with the 7% range of motion impairment, which yields a 14% whole person impairment using the Combined Values Chart. The 14% whole person impairment of the thoracic spine does not require any apportionment." The ALJ finds that Claimant has proven that it is more probably true than not that he is at MMI, that he sustained a 14% whole person impairment as rated by Dr. Reinhard, and that he is entitled to receive PPD benefits based on said 14% whole person impairment rating.

14. Claimant testified at hearing that he was born on July 3, 2017, and that on July 3, 2017, the date of MMI, he was 52 years old. The statutory age factor for a person aged 52 on the date of MMI is 1.16.

15. Respondent is liable to Claimant for Permanent Partial Disability / Medical Impairment based on said 14% whole person impairment rating, the statutory age factor of 1.16, and Claimant's benefit rate of $600.00 per week.

16. Dr. Reinhard also opined in his July 3, 2017 report that Claimant will require ongoing medical treatment in the future to cure and relieve the effects of his occupational injury. He reported: "Mr. Stevens is seen in follow up with regard to work-related injuries. My plan was to have him undergo active treatment. However, in lieu of doing that, we can go ahead and place him at Maximum Medical Improvement today. He does not have any permanent restrictions. *Future care, which could be done as maintenance care, would include 12 to 16 sessions of physical therapy, 16 to 20 sessions of chiropractic treatment, and possibly T2-3 and T7-8 epidural injections on the left. He may also require medications such as nonsteroidal antiinflammatory medications and opioid analgesic medications periodically for pain."* (emphasis added) The ALJ finds Claimant has proven through substantial evidence in the record that it is more probably true than not that future medical treatment will be reasonably necessary to relieve the effects of his industrial injury or prevent further deterioration of the claimant's condition.

17. Dr. Reinhard's uncontroverted opinions referenced above are accepted by the ALJ and afforded great weight.

18. Claimant's counsel served Dr. Reinhard's July 3, 2017 MMI/impairment rating report on the Respondent Employer on July 28, 2017, and again on August 24, 2017 by emailing it to the email address of the Employer on

file with the OAC: j.pedersen.llc@gmail.com. Copies of these email transmissions were submitted to and received by the ALJ into evidence at hearing.

19. Respondent did not request a DIME to contest Dr. Reinhard's MMI impairment rating, or to controvert Dr. Reinhard's opinion that Claimant requires ongoing medical care as the result of his occupational injury. Thus, there "is no contrary medical opinion" (to the opinions contained in ATP David Reinhard, MD July 3, 2018 report) in the evidentiary record of this hearing.

20. Respondent has not filed the required "final admission"… "admitting liability for (Claimant's) related reasonable and necessary (future) medical benefits by an authorized treating physician."

21. Dr. Reinhard placed Claimant at MMI and issued his report of impairment on July 3, 2017. Respondent has not filed the required Final Admission from the date of Dr. Reinhard's report through the date of this hearing. Respondent has not admitted for or paid PPD benefits calculated on the 14% whole person impairment rating contained in Dr. Reinhard's report of July 3, 2017.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Past Medical Benefits Due and Unpaid

4. ALJ Broniak ordered that Respondent is liable for Claimant's authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. See, §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. Respondent is liable for payment of the treatment Claimant received from Dr. Reinhard, his authorized treating physician, in the amount of 1,431.67. Respondent is also liable for payment of the treatment Claimant received from Select PT, on referral from Dr. Reinhard, in the amount of $242.00. Pursuant to W.C. Rule 16-12, all medical bills are due and payable by Respondent within 30 days after receipt, unless contested pursuant to the provisions of said Rule.

MMI / Permanent Partial Disability / Medical Impairment Benefits

6. Claimant has reached MMI, and has been rated as having a 14% whole person impairment rating by his ATP, David Reinhard, M.D. Dr. Reinhard is Level II accredited by the Division of Worker's Compensation.

7. C.R.S. §8-42-107(b) provides that "When an injury results in permanent medical impairment and the employee has an injury or injuries not on the schedule specified in subsection (2) of this section, the employee shall be limited to medical impairment benefits as specified in subsection (8) of this section." Subsection (8)(d) provides that " Medical impairment benefits shall be determined by multiplying the medical impairment rating determined pursuant to paragraph (c) of this subsection (8) by the age factor determined pursuant to paragraph (e) of this subsection (8) and by four hundred weeks and shall be calculated at the temporary total disability rate specified in section 8-42-105.

8. In Claimant's case, the medical impairment rating is 14% whole person. The statutory age factor for an injured worker, age 52 as of the date of MMI, is 1.16. The temporary total disability rate in this claim is $600.00 per week (after taking into account the 50% increase provided by statute because Respondent Employer was uninsured). Under the statutory formula, the impairment rating of .14 (14%) is multiplied by the 1.16 age factor by 400 weeks, and by $600.00 per week. 0.14 x 1.16 x $600 x 400 = $38,976.00 in permanent partial disability /medical impairment benefits due.

9. Division of Workers Compensation Rule 5-5 (E)(1) provides that, "ADMISSIONS OF LIABILITY (1) Within 30 days after the date of mailing or delivery of a determination of medical impairment by an authorized Level II accredited physician, or within 30 days after the date of mailing or delivery of a determination by the authorized treating physician providing primary care that there is no impairment, the insurer shall either: (a) File an admission of liability consistent with the physician's opinion, or (b) Request a Division Independent

Medical Examination"**,** and to make timely payment for the PPD benefits such rating requires under the Act "within 30 days of when the benefits are due". (Rule 5-6). Respondent was served Dr. Reinhard's MMI report including his 14% impairment rating on July 28, 2017. However, Respondent has not filed a Final Admission consistent with Dr. Reinhard's opinion, or made payment of any of the PPD benefits such rating requires under the Act.

Post MMI Grover medical benefits

10. A claimant is entitled to future medical benefits where there is substantial evidence in the record to support a determination that future medical treatment will be reasonably necessary to relieve the effects of an industrial injury or prevent further deterioration of the claimant's condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App. 1995); *Milco Construction v. Cowan*, 860 P.2d 539 (Colo. App. 1992). Claimant has proven by a preponderance of the evidence that he is entitled to receive such future medical treatment. Respondent Employer is liable for Claimant's future medical treatment. Dr. Reinhard continues to be Claimant's authorized treating physician.

11. C.R.S. 8-42-107 8(f) provides "In all claims in which an authorized treating physician recommends medical benefits after maximum medical improvement, and there is no contrary medical opinion in the record, the employer shall, in a final admission of liability, admit liability for related reasonable and necessary medical benefits by an authorized treating physician." There "is no contrary medical opinion" (to the opinions contained in the July 3, 2018 opinion of ATP David Reinhard, MD) in the evidentiary record of this hearing. However, Respondent has not filed a "final admission"… "admitting liability for related reasonable and necessary medical benefits by an authorized treating physician."

Penalty for Employer's Failure to Carry Worker's Compensation Insurance

12. Every employer subject to the provisions of the Workers' Compensation Act shall carry workers' compensation insurance. §8-44-101, C.R.S. Section 8-43-408(1), C.R.S. provides that an injured employee's benefits shall be increased by 50% for an employer's failure to comply with the insurance provisions of the Act.

13. As found, ALJ Broniak determined that on July 8, 2015, the date of Claimant's injury, Respondent Employer was not covered by Workers' Compensation insurance. Claimant's disability benefits shall be increased by 50% because of Employer's failure to comply with the insurance provisions of the Act.

14. This 50% penalty has been calculated into the Permanent Partial Disability total noted above, by the increase in Claimant's benefit rate from $400.00 per week to $600.00 per week.

Interest on Benefits Due, not paid when Due

15. Pursuant to C.R.S. §8-43-410(2), all benefits due, not paid when due, bear interest at the rate of 8% per annum. Under § 8-43-410, interest on an award of compensation is a matter of statutory right and applies automatically on the date payment is due. *Beatrice Foods Co. v. Padilla*, 747 P.2d 685 (Colo.App.1987). The legislative purpose underlying the award of such interest is not to impose a penalty or award an additional benefit, but merely to secure to claimants the full value of the benefits to which they are entitled. See *Travelers Insurance Co. v. Savio*, 706 P.2d 1258 (Colo.1985).

Requirement for Posting Bond

15. Pursuant to Section 8-43-408(2), C.R.S. "In all cases where compensation is awarded under the terms of this section, the director or an administrative law judge of the division shall compute and require the employer to pay to a trustee designated by the director or administrative law judge an amount equal to the present value of all unpaid compensation or benefits computed at the rate of four percent per annum; or, in lieu thereof, such employer, within ten days after the date of such order, shall file a bond with the director or administrative law judge signed by two or more responsible sureties to be approved by the director or by some surety company authorized to do business within the state of Colorado. The bond shall be in such form and amount as prescribed and fixed by the director and shall guarantee the payment of the compensation or benefits as awarded. The filing of any appeal, including a petition for review, shall not relieve the employer of the obligation under this subsection (2) to pay the designated sum to a trustee or to file a bond with the director or administrative law judge." The term "compensation" refers to disability benefits. *In Re of Shier,* W.C. No. 4-573-910 (ICAP, Dec. 15, 2005). In this claim, it has been determined that Respondent was uninsured at the time of Claimant's injury; thus, the provisions of Section 8-43-408(2) are mandatory.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Respondent is liable for payment to Claimant of the following benefits, which are in addition to benefits due under previous Orders or which may be awarded in subsequent Orders:

1. Liability for Charges for Past Medical Treatment: Respondent is liable for and shall pay the charges for Claimant's past medical treatment from Dr. Reinhard, in the amount of $1,431.67 and from Select PT, in the amount of $242.00.

2. Liability for Future Medical Treatment. Respondent is liable for Claimant's future medical treatment reasonably necessary to relieve the effects of his industrial injury or prevent further deterioration of the Claimant's condition, pursuant to *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

3. Permanent Partial Disability/Medical Impairment Benefits: Respondent shall pay to Claimant the amount of $38,987.00 for permanent partial disability benefits.

4. Statutory Interest Respondent shall pay statutory interest at the rate of eight percent per annum on all amounts due, not paid when due.

5. Pursuant to the provisions of C.R.S. §8-43-408(2), Respondent, in lieu of payment of the above compensation and benefits to Claimant, shall:

a. Deposit the sum of $60,000 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, Attn: Gina Johannesman, Special Funds Unit Supervisor, 633 17th St, Suite 900, Denver, CO, 80202; or in lieu thereof,

b. File a bond in the sum of $60,000 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

Respondent shall notify the Division of Workers' Compensation and Claimant of payments made pursuant to this Order.

The filing of any appeal, including a petition for review, shall not relieve Respondent of the obligation to pay the designated sum to the trustee or to file the bond. §8-43-408(2), C.R.S.

Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless the agreement or order authorizing distribution of the principal provides otherwise.

6. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's Order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within

twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

I. Whether Claimant has demonstrated by a preponderance of the evidence that the C3-4 disc replacement surgery requested by J. Paul Elliott, M.D. is reasonable, necessary and causally related to his admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 50 year old male who works for Employer as a plumbing foreman.

2. Claimant has a history of two prior cervical fusions. On March 11, 2014, Claimant underwent a C5-C6 anterior cervical discectomy and fusion ("ACDF"). By March 2015, Claimant continued to report neck pain as well as pain, weakness, numbness and tingling in his in left upper extremity and hand.

3. A July 11, 2015 cervical spine MRI revealed, in relevant part, mild residual bilateral foraminal narrowing at C5-C6, disc degeneration at C6-C7 with annular bulging and stenosis, annular bulging and uncinate ridging at C4-C5 with mild facet arthropathy and mild right-sided foraminal stenosis, and annular bulging and uncinate ridging at C3-C4 with mild facet arthropathy and mild central and bilateral foraminal stenosis.

4. On July 31, 2015, Claimant underwent an ACDF at C6-C7.

5. By February 15, 2016, Claimant was reporting that his arm pain resolved, but that he continued to experience some neck pain and headaches. William Biggs, M.D. noted that x-rays revealed Claimant was healing well, with degeneration above the areas of cervical fusion. Dr. Biggs recommended physical therapy and an epidural steroid injection ("ESI") if Claimant showed no improvement.

6. Claimant testified at hearing he did not recall Dr. Biggs' recommendation, but relocated few months later, and did not receive physical therapy or injections. Claimant testified that prior to March 20, 2017, although he had a history of previous fusions at C5-C6 and C6-C7 he had no symptoms, limitations, pain complaints or restrictions in his cervical spine or upper extremities leading up to the admitted industrial injury. The medical records are devoid of Claimant having any medical care for his cervical spine between February 15, 2016 and March 22, 2017.

7. On March 20, 2017, Claimant suffered an admitted industrial injury when he hit his head on a door jamb while ascending an 8-foot tall ladder. Claimant testified he "jammed" his head back and felt immediate pain in his neck. Claimant was carrying materials in each hand and wearing a hard hat at the time. He reported the incident to

Employer but did not seek medical care at the time because he was able to work the remainder of his shift. Claimant performed his usual job duties on March 21, 2017.

8. Subsequently, while unloading copper pipe with a co-worker, Claimant was struck on the right side of the head with a copper pipe measuring approximately 20 feet long and 2 inches in diameter. Claimant testified he fell to his knees for approximately five minutes after being hit. There are discrepancies in the record regarding exactly when the incident occurred. Claimant testified the incident occurred on March 22, 2017. An April 12, 2017 medical record notes Claimant was hit with the pipe "yesterday," while a May 24, 2017 medical record notes Claimant was hit with a copper pipe a week after the March 20, 2017 door jamb incident. Employer's First Report of Injury dated March 22, 2017 solely refers to Claimant "jamming" his head on a horizontal door frame while climbing a ladder.

9. Claimant sought medical treatment with authorized treating physician ("ATP") Brian Beatty, D.O. on March 22, 2017. Claimant reported experiencing an onset of neck pain after his head got caught on a piece of structure, pushing his head back and stretching his neck. He complained of neck stiffness. Dr. Beatty noted cervical spine x-rays revealed residual motion with increase in the interspinous space on the flexion compared to the extension view at both C5-6 and C6-7, which he opined may represent pseudarthrosis. On exam, Dr. Beatty noted tenderness and tightness without spasm. He diagnosed Claimant with a work-related cervical strain.

10. A March 31, 2017 cervical spine CT scan revealed, in relevant part, loosening of C6 screws and a fracture of the left C7 screw and mild scattered degenerative changes.

11. On April 12, 2017, Dr. Beatty noted Claimant "…was feeling fairly good with minimal pain up until yesterday when he was apparently hit upside the head with a 2 inch copper pipe by a coworker and developed increased pain and now is very sore." Dr. Beatty again diagnosed Claimant with a cervical strain and recommended Claimant proceed with physical therapy.

12. On May 20, 2017, Claimant underwent an MRI of cervical spine. The radiologist gave the following impression: "1. Moderate canal and moderate right foraminal stenosis are seen at C3-4 secondary to protrusion and osteophytes. 2. There is mild canal stenosis and a small protrusion at C4-5. 3. There is moderate right and mild left foraminal stenosis at the C6-7 level secondary to foraminal osteophytes."

13. During the course of care, Dr. Beatty referred Claimant to J. Paul Elliott, M.D. Dr. Elliott first evaluated Claimant on May 24, 2017. Claimant reported jamming his neck when hitting his head against a door jamb on March 21, 2017, and getting hit in the head with a copper pipe a week later, further aggravating his neck pain. Dr. Elliott noted Claimant had an acute onset of neck and trapezius pain following two work injuries and had experienced unremitting neck and trapezius pain since the incidents. Claimant denied upper extremity radiculopathy and focal weakness. Dr. Elliott noted Claimant has a history of ACDF at C5-C6 and C6-C7, and did well postoperatively with

minimal residual neck pain. On exam, Dr. Elliott noted cervical tenderness, reduced range of motion, and paraspinal and trapezius spasms. He reviewed the May 20, 2017 MRI, March 31, 2017 CT scan, and March 22, 2017 x-ray and concluded the imaging revealed C5-7 pseudarthrosis and residual spondylosis. Dr. Elliott opined that operative intervention was warranted to treat the workplace injury, as Claimant failed to experience relief with conservative measures. The surgery was not contested by Respondents.

14. On July 27, 2017, Dr. Elliott performed surgery comprised of:

1. Reoperation, removal of hardware C5-C6 anterior plate screw instrumentation and C6-C7 anterior plate screw instrumentation.
2. C5-C6 and C6-C7 anterior cervical diskectomy and removal of pseudoarthrosis with decompression of central canal and bilateral foraminal nerve root decompression.
3. C5-C6 and C6-C7 allograft arthrodesis.
4. C5-C6-C7 anterior plate screw instrumentation, Sofamor Danek Atlantis translational plate with fixed and variable screws.
5. Posterior C5-C6-C7 lateral mass screw rod instrumentation, Sofamor Danek vertex Instrumentation.
6. C5-C7 posterior spinal arthrodesis, local autograft and allograft, demineralized bone matrix.
7. Microdissection.

15. Both Respondents' expert and Claimant testified the purpose of the July 27, 2017 surgery was to address Claimant's neck pain and trapezius pain. Claimant testified that, while he experienced some relief from the surgery, it only decreased his pain level from an 8/10 to a 6/10.

16. On October 18, 2017 Respondents filed a General Admission of Liability.

17. On January 16, 2018, Dr. Beatty noted that, despite physical therapy, there had not been much improvement in Claimant's symptoms over the last month or two. Claimant complained of difficulty with any activity bending his neck for longer than 10 minutes and waking up four to five times per night. Dr. Beatty changed Claimant's prescription medications.

18. On January 25, 2018, Claimant reported to Dr. Elliott bilateral trapezii pain and neck pain that had not improved since the surgery. Claimant described the pain as tightness, denying radiculopathy, numbness/tingling or weakness. Dr. Elliott noted physical therapy and medications had not relieved Claimant's pain, and ordered a cervical CT scan and MRI for further evaluation.

19. Claimant underwent a cervical spine MRI on February 13, 2018, which revealed cervical spondylosis with multilevel foraminal stenosis, including moderate central stenosis at C3-C4, and a bony bridging across the disc spaces at C5-C7.

20. Dr. Elliott reevaluated Claimant on February 22, 2018. Claimant reported experiencing ongoing right greater than left trapezius pain since the July 2017 surgery. Dr. Elliott noted Claimant initially experienced improvement postoperatively, but plateaued about two months after the operation. He reviewed the February 13, 2018 MRI results, noting the MRI revealed C3-C4 right greater than left foraminal stenosis and no recurrent stenosis at C5-C7. Dr. Elliott recommended home cervical traction and a right C3-C4 transforaminal ESI for diagnostic and therapeutic purposes, and a C3-4 anterior cervical disc replacement if Claimant's symptoms ultimately did not improve.

21. On March 1, 2018, Dr. Beatty noted Dr. Elliott felt the surgery was doing very well, but that Claimant developed a spur at C3-C4 and was recommending an epidural steroid injection.

22. On April 17, 2018, Barry Ogin, M.D. performed a right C3-C4 transforaminal ESI and right C4-C5 transforaminal ESI. Dr. Ogin noted the following regarding the injection at the C3-C4 level:

> Interestingly, when I slowly injected contrast, there was filling of the C2-C3 facet space. Needle was repositioned slightly more inferior and additional filling was not documented though there was significant venous filling. The needle was repositioned slightly more medially and there was some filling along the lateral gutter of the epidural space. There was no obvious vascular uptake seen or spinal flow. The patient did report significant pain locally at the neck at that point. Given the challenge at the C3-C4 level, I did elect to proceed at the C4-C5 level as well as try to get better flow proximally.

23. Dr. Ogin noted that Claimant had reproduction of neck pain at the C3-C4 level in particular and reported that his pain went from 4-6/10 pre-injection to 1-2/10 post-injection. Dr. Ogin wrote, "This appeared to be good diagnostic response."

24. On April 19, 2018, Claimant reported to Dr. Beatty that the shooting pains down his right arm had resolved, but that he continued to experience a fair amount of pain and stiffness in his neck.

25. On April 30, 2018, Dr. Ogin noted that a co-worker dropped a large metal piece on Claimant's head, flexing Claimant's head forward. He further noted that he had performed a right-sided transforaminal ESI at C3-C4 and, because he was "unable to get satisfactory proximal flow," also at C4-C5 to improve the therapeutic yield. Claimant reported that his shoulder pain improved post-injection, but that he had developed new discomfort in his forearm. Claimant continued to experience some aching in his shoulders and neck. Dr. Ogin opined that Claimant's right lateral shoulder discomfort seemed to be related to some localized shoulder tendinopathy. He opined that Claimant

was likely approaching maximum medical improvement ("MMI") for his neck, and referred Claimant to Dr. Timothy Shea for pain management and cognitive behavioral training.

26. On May 17, 2018, Claimant reported to Dr. Beatty that his symptoms were about the same, with some of his right upper arm pain returning. Dr. Beatty noted he planned to set Claimant up with Dr. Elliott to see if there was anything that could be done surgically.

27. On May 21, 2018, Dr. Ogin noted Claimant continued to experience "baseline" pain along his neck with some radiation along his upper trapezius and lateral shoulder. He opined that Claimant would likely not get any lasting relief from further injections as Claimant seemed stable overall with fairly diffuse and axial pain.

28. On June 7, 2018, Dr. Elliott noted that Claimant initially had significant relief from the ESI but that his symptoms had since redeveloped. He reviewed the February 13, 2018 cervical spine MRI and CT scan and diagnosed Claimant with cervical spondylosis, opining that Claimant's right trapezius pain was attributable to right C3-4 foraminal stenosis. He noted that although Claimant remained "neurologically intact," he failed to experience lasting relief "with *myriad* conservative measures; thus, operative intervention is warranted for definitive treatment." (Emphasis not added). He noted Claimant elected to proceed with the surgery after discussion of the risks. He ordered Claimant to return to Dr. Beatty's office for medical clearance and that Claimant undergo cervical AP/lateral/flexion/extension x-rays to rule out dynamic instability.

29. On June 20, 2018 Dr. Beatty cleared Claimant for surgery.

30. On June 20, 2018, Dr. Elliott requested authorization for C3-C4 disc replacement surgery.

31. On June 27, 2018, Michael J. Rauzzino, M.D. performed a medical record review at the request of Respondents. Dr. Rauzzino did not interview or examine Claimant. Dr. Rauzzino opined that the proposed C3-C4 disc replacement surgery was not related to Claimant's admitted industrial injury. He noted the cervical MRI revealed previously existing pseudarthrosis without new injury. Dr. Rauzzino opined that because the C5-C7 fusion existed prior to the work injury, adjacent level disease was not caused by the work injury, specifically at C3-C4, as such level was not injured in the claim nor is adjacent to the C5-C7 fusion. Dr. Rauzzino further opined that the disc replacement surgery was not reasonable and necessary because a pain generator had not been clearly defined, noting that Dr. Ogin injected C4-C5 and C3-C4 and felt that the response was equivocal and that no further injections would be offered. Dr. Rauzzino further opined that the requested surgery could lead to worsening neck pain given Claimant's diffuse axial neck pain and facet arthropathy. He opined that no additional treatment was needed for Claimant's cervical spine under workers' compensation, stating he did not know that any additional treatment was likely to improve Claimant's pain complaints.

32. On June 29, 2018, Respondents denied Dr. Elliott's request for C3-C4 disc replacement surgery, relying on Dr. Rauzzino's report.

33. On September 12, 2018, Dr. Beatty noted that Claimant's symptoms were "quite severe," continued to worsen, and that Claimant opted to undergo cervical spine surgery with Dr. Elliott through his personal health insurance.

34. Dr. Rauzzino testified at hearing as a Level II accredited expert in neurosurgery. Dr. Rauzzino testified consistent with his IME report, continuing to opine that the recommended C3-C4 disc replacement is not reasonable, necessary or related to Claimant's work injury. Dr. Rauzzino testified Claimant's initial pain complaints centered on neck and trapezii pain without radiation to Claimant's arms, which he explained is more of a muscular or myofascial concern. Dr. Rauzzino stated that the imaging studies and medical reports did not support a finding of any acute injury to Claimant's C3-C4 level. Dr. Rauzzino explained that because there is a "skip level" at C4-C5, adjacent level disease could not explain any presence of C3-C4 pain, as level C3-C4 is not adjacent to the re-fused levels. Dr. Rauzzino testified that the noted disc bulging, facet arthrosis, and right sided foraminal stenosis were documented in records predating the work injury. Dr. Rauzzino acknowledged that his IME report did not contain reference to the copper pipe incident, stating that he had read about the incident, but that it did not change his opinion.

35. Regarding the reasonableness and necessity of the recommended surgery, Dr. Rauzzino noted that Dr. Ogin's injection report indicates that the C3-4 level was never adequately injected to allow a diagnosis that it was the pain generator. Dr. Rauzzino explained that Dr. Ogin's only effective injections occurred to Claimant's C4-C5 level, as Dr. Ogin was never able to achieve sufficient proximal flow at the C3-C4 level. Dr. Rauzzino opined that any injection to that level could not be considered diagnostic. Dr. Rauzzino testified the Medical Treatment Guidelines indicate that when facet arthrosis is found, which he described as arthritis in the back, a cervical disc replacement is inappropriate, or contraindicated. Dr. Rauzzino testified that because Claimant has presented with facet arthrosis throughout his neck since at least 2015, the cervical disc replacement would not be appropriate as it would not be anticipated to relieve Claimant's symptoms of diffuse neck pain. Dr. Rauzzino concluded that the surgery would not be expected to provide Claimant relief from his neck pain due to Claimant's diffuse axial neck pain without a specific radiculopathy and pre-existing arthritis.

36. Claimant testified his neck symptoms have not resolved since March 2017. Claimant testified he understands the risks of surgery, however, understanding those risks he still desires to pursue the recommended surgery as he does not want to live in pain.

37. The ALJ finds the testimony of Claimant credible and persuasive.

38. The ALJ finds the testimony and opinions of Drs. Elliott and Beatty, as supported by the medical records and Claimant's testimony, more credible and persuasive than the contrary opinion of Drs. Rauzzino and Ogin.

39. Claimant established it is more likely than not that the requested C3-C4 disc replacement surgery is related to Claimant's admitted work injury, and reasonably necessary to cure and relieve Claimant of the effects of the work injury.

40. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the Medical Treatment Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the Medical Treatment Guidelines such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008); Section 8-43-201(3), C.R.S.

The ALJ concludes Claimant proved by a preponderance of the evidence the requested C3-C4 disc replacement surgery is reasonable, necessary and related to the admitted March 2017 work injury. While Claimant had two prior cervical fusions at C5-C6 and C6-C7, as well as pre-existing annular bulging at C3-C4 with mild facet arthropathy central and bilateral foraminal stenosis, Claimant was credible in his testimony that he did not have symptoms, limitations, or restrictions in his cervical spine or upper extremities leading up to the admitted industrial injury. Although a February 15, 2016 record references neck pain, no medical records were introduced at hearing indicating Claimant continued to seek treatment for any cervical spine issues leading up to the industrial injury. On March 20, 2017, Claimant hit his head on a door jamb and immediately thereafter experienced neck pain, which was later exacerbated when he was struck in the head with a 20 foot pipe at work. Despite discrepancies in the record regarding the exact date of the copper pipe incident, the ALJ is persuaded the incident did occur and exacerbated Claimant's condition. The work incidents and related July 2017 surgery aggravated and exacerbated Claimant's condition, causing the need for medical treatment, specifically, the recommended disc replacement surgery.

Claimant underwent surgery in July 2017 to address the neck pain that resulted from his work-related injuries, yet continued to consistently report neck and right upper extremity pain. Dr. Elliott, who is one of Claimant's ATP and has treated Claimant throughout the course of his claim, is of the credible opinion Claimant had a diagnostic injection at C3-C4, which supports his recommendation for disc replacement surgery. Claimant has undergone extensive conservative treatment with no lasting improvement. Dr. Elliott credibly and persuasively opined that the recommended surgery is warranted at this time. Dr. Beatty, also an ATP, has given Claimant surgical clearance. Claimant credibly testified he understands the risks and wants the surgery.

The ALJ has considered the Medical Treatment Guidelines as they apply to Claimant's case; however, based on the totality of the evidence, the ALJ concludes it is more likely than not Claimant's need for C3-C4 disc replacement is related to his work injury, and is reasonable and necessary to cure and relieve Claimant of its effects.

ORDER

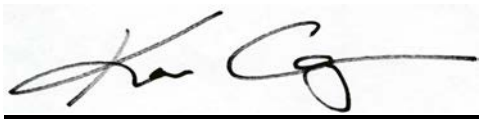
It is therefore ordered that:

1. Dr. Elliott's request for C3-C4 disc replacement surgery is reasonable, necessary and related to Claimant's work injury. Respondents shall pay for such surgery pursuant to the fee schedule.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: November 30, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable injuries to his head and cervical spine during the course and scope of his employment with Employer on January 13, 2017.

2. Whether Claimant has established by a preponderance of the evidence that his medical treatment was authorized, reasonable, necessary and causally related to his January 13, 2017 industrial injuries.

3. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the periods January 19, 2017 through February 28, 2017 and May 27, 2018 until terminated by statute.

4. Whether Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule on January 13, 2017 in violation of §8-42-112(1)(b) C.R.S. and his non-medical benefits should thus be reduced by fifty percent.

STIPULATION

The parties agreed that Claimant earned an Average Weekly Wage (AWW) of $939.00.

FINDINGS OF FACT

1. Claimant worked for Employer as a Quality Control Technician at an open quarry site in Morrison, Colorado. His job duties involved obtaining buckets of various materials mined at the quarry and testing them for quality and consistency. The samples that Claimant tested sometimes came from stockpiles of material within the quarry. To obtain a sample from the stockpiles, Claimant had to involve another employee operating a loader. The loader operator was responsible for using the loader to dig into the stockpile and make a smaller pile or pad from which the quality control technician could obtain his samples. The loader operator would also use his vehicle to flatten the surface of the pad.

2. Prior to the formation of the pad, Claimant was required to check the stockpile to make sure there were no oversized rocks that would compromise the sampling. Claimant testified that he was required to drive his pickup truck directly in front of the stockpile to check for oversized rock.

3. Claimant explained that, after checking for oversized rock, he was trained to make eye contact with the loader operator. The parties were then aware of each other's locations. Following "eye contact," Claimant noted that he was trained to drive and park at the same general area next to the stockpile.

4. On January 13, 2017 Claimant was asked to obtain a sample from the "57/67 three-quarter wash" stockpile. He thus made radio contact with Loader Operator Talmadge "T.J." Milan, Jr. Claimant then drove his pickup truck to the stockpile utilizing the "haul" road. Mr. Milan followed Claimant in his loader from about 15 feet behind. Each vehicle was traveling at approximately five miles per hour.

5. When Claimant arrived at the stockpile he turned right off the haul road so that he could drive in front of the materials and make necessary observations for oversized rock. Claimant commented that he drove approximately 10 feet in front of the stockpile.

6. Once Claimant made the necessary observations he turned right again. He intended to make a clockwise loop back to the east side of the stockpile next to the haul road. As Claimant turned away from the stockpile, he made eye contact with Mr. Milan. Mr. Milan was preparing to drive his loader into the stockpile to make the pad of quarry rock. Claimant did not make eye contact with Mr. Milan after he moved away from the front of the stockpile and pulled his truck behind the loader.

7. As Claimant was approaching his parking spot, Mr. Milan backed his loader away from the pad and articulated his vehicle to the left. The rear of the loader collided with Claimant's pickup truck. Claimant's vehicle was in motion at the time of the accident.

8. Employer had a written Health and Safety Manual. Section 4.3.2 of the Manual provides "each company operation or site will have unique considerations regarding traffic, movement, and control. Traffic rules should be developed at each site to regulate traffic flow and control common hazards, which may arise through normal operation either on or off company property. The traffic rule should be documented in a traffic control plan and should consider the operating environment, volume, and categories of vehicles being utilized at the facility." Section 4.3.2.5 of the Manual specifies "one of the things to be considered as part of this traffic control plan is controlled interaction with light vehicles and heavy mobile equipment by maintaining a prescribed minimum 25 yard separation distance." Employer published and disseminated its traffic policy to all employees.

9. Claimant testified that there were procedures to follow if light and heavy vehicles were within 75 feet of each other. Specifically, the drivers were required to make eye contact with each other or have radio communication.

10. Claimant reported the accident to Employer's Quality Control Manager John Cheever. Mr. Cheever inquired whether Claimant was doing "ok" and Claimant replied that he was fine.

11. Employer conducted an investigation of the January 13, 2017 accident. Mr. Cheever, Safety Manager Al Quist, and other members of Employer's management team discussed the accident further but did not draw any conclusions until they could review the DriveCam video from Claimant's truck. However, prior to viewing the DriveCam video

and based on Claimant's account of the accident, Mr. Cheever surmised that Claimant had not likely committed any rules violations.

12. After reviewing the DriveCam video on January 14, 2017, Mr. Cheever determined that Claimant's description of the accident was inaccurate and his vehicle was moving just before the collision. Mr. Cheever also concluded that it was apparent that Claimant had pulled within 25 yards behind the loader just before the collision without making any positive contact. Mr. Quist confirmed Mr. Cheever's findings after reviewing the DriveCam footage. He also noted that the distance between the back end of the loader and Claimant's pickup truck while loading in the pile was approximately 40 feet. He commented that the distance between the loader's back end after leaving the pad area and turning to the left and Claimant's pickup truck was about 23 feet.

13. Immediately following the accident, Claimant went to Employer's mining office to complete a short written statement about the accident. Claimant then returned to his lab and unloaded his samples. However, he was feeling nauseous. He testified that he vomited on the floor in one of the labs. Claimant then sat down for a time. He subsequently cleaned up his vomit by throwing it in a waste rock pile behind the trailer.

14. Approximately 30-45 minutes later Mr. Cheever arrived at the lab. He and Claimant then went to the mining office to prepare a written statement about the accident. Mr. Cheever, Claimant, Mr. Milan and others then went to the accident scene and attempted to recreate the event.

15. When finished at the scene of the accident, Claimant returned to the lab. However, Claimant did not feel well. He thus left work early at approximately 2:00 PM. Claimant called Mr. Cheever to inform him that he did not feel well and was leaving.

16. Claimant did not feel any better during the evening of January 13, 2017. On the following day Claimant reported to work for his normal Saturday shift. Claimant testified that he was still not feeling well. He was experiencing a headache, back and neck pain, dizziness and his "balance was not the greatest."

17. Claimant returned to work on Monday, January 16, 2017. Claimant and Mr. Cheever reviewed the video of the accident. Claimant remarked that he might have a concussion. He was released from any further work because of the weather.

18. Employer's Safety Recognition, Reward, and Consequences Policy (SRRCP) sets forth the different categories of safety violations and the corresponding possible penalties. Category 1 violations include violations that could lead to a fatality or serious bodily injury and may result in immediate termination.

19. On January 17, 2017 Employer's SRRCP committee had a conference call to discuss the January 13, 2017 accident. The committee concluded that Claimant violated Employer's safety rules and policies by driving behind the loader within the proscribed distance without making positive contact. Under the SRRCP, Employer

determined that Claimant's conduct constituted a Category 1 violation and terminated his employment.

20. On January 17, 2017 Mr. Cheever called Claimant with the intent of scheduling a termination meeting. However, Claimant explained that he was not feeling well and was at UC Health Urgent Care. Mr. Cheever asked Claimant to call him back when he was finished with the examination. However, approximately five minutes later, Mr. Cheever called Claimant and told him that he needed to seek treatment at authorized provider Concentra Medical Centers.

21. On January 17, 2017 Claimant visited Concentra for an examination. Claimant reported that he was a restrained driver in a pickup truck when he was struck by a loader. He had extreme pain between his shoulder blades and numbness in his arms. Claimant noted worsening dizziness, headaches, memory issues, confusion and headache pain. The Concentra nurse instructed Claimant to visit an emergency room.

22. On January 17, 2017 Claimant visited the North Suburban Medical Center Emergency Room. Claimant reported headaches, tingling to his right hand, neck pain, back pain and abdominal discomfort. He denied loss of consciousness. However, he endorsed headaches, tingling, dizziness, difficulty concentrating and difficulty walking. Claimant did not respond to commands correctly when prompted. He was diagnosed with post-concussive syndrome.

23. On January 18, 2017 Claimant returned to Concentra for an evaluation with Gary Zuehlsdorff, M.D. Claimant reported nausea but denied vomiting. He also noted blurred vision and photophobia. Claimant complained of muscle pain, back pain, neck pain and joint stiffness. He also mentioned headaches, dizziness, memory loss, confusion, tingling, numbness, impaired balance and poor coordination. A psychiatric screen was negative. Dr. Zuehlsdorff diagnosed headaches due to trauma, dizziness, neck strain, thoracic strain, chest wall strain, abdominal wall strain and a concussion. He restricted Claimant from any work activity.

24. On January 19, 2017 Mr. Cheever contacted Claimant and terminated his employment. On the following day, Claimant visited the St. Anthony's North Emergency Room. He reported worsening confusion, headaches, photophobia, neck pain, chest pain and abdominal pain. Claimant was admitted to the hospital for five days.

25. During the St. Anthony North admission numerous providers examined Claimant, performed diagnostic tests and conducted studies to determine the underlying cause of his subjective complaints. A Romberg balance test was negative and a finger nose finger test was normal. An EEG study that measures brain wave activity was inconsistent with Claimant's subjective complaints of confusion and altered mental status. A neurologist examined Claimant during his hospital stay and commented that "[p]er nursing, [Claimant] can vary significantly from talking normally with family to behavior I witnessed during exam. The range of his symptoms and behaviors are beyond typical concussion or pain behavior." On January 23, 2017 a nurse specialist remarked that

Claimant exhibited "intermittent, waxing and waning confusion," and that she was "unable to complete a meaningful psychiatric evaluation." A speech therapist commented that Claimant's deficits appeared "inconsistent and idiosyncratic." Claimant was ultimately diagnosed with post-concussive syndrome that included a significant functional component.

26. On January 27, 2017 Respondents filed a Notice of Contest challenging Claimant's January 13, 2017 claim. Because Claimant's claim was denied, he was required to seek treatment on his own for his continuing symptoms.

27. Claimant did not seek additional medical care after his discharge from St. Anthony North until he visited primary care provider Brandon Combs, M.D. on February 16, 2017. Claimant complained of headaches. During his August 17, 2018 deposition, Dr. Combs concluded that Claimant suffered a kinetic injury to his brain at the time of the January 13, 2017 accident. He further determined that Claimant's symptoms were consistent with post-concussive syndrome with significant functional overlay and were related to his January 13, 2017 work-related accident. Nevertheless, Dr. Combs acknowledged that Claimant intentionally performed poorly on diagnostic tests.

28. Dr. Combs explained that functional syndrome is a "catch all" term for symptoms that lack an obvious organic explanation. However, functional overlay may be an intensifying of symptoms associated with an underlying organic syndrome. Therefore, an individual with post-concussive syndrome may have functional overlay. Dr. Combs noted that the presence of an organic injury along with functional overlay can have a synergistic effect.

29. On April 5, 2017 and April 24, 2017 Claimant visited Physician's Assistant Christina Lee at Panorama Orthopedic. Following a physical examination and consideration of radiological studies, Claimant was diagnosed with cervical radiculopathy and chronic bilateral lower back pain with sciatica.

30. In June 2017 Claimant began to receive treatment from Neuropsychologist Alissa Wicklund, Ph.D. On August 20, 2018 Dr. Wicklund testified through an evidentiary deposition. After reviewing DashCam video of Claimant's January 13, 2017 industrial incident she determined that the accident was sufficient to support the diagnosis of a concussion. However, she explained that Claimant's symptoms were discordant with the mechanism of injury. Dr. Wicklund concluded that, in addition to post-concussive syndrome, Claimant's symptoms were explained by other factors such as depression, anxiety and somatic response to injury. She remarked that it is impossible to parse out what symptoms were psychological in nature from those associated with post-concussive syndrome. Dr. Wicklund saw Claimant for a final time on November 2, 2017. She did not administer neuropsychological testing because "on tests to assess suboptimal effort and malingering, scores are significantly impaired." Nevertheless, Dr. Wicklund concluded that Claimant was unable to work during the course of her treatment from June 22, 2017 until his last visit on November 2, 2017.

31. On January 26, 2018 Claimant underwent an independent medical examination with Neurologist Alexander H. Zimmer, M.D. Dr. Zimmer also testified at the hearing in this matter. Based on a review of Claimant's medical records and a physical examination, Dr. Zimmer concluded that Claimant did not suffer a concussion as a result of the January 13, 2017 accident. He noted that Claimant was involved in a low velocity accident and did not lose consciousness. Dr. Zimmer reasoned that Claimant's presentation, especially during his five-day admission at St. Anthony North, constituted atypical features for post-concussive syndrome. Moreover, Claimant's records are replete with inconsistencies and abnormal validity scores. Dr. Zimmer concluded that the majority of Claimant's symptoms were the result of "conscious or subconscious factors resulting in physical manifestations." Finally, he acknowledged that an individual can suffer from both post-concussive syndrome and a functional disorder.

32. Claimant subsequently underwent extensive psychological treatment for depression. On February 27, 2018 Claimant began to receive treatment from Neurologist Samantha Holden, M.D. Dr. Holden testified at the hearing in this matter.

33. Claimant reported to Dr. Holden that he was experiencing difficulty with balance and walking, photophobia, phonophobia, headaches, dizziness, poor sleep, irritability and personality changes. Dr. Holden diagnosed Claimant with post-concussive syndrome and Functional Neurological Symptoms Disorder with mixed symptoms. She explained that Functional Neurological Symptoms Disorder is primarily a neurological condition. In the past the condition has been referred to as hysteria and conversion disorder. Functional Neurological Symptoms Disorder involves neurological symptoms that are not necessarily associated with a clear structural cause but are a dysfunction of the neurological system. Dr. Holden described the Disorder as a software problem of the brain. She acknowledged that the Disorder can develop in the absence of a head injury and can be triggered by significant stress or emotional trauma.

34. Dr. Holden explained that it was "unclear if [Claimant] actually suffered a head injury." She further noted that Claimant had "significant depression and anxiety" and the accident was "an extremely stressful and traumatic event, with some symptoms of post-traumatic stress evident by history, with hypervigilance and re-experiencing." Dr. Holden explained that, although Claimant's symptoms were consistent with post-concussive syndrome, "there is significant functional overlay present." She noted that physical objective evidence is not available in the vast majority of mild traumatic brain injury cases. Finally, Dr. Holden testified that there is no way to separate or disentangle functional neurological symptoms from post-concussive syndrome.

35. Dr. Holden explained that symptoms associated with a Functional Neurological Symptoms Disorder will wax and wane. The degree of symptoms experienced depends very much on what the affected person's brain is doing. If the brain is under stress, the symptoms can be worse because there is less energy left over for required brain tasks. Dr. Holden was aware that physicians at St. Anthony's Hospital had suggested the possibility that Claimant's presentation could be explained by secondary gain. However, Dr. Holden commented that secondary gain is exceptionally rare and she

did not believe Claimant was demonstrating secondary gain. She remarked that Claimant was not malingering or faking an injury.

36. Dr. Holden suggested that Claimant's treatment for Functional Neurological Symptoms Disorder required an interdisciplinary team. She did not believe that Claimant required psychiatric treatment or had a psychiatric diagnosis. Dr. Holden recommended continued physical therapy, occupational therapy, speech therapy and treatment under her care.

37. Accident Reconstructionist Mark Leonard prepared a report and testified at the hearing in this matter. Mr. Leonard conducted an accident reconstruction of the January 13, 2017 crash by performing a 3D scan of the involved loader and pickup truck. He also considered the video of the accident. The footage showed accelerometer data and speed data for the pickup truck. While attempting to determine the Delta–V of Claimant's head at the time of the accident, Mr. Leonard utilized a formula to calculate the Head Impact Criterion (HIC). Claimant had a HIC of around .1. In contrast, the head injury criterion in the literature reflect that the minimum value for concussions is 250. There was thus insufficient force in the January 13, 2017 crash to cause a concussion.

38. Biomechanical Engineer John Smith also prepared a report and testified at the hearing in this matter. Mr. Smith explained that Mr. Leonard's calculations of force were inaccurate. Specifically, Mr. Leonard relied upon "Campbell's Equation" to calculate the amount of force. Campbell's Equation is only reliable if the crash involves a vehicle having a straight impact into an unmovable barrier. However, Campbell's Equation is invalid when involving two moving vehicles and/or a non-straight impact.

39. Mr. Smith also explained that there are five potential causes of head injury in a collision. The causes include: (1) translation of the head from side to side; (2) translation of the head from front to back, (3) rotation of the head from side to side; (4) rotation of the head from front to back, and (5) actual impact of the head with an object. He remarked that the studies establishing HIC criteria only consider impact of the head. Because the HIC criteria only measure values involving an impact of the head, Mr. Smith explained that the HIC calculation in the present case would be zero.

40. Claimant has demonstrated that it is more probably true than not that he suffered injuries to his head and cervical spine during the course and scope of his employment with Employer on January 13, 2017. Initially, on January 13, 2017 the rear of a loader struck Claimant's pickup truck while he was working at Employer's quarry. In his first visit to Concentra on January 17, 2017 Claimant reported pain between his shoulder blades and numbness to his arms. Claimant also noted worsening dizziness, headaches, memory issues, confusion and headache pain. By January 19, 2017 Claimant visited the St. Anthony's North Emergency Room. He reported worsening confusion, headaches, photophobia, neck pain, chest pain and abdominal pain. Claimant was admitted to the hospital for five days. During the St. Anthony North admission numerous providers examined Claimant, performed diagnostic tests and conducted studies to determine the underlying cause of his subjective complaints. Claimant was

ultimately diagnosed with post-concussive syndrome that included a significant functional component. He was subsequently also diagnosed with cervical radiculopathy and chronic bilateral lower back pain with sciatica as a result of the January 13, 2017 collision.

41. The persuasive medical records reflect that Claimant suffered both post-concussive syndrome and Functional Neurological Symptoms Disorder as a result of the crash. After his hospital discharge Claimant visited personal physician Dr. Combs for an evaluation. Dr. Combs concluded that Claimant suffered a kinetic injury to his brain at the time of the January 13, 2017 accident. He further determined that Claimant's symptoms were consistent with post-concussive syndrome including, significant functional overlay. The conditions were related to his January 13, 2017 work-related accident. Neuropsychologist Dr. Wicklund determined that the accident was sufficient to support the diagnosis of a concussion. However, she explained that Claimant's symptoms were discordant with the mechanism of injury. Dr. Wicklund concluded that, in addition to post-concussive syndrome, Claimant's symptoms were explained by other factors such as depression, anxiety and somatic response to injury. She remarked that it is impossible to parse out what symptoms were psychological in nature and from those associated with post-concussive syndrome. Neurologist Dr. Holden diagnosed Claimant with post-concussive syndrome and Functional Neurological Symptoms Disorder with mixed symptoms. She explained that Functional Neurological Symptoms Disorder has neurological symptoms that are not necessarily associated with a clear structural cause but are a dysfunction of the neurological system. Dr. Holden explained that symptoms associated with the Disorder will wax and wane. Although Claimant's symptoms were consistent with post-concussive syndrome Dr. Holden commented that he exhibited significant functional overlay. She noted that physical objective evidence is not available in the vast majority of mild traumatic brain injury cases. Finally, Dr. Holden explained that there is no way to separate or disentangle functional neurological symptoms from post-concussive syndrome.

42. In contrast, Dr. Zimmer explained that Claimant did not suffer a concussion as a result of the January 13, 2017 accident. He noted that Claimant was involved in a low velocity accident and did not lose consciousness. Dr. Zimmer reasoned that Claimant's presentation, especially during his five-day admission at St. Anthony North, constituted atypical features for post-concussive syndrome. Moreover, Accident Reconstructionist Mr. Leonard determined that Claimant had a HIC of around .1. He remarked that the literature reflected the minimum value for concussions was 250. There was thus insufficient force in the January 13, 2017 crash to cause a concussion. However, Mr. Smith explained that Mr. Leonard's calculations were incorrect. Moreover, the studies establishing HIC criteria only consider impact of the head but there are five potential causes of head injury in a collision. More importantly, Dr. Zimmer's opinion fails to account for the significant medical evidence reflecting that Claimant exhibited post-concussion symptoms as a result of the collision. Although the records reflect that Claimant's presentation involved a significant functional overlay, there is no way to separate functional neurological symptoms from post-concussive syndrome. Accordingly, Claimant suffered compensable head injuries while working for Employer on

January 13, 2017. The record also demonstrates that Claimant suffered cervical spine injuries as a result of the January 13, 2017 accident.

43. Claimant has established that it more probably true than not that his medical treatment was authorized, reasonable, necessary and causally related to his January 13, 2017 industrial injuries. Initially, Respondents authorized Claimant's care and treatment for his work injuries through Concentra and St. Anthony North Hospital. Because Respondents denied Claimant's claim on January 27, 2017 for non-medical reasons, he was permitted to seek treatment on his own for his continuing symptoms as a result of his work accident. Therefore, Claimant's care for his January 13, 2017 injuries with Dr. Combs, Dr. Wicklund, Panorama Orthopedics, Select Physical Therapy, the CU Balance Center, Dr. Murray and CU Anschutz was reasonable, necessary and related to the crash.

44. Claimant's symptoms have persisted and he has not reached Maximum Medical Improvement (MMI). Moreover, Claimant continues to suffer a myriad of post-concussive and neurological symptoms that warrant additional treatment. Dr. Holden persuasively suggested that Claimant's treatment for Functional Neurological Symptoms Disorder required an interdisciplinary team. She did not believe that Claimant required psychiatric treatment or had a psychiatric diagnosis. Dr. Holden recommended continued physical therapy, occupational therapy, speech therapy and treatment under her care. Accordingly, Claimant shall receive reasonable and necessary medical treatment for his symptoms that is designed to cure or relieve the effects of his January 13, 2017 industrial injuries.

45. Claimant has proven that is is more probably true than not that he is entitled to receive Temporary Total Disability (TTD) benefits for the periods January 19, 2017 through February 28, 2017 and May 27, 2018 until terminated by statute. The record reflects that Claimant has been unable to work since January 17, 2017. On January 17, 2017 Claimant was diagnosed with post-concussive syndrome. On the following day, Dr. Zuehlsdorf restricted Claimant from all work activities. Claimant continues to suffer symptoms and require medical treatment as a result of the January 13, 2017 crash. He is unable to perform his job duties and has not reached MMI. Claimant is entitled to an award of TTD benefits because his January 13, 2017 industrial injuries caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss.

46. Respondents have proven that it is more probably true than not that Claimant willfully failed to obey a safety rule on January 13, 2017 and his non-medical benefits should thus be reduced by fifty percent. Initially, Claimant drove his pickup truck to a stockpile to obtain testing samples. Mr. Milan followed Claimant in his loader from about 15 feet behind. Claimant intended to make a clockwise loop back to the east side of the stockpile next to the haul road. As Claimant turned away from the stockpile, he made eye contact with Mr. Milan. Mr. Milan was preparing to drive his loader into the stockpile to make the pad of quarry rock. Claimant did not make eye contact with Mr. Milan after he moved away from the front of the stockpile and pulled his truck behind the

loader. The rear of the loader collided with Claimant's pickup truck. Claimant's vehicle was in motion at the time of the accident.

47. Section 4.3.2.5 of Employer's Health and Safety Manual specifies "one of the things to be considered as part of this traffic control plan is controlled interaction with light vehicles and heavy mobile equipment by maintaining a prescribed minimum 25 yard separation distance." Employer published and disseminated its traffic policy to all employees. Claimant acknowledged that there were procedures to follow if light and heavy vehicles were within 75 feet of each other. Specifically, the drivers were required to make eye contact with each other or have radio communication.

48. By moving his pickup truck within 25 yards behind Mr. Milan's loader without making positive contact, Claimant violated Employer's reasonable safety rule. Specifically, after conducting an investigation and reviewing DriveCam video of the accident, Mr. Cheever concluded that it was apparent that Claimant had pulled within 25 yards behind the loader just before the collision without making any positive contact. Mr. Quist confirmed Mr. Cheever's findings after reviewing the DriveCam footage. He also noted that the distance between the back end of the loader and Claimant's truck while loading in the pile was approximately 40 feet. He commented that the distance between the loader's back end after leaving the pad area and turning to the left and Claimant's pickup truck was about 23 feet. Employer's SRRCC committee concluded that Claimant violated Employer's safety rules and policies by driving behind the loader within the proscribed distance without making positive contact. Under the SRRCP, Employer determined that Claimant's conduct constituted a Category 1 violation and terminated his employment. Claimant's activities demonstrate that he deliberately violated Employer's safety rule regarding maintaining a safe distance from heavy vehicles and failing to make positive contact on January 13, 2017. Accordingly, Claimant's actions constituted a willful failure to obey a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. and warrant the reduction of his non-medical benefits by fifty percent.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered injuries to his head and cervical spine during the course and scope of his employment with Employer on January 13, 2017. Initially, on January 13, 2017 the rear of a loader struck Claimant's pickup truck while he was working at Employer's quarry. In his first visit to Concentra on January 17, 2017 Claimant reported pain between his

shoulder blades and numbness to his arms. Claimant also noted worsening dizziness, headaches, memory issues, confusion and headache pain. By January 19, 2017 Claimant visited the St. Anthony's North Emergency Room. He reported worsening confusion, headaches, photophobia, neck pain, chest pain and abdominal pain. Claimant was admitted to the hospital for five days. During the St. Anthony North admission numerous providers examined Claimant, performed diagnostic tests and conducted studies to determine the underlying cause of his subjective complaints. Claimant was ultimately diagnosed with post-concussive syndrome that included a significant functional component. He was subsequently also diagnosed with cervical radiculopathy and chronic bilateral lower back pain with sciatica as a result of the January 13, 2017 collision.

8. As found, the persuasive medical records reflect that Claimant suffered both post-concussive syndrome and Functional Neurological Symptoms Disorder as a result of the crash. After his hospital discharge Claimant visited personal physician Dr. Combs for an evaluation. Dr. Combs concluded that Claimant suffered a kinetic injury to his brain at the time of the January 13, 2017 accident. He further determined that Claimant's symptoms were consistent with post-concussive syndrome including, significant functional overlay. The conditions were related to his January 13, 2017 work-related accident. Neuropsychologist Dr. Wicklund determined that the accident was sufficient to support the diagnosis of a concussion. However, she explained that Claimant's symptoms were discordant with the mechanism of injury. Dr. Wicklund concluded that, in addition to post-concussive syndrome, Claimant's symptoms were explained by other factors such as depression, anxiety and somatic response to injury. She remarked that it is impossible to parse out what symptoms were psychological in nature and from those associated with post-concussive syndrome. Neurologist Dr. Holden diagnosed Claimant with post-concussive syndrome and Functional Neurological Symptoms Disorder with mixed symptoms. She explained that Functional Neurological Symptoms Disorder has neurological symptoms that are not necessarily associated with a clear structural cause but are a dysfunction of the neurological system. Dr. Holden explained that symptoms associated with the Disorder will wax and wane. Although Claimant's symptoms were consistent with post-concussive syndrome Dr. Holden commented that he exhibited significant functional overlay. She noted that physical objective evidence is not available in the vast majority of mild traumatic brain injury cases. Finally, Dr. Holden explained that there is no way to separate or disentangle functional neurological symptoms from post-concussive syndrome.

9. As found, in contrast, Dr. Zimmer explained that Claimant did not suffer a concussion as a result of the January 13, 2017 accident. He noted that Claimant was involved in a low velocity accident and did not lose consciousness. Dr. Zimmer reasoned that Claimant's presentation, especially during his five-day admission at St. Anthony North, constituted atypical features for post-concussive syndrome. Moreover, Accident Reconstructionist Mr. Leonard determined that Claimant had a HIC of around .1. He remarked that the literature reflected the minimum value for concussions was 250. There was thus insufficient force in the January 13, 2017 crash to cause a concussion. However, Mr. Smith explained that Mr. Leonard's calculations were incorrect. Moreover, the studies establishing HIC criteria only consider impact of the head but there are five potential causes of head injury in a collision. More importantly, Dr. Zimmer's opinion fails

to account for the significant medical evidence reflecting that Claimant exhibited post-concussion symptoms as a result of the collision. Although the records reflect that Claimant's presentation involved a significant functional overlay, there is no way to separate functional neurological symptoms from post-concussive syndrome. Accordingly, Claimant suffered compensable head injuries while working for Employer on January 13, 2017. The record also demonstrates that Claimant suffered cervical spine injuries as a result of the January 13, 2017 accident.

Medical Benefits

10. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure and relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). It is the Judge's sole prerogative to assess the sufficiency and probative value of the evidence to determine whether the claimant has met his burden of proof. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251, 252 (Colo. App. 1999).

11. Authorization to provide medical treatment refers to a medical provider's legal authority to treat the claimant with the expectation that the insurer will compensate the provider. *Bunch,* 148 P.3d at 383; *One Hour Cleaners v. Industrial Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). Authorized providers include those to whom the employer directly refers the claimant and those to whom an Authorized Treating Physician (ATP) refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office,* 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office,* 902 P.2d 854 (Colo. App. 1995).

12. As found, Claimant has established by a preponderance of the evidence that his medical treatment was authorized, reasonable, necessary and causally related to his January 13, 2017 industrial injuries. Initially, Respondents authorized Claimant's care and treatment for his work injuries through Concentra and St. Anthony North Hospital. Because Respondents denied Claimant's claim on January 27, 2017 for non-medical reasons, he was permitted to seek treatment on his own for his continuing symptoms as a result of his work accident. Therefore, Claimant's care for his January 13, 2017 injuries with Dr. Combs, Dr. Wicklund, Panorama Orthopedics, Select Physical Therapy, the CU Balance Center, Dr. Murray and CU Anschutz was reasonable, necessary and related to the crash.

13. As found, Claimant's symptoms have persisted and he has not reached Maximum Medical Improvement (MMI). Moreover, Claimant continues to suffer a myriad of post-concussive and neurological symptoms that warrant additional treatment. Dr. Holden persuasively suggested that Claimant's treatment for Functional Neurological Symptoms Disorder required an interdisciplinary team. She did not believe that Claimant required psychiatric treatment or had a psychiatric diagnosis. Dr. Holden recommended continued physical therapy, occupational therapy, speech therapy and treatment under her care. Accordingly, Claimant shall receive reasonable and necessary medical

treatment for his symptoms that is designed to cure or relieve the effects of his January 13, 2017 industrial injuries.

TTD Benefits

14. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

15. As found, Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule on January 13, 2017 and his non-medical benefits should thus be reduced by fifty percent. Initially, Claimant drove his pickup truck to a stockpile to obtain testing samples. Mr. Milan followed Claimant in his loader from about 15 feet behind. Claimant intended to make a clockwise loop back to the east side of the stockpile next to the haul road. As Claimant turned away from the stockpile, he made eye contact with Mr. Milan. Mr. Milan was preparing to drive his loader into the stockpile to make the pad of quarry rock. Claimant did not make eye contact with Mr. Milan after he moved away from the front of the stockpile and pulled his truck behind the loader. The rear of the loader collided with Claimant's pickup truck. Claimant's vehicle was in motion at the time of the accident.

Safety Rule Violation

16. Section 8-42-112(1)(b), C.R.S. authorizes a fifty percent reduction in compensation for an employee's "willful failure to obey any reasonable rule adopted by the employer for the safety of the employee." A safety rule does not have to be either formally adopted or in writing to be effective. *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office,* 907 P.2d 715, 719 (Colo. App. 1995). To establish that a violation of §8-42-112(1)(b), C.R.S. has been willful, a respondent must prove by a preponderance of

the evidence that a claimant acted with "deliberate intent." *In re Alverado,* W.C. No. 4-559-275 (ICAP, Dec. 10, 2003). Willful conduct may be proven by circumstantial evidence including "evidence of frequent warnings, the obviousness of the risk, and the extent of deliberation evidenced by claimant's conduct." *Id.*

17. Respondents need not establish that an employee had the safety rule in mind and decided to break it. *In re Alverado,* W.C. No. 4-559-275 (ICAP, Dec. 10, 2003). Rather, it is sufficient to show the employee knew the rule and deliberately performed the forbidden act. *Id.* However, willfulness will not be established if the conduct is the result of thoughtlessness or negligence. *In re Bauer*, W.C. No. 4-495-198 (ICAO, Oct. 20, 2003). "Willfulness" also does not encompass "the negligent deviation from safe conduct dictated by common sense." *In re Gutierrez,* W.C. No. 4-561-352 (ICAP, Apr. 29, 2004). Whether an employee has deliberately violated a safety rule is a question of fact to be determined by the ALJ. *Lori's Family Dining, Inc.*, 907 P.2d at 719.

18. Generally, an employee's violation of a rule to facilitate the accomplishment of the employer's business does not constitute willful misconduct. *Grose v. Rivera Electric*, W.C. No. 4-418-465 (ICAP, Aug. 25, 2000). However, an employee's violation of a rule to make the job easier and speed operations is not a "plausible purpose." *Id.*; *see* 2 *Larson's Workers' Compensation Law*, § 35.04.

19. As found, Respondents have proven by a preponderance of the evidence that Claimant willfully failed to obey a safety rule on January 13, 2017 and his non-medical benefits should thus be reduced by fifty percent. Initially, Claimant drove his pickup truck to a stockpile to obtain testing samples. Mr. Milan followed Claimant in his loader from about 15 feet behind. Claimant intended to make a clockwise loop back to the east side of the stockpile next to the haul road. As Claimant turned away from the stockpile, he made eye contact with Mr. Milan. Mr. Milan was preparing to drive his loader into the stockpile to make the pad of quarry rock. Claimant did not make eye contact with Mr. Milan after he moved away from the front of the stockpile and pulled his truck behind the loader. The rear of the loader collided with Claimant's pickup truck. Claimant's vehicle was in motion at the time of the accident.

20. As found, section 4.3.2.5 of Employer's Health and Safety Manual specifies "one of the things to be considered as part of this traffic control plan is controlled interaction with light vehicles and heavy mobile equipment by maintaining a prescribed minimum 25 yard separation distance." Employer published and disseminated its traffic policy to all employees. Claimant acknowledged that there were procedures to follow if light and heavy vehicles were within 75 feet of each other. Specifically, the drivers were required to make eye contact with each other or have radio communication.

21. As found, by moving his pickup truck within 25 yards behind Mr. Milan's loader without making positive contact, Claimant violated Employer's reasonable safety rule. Specifically, after conducting an investigation and reviewing DriveCam video of the accident, Mr. Cheever concluded that it was apparent that Claimant had pulled within 25 yards behind the loader just before the collision without making any positive contact. Mr. Quist confirmed Mr. Cheever's findings after reviewing the DriveCam footage. He also

noted that the distance between the back end of the loader and Claimant's truck while loading in the pile was approximately 40 feet. He commented that the distance between the loader's back end after leaving the pad area and turning to the left and Claimant's pickup truck was about 23 feet. Employer's SRRCC committee concluded that Claimant violated Employer's safety rules and policies by driving behind the loader within the proscribed distance without making positive contact. Under the SRRCP, Employer determined that Claimant's conduct constituted a Category 1 violation and terminated his employment. Claimant's activities demonstrate that he deliberately violated Employer's safety rule regarding maintaining a safe distance from heavy vehicles and failing to make positive contact on January 13, 2017. Accordingly, Claimant's actions constituted a willful failure to obey a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. and warrant the reduction of his non-medical benefits by fifty percent.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. On January 13, 2017 Claimant suffered compensable head and cervical spine injuries while working for Employer. Claimant specifically suffered both post-concussive syndrome and Functional Neurological Symptoms Disorder as a result of the crash.

2. Respondents are financially responsible for all of Claimant's medical care through Concentra, North Suburban Medical Center and St. Anthony's North Hospital. Respondents are also liable for all of Claimant's medical treatment provided by Dr. Wicklund, Dr. Murray, Dr. Holden at CU Anschutz Medical Center, CU Balance Center, Select Physical Therapy, Panorama Orthopedics and CU Internal Medicine for dates of service between January 18, 2017 and February 16, 2018.

3. Claimant shall receive TTD benefits for the periods January 19, 2017 through February 28, 2017 and May 27, 2018 until terminated by statute.

4. Claimant committed a willful failure to obey a reasonable safety rule adopted by Employer in violation of §8-42-112(1)(b) C.R.S. Accordingly, his non-medical benefits shall be reduced by fifty percent.

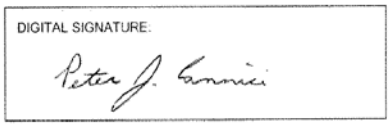
5. Claimant earned an AWW of $939.00.

6. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 3, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that the sacroiliac (SI) joint injection recommended by Dr. Kenneth Lewis is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted November 15, 2017 work injury.

- Whether the claimant has demonstrated by a preponderance of the evidence that the claimant's "base" average weekly wage (AWW) should be increased from $1,261.69 to $1,314.62.

- At hearing, the parties indicated their agreement that the claimant's AWW should be increased by $239.34 for COBRA related insurance coverage.

FINDINGS OF FACT

1. The claimant was employed by the employer in the oil and gas industry. The claimant suffered an admitted work injury on Wednesday, November 15, 2017. The injury occurred when the claimant was pulling hoses from a pond, slipped in the mud, and fell to the left and onto his back. The claimant testified that at the time of the fall he felt aching and throbbing pain in his low back on the left side. The claimant continued his job duties on November 15, 2017, despite continued pain in his back. The claimant notified the employer of his slip and fall the following day, November 16, 2017. The employer referred the claimant for medical treatment with Work Partners.

2. On November 20, 2017, the claimant first treated at Work Partners and was seen by Dr. Lori Fay. The claimant testified that he did not pursue treatment until that date because he hoped that his pain would resolve over the weekend. On November 20, 2017, Dr. Fay noted that the claimant was complaining of pain in his low back that was accompanied by numbness on his left side.

3. On December 6, 2017, the respondents filed a General Admission of Liability (GAL). In the GAL, the respondents admitted for medical benefits, temporary total disability (TTD) benefits, and an average weekly wage (AWW) of $1,261.69.

4. During this claim, the claimant consistently completed pain diagrams in which he indicated pain in his left low back. Dr. Fay has referred the claimant for various modes of treatment. This treatment had included physical therapy, chiropractic treatment, dry needling, acupuncture, use of a TENS unit, and pain medications (including gabapentin). The claimant testified that physical therapy did not improve his symptoms and chiropractic treatment made his symptoms worse.

5. On January 10, 2018, a magnetic resonance image (MRI) was taken of the claimant's lumbar spine. The MRI showed mild degenerative disc and facet changes from the L3 level through the S1 level. The radiologist noted there was no spinal stenosis or neural foraminal narrowing at any level.

6. On February 7, 2018, Dr. Fay referred the claimant to Dr. Kenneth Lewis with Western Rockies Interventional Pain Specialists. The claimant as first seen in Dr. Lewis' practice on February 22, 2018. At that time, the claimant was seen by Daniel Meyer, PA-C. Mr. Meyer noted that the claimant had complaints of a dully achy pain in his left posterior flank in the muscles adjacent to his lumbar spine. The claimant also reported numbness in his muscles. On examination, Mr. Meyer noted that the claimant was tender to palpation over the left sacroiliac (SI) joint and the corresponding piriformis muscle. Mr. Meyer also noted that the claimant demonstrated positive responses to left sided FABER, Gaenslen, and distraction/gapping maneuvers, which are indicators for SI joint pain. Mr. Meyer recommended that the claimant undergo medical branch block (MBB) injections at the L3 through S1 levels on the left side. He also opined that a left sided SI joint injection could be considered.

7. The medial branch block injections were initially denied by the respondents. However, authorization was ultimately provided and on June 6, 2018, Dr. Lewis examined the claimant and agreed with the injections recommended by Mr. Meyer. On that same date, Dr. Lewis administered left sided MBB injections from the L2 level through the L5 level.

8. On June 29, 2018, the claimant returned to Mr. Meyer and reported that the June 6, 2018 injections did not provide any relief of his symptoms. At that time, Mr. Meyer noted that the claimant continued to have low back pain at the level of his SI joint and below. Mr. Meyer again assessed the claimant's response to provocative maneuvers for SI joint dysfunction and noted the claimant demonstrated positive responses. Mr. Meyer opined that the claimant's primary source of pain was his SI joint and recommended an SI joint injection.

9. Dr. Lewis testified that February 22, 2018 Mr. Meyer followed the necessary protocol in examining the claimant and making recommendations for treatment, including injections. Dr. Lewis also testified that he has trained all of his PAs in the process he wants them to follow in examining patients. Ultimately, Dr. Lewis will make the final determination regarding what specific treatments he will administer. Dr. Lewis testified that the MBB injections that he administered on June 6, 2018 were unsuccessful. This leads Dr. Lewis to the conclusion that the claimant's pain generator is likely his SI joint. Therefore, Dr. Lewis continues to recommend an SI joint injection. Dr. Lewis described this injection as the "gold standard" for diagnosing SI joint pain.

10. At the request of the respondents, the claimant attended an independent medical examination (IME) with Dr. Allison Fall on August 22, 2018. In connection with the IME, Dr. Fall reviewed the claimant's medical records, obtained a history from the claimant and competed a physical examination. In her IME report, Dr. Fall opined that the recommended SI joint injection is not medically reasonable, necessary, or related to the claimant's work injury because the location of the claimant's pain is not consistent with the SI joint. In addition, Dr. Fall noted that during her examination of the claimant she was unable to complete a FABER maneuver. Dr. Fall agrees that claimant should undergo additional medical treatment, but not the treatment recommended by Dr. Lewis. Instead, Dr. Fall recommends additional physical therapy, increasing gabapentin, and trigger point injections. Dr. Fall's testimony at hearing was consistent with her written report.

11. The ALJ credits the claimant's testimony, the medical records, and the opinions of Dr. Lewis over the conflicting opinions of Dr. Fall. As a result, the ALJ finds that the claimant has demonstrated that it is more likely than not that the recommended SI joint injection is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury.

12. The claimant testified that while working for the employer, he worked fewer hours in the winter months because of the weather. The claimant asserts that his AWW should be calculated using his wages for the 16.43 weeks immediately prior to his injury. This amount is $21,599.24, which results in an average of $1,314.62 per week.

13. Payroll records entered into evidence indicate that the claimant earned $65,607.65 during the 52-week period of October 30, 2016 through October 28, 2017. When this total is divided by 52 weeks it results in an average of $1,261.69 per week.

14. The ALJ credits the payroll records reflecting the claimant's wages for the entire 52-week period prior to the claimant's work injury. Therefore, the ALJ finds that the appropriate calculation of the claimant's AWW is the amount previously admitted by the respondents of $1,261.69. The claimant has failed to demonstrate it is more likely than not that his AWW should be recalculated.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008).

4. As found, the claimant has demonstrated by a preponderance of the evidence that the SI joint injection recommended by Dr. Lewis is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury. As found, the claimant's testimony, the medical records, and the opinions of Dr. Lewis are credible and persuasive.

5. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include any advantage or fringe benefit provided to the Claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

6. As found, the claimant has failed to demonstrate by a preponderance of the evidence that his AWW should be recalculated. As found, the AWW of $1,261.69 (which is calculated by averaging an entire 52-week period) is the most accurate calculation of the claimant's AWW. As found, the payroll records are credible and persuasive.

ORDER

It is therefore ordered:

1. The respondents shall pay for the sacroiliac (SI) joint injection recommended by Dr. Lewis, pursuant to the Colorado Medical Fee Schedule.

2. The claimant's "base" average weekly wage (AWW) is $1,261.69.

3. The ALJ adopts the stipulation of the parties and $239.34 shall be added to the claimant's AWW for a **total** AWW of $1501.03.

4. All matters not determined here are reserved for future determination.

Dated December 3, 2018

You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUE

Whether Claimant established by a preponderance of the evidence that he suffered a work related injury arising out of and in the course and scope of his employment while playing bubble soccer on March 18, 2018.

FINDINGS OF FACT

1. Employer operates Lutheran Medical Center, located at 8300 West 38th Avenue, Wheat Ridge, Colorado.

2. Claimant was hired as Director of Emergency and Trauma Services for Lutheran Medical Center on June 20, 2016. Claimant remained in that position through his date of injury. Claimant's office is located at Lutheran Medical Center. His customary office hours were Monday through Friday from 6:00 a.m. to 3:00 or 4:00 p.m.

3. Claimant's job duties as Director of Emergency and Trauma Services are described in Employer's "Clinical Director" job description form. Claimant's duties included "Building Team Spirit" among his 150 subordinates. His duties did not preclude him from organizing and attending recreational events away from Lutheran Medical Center, outside of work hours in the name of building team spirit.

4. Claimant and his management team organized a March 18, 2018, bubble soccer event for emergency department employees, their families and significant others. Bubble soccer is a recreational activity where people play soccer while wearing an inflated plastic bubble. The sole purpose was to have fun and boost morale.

5. The 150 emergency department employees under Claimant's supervision were invited to attend bubble soccer. Of the employees invited to attend, 18 employees actually attended bubble soccer.

6. Claimant's supervisor is the Chief Nursing Officer, Andrea Burch. Ms. Burch was invited to attend the bubble soccer event, but she chose not to attend without negative employment consequence. Claimant's management team included his clinical manager, his manager of coding and compliance, his trauma coordinator, his emergency department educator, and eight or nine charge nurses. Claimant's management team could choose not to attend bubble soccer, with no negative employment consequence.

7. Claimant would not have been punished for not attending the bubble soccer event. Claimant felt he should be there because he arranged it, had it authorized and paid for. Claimant did not have to attend every extracurricular event held in his department. The event was not mandatory for management.

8. Attendance and participation at the bubble soccer event was also not mandatory for non-management employees. No activities benefiting employer within the course and scope of the employees of the emergency and trauma services was conducted at the bubble soccer event, and no meetings were held. The event was to start at 2:00 p.m. on a Sunday afternoon. Employees could come late or leave early. No attendance was taken. Employees were not paid to attend the event. The employees who attended the event received no monetary or employment related benefit for attending, and those employees who chose not to attend were not penalized.

9. Employees were welcome to attend the bubble soccer event and participate in playing soccer, or attend the event and watch others play. Family members and significant others were invited, and Claimant brought his own teenage children. No one who attended was required to play soccer. Claimant's assistant attended but did not play soccer. Claimant was free to observe the event, he did not have to play soccer, but he voluntarily chose to play soccer.

10. On Sunday, March 18, 2018, Claimant fractured his right ankle while playing bubble soccer event Another player hit Claimant from behind causing him to forward somersault, and as he did, he rolled over his right ankle. Claimant's right ankle was his only injured body part. Claimant's bubble soccer injury occurred outside of his regular work hours, and off Employer's premises.

11. Following his bubble soccer injury, Claimant was taken to Lutheran Medical Center where he was ultimately diagnosed as sustaining a closed displaced fracture of the medial malleolus of his right tibia. On March 27, 2018, Claimant underwent right ankle surgery.

12. On April 2, 2018, Claimant was evaluated by William Woo, M.D. Claimant provided a detailed history of the bubble soccer event, and his injury. Importantly, Claimant told Dr. Woo that there was no specific agenda for the bubble soccer activity, and "[n]one of the participants were paid for this activity and none of the participants were required to attend."

13. On April 9, 2018, Insurer filed a Notice of Contest denying the claim as not work-related. On July 16, 2018, Claimant applied for hearing on compensability. On August 15, 2018, Respondents filed a Response to Application for Hearing, noting that Claimant was injured while participating in a voluntary recreational activity.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-201, C.R.S. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. Section 8-43-301(1), C.R.S.

2. The claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his employment with the employer. Section 8-41-301(1)(b) and (c), C.R.S*.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

3. An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638

(Colo. 1991). The arising out of element is narrower and requires the claimant to show a causal connection between the employment and the injury such that the injury had its origins in the employee's work related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair, supra.*

4. In rendering a decision, the ALJ must make credibility determinations, draw plausible inferences from the record, and resolve essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office,* 84 P.3d 1023 (Colo. 2004). In determining credibility, the ALJ considers the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. Colorado Jury Instructions, Civil, 3:16.

Compensability/Voluntary Recreational Activities

5. By statute, the term "employment" specifically excludes a claimant's "participation in a voluntary recreational activity or program, regardless of whether the employer promoted, sponsored, or supported the recreational activity or program." Section 8- 40-201(8), C.R.S. A person "participating in recreational activity, who at such time is relieved of and is not performing any duties of employment; is similarly excluded from the definition of an "employee." Section 8-40-301(1), C.R.S.

6. Accidents which occur while a claimant is engaged in voluntary and recreational activities are not compensable. *White v. ICAO*, 8 P.3d 621 (Colo. App. July 20, 2000). The determination of whether the activity was "recreational" and whether the claimant's participation was "voluntary" are questions of fact for the ALJ. *Id.; see also Dover Elevator Co. v. ICAO,* 961 P.2d 1141 (Colo.App. 1998).

7. The Colorado Supreme Court determined that the following factors should be considered in determining whether an activity is recreational in nature: (1) whether the injury occurred during working hours; (2) whether the injury occurred on the employer's premises; (3) whether the employer initiated the employee's exercise; (4) whether the employer exerted control over the employee's exercise; and (5) whether the employer stood to benefit from the employee's exercise*. Price v. ICAO,* 919 P.2d 207 (Colo. 1996) Here, as found, Claimant was injured while participating in a voluntary recreational activity when he fractured his ankle on Sunday, March 18, 2018, while playing bubble soccer.

8. The persuasive evidence includes that bubble soccer in this case was strictly a recreational activity that had no relation to Lutheran Medical Center's normal hospital business. The bubble soccer event occurred off of Employer's premises and outside of Claimant's normal working hours. There was insufficient evidence to support that Employer stood to benefit from Claimant playing bubble soccer, or that Employer exerted control over Claimant playing bubble soccer. Claimant's job duties as Director of Emergency and Trauma Services do not include playing bubble soccer. As such, bubble soccer was a recreational activity.

9. The persuasive evidence also confirms that Claimant's participation in bubble soccer on March 18, 2018, was voluntary. As found, the purpose of the event was to have fun and boost morale, the event was not mandatory, only 18 of an approximate 150 employees attended the event, non-employees were invited to attend and participate, attendance was not taken, no employee was compensated to attend the event, no employee was provided any specific employment benefit from participating in the event, no employee was reprimanded or penalized for not attending the event, no business was conducted during the event, and an employee could choose to attend the event and not play bubble soccer.

10. The event was not mandatory for any employees or management personnel. Claimant's own supervisor, Andrea Burch, who had ultimate responsibility over the emergency department, was invited to attend and elected not to attend without any consequence. At least two management level employee's under Claimant's supervision were invited to attend and elected not to attend, without consequence. Claimant was not directed to attend by anyone other than himself. Claimant felt he should attend because he and his team organized the event. This fact does not deem his attendance at the event as mandatory. Before obtaining counsel, Claimant told Dr. Woo that no one was required to attend. At hearing, Claimant specifically admitted that he could have elected to not attend the bubble soccer without any consequence to his job.

11. Furthermore, even if Claimant felt his attendance at the bubble soccer event was required due to his role as a manager and in setting the event up, his decision to actually play bubble soccer while attending the event was voluntary. It cannot be reasonably inferred that Claimant's participation in bubble soccer was implicitly or explicitly required.

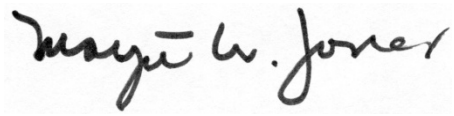
12. In an instructive voluntary recreational activity case, the Colorado Court of Appeals held that an accident occurring during a recreational event was not compensable even though the event was planned during company time and the employer paid for part of the event, where the claimant's participation in the event was voluntary, the event was held off of the employer's premises, and the only benefit to the employer was improvement of employee morale or achievement of goodwill between the employer and the employee. *See Wilson v. Scientific Software-Intercomp*, 738 P.2d 400 (Colo.App. 1987). That is precisely the circumstances in the case at hand. Claimant's injury occurred during a voluntary recreational activity, and his claim is denied.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge should enter the following order:

Claimant has failed to establish by a preponderance of the evidence that he sustained injuries arising out of and in the course and scope of his employment on March 18, 2018, while playing bubble soccer. Claimant's injury occurred during a voluntary recreational activity. Claimant's claim for workers' compensation benefits is therefore denied and dismissed.

This 3rd day of December, 2018.



Margot W. Jones

Administrative Law Judge

Office of Administrative Court

Denver, CO 80203

If you are dissatisfied with the Judge's Order, you may file a Petition to Review the Order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the Order, as indicated on the certificate of mailing or service; otherwise, the Judge's Order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the Order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43- 301(2), C.R.S. (as amended, SB 09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a Petition to Review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-993-719

ISSUES

- Claimant seeks daily penalties pursuant to § 8-43-304 and § 8-43-305 for the Respondents' alleged violation of § 8-42-105 and § 8-42-106 and WCRP 5-6 for allegedly not paying temporary partial disability and temporary total disability benefits in the proper amounts starting on June 16, 2018 "and continuing."

- Respondents' defenses were § 8-42-304(4), C.R.S. (cure), application for hearing filed July 8, 2018, General Admissions of Liability filed July 12 and July 19, 2018 and benefits paid contemporaneously therewith.

Based upon the evidence received at hearing, the ALJ enters the following Findings of Fact, Conclusions of Law and Order.

FINDINGS OF FACT

1. Claimant was injured on August 22, 2015 in the course and scope of his employment for Bridgestone Firestone.

2. Undersigned previously heard this case on November 15, 2017. Issues raised at that hearing was average weekly wage and whether Respondents owed Claimant any back TPD.

3. On January 29, 2018, a clerk in the Office of Administrative Courts mailed the Findings of Fact, Conclusions of Law and Order from the November 15, 2017 hearing to counsel for Claimant, former counsel for Respondents, and the Division of Workers' Compensation. A copy was not mailed to Respondent-Employer or Respondent-Insurer.

4. Summer Rainey is the adjuster on the case. Ms. Rainey testified she became the adjuster in 2016. Ms. Rainey testified she did not calculate the original AWW.

5. Ms. Rainey testified although normally her counsel supplies her with orders by ALJs; in this case her former counsel did not timely provide her with, nor did she receive a copy of the January 25, 2018 Findings of Fact, Conclusions of Law and Order until approximately May 9, 2018 when she filed the GAL. Ms. Rainey testified she was unaware an appeal had been filed. Ms. Rainey testified that when she filed the May 9, 2018 GAL she made payments.

6. The Order found Claimant's average weekly wage is $508.31. The Order found Claimant is entitled to benefits based on his average weekly wage of $508.31 for the period of time he was entitled to temporary partial disability benefits. Review of the Order does not establish a specific time for provision of temporary partial disability benefits other than noting Claimant was on an hourly restriction "April of 2016" through September 26, 2017.

7. Counsel for Claimant filed a Petition to Review. The Industrial Claims Appeals Office issued their Final Order on May 25, 2018. It mailed a copy of the final order to counsel for Claimant and former counsel for Respondents. The Office did not mail a copy to Employer or Insurer. Ms. Rainey testified her former counsel did not provide her with a copy of this Final Order, and she did not receive a copy until after she retained new counsel.

8. Review of the Final Order establishes ICAP increased Claimant's average weekly wage from the $508.31 to $525.92. Review of the ICAP Order does not establish any more detail with regard to the temporary partial disability benefit issue.

9. Prior to ICAP issuing its Order, on May 9, 2018 the adjuster filed a General Admission of Liability whereby she admitted to the average weekly wage as ordered by the January 25, 2018 order and retroactively paid temporary partial disability benefits from April 1, 2016 through September 18, 2017 at the temporary partial disability benefit rate of $19.66. Insurer sent Claimant a check for $1,505.87. Insurer had already paid Claimant $15,114.19 in PPD for dates January 6, 2016 through November 13, 2016. This time covered the period from April 1, 2016 through November 13, 2016.

10. On July 8, 2018, Claimant's counsel filed a new application for hearing alleging penalties. Claimant's counsel sent a copy to Respondents' former counsel but not to the adjuster. Ms. Rainey testified upon receipt of the new application for hearing, Insurer transferred the file to Respondents' new counsel. Ms. Rainey testified she reviewed the new application with new counsel and she timely filed an Amended General Admission of Liability on July 12, 2018. The Amended GAL reflected Insurer's admission to the average weekly wage as ordered by ICAP of $525.92 and payment of an additional amount in temporary partial disability benefits. The adjuster also increased Claimant's temporary total disability benefits to $350.61 per week retroactive to September 19, 2017 based upon the ICAP Order.

11. Ms. Rainey testified that on July 19, 2018, once additional wage information became available, Insurer filed a third General Admission of Liability whereby Claimant's temporary partial disability benefit rate was increased to $85.37 reflecting a total temporary partial disability benefit of $6,536.97. Insurer sent payment of that amount to Claimant.

12. Ms. Rainey testified had her former attorney provided her with the January 25, 2018 order prior to May 9, 2018, she would have made the appropriate filings and paid any amount appropriate amount due. Ms. Rainey testified if she had been provided with the May 25, 2018 ICAP order prior to July 12, 2018, she would have filed an admission and paid any amount due. Ms. Rainey testified if she had been provided with the additional information regarding hours on July 12 she would have admitted to and paid the TPD based on that information at that time.

13. The ALJ finds Ms. Rainey's testimony to be credible and persuasive.

14. The award of a penalty is not a matter of strict liability. When construing the assessment of penalties pursuant to section 8-43-304 an element of fault must be involved. Fault requires the application of a negligence standard measured by an objective standard of whether a reasonable insurer would or would not have taken a particular action under the circumstances.

15. The ALJ specifically finds the adjuster's actions in this case not "negligent." Based upon the lack of documentation provided to the adjuster a reasonable insurer would have taken the "actions" which occurred in this case.

16. Upon receipt of the specific Findings of Fact, Conclusions of Law and Order the adjuster filed the General Admission of Liability increasing the average weekly wage from the admitted average weekly wage of $507.07 to $508.31 and paid TPD benefits, which, in part, coincided with the time Insurer had paid PPD to Claimant. Upon receipt of the ICAP Order, the adjuster increased the average weekly wage from $508.31 to $525.92, again sending Claimant the requisite temporary partial disability benefit check increasing its prior payment of PPD benefits. When the adjuster received additional documentation, she filed a third General Admission of Liability and sent Claimant additional temporary partial disability benefits again increasing the amount of previously paid PPD benefits.

17. Neither party appealed the January 25, 2018 order, thus the order did not become final for purposes of imposition of liability and a duty to act by the adjuster until that order became final. The ICAP order dated May 25, 2018 became final when no party timely appealed to the Court of Appeals. Thus, for purposes of imposition of liability and a duty to act, the date began 30 days after May 25, 2018 -- on Monday June 25, 2018.

18. The ALJ finds the adjuster admitted pursuant to the ICAP order on July 12, 2018; 17 days after all appeals had been exhausted and paid the benefits based on the adjusted AWW.

19. The ALJ finds the adjuster did not know of the January 25, 2018 order until May 9, 2018 and acted promptly upon receipt. The ALJ also finds the adjuster was unaware of the May 25, 2018 ICAP order until she retained new counsel, and acted promptly upon receipt.

20. The ALJ finds the adjuster acted as a reasonable adjuster would have in similar circumstances.

21. The ALJ finds the adjuster's second and third GALs and payment of additional TPD occurred more than 30 days after all appeals had been exhausted. As such, the ALJ finds Respondents technically violated the rule and statute. However, Respondent's cured the technical violation within four to eleven days of Claimant's counsel filing its application for hearing alleging penalties, Claimant's burden of proof rose to the level of proving by clear and convincing evidence the adjuster knew or reasonably should have known she was in violation of the rule, statute and/or an ALJ's/ICAP order.

22. The ALJ finds Claimant did not establish by clear and convincing evidence the adjuster knew or reasonable should have known she was in violation because her former counsel did not provide her with a copy of the ICAP order. The ALJ finds it is not possible for an adjuster to take action when no information provided alerts the adjuster that a situation existed which required action. Therefore, no penalty is due or owed.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

An Order of an ALJ is an "order made by the Director …" *Giddings v. ICAO*, 39 P.3d 1211 (Colo. App. 2001). The imposition of a penalty under § 8-43-304(1) is

governed by an objective standard of negligence. As such, it is measured by the reasonableness of the insurer's actions and does not require knowledge that the conduct was unreasonable or in bad faith. Thus, penalties may be assessed against an insurer neglecting to take action that a reasonable insurer would take to comply with either a lawful order or provision of the Workers' Compensation Act. *Pueblo School District v. Toth*, 924 P.2d 1094 (Colo. App. 1996). Section 8-43-304(4) provides that if the violator cures the violation within 20 days of a request for the assessment of a penalty, the party requesting a penalty must establish by clear and convincing evidence the violator reasonably should have known they were in violation.

The ALJ concludes the July 12, 2018 General Admission was not filed within 30 days from the date the May 25, 2018 ICAP Final Order became final.

The ALJ concludes as a matter of law Claimant requested penalties on July 8, 2018, and as a matter of law the "violator" cured the violation within 20 days of the request for the assessment of a penalty.

The ALJ concludes as a matter of law the party requesting the penalty did not establish by clear and convincing evidence the violator reasonably should have known they were in violation. The ALJ concludes as a matter of law the "violator" in this case was not provided with a copy of the ICAP Final Order upon which a General Admission was predicated by either ICAP, Claimant's counsel or prior Respondents' counsel within 30 days from the Final Order becoming final: a condition precedent to being able to file the General Admission. Insurer paid the TPD owed based upon the January 25, 2018 Order initially on May 9 and then subsequently on July 12, and finally July 19.

No persuasive evidences supports a finding of malevolence or negligence on Respondents' part. Thus, any penalty assessed in this case would not serve to deter any future misconduct because the "misconduct" was not due to anything committed by the adjuster. Rather, Respondents' former counsel failed to provide Respondents with the specific Findings of Fact, Conclusions of Law and Order and the Final Order such that she could provide her General Admissions. Once Insurer received the Final Order, she filed admissions and paid benefits. Additionally, Claimant had already received PPD for part of the time in question.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for penalties is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

DATED: December 4, 2018

/s/ Kimberly Turnbow
Kimberly B. Turnbow,
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Have Respondents overcome, by clear and convincing evidence, the DIME opinion of Dr. Hall on the issue of causation and MMI for Claimant's right foot and cervical region?

II. Have Respondents shown, by a preponderance of the evidence, that Claimant was responsible for his own termination, thus permitting Respondents to withdraw their Admission of Liability for TTD benefits?

III. Has Claimant shown, by a preponderance of the evidence, that he should be reimbursed for the right ankle surgery performed by Dr. Maurer, and further treatment moving forward?

IV. Disfigurement for injuries to Claimant's right eyebrow and left chest area.

STIPULATION

Both parties agreed at hearing that Claimant's Average Weekly Wage is $893.83. The ALJ accepted this stipulation.

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

The Injury

1. Claimant was hired on May 13, 2016, by Employer, a landscaping company with an estimated 15 to 20 employees. (Ex. A, pg. 1). Claimant was a heavy equipment operator and by all accounts, a good employee.

2. On December 22, 2016, Claimant was in the office on an extension ladder, working on ceiling tiles. His feet were approximately 6 foot off the floor; hence his head was approximately 11 to 12 foot above floor level. His co-worker Gloria Byers ("Byers") was on the floor holding the ladder. According to Claimant, Byers had dust in her eye and stepped away from the ladder, causing it to fall. According to Employer, Claimant did not adjust the ladder correctly as he was required to do. (Ex. AA, pg. 630-632). Regardless of any fault, this is an admitted work injury, with no safety rule violation alleged.

3. Byers was the only person physically present when Claimant fell. The details of what occurred is in conflict; nonetheless, Claimant "rode" the ladder quickly

down to the uncarpeted floor. After a few seconds, Claimant attempted to get up from the ground but Byers told him to stay down. Claimant did not lose consciousness. Laura Matthews, Employer General Manager and Mike Anders, Safety-Director and Claimant's supervisor, heard the crash of the ladder from the office and ran to the scene, arriving within seconds of the fall.

4. Matthews and Anders both testified that when they arrived at the scene, Claimant was standing up, holding a paper towel above his eye brow which had a cut and was bleeding. According to Anders, he asked Claimant if he was okay, and Claimant said yes. Claimant allegedly stated he did not want medical care and he had sustained much greater injuries from MMA fighting. According to Claimant's testimony, he does not recall the fall or what happened after the fall or the drive home the day of the fall.

5. Both Byers and Matthews testified that before the injury, Claimant came to work with facial and other bruises. Claimant indicated he was bruised from an MMA fight he had participated in. According to Byers, she and Claimant were friendly. Claimant freely discussed his MMA fighting with Byers, with him discussing several MMA fights he had competed in. According to Matthews' testimony, she does not really know what MMA fighting is. Claimant testified that he never told Matthews or Byers that he was an MMA fighter and that he was present for both of their testimony and both Matthews and Byers were lying.

6. Prior to his employment with Employer, Anders worked for 30 years at CDOT as the Maintenance Superintendent and Property Manager, managing workers' compensation claims. He also worked as an Emergency Medical Technician (EMT) and a voluntary fire fighter. While he is not a medical expert, Anders testified that he had sufficient experience to recognize if Claimant's injuries were emergent or if Claimant had been lying on the ground unconscious, Anders would have immediately called 911.

7. Both Anders and Matthews testified that they discussed and agreed that Clamant should be seen for medical care even though he declined treatment at the time. According to Anders, he went to get his truck and pick up Claimant to take him to CCOM, which is an Employer designated medical provider. Claimant began walking towards the truck and opened the door and then told Anders he would be right back. Claimant was gone a short time and came back with either his cell phone or his back pack which had been in the office. During the 10 to 15-minute drive to the doctor, Anders testified he and Claimant engaged in mundane conversation. According to Anders, Claimant was responsive and did not exhibit any signs of a head injury or cognitive issues. Claimant was not stuttering, or confused, or in a 'fog'.

Medical Treatment with ATP Dr. Centi and Foot Surgeon Dr. Simpson

8. Claimant entered into evidence photographs of the cut above his right eyebrow, apparently before he had stitches to close the wound. He also displayed a bruise to his left chest marked as photos taken on December 22, 2016, the date of injury. (Ex. 22, pg. 344 and Ex. 23, pg. 345)

9. Claimant completed paperwork and was seen by Steven Byrne, PA to Dr. Thomas Centi. Anders did not go into the exam room with Claimant. Under 'patient description' of the accident, PA Byers wrote: "[patient] states the [ladder] he was working on slipped causing him to twist his ankle and hit his head on the ladder rung." Claimant's primary concern at this time was the left eyebrow laceration. He was negative for headaches. (Ex. P, pg. 216)

10. On physical examination, Claimant was alert and oriented and there was no loss of consciousness. There was some mild swelling noted over the right ankle. An X-ray revealed no acute fracture, significant osteoarthritic changes, and old fractures that healed. Claimant was given 9 stitches in his eyebrow, and told to go home and rest and to "[w]atch for signs and symptoms of head injury and if these occur to respond to the emergency room department." (Id. at 217) PA Byers released Claimant to regular work duties the following day if he did not have any complications. There were no complaints of chest injury and no exam of the chest was done. (Id. at 218)

11. Anders then drove Claimant the 10 to 15-minute drive back to Employer's office, where Anders and Claimant again engaged in conversation until Claimant got into his truck at the office and drove home. At no time during the drive to or from the physician's office did Claimant show any signs of being fuzzy or forgetful, or complain of headaches. Nor did he display any signs of a traumatic brain injury, head injury, or memory loss to Anders, except for the cut above his eye.

12. Claimant returned to work the following day with no restrictions. He filled out and signed an "Employee Incident Form" in his own handwriting. He stated that he fell approximately 6 to 8 feet from an extension ladder. When asked to indicate any injuries on the pain diagram, Claimant stated "10 stitches to the left upper orbital, ankle injury to right side left upper chest." Claimant also marked on the body diagram his left eyebrow, right ankle and left chest to indicate his injuries. Claimant made no marks to indicate injury to his head or neck. (Ex. AA, p. 643)

13. Claimant worked the full day on December 23, 2016, working on inside improvements and loading trucks. (Ex. AA, pp. 676-677; Ex. BB, p. 696). On December 26, 2016, Claimant told Matthews he was going to go to Salida, and ski Monarch for New Years. According to Matthews, Claimant indicated that he could probably snowboard because a snowboard boot is enough support. Matthews advised Clamant

against trying to snowboard because he could cause further injury to his foot. (Ex. BB, p. 696)

14. On December 29, 2016, Claimant saw Dr. Centi for left chest pain, to have his stitches removed from the left eyebrow and right ankle pain and swelling. Claimant was again negative for headaches, and his neurological exam was normal. There were no abrasions or bruising noted to be on Claimant's face. There was no abrasion, swelling, erythema or rash present on Claimant's chest although Dr. Centi documented "*moderate ecchymosis"* to the left anterior chest wall with noted tenderness." (Ex. P, pp. 220 - 221) Dr. Centi restricted Claimant to modified duty, with restrictions of sitting 50% of the time, no climbing ladders or scaffolds, no lifting/carrying greater than 10 pounds and no pushing/pulling greater than 10 pounds. (Id. at 221)

15. On December 31, 2016, Claimant posted a photo of himself and another person on Facebook with a caption that reads: "Having fun in Salida with my wife brother sister in law and family I wish I could ski tomorrow but had an ankle injury dammit." (Ex. BB, p. 697)

16. By January 5, 2017, Dr. Centi reported that Claimant's eyebrow and face were doing "fine" and the chest wall was somewhat tender. Dr. Centi documented that the right ankle hurts and Claimant: "says that it seems to be constant. It is improved with medications. He feels it is improving slightly, ankle is the most problematic body part now." Claimant was negative for headaches. (Ex. P, p. 222) On exam, bruising was not present on the right ankle, but Dr. Centi documented decreased range of motion with dorsiflexion and plantar flexion and pain with inversion. There was no bruising or swelling to the face and the face wound was documented as healed. To the chest, Dr. Centi documented that bruising and erythema were not present but that to the chest wall claimant had "*mild ecchymosis and resolving, mildly tender anterior chest wall.*" (Ex. P, p. 223).

17. On January 12, 2017, Dr. Centi reported Claimant's primary problem was the right ankle and chest wall. Claimant was negative for headaches. (Ex. P, p. 224) There was no bruising to the face or chest but for the right ankle, "moderate edema, *resolving ecchymosis",* tenderness and loss of ROM were present. (Id. at 225). Dr. Centi referred Clamant for a right ankle MRI.

18. On January 19, 2017, Claimant had moderate right ankle pain, and the ankle was still swollen. Claimant was negative for headaches. Dr. Centi again noted that Claimant's ankle MRI was scheduled for January 24, 2017. Dr. Centi anticipated MMI on February 9, 2017.

19. On January 26, 2017, Dr. Centi reported Claimant's right ankle pain complaints as some progress with PT, but Claimant still had pain and bruising and the pain was often worse at the end of the work week. Claimant felt the ankle was

improving slightly. Claimant was negative for headaches and that Claimant "appeared to be healthy." Dr. Centi reported that the MRI showed an occult fracture to the ankle and he made an orthopedic referral to Alex Simpson, M.D. (Ex. P, pp. 235-236)

20. On February 3, 2017, Claimant was seen by Dr. Simpson, who documented that Claimant stated he injured his right ladder falling off a ladder 12/22/16. Clamant "states he is having minor pain today." (Ex. Q p. 243) Dr. Simpson documented that Claimant was having no back, chest or arm pain and that claimant reported "*no loss of consciousness* no weakness no numbness no seizures and *no headaches.* He reports no depression no sleep disturbances feeling safe in relationships . . .". As to psychiatric, Dr. Simpson documented*: "oriented to time and place and person Mood and Affect normal mood and affect and active and alert*." (Id. at 244) (emphasis added).

The 'Boot Incident'

21. During the February 3rd visit, Dr. Simpson ruled out ankle surgery; instead he noted:

This will just take time to feel better. I would recommend an ankle boot to allow the ankle to rest while he weightbears. *I would ask that his job accommodate his working with the boot on.* I would anticipate the boot be worn for six weeks. At that point we can transition to a lace up ankle brace plus or minus physical therapy. ***He does understand and agree.*** We will reach out to his Workers Comp team and let them know. (Ex. Q, pg. 245) (emphasis added).

22. Claimant, according to Matthews, called her from his cell phone on February 3, 2017 and told her that Dr. Simpson told him he was not to return to work for 6 weeks because Dr. Centi wanted Claimant's foot to heal. Claimant said nothing about the boot to her. (Ex. BB, p. 698) Matthews then emailed Dean Byers ("Byers"), who handles Employer WC claims and told him that Claimant went to the specialist today and "he's ordered him off duty for 6 weeks . . . just seems really out of the ordinary, but I've never dealt with this situation before so please let me know your thoughts." (Ex. BB, p. 698).

23. Claimant admitted that he called Matthews but claimed he told her that Dr. Simpson was only taking him off from work for "a day or two" not 6 weeks so that his foot could heal. According to Claimant, who was present during Matthews' testimony, Matthews was lying.

24. On February 8, 2017, Dr. Centi told Employer that the reason Dr. Simpson took Claimant off from work was that Claimant told Dr. Simpson that Employer would not allow him to work in a boot. (Ex. BB, p. 698)

25. On February 9, 2017, Claimant was seen by Dr. Centi who released him back to work with restrictions. In response, Claimant said he could not return to work because Dr. Simpson took him off of work. Dr. Centi told Claimant that he spoke with Dr. Simpson and it was agreed that Claimant could return to work because wearing the boot was not an issue with Employer. According to Dr. Centi, at this point Claimant became very confrontational with Dr. Centi, and told him that he had no right to speak with Dr. Simpson. Claimant used profanity at Dr. Centi and jumped down off the exam table and was pointing in his face yelling this is "wrong" this is "bullshit." (Ex. P, p. 238). As a result of this incident, Claimant's care was transferred to a new provider, Dr. Lakin. According to Dr. Centi's notes, the internal protocol at CCOM was not to assign a new ATP within CCOM; rather to assign Claimant to a new group entirely.

26. Matthews was in Dr. Centi's reception area on February 9, 2017, to discuss modified duty with Dr. Centi when Claimant came out from the exam area and into the front reception area, apparently without noticing Matthews' presence. Claimant was very upset and said to the front receptionist: "can you believe he's making be go back to work . . . . that's a bunch of shit, and carried on for quite some time to the receptionist." According to Matthews, Claimant got very confrontational with her, and he stated he won't go back to work and it is "hostile with Mike." Matthews responded by telling Claimant she was there to see Dr. Centi and it was not appropriate to discuss another employee in the waiting room. After Claimant left, Matthews met with Dr. Centi, who said that when he told Claimant he could go back to work, claimant became aggressive and began to use foul language towards him. (Ex. BB, p. 696)

27. At hearing, Claimant testified that Dr. Centi and Matthews were lying. The receptionist incident never happened. The confrontation with Dr. Centi admittedly happened, but according to Claimant he was angry because each and every time he saw Dr. Centi and his PA on that first visit, from 12/22/16 to 2/9/17, he told both the PA and Dr. Centi that he had four additional medical problems: headaches, neck pain, memory loss and fogginess. During each visit, Claimant contends that Dr. Centi responded by telling him he would not address those complaints because he wanted to treat "one thing at a time." Claimant claims his frustration with Dr. Centi had nothing to do with "the boot incident" or Dr. Centi releasing claimant back to work. Instead, it was the result of Dr. Centi ignoring his repeated complaints of headaches, neck pain, memory loss and fogginess.

Dr. Centi

28. Dr. Centi testified that Claimant did not complain of headaches, neck pain, memory loss and fogginess at all during the entire time he treated Claimant from his first visit with the PA on 12/22/16 until the 2/9/17 'boot incident'. Had Claimant complained of any of these symptoms, Dr. Centi would have not only documented those complaints, he would have treated them. He did not forget to document repeated complaints of headaches, neck pain, memory loss and fogginess. Nor did he refuse to treat those

complaints because he was too busy focused on the stitches in Claimant's eye, the chest bruise and the ankle fracture. Dr. Centi stated he would have treated these other symptoms, immediately, as he would never ignore symptoms of a potential brain or head injury for any patient. Dr. Centi also testified that claimant confronted and yelled at him specifically about his releasing Claimant to modified duty. At no time did Claimant yell or confront him about his purported refusal to treat Claimant's headaches, neck pain, memory loss and/or fogginess.

29. During the third day of hearing (after Dr. Centi had testified), Claimant submitted into evidence a "Visit Summary for Employer" dated 2/9/17. (Claimant's Ex. 24) This Summary includes a diagnosis of "head contussion [sic] headaches." [It is not clear to the ALJ if the reference is to "*contusion*" or "*concussion*."] Dr. Centi testified that an "Employer Visit Summary" is a printout out by the receptionist and handed to the Claimant at the end of a visit that the receptionist later sends to Employer because it contains his work restrictions.

30. Claimant testified at hearing that after he left Dr. Centi's office on 2/9/17 following the confrontation, he returned 2 hours later because he realized he had left the appointment without the "Employer Visit Summary." When he arrived at the office, he asked Dr. Centi's receptionist for the 'Employer Visit Summary' and she gave the record it to Claimant. According to Claimant's testimony, he noticed during the hearing that this record was missing, so he went home and got his copy of the record, which was later submitted into evidence.

31. As Dr. Moe later testified when asked about the significance of the record, it could mean that Claimant had a headache on that day, 2/9/17, and the record showed that Dr. Centi documented claimant's headache on the one day that Claimant had a headache. Or, Dr. Moe explained, it could mean when Claimant returned to Dr. Centi's office hours after the confrontation and asked for the Employer Visit Summary sheet he demanded that "headaches" be documented in the record, and the receptionist (or Dr. Centi) may have written down anything Claimant said 'just to get rid of him', given the nature of the confrontation that day. By this time, Claimant's care has been transferred to another medical provider. This record makes no mention of the Claimant's complaints of neck pain, memory loss or fogginess.

Other Medical Providers

32. Dr. Maurer documented that claimant was "negative for headaches" and "negative for neck pain" on each of his visits: December 29, 2017 (Ex. W, pg. 500), January 15, 2018 (Id. at 505), May 14, 2018 (Id. at 516), July 13, 2018 (Id. pg. 524), August 1, 2018 (Id. at 528). During each of these visits, Dr. Maurer documented that claimant was "alert and oriented x 3" and "in no acute distress" and "[m]ood and affect within normal limits. (Id. at 494, 500, 505, 516, 520, 524, 528). During each visit, Dr. Maurer documented what Claimant told him, and what Dr. Maurer told Claimant.

According to Dr. Maurer, Claimant understood. At no time did Dr. Maurer document fogginess, stuttering, confusion, memory loss or any other cognitive symptoms.

33. Claimant was seen by Dr. Simpson twice. The first time, February 3, 2017, Dr. Simpson documented that Claimant reports "no muscle weakness and no back pain" And, "no headaches. He reports no depression no sleep disturbances feeling safe in relationship. He reports no fatigue. [O]riented to time and place and person. Mood and Affect normal mood and effect and active and alert." No neck pain or cognitive symptoms were documented. (Ex. Q, pg. 244). The second encounter on March 15, 2017, Dr. Simpson reported that Claimant "states his ankle is feeling very badly . . . and his work has been really bad about his time off." And, Claimant "reports no weakness, no numbness, no seizures, no dizziness and no headaches. He reports no depression . . . no fatigue." (Ex. Q, p. 249).

34. Claimant's pain complaints to Dr. Castrejon (Claimants IME Physician), did not include any psychological injury, cognitive symptoms, memory loss, confusion, stuttering, or things such as forgetting music lyrics. (Ex M, p. 134). During Dr. Castrejon's exam, on September 13, 2017, Claimant was "in no acute distress. He is alert and oriented." (Ex. M, p. 134.)

Claimant's Employment, from DOI to 'Boot Incident'

35. From December 23, 2016 through February 6, 2017, Claimant was able to work his pre-injury job full time, operating a front-end loader. On direct examination, claimant suggested that Employer did not honor his work restrictions because Dr. Centi had given Claimant restrictions of no climbing ladders or scaffolding. Claimant originally testified that climbing up and down the "ladder" to get in and out of the front end loader was a violation of his restrictions. On cross-examination, Claimant admitted that while Dr. Centi did give him a 'no ladder' restriction, Dr. Centi also stated that Claimant "is able to climb in and out of *loader*." (Ex. P, p. 226)

36. Anders, Matthews, Byers and Dean all testified that Claimant's demeanor was no different during this time period than it was prior to the work injury. Claimant did not appear to be in a fog or a daze. Claimant did not act confused or experience memory loss. He did not complain of headaches, or stutter, nor was he forgetful. Claimant did not call in sick, or come in late, or leave early due to pain or injury. Robert Santiago ["Santiago"] and Edrick Chavez ["Chavez"] provided no testimony of Claimant's purported memory loss, dizziness, fogginess, confusion or any cognitive symptoms.

37. During this time period, there was one incident that occurred between Employer and Claimant. According to Matthews, On January 13, 2017 (before the ankle MRI), Claimant went to Matthews' office complaining that the physical therapist did not read his file, and moved his ankle in a way that was very painful. When Claimant told

him to stop, the therapist read the file and said "well no wonder" [and Claimant] said it was terribly painful and caused a lot of bruising and now they want to do an MRI." (Ex. BB, p. 697)

38. Following this incident, Burns went to Claimant's next appointment with Dr. Centi. Burns testified he went to advocate for Claimant, and make sure Dr. Centi was aware of the incident with the PT. After that appointment, Claimant told Matthews he was upset and that Burns said it was "suspect" that he would not allow him to go in the exam room with Dr. Centi for the exam. Matthews called Burns, with Claimant in her office, to discuss this incident. Burns apologized and said there was a miscommunication because he did not recall saying "that was very suspect." Claimant apologized for becoming upset and said he may have overreacted. (Ex. BB, p. 697) Both Matthews and Burns testified about this incident, with Burns explaining that Claimant knew Burns was going with him and he also knew it was because of the PT incident. Burns attends medical appointments with other injured workers when needed, because it is part of his job to do so. At hearing, Claimant denied saying he "may have overreacted", and he contends that both Burns and Matthews lied about this under oath.

Terrance Lakin, M.D. - Claimant's New ATP

39. At hearing, Dr. Primack explained that Claimant's medical treatment and diagnoses changed so “dramatically" after Claimant began treating with Dr. Lakin, it's as if the pre-and post-Dr. Lakin records indicate two claims with two different claimants.

40. After his last visit with Dr. Centi on February 7, 2017, Claimant did not return to work until mid-March 2017. During that time frame Claimant did not obtain medical treatment for his any cognitive symptoms, memory loss, amnesia, headaches or neck/arm pain.

41. Claimant was first seen by Dr. Lakin on March 1, 2017. During that initial visit, Dr. Lakin documented "WC accidental fall from a ladder", "*WC concussion with loss of consciousness of 30 minutes or less*." (Ex R, pp. 251 & 253) (emphasis added). Dr. Lakin repeats that there was a ‘Loss of Consciousness’ (“LOC”) for ‘30 minutes or less’ throughout his entire treatment of Claimant. (Ex. R). On the March 17, 2017, visit, Dr. Lakin took a "history of illness" and reported that *claimant presents with a "head, neck and chest injury. The symptoms began on 12/22/16. On a scale of 1 to 10, the intensity is described as a 7."* (Ex. R, pgs. 255 & 270) (emphasis added). This is repeated in Dr. Lakin's records. Both the ‘LOC for 30 minutes or less’ and the purportedly immediate onset of head, neck and cognitive complaints beginning on the DOI to continuing are also repeated by other providers for the remainder of this claim.

42. On March 23, 2017, Dr. Lakin reported that claimant "*complains of neck pain with hand paresthesias, headache, and cognitive changes since a fall at work 12/22/16."* Dr. Lakin states that Claimant does not recall much of the fall or much of that

day. He does not recall driving home that evening and has had several patches of memory loss for more than 24 hours. He has some amnesia about his evaluation and care at CCOM with Dr. Centi. (Ex. R, pp. 259 & 276) Claimant also told Dr. Lakin that his "headaches now since the fall are different, and that he has them 3 times per week. (Id. at 257, 267). Claimant's complaints expanded to numbness in both hands and feet, ringing into the left ear and pain in the mid-back where moving his neck or shoulders aggravate the pain and pain in the low back. (Ex. R, pp. 271-272)

43. It is unclear if Dr. Lakin reviewed any medical records from Dr. Centi during this time. Dr. Lakin referred Claimant for a brain and cervical MRI. Both were normal. (Ex. R, p. 273). He also referred him to Mr. Beaver for cognitive behavioral therapy,

44. On March 13, 2017, Claimant returned to modified duty in a clerical job approved by Dr. Centi. Matthews spoke to Claimant about her concerns of how he behaved toward in the reception area of Dr. Centi's office after the 'boot incident', and his claim that Mike Anders was hostile. According to her notes, Claimant told Matthews that he was just very frustrated that day, and that down the road he would "like to get with Mike [Anders] and get things right again." (Ex. BB, p. 702). Claimant testified that he did not have this conversation with Matthews and that Matthews was lying.

45. By March 29, 2017, Dr. Lakin noted that Claimant was seeing Dr. Staudenmayer for traumatic brain injury, and that Claimant was reporting poor sleep, decreased memory loss (forgets tasks at work and sometimes when he's driving.) (Id. at 277). By April 6, 2017, Dr. Lakin diagnosed cervicalgia, traumatic brain injury, vertigo, and a left chest wall contusion with a firm mass behind the left nipple. (Id. at 285)

46. Dr. Lakin sent Claimant to Dr. Caughfield for cervical injections and to Dr. Townsend, a neuropsychologist, and to Dr. Johnson for his left chest hematoma. (Ex. R, pg. 297) By May 16, 2017, Claimant continued to complain of neck and right ankle pain, and now also upper and low back pain. (Id. at 308)

47. Claimant was seen by Lisa M. Townsend, PsyD. on May 4, 2017, for a neuropsychological evaluation. Claimant reported to Dr. Townsend that he had a loss of consciousness, with amnesia, following a fall from a ladder. (Ex. T, p. 458). Dr. Townsend confirmed that *"medical notes obtained from Dr. Lakin's office support [claimant's] complaints of concussion."* (Ex. T, p. 458). Her overall impression was concussion with loss of consciousness less than 30 minutes, supported by Dr. Lakin and Claimant's "chief complaint" of "4 months of short-term memory loss" *since the 12/22/16 DOI*. (Id. at 461) Dr. Townsend could not explain claimant's stuttering. (Id.) Dr. Townsend ruled out post concussive syndrome (Ex. R, pg.309) and also ruled out traumatic brain injury (Ex. T, pg. 462)

48. On June 23, 2017, Dr. Lakin took Claimant off from work entirely because of Dr. Staudenmaier's recommendation that Claimant should not return to Employer's hostile work environment. (Ex R, p. 324). Insurer began paying TTD to Claimant as of June 23, 2017, because he was taken off from work, and no longer working modified duty. (Ex. B, p. 5)

49. On July 23, 2017, Dr. Lakin finally reviewed Dr. Centi's medical records. After doing so, Dr. Lakin changed his work related medical diagnoses to including only a cut above the eyebrow, ankle fracture and chest injury. He then opined that the neck, headaches, and cognitive complaints were not work related. Dr. Lakin also opined that if Claimant had a concussion (based upon Claimant's reported mechanism of injury), any symptoms had been resolved, based upon how functional he was on Dr. Centi's exams and the objective data which ruled out traumatic brain injury.

50. Dr. Lakin also explained that Claimant had denied having any pre-existing psychological conditions or taking any psych medication. Before the DOI, Dr. Lakin saw Claimant in March 2013 for a pre-employment physical examination. At this exam, Claimant denied pre-existing injury, including psych treatment. Dr. Lakin later discovered that Claimant had significant injuries with a prior right ankle tear in 2008 and a right hand injury in 2003. He was also on multiple medications prior to 12/22/16, including Adderall, Clonazapam, Suboxone, Lamictal, Belsomra and Mertazipine. Dr. Lakin noted, in response to inquiries:

> It is therefore highly suspected that he [Claimant] was not reporting conditions and medications truthfully and that he was wrongly medically qualified to work in a potentially hazardous job that he may have put himself and others at undue risk in a hazardous workplace. (Ex. R, pg. 345).

Claimant had been on Suboxone and Clonazepam for several years prior to the work injury. He was also taking Lamictal secondary to bipolar disorder and Adderall for his ADHD. (Ex. K, p. 102)

51. Dr. Lakin opined that Claimant would reach MMI after recovery from his chest wall hematoma excision, but that he was already at MMI for his right ankle as of July 23, 2017. (Ex. R, p. 346). This chest wall surgery was scheduled with Dr. Johnson for August 15, 2017. (Ex. R, p. 350

52. On August 4, 2017, Dr. Lakin reported that he talked to Dr. Staudenmayer on the phone that day. Dr. Staudenmayer "was adamant [sic] that patient can not return to the current employer due to a supervisor that is *inappropriate causing* the patient significant anxiety." (Ex. R, p. 354). Dr. Lakin, therefore, relying upon this recommendation, continued to keep Claimant off work. Dr. Staudenmayer later testified at hearing that the above-referenced supervisor was Tracy Matthews.

53. On August 15, 2017, Dr. Johnson removed the mass from Claimant's chest. He documented that Claimant, "who previously suffered a contusion to the left chest wall and was found to have a persistent pain mass in the subareolar of his left breast. Differential diagnosis was . . . hematoma and therefore the patient requested excision of the soft tissue mass." (Ex. U, p. 481).

54. Dr. Lakin placed Claimant at MMI September 27, 2017 with a 15% scheduled impairment for his right ankle/foot. Dr. Lakin detailed the treatment Claimant had and recommended medical maintenance with Dr. Staudenmayer for up to 6 more visits in 6 months. He was also to follow up with Dr. Clark Johnson, Podiatry for his right ankle follow up every 6 months if needed, conservative care with injections and braces and evaluation and consideration for arthroscopy if needed in 10-15 years.

55. In his MMI report, Dr. Lakin addressed Claimant's claim that he has difficulty concentrating, gets confused easily and has trouble forgetting words to songs he has written. Claimant reported being in a band and now music purportedly created headaches. Noise and lights from the band led to confusion and headaches and bright lights also supposedly gave Claimant a headache. (Ex. R, pp. 394-401)

56. On the date of MMI, 9/29/17, Claimant completed a pain diagram, similar to the one he had completed for Employer on 12/23/16, the day after his injury. This time he marked his head, both shoulders, his neck, his entire spine and his right ankle. (Id. at 405)

57. On October 24, 2017, Insurer filed a Final admission of Liability consistent with the opinions of Dr. Lakin, thereby terminating TTD as of September 26, 2017. (Ex. B, p. 5) On November 22, 2017, Claimant applied for a DIME for the right ankle, chest, neck and head. (Ex. C, p. 24).

DIME by Dr. Hall

58. Claimant underwent a DIME with Dr. Hall on January 22, 2018. Dr. Hall diagnosed post concussive syndrome with ongoing cognitive symptoms and dizziness, post concussive headaches vs. cervicogenic headache, forehead laceration, healed, neck pain, left breast contusion doing well, upper extremity symptoms and right ankle talus fracture. (Ex. J, p. 92). Dr. Hall opined that Claimant was not at MMI. In order to reach MMI, Claimant needed foot surgery with Dr. Maurer, facet work and consideration of rhizotomy, neuromuscular therapies to treat the neck and arm pain. (Ex. J, p. 93)

59. Dr. Hall did not opine that Claimant had a work related psychological injury, or that he needed any treatment of any kind for any psych condition, including PTSD from the sight of ladders. Nor did Dr. Hall opine that Claimant had a work related psychological condition of any kind. (Ex. J).

60. Dr. Hall's mechanism of injury is that Claimant hit the ground full force and twisted his ankle after falling 12 feet from a ladder. (Ex. J. p. 84) Claimant could not remember any details about the fall and only awakened up to his wife at home. Dr. Hall went through the mechanism of injury with Claimant who stated that he was "foggy" after the fall and "the fog has never lifted" after he fell 12 feet. "At least his face was almost that high and 'face-planted.'" (Ex. J, pp. 91-92)

61. According to Dr. Hall, based upon his conversations with Claimant and review of records, Claimant had a concussion with headaches and neck pain ever since the fall. Cognitively, Claimant is forgetful, cannot remember things, and has trouble word finding and explaining things. He loses track of his thought and has slurred speech.

62. Dr. Hall stated that "[u]nder the care of Alex Simpson, orthopedic surgeon," [Claimant] "was having headaches three times per week originating in the left eye, very sharp 8 to 10 pain level. (Ex. M, p. 88). Yet, Dr. Simpson documented that Claimant had no headaches during his evaluations of claimant. (Ex. Q, pp. 244, 249).

63. Dr. Hall relied upon a note from Dr. Staudenmayer, who diagnosed adjustment disorder, somatic symptom disorder with predominant pain and neuro-cognitive disorder "*due to traumatic brain injury."* (Ex. J, p. 89) Dr. Hall appears to have relied upon Dr. Staudenmayer's conclusion that Claimant could not return to work for Employer due to a supervisor that is inappropriate, causing Claimant significant anxiety. (Id. at 90)

64. Dr. Hall opined that Claimant has a work related neck injury with arm symptoms because "I can [sic] imagine how anybody could fall as this man did, lacerate his eye, have a contusion to his chest, and not have neck pain."

65. Dr. Hall did address Dr. Primack's original IME report. Therein, Dr. Primack opined that Claimant's neck complaints were not work-related. Citing Dr. Primack's original IME report, Dr. Hall stated that "Dr. Primack's "opinion seems to be based upon the fact that the record does not report/documented neck pain from 12/22/16 to 2/3/17." According to Dr. Hall, "this habit of drawing opinions from the record is fraught with difficulty. We are absolutely at the mercy of those doing the documenting. I have seen many records that simply do not document symptoms in an area especially where there are concomitant injuries that are taking up space. It is my opinion that his neck symptoms and arm symptoms are the direct consequence of the accident. (Ex. M, p. 93).

66. According to Dr. Centi's testimony, he did not fail to document Claimant's complaints of neck pain. Nor was he too busy treating Claimant's foot, eye and chest to pay attention to and treat claimant's neck pain-or headaches or cognitive complaints.

He did not document or treat complaints of neck pain, headaches or cognitive complaints because Claimant did not report those complaints to him.

67. Dr. Hall opined that Claimant's headaches were either the result of the concussion and the head injury, or they relate to claimant's neck injury. Dr. Hall testified in his deposition that: "I think he had a concussion when he fell and has had ongoing cognitive symptoms and reports of dizziness which are consistent and common symptoms of concussion. He got this headache, which is simply either a headache because you hit your head. It's really not that interesting a diagnosis. Or he could have cervicogenic headache, meaning the headache could be coming from the neck." (Ex. H, p. 51.

68. According to Dr. Hall, when he conducts a DIME, he interviews the Claimant to get his input and then he also reviews medical records to "iron [the discrepancies] out. And "so you weigh both sides of the coin . . . and we're stuck with the job of resolving the point of contention. So, by definition, that's what you do in a Division IME." (Ex. H, p. 52).

69. Dr. Hall testified that during the DIME, Claimant had "cervical range of motion limited in all planes." (Ex. H, p. 50). When Claimant saw Dr. Castrejon September 17, 2017, Dr. Castrejon reported that: "[e]xamination of the cervical spine reveals full range of motion, with the exception of mild decrease in right rotation and left rotation being limited by pain." (Ex. M, p. 134)

70. Dr. Hall admitted at his deposition that he was not aware Claimant had a pre-existing ankle/foot condition, or that he underwent surgery known as the Brostrom procedure. During his deposition, Dr. Hall had to "Google" 'Brostrom procedure' and testified afterwards that: "the patient had ankle reconstruction in 2008. So that's, I suppose, a type of ankle reconstruction." (Ex. H, p. 54).

71. During his deposition, Dr. Hall reviewed the 14-minute surveillance video. According to Dr. Hall, there is nothing in the video that would be inconsistent with the need for ankle surgery because Claimant did not "push off his right ankle. He sort of falls off his right foot onto his left." And, Claimant has never claimed "he could not walk." While Dr. Hall saw claimant crouch down he did not address that according to both Dr. Primack and Dr. Lakin it is the act of crouching down that demonstrates Claimant does not need ankle surgery.

72. Dr. Hall acknowledged that he did not correlate Claimant's level of functioning as documented in the medical records during the time the surveillance was taken and Claimant's level of functioning in the surveillance itself.

73. Dr. Castrejon reported that he did not review the initial emergency room records. As Dr. Primack explained, given the wrong mechanism of injury documented

by Dr. Castrejon, it was natural that Dr. Castrejon assumed that Claimant had gone to the emergency room. Dr. Castrejon also admitted that he did not review any medical records from the December 22, 2016 DOI through February 3, 2017, because he did not have them. He expressly retained the right to change his opinions once he received these initial treatment records. [The ALJ notes there is no record of this actually occurring].

74. Dr. Castrejon nevertheless opined that: "based solely upon the mechanism and the injuries sustained" (as stated in the records he did review) it is medically probable that Claimant sustained a LOC that has not left behind any neurological residuals but that the head injury resulted in post concussive headaches which remain symptomatic. According to Dr. Castrejon, Claimant carries a diagnosis of post concussive headaches. Again, Dr. Castrejon "requested clarification" to review the medical records, including the emergency room record, that he admittedly does not have that may *"alter [his] opinion regarding causation*" (Ex. M, pg. 142) (emphasis added)

75. Dr. Hall admitted there are no records that he reviewed that are consistent with Claimant having had a concussion. Dr. Hall did not know how Claimant traveled for medical care on the DOI. Dr. Hall admitted that there is no objective evidence that Claimant had a concussion post fall. When asked "what evidence do you have that you rely upon in your belief that Claimant had a concussion," Dr. Hall testified: "*Others mentioned it as a diagnosis along the way."* When asked "what 'others'," Dr. Hall testified: Dr. Castrejon had some mention of some potential concussive symptoms after the fall, and he brings up the concussion idea. That's a couple of mentions prior to him seeing me." (Ex. H, p. 55). When asked if he knew whether or not Dr. Castrejon actually reviewed any of Claimant's medical records immediately after the fall, Dr. Hall testified: "I can't tell you right now exactly what Dr. Castrejon reviewed but he's usually pretty thorough." (Id. at 55).

76. According to his deposition testimony, the other basis for Dr. Hall's opinion that Claimant had a concussion is that: "I recall it being in one on Dr. Lakin's reports." (Ex. H. pg. 55). Dr. Lakin's final opinion is that even if Claimant had a concussion initially, any symptoms had resolved based upon Claimant's level of functioning during his treatment with Dr. Centi. Claimant's injuries, according to Dr. Lakin, are the eyebrow cut that needed stitches, the foot/ankle injury for which no additional treatment is needed and a chest bruise with hematoma. When asked if he knew Dr. Lakin's current opinion is with respect to concussion, Dr. Hall first testified "no" and then said "Oh, wait a minute. I do know it. He doesn't think he had a concussion. When asked if he knew why Dr. Lakin now believes that Claimant did not have a concussion, Dr. Hall testified: "No." (Ex. H, pp. 55-56)

Dr. Primack

77. Claimant underwent an initial IME with Scott J. Primack, D.O., on June 12, 2017. Dr. Primack performed a medical records review. Dr. Primack teaches for the Colorado Division of Labor regarding "causality" determinations for work injuries. Dr. Primack explained the five steps to determining causality are mechanism of injury ("MOA") or exposure, diagnosis, intervening factors, medical literature and probability. The MOA/exposure is "critical" per the Level II teachings in assessing causality of a work related diagnosis. Medical record review and medical history and the correlation of the medical records and objective findings to claimant's subjective complaints and level of functioning are essential to determining causation and impairment for any Level II accredited physician, including a DIME physician.

78. Dr. Primak feels that this is a case where Dr. Hall did not comply with the five steps of causality. Nor did he review the complete medical record. Instead, the bases for his opinions stem from Claimant's subjective complaints that Dr. Hall failed to correlate with the medical records and then identify or explain the discrepancies. Dr. Lakin agreed that Dr. Hall's DIME opinions are wrong and that Dr. Hall's "most glaring error is that he is assuming the MOI to have caused injury, or using Correlation and not analysis of Causation." (Ex. R, p. 422). The delay in reporting cervical and cognitive complaints, the reliability of claimant in reporting history, the lack of objective findings and electrodiagnostic findings to correlate with Claimant's reported upper extremity complaints and the very obvious inconsistency of Claimant's reported pain and poor functionality verses that observed on video. (Id. at 423). As Dr. Primack explained, Dr. Hall's failure to correlate and explain these inconsistencies does not comply with the Level II accredited teachings that DIME physicians are required to comply with when performing a DIME and rendering a DIME opinion.

79. Dr. Primack explained that there is absolutely no mention made of any neck problems from 12/22/16 through 2/3/17. Claimant told Dr. Primack that he had immediate neck pain after the initial injury on 12/22/16. Claimant's cervical MRI demonstrated stenosis without any acute component to his injury. Claimant gave a different history to Dr. Lakin in late February 2017. A work related cervical injury is not consistent with the diagnosis of stenosis or the timeline from the initial mechanism of injury and also does not correlate with the medical records. The medical literature also does not support Claimant having neck symptoms 8 weeks following the initial injury. (Ex. K at 103). Dr. Primack also explained that there is absolutely no component of retrograde amnesia for the first 6 weeks following the fall. Issues regarding initial confusion and loss of cognition would be apparent and reported within the first 6 weeks, Claimant's neuropsychological testing ruled out TBI. (Ex. K, p. 103) Treatment for Claimant's cognition, cervical spine and headaches are not work related. Dr. Primack believed at the time that Claimant sustained a 6% impairment of the lower extremity and that Claimant was at MMI.

80. Dr. Lakin retracted the diagnoses that Dr. Hall relied upon for his DIME because there is no significant objective evidence or imaging of a head or cognitive injury, nor is there any support of these injuries in the neuropsychological testing. Claimant's reported symptoms are very subjective, lack support, and are more likely related to unrelated psychiatric diagnoses or associated medications that Dr. Hall does not take into consideration because he does not appear to be aware of them. (Id. at 422). And, if he did consider him, Dr. Hall did not address them or correlate them with Claimant's subjective cognitive complaints from the work injury, as he was required to do.

81. With regard to the neck, Dr. Lakin reiterated that a neck injury beyond myofascial tightness by exacerbation of pre-existing disease is not supported by Claimant's lack of reporting neck pain for several months (after he reviewed Dr. Centi's records from the 12/22/16 DOI to 2/9/17) and is greatly refuted by Claimant's high level of function, demonstrated range of motion and lack of symptoms on surveillance video. (Ex. R, p. 422)

82. On May 25, 2018, Dr. Centi agreed that the surveillance video shows Claimant's ankle is stable as of the date of the video and that no further treatment to the ankle/foot, including surgery, is needed. Dr. Centi also opined that Dr. Hall's DIME opinions are wrong and that Claimant was at MMI on September 27, 2017, for the work injury consisting of cut above the eye brow, chest contusion with hematoma and right ankle fracture.

83. On the 4/30/17 surveillance, Claimant was able to ambulate without any type of antalgic gait pattern. He was able to ascend and descend stairs. He was able to crouch in hyper-dorsiflexion at the ankles which places a high amount of load/force going through the ankle/subtalar joint area. He was also able to stoop into his truck and lift a tire out with one arm. After watching the surveillance and correlating Claimant's level of functioning with Claimant's medical records, Dr. Primack explained that the surveillance merely reiterated his opinion that there was no neck injury.

84. Dr. Lakin responded that he stands by his determination that Claimant reached MMI on September 27, 2017, with 15% right ankle impairment. In addition, Dr. Lakin changed his original opinion regarding medical maintenance to include consideration of surgical intervention for the right ankle. That opinion, according to Dr. Lakin, was no longer supported as Claimant demonstrated full function of his right ankle on video surveillance taken April 30, 2017, "*at the height of his symptoms and 4-5 months from his injury."* Claimant demonstrated ability to fully squat down for nearly 3 minutes while changing a vehicle license plate. The amount of stress placed on his right ankle, if he had persistent issues with it, would be more than enough to cause some modification of the position such as sitting down or kneeling rather than maintaining a squat position with pressure on the ankle. Even with an ankle brace and/or pain medications, one would likely conclude that if there was any significant pathology

limiting function, that he would have had some pain and antalgic gait following this task. Nothing of the sort was evident on video." (Ex. R, pp. 421-422)

85. After engaging in a causality determination and conducting an extensive records review, including watching the surveillance video and comparing Claimant's alleged level of functioning documented in the medical notes vs. vs. Claimant's level of functioning when he is now aware he is being videotaped, during the same period of time, Dr. Primack was "somewhat in shock." He concluded that "it is clear that Mr. Marez is consciously misrepresenting himself, which one would see as malingering. This finding is also correlated with the dramatic change in history and clinical findings from 2/9/17 to Dr. Lakin's initial visit on 2/28/17." (Ex. K, p. 117).

86. After Dr. Lakin also reviewed extensive medical and other records, including the DIME report of Dr. Hall, the medical records from Dr. Centi, the original ATP, and compared Claimant's level of functioning on video to Dr. Lakin's treatment of Claimant (and other providers) during the same time frame, and concluded that Claimant "is likely conscientiously misrepresenting himself." (Ex. R, p. 424)

Other Medical Opinions

87. James Ferrari, M.D., 1/30/18 PA orthopedist, arthroscopy with foot/ankle arthroscopy opined that further foot/ankle surgery with Dr. Maurer is not work related but the result of the natural progression of Claimant's osteoarthritis and spurring which were present before the DOI. It is inevitable that Claimant would need the surgery irrespective of this work injury which did not accelerate the need for the surgery. (Ex. L, p. 120). Dr. Maurer did not review the surveillance, but believes the mechanism of injury is that Claimant got his ankle/foot caught in the ladder, twisting it as he fell.

88. James P. Lindberg, M.D., surgeon, conducted a review of records and reviewed surveillance, concluding that it is "astonishing" that Dr. Hall, a physiatrist, was making surgical recommendations on an ankle when he does not even know what a Brostrom procedure is. After reviewing the video, Dr. Hall's opinion regarding Claimant needing work related foot surgery did not change, but as Dr. Lindberg explained, Dr. Hall is not familiar with the fact that chronic instability in an ankle can causes arthritis and osteophytes to form around the ankle joint. (Ex. M, p. 129)

89. Joseph Fillmore, M.D., 4/19/17 PA physiatrist, opined that Claimant's cervical and cognitive complaints are not work-related, as there was no documentation of an injury to the neck, or cognitively, and there was no original report of LOC. (Ex. L, p. 122)

90. James Ogsbury, M.D., 4/19/17 PA, spine surgeon, reported that because Claimant did not have symptoms of a concussion or a neck injury within the first month these symptoms are not casually related to the work injury. (Ex. L, p. 123). Claimant, according to Dr. Hall, has amnesia, cannot remember the fall and has been in a fog with

headaches since the date of injury and Dr. Centi simply failed to document these repeated complaints, or was too busy tendering to claimant's other injuries to address the head and cognitive complaints. Dr. Centi testified that this speculation by Dr. Hall that Dr. Hall bases his DIME opinions on is wrong, rendering the DIME opinions wrong.

Claimant's 5/3/18 Surgery with Dr. Maurer

91. On May 3, 2018, Claimant underwent right ankle arthroscopy with debridement and recession by Dr. Maurer. (Ex. W, p. 518)

92. Dr. Maurer first saw Claimant one year after the fall on December 15, 2017. The history Claimant gave to Dr. Maurer regarding the mechanism of injury is that he was at work on a ladder with a co-worker who had dust in her eye and she moved away from the ladder. As a consequence, the ladder slipped and he fell from the ladder. "He states that as he was falling his right ankle was caught in the ladder. He states that he had hyperdorsiflexted his right ankle. He then landed on the floor." (Ex. W, p. 492).

93. During the December 15, 2017, evaluation, Claimant complained of "deep and sharp pain over the anterior aspect of his right ankle. He also had edema and ecchymosis to the right ankle and foot. Dr. Maurer noted that Claimant underwent a right ankle ligament repair in 2005. He said nothing about the Brostrom procedure Claimant had undergone in 2008. Nonetheless, Claimant reported good results from this procedure.

Dr. Lakin's Opinion re: 'Hostile Work Environment'

94. On August 28, 2018, Dr. Lakin stated that *if the ALJ finds that there was no hostile work environment by Employer,* Dr. Lakin would not have taken Claimant off from work on June 23, 2017, based upon the recommendation of Dr. Staudenmayer. (Ex. R, p. 430) (emphasis added).

Dr. Herman Staudenmayer, and 'Hostile Work Environment'

95. Dr. Lakin referred Claimant to Dr. Staudenmayer, neuropsychologist, who evaluated claimant on March 20 and 28, 2017 for a work place fall with a 'LOC for 30 minutes or less', resulting in a broken foot, neck injury and concussion with residual symptoms of cognitive dysfunction and headaches. According to Dr. Staudenmayer, Claimant felt bad because nobody addressed his headaches or cognitive dysfunction that he has had since the DOI on 12/22/16.

96. Dr. Staudenmayer's opinions are admittedly based upon subjective tests and whatever Claimant tells him, including that Tracy Matthews continuously harassed him. Dr. Staudenmayer testified that one hundred percent of the basis for his opinions

that Employer work environment was a hostile one are what Claimant told him, plus two pieces of "corroborating information."

97. The first corroborating piece of information is that on April 11, 2017, Dr. Staudenmayer documented Claimant felt that Matthews was harassing him, because she was telephoning his physicians and asking them the "exact time" of Claimant's medical appointments. Dr. Staudenmayer reported that he himself had received such a call from Matthews and found her demeanor to be abusive and persistent." (Ex. Y, p. 545)

98. Matthews said that she contacted Dr. Staudenmayer on one occasion and the discussion was very brief. The sole reason she called Dr. Staudenmayer, however, was because Claimant handed Dr. Staudenmaier's business card to Matthews and specifically asked Matthews to call Dr. Staudenmayer and confirm the time of day his next appointment was scheduled because Claimant could not recall if it was scheduled for 11:30 a.m. or 1:30 p.m. Matthews denied that her demeanor was abusive or persistent; she was simply doing exactly what Claimant asked her to do in order to help him. Claimant testified that he never asked Matthews to call Dr. Staudenmayer, and that Matthews entire testimony regarding this request was a lie.

99. Dr. Staudenmayer testified at hearing that he "remembered" that Matthews called him to find out if Claimant had showed up for a specific appointment that had already taken place. When pressed, Dr. Staudenmayer admitted that Matthews "could have" contacted him to check the time of day that an appointment was scheduled for in the future. Dr. Staudenmayer agreed that Claimant's version (that Matthews was checking up on him to harass him) and Matthews' version, that she called Dr. Staudenmayer because Clamant asked her to, could not be reconciled. This was not merely a question of perception. Dr. Staudenmayer admitted only one person's version of why Matthews called Dr. Staudenmayer could be accurate. Dr. Staudenmayer testified that he believed Claimant's version and not Matthews'.

100. The second piece of corroborating information, according to Dr. Staudenmayer, is a statement contained in the Coburn Investigative Summary dated April 30, 2017. (Ex. I, p. 71) Dr. Staudenmayer testified that he did not have this report until it was sent to him on July 16, 2018, on Respondents' behalf. (Ex. Y, p. 575) The report states that the investigator interviewed Tracy Matthews on April 19, 2017 and that Matthews: "stated that Claimant was in an MMA fight prior to the date of injury; therefore, she was concerned with the claim and believed this was the cause of the injury." (Ex. I, p. 71). Matthews admitted that she was interviewed and told the investigator that Claimant was an MMA fighter in response to the investigator's question regarding what she knew about Claimant. Matthews testified that she did not tell the investigator that she believed MMA fighting was the cause of claimant's injury because Matthews never believed that. Matthews explained she knew Claimant was injured because she was present 15 seconds after the injury.

101. On April 11, 2017, Dr. Staudenmayer also reported that Employer was not honoring Claimant's work restrictions because Claimant had to stand most of the day, while his restrictions required him to be sitting most of the day. (Ex. Y, p. 545) During the time Claimant was telling Dr. Staudenmayer that Employer was not honoring his work restrictions, Claimant was actually working a modified job that had been approved by Dr. Lakin. That job was for claimant to do data entry, filing, sorting, shredding, opening and stamping mail, sorting invoices and bills, collating materials, dispatch and answer phones and assist customers operating POS system. This entire job involved sitting but Claimant was free to stand any time he wished. As noted, Dr. Lakin approved this job for Claimant. Thus, while Claimant was telling Dr. Staudenmayer that Employer was not honoring his restrictions because he was standing most of the day, Claimant was working modified duty for Employer in a job that permitted him to sit all day, and which was approved by Dr. Lakin. (Id.)

102. Employer witnesses Tracy Matthews and Mike Anders both testified that they each reprimanded Claimant for working in excess of his restrictions. Matthews documented that on March 13, 2017, Claimant was observed voluntarily getting an air compressor, start it up and help customers air up low tires. Claimant would have to be reminded to "stay within his restrictions." (Ex. BB, p. 702) Other times, Claimant voluntarily helped customers load items. Again, Employer had to remind him that he was not allowed to do that type of work per his physician. (Ex. BB, p.703)

103. And on May 5, 2017, Matthews documented that she observed Claimant in the retail yard putting tie-downs over the bed of a customer's truck. Matthews noted that Santiago and Anders also present. Matthews immediately went out and told Claimant to please let Mike Anders and Santiago care of that customer. Claimant became upset and said he was only trying to help and Matthews explained that "this is not part of your restrictions and I need you to follow your restrictions." (Ex. BB, p. 707) Anders also testified to this incident as well as other times when he had to remind Claimant to follow his work restrictions.

104. According to Santiago, an example of Employer's so-called "harassment" and "hostile work environment" was that very day when claimant was simply trying to help Santiago with tie-downs and Matthews came over and "reprimanded" Claimant, *i.e.*, made him stop working with the tie-downs. Santiago testified that Claimant was simply trying to help him, but Matthews would not permit claimant to do so. Santiago admitted he had no idea what Claimant's work restrictions was or what claimant's modified job was or even that claimant was on modified duty.

105. Also on April 11, 2017, Dr. Staudenmayer accepted Claimant’s new explanation regarding the reasons he changed treating physicians. According to this version, Claimant stated that Dr. Centi had him working full duty for 6 weeks after the DOI. And, Dr. Centi never addressed Claimant's headaches. At the same time, he saw Dr. Simpson who placed Claimant on full work restrictions and took him completely off

of work. Then Dr. Centi disagreed with Dr. Simpson that Claimant should be taken completely off from work and Dr. Centi released him to work with restrictions which his Employer did not honor.

106. Claimant testified that Mike Anders called him a gimp and a hop-along (on at least 2 occasions. The first time Anders supposedly did this was over the CB radio where multiple other employees would have heard this. Claimant testified that they probably had their radios turned down low. No witness, not even Santiago or Chavez, would corroborate this allegation. The second time Anders did this was supposedly when Anders was alone with Claimant. Anders denied ever referring to Claimant as a hop-along or a gimp, and testified that he did not believe those words have ever been a part of this personality. Claimant, who was present during Anders' testimony, testified that Anders was lying.

107. Claimant also testified that he reported the name-calling by Anders to Matthews, but Tracy Matthews did nothing about it. According to Claimant, Anders continued to call him hop-along and gimp. Claimant testified that Anders and Matthews, who both denied this, were lying and that Mike Anders did in fact call Claimant these names. Byers, who was friendly with Claimant, testified that Claimant referred to himself as hop-along, gimp and office bitch in conversation on more than one occasion. Claimant denied every calling himself these words and testified that Byers was lying.

108. Claimant claimed that some co-workers, specifically truckers, threatened to physically harm him. The truckers were not present to testify and there is no documentation in Dr. Staudenmaier's records about this alleged incident. Claimant testified that he reported the truckers' physical threats to harm him to Matthews and Matthews responded that he would have to figure out a way to get along with his co-workers.

109. Dr. Staudenmayer admitted that his opinions were based upon believing and accepting all of Claimant's subjective complaints and version of events as being true. Dr. Staudenmayer also admitted that some incidents could not be reconciled to differing perceptions and in the case of conflict, Dr. Staudenmaier's opinions are based upon Claimant's version as being the truth. The conflicting versions of such incidents between Claimant and Dr. Centi, Tracy Matthews, Mike Anders, Dean Burns and Gloria Byers were rejected by Dr. Staudenmayer as not being the truth.

110. On February 6, 2018, (14 months after DOI) Dr. Staudenmayer changed his diagnoses from adjustment disorder (which is essentially stress, per Dr. Moe) and somatic symptom disorder (believing pain symptoms exist even though there is no medical basis for those symptoms) to post traumatic stress disorder due to a fear of ladders. According to Dr. Staudenmayer, Claimant's PTSD was triggered when he had a panic experience when he saw an individual going up a ladder. Claimant had a flashback to his own trauma and as of the day of the third hearing, according to Dr.

Staudenmayer, Claimant is unable to climb up only a specific type of ladder- "the extension ladder." (Ex. Y, p. 562).

111. Dr. Staudenmayer did not offer any explanation why Claimant was able, for 6 months, to watch his co-workers walk up and down not only an "average extension ladder", but Claimant watched his co-workers go up and down on the very same extension ladder that he was injured on. This occurred every day, multiple times per day, from December 23, 2016 (the day after the DOI) through June 23, 2016-the date Dr. Staudenmayer took Claimant off from work for a “hostile work environment.”

112. On August 29, 2017, Claimant informed Dr. Staudenmayer that he felt he was not at MMI psychologically. Three months later, on November 28, 2017, in the absence of any reported symptoms that raised the issue of PTSD, Dr. Staudenmayer noted that Claimant "asked me if I had every diagnosed him with PTSD." Dr. Staudenmayer "checked [his] notes and did not see the diagnosis. My diagnoses have remained unchanged . . . "(Adjustment Disorder and Somatic Symptom Disorder). (Ex. N, p. 166)

113. Claimant returned to work for Employer from mid-March 2017 until June 23, 2017. During this time, no Employer witnesses, including Santiago and Chavez, testified about any cognitive problems Claimant had, including confusion, stuttering, memory loss, seeing flashing lights and amnesia. Nor did either witness testify as to any incidents of harassment by Employer including the alleged name calling by Anders.

114. Santiago’s examples of “harassment” were alleged incidents where Anders or Mathews reprimanded Claimant for taking too long of a break or for “trying to help.” But Santiago admitted he had no idea if claimant exceeded his work restrictions when “helping” or if Claimant was on a legitimate break when reprimanded. Santiago first claimed that he quit working for Employer because of the harsh way Claimant was treated, but later admitted that he quit because he found a higher paying job and also returned to Employer part-time after he quit. Chavez, was present at Employer only 35% of the time and he too did not testify to any incidents that supported Claimant’s harassment allegations. Both witnesses knew very little about Claimant’s work injury, restrictions, modified job duties, work hours or frequency or length of breaks.

Pre-existing Psychological Issues, John T. Hardy, M.D.

115. Claimant treated with Dr. Hardy for pre-existing psychological problems prior to the admitted work injury. Claimant was diagnosed with depression and has had periods of hypomania lasting up to 4-days, as an adolescent. He was also diagnosed with ADHD as a child and treated with a Dr. Sal Cruz until Dr. Cruz’ retirement. (Ex. O, p. 172)

116. According to Dr. Hardy, who took over for Dr. Cruz in March of 2012, during Claimant's "spells" he has reduced sleep, racing thoughts, impulsivity and "will

spend a $1,000 at the music store." Claimant had pre-existing "panic attacks with feelings of suffocation, racing thoughts at night and ADHD symptoms." (Id. at 172) He has also been manic a times and treated for panic disorder. (Id. at 185)

117. Dr. Hardy also noted that Claimant had a pre-existing diagnosis of agoraphobia, a fear of places and situations that might cause panic, helplessness or embarrassment. Claimant laughed about having agoraphobia, yet he is a musician that performs in front of crowds. (Ex. O, pp. 179,182) Claimant filled multiple anti-depressant prescriptions, and had ongoing had panic attacks and anxiety and compulsive behavior for years prior to the DOI.

118. On March 27, 2017 Claimant told Dr. Hardy he had been "severely injured" right before Christmas when he fell 15 feet from a ladder, sustained a concussion, got 27 stitches in his brow, fractured his ankle and had a terrible hematoma where he fell on the ladder rung. (Ex. O, p. 201) Claimant also complained that his work had become "an 'ugly place'" and his employer had him doing 8 hours per day of "nonsense work" (Id. at 202)

119. On November 28, 2018, Dr. Hardy noted that Claimant retained an attorney and was having trouble with "Tracy [Matthews] his boss." (Id. at 204) In February 2018, Claimant told Dr. Hardy that he was fired from Employer and his WC "doctor said 'he had to cut him loose" and says he was at MMI even though he remains with a broken ankle, some obvious post concussive problems including nightmares that bother him" and that he also has "pretty severe PTSD captured by [Dr. Staudenmayer]." (Ex. O, p. 206)

120. By May 2, 2018, Claimant told Dr. Hardy that his "workers' compensation hearing went well", but that he was unable to watch "'Funniest Videos' as he sees people falling in a different light." (Ex. O, pg. 209

Stephen Moe, M.D.

121. Claimant underwent an IME with Dr. Moe, psychiatrist, who reviewed the medical and employment records. He also attended this hearing, and listened to the testimony of all witnesses. Dr. Moe explained that Claimant has "3 points of injury:" eye, chest and foot. If there was any work related psych component to the injury, it would be a mild adjustment disorder which simply means "stress" due to pain which would have resolved itself a long time ago. However, Dr. Moe was also aware of inconsistencies in the medical records, and that some of the information Claimant reported to Dr. Moe contradicted the records, and was of "dubious validity." (Ex. N, p. 148)

122. Dr. Moe also explained that there was a "profound change" in Claimant's account of the injury and his symptoms after Claimant changed physician from Dr. Centi to Dr. Lakin. (Ex N, p. 164). There is no "medical explanation" for displaying a normal mental status with no signs of amnesia in the "minutes, hours, days and weeks after the

injury and then to report amnesia about the incident 2 months after the fact." (Ex. N, pg. 159) As did Dr. Lakin, Dr. Moe also documented Claimant's misrepresentation of his pre-injury psychiatric treatment and Claimant's demonstrated capacity to work after the DOI and his current claims of disability. (Ex. N, p. 161)

123. Dr. Moe opined that Claimant appeared to "be driven by motivated intent to be regarded as impaired/disabled" and that "even in giving the Claimant the benefit of the doubt in all situations involving uncertainty, I cannot explain some very important findings on the basis of unconscious mental mechanisms or simple misunderstandings." For example, the discrepancy between Claimant's demonstrated capacity to work right after his injury and his current report of multiple, independently disabling problems "suggests misappropriation of the injured role." (Ex. N, p. 163) Dr. Moe's IME report sets forth the indications that unconscious psychological effects and intentional exaggeration have influenced different elements of Claimant's post-injury complains." (Ex. N, p. 183)

124. With regard to the cause-and-effect relationship between Claimant's symptoms and his alleged grievances, according to Dr. Moe there are three possibilities: (i) claimant was subjected to the mistreatment by Employer as he claims, which would mean that Claimant's physical symptoms were magnified by psychological factors related to the work injury; (ii) Claimant believes that he was subjected to the mistreatment by Employers as he claims, but he was not subjected to these things, this means that physical symptoms were magnified by Claimant's perceptions; this would not be related to his work injury; (iii) Claimant intentionally manipulated events, by making false accusations of a hostile work environment (such as Anders calling him gimp and hop- along, and Matthews and Byers lying about his claims of being an MMA fighting, when Claimant never said such a thing).

125. Dr. Moe acknowledged that this was ultimately up to the "tier of fact." Dr. Moe also explained that if the ALJ found that in the cases of those incidents that cannot be explained away by differing perceptions, that it was Claimant who was being untruthful, then Claimant is malingering, which is, of course, not work-related. (Ex. N, p. 164) If Claimant intentionally manipulated these events because of his pre-existing psychiatric illnesses there is not a work-related psychological condition (and no hostile work environment). Dr. Primack tested Claimant's perception of his overall level of functioning and his psychological perception. The results showed the probability for somatization, given Claimant's longstanding history of psychological problems, opioid dependency, ADHD, bipolar disorder and their effects on pain. (Ex. K, p. 110)

126. In those instances that could not be explained away by differing perceptions, Dr. Moe chose to believe the Employer witnesses and Dr. Centi were being truthful, and not Claimant. Dr. Staudenmayer rejected this, believing that Claimant was telling the truth and Dr. Centi and all four employer witnesses were not being truthful (Ex. N pg. 164)

127. Dr. Moe also explained that Claimant does not have PTSD from the fear of ladders. Per the Diagnostic and Statistical Manual, 5th Edition ("DSM-5"), in order to meet the criteria for PTSD, an individual must suffer a "qualifying" trauma: "The person was exposed to death, actual or threatened serious injury or actual or threatened sexual violence." These "threats" in the DSM-5 "include, but are not limited to, exposure to war as a combat or civilian, threatened or actual physical assault, threatened or actual physical violence, being kidnapped, being taken hostage, terrorist attack, torture, incarceration as a prisoner of war, natural or human-made disasters or severe motor vehicle accident. (Ex. N, p. 165). Dr. Moe testified that any traumatic event held responsible for PTSD must be on par with these examples. By comparison, Claimant's fall from a ladder at a relatively low height, while injurious, was not an accident which would engender the degree of distress that the traumas listed in the DSM-5 are prone to cause.

128. The vast majority of those who develop PTSD display prominent signs of emotional distress in the *immediate aftermath* of the traumatic event. It is generally accepted that PTSD does no arise months to years later in individuals who had previously shown no indication that they were emotionally traumatized by the event. Dr. Moe explained that there is no indication in the medical or employment records that Claimant developed PTSD symptoms. In fact, Claimant returned to work the day after the injury on December 22, 2016 and worked until June 23, 2017, where he observed co-workers working on the same ladder that Claimant was injured on.

129. Claimant testified that after he was injured on December 22, 2016, Employer harassed him and subjected him to a hostile work environment. While there are many components to these claims that can be explained by differing perceptions between Claimant and Employer, there are many other incidents that cannot be so explained.

130. Both claimant's IME physician, Dr. Castrejon and the Division IME physician, Dr. Hall, have not opined that Claimant had any work related psychiatric concerns, including PTSD. In his IME report of September 13, 2017, Dr. Castrejon stated: "Further psychological treatment is not indicated on an industrial basis." In his DIME report of January 22, 2018, Dr. Hall did not identify any psychiatric concerns.

131. Dr. Staudenmayer does not mention PTSD as a potential diagnosis until February 6, 2018. In making the PTSD diagnosis, Dr. Staudenmayer accepted Claimant's self-report of "having a recent panic experience when he saw an individual going up a ladder. He had a flashback to his own trauma. This trigger for Claimant's PTSD symptoms is notably different from both triggers Claimant reported to Dr. Moe: (i) that either his PTSD symptoms began within a few months of the DOI or (ii) they began after Claimant climbed atop his roof to fix a leak). (Ex. N, p. 167)

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

a. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. (2007), *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the Claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

b. A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved. The ALJ need not address every piece of evidence or every inference that might lead to conflicting conclusions. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P. 3d 385 (Colo. App. 2000).

c. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

d. In summary, the ALJ finds much of Claimant's testimony to be less than reliable. There do appear to be issues of secondary gain which have manifested themselves, both in his testimony, and his reported symptoms, to Dr. Staudenmeyer in particular. Claimant's recall of events which occurred in the workplace is, stated mildly, highly suspect-regardless of whether it is a sincere difference in perception, or intentional. In contrast, the ALJ finds Claimant's co-workers to be sincere and credible, despite differences in the details as they recall them. The ALJ does not accept Claimant's claim that Tracy Matthews, Mike Anders, Gloria Byers, Dean Burns, and Dr. Centi are all lying. They aren't. Further, the ALJ finds that Edrick Chavez and Robert Santiago are sincere in their *perceptions*, but the *facts* they can testify to are of limited utility to the ALJ. They might have sincerely felt certain 'vibes' in the workplace, but vibes are insufficient to warrant a finding that a hostile work environment existed.

e. Despite the foregoing conclusions regarding Claimant's credibility, the ALJ finds that Claimant was hurt at work. The fall was not faked. The imaging studies taken along the way cannot be faked. The initial X-ray did not show the occult fracture, and as a result, Claimant did not receive the appropriate medical treatment initially. The pain in his ankle he reported was real, but was partially alleviated by the surgery. ALJ finds Claimant to be a sufficiently reliable medical historian, as to his right foot, chest, and neck to support the DIME opinion of Dr. Hall.

Overcoming Division IME, Generally

f. In ascertaining a DIME physician's opinion, the ALJ should consider all of the DIME physician's written and oral testimony. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998). A DIME physician's determination regarding MMI and permanent impairment consists of his initial report and any subsequent opinions. *In Re Dazzio,* W.C. No. 4-660-149 (ICAP, June 30, 2008); *see Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328 (Colo. App. 2005

g. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAP, July 19, 2004); *see Shultz v. Anheuser Busch, Inc*., W.C. No. 4-380-560 (ICAP, Nov. 17, 2000).

h. "Maximum Medical Improvement" (MMI) is defined as the point when any medically determinable physical or mental impairment as a result of the industrial injury has become stable and when no further treatment is reasonably expected to improve the condition. Section 8-40-201(11.5). A finding of MMI is premature if a course of treatment has "a reasonable prospect of success" and the claimant is willing to submit to the treatment. *Reynolds v. Industrial Claim Appeals Office*, 794 P.2d 1080, 1081-82 (Colo. App. 1990). Additionally, a finding that a claimant is not at MMI may rest solely upon recommendations for further diagnostic evaluation if such procedures have a reasonable prospect of diagnosing or defining the claimant's condition to suggest a course of further treatment. *E.g., Soto v. Corrections Corp*., W.C. No. 4-813-582 (ICAO, October 27, 2011).

i. The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. The elevated burden is evidence of the Colorado Legislature's intent to limit overcoming the DIME physician's opinion to those cases where it is more probable than not that the opinion was incorrect

j. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. §8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola,* W.C. No. 4-631-447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. *Id.* Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ. *In Re Goffinett,* W.C. No. 4-677-750 (ICAP, Apr. 16, 2008).

Overcoming Dr. Hall's DIME Opinion on MMI

k. At hearing, Dr. Primack testified that Dr. Hall's DIME opinion should be overcome because Dr. Hall did not have an accurate understanding of the mechanism of injury. A review of the DIME Report, as well as Dr. Hall's deposition testimony, establishes to the satisfaction of the ALJ that Dr. Hall did have an accurate understanding of the mechanism of injury. Dr. Hall's DIME Report shows that he went through the mechanism of injury with the Claimant at the time of the DIME examination. Furthermore, Dr. Hall notes that he reviewed the IME Reports of Dr. Castrejon and Dr. Primack, as well as the treatment notes of Dr. Lakin. All of these Reports contain a description of the mechanism of injury. The medical records entered into evidence contain several descriptions of the incident that are all reasonably consistent. The descriptions of the mechanism of injury are also reasonably consistent with the eyewitness testimony provided at hearing by Gloria Buyers. There is not a slow-motion video of this work injury, but the ALJ finds that Claimant was on the ladder when it fell to the floor with him still on it. In the process, his right foot was impacted and twisted. His forehead struck the ladder with sufficient force to cause a cut. His chest hit the ladder hard enough to cause a cut, and with sufficient force to later require surgical removal of swollen tissue. Dr. Hall opined that Claimant strained his cervical area during the fall, and may have suffered a minor concussion (which cannot be effectively treated). The ALJ finds that Respondents have failed to provide sufficient evidence that Dr. Hall did not have an accurate description of the mechanism of injury.

l. Respondents also asserted at hearing that Dr. Hall's DIME opinion should be overcome because he did not review all of the pertinent evidence. However, Dr. Hall reviewed the medical records provided to him through the DIME process. These records included all of the records (and pain diagrams) generated as a result of

Claimant's treatment at CCOM between the date of injury and February 9, 2017. Given Dr. Hall's review of the CCOM records, he was aware of the early reporting provided by Claimant, including the physical examinations conducted by PA Byrne and Dr. Centi. Dr. Hall was aware of the lack of documenting of symptoms of headaches and neck pain in the CCOM records. Dr. Hall was aware of the incident at CCOM on February 9, 2017, wherein Claimant and Dr. Centi got into a verbal altercation. He was also aware that Claimant's medical care had been transferred to the Southern Colorado Clinic at Claimant's request.

m. Dr. Hall reviewed the IME report that Dr. Scott Primack issued on June 12, 2017. As such, Dr. Hall was aware that Dr. Primack had opined that Claimant's headaches, cognitive issues, and neck pain were not related to the mechanism of injury because, in Dr. Primack's opinion, they had not been sufficiently reported and/or documented early in the claim. Dr. Hall was aware that Dr. Primack opined that Claimant was at MMI for his ankle and facial laceration and that Dr. Primack was not recommending any additional treatment.

n. Dr. Hall also reviewed the Southern Colorado Clinic medical records that included the MMI and Impairment Rating Report authored by Dr. Terrence Lakin on September 27, 2017. He was aware of the physical examinations performed by Dr. Lakin, as well as the treatment he directed. Dr. Hall was aware of the causation opinions offered by Dr. Lakin as to the relatedness of the headaches and neck complaints. He was also aware of Dr. Lakin's opinions on MMI and future medical treatment.

o. At his deposition, Dr. Hall also reviewed the surveillance videos shot on April 18, 2017, and on April 27, 2017. At this deposition, he was also provided with the supplemental reports authored by Dr. Primak and Dr. Lakin after they had viewed the surveillance video. Having watched the surveillance video for himself, and having considered the opinions of Dr. Primack and Dr. Lakin, Dr. Hall opined that the video was not inconsistent with Claimant's physical presentation or his physical examination. Dr. Hall testified that the surveillance video and updated opinions from Dr. Primack and Dr. Lakin did not change his opinions.

p. Based upon his understanding of the mechanism of injury, and his review of the relevant evidence, Dr. Hall performed a causation analysis with an eye toward resolving the material disputes in the record. First, Dr. Hall identified that there was an issue whether Claimant's complaints of neck pain are related to the mechanism of injury. Second, Dr. Hall identified that there was an issue whether Claimant required any additional medical treatment for his right ankle condition.

q. In his DIME Report, Dr. Hall weighs the evidence on the issue of whether the neck pain is causally related to the fall that occurred on December 22, 2016. Dr. Hall notes Dr. Primack's position that the neck pain is not related, and cites to Dr. Primack's rationale. Dr. Hall then references the mechanism of injury and determines that this mechanism is highly likely to cause some form of neck injury.

r. Dr. Hall also acknowledges the lack of documentation of neck pain and headaches in the early medical records from CCOM. He determines that the lack of documentation in the CCOM records does not necessarily mean that Claimant did not injure his neck in the fall. Dr. Hall mentions that he has seen times when a symptom or condition was not documented by medical providers even though it was clearly present. He points out that this is especially true in situations where there are multiple injuries that may complicate the reporting of symptoms. He also determined that Claimant's neck pain is causally related to the fall on December 22, 2016. The ALJ finds this to be a plausible inference, in light of Claimant falling, striking the right side of his head, left side of his chest, and right ankle. It is not surprising that this mechanism of injury, striking the floor asymmetrically, could also strain his neck in the process. Dr. Hall opines that Claimant is not at MMI because he needs facet work, to be followed by a possible rhizotomy, and targeted physical therapy.

s. Dr. Hall also identified the issue of whether Claimant required any additional medical treatment for his right ankle condition as a material dispute. Dr. Hall noted the mechanism of injury that establishes Claimant's right foot as a compensable part of this claim. Dr. Hall reviewed the treatment notes of Dr. Simpson and Dr. Maurer, who provided orthopedic treatment for Claimant's right ankle. He also reviewed the future medical treatment recommendations of Dr. Primack and Dr. Lakin. He performed a physical examination of Claimant's right ankle and discussed the issue with Claimant. Dr. Hall opined that the "cleanout" procedure recommended by Dr. Maurer is a treatment option that is causally related to the work-injury, and has a reasonable chance of reducing Claimant's symptoms. Dr. Hall's opinion is consistent with the independent review done by Dr. Ferrari. Dr. Ferrari opined that the proposed surgery was a *reasonable* treatment option, given Claimant's symptoms and physical findings. However, Dr. Ferrari felt that the surgery should have been done under Claimant's private health insurance. In contrast, Dr. Primak opined that the surgery should not be performed as it was *not a reasonable* treatment option, regardless of causation. As such, the record establishes that Dr. Hall reviewed the relevant evidence and resolved discrepancies in the record as he performed his causation analysis.

t. The ALJ finds, in summary, that Dr. Primack has conducted a thorough, sincere, and professionally rendered analysis and critique of Dr. Hall's DIME report. In the end, however, Respondents have not shown, by clear and convincing evidence, that Dr. Hall did not follow the appropriate protocols and analysis in rendering his DIME opinion. Dr. Hall did have access to the appropriate records in the case, and his opinion remained essentially unchanged through his deposition, even when confronted with additional evidence. It is of no small concern to this ALJ how Claimant's diagnosis changed upon his reassignment to Dr. Lakin. In the end, however, Dr. Hall's DIME opinion is one of several, upon which reasonable minds might differ—but a DIME opinion is given greater deference under the Workers Compensation system. Were the burden of proof lower, a different result might arguably be reached. Respondents have not overcome Dr. Hall's DIME report on causation and MMI regarding Claimant's right foot and cervical region.

u. The ALJ further notes that Respondent argues that Claimant must overcome the DIME on the issue of a concussion. By his own position statement (and as made clear in Dr. Hall's deposition) Claimant is making no such attempt. The ALJ, however, does find that Claimant is now at MMI for any concussion symptoms which may have followed his work injury. There is no treatment to be offered at this point, nor is there an impairment rating to be assigned.

Withdrawal of Admission of Liability / Claimant Responsible for Own Termination

v. Claimant sustained an admittedly compensable injury on December 22, 2016. Claimant worked various modified duty assignments for Employer from the date of injury through June 22, 2017. During the light duty period, there was a significant amount of animosity, suspicion, and hostility between the Claimant and the Employer. Based upon what Claimant told Dr. Staudenmeyer (whose records were relied upon by Dr. Lakin), Dr. Lakin determined that the benefit of the modified duty was outweighed by the stress, and potential delay in recovery, it was causing Claimant. Dr. Lakin then took Claimant off of modified duty as of June 23, 2017. Respondents filed a General Admission of Liability, and ultimately a Final Admission of Liability, that admitted for TTD benefits beginning on June 23, 2017 and continuing until September 26, 2017. Claimant objected to the Final Admission and requested a DIME. The DIME was performed by Dr. Hall on January 22, 2018. Dr. Hall determined that Claimant is not at MMI and recommended additional medical treatment. Respondents then contested Dr. Hall's determinations, and filed Application for Hearing. In their Application for Hearing, Respondents state as follows:

> In addition, Respondents endorse that claimant was responsible for his termination as of the date his treating physician took him off from work based upon claimant's misrepresentation to the ATP that the employer, who offered claimant modified duty which claimant had been working, provided a hostile work environment. The ATP relied upon this misrepresentation by claimant as the employer's work environment was not hostile to claimant. Respondents are seeking an overpayment of the TTD/TPD paid to claimant has [sic] of the date the ATP took claimant completely. Overpayment.

w. Although Respondents state the issue as termination for cause, Claimant argues that the proper framework for this issue is withdrawal of the admission(s) of liability under C.R.S. 8-43-201(1). Under C.R.S. 8-43-201(1) a party seeking to modify an issue determined by a general or final admission, a summary order, or a full order has the burden to prove by a preponderance of the evidence that such a modification should be made. *City of Brighton v. Rodriguez*, 318 P.3d 496 (2014). The ALJ concurs with Claimant on how this issue is to be framed.

Claimant Responsible for Termination

x. When a temporarily disabled claimant is responsible for termination of his employment, the resulting wage loss may not be attributed to the work injury. *See* § 8-42-103 (1) (g), §8-42-105 (4), C.R.S. 2004. *Liberty Heights at Northgate v. ICAO*, 30 P.2d 872 (Colo. App. 2001). The termination statutes, §8-42-103(1) (g) and §8-42-105(4), apply to both regular and modified employment. *See Colorado Springs Disposal v. ICAO*, 58 P.3d 1031 (Colo. App. 2002). An employee is responsible for termination if the employee precipitated the employment termination by a volitional act which an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (ICAO, 2001). Thus, the determination of Claimant's responsibility for the termination of employment is not related to the concept of culpability, but requires only a "volitional act," or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corporation*, 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995)

y. Here, Claimant was responsible for his separation from employment effective June 23, 2017, by the volitional act of misrepresenting to Dr. Staudenmayer that Employer was harassing him at work. Things like 'not being welcome at an employee meeting' or 'not being invited to an employer party' or 'being reprimanded for taking too long of a break', may be misconstrued as a matter of one's perception. However, this does not objectively constitute a "hostile work environment". Not even close.

z. Additionally, numerous aspects to Claimant's claim of 'harassment' cannot be explained merely as differing perceptions. Either Mike Anders called Claimant hop-along and gimp, or he did not. The ALJ finds he did not. Either Claimant reported Anders' name-calling to Tracy Matthews and Matthews refused to address it, or Claimant never reported any such thing to Matthews. The ALJ finds that this was never reported to Tracy Matthews. Either Claimant told Gloria Byers and Tracy Matthews about his MMA fighting, or they are both lying. The ALJ finds that Byers and Matthews did not just make this up. Some sort of casual MMA conversations occurred, the details of which are consigned to the bin of history. Either claimant called Matthews and told her Dr. Simpson took him off from work for 6 weeks because his foot needed to heal or Matthews is lying about it. Matthews is not lying about it. Either Employer required Claimant to work in excess of his physical restrictions, or Employer reprimanded Claimant when he tried to do so. The ALJ finds that Employer, at all times pertinent, offered reasonable temporary duty to Claimant, and acted in good faith to prevent him from exceeding his reasonable work restrictions.

aa. The ALJ finds that Employer's employees did not, by any reasonably objective measure, harass Claimant in any instance that cannot be explained away by simply differing perceptions. Claimant's reports to Dr. Staudenmayer that Employer did these things are simply not true. Whether Claimant intentionally lied for financial gain or did so because of a preexisting psych condition is not determinative here. An employee is responsible for his own termination if the employee precipitated the employment

termination by a *volitional act* which an employee would reasonably expect to result in the loss of employment. *Patchek v. Colorado Department of Public Safety*, W.C. No. 4-432-301 (ICAO, 2001). The determination of Claimant's responsibility for the termination of employment is not related to the concept of culpability, but requires only a "volitional act," or the exercise of some control in light of the totality of the circumstances. *Padilla v. Digital Equipment Corporation*, 902 P.2d 414 (Colo. App. 1994), *opinion after remand*, 908 P.2d 1185 (Colo. App. 1995). The ALJ finds that Claimant should reasonably have expected that if he continued to complain of harassment and hostility (which the ALJ finds was not happening), that Dr. Staudenmayer would take him off from work. This is exactly what occurred. Claimant was fully capable of performing the reasonable modified duties assigned to him. He just chose not to.

bb. On June 23, 2017, when Dr. Lakin took Claimant off from work because Dr. Staudenmayer told him Claimant could not return to Employer's hostile work environment, it was Claimant who was responsible for that separation of employment, due to his own misrepresentations to Dr. Staudenmayer about the alleged 'hostility' in the workplace. Claimant essentially took himself out of the modified job he was doing for Employer and was responsible for his separation from Employer as of June 23, 2017 because of his claims of harassment. As such, Claimant's resulting wage loss, i.e., the wages he was earning working for modified duty for Employer, is not attributable to him being unable to work because of the ladder injury. Instead, it is attributable to the volitional act of reporting incidents of harassment and hostility that never happened to Dr. Staudenmayer. The ATP, Dr. Lakin, opined that he would never have taken Claimant off from work entirely effective June 23, 2017, if the ALJ were to find that Employer's work environment was not hostile. The ALJ finds that Claimant was responsible for the separation of employment beginning on June 23, 2017. Claimant, therefore, was not entitled to TTD as of that date. He was entitled to TPD, in the amount he was receiving before he self-terminated his employment.

cc. The law permits this remedy. In *Begordis vs. Liberty Mutual*, W.C. No. 4-780-399 (ICAO July 28, 2012), the ATP released claimant to full duty work on March 20, 2009 after claimant had been non-compliant with care. Later, the claim was litigated, and claimant argued that claimant should not have been placed at full duty in March 2009, and claimant was therefore entitled to TTD after March 20, 2009. In preparation for hearing, claimant wrote the ATP asking the ATP what claimant's restrictions would/should have been, if he wasn't released for noncompliance. The ATP responded with a list of restrictions claimant should have had, given his physical condition on March 20, 2009. At hearing, the ALJ determined that claimant should not have been released to full duty on March 20, 2009, and she awarded claimant TTD from March 20, 2009 until some future date. This case stands for the proposition that an ALJ can credit an ATP's opinion that the restrictions he did, or did not, give in the past were not appropriate. And, an ALJ can rule that the retroactive "change" in restrictions can affect a party's liability for lost wage benefits.

dd. The ATP, Dr. Lakin, opined that he would **not** have taken Claimant off from work on June 23, 2017, if Employer did not provide a hostile work environment to Claimant because of this injury. The ALJ finds that Employer did not provide a hostile

work environment or harass Claimant. The ALJ adopts the opinion of Dr. Lakin that he should not have taken Claimant entirely off from work as of June 23, 2017. Claimant's own volitional act removed him from employment. The ALJ finds Dr. Staudenmayer's opinions and testimony to the contrary to be wholly unpersuasive. Dr. Staudenmayer relied far too heavily on Claimant's unreliable version and perception of these events, to the exclusion of far more persuasive evidence. Claimant is in no further need of psychological treatment related to his work injury.

Medical Benefits

ee. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. C.R.S. § 8-42-101. However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection with reasonable probability, but it need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Industrial Commission*, 30 Colo. App. 224, 491 P.2d 106 (Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Industrial Commission v. Royal Indemnity Co.,* 124 Colo. 210, 236 P.2d 293 (1951).

ff. Claimant was placed at MMI by Dr. Lakin on September 27, 2017. At that time, Dr. Lakin opined that Claimant's right ankle condition was causally related to the December 22, 2016 work-injury. Dr. Lakin provided a permanent impairment rating for the right ankle. Dr. Lakin recommended future medical care for the right ankle as follows:

> Dr. Clark Johnson, Podiatry, or other foot/ankle specialist, - right ankle follow up every 6 months if needed, conservative care with injections, f/u imaging, AFO bracing/fitting and replacement for normal wear and tear. Evaluation/consideration of arthroscopy, arthrodesis if needed in 10-15 years. (Ex. 14, p. 185)

gg. Following MMI, Dr. Lakin did refer Claimant to Dr. Johnson for treatment of the right ankle. Dr. Johnson saw Claimant November 13, 2017. Dr. Johnson performed a right ankle intra-articular injection. Dr. Johnson noted that if the injection provided good, if short-term relief, then surgical re-evaluation would be medically indicated. The next day, Claimant contacted Dr. Johnson and indicated that there had been significant but short-term benefit. Based upon the diagnostic effect of the injection, Dr. Johnson referred Claimant to Dr. Mark Maurer for a surgical evaluation. (Ex. 14, pp. 191-195).

hh. Claimant began treatment with Dr. Maurer on December 15, 2017. Dr. Maurer provided conservative treatment in the form of additional injection, physical therapy, and diagnostics. However, on January 29, 2018, Dr. Maurer recommended a right ankle arthroscopy with synovectomy, with possible micro fracture if necessary. Dr. Maurer submitted his request for pre-authorization to Insurer. Insurer had the request reviewed by Dr. James Ferrari. Dr. Ferrari opined that the proposed surgery was a *reasonable* treatment option given Claimant symptoms and physical findings. However, Dr. Ferrari felt that the surgery should have been done under Claimant's private health insurance. As such, Insurer denied the request for pre-authorization.

ii. Claimant was then examined by Dr. Timothy Hall as part of the DIME process on January 22, 2018. At that time, Dr. Hall performed a physical examination of Claimant's right ankle and foot. Dr. Hall determined that:

> Regarding the ankle, there is abnormal range of motion documented elsewhere. He has tenderness at the talocrural joint along the left posterior malleolus. There is some crepitus with range of motion. Pulse is difficult to appreciate due to 1+ edema. There are color changes locally, likely from chronic edema. Again, he is wearing a boot. . .

jj. Because Claimant's right ankle and foot were still swollen, still discolored, and still functionally limiting over one year from the date of injury, Dr. Hall determined that the surgery recommended by Dr. Maurer was a reasonable treatment option for Claimant.

kk. On May 14, 2018, Dr. Maurer performed the recommended surgical procedure. Following the procedure, Claimant has continued to treat with Dr. Maurer. Dr. Maurer's medical records document that Claimant's pain levels have decreased since the surgery. Claimant is no longer wearing his walking boot. Claimant testified at hearing that the surgery has been beneficial and that he believes it was the right decision to proceed. The ALJ finds that Claimant has shown, by a preponderance of the evidence, that the right ankle surgery performed by Dr. Maurer on May 14, 2018 was reasonable, necessary, related to his work injury.

Disfigurement

ll. The ALJ finds and concludes that as a result of his work injury, Claimant has a visible disfigurement to the body consisting of 1) a well-healed, light, scar running adjacent to his right eyebrow, approximately 1" by 1 mm. 2) a crescent shaped 2" scar, reddish in color, surrounding his left nipple area. (Any disfigurement of Claimant's ankle is held in abeyance). Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation. Section 8-42-108 (1), C.R.S.

mm. The ALJ Orders that Insurer shall pay Claimant $800.00 for that disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore Ordered that:

1. The DIME of Dr. Hall has not been overcome by Respondents. Claimant is not at MMI for his right ankle or his cervical region.

2. Claimant is responsible for his own termination, effective June 23, 2017. Respondents may withdraw their Admission of Liability to TTD benefits, effective this date.

3. Respondents will reimburse Claimant for the surgery performed on his right ankle by Dr. Maurer, and will pay for all reasonable, necessary, and related medical care to bring Claimant to MMI.

4. Respondents shall pay for all reasonable, necessary, and related medical care on Claimant's neck to bring him to MMI.

5. Respondents shall pay Claimant $800.00 for disfigurement.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 6, 2018

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that she was disabled from her usual employment and suffered a wage loss during a closed period of time, January 3, 2017, to December 17, 2017, and is therefore entitled to an award of temporary partial disability.

2. What is Claimant's average weekly wage?

FINDINGS OF FACT

1. Claimant is a 54 year old female who sustained an admitted industrial injury on September 24, 2016. Claimant began her employment with Employer on March 15, 2015. Claimant's injury occurred when the driver of the electric cart she was riding in made a quick turn and threw her onto the concrete floor. Claimant was immediately placed off work.

2. After being released to work with restrictions of no lifting, pushing or pulling five pounds, Employer made a modified job offer to Claimant which offered work 8:00 am to 2:30 pm Monday through Thursday and 8:00 am to 12 Noon on Friday at the rate of $11.27, totaling 30 hours a week. The offer contemplated paying Claimant $338.10 a week.

3. Employer is a greenhouse with a seasonal work schedule. Work begins to ramp up in January and February. The peak season is March through June and July to December is the slow work period. In the slow season employees average 20 to 25 hours a week. Between February and September 2016, Claimant consistently worked in excess of 25 hours be week.

4. Claimant's post-injury weekly hours did not naturally decrease starting in July when the Employer's "slow period" of work began. From February 7, 2016, to September 17, 2016, a period of 224 days, Claimant earned a total of $18,632.66. This averages to $582.27 per week. Claimant also received a $250 annual bonus adding an additional $4.81 a week for a total of $587.08.

5. Claimant has demonstrated that it is more probably true than not that an accurate reflection of her AWW is based upon the 224 day period prior to her injury, including her bonus, for an AWW of $587.08. This period of time covers the slow and peak periods of employment in Employer's greenhouse business.

6. Respondents admitted to an AWW of $543.43. Respondents argues that the correct AWW is lower than the one they admitted. Respondents contend the correct AWW is $330.00. The ALJ finds that the correct AWW is $587.08

7. Wage records from before the injury compared to after injury establish that Claimant was scheduled fewer hours post-injury than the same period of time pre-injury. Claimant worked all the hours she was scheduled and was only absent for medical appointments. Claimant had doctor appointments, MRIs, physical therapy, psychology appointments in Thornton and Denver during her work day. Claimant never left work without permission and was never written up for returning to work untimely when taking off for medical appointments.

8. For example, Claimant's medical records and time cards illustrate several examples where Claimant did not come into work at 8:00am as scheduled in the modified job offer. Work related medical appointments conflicted with her work schedule as reflected in time cards and medical reports:

   a. on January 10, 2017, Claimant had an appointment with Dr. Parsons and arrived at work at 10:24am;

   b. on February 20, 2017, Claimant had an appointment with Dr. Parsons and arrived at work at 10:18am; and

   c. on May 3, 2017, Claimant had an appointment with Dr. Anderson-Oeser and arrived at work at 11:14am.

9. Starting on May 3, 2017, the authorized treating physician (ATP) limited Claimant's hours to eight hours per day and five days a week, or 40 hours per week. During this same period in 2016, before the injury, Claimant worked an average of 57 hours a week.

10. Claimant performed modified job duties which occasionally exceeded her restrictions. Claimant's restrictions impaired her ability to perform her regular employment. The modified duty offer provided for 30 hours of work a week, fewer hours than Claimant's regular work-week pre-injury.

11. Claimant's ATP never released her to regular work without restrictions until MMI.

12. Effective January 22, 2017, Employer lowered the hourly wage rate of all of it's' employees to $11.00 per hour. Employer provided notice to all employees of the wage rate change on January 17, 2017. On January 22, 2017, Claimant's hourly rate of $11.27 an hour was reduced to $11.00 an hour. Employer represented that its wage reduction was consistent with federal law governing wages paid by H2A Employers.

13. It is found that Respondents' January 22, 2017, wage reduction does not impact calculation of Claimant's AWW for a date of injury on September 24, 2016, nor

does it reduce Claimant's indemnity benefits award for the period January 3, to December 17, 2017.

14. Claimant took vacation starting December 18, 2017, to January 8, 2018. Claimant is not entitled to TPD for that period.

15. Claimant demonstrated that it is more probably true than not that her work injury to some degree contributed to her post injury wage loss. Claimant is entitled to TPD from January 3, 2017, to December 17, 2017, in the amount of $8,913.65. This calculation is based on an AWW of $587.08. The ALJ incorporates by reference the chart contained in paragraph 17 of Claimant's proposed findings of fact dated August 27, 2018.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-201, C.R.S. The claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. Section 8-43-301(1), C.R.S.

2. The claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his employment with the employer. Section 8-41-301(1)(b) and (c), C.R.S*.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

3. In rendering a decision, the ALJ must make credibility determinations, draw plausible inferences from the record, and resolve essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office,* 84 P.3d 1023 (Colo. 2004). In determining credibility, the ALJ considers the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. Colorado Jury Instructions, Civil, 3:16.

AWW

4. Section 8-42-102(2), *supra*, requires the ALJ to base Claimant's AWW on her earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon her AWW on a date other than the date of injury.

Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), *supra*, grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997).

5. A fair approximation of Claimant's AWW is arrived at by considering Claimant's wages earned during the 32 weeks (224 days) prior to the date of injury, September 24, 2016. Based on that time period, the correct AWW is $587.08.

TPD

6. As found, commencing January 3, 2017, to December 17, 2017, Claimant was unable to return to the usual job due to the effects of the work injury. Section 8-42-103(1), *supra*, requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Thus, if the injury in part contributes to the wage loss, TPD benefits must continue until one of the elements of Section§8-42-106(2), *supra*, is satisfied. *Champion Auto Body v. Industrial Claim Appeals Office*, *supra.*

7. Claimant established by a preponderance of the evidence that Respondents are liable for an award of TPD commencing January 3, 2017, through December 17, 2017.

ORDER

1. Respondents shall be liable to pay to Claimant TPD from January 3, 2017, to December 17, 2017, in the amount of $8,913.65.

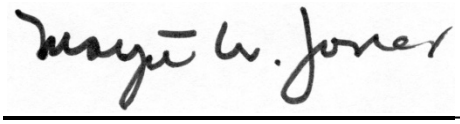
2. Claimant's AWW is $587.08.

3. Respondents shall be liable to Claimant for interest at the rate of 8% per annum on all amounts not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4 th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to

the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 6, 2018



Margot W. Jones
Administrative Law Judge
Office of Administrative Court
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained compensable lower back and finger injuries on September 25, 2017 during the course and scope of his employment with Employer.

2. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries.

3. A determination of Claimant's Average Weekly Wage (AWW).

4. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 3, 2017 until January 6, 2018.

5. Whether Employer is subject to penalties pursuant to §8-43-408(1), C.R.S. for failing to carry Workers' Compensation insurance on September 25, 2017.

6. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to recover penalties under §8-43-304, C.R.S. for Employer's failure to timely report his Workers' Compensation claim pursuant to §8-43-103(1), C.R.S.

7. Whether Claimant has established by a preponderance of the evidence that he is entitled to recover penalties for Employer's failure to timely admit or deny his Workers' Compensation claim pursuant to §8-43-203(2)(a), C.R.S.

FINDINGS OF FACT

1. Employer is a service establishment owned by Im Hoe. On July 26, 2017 Claimant began working for Employer.

2. On September 25, 2017 Claimant was working in the bar area of Employer's facility. Claimant testified that he injured his lower back, left little finger and right middle finger while changing a beer barrel in the bar area. Employer did not possess Workers' Compensation insurance on September 25, 2017.

3. Claimant immediately reported his injuries to General Manager Dong Gil Kim but was terminated on the following day. Mr. Kim informed Claimant that October 2, 2017 would be his last day working for Employer.

4. On October 2, 2017 Claimant drafted a letter to Mr. Hoe. He explained that he had been injured at work on September 25, 2017 at 11:00 p.m. He specifically

noted that he strained his back, sprained his left little finger and sprained his right middle finger. Claimant remarked that he reported his injuries to Mr. Kim and requested medical benefits. He stated that he would file a Workers' Compensation claim because he was uncertain about future treatment and recovery.

5. Employer did not respond to Claimant's request for medical treatment. Claimant thus obtained acupuncture and chiropractic treatment for his industrial injuries through personal providers. The chiropractic treatment included therapeutic massage and manipulation of Claimant's lower back. Claimant paid $60.00 to Yang Acupuncture and $2,743 to Kevin Hwang Chiropractic for a total of $2,803.

6. Claimant explained that he was unable to work for the period October 3, 2017 until January 6, 2018 because of his September 25, 2017 work injuries. The period consists of 95 days or 13.57 weeks.

7. For the period July 26, 2017 until October 2, 2017 Claimant earned total wages of $7050. The period covered 68 days or 9.71 weeks. Dividing $7050 by 9.71 yields an Average Weekly Wage (AWW) of $726.05. An AWW of $726.05 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

8. Claimant has established that it is more probably true than not that he sustained compensable lower back and finger injuries on September 25, 2017 during the course and scope of his employment with Employer. Claimant credibly testified that on September 25, 2017 he injured his lower back, left little finger and right middle finger while changing a beer barrel in Employer's bar area. In an October 2, 2017 letter to Employer Claimant explained that he was injured at work on September 25, 2017 at 11:00 p.m. He specifically noted that he strained his back, sprained his left little finger and sprained his right middle finger. Claimant reported his injuries to Mr. Kim and sought medical benefits for his injuries. Based on Claimant's credible testimony and a review of the record, Claimant suffered a disability that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer.

9. Claimant has demonstrated that it is more probably true than not that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries. Because Employer did not respond to Claimant's request for medical care he obtained acupuncture and chiropractic treatment for his industrial injuries at his own expense. The chiropractic treatment included therapeutic massage and manipulation of Claimant's lower back. Claimant paid $60.00 to Yang Acupuncture and $2,743 to Kevin Hwang Chiropractic for a total of $2,803. All of the preceding medical treatment was reasonable, necessary and related to Claimant's September 25, 2017 industrial injuries. Employer is thus financially responsible for the payment of Claimant's medical expenses for the treatment of his lower back and finger conditions.

10. Claimant has proven that it is more probably true than not that he is entitled to receive Temporary Total Disability (TTD) benefits for the period October 3,

2017 until January 6, 2018. Claimant's credible testimony reveals that he was unable to perform his job duties between October 3, 2017 and January 6, 2018. The period covers 95 days or 13.57 weeks. Claimant was obtaining medical treatment for his lower back and finger symptoms. He is entitled to an award of TTD benefits because his September 25, 2017 industrial injuries caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Multiplying Claimant's AWW of $726.05 by 66.67% yields a weekly TTD rate of $484.06. Multiplying $484.06 for a period of 13.57 weeks yields a total TTD amount of $6,568.69.

11. Employer was uninsured on September 25, 2017. Accordingly, in addition to any other compensation or benefits paid or ordered, Employer shall pay an additional amount equal to 25% or $3,000 of the compensation and benefits to the Colorado Uninsured Employer Fund. If Employer fails to pay the Claimant indemnity or medical benefits as ordered, Employer shall pay an additional 25% penalty to the Colorado Uninsured Employer Fund of the Colorado Division of Workers' Compensation.

12. Claimant has failed to demonstrate that it is more probably true than not that he is entitled to recover penalties under §8-43-304, C.R.S. for Employer's failure to timely report his Workers' Compensation claim pursuant to §8-43-103(1), C.R.S. The record demonstrates that Claimant notified Mr. Kim of his September 25, 2017 work injuries on the date they occurred. Claimant also drafted a letter to Mr. Hoe on October 2, 2017 advising of his work injuries. However, Claimant has produced insufficient evidence that Employer failed to report the September 25, 2017 claim to the Division of Workers' Compensation within 10 days or advise Claimant that he might be entitled to Workers' Compensation benefits. Accordingly, Claimant's request for penalties pursuant to §8-43-103(1), C.R.S. is denied and dismissed.

13. Claimant has failed to establish that it is more probably true than not that he is entitled to recover penalties for Employer's failure to timely admit or deny his Workers' Compensation claim pursuant to §8-43-203(2)(a), C.R.S. Although Employer was informed of Claimant's work injuries, Claimant has produced insufficient evidence that he missed work as a result of the injuries. The record reveals that Claimant was terminated from employment on October 2, 2017 but is devoid of evidence that Employer was aware of Claimant's subsequent disability. Accordingly, Claimant's request for penalties pursuant to §8-43-203(2)(a), C.R.S. is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004).

The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. As found, Claimant has established by a preponderance of the evidence that he sustained compensable lower back and finger injuries on September 25, 2017 during the course and scope of his employment with Employer. Claimant credibly testified that on September 25, 2017 he injured his lower back, left little finger and right middle finger while changing a beer barrel in Employer's bar area. In an October 2, 2017 letter to Employer Claimant explained that he was injured at work on September 25, 2017 at 11:00 p.m. He specifically noted that he strained his back, sprained his left little finger and sprained his right middle finger. Claimant reported his injuries to Mr. Kim and sought medical benefits for his injuries. Based on Claimant's credible

testimony and a review of the record, Claimant suffered a disability that was proximately caused by injuries arising out of and within the course and scope of his employment with Employer.

Medical Benefits

7. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

8. As found, Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his industrial injuries. Because Employer did not respond to Claimant's request for medical care he obtained acupuncture and chiropractic treatment for his industrial injuries at his own expense. The chiropractic treatment included therapeutic massage and manipulation of Claimant's lower back. Claimant paid $60.00 to Yang Acupuncture and $2,743 to Kevin Hwang Chiropractic for a total of $2,803. All of the preceding medical treatment was reasonable, necessary and related to Claimant's September 25, 2017 industrial injuries. Employer is thus financially responsible for the payment of Claimant's medical expenses for the treatment of his lower back and finger conditions.

Average Weekly Wage

9. Section 8-42-102(2), C.R.S. requires the Judge to determine a claimant's AWW based on his earnings at the time of injury. The Judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, §8-42-102(3), C.R.S. authorizes a Judge to exercise discretionary authority to calculate an AWW in another manner if the prescribed methods will not fairly calculate the AWW based on the particular circumstances. *Campbell v. IBM Corp.,* 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an AWW is to arrive at a fair approximation of a claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997). Therefore, §8-42-102(3), C.R.S. grants an ALJ substantial discretion to modify the AWW if the statutorily prescribed method will not fairly compute a claimant's wages based on the particular circumstances of the case. *In Re Broomfield,* W.C. No. 4-651-471 (ICAP, Mar. 5, 2007).

10. As found, for the period July 26, 2017 until October 2, 2017 Claimant earned total wages of $7050. The period covered 68 days or 9.71 weeks. Dividing $7050 by 9.71 yields an AWW of $726.05. An AWW of $726.05 constitutes a fair approximation of Claimant's wage loss and diminished earning capacity.

Temporary Total Disability Benefits

11. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, she left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999).

12. As found, Claimant has proven by a preponderance of the evidence that he is entitled to receive TTD benefits for the period October 3, 2017 until January 6, 2018. Claimant's credible testimony reveals that he was unable to perform his job duties between October 3, 2017 and January 6, 2018. The period covers 95 days or 13.57 weeks. Claimant was obtaining medical treatment for his lower back and finger symptoms. He is entitled to an award of TTD benefits because his September 25, 2017 industrial injuries caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. Multiplying Claimant's AWW of $726.05 by 66.67% yields a weekly TTD rate of $484.06. Multiplying $484.06 for a period of 13.57 weeks yields a total TTD amount of $6,568.69.

Penalties for Employer's Failure to Carry Worker's Compensation Insurance

13. Every employer subject to the provisions of the Workers' Compensation Act shall carry workers' compensation insurance. §8-44-101, C.R.S. Section 8-43-408(5), C.R.S., provides that, in addition to any other compensation or benefits paid or ordered, an employer that is uninsured at the time an employee suffers a compensable injury shall pay an additional amount equal to 25% of the compensation and benefits to the Colorado Uninsured Employer Fund. Section 8-43-408(6), C.R.S., further specifies that, if the uninsured employer fails to pay the Claimant indemnity or medical benefits as ordered, the non-insured Respondent shall pay an additional 25% penalty to the Colorado Uninsured Employer Fund of the Colorado Division of Workers' Compensation. If compensation is awarded the Judge shall compute and require the employer to pay a trustee an amount equal to the present value of all unpaid compensation or require the employer to file a bond within 10 days of the order. §8-43-408(2), C.R.S. The term "compensation" refers to disability benefits. *In Re of Shier,* W.C. No. 4-573-910 (ICAP, Dec. 15, 2005).

14. As found, Employer was uninsured on September 25, 2017. Accordingly, in addition to any other compensation or benefits paid or ordered, Employer shall pay an additional amount equal to 25% or $3,000 of the compensation and benefits to the Colorado Uninsured Employer Fund. If Employer fails to pay Claimant indemnity or medical benefits as ordered, Employer shall pay an additional 25% penalty to the Colorado Uninsured Employer Fund of the Colorado Division of Workers' Compensation.

Penalties for Employer's Failure to Timely Report Claim pursuant to 8-43-103(1), C.R.S.

15. Section 8-43-103(1), C.R.S. requires that an employer report an injury to the Division of Workers' Compensation (DOWC) within 10 days of notice or knowledge that an employee has suffered a lost-time injury. A "lost-time injury" is defined as one that causes a claimant to miss more than three shifts or three calendar days of work. *Grant v. Industrial Claims Appeals Office*, 740 P.2d 530 (Colo. App. 1987). An employer is deemed to have "notice" of an injury when the employer has some knowledge of the facts that would lead a reasonably conscientious manager to believe the claimant may seek benefits for the injury. *Jones v. Adolph Coors Co.*, 689 P.2d 681 (Colo. App. 1984).

16. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to recover penalties under §8-43-304, C.R.S. for Employer's failure to timely report his Workers' Compensation claim pursuant to §8-43-103(1), C.R.S. The record demonstrates that Claimant notified Mr. Kim of his September 25, 2017 work injuries on the date they occurred. Claimant also drafted a letter to Mr. Hoe on October 2, 2017 advising of his work injuries. However, Claimant has produced insufficient evidence that Employer failed to report the September 25, 2017 claim to the Division of Workers' Compensation within 10 days or advise Claimant that he might be entitled to Workers' Compensation benefits. Accordingly, Claimant's request for penalties pursuant to §8-43-103(1), C.R.S. is denied and dismissed.

Penalties for Employer's Failure to Admit or Deny Liability

17. Section 8-43-203(1)(a), C.R.S. provides:

> The employer or, if insured, the employer's insurance carrier shall notify in writing the division and the injured employee . . . within twenty days after a report is, or should have been filed with the division pursuant to section 8-43-101, whether liability is admitted or contested; except that, for purpose of this section, any knowledge on the part of the employer, if insured, is not knowledge on the part of the insurance carrier.

18. Section 8-43-203(2)(a), C.R.S. specifies that if such notice is not filed, "the employer, or if insured, the employer's insurance carrier, may become liable to the claimant, if successful on the claim for compensation, for up to one day's compensation for each failure to so notify." Because the claimant seeks the imposition of a penalty for

failure timely to admit or deny liability, the claimant bears the burden of proof to establish the circumstances justifying the imposition of the penalty. *See Pioneer Hospital v. Industrial Claim Appeals Office,* 114 P.3d 97 (Colo. App. 2005) (claimant seeking imposition of penalty under § 8-43-304(1) bore burden of proof to establish circumstances justifying a penalty).

19. Under the language of § 8-43-203(1)(a), knowledge of an insured may not be imputed to the insurer. *See State Compensation Insurance Fund v. Wilson,* 736 P.2d 33 (Colo. 1987); *Campbell v. IBM Corp.,* 867 P.2d 77 (Colo. App. 1993). Thus, an insurer is not responsible for admitting or denying liability until 20 days after it has knowledge of information that would require the employer to file a first report of injury with the DOWC under §8-43-101, C.R.S. Those circumstances include injuries that result in "lost time from work for the injured employee in excess of three shifts or calendar days." The mere knowledge that the claimant sustained an injury and that the injury resulted in restrictions resulting in a prescription for modified duty does not establish that the claimant missed work as a result of the injury or the number of days missed. *See Ralston Purina-Keystone v. Lowry,* 821 P.2d 910 (Colo. App. 1991); *Atencio v. Holiday Retirement Corp.,* W.C. No. 4-532-443 (ICAP Nov. 15, 2002).

20. As found, Claimant has failed to establish by a preponderance of the evidence that he is entitled to recover penalties for Employer's failure to timely admit or deny his Workers' Compensation claim pursuant to §8-43-203(2)(a), C.R.S. Although Employer was informed of Claimant's work injuries, Claimant has produced insufficient evidence that he missed work as a result of the injuries. The record reveals that Claimant was terminated from employment on October 2, 2017 but is devoid of evidence that Employer was aware of Claimant's subsequent disability. Accordingly, Claimant's request for penalties pursuant to §8-43-203(2)(a), C.R.S. is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable lower back and finger injuries on September 25, 2017 during the course and scope of his employment with Employer.

2. Employer is financially responsible for payment of Claimant's medical expenses for the treatment of lower back and finger injuries as well as authorized medical treatment that is reasonable and necessary to cure or relieve the effects of his September 25, 2017 industrial injuries. Claimant has incurred medical expenses totaling $2,803 for acupuncture and chiropractic care.

3. Claimant earned an AWW of $726.05.

4. Claimant shall receive TTD benefits for the period October 3, 2017 until January 6, 2018. The period covers 95 days or 13.57 weeks. Multiplying Claimant's

AWW of $726.05 by 66.67% yields a weekly TTD rate of $484.06. Multiplying $484.06 for a period of 13.57 weeks yields a total TTD amount of $6,568.69.

5. Claimant's request for penalties pursuant to §8-43-103(1), C.R.S. is denied and dismissed.

6. Claimant's request for penalties pursuant to §8-43-203(2)(a), C.R.S. is denied and dismissed.

7. Section 8-43-408(5), C.R.S., provides that in addition to any other compensation or benefits paid or ordered, an employer that is uninsured at the time an employee suffers a compensable injury shall pay an additional amount equal to 25% of the compensation and benefits to the Colorado Uninsured Employer Fund.

Section 8-43-408(6), C.R.S., provides that if the uninsured employer fails to pay the claimant indemnity and/or medical benefits as ordered, the non-insured Respondent shall pay an additional 25% penalty to the Colorado Uninsured Employer Fund of the Colorado Division of Workers' Compensation.

IT IS FURTHER ORDERED: Respondent-Employer shall pay the sum of $12,000 in compensation and benefits to Claimant.

IT IS FURTHER ORDERED: Respondent-Employer shall pay the sum of $3,000 to the Colorado Uninsured Employer Fund. The check shall be payable to the Division of Workers' Compensation, 633 17th Street, 9th Floor, Denver, CO 80202, Attention Iliana Gallegos, Revenue Assessment Officer.

In lieu of payment of the above compensation and benefits to Claimant, Respondent-Employer shall:

a. Deposit the sum of $15,000 with the Division of Workers' Compensation, as trustee, to secure the payment of all unpaid compensation and benefits awarded. The check shall be payable to and sent to the Division of Workers' Compensation, 633 17th Street, 9th Floor, Denver, Colorado 80202, Attention: Gina Johannesman / Trustee Special Funds Unit; or

b. File a surety bond in the sum of $15,000 with the Division of Workers' Compensation within ten (10) days of the date of this order:

(1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation; or

(2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation, penalties and

benefits awarded.

IT IS FURTHER ORDERED: Respondent-Employer shall notify the Division of Workers' Compensation, and Claimant, of payments made pursuant to this order.

IT IS FURTHER ORDERED: The filing of any appeal, including a petition to review, shall not relieve Respondent-Employer of the obligation to pay the designated sum to Claimant, to the trustee or to file the bond as required by paragraph (b) above. §8-43-408(2), C.R.S.

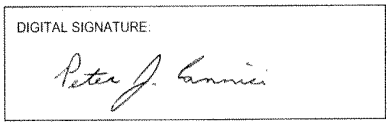
IT IS FURTHER ORDERED: Any interest that may accrue on a cash deposit shall be paid to the parties receiving distribution of the principal of the deposit in the same proportion as the principal, unless an agreement or Order authorizing distribution provides otherwise.

IT IS FURTHER ORDERED: Pursuant to §8-42-101(4), C.R.S., any medical provider or collection agency shall immediately and forthwith cease and desist from any further collection efforts from Claimant because Respondent-Employer is solely liable and responsible for the payment of all medical costs related to Claimant's work injury.

8. Any issues not resolved in this order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 6, 2018.



_____
Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts

1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant is entitled to a 29% whole person impairment rating, as determined by the Division Examiner, and if not, what is the correct scheduled and/or whole person impairment rating to which she is entitled.

II. Whether Claimant has established by a preponderance of the evidence that she is entitled to a disfigurement award, and if so, how much.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant, Debra Ball, is currently fifty-four years old. She worked as a bus driver for Employer. As a bus driver, Claimant dealt with customers and assisted in loading their luggage. Hrg. Tr. p. 16-17: 12-3.
2. On April 17, 2016, Claimant suffered an admitted injury to her right shoulder and rotator cuff while lifting a piece of luggage, which weighed approximately 50 pounds, onto a shelf. Hrg. Tr. p. 16-17: 8-15.
3. On April 22, 2016, an MRI revealed a massive and retracted full-thickness tear of her right rotator cuff. Cl. Ex. 6: 63; Ex. 3: 52; Ex. 1: 37.
4. As treatment for her industrial injury, Claimant underwent three surgeries to her right rotator cuff. Each surgery was performed by Dr. John Papilion of Advanced Orthopedic & Sports Medicine Specialists.
5. The first surgery to repair the damage to the various components of her rotator cuff was performed on June 6, 2016. The surgery required the placement of multiple sutures and anchors. Cl. Ex. 1: 1; 1:37. Dr. Papilion noted in the surgical report the postoperative diagnosis as:
    a. Large 5 cm tear of supraspinatus and infraspinatus tendon rotator cuff,
    b. Degenerative tear of the superior labrum,
    c. Chronic impingement, and
    d. AC joint anthropathy.
6. After surgery, Claimant underwent physical therapy as prescribed and ordered by Dr. Papilion of Advanced Orthopedic & Sports Medicine Specialists.

7. Due to pain and dysfunction of her cervical musculature, and the orders for physical therapy, which the ALJ infers were from Dr. Papilion since he signed off on the physical therapy notes which outline the "completed orders", the physical therapists treated Claimant's cervical musculature. Ex. 7.

8. The medical records submitted at hearing from Advanced Orthopedic & Sports Medicine Specialists, which were generated by various physical therapists and signed off on by Dr. Papillion, document the completed physical therapy orders directed towards Claimant's cervical musculature at various appointments. The "completed orders**,**" i.e., treatment, directed towards Claimant's cervical musculature in the form of physical therapy included:

    a. Neck stretches, scapular squeezes[1], and soft tissue mobilization of her cervical musculature to improve mobility on June 30, 2016. *(Ex. 7: 84-85)*

    b. Neck stretches and scapular squeezes on July 5, 2016. *(Ex. 7: 86-87)*

    c. Neck stretches and scapular squeezes on July 6, 2016. *(Ex. 7: 88-89)*

    d. Neck stretches and scapular squeezes on July 12, 2016. (Ex. 7: 90-91)

    e. Soft tissue mobilization to the cervical musculature, neck stretches, and scapular squeezes on July 13, 2016. *(Ex. 7: 92-93)*

    f. Soft tissue mobilization to the cervical musculature, neck stretches, and scapular squeezes on July 19, 2016. *(Ex. 7: 94-95)*

    g. Soft tissue mobilization to the cervical musculature, neck stretches, and scapular squeezes on July 21, 2016. *(Ex. 7: 99-100)*

    h. Neck stretches and scapular squeezes on July 26, 2016. *(Ex. 7: 101-102)*

    i. Soft tissue mobilization to the cervical musculature, neck stretches, and scapular squeezes on July 28, 2016. *(Ex. 7: 103-104)*

    j. Soft tissue mobilization to the cervical musculature, neck stretches, and scapular squeezes on August 2, 2016. *(Ex. 7: 105-106)*

    k. Neck stretches and scapular squeezes on August 4, 2016. *(Ex. 7: 107-108.)*

    l. Neck stretches and scapular squeezes on August 11, 2016. *(Ex. 7: 109-110.)*

    m. Neck stretches and scapular squeezes on August 12, 2016. *(Ex. 7: 111-112.)*

    n. Neck stretches and scapular squeezes on August 18, 2016. *(Ex. 7: 113-114.)(Also educated about sleeping position in order to accommodate her shoulder condition.)*

[1] Dr. Gray testified that the levator scapulae muscle is one of the primary muscles that is shared between the neck and the shoulder and is a significant focus when recovering and undergoing rehabilitation after shoulder surgery. Therefore, the ALJ credits Dr. Gray's testimony and finds that physical therapy directed towards Claimant's scapula musculature in the form of scapular squeezes is treatment of the levator scapulae and directed towards the musculature of Claimant's cervical spine.

o. Neck stretches and scapular squeezes on August 23, 2016. *(Ex. 7: 115-116.)*
p. Neck stretches and scapular squeezes on August 24, 2016. *(Ex. 7: 117-118.)*
q. Neck stretches and scapular squeezes on August 23, 2016. *(Ex. 7: 118-120.)*

9. Despite undergoing the first surgery, and despite undergoing physical therapy directed towards her shoulder, i.e., rotator cuff, as well as her cervical musculature, i.e., her neck, Claimant continued to have significant pain and dysfunction of the associated structures.

10. Due to ongoing pain and functional impairment, Claimant underwent another MRI. The MRI indicated the first surgery failed. The MRI demonstrated a persistent massive rotator cuff tear, edema in the posterior muscle belly, and superior migration of the humeral head and effusion of the shoulder joint. *Ex. 3: 52-3; Ex. 1: 37*.

11. After examining Claimant, listening to her reported physical complaints, and reviewing her MRI, Dr. Papillion concluded the prior repair failed and Claimant developed:

> [A] massive recurrent tear that was now felt to be irreparable with retraction to the glenoid rim. She has superior migration of the humeral head and pseudoparalysis. She has failed conservative treatment including extensive therapy, injections, and bracing. A repeat MRI reveals massive recurrent tear with atrophy and retraction. She is too young to consider for reverse shoulder arthroplasty. *Ex. 1: 37-38.*

12. On October 17, 2017, Dr. Papilion performed a second surgery, which was extensive, and involved a right shoulder superior capsular reconstruction. *Ex. 1: 37-40.* As stated by Dr. Jorge Klajnbart, who performed an IME on behalf of Respondents, even this second surgery was considered "somewhat of a salvage procedure, with a failed rotator cuff tear." Ex. D: 47.

13. The October 17, 2017, surgical report of Dr. Papilion supported Claimant's physical complaints of pain and functional impairment. As noted by Dr. Papilion, he found, among other things, the following:

    a. Moderate adhesions,

    b. The superior labrum was markedly frayed and there was poor attachment of the biceps, which required surgical repair,

    c. Massive recurrent rotator cuff tear, which was not felt to be repairable, in which numerous sutures were noted to be retained in the greater tuberoristy with no tissue attachment,

    Dr. Papilion then described all procedures performed, including the reconstruction of the superior capsule.

Nowhere in Dr. Papilion's surgical report or medical records does he contend that any portion of Claimant's pain complaints and functional impairments were "a direct consequence of her psychosomatic overlay," as indicated by Dr. Burris, and not due to the significant pathology noted during surgery.

14. Unfortunately, the right shoulder superior capsular reconstruction surgery also failed. Therefore, after the second surgery proved unsuccessful, Dr. Papilion ultimately recommended a reverse shoulder arthroplasty, which has been described as a "salvage procedure" by many of the physicians who have evaluated and/or treated Claimant. Even Dr. Klanjbart, Respondents' IME physician, indicated that Claimant should manage her expectations as to how successful the surgery will be at restoring Claimant's functioning because the shoulder replacement surgery will not result in a normal shoulder. *Ex. D: 47.*

15. On March 9, 2017, Claimant was evaluated by Dr. Mark Failinger, an orthopedic surgeon, for a second opinion regarding the reverse shoulder arthroplasty recommended by Dr. Papilion. After reviewing her medical records, physically examining Claimant, and taking into consideration her physical complaints, Dr. Failinger concluded that due to Claimant's limited shoulder motion, pain, and dysfunction, the only procedure left to perform to treat Claimant's injury was the reverse shoulder arthroplasty recommended by Dr. Papilion. He also stated that he completely agreed with the recommended surgery – which was deemed a salvage surgery. Absent from Dr. Failinger's report is any indication that any portion of Claimant's pain complaints and reported and observed functional impairments were based on subjective complaints which did not have an anatomical or physiological basis and were not supported by objective findings. There was no indication in his report that Claimant's symptoms and functional limitations were psychologically based. *Ex. 3.*

16. On July 19, 2017, Dr. Papilion performed the reverse shoulder arthroplasty. *Cl. Ex 1: 47.*

17. For treatment, Claimant has undergone an extensive amount of physical therapy which was directed towards her shoulder as well as her cervical musculature. The physical therapy directed towards Claimant's neck included neck stretches and soft tissue mobilization. Claimant also performed home therapy exercises, which included neck stretches, wall crawls, pulleys, and laying on a foam rolly. Claimant performed the home therapy exercises two to three times a day. She did physical therapy after all three of her surgeries. *Hrg. Tr. p. 19-22: 14-5.*

18. On December 12, 2017, Dr. Erik Tentori placed Claimant at maximum medical improvement (MMI). Pursuant to the AMA Guides, he provided Claimant a 40% extremity rating which equates to a 24% whole person rating. The 40% rating was comprised of a 30% rating for the artificial joint and an additional 14% for the decrease in shoulder range of motion. Dr. Tentori placed Claimant on modified duty and assigned a 15 lb. push/pull lifting restriction. *Cl. Ex. 4: 56- 60.*

19. On February 13, 2018, Respondents filed a Final Admission of Liability (FAL) admitting to the forty-percent scheduled impairment rating. Respondents also

admitted to reasonable and necessary maintenance medical treatment after MMI. *Cl. Ex. 8: 153.*

20. Claimant objected to the FAL on February 28, 2018. *Cl. Ex. 9: 157.* Claimant also requested a Division Independent Medical Examination (DIME).

21. Dr. Stephen Gray performed the DIME on April 10, 2018. In his report, Dr. Gray noted Claimant's current symptomatology and her reported functional impairments due to her work related injury. These symptoms and functional impairments included:

    a. Constant severe aching and throbbing right shoulder pain;

    b. Radiation of pain into her neck and down her right arm;

    c. Global neck pain with headaches;

    d. Pain down the middle of her upper back area;

    e. Weakness in her right arm;

    f. Increased right shoulder pain with essentially all activities, except writing and driving up to an hour;

    g. Difficulty bathing and getting dressed;

    h. Inability to perform anything but light housework;

    i. Inability to perform yard work;

    j. Inability to play or participate in various sports such as tennis, volleyball, softball, horseback riding, skiing, golfing, and fishing;

    k. Inability to enjoy sex; and

    l. Limited ability to play with her grandchildren.

22. Dr. Gray also noted in his physical examination that Claimant had muscle atrophy in the anterior shoulder and chest wall. Although Dr. Gray indicated that some of the atrophy may have been due to Claimant's prior mastectomy, he still attributed a portion of the atrophy to her shoulder and chest wall to her work injury. He also noted tenderness over all areas palpated on the right shoulder and all areas palpated proximal to the glenohumeral joint up into the right side of her neck. He also determined Claimant had decreased range of motion in her right shoulder and measured such pursuant to the AMA Guides.

23. Dr. Gray also physically examined Claimant's upper extremities. His examination revealed an essentially normal exam regarding her upper extremities.

24. Dr. Gray also recommended permanent restrictions. These restrictions included a 12-pound right hand lifting limit and no right handed overhead work.

25. There is no finding by Dr. Gray in his report or testimony that Claimant's symptoms and functional impairments are not physiologically or anatomically consistent with her work injury and not supported by objective findings. Instead, Dr. Gray testified that Claimant's symptoms and functional impairments are physiologically and anatomically consistent with her work injury and supported by

objective findings. The objective findings would include the documented massive rotator cuff tear, massive re-tear of her rotator cuff, and the three surgeries which included the shoulder replacement which was deemed a salvage surgery, combined with the expected impact – functional impairment - the injury had on the muscles which are shared with the shoulder and the neck. In addition, the distribution of Claimant's pain, symptoms, and functional impairments are consistent with her injury and extensive course of treatment.

26. In determining Claimant's impairment rating, Dr. Gray provided Claimant a 30% impairment of the right upper extremity due to the total reverse arthroplasty pursuant to Table 19 of the AMA Guides and the DOWC Impairment Rating Tips guidance. He also provided Claimant a 14% upper extremity impairment rating due to range of motion deficits. When combined, he provided Claimant a 40% right upper extremity rating which converts to a 24% whole person impairment rating. Dr. Gray also provided Claimant an additional 6% whole person impairment rating due to the functional impairment to Claimant's cervical spine musculature caused by the injury. Dr. Gray explained that the effects of Claimant's injury to her right shoulder along with the subsequent surgeries have had a "significant whole person effect on [Claimant's] condition and functioning." He added that these limitations qualify Claimant for a cervical spine rating due to a decrease in range of motion, despite the absence of a Table 53 diagnosis. He reiterated that he assigned the additional 6% whole person impairment rating under the AMA Guides:

> [D]ue to the effects on cervical range of motion secondary to the effects of the right shoulder condition and its effects and involvement on and of the structures proximal to the right glenohumeral joint. (Ex. 6: 74).

Dr. Gray concluded Claimant's total whole person impairment due to her work related injury pursuant to the AMA Guides was 29% whole person. Cl. Ex. 6: 74.

27. Dr. Gray was deposed on July 31, 2018. In support of his rating for the decreased range of motion of Claimant's cervical spine, Dr. Gray opined that the massive rotator cuff tear, the three surgeries, and the postoperative immobilization would certainly affect the muscles between the neck and shoulder. *Gray Depo Tr. p. 11-12: 21-7.* In support of his opinion, Dr. Gray explained that the shoulder and the neck have shared musculature, with the most important muscles being the trapezius, levator scapulae, subscapularis, and the intrascapular. *Gray Depo Tr. p. 26: 2.* Dr. Gray explained that the trapezius and levator scapulae act to stabilize the shoulder. Gray Depo Tr. p. 28: 7-10. When the shoulder is immobilized, Dr. Gray stated that the neck and shared muscles will compensate and "take over part of that function" causing the person to use shared muscles between the neck and shoulder to support the neck. *Gray Depo Tr. p. 28 14-16; Gray Depo Tr. p. 31:2-6.* Additionally, Dr. Gray noted Claimant was elevating her right shoulder during the examination, which further supported his finding that the shared cervical musculature were compensating for the loss of function in Claimant's shoulder. *Gray Depo Tr. p. 30: 16-22.*

28. In reviewing Claimant's medical records, Dr. Gray found multiple entries by physical therapists discussing attention to the neck. *Gray Depo Tr. p. 16: 7-11.* Dr. Gray also relied on a report from Dr. Failinger from March 9, 2017 that notes tenderness in the elevator scapulae and a lack of range of motion in Claimant's neck. *Gray Depo Tr. p. 17-18: 19-11; Failinger Report at Cl. Ex. 3:51-53.* Dr. Gray explained that the levator scapulae is one of the primary shared muscles between the neck and the shoulder and a "significant focus when recovering rehabilitation from a shoulder surgery, especially a total reverse [arthroplasty]." *Gray Depo Tr. p. 17-18: 19-11. Pg. 17-18.* Dr. Gray also relied on a physical therapy record from June 30, 2016, that noted Claimant had pain in her neck and was guarding her neck musculature. *Gray Depo Tr. p. 20-21: 25-7; Report at Cl. Ex. 7:84.*

29. The AMA Guides set forth how to rate medical impairment of the cervical spine. The AMA Guides divide impairment of the cervical spine into two categories. The first category is based on diagnosis-related factors involving structural abnormalities. *AMA Guides, pg. 78.* The second category is based on range of motion abnormalities. *AMA Guides, pg. 78-81.*

30. The Principles for Calculating Impairment contained in the AMA Guides direct the examiner in the method to be used in calculating impairment of the cervical spine. *AMA Guides, pg. 79*. The Principles provide that "***If applicable***, use Table 53" to obtain a diagnosis-based percentage of impairment. (Emphasis added.) *AMA Guides, pg. 79.* The Principles indicate the next step in determining impairment is to determine any abnormal range of motion and the amount of impairment associated with the abnormal range of motion. The Principles further provide that the evaluator is to combine the Table 53 rating [if applicable] with the range of motion rating to determine the total impairment of the cervical spine. *Id. at 81.* Consequently, if the examiner does not think there should be a table 53 Rating, because it is "not applicable," the cervical rating would be based solely on the abnormal range of motion deficits of the cervical spine.

31. There is no explicit declaration in the AMA Guides that a Table 53 diagnosis and rating is a prerequisite to providing an impairment rating based on abnormal range of motion of the cervical spine caused by an injury to the shoulder and its shared musculature with the neck.

32. When and how to rate medical impairment under the AMA Guides is based on each physician's reasonable interpretation and application of the AMA Guides.

33. In certain cases, there is a legitimate difference of opinion as to how the AMA Guides should be interpreted and applied. And, in certain cases, each opinion can be a reasonable and fully defensible interpretation and application of the AMA Guides regarding a particular injury.

34. In most cases, before providing a spinal rating for the lumbar, thoracic, or cervical spine, there must be a Table 53 diagnosis based rating. The assumed premise is that there must be an underlying identifiable diagnosis and injury to

the underlying spinal segment from which the abnormal range of motion flows in order to support a rating.

35. However, when and how to rate certain shoulder injuries which also impair the functioning of the neck musculature pursuant to the AMA Guides is not always clear. On the other hand, what does appear to be clear is that certain shoulder injuries can impact the cervical musculature and significant shoulder injuries can result in pain and abnormal range of motion of the cervical spine. Therefore, the Colorado Division of Worker' Compensation has issued Impairment Rating Tips in an attempt to address this issue.

36. The Impairment Rating Tips from the Division of Workers' Compensation set forth the Division's interpretation of how to apply the AMA Guides when rating significant shoulder injuries that also impair cervical range of motion. [2]

The Rating Tips provide an exception to the usual requirement to provide a diagnosis based Table 53 rating before rating spinal range of motion deficits. The General Principles section of the Rating Tips specifies that:

> [I]n shoulder cases with accompanying neck pain, the clinician must determine whether an additional objective work related Table 53 cervical pathology qualifies for a rating OR the symptoms the patient has are those expected from the shoulder pathology and do not qualify for an additional rating. [3]

This admonition is repeated in the Spinal Rating section:

> In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established. (References: Spine section of the AMA Guides, 3rd Edition (rev.). [4]

However, this statement is followed by an exception, which provides:

> In unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature, an isolated cervical range of motion impairment may be allowed if well-justified by the clinician. Otherwise there are no exceptions to the requirement for a corresponding Table 53 rating. [5]

---

[2] See Division of Workers Compensation Desk Aid #11 – Impairment Rating Tips; Updated May 2018. Respondents' Exhibit G.
[3] *Id.*
[4] *Id*.
[5] *Id*.

In this case, Dr. Gray determined Claimant's work related injury caused severe shoulder pathology, which resulted in treatment being directed towards her shoulder and cervical musculature, and that Claimant's cervical range of motion deficits were causally related to her injury and ratable pursuant to the AMA Guides and the Colorado Division of Workers' Compensation Rating Tips.

37. The ALJ finds Dr. Gray's opinions as set forth in his report and testimony to be credible, persuasive, and well supported.

38. The ALJ also finds Dr. Gray's interpretation and application of the AMA Guides to the particular facts of this case to be credible, persuasive, and well supported.

39. The ALJ also finds Dr. Gray's interpretation and application of the AMA Guides to the particular facts of this case to be consistent with the Rating Tips issued by the Colorado Division of Workers' Compensation.

40. At hearing, Dr. John Burris testified on behalf of Respondents. He agreed that the objective medical evidence revealed severe shoulder pathology as a result of Claimant's industrial injury. *Hrg. Tr. p. 25: 4-9.* However, Dr. Burris opined that the symptoms extending beyond the shoulder were psychological in nature and unrelated to the industrial injury. *Hrg. Tr. p. 41-42: 23-3.*

41. Nonetheless, Dr. Burris also stated that the pain in the muscles beyond Claimant's shoulder act as a normal consequence for her severe shoulder pathology. *Hrg. Tr. p. 50: 21-24.* Dr. Burris testified that when a person tears a rotator cuff, it is common for the surrounding muscles to tighten up and compensate for the tear. *Hrg. Tr. p. 26: 17-21.* Of the surrounding musculature, Dr. Burris agreed that the affected muscles would include the trapezius, which he agreed acts as part of the cervical musculature. *Hrg. Tr. p. 50: 16-20; Hrg. Tr. p. 49: 6-9.*

42. Dr. Burris performed range of motion testing on Claimant's shoulder. He testified that his findings were not consistent with what one would expect from a reverse total shoulder arthroplasty. *Hrg. Tr. p. 34: 13-15.* However, contrary to his hearing testimony, four months after the reverse total shoulder arthroplasty, Dr. Burris evaluated Claimant on November 21, 2017. Dr. Burris stated in his report that Claimant's "examination is consistent with the expected outcomes from the reverse total shoulder arthroplasty." In the same report, Dr. Burris also stated that Claimant's "observed range of motion is consistent with her reverse total shoulder arthroplasty salvage procedure." *R Ex. B: 22.*

43. Moreover, in his November 21, 2017, report, Dr. Burris discussed Claimant's frustration with her current pain complaints and functional impairments. He indicated that the surgery did not provide a "significant" change in Claimant's subjective complaints or functional status. On the other hand, he indicated that a significant change was not expected because "it still does not appear that [Claimant] has realistic expectations for the nature of the outcome from her treatment" which is a "salvage procedure." In his report, he also indicated that Claimant has functional impairment which includes limiting her lifting to up to 20

pounds, limiting her repetitive overhead activities to an occasional basis, and avoiding high impact activities involving both upper extremities. *R Ex. B: 22.*

44. Dr. Burris was asked at hearing about the "significant psychological issues" he noted in his report which he appears to contend are the predominant cause of Claimant's pain complaints and functional impairments. He was then asked the following question:

> Are the significant psychological issues a reasonable explanation of why [Claimant] continues to complain of physical limitations and/or restrictions as opposed to objective medical pathology, in your expert opinion?

Dr. Burris then provided the following answer:

> In my latest role with my clinical practice, I do mostly delayed recovery. And in most cases like this where you have substantial delayed recovery and not (*sic*) response, doesn't respond to appropriate treatment, that's highly likely that that's a significant factor in continuation of symptoms.

Hr. Tr. pg. 47-48.

45. Dr. Burris' contention that Claimant's pain complaints, functional impairments, and disability are psychologically based, because she has not responded to appropriate treatment, is at odds with the objective findings that supported the underlying diagnoses to her shoulder and which supported the need for each of the three surgeries. The ALJ finds Dr. Burris' attempt to cloak Claimant's symptoms and functional impairments with the negative connotation that is sometimes associated with "delayed recovery" or delegitimize her symptoms and functional impairments by labeling them as psychologically based is also at odds with the objective pathology, the extent of the "salvage" surgeries which were performed in this case, and the medical record.

46. Claimant has had a psychological response to her work injury and her functional impairments which were caused by her work injury. However, even Dr. Lupe Ledezma, Ph.D, Claimant's psychologist, noted that there was no indication Claimant is intentionally trying to exaggerate or distort her symptoms which include chronic pain and functional impairment. *Ex. B: 6.* Dr. Ledezma's opinion that Claimant was not exaggerating or distorting her symptoms is supported by the objective medical evidence which established Claimant had a massive rotator cuff tear which required surgical repair, a massive re-tear of her rotator cuff, and two additional surgeries which have been defined as salvage surgeries.

47. The ALJ does not credit Dr. Burris' opinion that Claimant's pain and functional impairments are psychologically based and do not have an anatomic or physiologic correlation to her underlying injury and are not supported by objective findings.

48. Dr. Burris provided Claimant a 30% upper extremity rating pursuant to Table 19 of the AMA Guides. He did not assign any additional impairment for any decreased range of motion regarding Claimant's shoulder.

49. Dr. Burris' opinion that Claimant's rating for her reverse shoulder arthroplasty is limited to the 30% rating assigned for an arthroplasty pursuant to the AMA Guides is not found to be persuasive. Dr. Burris indicated in his report that he did not provide Claimant additional impairment for her decreased range of motion of her shoulder because Claimant gave minimal effort and the tables only apply to a normal joint, i.e., not a prosthetic joint. At hearing, he went further and indicated Claimant is not entitled to additional impairment for any decreased range of motion of her shoulder because pursuant to the AMA Guides the 30% rating for the prosthetic joint also encompasses any decreased range of motion. However, upon a review of the AMA Guides, such contention is unpersuasive. The AMA Guides specifically provide that "Arthroplasty impairment may be *combined* with impairments due to restricted range of motion." *See AMA Guides, pg. 51.* The AMA Guides also provide numerous examples demonstrating the method to be used when rating impairment when an artificial joint is involved. The examples demonstrate the provision of a specific rating for the artificial joint as well as the provision of additional impairment for any decreased range of motion. Moreover, Dr. Tentori as well as the Division Examiner, Dr. Gray, provided Claimant a rating for her artificial joint as well as the decreased range of motion of her shoulder. Therefore, the ALJ does not credit Dr. Burris' opinion that Claimant's impairment rating for her prosthetic shoulder joint is limited to a 30% upper extremity rating and that it is inappropriate to include additional impairment for any range of motion deficits of the shoulder joint pursuant to the AMA Guides.

50. Dr. Jorge Klajnbart also performed an IME for Respondents. On deposal, Dr. Klajnbart stated that physical therapy is a form of treatment. *Klajnbart Depo. p.17:1-5.* Dr. Klajnbart stated that soft tissue mobilization of the neck acts as treatment for the cervical musculature. *Pg. 17, 17-22*. After reviewing a physical therapy record stating that Claimant received soft tissue mobilization to her neck musculature, Dr. Klajnbart agreed this treatment acts as treatment to the cervical musculature. *Klajnbart Depo. p.17-22; Record at Cl. Ex. 7: 92.*

51. Dr. Klajnbart stated that while the Claimant may have received treatment to cervical musculature, she still should not have received a rating to her cervical spine without documentation of cervical or neck pain. *Klajnbart Depo. p.20-21:18-4.* However, Dr. Klajnbart agreed that statements in the records denoting neck pain or guarding of the neck would suffice as documenting cervical neck pain. *Klajbart Depo. p.22-23:18-4; Record at Cl. Ex. 7:84.*

52. Dr. Tentori met with Claimant on one occasion in which he put her at MMI and assigned a permanent impairment rating. *Tentori Depo. p.6:20-23*. Dr. Tentori explained that although he only focused on the patient's right shoulder, he did not have time to review all of Claimant's records to determine if other body parts were involved. Tentori Depo. p.10:16-23. Dr. Tentori explained that even had Claimant complained of symptoms in her neck, he only had a short time to examine and would not have been able to address anything other than the right shoulder. *Tentori Depo. p.11:16-25.*

53. Dr. Tentori explained while he had limited time to review Claimant's records, the three surgeries make it reasonable to conclude that a whole person impairment rating should apply. *Tentori Depo. p.14: 3-17.*

54. Dr. Tentori stated that he disagreed with Dr. Burris in that the impairment should be limited to the extremity. *Tentori Depo. p.23: 4-12.* Moreover, as set forth above, Dr. Tentori provided Claimant a 30% impairment rating for her artificial shoulder joint as well as an additional 14% impairment for the abnormal range of motion of her shoulder, which combined to a 40% impairment rating of the upper extremity. By providing Claimant additional impairment for her decreased range of motion, Dr. Tentori disagreed with Dr. Burris' methodology for limiting impairment to just the joint replacement rating of 30%, regardless of the impact the injury had on the functioning of the shoulder which limits the range of motion of the shoulder and upper extremity.

55. The physical therapy records show an extensive amount of physical therapy performed on Claimant. *Cl. Ex. 7: 84-152.* As found above, the treatment performed included soft tissue mobilization and stretches involving both the shoulder and neck - cervical musculature.

56. Claimant's testimony and statements to her medical providers is found to be credible and persuasive.

57. Since her injury, Claimant's symptoms and functional impairments include pain in her right arm, shoulder, back, and neck. She has also lost a significant amount of functioning of her shoulder. Furthermore, she also experiences frequent headaches. *Hrg. Tr. p. 17: 16-22-3.* Claimant also physically struggles to do simple tasks such as showering, washing, and blow-drying her hair. *Hrg. Tr. p.18 1-15.* In addition, Claimant has been provided restrictions which preclude or limit her from performing overhead work and activities and limits her ability to lift over 15 pounds with her right upper extremity and shoulder, whether performing work or other activities of daily living. *Cl. Ex. 4: 56- 60.* Claimant did not have these functional impairments prior to her injury. *Hrg.Tr. p. 17: 23-25.*

58. Claimant sustained a single, but significant, injury to her shoulder. The injury to her shoulder resulted in the following permanent symptoms and functional impairments:

    a. Constant severe aching and throbbing right shoulder pain;

    b. Radiation of pain into her neck and down her right arm;

    c. Global neck pain with headaches;

    d. Decreased cervical range of motion;

    e. Pain down the middle of her upper back;

    f. Weakness in her right arm;

    g. Right shoulder pain with essentially all activities, except writing and driving up to an hour;

    h. Difficulty bathing, showering, fixing her hair, and getting dressed;

i. Inability to perform anything but light housework;

j. Inability to perform yard work;

k. Inability to play or participate in various sports such as tennis, volleyball, softball, horseback riding, skiing, golfing, and fishing;

l. Inability to enjoy sex;

m. Limited ability to play with her grandchildren;

n. Restrictions issued by physicians which limit her ability to lift more than fifteen pounds using her right upper extremity and restricted her ability to do overhead activities with her right upper extremity and shoulder; and

o. The physical inability to perform overhead activities, which includes the inability to perform her regular job duties which required her to drive and handle passengers' luggage, such as lifting it overhead, as she was doing when she was injured.

59. Claimant's injury has resulted in effects and involvement on and of the structures proximal to the right glenohumeral joint. *Ex. 6: 74*

60. Claimant did not sustain a "loss of an arm at the shoulder" within the meaning of the schedule of disabilities in § 8-42-107(2)(a). Instead, Claimant sustained a whole person medical impairment rating which is compensable under § 8-42-107(8)(c).

61. Pursuant to the AMA Guides, Claimant's work injury resulted in a 29% whole person impairment rating.

62. In the disfigurement potion of the hearing, the ALJ noted a 4-and-a-half inch long and quarter inch wide surgical scar on Claimant's right shoulder. The ALJ also noted three arthroscopic surgical port scars and a marked indentation on the right shoulder compared to left. *Hrg. Tr. p. 52-53: 11-8.*

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, et seq., is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met their respective burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility assigned to evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant*, 24 Colo. App. 131, 134 P. 254 (1913); see also *Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

Order of Analysis and Burden of Proof

In cases in which the ALJ finds functional impairment to the whole person and the DIME physician has assigned a whole person impairment rating, the DIME physician's rating is binding unless overcome by clear and convincing evidence. *See Warthen v. Industrial Claim Appeals Office*, 100 P.3d 581, 583 (Colo. App. 2004).

Therefore, the initial issue to address is whether Claimant suffered an injury not listed on the schedule of disabilities.

I. Permanent Partial Disability Benefits

a. Whether Claimant Suffered Functional Impairment to the Whole Person.

The question of whether Claimant sustained a "loss of an arm at the shoulder" within the meaning of the schedule of disabilities in § 8-42-107(2)(a), C.R.S., or a whole person rating under § 8-42-107(8)(c), C.R.S., is one of fact for determination by the ALJ. *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). In resolving this question, the ALJ must determine the situs of Claimant's "functional impairment," and the site of the functional impairment is not necessarily the site of the injury itself. *Langton v. Rocky Mountain Health Care Corp*., 937 P.2d 883 (Colo. App. 1996); *Strauch v. PSL Swedish Healthcare System, supra*.

Moreover, the panel has repeatedly held that "functional impairment" need not take any particular form. *See Nichols v. LaFarge Construction*, W.C. No. 4-743-367

(October 7, 2009); *Aligaze v. Colorado Cab Co*., W.C. No. 4-705-940 (April 29, 2009); *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Functional impairment may be evidenced by pain that limits use of a part of the body. *Spitzer v. Custom On Site Builders*, W.C. No. 4-739-406 (November 4, 2009). *Chavez v. Excel Corporation*, W. C. No. 4-491-549 (February 05, 2004); *Valles v. Arrow Moving & Storage Co.*, W.C. No. 4-265-129 (October 22, 1998). Moreover, there is no requirement that there must be permanent restrictions imposed by a doctor in order to support a finding as to whether Claimant has functional impairment as a result of an injury. *Martinez v. Pueblo County Sheriff's Office*, W.C. No. 4-806-129 (August 9, 2011). As set forth in *Martinez, supra*, "functional impairment is not merely assessed by medical means but rather can involve an overall assessment of the effect the injury has had on the claimant's ability to function in terms of movement and in the performance of activities at work and daily living." And, the term "injury" as used in the schedule of disabilities refers to the manifestation in a part or parts of the body which have been impaired or disabled as a result of the industrial accident. *Id.*

Therefore, when evaluating functional impairment, it is appropriate for the ALJ to look at, not only the alteration of Claimant's abilities by medical means, but also by non-medical means of the impact the injury has had on Claimant's capacity to meet personal, social and occupational demands. See, *Martinez, supra*, and *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). Therefore, the existence of permanent restrictions imposed by a doctor is some evidence which the ALJ may consider in determining the nature and extent of Claimant's functional impairment. *See, Strauch v. PSL Swedish Healthcare System, supra*. Therefore, an ALJ may or may not find the existence of permanent restrictions to be persuasive when balanced against other evidence concerning Claimant's ability to function.

In this case, the ALJ concludes Claimant did not sustain a "loss of an arm at the shoulder" within the meaning of the schedule of disabilities in § 8-42-107(2)(a). Instead, the ALJ concludes Claimant sustained a whole person medical impairment rating which is compensable under § 8-42-107(8)(c).

In this case, Claimant suffered a significant injury to her right shoulder which resulted in significant functional impairment. As found, Claimant sustained a single, but significant, injury to her right shoulder. The injury to her right shoulder resulted in the following permanent symptoms and functional impairments:

a. Constant severe aching and throbbing right shoulder pain;

b. Radiation of pain into her neck and down her right arm;

c. Global neck pain with headaches;

d. Decreased cervical range of motion;

e. Pain down the middle of her upper back;

f. Weakness in her right arm;

g. Right shoulder pain with essentially all activities, except writing and driving up to an hour;

h. Difficulty bathing, showering, fixing her hair, and getting dressed;

i. Inability to perform anything but light housework;

j. Inability to perform yard work;

k. Inability to play or participate in various sports such as tennis, volleyball, softball, horseback riding, skiing, golfing, and fishing;

l. Inability to enjoy sex;

m. Limited ability to play with her grandchildren;

n. Restrictions issued by physicians which limit her ability to lift more than fifteen pounds using her right upper extremity and shoulder and restricted her ability to do overhead activities with her right upper extremity and shoulder; and

o. The physical inability to perform overhead activities, which includes the inability to perform her regular job duties which required her to drive and handle passengers' luggage, such as lifting it overhead, as she was doing when she was injured.

The ALJ concludes Claimant has established by a preponderance of the evidence that her functional impairment is not on the schedule of disabilities. Claimant did not sustain a "loss of an arm at the shoulder" within the meaning of the schedule of disabilities in § 8-42-107(2)(a). The ALJ concludes Claimant has established by a preponderance of the evidence that she sustained a whole person medical impairment rating which is compensable under § 8-42-107(8)(c).

b. Whether Respondents Overcame the Division IME by Clear and Convincing Evidence.

In cases in which the ALJ finds functional impairment to the whole person and the DIME physician has assigned a whole person impairment rating, the DIME physician's rating is binding unless overcome by clear and convincing evidence. *See Warthen v. Industrial Claim Appeals Office*, 100 P.3d 581, 583 (Colo. App. 2004).

A DIME physician must apply the AMA Guides when determining Claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning the Claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

Moreover, the questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. In addition, not every deviation from the rating protocols of the AMA Guides requires the ALJ to conclude that the DIME physician's rating has been overcome as a matter of law. Rather, deviation from the AMA Guides constitutes evidence that the ALJ may consider in determining whether the DIME physician's rating has been overcome. *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117 (Colo. App. 2003); *Logan v. Durango Mountain Resort,* W.C. No. 4-679-289 (ICAO April 3, 2009). Furthermore, a mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

In this case, Dr. Gray provided Claimant a 29% whole person impairment rating pursuant to the AMA Guides. In arriving at the impairment rating, Dr. Gray provided Claimant a 30% impairment of the right upper extremity due to the total reverse arthroplasty pursuant to Table 19 of the AMA Guides and the DOWC Impairment Rating Tips guidance. He also provided Claimant a 14% upper extremity impairment rating due to range of motion deficits. When combined, he provided Claimant a 40% right upper extremity rating which converts to a 24% whole person impairment rating. Dr. Gray also provided Claimant an additional 6% whole person impairment rating pursuant to the AMA Guides due to the medical impairment to Claimant's cervical musculature which was caused by the injury. Dr. Gray explained that the effects of Claimant's injury to her right shoulder along with the subsequent surgeries have had a "significant whole person effect on [Claimant's] condition and functioning." He added that these limitations qualify Claimant for a cervical spine rating due to a decrease in range of motion, despite the absence of a Table 53 diagnosis. He reiterated that he assigned the additional 6% whole person impairment rating under the AMA Guides:

> [D]ue to the effects on cervical range of motion secondary to the effects of the right shoulder condition and its effects and involvement on and of the structures proximal to the right glenohumeral joint.

Dr. Gray was deposed on July 31, 2018. In support of his rating for the decreased range of motion of Claimant's cervical spine, Dr. Gray opined that the massive rotator cuff tear, the three surgeries, and the postoperative immobilization would certainly affect the muscles between the neck and shoulder. In support of his opinion, Dr. Gray explained that the shoulder and the neck have shared musculature, with the most important muscles being the trapezius, levator scapulae, subscapularis, and the intrascapular. Dr. Gray explained that the trapezius and levator scapulae act to stabilize the shoulder. Gray Depo When the shoulder is immobilized, Dr. Gray stated that the neck and shared muscles will compensate and "take over part of that function" causing the person to use shared muscles between the neck and shoulder to support the neck. Additionally, Dr. Gray noted Claimant was elevating her right shoulder during the examination, which further supported his finding that the shared cervical musculature were compensating for the loss of function in Claimant's shoulder.

In reviewing Claimant's medical records, Dr. Gray found multiple entries by physical therapists discussing attention to the neck. Dr. Gray also relied on a report from Dr. Failinger from March 9, 2017 that notes tenderness in the elevator scapulae and a lack of range of motion in Claimant's neck. Dr. Gray explained that the levator scapulae is one of the primary shared muscles between the neck and the shoulder and a "significant focus when recovering rehabilitation from a shoulder surgery, especially a total reverse [arthroplasty]." Dr. Gray also relied on a physical therapy record from June 30, 2016, that noted Claimant had pain in her neck and was guarding her neck musculature.

The AMA Guides set forth how to rate medical impairment of the cervical spine. The AMA Guides divides impairment of the cervical spine into two categories. The first category is based on diagnosis-related factors involving structural abnormalities. *AMA Guides, pg. 78.* The second category is based on range of motion abnormalities. *AMA Guides, pg. 78-81.*

The Principles for Calculating Impairment contained in the AMA Guides direct the examiner in the method to be used in calculating impairment of the cervical spine. The Principles provide that "***If applicable***, use Table 53" to obtain a diagnosis-based percentage of impairment. (Emphasis added.) *See AMA Guides, pg. 79.* The Principles indicate the next step in determining impairment is to determine any abnormal range of motion and the amount of impairment associated with the abnormal range of motion. The Principles further provide that the evaluator is to combine the Table 53 rating [if applicable] with the range of motion rating to determine the total impairment of the cervical spine. *Id. at 81.* Consequently, if the examiner does not think there should be a table 53 Rating, because it is "not applicable," the cervical rating would be based solely on the abnormal range of motion deficits of the cervical spine.

There is no explicit declaration in the AMA Guides that a Table 53 diagnosis and rating is a prerequisite to providing an impairment rating based on abnormal range of motion of the cervical spine caused by an injury to the shoulder and its shared musculature with the neck.

When and how to rate medical impairment under the AMA Guides is based on each physician's interpretation and application of the AMA Guides.

In certain circumstances, there is a difference of opinion as to how the AMA Guides should be applied when rating a particular injury. And, in certain circumstances, each opinion can be a reasonable, but merely a different interpretation and application of the AMA Guides to a particular injury.

In most cases, before providing a spinal rating for the lumbar, thoracic, or cervical spine, there must be a Table 53 diagnosis based rating. The assumed premise is that there must be an underlying and identifiable diagnosis caused by a specific discrete injury to the underlying structure of the spinal segment from which the abnormal range of motion flows.

However, the resulting functional impairment from an injury is not always clearly defined and confined. Thus, when and how to rate a shoulder injury which also impairs the functioning of the neck musculature pursuant to the AMA Guides is not always clear. However, what is clear is that certain shoulder injuries can impact the cervical musculature and significant shoulder injuries can result in pain and abnormal range of motion of the cervical spine which is ratable under the AMA Guides. Therefore, the Colorado Division of Worker' Compensation has issued Impairment Rating Tips in an attempt to address this issue.

The Impairment Rating Tips from the Division of Workers' Compensation set forth the Division's interpretation of how to apply the AMA Guides when rating a significant shoulder injury that also impairs cervical range of motion. [6]

The Rating Tips provide an exception to the usual requirement to provide a diagnosis based Table 53 rating before rating spinal range of motion deficits. The General Principles section of the Rating Tips specifies that:

> [I]n shoulder cases with accompanying neck pain, the clinician must determine whether an additional objective work related Table 53 cervical pathology qualifies for a rating OR the symptoms the patient has are those expected from the shoulder pathology and do not qualify for an additional rating.[7]

This admonition is repeated in the Spinal Rating section:

> In order to be assigned a spinal rating, the patient must have objective pathology and impairment that qualifies for a numerical impairment rating of greater than zero under Table 53. Spinal range of motion impairment must be completed and applied to the impairment rating only when a corresponding Table 53 diagnosis has been established.

[6] See Division of Workers Compensation Desk Aid #11 – Impairment Rating Tips; Updated May 2018. Respondents' Exhibit G.
[7] Id.

> (References: Spine section of the AMA Guides, 3rd Edition (rev.).[8]

However, this statement is followed by an exception, which provides:

> In unusual cases with established severe shoulder pathology accompanied by treatment of the cervical musculature, an isolated cervical range of motion impairment may be allowed if well-justified by the clinician. Otherwise there are no exceptions to the requirement for a corresponding Table 53 rating.[9]

In this case, Dr. Gray determined Claimant's work related injury caused severe shoulder pathology, which resulted in treatment being directed towards her shoulder and cervical musculature, and that Claimant's cervical range of motion deficits were causally related to her shoulder injury and ratable pursuant to the AMA Guides and the Colorado Division of Workers' Compensation Rating Tips.

The ALJ finds and concludes Dr. Gray's opinions as set forth in his report and testimony to be credible, persuasive, and well supported. The ALJ also finds and concludes that Dr. Gray's interpretation and application of the AMA Guides to the particular facts of this case to be credible, persuasive, and well supported.

The ALJ further finds and concludes that Dr. Gray's interpretation and application of the AMA Guides to the particular facts of this case to be consistent with the Rating Tips issued by the Colorado Division of Workers' Compensation.

The ALJ finds and concludes that the opinions in the record which are contrary to Dr. Gray's, as to the proper rating of Claimant's injury, are not found to be credible or persuasive. Such opinions are merely a difference of opinion as to the proper interpretation and application of the AMA Guides to the particular facts of this case.

The ALJ finds and concludes Respondents have failed to overcome by clear and convincing evidence the 29% whole person impairment rating provided by Dr. Gray. The ALJ concludes Claimant is entitled to the 29% whole person impairment rating due to her work related injury.

II. Whether Claimant has established by a preponderance of the evidence that she is entitled to a disfigurement award, and if so, how much.

Claimant is entitled to additional compensation if she has sustained a serious permanent disfigurement to areas of the body normally exposed to public view. *See* § *8-42-108 (1), C.R.S.*

Due to her numerous surgeries, Claimant has a 4-and-a-half inch long and quarter inch wide scar on her right shoulder. Claimant also has three arthroscopic surgical port scars on her right shoulder. In addition, Claimant has a marked

[8] *Id*.
[9] *Id*.

indentation on her right shoulder compared to her left shoulder. Therefore, the ALJ Concludes Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view and it entitled to additional disfigurement in the amount of $2,000.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay Claimant permanent partial disability benefits based upon the 29% whole person impairment rating provided by Dr. Gray.
2. Respondents shall pay Claimant $2,000 in disfigurement benefits. Respondents shall be given credit for any amount previously paid for disfigurement in connection with this claim.
3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 10, 2018.

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUE

Whether Respondent has proven by a preponderance of the evidence that Claimant was responsible for her termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving Temporary Total Disability (TTD) benefits.

FINDINGS OF FACT

1. Claimant is a 55-year-old female who began working for Employer on July 27, 1987. She was employed for 31 years primarily in Employer's Department of Motor Vehicles.

2. On December 19, 2016 Claimant sustained a work-related injury to her right shoulder. Employer admitted liability for the claim, provided medical treatment and paid temporary indemnity benefits.

3. Claimant's right shoulder injury has required substantial treatment including surgery in January 2017 and manipulation under anesthesia in April 2017.

4. On December 20, 2017.Claimant was taken completely off work by Authorized Treating Physician (ATP) Alisa Koval, M.D. because of her right shoulder condition.

5. On January 18, 2018 Claimant underwent right shoulder surgery with James Johnson, M.D. The procedure included a rotator cuff revision, subacromial decompression, labral debridement, biceps tenotomy and distal clavicle resection.

6. Dr. Koval continued to prohibit Claimant from working through July 23, 2018. She specifically confirmed Claimant's work restrictions at appointments on February 1, 2018, February 22, 2018, March 5, 2018, and April 17, 2018.

7. Respondent paid Claimant Temporary Total Disability (TTD) benefits from December 20, 2017 through June 22, 2018. Respondent suspended TTD benefits from June 22, 2018 through July 23, 2018. The interruption was predicated on Respondent's June 25, 2018 General Admission of Liability (GAL) suspending benefits for Claimant's failure to appear for consecutively scheduled medical appointments pursuant to WCRP 6-1(A)(5). Employer resumed benefits pursuant to a July 31, 2018 GAL when Claimant returned to care effective July 23, 2018. Because the present hearing was conducted

pursuant to an Application for Expedited Hearing, OACRP 9-D prohibits the determination of any issues relating to the WCRP 6-1(A)(5) suspension of benefits.

8. On March 21, 2018 Claimant executed a Notice of Retirement with Employer. Claimant specified that her last day of employment would be May 31, 2018. The Notice was addressed to Claimant's supervisor, the Office of Human Resources and Employer's retirement plan. The Notice of Retirement was delivered to Employer in April 2018.

9. Claimant testified that she fell under the "Rule of 75" with respect to Respondent's retirement benefits. She explained that the Rule of 75 enables an employee to retire as early as age 55, without a retirement benefit reduction, provided the combined credited service and age at termination equal or exceed the sum of 75. Claimant remarked that she had been contemplating retirement since at least 2017, coordinated her retirement with Respondent for several months prior to submitting her Notice of Retirement and worked with Respondent's retirement office (DERP) to ensure that she could transition successfully into retirement.

10. Claimant further explained that in advance of her retirement she had planned a lengthy vacation with her husband to Florida and the Caribbean. Claimant left on June 4, 2018 for Florida then departed on a Caribbean cruise on July 1, 2018. Claimant returned to Colorado on July 15, 2018.

11. On July 23, 2018 Claimant visited Dr. Koval for an examination. Dr. Koval reduced Claimant's work restrictions to no reaching above shoulder level or away from the body and no use of the right arm.

12. On November 1, 2018 Dr. Koval determined that Claimant had reached Maximum Medical Improvement (MMI) for her right shoulder injury.

13. Respondent has proven that it is more probably true than not that Claimant was responsible for her termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits. Initially, Claimant suffered an admitted right shoulder injury on December 19, 2016. She underwent extensive medical treatment and received TTD benefits. On March 21, 2018 Claimant executed a Notice of Retirement with Employer. She had worked for Employer for approximately 31 years. Claimant remarked that she had been contemplating retirement since at least 2017, coordinated her retirement with Respondent for several months prior to submitting her Notice of Retirement and worked with Respondent's retirement office (DERP) to ensure that she could transition successfully into retirement. Claimant had also planned a long vacation to celebrate her retirement that extended from June 4, 2018 until July 15, 2018.

14. There is a lack of evidence that Claimant's right shoulder injury was the reason she resigned her position. Although Claimant was prohibited from performing her job duties at the time she submitted her Notice of Retirement, the record reveals that her industrial injury did not cause her to leave employment and suffer a wage loss. Claimant's

retirement was voluntary and unrelated to her work injury. She planned her retirement well in advance without considering her shoulder injury or work restrictions. Specifically, Claimant planned her retirement in the years preceding her resignation, voluntarily retired when reaching Respondent's Rule of 75 and celebrated her retirement with a vacation. The record thus reveals that Claimant precipitated her employment termination by a volitional act that she would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over her termination from employment. She is thus precluded from receiving TTD benefits after July 31, 2018.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Section 8-42-103(1), C.R.S. requires a claimant seeking temporary disability benefits to establish a causal connection between the industrial injury and subsequent wage loss. *Champion Auto Body v. Industrial Claim Appeals Office*, 950 P.2d 671 (Colo. App. 1997). To demonstrate entitlement to TTD benefits a claimant must prove that the industrial injury caused a disability lasting more than three work shifts, he left work as a result of the disability and the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability," connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and

(2) impairment of wage earning capacity as demonstrated by the claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). A claimant suffers from an impairment of earning capacity when he has a complete inability to work or there are restrictions that impair his ability to effectively and properly perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998). Because there is no requirement that a claimant must produce evidence of medical restrictions, a claimant's testimony alone is sufficient to demonstrate a disability. TTD benefits shall continue until the first occurrence of any of the following: (1) the employee reaches MMI; (2) the employee returns to regular or modified employment; (3) the attending physician gives the employee a written release to return to regular employment; or (4) the attending physician gives the employee a written release to return to modified employment, the employment is offered in writing and the employee fails to begin the employment. §8-42-105(3)(a)-(d), C.R.S.

5. Respondents assert that Claimant is precluded from receiving temporary disability benefits because she was responsible for her termination from employment pursuant to §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. Under the termination statutes a claimant who is responsible for his termination from regular or modified employment is not entitled to TTD benefits absent a worsening of condition that reestablishes the causal connection between the industrial injury and wage loss. *In re of George,* W.C. No. 4-690-400 (ICAP July 20, 2006). The termination statutes provide that, in cases where an employee is responsible for her termination, the resulting wage loss is not attributable to the industrial injury. *In re of Davis*, W.C. No. 4-631-681 (ICAP Apr. 24, 2006). A claimant does not act "volitionally" or exercise control over the circumstances leading to her termination if the effects of the injury prevent her from performing her assigned duties and cause the termination. *In re of Eskridge,* W.C. No. 4-651-260 (ICAP Apr. 21, 2006). Therefore, to establish that Claimant was responsible for her termination, Respondents must demonstrate by a preponderance of the evidence that Claimant committed a volitional act, or exercised some control over her termination under the totality of the circumstances. *See Padilla v. Digital Equipment*, 902 P.2d 414, 416 (Colo. App. 1994). An employee is thus "responsible" if she precipitated the employment termination by a volitional act that she would reasonably expect to cause the loss of employment. *Patchek v. Dep't of Public Safety,* W.C. No. 4-432-301 (ICAP, Sept. 27, 2001).

6. In *Blair v. Art C. Klein Construction Inc.,* W.C. No. 4-556-576 (ICAP, Nov. 3, 2003), the ICAP determined that the claimant's voluntary resignation was not dispositive of whether she was responsible for her termination from employment. The ICAP reasoned that the pertinent issue is the reason the claimant resigned because the claimant is not "responsible" where the termination is the result of a work injury. *See Gregg v. Lawrence Construction Co.,* W.C. No. 4-475-888 (ICAP, Apr. 22, 2002); *Bonney v. Pueblo Youth Service Bureau,* W.C. No. 4-485-720 (ICAP Apr. 24, 2002). As noted in *Blair,* "if the claimant was compelled to resign from this employment such that it can be said the termination was a necessary and natural consequence of the injury, rather than the claimant's subjective choice, the claimant would not be at fault for the termination."

7. As found, Respondent has proven by a preponderance of the evidence that Claimant was responsible for her termination from employment under §8-42-105(4) C.R.S and §8-42-103(1)(g) C.R.S. (collectively "termination statutes") and is thus precluded from receiving TTD benefits. Initially, Claimant suffered an admitted right shoulder injury on December 19, 2016. She underwent extensive medical treatment and received TTD benefits. On March 21, 2018 Claimant executed a Notice of Retirement with Employer. She had worked for Employer for approximately 31 years. Claimant remarked that she had been contemplating retirement since at least 2017, coordinated her retirement with Respondent for several months prior to submitting her Notice of Retirement and worked with Respondent's retirement office (DERP) to ensure that she could transition successfully into retirement. Claimant had also planned a long vacation to celebrate her retirement that extended from June 4, 2018 until July 15, 2018.

8. As found, there is a lack of evidence that Claimant's right shoulder injury was the reason she resigned her position. Although Claimant was prohibited from performing her job duties at the time she submitted her Notice of Retirement, the record reveals that her industrial injury did not cause her to leave employment and suffer a wage loss. Claimant's retirement was voluntary and unrelated to her work injury. She planned her retirement well in advance without considering her shoulder injury or work restrictions. Specifically, Claimant planned her retirement in the years preceding her resignation, voluntarily retired when reaching Respondent's Rule of 75 and celebrated her retirement with a vacation. The record thus reveals that Claimant precipitated her employment termination by a volitional act that she would have reasonably expected to cause the loss of employment. Accordingly, under the totality of the circumstances Claimant committed a volitional act or exercised some control over her termination from employment. She is thus precluded from receiving TTD benefits after July 31, 2018.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

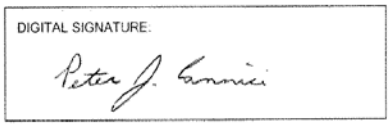
1. Based on Claimant's voluntary resignation from employment, she is precluded from receiving TTD benefits after July 31, 2018.

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory*

reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 11, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant has shown, by a preponderance of the evidence, that she sustained a compensable injury to her right shoulder on June 9, 2017?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to reasonable, necessary and related medical treatment for her right shoulder for an incident which occurred on or about June 9, 2017?

III. If compensable, is Dr. Castrejon the Authorized Treating Physician, even though Claimant is the owner of the Employer/Business, and failed to provide herself a designated provider list?

FINDINGS OF FACT

Based upon the evidence received at Hearing, the ALJ makes the following Findings of Fact:

History of Incident

1. Claimant testified she injured her right shoulder on Saturday, June 9, 2017 at her place of employment, Rio Grande Pharmacy, LLC, when reaching across a computer terminal/fax machine to place a basket containing patient prescriptions and insurance documents. In order to reach the shelf, Claimant testified she had fully extended her right arm and upper extremity while reaching across the office equipment. Claimant testified she heard a popping sound, grimaced in extreme pain and stepped away from the counter. Claimant testified the injury occurred in front of two other employees, although neither appeared at hearing.

2. Claimant's job duties included interpretation of prescriptions, insuring prescriptions were appropriate, opening childproof seals on containers, counting pills, placing labels on bottles, bagging the prescriptions, and putting prices on the bags. She would fill 80-200 per day. In June 2017, Claimant also had technicians, who entered the information into the computers, and pulled drugs from shelves and counted pills, although Claimant was responsible for overseeing all prescriptions going out of the pharmacy. Claimant's work counter was below shoulder height.

3. Claimant testified she has been a pharmacist for 42 years, in institutional settings such as hospitals, in academic settings, and in large retail settings. She testified that she purchased Rio Grande Pharmacy, LLC in March 2011, and is the sole pharmacist, owner and operator of the business. According to Claimant's testimony, the pharmacy was open Monday-Friday from 9:00 AM-6:00 PM and Saturday from 9:00 AM-1:00 PM during the period 2011- July 2018. During work hours in that period, Claimant took 1 hour each day for lunch with periodic breaks.

4. Claimant testified she had a significant history of injury to her right shoulder. She had previously undergone a right rotator cuff repair in January 31, 2011 by Dr. Steven Kitchen, an orthopedic surgeon, at San Luis Valley Hospital ("SLVH") in Alamosa, Colorado. Claimant testified that when she had purchased the pharmacy, her right arm was still in a sling for a few weeks.

5. However, she also testified that initially, business was slow and she was only filling approximately 80 prescriptions per day. Thereafter, business increased enough to add a half-day per week on Saturdays. Claimant further testified she had a complete recovery from that procedure, continued on with full time employment after purchasing her pharmacy, with no permanent impairment, restrictions, or loss of functionality.

Prior Medical History involving Claimant's Right Shoulder

6. On April 11, 2006, Claimant, as a result of computer work, complained of pain in left elbow, both wrists, and right shoulder. She was having trouble raising her shoulder higher than 90°, difficulty combing her hair, and lifting her arm laterally. Her shoulder problems continued through 2010. (Ex. A, p. 1). By April 28, 2010, it was noted that Claimant was having shoulder problems that began five years prior. (Ex. E, p. 11).

7. On December 1, 2010, Claimant saw Dr. Claud Bays. Claimant had chronic pain in the right shoulder for approximately five years. (Ex. F, pp.13-14). On January 10, 2011, an MRI of Claimant's shoulder showed a moderate joint effusion, either continuation of the effusion or a synovial-type cyst. There was a large rotator cuff tear with a 2 cm gap of the supraspinatus tendon and rotator cuff, with retraction. (Ex. G, p. 15).

8. Claimant underwent surgery on January 31, 2011, with Dr. Steven Kitchen. Dr. Kitchen performed a rotator cuff repair of the supraspinatus and

infraspinatus tendons, anterior subacromial decompression, and debridement of the bicep and labral tear. (Ex. H, pp. 17-18). After the surgery, Claimant recovered, but as of May 4, 2011, she continued to have limitation in her strength. (Ex. M, p. 27).

9. During the Spring of 2015, Claimant began experiencing pain in her right shoulder, but denied it was due to any accident or injury. She was diagnosed with bursitis of the right shoulder and prescribed eight (8) weeks of physical therapy. According to a treatment note dated February 29, 2016 from Rio Grande Hospital (RGH) Clinics, in Del Norte, Colorado, Claimant had been lifting her husband and developed constant right shoulder pain. (Ex. O, pp. 30-32).

10. According to an RGH treatment note, Claimant could not lift gallon jugs, and had to assist lifting her arm at times. According to Claimant, she continued to work full time, 5 ½ days per week during the entire period from March 2011 until March 30, 2016. Her pain was self-reported at 7/10 by this time, and she was prescribed tramadol. (Ex. Q, pp. 37-39).

11. On December 22, 2016, Claimant sought treatment from Kim Woodke, PA-C at RGH Clinic in Del Norte, for a flare up in her right shoulder after falling off a stool and landing on her right hip and shoulder. Pain was described as dull, constant, and sharp with exertion. (Ex. T, pp. 44-46). She was provided pain medication and told to follow up with her provider at SLVH. Claimant testified both flare ups treated at the RGH Clinic in Del Norte resolved without significant or permanent disability. There were no follow-up appointments at that clinic for either incident, nor were they mentioned in subsequent treatment records at SLVH.

12. On January 5, 2017, Claimant saw Dr. Blake Clifton, an orthopedist. Dr. Clifton noted that Claimant had undergone a rotator cuff repair in 2011, but had continuing pain over the last six months, with persistent weakness and pain in the right shoulder. She had pain at night, and with activity, decreased range of motion and strength. She was on hydrocodone-acetaminophen 10/325, 1 tablet three times daily. X-rays showed mild arthritic changes with slightly *high riding humeral head.* (Ex. U, pp. 47-49) (emphasis added).

13. A MRI performed January 13, 2017, showed a large full-thickness supraspinatus tendon tear with moderate muscle atrophy, intact infraspinatus tendon with mild muscle atrophy, mild acromiclavicular degenerative joint disease, mild bone marrow edema, biceps tendon tear,

labral degeneration and large joint effusion with synovitis. The tear was noted to be 3 x 5 cm left to right x 4.3 cm anterior to posterior. (Ex. W, pp. 59-60).

14. On January 27, 2017, Claimant's pain level was 5/10; she was having a dull, constant ache in the shoulder; and she was taking tramadol. Her pain was mostly at nighttime and with overhead activity. Dr. Clifton noted weakness with resisted abduction and external rotation, pain with overhead activity, positive Hawkins test. His assessment was a massive tear of the supraspinatus with small degenerative changes within the joint.

> We discussed treatment options and because of the type in [and] size of the tear with atrophy I do not think this is a repairable tear. At this point I recommend a steroid injection which she requested to proceed with. *She will eventually need a* ***reverse total shoulder arthroplasty*** *if conservative treatment does not help her.* (Ex. X, pp. 61-63) (emphasis added).

15. On March 7, 2017, Claimant presented to the emergency room at RGH with chest pain. One week prior, she had fallen on her right chest and right shoulder when she slipped on the ice. It was noted that she had chronic shoulder pain and *planned for a replacement in the future.* (Ex. Z, pp. 67 & 71) (emphasis added).

16. On April 19, 2017, Claimant saw orthopedist, Dr. Carissa Tripi at SLVH. Claimant complained of right shoulder pain, which was worsening. She had pain all the time, it popped, numbness and tingling down her arm, but denied any history of neck issues, limited range of motion, pain level was 7/10, and she was taking tramadol. Claimant had received a cortisone injection two months prior, which was still helping, but more so in the beginning. She had full range of motion, although pain with mid and upper ranges.

17. It was Dr. Tripi's interpretation of the MRI that there was a large full thickness tear involving at least the supraspinatus and infraspinatus, which was retracted in some areas medial to the glenoid. There was also atrophy located in the supraspinatus and infraspinatus areas. Dr. Tripi indicated that they could try continue conservative line of treatment, which may be in her best interest at her relatively young age versus a reverse total shoulder arthroplasty-which would need to occur at some point. She did not believe that arthroscopic surgery was a good option.

18. Claimant was noted to have excellent range of motion, and surprisingly excellent strength regarding her rotator cuff, even with the chronicity of the large tear. (Ex. AA, pp. 80-82). At hearing, Claimant testified at the time she saw Dr. Tripi, she couldn't lift her arm to comb her hair, she had to assist her arm to move it into position, she had modified her job, and the technicians were doing more of what was supposed to be her job. She could do work, as long as it was close to her body. Claimant indicated the reason she wanted to put off a total shoulder replacement was for personal reasons, both because her husband was significantly disabled, and she was a single pharmacist in her own business. Claimant sought no further treatment until her reported injury in this case.

Medical Treatment following the Incident of June 9, 2017

19. Once Claimant experienced the pain during the episode described in Finding of Fact #1, Claimant testified that after resting for several minutes, she resumed work for the rest of the day by supporting her right arm with her left, and slowing her rate of work. The next day was a Sunday, and she rested her shoulder. She returned to work on Monday, June 11, 2017 and Tuesday, June 13, 2017 repeating the same process of self-limiting work activities. By the evening of June 14, 2017, Claimant testified that her pain escalated to a point that she could no longer tolerate it by merely resting or using pain medication and she sought treatment at RGH Clinics emergency room in Del Norte.

20. On June 15, 2017, Claimant went to the emergency room at RGH at 2:35 a.m. Her pain was located in her shoulder, the pain was dull to the fingers, and she counted pills for her employment. Pain started in May, 2017. (Ex.DD, p. 93). Specifically, in her history, it is noted that her onset of pain was 'years' back, it was getting worse post-surgically. It was noted there was no recent injury, but records show Claimant reported to ER personnel a *"botched" rotator cuff surgery* in 2011. (Ex. DD, p. 95) (emphasis added). Claimant was prescribed Vicodin and told to follow up with an orthopedist.

21. An x-ray taken of the shoulder indicated a right anterior glenohumeral subluxation, an interval change compared to 03/07/2017 and chronic ossific rotator cuff tendinopathy. (Ex. DD, p. 98).

Medical Opinions

22. On July 12, 2017, Claimant went to see Dr. Castrejon in Colorado Springs. Dr. Castrejon testified Claimant fills out a patient questionnaire every time she is seen in his office. The questionnaire of July 12, 2017, notes the date of injury as June 14, 2017. It is also the first time the 'basket incident' is noted.

23. Claimant, as the owner/employer, did not have a Designated Provider list for Workers Compensation injuries. At the time Claimant saw Dr. Castrejon, she had not seen an orthopedic surgeon, despite instructions by the emergency room. Claimant listed her medications, which included tramadol. She was no longer taking any narcotic pain medication. Claimant notes her pain complaints indicate that compared to the time of the injury, she is better and her pain is 6/10. (Ex. EE, pp. 103-105). Dr. Castrejon's note of July 12, 2017 notes decrease range of motion, rotator cuff strength was 4/5 and no instability. Dr. Castrejon ordered an MRI arthrogram. (Ex.EE, pp. 100-101).

24. On July 22, 2017, an MRI without contrast was performed. Indication was chronic pain and limited range of motion with sharp pain following injury on June 13, 2017. The information indicates that the problem began in 2009. The MRI revealed post-operative changes, status post repair of supraspinatus with recurrent tear and medial retraction approximately 4 cm. There was *severe atrophy* of the infraspinatus and supraspinatus muscles, full thickness tear of the long head of the biceps with distal retraction, *advanced osteoarthritis* of the glenohumeral joint, with *associated loss of articular cartilage* associated with subacromial cyst formation extending into the coracoid process. Reactive bone marrow was noted. There was no evidence of joint effusion. (Ex. FF, pp. 107-108) (emphasis added).

25. Dr. Castrejon saw Claimant on August 14, 2017. Her pain was still 6/10; however, she indicated she was worse. She had new injuries and she bruised or cracked some ribs. Her shoulder pain remained dull and numb. (Ex. GG, p. 113).

26. Claimant noted her pain was tolerable after May of 2017, and she elected to wait for the total shoulder replacement until her work schedule had slowed down. Dr. Castrejon indicated in his testimony that he had limited medical records from January to the present. He noted that the event in

June of 2017 caused a change in her level of pain and functional ability, but he could not state within a reasonable certainty that the sole cause for the significant worsening was Claimant's right shoulder condition. This was based on *no acute changes* on the MRI, and *just prior to the June event, the recommendation for total shoulder replacement.* (Ex. GG, p. 112).

27. Claimant saw Dr. Castrejon on May 10, 2018, after which he issued a special report to Claimant's attorney. Dr. Castrejon had reviewed records from approximately early 2016 through present. The pain diagram filled out by Claimant on that date indicated she was working modified duty, her pain was worse, and her pain was now 10/10. She also noted pain in her right shoulder, back, left hip, left hand, and right foot. Claimant testified that she has osteoarthritis and has been treated for those areas as well. (Ex. II, pp. 115-125).

28. It was Dr. Castrejon's opinion that lifting her disabled husband, or helping with the care of her husband, was only a temporary problem. Claimant had returned to baseline, only to worsen again in early 2017. Dr. Castrejon notes the date of injury as June 14, 2017. He notes that she had a subluxation and that her shoulder had relocated, followed by a mild decrease in her pain level. Her pain was dull to sharp and stabbing, extending to the mid arm level of the biceps. She had sensation of numbness distal to the elbow, into the hand and fingers. She was not describing cervical pain, but trapezius tightness.

29. Activities with repetitive motion of the arm and reaching away from her body increased Claimant's symptoms, due to weakness and pain, and less difficulty lifting small objects with her arm close to her body. Claimant was unable to sleep on her right side, and her symptoms were minimally decreased with inactivity, rest and ice. He noted decreased range of motion, decreased rotator cuff strength, instability and positive labral test.

30. Dr. Castrejon opined that there was an association between the described work activities and the event of [June 14], 2017, due to significant worsening of her present condition. He determined that this association is industrial in nature, and substantially led to an aggravation of the underlying shoulder condition that would not have required further surgery, had it not been for the combination of work activities and the event of [June 14], 2017. Dr. Tripi's findings were contrary to his of July 12, 2017, and support the presence of a substantial worsening of her condition between April 19, 2017 and July 12, 2017. He would attribute these aforementioned

changes to the event of June 14, 2017. (Ex. II, pp. 115- 123).

31. At Respondents' request, Dr. William Ciccone, MD saw Claimant on August 8, 2018. He then issued a report on August 21, 2018. It was his opinion that Claimant had a shoulder rotator cuff arthropathy, which is a combination of a rotator cuff tear and osteoarthritis of the shoulder joint. He testified that Claimant had a rotator cuff repair in 2011. By 2016, Claimant was having difficulty and worsening of her problems, and had a significant supraspinatus tear noted in January 13, 2017, by MRI. He noted by April 19, 2017, Claimant was getting worse, as noted by Dr. Tripi's report. He did not believe that Claimant sustained an injury. There was nothing to indicate by the MRI findings, which he personally reviewed, between the January 13, 2017 and the July 22, 2017, to indicate there had been any acute event. The only difference between the two MRIs was no effusion, and osteoarthritis of the glenohumeral head.

32. It was Dr. Ciccone's opinion that the progression of the glenohumeral head arthritis occurs because the pre-existing rotator cuff tear creates a situation in which the glenohumeral head is no longer in the proper position in the joint, thereby, limiting the flow of synovial fluid. The synovial fluid bathes the cartilage, giving it nutrition. When that is compromised, it contributes to osteoarthritis- which Claimant now has. He did not believe the event of June 9, 2017 caused, accelerated, or aggravated the osteoarthritis. He notes that osteoarthritis symptomology includes popping, which is what he believes Claimant experienced, due to the joint incongruity, which then occurs due to osteoarthritis. Strength and range of motion will also decrease due to the rotator cuff tear, atrophy and osteoarthritis.

33. Dr. Ciccone disagrees with Dr. Castrejon that in April 2017, two months prior to the date of injury, Claimant could have good strength, good range of motion, and a perfect shoulder, but that her shoulder was so weak that this minor event of June 9, 2017 would have caused a subluxation. He noted there was no subluxation by x-ray, based on the alignment of the shoulder with the scapula. He also testified that had there been a subluxation, Claimant would not have been discharged from the RGH Emergency Room without treatment. (Ex. JJ, pp. 126-132).

34. Dr. Ciccone indicated that pursuant to the Medical Treatment Guidelines, the type of job duties Claimant described were below shoulder height, and would not meet the criteria which would aggravate or create a cumulative trauma disorder of the shoulder. Nor did he believe this incident caused an

injury. The need for the reverse total shoulder was not caused, aggravated, or accelerated by this event of June 9, 2017. (Ex. JJ, pp. 126-140).

35. Pharmacy records from City Market and Rio Grande Pharmacy show Claimant regularly filled prescriptions for tramadol prior to and after the alleged work accident. The only increase in medications occurred during specific flare-ups. (Ex. E, pp. 9-10; Ex. V, pp. 51-56).

Authorized Treating Provider

36. According to Claimant's testimony, she had never had a Workers Compensation claim filed since purchasing her business in March 2011. She did not know or understand how to proceed once she filed her claim, nor did her business manager. Claimant testified that she thought she could treat with any health care provider. Once she reported the claim to her business manager, Sam Kaufmann, he told her to do so. She further testified there was no list of designated providers, nor did Mr. Kaufmann provide her a list.

37. Claimant further testified that she now understands the requirement to provide a list of designated providers for other employees. Moving forward, she would not allow other employees to treat with their own choice of physician, but only because she learned the statutory rule in her case. Claimant also testified she lost confidence in the sole orthopedic group in her area, based upon her negative opinion of Dr. Tripi.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this instance, the ALJ finds Claimant to be sincere in recounting what occurred; her testimony is simply insufficient to prove compensability. Similarly, the ALJ finds both Dr. Castrejon and Dr. Ciccone to be sincere and professional in rendering their respective opinions; however, the ALJ must ultimately find which is more persuasive in light of the evidence.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. A compensable injury is one that arises out of and occurs within the course and scope of employment. § 8-41-301(1)(b), C.R.S. An injury occurs in the course of employment when it was sustained within the appropriate time, place, and circumstances of an employee's job function. *Wild West Radio v. Indus. Claim Apps. Office*, 905 P.2d 6 (Colo. App. 1995). An injury arises out of employment when there is a sufficient causal connection between the employment and the injury. *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014). Where the claimant's entitlement to benefits is disputed, the claimant has the burden to prove, by a preponderance of the evidence, a causal relationship between the work injury and the condition for which benefits are sought. *Snyder v. Indus. Claim Apps. Office*, 942 P.2d 1337 (Colo. App. 1997).

E. An aggravation of a preexisting condition is compensable. *Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. 1990). If there is a direct causal relationship between the mechanism of injury and resultant disability, the injury is compensable if it caused a preexisting condition to become disabling. *Duncan v. Indus. Claim Apps. Office*, 107 P.3d 999 (Colo. App. 2004). However, there must be some affirmative

causal connection beyond a mere assumption that the asserted mechanism of injury was sufficient to have caused an aggravation. *Brown v. Indus. Comm'n*, 447 P.2d 694 (Colo. 1968). It is not sufficient to show merely that the asserted mechanism could have caused an aggravation, but rather Claimant must show that it is more likely than not that the mechanism of injury did, in fact, cause an aggravation.

F. The Workers' Compensation Act creates a distinction between an "accident" and an "injury." The term "accident" refers to an "unexpected, unusual, or undesigned occurrence." Section 8-40-201(1), C.R.S. In contrast, an "injury" contemplates the physical or emotional trauma caused by an "accident." An "accident" is the cause and an "injury" is the result. No benefits flow to the victim of an industrial accident unless the accident causes a compensable "injury." A compensable injury is one that causes disability or the need for medical treatment. *City of Boulder v. Payne*, 162 Colo. 345, 426 P.2d 194 (1967). *Soto-Carrion v. C & T Plumbing, Inc.,* WC 4-650-711 (ICAO February 15, 2007).

G. The mere fact that a claimant experiences pain at work does not necessarily require a finding of a compensable injury. In *Miranda v. Best Western Rio Grande Inn,* WC 4-663-169 (ICAO April 11, 2007), the panel stated "pain is a typical symptom caused by the aggravation of a pre-existing condition. However, an incident which merely elicits pain symptoms caused by a pre-existing condition does not compel a finding that the claimant sustained a compensable injury."

H. In this instance, Claimant has failed to meet her burden of proving she sustained a compensable injury on June 9, 2017. The ALJ finds Dr. Ciccone's testimony to be more persuasive than Dr. Castrejon's. It is unlikely the mechanism of injury described by Claimant could have caused an industrial injury. Claimant continued to work the day of the incident of June 9, 2017. Claimant's pain level remained consistent with her prior pain levels; medications did not change long term. There is no mention of this injury mechanism to ER personnel on June 15, 2017. There was no change in recommended treatment prior to or after the injury of June 9, 2017. Moreover, the need for a reverse total shoulder arthroplasty was recommended by Dr. Clifton in January 2017, and Dr. Tripi in April 2017 for pain relief. Claimant was fully cognizant of this fact, even referring to her 2011 rotator cuff surgery as being "botched" to ER personnel.

I. As noted by Dr. Ciccone, the 'popping' that Claimant says she experienced on June 9, 2017 was due to the pre-existing osteoarthritis, which caused the joint incongruity. The beginnings of this were already visible in January, wherein x-rays showed a slightly high riding humeral head. Claimant's shoulder, therefore, was not subluxed as a result of grabbing the basket with her arm. Further, the MRIs showed no significant differences pre and post-injury. In addition, Claimant had already experienced far more significant, recent trauma to this shoulder, including lifting her husband, and falling on this shoulder. The ALJ concludes, therefore, that Claimant has not suffered a compensable injury.

Medical Benefits

J. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. § 8-42-101, C.R.S. Nevertheless, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. § 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Apps. Office,* 12 P.3d 844, 846 (Colo. App. 2000). Claimant must establish the causal connection with reasonable probability but need not establish it with reasonable medical certainty. *Ringsby Truck Lines, Inc. v. Indus. Comm'n*, 491 P.2d 106 (Colo. App. 1971); *Indus. Comm'n v. Royal Indemnity Co.,* 236 P.2d 2993. A causal connection may be established by circumstantial evidence and expert medical testimony is not necessarily required. *Indus. Comm'n v. Jones*, 688 P.2d 1116 (Colo. 1984); *Indus. Comm'n v. Royal Indemnity Co., supra*, 236 P.2d at 295-296. All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

K. In this instance, the ALJ is prepared to find that the proposed reverse total right shoulder arthroplasty is reasonable and necessary, but not related to a work injury; rather, it is related to a pre-existing degenerative and chronic condition, which was not significantly aggravated by the incident at work on June 9, 2017.

Authorized Treating Provider

L. This issue is now moot, based upon the Conclusions of Law as found. However, on a purely advisory basis, the ALJ does find Claimant's testimony on this issue to be sincere and credible. Claimant did not understand the "ground rules" for an employer to provide a list of ATPs. Further, Claimant was not deliberately engaging in 'doctor shopping;' the list of available treatment providers in this region is limited. If this injury were found to have been compensable, the ALJ would have found the ATP to be Dr. Castrejon, who would have then overseen any orthopedic care recommended. While this result could possibly lead to some abuses, this is not the fault of the policy holder. Instead, it is the responsibility of the Insurer to educate the policy holder, and assist with preparing the ATP list, if the Insurer so desires.

ORDER

It is therefore Ordered that:

1. Claimant's claim for Workers Compensation benefits is denied and dismissed.

2. Claimant's request for medical benefits is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-073-519-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on November 14, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 11/14/18, Courtroom 4, beginning at 8:45 AM, and ending at 12:15 PM). The official Spanish/English Interpreter was Maria Fernanda Bravo.

Claimant's Exhibits 1 through 9 were admitted into evidence, without objection. Claimant's Exhibits 10 and 11 were rejected. Respondents' Exhibits A through F were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed on November 21, 2018. No timely objections to the proposed decision were filed and the matter was deemed submitted for decision on November 27, 2018. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUE

The sole issue to be determined by this decision concerns an alleged willful "safety violation."

The Respondents bear the burden of proof by a preponderance of the evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the time of the Claimant's admitted injury, he worked as an insulation installer for the employer. His duties were to install insulation in residential and commercial buildings.

2. Respondents' admitted that Claimant sustained a work-related injury on March 31, 2018, when he fell from a height of approximately five feet and landed on the platform of a stairwell. His injuries include a C6 fracture with anterolisthesis of C6 on 7, comminuted left C& fact and vertebral body fracture along with bilateral C7 transverse process fractures. These injuries caused Mr. Rodriguez to be paralyzed essentially from the chest down.

3. The Respondents' ultimately filed a General Admission of Liability (GAL) dated June 12, 2018, admitting for medical benefits; asserting a Safety Rule Violation; admitting to an average weekly wage (AWW) of $959.50; and, exacting a 50% reduced temporary total disability (TTD) benefit rate of $319.84 per week from April 1, 2018, through "ongoing."

4. The Claimant's AWW is undisputed and it is also undisputed that the Claimant has been unable to work since the injury occurred.

Claimant's Injury

5. Although Mike Sventko was not present at the jobsite on the date of the injury, Sventko saw some pictures of the location where the Claimant fell. (Respondents' Exhibit C)

6. It is undisputed that the Claimant fell from a distance of approximately five feet and when he landed, felt a pop in his back and had a loss of bilateral function.

7. David Valenzuela believes that the Claimant was attempting to install insulation above a window in the stairwell, while standing on unsafely stacked drywall rather than using a ladder or safely stacked drywall. Valenzuela was not present at the time of the Claimant's fall.

8. Sventko' s belief that a safety violation occurred is based, in part, on pictures of what he deems to be unsafely stacked drywall that appears to have been damaged in the same vicinity as where the Claimant was located after his injury.

9. Valenzuela, project supervisor, opined that the damage sustained to the drywall could only have been caused by excessive weight, but that he does not know how much weight is necessary to cause damage to drywall.

10. In support of their position, Respondents' also rely on the medical record from the paramedics who indicates, "Pt. was working near a stairwell when he fell through an unfinished wall." This opinion of the paramedics is inadequately founded.

11. The Claimant disputes the Respondents' alleged mechanism of injury.

12. There were no visual witnesses to the injury at the time the Claimant fell, other than the Claimant himself – not Sventko or Valenzuela.

13. The Claimant testified that he did not fall in the manner that Sventko and Valenzuela allege. Instead the Claimant testified that he was walking down some stairs to get materials when he either tripped or slipped and fell to the stairwell landing.

14. The medical records from the Claimant's treating providers indicate that the Claimant either fell off a ladder or fell from stairs, landed on his feet, felt a pop in his back and had loss of bilateral function. Nothing in the medical records indicate that he was standing on stacked drywall that gave way, causing him to fall.

15. Although the records from the paramedics state that the Claimant fell through an unfinished wall, the stairwell where the Claimant was found is completely

unfinished. Sventko admitted that it is completely reasonable for the Claimant to have fallen through the unfinished wall while walking down the stairs.

Employer's Safety Rule

16. At hearing, Sventko testified that he had adopted a number of safety regulations which were contained in a manual in excess of 400 pages and instead of providing his employees with the manual, he and one of his supervisors, David Valenzuela, held regular weekly safety meetings where the employees were mandated to attend.

17. The employees would sign a sign-in sheet at the safety meetings. Sventko testified that the rule for employees to use ladders safely was a rule that he adopted and that was regularly conveyed to Rodriguez in Spanish. This meant that an employee should not take chances and use a ladder when necessary. No specific details on the use of a ladder in a safe manner were given. Indeed, Senko's testimony is based on an assumption that conflicts with the Claimant's version of events. Svenko assumed that the Claimant was working when a ladder should have been used. The Claimant's version of events rules out the need for a ladder. the Claimant testified that he was walking down some stairs to get materials when he either tripped or slipped and fell to the stairwell landing. The ALJ finds the Claimant's version of events credible as weighed against the opinions of Sventko and Valenzuela, which were based on their non-expert take on circumstantial evidence, which is disputed by the Claimant's direct recounting of events.

18. Sventko stated that he provided ladders for employees to use, and employees were also allowed to use their own personal stilts, however, this fact is irrelevant to the Claimant's version of the fall, which the ALJ finds credible. Indeed, Valenzuela conceded that the Claimant could have fallen in the manner the Claimant said he fell.

19. Sventko testified that employees were allowed to stand on stacked drywall as well, in addition to using ladders. However, he also stated that when the drywall has been shifted, it is not appropriate for someone to stand on the drywall.

20. Essentially, Sventko testified that it was a judgement call for the employee to make as to whether it would be appropriate to use a ladder or not, and when it was safe to stand on stacked drywall. This testimony is internally inconsistent with the allegations that the Claimant either should have used a ladder or not stood on drywall to prevent falling. The ALJ finds that an alleged safety violation, based on an alleged improper judgment call, is so vague and subjective on the part of the employer who alleges a safety violation as to be incapable of knowing.

21. Valenzuela, the Project Supervisor for the Employer was not on the jobsite on the date of the Claimant's injury, but Valenzuela about his involvement with the safety meetings. He regularly held the meetings He would ask if anyone had questions or didn't understand anything, and he would also conduct the safety meetings in Spanish so that the Claimant would understand. The ALJ finds that evidence of the content of safety meetings is a "red herring," in light of the Claimant's credible version of the fall.

22. The Claimant testified that he did not receive training from the Employer, and that he had to sign the safety sign-in sheets in order to get his weekly paycheck. The ALJ does not find the Claimant credible in this regard, however, it is not relevant to the Claimant's version of the fall. The ALJ does not subscribe to the maxim, *falso in unum, falso in omnibus."* Things are not that simple. Nonetheless, the ALJ finds that the Claimant's version of the accident credible.

Ultimate Findings

23. Despite some apparent anomalies in the Claimant's testimony, the ALJ finds his testimony credible and persuasive. None of the Respondents' witnesses (who were not present at the time of the Claimant's accident but ventured opinions based on faulty circumstantial evidence based on an erroneous assumption, as found herein above) were able to persuasively rule out the Claimant's version of the accident.

24. Essentially, the Respondents' version of the safety rule violated is "thou shalt be safe, and we'll be the judge of what is safe and unsafe." Such a rule or policy does not meet the threshold of an ascertainable safety rule or policy that can be proven to have been "willfully" violated.

25. It is legally irrelevant if the Claimant's accident was caused by his negligence or carelessness. It was not so caused. There was no "deliberate intent" on the Claimant's part to willfully violate a safety rule or policy.

26. Between conflicting versions of the accident, the ALJ makes a rational choice, based on substantial evidence, to accept the Claimant's version of the accident, which involved an unfortunate mishap as opposed to a "willful violation of a safety rule or policy, and to reject any evidence to the contrary.

27. The Respondents have failed to prove, by a preponderance of the evidence, that the Claimant's admitted accident of March 31, 2018 was proximately caused by the Claimant's willful violation of a safety policy.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85** The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). As found, despite some apparent anomalies in the Claimant's testimony, his testimony was credible and persuasive. None of the Respondents' witnesses (who were not present at the time of the Claimant's accident but ventured opinions based on faulty circumstantial evidence based on an erroneous assumption, as found herein above) were able to persuasively rule out the Claimant's version of the accident.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of

conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting versions of the accident, the ALJ made a rational choice, based on substantial evidence, to accept the Claimant's version of the accident, which involved an unfortunate mishap as opposed to a "willful violation" of a safety rule or policy, and to reject any evidence to the contrary.

Safety Violation

c. Section 8-42-112 (1), C.R.S., provides for a 50% reduction in benefits if an employee is injured due to a **willful** safety violation. The term "willful" connotes deliberate intent, but mere carelessness, negligence, forgetfulness, remissness or oversight does not satisfy the statutory standard. *See Bennett Properties Co. v. Industrial Comm'n,* 165 Colo. 135, 437 P.2d 548 (1968); *Carlos Flores v. American Furniture Warehouse,* W.C. No. 4-939-951-01 [Indus. Claim Appeals Office (ICAO), April 30, 2015]. An alleged safety violation is an affirmative defense and it is the proponent's burden to prove it by a preponderance of the evidence**.** *See Lori's Family Dining, Inc. v. Indus. Claim Appeals Office,* 907 P.2d 715 (Colo. App. 1995); *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). As found, it is legally irrelevant if the Claimant's accident was caused by his negligence or carelessness. It was not so caused. There was no "deliberate intent" on the Claimant's part to willfully violate a safety rule or policy.

Burden of Proof

d. The burden of proof is placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v Jones*, 688 P.2d 1116 (Colo. 1984). As found, Respondents have failed to satisfy their burden with respect to a safety violation.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims for a 50% reduction in benefits for an alleged safety violation are hereby denied and dismissed.

B. The General Admission of Liability (GAL), dated June 12, 2018, shall remain in full force and effect with respect to the admission of liability.

C. Temporary total disability benefits shall be **increased** by 50% from April 1, 2018 and continuing.

D. Based on the admitted average weekly wage of $959, the re-established temporary total disability benefit rate is $639.66 per week, or $91.38 per day, as opposed to the reduced rate of $319.97 per week, or $45.71 per day. Thus, the differential between the admitted rate and the re-established rate is $319.69 per week, or $45.67 per day.

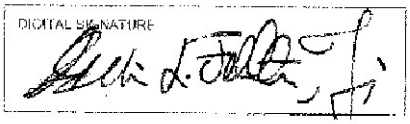
E. For the period from April 1, 2018 through the hearing date, November 14, 2018, both dates inclusive, a total of 228 days, Respondents shall pay the Claimant additional temporary total disability benefits in the aggregate amount of $10,412.76, which is payable retroactively and forthwith.

F. From November 15, 2018, and continuing until modification or cessation is warranted by law, Respondents pay the Claimant $639.66 in temporary total disability benefits.

G. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on indemnity benefits due and not paid when due.

H. Any and all issues not determined herein are reserved for future decision.

DATED this 12th day of December 2018.



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

1. Did Claimant prove he suffered a whole person impairment?

2. Disfigurement.

3. Is Claimant barred from pursuing whole person impairment and disfigurement benefits by the doctrine of issue preclusion/collateral estoppel?

PREHEARING SUMMARY JUDGMENT ORDER

Before the November 7, 2018 hearing, the parties filed cross-motions for partial summary judgment on the issue of whether Respondents are bound by the DIME's whole person impairment rating as a matter of law. On October 30, 2018, the ALJ denied Claimant's motion and granted Respondents' competing motion. The hearing went forward on the merits of Claimant's request for "conversion."

The ALJ's findings and conclusions from the October 30, 2018 summary judgment order will not be repeated here. The October 30, 2018 order has been placed in the OAC file and is hereby incorporated in this order by reference.

FINDINGS OF FACT

1. Claimant suffered admitted injuries to his left leg on April 8, 2015 while working for Employer as a plumber. He was stepping up onto a scaffold and his left foot slipped into a gap between the ground and the front step of the scaffold, causing him to fall backward onto the ground. In the process of falling, he twisted his left leg and ankle.

2. Claimant's boss took him to Concentra, where he saw Dr. Walter Larimore. Claimant reported pain in the left ankle and left calf, and had difficulty bearing weight on the left leg. His left ankle was swollen and tender with limited range of motion. Dr. Larimore diagnosed a moderate left ankle sprain, splinted the ankle and gave Claimant crutches. He advised Claimant to remain nonweightbearing and released him to sedentary duties only.

3. Claimant returned to Concentra on April 13, 2015 and reported minimal improvement. He was not using crutches but was limping due to lateral ankle and calf pain. His left ankle remained swollen and painful. Examination of the left calf showed tenderness at the gastrocnemius and Achilles junction. Dr. Larimore added the diagnosis of gastrocnemius tendon strain. Ibuprofen was not helping, so Dr. Larimore prescribed naproxen instead. He also referred Claimant for physical therapy.

4. Claimant's ankle steadily improved over the next several weeks, but his calf remained painful with minimal relief from medication and therapy. Dr. Larimore referred Claimant for a lower leg MRI and an orthopedic consultation with Dr. Michael Simpson.

5. Claimant saw Dr. Simpson on May 18, 2015. Dr. Simpson reviewed the MRI and described it as "completely normal" with no evidence of a muscle tear. He saw no surgical pathology and expected Claimant's pain to resolve with time. He also stated, "If he continues to have pain, it may be prudent to have him evaluated by a pain management specialist to determine whether or not he has any neuropathic pain."

6. Claimant did not improve, and on June 8 he told Dr. Peterson at Concentra he was "becoming worse." Dr. Peterson ordered a "STAT" ultrasound, which ruled out DVT. Dr. Peterson referred Claimant to Dr. Jeffrey Jenks for electrodiagnostic testing.

7. Claimant had a repeat MRI on June 30 due to imaging artifacts in the first MRI. The second MRI showed "minimal Achilles tendinosis."

8. Dr. Jenks performed a left leg EMG on July 8, 2015, which showed peroneal neuropathy at the left fibular head. Testing of the lumbar paraspinals was normal with no evidence of denervation or motor changes. Dr. Jenks started Claimant on Neurontin and prescribed a topical compound analgesic cream.

9. Claimant began treating with Dr. Shimon Blau, a physiatrist, on July 20, 2015. He described ongoing left leg pain and weakness, aggravated by walking. The Neurontin was not helping, so Dr. Blau switched him to Lyrica.

10. In late October 2015, Claimant reported the pain had "started working its way up into his posterior thigh and buttocks."

11. Dr. Blau administered an ultrasound-guided injection of steroid and lidocaine on November 3, 2015. On follow up in December, Claimant told Dr. Blau the injection "did not help at all."

12. Claimant started experiencing low back pain in approximately November 2015. Claimant never noted low back pain on the pain diagrams he completed at Concentra. Claimant has admitted he first developed back pain "eight or nine months" after the injury.

13. In January 2016, Dr. Blau discontinued Lyrica and started Claimant on Cymbalta. He also refilled trazodone and referred Claimant back to Dr. Jenks for a repeat lower extremity EMG.

14. Dr. Albert Hattem took over as Claimant's primary ATP on January 14, 2016 due to "delayed recovery." Claimant told Dr. Hattem "overall since his injuries . . . he is unchanged despite considerable time and treatment." The physical examination was largely normal, except slight tenderness on the lateral aspect of the ankle and lower leg. Dr. Hattem advised Claimant if the repeat EMG were unchanged or improved, he would be at MMI.

15. Claimant saw Dr. Jenks for the repeat EMG on February 16, 2016. Although Dr. Jenks' report is not in evidence, Dr. Blau described it in his March 7, 2016 report. According to Dr. Blau, the EMG showed "findings and symptoms potentially consistent with a left L5 radiculopathy. This was based on _____ peroneus longus muscle."

16. Dr. Blau's March 7, 2016 report also contains what appears to be the first mention of low back pain in the Concentra records. Claimant described the back pain as "constant, aching and throbbing." Claimant also reported ongoing leg pain that was "more sharp in nature." He rated his pain at 7.5-9/10, but it is unclear whether he was referring to his back pain, leg pain, or both. Dr. Blau noted "he has tried Lyrica, Cymbalta, and trazodone in the past . . . and states these were not helping very much." Dr. Blau ordered a lumbar MRI.

17. Claimant followed up with Dr. Hattem on March 24. Dr. Hattem noted the repeat EMG "demonstrated no evidence of left peroneal neuropathy. This condition is now resolved and is at maximum medical improvement." He also opined the potential L5 radiculopathy was a "new finding" not causally related to the industrial accident. Dr. Hattem placed Claimant at MMI with no impairment, no restrictions, and no maintenance care. He advised Claimant to "consult with his personal physician outside of workers' compensation for non-claim-related lumbosacral radiculopathy."

18. Claimant has been treating with his primary care providers for leg pain since March 2016. The working diagnosis throughout the PCP records is "left L5 radiculopathy."

19. Claimant saw Dr. Stephen Gray for a Division Independent Medical Examination ("DIME") on April 11, 2017. Claimant complained of intermittent "severe" sharp, shooting, and stabbing pain across his entire lumbosacral region. Dr. Gray noted none of the Concentra pain diagrams identified low back pain. Claimant stated the back pain did not develop until "8 or 9 months after the original injury." He described stabbing pains and tingling in the posterior aspect of the left leg from the buttock into the heel. He complained of numbness laterally over the left thigh and calf area, and weakness "in the entire left leg." On exam, he was tender over the left iliac crest and iliolumbar ligament, and the left SI joint. Straight leg raise and tension signs were "equivocally positive" on the left. He had decreased sensation over the left L5 dermatome "consistent with L5 radiculopathy." Strength testing was "difficult to evaluate as there was a rather extreme breakaway weakness" when testing dorsiflexion and left knee extension. Left leg range of motion testing showed difficulty with eversion "consistent with his previous peroneal nerve palsy." He had significant difficulty with dorsiflexion, and his EHL was weak.

20. Dr. Gray agreed Claimant was at MMI on March 24, 2016. Dr. Gray's diagnoses included "left peroneal neuropathy, probably secondary to 4/8/15 work-related incident," and "lumbosacral radiculopathy, unclear relationship to [the industrial accident]." Dr. Gray struggled to sort out which symptoms were injury-related:

> This case proved to be quite difficult in regards to causation of the late complaint of low back pain and the late findings of the L5 radiculopathy. It seems reasonably clear that the left lower extremity peroneal neuropathy is

> related to the strain/sprain injury of the left lower extremity that occurred on 4/8/15. The late finding of an L5 radiculopathy throws a wrench or red herring into the thought process. To this examiner's knowledge an MRI scan was not obtained. Even if an MRI scan of the lumbar spine showed a corresponding disc lesion at the left L5 area, it would not answer whether there was ever a low back injury. [Claimant] was quite frank about the fact that his complaints of low back pain did not manifest until long after the initial injury. The first mention of back injury in the medical records occurred almost ½ a year after the injury . . . . Nevertheless, we have the electrodiagnostic studies that show a left leg peroneal neuropathy and then a later electrodiagnostic study that shows an L5 radiculopathy. This examiner did not have the benefit of reviewing a complete set of notes on the electrodiagnostic studies that were performed. . . . Even if this examiner did have complete raw data on the electrodiagnostic studies, it would require the input of Dr. Jenks to help answer the following question. Is it possible that the early study showing a peroneal neuropathy was limited by how far of the exam was done? Is it possible that what we are seeing is the result of a "double crush" phenomena? Is it possible that, if the earlier study had been performed all the way up into the proximal right lower extremity and pelvis, would this have shown an L5 radiculopathy?

21. Dr. Gray opined, "there ***may*** have been a relationship between the peroneal nerve injury and electrodiagnostic changes proximal to that, in the L5 spinal nerve root, which is partially where the peroneal nerve comes from." (Emphasis added). Dr. Gray assigned a 14% lower extremity impairment rating based on range of motion deficits and impairment of the common peroneal nerve. He indicated the neurological rating addressed "both the L5 radiculopathy and peroneal nerve changes." He did not assign a lumbar spine rating. Dr. Gray stated, "It is this examiner's opinion that impairment of the left lower extremity, in this case, should be considered on a whole person basis," but offered no further explanation for his opinion regarding whole person impairment.

22. Claimant underwent a lumbar MRI on April 21, 2017, which was essentially normal.

23. Insurer filed a Final Admission of Liability on May 17, 2017 based on Dr. Gray's DIME report. The FAL admitted for a 14% scheduled impairment of the left leg.

24. In May 2017, Claimant's PCP referred him to Dr. Christopher Malinky, an interventional pain management specialist. Claimant's primary complaint was left-sided low back pain radiating down his left leg. Dr. Malinky administered an L4-5 transforaminal ESI, which gave Claimant "0 relief." Dr. Malinky recommended a spinal cord stimulator trial since no previous treatment had helped Claimant's leg pain.

25. Claimant saw Dr. Mark Paz for an IME at Respondents' request in October 2017. Dr. Paz opined the left peroneal neuropathy had resolved per the EMG, and the L5 radiculopathy was not injury-related. Dr. Paz pointed out Claimant did not complain of low back pain until several months after the original injury, and opined the mechanism of injury

does not correlate to an L5 radiculopathy. Dr. Paz agreed Claimant was at MMI as of March 24, 2016, but disagreed with Dr. Gray's rating because it was based on conditions that are not related to the April 2015 accident.

26. Dr. Hattem testified in a deposition for Respondents on September 15, 2017. He does not believe Claimant's low back pain is work-related, as it did not manifest until well after the original injury. He also noted Claimant's pain from the work injury originated in the lower leg and radiated at times *upward*, which is not consistent with the later onset of L5 radiculopathy radiating from the back *downward*.

27. Dr. Paz issued a supplemental report on October 17, 2018. Dr. Paz stated Claimant displayed no gait abnormalities on direct observation at the October 9, 2017 IME. He also noted the records from Dr. Blau, Dr. Hattem, and Dr. Gray document normal gait. Dr. Paz opined Claimant's low back symptoms and documented left L5 radiculopathy are not causally related to the industrial accident.

28. Dr. Paz testified at hearing on behalf of Respondents. He reiterated and expanded on the opinions expressed in his IME report. He explained that symptoms of peroneal neuropathy are similar to those of L5 radiculopathy, but they are distinct entities and the EMG would be expected to differentiate easily between them. He maintained the peroneal neuropathy has resolved and the L5 radiculopathy is not related to Claimant's industrial injury.

29. The opinions of Dr. Hattem and Dr. Paz are more persuasive than opinions in the record to the contrary.

30. Claimant failed to prove by a preponderance of the evidence his low back pain and L5 radiculopathy are causally related to the April 8, 2015 industrial accident.

31. Claimant failed to prove he suffered functional impairment not listed on the schedule.

32. Claimant failed to prove he suffered an injury-related disfigurement. At hearing, he demonstrated a limp as the basis for a disfigurement award. But Claimant's treatment records repeatedly document normal gait, including PCP records as recently as July 17, 2017. Similarly, the DIME and Dr. Paz both documented normal gait. In any event, Claimant did not prove he developed a gait abnormality due to any injury-related condition. To the extent Claimant suffers from alteration of his gait, the ALJ finds it is probably related to his nonwork-related radiculopathy and not a consequence of his compensable injury.

CONCLUSIONS OF LAW

A. Claimant's claims for whole person impairment and disfigurement benefits are not barred by issue preclusion/collateral estoppel.

As an initial matter, Respondents argue Claimant's requests for whole person impairment and disfigurement based on low back pain and radiculopathy are barred by

the doctrine of issue preclusion/collateral estoppel. Specifically, Respondents point to the prior FFCLO dated March 22, 2018 that found Claimant failed to prove his low back and radicular symptoms were injury-related in the context of his request for *Grover* medical benefits.

Issue preclusion (*i.e.,* collateral estoppel) is an equitable doctrine that bars relitigation of an issue that has been finally decided by a court in a prior action. *Bebo Construction Co. v. Mattox & O'Brien*, 990 P.2d 78, 84 (Colo. 1999). The doctrine's purpose is to relieve parties of the burdens of multiple lawsuits, to conserve judicial resources, and to promote reliance on and confidence in the judicial system by preventing inconsistent decisions. *Id*. Although issue preclusion was conceived as a judicial doctrine, it has been extended to administrative proceedings, where it "may bind parties to an administrative agency's findings of fact or conclusions of law." *Sunny Acres Villa, Inc. v. Cooper*, 25 P.3d 44, 47 (Colo. 2001). One requirement for the application of the doctrine is that the issue to be precluded must be identical to an issue already determined in the prior proceeding. *Id*.

Even assuming the identity of issues requirement is satisfied, the ALJ would not apply issue preclusion here, due to the unique circumstances of the case. Specifically, Claimant tried to litigate whole person impairment at the November 21, 2017 hearing, but Respondents objected on the basis Claimant had not properly disclosed his positions and evidence during discovery. The ALJ offered Respondents the option to try the issue at that time or reserve it for future determination, and Respondents elected to reserve the issue.[1] The ALJ's order at the outset of the November 2017 hearing essentially bifurcated the issues of impairment and *Grover* meds. That necessarily preserved Claimant's right to litigate the underlying factual elements of his claim for whole person impairment, including causation. It would be fundamentally unfair to explicitly advise Claimant an issue was being reserved, and then proceed to make factual findings that preclude him from litigating the reserved issue in the future. Had Claimant known that outcome was contemplated, he probably would have asked to continue the November 21, 2017 hearing and try all issues together in a later proceeding. Thus, the ALJ concludes Claimant is not precluded from addressing causation in conjunction with impairment and disfigurement.

B. Claimant failed to prove he suffered permanent impairment not listed on the schedule

The term "injury" as used in the context of permanent partial disability "refers to the manifestation in a part or parts of the body which have been impaired or disabled as a result of the industrial accident." *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has sustained a scheduled injury or a whole person impairment is a question of fact for determination by the ALJ. *Id.* In resolving

[1] The prior FFCLO contains the following discussion of this issue: "At the commencement of the hearing, Claimant argued he suffered a whole person impairment, and Respondents were bound by the DIME rating because they filed a Final Admission of Liability rather than requesting a hearing after receiving the DIME report. The ALJ concluded Claimant properly preserved that issue by endorsing "PPD" on his Application for Hearing, but did not give Respondents sufficient notice of his intent to try that issue through discovery. Respondents elected to reserve that issue for future determination.

this question, the ALJ must determine "the situs of the functional impairment," which refers to "the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co*., 942 P.2d 1390, 1391 (Colo. App. 1997). The schedule of disabilities refers to the loss of "a leg." Section 8-42-107(2)(a). To establish entitlement to a whole person rating, the claimant must show functional impairment to part(s) of her body other than the "leg." It is the claimant's burden to prove a non-scheduled impairment by a preponderance of the evidence. *Cassius v. Entegris*, W.C. No. 4-732-489 (March 26, 2010).

Functional impairment need not take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may show functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although medical opinions may be relevant to this determination, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

As found, Claimant failed to prove he suffered functional impairment not listed on the schedule. The primary factual basis for Claimant's whole person argument is the development of low back pain and radiculopathy. But the persuasive evidence does not show those symptoms are related to the admitted accident. Although a claimant is not required to present medical evidence to support his case, the presence or absence of expert opinion is a legitimate factor for the ALJ to consider. *Rockwell International v. Turnbull*, 802 P.2d 1182 (Colo. App. 1990); *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983). Dr. Hattem and Dr. Paz provided well-reasoned causation arguments and Claimant has no persuasive countervailing opinion evidence. Dr. Gray's conclusory statement that Claimant's rating "should be considered on a whole person basis" is not persuasive in the absence of more explanation. As Dr. Gray himself pointed out, the assessment of causation is "difficult" due to the conflicting EMG findings and evolving symptomatology. Claimant has some symptoms consistent with peroneal neuropathy, but no corresponding current EMG findings. He also has symptoms consistent with L5 radiculopathy and positive EMG findings, but no apparent spinal pathology per the lumbar MRI. Dr. Gray raised several valid questions in his report but failed to answer them. After reviewing all the evidence presented, the ALJ is persuaded Claimant's permanent impairment is limited to his left leg.

C. Claimant failed to show he suffered disfigurement because of the injury.

Under § 8-42-108(1), a claimant is entitled to additional compensation if they are "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." Disfigurement benefits are awarded for the observable consequences of an industrial injury. *Arkin v. Industrial Commission*, 358 P.2d 879 (Colo.

1961). A permanent limp caused by an industrial injury can be the basis for a disfigurement award. *E.g., Piper v. Manville Products Corporation*, W.C. No. 3-745-406 (July 29, 1993).

As found, Claimant failed to prove he suffered any injured-related disfigurement. At hearing, he demonstrated a limp as the basis for a disfigurement award. But Claimant's treatment records, including PCP records as recent as July 17, 2017, repeatedly document normal gait. Similarly, the DIME and Dr. Paz both documented normal gait. In any event, even giving Claimant the benefit of the doubt regarding the presence of a limp, he did not prove he developed a gait abnormality due to any injury-related condition. To the extent Claimant suffers from alteration of his gait, it is probably related to his nonwork-related lumbar radiculopathy and not a consequence of his compensable injury.

ORDER

It is therefore ordered that:

1. Claimant's request for whole person PPD benefits is denied and dismissed.

2. Claimant's request for a disfigurement award is denied and dismissed.

Date: December 17, 2018

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she is entitled to a general award of medical maintenance benefits for her September 21, 2014 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 50 year old woman who has worked for Employer as a deputy sheriff for approximately 25 years.

2. On September 21, 2014, Claimant sustained an admitted industrial injury while assisting an inmate who attempted to hang herself. Claimant lifted the inmate by her legs to relieve the pressure of the noose around the inmate's neck. Claimant estimates the inmate weighed approximately 300 pounds.

3. Claimant underwent treatment at Concentra. On September 23, 2014, Claimant presented with complaints of pain in her spine, left hip, left shoulder and left knee. Glenn Petersen, PA-C diagnosed Claimant with an acute cervical sprain, low back strain, left hip strain, left shoulder strain, and knee strain. Claimant began treating with medication, massage therapy, and physical therapy.

4. On December 22, 2014, Claimant presented to Kathy F. McCranie, M.D. for a physiatric evaluation. Claimant reported neck, left shoulder and low back pain. Dr. McCranie noted Claimant had two prior knee surgeries related to a 2009 work injury for which she was placed at maximum medical improvement ("MMI") on July 13, 2012 with 10% lower extremity impairment and a few months of maintenance treatment. She further noted, "[Claimant] states that her left knee hurt initially but now back to baseline which she describes as a constant burning sensation that has been there since the time of her knee injury. She states she has learned to live with this." Dr. McCranie's impression was as follows: (1) cervical pain status post strain with myofascial involvement, (2) left shoulder pain with intermittent locking, (3) intermittent low back pain with pelvic asymmetries and resolving left hip pain, and (4) status post left knee strain with prior history of left knee meniscal tear and repair x2, currently at baseline.

5. Claimant underwent a left shoulder MRI and cervical MRI on January 9, 2015. On January 16, 2015, Dr. McCranie noted the shoulder MRI revealed a small supraspinatus tendinosis, AC joint arthropathy with acromial morphology predisposing to impingement, mild subacromial subdeltoid bursitis, degenerative cysts within the posterolateral humeral head, and no evidence of rotator cuff or labral tear. The cervical spine MRI showed some focal left-sided findings at C3-4 and C4-5 and some mild

degenerative changes and a disk bulge causing some mild left neural foraminal compromise.

6. Claimant continued to undergo treatment for her neck and left shoulder, including massage therapy, physical therapy, acupuncture, chiropractic care, medication, and shoulder injections.

7. During a follow-up examination with Dr. McCranie on June 5, 2015, Claimant reported persistent pain in her left knee. Dr. McCranie opined further left knee treatment would likely be considered maintenance care from Claimant's 2009 injury, as Claimant had chronic left knee pain since her 2009 work injury and had returned to baseline by the time of Dr. McCranie's initial evaluation in December 2014. On July 8, 2015 Lacie Esser, PA-C noted Claimant was reporting a sharp pain in her left knee. PA-C Esser noted, "[Claimant] did have 2 previous surgeries on this knee…She is concerned that there is another tear in there because it feels the way it felt before the other surgeries. It is definitely worse now than before the injury in September." She recommended Claimant undergo a left knee MRI.

8. On July 30, 2015, a left knee MRI demonstrated markedly diminutive appearance of the posterior horn and body of the medial meniscus, primarily due to postoperative changes secondary to a prior partial meniscectomy.

9. On August 26, 2015, Claimant presented to Bryan Counts, M.D. Dr. Counts reviewed and compared the July 30, 2015 left knee MRI with a May 12, 2011 left knee MRI, noting the MRIs were "essentially the same except for further degenerative changes." Dr. Counts gave the following assessment: acute cervical sprain, left shoulder strain and knee strain. He opined chronic changes in Claimant's knee, including meniscal injury, were not related to the September 21, 2014 work injury.

10. Dr. Counts referred Claimant to Stewart Weinerman, M.D. for a second opinion on her shoulder and knee. Dr. Weinerman opined Claimant did not sustain a new left knee injury. He recommended Claimant undergo left shoulder surgery for a torn labrum.

11. On November 4, 2015, Claimant presented to Bryan Castro, M.D., who reviewed October 2, 2015 cervical spine x-rays and the January 9, 2015 cervical spine MRI, noting disc changes at C4-C5 with some foraminal narrowing on the left. He opined that surgical intervention was not recommended as Claimant's main symptoms were neck pain. He wrote,

> I discussed that some of her neck and trapezial and interscapular pains could be coming from the shoulder with the shoulder aggravating some of the muscles. We discussed however that the left arm symptoms that she gets intermittently with shooting pains down the left arm with numbness and tingling in her fingers are more likely from her neck.

Dr. Castro recommended Claimant undergo massage therapy and acupuncture or physical therapy, and obtain an EMG/NCS of the upper extremities.

12. The results of the EMG/NCS of Claimant's bilateral upper extremities were normal.

13. Claimant subsequently underwent a left shoulder arthroscopy with flap repair, performed by Dr. Weinerman on January 21, 2016. Claimant underwent physical therapy post-operatively.

14. On June 2, 2016, Respondent's physician advisor, John Raschbacher, M.D., performed a medical record review. Dr. Raschbacher noted Claimant's massage therapy to date exceeded that which was recommended by the Medical Treatment Guidelines, and that there was no record that the massage therapy had clearly improved Claimant's functional status. With regard to physical therapy, Dr. Raschbacher noted Claimant had been undergoing physical therapy since her 2014 injury. He opined that it was medically unlikely that physical therapy or massage therapy would improve Claimant's functional status, and that there was no clear medical indication for continuing therapy.

15. Dr. Castro reevaluated Claimant on June 29, 2016. He again opined Claimant was not a candidate for surgical intervention, as her pain was largely neck pain rather than radicular pain. He suggested Claimant return to physical therapy to try some range of motion and other exercises for her neck, and deferred to Dr. Weinerman as to whether Claimant shoulder undergo additional physical therapy for the shoulder. He released Claimant from his care, stating he would continue to see her on an as-needed basis.

16. Claimant's care was transferred from Dr. Counts to delayed recovery specialist Albert Hattem, M.D., who first evaluated Claimant on August 29, 2016. Claimant continued to complain of persistent left knee and left shoulder pain. On October 7, 2016, Dr. Hattem noted Claimant was at MMI for the left shoulder, as she was nine months post-SLAP repair and doing well. He opined Claimant was approaching MMI for the cervical spine, having completed a comprehensive course of conservative care. Dr. Hattem noted that, on September 6, 2016, Dr. Weinerman concluded Claimant's current left knee condition was claim-related and recommended arthroscopy; however, Dr. Hattem agreed with Dr. McCranie that Claimant's recurrent knee pain was likely not claim related, considering she had returned to baseline in December 2014.

17. Dr. McCranie discharged Claimant from her care on October 21, 2016, noting Dr. Hattem had taken over Claimant's care. She wrote prescriptions for medication and recommended Claimant continue and complete therapy, transition to an independent exercise program, and follow-up with Dr. Castro regarding cervical injections.

18. Claimant returned to Dr. Castro on November 16, 2016. Dr. Castro reiterated his opinion that there was no surgical indication for Claimant's neck. He recommended Claimant continue physical therapy and engage in a home exercise program consisting of stretching and range-of-motion exercises. He also made general recommendations regarding regular aerobic activity and exercises that Claimant could perform at the gym.

Dr. Castro released Claimant from his care, opining Claimant was at MMI "from a surgical standpoint."

19. Dr. Hattem reexamined Claimant on November 28, 2016. Claimant continued to have persistent left shoulder and neck discomfort that she rated 4/10. Dr. Hattem again reviewed Claimant's medical history, noting Claimant had since been discharged from care by both Dr. McCranie and Dr. Castro. He also noted Claimant completed chiropractic massage and physical therapy. Dr. Hattem referred Claimant for a functional capacity evaluation (FCE) to determine Claimant's permanent work restrictions pending MMI and an impairment rating.

20. Dr. Hattem placed Claimant at MMI on February 13, 2017. Dr. Hattem concluded Claimant completed a "comprehensive course of postoperative therapy" for the shoulder, and chiropractic massage and physical therapy for the neck. He continued to opine Claimant's recurring left knee pain was not claim-related. Dr. Hattem assigned an 8% upper extremity impairment for abnormal left shoulder range of motion and released Claimant to full duty work based upon the results of a January 26, 2017 FCE. He opined Claimant did not require any post-MMI medical monitoring or follow-up.

21. On August 7, 2017, Mark C. Winslow, D.O. performed a Division Independent Medical Examination ("DIME"). Claimant complained of pain, popping, swelling and locking of the left knee, as well as pain and limited range of motion of the neck and shoulder. On examination, Dr. Winslow noted limited shoulder range of motion with mild tenderness in the myofascial trapezius, restricted range of motion in the cervical spine with tenderness and several trigger points, and decreased range of motion of the knee with mild tenderness on the medial joint line. Dr. Winslow gave the following assessment: (1) status post labral tear with repair, (2) cervicalgia with ongoing complaints of pain, (3) low back pain with essentially complete resolution, and (4) left knee pain with previous meniscectomy, exacerbation currently back to previous baseline. He agreed Claimant reached MMI as of February 13, 2017 and assigned 13% whole person impairment for the cervical spine, and 9% upper extremity impairment (5% whole person) for the left shoulder.

22. Dr. Winslow opined Claimant's current knee pain is more likely due to her previous work injury than the September 21, 2014 work injury. In support of his opinion, he noted Claimant's symptoms were "very much like her previous knee pain," the imaging did not reveal new pathologic changes, and Claimant's range of motion at the DIME evaluation was better than it was at the time Claimant was discharged from her prior knee injury.

23. Regarding Claimant's neck, Dr. Winslow noted he reviewed medical records from Kaiser prior to the September 21, 2014 work injury that suggested Claimant had previous "intermittent and self-correcting" symptoms in the cervical region," specifically referring to an August 28, 2012 medical record that documented possible previous neck problems that included "recurrent self-limited episodes of neck pain in the past." He further noted, however, that a December 3, 2012 medical note indicated there was no neck pain or other concerns, and no active treatment was initiated. He opined that

Claimant, with her mild underlying degenerative joint disease, sufficiently strained the cervical region in the September 21, 2014 work incident, leading to "a rapid and sustained increase in her previously mild and intermittent symptoms." Dr. Winslow opined it was "entirely probable" Claimant would go on to have continued symptoms. Noting that treatment had been recommended by her providers for Claimant's ongoing symptoms, Dr. Winslow concluded additional medical treatment could be offered as maintenance. He wrote,

> The patient has ongoing symptoms. She has findings on clinical examination that suggests she has continued restrictions and cervical range of motion that have responded in the past and should response to chiropractic or osteopathic manual treatment. The patient reports that these treatments have been helpful-beneficial at allowing her to maintain her normal level of function and assist her to continue working her full capacity. In my opinion this should be continued up to 12 visits over the next 24 months to include massage therapy up to 12 visits during this same time frame. These are not offered to improve however to allow/assist the patient to continue her current level of function.

24. Respondent filed a Final Admission of Liability on December 15, 2017 admitting for Dr. Winslow's permanent impairment rating, but denying maintenance medical treatment based on Dr. Hattem's opinion.

25. On April 23, 2018, Respondent sent Dr. Hattem a letter asking for an updated opinion regarding maintenance medical benefits in light of Dr. Winslow's DIME report. In his April 26, 2018 response, Dr. Hattem continued to opine that maintenance medical treatment was not reasonably necessary stating, "At this time 3 ½ years post injury any current pain she may experience is likely due to pre-existing cervical spondylosis rather than to the remote work injury." Dr. Hattem wrote that he found it significant that Claimant had not sought treatment since undergoing the DIME, stating, "One would have expected the patient to seek medical attention if significant pain persisted."

26. Claimant testified Dr. Hattem evaluated her approximately four times in the 2.5 years of her treatment. Claimant she did not have neck symptoms or treatment to her neck prior to the September 21, 2014 work injury. She stated Dr. Hattem never discussed with her any pre-existing neck issues. Claimant testified she experiences ongoing pain and decreased range of motion in her neck and left shoulder, consistent with her work 2014 work injury. Claimant testified that her left shoulder also pops when rotated, causing additional pain and discomfort. Claimant acknowledged she has been working full duty and is able to perform her work duties. Claimant testified she would like to follow up with her treating physicians to discuss Dr. Winslow's recommendations. She has yet to seek additional treatment because Respondent denied maintenance treatment.

27. Dr. Hattem testified at hearing regarding his treatment of Claimant as well as his opinions regarding Claimant's need for maintenance medical treatment. Dr. Hattem was qualified as an expert in occupational medicine. He reiterated his opinion that medical

maintenance treatment for Claimant's September 21, 2014 work injury is not reasonable or necessary. In support of his opinion, Dr. Hattem pointed out that multiple years had passed since Claimant's work injury and shoulder surgery. Dr. Hattem testified Claimant exhausted what he considered to be reasonably necessary post-operative therapy for the neck and shoulder, noting Claimant had a complete course of post-surgical care for her shoulder, including 24 sessions of post-operative physical therapy. Dr. Hattem testified the FCE evidenced a high level of function, meaning the only treatment necessary to maintain such level of function would be engagement in an independent home exercise program.

28. Dr. Hattem further testified there was no cervical nerve impingement or other significant findings on Claimant's cervical MRI or the EMG/NCS, and that any neck complaints were axial in nature. Dr. Hattem opined that Claimant's persistent shoulder pain was residual pain from the labrum tear, and that it was not referred pain from the neck. Dr. Hattem testified that Claimant had not, in fact, received treatment to her shoulder or neck prior to the September 21, 2014 work injury, nor did she have pre-existing symptoms.

29. Claimant's testimony is found credible and persuasive.

30. The ALJ finds the opinions of Drs. Castro and Winslow more credible and persuasive than the opinions of Drs. Hattem, Raschbacher and McCranie.

31. Claimant has presented substantial evidence establishing it is more likely than not future medical treatment will be reasonably necessary to relieve the effects of Claimant's work injury and prevent further deterioration of her condition.

32. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App.

2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical Maintenance Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. MMI exists when any medically determinable physical or mental impairment caused by the injury has become stable and no further treatment is reasonably expected to improve the claimant's condition. Section 8-40-201(11.5), C.R.S.; *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002). Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

The ALJ concludes Claimant established by a preponderance of the evidence she is entitled to a general award of medical maintenance benefits. Dr. Hattem opined that, based on the length of time passed since the work injury and surgery, Claimant's continued symptoms are now more likely due to pre-existing cervical spondylosis. While it is undisputed Claimant had a pre-existing cervical condition, she credibly testified she did not have prior symptoms or treatment to the cervical spine. The record corroborates Claimant's testimony to the extent there is no evidence of neck symptoms or treatment between February 2012 and the September 21, 2014 work injury. Dr. Winslow credibly opined that, to the extent Claimant did suffer from pre-existing mild and intermittent symptoms, the cervical strain sustained in the 2014 work incident was sufficient to increase such symptoms and result in continued symptoms.

Although Dr. Castro opined there are no surgical indications, he has repeatedly recommended Claimant continue physical therapy for her neck. While not a treating physician, Dr. Winslow did perform a through medical records review and physical examination and interview Claimant. Dr. Winslow also credibly and persuasively opined that additional treatment is reasonably necessary to keep Claimant's current level of function. Claimant credibly testified she continues to experience pain and limitations in her neck and shoulder, that she wishes to undergo maintenance treatment, and that she has not sought additional treatment due to Respondent denying maintenance treatment. The medical records evidence Claimant has been consistent with her complaints of ongoing symptoms. Although Claimant has returned to working full duty with no restrictions, based on the totality of the evidence, the ALJ is persuaded it is more likely than not additional medical treatment is reasonably necessary to maintain her current level of function and prevent further deterioration of her condition. Respondent retains the right to challenge the compensability, reasonableness and necessity of any specific treatment.

ORDER

It is therefore ordered that:

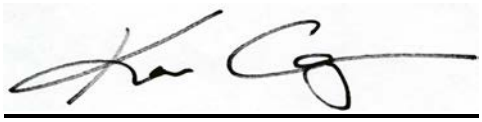
1. Respondent shall be liable for reasonably necessary and related post-MMI maintenance medical treatment for the September 21, 2014 work injury.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 18, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that his 18% scheduled right shoulder impairment rating should be converted to an 11% whole person impairment rating.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant works for Employer as a working foreman. Claimant specializes in above-ground and underground power distribution. Claimant suffered a compensable injury to his right shoulder on February 21, 2017, when he fell at work. *Ex. 1.*
2. Claimant came under the care of John Sanidas, M.D., and James Ferrari, M.D.
3. On April 4, 2017, Claimant underwent an MRI which established a massive rotator cuff tear, subluxed bicep tendon, a fraying of the labrum, a possible labral tear, and mild acromial clavicular arthrosis.
4. On June 22, 2017, Claimant underwent right rotator cuff shoulder surgery with Dr. Ferrari. The surgery included a repair of a rotator cuff, a distal clavicle resection, as well as debridement in the bicep tendon. *Ex.6.*
5. On November 13, 2017, Claimant returned to Dr. Ferrari. Dr. Ferrari noted Claimant was only occasionally symptomatic with mild-moderate aching pain in his shoulder. *Ex. B, pg. 74.*
6. On January 8, 2018, Dr. Ferrari evaluated Claimant approximately six months after his rotator cuff repair. He noted Claimant had "some weakness but not much pain or discomfort." He also noted Claimant was having "no pain at night." Based on Claimant's recovery, he did not think Claimant had to continue with formal physical therapy, but Claimant merely had to continue his strengthening exercises three times a week. And, although Claimant was doing mostly supervisory-type activities, Dr. Ferrari did not provide any formal work restrictions. He anticipated Claimant would be at MMI 3 months, i.e., April of 2018. *Ex. 7, pg. 32.*
7. On January 22, 2018, Claimant returned to Dr. Sanidas. Dr. Sanidas noted the following:

> The patient has no real complaints. He has minimal discomfort in his right shoulder. He gives no history of any numbness and tingling in his fingertips.

> . . .
>
> He has very excellent range of motion. His grip is 5/5. Sensation is intact. He has slight difference in resistant to gravity and resistance of his right upper extremity compared to his left.
>
> . . .
>
> The patient now can lift, push, pull, and carry up to 15 pounds. He is to finish out the physical therapy that he has left and I am giving him 3 more weeks at twice a week basically for strengthening. His range of motion is good at this point in time. As far as any medication, he can take those over-the-counter.

Ex. 8, pg. 63-64.

8. On February 5, 2018, Claimant continued undergoing physical therapy. His physical therapist noted that Claimant reported doing fine, had minimal pain, but was having difficulty lifting any weight overhead. The therapist also noted Claimant's range of motion did get worse as Claimant fatigued from performing therapy. *Ex. 8., pg. 66-67.*

9. On February 22, 2018, Claimant underwent physical therapy. He noted he was feeling better and can do more work. Although the physical therapy did not cause any increase in shoulder pain, his shoulder did fatigue. *Ex. 8, pg. 64.*

10. On February 28, 2018, Claimant underwent additional physical therapy. Claimant noted that he quickly fatigues with overhead motion and wanted to focus on improving his overhead motion first. Upon completion of physical therapy that day, the therapist noted that Claimant showed some fatigue with overhead activity. *Ex. 8, pg. 60-61.*

11. On March 14, 2018, Claimant underwent additional physical therapy. He noted it was his last session and would be seeing his surgeon in April. The physical therapist noted that during physical therapy, there was "no increase in pain," but that Claimant continued to hike his right shoulder when lifting more than 3 pounds overhead. It was also noted that Claimant will continue working on improving overhead range of motion. It was advised that Claimant should attempt to perform full overhead range of motion exercises with less weight instead of performing shorter overhead range of motion exercises with more weight. *Ex. 8, pg. 58-59.*

12. On April 2, 2018, Claimant returned to Dr. Ferrari. Dr. Ferrari specifically noted in his report on this date that Claimant's symptoms occur rarely, but when they do occur, they are due to strenuous activity. He also noted that when the symptoms do occur, the symptoms are limited to aching. This appears to be Dr. Ferrari's discharge report.

13. On April 9, 2018, Claimant returned to Dr. Sanidas. At this visit, Dr. Sanidas noted Claimant had:

> [V]ery minimal complaints about his right shoulder, occasional discomfort, but he can use it quite well.

He also performed a physical examination of his shoulder and noted:

> The patient has No tenderness to palpation of his right shoulder, anterior, posterior, posterolaterally, and laterally. He has very good range of motion. His grip is 5/5. Sensation is intact of his upper extremity. Strength testing is slightly less on the postoperative right as compared with the left.
>
> The patient can return to full duty. He is to return to this clinic in 2 weeks. If he tolerates full duty without any difficulty, consideration of discharge and impairment rating will be done.

Ex. A, pg. 39.

14. On April 23, 2018, Claimant returned to Dr. Sanidas. Dr. Sanidas had said approximately two weeks earlier, that if Claimant can tolerate full duty, without any difficulty, he will consider placing Claimant at MMI and discharging him from his care. At this appointment, Dr. Sanidas evaluated Claimant and concluded Claimant tolerated working full duty without any difficulty. He also determined Claimant reached MMI and discharged him from his care.

15. In his final report of April 23, 2018, Dr. Sanidas stated the following:

> [Claimant] has no complaints, occasionally slight discomfort in his right shoulder, otherwise, he has no complaints of any significant pain, discomfort, numbness, or tingling in his right upper extremity or fingers, and he has been working full duty without difficulty.
>
> He did well with physical therapy, a home exercise program, and now he is working full duty without any significant pain or discomfort.
>
> Has excellent range of motion. His grip is 5/5. Sensation is intact. His motor strength is 4 on the surgical side as compared with the uninjured left side.

Dr. Sanidas determined that pursuant to the AMA Guides, Claimant sustained an 18% impairment of the upper extremity which equals an 11% whole person rating. [1]

16. Claimant testified that after being placed at MMI, his right shoulder has continued to impact him functionally. He contends he has difficulty sleeping on his right side, requiring him to sleep on his left side or on his back. However, despite this testimony during his direct examination, Claimant admitted during cross examination that the medical records do not indicate he is having problems sleeping due to his shoulder injury and pain at night. *Hrg., pg. 33 L13 – 17.* Moreover, the lack of any pain at night and problems sleeping associated with any pain is specifically documented by Dr. Ferrari in his report of January 8, 2018, which specifically indicates that "There is no pain at night." *Ex. 7, pg. 32.*

17. Claimant also testified that he has pain at the area of his upper right shoulder when carrying objects on it and that he has limitations lifting objects above his head when using his right arm. He also said that due to his injury, he feels pain when attempting to do things behind his back, such as putting on a belt.

18. On the other hand, despite Claimant's contention that he has pain while doing certain aspects of his job, Claimant testified that he is still able to perform all essential functions of his job. *Hrg., pg. 20.* Moreover, Claimant's ability to perform the essential functions of his job is consistent with the statement in Dr. Sanidas' report noting Claimant stated that he has been working full duty without difficulty and Dr. Sanidas releasing Claimant to full duty without any restrictions.

19. At hearing, Claimant also prepared a pain diagram which was entered into evidence. Claimant identified having aching and burning pain on the front and back side of his right shoulder. He also indicated that his average pain level during the last week was 60% on a scale of 0% to 100%. *See Exhibit 10.* However, such contention regarding his pain levels is inconsistent with the medical records submitted at hearing and his own hearing testimony that he can perform all essential functions of his job.

20. Claimant did, however, admit at hearing that he was having no pain in his neck or his upper back as a result of his injury. *Hrg. Trans. 33 L22 – 34 L4.* He further admitted that on April 9, 2018 John Sanidas, M.D., documented that Claimant had very minimal complaints about his right shoulder, he had no numbness or tinging in his fingertips, he had no tenderness to palpation of his right shoulder, anterior, posterior, posterolaterally, and laterally. *Hrg, Trans. 28 L18 – 30 L21; Resp. Exh. A 38, 39.*

21. Claimant also admitted that there was never any indication or documentation in any medical report that he was having problems sleeping (*Hrg. Trans. 33 L13 – 17*), which correlates directly with Dr. Ferrari's report of January 8, 2018 which documented that Claimant in fact had no pain at night. *Exh. 7 pg. 32*.

[1] The 18% upper extremity rating was comprised of a 9% upper extremity rating due to range of motion deficits of the shoulder and a 10% upper extremity rating for the shortening of his distal clavicle and excision of the distal portion of the acromion. They combined to an 18% upper extremity rating.

22. Claimant admitted that as of MMI he was not given any restrictions. *Hrg. Trans. 33 L5 – 12.* He also admitted he was able to work his job full duty without modification or restrictions, and has never asked for any modification or restriction of his duties. *Exh. C; Hrg. Trans. 34 L6 – 35 L4.*

23. Claimant lastly admitted that his safety manager Mike Anderson had in fact spoke with him several times to see how he was doing. He admitted that Anderson accurately testified Claimant has worked full time and at full duty since being released to full duty, has not taken any time off from work due to his injury, has never complained of any pain while at work, and has never requested any modification or restriction of his duties due to his injury. *Hrg. Trans. 110 L18 – 111 L9.*

24. Claimant retained Dr. Ronald Swarsen, an occupational medicine specialist and Level II certified physician, to render an opinion on whether the Claimant's right shoulder girdle injury entitled him to a whole person impairment rating of 11%.

25. Over objection of the Respondents, Dr. Swarsen was permitted to testify as an expert.

26. Using the anatomical chart from Netters introduced as evidence, Dr. Swarsen identified the anatomical location of the areas of surgical intervention performed on Claimant by Dr. Ferrari. *Exhibit 11*. He testified that all locations were above the glenohumeral joint and were part of the Claimant's shoulder complex, not his arm.

27. On cross-examination Dr. Swarsen agreed that under the AMA Guides the evaluation of the shoulder impairment is found in the section in the AMA Guides related to the upper extremity. He testified that this does not change the fact that the Claimant's functional impairment and his surgical intervention were to the shoulder girdle, not his arm.

28. Respondents introduced the testimony of Mike Anderson and EJ Schmiel to Challenge the Claimant's testimony that he had functional limitation to his right shoulder girdle post-surgery. Neither witness testified to having medical expertise. Mr. Anderson testified that he had observed the Claimant after he returned to work and the Claimant did not complain of continuing problems with his right shoulder. On cross-examination he stated that he had observed the Claimant functioning at a construction site but could not state when. This assertion was contested by Claimant who said that the last time Mr. Anderson had been at a worksite where he was working was approximately three years ago.

29. Mr. Schmiel testified that he has not observed Claimant on the worksite but in the loading yard. He also testified that post-MMI he observed the Claimant in the yard where the majority of the work of loading was not performed by other co-employees, and not Claimant.

30. By his admission at hearing, Claimant is able to physically perform all of the essential functions of his job. Although Claimant alleges he has some difficulty putting heavy items on his right shoulder and working overhead, Claimant has not requested any accommodation to perform his job duties.

31. Even if the ALJ accepts as fact that Claimant's right shoulder is tender, and he has some pain when putting on a belt when attempting to get the belt through the belt-loops on the backside of his pants, the totality of the evidence presented, including Claimant's own testimony, persuades the ALJ that these symptoms are not functionally impairing. Accordingly, Claimant has failed to establish that he has a "functional impairment" beyond the schedule which would entitle him to "conversion" of his scheduled impairment to impairment of the whole person.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S., *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of the respondents. *Section 8-43-201, C.R.S.*

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The ALJ has considered these factors and concludes, based upon the totality of the evidence presented, that while Claimant sustained a serious injury to his left shoulder, his testimony fails to establish that that he has suffered any decreased capacity to meet his personal, social or occupational demands. Consequently, his assertion that he is entitled to conversion of his scheduled upper extremity impairment to whole person impairment is unpersuasive.

In accordance with Section 8-43-215 C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive

arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5. P3.d 385 (Colo. App. 2000).

Conversion

When Claimant's injury is listed on the schedule of disabilities, the award for that injury is limited to a scheduled disability award. *Section 8-42-107(1)(a), C.R.S*. However, Claimant may establish that his injury has resulted in "functional impairment" beyond the schedule enumerated in C.R.S. §8-42-107(2)(a); thus, entitling him to "conversion" of the scheduled impairment to impairment of the whole person. This is true because the term "injury" as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Walker v. Jim Fucco Motor Co,* 942 P.2d 1390 (Colo. App. 1997); *see also Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). Thus, while ratings issued under the AMA Guides are relevant to determining the issue, they are not decisive as a matter of law. *Strauch v. PSL Swedish Healthcare System, supra*. Whether Claimant has sustained a scheduled injury within the meaning of § 8-42-107(2), C.R.S. or a whole person impairment compensable under § 8-42-107(8), C.R.S. is a factual question for the ALJ and depends upon the particular circumstances of the individual case. *Walker v. Jim Fucco Motor Co, supra*. In the case of a shoulder injury, the question is whether Claimant has sustained functional impairment beyond the arm at the shoulder.

"Functional impairment" is distinct from physical (medical) impairment under the AMA Guidelines and as noted above, the site of functional impairment is not necessarily the site of the injury itself. The site of functional impairment is that part of the body which has been impaired or disabled. *Strauch, supra*. Physical impairment relates to an individual's health status as assessed by medical means. On the other hand, disability or functional impairment, pertains to a person's ability to meet personal, social, or occupational demands, and is assessed by non-medical means. Consequently, physical impairment may or may not cause "functional impairment" or disability. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, 984 P.2d 656, 658 (Colo. App. 1998).* Physical impairment becomes a disability only when the medical condition limits the claimant's capacity to meet the demands of life's activities. *Lambert & Sons, Inc. v. Industrial Claim Appeals Office, supra at 658.* Functional impairment need not take any particular form. *See Nichols v. LaFarge Construction, W.C. No. 4-743-367 (October 7,2009); Aligaze v. Colorado Cab Co., W.C. No. 4-705-940 (April 29, 2009); Martinez v. Albertson's LLC, W.C. No. 4-692-947 (June 30, 2008*). Accordingly, "referred pain from the primary situs of the industrial injury to another part of the body may establish proof of functional impairment to the whole person." *Hernandez v. Photronics, Inc., W.C. No. 4-390-943 (July 8, 2005).* Nonetheless, symptoms of pain do not automatically rise to the level of a functional impairment. To the contrary, there must be evidence that such pain limits or interferes with Claimant's ability to use a portion of his body to be considered functional impairment. See *Mader v. Popejoy Construction Co., Inc.*, W.C. No. 4-198-489 (August 9, 1996), aff'd *Popejoy Construction Co., Inc.,* (Colo. App. No. 96CA1508, February 13, 1997)(not selected for publication)(claimant sustained functional impairment of the whole person where back pain impaired use of arm). In order to determine whether permanent disability should be compensated as physical

impairment on the schedule or as functional impairment as a whole person, the issue is not whether Claimant has pain, but whether the injury has impacted part of the claimant's body which limits his "capacity to meet personal, social and occupational demands." *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996).

Moreover, there is no requirement that there must be permanent restrictions imposed by a doctor in order to support a finding as to whether Claimant has functional impairment as a result of an injury. *Martinez v. Pueblo County Sheriff's Office*, W.C. No. 4-806-129 (August 9, 2011). As set forth in *Martinez, supra*, "functional impairment is not merely assessed by medical means but rather can involve an overall assessment of the effect the injury has had on the claimant's ability to function in terms of movement and in the performance of activities at work and daily living." And, the term "injury" as used in the schedule of disabilities refers to the manifestation in a part or parts of the body which have been impaired or disabled as a result of the industrial accident. *Id.*

Therefore, when evaluating functional impairment, it is appropriate for the ALJ to look at, not only the alteration of Claimant's abilities by medical means, but also by non-medical means of the impact the injury has had on Claimant's capacity to meet personal, social and occupational demands. See, *Martinez, supra*, and *Askew v. Industrial Claim Appeals Office*, 927 P.2d 1333 (Colo. 1996). Therefore, the existence of permanent restrictions imposed by a doctor is some evidence which the ALJ may consider in determining the nature and extent of Claimant's functional impairment. *See, Strauch v. PSL Swedish Healthcare System, supra*. Therefore, an ALJ may or may not find the existence of permanent restrictions to be persuasive when balanced against other evidence concerning Claimant's ability to function.

Consequently, the ALJ concludes that an injury to the structures which make up the shoulder may or may not result in functional impairment beyond the arm. See generally, *Walker v. Jim Fucco Motor Co, supra; Strauch v. PSL Swedish Healthcare System, supra; Langton v. Rocky Mountain Health Care Corp.,* 937 P.2d 883 (Colo. App. 1996).

Based upon the evidence presented, the ALJ finds that Claimant has failed to meet his burden to establish by a preponderance of the evidence that he has sustained functional impairment beyond the arm at the shoulder warranting conversion of his scheduled impairment to impairment of the whole person. At hearing, Claimant testified that since his admitted shoulder injury he has experienced some tenderness on the top of his shoulder when he places something heavy on it, has pain when reaching behind his back to put on a belt and in working overhead. Accordingly, Claimant asserts that he has functional limitations beyond the arm at the shoulder entitling him to an award of whole person impairment. The ALJ is not persuaded for the following reason: While Claimant may have tenderness on the top of his shoulder and alleged some difficulty working overhead, these symptoms have not caused "functional impairment" or disability.

In addition, Claimant's testimony regarding certain functional impairments is inconsistent with the information contained in his medical records and his hearing

testimony. For example, based on his pain diagram completed in court, Claimant attempts to assert that he has 6/10 shoulder pain on a regular basis. But, such is not supported by the medical records which document limited pain and discomfort brought on by strenuous activities. In addition, although Claimant contends he cannot sleep on his right shoulder, the medical records indicate Claimant has no pain at night. Although there is a difference between being unable to sleep on his right shoulder and having pain at night that interferes with sleeping, the ALJ does not find Claimant's self-serving statements at hearing, which are not fully supported by the medical records, to be persuasive in establishing functional impairment which extends beyond the arm at the shoulder.

Claimant has been returned to full duty and is able to perform all essential functions of his job. Claimant's functional capacity, as demonstrated by his ability to return to full duty substantially erodes his claims that he has functional impairment beyond the arm at the shoulder. While Claimant's right shoulder injury may have resulted in some tenderness on the top portion of his shoulder, some pain when attempting to put on a belt, and some difficulty performing certain work overhead, the injury has not resulted in any decreased capacity to meet his personal, social or occupational demands.

In addition, the ALJ is not persuaded by Dr. Swarsen's testimony. In essence, Dr. Swarsen's testimony established the location of the injury and surgery, but did not persuasively establish Claimant's injury resulted in functional impairment that extends beyond the arm at the shoulder.

Based upon a totality of the evidence presented, the ALJ concludes that the situs of Claimant's functional impairment does not extend beyond the arm at the shoulder. Consequently, the ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that he has functional loss that would support an award of permanent disability benefits as a whole person.

ORDER

It is therefore ordered that:

1. Claimant's request for conversion of his scheduled upper extremity impairment to impairment of the whole person is denied and dismissed.
2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 18, 2018.

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that she suffered a right Achilles tendon injury during the course and scope of her employment with Employer on April 14, 2018.

STIPULATIONS

The parties agreed to the following:

1. If Claimant's claim is compensable, all the medical treatment she received for her right lower extremity through Concentra Medical Centers, Colorado Orthopedic Consultants, Stuart Myers, M.D., including the April 19, 2018 right Achilles tendon surgery, Health Images and Kaiser Permanente is reasonable, necessary and causally related to her April 14, 2018 industrial Injury.

2. Claimant earned an Average Weekly Wage (AWW) of $1135.68, with a corresponding Temporary Total Disability (TTD) rate of $776.92.

FINDINGS OF FACT

1. Employer is a retail store. Claimant worked for Employer as a Custom Closet Market Manager. She did not work at a particular store but floated between seven locations. Claimant's job duties involved training employees, coaching employees and coordinating between the design team, store employees and the installation department.

2. Claimant explained that Employer's Handbook details seven foundational principles describing the conduct of its business. She detailed that one of the principles reflects that hiring one great employee is the equivalent of hiring three good applicants. Another principle involves employee communication and leadership. A third principle is creating an "air of excitement" or energy within Employer's store. Claimant remarked that the "air of excitement" involves the energy employees bring to the store and their interactions with customers. She commented that the "air of excitement" is designed to create an environment in which customers want to spend time in the store and shop. Claimant detailed that demonstrating items or opening packages for customers to touch creates an "air of excitement."

3. Claimant testified that on April 14, 2018 she arrived at Employer's store at approximately 9:00 a.m. to prepare for the store opening at 10:00 a.m. She explained that she was planning to conduct a team huddle to set the expectations and goals for the day. The team huddle is used to motivate employees, explain promotional sales and address concerns.

4. Prior to the team huddle Claimant was in the break room with Visual Sales Manager Jay Mendoza. Mr. Mendoza called for a team huddle at about 9:50 a.m. As they were walking to the huddle, they were discussing ways in which employees could engage customers. Mr. Mendoza suggested and demonstrated a "silly walk." Claimant described the "silly walk" as "hands out, legs out, teeter-totter, side-to-side."

5. When Claimant and Mr. Mendoza arrived at the team huddle they met approximately six to eight other employees. The group discussed having fun with customers and doing a silly walks. Another employee mentioned that sales associates might also "skip" to customers. Former employee Chris then inquired "what do you mean by skipping?" Claimant responded by demonstrating "skipping" and suffered a "pop" in her right lower leg. She noted that she did not fall, but leaned on a nearby desk. After the team huddle ended and the store opened to customers another employee helped Claimant to the break room because she was having difficulty walking.

6. Claimant explained that she was demonstrating "skipping" for other employees at the team huddle to increase the energy level in the store prior to the arrival of customers. She noted that they were discussing fun ways to engage with customers. Claimant remarked that she would not have skipped on April 14, 2018 if Mr. Mendoza had not demonstrated silly walking. She acknowledged that generally employees are not permitted to skip through the store and she doubted that she would ever skip in front of a customer.

7. After reporting her injury to Employer Claimant received treatment at Concentra Medical Centers on April 14, 2018 through Jerald Solot, D.O. He ordered crutches and assigned Claimant work restrictions.

8. On April 16, Claimant underwent a right ankle MRI. The MRI revealed a complete rupture of Claimant's Achilles tendon.

9. On April 17, 2018 Claimant visited Stuart H. Myers, M.D. of Colorado Orthopedic Consultants for an evaluation. Dr. Myers requested authorization for right ankle Achilles tendon surgery.

10. On April 19, 2018 Claimant underwent an open repair of her right Achilles tendon. Dr. Myers subsequently evaluated Claimant and referred her for physical therapy through Kaiser Permanente.

11. Claimant underwent physical therapy through Kaiser and continued to receive follow-up treatment from Dr. Myers. By May 21, 2018 Dr. Myers noted that Claimant was suffering from delayed wound healing and serous drainage. He referred Claimant to a wound care specialist through Kaiser.

12. On June 4, 2018 Claimant visited Edward Melkun, M.D. from Kaiser for her wound healing difficulties. He suggested possible surgery to clean and close the wound. Claimant subsequently received treatment from Dr. Melkun and Dr. Myers to improve the healing of her incision.

13. On October 15, 2018 Claimant underwent a right ankle full thickness skin graft with Dr. Melkun. The donor skin was removed from Claimant's right thigh. By November 6, 2018 Dr. Melkun noted the wound did not show any signs of infection and was healing.

14. Mr. Mendoza testified at the hearing in this matter. He noted that he was in Employer's break room with Claimant on April 14, 2018. They were discussing ways to create a fun and exciting environment at Employer's store. Mr. Mendoza called the team huddle before the store opened. He remarked that the purpose of the huddle was to review sales performance and discuss priorities for the day. Mr. Mendoza stated that he walked with Claimant and a few other employees from the break room to the huddle. He suggested and demonstrated a funny walk while transitioning from the break room to the team huddle. Mr. Mendoza testified he demonstrated the funny walk to lighten the mood and generate excitement about the day. However, he noted that the conversation was meant to be funny and not serious when greeting customers during business hours. Similarly, skipping during business hours would constitute a safety concern. Nevertheless, skipping down an aisle prior to business hours would not be harmful and could be viewed as a joke.

15. Mr. Mendoza acknowledged that the purpose of the huddle involved team building and generating excitement about the day. He remarked that he demonstrated the funny walk as part of his job duties to build rapport with other employees. Claimant's skipping also created excitement for employees as they began their shifts so they could more effectively engage customers.

16. Part-time Sales Associate Taylor Rhodes-Wilmere testified that she walked from the break room to the team huddle with other employees on April 14, 2008. She explained that the air of excitement is a sales technique in which employees present themselves to customers in an attempt to generate enthusiasm. Ms. Rhodes-Wilmere commented that the air of excitement never included physical activities. She remarked that the discussion from the break room to the huddle had a joking tone. The parties specifically mentioned walking through the store with customers in a fun and different way. However, the notion of skipping was not a serious suggestion. Skipping was simply not an activity that associates were permitted to perform while engaging customers.

17. Area Director Traci Heitz also testified at the hearing in this matter. She noted that she would not tolerate skipping in Employer's stores because it constituted a safety hazard. The air of excitement was used to motivate employees to greet customers but did not involve physical activities. Ms. Heitz explained that the air of excitement involved creating energy in the store through audio and visual presentations. In contrast, team building involves creating camaraderie among employees. She acknowledged that building rapport may include telling jokes. However, Ms. Heitz noted that Claimant's skipping was inappropriate and did not convey any benefit to Employer. Nevertheless, she agreed that generating excitement with other employees through a funny walk or skipping conveys a benefit to Employer.

18. Claimant has demonstrated that it is more probably true than not that she suffered a right Achilles tendon injury during the course and scope of her employment with Employer on April 14, 2018. Initially, on April 14, 2018 Claimant injured her right Achilles tendon while demonstrating "skipping" at a team huddle with other employees prior to opening Employer's store to customers. Claimant explained that she was demonstrating skipping to increase the energy level in the store prior to the arrival of customers. She noted that they were discussing fun ways to engage with customers. Mr. Mendoza also acknowledged that the purpose of the huddle involved team building and generating excitement about the day. He remarked that he demonstrated a funny walk on the way to the team huddle with other employees as part of his job duties to build rapport. Claimant explained that she would not have skipped on April 14, 2018 if Mr. Mendoza had not demonstrated silly walking. Mr. Mendoza acknowledged that Claimant's skipping also created excitement for employees as they began their shifts so they could more effectively engage customers. Claimant's right Achilles tendon injury occurred in the course of employment because it happened at work while at a team huddle with other employees and was connected to her work-related functions.

19. Claimant's right Achilles tendon injury also arose out of her employment because it did not constitute a deviation from employment so substantial as to remove it from the employment relationship. The deviation from employment activities was insignificant because Claimant's skipping was commingled with Employer's desire to create an air of excitement. Claimant credibly explained that she was demonstrating skipping for other employees at the team huddle to increase the energy level in the store prior to the arrival of customers. Similarly, Mr. Mendoza testified he demonstrated the funny walk to lighten the mood and generate excitement about the day. In contrast, Witnesses explained that skipping was a safety hazard and not permitted while customers were in Employer's store.

20. However, the team huddle occurred prior to business hours, was designed to build rapport and generated enthusiasm among employees. Creating an air of excitement encouraged customers to remain in the store and shop. Mr. Mendoza's funny walk and Claimant's activity of skipping prior to the store opening were designed to generate enthusiasm among employees and benefitted Employer by enhancing product sales. The nature of the air of excitement contemplated some level of horseplay prior to the opening of the store to customers in an effort to generate enthusiasm among employees and ultimately enhance the customer experience. The record thus reveals that Claimant was not acting for her sole benefit by skipping at the team huddle, but instead sought to benefit Employer by creating an air of excitement in compliance with Employer's foundational principles. Claimant's skipping at the team huddle therefore did not remove her from the employment relationship. Accordingly, Claimant's right Achilles tendon injury arose out of her employment duties for Employer on April 14, 2018.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured

workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. To establish a compensable injury an employee must prove by a preponderance of the evidence that his injury arose out of the course and scope of employment with his employer. §8-41-301(1)(b), C.R.S. (2006); *see City of Boulder v. Streeb*, 706 P.2d 786, 791 (Colo. 1985). An injury occurs "in the course of" employment when a claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638, 641 (Colo. 1991). The "arising out of" requirement is narrower and requires the claimant to demonstrate that the injury has its "origin in an employee's work-related functions and is sufficiently related thereto to be considered part of the employee's service to the employer." *Popovich v. Irlando,* 811 P.2d 379, 383 (Colo. 1991).

5. Regardless of the theoretical framework that is applied, the issue is whether the "claimant's conduct constitutes such a deviation from the circumstances and conditions of the employment that the claimant stepped aside from his job and was performing activity for his sole benefit." *In Re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010); *see Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006). It is thus not essential that the activities of an employee emanate from an obligatory job function or result in a specific benefit to the employer for a claim to be compensable. *City of Boulder v. Streeb,* 706 P.2d 786 (Colo. 1985).

6. When the employer asserts a personal deviation from employment activities "the issue is whether the activity giving rise to the injury constituted a deviation from employment so substantial as to remove it from the employment relationship."

Roache v. Industrial Commission, 729 P.2d 991 (Colo. App. 1986); *In Re Laroc,* W.C. 4-783-889 (ICAP, Feb. 1, 2010). If an employee substantially deviates from the mandatory or incidental duties of employment so that he is acting for his sole benefit at the time of injury, his claim is not compensable. *Kater v. Industrial Commission,* 729 P.2d 746 (Colo. App. 1986). However, ministerial actions for an employee's personal comfort do not constitute a substantial deviation from employment unless the personal need being met or the means chosen by the employee to satisfy his personal comfort is unreasonable. *In Re Rodriguez,* W.C. 4-705-673 (ICAP, Apr. 30, 2008); *see Larson's Workers' Compensation Law,* §21.00. In *Lori's Family Dining, Inc. v. Industrial Claim Appeals Office*, 907 P.2d 715, 718 (Colo.App. 1995), the court announced the following four part test to analyze whether an activity constitutes a deviation or horseplay: (1) the extent and seriousness of the deviation; (2) the completeness of the deviation; (3) the extent to which the practice of horseplay had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay. The question of whether a deviation is significant enough to remove the claimant from the course and scope of employment is a factual determination for the ALJ. *Id.*

7. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered a right Achilles tendon injury during the course and scope of her employment with Employer on April 14, 2018. Initially, on April 14, 2018 Claimant injured her right Achilles tendon while demonstrating "skipping" at a team huddle with other employees prior to opening Employer's store to customers. Claimant explained that she was demonstrating skipping to increase the energy level in the store prior to the arrival of customers. She noted that they were discussing fun ways to engage with customers. Mr. Mendoza also acknowledged that the purpose of the huddle involved team building and generating excitement about the day. He remarked that he demonstrated a funny walk on the way to the team huddle with other employees as part of his job duties to build rapport. Claimant explained that she would not have skipped on April 14, 2018 if Mr. Mendoza had not demonstrtaed silly walking. Mr. Mendoza acknowledged that Claimant's skipping also created excitement for employees as they began their shifts so they could more effectively engage customers. Claimant's right Achilles tendon injury occurred in the course of employment because it happened at work while at a team huddle with other employees and was connected to her work-related functions.

8. As found, Claimant's right Achilles tendon injury also arose out of her employment because it did not constitute a deviation from employment so substantial as to remove it from the employment relationship. The deviation from employment activities was insignificant because Claimant's skipping was commingled with Employer's desire to create an air of excitement. Claimant credibly explained that she was demonstrating skipping for other employees at the team huddle to increase the energy level in the store prior to the arrival of customers. Similarly, Mr. Mendoza testified he demonstrated the funny walk to lighten the mood and generate excitement about the day. In contrast, Witnesses explained that skipping was a safety hazard and not permitted while customers were in Employer's store.

9. As found, however, the team huddle occurred prior to business hours, was designed to build rapport and generated enthusiasm among employees. Creating an air of excitement encouraged customers to remain in the store and shop. Mr. Mendoza's funny walk and Claimant's activity of skipping prior to the store opening were designed to generate enthusiasm among employees and benefitted Employer by enhancing product sales. The nature of the air of excitement contemplated some level of horseplay prior to the opening of the store to customers in an effort to generate enthusiasm among employees and ultimately enhance the customer experience. The record thus reveals that Claimant was not acting for her sole benefit by skipping at the team huddle, but instead sought to benefit Employer by creating an air of excitement in compliance with Employer's foundational principles. Claimant's skipping at the team huddle therefore did not remove her from the employment relationship. Accordingly, Claimant's right Achilles tendon injury arose out of her employment duties for Employer on April 14, 2018.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

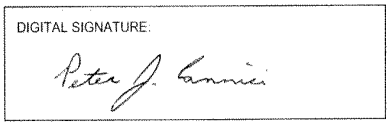
1. Claimant suffered a right Achilles' tendon injury while working for Employer on April 14, 2018.

2. All the medical treatment Claimant received for her right lower extremity through Concentra Medical Centers, Colorado Orthopedic Consultants, Stuart Myers, M.D., including the April 19, 2018 right Achilles tendon surgery, Health Images and Kaiser Permanente is reasonable, necessary and causally related to her April 14, 2018 industrial Injury.

3. Claimant earned an AWW of $1135.68, with a corresponding TTD rate of $776.92.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: December 19, 2018.



_____

Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

The issues set for determination included:

(1) Did Claimant overcome the opinions of the physician who performed the DOWC Independent Medical Examination ("DIME") [John Douthit, M.D.] regarding causation and relatedness by clear and convincing evidence?

(2) If Claimant overcame the DIME's opinion, did she prove that she sustained permanent medical impairment to her low back, including the SI joint?

(3) Is Claimant entitled to *Grover* medical benefits?

STIPULATIONS

The parties stipulated to the following facts: (a) Claimant is at maximum medical improvement; (b) Claimant is not seeking retroactive temporary disability benefits; (c) Claimant is not challenging Dr. Douthit's extremity rating; (d) Respondents have paid $74,544.99 in indemnity benefits to date. The Stipulations were accepted by the Court and are made part of this Order.

FINDINGS OF FACT

1. Claimant was employed as a home health LPN for Employer.

2. There was no medical evidence in the record that Claimant suffered an injury to her low back/hip or right SI joint before 2014.

3. Claimant suffered an admitted industrial injury when she was involved in a motor vehicle accident ("MVA") on November 14, 2014. She was a restrained driver, who was involved in a head-on collision with another vehicle. Claimant testified there was significant force associated with the impact and both airbags deployed in her vehicle. Claimant testified she felt pain all over after the accident, including her back and her right leg. The initial focus of her treatment was on her right leg and the tibial plateau fracture.

4. Claimant was transported by ambulance to Poudre Valley Hospital (University of Colorado Health). The EMS report and the initial documentation from University of Colorado Health documented right knee pain only.[1] Claimant complained of right knee and left foot numbness and tingling in the Emergency Department. Claimant underwent surgery (open reduction internal fixation) to repair the right tibial

[1] Exhibit C, pp.6-11 (Exhibit 1 to Dr. Anderson-Oeser's deposition.)

plateau fracture, which was performed by orthopedic surgeon Robert Baer, M.D. on November 14, 2014

5. An Employee's Report of Injury was completed on November 21, 2014 and signed by Claimant. In the injury description section, Claimant listed a right tibia plateau fracture and right lower leg to the right hip pain, which was caused by a head-on collision.

6. On December 2, 2014, Claimant was evaluated by Kevin O'Connell, M.D. In a pain diagram she completed, Claimant referenced burning in her hip and aching in her low back. Claimant testified that she advised Dr. O'Connell of pain in her low back and hip area early on when she treated with him. Dr. O'Connell's diagnosis was right tibial plateau fracture-closed. There was not a diagnosis related to the hip or low back.

7. In the physical therapy ("PT") notes authored by Jennifer Himot, PT, dated December 22, 2014, there was a reference to rib pain and reduced muscle strength in the right hip (abduction, adduction and extension). The references to reduced MMT in the right hip were reflected in PT Himot's notes through April 3, 2015.

8. Dr. O'Connell noted Claimant was making gradual progress to weight-bearing in the treatment note of January 20, 2015. Claimant reported right-sided costochondral soreness and x-rays were taken at that time. The x-rays were negative for fracture. Dr. O'Connell's record reflected claimant gradually advanced to weight-bearing. Dr. Baer noted Claimant was able to ambulate without a cane or crutch on February 11, 2015, but it was still recommended she use a cane.

9. When Claimant returned to Dr. O'Connell on March 24, 2015, it was noted she slipped in the bathroom while exiting the shower. Her right knee gave out and she impacted the right leg, as well as her right arm and shoulder. Dr. O'Connell's assessment continued to be specific to the right knee tibial plateau fracture, status post-ORIF. However, Dr. O'Connell also examined her right shoulder and right arm.

10. In the six evaluations of Claimant by Dr. O'Connell which occurred between April 30, 2015 and August 28, 2015, there was no reference to low back or hip pain, although a shoulder sprain was included in Dr. O'Connell's diagnoses. Claimant underwent surgery to remove the hardware in the right knee on August 5, 2015. She continued to receive PT following that procedure.

11. On October 9, 2015, Claimant returned to Dr. O'Connell and reported right hip discomfort, which she thought was attributable to her original right knee injury. Dr. O'Connell did not list a diagnosis for the low back or hip for this visit. Claimant also reported hip/low back, as well as right leg symptoms at the November 3, 2015 appointment with Dr. O'Connell. Were documented in a pain diagram she completed. O'Connell noted Claimant there were myalgias and joint swelling present at the time of the examination.

12. Claimant testified she felt pain in her hip and SI joint once she transitioned to weight-bearing on the right leg. The ALJ found the medical records corroborated Claimant's testimony that she was not weight-bearing for a period of time and the focus of her treatment was on the right knee. Her symptoms in the low back and hip area increased as she used her leg more.

13. In a treatment note, dated December 10, 2015, Dr. O'Connell noted Claimant was experiencing more pronounced right-sided low back pain at the SI areas radiating into the right groin. The symptoms were often triggered by movements of the right hip. Dr. O'Connell's diagnoses were: tibial plateau fracture, right, closed with routine healing; labral tear of hip, degenerative; sciatica neuralgia, right. Although Dr. O'Connell initially questioned whether the back complaints were causally related to subsequent to December 2015, he made referrals for evaluation and treatment of the low back/hip. Claimant was also referred for diagnostic testing, including an MRI of the low back. The ALJ inferred this supported the conclusion Dr. O'Connell believed Claimant's low back and hip condition were related to the industrial injury.

14. Claimant was referred for an MRI of the lumbar spine on December 23, 2015. Jeremy McCue, M.D. read the films and noted a small focal right foraminal protrusion at L3-L4, contacting the exiting right L3 nerve root. The disc did not cause a significant anatomic stenosis. Mild degenerative changes with annular fissuring was also noted at L4-5 and L5-S1. The ALJ found this MRI showed objective evidence of anatomic lesions in the lumbar spine.

15. On January 12, 2016, Claimant underwent arthroscopy of the right knee, which was performed by Robert Trumper, M.D. Grade IV post-traumatic osteoarthritis was identified at that time. The ALJ inferred the traumatic osteoarthritis resulted from the MVA.

16. Dr. O'Connell continued to oversee Claimant's treatment, as she treated for symptoms in the right knee, hip, right shoulder and neck. When Claimant returned to Dr. O'Connell on January 15, 2016, additional diagnoses included neck pain, radiculitis of the right cervical region; shoulder sprain, right; adjustment reaction; in addition to those identified in December 2015.

17. On February 10, 2016 Claimant was evaluated by Hans Coester, M.D. to whom she was referred by Dr. O'Connell. At that time, her chief complaints were listed as neck, shoulder, right arm and back pain. Dr. Coester found extension of Claimant's neck aggravated her pain, but she had no arm pain or weakness. She also had no weakness in her lower extremities. Dr. Coester noted Claimant had degenerative disc disease at multiple levels of the cervical spine. There was a small protrusion at C7-T1, without significant nerve root compression. Dr. Coester did not recommend any cervical treatment/intervention. Claimant's lumbar MRI scan showed mild degenerative disc disease at the L4-5 and L5-S1 level, but no nerve root compression. Dr. Coester did not recommend surgical intervention and thought the burning pain may be the result of

the meralgia paresthetica. He recommended a physiatry evaluation and possible nerve conduction tests.

18. On March 1, 2016, Jeff Raschbacher, M.D. (Occupational Medicine) reviewed a prior authorization request related to treatment of Claimant's right hip on behalf of Insurer. Dr. Raschbacher noted the hip was mentioned in June 2015 by an orthopedic physician and it was his opinion that given the nature of the injury, this could have caused a labral tear in the right hip, the force being transmitted up the extremity proximally from the knee. He recommended a review of the PT records before authorizing the treatment.

19. Claimant was evaluated by Brian White, M.D. on March 16, 2016 with a focus on the right hip pain. She complained of worsening right hip pain, as well as low back pain, without numbness, tingling, or any significant radicular symptoms. On examination (performed by Shawn Karns, PA-C), Claimant had a non-antalgic gait, with excellent lumbar range of motion ("ROM") and no midline or paraspinal muscular tenderness. The bilateral hip exam showed flexion of the right hip to be limited as compared to the left. Straight leg test was negative for low back pain radicular symptoms and FABER test was negative for SI joint pain. No tenderness was found to palpation over the greater trochanters.

20. PA-C Karns' concluded Claimant had findings consistent with right hip femoroacetabular impingement and labral tear. Due to the extent of her pain and failure of conservative treatment, she was a candidate for hip arthroscopy surgery. Dr. White's addendum noted Claimant had significant pain with anterior impingement maneuver, otherwise good ROM. The MRI showed a labral tear. Dr. White's assessment was: Claimant had an underlying labral tear likely from a subluxation event at the time of her injury. He recommended that Claimant lose weight before undergoing hip surgery.

21. On July 22, 2016, Claimant was evaluated by Kimberly Siegel, M.D. at UC Health. Dr. Siegel noted Claimant previously treated with Dr. O'Connell, whose most recent notes indicated Claimant was approaching nearing MMI with respect to all conditions, except for the right hip labral tear. Claimant was also to have a NCS/EMG to rule out right lumbar radiculitis. Claimant's pain diagram reflected pain in the right side of her low back, as well as radiating pain down the right leg. At the time of the evaluation, Claimant's gait demonstrated mild favoring of the right lower extremity. Cervical ROM was moderately limited in all planes and lumbar ROM was limited to about 30 to 40° flexion by right-sided low back pain. Extension was mildly limited and elicited pain, along with bilateral flexion.

22. Dr. Siegel's assessment was: labral tear of hip, degenerative; neck pain; low back pain with radiation, right; cervical myofascial pain syndrome; pain, right thigh. Dr. Siegel noted surgery was not recommended on Claimant's neck or back. Dr. Siegel opined Claimant was primarily having myofascial pain in her neck and back and thought some treatment (i.e. dry needling) directed specifically at this may be of some benefit.

The ALJ inferred Dr. Siegel was of the opinion that Claimant's low back required additional treatment, as evidenced by referrals made and this opinion was persuasive.

23. Claimant was evaluated by George Girardi, M.D. on May 9, 2016. Dr. Girardi noted Claimant had a history of low back pain going into the right hip, right groin and right anterior thigh. Her MRI demonstrated a right foraminal protrusion at L3-4, which correlated with her symptoms. On examination, Claimant was able to reproduce her pain with extension and had a positive Spurling's maneuver to the right side. Claimant also had discomfort with the straight leg test on the right side of the anterior thigh and groin.

24. Dr. Girardi's assessment was: neck pain, with right radicular symptoms potentially due to a C6-7 disc protrusion; low back pain, with right anterior thigh pain, with the disc protrusion at L3-4. Dr. Girardi ordered epidural steroid injections for the lumbosacral area, as well as the cervical, thoracic region.

25. Claimant was evaluated by Raymond Van den Hoven on August 17, 2016. She was complaining of pain in the right SI joint, buttock, lateral hip, and anterior thigh region, along with burning in the right anterolateral leg. On examination, Dr. Van den Hoven found right SI joint tenderness, along with piriformis and hip adductor tenderness. Hip flexion/adduction/internal rotation resulted in pain in the right anterior hip region, but no popping or catching was noted. Claimant's lumbar spine was not tender and there was no tenderness over the ASIS region. There was negative Tinel's over the lateral femoral cutaneous nerve near ASIS. FABER testing resulted in SI joint pain and anterior hip pain. Dr. Van den Hoven also noted sensitivity in the skin around anterior knee and medial shin, but normal sensation in L3 and L4 dermatomes above the knee.

26. Dr. Van den Hoven's impression was: no acute or chronic lumbar radiculopathy in the L3 through S1 myotomes, right lower extremity; no clinical evidence for meralgia parasthetica, right lower extremity; no tarsal tunnel syndrome, bilateral lower extremities; no fibular neuropathy in the knee or ankle, bilateral lower extremities; no peripheral neuropathy. Dr. Van den Hoven opined Claimant's pain appeared to be multifactorial and related to the right SI joint strain, tendinopathy of the right abductor tendons, right anterior hip labral tear, knee issues, with right thigh pain likely being somewhat related to all of these sources. The skin sensitivity was likely due to cutaneous nerve injuries, possibly post-surgical. Dr. Van den Hoven recommended consideration of right SI joint and right hip abductor tendon injections, along with resolving the right hip labral tear issues.

27. On October 18, 2016, Claimant underwent surgery for her right hip Adventist Hospital. Dr. White performed a right hip arthroscopy, with femoral osteoplasty, limited acetabular rim trimming, minor shaving chondroplasty, acetabular labral reconstruction and capsular closure.

28. Claimant returned to Dr. White on December 14, 2016. Claimant was described as doing really well with regard to the right hip, but having issues with her SI joint and knee on the ipsilateral side. Dr. White noted this was all stemming from the MVA. Dr. White thought Claimant's SI joint may come around with further PT. If she had continued pain, he recommended Jeffrey Donner, M.D. for an evaluation and possible injections.

29. In a follow-up to visit with PA-C Karns on February 9, 2017, he documented Claimant walked with a mildly antalgic gait, which she attributed to the knee. Mild tenderness was found over the greater trochanter. In PA-C Karns' assessment, Claimant was noted to be progressing well post-surgery, but still dealing with right knee and SI joint issues. If Claimant's hip bursa became more of an issue, a cortisone injection was recommended.

30. From February 13, 2017 through February 27, 2017, Claimant underwent three Hyalgan injections in the right knee. Relief was noted after those injections.

31 On February 15, 2017, Claimant was evaluated by Albert Hattem, M.D., at the request of Respondents. Claimant reported right leg pain and sensitivity, right-sided low back pain, right hip tenderness, along with upper back and neck tightness. Dr. Hattem's medical records summary stated there was a PT note from Orthopedic Center of the Rockies in which Claimant reported right rib, hip, low back, right knee and right ankle pain. On examination, Claimant's right knee revealed a well-healed surgical scar, with no swelling or skin discoloration. There was mild to decreased flexion and extension, but no crepitation noted. Claimant's right hip had well-healed surgical scars, very mild decreased range of motion and slight tenderness over the lateral aspect. Slight right paraspinous tenderness was noted in the lumbar spine. Claimant's cervical spine and bilateral shoulders had full range of motion, with mild use tenderness.

32. Dr. Hattem' diagnoses were: right bicondylar tibial plateau fracture, post-open reduction internal fixation by Dr. Baer on November 15, 2014; status post right knee hardware by Dr. Baer on August 5, 2015; post-traumatic osteoarthritis versus aggravation of pre-existing arthritis of medial femoral condyle right knee, status post right knee arthroscopic chondroplasty of the medial femoral condyle and chondroplasty of the patella performed by Dr. Trumper on January 12, 2016; right hip femoral acetabular impingement and labral tear, status post right arthroscopic femoral osteoplasty, limited acetabular trimming, chondroplasty, and acetabular labral reconstruction by Dr. White on October 8, 2016; myofascial cervical and shoulder/upper back pain; mechanical nonspecific low back pain.

33. Dr. Hattem opined Claimant would be at MMI for the right knee in a month, once she completed injections. He noted the right shoulder exam was unremarkable with full ROM and Claimant's right hip was approaching MMI. Claimant was at MMI for her neck and low back. Dr. Hattem stated Claimant's right knee, right hip and low back were causally related to the November 14, 2014 work injury. He did not believe the cervical spine complaints were related to the work injury.

34. Dr. Hattem testified as an expert in Physical Medicine and Rehabilitation at hearing. He is Level II accredited pursuant to the WCRP. He testified consistently with his report and noted on evaluation Claimant did not have objective evidence of pain in the lumbar spine, including radiculopathy. He said the MRI was negative for acute pathology and Claimant had a small disc protrusion.

35. Dr. Hattem took issue with Dr. Anderson-Oeser's conclusion that a positive Faber's test and pain to palpation were objective signs. Dr. Hattem testified there was no objective evidence to establish Claimant's SI joint was involved in this case because the SI joint injection was not diagnostic, Claimant's pain complaints were subjective, and the FABER test could have been positive for Claimant's right hip pathology. Also, Claimant's arthritic knee could have caused the antalgic gait. He also concluded there was no objective evidence to establish a permanent impairment for Claimant's low back because myofascial back pain is not entitled to a permanent impairment rating. Dr. Hattem stated Claimant was not entitled to a permanent medical impairment rating for low back/hip. Dr. Hattem testified this was consistent with Dr. Siegel's findings and noted Dr. Siegel did not rate Claimant's lumbar spine.

36. On cross-examination, Dr. Hattem admitted he did not perform provocative maneuvers when he evaluated Claimant. He agreed that in his report he concluded the low back was injured as a result of the motor vehicle accident. He admitted the mechanism of injury in this accident could cause an injury to the hip/low back and the right SI joint had required treatment.

37. On April 10, 2017, Claimant was evaluated by Dr. Siegel, who concluded she was at MMI and evaluated her permanent medical impairment. Dr. Siegel noted Claimant continued to have right low back pain, which was felt to stem from right SI joint inflammation or dysfunction. Dr. Siegel referred Claimant to Dr. Donner, but she had not been evaluated by that physician. Dr. Siegel's diagnoses were: sprain of right hip; tibial plateau fracture, right, closed, with routine healing; traumatic arthritis of the knee, right; ACL laxity, right; pain of right thigh; low back pain with radiation, right; cervical myofascial pain syndrome; and chronic myofascial pain.

38. Dr. Siegel assigned a permanent medical impairment rating to Claimant's right knee and right hip. Dr. Siegel assigned a 39% extremity impairment rating for the right knee, which included range of motion loss (11%) and Table 40 diagnoses (arthritis and ACL loss. Dr. Siegel assigned a 25% impairment to the hip, which included the right hip flexion, abduction and abduction, as well as internal and external rotation. The lower extremity impairments combined to a total of 54%, which corresponded to a 22% whole person impairment. Dr. Siegel noted Claimant's right low back pain had been felt to stem from right SI joint inflammation or dysfunction. However, Dr. Siegel did not perform range of motion testing on Claimant's lumbar spine and did not detail in her report why Claimant would or would not be entitled to a medical impairment for the lumbar spine/SI joint.

39. Dr. Siegel opined Claimant required maintenance treatment, including a follow-up with Dr. White, as well as completion of the remaining PT for her hip. Claimant was also to receive maintenance/adjustment/replacement of the knee brace, as well as viscosupplementation injections for the knee. Claimant was to follow-up with Dr. Trumper every 2-4 years to monitor functional status of right knee, as well as to continue with her prescription meds. The ALJ credited Dr. Siegel's opinion with regard to Claimant's need for maintenance treatment for her hip and knee. Claimant was authorized to follow-up with Dr. Donner possible right SI joint injection, per the prior referral. The ALJ inferred Dr. Siegel was of the opinion that treatment for the SI joint was reasonable, necessary and related to the industrial injury.

40. On June 1, 2017, Claimant was evaluated by Chris Kottonstette, PA-C. At that time, she described pain over the SI joint, including pain of the posterior sacral sulcus and along the SI joint line. Single leg standing increased her pain on the right. Shear and compressive force in the supine position increased her pain and there was a positive Lasegue's test, along with increased pain at 30° elevation during the straight leg raise. Dr. Donner was in to examine the patient, reviewed her imaging studies and treatment plan. PA-C Kottonstette noted they would set Claimant up for a right SI joint injection, as well as potential discography determine whether the two annular tears contributing to her back pain. The right SI joint injection was performed on June 28, 2017.

41. The ALJ noted there was nothing in the record to confirm Dr. Donner requested authorization for an additional procedure (injection) from Insurer. There was no follow-up with Dr. Donner after the first injection and no record in which he recommended further injections.[2]

42. Claimant underwent a DIME which was performed by Dr. Douthit on July 10, 2017. Claimant complained of pain in the right knee, low back pain and sacroiliac joint pain, which she referenced as near the sacrum. She also complained of hypersensitivity in the lower leg. Claimant stated her shoulder and hip pain had resolved. On examination, Dr. Douthit found the right knee was stable in both the Lachman and drawer maneuvers. There was no collateral ligament instability. There was limitation in range of motion of the right hip on extension, internal rotation and external rotation, along with mild atrophy of the gluteus muscle.

43. Dr. Douthit stated he was missing some of the early records and relied on Dr. Hattem's report for the records of the first year. This is not proscribed by the AMA Guides. Dr. Douthit said he did not find records that she was complaining of low back pain in the months after the accident and the first records that were noted were in December 2015. This was contradicted by evidence in the record. Claimant had no neurological findings and limited motion was from volitional guarding of the lumbar

[2] Dr. Anderson-Oeser was asked about an SI joint injection which Claimant underwent on June 28, 2017. (Deposition of Dr. Anderson-Oeser, p. 29:10-16.) There was no evidence before the Court which showed Dr. Donner saw Claimant after that time.

spine. Also, there were no medical imaging studies to indicate an injury to the SI joint occurred and the MRI finding of the lumbar spine did not demonstrate convincing evidence of an associated back injury.

44. Dr. Douthit noted the MRI showed mild labral tearing of the right hip and x-rays were equivocal/open to interpretation. He assigned 12% scheduled impairment for the mild loss of range of motion of the right hip. Dr. Douthit determined Claimant sustained a 25% impairment of the lower extremity for the right knee, which included 12% related to loss of range of motion, 10% impairment for arthritis and 5% for the possibility of attenuation of the cruciate ligament. The 25% impairment was added/combined to the 12% extremity rating for the hip which equaled 34% impairment of the lower extremity and 14% whole person impairment. Dr. Douthit did not find objective medical evidence of permanent injury of the lumbar spine, shoulder, neck or SI joint and did not assign an impairment rating to those areas of the body.

45. Claimant underwent three Hyalgan injections in the right knee in September 2017. Dr. Trumper opined Claimant would require a total knee replacement and the strategy was to defer that procedure as long as possible.[3]

46. A record review was prepared by Mark Failinger, M.D., dated December 10, 2017. After reviewing Claimant's course of treatment, Dr. Failinger opined Claimant sustained a high-energy injury to her knee which created, with reasonable medical probability, post-traumatic arthritis. This arthritis progressed with time and would not imrove. Dr. Failinger agreed with Dr. Trumper's opinion that the Claimant had a high chance that the knee had progressed to arthritis, which would, with medical probability, become recalcitrant to conservative measures, including those she had undertaken to this point. A knee replacement was the next most reasonable step, with one repetition in Claimant's lifetime. The ALJ concluded Claimant will require continuing treatment for her right knee, including possible joint replacement surgery.

47. On December 14, 2017, Claimant was evaluated by Dr. Anderson-Oeser, who performed an IME at the request of her attorney. At that time, Claimant reported an aching sensation in the right posterior shoulder girdle, along with aching pain to the lower lumbar region, including the right sacroiliac and buttocks, left buttocks and posterior thigh. She also reported burning sensation over the lateral aspect of the right lower extremity to her ankle and numbness over the right knee. The ALJ noted these latter complaints were not reported to Dr. Douthit. On her examination, Claimant's gait was mildly antalgic. Her cervical ROM was within functional limits. Claimant was tender over the lower lumbar SI joints, bilateral PSIS and bilateral sacroiliac joints, as well as right gluteal muscles. The FABER test was positive on the right.

48. Dr. Anderson-Oeser opined, based on the mechanism of Claimant's injury and the fact that she reported pain in the low back and SI region from the onset, these were causally related to the vehicle accident of November 14, 2014. Dr. Anderson-

[3] Exhibit G, p.185.

Oeser testified that a lumbar rating was appropriate for SI joint injuries. Dr. Anderson-Oeser assigned a 9% impairment of the lumbar spine due to loss of range of motion and a 5% impairment of the lumbar spine based on Table 53 II(B); for a total of 14% spinal impairment. The ALJ credited the opinion offered by Dr. Anderson-Oeser with regard to Claimant's permanent impairment in the lumbar spine/SI joint.

49. Dr. Anderson-Oeser testified as an expert in Physical Medicine and Rehabilitation, the specialty in which she is board-certified. She is Level II accredited pursuant to the WCRP. Dr. Anderson-Oeser testified that this MVA caused the front-end of the dashboard to push the femur up into the hip socket, which transferred the forces across Claimant's sacrum. This can cause an injury to the SI joint, as well as low back pain. Dr. Anderson-Oeser opined that the mechanism of injury involved in an MVA can cause injury to the SI joint and spine.[4] Dr. Anderson-Oeser concluded Claimant had a problem on the right SI joint and myofacial pain in the lower lumbar region. The ALJ credited this opinion.

50. Dr. Anderson-Oeser testified Claimant's SI joint could have constant irritation, if it was not moving appropriately. On examination, Claimant had positive Faber's sign on the right, along with tenderness to palpation. Dr. Anderson-Oeser agreed there was a subjective element to these findings. There was also spasm of the gluteal muscles, along with a loss of ROM in the lumbar spine. On the question of whether Claimant initially reported low back/hip/SI joint problems, Dr. Anderson-Oeser referenced will the pain diagram Claimant completed for Dr. O'Connell, as well as the initial report of injury. She did not recommend a DIME physician relying on the medical records summary, as Dr. Douthit did in this case. The ALJ inferred Dr. Anderson-Oeser reviewed the initial report of symptoms at as supportive of the conclusion that there was an injury to this area of body and thus, potential impairment. Also the evidence of muscle spasm and loss of ROM were objective findings. The ALJ found Dr. Anderson-Oeser's opinions to be more persuasive than Dr. Hattem.

51 Dr. Anderson-Oeser opined Claimant was at MMI for the SI joint and low back condition. She believed these conditions could be treated as part of medical maintenance.

52. Claimant suffered an injury to her low back, and right SI joint as a result of the November 14, 2014 MVA.

53. There was agreement amongst the physicians, including Dr. Douthit, Dr. Hattem and Dr. Anderson-Oeser that Claimant did not sustain a permanent medical impairment to her cervical spine or right shoulder. The dispute in the case centered on the lumbar spine and right SI joint.

54. Claimant proved she is entitled to post-MMI medical treatment, including treatment for the right knee.

[4] Deposition of Dr. Anderson-Oeser, p. 8:5-17.

55. No ATP, including Dr. Siegel, recommended further injections for Claimant's right SI joint after June 2017.

56. Claimant failed to prove she required additional treatment for her right SI joint at this juncture.

57. Evidence and inferences inconsistent with these findings were not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Claimant overcame Dr. Douthit's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence". § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 16 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. The elevated burden is evidence of the Colorado Legislature's intent to limit overcoming the DIME physician's opinion to those cases where it is more probable than not that the opinion was incorrect.

The crux of the issue represented by the case is whether Dr. Douthit's opinion that Claimant did not sustain a permanent impairment to the lumbar spine (including the SI joint) was more probably wrong. The ALJ considered the arguments proffered by Claimant and Respondents with regard to Dr. Douthit's opinion. Claimant asserted that Dr. Douthit's conclusions were erroneous because he did not review Claimant's treatment early records where she reported low back pain. Respondents' argued that the Dr. Douthit's opinions were not overcome by clear and convincing evidence, as there was a lack of objective evidence to support the conclusion there was a lumbar spine/SI joint injury. Respondents also asserted the MRI did not show evidence of an acute lumbar injury and on the occasions when Claimant had an antalgic gait, this was related to her knee injury. Respondents relied upon the testimony of Dr. Hattem to support their contentions. In the case at bar, the ALJ determined Claimant met her burden to overcome Dr. Douthit's opinion.

There are two facets to the ALJ's reasoning; first, there was a sufficient quantum of evidence introduced that Dr. Douthit's conclusions vis a' vis the lumbar spine were erroneous. As found, Dr. Douthit relied upon Dr. Hattem's summary of the early treatment records, which does not constitute an error *per se.* However, this lessened the weight of Dr. Douthit's opinion. Dr. Douthit went on to conclude that Claimant did not complain of low back pain initially, (which is contrary to the records) as part of his conclusion Claimant sustained no permanent medical impairment for lumbar spine.

As determined in Findings of Fact 3, 5-7, 11, Claimant complained of low back/hip pain in the initial aftermath of this accident. Claimant also referenced low back pain in her report of injury (Finding of Fact 5) and testified she had low back pain after the accident. There were also references to hip pain in the PT notes admitted into evidence. (Finding of Fact 7). The medical evidence in the record supported the

conclusion Claimant had low back and right sided hip/leg pain following the accident. To the extent Dr. Douthit based his opinion that Claimant did not sustain an injury to the low back/hip as a result of the MVA because there were no complaints initially, this conclusion was erroneous.

In addition, the records of Dr. Siegel (an ATP) indicate she believed that Claimant suffered an injury to her low back/SI joint, which required diagnostic testing and treatment for these areas of the body. The ALJ credited Dr. Siegel's opinions in this regard. (Finding of Fact 22.) Medical records from other physicians confirmed Claimant had symptoms and treatment involving the lumbar spine and SI joint. As found, Dr. O'Connell initially questioned causation with regard to the hip and low back complaints. (Finding of Fact 13). However, the medical evidence in the record indicated Dr. O'Connell referred Claimant for diagnostic testing (MRI) as an ATP. (Findings of Fact 13-14). Other ATPs who opined that the hip, low back and right leg complaints were related to the subject accident included Drs. Girardi, White, Van den Hoven, and Donner (ATPs). Even Respondents' IME physician, Dr. Hattem, determined Claimant's low back was injured in the subject accident. (Finding of Fact 33.)

To be sure, there was not a uniform consensus between the doctors regarding the source of Claimant's pain complaints during the course of her treatment. Several physicians identified a labral tear in Claimant's hip as the pain generator. Also, there was a delay before Claimant's treatment focused on the hip and lumbar spine. On balance, the ALJ was persuaded that based upon the evidence, including the physicians' opinions, the MVA caused an injury to Claimant's lumbar spine and SI joint which required treatment. (Finding of Fact 52).

Second, the ALJ credited Dr. Anderson-Oeser's opinion that Claimant's low back and SI joint were causally related to the subject accident and Claimant sustained a permanent medical impairment to that area of her body. At the time of her evaluation, Dr. Anderson-Oeser had reviewed Dr. Hattem's report, as well as Dr. Douthit's. Dr. Anderson-Oeser's opinion on causation was supported by Dr. Raschbacher, as well as by Respondents' expert, Dr. Hattem who in his initial report concluded the hip and low back were related. Dr. Siegel, who was an ATP, also concluded Claimant's SI joint pain was related to the subject accident and referred Claimant to Dr. Donner for an evaluation and treatment. (Finding of Fact 34). All of these physicians concluded Claimant had an SI joint diagnosis which supported the ALJ's conclusion that Claimant was entitled to a rating for the low back/SI joint under the AMA Guides. Dr. Anderson Oeser testified, which provided a rationale and support for the conclusion Claimant suffered a permanent medical impairment to the lumbar spine and the basis for rating. This was the most complete explanation that opinion of all the opinions within the record. The ALJ credited Dr. Anderson Oeser's opinion that Claimant was entitled to a Table 53II(B) impairment under the AMA Guides and concluded Claimant's total impairment was 14% whole person. (Finding of Fact 48).

Therefore, after considering the totality of the medical evidence, the ALJ concluded Claimant sustained a permanent medical impairment to lumbar spine (including the SI joint) and was entitled to a permanent medical impairment rating. Since Dr. Douthit's conclusion that Claimant did not have lumbar impairment was based, at least in part, on the erroneous belief Claimant did not complain of symptoms, his opinion was overcome. Accordingly, Claimant is entitled to additional PPD benefits for the injury to the lumbar spine/SI joint which was injured in the subject accident.

Grover Medical Benefits

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). As found, Claimant's traumatic injury to the right knee caused post-traumatic arthritis. (Finding of Fact 46). The medical evidence revealed Claimant may require knee joint replacement for the right knee and Respondents are liable for said treatment. Claimant proved she is entitled to continuing treatment to maintain MMI for the right knee. (Findings of Fact 45, 53). In this regard, Claimant's ATP, Dr. Siegel, opined Claimant required maintenance medical treatment at the ALJ credited this opinion. (Finding of Fact 39).

Claimant offered the opinion of Dr. Anderson-Oeser to support her contention that she requires maintenance treatment for her SI joint and low back. The ALJ concluded Claimant failed to prove entitlement to those medical benefits to either maintain MMI or prevent deterioration. (Findings of Fact 54-55). As found, Dr. Siegel referred Claimant to Dr. Donner and she was evaluated by PAC Kottonstette at Dr. Donner's office on June 1, 2017. Claimant underwent one injection, but there was no evidence in the record Claimant returned to Dr. Donner after that time. Claimant failed to prove the efficacy of said injection, such that a further SI joint injection would be warranted. Based upon this failure of proof, Claimant's claim for additional medical benefits for the low back and SI joint is denied.

ORDER

It is therefore ordered:

1. Claimant met her burden to overcome the DIME physician's findings with regard to causation and medical impairment by clear and convincing evidence.

2. Respondents shall pay PPD benefits to Claimant based upon a 14% whole person impairment to lumbar spine.

3. Respondents are entitled to a credit for PPD benefits paid.

4. Claimant's recovery is subject to the combined PPD/TTD limits of $81,435.67 (§ 8-42-107.5, C.R.S.), as her medical impairment does not exceed 25%.

5. Respondents shall pay reasonable and necessary post-medical treatment, including treatment for post-traumatic arthritis in the right knee.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 17, 2018

1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury to his low back on February 13, 2018.

II. What is the Claimant's average weekly wage.

III. Whether Claimant is entitled to temporary total disability benefits from March 6, 2018, and ongoing, less any applicable offsets including unemployment benefits that Claimant has received.

IV. Whether Claimant is entitled to temporary partial disability benefits from February 14, 2018, through March 5, 2018, less any applicable offsets.

STIPULATIONS

I. The parties stipulated that Dr. Tomm Vanderhorst is the authorized treating physician.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant is a 29-year old male who worked for the Martin Marietta Materials, Inc. (Employer) as a mixer driver. He was hired on February 27, 2017, His employment with Employer was formally terminated on or about May 14, 2018. *R. Ex. H pp. 146 & J p. 151.*

2. Claimant has alleged that he injured his back on February 13, 2018, when he drove his cement mixer over a bump or transition in the road. He alleged that he flew up in his seat, while he was wearing his seatbelt, came down and his back hit the lumbar bar, he heard a pop, and felt shooting pain. Since then he has had problems bending over and also has tingling in his low back. *R. Ex. J p. 157 – 158; Tr. pp. 40 – 41.*

3. The truck that Claimant drove was known as truck 623. The driver's seat had been replaced approximately 3 ½ years before the alleged incident. The previous seat had lasted 8 years before it had to be replaced. The seat involved in this claim appeared worn from a cosmetic standpoint. Specifically, there was a section of the upholstery towards the outside bottom of the seat cushion that was torn, and a section of foam was missing from the cushion. However, upon testing for failure analysis, all mechanical and air adjustments of the seat were functioning properly. The section of missing foam did not alter the seated position

of the driver in any meaningful way and would not have decreased the performance of the seat. The missing foam is not under the seated position, but on the side of the cushion, i.e., leg/thigh bolster, and would mainly be noticeable only when entering or exiting the seat. *R. Ex. A p. 3; Tr. pp. 114 – 116.*

4. The seat is equipped with manual controls to adjust the location of the seat fore and aft, the height of the front and rear of the seat cushion, the tilt of the seat and the angle of the arm rests. The seat includes air controls to adjust the height of the seat. The seat back consists of a tubular steel frame with horizontal cross members. It is equipped with an optional triple lumbar support. There is an additional sheet metal plate welded between the lower and middle cross members to hold the three air chambers in place. There is no metal bar located in the area of the lumbar air chambers. The whole structure is covered with a thick high density molded foam cushion underneath the seat upholstery. In the lower lumbar area this foam is approximately 1.25 inches thick. R*. Ex. A p. 2; Tr. pp. 104 – 110.*

5. Claimant began complaining about the seat in his truck on or about January 31, 2018. When he talked to Nate Kaspar about it, Mr. Kaspar asked Claimant if he was writing it up. Claimant is required by federal law to conduct a Pre & Post Trip Inspection Report of his truck before and after he drives it each day. On February 1, 2018, Claimant began remarking on every Pre & Post Trip Inspection Report that he completed between that date and February 13, 2018, the alleged date of injury, that the truck needed a new seat. *R. Ex. J p. 161 - 170 & K pp. 171 – 172; Tr. pp. 31 - 33 & 76 -77.*

6. On February 6, 2018, Rudy Alvarado rather than Claimant drove truck number 623. He remarked on the pre & post trip inspection form that the yellow ABS light was on, but he made no mention of the need for a new seat. *R. Ex. J p. 165.*

7. Both Claimant and Mr. Alvarado on each of the days they drove the truck between February 1, and 13, 2018, certified that they had conducted the required pre-trip inspection and found the truck in safe mechanical condition. If they could not certify the truck to be in safe condition it would be taken out of service for repairs. The employer prioritizes the vehicles to be taken out of service based upon the trucks that have safety or operational issues first. When a truck is taken out of service for reasons such as safety, operational issues or routine maintenance the mechanics review the pre-trip/post-trip inspections in order to address items that are listed on the pre-trip inspection forms that were not safety sensitive or serious enough to have downed a truck and have it taken out of service. *R. Ex. J pp. 161 – 170; Tr. pp. 33, & 77 – 81.*

8. Claimant initially called Patrick Reeves to report his injury on February 13, 2018, after he had finished his cement pours for the day and had returned to the Quivas plant. He testified he told Mr. Reeves that the location of the accident was as he was coming off I-70 on to 6th Ave he was injured on 6th Avenue**.** *Tr. pp. 21 - 22 & 39.*

9. The next day on February 14, 2018, Claimant met with his direct supervisor Nate Kaspar to formally report his accident. Claimant testified he recalled formally

reporting his alleged accident that day but did not recall completing the incident/injury report. *See R. Ex. J pp 157-159.* The incident/injury report was not signed by Claimant, and Claimant testified that he did not recognize the handwriting in the incident/injury report as his. Mr. Kaspar testified he witnessed Mr. Kaspar filing out the incident/injury report in Claimant's own handwriting. Claimant recalled speaking to someone at The Healthbridge deciding to initially try home care and modified duty to see if he would get better. Mr. Kaspar made the notations about the decision to initially pursue home care and modified duty on the third page of the incident injury report. Claimant indicated on the report that the specific street location of the incident was on I-70 before the 6th Avenue exit. The hand written incident report indicated that:

a. Claimant was driving down I-70 toward 6th Avenue doing 50 mph when he hit a bump in the road and flew up in his seat.

b. He had a seatbelt on.

c. He came down and hit the lumbar bar and heard a pop and felt shooting pain.

d. Since the incident, he could not bend over.

e. He had tingling in his low back and tightness from his tailbone to the center on both sides. *R. Ex. J pp. 157 - 159; Tr. pp.40 - 41 & 71 – 72.*

10. As found above, Claimant was asked at the hearing whether he completed the handwritten incident/injury report. Claimant testified that he could not recognize the handwriting in the report as his. However, Claimant's personal calendar was submitted into evidence. *R. Ex. K.*[1] The ALJ finds that the handwriting contained in the calendar and incident/injury report look similar and have comparable characteristics. For example, the written number 7 on the accident/injury report, which is written numerous times, is written with a line in the middle. R. *Ex. J pp. 157-159.* Consistent with the writing in the accident report, Claimant wrote the number 7 on his calendar – in the February 22nd box - with a line in the middle. *R. Ex. K pp.172.* In addition, Mr. Kaspar credibly testified that Claimant completed the handwritten incident/injury report. Therefore, the ALJ finds that Claimant did complete the accident report and his testimony that he does not recognize his own handwriting, which provides a description of the incident occurring in a location which is different than his later accounts as to where he was driving when the incident occurred, diminishes Claimant's overall credibility.

11. Claimant contends he continues to suffer from back pain. He testified he cannot sit longer than 45 minutes at a time, stand longer than 1 hour at a time, he cannot lift over 10 pounds and he gets shocking pain down his leg which has caused him to fall at least 3 times since the date of injury. *Tr. pp. 37 - 38.*

12. Claimant rents a room in his home through Airbnb. He does the cleaning for the room including changing the sheets. He also moved a 65-inch television by

[1] A more legible copy of Claimant's calendar was submitted into evidence via a flash drive and CD and are part of the record.

himself on or about April 3, 2018, which aggravated his back pain. Even the attempt to move this large TV by himself is inconsistent with his reported limitations and presentation at hearing. *R. Ex. D p. 110; Tr. pp. 30 - 31 & 50 – 51.*

13. Despite the claim that the accident was so significant that he is still suffering symptoms 9 months after the accident, he does not know where the accident occurred. But, Claimant has reported at least 3 different possible locations where he said it occurred. *Tr. pp. 53 – 58.*

14. On February 16, 2018, Claimant was seen by Dr. Vanderhorst, reporting that on February 13, 2018, at approximately 2 p.m. he was driving on the interstate in a cement truck when he hit an unexpected bump which caused him to bounce up in his seat and then back down. Claimant told Dr. Vanderhorst the airbag pillow for the lumbar support was not operational and as result his lumbar area impacted the horizontal bar ledge in the unit and he heard a pop. He had immediate soreness across his lumbar region. He reported persistent soreness since then. On examination that day there was no abrasion or ecchymosis of the thoracic, lumbar or sacral region. X-rays revealed no sign of acute injury. *R. Ex. C pp. 96 – 102; Tr. pp. 44 – 45.*

15. On February 21, 2018, Claimant and Nate Kasper drove the route where Claimant explained he experienced the injury. They were trying to locate the bump or transition in the road that he alleges caused him to fly up in the seat as he explained in his original description of the incident. They did not locate any large bumps on I-70 that would cause Claimant to fly up in his seat as mentioned in his original statement. As they transitioned onto 6th Avenue no large bumps were identified. According to Nate Kaspar, as they were driving eastbound on 6th Avenue, Claimant mentioned he would look like an ass if no bumps or dips were identified along the route. On 6th Avenue two expansion joints were clearly visible on the 6th Avenue overpass at Sheridan Boulevard. As they drove over them Claimant advised Mr. Kaspar that he thought that might have been it but believed that he must have been in the center lane, because of traffic merging on from Sheridan. Consequently, they took the exit at Federal, went west on 6th Avenue to Wadsworth, and got back onto 6th Avenue eastbound to experience the expansion joints in the center lane. They followed a dump-truck in the center lane over the transition at Sheridan. They did not notice any violent bumping or jarring of the dump-truck, nor did the transition seem extreme in the pick-up truck in which they were riding. It was stressful for Claimant to be riding with his supervisor looking for the location of his alleged accident. Claimant was running out of roadway to find a bump or transition in the road when he was riding with Mr. Kaspar because he would have had to turn off 6th Avenue onto Santa Fe in 3 more exits in order to go to Quivas when he proclaimed the location as Sheridan and 6th Avenue. *Tr. pp. 52 - 58 & 72 – 76.*

16. According to the notes of Claimant's recorded statement taken on February 22, 2018, by Casey Garrison, Claimant told him the accident took place on February 13, 2018 at 2 p.m. on Sixth Avenue around Kipling headed eastbound. He indicated he was driving a truck. The lumbar airbag was not working. There was

a bar going across the seat on the inside. He hit a bump and slammed down hurting his back when he hit the bar. *R. Ex. H p. 146.*

17. Claimant also testified that the lumbar air bag in the seat was not working and that there was a bar in the seatback which was digging into his lower lumbar back. After Claimant reported his alleged injury the shop mechanics removed this seat and found the lumbar airbag was inflating and there was no protruding bar. Statements made about the seat condition by Claimant are not supported by and are inconsistent with the physical data. *R. Ex. A pp. 1 – 5; Tr. p. 133.*

18. Tim Eakins an expert in accident reconstruction and failure analysis testified credibly and persuasively consistent with his report that:

    a. There was no lumbar bar,

    b. The lower cross member of the seat frame was located below the area of the lumber air bags,

    c. Due to the geometry of the human body and the seat it is unlikely that Claimant could strike his back on the lower bar,

    d. The seat's air system functioned properly in testing under various loaded conditions, and

    e. There were three lumbar airbag chambers which were all functioning properly and the vertical height adjustment to the air ride seat was functioning properly.

    See R. Ex. A pp. 2 – 7; Tr. pp. 130 – 132.

19. The statements made by Claimant about the location of where the accident occurred varied greatly. The difference between the Claimant's written statement and the location he pointed out to Nate Kaspar is approximately 7 miles. Tim Eakins also drove the route and found no significant bump or transition of the magnitude of which would have caused Claimant to fly out of his seat. The seat was designed with an air suspension to bounce or float with a person sitting on the seat when travelling over uneven surfaces not to eject a person. *R. Ex. A p. 6; C p. 96; H p. 146; & J pp. 157 – 158; Tr. pp. 127 - 129, & 132 – 133.*

20. Mr. Eakins analyzed the Trimble data pertaining to truck number 623. It reflected the location of the truck at approximate one-minute intervals by latitude and longitude. This demonstrated where the truck was being driven throughout the day of February 13, 2018. It also reflected the speeds and times. The statements by Claimant regarding the speed of the vehicle and that he was travelling 50 mph as he approached I-70 is not supported by the Trimble data which showed he was actually travelling at between 62 and 65 mph. *R. Ex. A pp. 25 - 56; Tr. pp. 123 - 125 & 133.*

21. Mr. Eakins obtained Google earth and Google drive photos of the entire route utilizing the latitude and longitude information from the Trimble date. He examined the photos on his computer and he did not find any significant bumps or transitions on the road surfaces between the Spec Agg and Quivas plant over

the route that Claimant traveled.[2] Mr. Eakins also indicated that the expansion joints at the Sheridan overpass were in good shape. According to Mr. Eakins, that section of 6th Avenue had been completely redone within the last 5 years. He further indicated that those 2 expansion joints are the only expansion joints that are encountered over the entire route and would be logical for Claimant to blame them as the cause in the absence of finding anything else. Mr. Eakins testified that the expansion joints at the Sheridan location were very good and were in the top 10% of the more that 70 expansion joints that he encountered on the way to DIA recently. *R. Ex. A pp. 6 - 7, & 25 – 77; Tr. pp.124 – 130.*

22. Mr. Eakins and his associate are both of similar size to the Claimant. Both attempted to deliberately get their backs to strike the lower cross member with their backs to no avail. *R. Ex. A pp. 5 – 7; Tr. pp. 119 -120 & 151 – 152.*

23. Claimant returned to see Dr. Vanderhorst on February 21, 2018, for follow-up of his left posterior thoracic strain and lumbar contusion. He returned to work that day but did not work Monday or Tuesday because of the severe cold. He reported he definitely felt improvement though. He was still having episodes of tightness and spasms at times. He walked with a normal gait. *R. Ex C p. 93 – 94.*

24. Claimant returned to see Dr. Vanderhorst on February 28, 2018, for recheck of his thoracic and lumbar strains. He continued in physical therapy and felt positive about his progress. He stated that in therapy the TENS unit felt great. He was interested in that for home use. He had reduced the use of Flexeril and Vicodin to two at bedtime only. He had two tablets left of the Flexeril and about five of the Vicodin and did not want additional of either. Claimant reported there were times when he no longer experienced pain and other times his pain would get to a level of 6/10. On examination his pain was at the level of 1/10. He had somewhat increased pain after repetitive activities such as picking up the trash at work or sitting longer than 20 minutes. He felt better if he was active and moving. He requested that he be allowed to do sweeping. He was hoping to have an increase in his work hours as he was currently working only about four hours per day. His gait was normal. He was given a prescription for a TENS unit for home use. He was allowed to do broom work and sweeping. He was reminded of the need to alternate right and left sided activities. He was to be rechecked in approximately 10 days and may well be able to start driving again as he would be off the muscle relaxants and narcotics. *R. Ex C pp. 88 – 89.*

25. Claimant did not return to see Dr. Vanderhorst after his claim was denied. He did see Dr. Lipnick 4 times between March 19, 2018 and June 21, 2018. He has not

[2] The ALJ does not find the Google satellite imagery or Google Drive Imagery to be very persuasive in establishing the condition of the roadway on the date and time of the alleged incident. For example, the vantage point of the satellite imagery looking downward would appear to be unable to detect and demonstrate with sufficient precision the extent of any vertical protrusions or indentations of the roadway which could cause a bump and significantly impact the truck and its driver. Or, if such can be done, there was no testimony explaining how. Moreover, there is no way for the ALJ to determine when each picture of the roadway Mr. Eakins obtained from Google Drive Imagery was taken. However, even though the ALJ did not find the satellite and Google drive imagery to be very persuasive, the ALJ did find the remainder of Mr. Eakins' evaluation, testing, and opinions to be highly persuasive. Moreover, the ALJ also found Mr. Eakins' testimony to be credible.

had any medical treatment for his alleged injury since June 2018. *R. Ex. pp. 118 – 127; Tr. pp. 49 – 50.*

26. The ALJ finds the testimony of Nate Kaspar to be credible and highly persuasive. Mr. Kaspar testified he witnessed Claimant completing the incident injury report on the day after the alleged incident in his own handwriting. On February 21, 2018, Claimant and Nate Kaspar drove the route where Claimant explained he had experienced the injury trying to locate the bump or transition in the road where Claimant alleged he experienced the injury. They did not locate any bump or transition on the route which would have caused Claimant to fly out of his seat.

27. The ALJ also finds the opinions of Tim Eakins to be credible and highly persuasive for a number of reasons:

    a. Mr. Eakins' testimony is consistent with the physical evidence presented which demonstrated that there was no lumbar bar located within the seat in the area of the lumbar air chambers. The seat back frame cross member was located in a position which was lower than where one would sit in the seat. There was a sheet metal plate that held the 3 lumbar air chambers in place. The entire seat back was covered with a thick high density molded foam cushion, which measured approximately 1.25 inches thick in the lower lumbar area, and the foam was covered with upholstery.

    b. The seat had only been in service for approximately 3.5 years. Upon testing the seat for failure analysis all mechanical and air adjustments of the seat were functioning properly including the lumbar air chambers. In addition, the lumbar chambers are an option for the chair and the chair can be ordered without the lumbar chambers. In other words, the chair is meant to safely operate with or without lumbar air chambers. Furthermore, efforts made by Mr. Eakins and his associate to deliberately get their backs to strike the lower cross member were unsuccessful.

    c. Personally driving and examining the road surface of the route Claimant travelled reflected the road surface was in good condition, and there were no significant bumps or transitions which would have caused Claimant to fly out of his seat. Although Mr. Eakins did not drive the route on the date of the alleged incident, the evidence does not establish that the delay in viewing the expansion joints which allegedly caused the incident changed in any way between the date of the accident and the date they were observed by Mr. Eakins.

28. The ALJ does not find the testimony of Claimant to be credible or persuasive for a number of reasons:

    a. Claimant made inconsistent statements about the location of the bump or transition on the road. He does not know where the alleged bump or transition is located and could not find a bump or transition in the roadway sufficient to have caused him to fly out of his seat when he rode with his supervisor approximately a week after the alleged injury for the purpose of showing him where the incident had allegedly occurred. It is probable if

Claimant had sustained a serious enough injury that he claimed to still be suffering the effects of 9 months later, he would have been aware of where it happened and he and his supervisor would have been able to find the area of the roadway that caused the incident.

b. Claimant contended that both the seat suspension and the lumbar air supports were not working yet upon testing for failure analysis all mechanical and air adjustments of the seat were functioning properly. Moreover, even if any of the lumbar air cushions were not inflated, the chair would have still performed safely and not subjected Claimant to injury based on a bar hitting him in the lumbar spine due to going over a bump in the road.

c. Claimant contends he cannot sit longer than 45 minutes at a time, stand longer than 1 hour at a time and that he gets shocking pains down his leg which have caused him to fall at least 3 times since the alleged date of injury. Yet, he was observed sitting for greater than 45 minutes at a time while in the courtroom for a hearing that lasted almost 4 hours; he rents out a room in his home to guests through Airbnb which he cleans the room and changes the bedding between guests; and he aggravated his alleged back pain when lifting a 65-inch television by himself on or about April 3, 2018. It is unlikely he would consider lifting the TV by himself if he were suffering from the effects of his alleged injury as he contends.

d. Claimant testified that he was unable to identify his handwriting on the accident/injury report. Most people are able to identify their own handwriting. Moreover, Mr. Kaspar credibly testified Claimant completed the accident report. In addition, the ALJ finds the handwriting used in the accident/injury report and Claimant's calendar to be similar. Therefore, Claimant's testimony that he could not identify whether the handwriting on the accident/injury report was his is not found to be credible and diminishes Claimant's credibility.

e. Claimant provided his handwritten calendar to Respondents in an attempt to establish certain events occurred before the alleged incident, such as needing a new seat before the alleged incident. Generally, calendars are kept to remind people of future events. If, however, someone thinks documentation of an event or series of events will be needed to establish something in the future, they may use a calendar to record events concurrently with the event being recorded. And, some people will use a calendar after the fact to document what they contend happened in the past, so they can use the reconstructed timeline of events to help establish something. In this case, Claimant testified that the primary purpose of his calendar was to remind him of future events. However, the entry on February 1, 2018, indicates: "Started writing seat up in inspection book." To this ALJ, this entry is written in the past tense and in a manner that indicates the calendar entry of February 1, 2018, was not created contemporaneously with the event of reporting the defective seat at work. Instead, it appears the entry was written later in an attempt to either

recreate what happened in the past and/or to use the entry as self-serving documentary evidence to support Claimant's contention that the seat was defective before the alleged incident and that he documented it in his personal calendar. Moreover, if the seat was in such disrepair that it needed to be repaired right away, why did Claimant document in his calendar that he "Started writing" it up? Usually, most people do not know what is going to happen in the future. In other words, how would he know he would have to continue writing it up, unless he had already done so.

In addition, Claimant was also asked why there were no entries on his calendar for January of 2018. Claimant's testified that he merely did not have anything to document that month.

Claimant called a rebuttal witness to refute Respondents' contention that the calendar was recently created and provided to Respondents in order to support or bolster certain contentions being made by Claimant in this claim. Claimant's counsel indicated the witness, Ms. Jennifer Marsallo, works for a law firm Claimant previously contacted to inquire about legal services involving this claim. Claimant's counsel indicated that as part of the inquiry, Claimant provided Ms. Marsallo his personal calendar which was submitted by Respondents.

Ms. Marsallo testified that she has been a paralegal for 12 years and works on personal injury and workers' compensation cases in Nebraska. She testified that Claimant did provide his calendars to her via email on May 18, 2018. There was no indication during Ms. Marsallo's direct examination that she had a personal relationship with Claimant or anyone in his family.

Respondents' counsel asked Ms. Marsallo how she knows Claimant since she works for a law firm in Nebraska. Ms. Marsallo testified that she knows Claimant because she is dating Claimant's father. The fact that the relationship between this witness and Claimant, and Claimant's father, was not brought out during direct examination, but was left to be discovered, if at all, though effective cross examination, negates the credibility and persuasiveness of the testimony provided by this witness. Moreover, even if the same calendars were provided to this witness on May 18, 2018, this fact does not establish that the information contained in the calendars was documented contemporaneously with the occurrence of each event as alleged by Claimant and was not added at a later date to create self-serving evidence.

Therefore, the ALJ does not find Claimant's testimony regarding the entries in his calendar, and when they were made, to be credible.

f. Claimant's contention that driving over an expansion joint at the Sheridan location caused his back injury - even if the seat pneumatics were not working and he drove across the expansion joint at a slight angle while changing lanes - is not plausible. In essence, Claimant is asserting that merely driving on a well maintained roadway and driving over an

expansion joint in a cement truck like the one he was driving will exert sufficient force to the driver to almost eject the driver out of the seat and cause a back injury.

29. Based on the totality of the evidence, the ALJ does not find Claimant's testimony and statements to others regarding the alleged incident to be credible.

30. The ALJ finds Claimant did not injure his low back while working and driving his cement mixer truck on February 13, 2018.

CONCLUSIONS OF LAW

Based on the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2005).

Where the medical evidence is subjected to conflicting inferences; it is the ALJ's sole prerogative to resolve the conflict. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

Compensability

Claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work- related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). The mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms.

Ultimately, the question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The Claimant, has failed to prove that he ran over a bump or transition joint anywhere on the route that he travelled on February 13, 2018, from Spec Agg to Quivas, and that he flew out of his seat while wearing his seat belt and then came down striking a lumbar bar contained within his seat.

The ALJ found Mr. Kaspar's testimony to be credible and persuasive. Mr. Kaspar credibly testified that when he and Claimant went to look for the location of the incident, they were unable to find any road conditions which could have caused the incident described by Claimant.

The ALJ also found Claimant was not credible and therefore his testimony and statements regarding the alleged incident and cause of his back problems were not found to be credible. As found, Mr. Kaspar credibly testified that Claimant completed the handwritten incident/injury report. Claimant, however, was unwilling to confirm that he completed the incident/injury report. In addition, Claimant's testimony regarding his calendar was not found to be credible. Lastly, Claimant's testimony regarding the alleged defects with the seat which allegedly caused his back injury was not found to be credible in light of the testimony provided by Mr. Eakins. The seat did demonstrate wear and was missing some foam one of the leg/thigh bolsters. However, as testified to by Mr. Eakins, and demonstrated at the hearing, the seat still functioned properly.

The ALJ found Mr. Eakins' testimony and opinions to be credible and persuasive. Claimant's seat was functioning properly both in terms of the air ride system and the lumbar air support cushions. The seat was designed to bounce or float with the person sitting on it. The air ride absorbs or negates jarring effects of driving over uneven surfaces. It was not designed to eject persons. The seat did not have a lumbar bar. The lower cross member of the seat back frame was located lower than a person's lumbar region would be located when sitting in the seat. Considering the geometry of the seat it is unlikely that Claimant's back could have contacted the lower member of the seat back frame, especially, when also considering the foam padding, the 3 lumbar air bag chambers, and the upholstery that covered the seat back. In addition, Mr. Eakins drove the route involved in this case on a regular basis since he lives in the area and also drove the route while investigating this matter. Mr. Eakins never came across any defects or conditions in the road which could cause an

incident like the one described by Claimant. Moreover, the transition or expansion joint Claimant contends caused the incident was insufficient to cause the event as described by Claimant. The persuasive and credible evidence demonstrates that Claimant did not sustain an injury in the manner he described.

The ALJ concludes Claimant failed to establish by a preponderance of the evidence that he suffered an injury attributable to driving over a transition or bump somewhere on I-70 or 6th Avenue between Spec Agg and Quivas while he was in the course and scope of his employment.

Claimant's claim for workers' compensation is, therefore, denied and dismissed and the remaining issues need not be addressed.

ORDER

Based upon the forgoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant did not suffer a compensable back injury.

2. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 21, 2018.

/s/ Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained an injury not on the schedule of impairment, and is thus entitled to a whole person permanent impairment rating.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to a general award of future medical benefits ('grover meds").

3. Determination of disfigurement sustained as a result of Claimant's work injury.

FINDINGS OF FACT

1. Claimant is employed by Respondent as a firefighter with demanding physical job requirements and duties.

2. On January 12, 2016, Claimant responded to a structure fire where there were reports of parties trapped inside. There was a lot of fire, smoke, and traffic communication on the radios at the scene.

3. Claimant went inside the structure to begin searching. During the search, Claimant fell partway through the floor inside the structure as the floor was burned through. Claimant's right leg went through the floor and was wrenched backwards. Claimant's left leg remained on the surface of the floor. Claimant was able to pull himself out of the hole. After he pulled himself out, a mayday was called on the radio and they knew there was a person unaccounted for. Claimant swapped out his oxygen bottles and went back in the structure. While back inside, Claimant tripped and hit his left knee and later when taking off his gear discovered a nail had punctured his knee through his gear.

4. Claimant was taken from the scene of the fire to Denver Health Medical Center. Claimant's back and hip area as well as the front of his leg and abdomen area were bothering him. At the ER, Claimant reported pain in his right groin area. Claimant had a puncture in his left knee and abrasions to his right knee. *See* Exhibits 9, B.

5. The next day, Claimant found it hard to walk. The interior of his right leg had large bruises and he also had large bruises on his abdomen where it caught when he went through the floor. Claimant reported that he was in a lot of pain the day following the fire.

6. On January 14, 2016, Stephen Danahey, M.D. evaluated Claimant at Concentra. Claimant reported worsening right hip/groin pain as well as continued pain in his left knee. Claimant reported pain in his right hip/groin/right buttocks at a 4/10 level worse with sleeping position. Claimant was able to squat to 45 degrees but had pain with lunges in the hip to groin area. Claimant had tenderness at the anterior hip joint, gluteus maximus, and gluteus minimus. Dr. Danahey assessed groin strain and puncture would of left knee and referred Claimant to physical therapy. *See* Exhibits 7, C.

7. On January 27, 2016, Dr. Danahey evaluated Claimant. Claimant reported 4-6/10 worsening right hip/groin pain that had started radiating into his right lower back. Claimant attributed his pain to having his right leg fall through the floor. Claimant reported that the pain was worse with internal rotation of his right hip and with walking and that it sometimes felt like the right hip wanted to pop backwards. Dr. Danahey assessed strain of right piriformis muscle and sacroiliac joint dysfunction of right side and referred Claimant to a chiropractor. *See* Exhibits 7, C.

8. On March 4, 2016, Dr. Danahey evaluated Claimant. Claimant reported 4/10 right hip/right lower back pain radiating into his right buttocks. Dr. Danahey continued to assess groin strain, strain of right piriformis muscle, and sacroiliac joint dysfunction and recommended an MRI of the right hip and the lumbar spine. *See* Exhibits 7, C.

9. On March 16, 2016, Dr. Danahey evaluated Claimant. Claimant had tenderness to palpation in his right lower back with mild restriction, tenderness to palpation in the anterior aspect of his right hip with mild flexion. Dr. Danahey reviewed the MRIs of the lower back and right hip and referred Claimant to a physical medicine and rehabilitation physician, noting a request for Dr. Aschberger. *See* Exhibits 7, C.

10. On April 18, 2016, Dr. Danahey evaluated Claimant and noted that Claimant had seen Dr. Aschberger who felt most of Claimant's symptoms were intrinsic to the right hip and not the low back. On May 9, 2016, Dr. Danahey evaluated Claimant and noted a hip injection was pending and that there was some consideration for a right hip arthroscopy. On May 27, 2016, Dr. Danahey evaluated Claimant, noted Claimant continued to be in therapy for the hip, and had continued discomfort in the anterior aspect, mostly with internal rotation. *See* Exhibits 7, C.

11. On June 15, 2016, Dr. Danahey evaluated Claimant and noted that Claimant had a right anterior CT guided hip injection and that Claimant had significant discomfort with the injection and that Claimant's anterior hip still hurt. At a June 22, 2016 evaluation with Dr. Danahey, Claimant reported he did well with the injection and was overall improved. On July 20, 2016, Claimant reported to Dr. Danahey that he was improved but still had mild discomfort over the anterior and lateral aspect of his right hip and Claimant planned to resume physical therapy. By August 24, 2016, Claimant reported to Dr. Danahey that he was having a lot of right hip discomfort and that Dr. Schwappach had put in a request for a right hip replacement and that he was going in for a second opinion. Claimant reported at the August 24, 2016 evaluation that he was in

constant pain and felt pressure constantly like the hip was going to pop out of socket. *See* Exhibits 7, C.

12. On June 22, 2016, John Schwappach, M.D. evaluated Claimant. Dr. Schwappach noted that Claimant had recently undergone a right hip cortisone injection which caused some discomfort initially but that overall claimant was much improved and did not feel the pain and discomfort previously exhibited. Dr. Schwappach reviewed a right hip MRI scan with Claimant that confirmed right hip osteoarthritis and some synovitis debris within the hip joint. Dr. Schwappach discussed various treatment options with Claimant. *See* Exhibit 10.

13. In August of 2016, Dr. Schwappach evaluated Claimant and requested a right total hip arthroplasty. Dr. Schwappach noted decreased range of motion of the right hip in abduction, flexion, and internal and external motion. Dr. Schwappach opined that Claimant had failed non-operative management including physical therapy and cortisone injections and should have a total hip arthroplasty. *See* Exhibits 10, E.

14. On November 3, 2016, Dr. Danahey evaluated Claimant. Claimant reported that both Dr. Schwappach and Dr. Melberg recommended a total right hip replacement. Claimant reported that he continued to have constant hip pain. Claimant reported that he had no back pain and no limping. Dr. Danahey noted mild motion limitations in the right hip with pain and discomfort with motion. *See* Exhibits 7, C.

15. On January 5, 2017, Dr. Schwappach evaluated Claimant. Dr. Schwappach noted that Claimant had end stage osteoarthritis of the right hip and that Claimant's arthritis was causing disabling pain and functional disability. Dr. Schwappach noted Claimant's gait included a noted limp on the right. Dr. Schwappach noted that various treatment options were discussed and that Claimant decided to proceed with right total hip replacement. *See* Exhibits 10, E.

16. Ultimately, on January 9, 2017, Claimant underwent a right total hip arthroplasty performed by Dr. Schwappach. *See* Exhibits 10, 11, E.

17. On January 23, 2017, Dr. Schwappach evaluated Claimant. Claimant reported he was having no pain in his right hip, but some muscle soreness along the outside of his right thigh and right knee. Claimant was noted to be walking with a cane. X-rays showed a well aligned, well fixed hip with no evidence of loosening, wear, or osteolysis. Dr. Schwappach noted that Claimant was pleased with the post-operative recovery thus far and that Claimant reported near resolution of his pre-operative symptoms. *See* Exhibits 8, E.

18. At physical therapy on February 16, 2017, Claimant reported a pain level of 0/10 and that he had been performing all daily activities and home construction projects without pain or difficulty. His lower extremity functional scale score was noted to be 71/80. It was noted that Claimant had achieved his work related goals of walking and sitting for prolonged periods as well as lifting 30 pounds 15 times safely. *See* Exhibit 13.

19. On February 23, 2017, Dr. Schwappach evaluated Claimant. Claimant reported that he was having no pain in the right hip but some muscle soreness along the outside of his right thigh. Claimant reported that he was back to work at the Denver Fire Department on light duty and that he was walking without assistance. Claimant reported that he was completing physical therapy twice per week with significant improvement in range of motion and that he had no new complaints. *See* Exhibit E.

20. On March 8, 2017, Dr. Danahey evaluated Claimant. Claimant reported mild anterior discomfort in his right hip but that he was otherwise doing well. Claimant was found to have full hip motion. *See* Exhibit C.

21. On April 7, 2017, Dr. Danahey evaluated Claimant. Claimant felt like his hip was doing great and improving very well and that he had only intermittent pain in the hip. Claimant reported, however, that he had recently (approximately two weeks) started noticing an intermittent interior leg, groin, and testicular pain that radiated down into the leg stopping at about the knee causing his knee to cramp. Claimant reported some right lower back pain and gluteal discomfort. See Exhibit C. Claimant's right hip was found to have near full flexion, and his exam showed full lumbar extension, full lumbar forward flexion, full squat, and full cross leg position. Dr. Danahey planned an ultrasound of the inguinal and an ultrasound of the scrotum. *See* Exhibits 7, C.

22. On April 13, 2017, Dr. Schwappach evaluated Claimant. Claimant reported that he was doing well overall but had been experiencing pain in his groin, testicular area, and occasionally in his hip joint. Claimant reported that he was doing physical therapy once per week and that he was working on range of motion. Claimant reported that physical therapy also provided him with dry needling and massage to help with scar tissue build up. Dr. Schwappach recommended physical therapy twice per week for six more weeks for improved strength and range of motion and anticipated MMI in 6-10 weeks. *See* Exhibits 10, E.

23. On May 10, 2017, Dr. Danahey evaluated Claimant. Claimant reported some right lower back and gluteal tightness resulting in a slight antalgic gait when arising from a seated position but that otherwise he was progressing well. Dr. Danahey noted that the CTs of the inguinal and scrotum were negative. Claimant reported physical therapy was twice per week and that he was exercising to build the muscle up which was helping. Claimant reported joint pain and muscle pain but no back pain. Dr. Danahey noted right hip near full to full flexion with very good strength and balance. Dr. Danahey also noted the lumbar extension was full, lumbar flexion was mildly tight, and the pelvic squat was excellent. *See* Exhibits 7, C.

24. On May 16, 2017, Claimant underwent therapy with Denver Fire Department Physical Therapy. Claimant reported that he was continuing to improve and continued to add light leg machine weight lifting without increased pain or soreness. Clamant reported that he wanted to try light tennis with his wife that day. The therapist noted that Claimant was able to deep squat pain free after treatment. *See* Exhibit 14.

25. On July 1, 2017, Dr. Schwappach evaluated Claimant. Claimant reported that he was doing well. Claimant reported that when he is sitting and goes to stand up he feels like he needs to adjust before he is able to walk. Claimant continued to report complete resolution of his preoperative symptoms. Dr. Schwappach noted that Claimant could be weight bearing as tolerated with full range of motion and that Claimant had reached MMI with respect to his right total hip replacement. *See* Exhibit E.

26. On July 12, 2017, Dr. Danahey evaluated Claimant. Dr. Danahey noted that Claimant reported mild discomfort but overall that he was doing well. Dr. Danahey noted that Dr. Schwappach had felt Claimant was at/near MMI for the right hip. Claimant reported no back pain and was found to have near full right hip motion. *See* Exhibits 7, C.

27. On August 10, 2017, Claimant underwent therapy at Denver Fire Department Physical Therapy. Claimant reported that he had been doing his own training and that his hip and lateral thigh had been getting tighter making it hard to do squatting. See Exhibit 14.

28. On August 17, 2017, Dr. Schwappach evaluated Claimant. Claimant reported that he was having pain and weakness in the medial aspect of his right thigh that radiated to his knee. Claimant reported that he was exercising three times per week and completing physical therapy two times per week as well as receiving dry needling treatments. Claimant reported he was also using a tens unit. Claimant wanted to discuss other options to improve the weakness and pain he was experiencing. Dr. Schwappach continued to opine that Claimant had reached MMI for his right total hip replacement and that Claimant could be weight bearing as tolerated with full range of motion. *See* Exhibit E.

29. On August 23, 2017, Dr. Danahey evaluated Claimant. Claimant reported his hip was doing well and that Dr. Schwappach had released him. On exam, Dr. Danahey noted the right hip had near full-to-full motion. Claimant showed Dr. Danahey jumping forward from a one-legged position on the right and believed he had difficulty with it. Claimant reported that he had done a functional test in therapy and did not do well on a portion of the exam. Dr. Danahey noted that he would review the testing and have Claimant continue in therapy at the fire department physical therapy program. *See* Exhibits 7, C.

30. On September 22, 2017, Claimant underwent therapy at Denver Fire Department Physical Therapy. Claimant reported that he was continuing to improve and that he was eager for full duty work. *See* Exhibit 14.

31. On November 8, 2017, Dr. Danahey evaluated Claimant. Claimant reported good and bad days and achiness with weather changes. Claimant reported he was going to physical therapy in the firefighter program and that he was getting some dry needling to the right anterior thigh and the lower back muscles. Claimant reported muscle tightness

around the right hip. Dr. Danahey noted mild motion limitations in the right hip but good range of motion and that Claimant was progressing well. Dr. Danahey opined that Claimant was close to being able to do the physical requirements of his job, but not quite all the way yet. Dr. Danahey noted that Claimant was nearing MMI and that he planned to do an impairment rating of the right hip in the next visit or two. Dr. Danahey gave a similar opinion on December 1, 2017 where he noted Claimant's flexion of the right hip was near full, Claimant had good squatting, good extension, and good abduction of the hip. *See* Exhibits 7, C.

32. On November 20, 2017, Dr. Danahey requested a prescription for an H-wave machine for Claimant to use for 30 minutes, twice per day, seven days a week. Dr. Danahey noted the H-wave would be for home use for a 30-day trial. Respondent changed the rental to a purchase and purchased an H-wave for Claimant's use. *See* Exhibit J.

33. On December 18, 2017, Dr. Danahey evaluated Claimant. Claimant reported some mild IT discomfort but otherwise that he was doing very well. Claimant reported that he was using the H-wave machine and would have dry needling that day. Claimant reported he was going to test the next day. Dr. Danahey opined that Claimant's right hip motion was very good and that Claimant was at his functional goal and ready for discharge. *See* Exhibit C.

34. On December 19, 2017, Claimant passed the fit for duty evaluation required by Employer in order for Claimant to return to work. The fit for duty evaluation is a physically demanding test. Claimant passed all sections of the test including ladder evolution, forcible entry, high-rise evolution, hand line advance and pull, overhaul, equipment carry, ventilation, and victim rescue. Claimant completed the evaluation in 9 minutes and 17 seconds. *See* Exhibits 16, H, I.

35. After passing the test, Claimant returned to work full duty as a firefighter.

36. On December 27, 2017, Dr. Danahey evaluated Claimant. Dr. Danahey noted that Claimant overall had done well after surgery but had a very lengthy rehabilitation and had some persistent achiness. Claimant reported no joint pain, no muscle pain, no back pain, no joint stiffness, no muscle weakness, no limping, and no night pain. Dr. Danahey found on physical examination that Claimant's right hip had mild/moderate motion limitations in all planes. Dr. Danahey opined that Claimant was at maximum medical improvement (MMI) and released Claimant to full duty work without work restrictions. On the right hip range of motion, Dr. Danahey noted a 0% impairment for flexion, a 4% impairment for extension, a 6% impairment for abduction, a 0% impairment for adduction, a 3% impairment for internal rotation, and a 5% impairment for external rotation. Dr. Danahey opined that the total impairment for Claimant's right hip was 34% lower extremity that may be converted, if applicable, to a whole person impairment of 14%. Dr. Danahey opined that no maintenance care was currently indicated. *See* Exhibits 7, C.

37. On January 30, 2018, Respondent filed a final admission of liability admitting to a 34% scheduled impairment of the right lower extremity. In the FAL, Respondent denied maintenance medical care. *See* Exhibits 2, F.

38. On February 22, 2018, Claimant objected to the final admission of liability. Claimant later applied for hearing.

39. On April 19, 2018, Jorge Klajnbart, D.O. reviewed Claimant's medical records and issued a medical opinion letter. Dr. Klajnbart opined that there was no full consensus as to medical maintenance treatment and agreed that medical maintenance was not reasonable or necessary other than consideration of a radiograph at the two year mark from the surgery, or in January of 2019. Dr. Klajnbart opined that it was well documented in the medical records that Claimant had complete resolution of his preoperative symptoms in the right hip and opined that Claimant appeared to have a well-fixed total hip arthroplasty. *See* Exhibit D.

40. Claimant testified at hearing. Claimant testified that after his injury it was hard to walk, he had large bruises on his interior right leg and on his abdomen where he fell through the floor. Claimant testified that after surgery, he went to physical therapy to maintain his baseline and that he continued to have pain in his groin area, hip girdle, and lower back but that dry needling helped. Claimant testified that the dry needling as well as H-wave, massage, and cupping were all done after surgery. Claimant testified that the dry needles were placed inside his leg, in his hip, on his lower back area, and on the lower right side of his abdomen all the way to his back. He testified that massage was done on his hip, back, and the front side of his surgical scar and that cupping was done to the exterior of the IT band. Claimant testified that his IT band continued to give him problems. Claimant reported that now he could not jog, play tennis, play basketball, run, or cut and that he was 85-90% improved but not 100%. Claimant testified that those activities cause pressure on his right hip. Claimant testified that he still attends physical therapy. Claimant reported that his IT and lower back affect his walking and that he tries not to sit too long because he gets tight. Claimant testified that when he passed the fit for duty test he had to make some modifications from how he used to perform certain maneuvers. Claimant testified that his right groin pain goes from the right testicle up to the right mid abdomen over to the right hip and through the back.

41. Claimant testified that he had been working out 3 times per week including using a stair stepper and doing squats and leg extensions. Claimant testified that his work with Denver Fire Department Physical Therapy helped him to continue with his full time work and physically demanding job.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See*

§ 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Scheduled versus whole person impairment

Section 8-42-107(1)(a), C.R.S., provides that when an injury results in permanent medical impairment and the “injury” is enumerated in the schedule set forth in subsection (2) of the statute, “the employee shall be limited to the medical impairment benefits as specified in subsection (2).” If the claimant sustains an injury not found on the schedule § 8-42-107(1)(b), C.R.S., provides the claimant shall “be limited to medical impairment benefits as specified in subsection (8),” or whole person medical impairment benefits. As used in these statutes the term "injury" refers to the part or parts of the body that sustained the ultimate loss, not necessarily the situs of the injury itself. Thus, the term "injury" refers to the part or parts of the body that have been functionally disabled or impaired. *Warthen v. Industrial Claim Appeals Office,* 100 P.3d 581 (Colo. App. 2004); *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366 (Colo. App. 1996). Under this test the ALJ is required to determine the situs of the functional impairment, not the situs of the initial harm, in deciding whether the loss is one listed on the schedule of disabilities. *Strauch v. PSL Swedish Healthcare System, supra.*

Section 8-42-107(2)(w), C.R.S., provides for scheduled compensation based on "loss of a leg at the hip or so near thereto as to preclude the use of an artificial limb." The claimant bears the burden of proof by a preponderance of the evidence to establish functional impairment beyond the leg at the hip and the consequent right to PPD benefits awarded under § 8-42-107(8)(c). Whether the claimant met the burden of poof presents an issue of fact for determination by the ALJ. *Delaney v. Industrial Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2001); *Maestas v. American Furniture Warehouse,* WC No. 4-662-369 (June 5, 2007).

Conversion of a scheduled injury rating into a whole person rating is a question of fact for an ALJ and is not a medical determination for the authorized treating physician. *Eacker v. True Value Hardware*, W.C. No. 4-661-379 (Feb. 15, 2007). The ALJ must determine whether the claimant has proved beyond a preponderance of the evidence that his injury resulted in functional impairment to a portion of the body not listed on the schedule. *O'Connell v. Don's Masonry*, W.C. No. 4-609-719 (ICAO Dec. 28, 2006); *Lovett v. Big Lots,* W.C. No. 4-657-285 (ICAO Nov. 16, 2007) (affirmed at Colo. App. No. 07CA2375). The term "injury," as used in § 8-42-107(1)(a)-(b), C.R.S., refers to the part or parts of the body which have been impaired or disabled, not the situs of the injury itself or the medical reason for the ultimate loss. *Warthen v. ICAO*, 100 P.3d 581 (Colo. App. 2004); *Strauch*, 917 P.2d at 368. The mere fact that a claimant may have physical injury to structures adjacent to the extremity does not compel a finding of functional impairment beyond the extremity. *Lovett supra.* It is not the location of the physical injury or the medical explanation for the loss that determines the issue, but rather where the impairment lies. *Id.*

In this case, claimant has failed to establish, by a preponderance of the evidence, that he sustained functional impairment to a part of the body not located on the schedule. Claimant completed, and passed, a rigorous Fit for Duty Evaluation. The evaluation consisted on 10 phases, each requiring compound movements utilizing the entire body. This test required claimant to repeatedly lift heavy weights, move in multiple planes of motion, demonstrate flexibility, exhibit endurance and, most importantly, exhibit excellent functional ability. In completing the Fit for Duty Evaluation, claimant has demonstrated the ability to complete the essential functions of a firefighter. In completing the Fit for Duty Evaluation, claimant has also shown a lack of overall functional impairment, and has shown no impairment extending from the extremity into the whole person.

Additionally, Claimant's testimony failed to establish functional ability or functional loss beyond the leg at the hip. Claimant testified to feeling pressure, feeling fatigue and feeling pain during the Fit for Duty Evaluation and at other times following his surgery. Although Claimant has felt different sensations and has been afraid of certain movements, Claimant's overall function shown by medical records and employment testing is extremely high. Claimant has failed to show a loss of functional ability in the whole person. As found above, Claimant is working full duty as a firefighter. Claimant also exercises regularly. Claimant's abilities to complete physically demanding job duties and regularly exercise show that claimant has minimal functional impairment and that there is no functional impairment extending beyond his lower extremity and into his whole person.

The assessments of the treating physicians at MMI also support the conclusion that Claimant has no loss of function beyond the extremity. Both Drs. Danahey and Schwappach released claimant to full duty without any restrictions. Additionally, both treating physicians concluded that claimant had made a complete recovery and released Claimant to full duty as a firefighter, a job that is physically demanding. Releasing a firefighter to full duty shows excellent functional ability in the patient, not someone who has functional impairment beyond their extremity. Claimant has failed to establish by preponderant evidence that his injury is not on the schedule of impairments. His request to convert his impairment rating to a whole person rating is denied.

Medical Maintenance Benefits

The need for medical treatment may extend beyond the point of maximum medical improvement where claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or to prevent further deterioration of his condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995). An award for *Grover* medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999). The claimant must prove entitlement to *Grover* medical benefits by a preponderance of the evidence. *Lerner v. Wal-Mart Stores, Inc.,* 865 P.2d 915 (Colo. App. 1993). An award of *Grover* medical benefits should be general in nature. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). Even if medical maintenance benefits are awarded, Respondents retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003).

Claimant has established, by a preponderance of the evidence, an entitlement to a general award of medical maintenance benefits. Claimant's testimony is credible and persuasive that work with Denver Fire Department Physical Therapy has helped maintain his condition, that it relieves tightness from his injury, and that it prevents deterioration of his condition and allows him to continue working full duty at a physically demanding job. Additionally, medical evidence establishes that Claimant may need future x-rays to check his hip replacement. This medical care, and future benefits, will help relieve the effects of the injury and prevent further deterioration of Claimant's condition. Claimant is entitled to a general award of medical maintenance benefits for his right hip. Respondents retain the right to contest any specific treatment in the future.

Disfigurement

Due to his January 12, 2016 work injury, Claimant has visible disfigurement to the body. The disfigurement includes a scar on his right hip area from his right hip total arthroplasty. A large portion of the scar is covered by underwear, but exposed to public view is a portion of the scar measuring approximately 1" by ¼ of an inch. Claimant's testimony that the scar remains discolored is credible and consistent with the surgical records. Claimant has therefore sustained serious permanent disfigurement to areas of

the body normally exposed to public view, which entitles Claimant to additional compensation. §§ 8-42-108(1), C.R.S. Respondent shall pay Claimant $400 for the disfigurement.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant has failed to establish by a preponderance of the evidence that his injury is not on the schedule of impairment. Claimant is not entitled to a whole person impairment rating and his permanent impairment remains at 34% scheduled lower extremity.

2. Claimant has established by a preponderance of the evidence a general entitlement to future medical maintenance benefits. Respondents retain the right to dispute any specific treatments in the future.

3. Claimant sustained slight disfigurement as a result of his injury. Respondents shall pay Claimant $400.00 for the disfigurement described above.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 20, 2018

ISSUES

- Was Claimant an employee or an independent contractor when he fell from a roof on November 30, 2017?
- If Claimant was an employee, that the accident arise out of and occur within the course of his employment?
- What is Claimant's average weekly wage?
- Is Claimant entitled to TTD benefits from December 1, 2017 through February 28, 2018?
- The parties stipulated, if this claim is compensable, the treatment Claimant received from Swedish Medical Center was reasonably necessary authorized treatment.

FINDINGS OF FACT

1. Employer is a general contractor in the business of building and remodeling homes. Bryan Pruitt is the sole owner of the company.

2. On November 30, 2017, Claimant suffered multiple serious injuries when he fell from a roof at one of Employer's projects. After the accident, Claimant was transported by ambulance to the Swedish Medical Center emergency department. He was diagnosed with multiple fractures including an unstable T10 fracture. He was admitted to the intensive care unit and underwent a T8 to T12 pedicle screw rod fixation surgery to stabilize the spine on December 4, 2017. He was transferred to the Spaulding rehabilitation unit on December 14 and eventually discharged on December 21.

3. Claimant convalesced at home for approximately the next two months. Despite ongoing symptoms, he returned to work with Employer on March 1, 2018 in essentially the same capacity as before the accident.

4. Employer has been in business since 2000. Mr. Pruitt is a licensed General Contractor who performs carpentry and remodeling work. He primarily does residential projects, such as framing basements, decks, cabinets, trim work, etc. He has no permanent employees and labels everyone who works for him as an independent contractor.

5. In the summer of 2017, Claimant was working on a remodel project for Alvarado Construction. The project lasted from June through August 2017. Mr. Alvarado paid him an hourly rate and Claimant was responsible for his own taxes.

6. Claimant first met Mr. Pruitt during the project with Alvarado Construction. When the project with Alvarado Construction ended, Claimant contacted Mr. Pruitt to see if he had any work available.

7. Mr. Pruitt testified he told Claimant he was an independent contractor. Claimant denied being told he was an independent contractor.

8. Mr. Pruitt considers everyone who works for him an independent contractor and generally has everyone sign a written independent contractor agreement. He testified he gave Claimant an independent contractor agreement but Claimant never signed or returned it. No copy of any such independent contractor document was presented at the hearing — relating to Claimant or any other individual. Mr. Pruitt admitted he allowed Claimant to work without signing any documents.

9. Claimant first worked on a project for Employer on October 24, 2017. Claimant worked a few days on different residential sites from October 24, 2017 to October 28, 2017. Employer paid Claimant $20.00 per hour regardless of the tasks performed. Claimant was not guaranteed any number of hours. Mr. Pruitt and Claimant both understood Employer would withhold no taxes from his wages.

10. Mr. Pruitt typically texted Claimant with instructions regarding when and where to report to work the following day. Claimant was not instructed when to stop work. Claimant drove his personal vehicle to work, and was not reimbursed for mileage or gas. Claimant frequently used his own tools on job sites such as hand tools and an air compressor. Employer also provided some tools and equipment. For example, Claimant used a Bobcat provided by Employer to backfill a foundation and grade terrain. Claimant also used Employer's nail gun, and Employer provided a crane when putting trusses on a roof.

11. Employer frequently gave Claimant instructions on how to do his job. For instance, Mr. Pruitt directed Claimant what length to cut building material. He also instructed Claimant to supervise other workers. Mr. Pruitt assisted Claimant in installing roof trusses on a home and gave Claimant instructions on the installation of a subfloor. On one occasion, Mr. Pruitt directed Claimant to pick up a worker at Labor Ready to help Claimant in his work, at Employer's expense.

12. Prior to 2000, Claimant operated a construction business under the name "Flint Construction." At present, Claimant has no trade name or business registered with the Colorado Secretary of State. He has no business bank account and has not had one since approximately 2000.

13. Claimant has been marginally employed for many years since closing Flint Construction. He sporadically performed "odd jobs" for friends and family members. He also worked occasionally for construction companies such as Employer. Claimant did not file a tax return between 2009 and 2017 because he did not make enough money to owe taxes.

14. Claimant worked 36 hours during the period of October 24-28, 2017 and billed his time on an invoice dated November 8, 2017 from "Flint Construction." The invoice is captioned "*Service Contractor & Invoice.*" It lists Claimant's home address and an email address of flintconst@comcast.net. Claimant pulled the invoice template off the internet so he had something to give Employer. The total invoice was for $720 ($20 x 36 hours), from which Claimant subtracted "$252 for draw." The "draw" represented money Employer had advanced Claimant when he was short on funds. Mr. Pruitt initially advanced Claimant $200 on October 27, 2017 via check payable to "Tom Flint." On another occasion, Mr. Pruitt gave Claimant $52.00 in cash because Claimant had no money for food or gas money to get home. After subtracting the $252.00 advance, the balance on the invoice was $468.00.

15. Employer paid Claimant $468 on November 16, 2017 via check payable to "Tom Flint."

16. On November 30, 2017, Claimant reported to work at a job site on Ash Street, but Mr. Pruitt had enough help at that site so he directed Claimant to another job on South Sherman Street. Claimant's accident occurred at the South Sherman Street location later that night.

17. Claimant arrived at the Sherman Street job site around 10:00 or 10:30 AM on November 30. Claimant understood Employer wanted him to complete a "punch-list" on the property. Mr. Pruitt primarily wanted Claimant to finish the fireplace and redo some window reveals. Claimant also believed he needed to address a small section of the roof that was out of alignment due to an architectural error. Claimant thought the roof issue had to be remedied that day because the roofers were coming the next day.

18. Mr. Pruitt stopped by the site mid-afternoon to check Claimant's progress. Mr. Pruitt was upset because Claimant had not yet finished the fireplace. Claimant testified that the work on the fireplace was extensive and took considerable time to ensure it would pass inspection. Mr. Pruitt testified he told Claimant to go home but Claimant denies being told to leave.

19. Claimant left the job site to get something to eat after Mr. Pruitt left. He returned sometime after 4:00 PM and started working on the roof. At approximately 9:30 PM, Claimant slipped on a loose piece of OSB on the roof and fell approximately 15 feet to the ground.

20. Mr. Pruitt subsequently paid Claimant in cash for the hours he worked on November 30, 2017.

21. Employer did not provide Claimant a Form 1099 for work performed in 2017.

22. Claimant returned to work with Employer on March 1, 2018. The record documents Claimant worked 42 hours in March 2018.

23. On March 30, 2018, Employer paid Claimant $625 for work performed between March 1 and March 29. The check was payable to "Tom Flint."

24. The preponderance of evidence shows Claimant was an employee rather than an independent contractor.

25. Claimant proved his injury arose out of and occurred within the course of his employment.

26. Claimant proved he is entitled to TTD benefits from December 1, 2017 through February 28, 2018.

27. Claimant's average weekly wage is $303.31 per week, with a corresponding TTD rate of $202.21.

CONCLUSIONS OF LAW

A. Claimant was an employee rather than an independent contractor.

Section 8-40-202(2)(a) provides that "any individual who performs services for pay for another shall be deemed to be an employee . . . unless such individual is free from control and direction in the performance of the service . . . [and] is customarily engaged in an independent trade, occupation, profession, or business related to the service performed."

Once a claimant shows they performed services for pay, the burden shifts to the putative employer to show the claimant was an independent contractor. The Act creates a balancing test to overcome the statutory presumption of employment and establish independence. *Nelson v. Industrial Claim Appeals Office*, 981 P.2d 210 (Colo. App. 1998). Section 8-40-202(2)(b)(II) sets forth several factors the General Assembly considers particularly "important" in distinguishing employees from independent contractors. *Industrial Claim Appeals Office v. Softrock Geological Services Inc*., 325 P.3d 560, 565 (Colo. 2014). No single factor is dispositive and the determination must be based on the totality of evidence in any given case. *Id*.

As found, the persuasive evidence shows Claimant was Employer's employee and not an independent contractor. The ALJ does not doubt Mr. Pruitt personally considered Claimant an independent contractor. Nor does the ALJ doubt Claimant was happy to receive wages with no withholding. But the parties' mutual willingness to avoid payroll taxes and other employment-related obligations it is not dispositive of whether Claimant was, in fact, an independent contractor.

After considering the totality of circumstances, including the factors enumerated in § 8-40-202(2)(b)(II), the ALJ concludes Claimant was an employee at the time of his accident. The most significant factors in the ALJ's mind are: (1) Claimant was not "customarily engaged in an independent trade or business." Claimant's prior contracting business was defunct, with no active license, bank account, or significant jobs, for many years before his accident. He occasionally performed small "odd jobs" for friends and family, but it was not regular or substantial. (2) Employer paid Claimant an hourly rate rather than a fixed or contract rate. (3) Employer paid Claimant personally and not in the name of any business. (4) Employer never sent Claimant a 1099 or other appropriate tax

documentation consistent with being an independent contractor. (5) Employer provided some tools Claimant needed to complete his work. (6) Mr. Pruitt frequently oversaw Claimant's work and instructed him on how to complete tasks, including what length to cut material and how to install a subfloor. He also instructed Claimant to pick up a day laborer on at least one occasion. (7) Mr. Pruitt typically directed Claimant when to start work each day. (8) On the day of the accident, Claimant had reported to work at one job site, but Employer had enough help at that site and directed Claimant to the Sherman Street address where his accident occurred. (9) There is no persuasive evidence of any limitation on Employer's ability to terminate Claimant if his work was deemed unsatisfactory. (10) Mr. Pruitt claims he sent Claimant an independent contractor agreement, but did not produce it at hearing. Regardless, he admitted Claimant never signed the agreement, but was allowed to work anyway.

Although the record contains evidence from which an independent contractor relationship could be inferred, on balance, the evidence persuades the ALJ Claimant was an employee. Claimant was not "contracted" to perform any specific job or series of jobs, but was essentially hired on an open-ended basis to perform whatever tasks Employer had available. Claimant went from job to job at Employer's direction, with no prior negotiations about cost and simply the agreement he would be paid $20 per hour to work as long as it took to complete the job. That arrangement is far more akin to an employer-employee relationship than an independent contractor situation.

B. Claimant's accident arose out of and occurred within the course of his employment.

To establish a compensable claim, a claimant must prove the injury occurred while "performing service arising out of and in the course of his employment." Section 8-41-301(1)(b). The terms "arising out of" and "in the course of" are not synonymous. The "course of employment" requirement is satisfied if the injury occurred within the time and place limits of the employment relationship and during an activity that had some connection with the employee's job-related functions." *Popovich v. Irlando*, 811 P.2d 379, 383 (Colo. 1991). The term "arising out of" is narrower, and requires that an injury "has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered a part of the employee's employment contract." *Horodysyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). The claimant need not actually be performing work duties at the time of the injury, nor must the activity be a strict employment requirement or confer an express benefit on the employer. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Rather, the question is whether the activity is sufficiently "interrelated to the conditions and circumstances under which the employee generally performs the job functions that the activity may reasonably be characterized as an incident of employment." *Id*. at 210. Whether an injury arises out of and in the course of employment are questions of fact for the ALJ. *Dover Elevator Co. v. Industrial Claim Appeals Office*, 961 P.2d 1141, 1143 (Colo. App. 1998).

An employee can momentarily step outside the scope of employment by engaging in a purely personal deviation. When a personal deviation is asserted, the question is "whether the claimant's conduct constituted such a deviation from the circumstances and

conditions of the employment that the claimant stepped aside from his job and was performing an activity for his sole benefit." *Panera Bread, LLC v. Industrial Claim Appeals Office*, 141 P.3d 970, 972 (Colo. App. 2006). The deviation must be "substantial" to remove the claimant from the course and scope of employment. *Kelly v. Industrial Claim Appeals Office*, 214 P.3d 516 (Colo. App. 2009).

As found, Claimant proved the accident arose out of and occurred in the course of his employment. Although the parties offered conflicting testimony regarding whether Mr. Pruitt actually wanted Claimant to work on the roof, there is no requirement that the injurious work activity be a strict requirement of employment. The ALJ is persuaded Claimant genuinely believed the roof issue needed to be addressed before the roofers came the next day. Claimant was on the roof to further Employer's business and had no non-work-related reason to be up there. Claimant would not have been in a position to be injured but for his work. The ALJ finds a sufficient nexus between Claimant's work and his fall to satisfy the "arising out of" and "course and scope" requirements.

C. Claimant is entitled to TTD benefits from December 1, 2017 through February 28, 2018.

A claimant is entitled to TTD benefits if the injury causes a disability, the disability causes the claimant to leave work, and the claimant misses more than three regular working days. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The claimant must establish a causal connection between a work-related injury and the wage loss to obtain TTD benefits. *Id*. The term disability connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function, and (2) impairment of wage-earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Impairment of earning capacity may be evidenced by a complete inability to work, or by restrictions that impair the claimant's ability effectively and properly to perform her regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

As found, Claimant proved he left work on November 30, 2017 due to the accident, was disabled by his injuries, and suffered a wage loss commencing December 1, 2017. Although Claimant had no formal restrictions, his disability was too obvious to necessitate work restrictions. It would have been impossible for Claimant to work while he was in the hospital recovering from his injuries. Once commenced, TTD benefits continue until a terminating event occurs, which in this case was his return to work on February 28, 2018.

D. Claimant's AWW is $303.31

Section 8-42-102(2), C.R.S. provides that compensation is payable based on the employee's average weekly earnings "at the time of the injury." The statute sets forth several computational methods for workers paid on an hourly, salary, per diem basis, etc. But § 8-42-102(3) gives the ALJ wide discretion to "fairly" calculate the employee's AWW in any manner that seems most appropriate under the circumstances. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss

and diminished earning capacity because of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993).

The record contains minimal documentation from which to determine Claimant's average weekly wage. Claimant was paid $20 per hour, but his hours fluctuated greatly based on availability of work. The only pre-injury wage documentation in the record covers five days in October 2017. He worked 36 hours between October 24, 2017 and October 28, 2017, for total wages of $720. The record also documents Claimant worked 42 hours in March 2018, for a total of $840. Claimant was paid in cash for some hours, but the ALJ finds the testimony regarding cash payments too vague and unreliable to use for AWW calculation.

The ALJ concludes the most reasonable way to calculate Claimant's AWW is to average his documented earnings over a period of 36 days, resulting in an average daily wage of $43.33. (10/24/17 through 10/28/17 = 5 days + 31 days in March 2018 = 36 days. $720 + $840 = $1,560 ÷ 36 days = $43.33/day x 7 = $303.31 per week).

Applying the foregoing methodology, Claimant's AWW is $303.31 per week, with a corresponding TTD rate of $202.21.

ORDER

It is therefore ordered that:

1. Claimant's claim is compensable.

2. Insurer shall pay Claimant TTD benefits at the rate of $202.21 per week from December 1, 2017 through February 28, 2018.

3. Insurer shall pay statutory interest of eight percent (8%) per annum on all benefits not paid when due.

4. Insurer shall cover all medical treatment from authorized providers reasonably necessary to cure and relieve the effects of Claimant's compensable injury, including but not limited to charges from Swedish Medical Center.

5. All issues not decided herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

Whether the claimant has demonstrated by a preponderance of the evidence that the cervical Botox injections recommended by Dr. Brittany Matsumura are reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted work injury.

FINDINGS OF FACT

1. The claimant began his employment with the respondent in 2007 as a patrol officer. The claimant provided testimony regarding three separate work related incidents that led to injuries of his back and neck.

2. The first incident occurred on May 27, 2016. While the claimant was attempting to place a drunk individual into the back of his patrol car, he felt a twist in his back.

3. Following the May 27, 2016 incident, the claimant received medical treatment with Dr. Robert James McLaughlin. The claimant was first seen by Dr. McLaughlin on June 1, 2016. At that time, the claimant described the May 2016 incident as resulting in a pop and pain in his mid and low back. Dr. McLaughlin recommended a muscle relaxer, heat, and physical therapy.

4. The second incident occurred on November 27, 2016. The claimant testified that an individual high on methamphetamine was in walking into traffic and he had to take steps to move the individual out of the road. In doing so, the claimant was struck in the face with a full Gatorade bottle. This resulted in a lip laceration and pain in the claimant's neck and back.

5. Following the November 27, 2016 incident the current workers' compensation claim was opened. The claimant continued to treat with Dr. McLaughlin following the November 27, 2016 incident. On December 6, 2016, Dr. McLaughlin noted that the claimant suffered cervical and lumbar strains. He recommended the use of ibuprofen and chiropractic treatment.

6. During this time, the claimant sought chiropractic treatment with Dr. Ben Dorenkamp. The claimant reported to Dr. Dorenkamp that following the November 27, 2018 incident his neck and upper back were achy and stiff.

7. On February 22, 2017, Dr. McLaughlin referred claimant to Dr. Mitchell Burnbaum for electromyography (EMG) testing. On March 1, 2017, the claimant was seen by Dr. Burnbaum for the recommended EMG. Dr. Burnbaum noted that the

testing was unremarkable. However, Dr. Burnbaum recommended a magnetic resonance image (MRI) of claimant's spinal cord.

8. On March 10, 2017, an MRI of the claimant's cervical spine showed mild multilevel facet arthropathy with mild bilateral neural foraminal narrowing at the C5-C6 level. Following the MRI, Dr. McLaughlin referred the claimant to Dr. Kirk Clifford for a surgical consultation.

9. On March 29, 2017, the claimant was seen by Dr. Clifford and reported neck pain, low back pain, and headaches. Based upon the March 10, 2017 MRI results and his physical examination of the claimant, Dr. Clifford opined that the claimant had cervicalgia with mild cervical spondylosis and an L5-S1 disk displacement with persistent lumbago. Dr. Clifford recommended that the claimant continue with nonsurgical treatment such as physical therapy, yoga and core strengthening exercises. Dr. Clifford did not believe that the claimant should undergo injection therapy or surgery.

10. On April 3, 2017, the claimant was involved in a third incident in which he was chasing a suspect on foot. While attempting to jump over a bush, the claimant's foot got caught and he fell. He continued his pursuit of the suspect and fell a second time in some gravel. The claimant testified that following this third incident his neck and back pain increased immensely.

11. On April 12, 2017, the claimant returned to Dr. McLaughlin. At that appointment Dr. Clifford's recommendations were discussed. In addition, the claimant reported the most recent incident of April 3, 2017. Dr. McLaughlin identified further injury to the claimant's lumbar and cervical spines.

12. On May 23, 2017, a second MRI was taken of the claimant's cervical spine. This MRI showed mild neural foraminal narrowing from the C5-C6 level though the C7-T1 level. The radiologist noted in the MRI report that the MRI was unchanged from the prior March 10, 2017 MRI.

13. Subsequently, Dr. McLaughlin referred the claimant to Dr. Brittany Matsumura. The claimant was first seen by Dr. Matsumura on July 25, 2017. At that time, the claimant described his cervical pain as burning with occasional radiation. Dr. Matsumura recommended the claimant see Dr. Kenneth Lewis for interventional spine evaluation and treatment. Dr. Matsumura specifically noted that the claimant might benefit from cervical epidural steroid injections (ESIs) or medial branch blocks (MBBs). Dr. Matsumura also recommended a new cervical MRI.

14. On August 9, 2017, the claimant was first seen in Dr. Lewis' practice by Chelsea Olson, FNPC. The claimant reported to Ms. Olson that he had constant neck pain and headaches. Ms. Olson recommended that the claimant undergo an ESI at the C6-C7 level, with possible consideration of later MBBs from the C3 level to the C6 level.

15. Dr. Lewis administered a right sided C6-C7 ESI on September 8, 2018. When the claimant returned to Ms. Olson on October 10, 2017, he reported that the ESI did not provide him with any pain relief. At that time, Ms. Olson again recommended consideration of MBBs at the C3 through C6 levels.

16. Dr. McLaughlin also referred the claimant to Dr. Chad Prusmack with Rocky Mountain Spine Clinic. On September 12, 2017, the claimant was seen by David Whatmore, MMS/PAC with Rocky Mountain Spine Clinic. Mr. Whatmore noted that the claimant was experiencing axial neck pain and low back symptoms. With regard to the claimant's cervical symptoms, Mr. Whatmore recommended that the claimant undergo a diskogram of the cervical spine. The purpose of the diskogram would be to determine whether there were injuries to the claimant's cervical spine.

17. At the request of the respondents, on October 20, 2017 Dr. John Burris reviewed the claimant's medical records. In his report Dr. Burris opined that the claimant's symptoms do not follow the referral pattern for facet mediated pain. As a result, Dr. Burris noted that the recommended set of MMB injections were not reasonable, medically necessary, or causally related to the claimant's November 27, 2016 work injury.

18. On October 24, 2017, Dr. Burris saw the claimant for an independent medical examination (IME). In connection with the IME, Dr. Burris reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In his IME report, Dr. Burris noted that the claimant's symptoms were diffuse and involved his entire spine and extremities, but did not follow a neuroanatomical pattern. In addition, Dr. Burris noted that the exam was nonspecific with no evidence of radiculopathy. Dr. Burris diagnosed a myofascial irritation of the cervical and lumbar spines from the November 27, 2016 incident. Dr. Burris also opined that the April 3, 2017 incident further aggravated the claimant's symptoms, but that aggravation was only temporary. Dr. Burris noted that it was his opinion that the claimant reached maximum medical improvement (MMI) on December 27, 2016. In addition, Dr. Burris opined that the claimant did not require further medical treatment or work restrictions.

19. Ultimately the claimant underwent the recommended C3 to C6 MMBs. These injections were administered by Dr. Lewis on February 20, 2018. On February 22, 2018, the claimant reported no notable improvement from the MBBs. At that time, Dr. Lewis recommended a C6-C7 interlaminar cervical ESI.

20. On March 6, 2018, the claimant underwent the recommended right interlaminar C6-C7 ESI. However, the claimant again had no pain relief from the ESI.

21. On May 15, 2018, the claimant returned to Dr. Matsumura and reported neck pain and headaches. Dr. Matsumura discussed with the claimant that the injections with Dr. Lewis did not improve his pain. Dr. Matsumura diagnosed the claimant with cervical dystonia/torticollis. She specifically noted that the claimant

exhibited a chin turn to the right with right shoulder elevation. To treat the cervical dystonia, Dr. Matsumura recommended that the claimant undergo Botox injections. Dr. Matsumura also opined that the claimant's headaches were cervicogenic in nature and could be reduced by the Botox injections.

22. On May 21, 2018, Dr. Burris was asked to again review the claimant's medical records. Dr. Burris was specifically asked to opine regarding the Botox injections recommended by Dr. Matsumura. Dr. Burris opined that the recommended Botox injections are not reasonable, medically necessary, or causally related to the claimant's November 27, 2016 work injury. In support of his opinion, Dr. Burris noted what he considered to be inconsistencies in the claimant's medical exams performed by various providers. Dr. Burris also noted that without consistent findings, the recommended treatment does not meet the Colorado Medical Treatment Guidelines for Botox injections.

23. On October 2, 2018, the claimant attended an IME with Dr. Kathy McCranie. In connection with the IME, Dr. McCranie reviewed the claimant's medical records, obtained a history from the claimant, and completed a physical examination. In her IME report, Dr. McCranie opined that the three incidents the claimant experienced caused strains to his cervical, thoracic, and lumbar musculature. Dr. McCranie also opined that the claimant's headaches were likely cervicogenic. Dr. McCranie noted that on exam the claimant showed no evidence of cervical dystonia and that the claimant did not have torticollis. Dr. McCranie opined that the recommended Botox injections were not reasonable or necessary to treat the claimant's cervical symptoms. Dr. McCranie also opined that the claimant reached maximum medical improvement on May 21, 2018, with evidence of permanent impairment of the cervical and lumbar spines. Dr. McCranie's testimony at hearing was consistent with her written report.

24. The respondents have denied the recommended Botox injections.

25. The claimant testified that his current symptoms include back pain, neck pain, severe pain and cramping in his hands, a feeling of deadness in his legs, and severe migraines. The claimant also testified that the pain medications he takes leave him feeling "foggy" and "in a haze". He would like to undergo the recommended Botox injections so that he can get back to work.

26. The ALJ credits the medical records and the opinions of Drs. Burris and McCranie over the contrary opinion of Dr. Matsumura. The ALJ finds that the claimant does not have symptoms consistent with cervical dystonia. In addition, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the recommended Botox injections constitute reasonable medical treatment necessary to cure and relieve the claimant from the admitted work injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2016).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008).

4. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the recommended Botox injections constitute reasonable medical treatment necessary to cure and relieve the claimant from the admitted work injuries. As found, the medical records and the opinions of Drs. Burris and McCranie are credible and persuasive.

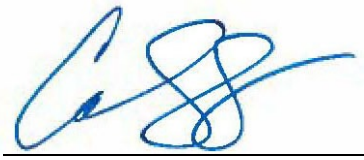
ORDER

It is therefore ordered:

1. The claimant's request for cervical Botox injections is denied and dismissed.

2. All matters not determined here are reserved for future determination.

Dated December 27, 2018.



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm. **In addition, it is recommended that you send a copy of your Petition to Review to the Grand Junction OAC via email at oac-gjt@state.co.us.**

ISSUES

Whether the claimant has demonstrated by a preponderance of the evidence that the lumbar fusion surgery recommended by Dr. Kirk Clifford is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted May 15, 2017 work injury.

FINDINGS OF FACT

1. The claimant worked for the employer as a bricklayer. The claimant testified that on May 15,2017 he was performing his job duties as a bricklayer laying large blocks. The claimant testified that while he was lifting one of these blocks overhead his "back gave out" and he felt a pop in his back. The claimant also testified that the pain caused him to collapse and fall to the ground.

Medical Treatment Prior to May 15, 2017

2. Prior to the May 15, 2017 injury involving the claimant's back, the claimant had a longstanding history of low back pain and long term use of opioids to treat that pain.

3. Medical records entered into evidence indicate that the claimant suffered a fall in the 1990s that caused him back pain. However, more recently on April 1, 2016, x-rays were taken of the claimant's back because of "chronic midline back pain". At that time, the x-rays showed advanced degenerative spondylolysis.

4. On February 23, 2017, the claimant's primary physician, Dr. Jeffrey Krebs, noted that the claimant suffered from chronic midline back discomfort with degenerative spondylolisthesis in this lumbar spine. At that time, the claimant was using the prescription drug "Norco" to treat his pain.

5. On April 7, 2017, the claimant was seen by Dr. Krebs and reported numbness and tingling down his left leg. Based upon these complaints, Dr. Krebs referred the claimant for electromyography (EMG) testing of the claimant's left leg.

6. On April 18, 2017, the claimant was seen by Dr. Michael Hehmann for the recommended left leg EMG. Dr. Hehmann noted that there were no signs of peripheral neuropathy. However, Dr. Hehmann did note that the claimant had significant L5-S1 findings with acute denervation. As a result, Dr. Hehmann recommended a magnetic resonance image (MRI) of the claimant's lumbosacral spine.

7. On May 5, 2017, an MRI was taken of the claimant's lumbar spine. At that time, the claimant was complaining of back pain and left radiculopathy. The lumbar spine MRI showed congenital canal stenosis with epidural fat space prominence and

degenerative spondylosis causing severe stenosis and moderately severe right neural foraminal stenosis at the L4-L5 level. In addition, the MRI showed entrapment of the cauda equine and moderate left neural foraminal stenosis at the L5-S1 level.

8. The claimant returned to Dr. Hehmann on May 11, 2017 to discuss the MRI results. At that time, Dr. Hehmann noted that the claimant had significant changes and severe findings in his low back. Dr. Hehmann recommended that the claimant be seen by neurosurgery or orthopedic specialists for surgical consultation. The claimant's injury at work occurred four days later.

Medical Treatment May 15, 2017 and After

9. Following the claimant's feeling of popping and pain in his back on May 15, 2017, the claimant's supervisor, Mr. Guisinger, transported him to St. Mary's Hospital emergency department for treatment. At that time, the claimant reported no radiating pain down his legs and no bladder or bowel issues. The claimant also reported that he had had similar symptoms in the past that were treated with Norco. X-rays of the claimant's lumbar spine showed no acute abnormalities. The claimant was diagnosed with acute bilateral low back pain without sciatica.

10. Following the injury, the claimant's authorized treating physician (ATP) became Dr. Kurtis Holmes. The claimant was first seen by Dr. Holmes on May 18, 2017. At that time the claimant reported numbness down both legs. Dr. Holmes diagnosed a herniate nucleus pulposus of the lumbosacral spine and ordered a magnetic resonance image (MRI) of the claimant's lumbar spine.

11. On May 22, 2017, and MRI of the claimant's lumbar spine showed severe spinal canal and right sided foraminal stenosis a the L4-L5 level relate to a broad based disc extrusion and facet hypertrophy. In addition, there was moderate to severe left sided foraminal stenosis at the L5-S1 level secondary to an eccentric disc extrusion. Finally, the MRI also showed moderate spinal canal stenosis at the L2-L3 and L3-L4 levels related to broad based disc protrusions along with moderate bilateral foraminal stenosis at these same levels.

12. Subsequently, Dr. Holmes referred the claimant to Dr. Jim Youssef with Spine Colorado for a surgical consultation. The claimant was first seen by Dr. Youssef on August 14, 2017. At that time, Dr. Youssef recorded that the claimant was experiencing back pain with bilateral lower extremity radiculopathy that was burning and aching. Dr. Youssef noted surgical treatment of the claimant's symptoms would be complicated by his long term use of opioids. Dr. Youssef recommended the claimant undergo bilateral transforaminal epidural steroid injections (TFESIs) at the L5-S1 level and pursue physical therapy. According to the August 14, 2017 medical record, the claimant was reluctant to pursue the recommended injections and physical therapy.

13. On September 14, 2017, Dr. William Faragher administered an L5-S1 interlaminar ESI.

14. On October 2, 2017, the claimant returned to Dr. Youssef and reported that he did not get any relief from the September 14, 2017 injection and developed a headache as a result of the injection. The claimant also reported that he had been attending physical therapy and felt that was helping him reduce his use of opioids.

15. On October 18, 2017, the claimant continued to complain of low back and left leg pain. At that time, Dr. Youssef recommended EMG testing of the claimant's left lower extremity.

16. On December 6, 2017, Dr. James Santos administered the recommended left lower extremity EMG. The EMG was read as normal with no evidence of lumbosacral radiculopathy, peripheral neuropathy, or compressive neuropathy. Following the EMG, Dr. Youssef recommended surgical intervention that would include interbody fusion from L3 to S1 and decompressive laminectomies.

17. At the request of the respondents, on December 21, 2017, Dr. Michael Janssen reviewed Dr. Youssef's surgical recommendation. In his report, Dr. Janssen opined that the recommended surgery was reasonable to treat the claimant's symptoms. However, Dr. Janssen also opined that the claimant's need for surgery was not related to the May 15, 2017 incident at work. On the contrary, it was Dr. Janssen's opinion that the need for surgery was related to the claimant's long standing multilevel severe degenerative disk disease. Based upon the opinions of Dr. Janssen, the respondents denied authorization for the surgery recommended by Dr. Youssef.

18. On February 15, 2018, the claimant returned to Dr. Holmes and reported that physical therapy was helping with his symptoms. The claimant requested a second opinion regarding his low back. Based upon that request, Dr. Holmes referred the claimant to Dr. Kirk Clifford for a surgical consultation.

19. On March 27, 2018, the claimant was seen at Dr. Clifford's practice by Todd Ousley, PA-C. At that time, Mr. Ousley assessed that the claimant had lumbar spondylolisthesis and stenosis with neurogenic claudication. Mr. Ousley recommended that the claimant undergo a L4-L5 and L5-S1 TFESI. Dr. Ousley also addressed the possibility of a lumbar interbody fusion from L2 to S1.

20. On April 12, 2018, the claimant was seen by Dr. Clifford. At that time, Dr. Clifford administered the recommended left L4-L5 and L5-S1 TFESI.

21. On May 8, 2018, the claimant reported to Dr. Holmes that the injection only helped for one week. At that time, Dr. Holmes deferred to Dr. Clifford for surgical recommendations.

22. On May 24, 2018, the claimant returned to Dr. Clifford and reported that the recent injection provided him with minimal relief. On that date, Dr. Clifford recommended that the claimant undergo a L2-3, L3-4, L4-5 right sided anterior lumbar fusion followed by a L2-S2 instrumentation with lumbopelvic fixation and L5-S1 transforaminal interbody fusion and a L4-5 laminectomy.

23. On June 7, 2018, Dr. Janssen reviewed the surgery recommended by Dr. Clifford. Again Dr. Janssen noted that while the recommended surgery might be reasonable to treat the claimant's symptoms, the surgery is not related to the work injury. Dr. Janssen reiterated his opinion that the claimant's need for surgery is related to the claimant's long standing preexisting condition. Dr. Janssen also opined that the work injury on May 15, 2017 did not exacerbate the claimant's preexisting condition. The respondents denied authorization for the surgery proposed by Dr. Clifford.

24. On July 31, 2018, Dr. Janssen was asked to again review the surgery recommended by Dr. Clifford. Dr. Janssen stated that the claimant's need for surgery recommended was related to his longstanding preexisting degenerative disk disease. Following this report by Dr. Janssen, the respondents denied authorization for surgery.

25. On September 4, 2018, the claimant attended an independent medical examination (IME) with Dr. Michael Rauzzino. In connection with the IME, Dr. Rauzzino reviewed the claimant's medical records, obtained a history from the claimant, and performed a physical examination. In his IME report, Dr. Rauzzino opined that the claimant's symptoms are related to longstanding and progressive chronic degenerative changes. Dr. Rauzzino also opined that the claimant's symptoms are not related to the May 15, 2017 workplace injury. In support of this opinion, Dr. Rauzzino notes that the claimant was experiencing similar symptoms prior the May 15, 2017 incident, including the need for an MRI only 10 days before the injury. With regard to the surgery recommended by Dr. Clifford, Dr. Rauzzino opined that it is a reasonable procedure to treat the claimant's back symptoms, but unrelated to the work injury.

26. The claimant's friend, Mr. Jacobson, testified at hearing. Mr. Jacobson testified that prior to the May 15, 2017 injury the claimant was able to go fishing with him. In additional they would go to football games together. Mr. Jacobson testified that since the claimant's injury they are unable to do those things together.

27. The claimant's supervisor, Mr. Guisinger testified that he had heard the claimant often complain of back pain in the year prior to the May 15, 2017 injury.

28. The claimant testified that his current symptoms include severe pain in his back down into his heel and incontinence. The claimant also testified that these are different and worsening symptoms compared to what he experienced prior to the May 15, 2017 injury at work.

29. The ALJ credits the medical records, particularly those dated prior to the claimant's work injury. The ALJ also credits the opinions for Drs. Janssen and Rauzzino and finds that the recommended surgery, while likely reasonable treat the claimant's symptoms, is not causally related to the May 15, 2017 work injury. The claimant sought medical treatment for his low back, including an MRI and EMG testing just prior to the work injury. Just days before the claimant's injury, Dr. Hehmann recommended a surgical consultation to treat the claimant's symptoms. The ALJ finds that the claimant's need for surgery is unrelated to the May 15, 2017 work injury. The

ALJ is likewise persuaded by the opinion of Dr. Janssen and finds that the claimant's work injury on May 15, 2017 did not exacerbate the claimant's preexisting condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, the claimant has failed to demonstrate by a preponderance of the evidence that the lumbar fusion surgery recommended by Dr. Clifford is necessary to cure and relieve the claimant from the effects of the work related injury. As found, the claimant's need for surgery is related to his longstanding low back condition, and not the May 15, 2017 work injury. As found, the claimant's May 15, 2017 work injury did not aggravate, accelerate, or combine with his preexisting low back condition to necessitate surgery. As found, the medical records and the opinions of Drs. Janssen and Rauzzino are credible and persuasive.

ORDER

It is therefore ordered:

1. The claimant's request for the lumbar fusion surgery recommended by Dr. Clifford is denied and dismissed.

2. All matters not determined here are reserved for future determination.

Dated December 28, 2018

ISSUES

- Did Claimant injure his right knee while working for Blanco on or about August 11, 2017?
- If Claimant proved an injury, was Claimant an employee or an independent contractor?
- What is Claimant's average weekly wage?
- Is Claimant entitled to TTD benefits from the date of injury through January 11, 2018?
- Medical benefits.

FINDINGS OF FACT

1. Blanco Remodeling ("Blanco") is a sole proprietorship that performs commercial remodeling services. Lorenzo Blanco is the sole owner of the company. Blanco has no permanent employees and utilizes "subcontractors" to perform its work.

2. In the summer of 2017, Claimant worked with Blanco Remodeling on a project at Grand River, a large apartment complex in northeast Colorado Springs. On approximately August 11, 2017, Claimant fell on a staircase while retrieving his tools from the job site, injuring his right knee.

3. The critical threshold question is whether Claimant was Blanco's employee or an independent contractor.

4. Cortland Partners ("Cortland") was the general contractor on the Grand River project. Blanco Remodeling was one of several subcontractors retained by Cortland. The workers were organized into small crews, and each crew was assigned several apartment units. The individual unit assignments were made by Cortland. Each crew was responsible for completing the entire scope of work for each of its units.

5. Claimant was the "manager" of his crew. As such, Claimant directly supervised and was responsible for everyone in his crew. Claimant typically met his crew each morning in Pueblo at approximately 6:30 AM and they drove together in Claimant's SUV to the job site in Colorado Springs. They usually worked from approximately 8:00 AM until 5:00 or 6:00 PM, with a one-hour lunch break. Based on conflicting evidence, the ALJ finds that Claimant engaged most, if not all, the men who worked on his crew.

6. Blanco paid Claimant a fixed rate of compensation based on the tasks completed in each apartment unit. For example, Blanco paid $160 for Demo, $60 for

Framing, $75 for Electrical Rough, $50 for Plumbing Rough, $100 for Drywall, and $500 for Paint. Cortland's project manager, Carlos Almonte, inspected the units each week to verify the completed item, after which Cortland would release payments to Blanco. Blanco, in turn, generally paid Claimant each week, although some payments were delayed because Cortland was late in transmitting payment to Blanco.

7. Blanco paid Claimant directly for all work completed by his crew. The funds were transferred electronically to Claimant's personal bank account by direct deposit. Claimant would then pay his crew from those funds. The documentary evidence shows payments in various amounts, ranging from $810 to $4,010. Claimant estimated net earnings of approximately $300 per week after paying his crew.

8. On at least one occasion, Blanco paid Claimant in advance for work not yet completed.

9. Cortland provided most materials used on the project. Occasionally, Claimant purchased small amounts of material from Home Depot, for which he was later reimbursed by Blanco. Claimant contacted Blanco for advance approval of any material purchases over $1,000.

10. Lorenzo Blanco was rarely on the job site with Claimant. Mr. Blanco did not supervise Claimant or direct him when or how to complete the work.

11. There is no persuasive evidence Blanco provided Claimant any training.

12. Cortland required that all workers on-site wear a T-shirt or other clothing conspicuously identifying the contractor for whom they worked. To satisfy this requirement, Claimant and his crew wore T-shirts on the job site emblazoned with the words "Blanco Remodeling." The T-shirts were provided by Blanco.

13. Claimant provided his own tools for the job. Claimant used his vehicle to tow a cargo trailer containing tools and equipment. There is no persuasive evidence Blanco provided any tools.

14. There is no persuasive evidence of any limitation on Claimant's freedom to work for other individuals, although it appears he worked exclusively with Blanco from July through mid-August 2016.

15. Claimant and Blanco completed no paperwork regarding their arrangement, and their working relationship was based on a "gentleman's agreement."

16. At hearing, Blanco presented testimony from Jorge Casana, who had worked with Blanco in a similar capacity as Claimant. Mr. Casana persuasively testified he believed he was a "subcontractor" and not Blanco's employee. Mr. Casana persuasively testified the managers had to report any accidents or injuries on the job site to Mr. Almonte, with the expectation the injured worker would ultimately file a claim with their own insurance carrier.

17. The preponderance of persuasive evidence shows Claimant was an independent contractor and not Blanco's employee.

18. Claimant failed to prove his injuries arose out of an employer-employee relationship.

CONCLUSIONS OF LAW

Section 8-40-202(2)(a) provides that "any individual who performs services for pay for another shall be deemed to be an employee . . . unless such individual is free from control and direction in the performance of the service . . . [and] is customarily engaged in an independent trade, occupation, profession, or business related to the service performed."

Once a claimant shows they performed services for pay, the burden shifts to the putative employer to show the claimant was an independent contractor. The Act creates a balancing test to overcome the statutory presumption of employment and establish independence. *Nelson v. Industrial Claim Appeals Office*, 981 P.2d 210 (Colo. App. 1998). Section 8-40-202(2)(b)(II) sets forth several factors the General Assembly considers particularly "important" in distinguishing employees from independent contractors. *Industrial Claim Appeals Office v. Softrock Geological Services Inc*., 325 P.3d 560, 565 (Colo. 2014). No single factor is dispositive and the determination must be based on the totality of evidence in any given case. *Id*.

After considering the totality of circumstances, including the factors enumerated in § 8-40-202(2)(b)(II), the ALJ concludes Claimant was an independent contractor and not Blanco's employee at the time of his accident. The most significant factors in the ALJ's mind are: (1) Blanco paid Claimant a fixed rate per task rather than on an hourly basis; (2) Blanco paid Claimant for all completed work and Claimant divided the payment among himself and his crew; (3) Claimant managed his crew with no input from Blanco, (4) Claimant provided workers for his crew without direction from Blanco; (5) Claimant set his own work schedule; (6) Blanco did not supervise Claimant or otherwise direct the performance of his work; (7) Claimant provided his own tools; (8) Blanco provided Claimant no training; and (9) Blanco and Claimant completed no employment-related documents such as an I-9 or W-4.

Although the record contains evidence from which an employer-employee relationship could be inferred, on balance, the evidence persuades the ALJ that Claimant was free from Blanco's direction and control in the performance of his work and was engaged in an independent trade performing remodel work.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: December 28, 2018

Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-086-600-001

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on December 11, 2018, in Denver, Colorado. The hearing was digitally recorded (reference:) 12/11/18 Courtroom 3, beginning at 8:39 AM, and ending at 12:00 PM).

Claimant's Exhibit 1 was not admitted into evidence due to a lack of foundation. Claimant's Exhibit 2 was admitted into evidence without objection. Claimant's Exhibit 3 was initially not admitted into evidence due to a lack of foundation and was later withdrawn by the Claimant. Respondents' Exhibit A through C were admitted into evidence without objection. Respondents' Exhibit D was admitted into evidence over the Claimant's objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Respondents, which was filed on, electronically on December 18, 2018. Counsel for the Claimant was given two working days within which to object as to form. No timely objections having been filed, the matter was deemed submitted for decision on December 21, 2018. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable injury arising out of and in the course of his employment on August 13, 2018; and, if compensable, the extent to which the Claimant is entitled to reasonably necessary and causally related medical treatment to cure and relieve the effects of his compensable injury.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant was employed by the Employer when he sustained an injury to his low back on August 13, 2018. The injury consisted of a temporary aggravation and acceleration of a pre-existing low back condition.

2. Prior to the August 2018 injury, the Claimant's medical records document pre-existing low back pain dating back to 2015 with prescriptions for cyclobenzaprine and prescription strength ibuprofen from January 2015 continuing until the injury on August 13, 2018.

The Incident

3. On August 13, 2018, the Claimant was working for the Employer folding mats. The Claimant was folding a "king" mat. A "king" mat is approximately 6 feet by 20 feet and weighs 45 kilograms, which is equal to 99.2 pounds.

4. The Claimant folded the mat, lifted it on to his left shoulder, and then felt his he alleges that the mat fell on top of him.

5. The Claimant testified that while he had prior low back pain, it was not as severe as it was on August 13, 2018.

6. The Claimant was taken by ambulance to the emergency room (ER) on August 13, 2018 and he remained in the ER overnight. He received several medications and underwent imaging. Lumbar spine x-rays, a thoracolumbar MRI (magnetic resonance imaging), and a thoracolumbar spine CT, none of which showed any acute process. John Raschbacher , M.D., testified at hearing that imaging would not necessarily show a lumbar strain (Claimant's Exhibit 2).

7. Following the ER, the Claimant was directed by Respondents to seek treatment at Concentra. The treatment with Concentra was authorized and has already been paid for by Respondents. This treatment and costs thereof are not in dispute.

8. On October 5, 2018, Trina L. Bogart, M.D. of Concentra noted that on August 13, 2018, the Claimant was single-handedly lifting a king size carpet roll when he felt a blockage in the muscles of the lower back on both sides and the back of his left leg blocked up too. The Claimant immediately fell forward onto the floor and the carper roll fell and possibly landed on his back but he could not recall details. This is consistent with the Claimant's testimony at hearing regarding the mechanism of injury (Respondents' Exhibit B, pp. 41-43).

9. Dr. Bogart noted that the Claimant was seeing a psychologist for treatment of PTSD (post-traumatic stress disorder) due to this work injury. On examination, Dr. Bogart noted that the Claimant's subjective complaints and objective findings were inconsistent. She noted that the Claimant had to crawl onto the exam table only using his upper body while his legs were extended stiff. Dr. Bogart assessed the Claimant with a lumbar strain (Respondents' Exhibit B, pp. 43-44).

10. On October 11, 2018, NP (Nurse Practitioner) Kathy Okamatsu of Concentra noted that "It was apparent that if the pt thought he was being observed, he would change his demeanor and begin crying and appearing to be in pain." The Claimant was also observed getting into a vehicle without difficulty despite his appearance in the office of having to use a walker and being unable to move his legs to climb on the examination table (Respondents' Exhibit C, pp. 69-70).

11. John Burris, M.D. of Concentra examined the Claimant on October 25, 2018. Dr. Burris noted that the Claimant was a very poor historian. The Claimant denied any prior low back symptoms. Dr. Burris noted that the Claimant's pain diagram showed a pain distribution in a nondermatomal pattern. The Claimant denied any numbness or weakness in the extremities. Dr. Burris noted that the Claimant was sitting on the examination table with no evidence of discomfort and could bend fully at the waist and hold his left leg out behind them. Dr. Burris was of the opinion that the Claimant had persistent subjective low back complaints that were out of proportion to his examination, which revealed no objective findings (Respondents' Exhibit B, pp. 38-40).

Respondents' Independent Medical Exam (IME) of John Raschbacher, M.D.

12. Dr. Raschbacher examined the Claimant for an IME on November 27, 2018. He noted that the injury occurred when the Claimant was folding a king mat, lifted it, and had sudden pain in his back, he seemed to be locked, he could not move and he fell down. The Claimant denied any prior low back pain, depression, or anxiety. The Claimant told Dr. Raschbacher "I might be becoming disabled." Dr. Raschbacher

observed the Claimant moving and gesturing with no difficulty while discussing his injury. In contrast, once he began examining the Claimant, the Claimant was unable to move, could not lie down flat, could not bend his knees, and was in great pain. Dr. Raschbacher was of the opinion that the Claimant's pain behaviors were fairly florid. Dr. Raschbacher concluded: "I do not see any clear evidence that it is likely that an injury actually occurred" (Respondents' Exhibit D).

13. According to the Claimant, he is better now and his back pain has improved since the injury occurred on August 13, 2018.

14. At hearing, Dr. Raschbacher mistakenly testified that the Claimant did not tell him he fell down. This mistake was a harmless error because Dr. Raschbacher's opinions in his IME report were written based on the Claimant saying he fell down. Dr. Raschbacher's opinion regarding the Claimant's pre-existing condition and future medical treatment is, nonetheless, credible and persuasive.

15. According to Dr. Raschbacher, the Claimant exhibited. According to Dr. Raschbacher, if the Claimant had been injured the way he described, then he would have had contusions, bruising, or swelling when he was seen at Ardas on August 15, 2018 and he did not have any evidence of an injury at that time.

16. Dr. Raschbacher further testified that if the Claimant had suffered a lumbar strain, then he did not need any further medical treatment and was back to the level of his pre-existing condition (back to baseline). This opinion is partially corroborated by the Claimant's statement to Dr. Raschbacher that his back pain was a little better now and the Claimant's testimony that he has improved.

17. The ALJ finds that the Claimant's testimony and the medical records document a pre-existing condition but that the Claimant's testimony and the medical records from the ER support a finding that the Claimant temporarily aggravated his pre-existing condition on August 13, 2018, but returned to baseline shortly thereafter.

Ultimate Findings

18. Insofar as the Claimant attempted to establish long-term effects of August 13, 2018 incident, the ALJ does **not** find the Claimant's testimony credible. His testimony is refuted by the IME opinion of Dr. Raschbacher, which the ALJ finds credible with the exception of that portion of Dr. Raschbacher's opinion that **no** injury occurred on August 13. As found, there was a temporaery acceleration and aggravation of the Claimant's underlying back condition.

19. Between conflicting testimonies and opinions, the ALJ makes a rational choice, based on substantial evidence, to substantially accept Dr. Raschbacher's

opinions, the opinions of the Concentra doctors, the Claimant's testimony in minor part, and to reject any contrary opinions.

20. The Claimant has proven by a preponderance of the evidence that he sustained a work-related aggravation of his underlying back condition on August 13, 2018 and this compensable injury arose out of the course and scope of his employment with the Employer herein, however, it amounted to a temporary acceleration and aggravation of his pre-existing low back condition.

21. After the injury, the Claimant was transported by ambulance to the ER due to his severe pain. The ALJ finds that this treatment was reasonably necessary, causally related to the August 13, 2018 aggravation of the Claimant's pre-existing condition, and of an emergent nature.

22 As of August 14, 2018, once released from the ER, the medical records and Dr. Raschbacher's testimony convincingly reveal that the Claimant had returned to his pre-existing baseline. The ALJ finds that as of August 14, 2018 the Claimant was at baseline for his pre-existing condition. Therefore, no further benefits after August 14, 2018 are causally related to the compensable August 13, 2018 work injury, and any treatment thereafter is not reasonably necessary to cure and relieve the effects of the August 13, 2018 injury.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App.

2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* § 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, insofar as the Claimant attempted to establish long-term effects of August 13, 2018 incident, the ALJ did **not** find his testimony credible. His testimony was substantially refuted by that portion of Dr. Raschbacher's which minimized the eftects of the August 13. incident. As further found, Dr. Raschbacher's opinions, insofar as not inconsistent with a temporary aggravation, were credible and persuasive.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting testimonies and opinions, the ALJ made a rational choice, based on substantial evidence, to substantially accept Dr. Raschbacher's minor part, and to reject any contrary opinions.

Compensability

c. An "injury" referred to in § 8-41-301, C.R.S., contemplates a **disabling** injury to a claimant's person, not merely a coincidental and non-disabling insult to the

body. *See Henderson v. RSI, Inc.,* 824 P.2d 91 (Colo. App. 1991). *Also see Gaudett v. Stationers Distributing Comp*any, W.C. No. 4-135-027 [Indus. Claim Appeals Office (ICAO), April 5, 1993]. A priori, the consequences of a work-related incident must require medical treatment or be disabling in order to be sufficient to constitute a compensable event. If an incident is not a significant event resulting in an injury, claimant is not entitled to benefits. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (ICAO, March 7, 2002). As found, the temporarily accelerating and aggravating event of August 13, 2018, required medical treatment in the ER and followup evaluations with Concentra. Therefore, the event of August 13, 2018, was sufficient to be compensable.

d. An injury must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment. Thereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. As found, the Claimant's termporarily accelerating/aggravating insult to his low back arose out of the course and scope of his employment for the Employer and was, therefore, compensable.

Medical

e. A medical emergency allows an injured worker the right to obtain treatment without undergoing the delay inherent in notifying the employer and awaiting approval. However, once the emergency has ended, the employee must give notice to the employer of the need for continuing care. *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's visit to the ER on August 13, 2018, was of an emergent nature. Therefore, Respondents are liable for the costs thereof.

f. An employer must provide an injured employee with reasonably necessary medical treatment to "cure and relieve the employee from the effects of the injury." § 8-42-101(1) (a), C.R.S. The employee must prove a causal relationship between the injury and the medical treatment for which the worker is seeking benefits. *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Treatments for a condition not caused by employment are not compensable. *Owens v. Indus. Claim*

Appeals Office, 49 P.3d 1187, 1189 (Colo. Ct. App. 2002). An industrial accident is the proximate cause of a claimant's disability if it is the necessary precondition or trigger of the need for medical treatment. *Subsequent Injury Fund v. State Compensation Insurance Authority,* 768 P.2d 751 (Colo. App. 1988). In order to prove that an industrial injury was the proximate cause of the need for medical treatment, an injured worker must prove a causal nexus between the need for treatment and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). It is for the ALJ, as the fact-finder, to determine whether a need for medical treatment is caused by the industrial injury, or some other intervening injury. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985). Respondents are liable for the "direct and natural consequences" of a work-related injury, including consequential injuries caused by the original compensable injury. *See Travelers Ins. Co. v. Savio*, 806 P.2d 1258 (Colo. 1985). The chain of causation, however, can be broken by the occurrence of an independent intervening injury. *See* 1 A. *Larson, Workers' Compensation Law,* section 13.00 (1997). As found, after August 14, 2018, the Claimant had returned to the baseline of his pre-existing low back condition and medical treatment thereafter was and is not causally related to the August 13, 2018 incident. Therefore, the Respondents are not liable for any medical care and treatment after August 14, 2018, with the exception of evaluations at Concentra thereafter.

Burden of Proof

g. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant sustained his burden on compensability and medical care and treatment on August 13, 2018, including the ER. The Claimant failed to sustain his burden with respect to medical care and treatment

ORDER

IT IS, THEREFORE, ORDERED THAT:

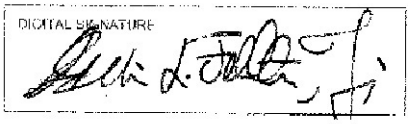
A. The Claimant sustained a temporarily accelerating and aggravating injury to his low back on August 13, 2018. He returned to the baseline of his pre-existing condition on August 14, 2018.

B. Respondents shall pay the costs of the Claimant's ER treatment and evaluations at Concentra, subject to the Division of Workers' Compensation Medical Fee Schedule. Respondents are entitled to credit for payments already made.

C. Any and all claims for medical benefits after and including August 14, 2018, are hereby denied and dismissed.

D. Any and all issues not determined herein are reserved for future decision.

DATED this 31st day of December 2018.



EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

I. Whether Claimant proved by a preponderance of the evidence she suffered a compensable occupational disease.

II. If Claimant proved she suffered a compensable occupational disease, whether Claimant proved by a preponderance of the evidence she is entitled to medical treatment that is reasonable, necessary and related to the occupational disease, including a right ankle surgery proposed by Dr. Stuart Myers.

FINDINGS OF FACT

1. Claimant is a 52 year old woman who has worked for Employer, a floral wholesaler, since 2012. Claimant works as a selector. She is responsible for selecting various materials and items including, among other things, flowers, boxes of greens, cases of vases, jugs of chemicals and preservatives, and hard goods to fulfill retail client orders. Employer does not have a computer inventory system. As such, Claimant must physically search the facility to find the items to fulfill the client orders. Employer's facility is approximately the size of a grocery store, housing five coolers, a greenhouse, shelving, a process floor, and sales desks.

2. Claimant places the items on carts to transport to the sales desks. The carts are three-tier wooden carts custom-made for Employer. They are made of 2x4s, 2x6s, oriented strand board, bolts and fasteners. All four wheels are swivel castors on metal mountings with metal axels. There is no fixed wheel pivot point on the swivel castors. Claimant testified the carts are old, with splintering wood and compromised wheel mountings. She testified the wheels on the carts are old and flat, which prevents the wheels from spinning cleanly and makes it more difficult to turn the carts. Claimant testified that, several years ago, she began to experience general aches and pains due to pushing the carts, so she took it upon herself to lubricate the cart wheels with WD-40.

3. Claimant estimated the carts weigh approximately 100 pounds when empty. Claimant testified she uses her whole body to push and steer the carts, pushing off with her legs. She testified she locks the left side of her body and puts her right foot out as far as she can for leverage to pivot. Claimant testified the route she takes to the main cooler necessitates four left turns. Employer's facility has concrete flooring which contains cracks and holes in various areas. Metal ramps are located at the entry way of each cooler, requiring almost every order to be pushed over a ramp. Claimant estimates she walks two to five miles at a brisk pace through Employer's facility each day.

4. Claimant testified she began experiencing a burning and stabbing pain in her right Achilles in the summer of 2017, which she attributes to the performance of her

work duties for Employer. Claimant testified she did not sustain any acute ankle injury outside of work in 2017, or participate in any recreational activities in 2017 that involved injury to her right lower extremity.

5. Claimant testified that in mid-summer 2017 her sales manager inquired about Claimant's limping. Claimant spoke to her supervisor, Dana Daniel, about her right ankle in approximately late July 2017 because the pain was spreading and her hip was beginning to hurt. She further testified she informed Dana that she needed to find a different way of working or a different line of work. Claimant was not offered any workers' compensation documents at the time.

6. Claimant suggested to Employer getting an operational cart that was easier to maneuver. In late July 2017, Claimant ordered a new cart and was reimbursed for the cart by Employer. Claimant testified that her ankle pain slightly decreased with use of the new cart, but did not fully resolve.

7. Claimant testified that her ankle pain did not increase through the fall of 2017, as fall is a slower time at work. She stated that throughout the fall she treated her ankle with rest and home remedies. However, in mid-December 2017, Claimant testified her ankle pain increased to the point she could no longer wear "normal" closed-back shoes due to the swelling on the back of her ankle. Claimant requested to see a workers' compensation doctor in late January 2018 and began treating with Concentra.

8. Claimant presented to Bryan Counts, M.D. on February 2, 2018 for an initial evaluation. On her intake paperwork, Claimant reported getting injured "during the course of repeated tasks" due to "[c]hronic physical work stress." Claimant reported to Dr. Counts noting pain over her right Achilles tendon in mid-August 2017 with gradual swelling. Dr. Counts noted, "Her job is fast pace, spends hours per day pushing carts with floral items on them. No concurrent activities. No h/o bone spurs or Achilles rupture in the past. Feels better with rest, worse with pushing carts." On exam, Dr. Counts noted swelling, minimal tenderness over the distal Achilles and anteromedially to the tendon insertion, and mildly reduced dorsiflexion. Thompson and Homan's test were negative. Dr. Counts diagnosed Claimant with an Achilles tendon injury. He opined that there was, "[g]reater than 50% prob this is a work related injury, overuse mechanism form (*sic*) pushing carts at work." Dr. Counts further noted on his WC-164 form that his objective findings were consistent with history and/or work-related mechanism of injury. He referred Claimant for physical therapy and to Stuart Myers, M.D. for an orthopedic specialist evaluation.

9. Claimant began physical therapy on February 2, 2018. Her intake forms note she pushes and pulls heavy carts and loaded pallets and maneuvers large carts all day with lots of walking and walking for most of the day. The physical therapist noted,

> Patient reports she started to feel her Achilles in the summer of last year. It then became worse in December. She notes that the pushing and being on her feet for prolonged periods is catching up with her…Patient reports

being unable to participate fully in one or more community or life events due to impairments associated with current injury.

10. Claimant presented to Dr. Myers on February 13, 2018. Claimant reported experiencing pain and swelling in her Achilles for several months. Dr. Myers noted, "She has been wearing a croc type shoe without a heel counter, which seems to be making her feel better. The pain is worse with application of any pressure with prolonged standing or walking…Prior to beginning this job, she had no such discomfort." On exam, Dr. Myers noted swelling, tenderness at the insertion of the Achilles and on the calcaneus. He further noted that he personally reviewed prior radiographs that revealed a small enthesophyte at the insertion of the Achilles on the calcaneus. Dr. Myers gave the following impression: insertional Achilles tendinitis and painful calcaneal enthesophyte. He recommended Claimant continue physical therapy and provided a heel lift.

11. On March 2, 2018, Claimant underwent a right ankle MRI. Jeffrey Weingardt, M.D. gave the following impression:

1. Moderate, distal Achilles tendinitis with interstitial tearing.
2. Mild Haglund's deformity of the posterior calcaneus with retrocalcaneal bursitis. Concomitant Haglund's syndrome may be present.
3. Probable scarring of the anterior talofibular and calcaneal fibular ligaments.
4. Posterior subtalar joint effusion with probable intra-articular chondral body as described.
5. Mild peroneal and tibialis posterior tenosynovitis.
6. Retrocalcaneal and retro-Achilles bursitis.

12. On March 13, 2018, Dr. Myers noted Claimant remained unable to wear any shoes with a closed heel and had significant limitations in terms of activities. He noted he personally reviewed the March 2, 2018 MRI images and MRI report. Dr. Myers gave the following impression: intra-articular loose body of the subtalar joint of uncertain significance, subtalar joint effusion, peroneal and posterior tib tenosynovitis, not likely contributory, and insertional Achilles tendinosis/tendonitis/interstitial tearing. He provided Claimant a brace and updated her physical therapy prescription, but noted that such treatment alone was not likely to return Claimant to full activity. Dr. Myers discussed two additional treatment options, a platelet-rich plasma ("PRP") injection or surgery involving debridement of Achilles, FHL transfer, removal of the intra-articular body in the subtalar joint. He recommended Claimant first proceed with a PRP injection.

13. Dr. Myers performed a PRP injection of the right Achilles tendon sheath and retrocalcaneal bursa on April 6, 2018. As of a follow-up appointment with Dr. Myers on April 10, 2016, Claimant reported that she had yet to feel any beneficial effect from the injection. Dr. Myers ordered Claimant to continue wearing a walking boot for two more weeks, then begin physical therapy. On April 11, 2018, Dr. Counts noted Claimant was having moderate post-injection pain.

14. On April 12, 2018, Jill Adams performed a Job Demands Analysis and Risk Factors Analysis at the request of Respondents. Ms. Adams noted Claimant spent 15-20% of her work time in supply management, and the remaining 80-85% of her time performing selector duties. Ms. Adams assessed the physical demand requirements of the job in the light to medium category. Lifting 1-5 pounds was frequent to constant, lifting 5-20 pounds was frequent, and lifting up to 25 pounds was occasional. Lifting between 26-50 pounds was noted as infrequent, and lifting 51-100 pounds was noted as "never." Ms. Adams determined that Claimant's total body pushing and pulling with respect to the carts was 1-25 pounds of force, frequent to constant.

15. Claimant testified that Ms. Adams conducted the job demands analysis on a slow day, and arrived at 9:00 a.m. Claimant begins her shift at 7:00 a.m. Claimant had already pulled all of the morning orders by the time Ms. Adams arrived to conduct the job demands analysis. Claimant testified that Ms. Adams only brought a notepad and cell phone with her, and that Ms. Adams did not push any carts.

16. Ms. Adams testified at hearing as an expert in vocational evaluation and assessment. Ms. Adams testified that she interviewed Claimant, observed Claimant performing her duties, and also observed other workers performing selector job duties. She testified that she looked at the carts and that she believes she pushed some of the carts as well. Ms. Adams testified that an empty cart did not weight much or require much force to push. She further testified that she typically uses a force gauge to determine the amount of force required, and believes she did so in Claimant's case, but is not certain. Ms. Adams did not bring scales with her or use the scales on site to weigh anything but, rather, estimated the weight of items by looking at them. She acknowledged that she was unaware of the total weight of the carts, empty or otherwise. Ms. Adams' report includes the Medical Treatment Guidelines risk factors for upper extremity cumulative trauma. She stated these guidelines have no relevance to Claimant's work injury, and were included as part of the standard form used.

17. On April 27, 2018, Insurer's physician advisor, Andrew Parker, M.D. opined that Claimant's Achilles condition was not work-related. Dr. Parker noted that the job requirements defined in her workplace environment and the job demands analysis did not suggest any increased risk for Achilles tendinitis, and that all of the MRI findings were chronic and did not suggest a specific workplace injury.

18. Respondents filed a Notice of Contest on May 1, 2018.

19. Dr. Myers reevaluated Claimant on May 23, 2018. He noted that because Claimant's claim had "closed," he was seeing her free of charge to follow-up on the PRP injection. Dr. Myers noted that Claimant received no benefit from the PRP injection and continued to experience persistent insertional discomfort with swelling. He opined that Claimant would benefit from surgery and encouraged Claimant to pursue surgery once she obtained health insurance.

20. On September 14, 2018 Paul Stone, M.D. performed an independent medical examination ("IME") at the request of Respondents. Dr. Stone interviewed Claimant,

performed a physical examination, and reviewed medical records and the job demands analysis. Claimant reported to Dr. Stone that her pain began in July 2017, but that she did not feel she should take any time off of work due to it being wedding season. She reported her job duties involved pushing heavy carts weighing 100-150 pounds when empty and 250-300 pounds when full of flowers. Dr. Stone noted that the job demands analysis indicated Claimant's total body pushing and pulling was up to 25 pounds, which was 10 times less than what was reported to him by Claimant. Dr. Stone agreed with Dr. Parker that Claimant's diagnoses were degenerative in nature. He concluded that the amount of pushing Claimant performed as noted in the job site analysis was not consistent with the aggravation of a pre-existing condition. Noting Claimant's condition would likely worsen over time, Dr. Stone highly recommended that Claimant pursue surgery outside of the workers' compensation system.

21. On September 21, 2018, Dr. Myers issued a report responding to multiple questions from Claimant's counsel. The report includes a thorough explanation of Claimant's condition, analysis of causes, and recommended treatment. Dr. Myers explained that Claimant's condition is comprised of both acute and chronic components. He stated that the interstitial tearing (which he noted could also be described as tendinosis) was chronic, and that the chronic process could have acute exacerbations leading to tendinitis. Dr. Myers concluded that the mild peroneal and tibialis posterior tenosynovitis and the Haglund's deformity were not caused, aggravated, or accelerated by Claimant's work duties. He did opine, however, that the retrocalcaneal bursitis with which the Haglund's deformity is associated, was exacerbated by Claimant's work activities. Dr. Myers opined that it is medically probable Claimant's diagnosis of retrocalcaneal and retro-Achilles bursitis was aggravated by her work duties, specifically the use of closed-back shoes and any activity consisting of forceful plantarflexion of the ankle, including pushing and lifting of heavy objects.

22. Dr. Myers further opined that Claimant's Achilles tendinitis with interstitial tearing was aggravated or accelerated by Claimant's work duties, stating,

> Achilles tendinitis with interstitial tearing, also referred to as Achilles tendinosis or Achilles tendinopathy, is an overuse condition. Although there are a myriad of predisposing factors for this condition, the sine qua non is repetitive microtrauma with an incomplete healing response. The Achilles tendon is the primary plantar flexor of the ankle. Any repetitive activity involving plantarflexion of the ankle will lead to increased pain and dysfunction in the presence of Achilles tendinopathy/tendinosis.
>
> * * *
>
> Symptoms can be precipitated or exacerbated by a specific injury but more frequently developed insidiously and in the absence of a specific inciting event. The ultimate cause is overuse – repetitive microtrauma to the tendon – from activities related to forceful plantarflexion of the foot. These include lifting and pushing. There is

> no specific amount of force that has been shown to cause – or not cause – mictrotrauma in this fashion. This threshold depends completely on the individual patient.

23. Dr. Myers further explained that the precise force, frequency or distance Claimant pushed the carts was not dispositive to a causation opinion stating, "There is no way of knowing how much force and how much repetition would be needed to cause repetitive microtrauma to the Achilles tendon in any given patient. There is no fixed threshold for causing microtrauma that leads to interstitial tearing and Achilles tendinopathy/tendinosis."

24. Dr. Myers continued to opine that surgery is indicated for Claimant, and that Claimant's need for surgery is related to her work duties.

25. Claimant testified the treatment she has received thus far has not improved her condition and that she wants to undergo the surgery proposed by Dr. Myers. Claimant testified she is unable to wear normal shoes and experiences pain when she walks. She stated she struggles to perform her job duties, as she now walks slower, and typically has to immobilize her ankle with the walking boot prescribed by Dr. Myers a few hours into her shift. Claimant further testified that she cannot garden or walk her dog without experiencing pain. Claimant testified that one of her hobbies is walking her dogs. Her home is surrounded by a gradual incline and a steeper incline. She testified that she typically does not take the steep incline when walking her dogs.

26. Regarding prior right lower extremity issues, Claimant testified she sustained a right ankle sprain on a hike in September 2013 that did not involve any injury to her Achilles. She stated she did not seek medical treatment for the injury, and wore a walking boot given to her by a co-worker. Claimant testified that in 2015 she had pain in her right Achilles that she attributed to wearing high-top hiking boots. The pain resolved once Claimant began wearing low-top hiking boots.

27. Claimant's testimony is found more credible and persuasive than the testimony of Ms. Adams.

28. The ALJ finds the opinion of Dr. Myers, as supported by Claimant's testimony and the medical records, more persuasive than the contrary opinions of Drs. Parker and Stone.

29. Claimant proved it is more likely than not she suffered a compensable occupational disease as a result of her work duties.

30. Claimant provided it is more likely than not she is entitled to reasonably necessary medical treatment related to the occupational disease, including the ankle surgery proposed by Dr. Myers.

31. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

The claimant was required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to

produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The test for distinguishing between an accidental injury and occupational disease is whether the injury can be traced to a particular time, place, and cause. *Campbell v. IBM Corporation,* 867 P.2d 77 (Colo. App. 1993). "Occupational disease" is defined by § 8-40-201(14), C.R.S., as:

> [A] disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

This section imposes additional proof requirements beyond those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819 (Colo. 1993). Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The ALJ concludes Claimant has established by a preponderance of the evidence the hazards of her employment aggravated and accelerated her right Achilles and ankle condition. Although Claimant suffered a right ankle sprain in 2013, and experienced some Achilles pain in 2015, no evidence was offered at hearing indicating Claimant continued to experience Achilles symptoms leading up to the onset of symptoms in summer 2017. Claimant credibly testified the Achilles pain she experienced in 2015 resolved once she changed from wearing high-top hiking boots to low-top hiking boots.

Claimant has been consistent in her reports regarding the nature of her work and onset of symptoms. Claimant credibly explained her work duties, which require pushing heavy, difficult-to-maneuver carts loaded with multiple items throughout a large facility over ramps and uneven surfaces. Maneuvering the carts requires pushing off with her legs, frequently using her right foot and leg to pivot for leverage to make multiple left turns. Dr. Counts, an authorized treating physician, credibly and persuasively opined that Claimant suffered a work-related overuse injury from pushing carts at work. Dr. Myers, also an authorized treating physician in this case, examined Claimant on multiple occasions, personally reviewed the imaging, and issued a very thorough analysis of each aspect of Claimant’s condition. Dr. Myers credibly and persuasively

explained that Claimant's primary condition, Achilles tendinitis with interstitial tearing, is an overuse condition resulting from repetitive microtrauma from activities related to forceful plantarflexion of the foot, including pushing and lifting of heavy objects. Dr. Myers credibly and persuasively opined that Claimant's work activities exacerbated and aggravated Claimant's Achilles tendinosis with interstitial tearing and retrocalcaneal bursitis. Dr. Myers further credibly and persuasively explained that the precise force, frequency and distance Claimant pushed the carts was not dispositive to a causation opinion, as the threshold for causing the type of microtrauma that results in Claimant's condition can be different for each individual.

The opinions of Drs. Parker and Stone heavily rely on the job demands analysis, which was credibly called into question by Claimant. Ms. Adams arrived to Employer's facility two hours after Claimant had begun her shift and already completed the morning orders. Ms. Adams herself acknowledged that she did not weigh any items and was uncertain if she did, in fact, use a force gauge. Claimant credibly testified Ms. Adams did not have a force gauge with her during the observation. The ALJ is persuaded the job demands analysis is not an accurate representation of the physical demands of Claimant's job.

The ALJ acknowledges that no evidence was presented indicating Claimant was required to wear closed-back shoes for her position, that the shoes Claimant wore at work were distinct from those she wore when she was not working or those generally worn in other occupations. As such, the ALJ does not consider Claimant's use of closed-backed shoes a hazard associated with Claimant's vocation. However, the ALJ is persuaded the repetitive pushing of heavy carts as required by her position is a peculiar risk and a hazard that Claimant would have been equally exposed to outside of this employment. Although Claimant participates in walking her dogs on different inclines surrounding her home, there is insufficient credible and persuasive evidence such activity is the cause of Claimant's condition. Based on the totality of the credible and persuasive evidence, Claimant has established it is more likely than not Claimant's work duties aggravated and exacerbated her right Achilles condition, causing the need for medical treatment.

Medical Treatment

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002).

Claimant has established entitlement to reasonable, necessary and related medical care by a preponderance of the evidence. Claimant has failed conservative treatment, including physical therapy, medication, a walking boot and PRP injection.

Claimant credibly testified she continues to experience pain and limitations in her activities and cannot wear normal shoes. Dr. Myers credibly and persuasively opined that Claimant requires surgery and that it is medically probable the need for surgery is related to Claimant's work duties. Even Respondents' IME, Dr. Stone, highly recommends Claimant undergo the proposed surgery, albeit outside of the workers' compensation system. As such, Respondents shall be liable for reasonable and necessary medical treatment to cure or relieve the effects of Claimant's occupational disease, including the surgery propose by Dr. Myers.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence she suffered a compensable occupational disease to her right ankle and Achilles.

2. Respondents shall pay for reasonable and necessary medical treatment related to the occupational disease, including treatment received to date by authorized providers, and the surgery proposed by Dr. Myers.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS

STATE OF COLORADO

W.C. No. 5-055-251-002

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER GRANTING SUMMARY JUDGMENT IN FAVOR OF RESPONDENTS AND DENYING SUMMARY JUDGMENT IN FAVOR OF CLAIMANT.

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for January 18, 2019, in Greeley, Colorado. On September 24, 2018, a Prehearing Conference was held before Prehearing Administrative Law judge (PALJ) Michelle S. Sisk, concerning Respondents' Motion to Strike Claimant's Notice and proposal to Select a Division Independent Medical Examiner (DIME). Citing §§ 8-42-107.2 and 8-42-107 (8) (c), C.R.S., Respondents argued that the Claimant's Notice and Proposal was untimely. The Claimant cited the holding in *Harman-Bergstedt, Inc. v. Loofbourrow,* 320 P.3d 327 (Colo. 2014) for his argument that the time limits to object to the Final Admission of

Liability (FAL) and to file a Notice and Proposal did **not** apply. Citing *Williams v. Devereux Cleo Wallace,* W.C. No. 4-620-507 [Indus. Claim Appeals Office (ICAO), August 10, 2006], which held that the timely filing of a Notice and proposal for a DIME was a jurisdictional prerequisite for a DIME, PALJ Sisk granted Respondents Motion to Strike the Claimant's Notice and Proposal in a Prehearing Order, dated October 2, 2018.

On November 9, 2018, the Claimant filed a Motion for Summary Judgment which, in essence, amounts to an appeal of PALJ Sisk's Prehearing Order.

On November 19, 2018, Respondents filed a Response to Claimant's Motion for Summary Judgment and their Cross-Motion for Summary Judgment in Respondents' favor.

ISSUES FOR SUMMARY JUDGMENT

The issues to be determined by this decision concerns whether there are genuine issues of disputed material fact concerning whether the Claimant exceeded the statutory time limits regarding the filing of a Notice and Proposal to Select a DIME which is undisputed; and, whether the holding in *Loofbourrow* dispenses with the time limits to file a Notice and Proposal to Select a DIME when a Medical-Only FAL, with a maximum medical improvement date and a denial of temporary and permanent disability benefits was filed by the Respondents.

FINDINGS OF FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

Undisputed Facts

1. Claimant suffered an admitted industrial cervical spine injury on August 25, 2017.

2. Respondents filed a "Med-Only" Final Admission of Liability (FAL) on June 22, 2018, admitting for medical benefits only; a maximum medical improvement (MMI) date of June 7, 2018; and, denying any temporary disability and permanent impairment benefits (Exhibit 1, attached to Claimant's Motion for Summary Judgment).

3. On September 5, 2018, forty-four days after the FAL, the Claimant objected to it and filed a Notice and Proposal to Select a DIME (Claimant's Exhibit 2)

4. On September 24, 2018, the parties participated in a Prehearing Conference before PALJ Michelle Sisk, on Respondents' Motion to strike Claimant's Notice and Proposal to Select a DIME. Relying up, (ICAO, September 5, 2018) and *Williams v. Devereux Cleo Wallace*, *supra,* PALJ Sisk granted Respondents' Motion to Strike, finding that the Claimant's untimely Notice and Proposal rendered the DIME procedure "jurisdictionally deficient" (Claimant's Exhibit 3).

5. The Claimant filed an Application for Hearing to appeal PALJ Sisk's Order to the OAC. Hearing is set for January 18, 2019. Also, Claimant's Motion for Summary Judgment is a *de facto* appeal of PALJ Sisk's Order.

Ultimate Finding

6. It is undisputed that there is no genuine issue of material fact. The Claimant's Motion for Summary Judgment and the Respondents' Cross Motion for Summary Judgment present a purely legal issue, *i.e.,* does the holding in *Loofbourrow* and the constellation of case law holdings make the time limits for filing a Notice and Proposal for a DIME inoperative?

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. As found, the Claimant's Motion for Summary Judgment is supported by documents. As further found, the Respondents Response and Cross Motion for Summary Judgment are supported by documents.

b. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to

judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegations of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the documentary evidence establishes that the facts in the present case are undisputed.

c. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there is a genuine issue for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, neither party contends that there are genuine disputed issues of material fact, and the ALJ finds that there are no genuine issues of disputed, material fact.

Effect of Holding in *Loofbourrow*

d. This case concerns the correct interpretation of the holding in *Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014). The undersigned ALJ was the trial judge in *Loofbourrow* and was affirmed up the line beyond the Industrial Claim Appeals Office. *Loofbourrow* involves a uniquely unusual set of circumstances. The Claimant herein asserts that the decision in *Loofbourrow* eliminates the obligation for a claimant to file a timely Notice and Proposal to begin the DIME process following the filing of a FAL. Contrary to this assertion, PALJ Sisk determined that the Claimant's interpretation of the *Loofbourrow* decision was overreaching, and the Claimant was not entitled to a DIME for failure to comply with the jurisdictional time limits to file a Notice and Proposal. There are no genuine disputed issues of material fact in these circumstances.

e. *Loofbourrow* addressed the sole issue of whether the claimant could be entitled to an award of TTD benefits without having challenged, by means of a DIME, the initial treating physician's assessment that she had reached MMI. The claimant in *Loofbourrow* had not suffered wage loss and had not originally filed a claim. As a "non-lost time" claim, no claim was reported to the Division, and no position admitting or denying the claim was ever filed. There was no FAL filed by respondents in *Loofbourrow*. The insurance carrier was entitled to pay medical expenses without admitting or denying liability, as permitted by § 8-43-101 (2), C.R.S. This only raises a legal issue. There is no genuine issue of disputed material fact.

f. In contrast to the facts in *Loofbourrow,* a FAL was filed herein. § 8-43-203(2)(b)(II) (A), C.R.S. states, "An admission of liability for final payment of compensation must include a statement that this is the final admission by the workers' compensation insurance carrier in the case, that the claimant may contest this admission if the claimant feels entitled to more compensation, to whom the claimant

should provide written objection, and notice to the claimant that the case will be automatically closed as to the issues admitted in the final admission **if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing, including the selection of an independent medical examiner** (emphasis supplied) pursuant to § 8-42-107.2 if an independent medical examination has not already been conducted." Respondents' FAL herein complies with these requirements.

g. The Division of Workers' Compensation (DOWC) "Final Admission Form" includes clear language that a claimant must file an objection and a Notice and Proposal for a DIME within thirty calendar days of the date of the FAL, if there is disagreement with the FAL. The form states, "Otherwise, your claim will be closed as to the issues admitted in the Final Admission of Liability." In the case of *Williams v. Devereux Cleo Wallace,* W.C. 4-620-507 (ICAO, August 10, 2006), the claimant filed a timely objection to the FAL, but did not file a Notice and Proposal. ICAO struck the claimant's later attempt to initiate the DIME process.

h. § 8-42-107.2(a)(II)(b) , C.R.S., reads: "(b) If any party disputes a finding or determination of the authorized treating physician, such party shall request the selection of an IME. The requesting party shall notify all other parties in writing of the request, on a form prescribed by the division by rule, and shall propose one or more acceptable candidates for the purpose of entering into negotiations for the selection of an IME. Such notice and proposal is effective upon mailing via United States mail, first-class postage paid, addressed to the division and to the last-known address of each of the other parties. **Unless such notice and proposal are given within thirty days after the date of mailing of the final admission of liability** (emphasis supplied… (2), the authorized treating physician's findings and determinations shall be binding on all parties and on the division."

i As found, Respondents filed a FAL on June 22, 2018. Claimant did not The ALJ concludes that the Claimant's objection and Notice and Proposal were **untimely.**

j. In his Summary Judgment Motion, the Claimant argues that decisions of ICAO support the conclusion that a claimant who has not received temporary benefits and has no permanent impairment is free from the jurisdictional obligations of filing an objection and a Notice and Proposal for a DIME in order to challenge a FAL and proceed with a DIME. The *Loofburrow* Court was clear that they were addressing a narrow issue. Eliminating a claimant's jurisdictional obligations was not included. There was no FAL in that case, and claimant's responsibilities in light of a FAL were not considered. The narrow issue in that case was only whether the claimant's claim for

TTD was barred by not having first proceeding through the DIME process, considering that the respondents had not filed a FAL.

k. *Gibson v. Atlantic Relocation Systems and Liberty Mutual,* W.C. No. 5-020-939-01 (ICAO, September 5, 2018) states that, "if a party wishes to challenge the authorized treating physician's MMI determination, the impairment, or both, the party must request a DIME in accordance with the procedures established in §8-42-107.2, C.R.S." ICAO included a long discussion of the facts, history and findings of *Loofbourrow* in its analysis in *Gibson.* In that matter ICAO warned against taking the language of *Loofbourrow* out of context and reading it too broadly, as claimant argues herein. The finding in *Gibson* was that a **timely** objection and request for a DIME entitled the claimant to the DIME process. The *Gibson* Panel found that a claimant placed at MMI with a zero percent impairment rating and no wage loss or lost time is entitled to the DIME process, but that claimant is bound by the jurisdictional requirements of that DIME process. There is no genuine issue of disputed material fact in this situation.

l. ICAO, in *Gibson*, specifically addressed the opinions cited in claimant's motion, including *Kazazian v. Vail Resorts*, W.C. No.4-915-969-03 (ICAO April 24, 2017). *See also Trujillo v. Elwood Staffing*, W.C. No. 4-957-118-02 (ICAO, June 22, 2017) and compare *Ramirez-Chavez v. In-Out Oil Field Services*, W.C. No. 5-019-466-01 (April 12, 2018). ICAO recognized these decisions as "divergent" from the findings of *Gibson,* and stated, "To the extent prior orders of the Panel conflict with this interpretation of *Loofbourrow*, we choose not to follow them." *Kazazian* was ruled upon on April 24, 2017. Since that time, case law has developed that make clear that a "non-loss time" claim with no impairment is entitled to the DIME process. Unlike the *Kazazian*, respondents, the Respondents herein do not argue that a claimant is not entitled to the DIME process by virtue of the zero amounts admitted to in the FAL. The Claimant is not entitled to the DIME process because he did not timely file his objection to the FAL and the Notice and Proposal for a DIME.

m. When construing a statute, the ALJ must give effect to the General Assembly's purpose and intent as reflected in the plain language of the statute. *People v. Luther*, 58 P.3d 1013 (Colo.2002). The ALJ should not depart from the plain meaning unless it leads to an absurd result. *Colo. Dep't of Soc. Servs. v. Bd. of County Comm'rs*, 697 P.2d 1 (Colo.1985). As discussed by the Court of Appeals in *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261 (Colo. App. 2004) an obvious purpose of the 1998 legislation establishing time frames for requesting a DIME was to encourage the prompt adjudication of issues requiring a DIME. *Citing Lobato v. Indus. Claim Appeals Office,* 94 P.3d 1173, (Colo.App., 2003) (there was no requirement to file a DIME request within a certain time until the 1998 amendments).

n. Summary judgment may be sought in a workers' compensation proceeding. OACRP Rule 17 allows an ALJ to enter summary judgment where there are no genuine disputed issues of material fact. *Lanza v. WalMart Stores, Inc*., W.C. 4-707-313 (ICAO, September 24, 2007). Summary judgment is a drastic remedy and is appropriate only if there is no disputed issue of material fact and the movant is entitled to judgment as a matter of law. *Van Alstyne v. Housing Authority of Pueblo*, 985 P. 2d 97 (Colo. App. 1999). Once a moving party establishes that no material fact is in dispute, the burden of proving the existence of a factual dispute shifts to the opposing party. *Lanza, supra.* As found, it is undisputed that there is no genuine issue of disputed material fact.

o. The Claimant concedes that he did not file either an objection to the FAL or a Notice and Proposal for a DIME until 75 days after the FAL was mailed.. Because the Claimant had not lost time and no permanent disabili (PPD), there was neither TTD nor PPD admitted on the FAL. The ALJ concludes that *Loofbourrow* cannot be expanded to eliminate statutory jurisdictional time requirements for the Claimant herein. PALJ Sisk's Prehearing Order is correct. To quote Justice Oliver Wendell Holmes, Jr., jurisdictional time limits are "a concession to the shortness of life."

Burden of Proof

p. The burden of proof is placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). That burden is "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). As found, the Respondents have sustained their burden with respect to their Cross-Motion for Summary Judgment. The Claimant has failed to sustain his burden with respect to his Motion for Summary Judgment.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents' Motion for Summary Judgment, requesting a denial of Claimant's untimely request for a Division Independent Medical Examination is hereby granted.

B. Claimant's Motion for Summary Judgment is hereby denied and dismissed.

C. Any and all issues not determined herein are reserved for future decision.

DATED this 17th day of December 2018.

`

EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*/
