OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-995-488-04

ISSUE

The following issue was raised for consideration: Whether Claimant proved by a preponderance of the evidence that he is entitled to an Order awarding home assistance and yard services as a reasonable and necessary medical benefit.

FINDINGS OF FACT

1. Claimant sustained an admitted low back injury in a motor vehicle accident while in the course and scope of her employment on September 3, 2015. Claimant was authorized to treat with Dr. Alicia Feldman at the Colorado Clinic in Loveland, Colorado.

2. Claimant was paid temporary total disability benefits (TTD) benefits of $570.86 biweekly beginning September 29, 2015.

3. Dr. Feldman placed the Claimant at maximum medical improvement (MMI) on January 31, 2017. The Respondents filed a Notice and Proposal to Select an IME.

4. On June 13, 2017, Marc Steinmetz, M.D. authored a Division independent medical examination (DIME) report, stating Claimant reached maximum medical improvement (MMI) without impairment on October 3, 2016. On July 18, 2017, the DOWC provided notice of receipt of the Division IME report DIME process concluded. On July 26, 2017, Insurer filed a Final Admission of Liability consistent with Dr. Steinmetz' opinions Claimant reached MMI on October 3, 2016, without impairment. TTD benefits were paid to Claimant by Respondents, and never terminated by any other admission or order, until that Final Admission of Liability was filed.

5. Insurer contends that Claimant was overpaid TTD benefits from October 3, 2016, through July 14, 2017, in the amount of $11,621.08. Respondents seek repayment of the alleged overpaid amount.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo.

306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overpayment

4. Section 8-40-201(15.5), C.R.S., defines two categories of overpayment; when a claimant receives money that exceeds the amount that should have been paid or money received that a claimant was not entitled to receive.

5. Here, Claimant did not receive an overpayment within the meaning of Section 8-40-201(15.5), *supra*. The evidence established that Claimant received TTD benefits to which she was entitled during the period, October 16, 2016 through July 14, 2017. So, although Claimant received benefits exceeding the amount to which she became entitled after the DIME opinion and the Final Admission of Liability, at the time she received the TTD she was entitled to the TTD benefits.

6. Sections 8-42-103(3) and 8-42-105, C.R.S. provides that temporary total disability benefits shall continue until an employee reaches MMI, returns to regular or modified employment, the attending physician gives the employee a written release to return to regular employment or the attending physician gives the employee a written release to return to modified employment, such employment is offered to the employee in writing and the employee fails to begin such employment.

7. At the time Claimant received TTD benefits, she was entitled to receive those benefits. Claimant did not meet any standard for termination of TTD as defined by Sections 8-42-103 and 105, *supra*. Claimant was placed at MMI by Dr. Feldman, the authorized treating physician, on January 31, 2017. On April 12, 2017, Respondents applied for a DIME challenging the impairment rating and MMI determination. TTD continue to be paid to Claimant during the pendency of the DIME. The DIME report was dated June 13, 2017, and DOWC determined the DIME process was concluded on July 18, 2017. On July 26, 2017, Respondents filed the Final Admission of Liability accepting

liability for TTD benefits from September 29, 2015, through October 2, 2016, based on the DIME physician's MMI determination of October 3, 2016.

8. Since Claimant was not overpaid TTD within the meaning of Section 8-40-201(15.5), C.R.S., Respondents shall not recoup an overpayment. *United Airlines v. Industrial Claim Appeals Office of the State of Colorado,* 312 P.3d 235, 239(Colo.App. 2013); *Rocky Mountain Cardiology v. Industrial Claim Appeals Office,* 94 P3d 1182, 1186 (Colo.App. 2004).

ORDER

1. Respondents claim to recoup an alleged overpayment of TTD is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver CO 80203p

PROCEDURAL BACKGROUND

On January 13, 2017, the Director of the Division of Workers Compensation issued a fine against Respondent, T-Rex Roofing & Construction, for failing to carry workers' compensation insurance since August 2013. The Director of the DOWC referred the matter to the Court for an evidentiary hearing and findings of fact. An evidentiary hearing was held pursuant to *Dami Hospitality, LLC v. Industrial Claim Appeals Office,* 2017COA21 (February 23, 2017).[1]

An Application for Hearing filed on behalf of the Colorado Division of Workers' Compensation on August 24, 2017. No Response to the Application for Hearing was filed on behalf of T-Rex Roofing & Construction, LLC.

PRELIMINARY FINDINGS OF FACT

1. T-Rex was a roofing company doing business in Pueblo, Colorado.

2. T-Rex was a two member LLC which Jason Trexel started with David Gallo in 2011. Mr. Trexel testified as a representative of Respondent at hearing.

3. Mr. Trexel testified T-Rex did not perform any of the roofing work; all the work was done through subcontractors. The subcontractors included Luis Martinez and BT Roofing.

4. T-Rex was previously covered by a workers' compensation insurance policy issued by Pinnacol Assurance.

5. On or about July 10, 2013 an individual employed by Luis Martinez (Liborio Rodriguez Reyes) was injured. A workers' compensation claim was asserted against T-Rex as the statutory employer. This claim was covered by Pinnacol Assurance. According to DOWC records, this Claimant fell off a roof and injured his head, neck and back.

6. There was no evidence in the record that other workers' compensation claims were filed against T-Rex after 2013.

7. Mr. Trexel testified the company's insurance premiums went up to $1,100.00 per month after the 2013 workers' compensation claim.

[1] The ALJ noted a petition for writ of certiorari was granted by the Colorado Supreme Court in *Dami Hospitality, LLC v. Industrial Claim Appeals Office, supra.*

8. T-Rex' workers' compensation coverage was cancelled on November 5, 2013 for non-payment of premiums.

9. Julie Yakes, a Manager of the Self-Insurance and Coverage Enforcement unit at the DOWC, testified at hearing. In this capacity, she was part of the compliance section of DOWC, which ensures employers carry worker's compensation coverage. Ms. Yakes was familiar with Respondent, as a case involving Respondent came through the unit.

10. Ms. Yakes confirmed T-Rex's last workers' compensation policy was effective on May 1, 2013 and coverage was cancelled for nonpayment of premiums on November 5, 2013. T-Rex continued to operate without worker's compensation insurance through November 2017.

11. Mr. Trexel did not dispute that T-Rex did not have worker's compensation coverage during the aforementioned period of time. The ALJ concluded Mr. Trexel knew Respondent did not have workers' compensation insurance coverage and continued to do business. This was a volitional decision.

12. After its insurance lapsed, T-Rex hired subcontractors to perform roofing work, including BT Roofing. Some of the subcontractors did not have workers' compensation insurance. Mr. Trexel testified T-Rex stopped using BT Roofing as a subcontractor in November 2016. Mr. Trexel admitted he did not verify whether BT Roofing had workers' compensation insurance, although at one point he thought he saw the company had coverage.

13. Ms. Yakes testified Respondent had a competitive advantage by not carrying workers' compensation insurance in that its costs were lower than other roofing companies. She estimated Respondents saved in excess of $63,000.00 by not paying workers' compensation insurance premiums. The ALJ concluded this constituted actual harm suffered by T-Rex' competitors.

14. On June 12, 2014, a rejection of coverage for T-Rex (for both members of the LLC) was filed with DOWC. The ALJ found this evinced a belief by Mr. Trexel that workers' compensation insurance coverage was not required, if T-Rex worked through subcontractors.

15. T-Rex continued to contract for roofing construction jobs after 2013. From November 15, 2016 through August 23, 2017, T-Rex filed for 31 permits for roof construction in the City of Pueblo.[2] T-Rex was listed as the contractor.

16. Evidence was admitted at hearing regarding the risk of occupational injuries and illnesses in 2015-16. For the year 2015, the construction industry had the highest number of fatal work injuries. A higher proportion of these injuries were

[2] Exhibit 2.

sustained by contractors. Ms. Yakes testified these statistics led her to surmise that roofing contractors had a high risk of injury. Mr. Trexel agreed workers performing roofing work were at risk to suffer injuries. The ALJ concluded from this evidence that there was a risk for workers within the construction field (in general) and the roofing industry (specifically) to sustain both fatal and nonfatal work-related injuries.

17. Ms. Yakes testified the Director of DOWC assessed a fine against T-Rex for $63,990.00 in January 2017, which was an ongoing fine.[3] Ms. Yakes explained that the fine was calculated by multiplying the number of days T-Rex was not in compliance, by the daily fine amount set forth under WCRP 3-6, which governs the imposition of fines. Ms. Yakes further explained that the daily amount of the fine increases as more time elapses during which the employer is without coverage. Ms. Yakes stated this methodology for assessing fines was used against other similarly situated employers.

18. Mr. Trexel testified he wrote a letter after receiving notification of the fine, which stated he couldn't pay the fine. Mr. Trexel also testified there was a lien placed on his house and he was sued by subcontractors. T-Rex ceased business operations in November 2017. Mr. Trexel testified that the LLC has no income. He also stated the closure of the business caused him financial hardship. Mr. Trexel testified that he filed for personal bankruptcy.[4] There was no evidence that T-Rex filed for bankruptcy.

19. On cross-examination, Mr. Trexel agreed that he and Mr. Gallo took the following payments from T-Rex:

2012 - $36,316.11 to Gallo and $48,352.88 to Trexel
2013 - $50,013.93 to Gallo and $81,335.02 to Trexel
2014 - $56,351.83 to Gallo and $109,041.23 to Trexel
2015 - $56,351.83 to Gallo and $118,006.37 to Trexel
2016 - $59,711.68 to Gallo and $144,986.89 to Trexel

20. The ALJ finds there was no documentary support or explanation of these figures. More particularly, it was unclear whether these figures represented member payments from the LLC in total for these years. The ALJ concluded Respondent had the wherewithal to make payments to the members of the LLC from 2012-2016. The ALJ further inferred Respondent had the financial ability to pay the fine imposed by DOWC.

21. In his post-hearing submission, Mr. Trexel averred that the payments made to members of the LLC were actually lower. He stated the figures were cumulative and did not represent payments on a year-to-date basis. Mr. Trexel alleged the following distributions were paid in succeeding years:

[3] The Order imposing the fine was not offered by either party and was not part of the record.

[4] No documents were admitted into evidence confirming this bankruptcy filing.

2012 - $25,250 to Gallo and $33,913.50 to Trexel
2013 - $13,697.82 to Gallo and $33,007.14 to Trexel
2014 - $6,337.90 to Gallo and $27,706.21 to Trexel
2015 - $0.0 to Gallo and $26,980.52 to Trexel
2016 - $5,229.70 to Gallo and $18,237.21 to Trexel

22. The ALJ found Respondent's explanation was unclear. In the post-hearing submission, Claimant referred to hearsay evidence, which was not considered. No explanation was provided as to the methodology used for arriving at the figures Respondent claimed he was paid, nor did he delineate what the payments were. The ALJ is unable to determine whether these represented LLC member payments on a yearly basis. The ALJ found that Respondent did not establish that it could not pay the fine as imposed by the Director.

23. Mr. Trexel testified that the company was the victim of a theft of materials from the yard. He also testified that an individual (Jose Guerrero) he employed represented himself as an owner of T-Rex and received direct payments for roofing work. This cause financial harm to the company. He also stated two suppliers had filed liens.

24. Amelia Torrealva testified as a rebuttal witness on behalf of Respondent. Ms. Torrealva stated that she owned BT Roofing and confirmed that it was a subcontractor for T-Rex. Ms. Torrealva testified that no one from T-Rex ever talked to her about workers' compensation insurance or asked her for proof of such insurance. She testified that BT Roofing did not have workers' compensation insurance during the time it did work for T-Rex.

25. Ms. Torrealva testified she did not sign the Workers' Compensation Independent Questionnaire.[5] Mr. Trexel testified he showed her the document, which Ms. Torerealva denied. The ALJ found this document did not have Ms. Torrealva's signature on it.

26. Financial records from T-Rex were not admitted at hearing. Respondent's representative was asked at the outset of the hearing whether there were attachments to Exhibit A to be submitted and these were not offered.

27. Mr. Trexel's personal financial records were not admitted at hearing.

28. T-Rex did not maintain workers' compensation insurance coverage from November 5, 2013 through November 2017.

29. T-Rex's failure to maintain worker's compensation insurance caused actual harm to its competitors, whose costs were higher.

[5] Exhibit 3.

30. T-Rex's failure to maintain workers' compensation insurance coverage caused no actual harm to an injured worker who sustained a work-related injury that was either employed directly by Respondent or by a subcontractor.

31. T-Rex's failure to maintain workers' compensation insurance coverage represented a risk of potential harm to workers who worked for uninsured subcontractors that the company engaged to perform roofing work.

Legal Standard

In *Dami Hospitality, LLC v. Industrial Claim Appeals Office,* 2017COA21 *(Colo. App. 2017),* the Colorado Court of Appeals enunciated the standard for evaluating conduct when imposing a fine for the failure to carry workers' compensation insurance. In that case, Dami Hospitality, LLC operated a motel in Denver and was initially fined for failing to carry workers' compensation insurance in 2006. Respondent paid the fine and then was once again without insurance in 2006-2007 and in 2010. DOWC sent a notice in 2014 imposing a penalty for the failure to carry insurance in the amount of $821,000.00, pursuant to 8-43-409(1)(b)(II) and WCRP 3-6. Respondent then requested DOWC to reconsider the fine, asserting among other things that the fine eas excessive because it exceeded the businesses' receipts in a year. Respondent also claimed that she relied on her insurance agent to obtain the necessary insurance and believe that the business insurance policy provided a workers' compensation coverage.

The Court of Appeals found the factors in *Associated Business Products v. Industrial Claims Appeal Office*, 126 P.3d 323 (Colo. App. 2005) established the standard for evaluating what was a constitutionally permissive fine under the Eighth Amendment. The Court concluded that Respondent was afforded procedural due process and found no facial flaw in the penalty statute, but found the penalty violated constitutional protections against excessive fines. More particularly, the Court found the fine in *Dami* was unconstitutionally excessive as applied.

Noting that an abuse of discretion occurred when an order was entered that was unsupported by the evidence, misapplied or was contrary to the law, the Court adopted the following criteria to be evaluated when a fine of this nature was imposed: the degree of Respondent's reprehensibility or culpability [6]; the relationship between the penalty and harm to the victim caused by the Respondent's actions; and the sanctions imposed in other cases for comparable misconduct. The Court also concluded that Respondent's ability to pay must be considered. (*Dami Hospitality, LLC v. Industrial Claim Appeals Office, supra,* slip opinion page 43-46).

Ultimate Findings of Fact-Application of *Dami* Factors

[6] The *Dami* Court noted that the Colorado Supreme Court adopted the U.S. Supreme Court's criteria for assessing reprehensibility in the punitive damages context in *Qwest Servs. Corp. v. Blood*, 252 P.3d 1094-1095 (Colo. 2011)-slip opinion pages 38-39.

As to the reprehensibility of Respondent's conduct, there was no evidence Respondent's conduct was done with indifference to or reckless disregard for the safety of others. While the ALJ found that the decision not to carry workers' compensation insurance was volitional, the ALJ also determined that Mr. Trexel believed he could work through independent contractors. Also, there was no evidence of intentional malice, trickery or deceit. The evidence in the record led the ALJ to conclude that, similar to *Dami*, Respondent's conduct was on the low end of reprehensibility.

As found, there was no actual harm caused by Respondent's conduct to an injured worker, either directly employed by the company or by one of its subcontractors, who did not maintain workers' compensation insurance coverage.

There was actual harm sustained by Respondent's competitors in that its lack of compliance with the requirement that it carry workers' compensation insurance gave it a competitive advantage by virtue of its lower costs.

There was also potential harm to workers who performed roofing for the subcontractors engaged by Respondent. The undisputed evidence was that the construction field in general was a dangerous one, both for fatal and nonfatal accidents. The statistical evidence supporting this conclusion, as well as the dangerous nature of the roofing industry was undisputed. Respondent's representative acknowledged that the roofing industry was a dangerous one. Accordingly, the ALJ concluded Respondent's failure to maintain worker's insurance coverage represented a potential harm both workers and the public. The risk exceeded that identified in *Dami*, as the roofing industry represented a higher risk of accidents than that of the leisure industry. There was also a higher potential risk Respondent could be found liable as a statutory employer, as it had in the 2013 claim.

The fine in this case was comparable to that imposed on other uninsured employers. Respondent did not dispute Ms. Yakes' testimony on the subject.

Last, based upon the totality of evidence, the ALJ determined that T-Rex did not prove it was unable pay the fine imposed by DOWC. There was evidence T-Rex obtained permits for roofing jobs in Pueblo through 2017. There was also evidence in the record that T-Rex's roofing jobs were to be completed by another company, but it was unclear whether T-Rex would receive any money for completion of those jobs.[7]

The ALJ credited the testimony that T-Rex and Mr. Trexel suffered financially, but this fell short of establishing Respondent was unable to pay. Mr. Trexel's testimony was primarily focused on his personal financial difficulties, including the fact that he filed for bankruptcy protection. There was no evidence in the record T-Rex filed for bankruptcy. On balance, T-Rex did not introduce sufficient evidence that it could not pay the fine.

_____

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable work injury on December 31, 2016.

II. Whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment.

III. Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability benefits.

IV. Whether Respondent has proven by a preponderance of the evidence that Claimant violated a safety rule and that his indemnity benefits should be reduced by fifty-percent.

STIPULATIONS

If found compensable, the parties stipulated to the following:

A. Claimant earned an average weekly wage (AWW) of $338.57.

B. Claimant is entitled to temporary total disability benefits from January 1, 2017 through February 28, 2017.

C. Respondent is liable for reasonable and necessary medical treatment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant starting working for Employer at the Beaver Creek Resort during December of 2016.

2. Claimant worked as a member of the Epic Mix race crew. The Epic Mix race crew conducted public and private ski races at the Beaver Creek Resort. His job duties included set-up and break-down of the course, and working at the either the starter or finish shack. **Hearing Tr. 48: 2-10**.

3. Employer is a drug-free workplace and Claimant was aware of such when he was hired.

4. Claimant agreed that Employer's drug-free workplace rule was a safety rule. **Hearing Tr. 67: 10-19**.

5. Although the exact definition of a drug-free workplace was not established during the hearing, Claimant agreed that Employer's drug-free workplace policy prohibited employees from working on the mountain while high or drunk. **Hearing Tr. 67: 10-19**.

6. Claimant was not required to pass pre-employment drug test.

7. There was no evidence submitted by either party that employees, such as Claimant, were subject to, and underwent, random drug tests during their employment to test for drug use during and after working hours.

8. During the brief period of his employment with Employer, it did not appear to Claimant that Employer enforced their drug-free workplace policy, unless there was a work accident.

9. As an employee, Claimant was provided access to employee housing. On December 12, 2016, Claimant signed numerous documents regarding his employee housing. The agreements indicate employees cannot use or possess illegal drugs, including marijuana, in employee housing. **Hearing Ex. I**. Claimant possessed marijuana in the employee housing. **Hearing Tr. 68-69**.

10. One of the documents Claimant signed indicated his employee housing would be inspected throughout the ski season by Management. The document indicated that Management would be looking for violations of the employee housing agreement, which included the possession of illegal drugs such as marijuana. However, the same document indicates the date and time of the inspections. **See Hearing Ex. I: pg. 107.**

11. Claimant was aware that any employee involved in an accident during work would be tested for drugs, including marijuana. Claimant was also aware that testing positive for marijuana after a work accident would result in his termination.

12. Claimant's first day of work was December 13, 2016.

13. On December 30, 2016, Claimant smoked marijuana around 8:30 PM before going to bed.

14. On December 31, 2016, Claimant did not smoke or ingest marijuana.

15. On December 31, 2016 Claimant clocked in at work around 7:50 AM. **Claimant's Ex. 3**. At approximately 8:20 AM Claimant boarded the Centennial Lift to make his way up the mountain and get to the EMR2 start shack so he could begin scanning in participants at the start of the race track. Claimant arrived at the EMR2 start shack and began working at the EMR2 start shack scanning participants in at the start of the race. **Hearing Tr. 48: 18-20**. At approximately 12:30 PM he called his supervisor, Joe Santalla, to request a break to use the restroom. **Hearing Tr. 49: 5-11**. Mr. Santalla approved and sent Mr. August Smirl to cover Claimant's post. **Hearing Tr. 49:12-16**. Thereafter, Claimant snowboarded down to the office, used the employee restroom next to the office, and ran into the office and grabbed a granola bar. **Hearing Tr. 50: 1-5**.

16. At 12:58 PM Claimant boarded the Centennial Lift gondola to return to his post at the EMR2 start shack. **Cl. Ex. 3: 4; Hearing Tr. 50: 5**. The gondola ride from the base of the mountain to Claimant's exit is approximately 10 minutes. **Hearing Tr. 50: 18-19**. He exited the gondola, strapped his feet into his snowboard and began descending the mountain to the EMR2 start shack location. **Hearing Tr. 50: 19-23**. The ride from the gondola drop off to the EMR2 start shack is less than five minutes. **Hearing Tr. 50: 22-33**.

17. Claimant arrived at the EMR2 start shack between 1:15 PM and 1:20 PM. As he approached the building his snowboard edge hit some ice and slid out from under him. He fell to his butt and slid directly into the EMR2 start shack. **Hearing Tr. 51: 7-11**.

18. August Smirl is an employee of Respondent Employer. **Hearing Tr. 31: 2-3**. On December 31, 2016 he worked with Claimant as a member of the Epic Mix Race crew at Beaver Creek. **Hearing Tr. 31: 4-8**. Around 12:30 PM he temporarily relieved Claimant from working the EMR2 start shack so Claimant could take a break and use the restroom. **Hearing Tr. 31: 21-25**. As Claimant was returning to work Mr. Smirl witnessed him crash into the EMR2 start shack. He testified Claimant, "lost his edge on his snowboard and slid into the start shack[]"(**Hearing Tr. 32: 5-14**) at a not slow speed. **Hearing Tr. 32: 20-22**.

19. After Claimant hit the building Mr. Smirl went to check on him (**Hearing Tr. 32-33: 24-1**) because he appeared to be in pain and favoring his leg. **Hearing Tr. 33: 15-18**. Claimant then removed his left boot in the presence of Mr. Smirl to examine his left ankle. **Hearing Tr. 33-34: 23-15; 52: 1-4**. Neither saw a compound fracture or what appeared to be a broken bone. **Hearing Tr. 34: 5-11; 52: 1-4**. Claimant felt severe pain in his left ankle but believed he only suffered a severe sprain. **Hearing Tr. 52: 4-11**.

20. Next, Claimant put his foot back in his boot and entered the EMR2 start shack to call his supervisor, Joe Santalla, about the accident. **Hearing Tr. 52: 16-19**.

21. Claimant called Mr. Santalla and reported he injured his left ankle by sliding into the EMR2 start shack. Mr. Santalla inquired into the severity of the injury. Claimant indicated he believed it was a sprain. **Hearing Tr. 52: 20-25**. Mr. Santalla informed Claimant he would be drug tested if he reported the injury as a work incident, and if he failed, he would lose his job. Claimant responded he did not want to lose his job if he only suffered a sprain that would sideline him for a short period of time. **Hearing Tr. 53: 18-23**.

22. Mr. Santalla agreed to help Claimant try to preserve his job and avoid taking a drug test by allowing him to leave early and report he injured himself somewhere else. **Hearing Tr. 53-54: 24-1**. The two believed this would allow Claimant to get medical treatment for his ankle injury and preserve Claimant's job with Respondent Employer.

23. The conversation between Claimant and Mr. Santalla lasted only 2-3 minutes, at most. **Hearing Tr. 54: 1-4.**

24. Mr. Smirl did not hear the conversation between Claimant and Mr. Santalla. **Hearing Tr. 34: 14-20**.

25. Once the conversation with Mr. Santalla was over Claimant informed Mr. Smirl he was leaving work for the day. He also mentioned to Mr. Smirl that he did not want to lose his job over an accident. **Hearing Tr. 54: 7-14; Tr. 42: 20-25**, and **Tr. 43: 1-3**. Claimant then buckled into his snowboard and headed down the mountain towards the Village. **Hearing Tr. 36: 7-13; 54: 7-14**.

26. Claimant started heading down the mountain towards the Village to clock out at approximately 1:25 PM. The office where Claimant clocks out is directly at the base of the run for the EMR course. **Hearing Tr. 57: 1-3.** Since it usually takes about 5 minutes to get from the EMR course to the base of the run and clock out, Claimant should have clocked out at approximately 1:30 PM - if he was not injured. **Hearing Tr. 36: 2-6**.

27. To accommodate the pain in his left leg Claimant rode "goofy foot" down the mountain which is not his typical riding position. **Hearing Tr. 54: 17-20**. "Goofy foot" means riding with the right leg forward. **Hearing Tr. 56: 15-18**. Mr. Smirl testified Claimant appeared to be snowboarding slower than his usual pace while traveling down the mountain. **Hearing Tr. 45: 8-11**. Typically the ride form the EMR2 start shack to the Race City Office is under five minutes. **Hearing Tr. 36: 2-6**. On December 31, 2016 it took Claimant approximately 30 minutes to travel this distance. **Hearing Tr. 56: 19-22**.

28. Claimant reached the Race City Office near the Village and clocked out at 1:53 PM. **Cl. Ex. 3: 4-5**.

29. Normally, Claimant would remove his snowboarding gear, clothes and boots, after clocking out and place them in his work locker. **Hearing Tr. 57: 10-15**. On December 31, 2016 Claimant clocked out and did not remove his gear, including his boots. **Hearing Tr. 57: 5-6**. Claimant's left boot was essentially acting as a cast allowing him to ambulate.

30. The distance between the Race City Office where Claimant clocked out and the bus stop is approximately 150-175 feet and is at most, a two minute walk. **Hearing Tr. 58: 3-7.**

31. Claimant limped from the Race City Office to the bus area where Vail-run busses pick up employees and customers and take them to various destinations, which includes employee housing and customer parking lots. **Hearing Tr. 57-58: 14-2**.

32. Within eight minutes of clocking out Claimant sent a text message to Mr. Santalla at 2:01 PM that read "Joe I'm off clock now. If I get hurt it's not testable right[?]" **Cl. Ex. 4: 15**. Phone records from AT&T confirm Claimant texted Mr. Santalla at this time. The records further confirm only one text message was sent between Claimant and Mr. Santalla. **Cl. Ex. 5: 22 (Items 95-97)**. Claimant testified he texted this to Mr. Santalla to inform him he was off the clock, and figure out how much time he needed to wait before going to seek medical treatment, "to make [their] story fit." **Hearing Tr. 59: 14-18**.

33. Claimant boarded the Vail-run bus and began making phone calls to find a ride to get medical attention. A random customer of Vail was on the bus and overheard Claimant making the calls and offered to take him to the nearest urgent care. **Hearing Tr. 60: 13-19**.

34. Mr. Santalla testified that he received a text message from Claimant, before the end of the day, indicating that he had fallen down some steps in the Village and had hurt his leg. **Hearing Tr. 120: 18-20**. However, the phone records confirm Claimant did not send Mr. Santalla a second text message before the end of the day, about falling down some stairs. The phone records establish Claimant called Mr. Santalla at 2:44 PM that day. **Cl. Ex. 5: 18 (Items 24-25).** Therefore, the ALJ finds that Claimant called Mr. Santalla at 2:44 PM and told him that he was going to get medical treatment for his ankle injury that occurred on the mountain when he slid into the start shack and indicate to the medical providers that the injury occurred when he fell down some steps in the Village after work.

35. Claimant arrived at Avon Urgent Care at 3:09 PM. He reported an injury to his left ankle sustained after falling down steps. **Cl. Ex. 6: 47**.

36. Imaging of the left ankle indicated multiple fractures and severed arteries. **Cl. Ex. 6: 52-53**.

37. Due to the extent of Claimant's injuries, Claimant was transferred for emergency treatment by LifeFlight to St. Anthony's ER in Denver. **Id. at 49**.

38. At St. Anthony's Claimant first reported a left ankle injury after falling down stairs. **Cl. Ex. 7: 65**. He underwent emergency surgery to reset the bones in his left ankle and get blood flow back to his left foot. **Cl. Ex. 9: 81-82**.

39. On December, 31, 2016, towards the end of the day, or early evening, Mr. Santalla contacted his supervisor, Mr. Ron Rupert, who is the manager of Beaver Creek's [**Vail Resort's**] Race Department. **Hearing Tr. 91**. Mr. Santalla advised Mr. Ruppert that Claimant was injured walking down some steps leaving work that day and was seeking medical treatment. **Hearing Tr. 91-92.**

40. Later in the evening, Mr. Rupert heard the injury was more serious than previously thought, so he tried reaching out to Claimant, but was unsuccessful. **Hearing Tr. 92-93**.

41. The following day, January 1, 2017, Mr. Rupert drafted an email to Jennifer Law and Claude Goldberg – Human Resources Manager for Beaver Creek. **Claimant's Ex. 10**.

The email contains the following message:

> One of my staff members apparently broke his ankle yesterday after work. Below is the ***story*** that I was told by other staff members. (Emphasis added.) Bryan Schoff was working on EMR yesterday. He was alone at the EMR 2 Start. He called Joe Santalla (EpicMixRacing Supervisor), on the phone and said he was not feeling well and thinking that it was something that he ate. He asked to if he could go home. Joe sent another staff member (August) up to relieve him so he could go home. When August arrived to relieve Bryan he noticed he was limping. Bryan got on his snowboard and went down the hill and clocked out. Shortly after Bryan clocked out he gave Joe a call on his cell phone and told him that he slipped in the village and hurt his ankle. Bryan was going to have it looked at.
>
> Later Joe received a call from Bryan's mother that Bryan had broken his ankle in 6 places and needed surgery. Bryan is currently in a hospital in Denver. (His mother lives in Denver).
>
> ***He did not report that he injured himself at work. It is my speculation that he was afraid to take a drug test.*** (Emphasis added.)

> I am wondering how I should proceed? If you would like to talk in person I should be available tomorrow afternoon. I could be available today as well.
>
> Please let me know what you all think.
>
> Thank you,
>
> Ronald R. Rupert.

42. Just one day after the incident, Mr. Rupert thought Claimant might have injured himself at work, but said he injured himself after work while walking in the Village of Beaver Creek to avoid taking a drug test.

43. On January 3, 2017, while at St. Anthony's ER, Claimant called Respondent Employer about finding a sit-down job within the company. **Cl. Ex. 3: 5**.

44. On January 4, 2017, Claimant was told by Respondents Employer that because he had not been an employee for more than 60 days, he was not eligible to take a leave of absence and would have to be terminated. **Hearing Tr. p, 64**; **Cl. Ex. 3: 6**.

45. After learning that he would be terminated, Claimant decided to tell the truth about how he got injured.

46. On January 5, 2017, Claimant informed Dr. Nimesh Patel he was injured in a high-impact snowboarding accident while at work and not by falling down stairs. Claimant informed Dr. Patel he feared he would lose his job if he failed a drug test, so after the injury he snowboarded down the mountain and clocked out before seeking medical care. **Cl. Ex. 8: 79**.

47. Blood flow was never restored to Claimant's left foot and had his lower left leg amputated on January 6, 2017. **Cl. Ex. 9: 89**.

48. Claimant did not undergo a forensic drug test after his accident. Therefore, there is no evidence based on a forensic drug test which indicates Claimant had the presence of marijuana in his system at the time of the accident.

49. Claimant did not use marijuana on the day of the accident.

50. Claimant's snowboarding accident and left ankle injury was caused solely by Claimant losing his edge while snowboarding on an icy slope and falling and then sliding into the start shack at approximately 1:15 PM.

51. The accident occurred while Claimant was on the clock and within the course and scope of his employment.

52. Claimant's work accident and injury did not result from Claimant violating Employer's drug-free workplace policy.

53. Claimant's work accident and injury did not result from the presence of a controlled substance – marijuana - in his system.

54. Claimant's hearing testimony is found to be credible.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

General Provisions

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A*., 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

I. **Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable work injury on December 31, 2016.**

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

An injury that results from a risk of employment that is directly tied to the work itself is compensable. *See City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014).

Moreover, actions such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water and keeping warm have been held to be incidental to employment under the "personal comfort" doctrine. *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17, 22-23 (Colo. 1988); *Industrial Commission v. Golden Cycle Corp*., 246 P.2d 902 (1952). Colorado appellate courts consistently have held that under the personal comfort doctrine, a resulting injury arises out of and in the course of the employment while the employee is on the employer's premises ministering to personal necessities. *Industrial Commission v. Golden Cycle Corp., supra; Stribling v. Home Depot USA, Inc.*, W.C. No. 4-597-408 (October 13, 2004). Underlying the personal comfort doctrine is the assumption that "personal comfort" is necessary to maintain an employee's health, and is indirectly conducive to the employer's purposes. *See Ocean Accident & Guaranty Corp. v. Pallaro*, 66 Colo. 190, 180 P. 95 (1919). Further, it is sufficient if the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of employment. *Cf. Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). This includes discretionary activities on the part of the employee which do not have any duty component, and are unrelated to any specific benefit to the employer. *Cf. City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985).

As found, Claimant clocked in and began working on December 31, 2016, at approximately 7:50 AM, at the Beaver Creek Resort. Claimant's job required him to take the Centennial Lift up the mountain and snowboard down to the Epic Mix race course and help run the course. At the beginning of the course is the start shack. Claimant's job required him to scan participates in at the start shack. Claimant helped run the start shack the day of the accident.

As found, around 12:30 PM, Claimant had to take a break to use the restroom. In order to use the restroom, Claimant snowboarded down to the base of the mountain and used the restroom. After using the restroom, Claimant boarded the Centennial Lift back up the mountain. Claimant got off the lift and snowboarded down the mountain to the start shack. While approaching the start shack on his snowboard, Claimant ran over some ice and lost his edge and fell on his butt and slid into the start shack and broke his

ankle. The ALJ concludes that snowboarding to the start shack and encountering ice on the mountain is a risk of employment that is directly tied to Claimant's job of helping operate the Epic Mix race course.

The ALJ found Claimant's hearing testimony to be credible and persuasive for a number of reasons. First, Claimant alleges he injured his left ankle when he lost his edge while snowboarding back to the start shack after taking a bathroom break. Claimant's testimony was corroborated by co-employee, Mr. Smirl. Mr. Smirl credibly testified that while working at the start shack on December 31, 2016, he saw Claimant lose his edge and crash into the start shack. Mr. Smirl stated that after the accident, Claimant appeared to be in pain and favoring his leg. Mr. Smirl also testified that after the accident, he saw Claimant remove his snowboarding boot and look at his ankle. He further testified that after the accident, he saw Claimant go into the start shack and call Mr. Santalla – and then come out of the shack and indicate that he did not want to lose his job due to an accident - and then get back on his snowboard and start snowboarding, slower than his normal pace, down the mountain.

Second, Claimant's testimony that he did not want to formally report his work accident when it occurred because he was afraid he would have to undergo a drug test – and thought he would fail it because he smoked marijuana the night before and would be terminated – is plausible. Employer made it clear to its employees that if they were involved in a work related accident, they would have to undergo a drug test, and if it was positive, they would be terminated.

Third, Claimant testified that shortly after he slid into the start shack and injured his ankle, he went into the start shack and used the telephone to call Mr. Santalla, who was in the shack at the end of the race course, and told him about the accident. Claimant testified that they had a brief discussion about the accident and at that time he did not think his injury was that bad. Claimant testified that after he told Mr. Santalla that he slid into the start shack and hurt his ankle, Mr. Santalla told him that he would have to undergo a drug test if the ski patrol took him down the mountain for a work injury, but that he would not have to undergo a drug test if he left work early because he was not feeling well and injured himself after work. Therefore, they both agreed that Claimant would leave early under the pretext of not feeling well and Claimant would seek treatment for his ankle after work and indicate he got injured after work. Although Mr. Santalla denied this conversation took place, the fact that Claimant sent Mr. Santalla (Joe) a text message at 2:01 PM indicating: "Joe I'm off clock now. If I get hurt it's not testable right[?]," corroborates Claimant's testimony. Claimant also testified that he called Mr. Santalla around 2:45 PM on the day of the accident and told him that he was getting medical treatment for his ankle and would indicate he hurt himself after work while going down some stairs in the Village. Claimant's text message, combined with his testimony about the phone call he made to Mr. Santalla, is consistent with the fact that Mr. Santalla did not respond to Claimant's 2:01 PM text message and then told Mr. Rupert on the day of the accident that Claimant injured his ankle going down some stairs in the Village.

Fourth, Employer contends Claimant snowboarded to the bottom of the mountain to use the restroom and then took the Centennial Lift back up the mountain and snowboarded to the start shack in order to call Mr. Santalla – who was working at the finish line shack on the same run – to let him know that he was not feeling well and to ask if he could go home. Such scenario does not make sense to the ALJ. If Claimant was not feeling well and wanted to go home, it seems more likely that Claimant would have texted or called Mr. Santalla on his cell phone after he used the restroom at the base of the mountain and asked to go home at that time instead of riding the lift back up the mountain, snowboard down the mountain to the start shack, take off his snowboard, walk into the start shack, and then call Mr. Santalla using the phone in the start shack and ask to go home.

Fifth, Claimant testified that it usually takes about five minutes to snowboard from the start shack to the base of the mountain and clock out. On the date of the accident, it took Claimant approximately 30 minutes to snowboard from the start shack to the bottom and clock out. Such testimony was corroborated by Employer's records which indicate the time Claimant got on the chairlift after using the restroom and the time he clocked out after the accident. The additional time it took Claimant to get to the bottom of the run and clock out is consistent with Claimant breaking his ankle when he slid into the start shack and needing additional time to get to the bottom and clock out.

Sixth, Mr. Rupert, the manager of the race department, learned about the incident on December 31, 2016, and January 1, 2017. His initial investigation into the matter indicated Claimant was seen limping before he left work early on December 31, 2016. His initial investigation into the matter also indicated that after he clocked out, Claimant called his manager, Mr. Santalla, and told him he slipped in the Village and hurt his ankle. Even Mr. Rupert speculated that Claimant injured himself at work and did not report his injury because he did not want to take a drug test.

Seventh, Claimant never mentioned to any medical provider that he was not feeling well. Although Claimant was treating for a severely fractured ankle, not once did he indicate that in addition to breaking his ankle, he was sick.

It should also be noted that the ALJ found Mr. Smirl's, (August's), testimony to be credible and persuasive for a number of reasons. Mr. Smirl works as a pharmacist during the week and works only one day a week, Saturday, for Employer during the ski season. In addition, there was no credible evidence submitted that Mr. Smirl and Claimant were friends outside of work. Therefore, the ALJ found Mr. Smirl to be an impartial witness because he is not beholden to Employer for ongoing employment and was not a friend of Claimant.

Therefore, the ALJ concludes Claimant established by a preponderance of the evidence that he injured his left ankle during the course and scope of his employment on December 31, 2016, when he slid into the start shack.

II. **Whether Claimant has proven by a preponderance of the evidence that he is entitled to reasonable and necessary medical treatment.**

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002).

As found, Claimant suffered a compensable injury when he slid into the start shack and broke his left ankle in numerous places. As found, the injury also resulted in decreased blood flow to his left ankle. In order to treat his serious ankle injuries, Claimant requirement emergency medical treatment. Due to the extent of his injuries, Claimant was flown to Denver where he underwent surgery to set his broken ankle and restore blood flow to his ankle. Because blood flow could not be restored to his ankle, Claimant ultimately underwent surgery to amputate his left ankle.

The parties stipulated that if the December 31, 2016, injury to Claimant's left ankle was found compensable, Respondent would be responsible for reasonable and necessary medical treatment.

The ALJ concluded Claimant established by a preponderance of the evidence that he suffered a compensable injury to his left ankle. Therefore, the ALJ concludes that Respondent is liable for reasonable and necessary medical treatment to treat Claimant's left ankle injury.

III. **Whether Claimant has proven by a preponderance of the evidence that he is entitled to temporary total disability benefits.**

The parties stipulated that if the December 31, 2016, injury to Claimant's left ankle was found to be compensable, Claimant was entitled to temporary total disability benefits from January 1, 2017, through February 28, 2017.

The ALJ concluded Claimant established by a preponderance of the evidence that he suffered a compensable injury to his left ankle on December 31, 2016. Therefore, Respondent is liable for temporary total disability benefits from January 1, 2017 through February 28, 2017.

IV. Whether Respondent has proven by a preponderance of the evidence that Claimant violated a safety rule and that his indemnity benefits should be reduced by fifty-percent.

a. Safety Rule Violation Pursuant to Section 8-42-112(1)(b), C.R.S.

C.R.S. § 8-42-112(1)(b) provides for a 50% reduction in compensation to Claimant when Respondent proves Claimant's injury was caused by the willful failure to obey any reasonable rule adopted by the employer for the safety of the employee. The Respondent carries the burden of establishing all five elements of a safety rule violation, which are:

1. There must be a specific, unambiguous and definite safety rule adopted by the employer.

2. The safety rule must be reasonable.

3. The safety rule must be "brought home" to the employee and diligently enforced.

4. Violation of the safety rule must be willful.

5. The violation of the safety rule must be the cause of Claimant's injury.

Respondent must establish that the proximate cause of Claimant's injury is the violation of the safety rule at issue. *See Stearns-Roger Mfg. Co. v. Casteel*, 261 P.2d 228, (Colo. 1953) In this case, the safety rule at issue is Employer's drug-free workplace safety rule, which Employer contends prohibits employees from using marijuana at any time, whether working or not, and prohibits employees from possessing marijuana in employee housing.

As found, Claimant possessed marijuana while living in the employee housing. It was also found that Claimant used marijuana after work on December 30, 2016, before going to bed. Respondent, however, failed to present credible and persuasive evidence establishing Claimant's use of marijuana after work on the evening of December 30, 2016, before going to bed and possessing marijuana in employee housing, - i.e., violating the safety rule of a drug free workplace - caused the accident the following day.

As found, Claimant did not use marijuana on the day of the accident and was not under the influence of marijuana on the day of the accident. As found, the sole cause of the accident was Claimant losing his edge while snowboarding down an icy mountain and falling and then sliding into the start shack. Claimant's use of marijuana the night before did not play any part in Claimant's accident and resulting injuries.

The resolution of the proximate cause element precludes the need to analyze the other elements required to establish a safety rule violation and reduction of indemnity benefits.

Therefore, the ALJ concludes that Respondent has failed to establish by a preponderance of the evidence a safety rule violation which warrants the reduction of Claimant's indemnity benefits by 50% pursuant to Section 8-42-112(1)(b), C.R.S.

b. Limitation on Payments based upon the use of a controlled substance. (Safety Rule Violation) Pursuant to Section 8-42-112.5, C.R.S.

Respondent also asserted at the beginning of the hearing that they were asserting a safety rule violation because they expected Claimant to testify that he was "on cannabis" on the day of the accident.

Pursuant to Section 8-42-112.5, C.R.S., non-medical benefits otherwise payable to an injured worker are reduced by fifty percent where the injury results from the presence in the worker's system, during working hours, of controlled substances, as defined in section 18-18-102(5), C.R.S., that are not medically prescribed, as evidenced by a forensic drug test conducted by a medical facility or laboratory licensed or certified to conduct such tests. A duplicate sample from any test conducted must be preserved and made available to the worker for purposes of a second test to be conducted at the worker's expense. If the test indicates the presence of such substances it is presumed that the employee was intoxicated and that the injury was due to the intoxication. This presumption may be overcome by clear and convincing evidence. C.R.S § 8-42-112.5, *supra*.

To the extent that Section 8-42-112.5 allows the imposition of a fifty percent reduction in disability benefits where the injury results from the use of a controlled substance, without a forensic drug test, the ALJ concludes that Claimant's accident and resulting injuries were not caused by the use of a controlled substance.

Claimant did not testify that he was on cannabis on the day of the accident and the ALJ did not find that Claimant used cannabis on the day of the accident or was under the influence of cannabis at the time of the accident.

As found, and set forth above, the sole cause of the accident was Claimant losing his edge while snowboarding down an icy mountain and falling and then sliding into the start shack. Claimant's use of marijuana the night before did not play any part in Claimant's accident and resulting injuries.

Moreover, the presence of a controlled substance, marijuana, in Claimant's system during working hours was not established through a forensic drug test as required by 8-42-112.5. Thus, Respondent is not entitled to the presumption that Claimant's accident resulted from the use of marijuana.

Therefore, the ALJ concludes that Respondent has failed to establish by a preponderance of the evidence Claimant's disability benefits should be reduced by 50% pursuant to Section 8-42-112.5.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable injury on December 31, 2016.

2. Respondent shall be responsible for payment of Claimant's reasonable and necessary medical treatment. Respondent shall pay for this medical treatment in accordance with the Colorado Medical Fee Schedule of the Division of Workers' Compensation.

3. Respondent shall pay Claimant temporary total disability benefits based on an average weekly wage of $338.57 for the period of January 1, 2017 through February 28, 2017.

4. Insurer shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

5. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 9, 2018

Glen B. Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether respondents have overcome the opinion of the Division-sponsored Independent Medical Exam ("DIME") physician on the issue of maximum medical improvement ("MMI") by clear and convincing evidence?

- If respondents have overcome the DIME physician's opinion, what is claimant's permanent impairment rating?

- Whether respondents have established by a preponderance of the evidence that the claimant sustained an intervening injury that serves to sever respondents' liability for benefits in this case?

FINDINGS OF FACT

1. Claimant sustained a compensable injury while employed with employer on June 21, 2016. According to the medical records, claimant was injured when she was helping a customer put an entertainment set on to a dolly when the entertainment set started to fall and claimant struggled to keep the entertainment set from falling.

2. Claimant sought medical treatment beginning July 11, 2017 with Concentra Medical Center. Claimant reported she had pain in her left lateral neck and lower back that occurred when she was holding up a heavy entertainment center. Claimant was diagnosed with a cervical train, a strain of the thoracic region and a lumbar strain and was prescribed physical therapy.

3. Claimant had a prior injury to her low back in 2009 that resulted in a left L5-S1 hemilaminectomy and discectomy. Claimant reported that following her surgery, she required minimal pain medication and did not have any work restrictions or permanent impairment.

4. Claimant reported in the medical records that during the course of her physical therapy, she sustained an injury when the therapist lad claimant on her stomach, then got up on her back and pushed forcefully in a downward motion overlying the area of the right shoulder blade.

5. Claimant returned to Concentra on July 18, 2016 with complaints of a stiff neck that was causing headaches. Claimant was eventually referred to Dr. Chan on August 23, 2016. Dr. Chan noted claimant's accident history and performed a physical examination. Dr. Chan reported that while claimant reported having no pain, she was still complaining of numbness and tingling over the right lower extremity, which were noted to be similar to her symptoms in 2009 prior to her surgery. Dr. Chan recommended a magnetic resonance image ("MRI") of the lumbar spine.

6. Claimant was examined by physician's assistant, Casey McKinney on August 25, 2016. PA McKinney noted that claimant's neck remained sore and stiff, but had improved with therapy.

7. Claimant underwent the lumbar spine MRI on September 2, 2016. The MRI demonstrated post-operative changes at L5-S1 with advanced L5-S1 degenerative disc disease and moderate left greater than right L5-S1 foraminal stenosis. An abutment of the descending left S1 nerve root at the L5-S1 level was also noted. Mild L4_l5 foraminal narrowing, slightly greater on the right than left and secondary to moderate bilateral L4-L5 facet hypertrophy was also noted.

8. Claimant returned to Dr. Chan on September 13, 2016. Dr. Chan reviewed claimant's MRI and noted the findings which he opined may correlate well with claimant's current symptomatology. Dr. Chan recommended an evaluation with an orthopedic spine surgeon.

9. Claimant was examined by Dr. Castro on September 21, 2016 noted claimant's history and reviewed her MRI scan. Dr. Castro opined that claimant had no significant nerve compression or severe disc herniations. Dr. Castro recommended an aggressive physical therapy and rehab program. Dr. Castro further noted that claimant may consider a cervical MRI down the road if her symptoms involving her neck and right arm did not improve or worsened.

10. Claimant was evaluated at the St. Luke's Emergency Room ("ER") on October 25, 2016 with complaints of 10/10 non-radiating upper back pain and non-radiating right anterior chest pain for the past four days. Claimant was provided with medications and released. This apparently was related to the incident at physical therapy with the therapist attempting a thoracic manipulation.

11. Claimant was evaluated by Dr. Villavicencio on October 26, 2016 at Concentra. Dr. Villavicencio noted claimant's report of problems following the physical therapy on October 21. Dr. Villavicencio referred claimant for an urgent physiatry evaluation with Dr. Sacha.

12. Claimant subsequently underwent the MRI of her cervical spin on October 26, 2016. The MRI showed mild facet hypertrophic changes on the left side at the C2-3 level contributing to mild left foraminal narrowing. At the C3-4 level, there was a small posterior disc/osteophyte complex asymmetric to the left which indents the ventral thecal sac. Additionally, mild-to-moderate facet hypertrophic changes and uncovertebral osteophytes contributing to moderate foraminal narrowing was also noted. A very mild disc bulge that indented the ventral thecal sac was noted that the C5-6 and C6-7 levels. Claimant also underwent an MRI of the thoracic spine on October 27, 2016. The MRI showed small disc protrusions at the T7-T8 and T8-T9 levels with minimal spinal narrowing and a normal appearance of the thoracic spinal cord. An MRI of claimant's right shoulder showed some elevated signal along the posterior inferior labrum, but it was not felt to represent a labral tear.

13. Dr. Sacha evaluated claimant on October 28, 2016. Dr. Sacha reviewed the MRI reports and noted that the MRI of the shoulder showed some inflammation around the right breast implant. Dr. Sacha noted that there was no evidence of rupture, but there was a strong possibility that the manipulation may have cause some inflammation around the breast implant. Dr. Sacha noted that the prognosis for a complete recovery would be excellent.

14. Claimant returned to Dr. Sacha on December 7, 2016. Dr. Sacha noted that claimant was progressing well with acupuncture and chiropractic treatment. Dr. Sacha diagnosed claimant with lumbosacral radiculopathy with thoracic strain, myofascial pain and right breast implant contusion. Dr. Sacha noted claimant was approaching maximum medical improvement.

15. Dr. Sacha placed claimant at MMI on December 28, 2016. Dr. Sacha provided claimant with an impairment rating of 5% whole person for the lumbar spine based on Table 53(II)(B). Dr. Sacha did not provide claimant with any impairment for range of motion. Dr. Sacha recommended maintenance care to include chiropractic care and acupuncture.

16. Post-MMI, claimant underwent an MRI of the thoracic spine on March 17, 2017. The MRI showed a probable bilateral intracapsular breast implant rupture. MRI of the right shoulder performed on the same day showed supraspinatus and infraspinatus tendinosis with degenerative changes in the acromioclavicular joint with acromial morphology predisposing claimant to impingement.

17. Claimant was seen in the ER on May 20, 2017 after an MVA. Claimant was evaluated for neck and back injuries after she was rear ended from behind. Claimant underwent a chest x-ray and a computed tomography ("CT") scan of the cervical spine. No acute changes were noted on the scans. Claimant was provided with medications and instructed to follow up with her primary care physician.

18. Claimant returned to the ER on June 6, 2017 for complaints of back pain, neck pain and hip pain after an MVA on May 20, 2017. The ER physician noted that claimant has a follow up exam in one month. Claimant was provided with medications including valium and oxycodone and released.

19. Claimant was again seen in the ER on July 6, 2017 with complaints of hip pain since her MVA. Claimant was instructed to return in a week.

20. Claimant underwent an independent medical evaluation ("IME") with Dr. Hughes on July 12, 2017 at the request of her attorney. Dr. Hughes reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. Hughes noted claimant's accident history and her complaints of left hip pain stemming from the MVA on May 20, 2017. Dr. Hughes noted the ER records from May 20, 2017 and June 6, 2017.

21. Dr. Hughes noted that claimant also complained of right sided posterior low back pain at a level of 4/10 along with left sided neck pain and stiffness with neck

pain ranging from 5-6/10 to 8/10 depending on what she does. Dr. Hughes noted claimant's prior back surgery along with prior neck therapy with full recovery.

22. Dr. Hughes noted that claimant presented with an interesting and complex medical history. Dr. Hughes agreed with Dr. Sacha's date of MMI. Dr. Hughes also noted that his range of motion measurements involving claimant's lumbar spine would result in a range of motion measurements of 16% whole person for the lumbar spine. Dr. Hughes combined this with the 5% Table 53(II)(b) rating to get a lumbar range of motion measurement of 20% whole person.

23. Dr. Hughes also provided claimant with permanent impairment involving her cervical spine of 4% whole person under Table 53(II)(B) along with range of motion measurements of 13% whole person. This related to a cervical spine impairment rating of 16% whole person for the cervical spine. Dr. Sacha combined the cervical and lumbar impairment ratings and opined that claimant had a total impairment rating of 33% for the lumbar and cervical spine.

24. Claimant underwent the DIME on July 27, 2017 with Dr. Castrejon. Dr. Castrejon reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with the DIME. Dr. Castrejon opined that based on his examination, claimant's mechanism of injury was consistent with a stratining injury of the cervical and lumbar spine. Dr. Castrejon noted that claimant remained symptomatic with regard to the cervical and thoracic spine. Dr. Castrejon noted that claimant's lumbar spine had reached a level of stability. Dr. Castrejon further opined that claimant sustained a new injury to the chest, thoracic spine and right scapular region as a result of the manipulation by the physical therapist. Dr. Castrejon opined that claimant was not at MMI with regard to the new injury to claimant's chest, thoracic spine resulting from the manipulation. Dr. Castrejon noted that claimant had developed right shoulder girdle myofascial pain and scapular dyskinesis.

25. Dr. Castrejon recommended additional medical treatment including a psychological evaluation, physical and massage therapy directed to the scapular dyskinesis and myofascial pain component of her condition. Dr. Castrejon noted that if claimant's condition did not improve, then consideration could be given to a therapeutic/diagnostic epidural steroid injection. With regard to the lumbar spine, the DIME physician found that no additional active treatment was indicated at this time.

26. Dr. Castrejon provided claimant with a provisional impairment rating of 28% whole person.

27. Respondents obtained a records review IME from Dr. Bernton on November 3, 2017. Dr. Bernton opined in his report that he did not believe the DIME report was performed consistent with the standards set forth for assessment of impairment in the *AMA Guides to the Evaluation of Permanent Impairment, Third Edition (Revised)*. Dr. Bernton opined that the May 20, 2017 MVA resulted in worsening of complaints while the initial occupational injury had occurred more than a year previous. Dr. Bernton opined that it could not be determined that claimant's current

complaints were related to her work injury without a complete set of the medical records from claimant's treatment following the MVA.

28. As noted above, May 2017, claimant was involved in a motor vehicle accident ("MVA"). Claimant reported the MVA to the DIME physician. Claimant reported to the DIME physician that she was evaluated in the emergency room after the MVA, but did not need additional medical treatment.

29. Respondents note in their position statement that claimant's medical history as provided to Dr. Castrejon was incorrect in that Dr. Castrejon recorded that claimant had only treated once with the ER following the MVA.

30. Medical records document that after the DIME, claimant continued to treat with Denver Health for issues involving her sacroiliac ("SI") joint and left hip. The medical treatment claimant has sought does not address, however, the recommended medical treatment that Dr. Castrejon associated with claimant's work injury. Specifically, Dr. Castrejon recommended physical and massage therapy directed to the scapular dyskinesis and myofascial pain component of her condition. Claimant's complaints post-MVA as mentioned in the medical records are not related to these complaints. Moreover, with regard to claimant's low back condition, Dr. Castrjon specifically found that claimant was at MMI. Therefore, the ALJ finds that respondents have failed to overcome the opinion of the DIME physician that claimant is at MMI.

31. Based on these same factual findings, the ALJ finds that respondents have failed to establish that it is more probable than not that claimant sustained an intervening injury that would sever respondents' liability in this case. The ALJ specifically notes that the DIME physician in this case placed claimant at MMI for the parts of the body that are being treated as a result of the MVA. Specifically, the DIME physician found that no additional active treatment was recommended for claimant's lumbar spine.

32. The ALJ notes, however, that claimant's range of motion of the lumbar spine as measured by Dr. Hughes and Dr. Castrejon appear to be different from the range of motion measurements obtained by Dr. Sacha. The ALJ also notes that Dr. Sacha's range of motion measurements were obtained before the MVA. The ALJ recognizes that there may be an argument as to the *cause* of the range of motion measurements, but that is within the confines of the DIME when the issue of PPD is addressed. The ALJ notes, however, that respondents are not precluded from arguing that a component of the PPD rating could be causally related to the MVA as opposed to the work injury, but that issue is not before this court due to the finding that the claimant is not at MMI.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-

102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2012. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2006).

3. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra*. A mere difference of opinion between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

4. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

5. Respondents argue that the opinion of Dr. Castrejon regarding the issue of MMI has been overcome by clear and convincing evidence. The ALJ disagrees.

6. While claimant was involved in an MVA on May 20, 2017, shortly before the DIME, the treatment claimant has received after the MVA has focused on her left hip and SI joint. The treatment recommended by Dr. Castrejon that justifies his opinion that claimant is not at MMI is to the scapular dyskinesis and myofascial pain complaints. As such, the ALJ finds that respondents have failed to overcome the DIME physician's opinion regarding MMI by clear and convincing evidence.

7. The doctrine of intervening injury concerns the effect of a separate injury, which occurs while the claimant is receiving medical and disability benefits for a compensable injury effectively holds that respondents are not liable for injuries which occur subsequent to a compensable injury, and are not a "natural result" of the compensable injury. *Post Printing and Publishing Co. v. Erickson,* 94 Colo. 382, 30 P.2d 327 (1934). Respondents are only liable for subsequent injuries which "flow proximately and naturally" from the compensable injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970).

8. At the present time, because there is no recommendation for ongoing treatment to claimant's lumbar spine, the ALJ finds that respondents have failed to establish an intervening injury that would sever their liability for ongoing benefits in this case.

ORDER

It is therefore ordered that:

1. Respondents have failed to overcome the opinion of the DIME physician that claimant is not at MMI by clear and convincing evidence.

2. Respondents shall pay for the reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

3. Respondents have failed to establish that claimant sustained an intervening injury sufficient to sever their liability for ongoing benefits.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 12, 2018

Keith E. Mottram

Keith E. Mottram
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he suffered a worsening of condition attributable to his April 12, 2012, right shoulder injury, warranting reopening of the claim.

2. In the event that the claim is reopened for a worsening of condition, whether Dr. David Schneider is an authorized provider.

3. In the event that the claim is reopened for a worsening of condition, whether surgery recommended by Dr. Schneider is reasonable, necessary and related to the April 12, 2012, right shoulder injury.

FINDINGS OF FACT

1. Claimant is a 52 year-old freight driver who has had preexisting right and left shoulder pain and symptoms since at least 2007. Claimant had been treating with Dr. Christopher Isaacs, orthopedic surgeon, for his bilateral shoulders since this time. Claimant also treated for his bilateral shoulders with Dr. Eric Smith, his family physician since the time that he was a child.

2. On January 1, 2012, Claimant suffered an admitted injury to his right shoulder as the result of work-related exposure. There was no specific mechanism of injury. Claimant was diagnosed with a full-thickness rotator cuff tear of the right shoulder and underwent surgical repair of the torn rotator cuff with Dr. Isaacs in June of 2013. Claimant specifically requested that Dr. Isaacs perform the surgery for the right shoulder, as he had previously performed a surgery for the left shoulder and was familiar with Claimant's shoulder problems.

3. Dr. Isaacs placed Claimant at MMI on October 31, 2013. Dr. Isaacs gave Claimant a 10% scheduled rating of the right upper extremity, which was later converted to a 6% whole person impairment rating at a previous hearing. Dr. Isaacs released Claimant to full duty and recommended maintenance care for the shoulder, limited to Lidoderm patches for one year after MMI. Claimant was otherwise discharged from care.

4. Respondents filed a Final Admission of Liability (FAL) on December 3, 2014. Respondents admitted for a 6% whole person impairment rating and reasonable, necessary, and related maintenance medical treatment.

5. Following his placement at MMI, Claimant continued treatment with his family physician, Dr. Smith, for regular yearly injection treatments. Claimant did not receive this treatment through workers' compensation.

6. Claimant presented to Dr. Isaacs on January 24, 2017, with complaints of ongoing bilateral shoulder pain. Dr. Isaacs noted that his was a problem that had been present for years. Dr. Isaacs indicated that Claimant had not had an injection for approximately one year for his right shoulder. Dr. Isaacs noted that Dr. Smith was retiring and that Claimant was "in the market for a new family physician." Dr. Isaacs reviewed x-ray imaging of both shoulders and noted some mild acromioclavicular degeneration, but otherwise no significant abnormalities. Dr. Isaacs stated the diagnosis was "Bilateral shoulder rotator cuff tendinitis and impingement." Dr. Isaacs recommended and performed a repeat subacromial injection. There were no recommendations for surgery or further treatment or evaluation.

7. Claimant subsequently independently sought further evaluation for his right shoulder through Dr. David Schneider, an orthopedic surgeon at Panorama Orthopedics recommended by his wife. Claimant presented to Panorama on March 27, 2017 and was referred for diagnostic MRI studies for his bilateral shoulders, pursuant to complaints of pain in the shoulder joints of both his left and right shoulders.

8. MRI studies of the left and right shoulders were performed on March 30, 2017. The radiologist, Dr. Andrew Sonin, indicated the MRI of the right shoulder reflected a prior rotator cuff repair with no full-thickness defect or retear, no retraction or atrophy of the cuff musculature, with a normal subscapularis. The biceps tendon and anchor are intact. There was no evidence of instability lesion. Dr. Sonin noted a cyst formation around the repair site in the lateral humeral head.

9. Claimant saw Dr. Schneider on April 26, 2017. It is noted that Claimant has chronic bilateral shoulder problems. It is noted that Claimant had difficulty sleeping due to bilateral shoulder pain. Dr. Schneider indicated that "both" of Claimant's MRIs showed a thinning and tearing of the supraspinatus. Dr. Schneider also noted "pretty large impending insufficiency fractures of both greater tuberosities with large cystic area right near the supraspinatus insertion site." The diagnosis was listed as complete tears of the right and left rotator cuffs. Dr. Schneider recommended that Claimant have a right shoulder surgery first (implying a pending left shoulder surgery). Dr. Schneider recommended shoulder "arthroscopy with rotator cuff repair, because of the edema and impending fracture, nature of the greater tuberosity." Dr. Schneider also recommended a calcium phosphate injection into the area at the time of surgery. Dr. Schneider requested that Claimant consult with his workers' compensation physician so he could have the procedure covered under the work-related claim.

10. Claimant returned to Dr. Isaacs on May 2, 2017, for a recheck in accordance with the findings of Dr. Schneider. It is reported that Claimant was having ongoing shoulder pain and was beginning to take time off work for his pain. Dr. Isaacs noted that Claimant was informed by Dr. Schneider that he had a cyst in the humeral

head and that there was a recommended arthroscopy with injection of the cyst area. Dr. Isaacs reviewed the MRI findings from March 30, 2017, and stated that he did not see the findings indicated by Dr. Schneider, including a full-thickness re-tear of the cuff or an impending fracture of the greater tuberosity. Dr. Isaacs indicated that he was not familiar with a calcium phosphate injection. Dr. Isaacs stated that Claimant was, without question, having pain related to his work injury but that he could not say whether the MRI findings were related to the injury. Dr. Isaacs did not schedule a follow-up appointment. .

11. Dr. Isaacs issued correspondence addressed specifically to Claimant's attorney, dated July 6, 2017. Dr. Isaacs noted that, since the initial right shoulder rotator cuff repair, Claimant had intermittent pain in his shoulders. Dr. Isaacs stated that Claimant had sought a "second opinion" from Dr. Schneider and had come away from this appointment with the impression that he had a cyst in his humerus that was quite large and required an injection. Dr. Isaacs also noted that Dr. Schneider was requesting a repeat rotator cuff repair and calcium phosphate injection into the greater tuberosity. Dr. Isaacs stated that the MRI did not show any rotator cuff tear but did show cystic changes that were likely related to the anchor placements at the time of the initial surgery. Dr. Isaacs opined that the cystic changes were likely a natural progression from surgery but that he was unfamiliar with the calcium phosphate injection procedure and would not have classified the MRI findings as an "impending fracture." Dr. Isaacs opined that there were no findings on the MRI to indicate the need for a repeat rotator cuff repair.

12. Dr. Isaacs signed a facsimile transmittal sheet, not addressed to any person or entity, dated both November 20 and November 22, 2017. Dr. Isaacs referred Claimant back to Dr. David Schneider for right shoulder surgery. There is no further comment concerning the referral or the procedure to be performed. This document was sent by Claimant to his attorney on November 27, 2017.

13. Dr. Mark Paz performed an IME on November 10, 2017, and issued his report on November 22, 2017. Claimant denied any new injury or trauma to the right shoulder since his rotator cuff repair. Claimant told Dr. Paz that he was scheduled for surgery on December 21, 2017, with Dr. Schneider for a "resection of the cyst." Dr. Paz agreed with Dr. Isaacs that there was no rotator cuff tear seen on the most recent March 30, 2017 MRI and that this also did not document impending fractures. Dr. Paz further opined that there was no mechanism of injury which would explain fractures. Dr. Paz opined that the proposed treatment of the calcium phosphate injection was not indicated to treat the work-related diagnoses of rotator cuff tendinitis and impingement, as set forth by authorized treating physician, Dr. Isaacs. Dr. Paz recommended conservative care as outlined by Dr. Isaacs, which could be completed under maintenance.

14. Dr. Paz issued an addendum report on December 5, 2017, after reviewing the November 22, 2017, referral note from Dr. Isaacs to Dr. Schneider. Dr. Paz noted that documentation supporting the basis for the referral was not presented. Id. Dr. Paz

stated that the primary issue was not a difference of opinion regarding treatment options for the right shoulder, but rather the absence of objective findings on the MRI study supporting any of the treatments proposed by Dr. Schneider. Dr. Paz noted that Dr. Isaacs specifically disagreed with Dr. Schneider's assessment of the MRI results.

15. Claimant testified that he was not referred by Dr. Isaacs to see Dr. Schneider until he solicited this request in November 2017. Claimant testified at hearing that he had specifically requested Dr. Isaacs to do surgeries for his right shoulder and unrelated knee injury because Dr. Isaacs was familiar with his claim and was a good surgeon. Claimant testified that Dr. Isaacs would not perform surgery and was unfamiliar with the proposed procedure requested by Dr. Schneider. Claimant testified that he received regular treatment for his right shoulder after surgery with his personal care provider, Dr. Eric Smith. Claimant testified that he had previously been out on FMLA leave for the shoulder. Claimant testified that he had been working full duty up until the point that he again went on FMLA leave on November 4, 2017. Claimant testified that his right shoulder had always been hurting, prior to his 2012 injury and after his 2013 surgery. Claimant testified that he had always had intermittent pains after surgery.

16. Dr. Paz testified at hearing as Respondents' medical expert in occupational medicine. Dr. Paz testified that there were no medical restrictions imposed by any provider in the records reviewed, to date. Dr. Paz testified that Claimant's present, ongoing diagnosis was impingement syndrome of the right shoulder and "post-operative" right shoulder rotator cuff repair status. Dr. Paz testified that Dr. Isaacs had not indicated any surgical recommendations to address the cyst formation and indicated no surgical recommendations after review of the MRI. Dr. Paz testified that there were no objective findings to support the opinion and recommendation for surgery by Dr. Schneider. Dr. Paz testified that the purpose of calcium phosphate injections is to heal fractures, and that cysts are resected out, not treated with calcium phosphate. Dr. Paz testified that there was no request for any specific type of surgical procedure in the record by Dr. Isaacs. Dr. Paz testified that the calcium phosphate injections recommended by Dr. Schneider were secondary to the recommendation for rotator cuff repair surgery and surgery for what Dr. Schneider classified as impending insufficiency fractures. Dr. Paz opined that any further reasonable, necessary, and related treatment could be performed as maintenance care.

CONCLUSIONS OF LAW

Reopening of the Claim

1. A claimant may file a Petition to Reopen his claim on the basis of a change in condition within six years of the date of injury, or otherwise after the date the last temporary or permanent disability benefits, or medical benefits, become due and payable. Section 8-43-303(1)-(2)(a)-(b), C.R.S. The claimant has the burden of proof, by a preponderance of the evidence, in seeking to reopen a claim for a worsened condition. *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). A "change in condition" refers either to a change in condition of the original principal injury or a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury. *Chavez v. Industrial Comm'n of State of Colo*., 714 P.2d 1328 (Colo. App. 1985). Reopening of a claim is appropriate when the degree of permanent disability has changed, or when additional medical or temporary disability benefits are warranted. *Richards v Industrial Claim Appeals Office of State of Colo*., 996 P.2d 756 (Colo. App. 2000). The ALJ has broad discretionary authority to determine whether a claimant has met his burden of proof to reopen. *Kilpatrick v. Industrial Claim Appeals Office of State*, 356 P.3d 1008 (Colo. App. 2015).

2. In determining whether a claimant has met her burden of proof, the ALJ may resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *Bodensleck v. Indus.* Claim Appeals Office, 183 P.3d 684 (Colo. App. 2008). When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness, probability or improbability, of the testimony and actions, the motives of the witness; whether the testimony has been contradicted; and bias, prejudice and interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936). The ALJ should consider an expert witness' special knowledge, training, experience or research, and has broad discretion to determine the weight of evidence on this basis. *See Young v. Burke*, 338 P.2d 284 (Colo. 1959).

3. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). Substantial evidence is that "quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo. App. 2001). It is not necessary that the ALJ address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

4. Claimant had preexisting right shoulder pain before his April 12, 2012, work injury and had treated with his family doctor, Dr. Smith, for both shoulders since the time he was a child. There was no acute injury in this matter and Claimant's pain continued intermittently after his 2013 surgical repair with Dr. Isaacs and his October 31, 2013, placement at MMI. Dr. Isaacs recommended Lidoderm patches as maintenance and otherwise discharged Claimant from care after MMI. Claimant continued to treat with his family doctor, Dr. Smith, after placement at MMI for the injury and only saw Dr. Isaacs for his injection treatments when Dr. Smith retired. Claimant sought treatment for his bilateral shoulders and it is noted that he was seeking a new family physician to continue treatment for the shoulders.

5. Dr. Isaacs did not recommend surgery, further diagnostics or care when Claimant presented to him on January 24, 2017. Dr. Isaacs likewise did not recommend surgery or further care at his May 2, 2017, follow-up visit. Dr. Isaacs never indicated a change in Claimant's MMI status or his work restrictions. Dr. Isaacs only referred Claimant back to Dr. Schneider when he was asked to do so by Claimant.

6. Claimant voluntarily removed himself from work in November to go on FMLA. Claimant has previously removed himself from work to go on FMLA for his bilateral shoulder condition.

7. Based upon the above, there is no work-related change in condition that warrants a reopening of the claim for additional medical or temporary disability benefits. There is no indication by the ATP that the cystic changes require removal from MMI or temporary disability. Likewise, there is no indication by the ATP that the referral solicited by Claimant to Dr. Schneider is for treatment related to the claim. Dr. Isaacs did not independently recommend surgery or further medical care after his review of the MRI study. Claimant has not met his burden to show that he suffered a work-related change in condition.

8. Since Claimant's petition reopen is denied and dismissed, it is found and concluded that Claimant's claim for medical benefits is also denied.

ORDER

1. Claimant has failed to establish that he suffered a work-related change in condition warranting reopening of his claim. Claimant's Petition to Reopen is therefore denied and dismissed.

2. Since Claimant failed to sustain his burden of proof to establish a worsening of his condition, Claimant's claims regarding medical benefits are also denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43- 301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.Hearing in this matter was held on

STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 5-044-870-01

ISSUE

The following issue was raised for consideration: Whether Claimant proved by a preponderance of the evidence that he is entitled to an Order awarding home assistance and yard services as a reasonable and necessary medical benefit.

FINDINGS OF FACT

1. Claimant sustained a compensable injury to his right upper extremity on April 23, 2017. Claimant has been a volunteer firefighter for the Employer since 2011 and was participating in training when he sustained an admitted injury to his right hand, primarily to the third and fourth digits. The injury required surgery on Claimant's right ring finger PIP joint and ligaments throughout the right hand. Claimant's surgery was performed on April 26, 2017.

2. Claimant's primary profession is as an attorney. Claimant's brother is an orthopedic surgeon.

3. The day after his April 23, 2017, work injury, Claimant treated with Dr. Tomm VanderHorst who reported that Claimant spoke to his brother, the orthopedic surgeon, and Claimant wanted to be referred to Dr. Craig Davis. On April 24, 2017, Dr. VanderHorst's medical record restricted Claimant to light desk work and maximal grip and pinch of one pound with the right hand. Dr. VanderHorst referred Claimant to Dr. Davis who Claimant saw that day, April 24, 2017. Dr. Davis performed Claimant's surgery on Claimant's right hand on April 26, 2017.

4. By June 2017, Dr. Davis suspected Claimant's CRPS diagnosis. Claimant developed complications related to the work injury. He developed right upper extremity pain. There were also trophic changes, which included increased hair growth, swelling, mottling changes of the skin and discoloration to Claimant's right upper extremity.

Commented [JM1]:
Commented [JM2R1]:
Commented [JM3R1]:
Commented [JM4R1]:

5. Following the April 26, 2017, surgery, Claimant was seen again by Dr. VanderHorst on June 5 and July 19, 2017. On July 19, 2017, Dr. VanderHorst reported that Claimant was accompanied by his new wife and reported good pain control through the pain management efforts of Dr. Ogin and Dr. Ghazi. Dr. VanderHorst reported that Claimant's wedding and road trip to Yellowstone and Glacier went well from the pain management perspective. At this appointment, Claimant sought an appetite stimulant for

weight gain which the doctor declined to prescribe and instead encouraged Claimant to eat regular meals.

6. Claimant reported to Dr. VanderHorst at the July 2017 appointment increased irritability and uncharacteristic lack of control, but adamantly rejected a recommendation for psychological counselling and expressed a need for assistance with home responsibilities such as house work and yard work. Dr. VanderHorst assessed Claimant with a diagnosis of CRPS, Type 2 of the right upper extremity, weight loss of more than 10 lbs. in 90 day, avulsion fracture of the proximal phalanx of finger, dislocation of the right ring finger and anxiety disorder due to general medical condition.

7. At the July 2017 appointment with Dr. VanderHorst a second surgery was discussed with Claimant, however a second opinion regarding the surgery was sought by Claimant and Dr. Davis. Dr. VanderHorst made recommendations to Claimant for doctors from whom he could get a second opinion, but Claimant declined the recommendations preferring instead to do some "internet searching" before making a decision regarding whom he wanted to see. Dr. VanderHorst concluded his July 17, 2017, medical report reporting, "Once he [Claimant] has decided whom he would like to see an (sic) 2nd opinion, he will let me know and we will make appropriate referrals."

8. During the month to six weeks after the April 26, 2017, surgery, Dr. Davis performed four to five cortisone injections in the joints of Claimant's right hand for Claimant's pain and range of motion limitations. When these injections did not help Claimant, Dr. Davis referred Claimant to Dr. Ogin for pain management.

9. Subsequent to the appearance of Claimant's CRPS symptoms, Claimant was diagnosed by multiple treating physicians with CRPS. Claimant received extensive medical treatment, including stellate ganglion blocks, peripheral nerve blocks, interregional bier blocks, cervical sympathetic blocks, occupational and physical therapy, and daily medications.

10. In June and July 2017, Dr. Davis wrote Claimant prescriptions for "home assistance" and "in home assistance." In a script, dated June 5, 2017, Dr. Davis recommended that Claimant receive home assistance three days per week, for a four-week time period. Dr. Davis then wrote another script dated July 19, 2017. Again, Dr. Davis recommended in-home assistance for five hours per day, four days per week, for the next six to eight weeks, as needed.

11. On August 15, 2017, Dr. Davis noted that Dr. Ogin had administered to Claimant a dozen stellate ganglion blocks. On this date, Dr. Davis spoke to Claimant at night at Claimant's request for 45 minutes by telephone. Dr. Davis reported that Claimant is complaining the he lives on a large property and requires help with outdoor work. Dr. Davis does not mention a need for "in home" assistance. In this note, the doctor reports that Claimant is crying and expressing frustration. Dr. Davis recommended that Claimant see a psychiatrist, but Claimant rejected this recommendation because he did not have time because of his treatments and his job. Claimant reported he had obtained a second

opinion regarding the recommendation for a second surgery. Dr. Davis asked Claimant to obtain the notes from the doctor offering the second opinion and foreword them to him.

12. On August 17, 2017, Dr. Davis wrote a letter to Respondent's counsel advising the attorney that Claimant required "assistance with general home services and activities, including yard services." Dr. Davis further explained that Claimant required this assistance to receive relief from his symptoms. The doctor explained that the performance of the tasks for which he seeks assistance (yard services) could cause reinjury of the right hand. Dr. Davis stated that Claimant needed this in-home assistance five hours per day for five days per week for an additional six to eight weeks, as needed.

13. Claimant reported to his doctors constant pain with paresthesia into the fingers and intermittent sharp shooting pains at 8-9/10. Claimant testified that he is in excruciating pain all the time. Claimant explained that his pain is burning, aching and a dull sensation. The pain at night is worse. Claimant claimed that the CRPS has also created mirror pain in the left upper extremity and, although not as bad, some pain in the bottom of Claimant's feet and hypersensitivity in Claimant's shoulders.

14. Dionne Lebeau, the claims administrator in this claim, testified that the cost for the one time that in-home assistance provided Claimant was $253.00. Ms. Lebeau also testified that the overall cost of medical treatment as of the date of the hearing was $41,589.48. On one occasion on June 13, 2017, Respondent provided Claimant with in home assistance. However, Claimant found the assistance offered unsatisfactory and advised Respondent he did not want the assistance provided and wanted to select the company from whom the assistance was obtained. Respondent declined to permit Claimant to select the service provider.

15. In an e-mail from Claimant to Erica Hernandez, an employee of OneCall Care Management, dated August 31, 2017, Claimant made it clear that the in-home assistance services that he needed would be limited to housekeeping/domestic services only.

16. Claimant attended an independent medical evaluation with Dr. Nicholas Olsen on October 25, 2017. In that evaluation, Claimant discussed with Dr. Olsen the extent and reason that he needs in-home assistance. Dr. Olsen reported that Claimant was able to bathe, dress and perform his activities of daily living (ADLs). Dr. Olsen reports that Claimant does not require assistance with his ADLs, including dressing, bathing, and toileting. Claimant told Dr. Olsen that he only needed help in his yard, as well as performing house cleaning services. Claimant told Dr. Olsen he needed help with bigger projects around his home and taking care of his property and lawn.

17. Dr. Olsen also testified that, based on his review of the medical records, Claimant has attended numerous medical appointments from the date of his injury through the present time. Dr. Olsen testified that his medical record review does not reflect that Claimant was having any difficult attending those medical appointments. Dr. Olsen further noted that Claimant has been prescribed the following medications: Lyrica, Cymbalta, Baclofen, Prednisone, Dilaudid, Ambien, Tramadol, Trazodone, Ibuprofen,

Gabapentin, and Hydrocodone. Claimant has discontinued the use of Hydrocodone, Gabapentin, Tramadol and Dilaudid.

18. Claimant failed to establish that his need for home services and yard assistance is medical in nature because these services would not cure and relieve the symptoms and effects of Claimant's work injury. It is further found that these services are not incidental to medical treatment because they are not part of a home healthcare program designed to treat Claimant's condition.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

In-home assistance and yard care services

4. Section 8-42-101(1)(a), C.R.S. imposes upon every employer the duty to furnish such medical treatment "as may reasonably be needed at the time of the injury ... and thereafter during the disability to cure and relieve the employee from the effects of the injury." That duty includes furnishing treatment for conditions representing a natural development of the industrial injury. *Employers Mutual Insurance Co. v. Jacoe,* 102 Colo. 515, 81 P.2d 389 (1938). All results flowing proximately and naturally from an industrial injury are compensable. *See Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970).

5. Home health care services in the nature of "attendant care," if reasonably needed to cure or relieve the effects of the industrial injury may encompass assisting the claimant with activities of daily living, including matters of personal hygiene. *Suetrack v. Industrial Claim Appeals Office, supra.* In *Kuziel v. Pet Fair, Inc.,* 931 P.2d 521 (Colo. App. 1996), however, the court cited *Industrial Commission v. Pacific Employers Insurance Co.,* 120 Colo. 373, 209 P.2d 908 (1949) and refused to extend benefits to cover the payment of expenses incurred for household care or maintenance, child, spousal, or pet care, or other routine living expenses that are paid or incurred during a claimant's hospitalization or other medical treatment.

6. To be a compensable medical benefit, the service must be medical in nature or incidental to obtaining such medical or nursing treatment. *Country Squire Kennels v. Tarshis*, 899 P.2d 362 (Colo. App. 1995). A service is medical in nature if it is reasonably needed to cure and relieve the effects of the injury and related to the claimant's physical needs. *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo. App. 1997); Kuziel v. Pet Fair, Inc., supra.

7. Services which have been found to be "medical in nature" include home health care services in the nature of "attendant care" if reasonably needed to cure or relieve the effects of the industrial injury. *Atencio v. Quality Care, Inc*., 791 P.2d 7 (Colo. App. 1990). Such services may encompass assisting the claimant with activities of daily living, including matters of personal hygiene. *Suetrack v. Industrial Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995). Further, it is well established that a claimant's family may be compensated for these services. *See Edward Kraemer and Sons, Inc. v. Downey*, 852 P.2d 1286 (Colo. App. 1992).

8. The leading and most recent case on the issue of when home services may be considered “medical” in nature is *Bellone v. Industrial Claim Appeals Office*, 940 P.2d 1116 (Colo.App. 1997). In *Bellone, supra*, the court held that child care services prescribed by a physician were “medical in nature” because they allowed the claimant, who suffered a brain injury, to obtain rest and reduce the likelihood of injury-related fatigue and seizures. The court stated the following:

> The child care services here were “medical” in nature because they relieved the symptoms and effects of the injury and were directly associated with claimant’s physical needs. Further, they were “incidental” to medical treatment because the services were provided as part of an overall home health care program designed to treat the claimant’s condition. *Id*. at 1118.

9. The determination of whether the attendant care requested by the claimant is "medical in nature" is one of fact for determination by the ALJ, which must be upheld if supported by substantial evidence in the record. *Bellone*, supra. In assessing the evidence, the ALJ may consider whether the services were medically prescribed, and whether they are directly associated with the claimant's physical needs. *Bellone, supra*. However, the term "medical in nature" is not limited to services prescribed by the treating

physician. Neither is there any rule or statute which requires the claimant to present evidence of a medical prescription from the attending physician before attendant care may be found to be medical in nature.

10. Here, the Judge concludes that Claimant's request for in home services and yard services is not reasonably necessary to cure and relieve Claimant of the effects of the April 23, 2017, injury nor is it incidental to obtaining medical treatment. Claimant's testimony at hearing, and the medical records reflect, that Claimant aggressively acquired workers' compensation benefits. Dr. Davis's evolving prescription for in home services and yard services leaves question about the credibility and persuasiveness of Dr. Davis's opinion. Particularly, in light of the credible testimony and independent medical examination report of Dr. Olson who opined that Claimant's request for in home services and yard services was not a reasonably necessary medical benefit. Dr. Olson further credibly opined that Claimant did not require in home services to aide him with his activities of daily living. Dr. Olson credibly reports that he reviewed a request for services from June 2017 from a professional caregiver from whom Claimant sought assistance. From that agency, Claimant sought services to clean bathrooms, vacuum floors, throw out trash and put away clothing. Dr. Olson reports that Claimant advised him he needed assistance with larger projects around his house.

11. It is concluded that the request for yard services and in home services would relieve Claimant of the rigors of yard work and larger projects in the home but these services are not prescribed to cure and relieve Claimant of the effect of the work injury nor are these services incidental to obtaining such medical treatment.

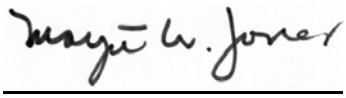
ORDER

1. Claimant's claim for in home services and yard services is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 22, 2018



Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver CO 80203p

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her left knee on March 25, 2017.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical treatment for her left knee, including left knee surgery performed on May 1, 2017.

3. Determination of Claimant's average weekly wage.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits.

5. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability (TPD) benefits.

FINDINGS OF FACT

1. Claimant is a 33 year old woman employed by Employer at a Qdoba restaurant, a subsidiary of Employer. Claimant has worked at Qdoba for approximately 13 years and is an assistant manager.

3. From December 19, 2016 through March 12, 2017, the twelve weeks prior to her alleged work related injury, wage records show that Claimant worked on average 43.41 hours per week, consistent with her testimony at hearing that she typically worked 45 hours per week. The wage records also list her as "Nexempt" supporting her testimony at hearing that she is paid time and a half for the hours she works over 40 hours per week. Finally, the wage records show that from September of 2016 through December 18, 2016, her hourly wage rate was $12.47. The records also show that starting December 19, 2016, her regular hourly pay rate was $14.50. Claimant testified that her hourly rate was $12.70 per hour which is inconsistent with any hourly rate listed in wage records. *See* Exhibit J.

4. With an hourly rate of $14.50/hour for 40 hours per week ($580) and with time and a half of $21.75/hour for the average 3.41 hours per week that Claimant worked over 40 hours ($74.17), the ALJ determines based on the persuasive testimony and evidence that Claimant's average weekly wage prior to her injury was $654.17. This average weekly wage determination times 52 weeks per year ($34,016.84) is also consistent with the amount listed on Employer's records as Claimant's annual salary ($33,930.00). *See* Exhibit J.

5. Claimant's duties as assistant manager include opening the restaurant, turning on fryers, preparing food, operating the restaurant, and cleaning.

6. Claimant is required to wear a uniform including jeans/pants, a Qdoba shirt, and non-slip work shoes.

7. On March 25, 2017 Claimant was so employed. Claimant was assigned to the morning shift and opened the restaurant. At approximately 7:30 a.m. Claimant was preparing tortilla chips facing the fryer. As the chips were frying, hot grease splashed outside the fryer and Claimant turned/twisted to her left to grab a towel that was behind her to clean the mess. When she turned her feet were planted on the ground.

8. When she completed this motion her left knee popped, gave out, and she felt immediate pain. She immediately was unable to place weight on her left leg to walk or move.

9. Jeffrey Gerler is a cook at Qdoba and was working the morning shift with Claimant on March 25, 2017. He testified that Claimant was walking normally that morning before the incident, was not limping, and did not appear to be in any pain. He testified that he saw Claimant working at the fryer and saw the incident with her left knee and saw that she was in severe pain, could not walk, and that she left work shortly after. He testified that Claimant was wearing her non-slip shoes and that she didn't slip or fall but twisted when the incident happened.

10. Claimant has had issues with her left knee prior to March 25, 2017. In 2010, Claimant jumped up to touch a sign while out drinking and hyperextended her left knee when she landed.

11. On April 26, 2015 Claimant was evaluated at the Poudre Valley Health emergency department. Claimant reported pain to her left knee, mostly the anterior tibial plateau area in joint line. Claimant reported that she was in a fight with her brother the night prior and that her knee was hyperextended. Claimant reported she was still able to ambulate. Claimant was noted to have decreased range of motion, tenderness on the medial joint line and lateral joint line. It was recommended that Claimant follow up if she did not improve and return to the ER, a primary care provider, or to an orthopedic referral. *See* Exhibit B.

12. On April 21, 2016 Claimant was evaluated at the Poudre Valley Health emergency department. Claimant reported injuring her left knee while wrestling with a friend that day. Claimant reported that she felt a pop. Claimant's exam showed medial and lateral joint line tenderness, laxity with valgus stress, and no endpoint appreciated with Lachman's maneuver. There was suspicion for an MCL and ACL tear and large effusion was noted on the x-ray. Claimant was placed in a knee immobilizer and crutches were provided. Claimant was noted to have been limping. *See* Exhibit B.

13. Claimant's left knee was also evaluated on February 7, 2017 by Erin Schrunk, M.D. Dr. Schrunk noted that Claimant was there for evaluation of intermittent left knee pain and right arm paresthesia. Regarding the knee, Claimant reported that about five years prior she was drinking and jumped landing in a hyperextended position. Claimant reported having pain laterally with no swelling or erythema but that now she had intermittent pain laterally that was alleviated by over the counter medication. Claimant reported that she was applying for a job and wanted to make sure nothing further was going on with her knee. Dr. Schrunk performed a focused exam on the left knee and found no obvious deformity/swelling, no PTP of joint spaces, negative lochman/mcmurray/ant and post drawer tests, and intact distal sensation. *See* Exhibits 10, G.

14. On the morning of March 25, 2017, shortly after the incident, Claimant left Qdoba and went to Poudre Valley Health emergency room and was admitted at approximately 9:08 a.m. Claimant reported that just prior to arrival she hyperextended her left knee. Claimant reported originally injuring her knee about two years ago and that it improved but that she had periodic episodes of knee pain. X-rays performed were negative for fracture. A complete assessment of the knee was not performed due to Claimant's intolerance and guarding. Based on the history, suspicion of meniscal injury was noted as well as differential diagnoses of dislocation and ligamentous injury. Claimant was placed in a knee immobilizer splint and was referred to orthopedics for follow up. *See* Exhibits 7, B.

15. On March 27, 2017 Claimant was evaluated at Orthopedic & Spine Center of the Rockies by Kurt Dallow, M.D. Claimant reported that she had hyperextended her left knee a few years ago and never followed up and had hyperextended it a few times since then. Claimant reported that on March 25, 2017 she twisted her knee while her foot was planted and felt a pop and was unable to bear weight. Dr. Dallow discussed with Claimant that the injury happened at work and that she needed to notify her supervisor and talk with them about whether it should be handled through work comp. *See* Exhibits 8, C.

16. On March 28, 2017 Claimant was evaluated at Concentra by Amber Payne, PA-C. Claimant reported that she twisted her knee on March 25, 2017 while working in the kitchen. Claimant reported that her left knee popped and she was immediately unable to bear weight. Claimant reported pain under the patella and on the medial side. Claimant reported that she didn't know if her knee caught, locked, or gave way because it was too painful to even try to walk on it. PA Payne found effusion at a grade 2-3 and tenderness over the medial joint line and diffusely over the medial knee. PA Payne assessed left knee sprain and swelling of left knee joint. She ordered an MRI of the left knee. *See* Exhibits 9, E.

17. On March 30, 2017 Claimant underwent an MRI of her left knee interpreted by Jamie Colonnello, M.D. In the medial compartment, a complete bucket-handle type tear of the medial meniscus was found involving the body and both horns with a flipped bucket handle fragment into the intercondylar notch and disruption of the

meniscocapsular junction posteriorly and superiorly. A complete rupture of the anterior cruciate ligament was found with no intact fibers. Edema was found surrounding the medical collateral ligament along its proximal one half. Deep fibers to the medial meniscus were thickened and Dr. Colonnello opined that they may be partly torn compatible with a low to intermediate grade sprain. Dr. Colonnello found a large joint effusion and extension into a small popliteal cyst with subcutaneous edema along the anterior aspect of the joint. Dr. Colonnello's impression was: complete rupture of the left knee anterior cruciate ligament; complex bucket handle tear of the left knee medial meniscus with a flipped bucket handle fragment into the intercondylar notch; apparent disruption of the posterior and superior medial meniscal capsular junction; minimal trochlear chondrosis; and large joint effusion with soft tissue swelling surrounding the knee. *See* Exhibits 3, F.

18. On April 4, 2017 Claimant was evaluated by PA Payne. PA Payne discussed the MRI results with Claimant and reported to Claimant that the results were not supported by the mechanism of injury. PA Payne noted that Claimant's swelling had decreased but that she was still wearing a brace and requiring crutches. PA Payne did not perform an examination. PA Payne opined that there was less than 50% medical probability that this was a work related injury. PA Payne told Claimant that she would likely need surgery and was to continue on non-weight bearing status with the use of crutches and a knee brace. Claimant was released from care with instructions to follow up with orthopedics or her primary care provider under her primary insurance. *See* Exhibit E.

19. On April 10, 2017 Claimant was evaluated by David Beard, M.D. Claimant reported that prior the injury at work she was not having problems with pain, swelling, instability, or loss of motion and would regularly participate in physical exercise such as weightlifting. Dr. Beard noted that there was still approximately 2+ knee effusion, some guarding on attempts at Lachman examination making it difficult to assess any type of endpoint, and moderate medial joint line tenderness. Dr. Beard reviewed the MRI from March 30, 2017 that showed a prominent joint effusion present and findings consistent with an ACL complete tear. Dr. Beard noted that he was able to see some of the fibers of the ACL still attached to the tibia and opined that it did not appear to be a chronic tear. He also noted evidence of a displaced bucket handle tear of the medial meniscus displaced into the intercondylar notch and did not see any bone marrow edema on the proximal tibia but did see a very small area of bone marrow edema on the anterior aspect of the medial femoral condyle. Dr. Beard assessed: left knee acute ACL tear, left knee displaced bucket handle medial meniscus tear, and left knee large effusion. Dr. Beard disagreed with PA Payne. Dr. Beard opined that Claimant had a specific documented injury and was completely asymptomatic with the left knee prior to the injury and had persisted to be symptomatic since the time of injury. He recommended proceeding with a left knee ACL reconstruction and attempt at medial meniscus repair. He recommended Claimant continue on crutches in the meantime to avoid further damage. *See* Exhibits 8, C.

20. On May 1, 2017 Claimant underwent left knee surgery performed by Dr. Beard. Dr. Beard performed a left knee arthroscopically assisted anterior cruciate ligament reconstruction and a left knee arthroscopic medial meniscus repair. Dr. Beard noted Claimant's immediate onset of pain following by swelling and instability after a twisting injury on March 25, 2017. In the surgical note, Dr. Beard noted that the ACL was torn and that fibers of the ACL were still visible but it represented a complete tear. *See* Exhibits 6, A.

21. On May 25, 2017 Claimant was evaluated by Dr. Beard. He noted that Claimant could wean out of the left knee brace and crutch over the next several days and that she would be allowed to return to light duty status at work the next week with 25 hours per week gradually increased as tolerated. He recommended she continue to use the brace while at work. *See* Exhibits 8, C.

22. On June 22, 2017 Claimant was evaluated by Dr. Beard. He noted she had been undergoing physical therapy and was no longer using crutches. He noted full knee extension and 130 degrees of flexion on the left compared to 135 degrees on the right. Dr. Beard noted that Claimant would finish formal physical therapy over the next two weeks and then would move to an independent exercise program. *See* Exhibits 8, C.

23. On July 20, 2017 Claimant was evaluated by Dr. Beard. Claimant was noted to be back to full activities at work with a plan to continue working on rehab exercise and progress more to independent stretching. *See* Exhibits 8, C.

24. On September 6, 2017 Dr. Beard provided written medical opinions in response to questions asked of him. Dr. Beard noted that Claimant had been seen first by a non-operative physician at his clinic, Orthopedic & Spine Center of the Rockies, and then was referred to him for further evaluation. Dr. Beard opined to a reasonable degree of medical probability that Claimant suffered a compensable workers compensation injury to her left knee on March 25, 2017. He opined that the mechanism of a twisting-type injury with her foot planted supported the objective findings on MRI of complete anterior cruciate ligament tear, displaced bucket handle meniscus tear, and large joint effusion. Dr. Beard noted Claimant's pre-existing history of knee injuries but found that her most recent examination by Dr. Schrunk on February 7, 2017 showed normal range of motion, no swelling, no deformity, no tenderness to palpation, and no issues with instability. Dr. Beard opined that the twisting is a specific mechanism of damage to the structures involved and that the large joint effusion shown on MRI specifically indicated a more recent injury as opposed to a chronic injury. Dr. Beard opined that PA Heard's opinion that the mechanism of injury could not have caused the objective findings on MRI was incorrect. *See* Exhibits 4, C.

25. Dr. Beard opined that at the time of the May 1, 2017 surgery, he saw the anterior cruciate ligament tear and saw that there were still remaining fibers of the torn anterior cruciate ligament present, typically indicating a more recent injury. Dr. Beard opined that if it were an injury from years ago, the body would tend to reabsorb the fibers of the anterior cruciate ligament, even torn portions, and they would typically see absence

of the ACL. He opined that because they did still see torn fibers of Claimant's ACL, it indicated a more recent injury. Dr. Beard opined that the surgery he performed on May 1, 2017 was reasonable, necessary, and related to Claimant's March 25, 2017 work injury. *See* Exhibit 4.

26. On September 25, 2017 Claimant underwent an independent medical evaluation performed by J. Stephen Gray, M.D. Claimant reported being in the kitchen in her non slip shoes when she turned around to reach for a towel and twisted her knee with a popping sensation and severe pain. Claimant reported that after she had to hop on her right leg. Dr. Gray reviewed medical records and performed a physical exam. Dr. Gray opined that Claimant sustained a compensable injury to her left knee and that Claimant was injured in the course of performing work duties. Dr. Gray noted Claimant's pre-existing injuries and opined they may have left Claimant vulnerable to future injury making Claimant somewhat of an "eggshell" patient. Dr. Gray opined that Claimant had some residual incompletely resolved internal injury to the left knee and clearly some previous ACL injury that was medically probably permanently aggravated by the work related injury on March 25, 2017 which was the straw that broke the camel's back. Dr. Gray opined that a twisting motion with the foot held in place by non-slip footwear could explain a meniscus injury and he cited the medical treatment guidelines. Dr. Gray further opined that with a pre-existing ACL tear, the twisting could have been sufficient to tear some of the remaining ACL fibers, especially with some pre-existing mild instability. Dr. Gray opined that acute damage to the ACL was supported by the presence of an effusion. Dr. Gray opined that the surgical finding of a few remaining ACL fibers supported the notion that there was not a pre-existing complete rupture of the ACL and opined that it was medically probable that a portion of the ACL was acutely injured at the time of the incident in question. Dr. Gray opined that he agreed with Dr. Beard. *See* Exhibits 5, It.

27. Dr. Gray opined that the surgery on May 1, 2017 was reasonable, necessary, and related to the March 25, 2017 work injury. Dr. Gray opined that the work injury worsened an already existing condition and that the abrupt twisting motion caused both permanent worsening of the pre-existing partial ACL tear and caused or permanently worsened a pre-existing partial meniscus tear. Dr. Gray opined that Claimant's condition was aggravated by the work incident and noted that Claimant was working full time without restrictions until March 25, 2017 with no signs of impairment supporting Claimant's contention that she was doing fine until the work incident. *See* Exhibit 5.

28. On August 14, 2017 Claimant underwent an independent medical evaluation performed by Timothy O'Brien, M.D. Claimant reported that she was at the fryer when she turned to the left to reach behind her with her left arm to get a towel and that she felt a pop and had immediate pain in her left lower extremity emanating from the left knee and could not put weight on her left knee. Dr. O'Brien noted three prior right knee injuries. Claimant had an injury in 2010 jumping up to hit a sign and coming down hyperextending the her left knee, that got better in a couple of days. In 2015 Claimant was horsing around with her brother and her left knee gave out on her. Claimant again reported it got better in a couple of days. In February of 2016 Claimant again had her left knee give out on her and was, like the time prior, told to see an orthopedist if it did not get

better. Claimant reported again, that it got better. Claimant reported that the March 25, 2017 injury was different because it had not gotten better. Dr. O'Brien reviewed medical records and performed a physical examination. *See* Exhibit H.

29. Dr. O'Brien opined that Claimant experienced left knee instability on March 25, 2017 as a manifestation of her longstanding and pre-existing ACL insufficiency. Dr. O'Brien opined that the symptoms on that date were not the result of any new tissue breakage or yielding and were not the result of any new injury. Dr. O'Brien opined that the mechanism of injury described was not traumatic enough to result in any ACL tear and/or any bucket handle tear of the medial meniscus and noted that Claimant was merely turning when she felt symptoms in her knee. He opined that Claimant did not slip, fall, was not running, not accelerating or decelerating, and thus that no substantial inertial forces were present. Dr. O'Brien opined that turning to reach a towel was not a traumatic event but a daily activity and that the musculoskeletal system is durable enough to remain healthy with common daily activities such as slightly turning through the knee joints. Dr. O'Brien opined that Claimant's past history of a traumatic injury from jumping and hyperextending her knee was the type of injury mechanism that predates an ACL tear and opined that is where Claimant sustained her ACL injury. Dr. O'Brien noted that once the ACL was torn, Claimant had an unstable knee and opined that Claimant had altered biomechanical forces for a decade which would be expected to result in swelling, giving way, and instability. Dr. O'Brien disagreed with Dr. Beard's statement that Claimant had no prior symptomatology. *See* Exhibit H.

Commented [JME6R1]:
Commented [JME7R1]:

30. Dr. O'Brien opined that the ACL was a very durable and resilient ligament that would take significant force to rupture or tear and that turning back to reach for a towel was not sufficient enough force to cause rupture/tearing. Dr. O'Brien opined that the MRI scan findings were consistent with a chronic ACL rupture, not an acute tear and significantly differed in opinion from Dr. Beard. Dr. O'Brien opined that the residual fibers viewed were 100 percent consistent with a chronic injury and opined that in the thousands of MRI scans of the knee he has seen, including those demonstrating acute tears and chronic tears, Claimant's MRI scan findings were 100 percent consistent with a chronic tear. Dr. O'Brien opined that on March 25, 2017 Claimant's unstable and insufficient ACL gave way which is what ACL deficient knees do and opined that no new injury occurred. *See* Exhibit H.

31. On January 3, 2018 Dr. O'Brien provided an updated report. He stood by the opinion he previously had provided and again disagreed with Dr. Beard's opinion. He noted that he had been able to review the MRI scan and opined that the MRI demonstrated a chronically torn and completely absent ACL, a degenerative and long standing bucket-handle tear, and opined that based on the MRI scan, Claimant's ACL had been absent for quite some time. Dr. O'Brien disagreed with Dr. Beard's opinion that there was a tibial attachment of the ACL and found no tibial attachment. *See* Exhibit L.

32. Claimant submitted a portion of the medical treatment guidelines as evidence. Referring to the rupture or partial rupture of the ACL, the guidelines indicate it may be caused by virtually any traumatic force of the knee but is most often caused by a

twisting or a hyperextension force, with a valgus stress. They go on to indicate that the foot is usually planted and the patient frequently experiences a popping feeling and giving way sensation. *See* Exhibit11.

33. Dr. O'Brien testified at hearing consistent with his reports. He indicated that when an ACL tears it is painful and there is bleeding and a quite swollen knee. He opined that once torn, the ACL will not repair itself and the person will have instability at unpredictable times. Dr. O'Brien opined that if a torn ACL is not repaired a person can live with it and play sports, but that it would be unpredictably symptomatic. Dr. O'Brien opined that the 2010 incident where Claimant jumped and came down wrong on her left knee was consistent with how you can injure an ACL with the hyperextension on foot landing. Dr. O'Brien referred to the records after the 2016 injury where the reports indicated no endpoint in ACL testing, laxity at the knee, and opined that this showed that Claimant's ACL was insufficient in 2016. Dr. O'Brien opined that Claimant had an ACL tear in 2016 and that it would be likely for Claimant to have intermittent pain, swelling, and knee giving way even without provocation or stress due to her underlying condition. Dr. O'Brien opined that there was no tear of the ACL, no tear of the meniscus, and no acute injury on March 25, 2017.

34. Dr. O'Brien opined that the February, 2017 exam was inaccurate since Claimant had a positive Lachman test in 2016 and the ACL cannot repair itself. Dr. O'Brien opined that given the April 2016 injury and findings, it would be very unlikely for Claimant to have had no symptoms until March of 2017 and that the February, 2017 exam and reports indicated ongoing issues with the left knee. Dr. O'Brien opined that a lot of force is required to tear an ACL and that here the mechanism of injury here was insufficient to cause an ACL tear. He opined that Claimant's ACL was completely apart with no fibers intact. He opined that the meniscular capsular junction showed a complete tear and that there was chondral fissuring which tells us there is arthritis and that it got softer, frayed, fractured with chronic tears. Dr. O'Brien opined that the arthritis shown on the MRI just a few days after the alleged injury takes years to develop and is related to Claimant's chronic ACL insufficiency. Dr. O'Brien opined that someone can have a partial tear that would cause instability but he opined that in Claimant's case, the March 25, 2017 manifestation was the natural progression of Claimant's underlying condition. Dr. O'Brien opined that Claimant was a candidate for surgery in 2010 and that there was no aggravation at work on March 25, 2017.

35. Claimant testified at hearing. She indicated that immediately after the incident on March 25, 2017 she could not put any pressure on her left leg at all. Claimant testified that she told providers of her prior issues with her left knee, but testified that her knee had always gotten better within a week so she had never seen an orthopedist before. Claimant testified that prior to March 25, 2017 she was able to play with her kid, walk her dogs, work 45 hours per week, and was doing fine. She indicated that after the three prior instances of left knee pain and problems in 2010, 2015, and 2016, her knee and symptoms always got better so she never sought further evaluation. Claimant testified that prior to March 25, 2017 she could walk, run, work out (including squats and lunges), work full duty, and had excellent strength. Claimant testified that in 2017 she had applied

for a different job requiring a physical exam and that her left knee was tested and no treatment was recommended for her. Claimant testified that after March 25, 2017 she had sharp pain, burning, stabbing, no strength, and limited movement.

36. Claimant told providers in March of 2017 about prior problems with her left knee. Claimant testified that in interrogatories she didn't list the prior problems/injuries because she didn't know the exact prior injury dates until this case happened.

37. Claimant, overall, is found credible and persuasive. Her testimony surrounding her level of function prior to March 25, 2017 is consistent with the February, 2017 medical report and consistent with the testimony of a co-worker.

38. The weight of the evidence supports the credible opinions of Dr. Gray and Dr. Beard.

39. As a result of her injury, Clamant missed some work between March 25, 2017 and April 16, 2017. As a result of her injury, Claimant was completely off work from April 17, 2017 to May 21, 2017. Claimant then returned to work, but between May 22, 2017 and June 18, 2017 she worked fewer than her average weekly hours prior to her injury. Claimant was back to full time work, and back to her average working hours on June 19, 2017.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo.

275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment was proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. Claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established, by a preponderance of the evidence that she sustained a compensable work related injury on March 25, 2017. The symptoms she experienced were not just the natural progression of a pre-existing condition. Although Claimant had prior injuries to her left knee in 2010, 2015, and 2016, prior to March 25, 2017 Claimant was doing well and able to remain active with exercise and with her full time work schedule. Although Claimant likely had partial tears and insufficiencies in her left knee prior to March 25, 2017, the ALJ finds the opinion of Dr. Gray to be credible and persuasive that the prior ACL injury was medically probably permanently aggravated on March 25, 2017. Dr. Gray credibly opined that the twisting incident at work was sufficient to tear some remaining ACL fibers, especially with some pre-existing mild instability in the left knee. Here, Claimant had instability and prior issues with her left knee. However,

more likely than not, the injury on March 25, 2017 tore remaining fibers and caused an acute injury. The opinion of Dr. Gray is supported by the presence of effusion on MRI. The opinion is also consistent with opinions provided by Dr. Beard. Dr. Beard performed the surgery on May 1, 2017 and saw remaining fibers of the torn ACL during surgery. Dr. Beard opined that if the injury had been chronic, even the remaining fibers would have been reabsorbed by the body and thus opined that a more recent tear and injury had occurred. Dr. Beard's opinion that Claimant sustained a compensable twisting type injury with a planted foot is credible and persuasive and consistent with the large joint effusion on MRI.

Claimant had an acute inability to bear weight on her left leg on March 25, 2017 after twisting with her feet planted at work. Prior to this date, Claimant was active and working full duty with no restrictions which is supported by her testimony, her co-worker's testimony, and her wage records. Although Claimant did not initially disclose her prior injuries in some reports and in her recorded statement, Claimant's consistently reported pre-existing left knee issues to her medical providers including to Poudre Valley Health, Dr. Dallow, Dr. Beard, Dr. O'Brien, and Dr. Gray. Claimant's testimony surrounding the condition of her knee prior to March 25, 2017 is credible and consistent with the weight of the evidence. Claimant had previously hyperextended her left knee and recovered each time within a week. Here, Claimant did not recover like she had in the past. The ALJ finds, more likely than not, that Claimant sustained an acute injury and additional tearing on March 25, 2017 when she turned with her feet planted, felt a popping sensation in her left knee, and had immediate pain. This injury aggravated her underlying condition and caused disability and the immediate need for medical treatment. The opinions of Dr. Gray and Dr. Beard are found persuasive and consistent with the overall weight of the evidence. Therefore, Claimant has met her burden to establish a compensable injury.

Reasonable and Necessary Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical treatment for her left knee. Claimant's underlying left knee condition was aggravated by work producing disability and the need for medical treatment including surgery. Claimant has established that the medical treatment received to date, including surgery performed by Dr. Beard, was reasonable and necessary to cure and relieve her of the effects of the industrial injury.

Average Weekly Wage

Section 8-42-102(2) C.R.S. requires the ALJ to base claimant's AWW on her earnings at the time of injury. Under some circumstances, the ALJ may determine a claimant's TTD rate based upon her AWW on a date other than the date of injury. *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Section 8-42-102(3), *supra*, grants the ALJ discretionary authority to alter that formula if for any reason it will not fairly determine claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective of calculating AWW is to arrive at a fair approximation of claimant's wage loss and diminished earning capacity. *Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240-475 (ICAO May 7, 1997).

As found above, in the twelve week period prior to the injury, Claimant worked on average 43.41 hours per week. This is consistent with her testimony that she typically worked 45 hours per week. The wage records also list her as a non-exempt employee, requiring pay at time and a half for hours over 40 per week. The wage records show an hourly wage of $14.50. The ALJ concludes that the persuasive evidence establishes an average weekly wage of 40 hours x $14.50 plus 3.41 hours x $21.75 for a total average weekly wage rate of $654.17. As found above, this average weekly wage determination is consistent with Employer's wage records documenting an annual salary of $33,930 (although Claimant is not paid salary, the average weekly wage calculated by the ALJ multiplied by 52 weeks comes out very close to the annual salary number listed by Employer in wage records).

The parties appear to base their average weekly wage calculations on the amount listed on Employer wage records as "total earning amount." However, the ALJ is unable to figure out how the "total earning amount" was calculated as it does not match the listed hourly rate times the number of hours worked. The persuasive evidence is that Claimant worked 43.41 hours per week at $14.50 per hour plus time and a half for 3.41 hours and that her average weekly wage is thus $654.17.

Temporary Total Disability

To prove entitlement to TTD benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *Anderson v. Longmont Toyota,* 102 P.3d 323 (Colo. 2004); *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995); *City of Colorado Springs v. Industrial Claim Appeals Office,* 954 P.2d 637 (Colo. App. 1997). Section 8-42-103(1)(a), C.R.S., requires the claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). TTD benefits ordinarily continue until one of the occurrences listed in § 8-42-105(3), C.R.S.; *City of Colorado Springs v. Industrial Claim Appeals Office, supra*. The existence of disability

presents a question of fact for the ALJ. There is no requirement that the claimant produce evidence of medical restrictions imposed by an ATP, or by any other physician. Rather, lay evidence alone may be sufficient to establish disability. *Lymburn v. Symbios Logic,* 952 P.2d 831 (Colo. App. 1997).

Here, Claimant has established by a preponderance of the evidence an entitlement to temporary total disability benefits from April 17, 2017 through May 21, 2017, and for a period of five weeks. At this time, Claimant was under the care of an orthopedic surgeon who recommended continued use of crutches, performed surgery, and monitored her surgical recovery. Wage records and testimony shows that Claimant had impairment of wage earning capacity due to her inability to resume her work during this time related to her medical incapacity. Claimant has established an entitlement to TTD benefits during this five week period. As of May 22, 2017, the evidence established that Claimant returned to modified employment and her entitlement to TTD ended.

Temporary Partial Disability

An employee is entitled to receive sixty-six and two-thirds percent of the difference between the employee's average weekly wage at the time of the injury and the employee's average weekly wage during the continuance of the temporary partial disability. As found above, on June 19, 2017 Claimant was able to resume her regular schedule and normal job duties and her temporary partial disability was no longer continuing. However, prior to June 19, 2017 Claimant had two periods of time where she was temporarily partially disabled and unable to earn her normal average weekly wage. These periods include: March 25, 2017 through April 16, 2017 and May 22, 2017 through June 18, 2017.

From the wage records submitted, it is unclear to the ALJ what wages Claimant was paid during these time periods as the records reflect a "total earning amount" that does not match the hourly wage rate times the number of hours worked. Claimant has established, by a preponderance of the evidence, that she was temporarily and partially disabled during these time periods and that she is entitled to TPD benefits. However, the ALJ has insufficient evidence to calculate the exact amount owing based on the evidence and records submitted.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that she sustained a compensable injury to her left knee on March 25, 2017.

2. Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical treatment for her left knee, including the May 1, 2017 left knee surgery performed by Dr. Beard.

3. Claimant's average weekly wage is $654.17.

4. Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from April 17, 2017 through May 21, 2017.

5. Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability (TPD) benefits from March 25, 2017 through April 16, 2017 and from May 22, 2017 through June 18, 2017.

6. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 22, 2018

/s/ Michelle E. Jones

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered compensable back injuries during the course and scope of his employment with Employer on February 22, 2017.

2. Whether Claimant has proven by a preponderance of the evidence that he is entitled to receive causally related, reasonable and necessary medical treatment for his February 22, 2017 injuries.

FINDINGS OF FACT

1. Claimant worked for Employer at a company called ProDrivers. His job duties involved driving a truck and delivering materials.

2. Claimant testified that on February 22, 2017 he was asked to deliver steel electrical piping to a job site. When he arrived at the location he unloaded the pipes and developed pain in his lower back area. Claimant assumed that his symptoms would resolve without treatment.

3. Transportation Supervisor Mitchell Smith testified that Claimant did not report any industrial injury to him on Wednesday, February 22, 2017. Instead, Claimant completed his shift and performed his regular job duties on February 23-24, 2017. Claimant called in sick with the flu on February 27-28, 2017.

4. On Saturday, March 4, 2017 Claimant and his wife were cleaning the office of his chiropractor Chris Pellow, D.C. Claimant had been receiving chiropractic treatment from Dr. Pellow for both his cervical and lumbar spine since 2009. Claimant climbed on a traction machine and laid on his stomach. When the machine lowered Claimant suffered a sharp pain in his lower back area.

5. A review of Claimant's personnel records reflects that his employment status with Employer changed on March 1, 2017 to "available." Thereafter, Claimant's job status was changed to "reason ended. Quit without notice end day: 03/01/2017 AE/ss [Operations Dispatcher] Jennifer Warren." On March 6, 2017 "this employee's status was changed to do not use – discharged for cause." Ms. Warren testified that Claimant did not report the February 22, 2017 incident at any time from February 22, 2017 through March 6, 2017.

6. Compliance Manager Amanda Rice testified that she is responsible for handling Workers' Compensation claims for Employer. She explained that Claimant reported his February 22, 2017 injury over the phone and then in person the following day

on March 13, 2017. Claimant specified in an injury report that he injured his back while unloading pipes on February 22, 2017.

7. On March 14, 2017 Claimant visited Authorized Treating Physician (ATP) Aviation & Occupational Medicine (Aviation) for an evaluation. Claimant reported that he was lifting electrical pipe off of a flatbed truck for about one to one and one-half hours. He developed pain in his lower back, mid-back and neck areas. After spinal x-rays did not reveal any acute injuries, Claimant was diagnosed with cervical, thoracic and lumbar strains. Amelia Carmosino, P.A-C determined that there was a greater than 51% probability that Claimant's injuries were caused by his work activities. She referred Claimant for 12 physical therapy sessions.

8. On April 7, 2017 Claimant began work as a Meat Cutter with Sam's Wholesale Club. In performing his job duties Claimant regularly lifted between 30 and 90 pounds.

9. On April 26, 2017 Claimant visited Rehabilitation Associates of Colorado (RAC) and was examined by Franklin Shih, M.D. Claimant reported "initial discomfort in the lower back area after unloading pipe off of a truck in February of this year. The back pain progressed and about a week later he was seen by his chiropractor and with traction had an acute increase in pain with extension into the mid and upper back area." Dr. Shih noted that Claimant's condition had improved by about 75% before reaching a plateau. He commented that Claimant's prior symptoms predominantly involved lower back discomfort and his pain diagram showed diffuse posterior axial complaints. Dr. Shih did not recommend injections or surgical intervention but suggested acupuncture.

10. Claimant subsequently continued regular treatment with Aviation. His condition improved significantly during the period.

11. On May 23, 2017 Claimant visited Jennifer Voag, P.A-C at Aviation for an examination. He reported that he was 95% better with minimal to no pain. He was also "doing well" with full duty employment. P.A-C Hoag concluded that Claimant had reached Maximum Medical Improvement (MMI) and released him to full duty employment with no impairment or work restrictions. She specified that Claimant did not require medical maintenance treatment.

12. On June 21, 2017 Claimant returned to Aviation for an evaluation. He reported lower back symptoms as well as pain and weakness radiating down his right leg. Gary Childers, M.D. diagnosed Claimant with cervical, thoracic and lumbar strains. He recommended a lower back MRI. Dr. Childers noted that Claimant remained at Maximum Medical Improvement (MMI) pending the MRI findings.

13. Claimant subsequently continued to receive medical treatment from Aviation. Treatment notes reflect that Claimant's February 22, 2017 case was reopened and he received work restrictions involving lifting, carrying, pushing and pulling.

14. On August 2, 2017 Claimant returned to RAC and visited Nicholas Olsen, M.D. Dr. Olsen noted that Claimant's July 31, 2017 lumbar MRI revealed moderate facet

arthrosis at his L4-L5 and L5-S1 nerve roots. He also remarked that Claimant had a right foraminal disc protrusion at L5-S1. Dr. Olsen recommended a right L5-S1 transforaminal epidural steroid injection (ESI). The September 12, 2017 ESI yielded pain relief for approximately two days.

15. On November 13, 2017 Claimant underwent an independent medical examination with Allison M. Fall, M.D. Claimant reported that on February 22, 2017 he unloaded steel electrical piping at a job site. While completing the task he developed weakness and pain in his lower back area. Claimant completed his shift and performed his regular job duties on February 23-24, 2017. Claimant called in sick with the flu on February 27-28, 2017. Employer called Claimant on Wednesday March 1, 2017 because he had been sick. Claimant responded that, because the job was very physical and he was 54 years old, he might look for another job. Claimant explained to Dr. Fall that on Saturday, March 4, 2017 he and his wife were cleaning the office of Dr. Pellow. Claimant climbed on a traction machine and laid on his stomach. When the machine lowered he suffered a sharp pain in his lower back area. Claimant exclaimed to his wife "Mary, I think I hurt myself really bad." Claimant subsequently obtained conservative medical treatment including pain medications and physical therapy. He left his job with Employer and obtained a position as a Meat Cutter with Sam's Club. Claimant later developed worsening symptoms including severe right leg pain.

16. After reviewing Claimant's medical records and conducting a physical examination Dr. Fall diagnosed Claimant with an exacerbation of preexisting lower back pain as a result of repetitive lifting at work on February 22, 2017. Dr. Fall explained that Claimant's initial back complaints "were appropriately treated successfully and he was released at MMI with no impairment." She characterized Claimant's February 22, 2017 symptoms as a temporary aggravation that resolved by the time he reached MMI on May 23, 2017. Any treatment after MMI was not related to the February 22, 2017 incident. Dr. Fall explained that Claimant also suffered a "new right lower extremity radiculopathy" that was unrelated to the February 22, 2017 incident. She detailed that after Claimant began working as a Meat Cutter he developed worsening symptoms and the acute onset of right leg pain at the end of June 2017. Dr. Fall emphasized that Claimant's right leg symptoms were not caused by the February 22, 2017 incident.

17. On December 7, 2017 the parties conducted the pre-hearing evidentiary deposition of Dr. Fall. Dr. Fall maintained that Claimant suffered a temporary exacerbation of his preexisting lower back condition as a result of repetitive lifting while working for Employer on February 22, 2017. However, he reached MMI by May 23, 2017 with no permanent impairment. Dr. Fall explained that Claimant suffered from chronic lower back pain as reflected in his long-term visits to a chiropractor. She detailed that after Claimant began working as a Meat Cutter he developed the acute onset of right leg pain at the end of June 2017. Dr. Fall concluded that Claimant's right leg symptoms were not caused by the February 22, 2017 incident.

18. On December 29, 2017 the parties conducted the pre-hearing evidentiary deposition of Dr. Childers. Dr. Childers explained that he first examined Claimant on March 24, 2017. He remarked that Claimant's cervical, thoracic and lumbar spines were

normal except for complaints of tenderness in the lumbar spine. There were no objective abnormalities and Claimant exhibited full range of motion. Dr. Childers released Claimant to regular duty employment on March 31, 2017 based on Claimant's request because he was beginning a new job as a Meat Cutter. Dr. Childers noted that Claimant's condition improved through May 23, 2017 when P.A-C Voag, placed Claimant at MMI. He commented that Claimant's condition was markedly worse by June 21, 2017 but did not comment on any source of the worsening.

19. Claimant has demonstrated that it is more probably true than that he suffered compensable back injuries during the course and scope of his employment with Employer on February 22, 2017. Initially, Claimant had been receiving chiropractic treatment from Dr. Pellow for both his cervical and lumbar spines since 2009. Claimant explained that on February 22, 2017 he was unloading electrical pipes at a job site and developed pain in his lower back area. Claimant completed his work shift and did not report an injury. He subsequently suffered a sharp pain to his lower back while on a chiropractic table on February 4, 2017 and ceased working for Employer on March 6, 2017. Claimant finally reported his February 22, 2017 injury to Employer over the phone on March 12, 2017 and in-person on the following day. On March 14 Claimant visited ATP Aviation for medical treatment. P.A-C Carmosino determined that there was a greater than 51% probability that Claimant's back injuries were caused by his work activities. After Claimant was referred to Dr. Shih he continued to receive treatment from Aviation and his condition improved. By May 23, 2017 P.A-C Hoag concluded that Claimant had reached MMI and released him to full duty employment with no impairment or work restrictions. She specified that Claimant did not require medical maintenance treatment.

20. Dr. Fall explained that Claimant suffered from chronic lower back pain as reflected in his long-term visits to a chiropractor. She persuasively maintained that Claimant suffered a temporary exacerbation of his preexisting lower back condition as a result of repetitive lifting while working for Employer on February 22, 2017. However, he reached MMI by May 23, 2017 with no permanent impairment. Dr. Fall characterized Claimant's February 22, 2017 symptoms as a temporary aggravation that resolved by the time he reached MMI on May 23, 2017. Based on Claimant's testimony, the medical records from Aviation and the persuasive opinion of Dr. Fall, Claimant suffered an exacerbation of his preexisting lower back condition while working for Employer on February 22, 2017. Claimant's work activities on February 22, 2017 aggravated, accelerated or combined with his preexisting back condition to produce a need for medical treatment.

21. Claimant has proven that it is more probably true than not that he was entitled to receive causally related, reasonable and necessary medical treatment for his February 22, 2017 back injuries until he reached MMI on May 23, 2017. However, the medical treatment that Claimant received after he reached MMI was not causally related to his work activities. Claimant initially obtained authorized medical treatment through Aviation and referrals. The treatment significantly improved his condition and he reached MMI on May 23, 2017. Claimant subsequently returned to Aviation, his claim was reopened and he received additional treatment.

22. Dr. Childers noted that Claimant's condition improved through May 23, 2017 when he reached MMI. He commented that Claimant's condition was markedly worse by June 21, 2017 but did not mention the source of the worsening. Dr. Fall persuasively detailed that after Claimant began working as a Meat Cutter he developed the acute onset of right leg pain at the end of June 2017. She concluded that Claimant's right leg symptoms were not caused by the February 22, 2017 incident. The medical records and persuasive opinion of Dr. Fall demonstrate that Claimant's medical treatment subsequent to May 23, 2017 was not related to his February 22, 2017 work activities. Accordingly, Claimant's request for medical benefits after May 23, 2017 is denied and dismissed.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered compensable back injuries during the course and scope of his employment with Employer on February 22, 2017. Initially, Claimant had been receiving chiropractic treatment from Dr. Pellow for both his cervical and lumbar spines since 2009. Claimant explained that on February 22, 2017 he was unloading electrical pipes at a job site and developed pain in his lower back area. Claimant completed his work shift and did not report an injury. He subsequently suffered a sharp pain to his lower back while on a chiropractic table on February 4, 2017 and ceased working for Employer on March 6, 2017. Claimant finally reported his February 22, 2017 injury to Employer over the phone on March 12, 2017 and in-person on the following day. On March 14 Claimant visited ATP Aviation for medical treatment. P.A-C Carmosino determined that there was a greater than 51% probability that Claimant's back injuries were caused by his work activities. After Claimant was referred to Dr. Shih he continued to receive treatment from Aviation and his condition improved. By May 23, 2017 P.A-C Hoag concluded that Claimant had reached MMI and released him to full duty employment with no impairment or work restrictions. She specified that Claimant did not require medical maintenance treatment.

8. As found, Dr. Fall explained that Claimant suffered from chronic lower back pain as reflected in his long-term visits to a chiropractor. She persuasively maintained that Claimant suffered a temporary exacerbation of his preexisting lower back condition as a result of repetitive lifting while working for Employer on February 22, 2017. However, he reached MMI by May 23, 2017 with no permanent impairment. Dr. Fall characterized Claimant's February 22, 2017 symptoms as a temporary aggravation that resolved by the time he reached MMI on May 23, 2017. Based on Claimant's testimony, the medical

records from Aviation and the persuasive opinion of Dr. Fall, Claimant suffered an exacerbation of his preexisting lower back condition while working for Employer on February 22, 2017. Claimant's work activities on February 22, 2017 aggravated, accelerated or combined with his preexisting back condition to produce a need for medical treatment.

Medical Benefits

9. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

10. As found, Claimant has proven by a preponderance of the evidence that he was entitled to receive causally related, reasonable and necessary medical treatment for his February 22, 2017 back injuries until he reached MMI on May 23, 2017. However, the medical treatment that Claimant received after he reached MMI was not causally related to his work activities. Claimant initially obtained authorized medical treatment through Aviation and referrals. The treatment significantly improved his condition and he reached MMI on May 23, 2017. Claimant subsequently returned to Aviation, his claim was reopened and he received additional treatment.

11. As found, Dr. Childers noted that Claimant's condition improved through May 23, 2017 when he reached MMI. He commented that Claimant's condition was markedly worse by June 21, 2017 but did not mention the source of the worsening. Dr. Fall persuasively detailed that after Claimant began working as a Meat Cutter he developed the acute onset of right leg pain at the end of June 2017. She concluded that Claimant's right leg symptoms were not caused by the February 22, 2017 incident. The medical records and persuasive opinion of Dr. Fall demonstrate that Claimant's medical treatment subsequent to May 23, 2017 was not related to his February 22, 2017 work activities. Accordingly, Claimant's request for medical benefits after May 23, 2017 is denied and dismissed.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

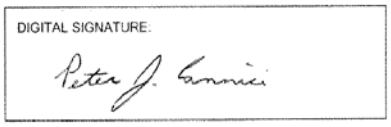
1. Claimant suffered work-related injuries to his back on February 22, 2017.

2. Claimant was entitled to receive medical treatment for his February 22, 2017 back injuries until he reached MMI on May 23, 2017. However, the medical treatment he received after he reached MMI was not causally related to his work activities.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: February 7, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Has Claimant shown, by clear and convincing evidence, that the DIME opinion of Dr. Tyler has been overcome, on the issue of MMI, and therefore, causation?

II. If the DIME has not been overcome, has Claimant's condition worsened after MMI, such that his claim should be reopened?

III. Has Claimant shown, by a preponderance of the evidence, that he is entitled to medical benefits, in the form of cervical spine surgery?

IV. Has Claimant shown, by a preponderance of the evidence, that he is entitled to TTD benefits, effective December 8, 2017, as a result of his worsening condition?

STIPULATIONS

I. The parties agreed that the issues of Permanent Partial Disability and Permanent Total Disability were bifurcated from this hearing, and held in abeyance, pursuant to a Prehearing Conference Order dated October 24, 2017. Further, Claimant has admitted to the Average Weekly Wage as admitted by Respondents, and wishes to hold the issue of disfigurement in abeyance. These agreements were all adopted by the ALJ.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant worked for Employer as a Maintenance Technician at Tierra Vista Communities. On November 22, 2013 Claimant was repairing a section of the sliding garage door when he fell approximately 3 feet from a platform ladder, striking primarily his left side of his body.

2. Claimant was initially treated by the Peterson Air Force base fire department and by personnel from American Medical Response. Claimant's entire spine was immobilized as he was placed on the back board with straps. He was also placed in a cervical collar as "Fire stated that pt was having c-spine neck pain, left shoulder pain, right knee pain, and head pain." (Ex. 1, pp. 2-3).

3. Claimant underwent initial diagnostic testing including a CT scan of the cervical spine which showed an absence of any acute fracture or subluxation. It was noted by his emergency providers that he had a mild T9 compression fracture of indeterminate age. (Ex. 2, p. 31). Claimant's initial diagnosis was a left shoulder strain and a right pinky finger abrasion. After physical therapy Dr. Randall Jones (with Concentra) placed Claimant at MMI with no impairment effective December 13, 2013. (Ex. K, p. 88-89).

Dr. Jones noted in his report that "patient is "100%" back to normal. Patient has been working their (sic) full duty. Patient has not been taking their meds because his condition improved. Patient has had physical therapy and feels better…' (Ex. 3, p. 71). (It is duly noted that Claimant testified that he never told Dr. Jones these things).

4. Claimant went without treatment for almost one year, but followed-up with Dr. Jones on November 10, 2014. According to Claimant, during this timeframe he went to his personal physician, Dr. Robert Swanson, who advised him to follow with Dr. Jones. During this visit, Claimant complained of shoulder pain, but *denied* neck problems, except some left neck pain with shoulder motion. (Ex. 3, p. 69). This produced a recommendation for an MRI scan of the left shoulder by Dr. Wiley Jinkins. Claimant was then diagnosed with subacromial impingement syndrome with a partial thickness rotator cuff tear. (Ex. K, pp. 89-90).

5. An MRI of the cervical spine was performed on December 18, 2014. The pertinent findings for that exam were:

1. Mid and lower cervical *degenerative* change, greatest at C6-C7……

4. *Possible mild subacute* soft disc at C6-C7, *more likely chronic.* (Ex. F, p. 4)(emphasis added).

6. Upon questioning, Dr. Jones responded by stating that it was a greater than 50% likelihood claimant's left shoulder pain was related to the work injury, but nothing in his record review would indicate claimant's back, head or neck related to the work injury. (Ex. K, p. 90).

7. Dr. Wiley Jinkins, MD, initially treated Claimant's left shoulder with injections, but Claimant also underwent a second MRI indicating the shoulder pathology had progressed. Dr. Jinkins performed the arthroscopic repair of claimant's left shoulder on October 23, 2015. If Claimant had made cervical spine pain complaints while treating with Dr. Jinkins, Dr. Jinkins testified that would have referenced this in his reports. No such references exist in his reports.

8. Claimant was placed at MMI by Dr. Jones, effective May 20, 2016 and provided with a 20% scheduled impairment. Respondents filed an Amended Final Admission of Liability dated June 12, 2016 in accordance with the MMI opinion and impairment rating. (Ex. A).

9. Claimant initiated the DIME process which was conducted by Dr. John Tyler, MD. Dr. Tyler found the claimant was at MMI, effective July 14, 2016. Dr. Tyler provided Claimant with an 18% left upper extremity impairment. Respondents filed a Final Admission of Liability on February 1, 2017 accordance with Dr. Tyler's opinions. (Ex. D).

10. In assessing whether Claimant received any impairment to the cervical spine due to the injury Dr. Tyler found that:

> I do not find clear and convincing evidence that the patient had an *injury* to the cervical spine. I base this not only on the medical record review of the physician's notes but also on the forms completed by the patient and each of these forms show that his pain symptomatology is well-localized to the left shoulder and the patient himself does not even mark the cervical spine is an area of pain complaint or concern. (emphasis added).

During the examination of Claimant's cervical spine, Dr. Tyler found normal alignment with no segmental dysfunctions, no evidence of localized spasm or trigger points, with only a few localized trigger points within the left infraspinatus, rhomboid minor and superior trapezius. (Ex. 8, p. 193).

11. Claimant underwent an independent medical examination on June 30, 2016 with Dr. Lawrence Lesnak. In Dr. Lesnak's report Claimant denies posterior neck symptoms. On physical examination, Claimant had full range of motion in the cervical spine in all planes, without reproduction of any symptoms. Provocative testing of Claimant's cervical spine was negative, and palliative testing of claimant cervical spine produced no symptoms. (Ex. H, p.59, 69). Dr. Lesnak performed a Distress and Risk Assessment Method (DRAM) evaluation of Claimant. This showed that Claimant had a significant degree of psychological factors influencing his symptoms. In Dr. Lesnak's estimation, Claimant has a very disabled viewpoint. Id at 57.

12. Claimant returned to Dr. Jinkins on January 18, 2017. The hand-written notes accompanying Dr. Jinkins' narrative report indicate; "(L) shoulder, headache & neck pain. Increased neck pain." (Ex.4, p. 96). Dr. Jinkins injected the shoulder and recommended a repeat MRI.

13. An MRI of the cervical spine was performed on March 23, 2017. Dr. Jinkins reviewed the results on April 4, 2017; "…There was a large disc herniation at C6-C7, which is causing moderate to severe bilateral foraminal stenosis, being more symptomatic on the left than the right, with the disc herniation effacing the thecal sac in close proximity to the cervical spinal cord. He indicated that overall, there has not been a great deal of change as far as symptoms are concerned. He rates his pain level in the neck and trapezius area as a '6' on a scale of 1-10 and his shoulder as well. The pain radiates all the way down his left arm into the hand." (Ex. 4, p. 89).

14. Dr. Jinkins continued; "Physical examination revealed provocative testing for impingement still to be positive, however, more significantly, there does appear to be some slight triceps weakness on the left as compared to the right, which would be a corresponding spinal nerve being impinged. Rotation of the cervical spine elicited discomfort as well." Id.

15. Dr. Jinkins recommended a neurosurgical consultation, "…insomuch that he does have a significant disc herniation, as noted above. He indicated that prior to his fall at work, he had no problems with his cervical spine. Since that time, his symptoms have not abated, but in actuality have progressed…" (Id at p. 90).

16. Claimant saw neurosurgeon Dr. Manon on July 24, 2017. He reported; "…The patient presents for a clinic visit today regarding the cervical spine. He had surgery performed of the left shoulder by Dr. Jenkins [sic] in 2015 for 'bone spurs.' Despite successful surgery he continued to have radiating pain originating in the shoulder and radiating to the neck. Additionally, he reported radiculopathy extending from the base of the neck [on] the left down the shoulder, biceps, forearm, and third, fourth and fifth digits…He reports some limited range of motion of the neck with precipitating neck pain upon flexion and rotation towards [the] left. Also, rotation towards [the] left precipitates his left arm pain…" (Ex. 5, p. 142).

17. On physical examination of the cervical spine, Dr. Manon found "diffuse pain elicited along the cervical paraspinal musculature bilaterally, trapezius, and shoulder. ROM [range of motion] limited with flexion and extension, rotation…" (Id.) Dr. Manon reviewed the MRI findings and concluded, "…This is a 60 year old gentleman with a chronic history of left upper extremity radiculopathy secondary to a prominent C6-C7 disc bulge or herniation with associated significant neural foraminal stenosis. There is advanced cervical spondylosis associated with this. The patient will be best treated with surgical discectomy and artificial disc replacement versus a cervical fusion…" (Ex. 5 at 144).

18. Dr. Jinkins again saw Claimant on July 26, 2017. He reported, "…He did see Dr. Manon, who felt that he is a candidate for decompression at level C6-C7. He is actually scheduled for the surgery on his cervical spine on Tuesday, 08/01/17. He indicated that overall, *there has not been any notable change as far as his neck* and left arm are concerned…Physical examination revealed there to be tenderness in the paraspinous musculature, left and right...I would recommend proceeding with this surgical procedure, as recommended by Dr. Manon…" (Ex. 4, p. 87)(emphasis added).

19. Dr. Manon submitted a request for authorization of cervical spine surgery to Insurer on July 27, 2017. (Ex. 5, p.141). Insurer denied the request on August 2, 2017. (Id. at 140).

20. Dr. Jinkins testified by deposition as an expert in orthopedic surgery on December 4, 2017. Dr. Jinkins explained that Concentra referred Claimant to him only for evaluation and treatment of the shoulder injury, and that the shoulder was the only injury he was authorized to treat. Dr. Jinkins explained that the lack of reference to cervical spine complaints in some of his reports was due to Concentra's policy of allowing him to treat only the shoulder. (Dr. Jinkins depo pp. 17-18)

21. Dr. Jinkins explained that when he placed Claimant at MMI, it was for the shoulder injury, not the neck injury:

> *Q* The maximum medical improvement status for Mr. Romero, if the – is this just maximum medical improvement in your opinion relative to the

left shoulder that you were treating or is this maximum medical improvement for the injury?

A No, this is just the shoulder.

Q Is that ordinarily how you would evaluate a worker for a work injury, is to offer maximum medical improvement for just the component of injury that you're evaluating?

A Yes, that's – that's the way it was recommended that it be done from Concentra.

Q From Concentra?

A Yes.

Q Okay.

A Once again, I was not treating him for the cervical problem at that time. (Dr. Jinkins depo p. 36).

22. Dr. Jinkins testified that the work injury served to aggravate Claimant's cervical spine degenerative condition:

Q The diagnostic testing for Mr. Romero, at least as far as the Penrad Imaging study shows, has degenerative changes identified in the MRI. Would you agree with that?

A It did, yes.

Q Including bony formations that are working in concert with a potential disc to create impingement, correct?

A Correct.

Q If this is identified in the report as chronic in nature, which we've read, do you disagree with that radiologist's interpretation of this condition as chronic?

A No, I do not. In other words, the injury which he – which was incurred did not cause the degenerative condition. It was – it was there previously. It preexisted, but it did serve to aggravate it.

Q Okay. So, in your opinion, the degenerative condition predates injury, but injury happens and creates symptomatology in the neck, working together with that degenerative condition?

A Yes, sir. The neck is inherently close to the shoulder or the muscles that operate the shoulder do originate in the cervical region, the scapular region. And so they can be interrelated. (Dr. Jinkins depo. pp. 57-58)

Q You talked about the degenerative condition not being caused by Mr. Romero's work injury, but it being aggravated. Could you tell us how that happened?

A Yes. This is not uncommon, that we see people -- older people in the older people workforce where -- who will have pre-existing degenerative arthritis, most commonly seen probably in the knees, who are completely asymptomatic barring an injury. The injury can aggravate this underlying, silent arthritis and cause it to become symptomatic. Also an injury can accelerate the progression of the arthritic condition if it's a significant trauma.

Q And do you feel that's what happened in Mr. Romero's case?

A He's significantly symptomatic now with regard to the cervical region, probably more so than he was early on, so it is *probably a progression.* (emphasis added). (Dr. Jinkins depo p. 67).

23. Dr. Jinkins testified that Claimant's cervical spine condition has worsened:

Q Since the report in which it appears you first documented cervical spine problems, that being December 23, 2014, from then until the time you most recently saw Mr. Romero, has his cervical spine condition worsened?

A It seems to be a preponderance of his symptoms at the present time. It does appear that it has progressed, because this is his main complaint at the present. (Dr. Jinkins depo p. 71).

24. Dr. Tyler was deposed on December 8, 2017. Dr. Tyler further explained at his deposition what he meant by a cervical *injury* during his deposition the following:

Q. And basically you found - - or it's your opinion that there was no cervical spine injury or perhaps just ratable impairment, or is that a distinction without a difference?

A. You are hundred percent correct. There was nothing that was ratable. Did he suffer an *injury* to the cervical spine? Yes. That was reported in the very beginning of his notes when he fell off the ladder and his consciousness, but, I mean, it was reported by think even the paramedics. But there wasn't anything *ratable* based on my examination. (Dr. Tyler depo, pp.31- 32,).

A. ….based on what we have just reviewed, i.e., the CT scans, the X-rays, and putting on the [cervical] collar, *it doesn't state that there's an injury.*

Now, there's mention made by the ambulance service, the paramedics, that the patient was tender. That's the symptom; that's not a diagnosis. So it's – do you have any question that he was most likely suffering an *injury* to the cervical spine? The question is, no, I don't question that he suffered an *injury* to the cervical spine. You don't fall off a 3-foot ladder striking your shoulder, your hips, and not *strain the muscles* of your neck. Why? Because your head weighs between 10 and 16 pounds, depending on the size.

….you're most likely going to *strain the muscles* and surrounding tissues that are helping to hold or support the head, and that would be the cervical spine.

Q: But just to clarify, is it your testimony that *he did sustain in injury to his cervical spine, but* ***he simply does not have ratable impairment?***

A: That would be correct. (Dr. Tyler depo, pp. 53-55)(emphasis added).

25. Dr. Tyler testified regarding the way he conducts DIMEs. While dictating the review of the medical records component of his DIME report the patient is present, so as to allow for any input. In this instance, Claimant participated in generating part of Dr. Tyler's report through parenthetical offerings, as allowed by Dr. Tyler. (Dr. Tyler depo, pp. 7, 8, 10-12). When showed Dr. Lesnak's report describing no cervical symptoms upon provocative testing, Dr. Tyler agreed that this was consistent with his examination of Claimant's cervical spine. (Dr. Tyler depo, p. 44).

26. Dr. Tyler also addressed the issue of worsening of Claimant's condition, since the DIME report was issued:

Q: …..Based on all of that, do you have an opinion as to whether or not Mr. Romero is still at MMI?

A: I don't think I can answer that question.

Q: Why not?

A: Because the disc pathology as seen now wasn't present during the time of care for which I was treating him in regards to his work injury of 2013, I believe it was; so *that is a new pathology.* So I'm not sure how you can state that [it] is directly related to his work injury when it wasn't present based upon the records that I had for review and based upon the

> symptomology that I saw at the point where I placed him at maximum medical improvement.
>
> So if that indeed is new symptomology and new pathology, then I'm not sure how it would have a direct relationship to his work injury. (Dr. Tyler depo, pp. 65-66).

27. Claimant testified he experiences continuous pain in his left neck and the upper part of his shoulder. Claimant testified that since being placed at MMI, his neck condition has worsened. Specifically, Claimant experiences neck pain and headaches when he turns his head up or down and from side to side, and he has had to decrease or terminate physical activities such as golf and fishing due to his increased neck pain. Claimant has been unable to work since December, 2014 due to the effects of his industrial injuries. Claimant was awarded Social Security disability benefits.

28. Claimant further testified that he did not tell a medical care provider at Concentra in November 2014 that he was: "100% back to normal with no pain." Claimant also testified that he told Dr. Lesnak about pain in his neck and that Dr. Lesnak did not palpate his neck. Claimant contends that the discrepancy between his testimony and what is contained in the medical records over these matters is due to an error on the part of the medical providers or examiners in generating the records.

CONCLUSIONS OF LAW

Based upon the foregoing Finding of Fact, the ALJ makes the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the

testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this instance, the ALJ finds Claimant to be sincere in his description of his symptoms to his medical providers at all times pertinent-including reporting, for example, to his Concentra provider in 2014 that he was "100% back to normal with no pain." His current recall of such events, including palpation of his neck by Dr. Lesnak, is simply not reliable-nor could one reasonably expect total reliability from a layperson who is now in pain. Claimant can only describe what he is feeling; someone in his position cannot render a medically reliable or convincing opinion on *causation.*

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion, Generally

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The

> requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

F. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

DIME opinion of Dr. Tyler re: MMI (and by implication, Causation)

G. Dr. Jinkins credibly indicated that his focus was Claimant's shoulder, not his neck, according to his understanding of his assigned role by Concentra. Dr. Tyler, by contrast, made clear in his DIME report that he was addressing Claimant's neck issues as well as his shoulder. This is addressed in his 'Impression #5', as well as in his narrative. If any lingering doubt remained about the scope of his DIME exam, it was made clear in his deposition. As the DIME physician, Dr. Tyler opined that Claimant was at MMI as of July 14, 2016, *for all his injuries caused by this industrial accident.* While Dr. Tyler agrees that Claimant now suffers from serious issues with his cervical spine, he has made a persuasive case that Claimant's current cervical complaints were *not* ***caused by*** *this industrial accident.*

Ambiguity in the DIME's Conclusions

H. While Dr. Tyler appeared to equivocate (as Claimant now urges) at one point in his deposition on the MMI issue, this was based upon speculation under cross-examination of what Dr. Jinkins (who by all accounts was to treat the shoulder-not the neck) might or might not have said at his own deposition. Dr. Tyler again reaffirmed (after this alleged equivocation) that he did not believe the work injury *caused* Claimant's current complaints. To the extent his momentary 'equivocation' is construed as an ambiguity, the ALJ finds that, taken as whole, Dr. Tyler's body of work in the DIME report clearly shows a lack of causation for Claimant's current complaints due to the work injury.

Aggravation of Underlying Condition/Now Symptomatic

I. The ALJ further finds that Claimant's latent degenerative cervical conditions were not made symptomatic by his fall. At most, Claimant suffered a muscle strain,

from which he has long since recovered. The only evidence to the contrary was offered by Dr. Jinkins, who at one point opined in his deposition that it's *probably* a progression of a now-symptomatic aggravation of an underlying chronic condition. Assuming, arguendo, that the ALJ accepts this as being correct (which the ALJ does not in this case), it is insufficient to overcome the DIME opinion by clear and convincing evidence. At most, it represents a difference in medical opinion. In this case, Dr. Jinkin's 'charter' was not to treat the neck at all, except insofar is it related to his shoulder. The DIME opinion, therefore, has not been overcome.

Reopening/Worsening of Condition

J. As found above, Claimant has not shown, by a preponderance of the evidence, that his current cervical complaints, worsening though they are, are due to his work injury. His condition is chronic, and was not made symptomatic by the fall from the ladder. His request to reopen his claim is denied.

Medical Benefits/TTD Benefits

K. No one contests that Claimant needs surgical correction of his worsening cervical condition. This unfortunate gentleman has suffered lumbar and thoracic conditions already; now he suffers from a progressive, chronic degenerative cervical condition. However, since his work accident did not *cause* his chronic condition to now become symptomatic, he is not entitled to medical benefits. Nor can he claim TTD benefits, for the same reason.

ORDER

It is therefore ordered that:

1. Claimant's request for cervical spine surgery and TTD benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: February 2, 2018

/s/ William G. Edie
William G. Edie
Administrative Law Judge
Office of Administrative Courts
2864 South Circle Drive, Suite 810
Colorado Springs, Colorado 80906

ISSUES

I. Whether Respondents' are entitled to dismissal on the issues of medical benefits, authorized treating physicians, reasonable and necessary treatment, disfigurement, TTD, PPD, and PTD, because petition to reopen is the only ripe issue.

II. Whether Claimant established, by a preponderance of the evidence, that his claim should be reopened.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

A. Procedural History

1. Claimant sustained an industrial injury to his right knee on March 7, 2006.

2. On November 19, 2013, Respondents filed an Amended Final Admission of Liability (FAL) admitting for MMI on August 8, 2013, and 38% scheduled impairment. No PPD was paid under the Amended FAL because $140,845.36 in TTD was paid, exceeding the indemnity cap of $75,000. The Amended FAL denied future medical benefits and specifically listed Disfigurement and PTD as "NONE." *(OMD Exhibit* A*)*

3. Subsequently, the FAL was not properly served. Hearing was held on the issue of service, and whether Claimant's objection to the FAL was timely. As set forth in his July 13, 2017, Specific Findings of Fact, Conclusions of Law, and Order, ALJ Cannici found that Claimant received the FAL on April 28, 2014. *(OMD Exhibit M)* ALJ Cannici also found Claimant's May 22, 2014, Objection to the Final Admission was timely. (*OMD Exhibit* M)

4. ALJ Cannici found that because Claimant timely objected to the FAL, his claim had not closed and remained viable. Judge Cannici also indicated that Claimant's Workers' Compensation claim for his March 7, 2006 right knee injury remained open and therefore it was unnecessary to address whether Claimant should be permitted to reopen the claim based on a worsening of condition pursuant to Section 8-43-303(1), C.R.S. Moreover, ALJ Cannici indicated that any issues not resolved in his Order, were reserved for future determination. *(OMD Exhibit* M)

5. The issue of whether Claimant timely filed an Application for Hearing or a Notice and Proposal to Select an IME within 30 days of receiving the FAL on April 28, 2014, was not addressed or resolved by ALJ Cannici. (*OMD Exhibit* M)

6. Claimant did not file an Application for Hearing or a Notice and Proposal to Select an IME within 30 days of the November 19, 2013, FAL which was received on April 28, 2014, as required by Section 8-43-203(2)(b)(II)(A), C.R.S. Rather, On May 22, 2014, Claimant merely filed an Objection to Final Admission. *(Claimant's Proposed FFCL, p.2; Claimant's Exhibit 7, p.2; OMD Exhibit B)*

7. On June 23, 2014, more than 30 days after Claimant's receipt of the FAL, Claimant filed an Application for Hearing on the sole issue of "Whether Respondent's Final Admission of Liability was properly served, and if so, when, and based upon such, whether Claimant's Objection to Final Admission of Liability was timely." (*OMD Exhibit* C). The issue was set to be heard on October 16, 2014. On October 14, 2014, Claimant filed an unopposed motion to withdraw his application for hearing, preserving all ripe issues, claims, defenses, and time requirements. (*OMD Exhibit* D). An Order was issued on October 15, 2014, allowing Claimant to withdraw his application for hearing and preserving all ripe issues, claims, defenses, and time requirements. (*OMD Exhibit* E). The Order neither granted Claimant the right to resurrect an issue that was previously ripe and not timely endorsed via a timely application for hearing and thereby closed, nor extend the time to file a Notice and Proposal for a DIME which was not timely filed.

8. On August 4, 2015, Claimant filed a Petition to Reopen alleging a change in medical condition, error, and mistake. (*Claimant's Exhibit* 1)

9. Claimant filed another Application for Hearing on February 2, 2017, and again endorsed the issue of "Whether Respondent's Final Admission of Liability was properly served, and if so, when, and based upon such, whether Claimant's Objection to Final Admission of Liability was timely" and petition to reopen. (*OMD Exhibit* L)

10. As set forth above, the issue as to when Claimant received the FAL and whether his objection was timely was heard by ALJ Cannici and resolved pursuant to Judge Cannici's July 13, 2017, Order. (OMD Exhibit M).

11. On August 22, 2017, over three years after Respondents' Amended FAL was filed, Claimant filed an Application for Hearing on the issues of compensability, medical benefits, authorized provider, reasonably necessary, petition to reopen claim, disfigurement, TTD from August 7, 2013 to ongoing, PPD, PTD, and "all issues ripe for determination arising from the ALJ's July 13, 2014 [sic] order." *(Claimant's Exhibit 7, p. 5). (The correct date of the ALJ's order is July 13, 2017.)*

12. On September 21, 2017, Respondents filed a Response to Application for Hearing and endorsed numerous issues, including "Claimant's failure to timely endorse any issues related to benefits," and "8-43-203(2)(b)(II), C.R.S." (*Claimant's Exhibit* 4).

B. Factual History

13. After Claimant's industrial injury on March 7, 2006, Claimant was temporarily totally disabled with right knee pain, underwent numerous knee surgeries, and walked with an antalgic gait. *(Hearing, p. 92)*

14. Claimant contends he has had back pain since the accident in 2006. (*Claimant's Exhibit* 1-004 and 1-013; *Hearing*, p.110)

15. On October 27, 2009, Claimant underwent a DIME with Dr. Shea, who did not assess any impairment related to low back pain. *(Respondents' Exhibit A, p. 5)*

16. On November 2, 2010, Claimant underwent a subsequent DIME with Dr. Shea, after having two additional knee surgeries. Dr. Shea agreed with Dr. Primack, opining Claimant reached MMI on September 23, 2010, with a 16% whole person impairment rating, and recommended a Percocet prescription for two years, as well as periodic maintenance for medication reevaluation. Dr. Shea did not find any impairment related to low back pain. *(Respondents' Exhibit A, pp. 8-9)*

17. On April 5, 2011, Claimant underwent a psychological evaluation with Dr. Kenneally. Claimant described to Dr. Kenneally "back pain that kills me all the time." (*Respondents' Exhibit* B, p. 12) Dr. Kenneally opined Claimant's "pain report is being exacerbated by both conscious and unconscious psychological factors." Claimant had marked elevation on the fake bad scale, indicating exaggerated symptom reporting. Further, Claimant "is not a good candidate for surgery or other invasive medical procedures at this time given the significance of his depression and sleep disorder; and his translation of psychological factors into physical symptomatology." *(Respondents' Exhibit B, p. 14)*

18. On September 13, 2011, Claimant underwent a lumbar MRI, which revealed degenerative changes at L4-L5 and L5-S1. (Dr. McPherson's Depo., p. 83) The reason for the lumbar MRI was based on the contention that Claimant injured his back in 2006 when he fell and injured his knee. (*Claimant's Exhibit* 1-004.)

19. On October 14, 2011, Claimant was seen again by Dr. Primack, and complained of chronic back pain. Dr. Primack concluded Claimant's "back problem is not work-related." (*Respondents' Exhibit D*, p. 22)

20. The claim was voluntarily reopened due to a worsening condition. (*Hearing Transcript*, p.33) On December 13, 2012, Claimant underwent a revision right knee arthroplasty to remove the knee prosthesis which contained materials

Claimant was allergic to. Claimant was prescribed OxyContin 20 mg and Percocet 10/325mg, up to six a day. (*Respondents' Exhibit* D, p. 23)

21. Before the November 19, 2013, Final Admission of Liability was filed, Claimant had asserted that his back condition was caused by his March 7, 2006, work accident, and sought treatment for his back condition.

22. On September 20, 2012, Claimant underwent a psychological evaluation with Dr. Carbaugh. Dr. Carbaugh noted "a summary of his treatment includes physical therapy with no benefit, medications with some benefit, injections with no benefit and at least five surgical procedures on his right knee with no benefit to a worsening of his condition." Dr. Carbaugh also noted in his report that Claimant complained of back pain and indicated that Dr. Loucks also told Claimant he needs back surgery as well. Dr. Carbaugh noted in his report Claimant's evaluation with Dr. Kenneally and that she "suspected a role of more conscious symptom magnification." Dr. Carbaugh opined Claimant "is an extremely poor candidate for surgery strictly from a psychological standpoint. His ongoing depression and personality characteristics make it very unlikely that he will respond positively to any invasive procedure." (*Respondents' Exhibit*, C.)

23. On June 15, 2012, Claimant finally underwent a urine drug test recommended by Dr. Primack, after previously refusing. Dr. Primack reported there was no evidence of oxycodone and no evidence of any opioids in Claimant's urine, yet Claimant received 530 opioid tablets between March 29, 2012 and May 15, 2012. Dr. Primack reported Claimant "is doctor shopping, yet non-compliant given the lack of opioid in his urine" and would not prescribe any more opioids at that time. *(Respondents' Exhibit D, p. 23)*

24. On December 13, 2012, Claimant underwent a revision right knee arthroplasty. (*Respondents' Exhibit* D, p. 23).

25. On February 27, 2013, based on a referral from Dr. Hugate, Claimant was evaluated by Dr. Chris Huser of Metro Denver Pain Management. Claimant reported the combination of Oxycontin and Percocet in the hospital made him pain free and since the surgery has been on Percocet. Claimant stated he had been out of pain medication for three weeks and rated his pain at 10/10. (*Respondents' Exhibit* D, p. 23). It does not appear Dr. Huser was aware of Dr. Kenneally's or Dr. Carbaugh's reports which indicated symptom magnification and that Claimant's pain complaints were being exacerbated by both conscious and unconscious psychological factors. It also does not appear Dr. Huser was aware of Dr. Primack's findings on June 15, 2012, when he indicated that on drug testing, there was no evidence of oxycodone and no evidence of any opioids in Claimant's urine, yet Claimant received 530 opioid tablets between March 29, 2012 and May 15, 2012 and that Dr. Primack reported Claimant "is doctor shopping, yet non-compliant given the lack of opioid in his urine" and

would not prescribe any more opioids at that time. (*Respondents' Exhibit* D, p. 23).

26. Based on Claimant's pain complaints, Dr. Huser prescribed Claimant OxyContin and Percocet and required Claimant to sign an opiate agreement and undergo a urine drug test. The urine drug test of February 27, 2013, came back positive for cocaine. Therefore, Dr. Huser discharged Claimant from their pain clinic. (*Respondents' Exhibit* D, p. 23).

27. On August 8, 2013, Claimant returned to his authorized knee surgeon, Dr. Hugate and was placed at MMI. Because Dr. Hugate was not Level II accredited, Claimant went to Dr. Fall, a Level II provider, for an impairment rating. Dr. Fall reported Claimant had a 15% whole person impairment. Neither physician assessed or rated back pain. *(Respondents' Exhibit D, p. 24)*

28. On November 19, 2013, as found above, Respondents filed an Amended Final Admission of Liability and denied future medical benefits.

29. After MMI, Claimant reported continued knee pain and low back pain, as well as pain throughout his entire body. *(Respondents' Exhibit E, p. 38)*

30. On September 17, 2014, Claimant underwent another lumbar MRI, revealing "some" spondylosis at L4-L5 and L5-S1 with moderate bilateral foraminal stenosis. There was no evidence of neural element impingement. These findings were no different from the first MRI. *(Respondents' Exhibit D, p. 24; Exhibit F, p.43)*

31. On December 17, 2014, Claimant had a surgical follow up with Dr. Hugate. Dr. Hugate noted that he had performed the revision knee replacement about two years earlier. He documented that "Interestingly in the clinic, I could only get [Claimant] to bend [his knee] a few degrees, but as soon as he went to sleep, his motion went down to about 110 degrees of flexion. A similar phenomenon occurred when Dr. Loucks was treating him, I believe." (*Respondents' Exhibit* D, p. 25) This is consistent with Dr. Kenneally finding exaggerated symptom reporting.

32. On July 30, 2015, Dr. Gesquire, responded to a letter written by Claimant's attorney asking whether Claimant's underlying back condition was caused or aggravated by his altered gait. Dr. Gesquire was specifically asked whether Claimant's "low back pain, lumbar spondylosis, and lumbar radiculopathy versus radiculitis bilaterally have either been caused or aggravated by changes in Claimant's gait or walking pattern?" Dr. Gesquire indicated that "It is my opinion that [Claimant] has a chronic antalgic gait caused by his right knee injury which is causing his BP to worsen." Although Dr. Gesquire indicated he thought Claimant's altered gait was causing his back pain to worsen, he did not say that Claimant's altered gait caused or aggravated Claimant's lumbar spondylosis,

lumbar radiculopathy, or radiculitis. Dr. Gesquire was also asked whether the medical treatment provided to Claimant for his "low back pain, lumbar spondylosis, and lumbar radiculopathy versus radiculitis" was due to Claimant's altered gait. Dr. Gesquire merely stated that Claimant's right knee injury aggravates his low back. He did not indicate the Claimant's altered gate caused the need for medical treatment. (*Claimant's Exhibit* 2, pg. 003-004) The ALJ does not find Dr. Gesquire's opinion to be persuasive because his opinion is vague, conclusory, and non-specific. His response on July 30, 2015, does not take into consideration the findings of Dr. Kenneally and Carbaugh which document symptom magnification. His response also fails to take into consideration and discuss the findings of Dr. Hugate and Dr. Loucks which tend to indicate Claimant's range of motion and function of his knee might be much better than Claimant contends and that the extent of Claimant's limp is in question.

33. Claimant subsequently underwent multiple bilateral L4-L5 and L5-S1 facet blocks, medial branch nerve blocks, bilateral L4-L5 transforaminal epidural steroid injections and selective nerve blocks. Claimant reported none of these procedures provided him pain relief. *(Respondents' Exhibit D, pp.24-26)*

34. Moreover, Claimant's self-reported response to the injections was non-physiologic. For example, reporting two days relief from an injection when the anesthetic contained in the injection lasts only six hours. (*Ridings 1*, p. 26: ll 2-10)

35. On April 26, 2016, Claimant underwent a L4-L5 fusion performed by Dr. McPherson, which did not relieve Claimant's symptoms. *(Respondents' Exhibit D, p. 26,30)*

36. On September 26, 2016, Claimant underwent an IME with Dr. Ridings. Claimant reported his low back pain began the date of his industrial injury. *(Respondents' Exhibit D, p. 27)* Dr. Ridings reviewed the entirety of Claimant's medical history.

37. In reviewing Claimant's medical history, Dr. Ridings noted in his report:

> At this point there are records indicating widespread complaints of pain in the neck, back, upper and lower extremities without clear etiology, which may or may not be related to an inflammatory arthritis, lack of any opiates in his system when he was thought to be on high dose Percocet, and a finding of cocaine in his system on a different drug screen, psychological testing indicating symptom magnification and a strong component of psychological factors (versus malingering) to the patient's complaints, and now the documentation of near normal range of motion of the right knee under anesthesia at a time that the patient

> was demonstrating only minimal right knee range of motion preoperatively in the clinic. Clearly it is difficult to support a clear-cut cause and effect relationship between the patient's antalgic gait and his complaints of low back pain.

(*Respondents' Exhibit* D, p. 25)

38. Dr. Ridings opined Claimant's increased pain symptoms and imaging did not warrant the lumbar fusion, but rather could be due to Claimant's inflammatory arthritis or lack of opiates in his system. *(Respondents' Exhibit D, p. 25)* Dr. Ridings further reported Claimant was not a surgical candidate given there were no surgical indications from Claimant's MRI's or x-rays, because there was no instability documented anywhere. Dr. Ridings reported in addition to the two psychological evaluations indicating Claimant's exaggeration of symptoms, Dr. Hugate reported when Claimant came in for a surgical follow up "interestingly in the clinic, [Claimant] could only bend a few degrees, but as soon as he went to sleep, his motion went down to about 110 degrees of flexion." *(Respondents' Exhibit D, p. 25)* Dr. Ridings opined Claimant's low back pain has been complicated by a degree of psychological overlay to the severity of his complaints:

> Based on my analysis of the records, the [Claimant's] lumbar fusion was performed primarily because his subjective complaints had not improved despite a course of conservative care. The structural findings on his lumbar imaging would not typically suggest the need for a fusion surgery. As it turns out, he reports no improvement in his symptoms from the fusion, supporting that opinion.

(Respondents' Exhibit D, p. 30)

39. Dr. Ridings also indicated that the spinal fusion was unreasonable and unrelated to Claimant's work injury, based on the lack of structural findings coupled with Claimant's psychological symptomology. *(Respondents' Exhibit D, p.30)* Dr. Ridings further opined Claimant does not require any treatment for his low back and Claimant remains at MMI since he was placed there in 2010. (*Respondents' Exhibit D, p.30*)

40. Dr. Ridings also indicated Claimant continued to seem depressed during his evaluation. Dr. Ridings suggested further treatment for Claimant's depression, which if brought under control may well lead to a significant diminution of Claimant's perceived pain and disability. However, Dr. Ridings indicated he did not fully evaluate and investigate Claimant's depression and he did not opine that Claimant's psychological condition, regardless of its cause, had worsened since being placed at MMI. (*Respondents' Exhibit* D, p.30). Moreover, during his deposition, Dr. Ridings indicated that any psychological treatment should be

undertaken outside the workers' compensation system. (*Ridings 1*, p. 53) Then, during a subsequent, deposition, Claimant's attorney asked Dr. Ridings if he agreed that Claimant was affected by a psychological overlay in December of 2016 which was causally related to the fact that Claimant was depressed due to his disability. Dr. Ridings indicated he did not make a causal connection between Claimant's depression and his work injury in either his report or his prior testimony. Dr. Ridings indicated that there might be multiple reasons as to why Claimant is depressed or might have been depressed before the injury. Dr. Ridings went on to state that Claimant has some kind of widespread inflammatory arthritis, that he has pain in essentially every joint in his body, and that there are multiple other psychological issues, including drug abuse, which could be the cause of any depression. (*Ridings 3*, pp. 23-25)

41. On May 10, 2017, Dr. McPherson testified by deposition and was admitted as an expert in orthopedic surgery. Dr. McPherson testified that he did not review Claimant's entire medical history, nor the reports regarding Claimant's psychological conditions from Dr. Ridings, Dr. Carbaugh or Dr. Kenneally. *(Dr. McPherson Depo., pp.67, 71, 75)* Dr. McPherson testified he diagnosed Claimant with degenerative spondylolisthesis. Dr. McPherson testified spondylolistheses is the slippage of vertebra, but he did not keep any records measuring slippage. *(Depo., p. 88)* Despite not having the objective neurogenic claudication findings, Dr. McPherson testified his indication for surgery was based on Claimant's pain symptoms and lumbar x-ray. *(Depo., pp. 57-58)*

42. On December 4, 2017 and January 10, 2018, Dr. Ridings testified by deposition and was admitted as an expert in physical medicine and rehabilitation, Level II accredited. *(Respondents' Exhibit F, p. 42)* Dr. Ridings testified that it is highly unlikely an antalgic gait would cause structural spinal damage, but would more likely cause muscular pain or a lumbar strain. *(Respondents' Exhibit H, pp.88-89)* Dr. Ridings testified "reporting low back pain as a symptom, however, does not imply or require that there be an actual pathologic or pathoanatomic change to the back itself." *(Respondents' Exhibit F, p.42)* Dr. Ridings testified Claimant underwent a series of lumbar injections, in part for diagnostic purposes because there was no clear etiology for the Claimant's low back complaints, however none of these injections relieved pain suggesting psychological overlay to the Claimant's complaints. *(Respondents' Exhibit F, p. 44)*

43. Claimant testified at hearing he was totally disabled since the date of injury. *(Hearing, p.118, llL21-23)* Claimant testified he had low back pain beginning at the time of his work injury and walked with a limp and antalgic gait. *(Hearing, p. 92 ll: 2-7)* Claimant testified he told all of his doctors dating back to 2006 that he was having low back pain. *(Hearing, p. 110, ll: 22-25)* Claimant testified none of the health care has helped his back pain. *(Hearing, p. 118, ll:13-17)*

44. On December 4, 2017, Dr. McPherson noted in a report that he has been unable to provide an impairment rating for Claimant's low back because he could not get

valid range of motion measurements and did not think Claimant would be able to participate in range of motion testing. (*Claimant's Exhibit* 16.) This is another example of Claimant attempting to establish the extent of his disability to a medical provider in an inconsistent manner.

45. Claimant is found to not be credible.

46. Claimant's pain complaints, physical presentation, and verbalized symptoms, are found to not be reliable.

47. Claimant did not injure his back on March 7, 2006, when he fell at work.

48. Claimant's altered gait did not cause or aggravate his back condition.

49. Claimant's altered gait did not cause or aggravate Claimant's back condition and necessitate the need for medical treatment or cause additional disability.

50. Claimant has failed to establish that his work related medical conditions have worsened since being placed at MMI.

51. Claimant has failed to establish that there was a mistake or error which warrants reopening.

52. The ALJ hereby finds the claim was closed on all issues but petition to reopen. The ALJ finds Claimant failed to meet his burden of proof and establish by a preponderance of the evidence found credible his industrial injury worsened as a natural progression there of, or that there was a mistake or error which warrants reopening, thus the Claimant is not entitled to additional benefits.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draw the following conclusions of law:

General

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 134 P. 254 (Colo. 1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

I. Whether Respondents' are entitled to dismissal on the issues of medical benefits, authorized treating physicians, reasonable and necessary treatment, disfigurement, TTD, PPD, and PTD, because petition to reopen is the only ripe issue.

Section 8-43-203(2)(b)(II)(A), C.R.S., provides that a case will be "automatically closed as to the issues admitted in the final admission if the claimant does not, within thirty days after the date of the final admission, contest the final admission in writing and request a hearing on any disputed issues that are ripe for hearing, including the selection of an independent medical examiner. . . ." *(emphasis added)* Applying time limits to Claimant's right to contest closure is rational and advances the statutory scheme designed to promote, encourage, and ensure prompt payment of compensation to an injured worker. *Olivas-Soto v. Indus. Claim Appeals Office*, 143 P.3d 1178 (Colo. App. 2006).

On November 19, 2013, Respondents filed an Amended Final Admission of Liability (FAL) admitting for MMI on August 8, 2013, and 38% scheduled impairment. No PPD was paid under the Amended FAL because $140,845.36 in TTD was paid, exceeding the indemnity cap of $75,000. The Amended FAL denied future medical benefits and specifically listed Disfigurement and PTD as "NONE."

There was a dispute regarding service of the FAL. A Hearing was held by ALJ Cannici on the issue of service and whether Claimant's objection to the FAL was timely as well as whether Claimant's claim should be reopened based upon a worsening of

condition. As set forth in his July 13, 2017, Specific Findings of Fact, Conclusions of Law, and Order, ALJ Cannici found that Claimant received the FAL on April 28, 2014. ALJ Cannici also found Claimant's May 22, 2014, Objection to the Final Admission was timely.

ALJ Cannici determined Claimant's case did not close due to a failure to timely file an objection to the FAL. Therefore, he did not address Claimant's petition to reopen based upon a worsening of condition. ALJ Cannici did indicate that any issues not resolved in his Order, were reserved for future determination. ALJ Cannici's Order did not address and resolve the issue of whether Claimant's case is closed due to his failure to timely file an application for hearing or file a Notice and Proposal to select an independent medical examiner.

In light of ALJ Cannici's Order, Claimant filed a new Application for Hearing on August 22, 2017, and endorsed the issue of compensability, medical benefits, authorized treating physician, reasonable and necessary treatment, disfigurement, TTD, PPD, and PTD. On September 21, 2017, Respondents filed a Response to Application for Hearing and endorsed numerous issues, including "Claimant's failure to timely endorse any issues related to benefits," and "8-43-203(2)(b)(II), C.R.S."

Claimant did not file an Application for Hearing or a Notice and Proposal to Select an IME within 30 days of receiving the November 19, 2013, FAL on April 28, 2014, as required by Section 8-43-203(2)(b)(II)(A), C.R.S. Rather, on May 22, 2014, Claimant merely filed an objection to the FAL.

In this case, the issue of medical benefits, future medical benefits, disfigurement, temporary total disability benefits from August 7, 2013 to ongoing, permanent partial disability benefits, and permanent total disability benefits closed pursuant to the November 19, 2013, FAL.

Claimant contends that the only issue that was ripe when he filed his June 23, 2014, Application for Hearing was whether his "claim should be reopened based upon a defectively served FAL." (*Claimant's Proposed FFCL*, p. 3) Claimant, however, misstates the issues raised and the finding of ALJ Cannici. The issue raised by Claimant in his June 23, 2014, Application for Hearing was "Whether Respondent's Final Admission of Liability was properly served, and if so, when, and based upon such, whether Claimant's Objection to Final Admission of Liability was timely." (*OMD* C) Although the June 23, 2014, Application for Hearing was withdrawn and refiled, the issue asserted by Claimant remained the same and was decided by ALJ Cannici. As set forth above, ALJ Cannici determined Claimant received the FAL on April 28, 2014, and timely filed an objection. ALJ Cannici did not determine the FAL was defective, but merely determined the date Claimant received the FAL which triggered Claimant's obligation to properly contest the FAL within 30 days. Therefore, by the time Claimant filed his June 23, 2014, Application, the case had closed due to his failure to properly contest the FAL within 30 days of receipt of the FAL.

The ALJ concludes Claimant's case closed pursuant to the November 19, 2013, FAL, which was received by Claimant on April 28, 2014.

II. Whether Claimant established, by a preponderance of the evidence, that his claim should be reopened.

Change in condition since being placed at MMI on August 8, 2013.

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. Claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if Claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 474 P.2d 622 (Colo. 1970); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

The question of whether Claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.*

As found, Claimant's altered gait did not cause or aggravate his underlying back condition and necessitate the need for medical treatment or cause any additional disability. Such conclusion, is based on a number of findings.

First, Claimant asserts that his back pain and back condition has worsened since being placed at MMI on August 8, 2013. However, Claimant complained to Dr. Kenneally in 2011 that his back pain kills him all the time. In addition, in September of 2012, Claimant told Dr. Carbaugh that he was advised by Dr. Loucks that he needed back surgery. Therefore, Claimant's contention that his back pain worsened and that such worsening necessitated the need for medical treatment, in the form of back surgery, is inconsistent with his medical records.

Second, the ALJ was persuaded by the opinions of Dr. Kenneally that Claimant's pain complaints are not a true representation of his actual pain due to any underlying physical pathology. In 2011, Dr. Kenneally opined Claimant's "pain report is being exacerbated by both conscious and unconscious psychological factors." She indicated that Claimant had marked elevation on the fake bad scale, indicating exaggerated symptom reporting. Dr. Kenneally also stated that Claimant "is not a good candidate for surgery or other invasive medical procedures at this time given the significance of his depression and sleep disorder; and his translation of psychological factors into physical symptomatology."

Third, the ALJ was also persuaded by the opinions of Dr. Carbaugh. In 2012, Dr. Carbaugh indicated that "a summary of his treatment includes physical therapy with no benefit, medications with some benefit, injections with no benefit, and at least five surgical procedures on his right knee with no benefit to a worsening of his condition." Dr. Carbaugh noted in his report Claimant's evaluation with Dr. Kenneally and that she "suspected a role of more conscious symptom magnification." Therefore, Claimant's pain complaints are not found to be reliable.

Fourth, the ALJ was also persuaded by the fact that the only treatment Claimant told Dr. Carbaugh provided him some benefit was medication, which Claimant was misusing. As stated by Dr. Primack, Claimant was misusing his opiod mediation. For example, on June 15, 2012, Claimant finally underwent a urine drug test recommended by Dr. Primack, after previously refusing. Dr. Primack reported there was no evidence of oxycodone and no evidence of any opioids in Claimant's urine, yet Claimant received 530 opioid tablets between March 29, 2012 and May 15, 2012. Dr. Primack reported Claimant was "doctor shopping, yet non-compliant given the lack of opioid in his urine" and would not prescribe any more opioids at that time. It should also be noted that after Dr. Primack refused to prescribe additional opiates, Claimant came under the care of Dr. Huser in February of 2013 and indicated that the only type of medication that controlled his pain was opiates. In light of Claimant's pain complaints, Dr. Huser prescribed OxyContin and Percocet and required Claimant to sign an opiate agreement and undergo a urine drug test. The urine drug test of February 27, 2013, came back positive for cocaine. Therefore, Dr. Huser discharged Claimant from their pain clinic.

Fifth, the ALJ was also persuaded by the opinions of Dr. Ridings. In reviewing Claimant's medical history, Dr. Ridings noted in his report:

> At this point there are records indicating widespread complaints of pain in the neck, back, upper and lower extremities without clear etiology, which may or may not be related to an inflammatory arthritis, lack of any opiates in his system when he was thought to be on high dose Percocet, and a finding of cocaine in his system on a different drug screen, psychological testing indicating symptom magnification and a strong component of psychological factors (versus malingering) to the patient's complaints, and now the documentation of near normal range of motion of the right knee under anesthesia at a time that the patient was demonstrating only minimal right knee range of motion preoperatively in

> the clinic. Clearly it is difficult to support a clear-cut cause and effect relationship between the patient's antalgic gait and his complaints of low back pain.

In addition, Dr. Ridings opined Claimant's increased pain symptoms and imaging did not warrant the lumbar fusion, but rather could be due to Claimant's inflammatory arthritis or lack of opiates in his system. Dr. Ridings further reported Claimant was not a surgical candidate given there were no surgical indications from Claimant's MRI's or x-rays, because there was no instability documented anywhere. Dr. Ridings reported in addition to the two psychological evaluations indicating Claimant's exaggeration of symptoms, Dr. Hugate reported when Claimant came in for a surgical follow up "interestingly in the clinic, [Claimant] could only bend a few degrees, but as soon as he went to sleep, his motion went down to about 110 degrees of flexion." Therefore, even the extent of Claimant's antalgic gait is questioned by the ALJ.

Moreover, Dr. Ridings opined based on his analysis of the records, the Claimant's lumbar fusion was performed primarily because his subjective complaints had not improved despite a course of conservative care. He also stated that the structural findings on his lumbar imaging would not typically suggest the need for a fusion surgery. Dr. Ridings indicated that as it turns out, Claimant reported no improvement in his symptoms from the fusion, which further supported Dr. Ridings' opinions.

Dr. Ridings also indicated that the spinal fusion was unreasonable and unrelated to Claimant's work injury, based on the lack of structural findings coupled with Claimant's psychological symptomology. Dr. Ridings further opined Claimant does not require any treatment for his low back and Claimant remains at MMI.

Sixth, Claimant's complaints of pain, and other symptoms, are not found to be credible or reliable. In essence, the basis for Claimant's petition to reopen is that his pain has worsened. However, as found, Claimant's pain complaints are not a reliable indicator regarding any underlying pathology, or the worsening of such, necessitating the need for medical treatment or causing any additional disability.

To the extent Claimant asserts that his psychological condition has worsened since being placed at MMI, Claimant has also failed to present credible and persuasive evidence supporting that contention.

The ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that his condition has worsened since being placed at MMI.

Error or Mistake

When a party alleges that a prior award is based on an error or mistake, the ALJ must determine whether an error or mistake was made, and if so, whether it is the type of error or mistake which justifies reopening the case. *Travelers Insurance Co. v. Industrial Commission*, 646 P.2d 399 (Colo. App. 1981). "Mistake" refers to any mistake of law or fact which demonstrates that a prior award or denial of benefits was incorrect. *See Renz v. Larimer County School District Poudre R-1*, 924 P.2d 1177 (Colo. App. 1996). A mistake in diagnosis, for example, previously has been held sufficient to justify reopening. *See Berg v. Industrial Claim Appeals Office*, 128 P.3d 270 (Colo. App. 2005); *see also Standard Metals Corp. v. Gallegos*, 781 P.2d 142 (Colo. App. 1989)(petition to reopen based on a mistake of fact may properly be granted where there is a mistake in diagnosis due to limited medical technology available to treating physician).

Claimant, in his Petition to Reopen, checked the box for error and mistake. However, Claimant's post hearing position statement – proposed order - does not contain a cogent argument regarding this issue. Claimant's post hearing filing contains some statements regarding the timing as to when Claimant learned that his back pain and need for medical treatment might have been caused or aggravated by his altered gait. As asserted by Claimant, he did not find out that he back pain might have been caused by his altered gait until he received the comments from Dr. Gesquire which were written on the July 30, 2015, letter to Dr. Gesquire. As found by the ALJ, Claimant did not injure his back on March 7, 2006, and Claimant's altered gait did not cause or aggravate his back condition. Therefore, there was no error or mistake in Claimant's diagnosis.

Claimant also states in his post hearing position statement – proposed order – that the failure to properly contest the FAL is a "technical flaw" and should not result in the closure of his claim pursuant Section 8-43-203(2)(b)(II)(A), C.R.S. Therefore, Claimant might also be arguing that his failure to properly contest the FAL should provide the basis reopening his claim.

When determining whether an error or mistake warrants reopening, the ALJ may consider whether it could have been avoided by the timely exercise of appropriate procedural or appellate rights. *Industrial Commission v. Cutshall*, 433 P.2d 765 (Colo. 1967); *Klosterman v. Industrial Commission*, 694 P.2d 873 (Colo. App. 1984). In this case, Claimant's "technical flaw" or mistake could have been avoided by timely exercising his procedural rights pursuant to Section 8-43-203(2)(b)(II)(A), C.R.S., and properly contesting the FAL. Therefore, the ALJ concludes that Claimant's failure to comply with Section 8-43-203(2)(b)(II)(A), C.R.S., and properly contest the FAL does not warrant reopening.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents' Motion for Dismissal is granted. This issue of medical benefits, future medical benefits, authorized treating physicians, reasonable and necessary treatment, disfigurement, TTD, PPD, and PTD were closed pursuant to Respondents FAL which is dated November 19, 2013, and was received by Claimant on April 24, 2014.

2. Claimant's Petition to Reopen is denied. Claimant's request for additional benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 5, 2018

Glen Goldman

Denver, CO 80203

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that he suffered an injury to his left foot arising out of and in the course and scope of his employment with employer.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that medical treatment he received constitutes reasonable medical treatment necessary to cure and relive claimant from the effects of the work injury.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary partial disability (TPD) benefits.

- If claimant proves a compensable injury, what is claimant's average weekly wage (AWW)?

FINDINGS OF FACT

1. Claimant testified that he began working for employer in May 2017. Employer is a landscaping company. Claimant was hired to work as a laborer in planting and renovation. Claimant was scheduled to work ten hours per day, four days per week and was paid $14.50 per hour.

2. Claimant testified that on Wednesday, May 31, 2017[1] he injured his left foot while working for employer. Claimant provided the following testimony regarding the incident. Claimant and his foreman, Mr. Garcia-Gonzales, were loading a wheeled cart full of plants onto a box truck. The truck has a hydraulic lift on the rear tailgate for this purpose. Claimant was standing on the lift with the cart while Mr. Garcia-Gonzales operated the mechanism for moving the lift. As the lift was raised the cart began to shift. It is claimant's testimony that his left foot became caught between the lift and the tailgate. The force of the lift pushed claimant's foot out.

[1] Employer's First Report of Injury and the medical records indicate that the incident at issue occurred on June 6, 2017. However, claimant was quite adamant in his testimony that the incident occurred on May 31, 2017.

3. Claimant testified that because he was wearing steel toe boots, his toes were protected from the force of the lift. Claimant removed his boot and looked at his toes and foot. Claimant testified that the skin on the top of his left foot was scraped off.

4. Claimant also testified that at the time of the May 31, 2017 incident he felt pain throughout his entire body. Claimant testified that he currently has pain from his neck down through his whole body, including pain in his shoulders and arms. Claimant's testimony regarding the nature and development of his symptoms was unclear and unpersuasive.

5. Mr. Garcia-Gonzales testified at hearing regarding the May 31, 2017 incident involving the lift gate and claimant's foot. Mr. Garcia-Gonzales agrees that he and claimant were in the process of loading a cart of plants onto the box truck. However, Mr. Garcia-Gonzales testified that claimant's foot was not caught by the movement of the lift, but was "pushed out". Mr. Garcia-Gonzales also testified that he looked at claimant's left foot immediately following the incident. Mr. Garcia-Gonzales testified that there was no redness, swelling, or abrasions on claimant's left foot at that time.

6. Claimant completed his shift on May 31, 2017, working approximately three more hours after the incident. Claimant testified that he reported for work and worked his entire shift the following day, which was a Thursday. Claimant also reported to work and completed his scheduled shifts the following week. Claimant testified that during this time he was in pain, but believed that Mr. Garcia-Gonzales would report the issue to employer.

7. Claimant testified that on Friday, June 9, 2017, he reported the incident to employer by notifying Mr. Heredia. At that time, claimant reported that the alleged injury to his foot occurred on June 6, 2018.

8. Ms. Heredia testified that claimant did report the incident to her, but not until June 16, 2017. On that date, claimant told Ms. Heredia that he was injured on June 6, 2017. When Ms. Heredia learned of the incident she provided claimant with a list of designated medical providers that same day. Ms. Heredia also testified that she informed claimant that Doctors on Call have Spanish speaking staff. Claimant indicated that he would seek medical treatment at Doctors on Call. Ms. Heredia also testified that claimant continued to report to work and complete all of his assigned duties. Employer's records indicate that claimant continued to work up to and including June 22, 2017. On that date claimant worked a 13 hour day.

9. On June 16, 2017, claimant first treated at Doctors on Call and was seen by Dr. Guy Kovacevich. At that time, claimant reported that his left foot was caught in a power lift gate "over a week ago". Dr. Kovacevich noted that claimant reported hyperextending his foot. Dr. Kovacevich diagnosed strains of unspecified muscles and tendons in the left lower leg and prescribed naproxen and Norco. At that time, claimant was placed on work restrictions of lifting, carrying, pushing and pulling of no more than 10 pounds.

10. The medical records indicate that claimant has reported ever increasing pain symptoms over time. These pain reports have expanded from leg and foot pain to include issues with his back, neck, arms, and shoulders.

11. On November 17, 2017, respondents sent claimant to Dr. Albert Hattem for an independent medical examination (IME). Dr. Hattem reviewed claimant's medical records, obtained a history from claimant, and performed a physical examination. In his IME report, Dr. Hattem opined that claimant suffered a minor sprain of his left foot that had resolved and claimant had reached maximum medical improvement (MMI). Dr. Hattem also opined that claimant's complaints of total body pain is not related to the May 31, 2017 left foot incident.

12. Dr. Hattem's testimony by deposition was consistent with his IME report. In his testimony, Dr. Hattem noted that Dr. Kovacevich did not order an x-ray of claimant's left foot. Dr. Hattem testified that this indicates to him that Dr. Kovacevich did not believe that claimant suffered any trauma to his left foot.

13. The ALJ credits Mr. Garcia-Gonzales' testimony regarding the incident involving claimant's foot and the hydraulic lift. The ALJ does not find claimant's testimony regarding that incident to be credible or persuasive. The ALJ also finds that the May 31, 2017 incident did not result in an injury to claimant's left foot. Nor did that incident cause the ongoing full body pain now alleged by claimant.

14. The ALJ credits the medical records and the opinion of Dr. Hattem and finds that on May 31, 2017 claimant suffered a minor left foot sprain that resolved and did not require medical treatment. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that he suffered an injury arising out of and in the course and scope of his employment with employer.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d

385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

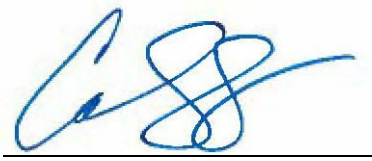
4. As found, claimant has failed to demonstrate by a preponderance of the evidence that he suffered an injury arising out of and in the course and scope of his employment with employer. As found, Dr. Hattem's opinion, the medical records, and the testimony of Mr. Garcia-Gonzales are found to be credible and persuasive.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits is denied and dismissed.

Dated: March 6, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it

within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that injuries he sustained on August 23, 2017 are compensable under the quasi course and scope doctrine.

- If claimant proves that his August 23, 2017 injuries are compensable, whether respondents have demonstrated by a preponderance of the evidence that claimant engaged in a substantial deviation that severed the relationship necessary for the application of the quasi course and scope doctrine.

- The parties have stipulated that if claimant's August 23, 2017 injuries are found compensable, the medical treatment claimant received at Vail Valley Medical Center is reasonable, necessary, and related to claimant's work injury. On December 22, 2017, Prehearing Administrative Law Judge Michael Harr entered an order approving the stipulation of the parties.

FINDINGS OF FACT

1. Claimant suffered an admitted injury to his back on February 10, 2011. Claimant has undergone a number of surgeries related to the February 10, 2011 injury. Claimant's most recent surgery was performed by Dr. John Adair Prall on April 12, 2017 and included partial laminectomy and medial facetectomy and foraminotomy at the T10-T11 and T11-T12 levels. The surgery was performed in Lakewood, Colorado.

2. Claimant resides in Grand Junction, Colorado. During this claim claimant has traveled to the Denver, Colorado area for medical treatment. Claimant traveled to Denver for his April 2017 surgery and related follow up appointments. These medical treatments and related travel were authorized and paid for by respondents.

3. Claimant was scheduled to undergo treatment at Craig Hospital on August 22, 2017. Craig Hospital is located in Englewood, Colorado. The medical treatment was to include a urodynamic study and a magnetic resonance image (MRI) of claimant's brain. It is undisputed that the treatment claimant received at Craig Hospital on August 22, 2017 was related to this claim and claimant's February 10, 2011 work injury.

4. Initially, claimant requested two nights of hotel accommodations from respondents for the August 22, 2017 related travel. However, it was discussed that the treatment would be completed early enough on August 22, 2017 to allow claimant time to travel home on that same date.

5. Claimant testified that because of his work injury he no longer drives. As a result, claimant's spouse typically drives him to and from medical appointments,

including those occurring outside of Grand Junction. Claimant also testified that his spouse does not drive at night because of issues with her vision.

6. When traveling claimant must stop periodically to stretch and walk to alleviate pain he has in his back and legs. Claimant testified that on a typical trip from Grand Junction to Denver he will need to stop four to five times. Claimant and his spouse will make this trip by traveling on 1-70.

7. Once the arrangements were made for the August 22, 2017 medical appointments, claimant and his spouse communicated with their daughter who resides in Fort Collins, Colorado. Claimant's daughter requested that when claimant and his spouse traveled to the Denver area for claimant's medical appointments that they bring items of furniture they had been storing for her in Grand Junction. Claimant and his spouse agreed.

8. Claimant and his spouse own a Lincoln Navigator and a 16 foot trailer. Prior to traveling in late August 2017, the trailer was attached to the Navigator for purposes of transporting the furniture items for claimant's daughter. Claimant testified that he did not participate in the attaching or loading of the trailer.

9. Claimant testified that due to the decision to deliver the furniture to their daughter in Fort Collins, he and his spouse traveled "a day or two early". The ALJ estimates that this would have been either August 19, 2017 or August 20, 2017. During that time claimant and his spouse stayed at their daughter's residence in Fort Collins, and steps were taken to disconnect the trailer from the Navigator.

10. On August 21, 2017, claimant and his spouse traveled from Fort Collins to Craig Hospital in Englewood where overnight accommodations had been arranged. They did not tow the trailer at that time.

11. On August 22, 2017, claimant underwent the scheduled urodynamic study and brain MRI at Craig Hospital. At the conclusion these treatments, claimant and his spouse drove from Englewood back to Fort Collins. Claimant testified that because the MRI was not completed until approximately 4:00 p.m. they decided not to travel home on that date. Instead they stayed an additional night at their daughter's residence on August 22, 2017.

12. On the morning of August 23, 2017, the now empty trailer was reattached to the Navigator. Claimant testified that he and his spouse left Fort Collins at approximately 9:30 a.m. They traveled down I-25 to 1-76 and then to I-70. Claimant testified that after leaving Fort Collins, they first stopped in Frisco/Dillon, Colorado to allow claimant a chance to walk and stretch. They also had a meal while in Frisco.

13. After the stop in Frisco/Dillon they returned to westbound I-70 to travel home to Grand Junction and were involved in a motor vehicle accident (MVA). Claimant testified that just prior to the MVA he and his spouse were traveling on the west side of Vail Pass, which was under construction. As a result, there was an area where the two westbound lanes were reduced to one lane. Another driver made space

to allow claimant and his spouse to merge left into the single lane. Claimant testified that approximately two or three minutes after moving to the single lane of traffic they were struck from behind by the same driver that had allowed them to merge. Claimant also testified that he and his spouse did not stop or slow down once they were in the single lane. Rather, they were moving slowly with the flow of traffic when they were struck.

14. Claimant's spouse also testified at hearing. Her testimony was consistent with claimant's testimony.

15. Claimant testified that following the MVA he instantly felt pain in his back. Claimant also testified that his head and whole body felt like they were "on fire". In his testimony, claimant described this burning pain as the same sensation he experienced at the time of the February 10, 2011 admitted work injury. After the MVA, claimant was transported to Vail Valley Medical Center by ambulance. Due to the nature of claimant's complaints, he was admitted to the hospital overnight.

16. The driver that struck claimant's vehicle was Mr. Phillips. Mr. Phillips testified that he resides in Vail, Colorado and travels over Vail Pass approximately twice a week. On August 23, 2017, Mr. Phillips was traveling on westbound I-70. Mr. Phillips testified that traffic was merging from two lanes to one because of construction and a number of vehicles were attempting to merge. Mr. Phillips noticed a vehicle pulling a trailer and tried to make room to allow that vehicle to merge. It is undisputed that this was claimant's vehicle. Mr. Phillips testified that after merging into the single lane claimant's vehicle slowed abruptly and he tried to brake to keep from striking them. However, Mr. Phillips' vehicle made contact with claimant's trailer and the trailer in turn struck claimant's vehicle.

17. Trooper Juenke testified at hearing and stated that he was the officer who responded to the MVA involving claimant. Based upon his investigation of the accident, Trooper Juenke opined that both vehicles were moving at the time of impact. In his written report, Trooper Juenke identified damage to claimant's trailer and vehicle as "moderate".

18. Respondents argue that claimant's travel to Fort Collins prior to traveling to Englewood for his medical appointments constitutes a substantial deviation that severed the quasi course of employment relationship. Respondents also argue that claimant's travel to and from Denver with a trailer attached to his vehicle constitutes a substantial deviation that severed the quasi course of employment relationship.

19. The ALJ credits claimant's testimony and finds that the primary purpose of claimant's trip to the Denver area in late August 2017 was for authorized medical treatment. However, the ALJ also finds that claimant engaged in two deviations while traveling to and from his medical appointments at Craig Hospital. The ALJ further concludes that in each instance the deviation ended prior to the August 23, 2017 MVA.

20. Claimant's first deviation occurred when he and his spouse left I-70 to travel north to Fort Collins rather than south to Englewood. That deviation ended once claimant and his spouse were traveling to Englewood on August 21, 2017 to stay at the hotel paid for by respondents and attend the medical appointments on August 22, 2017.

21. Claimant engaged in a second deviation on August 22, 2017 when he and his spouse traveled north of I-70 to return to their daughter's residence to stay an additional night and retrieve their trailer. Again, the ALJ finds that the deviation ended on August 23, 2017 once claimant and his spouse returned to I-70 and began their westbound travel home to Grand Junction. It was not until after the conclusion of this second deviation that the MVA occurred on Vail Pass. Therefore, the ALJ finds that claimant has shown that it is more likely than not that at the time of the MVA on August 23, 2017 he was in the quasi course and scope of employment.

22. The ALJ is not persuaded by respondents' assertion that the use of the trailer itself created a substantial deviation that continued throughout claimant's trip. On the contrary, the ALJ concludes that the use of the trailer was not the primary purpose of claimant's trip. The decision to transport the furniture was made after the medical appointments were made. Additionally, the ALJ concludes that the existence of an empty trailer did not cause the MVA.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

3. Under the quasi course of employment doctrine injuries sustained while undergoing or traveling to and from authorized medical treatment are compensable, even though they occur outside the ordinary time and place limitations of normal employment. *See Excel Corp. v. Industrial Claim Appeals Office*, 860 P.2d 1393 (Colo. App. 1998); *Schreiber v. Brown & Root, Inc.*, 888 P.2d 274 (Colo. App. 1993).

4. The principles regarding traditional deviation situations where the employee is on a personal errand during a business trip, can be used to resolve the factual question of whether there is a deviation from the route of travel in the application of quasi course and scope of employment for authorized medical treatment. *Kelly v. ICAO*, 214 P.3d 516 (Colo. App. 2009). The primary consideration is whether the deviation is substantial. *Id. See also Pacesetter Corp v. Collett* 33 P.3d 1230 (Colo. App. 2010); *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995).

5. As found, claimant has demonstrated by a preponderance of the evidence that at the time of the August 23, 2017 MVA he was in the quasi course and scope of employment. As found, claimant's testimony is credible and persuasive.

6. As found, respondents have failed to demonstrate by a preponderance of the evidence that at the time of the MVA claimant was engaged in a substantial deviation that severed the employment relationship required by the quasi course and scope doctrine. As found, the deviations engaged in by claimant had ended prior to the August 23, 2017 MVA. As found, claimant's testimony is credible and persuasive.

ORDER

It is therefore ordered that:

1. The injuries claimant sustained from a motor vehicle accident (MVA) on August 23, 2017 are compensable under the quasi course and scope doctrine.

2. Pursuant to the stipulation of the parties, respondents shall pay for the medical treatment claimant received at Vail Valley Medical Center as a result of the August 23, 2017 MVA, pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined herein are reserved for future determination.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. Nos. 3-958-743-05

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER DENYING PARTIAL SUMMARY JUDGMENT

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

A hearing on the merits in the above-referenced matter is scheduled for March 14, 2018, in Denver, Colorado. On February 6, 2018, Respondents filed a "Motion for Partial Summary Judgment Concerning Entitlement to Offset under C.R.S. 8-42-113.5." On February 20, 2018, Claimant filed a "Response to Respondents' Motion for Summary Judgment." The matter was referred to Edwin L. Felter, Jr., Administrative Law Judge (ALJ) for a ruling on February 23, 2018.

ISSUE FOR SUMMARY JUDGMENT

The sole issue for partial summary judgment concerns whether there is a disputed issue of material fact regarding whether the Respondents (over a period of fifteen years) have waived their right to claim a Federal Social Security (SSA) Retirement benefit offset in the amount of **$40,937.00**, against the elderly Claimant's permanent total disability (PTD) benefits of **$153.28** per week, which is the Claimant's only means of subsistence. Claimant is 80 years old and was employed by the Employer in 1989, at the time of her admitted, work-related injury.

Although appellate courts erroneously interpreted § 8-42-103 (1) (c) (I), C.R.S., by applying the offset provisions to Social Security **Retirement** benefits in an officially published opinion (*See Zerba v. Dillon Companies,* 292 P.3d 1051, **2012 COA 78**), the ALJ is bound by the doctrine of *stare decisis.* Therefore, applicability of the offset provisions to Social Security Retirement benefits cannot be an issue herein.

In the first instance, the Respondents bear the burden of proof, by a preponderance of the evidence, to establish that there is no genuine issue of dispute material fact regarding the applicability of the offset provisions. If there is no genuine disputed issue of material fact concerning the applicability of the offset provisions to retirement benefits, The Respondents bear the burden of establishing that there **is no genuine disputed issue of material fact** concerning **waiver** of the right to claim an offset. As pertains to a waiver of offset of SSA Retirement benefits, this is a case of first impression.

FINDINGS OF UNDISPUTED FACT

Based on the undisputed evidence contained in the file, pleadings and exhibits, the ALJ makes the following Findings of Fact:

1. Claimant sustained an admitted industrial injury on September 20, 1989, while employed by the Employer (Respondents' Exhibit A).

2. Subsequently, the Claimant first applied for federal social security disability (SSDA) benefits in 1991 but the Social Security Administration (SSA) denied her claim (Respondents' Exhibit C).

3. The Claimant reached maximum medical improvement (MMI) on October 20, 1992 for the 1989 industrial injury. Respondents filed a Final Admission of Liability (FAL) on July 21, 1994, admitting for permanent total disability (PTD) [Respondents' Exhibit A). She began to receive PTD benefits at the weekly rate of $153.28 (Respondents Motion for Summary Judgment, ¶ 22).

4. The Claimant began receiving **SS Retirement** benefits in August of 2002 (Respondents' Exhibit D).

5. In October of 2017, the Claimant filed an Application for Hearing. The issues designated were whether Respondents are entitled to an offset due to Claimant receiving social security retirement benefits; medical benefits; authorized providers; and, reasonably necessary medical treatment (Claimant's Exhibit 1).

6. During discovery, Respondents claim that they first found out that the Claimant had been receiving SS Retirement benefits since 2002 (Respondents' Exhibit D). In September of 2017, Respondents filed an FAL asserting an offset of $40, 937.00 against the Claimant's weekly PTD benefits of $153.28 (Claimant's Exhibit 2). Based

on the SS Retirement Award of $364.00 per month (Respondents' Exhibit F), the Claimant receives $84 per week in SS Retirement benefits. Coupled with her PTD benefit of $153.28 per week, the Claimant's gross income from all sources is $237.28 per week, or $1,028.21 per month, which is below the poverty line.

7. The Claimant is now eighty (80) years old and lives alone. She has dealt with numerous medical issues since her industrial injury including: chronic back pain; a torn left calf (Claimant's Exhibit 3); congestive heart failure (Claimant's Exhibit 4); spinal stenosis (Claimant's Exhibit 5); respiratory failure (Claimant's Exhibit 6); numerous episodes of confusion and altered mental status (Claimant's Exhibit 7, 8 and 9); a volvulus reduction, laminectomy, rotator cuff repair, and an appendectomy (Claimant's Exhibit 10).

8. Claimant currently understands that she receives social security **retirement** benefits but does not recall ever applying for them (Claimant's Exhibit 11). The ALJ infers and finds that there is a disputed issue of material fact concerning whether the Claimant or her counsel understood, or were confused, because of the difference between SSDI and straight SS Retirement benefits, in light of the wording of the offset provisions contained in § 8-42-103 (1) (c) (I), C.R.S.

9. At the time of the admitted injury, the Claimant was reportedly not eligible for social security benefits. Respondents received notice from the SSA, dated September 30, 1991, stating that Claimant was not entitled to SSDI benefits (Respondents' Exhibit B).

10. On July 21, 1994, Respondents sent a letter to both Claimant's counsel and the Claimant which referenced the September 30, 1991 letter from the SS denying benefits. The letter, which was sent in conjunction with the FAL, dated July 21, 1994, requested that Claimant or counsel "submit any social security information you may already have or receive in the future" (Respondents' Exhibit C). Apparently, this is the Respondents' last request for social security information, until 2017. Again, the ALJ infers and finds that there is a disputed issue of material fact concerning whether the Claimant or her counsel understood, or were confused, because of the difference between SSDI and straight SS Retirement benefits, in light of the wording of the offset provisions contained in § 8-42-103 (1) (c) (I), C.R.S.

11. On August 1, 2002, the Claimant began receiving SS Retirement benefits. Neither the Claimant nor her counse**l explicitly notified the Respondents of the Claimant's receipt of SS Retirement** benefits. Again, the ALJ infers and finds that there is a disputed issue of material fact concerning whether the Claimant or her counsel understood, or were confused, because of the difference between SSDI and straight SS Retirement benefits, in light of the wording of the offset provisions contained in § 8-42-103 (1) (c) (I), C.R.S.

12. Respondents claimed that they first learned (officially) that the Claimant was receiving SS Retirement benefits when they inquired with the SSA, as part of new

litigation of this workers' compensation claim. The inquiry was made because of a Social Security release executed by the Claimant on March 14, 2017 (Respondents' Exhibit D] A letter requesting Social Security records was submitted by Respondents on March 17, 2017 (Respondents' Exhibit E). The ALJ infers and finds that there is a disputed issue of genuine material fact concerning the Respondents' inaction in requesting releases from the Claimant from 1994 through 2017, a period of approximately 23 years. As a corollary, there is a genuine issue of disputed material fact concerning whether or not the Respondents **waived** their right to claim an offset against the Claimant's $153.28 weekly PTD benefits by 23 years of inaction on their part and suddenly (in 2017) claiming a $40, 937.00 offset against the Claimant's $153.28 weekly benefits. Indeed, **the doctrine of waiver is invested with the qualities of equitable considerations,** *e.g.,* "equity does not aid those who sleep on their rights." Pursuant to the Claimant's release of 2017, Respondents received written verification from the SSA that Claimant was receiving SS Retirement benefits of $364.00 per month, which equates to $84.00 per week (Respondents' Exhibit F).

13. On September 13, 2017, Respondents filed a new FAL, asserting an offset for an alleged overpayment of $40,937.00 against the Claimant's $153.28 weekly PTD benefit. Without the benefit of a hearing, Respondents suspended payment of the Claimant's PTD benefits to recover the overpayment, thus, temporarily granting their own motion for partial summary judgment.

14. On October 5, 2017, the Claimant filed an Application for Hearing to address the offset as well as PTD, medical benefits, authorized providers, and reasonably necessary treatment. A second hearing application was filed on November 17, 2017, endorsing the same issues.

15. Hearing is presently scheduled for March 14, 2018.

16. The Claimant's interrogatory responses, dated December 12, 2017, state, with respect to the asserted offset and claimed overpayment that "Respondents had sufficient notice that I was receiving Social Security benefits." She states that this notice was because she was "far beyond the age where it becomes mandatory" (Respondents' Exhibit G).

Ultimate Findings

17. There are genuine issues of disputed material fact surrounding the alleged and disputed **waiver** by the Respondents of the right to claim an offset of 40, 937.00 against the Claimant's PTD benefit of $153.28 per week. There may also be a collateral issue concerning the Respondents' unilateral suspension of the Claimant's $153.28 PTD benefits before a hearing.

18. There are genuine issues of disputed material fact concerning whether Respondents knew **or should have known** of the Claimant's eligibility for social security retirement benefits and Respondents' due diligence obligation to enquire and

prevent a "snow-balling effect of the alleged overpayment. After the Claimant turned 65 years of age, the Respondents continued paying the Claimant PTD benefits for 15 years, without enquiring or claiming an SS offset. As such, there are genuine issues of disputed material fact concerning the Respondents' inaction for almost 15 years and what the Respondents should have known. There are also genuine issues of disputed material fact surrounding equitable and fairness considerations as they relate to an alleged waiver of the right to pursue a snow-balled $40, 937.00 overpayment claim.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Undisputed Fact, the ALJ makes the following Conclusions of Law:

Summary Judgment

a. Pursuant to Office of Administrative Courts Rules of Procedure (OACP) Rule 17, 1 CCR 1101-3, "any party may file a motion for summary judgment seeking resolution of any endorsed issue for hearing." Summary judgment may be sought in a workers' compensation proceeding. *See Fera v. Indus. Claim Appeals Office,* 169 P.3d 231, 232 (Colo. App. 2007). The OAC Rule allows a party to support its Motion with affidavits, transcripts of testimony, medical reports, or employer records. A motion for summary judgment may be supported by pleadings, depositions, answers to interrogatories, and admissions on file. C.R.C.P. 56; *See also Nova v. Indus. Claim Appeals Office*, 754 P.2d 800 (Colo. App. 1988) [C.R.C.P. and C.R.E. apply insofar as they are not inconsistent with the procedural or statutory provisions of the Act]. The Respondents' Motions for Summary Judgment is accompanied by documents. The Claimant's Response to the Respondents' Motion for Summary judgment is also accompanied by documents.

b. Summary judgment is appropriate when the pleadings show that there is no genuine issue as to any material fact and that the moving party is entitled to judgment as a matter of law. C.R.C.P. 56(c); *Churchey v. Adolph Coors Co.*, 759 P.2d 1336 (Colo. 1988). This rule allows the parties to pierce the formal allegation of the pleadings and save the time and expense connected with trial when, as a matter of law, based on undisputed facts, one party could not prevail. See *Drake v. Tyner*, 914 P.2d 519 (Colo. Ct. App. 1996). As found, the aggregate documentary evidence establishes that there are genuine issues of disputed material fact.

c. Once the moving party shows specific facts probative of a right to judgment, it becomes necessary for the non-moving party to set forth facts showing that there are genuine issues of disputed, material facts for hearing. *See Miller v. Van Newkirk*, 628 P.2d 143 (Colo. App. 1980). As found, the Respondents' Motion for Summary Judgment, and the Claimant's Response thereto, fail to show specific facts

probative of the Respondents' right to summary judgment. Indeed, as inferred and found, there are genuine issues of disputed material fact surrounding **waiver** of the Respondents' right to claim an offset against SS Retirement benefits.

Waiver

d. The doctrine of waiver is based upon the principles of equity and fairness. The doctrine prevents "a rigid and inflexible application of the law [that] would otherwise result in an injustice." *Johnson v. Indus. Com. of State*, 761, P. 2d 1140, 1447 (Colo. 1988). A waiver occurs if a party manifests intent to relinquish a right. A party can waive a right through explicit or implicit conduct. An implicit waiver occurs when a party acts inconsistently with the assertion of the right. The ALJ, at an evidentiary hearing on the merits must consider whether Respondents knew **or should have known** of the Claimant's eligibility for social security benefits.

e. The *Johnson* court disagrees with Respondents' assertion, in their Motion for Partial Summary Judgment, that the Claimant has the sole responsibility to give notice of social security benefits. Apparently, the *Johnson* court wanted to prevent situations where vulnerable individuals, such as Claimant, were subject to a substantial offset (*e.g.,* $40,937.00) after a significant amount of time has passed, thus bringing detrimental harm to a claimant, which would warrant equity and fairness considerations coming into play. A determination involving such considerations would necessitate an evidentiary hearing on the merits to resolve genuine issues of disputed material fact.

Burden of Proof

f. The burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). In the present case, it is the Respondents' burden to prove that there are no genuine issues of disputed material fact and that they are, thus, entitled to a partial summary judgment. Their burden is by a "preponderance of the evidence." A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not (in this case that there is no genuine issue of disputed material fact). *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, there are genuine issues of disputed fact which can only be resolved at an evidentiary hearing, thus, Respondents have failed to prove that there are none.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. The Respondents' Motion for Partial Summary Judgment is hereby denied and dismissed.

B. The hearing of March 14, 2018, shall proceed as scheduled.

C. Any and all issues, including "waiver of the offset" are reserved for decision after the hearing on the merits.

DATED this_____day of March 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

This decision of the administrative law judge does not grant or deny a benefit or a penalty and may not be subject to a Petition to Review. Parties should refer to § 8-43-301(2), C.R.S., and other applicable law regarding Petitions to Review. If a Petition to Review is filed, *see* Rule 26, OACRP, for further information regarding the procedure to be followed.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that her permanent partial disability (PPD) impairment rating and functional impairment as a result of her work injury is on the schedule of injuries set forth by § 8-42-107(2), C.R.S.

FINDINGS OF FACT

1. Claimant was employed by Employer as a courtesy clerk with duties including bagging groceries and loading bags of heating pellets.

2. Respondents filed an admission of liability, admitting that on December 15, 2013 Claimant sustained a compensable injury involving her bilateral shoulders.

3. Following her injury in December of 2013, Claimant underwent treatment.

4. On July 20, 2015, Claimant underwent a Division Independent Medical Examination (DIME) performed by Bennett Machanic, M.D. Claimant reported working as a courtesy clerk with several days of repetitive cart pushing and lifting 40 pound bags of heating pellets and that by December 15, 2013 she had such severe pain in both shoulders that she was incapable of doing much work and within a couple of weeks she was totally unable to do her job. Dr. Machanic found on examination a straightened neck with exquisite tenderness over the scalene areas, right greater than left and reduced range of motion far worse on the right. He also found reduced range of motion in the bilateral shoulders, right greater than left. He found tenderness over the bicipital tendon area, decreased sensation over the hands bilaterally especially on the ulnar side, and distinct weakness in the hands. He opined that the Claimant's underlying problem may indeed be present over the brachial plexus and that she could have suffered a brachial plexus stretch injury or even thoracic outlet syndrome. Dr. Machanic opined that Claimant was not at maximum medical improvement (MMI), and recommended an EMG study of the brachial plexus; checking ulnar nerve dysfunction from the neck down the arm to the fingertips; MRI imaging; evaluation by a thoracic outlet syndrome therapist; and interventions based on the studies performed. He opined that since Claimant was not at MMI she did not qualify for a PPD impairment rating. *See* Exhibit C.

5. Based on the DIME report from Dr. Machanic, Claimant underwent additional treatment.

6. Claimant was evaluated by Alexander Feldman on June 30, 2016 and November 16, 2016. Dr. Feldman noted that Claimant had sustained a work related injury due to repetitive lifting of 40 pound heating pellet bags in 2013 and that Claimant had developed neck pain, shoulder pain, arm pain down the elbows. Dr. Feldman noted that

Claimant had been referred for thoracic outlet syndrome work up. He ordered a thoracic outlet protocol EMG study of both upper extremities and referred Claimant for thoracic outlet syndrome physical therapy stretching and Feldenkrise exercise. He noted that if it didn't help he would consider diagnostic scalene and pectoralis minor injections. *See* Exhibit F.

7. On October 12, 2016 Claimant underwent an Independent Medical Examination performed by Wallace Larson, M.D. Dr. Larson opined that Claimant did not sustain an injury at King Soopers with no specific history of trauma, no objective findings of trauma, and opined that the medical evidence showed pre-existing degenerative joint disease of the shoulders. Dr. Larsen opined that the condition was not caused or aggravated by occupational exposure. He opined that Claimant's examination was very inconsistent during his both his examination and other examinations and that her symptoms and responses could not be explained by any known physical disorder. He opined that Claimant did not have thoracic outlet syndrome. *See* Exhibit G.

8. On January 11, 2017 Claimant was again evaluated by Dr. Feldman. Dr. Feldman noted that Claimant's physical therapy had significantly helped with range of motion and shoulder and neck pain. Claimant reported stiff neck, neck muscle spasm, joint pain in shoulders with radiation to the elbows, weakness and mild weakness in the hands, and that she could not move her shoulders and hands fast enough. Claimant also reported tingling and numbness in her hands at night or when working on the computer. On examination, Dr. Feldman found stiffness and tenderness in the neck at cervical vertebrae 2, 3, 4, 5, and 6 as well as at the stemocleidomastoid region and the trapezius region on both sides. Dr. Feldman found tenderness in the sub occipital muscles of the cervical spine on both sides, increased cervical lordosis, and restricted range of motion in the cervical spine with flexion, extension, left side bending, right side bending, left rotation, and right rotation. He diagnosed brachial plexus disorder, traumatic arthropathy in the left and right shoulder, and cervicalgia. Dr. Feldman noted that Claimant had obviously benefited from physical therapy and recommended it be continued. Dr. Feldman noted significant pain over the right scalene complex and opined that if the therapy did not help, he would consider diagnostic blocks in the scalene muscles. *See* Exhibit F.

9. On May 23, 2017 Claimant was evaluated by Christina Pinsinski, M.D. Claimant reported that she was working in mail sorting and that she avoided the three actions out of her range that triggered her shoulder pain. Claimant reported doing yoga and tai chi and doing well. Claimant reported that once a week rehab helped significantly to release her deep upper back and shoulder muscles. On examination, Claimant's was found to have full range of motion of her shoulders and was able to rotate, extend, and flex completely. Claimant reported no pain with shoulder motions including with overhead movement. Dr. Pinsinski found full range of motion of shoulders, neck, and upper back without difficulty or pain. Claimant reported she only got symptoms when she overused three directions of movement including reaching anterior, reaching laterally, and lifting upward. Dr. Pinsinski assessed primary osteoarthritis of the right shoulder, primary

osteoarthritis of the left shoulder, and thoracic outlet syndrome. Dr. Pinsinski recommended continued therapy and home exercise and stretching. *See* Exhibit D.

10. On June 14, 2017 Claimant underwent physical therapy. She reported constantly feeling better and moderately confident in performing her activities of daily living with her upper extremities. Claimant reported increased symptoms in her left shoulder with constant overhead lifting and repetition but improved with exercise and physical therapy. *See* Exhibit 1.

11. On July 10, 2017 Claimant returned to Dr. Machanic for an updated DIME. Dr. Machanic noted that after his prior examination, Claimant had undergone additional treatment. He noted that Dr. Feldman believed Claimant to have chronic brachial plexus disorder. Dr. Machanic noted that Dr. Gottlob diagnosed primary osteoarthritis of both shoulders and bilateral shoulder glenohumeral degenerative joint disease. Dr. Machanic reviewed MRIs of both shoulders that were completed in March of 2016 as well as an EMG nerve conduction study done by Dr. Feldman in May of 2016. He noted that Dr. Feldman believed Claimant had evidence of thoracic outlet syndrome bilaterally as well as problems with the right median nerve and the left median nerve. Dr. Machanic noted diagnoses in July of 2016 by Dr. Dua of muscle contracture over the shoulders, sprain of the ligaments over the neck, sprain over the ligaments of the thoracic spine, brachial plexus disorders, and pain in both shoulders. Dr. Machanic finally noted that Claimant had been seen on May 23, 2017 by Dr. Pinsinski and placed at MMI with primary osteoarthritis, both right and left shoulders and thoracic outlet syndrome noted as problems. Dr. Machanic found on clinical examination that Claimant had stiffness of neck movement and upper back movement. Dr. Machanic noted that for the purpose of impairment rating which involved the shoulders only, Claimant's arms were examined with an inclinometer for range of motion over both right and left shoulders. *See* Exhibit C.

12. Dr. Machanic opined that Claimant had reached MMI on May 23, 2017. Dr. Machanic opined that Claimant had a work related cumulative trauma disorder as of December 15, 2013. He opined that Claimant had loss of range of motion over both shoulders with an 11% right upper extremity rating and a 5% left upper extremity rating. He also found that Claimant had sensory loss and findings in the ulnar nerves bilaterally with 5% upper extremity sensory motor loss on the right and 5% sensory motor loss on the left. Combing the ulnar nerve findings with loss of range of motion, he opined that Claimant had a 15% right upper extremity impairment and a 10% left upper extremity impairment, for a combined upper extremity impairment rating of 24%. He noted that the rating can be converted to a 9% whole person rating on the right, 6% whole person rating on the left, and to a total 15% whole person combined impairment rating. Dr. Machanic recommended closing Claimant's case, declaring MMI on May 23, 2017 and stating that Claimant had a permanent partial impairment of 24% upper extremity equating to 15% whole person. *See* Exhibit C

13. On August 9, 2017 Respondents filed a final admission of liability (FAL) admitting to a permanent partial disability (PPD) rating of 15% whole person, amounting

to a PPD payment of $11,400.60. Respondents indicated in the FAL that the basis for the permanent disability award was DIME physician Dr. Machanic's report. *See* Exhibit B.

14. On September 6, 2017 Claimant underwent physical therapy. Claimant reported feeling better with her upper back, neck, and shoulders with occasional pain and weakness in her shoulders. *See* Exhibit 1.

15. Claimant testified at hearing that due to her bilateral shoulder injuries her hands are not as efficient and that she moves slower now. Claimant testified that if she does not do physical therapy, her hands will get numb during work, especially her right hand. Claimant testified that her limitations from her injury essentially involve three actions that she avoids doing. She testified that these include repeated front reaching, repeated reaching to the side, and overhead reaching and that she tries to avoid lifting from the top of her thigh to the bottom of her ribs. Claimant testified that if she does these moves she had feelings of right shoulder spasm, bicep wanting to jump out of the groove, and irritation and pain. Claimant also testified that reaching overhead is not as acute of a problem, but that she avoids it.

16. Claimant's testimony is found credible. Claimant continues to experience spasm in her right shoulder, feelings of numbness in her hands, and feelings of bicep irritation like the bicep is jumping out of its groove. The pain, irritation, and limitations do not extend beyond the arm at the shoulder. The functional limitations resulting from Claimant's injury are limited to her shoulder, bicep, and hands and the functional limitations do not extend beyond the shoulder joint.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the

testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Scheduled Injury vs. Whole Person Impairment

Section 8-42-107, C.R.S., sets forth two different methods of compensating medical impairment. Subsection (2) provides a schedule of disabilities and subsection (8) provides for whole person ratings. The question of whether the Claimant sustained a scheduled impairment rating under § 8-42-107(2), C.R.S., or a whole person medical impairment compensable under § 8-42-107(8), C.R.S., is one of fact for determination by the ALJ. The application of the schedule depends upon the "situs of the functional impairment" rather than just the situs of the original work injury. *Strauch v. PSL Swedish Health Care System*, 917 P.2d 366 (Colo. App. 1996). Pain and discomfort which limit a Claimant's ability to use a portion of the body is considered functional impairment for purposes of determining whether an injury is off the schedule. *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Claimant bears the burden of establishing functional impairment and the consequent right to permanent partial disability benefits under § 8-42-107(8)(c), C.R.S., by a preponderance of the evidence. *Maestas v. American Furniture Warehouse,* W.C. No. 4-662-369 (June 5, 2007); *Johnson-Wood v. City of Colorado Springs,* W.C. No. 4-536-198 (ICAO June 20, 2005).

In this case, Claimant's testimony, substantiated by the medical records, establish that Claimant is entitled to a scheduled impairment rating under § 8-42-107(2), C.R.S. because her functional impairment is listed on the schedule of impairment. Claimant has met her burden by a preponderance of the evidence to show that her functional impairment does not extend beyond the "arm at the shoulder." As found above, at the time Claimant was placed at MMI by Dr. Pinsinski, Claimant reported that she only had symptoms with overuse in three directions of motion which is consistent with Claimant's hearing testimony. The symptoms and permanent impairment are related to the shoulder, bicep, and hands and do not extend beyond the shoulder. Claimant reported consistently at physical therapy in June of 2017 that she had increased symptoms in her shoulder with constant overhead lifting and repetition. Dr. Machanic found limitations in shoulder range of motion and sensory loss in her ulnar nerves bilaterally. Although Dr. Machanic found

stiffness of neck and upper back movement, Claimant is credible that her only permanent functional limitations as a result of the injury are with movements in her arms and at or below her shoulders. Claimant has established by a preponderance of the evidence that her functional limitations as a result of her work related injury are not beyond the arm at the shoulder and that she is entitled to a rating on the schedule of impairment.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that she has sustained a permanent partial disability impairment that is on the schedule of injuries listed at § 8-42-107(2), C.R.S. Claimant is therefore entitled to permanent partial disability benefits based upon a scheduled rating of 24% upper extremity.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 7, 2018

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

I. Whether the ALJ has subject matter jurisdiction over this matter.

II. Whether Claimant established by a preponderance of the evidence that he suffered a compensable right upper extremity injury arising out of and in the course of his employment on December 24, 2015.

III. Whether Claimant established by a preponderance of the evidence he is entitled to reasonable, necessary and related medical benefits, including an elbow injection as recommended by Dr. Scott Primack.

FINDINGS OF FACT

Jurisdiction

1. A First Report of Injury was filed in this claim on February 22, 2016.

2. Respondents filed a Notice of Contest on March 8, 2016.

3. On December 15, 2016, Respondents filed a Motion to Close the Claim for Failure to Prosecute.

4. On December 20, 2016, Claimant filed a Response to Respondents' Motion to Close Claim for Failure to Prosecute. Claimant also filed an Application for Hearing.

5. On December 30, 2016, the Director issued an Extension of Time to Show Cause ("Show Cause Order"), which provided Claimant's claim would automatically close unless, within 100 days of the date of the order, (1) the parties set a hearing before an OAC ALJ on any outstanding issues and attend the hearing, (2) the parties file a stipulation agreeing the claim be kept open, or (3) Claimant files a written motion for an additional extension of time with the Division.

6. A hearing was set for May 16, 2017. On January 19, 2017, Respondents filed their Response to Application for Hearing.

7. On April 14, 2017, the Division issued a second Show Cause Order providing the claim would automatically close within 100 days of the order unless the parties attend the May 16, 2017, file a stipulation agreeing the claim be kept open, or Claimant files a written motion for an additional extension of time with the Division.

8. On May 3, 2017, Claimant filed an Unopposed Motion for Extension of Time to Commence Hearing and to vacate the May 16, 2017 hearing. The motion was granted on May 4, 2017.

9. On May 8, 2017, Claimant filed a Motion for Additional Time to Show Cause, requesting additional time "incase parties are unable to get a new hearing date within the timeframe set forth in the April 14, 2017, Order." In that motion, Claimant stated, "Parties have been attempting to set a new date. However, counsel for Respondents has no availability for dates falling within the sixty (60) days, or the one hundred (100) day headline provided by Director Tauriello."

10. Based on the availability of counsel, parties agreed to set the hearing for November 2, 2017 at 1:30pm. On July 10, 2017, confirmation for the November 2, 2017 hearing was filed.

11. On July 19, 2017, the Director issued a third Show Cause Order, providing that Claimant's claim would automatically close unless, within 100 days of the date of the order, (1) the parties set a hearing before an OAC ALJ on any outstanding issues and attend the hearing, (2) the parties file a stipulation agreeing the claim be kept open, or (3) Claimant files a written motion for an additional extension of time with the Division.

12. The ALJ notes the July 19, 2017 Show Cause Order was issued after hearing confirmation of the November 2, 2017 hearing. Additionally, unlike the April 14, 2017 Show Cause Order, which noted the pending May 16, 2017 hearing date, the July 19, 2017 Show Cause Order did not reference or acknowledge the pending November 2, 2017 hearing date.

13. The hearing was held before ALJ Cayce on November 2, 2017.

14. On November 21, 2017, the Director issued a fourth Show Cause Order which stated the claim "will be held open so that the Final Order can be issued for the hearing held on November 2, 2017, within thirty (30) days of the date of this order."

15. On December 21, 2017, the parties attended a pre-hearing conference on Claimant's Motion for an Extension of Time to Comply with the Director's Show Cause Order. PALJ Steninger granted Claimant's motion, and ordered that the Director's Show Cause Order be "held in abeyance until 30 calendar days following the entry of an Order by the Office of Administrative Courts emanating from the hearing on 11/2/17."

16. The ALJ finds she has subject matter jurisdiction over this matter, per the Director's November 21, 2017 Show Cause Order and PALJ Steninger's December 21, 2017 Order.

<u>December 24, 2015 Alleged Injury</u>

17. Claimant is a 56-year-old man who works for Employer as a Business Manager.

18. Claimant alleges he suffered an injury to his right extremity on December 24, 2015. Claimant testified he was having a retirement party for two co-workers during a daily pre-work communication meeting in the customer area. He stated that supervisor Monica Vail appeared angry and approached him and told him it was not a good idea to have the meeting in that location. Claimant testified that, following the meeting, Ms. Vail grabbed his right arm with her right hand and yanked and pulled his elbow in an attempt to remove Claimant from the area and go see his immediate supervisor. He testified he told Ms. Vail "You need to turn me loose" and Ms. Vail released his arm. Claimant stated he felt immediate pressure from the pull, then pain over the following days and weeks. Claimant stated he did not have any bruising. Claimant reported the interaction to the Division Manager and Human Resources Manager that day, threatening to file assault charges against Ms. Vail. He did not report a work injury at the time. Claimant acknowledged he is aware of how to report work injuries. Claimant continued to work that day and has worked throughout the entirety of his claim.

19. Claimant testified he had no prior injuries to or issues with his right extremity. He stated he has experienced pain in his right arm and elbow since the date of the incident, as well as some pain in his hand and fingers.

20. Ms. Vail, Director of Sales, testified at hearing regarding the December 24, 2015 incident. She stated that she was frustrated Claimant chose to hold the meeting in a busy customer area and informed Claimant it was not a good idea to have the meeting in the customer area at that time. She testified she approached Claimant from his right side and put her left hand on Claimant's right upper arm because Claimant raised his voice. She stated Claimant told her to "never touch him again." She testified that she did not grab or pull Claimant. Ms. Vail testified that she is approximately five feet, six inches or five feet, seven inches tall.

21. Claimant is approximately six feet tall and weighs approximately 259 pounds.

22. Claimant testified he did not require medical treatment during the six weeks after the work incident. He later testified he waited to have the alleged injury addressed because he thought his symptoms would improve. He stated he did not do anything in the six weeks following the work incident that would have caused the injury.

23. On January 27, 2016, Claimant sought medical care with his personal physician, Seth A. Gursky, M.D., for a separate, non-related issue. During the visit, Claimant complained of right arm pain, reporting to Dr. Gursky that his supervisor grabbed his right arm. Claimant complained of soreness and tenderness, radiating arm pain, and decreased strength in his fingers. On physical examination, Dr. Gursky noted point tenderness in the right lateral antecubital fossa, pain with supination, pain and decreased strength in right hand, and no neurological deficits, boney tenderness, ecchymosis or deformity. Dr. Gursky assessed Claimant with obstructive sleep apnea, right elbow pain and right arm weakness. He recommended Claimant undergo an MRI of the right elbow.

24. Claimant attributed his condition to the December 24, 2015 work incident and subsequently reported the injury to Employer as a work-related injury on February 22, 2016. The First Report of Injury indicates the injury occurred when Ms. Vail grabbed Claimant's right arm at the bend of the elbow.

25. Claimant subsequently presented to Kirk Nelson, D.O. at U.S. HealthWorks Medical Group on March 1, 2016. Claimant reported that Ms. Vail grabbed his right arm at the elbow with her right hand in an attempt to escort him to another area. Claimant denied having constant pain, but reported having some pain at the elbow when rotating his forearm, and with flexion of his biceps. Physical examination revealed full active range of motion with resisted flexion producing pain in the radial collateral ligaments, mild crepitus at the head of the radius, normal grip strength, and decreased bicipital strength with subtle giveway weakness. Dr. Nelson remarked that Claimant was "insistent that the interaction between him and his co-worker be listed as an assault." Dr. Nelson diagnosed Claimant with a right elbow strain with possible small distal bicipital tendon tear and/or radial collateral ligament tear and assault. He recommended Claimant ice the area, take ibuprofen, and undergo an MRI. Dr. Nelson noted Claimant's history and physical exam were consistent with a work-related injury.

26. Claimant underwent an MRI of the right elbow on March 16, 2016. The MRI revealed a subacute mild strain to the distal biceps insertion on the radial tuberosity, with no tear or retraction. The ligaments were intact. There was no evidence of active epicondylitis. Modest subcutaneous edema adjacent to the medial supracondylar right without medial epicondylitis or ulnar neuritis was noted.

27. On March 18, 2016, Claimant presented to John Sanidas, M.D. Dr. Sanidas noted the following mechanism of injury: "pulling incident when [Claimant] wrenched the distal biceps tendon." He noted the MRI did not show a tear, but did reveal irritation/sprain. On physical examination, Dr. Sanidas noted tenderness to palpation on the distal tendon on the radius. He assessed Claimant with a right biceps distal tendon sprain and referred Claimant to an upper extremity specialist.

28. Dr. Sanidas opined that Claimant's December 24, 2015 injury was work-related.

29. On April 11, 2016, Claimant presented to Eric N. Britton, M.D. with complaints of right elbow pain. Physical examination revealed full range of motion of the elbow, tenderness to palpation of the proximal mobile wad and distal biceps tendon, and pain with stressed elbow flexion. The supination stress test was negative. Dr. Britton noted the MRI showed evidence of distal biceps tendon strain and medial subcutaneous edema. He diagnosed Claimant with a right elbow sprain and distal biceps tendon and brachloradialis strain. Dr. Britton referred Claimant to physical therapy.

30. Claimant reported no significant improvement after undergoing several sessions of physical therapy.

31. Dr. Sanidas reevaluated Claimant on May 13, 2016. Dr. Sanidas noted Claimant had no other discomfort or problems in the right shoulder or forearm except for

a “very isolated area of palpation.” He referred Claimant to Scott J. Primack, D.O. for an ultrasound.

32. Dr. Primack conducted a comprehensive diagnostic ultrasound consultation on June 24, 2016. The ultrasound revealed a small, deep muscle tear at the level of the supinator muscle just lateral to the insertion point of the biceps tendon. Dr. Primack discussed treatment options with Claimant, including injections or an elbow sleeve.

33. On October 9, 2016, Kathleen D’Angelo, M.D. performed an Independent Medical Evaluation (“IME)” at the request of Respondents. Dr. D’Angelo performed a comprehensive medical records review and physically examined Claimant. Claimant reported sustaining an injury when Ms. Vail grabbed his right arm with her right hand and pulled him. He reported that Ms. Vail was standing off to his left and facing him when the incident occurred. Claimant alleged experiencing worsening pain since the incident. On physical examination of the right elbow, Dr. D’Angelo noted negative Tinel’s, full range of motion with no complaints of pain with supination or pronation, no tenderness to the epidoncdyles or olecranon, no erythema or effusion, and isolate antecubital tenderness over the lateral region. Regarding the right shoulder she noted minor pain with palpation over the posterior musculature diffusely at the upper trapezius, and normal range of motion. Examination of the right hand was normal with the exception of isolated tenderness over the ulnar-lateral aspects of the long finger and ring finger MCP joints.

34. Based on a lack of MRI findings, negative physical examination findings, the late onset of pain complaints, and the absence of response to any appropriate treatment, Dr. D’Angelo opined Claimant’s injury was not related to the December 24, 2015 work incident. She explained that the supinator muscle is a deep muscle in the anteriolateral compartment of the forearm, and opined that Claimant’s supinator muscle tear cannot be explained by the mechanism of injury described by Claimant. She noted Claimant did not actively seek medical attention for his symptoms, and only mentioned the right arm pain to his personal physician during a visit for an unrelated issues. Dr. D’Angelo further noted that there was no trauma to the superficial tissue in the area, bruising, swelling and pain, which would have been expected. She also determined Claimant’s other symptoms, including the radiating pain, finger pain, trapezius spams and increased headaches, were not related to the injury.

35. Dr. D’Angelo opined Claimant was at MMI with no need for further medical evaluation or treatment, restrictions or permanent impairment. She suggested any further treatment should proceed under Claimant’s private health insurance.

36. Dr. D’Angelo testified by deposition as an expert in internal medicine. Dr. D’Angelo is board certified in internal medicine and Level II accredited by the Division of Workers’ Compensation. Dr. D’Angelo testified that supinator tears generally require a significant amount of force, are generally associated with a distal biceps tear and other associated traumas. She stated that one would anticipate bruising, immediate bleeding into the muscle, swelling, pain, ecchymosis and difficulty immediately with supination and pronation, none of which Claimant indicated occurred at the time the injury, or was

noted in the first exam. She testified that even if Ms. Vail grabbed Claimant's elbow, such contact would not have resulted in Claimant's injury. Dr. D'Angelo continued to opine within a reasonable degree of medical probability that Claimant's supinator tear and other symptoms were not related to the December 24, 2015 work incident. Dr. D'Angelo acknowledged that Drs. Sanidas and Nelson found Claimant's injury work-related, but stated neither doctor performed a thorough causation analysis.

37. Claimant returned to Dr. Sanidas for a follow-up visit on October 28, 2016. Dr. Sanidas placed Claimant at MMI with an 8% upper extremity rating. Claimant indicated to Dr. Sanidas he wished to continue conservative management on his own. Dr. Sanidas released Claimant to full duty with six to eight months of maintenance care as needed.

38. Ms. Vail's testimony is found more credible and persuasive than Claimant's testimony.

39. The ALJ credits the opinion of Dr. D'Angelo over the conflicting opinions of Drs. Sanidas and Nelson and finds Claimant's supinator muscle tear and other symptoms are not related to the December 24, 2015 work incident.

40. Claimant failed to establish by a preponderance of the evidence he sustained a compensable injury arising out of and in the course of his employment for Employer on December 24, 2015.

41. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Jurisdiction

Respondents contend the ALJ lacks subject matter jurisdiction over this matter, arguing Claimant's claim administratively closed on October 27, 2017 pursuant to the Director's July 19, 2017 Show Cause Order. Respondents argue that a hearing did not take place within 100 days of the date of the July 19, 2017 Show Cause Order, nor did Claimant file another written motion for an additional extension of time.

WCRP 7-1 provides, in relevant part, that a claim may be closed by order, final admission, or pursuant to the subsection (C) of the rule regarding failure to prosecute. Subject matter jurisdiction "relates to the power or authority of the court to deal with a particular case." Sanchez v. Straight Creek Constructors, 41 Colo. App. 19, 580 P.2d 827 (1978). The ALJ has subject matter jurisdiction to resolve disputes arising under the Workers' Compensation Act. § 8-43-201, C.R.S.

The Director's July 19, 2017 Show Cause Order was issued after confirmation of the November 2, 2017 hearing and made no reference to the pending November 2, 2017 hearing. The Director subsequently issued a November 21, 2017 order specifically stating the claim would be held open for issuance of a final order from the November 2, 2017 hearing. PALJ Steninger's December 21, 2017 order further noted the Director's order would be held in abeyance following the entry of an order of the OAC emanating from the November 2, 2017 hearing. Accordingly, despite the Director's July 19, 2017 Show Cause Order, subsequent orders clearly establish the claim was held open for the issuance of an order on the merits in this case. Accordingly, the ALJ has subject matter jurisdiction to decide whether Claimant sustained a compensable injury and is entitled to reasonable, necessary and related medical care.

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury she was performing service arising out of and in the course of employment, and that the alleged injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. The question of whether the claimant met the burden of proof to establish a compensable injury is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Ms. Vail credibly testified that she did not grab or pull Claimant's elbow. More importantly, Dr. D'Angelo credibly opined that even if Ms. Vail did grab Claimant as purported by Claimant, such mechanism of injury would not produce a supinator muscle tear or Claimant's other symptoms. The ALJ credited the opinion of Dr. Angelo, who performed a comprehensive examination, medical records review, and causation analysis. Claimant did not report a work injury nor seek medical treatment until approximately six weeks after the incident. Neither Claimant's testimony nor the medical records establish Claimant had any bruising, swelling, internal bleeding or injury to the more superficial muscles in the same area, which Dr. D'Angelo credibly opined would be present in the event Claimant sustained an injury as purported. Based on the objective medical evidence, Dr. D'Angelo's credible opinion, and the credible testimony of Ms. Vail, the ALJ concludes Claimant failed to demonstrate that it is more likely than not he sustained a compensable industrial injury on December 24, 2015.

As Claimant failed to meet his burden to prove a compensable injury, the issue of reasonable, necessary and related medical treatment is moot.

ORDER

It is therefore ordered that:

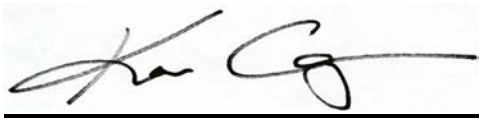
1. Claimant failed to prove by a preponderance of the evidence that he suffered a compensable injury resulting from his work activities on December 24, 2015. Claimant's claim for benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures

to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 7, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Is Claimant's entitled to higher average weekly wage for purpose of calculating Claimant's PPD benefits?

STIPULATIONS

The parties stipulated as to the following facts.

1. Claimant was injured on February 6, 2016. At the time of his injury, Claimant was paid $14.50 per hour (approximately 40 hours per week). Claimant's AWW was $648.48 – which equated to a comp. rate (TTD) of $432.32.

2. On or about July 16, 2016, Claimant received a wage increase to $15.00 per hour.

3. On or about September 21, 2016, Claimant received a wage increase to $17.00 per hour.

4. Claimant is still employed with Employer.

The Stipulations were accepted by the Court and made part of this Order.

FINDINGS OF FACT

1. On February 6, 2016, Claimant was injured while working for Employer when he fell off a balcony.

2. Claimant's rate of pay at the time of his injury was $14.50 per hour.

3. The ALJ found Stipulation 1 specified Claimant worked "approximately" 40 hours per week. However, the stipulated average weekly wage of $648.48 leads the ALJ to conclude Claimant worked slightly more than 40 hours per week. To reach this this AWW, Claimant would have been working approximately 44.72 hours per week (without any overtime).

4. There was no evidence in the record as to the amount of overtime (if any) Claimant was working at the time of injury.

5. An Employer's First Report of Injury was completed on or about February 8, 2016.[1] That document did not provide a figure for Claimant's AWW.

6. On February 22, 2016, a General Admission of Liability ("GAL") was filed on behalf of Respondents, admitting for medical benefits and wage benefits (TTD), beginning February 7, 2016.

7. On April 13, 2016, Claimant was released to work with restrictions.[2] Claimant was working six hours per day.

8. An amended GAL was filed on April 26, 2016, which reflected Claimant's return to work with restrictions.

9. On or about July 16, 2016, Claimant received a wage increase to $15.00 per hour. (*Stipulation #2*)

10. On September 9, 2016, Claimant was released to full duty (no commercial driving until a driving test could be taken).[3]

11. A General Admission of Liability was filed on or about dated September 16, 2016 after Claimant was returned to work full duty.

12. On or about September 21, 2016, Claimant received a wage increase to $17.00 per hour. (*See Stipulation #3*).

13. On February 15, 2017, Claimant was placed at Maximum Medical Improvement (MMI) and his ATP determined he had a 10% whole person impairment. Additionally, Claimant was awarded 3 years of medical maintenance to address issues with TMJ. Claimant did not receive any permanent restrictions.

14. On April 17, 2017, Respondents filed a Final Admission of Liability. Claimant's PPD Award was calculated to be $29,051.90 based on an AWW of $648.48 and a TTD comp. rate of $432.32.[4]

15. The AWW admitted to by Respondents was based on working more than 40 hours per week.

16. The admitted AWW did not fairly compensate Claimant for his wage loss.

17. Claimant is entitled to a higher average weekly wage.

---

[1] Respondents' Exhibit A.

[2] Respondents' Exhibit C.

[3] Respondents' Exhibit D.

[4] Respondents' Exhibit E.

18. The ALJ determined it was more fair to include Claimant's raise received in July 2016. At the time of this raise, Claimant was working modified duty. A higher AWW using this methodology would more fairly approximate Claimant's wage loss and diminished earning capacity.

19. The ALJ concluded the Claimant was working the equivalent of 44.72 hours per week at the time of his injury. Claimant was therefore entitled to a higher AWW of $670.80 per week ($15.00 x 44.72=$670.80). Claimant's TTD rate was $447.20 per week.

20. Testimony and evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

AWW

§ 8-42-102(2), C.R.S. (2016) requires the ALJ to calculate Claimant's AWW based on the earnings at the time of injury as measured by the Claimant's monthly, weekly, daily, hourly or other earnings. This section establishes the so-called "default" method for calculating Claimant's AWW.

However, if for any reason, the ALJ determines the default method will not fairly calculate the AWW, § 8-42-102(3), C.R.S. (2016) affords the ALJ discretion to determine the AWW in such other manner as will fairly determine the wage. § 8-42-

102(3), C.R.S. establishes the so-called “discretionary exception”. *Benchmark/Elite, Inc. v. Simpson,* 232 P.3d 777 (Colo. 2010); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra; Avalanche Industries v. ICAO*, 166 P.3d 147 (Colo. App. 2007)

In *Campbell*, Claimant's initial injury occurred ten years before her deteriorating condition caused her to cease working. Her employer argued that her AWW should be based on the wages she earned at the time of her initial injury, rather than the higher wages she had earned through salary increases and promotions during the intervening years. The Colorado Court of Appeals determined that it would be "manifestly unjust to base Claimant's disability benefits in 1986 and 1989 on her substantially lower earnings in 1979", and determined that her AWW should be based upon the higher salary earned at the time her deteriorating condition caused her to stop working. *Campbell v. IBM Corp., supra,* 867 P.2d at 82. The rationale for the Court’s decision was one of fairness and Justice Plank stated:

> “The entire objective of wage calculation [under the Act] is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. Although [AWW] generally is determined from the employee's wage at the time of injury, if for any reason this general method will not render a fair computation of wages, the administrative tribunal has long been vested with discretionary authority to use an alternative method in determining a fair wage”. *Campbell v. IBM Corp., supra,* 867 P.2d at 82.

Likewise, in *Pizza Hut v. ICAO*, 18 P.3d 867, (Colo. App. 2001), Claimant was injured while working as a delivery driver. He then obtained a second job at a hospital. Claimant concurrently held two jobs for a short period, then quit the delivery job. The Colorado Court of Appeals affirmed the increase in Claimant's average weekly wage and reinforced the principle that the ALJ had discretion to calculate Claimant’s wages to based on earnings from a subsequent employer and not upon wages earned at the time of injury, as the former represented a fairer calculation of Claimant’s AWW.

In the case at bar, Respondents argued the default method for calculating Claimant’s AWW was the appropriate methodology for this determination; specifically, the fact he received raised did not automatically entitle him to a higher AWW. Respondents also averred Claimant provided no evidence that he was entitled to a higher AWW.

Claimant argued the default method did not fairly establish Claimant’s AWW. Claimant asserted he was entitled to receive the benefit of the raises he received while working for Employer and therefore was entitled to a higher AWW of 17.24%.

As determined in Findings of Fact 15-19, the ALJ found the default method for calculating Claimant’s AWW was not the fairest calculation and did not adequately compensate Claimant for his wage loss. Respondents correctly pointed out Claimant was not automatically entitled to a higher AWW because he received raises subsequent to his industrial injury. However, the ALJ concluded Claimant’s actual wages were

higher than the admitted rate. (Finding of Fact 3). In addition, the ALJ determined it was a fair approximation of Claimant's actual wage loss to include one raise before Claimant was returned to full duty. (Finding of Fact 18).

Therefore, the ALJ found Claimant was entitled to a higher AWW and utilized the discretionary exception found in § 8-42-102(3), C.R.S. The ALJ's reasoning was twofold; first, based upon the evidence before the Court, Claimant was working slightly more than forty (40) hours per week at the time was injured. The admitted average weekly wage reflected this fact. In this regard, without payroll/timecard records, the ALJ deduced Claimant worked the equivalent of 44.72 hours per week. The ALJ concluded a fairer approximation of Claimant weekly wage took into account the average or equivalent number of hours per week and the July 2016 raise. This gives an AWW of $670.80.

Second, based upon the rationale articulated in *Campbell* and *Pizza Hut*, the ALJ determined Claimant should receive the benefit of the July 2016 raise, which he received before he was returned to work without restrictions. Using the formula, the ALJ determined this compensated Claimant for his cognizable wage loss which occurred while he was still temporarily disabled. Accordingly, Claimant is entitled to a higher average weekly wage.

ORDER

It is therefore ordered that:

1. Claimant's AWW is increased to $670.80 per week.

2. Respondents shall pay indemnity benefits (TTD) based upon Claimant's higher AWW.

3. Respondents shall pay medical impairment benefits (PPD) based upon Claimant's higher AWW.

4. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Timothy L. Nemechek
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that on April 28, 2017 she suffered an injury that arose from and in the course and scope of her employment with employer (WC 5-046-046-02).

- If claimant does not prove a new compensable injury, whether claimant has demonstrated by a preponderance of the evidence that her claim related to an admitted injury that occurred on December 26, 2015 (WC 5-002-511-01) should be reopened pursuant to Section 8-43-303, C.R.S. based on a change of condition.

- If claimant proves a compensable injury for claim WC 5-046-046-02 **OR** proves reopening of claim WC 5-002-511-01, whether claimant has demonstrated by a preponderance of the evidence that medical treatment she received after April 28, 2017 (including incurred medical mileage) was reasonable and necessary to cure and relieve her from the effects of either work injury.

STIPULATIONS

- The parties stipulated that if the April 28, 2017 incident is found compensable, claimant's average weekly wage (AWW) for that claim (WC 5-046-046-02) will be $626.62.

- The parties stipulated that respondents are entitled to an offset related to claimant's receipt of Social Security Disability Insurance (SSDI) benefits beginning October 1, 2017.

- In their position statements the parties indicated that they have also stipulated that if claim WC 5-002-511-01 is reopened **OR** if claim WC 5-046-046-02 is found compensable, claimant is owed temporary total disability (TTD) benefits for the period of April 29, 2017 through February 6, 2018 in the amount of $14,971.15 (which reflects the offset for SSDI benefits).

FINDINGS OF FACT

1. Claimant testified that she began employment with employer in September 2003 and worked primarily in the meat department. On December 26, 2015 claimant suffered an admitted work injury. Claimant testified that the injury occurred when she slipped on ice in employer's parking lot and fell. The medical records identify the injured body parts as claimant's low back, hip, and neck.

2. Following the December 26, 2015 injury, claimant's authorized treating provider (ATP) was St. Mary's Occupational Medicine. Claimant was seen at St. Mary's Occupational Medicine by James Harkreader, NP, Dr. Robert McLaughlin, and Dr. Craig Stagg.

3. On February 29, 2016, a magnetic resonance image (MRI) was taken of claimant's lumbar spine. The MRI showed mild facet arthritis with degenerative listhesis primarily at the L4-L5 level and some associated mild stenosis primarily from the L3 to S1 levels.

4. Claimant's medical treatment for the December 26, 2015 work injury has included physical therapy, injections, acupuncture, and chiropractic treatment. Claimant testified that she did not receive sustained pain relief from any of these treatment modalities.

5. On December 28, 2016, Dr. Stagg determined that claimant had reached maximum medical improvement (MMI) and assessed a permanent impairment rating of 11% whole person. Dr. Stagg recommended post MMI medical treatment including three to four follow up visits over the next year, with the possibility of additional injections. At that time, claimant had no work restrictions and continued working for employer in the meat department.

6. Claimant testified that when she was placed at MMI she continued to have symptoms that included pain in her low back, both hips, and her left leg from her hip to her foot.

7. On January 13, 2017, respondents filed a Final Admission of Liability (FAL) admitting for a whole person permanent impairment of 11%, the MMI date of December 28, 2016, and reasonable, necessary, and related maintenance medical treatment. Claimant did not contest the FAL. As a result, the claim was closed.

8. On January 16, 2017, claimant returned to Dr. Stagg and reported that she was having significant pain in her low back and pain in her cervical spine. Dr. Stagg assigned claimant work restrictions of no lifting, pushing, or pulling over 20 pounds. Based upon those work restrictions, employer moved claimant from the meat department to the position of fitting room attendant in mid to late January 2017. The position in the fitting room complied with claimant's work restrictions.

9. On March 28, 2017, Dr. Kenneth Lewis administered right sided L4 through S3 radiofrequency ablation. Immediately following the radiofrequency ablation treatment, Dr. Lewis recorded that claimant was able to ambulate with no motor or sensory deficits.

10. On April 10, 2017, claimant returned to Dr. Lewis' office and reported to Chelsea Olsen, FNPC that the radiofrequency ablation relieved her pain by 70%. At hearing, claimant testified that following the radiofrequency ablation treatment she developed a headache and pain in her back. Claimant also testified that felt that by March 2017 her condition was worsening.

11. Claimant testified that on April 28, 2017 she suffered an injury at work when she was working in the fitting room area and lifted a tub of merchandise. Claimant testified that she believed that the tub was only full of clothing items. However, the tub also contained shoes and boots, so it was heavier than claimant anticipated. As claimant lifted the tub she felt pain in her shoulder blade area, right arm, right shoulder, and back. Claimant testified that following that incident she finished her scheduled shift. Claimant testified that the next day the pain in her shoulder blade area had worsened and she called off from her shift. The next two days were claimant's scheduled days off.

12. Claimant testified that her next scheduled shift was the following Tuesday. On that date, claimant reported the April 28, 2017 incident to employer. Claimant testified that she was instructed by a member of personnel to see her workers' compensation doctor, so claimant scheduled an appointment with Dr. Stagg.

13. Claimant was seen by Dr. Stagg on May 2, 2017. Claimant reported that while lifting tubs at work she felt an increase in her low back pain with radiating pain into her left lower extremity. Dr. Stagg noted claimant's history of chronic back pain and determined that the April 28, 2017 tub incident was a "temporary aggravation" of that preexisting condition. Dr. Stagg ordered an x-ray of claimant's lumbar spine placed claimant on a work restriction of "no work". Claimant testified that she has not returned to work for employer or any other employer since that time.

14. Claimant returned to Dr. Stagg on May 5, 2017 and reported that although her back pain had decreased, it was still present. On that date, Dr. Stagg diagnosed an acute lumbar strain. Dr. Stagg recommended claimant begin physical therapy and continued claimant on a restriction of "no work".

15. On May 8, 2017, claimant returned to Dr. Lewis and reported that she had 60% relief from her right sided radiofrequency ablation. Claimant also reported that she had recently injured her right side and wanted to postpone further treatment on that side. On that date, Dr. Lewis performed left L4 through S3 radiofrequency ablation.

16. On May 10, 2017, claimant began physical therapy related to the April 28, 2017 incident. Claimant testified that at physical therapy her neck, shoulders, and mid-back were addressed. Claimant testified that pain in her mid-back is a new symptom that began after the April 28, 2016 incident.

17. On May 17, 2017, claimant returned to Dr. Stagg and reported that the most recent radiofrequency ablation procedure provided no relief. At that time, Dr. Stagg opined that claimant had experienced an "[e]xacerbation of [her] underlying chronic low back pain with radicular symptomology" and ordered a lumbar spine MRI.

18. On May 22, 2017, an MRI of claimant's lumbar spine showed degenerative disc and degenerative facet disease which was noted as "similar to previous study". The MRI also showed mild retrolisthesis of the L1 on L2 and

anterolisthesis of L4 on L5 secondary to degenerative facet disease, which was also unchanged from the prior MRI.

19. On May 30, 2017, claimant returned to Dr. Stagg and reported that she was still having pain in her back that was radiating into her left anterior thigh and down into her left lower extremity. On that date, Dr. Stagg recommended that claimant return to Dr. Clifford for consultation because of her "worsening symptomatology". Dr. Stagg also referred claimant to Dr. Joel Cohen for pain psychology treatment.

20. On June 14, 2017, claimant was seen by Todd Ousley, PA-C at Dr. Clifford's office. At that time, claimant described the April 28, 2017 incident involving lifting the tub at work. Claimant also reported pain in her lumbar spine that was radiating into the mid thoracic spine and down into her left leg.

21. Dr. Stagg also ordered a functional capacity evaluation (FCE) and claimant attended the FCE on August 7, 2017 with Marty Haraway, OTR. At the conclusion of the FCE, Ms. Haraway opined that claimant should seek work within or below the Sedentary Physical Demand Category that would allow for frequent position changes and not require squatting or kneeling.

22. Claimant attended an independent medical examination with Dr. Tashof Bernton on September 13, 2017. Dr. Bernton reviewed claimant's medical records, obtained a history from claimant and performed a physical examination as part of the IME. In his IME report, Dr. Bernton opined that claimant remains at MMI for the December 26, 2015 injury and did not suffer a new injury on April 28, 2017. Dr. Bernton also noted in his IME report that claimant has exhibited significant somatoform symptoms.

23. Dr. Bernton's testimony at hearing was consistent with his written report. During his testimony Dr. Bernton reiterated his opinion that claimant has not experienced a worsened condition related to the December 2015 work injury and did not suffer an injury on April 28, 2017. Dr. Bernton testified that following the December 2015 work injury, claimant's condition was "fluctuating but stable".

24. Dr. Bernton also provided testimony regarding his opinion that claimant's symptoms are the result of a somatoform disorder. In support of this opinion, Dr. Bernton noted that during the IME claimant exhibited four out of five Waddell's signs. Dr. Bernton explained that Waddell's signs are indicative of nonorganic or psychological causes of a patient's pain symptoms. Dr. Bernton testified that he does not doubt that claimant is experiencing pain, but there is no objective evidence pointing to a pain generator.

25. The ALJ credits claimant's testimony, the medical records, and the opinion of Dr. Stagg over the contrary opinion of Dr. Bernton and finds claimant has demonstrated that it is more likely than not that on April 28, 2017 she suffered an injury at work that aggravated, accelerated, or combined with her preexisting chronic low back pain, necessitating medical treatment.

26. The ALJ credits claimant's testimony and the medical records and finds that claimant has demonstrated that it is more likely than not that the medical treatment she has received following the April 28, 2017 work injury, including incurred medical mileage, is reasonable and necessary to cure and relieve her from the effects of the work injury.

27. The ALJ credits claimant's testimony and the medical records and finds that claimant has demonstrated that she has not worked since the April 28, 2017 injury and as a result has experienced loss of wages.

28. The ALJ does not address reopening WC 5-002-511-01 because claimant has proven that she suffered a compensable injury on April 28, 2017.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. At any time within six years after the date of injury, the ALJ may reopen an award on the ground of a change in condition. Section 8-43-303(1), C.R.S. A change in condition refers to "a change in the condition of the original compensable injury or to a change in claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

5. As found, claimant has demonstrated by a preponderance of the evidence that she sustained an injury to her back that arose out of and in the course an scope of her employment with employer. As found, the April 28, 2017 incident aggravated, accelerated, or combined with claimant's preexisting chronic back condition resulting in the need for medical treatment. As found, claimant's testimony, the medical records, and the opinion of Dr. Stagg are credible and persuasive.

6. As claimant has proven that she suffered a compensable injury on April 28, 2017, the ALJ does not address reopening the WC 5-002-511-01 claim.

7. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

8. As found, claimant has demonstrated by a preponderance of the evidence that medical treatment she has received following the April 28, 2017 work injury, including incurred medical mileage, is reasonable and necessary to cure and relieve claimant from the effects of the work injury. As found, claimant's testimony and the medical records are credible and persuasive.

9. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively

and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

10. As found, claimant has demonstrated by a preponderance of the evidence that she is entitled to temporary total disability (TTD) benefits because her April 28, 2017 work injury resulted in wage loss. As found, claimant's testimony and the medical records are credible and persuasive.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury on April 28, 2017 that arose out of and in the course and scope of her employment with employer.

2. As claimant has proven that she suffered a compensable injury on April 28, 2017, the ALJ does not address reopening the WC 5-002-511-01 claim.

3. Respondents are liable for medical treatment claimant received after April 28, 2017, including incurred medical mileage.

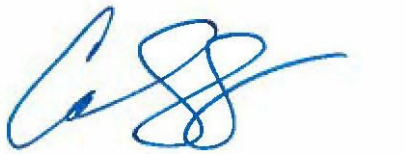
4. Pursuant to the stipulation of the parties, claimant's average weekly wage (AWW) is $626.62

5. Pursuant to the stipulation of the parties, claimant is owed temporary total disability (TTD) benefits for the period of April 29, 2017 through February 6, 2018 in the amount of $14,971.15.

6. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

7. All matters not determined herein are reserved for future determination.

Dated: March 13, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Have Respondents shown, by a preponderance of the evidence, that Claimant is no longer entitled to Temporary Total Disability ("TTD") payments, effective September 11, 2017, due to his failure to begin a valid offer of modified employment?

II. Have Respondents shown, by a preponderance of the evidence, that Claimant is no longer entitled to TTD benefits, effective September 11, 2017, because he was responsible for his own termination?

STIPULATION

Dr. Douglas Bradley, M.D. is Claimant's Authorized Treating Physician. The ALJ accepted this stipulation.

ADMISSIBILITY OF CLAIMANT'S EXHIBIT 5

Respondents object to the admission of Claimant's Exhibit 5 because the document lacks foundation and is inadmissible hearsay. The ALJ now finds that Exhibit 5 is a record generated by Pinnacol, Maggie's Farm's workers' compensation *insurer.* Insurer's records do not constitute *'employer records'* for the purposes of admission under § 8-43-201. Claimant wishes to characterize this document as a statement by a party opponent (thus non-hearsay). Such characterization is misplaced. While the *document* was generated by a *party in interest* (as opposed to a party-opponent), what Claimant seeks to introduce is actually *Claimant's statement* regarding his medical condition. Further, an insurer's records, such as here, contain discussions of the advisability of *settlement*, which is not before the fact-finder. Exhibit 5 is inadmissible based on a lack of foundation and hearsay, regardless of any relevance it might arguably possess.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant was hired as a cultivation technician by Maggie's Farm on July 24, 2017. As a cultivation technician, Claimant performed outdoor manual labor for a marijuana farm.

2. On the day he was hired, Claimant signed a document acknowledging he received Maggie's Farm's employee handbook ("Handbook"). The document declares Claimant reviewed the Handbook, understood the Handbook, and understood that it was his responsibility to comply with the policies in the Handbook. (Ex. D, p. 16).

3. The Handbook contains several policies related to attendance. In the section labeled "PUNCTUALITY AND ATTENDANCE," the Handbook states an "employee who is absent for three or more consecutive days without notifying the Company . . . will be considered to have abandoned their job and will be considered to have voluntarily resigned." (Ex. C, p. 11). In the section labeled "Unscheduled Time Off," the Handbook states that "[e]xcessive unscheduled time off may result in counseling and, if the problem continues, may be grounds for disciplinary action, up to and including termination of employment." (Ex. C, p. 15). Both policies refer to Maggie's Farm's Attendance Policy ("Attendance Policy") for additional details.

4. When he was hired, Claimant also signed a document acknowledging he received the Attendance Policy and he understood that it was his responsibility to read the Attendance Policy and to comply with its terms. (Ex. F, p. 23).

5. The Attendance Policy states that the third occurrence of absence without notification would result in separation from employment. (Ex. E, p. 19). An "absence without notification" is defined by the Attendance Policy as an "[u]nscheduled absence without notice prior to the start of the scheduled shift (not reporting or calling)." (Ex. C, p. 18). The Attendance Policy also states an employee "who is absent from work for three consecutive shifts without notifying his or her Supervisor or Manager may generally be deemed to have voluntarily resigned his or her position." (Ex. C*,* p. 20). Discipline under the Attendance Policy "may not necessarily be progressive" and Maggie's Farm may terminate employees without prior warnings. (Ex. C*,* p. 17).

6. The ALJ finds that Claimant received, and acknowledged by his signature dated 7/24/17, the Handbook and the Attendance Policy, including the rule stating an employee would be terminated for the third occurrence of an absence without notification.

7. Sharon Northern, the Human Resources Director at Maggie's Farm, drafted the Handbook and the Attendance Policy. She testified the Handbook expressed the overarching rules of employment with Maggie's Farm, while the Attendance Policy provided specific details regarding the expectations of employee attendance. The purpose of the attendance rules was to avoid severe disruption in the operation of Maggie's Farm's business. As Ms. Northern explained, when an employee unexpectedly misses time from work, the production level at Maggie's Farm drops, which reduces the supplies Maggie's Farm can provide to its recreational dispensaries.

8. Claimant reported to Emergicare that he injured his right knee on July 31, 2017, when his right knee just "gave out." He was unable to put any weight or pressure on his knee without experiencing considerable pain. Dr. Bradley noted swelling, tenderness, and limited range of motion when Claimant was examined. (Ex. 8, pp. 36-43). Claimant later reported that he did not fall, twist the knee, or hyperextend it. (Ex. L, p. 62). He was injured one week after he began working at Maggie's Farm.

9. Dr. Bradley prescribed work restrictions on the date of injury of no lifting, carrying, pushing or pulling more than 5 lb, walking or standing no more than 1 hour

total per day (5 to 10 minutes at one time), and 7 hours sitting per day (55 minutes per hour). Claimant was to wear a brace, and be up on crutches. MRI and X-rays were ordered. A follow-up visit was set for 8/4/17. (Ex K, p. 50).

10. Similar work restrictions remained in place at this follow-up visit of 8/4/17, with 7 hours of sitting noted to be 50 minutes per hour. It was noted that Claimant was not currently working. Next follow-up visit was set for 8/14/17 (Ex. K, p. 51).

11. On the follow-up visit of 8/21/17 (the record is unclear why it did not occur on 8/14/17 as previously scheduled), the same work restrictions remained in place. Physical therapy was prescribed, and a referral was made to Orthopedist Michael Simpson, MD. Dr. Simpson diagnosed Claimant with a patellar subluxation with bone contusion and mild strain of the medial collateral ligament, with the conclusion that this injury can be managed nonoperatively (Ex. 3, pp. 21-23). There is a handwritten notation that at this visit with Dr. Bradley that "Pt left without signing." Return appointment was set for "2 weeks." (Ex. K, p. 52).

12. On August 25, 2017, Respondents sent Dr. Bradley a modified position letter based on a position Ms. Northern had identified in the trim station. (Ex. G, p. 25). The modified position involved the following tasks: "Sitting in a room trimming the leaves off of plaints using scissors. Involves sitting, reaching, handling and no lifting/carrying/push/pulling over 5lbs." (Ex. G, p. 25). Ms. Northern selected this position because it was within Claimant's work restrictions.

13. Ms. Northern testified about the physical requirements of the trim station. This job requires employees to trim buds from marijuana plants with tiny scissors. The scissors are shorter than the length of a pen, and are equivalent to a cuticle scissor. (Ex. M, p. 67-68). The buds are the size of a quarter and weigh a few ounces. (Ex. M, p. 65). An employee called "the pass" brings the buds in a Tupperware container to employees at the trim station. The job can be performed while sitting or standing. The ALJ finds Ms. Northern accurately described the physical requirements of the trim station.

14. Claimant never worked in, and never saw, the trim station.

15. On August 29, 2017, Claimant had the next follow-up appointment with Dr. Bradley. (Ex. J, p. 35). Once again, Dr. Bradley provided Claimant with work restrictions of lifting, carrying, pushing/pulling five pounds; walking for one hour per day; standing for one hour per day; and sitting for seven hours per day. Dr. Bradley noted that Claimant should sit for 50 minutes per hour and walk or stand for 10 minutes per hour. (Ex. K, p. 53). Claimant signed instructions on August 29 listing these work restrictions. The next follow-up appointment was set for 9/11/17 at 11:30 a.m.

16. Claimant testified, and the ALJ finds, that he was aware of the work restrictions on the August 29 discharge instructions, because Dr. Bradley explained these restrictions to him and provided Claimant with a copy of the discharge instructions.

17. Dr. Bradley approved the modified position for Claimant at the trim station on August 29, but added Claimant could not lift or carry more than five pounds and needed to sit for 50 minutes per hour and stand or walk 10 minutes per hour. (Ex. G, p. 25).

18. The ALJ finds that Claimant's *work restrictions* as of September 11, 2017 were no lifting, carrying, pushing/pulling more than five pounds; walking for one hour a day at a rate of 10 minutes per hour; or standing for one hour a day at a rate of 10 minutes per hour; and sitting for seven hours a day or 50 minutes per hour.

19. The ALJ further finds that the trim station position easily satisfied the work restrictions imposed by Dr. Bradley, and Claimant would have been able to perform this position well within said work restrictions.

20. The modified position was scheduled to start at 7:30 a.m. on September 11, 2017. The ALJ finds Claimant received a copy of the modified job offer before the position was scheduled to start based on Ms. Northern's testimony that she mailed the modified job offer to Claimant, and Claimant's testimony that he received a copy of the offer. (Ex. I, p. 28). The ALJ also finds Claimant knew the modified position was scheduled to start at 7:30 a.m. because he received the letter.

21. Claimant admitted at hearing he did not come to work at Maggie's Farm on September 11 and has not worked there since then. Claimant testified that he did not "show up because [he] went to the doctor with the restrictions [he] had and the restrictions had changed and [he] was unable to perform the work physically that they had [him] put out to do." Claimant's personal opinion that the offered job did not comply with Dr. Bradley's restrictions is not persuasive. Claimant never saw or worked in the trim station prior to his injury. Without ever seeing or working in the trim station, Claimant could not have known whether the trim station position complied with Dr. Bradley's restrictions. The trim station position was well within the work restrictions Dr. Bradley noted in his August 29, 2017 letter.

22. Claimant testified that he believed he had restrictions beyond the restrictions Dr. Bradley listed in the modified job offer. Claimant testified his work restrictions included applying a warm moist compress to his knee, stretching hourly, and resting, icing, and elevating his knee. (Ex. J, p. 37). This testimony is not persuasive. These recommendations were *treatment recommendations,* not *work restrictions*, and have no relation to his ability to work at the trim station.

23. On September 11, 2017, at 11:30 a.m. (4 hours after he was to report for his modified duty with Employer), Claimant attended his next appointment with Dr. Bradley. Dr. Bradley again assigned work restrictions of lifting, carrying, pushing/pulling no more than five pounds; walking or standing for one hour per day cumulative; and sitting for seven hours per day, cumulative. (Ex. K, p. 54).

24. Claimant testified that he had restrictions beyond the restrictions Dr. Bradley assigned in his September 11 note. Claimant testified that his work restrictions

included applying a warm moist compress to his knee, stretching hourly, and resting, icing, and elevating his knee. Claimant also testified that Dr. Bradley gave him work restrictions for his back, which included icing or heating his back, resting on a firm surface, and applying warm compresses to his back. (Ex. J, p. 40).

25. The ALJ finds that Claimant's work restrictions immediately after his September 11, 2017 appointment with Dr. Bradley were no lifting, carrying, pushing/pulling more than five pounds; walking or standing for one hour cumulative per day; and sitting for seven hours per day. The ALJ finds that Claimant could have performed his modified job within these restrictions. The ALJ finds that Claimant's testimony regarding additional *treatment recommendations* is not persuasive, insofar as he characterizes them as *work restrictions.*

26. The ALJ finds Claimant's alleged back pain is not related to his work injury according to Dr. Bradley. (Ex. J, p. 48). Therefore, any restrictions or treatment recommendations related to Claimant's back are not work restrictions, and are not related to the Workers Compensation system.

27. Ms. Northern testified that the modified position offered to Claimant was within the restrictions assigned by Dr. Bradley and within the additional restrictions Claimant thought he had. Ms. Northern explained that Claimant could have applied warm compresses and an ice pack or heating pad while sitting, could have rested on a firm surface, and could have stood up while at the trim station. The ALJ finds her testimony to be credible and persuasive.

28. The ALJ further finds that Claimant could have performed the trim station position even if Dr. Bradley had included applying a warm moist compress to Claimant's knee, stretching hourly, and resting, icing, and elevating Claimant's knee and icing or heating his back, resting on a firm surface, and applying warm compresses to his back as work restrictions. The trim station position, as credibly described by Ms. Northern, involves very little physical effort and Maggie's Farm could have, and would have, accommodated Dr. Bradley's treatment recommendations, although not required to do so.

29. On September 14, 2017, Ms. Northern determined that Claimant had abandoned his job because he had not returned to work, nor had he contacted Maggie's Farm since he was released to work. (Ex. H, p. 26). The letter terminated Claimant, effective September 11. Ms. Northern relied on the Handbook and the Attendance Policy to terminate Claimant for not contacting Maggie's Farm for three consecutive days after he was scheduled to return to work.

30. Claimant testified he left a voicemail for Ms. Northern on September 11. Ms. Northern testified that Claimant did not leave her a voicemail. The ALJ credits Ms. Northern's testimony. Ms. Northern testified that if she had received a voicemail from Claimant she would not have terminated him because she would have known that he had intended to return to work. If Claimant had told Ms. Northern that he could not

return to work due to his restrictions, Ms. Northern would have worked with him to accommodate his new restrictions.

31. The ALJ finds that Maggie's Farm terminated Claimant on September 11 because Claimant failed to communicate with Maggie's Farm for three consecutive days after he was scheduled to return to work. Ms. Northern's decision to terminate Claimant was consistent with the employment policies clearly stated in the Handbook and the Attendance Policy. Claimant's decision to not call Ms. Northern was a volitional act because Claimant signed documents acknowledging that he had read and understood the Handbook and the Attendance Policy and understood that it was his responsibility to abide by their terms.

32. On September 18, 2017, Dr. Bradley revised Claimant's restrictions to allow him to stand and walk for seven hours a day and sit for only one hour a day. (Ex. K, p. 55). Those same work restrictions remained in effect on successive visits on 9/27/17 and 10/18/17 (Ex. K, pp. 55-57).

33. On 11/17/17, Dr. Bradley kept the same walking, standing, and sitting work restrictions, but revised the lifting, carrying, pushing, and pulling restrictions upwards to 15 lbs. Those same restrictions remained in place at successive visits on 12/1/17, 12/15/17, and 1/18/18. (Ex. K, pp. 58-61).

34. On November 14, 2017, Claimant also treated with Scott Primack, D.O. at Colorado Rehabilitation & Occupational Medicine. (Ex. L). Claimant filled out a patient questionnaire which asked him to identify his work restrictions. (Ex. A to Motion to Submit Post-Hearing Evidence, at 4). Claimant stated that his only work restrictions were "lifting, pushing, pulling only 5 pounds." Claimant makes no mention in this questionnaire of any of the treatment recommendations which he now contends were work restrictions. (*Id.*).

35. The ALJ finds that Claimant's statement to Dr. Primack undermines the credibility of his testimony that he had additional work restrictions. Instead, the statement to Dr. Primack shows that Claimant knew his work restrictions were limited to no lifting, carrying, pushing/pulling more than five pounds, walking or standing for one hour a day or 10 minutes per hour; and sitting for seven hours a day or 50 minutes per hour.

36. On November 17, 2017, Dr. Bradley improved Claimant's work restrictions again by allowing him to lift, carry, push, and pull up to 15 pounds. (Ex. K, p. 058). Claimant also testified these restrictions allowed him to do more than he had been able to do prior to September 11. Claimant testified that his restrictions had improved since September 11.

37. The ALJ finds that Claimant's condition has improved-certainly not worsened-since the date of his termination based on the liberalized revisions to his work restrictions.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. It is the sole province of the fact finder to weigh the evidence and resolve conflicts in the evidence. *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo. App. 2001). When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of a witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936). The ALJ "is at liberty to find part, but not all, of a witness' testimony to be credible." *El Paso Cnty. Dep't of Soc. Servs. v. Donn*, 865 P.2d 877, 881 (Colo. App. 1993).

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Claimant's Failure to Begin Modified Employment

D. Section 8-42-105(3)(d)(I), C.R.S., provides a three-part test for the termination of TTD benefits: "[1.] The attending physician gives the employee a written release to return to modified employment, [2.] such employment is offered to the employee in writing, and [3.] the employee fails to begin such employment." The term "fails to begin" is defined as "a failure to start the modified employment in the first instance." *Liberty Heights v. Indus. Claim Appeals Office*, 30 P.3d 872, 874 (Colo. App. 2001). Termination of TTD benefits is "mandatory" once the requirements of section 8-42-105(3)(d)(I) are satisfied. *Laurel Manor Care Cntr. v. Indus. Claims Appeals Office*, 964 P.2d 589, 590 (Colo. App. 1998).

E. Under section 8-42-105(3)(d)(I), the term "modified employment" means employment within the restrictions established by the attending physician. *See Flores-Arteaga v. Apple Hills Orchard Juice Co.*, W.C. No. 3-101-024 (ICAO Feb. 15, 1996). If there is a conflict in the record regarding a claimant's release to return to work, the ALJ has discretion to resolve the conflict. *Imperial Headware Inc. v. Indus. Claim Appeals Office*, 15 P.3d 295, 296 (Colo. App. 2000).

F. The modified employment must be reasonably available to the injured worker under an "objective standard." *Ragan v. Temp Force*, W.C. No. 4-216-579 (ICAO June 7, 1996). An injured worker's subjective beliefs about his ability to perform a modified job are legally irrelevant, and do not provide a basis to refuse to begin modified employment. *Burns v. Robinson Dairy*, 911 P.2d 661, 663 (Colo. App. 1995) ("[A]ny evidence concerning claimant's self-evaluation of his ability to perform his job was irrelevant.").

G. By a preponderance of the evidence, Respondents have the burden to prove that Claimant failed to begin modified employment while Claimant has the burden to show that the modified employment exceeded his physical restrictions or was unreasonable. *Bull v. Dynalectric*, W.C. No. 4-654-356 (ICAO Nov. 18, 2006).

H. Respondents have established by a preponderance of the evidence each of the three factors in section 8-42-105(3)(d)(I). Dr. Bradley, Claimant's attending physician, provided him with a written release to return to modified employment on August 29. Ms. Northern sent Claimant the letter offering him a modified position in the trim station to begin on September 11. Claimant received this letter. Finally, Claimant did not begin his modified employment with Maggie's Farm on September 11. Because Respondents have satisfied section 8-42-105(3)(d)(I), termination of TTD benefits is mandatory once these factors have been satisfied. Claimant is not entitled to TTD benefits effective September 11, 2017 and ongoing.

I Claimant argues that the modified job in the trim station was not within the Dr. Bradley's restrictions. Claimant contends that his restrictions prior to September 11 included applying warm moist compresses to his right knee, stretching hourly, and resting, icing, and elevating his right knee, which could not have been accommodated in the trim station.

J Claimant's *work restrictions* as of September 11 were lifting, carrying, pushing, and pulling up to five pounds, sitting for 50 minutes per hour, and walking or standing for 10 minutes per hour. These were the only work restrictions Dr. Bradley listed when he signed Claimant's modified task letter on August 29. (Ex. G, pp. 25). These were also the only work restrictions listed on the discharge instructions he provided to Claimant on August 29. (Ex. G, pp. 25, 53). Similarly, Claimant acknowledged in a patient questionnaire to Dr. Primack that his restrictions were lifting, pushing, and pulling five pounds, further indicating that Claimant himself believed these were his only work restrictions. The modified position Maggie's Farm offered to Claimant was well within these restrictions and Claimant's opinion that the offered job did not comply with Dr. Bradley's restrictions is neither relevant nor credible.

K. Claimant's testimony that his work restrictions changed on September 11 because Dr. Bradley recommended icing or heating his back, resting on a firm surface, and applying warm compresses to his back is likewise irrelevant. These 'restrictions' are irrelevant because Claimant's appointment with Dr. Bradley occurred four hours after Claimant was already supposed to have started his modified employment four hours prior. By the time Claimant had his appointment with Dr. Bradley, he had already failed to begin his modified employment. Further, Dr. Bradley concluded Claimant's *back pain* is not a work-related condition. In any event, Dr. Bradley's September 11 recommendations for Claimant's back on are treatment options, not work restrictions.

L Even if Claimant's testimony regarding the additional restrictions to his knee and back were credited, the trim station position still accommodated these restrictions. The trim station requires an employee to stand or sit and use cuticle-sized scissors to trim buds smaller than a quarter. Maggie's Farm was willing and able to allow Claimant to ice or heat his back, rest on a firm surface, take prescribed medications, apply warm compresses, and accommodate Claimant's medical appointments. (Ex. J, p. 40). Based on the nearly effortless physical requirements of the trim station and Ms. Northern's testimony, even the additional treatment recommendations Claimant believes he had could have been accommodated. It was patently unreasonable for Claimant to refuse to accept this position. Such offer of modified employment needs only to reasonably meet prescribed work restrictions; it need not offer total comfort, stimulation, or personal fulfillment to an injured worker.

Claimant's Responsibility for Termination

M. If an injured worker is responsible for his termination from employment, the injured worker is not entitled to receive benefits compensating him for the wage loss after the date of termination. § 8-42-103(1)(g), C.R.S.; § 8-42-105(4), C.R.S. For an employee to be responsible for termination, the employee must perform a volitional act which leads to the termination. *Gutierrez v. Exempla Healthcare*, W.C. No. 4-495-227 (ICAO June 24, 2002). An employee commits a volitional act when he exercises some degree of control over the circumstances leading to the termination. *Colorado Springs Disposal v. Indus. Claim Appeals Office*, 58 P.3d 1061, 1062 (Colo. App. 2002). An employee is responsible for termination if the employee precipitated the employment termination by a volitional act that an employee would reasonably expect to result in the loss of employment. *Patchek v. Colo. Dept. of Public Safety,* W.C. No. 4-432-301 (ICAO, Sept. 27, 2001). Negligent or inadvertent acts qualify as volitional acts for the purposes of determining whether a claimant is responsible for termination. *Gleason v. Southland Corp*., W.C. No. 4-149-631 (ICAO June 13, 1994).

N. Failing to return to or call in to work after an injury for a position that is within a Claimant's work restrictions are volitional acts which support a finding that a Claimant is responsible for termination. *Villa v. Wal-Mart Stores, Inc.*, W. C. No. 4-631-217 (ICAO Sept. 30, 2005); *Hoefner v. Russell Stover Candies*, W.C. No. 4-541-518 (ICAO Dec. 13, 2002).

O. Respondents have the burden to prove by a preponderance of the evidence that claimant was responsible for termination. *Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129, 1132 (Colo. App. 2008). Respondents have met their burden.

P. Claimant knew he was expected to return to work at 7:30am on September 11, 2017 based on the modified job offer he received. Claimant also knew that Maggie's Farm's Handbook and Attendance Policies required him to contact Maggie's Farm if he was unable to come to work. Yet, Claimant did not contact Maggie's Farm for three consecutive days after September 11. Maggie's Farm terminated Claimant, effective September 11, because he violated the attendance rules in the Handbook and Attendance Policy. As found, Claimant's failure to contact Maggie's Farm was volitional, and his volitional act led to his termination. Such termination was unrelated to his claim for Workers Compensation.

Q. To the extent Claimant wishes to contend that his condition has worsened since his termination, Claimant's condition has actually improved since his termination, based on his work restrictions, as well as Claimant's admission that he is physically able to do more now than he was able to do as of September 11, 2017.

ORDER

It is therefore ordered that:

1. Claimant's claim for TTD benefits from September 11, 2017 and ongoing is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

W.C. No. 5-019-945-03

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer/Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 27, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 2/27/18, Courtroom 1, beginning at 2:00 PM, and ending at 3:30 PM).

The Claimant was present via telephone and represented by Scot Eley, Esq. Respondents were represented by Jacqui D. Condon, Esq.

Hereinafter Sergio Martinez shall be referred to as the “Claimant." Security Industry Specialists, Inc. shall be referred to as the “Employer.” All other parties shall be referred to by name.

Claimant’s Exhibits 1 through 7 were admitted into evidence, without objection. Respondents’ Exhibits A through F were admitted into evidence, without objection. Security

At the conclusion of the hearing, the ALJ decided that no briefs were necessary, after the parties closing arguments. Therefore, the ALJ deemed the matter submitted for decision as of February 27, 2018.

ISSUES

The issues to be determined by this decision concern the Claimant's request for conversion of a scheduled extremity rating, admitted in the Final Admission of Liability (FAL), which was based on the Division Independent Medical Examiner's (DIME's) ratings, to a whole person rating; and, the Respondents' claim of overpayment of benefits.

The Claimant bears the burden of proof, by a preponderance of the evidence on the issue of conversion because the Claimant accepts the four corners of the DIME's opinion letter. The Respondents bear the burden of proving their entitlement to an overpayment.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. The Claimant, age 35, suffered an on-the-job right shoulder injury on June 23, 2016. The Claimant was struck in the anterior right shoulder while trying to apprehend a suspect as a Loss Prevention Specialist for the Employer.

2. The latest amended Final Admission of liability (FAL), dated October 6, 2017, admitted for a 6% right upper extremity (RUE) impairment, pursuant to the rating of Division Independent Medical Examiner (DIME) X.J. Ethan Moses, M.D.

3. The Claimant was evaluated at the Denver Health ER on June 23, 2016 by Derrick A. Foge, M.D., a resident, and the attending physician, Eric Hammerberg, M.D. The Claimant presented with "severe right shoulder pain" (*See* Claimant's Exhibit 3, BS 116) and was diagnosed with a comminuted mildly displaced extra-articular fracture of the right scapula after physical examination, x-rays, and a CT scan (*See* Claimant's Exhibit 3, BS118).

4. The Claimant was referred to the Denver Health Orthopedic Clinic for repeat imaging and ongoing operative management of his injury by the treating physicians at the Denver Health ER (*See* Claimant's Exhibit 3, BS 119). The Claimant made multiple visits to the clinic from July 1, 2016 to January 24, 2017 (*See* Claimant's Exhibit 2, BS 11-12). On January 24, 2017, Ashley P. Green, PA-C (Certified Physician's Assistant), discharged the Claimant from the clinic and released him to full duty with no restrictions. (*See* Claimant's Exhibit 3, BS 29, 33).

Division Independent Medical Examination (DIME) by X.J. Ethan Moses, M.D.

5. On September 6, 2017, Dr. Moses conducted a DIME of the Claimant at the request of the Respondents (*See* Claimant's Exhibit 2, BS 9-27). The Claimant reported to Dr. Moses "pain that is 6/10 in severity, burning in character, throbbing when exacerbated, located at the anterior right shoulder, constant, and radiates intermittently to his posterior right shoulder and right posterior neck" (*See* Claimant's Exhibit 2, BS 10). The Claimant also reported weakness, instability, atrophy of the right bicep, "numbness and tingling radiating from the shoulder to the right forearm." *See id.* Dr. Moses noted difficulty in determining the exact cause of the Claimant's subjective complaints because they were not entirely consistent with medical reports and pathology of his injury. *See id.* According to the DIME, the Claimant did not report having any headaches in the "Patient Reported History" and the Claimant's neck had a full range of motion with no tenderness during the "Physical Exam" (*See* Claimant's Exhibit 2, BS 9, 13).

6. Dr. Moses concluded that the Claimant reached maximum medical improvement (MMI) on January 24, 2017 "in conjunction with his release to full activities and discharge from care from Denver Health Orthopedics (Claimant's Exhibit 2, BS 10).

7. During a functional assessment, Dr. Moses found that the Claimant

> has difficulty opening a tight or new jar, doing heavy household chores, carrying a shopping bag or briefcase, washing his back, using a knife to cut food, performing recreational activities that require force or impact through the arm, performing normal social activities, performing regular daily activities or work, with pain, with tingling in the arm, and sleeping due to pain.

(Claimant's Exhibit 2, BS 14).

The ALJ infers and finds that DIME Dr. Moses observations are consistent with a situs of functional impairment bin the RUE and not beyond it.

8. Dr. Moses conducted an impairment evaluation and assigned a 6% RUE rating for Claimant's right shoulder (*See* Claimant's Exhibit 2, BS 16). As required by the American Medical Association *Guides to the Evaluation of Permanent Impairment*, 3rd. Ed., Rev., Dr. Moses mechanically converted that extremity rating into a 4% whole person rating. *See id.* Dr. Moses expressed his medical opinion that the Claimant "does not demonstrate a loss of function extending proximally from the injured shoulder," concluding it was not a whole person impairment without further explanation. (*See* Claimant's Exhibit 2, BS 16-17).

Respondents' Independent Medical Examination (IME) by Timothy S. O'Brien, M.D.

9. At Respondents' request, Dr. O'Brien completed an IME on November 11, 2016. His report notes that the Claimant complained of pain in the front and back of his shoulder, pain around the scapula, and numbness and tingling radiating down his arm and in his fingers (*See* Respondent's Exhibit B, BS 13). Dr. O'Brien notes associated symptoms as "achiness, weakness, jolting, tingling, sharpness, giving out, clicking, soreness, throbbing, numbness, and stiffness." *Id.* During his physical examination, Dr. O'Brien reported that the Claimant had a full range of motion in his neck (*See* Respondent's Exhibit B, BS 15).

Claimant's IME by Gregory D. Smith, D.O.

10. At the request of the Claimant, Dr. Smith completed an IME on January 19, 2018. In his subjective findings, Dr. Smith noted that the Claimant reported that "lying on his left side causes extreme pain, and in the morning, he may throw his arm across the bed and gets a popping sensation that becomes very painful in the glenohumeral region" (Claimant's Exhibit 1, BS 4). According to Dr. Smith, the Claimant also reported that his pain varies, he gets headaches, and he has "significant cervical pain at times." *Id.* During his physical examination, Dr. Smith noted "fairly significant tenderness on movement of the right shoulder" and lessened grip and muscular strength on the right. *Id.* Dr. Smith also concluded that the Claimant would receive a 6% RUE rating and 4% whole person rating. He stated that the Claimant's cervical range of motion was "abnormal on the right side in comparison to the left" but did not rate it because it was "not part of what I was asked to do at this time." (Claimant's Exhibit 1, BS 5).

11. Dr. Smith concluded that, in his opinion, a whole person rating should be used for the Claimant but then limits his reasoning to limitations in the right shoulder and arm (*See* Claimant's Exhibit 1, BS 5). He states:

> my through processes is if one reads the AMA Guides to Evaluation of Permanent Impairment, third edition, under 3.1G, it talks about the shoulder saying that the functional unit represents 60% of the upper extremity function. The shoulder has three units of motion, each contributing a relative value to the shoulder functioning as following: flexion, extension, abduction, adduction, and internal and external rotation. With this in mind, with the shoulder having 60% of all movements in the upper extremity and in Mr. Martinez' case he also has difficulties in his elbow down to the forearm with some weakness and some paraesthesia in his right upper extremity, I do feel this

> should be rated as a whole person and not as a upper extremity evaluation.
>
> *Id.*

The ALJ infers and finds that Dr. Smith's opinions do not demonstrate that it is highly probable, unmistakable and free from serious and substantial doubt that Dr. Moses' opinion, limiting permanent impairment to the RUE, is clearly wrong.

The Claimant's Testimony

11. The Claimant testified at hearing that he currently experiences pain in his shoulder and headaches. He reports that the symptoms affect his daily living because he can no longer work in loss prevention; he cannot work as an Uber driver for more than a few hours at a time, and cannot sleep for more than a few hours at a time because of pain. The Claimant testified that he had difficulty turning to see when changing lanes as an Uber driver because he would have to turn his whole torso to avoid pain. He reported that he had to add a side view blind spot camera to his vehicle to drive without having to turn his head. The Claimant visited multiple providers for his injury between the day of injury, June 23, 2016, to the DIME on September 6, 2017. There is no persuasive evidence that the Claimant ever complained of headaches or trouble turning his head in any of these visits including during the DIME.

Ultimate Findings

12. The Claimant's testimony concerning headaches, neck pain, and limited range of motion in the neck is inconsistent with the aggregate medical records. There is no convincing support for these symptoms prior to the Claimant's requesting a conversion and the subsequent IME by Dr. Smith. Consequently, the ALJ does not find the Claimant's testimony in this regard credible. Indeed, the ALJ infers that, under the totality of the evidence, the Claimant's description of neck symptoms and headaches appears to be an after-thought in anticipation of furthering his claim for a conversion. The DIME opinion of Dr. Moses, which is credible, persuasive, and has a presumptive effect does not include any complaints of headaches or limited neck movement. Furthermore, DIME Dr. Moses' opinions explicitly do not support a situs of functional impairment beyond the right upper extremity.

13. Between the conflicting opinions of Dr. Moses and Dr. Smith, the ALJ makes a rational choice, based on substantial evidence, to accept the opinion of Dr. Moses and reject any opinions to the contrary.

14. Accepting the four corners of Dr. Moses' opinions in the DIME Report, especially his opinion that a whole person rating is **not more appropriate** than an extremity rating, plus the finding herein above that Dr. Moses's opinion does not support a plausible inference that the situs of the functional impairment transcends the RUE, the ALJ finds that it is more likely than not that the situs of the Claimant's functional

impairment is in his right upper extremity. Therefore, the Claimant has failed to prove, by a preponderance of the evidence that a conversion to a whole person rating is warranted.

15. The Respondents failed to provide any evidence beyond the conclusory calculations in the FAL to support their overpayment claim.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the Claimant's testimony concerning problems of headaches and limited neck motion is inconsistent with the aggregate medical records. There is no convincing support for pain and problems going into the Claimant's neck or persistent headaches until much later when the pendency of his adjudication became imminent. Consequently, the ALJ does

not find the Claimant's testimony in this regard credible. Further, the ALJ infers and finds, the DIME opinion of Dr. Moses, which is credible and persuasive, does not support a situs of functional impairment beyond the RUE. As found, the opinions of DIME Dr. Moses are more thorough, based on more of an in-depth analysis, and more convincing and credible than the opinions of Claimant's IME Dr. Smith..

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of Dr. Moses and to reject any opinions to the contrary.

Conversion from Extremity to Whole Person Rating

c. It is well-established law that the question of whether a claimant sustained a "loss of an arm at the shoulder" within the meaning of § 8-42-107 (2) (a), C.R.S., or a whole person medical impairment compensable under § 8-42-107 (8) (c), C.R.S. is one of fact for determination by the ALJ. *Delaney v. Indus. Claim Appeals Office,* 30 P.3d 691 (Colo. App. 2000). In resolving this question, the ALJ must determine the site of a claimant's "functional impairment." *Strauch v. PSL Swedish Healthcare System,* 917 P.2d 366 (Colo. App. 1996). For a conversion, with a "preponderance" standard of proof, the party seeking it must accept the four corners of the DIME'S opinion letter, whereby it is clear that the seeker of the conversion is not challenging the DIME's opinions with respect to related medical conditions. As found, accepting the four corners of DIME Dr. Moses's opinions, especially because he does **not** render an opinion that a whole person rating is more appropriate than his extremity rating, plus the finding herein above that Dr. Moses's opinions do not support a plausible inference that the situs of functional impairment transcends the upper extremity, the ALJ finds that it is more likely than not that the situs of the Claimant's functional impairment is in the right upper

extremity. Therefore, the Claimant has failed to prove, by a preponderance of the evidence that a conversion to a whole person rating is warranted.

Overpayment

d. Recovery of overpayments, based on mistake and on a retroactive basis, was prohibited by *HLJ Management Group, Inc. v. Kim,* 804 P.2d 250 (Colo. App. 1990). In 1997, the General Assembly amended the re-opening statute to include overpayments as a ground for re-opening as to overpayments only. § 8-43-303 (1) and (2) (a), C.R.S. Now, employers have a statutory right to review and recalculate payments if an insurance carrier made a mistake in previous payments. *Simpson v. Indus. Claim Appeals Office,* 2009 Colo. App. LEXIS 576 (No. 07CA1581, April 16, 2009) (NSOP). Previously, an admission of liability could only be withdrawn retroactively on the basis of fraud. *Vargo v. Indus. Comm'n,* 626 P.2d 1164 (Colo. App. 1981). To the extent that a case may be re-opened, based on mistake and not fraud, if there were overpayments, the *Vargo* grounds for retroactively modifying a previously admitted award have been altered to include employer mistakes in **calculations**. As found, the Respondents failed to provide any persuasive evidence to support the overpayment claim beyond the conclusory FAL calculations. Therefore, the Respondents failed to prove their overpayment claim.

Burden of Proof

e. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P. 2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has failed to sustain his burden with respect to a conversion of the DIMJE's extremity rating to a whole person rating. Also, as found, the Respondents have failed to sustain their burden with respect to an overpayment.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Any and all claims for a conversion from the right upper extremity scheduled rating to a whole person rating are hereby denied and dismissed.

B. The latest, amended Final Admission of Liability, dated October 6, 2017, is hereby approved and adopted as if fully restated herein.

C. Any and all claims for overpayment of benefits are hereby denied and dismissed.

DATED this_____day of March 2018.

Wc.ord

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he is entitled to ongoing medical care for gout and the proposed surgery by Dr. Young?

2. Whether Claimant proved by a preponderance of the evidence that he is entitled to medical mileage concerning treatment received for the disputed care?

3. Whether Claimant was disabled from his usual employment by his work injury and therefore entitled to temporary total disability benefits (TTD)?

4. Whether Claimant established entitlement to penalties under Section 8-43-304, C.R.S.?

PROCEDURAL MATTERS

1. On September 28, 2017, at the parties' request, the Court left the record open to allow the parties to verify mileage and other dates of service paid by Respondents. See Respondents' exhibit I, attached ledger for dates of services paid to physicians, pharmacies and medical mileage for the dates at issue. Claimant has no objection to Exhibit I being made part of the record.

FINDINGS OF FACT

1. On May 8, 2002, Claimant was injured in the course and scope of his employment for Employer. He was shoveling an entrenchment and struck a rock injuring his right hand. Claimant noticed symptoms and was sent for medical treatment. Claimant was diagnosed with Carpal Tunnel Syndrome (CTS). Claimant was taken off work. Claimant continued to seek care. Claimant had several non-claim related health issues which began complicating matters. Claimant contracted an infection. This delayed recovery also led to additional procedures. Claimant had several surgeries to his wrist and finger, as well as surgeries to remove the infections.

2. In 2004, Claimant saw Dr. Henry Roth for a maximum medical improvement (MMI) determination. Dr. Roth diagnosed Claimant with CTS and trigger finger. Dr. Roth also addressed the infections and a gout issue. It was Dr. Roth's opinion that Claimant was at MMI. He noted that Claimant had ongoing issues, and assigned an impairment rating of 4% whole person. Dr. Roth opined that Claimant did not require work restrictions even though he would have ongoing issues with the injury, particularly with his finger. Dr. Roth also opined that the infections were not related to the industrial injury.

3. On June 14, 2004, Claimant underwent a DIME with Dr. Jonathon Woodcock. Dr. Woodcock agreed with the date of MMI, February 23, 2004, and

diagnoses. He noted that Claimant was having issues with the right ring finger. Dr. Woodcock assigned an impairment rating of 21% upper extremity. Dr. Woodcock noted that the right ring finger still presented issues, but agreed that there were no work restrictions. After several months of continuing care, Respondents re-opened the claim. Claimant received TTD during a surgery in January 2005. Claimant was given a release to full duty by his authorized treating physician (ATP), Dr. Hanson, on March 10, 2005. Dr. Hanson noted that Claimant was approaching MMI.

4. Claimant's case was also reviewed by Dr. Carlton Clinkscales a hand specialist. Dr. Clinkscales noted that it appeared Claimant's infection issues had resolved. Dr. Clinkscales opined that Claimant appeared to have undergone a successful biopsy. He also opined that Claimant was approaching MMI. Thereafter, Claimant worked for Gart Sports for approximately one year.

5. Claimant relocated to Nevada and has worked for various family businesses over the last several years performing a variety of duties. Claimant was seen by two different hand specialists in Nevada. Claimant did not follow-up further. Neither physician restricted Claimant from working. They noted that this was a complex case, but there was little to do in the way of treatment options.

6. Claimant was seen by Dr. Sean Griggs, a hand specialist, for an MMI determination. Dr. Griggs concurred in the diagnosis of CTS and right trigger finger from the industrial injury. He assigned a rating of 27% upper extremity. On December 28, 2011, the final admission of liability was filed. Claimant did not object to the final admission of liability.

7. Claimant continued to receive periodic care in Las Vegas, NV. Claimant worked for his family's business in a variety of positions. Claimant eventually came under the care of Dr. Colby Young in Nevada and total fusion surgery of the right wrist was performed in November of 2014. In 2015, it was noted that Claimant was doing well. On February 2, 2016, Claimant returned to Dr. Young because Claimant's pain persisted and the fusion of the right finger was discussed. Authorization for ring finger tenolyisis and capsulotomy was requested. Insurer had the request reviewed by Dr. Jonathon Sollender. Dr. Sollender reviewed Claimant's medical records. He opined that the surgery was not reasonable, necessary and related to the industrial injury. He further opined that anything after the 2014 fusion was not related to the original industrial injury because of the length of time that had passed since the original injury and past failed operations. He opined that additional surgery would was not appropriate.

8. There was additional care rendered in 2017, and also care was requested for Claimant's gout. Dr. Sollender again reviewed the records and noted that the initial gout treatment in 2005 was due to a reaction from prescribed medications. He noted that after 2006 there was not much concern about

gout in the medical records and that Claimant stopped taking anti-gout medications at that time. Dr. Sollender opined that Claimant's gout at this point was no longer related to the industrial injury but any regression was due to Claimant's metabolic state. He opined that Claimant's current request for repeat surgery was not reasonable and necessary. Insurer timely issued WCRP rule 16 letters in association with these requests.

CONCLUSIONS OF LAW

General Legal Principles

The purpose of the "Workers' Compensation Act of Colorado" (Act), Sections 8-40-101, *et seq*, (2017), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007)

Claimant's claim for medical benefits

The right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S.; *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The evidence must establish the causal connection between the work injury and the need for medical treatment. *Ringsby Truck Lines, Inc. v. Industrial Commission,* 30 Colo. App. 224, 491 P.2d 106

(Colo. App. 1971); *Industrial Commission v. Royal Indemnity Co*., 124 Colo. 210, 236 P.2d 2993(1951).

The need for medical treatment may extend beyond the point of MMI where a claimant requires periodic maintenance care to prevent further deterioration of his/her physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo.1988). An award for Grover medical benefits is neither contingent upon a finding that a specific course of treatment has been recommended nor a finding that the claimant is actually receiving medical treatment. *Holly Nursing Care Center v. Industrial Claim Appeals Office,* 992 P.2d 701 (Colo. App. 1999); *Stollmeyer v. Industrial Claim Appeals Office*, 916 P.2d 609 (Colo. App.1995). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if supported by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra.*

In this claim, it is concluded that Claimant failed to prove that the requested surgery, gout treatment and related medical mileage is reasonable, necessary and related to the industrial injury. This is a May 8, 2002, date of injury and multiple procedures have been performed. Claimant stopped taking the anti-gout medications in 2006 when that issue resolved. His current provider wishes to do a repeat procedure after having fused Claimant's wrist in 2014. Dr. Sollender credibly opined that the requested treatment is not reasonable, necessary and related to the 2002 injury.

Claimant is requesting additional surgery and treatment for gout in his wrist. Dr. Sollender opined in 2016 that the currently requested procedures and the gout treatment are no longer related to the 2002 date of injury. He explained in his deposition the difficulties with the anatomical components of healing in the affected areas as well as the failures of previous procedures. As to the gout, he opined in his report, while the 2005/2006 treatment was related to the medications prescribed post-surgically, the current need for treatment is related to Claimant's personal metabolic issues and not the medications.

Regarding the surgery requests from Dr. Young, Dr. Sollender noted there has been a lengthy passage of time, subsequent employment and previously unsuccessful procedures. Claimant has extensive scar tissue in his right hand. However, as Dr. Sollender explained the possibility of a successful repeat procedure is very slim. As he noted, the prior TAPS, IMEs, and DIME opined that there was no need for repeat surgeries to Claimant's hand. Dr. Sollender explained that the immature and mature scar tissue in Claimant's hand presented difficulties for surgeons and that the repeat procedure at this point is no longer, reasonable, necessary, and related to cure and relieve the effects of the industrial injury.

It is for these reasons, and the evidence submitted, that it is concluded that Claimant's claim for medical benefits for Claimant's wrist, gout condition, and associated travel reimbursement are not reasonable, necessary and related the original injury.

Claimant's claim for TTD, temporary partial disability benefits (TPD) and permanent partial disability benefits (PPD).

Claimant has requested additional TPD, TTD, and PPD. These issues are closed by the operation of law based on the December 28, 2011, FAL. A claimant is entitled to TTD benefits if the injury caused a disability, the disability caused the claimant to leave work, and the claimant missed more than three regular working days. TTD benefits continue until the occurrence of one of the four terminating events specified in Section 8-42-105(3), C.R.S. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

It is undisputed that Claimant was placed at MMI on September 29, 2011. No objection was filed and the issues were closed by operation of law. The claim is presently admitted for *Grover* medical benefits. Since the FAL was filed, a Petition to re-open has not been filed and there has not been an additional impairment rating. Thus, the Claimant's request for additional indemnity benefits is denied.

Claimant's claim for penalties

Claimant endorsed penalties as an issue for hearing on the Application for Hearing. However, the requested penalties were not specific as to the provision of the statute relied upon and the date or nature of the violation alleged. It is Respondents' position that they were not properly pled.

Section 8-43-304(1), C.R.S. allows a Judge to penalize a person who violates a rule, statute, or order in the amount of up to $1,000 per day. The imposition of penalties under 8-43-304(1) requires a two-step analysis. The ALJ must first determine whether the disputed conduct constituted a violation of a rule or order. *Allison v. Industrial Claim Appeals Office*, 916 P.2d 623 (Colo. App. 1995). If the ALJ finds a violation, the ALJ must determine whether the employer's actions which resulted in the violation were objectively reasonable. See *City Market, Inc. v. Industrial Claim Appeals Office*, 68, P.3d 601 (Colo. App. 2003). The reasonableness of the employer's action depends on whether it is predicated in a rational argument based in law or fact. *Jiminez v. Industrial Claim Appeals Office*, 107 P.3d 965 (Colo. App. 2003).

Section 8-43-304(4), C.R.S. provides that if the alleged violator cures the alleged violation within twenty days of the date of mailing of an application for hearing for penalty, the party seeking a penalty must prove by clear and convincing evidence that the alleged violator knew or reasonably should have known such person was in violation.

In this case, Claimant did not specifically pled a penalty. Claimant's application for hearing and all subsequently filed pleading failed to specify a statute, rule or order allegedly violated. Since the Claimant's claim for penalties was not specifically pled, the claim must be denied.

ORDER

1. Claimant's request for additional surgery, treatment for gout and associated mileage is denied.

2. Claimant's request for indemnity benefits is denied.

3. Claimant's request for penalties is denied.

Dated: March 14, 2018

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-054-169-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Self-Insured Respondent.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 8, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 2/8/18, Courtroom 1, beginning at 1:30 PM and ending at 4:30 PM).

Claimant's Exhibits 1 through 12 were admitted into evidence, without objection. Respondent's Exhibits A through N, with the exception of Exhibit M (a recorded statement which was withdrawn) were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule: The Claimant's opening brief was filed on February 16, 2018. Respondent's answer brief was filed on February 20, 2018. On February 22, 2018, Claimant advised that no reply brief would be filed. Therefore, the matter was deemed submitted for decision on February 22, 2018.

ISSUES

The issues to be determined by this decision concern compensability of a right knee injury of August 3, 2017; if compensable, medical benefits, average weekly wage

(AWW); and, temporary total disability (TTD) benefits from August 20, 2018 and continuing.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Stipulations and Findings

1. At the commencement of the hearing, the parties stipulated and the ALJ finds, in the event that the injury was compensable, the Claimant's AWW is $1,031.87.

2. Based on the stipulation, the ALJ finds that the Claimant is entitled to TTD benefits of $687.91 per week from August 24, 2017 through November 13, 2017.

3. Based on the stipulation, the ALJ further finds that the Respondent refused to tender medical care after August 22, 2017 and the right to select a medical provider passed to the Claimant who selected New West Physicians, also known as Denver West Family Practice and their subsequent referrals including, but not limited to, Panorama Orthopedics & Sports Center.

Preliminary Findings

4. The Claimant is 52 years old, having a date of birth of December 24, 1965.

5. Prior to August 3, 2017, the Claimant had no ongoing symptoms or functional limitation in her right knee. With the exception of two medical visits in 2009 (*See* Claimant's Exhibit 12), the Claimant had never been provided medical treatment for her right knee and had been an employee of the Employer since 2007, serving in the capacity of a Healthcare Services Technician I.

6. The Employer is a residential state agency caring for mentally disabled and functionally disabled individuals.

The injury Incident

7. On Thursday, August 3, 2017, the Claimant was loading disabled individuals onto a bus to take them to a pool for pool therapy in the course and scope of her as a Healthcare Services Technician I. After loading the disabled individuals, all of who were in wheelchairs and required having their wheelchairs locked down in the bus, the Claimant had the option of jumping over the three individuals in the back of the bus

to return to the driver's seat or stepping off the back of the bus to access the front where she would then drive the individuals to their pool therapy. Respondent disputes this version of events because the Claimant first reported that her right knee injury was caused by locking down patients wheelchairs in the bus. Later, the Claimant consistently reported that her injury occurred while jumping out of the back of the bus. Respondent argues that the Claimant did not mention jumping out of the back at first and, based on this, Respondent contends that the Claimant's is not credible concerning the mechanism of injury. The medical record reveals that the Claimant had a right knee injury as of the time she first sought medical treatment. Although it is the Claimant's burden of proof to establish a work-related right knee injury, Respondent offers no plausible, alternative theory of injury (this merely goes to the credibility of Respondent's defense).

8. The Claimant testified that after loading the bus to take the individuals to the pool, she felt that it was easier to exit the back of the bus rather than climb over the locked down wheelchairs. After the Claimant landed from jumping out of the back of the bus, she felt a pop in her right knee, but she was able to complete her work that day. She informed her supervisor, Brooke Renker, that she had experienced a twinge in her knee on August 3, 2017. Renker indicated that she did not receive notice of the Claimant's injury until two days later on August 5, 2017. Based on the totality of the evidence, the ALJ finds the Claimant's version of events credible.

9. On Friday, August 4, 2017, the Claimant called staffing coordinator, Melissa Yoder, and indicated that she had "hurt her right knee the day prior. Friday was the Claimant's day off and when she woke up her right knee was "swollen." The Claimant reported to work and filled out the Employee portion of the "Colorado Department of Human Services Injury/Exposure On The Job" form for Yoder (*See* Respondent's Exhibit I, Bate Stamp (BS) 59).

10. When the Claimant filled out the Employer's form, she described her injury as:

> While doing tie down my r[t] knee started to hurt and felt tight when I stood up it popped. Was a little uncomfortable rest of the day, but when I woke up this morning it was swollen.

Id.

The ALJ infers and finds that the Claimant did not mention 'jumping off the back of the bus" because she was afraid that she may have violated a safety procedure, however, unknown to the Claimant this is irrelevant to "compensability." Respondent did not designate "safety violation" as an issue for hearing.

11. Staffing coordinator Yoder indicated that the report was accepted at 3:18 PM and the parties agreed that the Claimant could go to Lutheran Medical Center,

which was a designated medical provider for medical issues on the weekends for injuries arising from an on-the-job injury when medical treatment was required.

12. On August 5, 2017, Supervisor Renker agreed that the Claimant provided her with notification of the August 3, 2017 injury at approximately 12:38 PM, but disagreed that the Claimant has previously told her that her right knee was tight on Thursday, August 3, 2017. Supervisor Renker played the message Claimant left for her on her cell phone at hearing.

Medical

13. On Saturday, August 5, 2017, at approximately 10:22 AM, the Claimant reported to Lutheran Medical Center Emergency Room (ER) with a chief complaint of a right knee injury and gave a history as follows:

> [Claimant] is a 51yr female who presents complaining of right knee pain. She is a bus driver and is in and out of the bus multiple times during the day. **She states she has to jump down.** Pain began on Thursday when she was in out of the bus several times. Her knee swelled up. She made an incident report on Friday and presents here today because of persistent pain in her knee. The swelling has gone down somewhat. She's had no fall. She is ambulating with difficulty. **She's had no trauma other than jumping out of the driver side of the bus.** She denied other complaint (emphasis supplied).

(*See* Claimant's Exhibit 5, BS 13)

The ALJ finds the almost contemporaneous history the Claimant gave to the Lutheran Medical Center ER more reliable and credible than the testimony of Yoder and Renker, who denied that the Claimant told them that the Claimant was injured jumping out of the back of a bus. The Claimant's history, given to the ER, is more consistent with the actual right knee injury observed by the ER.

14. At the evaluation at Lutheran Medical Center ER, the Claimant presented with "pain and tenderness in her right knee" (*See* Claimant's Exhibit 5, BS 14) and Michael John Stackpool, M.D., instructed the her as follows: "I don't think it is reasonable to have her drive while she is wearing a splint for the next couple of days" (*See* Claimant's Exhibit 5, BS 14) and Claimant was assigned work restrictions of "no work until August 12, 2017" (*See* Claimant's Exhibit 5, BS 18).

15. Following her ER visit, the Claimant contacted residential coordinator Brooke Renker and left a voicemail message consistent with Renker's written report which set forth as follows:

> [Claimant] called and left a message on 8/5/17 and stated she will be off for the next week per Dr.'s order. She then stated on 8/3/201 that she **jumped out the back of the bus** the next day she said her knee felt tight. She went to the Dr. and she said that the Dr. said she sprained the back of her knee.

See Respondent's Exhibit I, BS 60 (emphasis added).

16. In fact, at hearing, Residential Coordinator Renker played the voice message, and indicated that it had been received on her cell phone on August 5, 2017 at 12:38 PM.

17. On Monday, August 7, 2017, the Claimant was directed to the Employer's designated medical provider, Front Range Occupational Medicine, where she filled out a new patient information sheet, indicating that she had injured her right knee jumping/climbing out of bus (*See* Claimant's Exhibit 6, BS 19).

18. At the first evaluation, the Claimant was evaluated by authorized treating physician (ATP) Matt Miller, M.D., who took a history as follows:

> Says she has to climb up about **3 feet into the bus then jumps back down**. Kept working. Was off the next few days, but noticed swelling the next day. Saturday morning couldn't walk so she went to the ER. Had xrays and was given knee immobilizer and meloxicam. Then sent here for eval.
>
> * * *
>
> Assessment
>
> Initial Pain in Joint, Lower Keg, **acute**. No additional work-up required.
>
> **Given the information available today, from a causality standpoint, I feel this incident is work related. (>50%)** (emphasis supplied).

(*See* Claimant's Exhibit 6, BS 21-22)

19. The Claimant was assigned temporary work restrictions of 15 pounds, assigned a hinged knee brace and was instructed to take a break every one to two hours, which restrictions the Respondent accommodated.(*See* Claimant's Exhibit 6, BS 24.

20. On August 14, 2017, the Claimant was again evaluated by ATP Miller who noted that the initial chief complaint was:

> Patient was climbing in and out of the bus, felt increased tightness and a 'ping' in her right knee.
>
> * * *
>
> Work Status/Assessment
>
> Patient is to continue restriction(s): No kneeling or squatting, Weight lifting, pushing, pulling up to 15 pounds. Limit time on feet to 4 hours/day, no more than one hour at a time.

(*See* Claimant's Exhibit 6, BS 25)

21. The Claimant remained on temporary work restrictions, which the Employer accommodated (*See* Claimant's Exhibit 6, BS 27).

22. On August 18, 2017, the Respondent advised the Claimant that her claim was denied as follows:

> This is to inform you we have completed the investigation of your workers' compensation claim with a date of loss 8/3/2017. After a thorough investigation, we have determined we will be denying compensability for this claim. **Please be advised we are willing to pay for conservative treatment with your employer's authorized medical provider until 8/21/17. Any treatment after that date will be considered your responsibility** (emphasis supplied)**.**
>
> If you have any questions regarding this position on compensability, please feel free to contact me.

(*See* Claimant's Exhibit 6 6, BS 28).

Refusal to Treat for Non-Medical Reasons

23. On August 25, 2017, the Claimant reported to her private physician's office, New West Physicians, also known as Denver West Family Practice where the clinical indication was made of "medial right knee pain after jumping out of a box on 8/3/2017," and where she was evaluated by physician's assistant (PA) Rebecca Opaluch, who diagnosed a "right knee injury" and put in a request for an MRI (magnetic resonance imaging) of the right knee without contrast. (*See* Claimant's Exhibit 9 BS 36-37).

24. On August 30, 2017, the Claimant underwent an MRI of the right knee with a clinical indication that it was necessary because of "medial right knee pain after jumping out of a box [sic bus] on 8/3/2017" (*See* Claimant's Exhibit 7, BS 29) with the MRI results reflecting:

> Horizontal central and peripheral zone tear of the posterior horn of the medial meniscus.
>
> Small-volume joint effusion.

(*See* Claimant's Exhibit 7, BS 30).

25. On August 30, 2017, after receiving the MRI results at New West Physicians, PA Opaluch referred the Claimant to Panorama Orthopedics & Sports Center.

Authorized Treating Physicians by Default

26. On August 31, 2017, the Claimant notified the Respondent that care had been denied, that there had been a refusal to tender care, and that the Claimant was exercising her right to select a physician indicating:

> Claimant has selected Denver West Family Practice as her authorized treating provider. She is currently treating with a physician's assistant (PA) Rebecca Opaluch, and has been referred out to Panorama Orthopedics for a surgical evaluation. [Claimant's] MRI has come back reflecting a torn meniscus, which she did not have prior to the events of August 3, 2017. She will be requesting reimbursement of all co-pays in her case.

> A copy of the report from her first visit with Denver West Family is attached for your records. If [Claimant] is successful at hearing, this is the designated doctor.

(*See* Claimant's Exhibit 8, BS 32).

27. On September 7, 2017, the Claimant reported to Panorama Orthopedics & Sports Center for an evaluation with Charles Gottlob, M.D., of her right knee where a history of present illness was taken as follows:

> [Claimant] is a pleasant 51 year old female who presents to clinic today for evaluation of her right knee. She states that this injury happened at work but workers' comp denied the claim because they believe the injury happened at home. She has had no prior injury or surgery to this knee. **Her injury happened on 8/3/17 at work when she was jumping out of the back of a school bus.** She works as an aide for the mentally disabled. Her symptoms are dull and achy which is aggravated by walking, standing, driving, lifting, pushing, and pulling. She does notice swelling after too much activity. She is currently not working since she cannot return to work with light duty. She has been using sick leave for the time being.
>
> Assessment Plan
>
> Pain in right knee (M25.561)
>
> Tear of medial meniscus of right knee, current,
>
> Unspecific tear type, initial encounter
>
> (S83.241A)
>
> Right knee acute complex medial meniscus tear.

[Claimant] was injured at work 08/03/2017, for some reason they have denied her work comp claim, so she is running this through her commercial insurance. In any event, she presents with an MRI report from NewWest that shows a medical meniscus tear, no other significant surgical pathology. Her exam is consistent with

a medical meniscus tear as are her signs and symptoms clinically. Her mechanism of injury is also consistent with that pathology. At this point, I would recommend a right knee arthroscopic partial medial meniscectomy. Before we make that final decision **I do need to see the actual study and make sure that the radiology read is accurate in my opinion** (emphasis supplied)**.** She is going to collect her disc, drop it off, I will look at it, and then call her with the final decision.

(*See* Claimant's Exhibit 10, BS 50).

28. On September 20, 2017, the Claimant underwent surgery on her right knee with Dr. Gottlob, M.D., from Panorama Orthopedics & Sports Center (*See* Claimant's Exhibit 10, BS 56-58).

29. Following surgery, the Claimant underwent eight physical therapy visits as directed by PA Michael J. Trimble at Panorama Orthopedics & Sports Center (*See* Claimant's Exhibit 10, BS 59).

Independent Medical Examination by Timothy S. O'Brien, M.D.

30. Prior to hearing, the Respondent retained the services of Dr. O'Brien, who performed a Respondent-requested independent medical evaluation (RIME) on December 29, 2017 (*See* Claimant's Exhibit 11, BS 63-72). Dr. O'Brien testified at hearing consistent with his report and gave the opinion that it was more likely than not that the Claimant did not suffer an on-the job injury in light of her 1) inconsistent history; 2) physical examination and MRI findings; and, 3) her behavior following this injury, as opposed to the behavior following the two medical visits for the knee injury in 2009. The ALJ finds that Dr. O'Brien's opinions are inconsistent with the weight of medical opinion. The ALJ infers and finds that Dr. O'Brien's sketchy opinions selectively rely on a potpourri of factors, some not medical, *e.g.,* "behavior." Ultimately, the ALJ finds the opinions of Dr. Miller, Dr. Gottlob, the previous physicians' assistants, and the ER physicians more credible and persuasive than the opinions of Dr. O'Brien.

31. The Respondent's expert, Dr. O'Brien, testified that it was probable to tear a meniscus by jumping out of the back of a bus, but not probable to tear a meniscus arising from a squatting position after tying down a patient's wheelchair. Dr. O'Brien also testified that the surgery performed by ATP Gottlob was not reasonably necessary or causally related because the Claimant's injury would, more likely than not, have improved with the passage of time. The ALJ finds this opinion of Dr. O'Brien lacking in credibility because it is at odds with the totality of the medical evidence and it amounts to speculation.

32. In spite of Dr. O'Brien's testimony, in opposition to the medical records authored by Dr. Gottlob, Dr. O'Brien was of the opinion that ATP Miller was correct when he evaluated the Claimant at the first visit of August 7, 2017, as having suffered from an "acute" lower leg injury and that the restrictions assigned to the

Claimant, with the exception of a hinged knee brace, were appropriate. Dr. O'Brien agreed that the record was devoid of the Claimant receiving any medical care on her right knee except for the two visits in 2009 (*See* Claimant's Exhibit 12, BS 73-76). Dr. O'Brien also agreed that the Claimant was under no work restrictions prior to August 3, 2017, that jumping out of a bus could cause a meniscus tear, and that although he did not believe the surgery performed by ATP Dr. Gottlob was reasonably necessary or causally related, that "many orthopedic surgeons" are still performing the surgery which was performed by ATP Gottlob. Dr. O'Brien did not review the actual MRI film whereas ATP Gottlob did review the film. Based on the hypothetical, Dr. O"Brien conceded that mechanism of the Claimant's injury could have caused the Claimant's right knee condition.

33. Dr. O'Brien stated the opinion that it was too early to give an opinion on whether the surgery performed by Dr. Gottlob relieved the Claimant of the effects of her industrial injury, even though the Claimant reported pain complaints less than those she reported prior to injury. The ALJ infers and finds that this testimony is add odds with Dr. O'Brien's opinion that the surgery was not reasonably necessary. The ALJ further finds that this significantly detracts from Dr. O'Brien's overall credibility.

34. Prior to the hearing, ATP Gottlob was provided with the Respondent's expert, Dr. O'Brien's report and Dr. Gottlob drafted a succinct and concise response which set forth in pertinent part:

> [Claimant] is a patient who presented to me in the office on September 07, 2017 with a history of an injury at work while stepping off of the back of a school bus on August 03, 2017. She developed a new onset and medial knee pain. She had no prior history of knee issues. She presented with an MRI that showed a medial tear that correlated perfectly with her ongoing symptoms. Ultimately, I operated on her knee on September 20, 2017. I performed an arthroscopic partial medial meniscectomy, chondroplasty and synovectomy. She did well postoperatively. Our last visit was on October 19, 2017.
>
> It has come to my attention that my treatment has been called into question. Specifically, Dr. Timothy S. O'Brien, has suggested that surgery was unnecessary, her meniscal tear was chronic and related among other things to her weight. Of note, the patient's BMI is 26. **I strongly object to Dr. O'Brien's opinion. I think it is completely ill found and frankly offensive** (emphasis supplied)**.** [Claimant] was found to have an **unstable complex oblique tear of the posterior third of her medial meniscus, unstable to**

> **probing at the time of surgery. It was not a macerated horizontal cleavage type tear that is degenerative** (emphasis supplied)**.** I am actually not sure how he (Dr. O'Brien) even came to that conclusion. The rest of her knee looked excellent except for a very small area of degenerative arthritis along the far lateral aspect of the medial femoral condyle and some inflammation of her plica.
>
> Again, I resent and strongly disagree with Dr. O'Brien's opinion. I have the opportunity to see many degenerative meniscal tears in my practice and done so for the last twenty-two years. There was nothing degenerative about this tear.

(*See* Claimant's Exhibit 10, BS 61-62).

Ultimate Findings

35. The ALJ finds that the opinions of ATPs Dr. Miller, Dr.Gottlob and PA Opaluch, are more persuasive and credible than the opinion of the Respondent's expert, Dr. O'Brien because the former's opinions are based on a more thorough analysis of the Claimant's medical situation and because the Respondent's expert Dr. O'Brien gives the opinion that the temporary work restrictions assigned by ATP Miller are appropriate even though the Claimant had no work restrictions prior to August 7, 2017. ATPs Dr. Miller and Dr. Gottlob connect the mechanics of the Claimant's injury to the objective medical evidence of a meniscus tear and, thus, their opinions outweigh the opinion of Respondent's expert, Dr. O'Brien. Additionally, the Respondent's expert, Dr. O'Brien did not have the MRI film to read, which ATP Gottlob had and read. The mechanics of injury and the appropriateness thereof is a critical ingredient of the above injury. ATPs Dr. Miller and Dr. Gottlob were of the opinion that the Claimant's mechanism of injury was consistent with the actual medical condition of the injury.

36. The Respondent's IME, Dr. O'Brien, admits the probability that jumping off the back of a bus could cause a meniscus tear. In the final analysis, however, Dr. O'Brien's opinion is that because the Claimant is an "unreliable historian and that an onset of pain was the manifestation of her personal health," (*See* Claimant's Exhibit11, BS 69) her condition was not work related. The ALJ infers and finds, under the circumstances, that Dr. O"Brien has "pushed the envelope" too far to opine on non-work-relatedness. In light of the ER records, in addition to the causality findings of ATPs Dr. Miller and Dr. Gottlob, when viewed on the basis of the request for the MRI, the ALJ does not find Dr. O'Brien's opinion credible or persuasive.

37. The AJL makes a rational choice between two conflicting sets of opinions, based on substantial evidence, and accepts the opinions of ATPs Dr. Miller and Dr. Gottlob and rejects the opinion of Dr. O'Brien, in so far as it is inconsistent with the opinions of the ATPs. The ALJ finds that the Claimant's testimony is consistent with the medical records and is credible.

38. The Claimant has proven that it is more likely than not that she suffered an on-the-job occupational injury, which aggravated, accelerated or, combined with a preexisting disease or infirmity, to produce the need for treatment on her right knee and the treatment is a compensable consequence of the industrial injury. The ALJ further finds that it is reasonably probable and more likely than not that the testimony of the Claimant, ATP records authored by ATPs Dr. Miller and Dr. Gottlob show that the Claimant suffered a compensable occupation injury to her right knee jumping out the back of the bus after loading it with disabled individuals in the course and scope of her employment as a Healthcare Technician I.

39. All medical care rendered by the Claimant's ATP Matt Miller, M.D., at Front Range Occupational Medicine, from August 7, 2017 until care was denied for non-medical reasons on August 21, 2017, was reasonably necessary and causally related to the Claimant's right knee injury of August 3, 2017, and the medical care and treatment was and is authorized and within the chain of authorized referrals..

40. Because the Respondent refused to tender medical care after August 21, 2017 for non-medical reasons after August 21, 2017, the right to select a physician passed to the Claimant who selected PA Rebecca Opaluch, who referred the Claimant for an MRI at Denver West Family Practice and, thereafter, who referred the Claimant to Charles Gottlob, M.D., at Panorama Orthopedic & Sports Clinic. Therefore, all physcians and physician's assistants, after August 21, 2017 became the Claimant's authorized medical providers; and. the referrals within the chain of necessary medical treatment, after August 25, 2017 for the right knee are reasonably necessary, causally related and authorized.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, 2012 COA 85. The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the opinions of ATPs Dr. Miller, Dr.Gottlob and PA Opaluch, are more persuasive and credible than the opinion of the Respondent's expert, Dr. O'Brien because the former's opinions are based on a more thorough analysis of the Claimant's medical situation and because the Respondent's expert Dr. O'Brien gives the opinion that the temporary work restrictions assigned by ATP Miller are appropriate even though the Claimant had no work restrictions prior to August 7, 2017. ATPs Dr. Miller and Dr. Gottlob connect the mechanics of the Claimant's injury to the objective medical evidence of a meniscus tear and, thus, their

opinions outweigh the opinion of Respondent's expert, Dr. O'Brien. Additionally, the Respondent's expert, Dr. O'Brien, did not have the MRI film to read, which ATP Gottlob had and read. The mechanics of injury and the appropriateness thereof is a critical ingredient of the above injury. ATPs Dr. Miller and Dr. Gottlob were of the opinion that the Claimant's mechanism of injury was consistent with the actual medical condition of the injury.

b. Seriously undercutting Dr. O'Brien's ultimate opinion of non-work relatedness, as found, is that Dr. O'Brien admitted the probability that jumping off the back of a bus could cause a meniscus tear. In the final analysis, however, Dr. O'Brien's opinion is that because the Claimant is an "unreliable historian and that an onset of pain was the manifestation of her personal health," (*See* Claimant's Exhibit11, BS 69) her condition was not work related. Aw found, Dr. O"Brien "pushed the envelope" too far to opine on non-work-relatedness. In light of the ER records, in addition to the causality findings of ATPs Dr. Miller and Dr. Gottlob, when viewed on the basis of the request for the MRI, the ALJ found that Dr. O'Brien's opinion was not credible or persuasive.

Substantial Evidence

c. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, the AJL made a rational choice between two conflicting sets of opinions, based on substantial evidence, and accepted the opinions of ATPs Dr. Miller and Dr. Gottlob and rejected the opinion of Dr. O'Brien, in so far as it was inconsistent with the opinions of the ATPs. The ALJ found that the Claimant's testimony was consistent with the medical records and is credible.

d. A compensable injury is one that arises out of and in the course of employment. § 8-41-301(1) (b), C.R.S. The "arising out of test is one of causation. If an industrial injury aggravates or accelerates a preexisting condition, the resulting disability and need for treatment is a compensable consequence of the industrial injury. Thus, a

claimant's personal susceptibility or predisposition to injury does not disqualify the claimant from receiving benefits. *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). An injured worker has a compensable new injury if the employment-related activities aggravate, accelerate, or combine with the pre-existing condition to cause a need for medical treatment or produce the disability for which benefits are sought. § 8-41-301(1) (c), C.R.S. *See Merriman v. Indus. Comm'n,* 120 Colo. 400, 210 P.2d 448 (1949); *Anderson v. Brinkoff,* 859 P.2d 819 (Colo. 1993); *National Health Laboratories v. Indus. Claim Appeals* Office, 844 P.2d 1259 (Colo. App. 1992); *Snyder v. Indus. Claim Appeals* Office, 942 P.2d 1337 (Colo. App. 1997). *Also see §* 8-41-301(1) (c), C.R.S; *Parra v. Ideal Concrete,* W.C. No. 4-179-455 [Indus. Claim Appeals Office (ICAO), April 8, 1998]; *Witt v. James J. Keil Jr.,* W.C. No. 4-225334 (ICAO, April 7, 1998). As found, the incident of August 3, 2017, aggravated and accelerated the Claimant's underlying asymptomatic right knee condition. Therefore, she sustained a compensable injury on August 3, 2017.

Medical Care and Treatment

e. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational injury. *Dependable Cleaners v. Vasquez,* 883 P.2d 583 (Colo. App. 1994). The Claimant's medical treatment is causally related to the right shoulder injury. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational injury. § 8-42-101(1) (a), C.R.S; *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P.2d 864 (1935); *Sims v. Indus. Claim Appeals* Office, 797 P.2d 777 (Colo. App. 1990). As found, all of the Claimant's treatment at Front Range Occupational Medicine and the Claimant's subsequent treatment at New West Physicians, also known as Denver West Family Practice, and their referral to Panorama Orthopedic & Sports Center, including the surgery performed by ATP Dr. Gottlob was reasonably necessary to cure and relieve the effects of the August 3, 2017 compensable injury and causally related thereto.

Respondent's Refusal to Treat for Non-Medical Reasons and Claimant's Right of Selection

f. Respondent is liable for medical treatment which is reasonably necessary to cure or relieve the effects of an industrial injury. § 8-42-101(1) (a), C.R.S.; *Snyder v. Indus. Claim Appeals* Office, 942 P.2d 1337 (Colo. App. 1997). Pursuant to § 8-43-405 (a), C.R.S., respondents in the "first instance" have the authority to select the treating provider for a claimant. When the employer fails to provide a physician "in the first instance" the right of selection passes to the claimant. See *Rogers v. Indus. Claim Appeals* Office, 746 P.2d 565 (Colo. App. 1987) (employer must tender medical treatment "forthwith" on notice of an injury or the right of first selection passes to the claimant). Once the right of selection has passed to the claimant it cannot be recaptured by a respondent. *Id.*

g. Where a treating physician refuses to render care to a claimant the right of selection passes to the claimant. *See Rogers v. Indus. Claim Appeals Office, supra.* Here, the evidence establishes that the ATPs refused medical care for non-medical reasons. This triggered the Claimant's right to select his physician. See *Ruybal v. University of Colorado Health Sciences Center,* 768 P.2d 1249 (Colo. App. 1988). In the present case, the refusal to treat was not based on a company doctor's "medical judgment" concerning the Claimant's need for treatment, but rather on the Respondents' selected medical evaluator's opinion concerning legal issues of causality and compensability. Under the circumstances, it was a refusal to provide medical care when the Respondent related the Claimant's right knee problems to a pre-existing disease for legal, not medical, reasons. As a result of the foregoing, the right to select a physician passed to the Claimant who selected New West Physicians. Therefore, new West and all of its referrals were authorized.

h. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, all referrals after the Claimant's first selection upon the former ATP's refusal to treat for non-medical reasons were within the chain of authorized referrals.

Burden of Proof

i. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has sustained her burden on all designated, contested issues.

ORDER

A. The Claimant sustained a compensable injury to her right shoulder on August 3, 2017.

B. Respondent shall pay all of the Claimant's authorized, reasonably necessary and causally related medical costs, including those after the Claimant's self-selection of providers upon refusal of providers to treat for non-medical reasons, subject to the Division of Workers' Compensation Medical Fee Schedule.

C. Pursuant to the stipulations and findings thereon, Claimant's average weekly wage is $1,031.87, which yields a temporary total disability benefit rate of $687.90 per week, or $98.27 per day;; and, she was temporarily and totally disabled (TTD) from August 24, 2017 through November 13, 2017, both dates inclusive, a total of 82 days. Therefore, Respondent shall pay the Claimant temporary total disability benefits of $687.90 per week from August 24, 2017, through November 13, 2017, both dates inclusive, a total of 82 days, in the aggregate amount of $8,058.14, which is payable retroactively sand forthwith.

D. Respondent shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of March 2018.

ISSUES

I. What is the true opinion of Division Independent Medical Examination (DIME) physician, Dr. Robert Kawasaki regarding maximum medical improvement (MMI) and Claimant's permanent impairment?

II. If Dr. Kawasaki's true opinion is that Claimant is at MMI as of July 14, 2015, did Claimant overcome the DIME opinion by clear and convincing evidence?

III. If Dr. Kawasaki's true opinion is that Claimant is not at MMI, did Respondents overcome the DIME opinion by clear and convincing evidence?

IV. Whether Respondents overcame the opinion of the authorized treating physician, Dr. Hughes, on the matter of a permanent impairment rating by a preponderance of the evidence.

PRELIMINARY MATTERS

I. Respondents filed a Motion for Sanctions Violation of Discovery Orders pursuant to C.R.S. §8-43-207(1)(e), C.R.C.P. Rule 37(b)(2)(A)-(E) and Rule 9-1 of the Workers' Compensation Rules of Procedure. Respondents requested reimbursement of expenses for Claimant's failure to comply with an order compelling the Claimant's appearance and cooperation at a medical examination with Dr. Cebrian, reasonable attorney fees in the preparation of the Motion for Sanctions, and that the Claimant be precluded from presenting fact and expert witnesses and exhibits to support her claims or defenses in this matter. The ALJ denied the request for reimbursement and attorney fees but ordered that the Claimant could not present fact or expert witnesses except for the Claimant's own testimony and with respect to the tendered exhibits, ruled as follows:

(a) The Claimant's "Voluntary Abandonment" form with 10-page statement was not admitted per the Motion for Sanctions and also on the grounds that much of the document contained inadmissible hearsay;

(b) Documents from Dr. Sanders, including an impairment rating, an evaluation from the day prior to the hearing and all other documents prepared and/or organized by Dr. Sanders were not admitted per the Motion for Sanctions;

(c) The medical record of Dr. Hughes dated September 14, 2016 was admitted as part of the Respondents' Exhibit packet at exhibit LL;

(d) The recordings of Dr. Hughes were not admitted per the Motion for Sanctions, because the evidence exchange was not timely and a lack of relevance;

(e) The July 14, 2015 medical record of Dr. Hughes was admitted as part of the Respondents' Exhibit packet at exhibit EE.

II. The ALJ also admitted Respondents' Prehearing Brief RE: Issues and Burden of Proof for consideration in this case.

III. On May 31, 2017, Claimant submitted a post-hearing position statement in which Claimant registered numerous objections to questions and responses contained in deposition testimony of Dr. Robert Kawasaki taken on March 28, 2017. The transcript of the deposition was admitted into evidence at hearing over the general objection of Claimant. Claimant's position statement further contained references and discussion of matters not in evidence. Claimant also submitted additional documents with the position for the consideration of the ALJ. On June 8, 2017, Respondents submitted a Motion to Strike Portions of Claimant's Position Statement and the Submission of Additional Evidence after the Hearing. At hearing, the ALJ explained to Claimant that, by electing to proceed pro se, she would be bound by the same rules of procedure and evidence as attorneys. The ALJ ruled on the documentary evidence Claimant offered at hearing as detailed above, and Claimant elected to not testify at hearing. At hearing, the ALJ explained that no new evidence would be permitted in the position statements from either party. Claimant's offer of new evidence and testimony in her position statement is in contravention of the ALJ's rulings and instructions at hearing and allowing such evidence would cause unfair prejudice to Respondents. Further, while Claimant did not attend the deposition of Dr. Kawasaki, her attorney at the time attended on her behalf and voiced objections during the course of the deposition and no other objections were registered as to the questioning or responses of Dr. Kawasaki.

Accordingly, Respondents' Motion to Strike is GRANTED. The ALJ strikes and disregards Claimant's untimely objections to questions and responses in the deposition testimony of Dr. Kawasaki on March 28, 2017, as well as any and all post-hearing submissions and references to matters not in evidence.

FINDINGS OF FACT

1. Claimant sustained an admitted work injury to her left upper extremity on December 28, 2014.

2. Prior to the work injury, Claimant sustained non-work related injuries to her cervical spine, left upper extremity and other body parts.

3. Claimant experienced a non-work related motor vehicle accident (MVA) on March 27, 2009. Claimant treated with Dr. Paul Leo and Dr. Joseph Ramos through 2010 for injuries related to the March 27, 2009 MVA. Claimant was diagnosed with cervical facet arthropathy, cervical segmental dysfunction, cervical myospasm,

deconditioning, and cervicogenic headache. As of an October 7, 2010 office visit with Dr. Ramos, Claimant was reporting neck pain of 7-8/10 intensity and shoulder pain of 7/10 intensity.

4. Claimant was involved in a second non-work related MVA on July 15, 2014. Claimant saw PA-C Renae Tabin at OnPoint Urgent Care - Aurora on July 30, 2014, reporting hand pain, neck pain and headache. PA-C Tabin noted that Claimant was "struggling with upper back (left sided) and left upper arm 'hot pain,' creaking and crackling in the neck with ROM, headaches occasionally left sided."

5. On August 20, 2014, Claimant began treating with Dr. Gin-Ming Hsu for injuries related to the July 15, 2014 MVA. Dr. Hsu noted Claimant "has a pertinent history of diabetes with diabetic neuropathy." Claimant reported pain localized to the left side of her neck, with radiation to the left shoulder/arm. Claimant rated the pain at a 7/10 at its worst. Dr. Hsu noted Claimant "characterizes it as stabbing, tingling and aching." Dr. Hsu noted Claimant had full functional range of motion in the left upper extremity and that her strength was 5/5 in all major muscle groups. A Neer's test was positive for impingement. Dr. Hsu initially assessed Claimant as having injuries from the 7/15/14 MVA "consistent with whiplash injury. There is evidence of myofascial pain as well as occipital neuralgia. She is also complaining of shoulder pain, that upon exam, is consistent with bursitis." Dr. Hsu recommended conservative therapy to include physical therapy and injections and he also referred Claimant for an MRI of the cervical spine.

6. Dr. Hsu reevaluated Claimant on November 6, 2014. Claimant complained of left-sided neck pain with radiation to the left shoulder/arm. Claimant also complained of pain in her hand "that she describes as a locking sensation on the left side." On examination, palpation of the left upper extremity revealed subacromial tenderness but full functional range of motion. Hawkin's test was negative for impingement and Neer's test was positive for impingement. Strength was noted as 5/5 in all major muscle groups. Dr. Hsu performed trigger point injections in the greater occipital nerve under ultrasonic guidance. Dr. Hsu recommended a course of physical therapy following the injections. He noted that on later follow up, additional procedures are considered including left shoulder injections, left medial branch blocks and an MRI.

7. On November 7, 2014, Claimant saw neurologist Dr. Patricia Soffer. Claimant reported that she received facet blocks and cortisone injections for her neck pain, which Claimant reported were ineffective.

8. Dr. Hsu reevaluated Claimant on December 2, 2014. Claimant continued to report left-sided neck pain with radiation to the left shoulder/arm. Regarding the injection, Dr. Hsu noted, "She reports feeling relief after a week from injection, she reports since then she has had only two episodes of shooting pain into the head. She reports that these are overall successful, request to continue treatment with ONB." Claimant reported experiencing pain in her left had she described as a "locking sensation." Dr. Hsu noted full functional range of motion in the left upper extremity with 5/5 strength in all major muscle groups. Hawkin's test was negative for impingement

and Neer's test was positive for impingement. Dr. Hsu remarked, "Left AC Joint sprain noted on exam."

9. Claimant returned to Dr. Hsu on December 9, 2014 for a shoulder injection. Claimant continued to complain of pain in the hand described as a locking sensation on the left side. Dr. Hsu's findings for the left extremity were the same as his prior examination. Dr. Hsu noted that a course of physical therapy would follow the injection and that he was considering left medial branch blocks and an MRI for injuries related to the July 15, 2014 MVA.

10. On December 28, 2014, Claimant was treated by Dr. Duard (Pat) Spruce at OnPoint Urgent Care Aurora. Claimant reported she was experiencing left shoulder pain and left hand pain that started that day at work. She reported tingling and tenderness. On examination, Dr. Spruce noted Claimant "reacts to light touch but inconsistent." Dr. Spruce also documented, "ROM and motor strength exam also inconsistent with observed ROM and use of strength such as removing overcoat." Dr. Spruce further noted that there was no deformity, edema or ecchymosis on examination. Dr. Spruce assessed a strain/sprain to Claimant's shoulder/arm.

11. On December 29, 2014, Claimant went to NextCare Urgent Care and was treated by Dr. Mark Collins. Claimant complained of pain and tingling in her left hand and left shoulder pain with a severity level of 7. Claimant reported that the onset was one day ago at work. Claimant reported that "she was required to lift up to 40-5-pound masses of dough and reach into a machine requiring extreme hunching of her shoulders." On examination, Dr. Collins noted tenderness on palpation of her left shoulder and "severe pain with motion." Specifically regarding the left shoulder, Dr. Collins noted active and passive painful range of motion. Dr. Collins assessed a shoulder sprain and prescribed Skelaxin.

12. On January 7, 2015, Claimant returned to Dr. Hsu for a follow-up on the prior left AC injection. Claimant reported that the injection helped, but that her back pain started to return one week prior. Claimant reported that she was injured at work lifting 25 pounds of dough. Dr. Hsu noted, "[Claimant] reports new pain is different than pain before is tingling and sharp shooting pain (intermittent)." Claimant continued to complain of pain in her left hand. Claimant reported to Dr. Hsu that the pain was tingling and sharp and intermittent, with intermittent swelling in the left hand. On examination, Dr. Hsu noted Claimant's cervical range of motion was decreased secondary to pain. He also noted tenderness along the AC joint line, full functional range of motion of the left upper extremity, and 5/5 strength in all major muscle groups. Dr. Hsu recommended a repeat left AC joint injection, an MRI of the cervical spine, and physical therapy.

13. Dr. Hsu reevaluated Claimant on January 22, 2015. Claimant reported left-sided pain radiating to the left arm. Claimant reported experiencing temporary relief from the injection and that the arm pain returned. Claimant reported tingling and numbness in her hand and severe neck pain. Dr. Hsu noted that Claimant had been undergoing physical therapy with Julie Wallace. Dr. Hsu recommended another

cortisone injection in the left shoulder bursa, continued physical therapy and consideration of left medial branch blocks. Dr. Hsu noted, “Aware of PTs concern she may have thoracic outlet syndrome. I prefer to review MRI results before coming to that conclusion.”

14. On January 26, 2015, the Claimant returned to Dr. Hsu for the ultrasound guided left shoulder injection for the diagnosed left subacromial bursitis. Dr. Hsu reviewed a September 5, 2014 MRI and noted mild multilevel spondylosis at C3-C4, mild post disc bulging at C3-4, C4-5, and C6-7, mild facet arthropathy at C4-5, C5-6, C6-7, and moderate foraminal stenosis at C5-6.

15. Dr. John Hughes evaluated Claimant on February 3, 2015. Claimant complained of left arm pain at a 6/10 in severity. On examination, Dr. Hughes found Claimant’s strength was normal with active flexion measuring 90 degrees and active abduction measuring 70 degrees. Dr. Hughes diagnosed a left shoulder sprain, left TOS and disc displacement in the cervical spine. Dr. Hughes recommended an MRI of the left shoulder and left upper extremity neurodiagnostics. Dr. Hughes opined that “the cause of this problem appears to be, in part, related to work activities.”

16. Claimant returned to Dr. Hsu for a follow-up evaluation on February 24, 2015. Claimant reported experiencing intermittent neck pain, and that her left shoulder pain was about 80% better. On examination, Dr. Hsu noted tenderness along the AC joint line, full functional range of motion with no laxity or subluxation of any joints, and 5/5 strength in all muscle joints and normal overall tone. Hawkin’s test was negative for impingement and Neer’s test was positive for impingement. Dr. Hsu again noted Claimant’s concern regarding having TOS, and again stated that he preferred to review the MRI before coming to such conclusion. Dr. Hsu recommended that Claimant return to the physical therapist to obtain a home exercise program (HEP) for use at her gym.

17. Claimant underwent an MRI of the left shoulder without contrast on March 19, 2015. The radiologist, Dr. William Rhey Dunfee, compared the MRI images to December 17, 2008 X-ray images. Dr. Dunfee noted findings indicating an infraspinatus muscle strain and focal tendinosis versus partial rim-rent like tear (less than 50% thickness) of the supraspinatus tendon at the anterior distal insertion. Dr. Dunfee noted a more than slightly irregular signal within the superior labrum at the biceps anchor attachment which may represent of SLAP 1 type lesion. He further noted mild subacromial-subdeltoid bursitis and acromioclavicular joint arthritis.

18. On March 27, 2015, Claimant underwent a left upper extremity EMG. Dr. Erasmus Morfe assessed arm pain and radicular pain but opined that it was a “normal study.” Dr. Morfe remarked, “There is NO convincing electrophysiologic evidence for cervical radiculopathies or other compressive mononeuropathies. Overall no identifiable neurogenic changes.”

19. Dr. Hsu reevaluated Claimant on April 14, 2015. Claimant reported that, since her last visit, her neck pain was the same and her left shoulder pain had

worsened. Dr. Hsu noted that Claimant was discharged from physical therapy the previous week. Dr. Hsu noted the same examination findings from his previous examinations. Dr. Hsu administered a trigger point injection with ultrasound guidance. Dr. Hsu again noted Claimant's concern regarding having TOS, and again stated that he preferred to review the MRI before coming to such conclusion. Dr. Hsu recommend Claimant continue with physical therapy and receive additional trigger point injections.

20. Claimant returned to Dr. Hughes for a follow-up evaluation on May 7, 2015. Claimant reported that her symptoms had not changed over the past month and that she was experiencing left arm numbness. Claimant also reported that she had completed physical therapy with Ms. Wallace who told Claimant there was not much more she could do for her. On examination, Dr. Hughes noted,

> Left shoulder motion is guarded but smooth with active flexion and extension measured at 103 and 49 degrees, abduction and adduction 80 and 0 degrees, external and internal rotation 76 and 14 degrees. Sensation is intact to light touch. Strength testing is diffusely 'give-way' but hand intrinsic strength seems to be 5/5 and symmetrical.

Dr. Hughes assessed a work-related left shoulder sprain/strain with development of tendinosis versus a partial rim-rent-like tear of the supraspinatus tendon. Dr. Hughes noted that he received and reviewed additional medical records related to Claimant's 2009 and 2014 MVAs, including an MRI of her cervical spine from August 21, 2010 and records of Claimant's treatment with Dr. Hsu. Having reviewed those records, Dr. Hughes opined that Claimant's ongoing cervical spine problems do not stem from the work injury. He also noted that Claimant was assessed with left shoulder pathology prior to her work injury and had undergone ultrasound guided subacromial corticosteroid injections for this. Dr. Hughes opined that Claimant sustained a left shoulder injury superimposed on diabetic tendinopathy of her rotator cuff complex. He referred Claimant to Dr. John Reister for an orthopedic evaluation.

21. Claimant returned to Dr. Hsu for a follow-up evaluation on May 14, 2015. Claimant reported being very pleased after completing 12 weeks of physical therapy and that her left shoulder was about 80% better. Claimant reported that the trigger point injections she last received were very helpful. Dr. Hsu noted the same exam findings from his prior examinations. Dr. Hsu noted Claimant had "excellent results" with the trigger point injections and there was no need to repeat at that time. Dr. Hsu approved Claimant to be discharged, and documented that Claimant would be seeing an orthopedic physician to address her persistent left shoulder pain.

22. On July 14, 2015, Dr. Hughes reevaluated Claimant and placed Claimant at MMI. On examination, Dr. Hughes noted the following range of motion measurements of the left upper extremity: flexion at 120 degrees, extension at 49 degrees, abduction at 93 degrees, adduction at 22 degrees, external rotation at 88 degrees and internal rotation at 33 degrees. Dr. Hughes noted that other joint and sensorimotor examinations in her upper extremities were normal. Dr. Hughes assessed work-related left shoulder

sprain/strain with development of tendinosis versus a partial rim-rent-like tear of the supraspinatus tendon. Dr. Hughes also made the following non-work related assessments: past medical history of cervical spine injuries with MRI findings of multilevel degenerative changes with mild central canal stenosis, poorly controlled type 2 diabetes, hypertension, and probable left shoulder joint tendinopathy secondary to Claimant's type 2 diabetes. Dr. Hughes noted Claimant had related symptoms consistent with poorly controlled diabetes. Dr. Hughes remarked, "I feel her diabetes poses a relative contraindication to proceed with surgical treatment of her shoulder. For this reason, it is my opinion that she has reached maximum medical improvement." Dr. Hughes noted that Claimant had seen Dr. Reister and that Dr. Reister recommended a series of 12 physical therapy sessions which Dr. Hughes agreed Claimant could finish out under medical maintenance. Per the AMA Guides, Dr. Hughes assigned a 13% upper extremity impairment rating (8% whole person) based on his range of motion measurements.

23. On September 11, 2015, Respondents filed a Final Admission of Liability admitting a July 14, 2015 MMI date and a 13% impairment rating in accordance with Dr. Hughes' July 14, 2015 medical report.

24. On December 21, 2015, Dr. Tashof Bernton conducted an Independent Medical Examination (IME) of Claimant at the request of Respondents. Dr. Bernton performed a medical records review and physically examined Claimant. Claimant reported that she injured herself while lifting a piece of dough out of the extruder. Claimant reported that, subsequent to her July 14, 2015 evaluation with Dr. Hughes, she saw Dr. Sanders, who told Claimant she had two forms of TOS and recommended physical therapy and exercises. Claimant complained of neck pain, left-sided headaches, and pain in the left shoulder through her elbow and forearm. On examination, Claimant did not have pain on palpation of the left AC joint but had some tenderness in the left supraclavicular fossa. Range of motion measurements for the left shoulder were flexion at 129 degrees, extension at 51 degrees, external rotation at 87 degrees, internal rotation at 71 degrees, abduction at 136 degrees and adduction at 25 degrees. Dr. Bernton noted "no dermatomal numbness in the left arm, but some diffuse decreased sensation is noted and give-way weakness was present diffusely in the left shoulder."

25. Dr. Bernton noted that Claimant had chronic left neck and left shoulder complaints prior to the work injury, including stabbing, tingling, numbness and aching sensations. Dr. Bernton opined that Claimant sustained a work-related muscular strain which aggravated Claimant's shoulder tendinopathy.

26. Dr. Bernton remarked that Claimant's presentation was consistent with a "fairly pronounced functional overlay." Dr. Bernton further remarked, "In addition to the notation of inconsistent range of motion seen initially after the injury, the patient's complaints of pain and symptoms throughout the entire arm and the history of chronic pain also indicate a probable nonphysically-based contribution to the patient's symptomatology." Dr. Bernton agreed with Dr. Hughes assessment that Claimant was

at MMI for her work-related complaints, stating, "She does have left shoulder tendinopathy with a partial tear. As a diabetic with probable symptom magnification, surgical treatment of a partial tear of the shoulder, I would agree, is unlikely to produce functional improvement." Dr. Bernton opined that Claimant "may have" TOS as well, noting, "She does have some tenderness in the supraclavicular fossa and exacerbation of pain with abduction, external rotation, and opening and closing the fist." Dr. Bernton did not opine that the TOS was work-related. Dr. Bernton opined that the "work-related component of the patient's symptoms were, at most, a muscular strain which aggravated the patient's shoulder tendinopathy."

27. Dr. Bernton further opined that Claimant's impairment rating should be based upon range of motion deficits. Dr. Bernton found a 7% impairment of the upper extremity based on range of motion deficits. Dr. Bernton again noted that Claimant had shoulder pathology prior to the occupational injury, and apportioned 50% of the impairment to preexisting conditions. Dr. Bernton assigned a total impairment rating of the upper extremity of 3.5%, which he rounded to 4%.

28. Dr. Richard Sanders provided a record review report dated March 3, 2016. Dr. Sanders opined that Claimant's December 28, 2014 work injury aggravated Claimant's preexisting conditions from her July 15, 2014 MVA. Dr. Sanders noted that, based on a suggestion from the physical therapist, he also considered a diagnosis of TOS. Dr. Sanders noted that Dr. Bernton, in his IME, also suggested this diagnosis. Dr. Sanders noted that Dr. Hsu mentioned the TOS concerns of the physical therapist but did not make the diagnosis. Dr. Sanders then opined that, in reviewing records prior to December 28, 2014, no one mentions the appropriate symptoms for which to suspect TOS. As a result, he determined that based on the Claimant's reported mechanism of injury and what he finds to be the development of new symptoms of numbness and tingling in the hand and arm, he attributes the TOS to the work injury and noted Claimant was not at MMI for that work injury. He opined that if Claimant does not exhibit a pattern of improvement after three months of treatment for NTOS and NPMS, she may be a candidate for pectoralis minor tenotomy surgery.

29. On March 16, 2016, Dr. Hughes provided a case review at the request of Claimant. Dr. Hughes reviewed his previous medical notes and Dr. Sanders' March 3, 2016 report. Dr. Hughes disagreed with Dr. Sanders' conclusions, stating,

> [i]t is clear from medical record documentation from prior to December 28, 2014, that [the Claimant] had ongoing left-sided neck and shoulder problems leading to shoulder injections done prior to December 28, 2014. During the time I attended [Claimant]'s rehabilitative care, I pondered if she, indeed, sustained anything new as a result of her work-related injuries of December 28, 2014. However, in the absence of documentation by MRI scan of pathology involving the left shoulder, I ultimately attributed the left shoulder pathology to her work-related injury of December 28, 2014. The same is not true, in my opinion, regarding her ongoing and well-documented cervicothoracic and left upper extremity problems as

> discussed by Dr. Hsu in his follow up report of January 7, 2015. I do not feel that further evaluation and treatment proposed by Dr. Sanders in his report of March 3, 2016, is in any way related to the injuries she sustained at work on December 28, 2014.

30. On April 5, 2016, Dr. Bernton provided an updated medical record review and specifically addressed Dr. Sanders March 3, 2016 report. Dr. Bernton noted that Claimant's statements that pain, tingling and swelling in the left shoulder were not present after her July 15, 2014 MVA but were there after her December 28, 2014 work injury are inconsistent with the medical records. Dr. Bernton opined that Dr. Sanders' assessment that Claimant has TOS and that the work injury is the primary cause of Claimant's current disability was based on Claimant's subjective report to him on March 3, 2016. Dr. Bernton noted that "medical notes at the time reflect the most accurate documentation we have," and stated that it was unlikely Dr. Hsu simply made up complaints of stabbing, tingling, aching and radiation noted in his December 9, 2014 evaluation notes. Dr. Bernton also took issue with Dr. Sanders' failure to provide a placebo injection with his administration of a diagnostic pectoralis minor block, which caused him to question Dr. Sanders' conclusions regarding Claimant's response to that block. Dr. Bernton reiterated that the work-related component of Claimant's symptoms "were at most muscular strain which aggravated the patient's shoulder tendinopathy." Dr. Bernton stated, "To the extent the patient has thoracic outlet syndrome, the record does clearly reflect the presence of symptoms consistent with this prior to the occupational injury." Dr. Bernton again opined Claimant had reached MMI with a 7% upper extremity rating, apportioning 50% to preexisting conditions.

31. Dr. Robert Kawasaki performed a DIME examination of Claimant on April 15, 2016 and issued a report of the same date. Dr. Kawasaki performed a medical records review and physical examination. Claimant reported that she was "completely healed 'back to normal'" by the end of treatment following the 2009 MVA. Claimant reported she was feeling "fantastic" by early November 2014 and was only experiencing occasional pain in her neck and shoulder girdle after the July 2014 MVA. Claimant reported no numbness and tingling in her upper extremities as of her first day of work for Employer. Claimant reported that her injuries from the motor vehicle accident had mostly resolved by the start of her employment with Employer. Regarding the mechanism of injury, Claimant reported that she was injured at work while pulling dough out of an extruder machine. Claimant reported current symptoms of constant pain in her neck, left shoulder and pain shooting down her arm, with numbness and tingling in her left hand. Dr. Kawasaki noted that, while taking her history, Claimant complained of a hostile work environment and alleged sexual harassment.

32. On examination, Dr. Kawasaki noted "diffuse tenderness to palpation posterior cervical musculature." Dr. Kawasaki noted the Claimant was "diffusely tender" and she had the following left shoulder ROM measurements: flexion was 120 degrees, extension was 52 degrees, adduction was 35 degrees, abduction was 120 degrees, internal rotation was 70 degrees and external rotation was 90 degrees. Dr. Kawasaki further noted "giveway pattern weakness diffusely through the proximal upper extremity

and shoulder and shoulder girdle area."

33. Dr. Kawasaki noted that Claimant had a well-documented, long history of preexisting and non-work related chronic pain in the cervical spine and left shoulder, with reported stabbing, tingling, aching and radiation into the left shoulder/arm. Dr. Kawasaki referred to the MTG for TOS and noted, "Within medical probability, although the patient was not diagnosed prior to the work injury with thoracic outlet syndrome, retrospective review of the prior medical records show chronic signs and symptomatology consistent with long-standing thoracic outlet syndrome." Dr. Kawasaki opined that "The mechanism of injury reported on 12/28/14, within medical probability, was a shoulder strain with exacerbation of the pre-existing shoulder pathology and underlying thoracic outlet syndrome." Dr. Kawasaki noted that Claimant's symptoms were perpetuated by psychological, emotion and functional overlay.

34. Dr. Kawasaki further opined that Claimant had not reached MMI. Dr. Kawasaki recommended a psychologic evaluation, 6-12 biofeedback therapy sessions, and chiropractic treatment. Dr. Kawasaki opined that surgery was not indicated and that a repeat EMG test to confirm TOS could be considered reasonable, but was not necessary. Although Dr. Kawasaki did not place Claimant at MMI, he provided a provisional upper extremity impairment rating of 11% (7% whole person), which consisted of a 5% rating for range of motion deficits for the left shoulder and a 6% rating for TOS. Dr. Kawasaki remarked, "Although retrospectively, medical record review shows evidence of undiagnosed pre-existing thoracic outlet syndrome, there are no specific clinical findings documented by Dr. Hsu or other providers to provide basis for apportionment."

35. Claimant was involved in a third MVA on June 23, 2016. Claimant treated with Injury Solutions on July 7, 2016, August 4, 2016 and September 1, 2016 for injuries resulting from the June 23, 2016 MVA. On July 7, 2016, Dr. Kenneth Allan assessed possible closed head injury, anxiety/PTSD, cervicalgia, post-traumatic headache, cervical sprain/strain/myofascial spasm with pain, lumbosacral pain/strain/sprain, and thoracic pain.

36. After Dr. Kawasaki opined that Claimant was not at MMI, Claimant was returned to treatment with Dr. Hughes on September 14, 2016. Dr. Hughes noted that Claimant and her husband arrived for the appointment appearing "visibly angry." Dr. Hughes noted that he "did not proceed with any additional physical examination in light of this markedly hostile environment." Dr. Hughes noted that he had reviewed Dr. Kawasaki's DIME report and although he agreed with the recommendation for a pain psychology evaluation and other recommendations, Dr. Hughes continued to opine that the Claimant was at MMI and this treatment should be considered medical maintenance. Dr. Hughes noted that he discharged Claimant from his care into another authorized treating physician (ATP) as he "will not reevaluate [Claimant] without a court order to do so in the setting of mutual distrust."

37. Dr. Gary Gutterman conducted an outpatient psychiatric consultation of

Claimant on September 7, 2016 and issued a report dated September 26, 2016. Dr. Gutterman noted that he conducted a medical records review and met with Claimant for three hours. Dr. Gutterman opined that Claimant was at MMI from a psychiatric perspective relating to the work injury, stating:

> In summary, I do not believe the patient currently is experiencing any psychiatric or psychological disorder as it relates to her employment injury...The credibility of the patient's various complaints related to others needs to be carefully evaluated...There certainly was no indication of any need for psychopharmacologic or psychotherapeutic intervention as it would relate to her employment injury. In reference to six to 12 biofeedback sessions, if it is determined that the patient's TOS was exacerbated by the employment injury or if it is determined that the TOS arose as a result of the employment injury, six to 12 biofeedback sessions would be reasonable.

38. On September 19, 2016, Respondents designated Dr. Carlos Cebrian as Claimant's new ATP and scheduled an initial appointment for January 9, 2017, providing notice of the appointment to Claimant. On January 3, 2017, Claimant advised that she was unable to attend the appointment. Respondents rescheduled the initial evaluation appointment for Claimant on February 2, 2017 and then requested an order compelling Claimant to attend the appointment. PALJ Steninger noted that Claimant expressed "a willingness and intent to attend the 2/2/2017 appointment" and granted the motion to compel attendance at the appointment in his Prehearing Conference Order dated February 1, 2017.

39. Claimant saw Dr. Cebrian on February 2, 2017. Dr. Cebrian noted he explained to Claimant that he was to take over as Claimant's treating physician for her Workers' Compensation claim as Dr. Hughes previously declined to continue to treat her. Dr. Cebrian noted that he attempted to evaluate Claimant and to obtain a medical history from her and Claimant told him, "[w]e don't even know each other. You're not my doctor. You're not going to be my doctor." Dr. Cebrian noted that Claimant then stated that Dr. Cebrian seeing her was an "illegal IME" and what he was doing was "illegal." Dr. Cebrian noted that, based on Claimant's actions, he felt it would not be possible to establish a therapeutic doctor-patient relationship and ended the evaluation. Dr. Cebrian noted that he will no longer see Claimant.

40. Respondents subsequently sought another Prehearing Conference in this matter to compel Claimant to provide overdue responses to Interrogatories and Requests for Production and to permit the parties to conduct a deposition of the DIME physician Dr. Robert Kawasaki. PALJ Sandberg entered an order to compel discovery responses and he entered an order permitting the Respondents to take the deposition of Dr. Kawasaki.

41. The deposition of the DIME physician Dr. Kawasaki took place on March 28, 2017. Claimant's legal counsel at the time appeared at the deposition along with

Respondents' counsel.

42. Dr. Kawasaki testified that he agreed with Dr. Hughes' assessment that Claimant had a preexisting left shoulder condition prior to the December 28, 2014 injury and that Claimant's ongoing cervical spine problems are not related to the work injury. Dr. Kawasaki testified that it is medically probable that the pathology noted on the March 19, 2015 MRI was pre-existing. Dr. Kawasaki a opined that it is likely Claimant's shoulder tendinitis would have progressed whether or not she suffered a sprain or strain of her shoulder on December 28, 2014. Dr. Kawasaki testified that there was no problem with Dr. Hughes' methodology in converting range of motion measurements to an impairment rating.

43. Dr. Kawasaki testified that he changed his opinion and he stated his revised opinion as to both Claimant's MMI status and impairment rating. He referred to measurement of range of motion as an "objective measurement of subjective motion," that is, in part, based on a claimant's effort. After review of many of the medical records in this case, Dr. Kawasaki testified that, on multiple occasions, there were inconsistencies in Claimant's presentation and history, which eroded trust in Claimant. He opined that Claimant was not giving full effort during his DIME examination, and that her inconsistencies caused him to question even his own range of motion measurements. He testified both Dr. Hughes and Dr. Bernton used the correct methodology of converting the range of motion measurements to an impairment rating. He was unaware of how Dr. Bernton determined a 50% apportionment.

44. When questioned as to why he assigned a 6% rating for peripheral nervous system impairment, Dr. Kawasaki testified that at the point of the DIME report, he agreed with the diagnosis of TOS. Regarding Dr. Hughes February 3, 2015 medical record, Dr. Kawasaki acknowledged that, "there's nothing to indicate thoracic outlet syndrome in the note." Dr. Kawasaki testified that he revised his opinion and that, to the extent Claimant has TOS, it is preexisting and not related to the work injury. Dr. Kawasaki specifically testified:

Q: So if you were writing the DIME report today, would you find the symptomatology for the thoracic outlet syndrome related to the December 28, 2014 work injury?
A: No.
Q: Would you include that as a part of her impairment rating for the December 28, 2014 work injury?
A: No.
Q: All right. So what you have on Page 18 [of the DIME report], this 6 percent, you would no longer include that.
A: Correct.
Q: That would be zero percent?
A: Correct.

Dr. Kawasaki further testified about the TOS symptoms, treatment and the impairment rating as follows:

A: Right. So, again during my DIME, I did recommend some additional treatment for the thoracic outlet syndrome which I revised today. So with my understanding -- further understanding of the case today and reviewing the records as we have, I agree with Dr. Bernton at this point that the patient does not require further treatment.

Q: And in addition to not requiring further treatment for TOS, the rating for that condition should not be included in the overall impairment rating for [Claimant's] work related injury, correct?

A: That's correct.

45. Dr. Kawasaki testified that in his DIME report he recommended that the psychologic portion be addressed because of an overriding concern regarding potential delayed recovery and psychologic issues around the injury and alleged sexual harassment. When asked if he disputed Dr. Gutterman's conclusions regarding the lack of relatedness of any psychological or psychiatric issues to Claimant's work injury, Dr. Kawasaki testified:

A: …I know Dr. Gutterman, and he is somebody who has a good reputation. And I refer to Dr. Gutterman, as well, for my patients. And so I think that his summary can stand on its own. So I have no basis to agree or disagree. But these are -- but I did recommend in my IME that she have a psychologic evaluation. And Dr. Gutterman has evaluated the patient, and in his professional opinion, she does not need pharmacologic or psychotherapeutic interventions, he does not feel that the patient has a psychologic disorder relating to the employment, and indicates that the issues with regard to the sexual harassment do not need to be treated. I mean, I -- typically, if I'm looking at Dr. Gutterman's, that's what I do. I go to the summary because I always let Dr. Gutterman's assessment stand on its own.

Q: So do you accept Dr. Gutterman's conclusions on these issues?

A: I do.

Dr. Kawasaki further testified as follows:

Q: And the existence of outstanding psychological or psychiatric issues that you had expressed at the time of the DIME report, those are fully -- I guess those are covered with respect to your reliance on Dr. Gutterman's opinion in his September 26, 2016 report?

A: That's correct.

Q: All right. So does that change your opinion with respect to [the Claimant's] MMI status? At the time of the DIME report, you indicated she was not at MMI.

A: Yes, She is at maximum medical improvement at this point.

Q: All right. So if she is at MMI, do you agree that she was at MMI at the time that Dr. Hughes placed her there on July 14, 2015?

A: From a physical standpoint, I believe so. This is difficult. I mean, when I saw the patient for the DIME, the psychologic issue had not been addressed or looked at, as far as I know. And I think that was an important piece of the puzzle. So I believe that once the psychologic has been addressed, that's the point the patient reaches maximum medical improvement.

Q: Now, the psych was addressed on September 26, 2016, but in his report, he indicated that none of this was related to the employment injury. So if none of it was related -- I understand you wanted the need for this evaluation. But in the evaluation, Dr. Gutterman states none of it was related. So if none of it was related, doesn't that back date to when she was physically at MMI, if none of the psychological was ever found to be related to her employment injury, or for that matter, for her prior complaints of sexual harassment? He actually included that.

A: I'm going to think out loud for a second. Okay? So if -- say I had -- I did a DIME and had concern the patient had a knee pathology that might need to be treated, and I said the patient is not at maximum medical improvement and we need to work up the knee. And the knee MRI came back normal, and there's no indication for treatment for the knee. The MMI would be when the patient was at maximum medical improvement previously, not when the MRI is done proving that the patient did not need further treatment. So if the MRI had shown that the patient needed treatment for the knee, then the patient would not be at MMI and continue on. So using that logic, talking out loud, then I recommended a psychologic/psychiatric evaluation to see if there is treatment necessary. So even though it's done after I saw her, based on Dr. Gutterman saying that there's no need for treatment, there's no work related psychologic, then I would go back to the MMI date that she was placed by Dr. Hughes.

Q: So because that was longer, I just really want to clarify. And let's get this really short because it's easier to have it short. What you are now saying is that you have changed your opinion from your April 15, 2016 DIME evaluation based on some new information that we went through at this hearing, that [the Claimant] was at MMI on July 14, 2015, the date that Dr. Hughes placed her at MMI.

A: That's correct.

46. Dr. Bernton testified at hearing as an expert in internal medicine and occupational medicine. Dr. Bernton is board certified in internal medicine and

occupational medicine and is Level II accredited by the Division of Workers' Compensation. Dr. Bernton generally testified in accordance with his December 21, 2015 report of his IME examination of Claimant and updated his opinion regarding medical records subsequent to his original and updated written reports, including the DIME report, Dr. Gutterman's report and the deposition transcript of Dr. Kawasaki. Specifically regarding Dr. Hughes' February 3, 2015 medical record, Dr. Bernton agreed that there was nothing in the medical record to indicate that any testing for TOS had been performed at that point. Dr. Bernton also testified that the shoulder injections and treatment associated with Claimant's February 24, 2015 evaluation with Dr. Hsu were not related to Claimant's work injury.

47. Dr. Bernton testified that he agreed with Dr. Kawasaki's March 28, 2017 opinion that Claimant reached maximum medical improvement as of July 14, 2015, the date that Dr. Hughes originally placed Claimant at MMI. Dr. Bernton testified that the total upper extremity rating provided by Dr. Kawasaki related to Claimant's work-related impairments is a 5% upper extremity rating. Dr. Bernton agreed that Claimant's TOS condition is not work-related, and that Claimant should not receive a 6% rating for the TOS condition. Dr. Bernton agreed with Dr. Kawasaki's opinion that Claimant is entitled to a 5% upper extremity impairment rating for range of motion deficits. Dr. Bernton testified that Dr. Kawasaki's DIME opinion, as changed by Dr. Kawasaki's March 28, 2017 deposition testimony, is reasonable and appropriate. Dr. Bernton testified that the opinion of the DIME regarding the Claimant's impairment as expressed in his March 28, 2017 deposition testimony is provided in accordance with the AMA Guides.

48. Claimant was offered the opportunity to testify at the hearing and declined to testify.

49. The ALJ finds that Dr. Kawasaki changed his DIME opinion originally expressed in his April 15, 2016 DIME report. Per his testimony under oath at his deposition taken on March 28, 2017, Dr. Kawasaki changed his opinion as to Claimant's MMI status and impairment rating. Dr. Kawasaki's revised opinions as expressed in his deposition testimony are unambiguous and represent Dr. Kawasaki's true DIME opinion regarding MMI and permanent impairment.

50. Dr. Kawasaki's true opinion is that Claimant reached MMI as of July 14, 2015, the date that Claimant's ATP Dr. Hughes originally placed her at MMI.

51. Dr. Kawasaki's true opinion is that Claimant is total impairment rating is a 5% upper extremity impairment based on range of motion deficits, as Dr. Kawasaki revised his opinion to find that the TOS is not work-related and should not be rated. No other body parts were rated.

52. The ALJ credits the opinion of Drs. Kawasaki, Bernton, Hsu and Gutterman over the contradictory opinion of Dr. Hughes.

53. Claimant failed to overcome the DIME physician's opinion that she

reached MMI on July 14, 2015 by clear and convincing evidence.

54. Respondents established, by a preponderance of the evidence, that Dr. Hughes' 13% impairment rating admitted to in the September 11, 2015 FAL should be set aside, and the FAL should be modified to reflect the 5% impairment rating assigned by Dr. Kawasaki.

55. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Determining the True Opinion of the DIME Physician

The DIME physician's findings include his or her subsequent opinions, as well as his or her initial report. *Andrade v. Industrial Claim Appeals Office,* 121 P.3d 328, 330 (Colo. App. 2005). If a DIME physician issues conflicting or ambiguous opinions concerning MMI or impairment, it is the ALJ's province to determine the Division IME's true opinion as a matter of fact. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000); *Rainwater v. Sutphin*, WC 4-815 042-04 (ICAO September 9, 2014).

In his initial DIME report dated April 15, 2016, Dr. Kawasaki opined that Claimant had not reached MMI and assigned a provisional 11% impairment rating based on range of motion deficits and TOS. Upon reconsidering already reviewed medical records and reviewing additional medical records, Dr. Kawasaki subsequently revised his DIME opinion regarding MMI and permanent impairment in deposition testimony given under oath on March 28, 2017. In his deposition testimony, Dr. Kawasaki relied on Dr. Gutterman's opinion that Claimant's psychological issues are not work-related, and opined that Claimant had reached MMI as of the date her ATP, Dr. Hughes, placed her at MMI. Regarding permanent impairment, Dr. Kawasaki testified that Claimant's TOS condition was pre-existing and not work-related. Dr. Kawasaki testified that he would no longer include an impairment rating for Claimant's TOS condition. No other body parts were rated. As found, Dr. Kawasaki's revised opinions as expressed in his deposition testimony are unambiguous and represent Dr. Kawasaki's true DIME opinion regarding MMI and permanent impairment. As found, Dr. Kawasaki's true DIME opinion is that Claimant reached MMI as of July 14, 2015 and that Claimant's total impairment rating is a 5% upper extremity impairment rating based on range of motion deficits.

MMI

Once the ALJ determines the true opinion of the DIME physician, the party seeking to overcome that opinion bears the burden of proof by clear and convincing evidence. A DIME's findings of MMI, causation, and non-scheduled impairment are binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates it is "highly probable" that the DIME's findings are incorrect. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). To overcome a DIME's opinion, "there must be evidence that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.*, W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. Under the statute, MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monforte Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A DIME physician's findings concerning the diagnosis of a medical condition, the cause of that condition, and the need for specific treatments or diagnostic procedures to evaluate the condition are inherent elements of determining MMI. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003); *Quall-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998).

A finding that the claimant needs additional medical treatment (including surgery) to improve his condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1080 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures which offer a reasonable prospect for defining the claimant's condition or suggesting further treatment are warranted would be consistent with a finding that a Claimant was not at MMI. *Hatch v. John H. Harland Co.,* W.C. No. 4-368-712 (I.C.A.O. August 11, 2000). However, the requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of MMI per Section 8-40-201(11.5), C.R.S. nor does the need for recommended diagnostic testing solely to assist in the maintenance of a claimant's condition. *Brownson-Rausin v. Industrial Claim Appeals Office*, 131 P.3d 1172 (Colo. App. 2005).

As found, the DIME physician's true opinion is that Claimant reached MMI as of July 14, 2015. Accordingly, Claimant has the burden of proof to overcome Dr. Kawasaki's opinion on MMI by clear and convincing evidence.

Claimant declined to testify at hearing and did not present any admissible evidence establishing that it is unmistakable and free from serious or substantial doubt that it is highly probable Dr. Kawasaki's opinions on MMI is incorrect. Dr. Kawasaki's opinion that Claimant reached MMI is supported by the opinions of Dr. Hughes and Dr. Bernton, who both determined Claimant reached MMI as of July 14, 2015. Dr. Kawasaki testified at his deposition that Claimant's psychological issues and TOS condition were not work-related, which is supported by Dr. Gutterman's and Dr. Bernton's opinions, respectively. To the extent there are inconsistent physician opinions, such opinions merely represent a difference of opinion which, in this case, do not rise to the level of clear and convincing evidence. As found, Claimant has failed to overcome Dr. Kawaski's true DIME opinion on MMI and permanent impairment by clear and convincing evidence.

Scheduled Impairment Rating

While a DIME physician's opinion on non-scheduled impairment must be overcome by clear and convincing evidence, no statutory or presumptive weight is given to a DIME physician's opinion on a scheduled impairment rating. A party disputing the impairment rating of a scheduled injury bears the burden of proof by a preponderance of the evidence. *Maestas v. American Furniture Warehouse*, W.C. No. 4-662-369 (June 5, 2007); *Ortiz v. Ingersoll-Rand Co*., W.C. No. 4-981-218-04 (January 25, 2018). A party seeking to modify an issue already determined by a general or final admission shall bear the burden of proof for any such modification. 8-43-201(1), C.R.S.; *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014).

A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984).

Dr. Kawasaki opined that Claimant sustained a 5% scheduled upper extremity impairment. Respondents filed a September 11, 2015 FAL admitting for a 13% scheduled impairment in accordance with Dr. Hughes' July 14, 2015 medical report. Thus, Respondents bear the burden of proof, by a preponderance of the evidence, to establish Dr. Hughes' impairment rating should be set aside.

Respondents overcame Dr. Hughes' 13% impairment rating by a preponderance of the evidence and proved it is more likely than not Dr. Kawasaki's impairment rating is correct and appropriate. Dr. Kawasaki credibly opined that Claimant's TOS is not work-related and should not be rated. His opinion is supported by Dr. Bernton. The medical records evidence multiple inconsistencies in Claimant's strength testing and range of motion measurements, as well as repeated references to give-way strength. Dr. Kawasaki credibly testified that such inconsistencies led him to believe Claimant was not putting forth full effort. Dr. Hsu repeatedly found full range of motion and 5/5 strength in his examinations and the range of motion measurements of Drs. Hsu, Kawasaki, and Bernton's measurements were all higher than Dr. Hughes' measurements. Dr. Bernton agreed with Dr. Kawasaki's 5% upper extremity rating, and credibly testified the rating was provided in accordance with the AMA Guides and was reasonable and appropriate. Based on the totality of the evidence, Respondents have established that it is more probable than not that Dr. Hughes' 13% impairment rating should be set aside and the impairment rating previously admitted to in the September 11, 2015 FAL should be modified to Dr. Kawasaki's 5% scheduled impairment rating.

ORDER

It is therefore ordered that:

1. The true opinion of the DIME physician, Dr. Kawasaki, is that Claimant reached MMI as of July 14, 2015 and is entitled to a total impairment rating of 5% for the upper extremity.

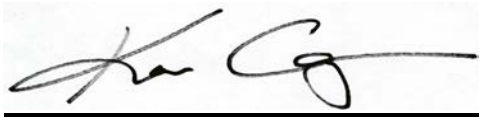
2. Claimant failed to overcome the DIME physician's true opinion on MMI by clear and convincing evidence.

3. Respondents established by a preponderance of the evidence that Dr. Hughes' 13% scheduled impairment rating should be set aside and the FAL should be modified to reflect a 5% scheduled impairment rating as provided by Dr. Kawasaki.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 14, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

STIPULATION

At the outset of hearing, the parties stipulated that if Claimant established compensability, his average weekly wage (AWW), including wages from his concurrent employment is $1,103.48. The ALJ approves the stipulation.

REMAINING ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that he sustained a compensable injury to his right finger on September 5, 2017.

II. If Claimant established that he suffered a compensable injury, whether he also established that he is entitled to a general award of all reasonable, necessary and related medical benefits.

III. If Claimant proved that he suffered a compensable injury, whether he also established, by a preponderance of the evidence, that he is entitled to temporary total disability benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing the ALJ enters the following findings of fact:

1. The facts regarding the mechanism of injury in this case are not in dispute. Claimant is employed by Respondent-Employer as a corrections officer. Claimant's job duties include, but are not limited to, making rounds, performing inmate counts and supervising/observing offenders.

2. On September 5, 2017, Claimant was sitting at an observation desk actively monitoring inmates when he developed an itch around his right ankle/calf area. While keeping an eye on the inmates as their turned in their laundry, Claimant reached down with his right hand, pulled up his right pant leg, reached into his sock, and scratched the itch. As Claimant was pulling his hand from his sock, his finger caught. Claimant felt a "pop" and experienced immediate pain. Upon freeing his hand/finger, Claimant noticed that the distal joint of the middle finger was bent forward and he could not actively move it.

3. Claimant suffers from venous stasis or slow blood flow in the legs. Claimant testified that his work occasionally requires him to sit for long stretches of time while he monitors offenders. According to Claimant, the slow blood flow in his legs combined with sitting results in the pooling of fluid and swelling in his lower legs creating a risk for blood clots. Claimant has a prior history of blood clot development in his right leg. His medical

records reveal that he had a deep vein thrombosis (DVT), i.e. a blood clot in the right leg, confirmed by ultrasound, after presenting to the emergency room on November 24, 2014 for pain and swelling in the right leg. Claimant was treated with anticoagulants and advised to wear a compression sock on the right for the "long haul." Claimant testified that since his DVT, he wears compression stockings daily, both at work and home to help prevent the reoccurrence of blood clots.

4. Claimant was wearing his compression stockings at the time of his finger injury. Claimant testified that no one at work knew about his compression socks because he had not told anyone he was using them, they were not part of his official uniform and they were concealed under his pants.

5. Claimant reported the injury to his employer. He was referred to Emergicare for treatment where he was evaluated by Dr. Michael Dallenbach.

6. During the initial evaluation, the following history of injury was recorded: "Pt states that he is wearing special sock when he had a itch, moved sock down, right middle finger got caught in sock cause (sic) it to stay bent." Dr. Dallenbach diagnosed Claimant with a "mallet finger" and imposed physical restrictions of "[n]o computer work, keep in splint at all times, no physical contact with inmates." He also referred Claimant to Dr. Phillip Marin for a hand surgery consultation. Of note, Dr. Marin's partner is Dr. Charles Kessler. Claimant was scheduled to return to Emergicare on September 19, 2017.

7. Respondent-Employer was unable to accommodate Claimant's temporary physical restrictions. Consequently, he did not work as a corrections officer following the September 5, 2017, injury until he was released from care on November 21, 2017. Claimant has concurrent employment with Loaf-n-Jug as a convenience store clerk. Because of his injury, and a subsequent surgery, Claimant was also did not work his concurrent store clerk position from September 5, 2017 until his release from care on November 21, 2017.

8. Respondent-Employer filed a Notice of Contest denying the claim on September 13, 2017.

9. Prior to his scheduled September 19, 2017, follow-up appointment with Emergicare, Claimant was notified that his claim had been denied and that Respondent-Employer would no longer authorize any care through workers' compensation. Nonetheless, Claimant followed through with the referral to Dr. Phillip Marin. Although Claimant was referred to Dr. Marin, physician availability mandated that he see Dr. Kessler who, as noted above, is Dr. Marin's partner.

10. Dr. Kessler evaluated Claimant on September 11, 2017. He recommended surgery to repair Claimant's mallet deformity. The recommended surgery was performed on September 22, 2017. Claimant subsequently participated in post-surgical occupational therapy at Hands Plus Rehabilitation Center from September 26, 2017 to November 8, 2017.

11. Based upon the evidence presented, the ALJ finds that Claimant's injury was precipitated by the act of having to reach down into his sock to relief the discomfort caused by an itch rather than his preexisting venous stasis, his prior blood clot or his sock per se.

12. This ALJ finds that Claimant suffered a compensable right finger injury on September 5, 2017.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), §§ 8-40-101, *et seq*., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1), C.R.S*. The Claimant shoulders the burden of proving by a preponderance of the evidence that he is a covered employee who suffered an "injury" arising out of and in the course of employment. *Section 8-43-301(1), C.R.S.; Faulker v. Industrial Claim Appeals Office, 12 P.3d 844 (Colo. App. 2000); City of Boulder v. Streeb, 706 P.2d 786 (Colo. 1985); Pacesetter Corp. v. Collett, 33 P.3d 1230 (Colo. App. 2001).* A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark, 197 Colo. 306, 592 P.2d 792 (1979)*. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. *Section 8-43-201, C.R.S*. A workers' compensation claim is decided on its merits. *Section 8-43-201, supra.*

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. As found, the facts concerning the mechanism of injury in this case are not in dispute. Moreover, the medical records admitted into evidence support Claimant's testimony regarding nature, extent and cause of his finger injury. Consequently, the ALJ finds Claimant's testimony credible.

C. In accordance with section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive

arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Compensability

D. Under the Workers' Compensation Act, an injured employee is entitled to compensation where the injury or death is proximately caused by an injury or occupational disease arising out of and in the course of the employee's employment. *Section 8-41-301(1), C.R.S.; Horodyskyj v. Karanian* 32 P.3d 470 (Colo. 2001). The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). Thus, an injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Based upon the evidence presented, the ALJ finds ample evidence to conclude that Claimant's finger injury occurred in the course of his employment. Indeed, Respondent does not challenge that Claimant's injury occurred in the scope of employment. Rather, Respondent argues that Claimant's injury did not "arise out" of his employment.

E. Relying on the principals announced by the Colorado Supreme Court in the *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. 2014), Respondent asserts that Claimant's mallet finger injury did not arise out of employment because it was caused by a risk which was entirely personal or private to him. In *City of Brighton*, the Court identified three categories of risk that cause injuries to employees: (1) employment risks directly tied to the work itself; (2) personal risks, which are inherently personal; and (3) neutral risks, which are neither employment related nor personal. 318 P.3d 496 (Colo. 2014).

F. In this case, Respondent contends that Claimant's need to wear a compression sock constitutes a personal risk, because it is an "accessory" unique to him rather than a risk tied directly to the work environment. As noted, category 2 above addresses risks that are entirely personal or private to the employee. Such risks would include an employee's pre-existing or idiopathic condition that is completely unrelated to his/her employment. Injuries precipitated by pre-existing conditions brought to the workplace are generally not compensable unless an exception applies. *City of Brighton, supra* at 503. One such exception is when a pre-existing or idiopathic condition precipitates an accident and combines with a hazardous condition of employment to cause an injury. Respondent emphasizes that since Claimant's compression sock caused his injury as a prescribed "medical instrument", namely an "accessory" to treat his pre-existing blood clots, the ALJ should view the sock as the expression and presence of a pre-existing condition brought by Claimant to the workplace. Accordingly, Respondent argues that the "special hazard rule" announced in *Gates Rubber Co. v.*

Industrial Comm'n., 705 P.2d 6, 7 (Colo. App. 1985), applies in this case. Consequently, Respondent maintains that Claimant must establish that his sock not only precipitated the accident but also combined with a hazardous condition of employment to cause an injury before the injury can be found to be compensable. *See also, Ramsdell v. Horn, 781 P.2d 150 (Colo. App. 1989).*

G. The rationale for the "special hazard rule" is that unless a special hazard of employment increases the risk or extent of injury, an injury due to the claimant's pre-existing condition does not bear sufficient causal relationship to the employment to "arise out of the employment. *Gates Rubber Co. V. Industrial Commission, supra; Gaskins v. Golden Automotive Group, L.L.C.,* W.C. No. 4-374-591 (August 6, 1999). In such cases, the existence of a special hazard, which elevates the probability of injury or the extent of the injury incurred, serves to establish the required causal relationship between the employment and the injury. *See Ramsdell v. Horn, supra.*

H. In order to be considered a special hazard, the employment condition cannot be a ubiquitous one; it must be a special hazard not generally encountered outside the work environment. *Id.* Chairs and stools have previously been determined to be ubiquitous conditions that a claimant could encounter equally off the job as well as on. *Crass v. Cobe Laboratories*, W.C. No. 3-960-662 (October 10, 1991); *Horne v. St. Mary-Corwin Hospital*, W.C. No. 4-205-014 (April 14, 1995). Relying on the above-cited cases, Respondent maintains that there is nothing special or hazardous about the chair that Claimant was sitting in at the time of his injury. To the contrary, Respondent contends that Claimant's chair is a ubiquitous feature commonly found both in and outside the work environment. Moreover, Respondent points out that the chair did not contribute to Claimant's injury, and there is no evidence any work duty combined with the compression sock to cause injury. Consequently, Respondent reasons that Claimant has failed to meet the requirements of special hazard rule to prove that his injury is compensable.

I. On the other hand, Claimant urges the ALJ to find that the act of pulling his hand from his sock and injuring his finger, while monitoring inmates as they turned in their laundry, was tied directly to his work and as such, his injury is compensable.

J. The term "arises out of" refers to the origin or cause of an injury. *Deterts v. Times Publ'g Co. supra.* There must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra*. An injury "arises out of" employment when it has its origin in an employee's work-related functions and is sufficiently related to those functions to be considered part of the employee's employment contract. *Popovich v. Irlando supra.* It is not essential, however, that an employee be engaged in an obligatory job function or in an activity resulting in a specific benefit to the employer at the time of the injury. *City of Boulder v. Streeb, supra*.

K. The determination of whether there is a sufficient "nexus" or causal

relationship between Claimant's employment and the injury is one of fact, which the ALJ must determine, based on the totality of the circumstances. *In Re Question Submitted by the United States Court of Appeals,* 759 P.2d 17 (Colo. 1988); *Moorhead Machinery & Boiler Co. v. Del Valle,* 934 P.2d 861 (Colo. App. 1996). The fact that Claimant may have experienced an onset of pain while performing job duties does not mean that he sustained a work-related injury or occupational disease. An incident that merely elicits pain symptoms without a causal connection to the industrial activities does not compel a finding that the claim is compensable. *F.R. Orr Construction v. Rinta*, 717 P.2d 965 (Colo. App. 1985); *Parra v. Ideal Concrete,* W.C. No. 3-963-659 and 4-179-455 (April 8, 1988)*; Barba v. RE1J School District,* W.C. No. 3-038-941 (June 28, 1991).

L. The totality of the evidence presented in this case persuades the ALJ that Claimant has established the requisite causal connection between his work duties and his right finger injury. In concluding as much, the ALJ finds Respondent's compensability defense rests principally on the suggestion that Claimant's pre-existing blood-clotting disorder precipitated his injury because it caused his need to wear compression socks. As found above, the ALJ is not persuaded. Here, the evidence presented convinces the ALJ that Claimant's injury was caused, i.e. precipitated by an itch that he sought to relieve by reaching into his pant leg and down his sock while he was actively engaged in his work duties rather than his pre-existing blood clotting disorder or his sock per se. Indeed, the evidence presented fails to establish that the compression stocking caused the finger injury to be worse than it would have been if Claimant had been wearing normal stockings, or that the injury would not have happened "but for" the compression stockings. Consequently, the ALJ is not persuaded that Claimant's injury arose out of a risk inherently personal to himself.

M. In determining that Claimant has proven that he sustained a compensable injury to his right finger, the ALJ is mindful that Colorado recognizes the "personal comfort doctrine" which holds that actions such as eating, sleeping, resting, washing, toileting, seeking fresh air, getting a drink of water and keeping warm have been held to be incidental to employment. *In re Question Submitted by U.S. Court of Appeals*, 759 P.2d 17, 22-23 (Colo. 1988). Although the doctrine primarily addresses questions concerning whether a particular injury occurred in the scope of employment, the underlying principal of the doctrine holds that actions taken to satisfy the employees "personal comfort" are necessary to maintain the employee health, and are indirectly conducive to the employers' purposes. *See Ocean Accident & Guaranty Corp. v. Pallaro*, 66 Colo. 190, 180 P. 95 (1919).

N. As noted, there must be a causal connection between the injury and the work conditions for the injury to arise out of the employment. *Younger v. City and County of Denver, supra.* A causal connection exists if it is demonstrated that the injury arises out of a risk which is reasonably incidental to the conditions and circumstances of the particular employment. *Marie Eslinger v. Kit Carson County Memorial Hospital*, W.C. No. 4-638-306 (ICAO, January 10, 2006)(citing *Phillips Contracting, Inc. v. Hirst*, 905 P.2d 9 (Colo. App. 1995). This includes discretionary activities on the part of the employee which are devoid of any duty component, and are unrelated to any specific

benefit to the employer. *Id., citing Boulder v. Streeb, supra*; *L.E.L. Construction v. Goode,* 849 P.2d 876 (Colo. App. 1992), rev'd on other grounds 867 P.2d 875 (Colo. 1994). Here, the ALJ finds/concludes that Claimant took action to relieve himself of the discomfort associated with an itch on his lower leg. Moreover, the evidence presented fails to support a conclusion that Claimant's decision to scratch his leg constituted a substantial departure (deviation) from his work duties that would warrant a finding that he left the scope of his employment. Thus, while Claimant's decision to scratch his leg did not involve a duty associated with his employment, the ALJ finds that Claimant's actions fall within the personal comfort doctrine. As noted, actions taken to minister to a worker's personal comfort have been held to be incidental to employment. Based upon the evidence presented in this case, the ALJ concludes that Claimant's need to scratch his leg without carefully monitoring the placement/location of his hand/fingers was not only necessary to relief his discomfort but also to maintain his attention/concentration on his job duties, specifically his need to remain vigilant regarding inmate movement and interaction. The ALJ concludes Claimant's injury arose out of an action that was reasonably incidental to the conditions and circumstances of his specific work duties at the time. Consequently, the injury is compensable.

Medical Benefits

O. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. *Section 8-42-101, C.R.S.*; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

P. Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Under §8-43-404(5)(a)(I)(A), C.R.S. 2014 the employer has the right in the first instance to designate the authorized provider to treat the claimant's compensable condition. The rationale for this principle is that the respondents may ultimately be liable for the claimant's medical bills and, therefore, have an interest in knowing what treatment is being provided. *Andrade v. Industrial Claim Appeals Office*, 121 P.3d 328 (Colo. App. 2005). Consequently, if the claimant obtains unauthorized medical treatment, the respondents are not required to pay for it. Section 8-43-404(7), C.R.S. 2005; *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999); Pickett v. Colorado State Hospital, 32 Colo. App. 282, 513 P.2d 228 (1973).

Q. The employer's duty to designate is triggered once the employer or insurer has some knowledge of facts that would lead a reasonably conscientious manager to believe the case may involve a claim for compensation. *Bunch v. Industrial Claim Appeals Office,* 148 P.3d 381 (Colo. App. 2006); *Jones v. Adolph Coors Co.,* 689 P.2d 681 (Colo. App. 1984); *Gutierrez v. Premium Pet Foods, LLC*, W.C. No. 4-834-947 (Industrial Claim Appeals Office, September 6, 2011). In this case, Claimant reported his injury to Employer who subsequently referred him to Emergicare

for treatment. Accordingly, the ALJ concludes that Emergicare is Claimant's designated provider. Claimant was treated at Emergicare one time on September 5, 2017, during which time he was referred to Dr. Marin for treatment of the work-related injury. As stated, Claimant was actually treated by Dr. Kessler who is in the same office as Dr. Marin and who is Dr. Marin's partner. Dr. Kessler performed surgery, oversaw follow up care, and referred Claimant to the Hands Plus Rehabilitation Center for physical therapy. Consistent therewith, Respondents are liable for the costs of treatment provided by Emergicare, Dr. Kessler, and the Hands Plus Rehabilitation Center as these providers are within the chain of authorized referrals. In this case, the evidence demonstrates that Claimant's medical care as provided at Emergicare and their referrals, including the evaluation and subsequent surgery performed by Dr. Kessler was reasonable, necessary and related to Claimant's traumatic mallet finger injury. The aforementioned care was necessary to assess and treat, i.e. relieve Claimant from the acute effects of his injury. The specialist referrals were reasonable and necessary to determine the extent of injury in light of Claimant's inability to extend the distal joint of his right long finger. Moreover, the evidence presented persuades the ALJ that the recommendation to proceed with surgery was reasonable and necessary given Claimant's continued pain and functional disability. Consequently, Respondents are liable for the aforementioned medical treatment.

Temporary Total Disability

R. To receive temporary disability benefits, a Claimant must prove the injury caused a disability, that he/she leaves work as a consequence of the injury, and the disability is total and lasts more than three regular working days. *C.R.S. § 8-42-103(1); PDM Molding, Inc. v. Stanberg,* 898 P.2d 542 (Colo. 1995). As stated in *PDM Molding*, the term "disability" refers to the claimant's physical inability to perform regular employment. *See also McKinley v. Bronco Billy's,* 903 P.2d 1239 (Colo. App. 1995). Once the claimant has established a "disability" and a resulting wage loss, the entitlement to temporary disability benefits continues until terminated in accordance with C.R.S. § 8-42-105(3)(a)-(d).

S. C.R.S. § 8-42-105(3) provides in pertinent part: Temporary total disability benefits shall continue until the first occurrence of any one of the following:

> (a) The employee reaches maximum medical improvement;
>
> (b) The employee returns to regular or modified employment;
>
> (c) The attending physician gives the employee a written release to return to regular employment; or
>
> (d)(I) The attending physician gives the employee a written release to return to modified employment, such employment is offered to

the employee in writing, and the employee fails to begin such employment.

T. From the evidence presented, the ALJ concludes that Claimant was provided with physical restrictions and released to return to work in a modified capacity following his September 5, 2017 Emergicare visit. The ALJ is also persuaded that Respondent was unable to accommodate Claimant's restrictions. Consequently, Claimant was unable to work as a corrections officer until he was released from care on November 21, 2017. Moreover, the evidence presented convinces the ALJ that Claimant was unable to perform the work duties associated with his concurrent employment as a store clerk for Loaf-n-Jug as a direct consequence of his compensable injury from September 5, 2017 until his release from care on November 21, 2017. Thus, the ALJ concludes that Claimant experienced a wage loss lasting more than three regular work shifts due to his inability to perform regular work duty and his employer's inability to accommodate his work restrictions. Here, Claimant has established that he is "disabled" within the meaning of section 8-42-105 and has experienced a wage loss. Thus, he is entitled to TTD benefits. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999); *Hendricks v. Keebler Company*, W.C. No. 4-373-392 (Industrial Claim Appeals Office, June 11, 1999). Because the period of disability lasted longer than two weeks from the day Claimant left work as a consequence of his injury, Claimant is entitled to recover disability benefits from the day he left work in this case. Section 8-42-103(1)(b), C.R.S. Based upon the evidence presented, the ALJ concludes that Claimant is entitled to TTD benefits from September 6, 2017 through November 20, 2017.

ORDER

It is therefore ordered that:

1. Claimant has established by preponderance of the evidence that she suffered a compensable injury to the distal joint of his right long finger on September 5, 2017.

2. Respondent shall pay for all medical expenses, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the effects of his compensable injury, including, but not limited to the treatment afforded Claimant at Emergicare, the mallet finger repair procedure performed by Dr. Kessler and the post-surgical rehabilitation at Hands Plus Rehabilitation Center.

3. Respondents shall pay temporary disability benefits in accordance with section 8-42-103(1)(b), C.R.S. at a rate of sixty-six and two-thirds percent of Claimant's stipulated AWW, but not to exceed a maximum of ninety-one percent of the state average weekly wage per week. As Claimant's disability lasted longer than two weeks from the day that he left work as a result of his injury, TTD benefits shall be paid from September 6, 2017 through November 20, 2017, in accordance with Section 8-42-103(1)(b), C.R.S.

4. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, Co 80906

ISSUES

- Did Claimant prove that her condition has worsened and a left ulnar nerve transposition is reasonably necessary to cure and relieve the effects of her industrial injury?

- Did Claimant prove entitlement to TTD benefits commencing August 17, 2017?

- Did Respondents prove that Claimant's admitted left ulnar nerve pathology was not caused by the November 7, 2011 accident?

FINDINGS OF FACT

1. Claimant suffered admitted injuries on November 7, 2011 due to a trip and fall accident. Claimant's foot got caught while she was stepping up onto a curb, causing her to fall forward onto her hands and knees.

2. Employer did not refer Claimant to an authorized provider, so she treated with her personal providers through the military healthcare system. She initially went to the Evans Army Hospital emergency room on November 7, 2011. The records are largely illegible, but the problematic areas appear confined to the bilateral wrists and left knee. There were no documented elbow complaints.

3. Claimant underwent upper extremity electrodiagnostic testing on November 30, 2011 with Dr. William Seybold. The impetus for the testing was "recurrent, primarily nocturnal bilateral hand pain and numbness . . . over the past few months." There was no mention of the November 7 fall at work. Dr. Seybold found bilateral carpal tunnel syndrome. He did not test the left ulnar nerve and there was no indication of any ulnar nerve symptoms or problems.

4. Claimant saw Dr. Daniel White, an orthopedic surgeon, on January 30, 2012. Her chief complaint was bilateral hand pain and numbness of "insidious onset" starting "6-7 months ago." She reported "pins and needles" in all fingers but "most specifically in the right ring finger." Elbow flexion ulnar compression test was "equivocal," and Tinel's was negative at the cubital tunnels. Dr. White diagnosed "bilateral wrist pain" and referred Claimant for occupational therapy. He did not mention any left ulnar nerve pathology.

5. Claimant's initial occupational therapy evaluation took place on April 16, 2012. The therapist examined both arms, but provocative tests for ulnar nerve issues were "negative."

6. Claimant underwent a second EMG/NCV test on December 11, 2012 with Dr. Mark Blackley. This time the testing included the left ulnar nerve at the elbow. The

testing showed mild to moderate bilateral carpal tunnel syndrome but "no evidence of an ulnar neuropathy."

7. Claimant had a surgical evaluation with Dr. Chance Henderson on January 22, 2013. There were significant clinical findings consistent with bilateral carpal tunnel syndrome, including thenar atrophy and positive Tinel's and Phalen's tests bilaterally at the wrists. Cubital tunnel testing was "negative x3 bilateral elbow." Dr. Chance diagnosed bilateral carpal tunnel syndrome, administered bilateral wrist injections and scheduled Claimant for surgery.

8. Dr. Henderson performed bilateral carpal tunnel surgery on February 8, 2013. Claimant initially did well, but her symptoms gradually returned. She followed up with Dr. Henderson on April 9, 2013 and reported "numbness in the bilateral ring and small fingers that seems to be bothering her more than anything." On examination, Tinel's and elbow ulnar nerve compression tests were negative, and there were no subjective changes in sensation in the ulnar nerve distribution. Dr. Henderson remarked Claimant was "doing well since surgery but today [presents] with new complaints of hand pain mostly in the distribution of the ulnar nerve . . . ."

9. Although Employer had filed a First Report of Injury shortly after the accident, Insurer did not contact Claimant for more than a year. A second "First Report of Injury" was filed on January 14, 2013, which prompted Insurer's claims adjuster, Beatriz Diaz, to contact Claimant in late January or early February 2013. As a result of those communications, Ms. Diaz filed a General Admission of Liability and referred Claimant to Dr. Gregg Martyak for ongoing care.

10. Claimant's initial visit with Dr. Martyak took place on July 11, 2013. He noted positive Tinel's over the bilateral cubital tunnels and made the first documented diagnosis of cubital tunnel syndrome.

11. On November 19, 2013, Claimant had a third EMG/NCV test, performed by Dr. Katherine Leppard. By that time, her clinical presentation was more clearly consistent with bilateral cubital tunnel syndrome. She had tenderness over both ulnar nerves at the elbow with positive Tinel's bilaterally. Pinprick sensation was decreased in the median and ulnar distributions. The electrodiagnostic testing showed continued bilateral carpal tunnel syndrome and, for the first time, evidence of bilateral ulnar neuropathy at the elbow. Dr. Leppard graded the left ulnar neuropathy as "moderate" and the right as "mild." She also commented that "both were reportedly normal on the prior EMG of 12/11/12."

12. On January 27, 2014, Dr. Martyak performed a left carpal tunnel revision and a left ulnar neuroplasty at the elbow. Intraoperatively, he found a "large amount of scar tissue on the median nerve at the wrist." He also noted a "large amount of tissue placing pressure on the [ulnar] nerve in the cubital tunnel," but did not specify whether it was scar tissue.

13. At her April 22, 2014 follow-up appointment, Claimant told Dr. Martyak her left elbow and wrist were "doing well," with no residual numbness in the ulnar nerve

distribution. But by August 7, 2014, numbness and tingling were "returning" in the ulnar distribution of the left hand.

14. Dr. Martyak released Claimant at MMI on October 8, 2014. He opined, "I am not sure any additional surgery would be of benefit to her. The only procedure left would be to revise her ulnar nerve neuroplasties to transpositions."

15. Claimant saw Dr. Shimon Blau on March 23, 2015 for an impairment rating. Dr. Blau assigned a 15% left upper extremity rating, including 3% for the residual left ulnar nerve impairment. Dr. Blau's report contains no causation analysis regarding the left cubital tunnel syndrome.

16. Claimant attended a DIME with Dr. Frank Polanco on August 24, 2014. Dr. Polanco calculated a 26% scheduled rating for the left upper extremity, including 3% for residual left ulnar nerve impairment. Dr. Polanco's report contains no discussion or analysis of causation regarding the left cubital tunnel syndrome.

17. Respondents filed a Final Admission of Liability based on Dr. Polanco's DIME report on October 14, 2015. Claimant timely objected to the FAL and requested a hearing, but subsequently withdrew her objection in a stipulation dated March 7, 2016, and allowed the claim to close.

18. Claimant's residual left cubital tunnel symptoms progressively intensified after MMI. On February 14, 2017, she returned to Dr. Martyak and reported the numbness in the fourth and fifth fingers had "returned to the level of pre surgery on the left." Dr. Martyak recalled that "at our last visit in 2014 we declared her at MMI with the caveat that if numbness returned we may need to consider a revision ulnar nerve neuroplasty with transposition as a final definitive procedure." He sent Claimant back to Dr. Leppard for repeat EMG/NCV testing.

19. Dr. Leppard performed the testing on July 20, 2017, which showed bilateral ulnar mononeuropathy at the elbow. She opined "the left ulnar mononeuropathy at the elbow is severe . . . . [and] has worsened since the prior EMG of 11/19/13."

20. After reviewing the electrodiagnostic test results, Dr. Martyak recommended a revision ulnar neuroplasty with an intramuscular transposition.

21. Respondents asked Dr. Eric Ridings to perform a Rule 16 peer review of the request for surgery. Dr. Ridings opined "there is no occupational relationship between her current left cubital tunnel syndrome and her injury falling down in 2011. Based on the record, an ulnar nerve transposition is reasonable but is not related to the 2011 claim or to her work in any other way."

22. Dr. Ridings performed a detailed record review for Respondents in November 2017 regarding the left cubital tunnel. He opined that the original mechanism of injury would not have caused cubital tunnel syndrome. He thought Dr. Leppard had over-interpreted the November 2013 electrodiagnostic testing, and stated, "at most I

would call this borderline cubital tunnel syndrome." He agreed that the July 2017 testing showed definitive ulnar neuropathy, but opined:

> [T]he patient's current left cubital tunnel syndrome can in no way be related to falling onto her outstretched hands in 2011. As noted, the EMG of December 2012 showed no abnormalities across the left elbow, and subsequent development of borderline findings in 2013 cannot be attributed to the 2011 work injury. Even less can one attribute findings in 2017 to the 2011 claim. Hence, any treatment for that condition is not work-related under this claim.

23. Claimant saw Dr. Timothy Hall for an IME at her counsel's request on November 15, 2017. Dr. Hall disagreed with Dr. Ridings and opined,

> [T]his is the direct consequence of her original injury to the left elbow. . . . This is a very specific event at the left elbow. The only thing that has happened at that left elbow is the fall, which resulted in this entrapment. I do not see any reasonable argument that has been put forward that would explain these symptoms other than the worsening over time of this diagnosis related to the fall. It is probably the consequence of local scarring following surgery, which is not an uncommon even under these circumstances.

24. Dr. Hall testified at hearing to elaborate on the opinions expressed in his report. When asked how Claimant's condition could naturally worsen after the 2014 surgery with no intervening cause, Dr. Hall explained:

> Continued scarring. You know, that's what the neurolysis went in to get rid of. And unfortunately, often the consequence of removing scar tissue is the production of further scar tissue. We don't have a way of retarding that consequence. Some people lay down different amounts of scar tissue in different places. And it appears she has laid down significant scar tissue postoperatively.

25. Regarding the significant delay between the accident and the first documented complaints of cubital tunnel syndrome, Dr. Hall opined he "wouldn't expect" acute symptoms because "there was not that much trauma." Rather, he opined that the entrapment "evolved slowly over time."

26. Dr. Ridings testified for Respondents in a posthearing deposition dated February 12, 2018. He expressed his "strong opinion that [Claimant's] left ulnar nerve issues are not, in any way, related to the 2011 claim." Dr. Ridings cited several factors which led him to that conclusion: there was no documented injury to Claimant's left elbow in 2011; the records document no complaints or findings consistent with ulnar compression until April 2013; EMG/NCV studies in November 2011 and December 2012 showed no evidence of cubital tunnel syndrome; and the EMG/NCV testing in November 2013 was at most "borderline" positive for cubital tunnel syndrome.

27. Dr. Hall's opinion that Claimant's current need for a left ulnar nerve transposition is the direct and natural consequence of the January 27, 2014 surgery is credible and persuasive. Claimant proved by a preponderance of the evidence that her condition has worsened since MMI and the proposed left ulnar nerve transposition is reasonably necessary.

28. Dr. Ridings' opinion that Claimant's initial diagnosis of cubital tunnel syndrome was not related to the November 2011 accident is credible and persuasive. Respondents proved that the initial diagnosis of left cubital tunnel syndrome was not caused by the November 2011 accident. The January 27, 2014 left cubital tunnel surgery was reasonably necessary, but not causally related to the November 2011 accident.

29. After reviewing the evidence presented, the ALJ is persuaded that Claimant's left cubital tunnel syndrome has worsened since MMI, and the left ulnar nerve transposition proposed by Dr. Martyak is reasonably necessary. The ALJ further credits Dr. Hall's opinion that the proposed transposition is the direct and natural consequence of the January 27, 2014 surgery. But the ALJ is also persuaded by Dr. Ridings' opinion that the initial diagnosis of left cubital tunnel syndrome, which led to the January 2014 surgery, was not caused by the November 2011 accident. Although Respondents admitted liability for the diagnosis, covered the 2014 surgery, and paid medical impairment benefits related to ulnar neuropathy, they are legally entitled to revisit the initial causation determination in the context of Claimant's petition to reopen. Since the January 2014 surgery was performed for a condition that, in retrospect, was not caused by the industrial accident, Respondents are not liable for the current consequences of that surgery. Therefore, Claimant's petition to reopen must be denied.

CONCLUSIONS OF LAW

A. Claimant proved her condition worsened after MMI. The proposed ulnar nerve transposition is reasonably necessary and causally related to the January 27, 2014 surgery

Section 8-43-303(1) allows a party to request that a claim be reopened on the grounds of "an error, a mistake, or a change in condition." A change in condition refers either to a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985).

Claimant's left ulnar neuropathy has clearly worsened since MMI and all experts agree the surgery proposed by Dr. Martyak is reasonably necessary. The also ALJ credits Dr. Hall's opinion that the ulnar nerve transposition surgery is the direct and natural consequence of the January 27, 2014 surgery. Specifically, Dr. Hall explained that the current left ulnar nerve entrapment "is probably the consequence of local scarring following surgery, which is not an uncommon event under these circumstances." This opinion is supported by the "large amount of scar tissue" Dr. Martyak found around the

median nerve during Claimant's left carpal tunnel revision surgery, which indicates she has a predisposition to developing excessive scar tissue after surgery.

B. Respondents must prove that the initial diagnosis of cubital tunnel syndrome, which led to the January 27, 2014 left ulnar neuroplasty, was not related to the November 2011 accident.

The respondents are liable for medical treatment which is reasonably necessary to cure and relieve the effects of an industrial injury. § 8-42-101(1)(a); *Snyder v. Industrial Claim Appeals Office*, 942 P .2d 1337 (Colo. App. 1997). As a general rule, where a claimant's entitlement to medical benefits is disputed, the claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). Even after an admission of liability is filed, the respondents retain the right to dispute the relatedness of any particular treatment, because the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010).

But application of those general principles in this case is complicated by § 8-43-201(1), which provides that "a party seeking to modify an issue determined by a general or final admission . . . shall bear the burden of proof for any such modification." Respondents are not merely disputing whether the proposed surgery is related to the original accident, but are asserting that left cubital tunnel syndrome should not have been considered a compensable component of the injury in the first place. That position directly conflicts with their previous admissions of liability for left cubital tunnel syndrome, pursuant to which they paid medical and indemnity benefits. By defending the petition to reopen on the basis that that the left cubital tunnel syndrome was not causally related to the accident in the first instance, Respondents are seeking to modify an "issue" that was previously determined by an admission of liability. As a result, Respondents must prove that Claimant's initial diagnosis of left cubital tunnel syndrome was not causally related to the November 2011 accident.

C. Is the standard of proof a preponderance or clear and convincing?

Although § 8-43-201(1) assigns the burden of proof it does not specify the applicable standard of proof. Most issues in this system are decided using the preponderance of the evidence standard, which requires a showing that a disputed proposition is more likely true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). But Claimant previously underwent a DIME with Dr. Polanco, who assigned an impairment rating for left ulnar neuropathy. Although determining causation is an "inherent" part of the DIME process, Dr. Polanco's determinations are not entitled to any special weight because Claimant had purely scheduled impairments. The presumptive weight attributed to the DIME's determinations of MMI and whole person impairment is not applicable to scheduled ratings. *Delaney v. Industrial Claim Appeals Office*, 30 P.3d 691 (Colo. App.

2000). Thus, Respondents must carry their burden on initial causation by a preponderance of the evidence.

D. Respondents carried their burden

As found, Respondents proved that Claimant's original diagnosis of left cubital tunnel syndrome was not caused by the industrial accident. The ALJ credits Dr. Ridings' opinions as the most reasonable interpretation of the post-accident medical evidence. The ALJ sees no persuasive explanation for the seventeen-month delay before the first definitive manifestations of ulnar entrapment. Although Claimant's early complaints of numbness and tingling in "all" of her fingers (which includes the fourth and fifth fingers) *could* have been consistent with cubital tunnel syndrome, no examining provider even suggested that diagnosis until Dr. Henderson in April 2013. Dr. Ridings further noted that those early reported symptoms were "diagnostically [ ] meaningless," and Dr. Hall agreed that Claimant's symptoms have been "very diffuse" and "non-specific," and her clinical presentation has been "inconsistent . . . from provider to provider." More importantly, specific provocative tests such as Tinel's and cubital tunnel compression test were repeatedly negative during that seventeen-month interval, and EMG/NCV testing of the left ulnar nerve in December 2012 (13 months post-injury) was objectively normal. Had Claimant been experiencing chronic inflammation and progressive scarring around the left ulnar nerve since the accident as opined by Dr. Hall, the ALJ would have expected ulnar nerve entrapment to have become apparent much sooner than it did.

The ALJ acknowledges that Dr. Blau and Dr. Polanco implicitly found a causal connection between left cubital tunnel syndrome and the accident, as evidenced by their impairment ratings. But their reports contain no specific discussion or analysis of causation and they appear to have simply presumed causation, most likely because Respondents had paid for the surgeries and were not disputing causation. The ALJ has given minimal weight to Dr. Blau's and Dr. Polanco's reports.

E. The proposed ulnar nerve transposition is not a compensable consequence of the original injury as a matter of law.

The finding that the accident did not cause the initial ulnar nerve entrapment does not end the analysis, because the ALJ has also determined that the proposed surgery is a direct and natural consequence of the surgery performed in January 2014. Therefore, the next question is: are Respondents liable for medical treatment to remedy a problem caused by a surgery they authorized under an admission of liability, even though, in retrospect, the original surgery was not causally related to Claimant's industrial accident?

The ICAO addressed this issue in *Gordon v. Ross Stores, Inc*., W.C. No. 4-878-759-05 (February 5, 2015). In *Gordon*, the respondents had admitted liability for carpal tunnel syndrome (CTS) and authorized a carpal tunnel decompression surgery. Because of the surgery, Claimant developed CRPS. A DIME determined that the CRPS was "iatrogenically caused" by the carpal tunnel surgery and provided a whole person CRPS rating. An ALJ subsequently found that the respondents proved the claimant did not develop CTS as a result of her employment and allowed them to withdraw the GAL. But

the ALJ also awarded the DIME's CRPS rating because the CRPS was caused by surgery that was authorized and admitted at the time. Specifically,

> The ALJ rejected the respondents' argument that since the claimant's underlying CTS was not caused by her work activities, then her subsequent surgery for CTS and her resulting CRPS also cannot be work-related. The ALJ based his determination on the quasi-course of employment doctrine. The ALJ explained that the claimant developed CRPS while undergoing authorized medical treatment for an industrial injury, that surgical treatment was provided to relieve the effects of the admitted industrial injury, and that it became an implied part of her employment contract.

The ICAO reversed and held the claimant's CRPS was not a compensable component of her injury as a matter of law. Citing *Travelers Insurance Company v. Savio*, 706 P.2d 1258 (Colo. 1985), the ICAO held the quasi-course doctrine only applies if the subsequent injury "is the direct and natural consequence of an original injury which itself was compensable." Since the claimant's CTS was not a compensable injury in the first instance, a secondary condition that developed due to treatment for CTS was also not compensable.

Based on the analysis in *Gordon*, even though Claimant's current need for surgery is a direct and natural consequence of the January 2014 surgery, Respondents are not liable for futher treatment because the original ulnar neuropathy was not caused by the November 2011 accident.

ORDER

It is therefore ordered that:

1. Claimant's request to reopen her claim for a left ulnar nerve transposition and additional TTD benefits is denied and dismissed.

2. Any matters not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 16, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that his claim should be reopened pursuant to Section 8-43-303, C.R.S. based on a change of condition.

- If claimant's claim is reopened, whether claimant has demonstrated by a preponderance of the evidence that recommended medical treatment, including neuropsychological testing and treatment with Dr. Christopher Young, is reasonable medical treatment necessary to cure and relieve claimant from the effects of the admitted March 21, 2013 work injury.

- If claimant's claim is reopened, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits beginning July 1, 2017 and ongoing until terminated by law.

- At the hearing respondents clarified that they have authorized treatment of claimant's anxiety and depression as it has been determined that those issues are related to the admitted work injury.

FINDINGS OF FACT

1. Employer operates in the oil and gas industry. Claimant sustained an admitted work injury on March 21, 2013. The injury occurred when claimant and his coworkers were unloading a trailer full of pipe and the mechanism that held the pipe in place opened and an aluminum "cheater pipe" hit claimant across the face. Claimant testified that the pipe that struck him was six feet long and three inches in diameter. Claimant also testified that virtually every bone in his face from his chin to his forehead was broken by the pipe striking him.

2. Immediately following the injury claimant received medical treatment at a medical clinic in Collbran, Colorado. However, due to the severe nature of claimant's injuries, he was transported to St. Mary's Hospital in Grand Junction, Colorado. At St. Mary's Hospital claimant was treated by Dr. Holly Buschhorn. The emergency room records indicate that claimant was complaining of significant facial pain, a diffuse headache, issues with hearing, as well as vomiting and nausea. Dr. Buschhorn also noted that claimant had three facial lacerations that required sutures.

3. A computed tomography (CT) scan of claimant's brain showed no acute traumatic intracranial injuries. A CT scan of claimant's facial bones showed multiple fractures including bilateral nasal bone fractures, a septal fracture, fracture of the left orbital, and multiple maxillary bone fractures. On May 31, 2013, Dr. James Merrell surgically repaired claimant's facial fractures.

4. Claimant's authorized treating provider (ATP) for this claim has been Work Partners. Claimant was initially seen at Work Partners by Erica Herrera, PA and Dr. Craig Gustafson. On June 25, 2013, claimant was seen by Ms. Herrera and reported pressure in his nose and an occasional sharp pain over the bridge of his nose. Claimant also reported that he felt that his pain was improving and noted his pain as 2 of 10. On that date, Ms. Herrera determined that claimant could return to work with modified duty. Claimant's work restrictions included sedentary desk work with no strenuous lifting or work, and no safety sensitive work.

5. On August 5, 2013, claimant was again seen by Ms. Herrera. On that date, claimant reported that he experienced an intermittent aching pain that seemed to be worsened by sneezing or blowing his nose. Even with that pain, claimant identified his pain level at a 0 of 10. Ms. Herrera released claimant to full duty, with an instruction to avoid respirator use.

6. Claimant testified that when he returned to full duty with employer he continued to experience headaches and nosebleeds, but was able to perform his normal duties. Claimant also testified that after returning to work in August 2013 he experienced difficulty sleeping, short term memory loss, and concentration issues.

7. On April 25, 2014, claimant returned to Work Partners and reported to Ms. Herrera that he was experiencing headaches and nosebleeds that were worsened with exposure to dust. Claimant also reported that he was having issues with his short-term memory, focus, and concentration. Based upon claimant's report of these symptoms, Ms. Herrera referred claimant for a neurological consultation.

8. April 25, 2014 was the first time claimant reported cognitive issues to a medical provider. Claimant testified that although he had been experiencing these issues since returning to work in August 2013, he did not want to admit that he was suffering emotional or cognitive impairment.

9. On June 9, 2014, Dr. Merrell performed a septoplasty with bilateral inferior turbinate reduction to address claimant's deviated septum. Two days later on June 11, 2014, claimant sought treatment at the emergency department at St. Mary's Hospital and was seen by Dr. Paul Padyk. Claimant reported "a jittery sensation", a "spacey feeling", heart palpitations, and narrowed vision. Dr. Padyk noted that the cause of these symptoms was unclear. Claimant testified that at the time of that emergency room visit he believed he was having a stroke. However, claimant now believes that he was experiencing a panic attack.

10. From that time, claimant continued to treat with Work Partners and reported headaches and ongoing issues with short-term memory loss, concentration, and a lack of focus.

11. On January 7, 2015, claimant was placed at maximum medical improvement (MMI) by Dr. Gustafson. At that time, Dr. Gustafson assessed a permanent impairment rating of 7% whole person. This rating included an impairment of 3% for claimant's loss of olfactory sense and impairment of 4% for claimant's "closed head injury". Dr. Gustafson opined that claimant would likely need maintenance medical treatment including follow up treatment with Work Partners and Dr. Merrell, repeat surgeries, and medication management.

12. On January 16, 2015, respondents filed a Final Admission of Liability (FAL) admitting for the January 7, 2015 date of MMI, the 7% whole person impairment rating, and reasonable, necessary, and related maintenance medical treatment.

13. After being placed at MMI, claimant continued to work for employer until he was laid off due to a work slowdown in April 2015. Claimant testified that during that time he experienced panic attacks more frequently and the attacks were more severe.

14. After he was laid off by employer, claimant began working for Intermountain Wood Products (IWP) as a truck driver in July or August 2015. Claimant testified that although he was able to perform all of his job duties while employed with IWP he experienced "anger fits" and felt very nervous at times. Claimant's employment with IWP ended when he was discharged for refusing to drive to Steamboat Springs during a snow storm.

15. Thereafter, claimant worked for Elite Cleaning (EC) for two or three months. During that employment claimant's job duties included completing construction clean up. Claimant stopped working for EC when he was hired by Gonzo to drive a water truck in the oil and gas industry. Claimant testified that his employment with Gonzo began in April or May 2017.

16. During his testimony claimant described an incident that occurred on June 30, 2017 while he was working for Gonzo. On that date, claimant was operating a water truck that did not have a working air conditioner so he was driving with the windows down. With the windows down, the cab of the truck filled with dust and claimant experienced what he later learned was a panic attack. At the time, claimant believed he was having a stroke or heart attack.

17. Immediately following the June 30, 2017, incident claimant received medical treatment at Grand River Hospital. It was there that claimant learned that he had experienced a panic attack.

18. On July 17, 2017, claimant returned to Work Partners and was seen by Dr. Lori Fay. Claimant reported to Dr. Fay that he was still experiencing nosebleeds and headaches. Claimant also reported his continuing panic attacks that seemed to be related to breathing. Dr. Fay recommended claimant avoid dust exposure and specifically included that recommendation as a work restriction. Dr. Fay also recommended claimant return to Dr. Merrell for an evaluation and referred claimant to Dr. Joel Cohen, a psychologist.

19. On August 8, 2017, claimant returned to Dr. Merrell's office and was seen by Dr. Mark Griffin. Dr. Griffin noted that claimant's septum was straight and there did not appear to be any anatomical issues.

20. Claimant was first seen by Dr. Cohen on August 17, 2017. At that time, claimant reported that he was having panic attacks two to three times per week, at a minimum. Claimant also reported that he felt that he had lost 30% of his memory function since the work injury. Dr. Cohen recommended that claimant see psychiatrist, Dr. David Good, for consultation regarding appropriate medication.

21. Claimant returned to Work Partners on August 29, 2017 and was seen by Ms. Herrera. At that time Ms. Herrera noted that claimant's panic attacks were getting worse and he was continuing to report memory and cognitive deficits. Based upon claimant's symptoms, Ms. Herrera opined that claimant was no longer at MMI. In that same medical record, Ms. Herrera stated that due to the mechanism of claimant's injury "he certainly sustained a traumatic brain injury and concussion". She agreed with Dr. Cohen's recommendation that claimant see Dr. Good for pharmacologic management of his anxiety and depression. Ms. Herrera also made a referral to Dr. Christopher Young for neuropsychological evaluation and testing.

22. On September 27, 2017, claimant was seen by Dr. Good. Dr. Good diagnosed claimant with major depression, panic disorder, attention deficit disorder (ADD), concussion, and panic disorder. Dr. Good recommended supportive therapy and prescribed Prozac.

23. Claimant testified that since he has been taking the medication prescribed by Dr. Good he has experienced a reduction in his cognitive issues. Specifically, claimant feels that his memory has improved, he is more articulate, more confident, and his panic attacks occur with less frequency.

24. On November 6, 2017, claimant's counsel asked Dr. Good to respond to a number of questions related to claimant's medical condition. In his response to counsel dated November 9 2017, Dr. Good noted that claimant was now having panic attacks less often, but opined that overall claimant's psychiatric condition has worsened since he was placed at MMI.

25. On November 27, 2017, claimant was seen by Dr. Stephen Moe for a psychiatric independent medical examination (IME). Dr. Moe reviewed claimant's medical records and obtained a medical history from claimant. In his IME report Dr. Moe diagnosed claimant with anxiety disorder and Moe opined that claimant's psychiatric symptoms are related to the March 21, 2013 work injury. Dr. Moe also opined that as of June 30, 2017 claimant was no longer at MMI. Dr. Moe recommended that claimant undergo psychiatric and psychological treatment to return to MMI.

26. With regard to cognitive difficulties, Dr. Moe opined that claimant's complaints of cognitive deficits are a result of claimant's diagnosed anxiety. Dr. Moe further opined that as the anxiety related symptoms are resolved, claimant's perceived cognitive issues will likely diminish. Dr. Moe further explained in his report that neuropsychological testing and/or a magnetic resonance image (MRI) of claimant's brain would likely be ambiguous or misinterpreted to claimant's detriment.

27. On December 14, 2017, claimant was seen by Dr. Eric Hammerberg for an IME. Dr. Hammerberg reviewed claimant's medical records, obtained a medical history from claimant, and performed a physical examination. In his IME report Dr. Hammerberg agreed with Dr. Moe's assessment that claimant is no longer at MMI and claimant's anxiety and depression symptoms are related to the work injury. Dr. Hammberberg also opined in his report that claimant did not sustain a concussion at the time of the work injury and that claimant's cognitive deficits are secondary to his psychological issues. Based upon the opinions of Drs. Moe and Hammerberg respondents have denied authorization for the recommended neuropsychological testing and treatment with Dr. Young.

28. Dr. Hammerberg's testimony by deposition was consistent with his report. Dr. Hammerberg testified that he does not believe claimant suffered a concussion because claimant did not report a loss of consciousness at the time of the work injury and no cognitive issues were reported for some time. Dr. Hammerberg also testified that any cognitive problems claimant may be having are related to his psychological issues and not a neurological cause.

29. Since the June 30, 2017 panic attack, claimant has not returned to work for Gonzo. Claimant testified that Gonzo will not allow him to return to his job duties until he has a release from a physician. Claimant understands that he is still employed by Gonzo, but is unable to report to work because of his "no dust" work restriction. Claimant testified that even if he were able to drive a truck for Gonzo with the windows rolled up, he would still be exposed to dust throughout his work day in the oil fields. Claimant also testified that he has not sought employment elsewhere because he would like to return to work for Gonzo.

30. The ALJ credits the medical records, claimant's testimony and the opinions of Ms. Herrera, Drs. Fay, Moe, and Hammerberg and finds that claimant has demonstrated that it is more likely than not that due to his anxiety, depression, and cognitive issues, claimant is no longer at MMI and has suffered a worsening of his condition.

31. The ALJ credits the medical records claimant's testimony, and the opinions of Ms. Herrera, Dr. Gustafson, and Dr. Good over the contrary opinions of Drs. Moe and Hammerberg and finds that claimant has demonstrated that it is more likely than not that claimant's current cognitive symptoms are related to the injury he sustained on March 21, 2013. The claimant has also demonstrated that it is more likely than not that the recommended neuropsychological testing and treatment with Dr. Young is reasonable and necessary to cure and relieve claimant form the effects of the work injury.

32. The ALJ credits the medical records and claimant's testimony and finds that claimant has failed to demonstrate that it is more likely than not that he has suffered a loss of wages because of the work injury. Claimant has not worked since his panic attack that occurred on June 30, 2017. Currently claimant's only work restriction is "no dust". Claimant has failed to demonstrate that he is unable to work. On the contrary, claimant testified that he has not sought employment elsewhere because he would like to return to work for Gonzo. The ALJ finds that claimant's wage loss is due to claimant's personal preference to not seek work elsewhere, and not due to a physical disability or medical condition.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

3. At any time within six years after the date of injury, the ALJ may reopen an award on the ground of a change in condition. Section 8-43-303(1), C.R.S. A change in condition refers to "a change in the condition of the original compensable injury or to a change in claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

4. As found, claimant has demonstrated by a preponderance of the evidence that he is no longer at MMI and has suffered a worsening of his condition. Therefore, claimant's claim for workers' compensation benefits shall be reopened pursuant to Section 8-43-303, C.R.S. As found, the medical records, claimant's testimony, and the opinions of Ms. Herrera, Drs. Fay, Moe, and Hammerberg are credible and persuasive on this issue.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

6. As found, claimant has demonstrated by a preponderance of the evidence that the recommended neuropsychological testing and treatment with Dr. Young is reasonable and necessary to cure and relieve claimant form the effects of the work injury. As found, the medical records, claimant's testimony, and the opinions of Ms. Herrera, Dr. Gustafson, and Dr. Good are credible and persuasive on this issue.

7. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

8. As found, claimant has failed to demonstrate by a preponderance of the evidence that he is entitled to TTD benefits. As found, the medical records and claimant's testimony are credible and persuasive on this issue.

ORDER

It is therefore ordered that:

1. Claimant's claim for workers' compensation benefits shall be reopened pursuant to Section 8-43-303, C.R.S.

2. Respondents shall pay for the recommended neuropsychological testing and treatment with Dr. Young, pursuant to the Colorado Medical Fee Schedule.

3. Claimant's claim for temporary total disability (TTD) benefits from July 30, 2017 and ongoing is denied and dismissed.

4. All matters not determined herein are reserved for future determination.

Dated: March 20, 2018

Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Have Respondents, by clear and convincing evidence, overcome the DIME opinion of Dr. Finn regarding the application of the Table 40(5) to Claimant's Impairment Rating, resulting in an additional 5% for arthritis?

ISSUES NOT IN DISPUTE

The parties do not dispute the MMI date of 3/17/17, as found by the DIME physician and ATP, nor do Respondents dispute the 8% Range of Motion Impairment rating as found by the DIME physician.

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ makes the following Findings of Fact:

1. Claimant was driving for employer on July 17, 2015 when he suffered a left patellar tendon rupture when he lost his balance exiting his truck, and fell backwards, landing awkwardly on his left leg.

2. An MRI scan was taken on this date, and the reading radiologist indicated the findings as:

> 1) High-grade distal quadriceps tendon, favored to be chronic given prior radiographs and the imaging characteristics, although it is conceivable that the tear has acutely worsened.
> 2) No detected meniscal tear or ligamentous injury.
> *3) Mild superior patellar chondromalacia.*
> 4) Small joint effusion with some extra-articular extension through the quadriceps defect.
>
> Addendum: Upon further review, although the report for the prior exam in 2014 describes findings of the left knee, those radiographs were actually of the right knee. As such, the high-grade tear of the distal quadriceps on this exam may all be acute. (Ex. D)(emphasis added).

3. On July 22, 2015, Claimant underwent repair of the left quadriceps tendon, which surgery was performed by Dr. Kimberly Furry. In Dr. Furry's post-surgical report, there is no mention of chondromalacia-or lack thereof-in Claimant's intra-articular interface between the kneecap and femur. (Ex. E).

4. Dr. Furry saw Claimant again on December 3, 2015. Under *HISTORY,* in addition to pain in his quadriceps tendon, it is noted that "he will have popping there as well." (Ex. 6).

5. Under *IMAGING,* on this date, she also notes "small bony ossicle at the superior medial aspect of his patella and *soft tissue ossification* a little more proximal to that is seen on the lateral" *Id.* (emphasis added).

6. His next noted visit is May 20, 2016, at which time under *HISTORY,* Claimant reports pain on stairs, worse when ascending, and catching in his knee, resulting in pain of 5/10. (Ex. 6). Under *PLAN,* Dr. Furry notes that upon review of the radiographs, "he does *not* seem to have any *substantial arthritis* in [his left] knee". (emphasis added).

7. Claimant returned to Dr. Furry on August 26, 2016, with bilateral knee discomfort. On this date, the doctor noted under *PLAN* that Claimant should be at MMI from his quadriceps tendon rupture and repair and should be able to resume full activity. Dr. Furry went on to note that, "We talked about the possibility of SYNVISC, although, I don't think that's going to help him and I don't think it's related to his Workman's Compensation injury either." (Ex E1).

8. At this same visit, under *HISTORY*, Dr. Furry noted that Claimant had seen her three months prior "for pain and catching", but that there was "less *catching* and clicking in that left knee but *it still catches with stairs,…" Id.* (emphasis added).

9. Also on this visit, *PHYSICAL EXAMINATION* on August 26, 2016 shows that under palpation, "He has minimal *patellofemoral crepitus on the left* and none on the right." *IMAGING* notes "He has some *mild patellofemoral* ***arthritis*** *on the left." Id.* (emphasis added).

10. Claimant's care had been coordinated by Dr. Kevin Rice. Claimant underwent physical therapy and was subsequently released to return to work full duty on October 28, 2016, and underwent a subsequent FCE, which confirmed this status. (Ex. F).

11. Before this, Dr. Rice noted on 4/18/16 that Claimant's knee would pop while ascending stairs, and upon *PHYSICAL EXAMINATION*, "There is *minimal patellofemoral crepitus*". At a visit on 7/22/16, Dr. Rice noted that Claimant "has *some patellofemoral crepitus*." Id. (emphasis added).

12. Claimant also treated with Rio Grande Hospital in Del Norte for physical therapy. Claimant reported pain while walking up stairs on the following dates: 5/27/16, 6/3/16, 6/10/16, 6/15/16, 6/23/16, 6/29/16, 8/5/16, 8/8/16, 8/15/16, 8/22/16, and 8/29/16. (Ex 6).

13. On March 17, 2017, Dr. Kevin Rice, placed claimant at MMI. On this date, Dr. Rice's diagnosis was: Status post left patellar tendon rupture 7/17/15. Dr. Rice

rated claimant's impairment, using the AMA Guidelines, 3rd Edition, at 4% of the lower extremity. He arrived at this rating by loss of range of motion calculations only. Dr. Rice did not note the existence of trauma related arthritis, nor did he provide a rating for it. (Ex F).

14. Respondent's filed a Final Admission of Liability consistent with Dr. Rice's rating on May 23, 2017. (Ex A).

15. Thereafter, on September 1, 2017, Claimant underwent a Division IME with Dr. Kenneth Finn. Dr. Finn noted in his *RECORDS REVIEW* section that he reviewed the July 17, 2015 MRI scan report, of the left knee, which revealed a "high-degree distal quadriceps tendon tear. A few fibers extend deep into the patella. There was evidence of *mild chondromalacia* of the superior patella."

16. After reviewing the medical records, Dr. Finn noted in his *PHYSICAL EXAM* section, that Clamant was "tender along the patellar tendon and had no medial or lateral joint line tenderness. There was no crepitation with active or passive ROM." (Ex. G, p. 3). Under *DIAGNOSIS,* Dr. Finn noted two items:

A. S/p left quadriceps tendon rupture repair July 22, 2015.

B. *Mild patella-femoral arthritis*. *Id.* (emphasis added).

17. In rating Claimant's permanent medical impairment, Dr. Finn also referenced the AMA Guidelines, 3rd Edition, (*Revised*), and awarded 8% for lost range of motion. He also opined that, "he does have a table 40 diagnosis of patella-femoral arthritis and is rendered a 5% lower extremity impairment." These two ratings combined for a total lower extremity rating of 13%. (Ex. G).

18. Claimant was referred for an independent medical examination ("IME") with Dr. John McBride on November 28, 2017. Dr. McBride reviewed Claimant's medical records, obtained a medical history and performed a physical examination in connection with his IME. Dr. McBride was also provided with the actual MRI scan of July 17, 2015 on CD ROM to review. In the *DISPOSITION* section of his report, he opined that a quadriceps tendon rupture is an eccentric loading injury that pulls the tendon off the superior pole of the patella. This is a non-articular injuring process. Dr. McBride explained that from his review of the Operative Report, he found no evidence of any articular cartilage damage at the time of the injury, and that the quadriceps tendon was ruptured off the superior pole of the patella. Therefore, based on the AMA Guidelines, Third Edition (*Revised*), there is no Table 40 diagnosis for osteoarthritis with regards to this specific injury. Hence, Dr. McBride concludes that Dr. Finn was in error to award the additional rating pursuant to Table 40.

19. Dr. McBride, Board Certified Orthopedic surgeon, and Level II Accredited physician, was accepted as an expert in the areas of orthopedic surgery and sports medicine. Dr. McBride testified consistent with his IME report at hearing. At hearing, Dr. McBride explained in more detail why his opinion concerning the extent of

permanent medical impairment suffered by this claimant constituted more than just a difference of opinion, from that of the DIME doctor's opinions.

20. Dr. McBride testified that his review of the actual CD ROM of the July 17, 2015 MRI scan, was of significant assistance in helping him formulate his opinions with respect to the existence of any ratable arthritis as a component of this injury. The MRI review evidenced no intraarticular injury – no damage to the ACL, PCL menisci, or the articular surface of the tibia or femur. No evidence of edema in the patella or the femur or tibia. No evidence of inflammation or degeneration of the cartilage in the knee joint. No evidence of any arthritis going on inside the knee. Dr. McBride pointed to the MRI report itself, and directed attention to the bottom of page 1, where it references "osseous and chondral surfaces" explaining that where the report indicates "normal marrow signal characteristics", that if Clamant had arthritis, the marrow should not be normal.

21. Dr. McBride explained that the type of injury claimant sustained involved his quadriceps tendon pulling away from the bone on the front half of his patella, and did not involve injury to the inside of the knee joint.

22. Dr. McBride opined that the Operative Report prepared by Dr. Furry did not describe any evidence of any intraarticular pathology, or damage, at the time of her repair in the Operative Report. Dr. Furry makes no reference to any articular injury.

23. Dr. McBride further noted that the ATP, Dr. Rice, provided a permanent medical impairment for lost range of motion only, as this is the number one complication for a ruptured tendon repair, and Dr. Rice did not provide a rating for arthritis.

24. In reviewing Dr. Finn's report, Dr. McBride opined that Dr. Finn provided Claimant a rating for arthritis based on Claimant's complaint of pain. However, in reviewing his report, and physical examination, Dr. McBride stated that there is no objective evidence to support this rating, as there is no evidence of intraarticular injury in this claim. Dr. McBride opines that this additional rating under Table 40 is clear error, as Table 40 does not apply as there is no evidence of symptomatic chondromalacia or intraarticular injury/damage. According to his Level II training, an injury must cause intraarticular damage in order for Table 40 to apply.

25. Dr. McBride opined that with no intraarticular injury, you cannot relate any alleged arthritis, to the work-related injury. This injury was not inside the knee joint, it was to the muscle that runs the knee joint. Dr. McBride analogized this injury in the following manner: (The quadriceps muscle is the motor that runs the knee, or the drive shaft that runs the knee. The knee is like the tire or wheel of a car, and the tire can wear out over time. So, as in this case, even if the tire is brand new, and your drive shaft breaks, then the car still won't run. However, as evidenced by the MRI, claimant's tire is not worn out, so his knee could not have gotten arthritis just because the drive shaft broke. The end of the story is that the knee isn't working because the drive shaft broke, and in this case claimant's quadriceps tendon tore, but the knee still has its full tread on it. It didn't get arthritis because the drive shaft broke.)

26. As a result of all of the above, Dr. McBride opined that providing an impairment rating for arthritis in the intraarticular surface of the knee in this claim is "clear error".

27. On cross-examination, Dr. McBride acknowledged that he had not seen any of the X-rays of Claimant. He further acknowledged that crepitus is among the first indicators of patella-femoral arthritis, but it is not the sole or exclusive means of establishing it. He did not see the report of Dr. Rice, wherein Dr. Rice noted that Claimant had patellofemoral crepitus. He did further acknowledge that patella-femoral crepitus was noted in Dr. Furry's report of August 26, 2016.

28. Claimant testified that he had not sustained any prior injuries to his left knee, nor has he previously had the type of pain he is now experiencing.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the ALJ finds the Claimant's testimony to be sincere and credible. While not medically trained, the ALJ finds that Claimant has been consistent overall in reporting his symptoms to his medical providers

(including the IME by Dr. McBride) in an effort to secure the best medical care he can. Further, the ALJ finds that Claimant testified credibly in the hearing.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion of Dr. Finn-Impairment Rating

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The ALJ should also consider all of the DIME physician's written and oral testimony. *Lambert and Sons, Inc. v. Industrial Claim Appeals Office,* 984 P.2d 656, 659 (Colo. App. 1998).

F. In this case, Respondents, and Dr. McBride, have taken the position that in order receive an impairment rating under Table 40(5), there must be an *objective* manifestation of arthritis; not merely a Claimant's *subjective* complaints of pain. The ALJ sees no such requirement in the plain wording of Table 40(5), in contrast, for example, with a Table 53(II)(B) or (C) rating. In this case, the DIME physician assigned a 5%

impairment rating for his diagnosis of patellofemoral arthritis, combined with 8% for range of motion (range of motion not being in dispute).

G. Nonetheless, there is ample evidence in the medical records to support such a finding of patellofemoral arthritis, based upon *objective* evidence.

●*"Catching" or "popping*" in his knee (accompanied by pain when it occurs, especially on stairs) was noted by Dr. Furry, as well as being a recurrent issue in physical therapy.

●*Crepitus* was noted by Dr. Furry ("minimal"), as well as Dr. Rice ("minimal", and "some").

●Dr. Furry noted in imaging studies that there was soft tissue *ossification* of his superior patella. Further, she noted in *IMAGING* that there was mild patellofemoral *arthritis.* She also noted on a different date that "he *does not seem* to have any *substantial* arthritis [in his left knee]. Such observation hardly eliminates a diagnosis of arthritis entirely; the wording is suggestive that some amount could exist.

●Mild *chondromalacia* was noted in the MRI narrative.

H. Dr. McBride notes that Dr. Furry, after seeing the intra-articular surfaces of Claimant's patella and femur during surgery, fails to document any observations in her post-operative notes of symptoms of arthritis. He infers that if such observation had occurred, it would have certainly appeared in her notes. While such medical inference is certainly reasonable, it falls short of compelling the conclusion that arthritis was nonexistent *during the DIME.* Claimant suffered a severe injury, and one that required urgent surgical intervention. The ALJ notes that Dr. Furry's surgical consent advisement included "failure of repair". Any repair, no matter how skillfully performed, could lead to some small misalignment of the kneecap, especially for an active, older person climbing stairs regularly. Over time, this can lead to the symptoms such as Claimant experienced. The medical reports suggest this may well have occurred over time.

I. While the ALJ finds Dr. McBride to be a sincere and eminently qualified orthopedist, he was also not in possession of all pertinent medical records in this case when he rendered his opinion. In the end, Dr. McBride's professional and sincerely held medical opinion simply differs from that of the DIME physician. After considering the totality of the evidence presented, including the DIME reports and testimony of Dr. McBride, the ALJ concludes that Respondent has failed to produce unmistakable evidence establishing that the Dr. Finn's impairment rating is highly probably incorrect. Rather, the ALJ concludes that the evidence presented establishes a mere difference of opinion of the application of Table 40(5) between the DIME physician and the medical expert retained by Respondent. A professional difference of opinion does not rise to the level of clear and convincing evidence that is required to overcome the opinion of the DIME physician.

ORDER

It is therefore ordered that:

1. The DIME physician's Impairment rating is upheld in its entirety. Claimant's combined lower left extremity Impairment Rating is 13%.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 21, 2018

ISSUES

1. Are Respondents bound by the DIME's opinion that Claimant requires medical treatment after MMI because they filed a Final Admission of Liability rather than an Application for Hearing in response to the DIME report?

2. Did Claimant prove entitlement to a general award of medical benefits after MMI by a preponderance of the evidence?

3. The parties stipulated to an average weekly wage of $591.20.

4. At the commencement of the hearing, Claimant argued he suffered a whole person impairment, and Respondents were bound by the DIME rating because they filed a Final Admission of Liability rather than requesting a hearing after receiving the DIME report. The ALJ concluded Claimant properly preserved that issue by endorsing "PPD" on his Application for Hearing, but did not give Respondents sufficient notice of his intent to try that issue through discovery. Respondents elected to reserve that issue for future determination.

FINDINGS OF FACT

1. Claimant suffered admitted injuries to his left leg on April 8, 2015 while working for Employer as a plumber. He was stepping up onto a scaffold and his left foot slipped into a gap between the ground and the front step of the scaffold, causing him to fall backward onto the ground. In the process of falling, he twisted his left leg and ankle.

2. Claimant's boss took him to Concentra, where he saw Dr. Walter Larimore. Claimant reported pain in the left ankle and left calf, and had difficulty bearing weight on the left leg. His left ankle was swollen and tender with limited range of motion. Dr. Larimore diagnosed a moderate left ankle sprain, splinted the ankle and gave Claimant crutches. He advised Claimant to remain nonweightbearing and released him to sedentary duties only.

3. Claimant returned to Concentra on April 13, 2015 and reported minimal improvement. He was not using crutches but was limping due to lateral ankle and calf pain. His left ankle remained swollen and painful. Examination of the left calf showed tenderness at the gastrocnemius and Achilles junction. Dr. Larimore added the diagnosis of gastrocnemius tendon strain. Ibuprofen was not helping, so Dr. Larimore prescribed naproxen instead. He also referred Claimant for physical therapy.

4. Claimant's ankle steadily improved over the next several weeks, but his calf remained painful with minimal relief from medication and therapy. Dr. Larimore referred Claimant for a lower leg MRI and an orthopedic consultation with Dr. Michael Simpson.

5. Claimant saw Dr. Simpson on May 18, 2015. Dr. Simpson reviewed the MRI and described it as "completely normal" with no evidence of a muscle tear. He saw no surgical pathology and expected Claimant's pain to resolve with time. He also stated, "If he continues to have pain, it may be prudent to have him evaluated by a pain management specialist to determine whether or not he has any neuropathic pain."

6. Claimant did not improve, and on June 8 he told Dr. Peterson at Concentra he was "becoming worse." Dr. Peterson ordered a "STAT" ultrasound which ruled out DVT and referred Claimant to Dr. Jeffrey Jenks for electrodiagnostic testing.

7. Claimant had a repeat MRI on June 30 due to imaging artifact in the first MRI. The second MRI showed "minimal Achilles tendinosis."

8. Dr. Jenks performed a left leg EMG on July 8, 2015, which showed peroneal neuropathy at the left fibular head. Testing of the lumbar paraspinals was normal with no evidence of denervation or motor changes. Dr. Jenks started Claimant on Neurontin and prescribed a topical compound analgesic cream.

9. Claimant began treating with Dr. Shimon Blau, a physiatrist, on July 20, 2015. He described ongoing left leg pain and weakness, aggravated by walking. The Neurontin was not helping, so Dr. Blau switched him to Lyrica.

10. In late October 2015, Claimant reported the pain had "started working its way up into his posterior thigh and buttocks."

11. Dr. Blau administered an ultrasound-guided injection of steroid and lidocaine on November 3, 2015. On follow up in December, Claimant told Dr. Blau the injection "did not help at all."

12. Claimant started experiencing low back pain in approximately November 2015. Claimant never noted low back pain on the pain diagrams he completed at Concentra. Claimant has admitted he first developed back pain "eight or nine months" after the injury.

13. In January 2016, Dr. Blau discontinued Lyrica and started Claimant on Cymbalta. He also refilled trazodone and referred Claimant back to Dr. Jenks for a repeat lower extremity EMG.

14. Dr. Albert Hattem took over as Claimant's primary ATP on January 14, 2016 due to "delayed recovery." Claimant told Dr. Hattem "overall since his injuries . . . he is unchanged despite considerable time and treatment." The physical examination was largely normal, except slight tenderness on the lateral aspect of the ankle and lower leg. Dr. Hattem advised Claimant if the repeat EMG was unchanged or improved, he would be at MMI.

15. Claimant saw Dr. Jenks for the repeat EMG on February 16, 2016. Although Dr. Jenks' report is not in evidence, Dr. Blau described it in his March 7, 2016 report.

According to Dr. Blau, the EMG showed "findings and symptoms potentially consistent with a left L5 radiculopathy. This was based on _____ peroneus longus muscle."

16. Dr. Blau's March 7, 2016 report also contains what appears to be the first mention of low back pain in the Concentra records. He described the back pain as "constant, aching and throbbing." Claimant also described ongoing leg pain which was "more sharp in nature." He rated his pain at 7.5-9/10, but it is unclear whether he was referring to his back pain, leg pain, or both. Dr. Blau noted "he has tried Lyrica, Cymbalta, and trazodone in the past . . . and states these were not helping very much." Dr. Blau ordered a lumbar MRI.

17. Claimant followed up with Dr. Hattem on March 24. Dr. Hattem noted the repeat EMG "demonstrated no evidence of left peroneal neuropathy. This condition is now resolved and is at maximum medical improvement." He also opined the potential L5 radiculopathy was a "new finding" not causally related to the industrial accident. Dr. Hattem placed Claimant at MMI with no impairment, no restrictions, and no maintenance care. He advised Claimant to "consult with his personal physician outside of workers' compensation for non-claim-related lumbosacral radiculopathy."

18. Claimant has been treating with his primary care providers for leg pain since March 2016. The working diagnosis throughout the PCP records is "left L5 radiculopathy."

19. Claimant saw Dr. Stephen Gray for a Division Independent Medical Examination ("DIME") on April 11, 2017. Claimant complained of intermittent "severe" sharp, shooting, and stabbing pain across his entire lumbosacral region. Dr. Gray noted none of the Concentra pain diagrams identified low back pain. Claimant stated the back pain did not develop until "8 or 9 months after the original injury." He described stabbing pains and tingling in the posterior aspect of the left leg from the buttock into the heel. He complained of numbness laterally over the left thigh and calf area, and weakness "in the entire left leg." On exam, he was tender over the left iliac crest and iliolumbar ligament, and the left SI joint. Straight leg raise and tension signs were "equivocally positive" on the left. He had decreased sensation over the left L5 dermatome "consistent with L5 radiculopathy." Strength testing was "difficult to evaluate as there was a rather extreme breakaway weakness in testing dorsiflexion and left knee extension. Left leg range of motion testing showed difficulty with eversion "consistent with his previous peroneal nerve palsy." He had significant difficulty with dorsiflexion, and his EHL was weak.

20. Dr. Gray agreed Claimant was at MMI on March 24, 2016. Dr. Gray's diagnoses included "left peroneal neuropathy, probably secondary to 4/8/15 work-related incident," and "lumbosacral radiculopathy, unclear relationship to [the industrial accident]." Dr. Gray struggled to sort out which symptoms were injury-related:

> This case proved to be quite difficult in regards to causation of the late complaint of low back pain and the late findings of the L5 radiculopathy. It seems reasonably clear that the left lower extremity peroneal neuropathy is related to the strain/sprain injury of the left lower extremity that occurred on 4/8/15. The late finding of an L5 radiculopathy throws a wrench or red

> herring into the thought process. To this examiner's knowledge an MRI scan was not obtained. Even if an MRI scan of the lumbar spine showed a corresponding disc lesion at the left L5 area, it would not answer whether there was ever a low back injury. [Claimant] was quite frank about the fact that his complaints of low back pain did not manifest until long after the initial injury. The first mention of back injury in the medical records occurred almost ½ a year after the injury . . . . Nevertheless, we have the electrodiagnostic studies that show a left leg peroneal neuropathy and then a later electrodiagnostic study that shows an L5 radiculopathy. This examiner did not have the benefit of reviewing a complete set of notes on the electrodiagnostic studies that were performed. . . . Even if this examiner did have complete raw data on the electrodiagnostic studies, it would require the input of Dr. Jenks to help answer the following question. Is it possible that the early study showing a peroneal neuropathy was limited by how far of the exam was done? Is it possible that what we are seeing is the result of a "double crush" phenomena? Is it possible that, if the earlier study had been performed all the way up into the proximal right lower extremity and pelvis, would this have shown an L5 radiculopathy?

21. Dr. Gray opined "there ***may*** have been a relationship between the peroneal nerve injury and electrodiagnostic changes proximal to that, in the L5 spinal nerve root, which is partially where the peroneal nerve comes from." (Emphasis added). Ultimately, Dr. Gray assigned a 14% lower extremity impairment rating based on range of motion deficits and impairment of the common peroneal nerve. He indicated the neurological rating addressed "***both*** the L5 radiculopathy and peroneal nerve changes." (Emphasis added). He did not assign a lumbar spine rating.

22. Dr. Gray recommended maintenance care in the form of quarterly visits with Dr. Hattem for pain management and medication refills. He also opined Dr. Hattem should have the option to refer Claimant for brief courses of physical therapy for flare-ups, and ESIs "if Dr. Hattem thinks that injections might help him control his pain." Dr. Gray did not specify what "pain" the recommended treatment was intended to address; i.e., the peroneal nerve pain or the unrelated back pain and L5 radiculopathy? He recommended a follow-up visit with Dr. Jenks for "an opinion on the relationship of the L5 and peroneal nerve changes." Finally, he recommended a follow-up visit with Dr. Simpson, despite opining Claimant "does not appear to be a surgical candidate for his current work-related condition."

23. Claimant underwent a lumbar MRI on April 21, 2017, which was essentially normal.

24. Insurer filed a Final Admission of Liability on May 17, 2017 based on Dr. Gray's DIME report. The FAL admitted for a 14% scheduled impairment. The FAL also stated "we deny liability for medical treatment and/or medications after MMI."

25. Claimant's PCP referred him to Dr. Christopher Malinky, an interventional pain management specialist, in May 2017. Claimant's primary complaint was left-sided

low back pain radiating down his left leg. Dr. Malinky administered an L4-5 transforaminal ESI, which gave Claimant "0 relief." Dr. Malinky recommended a spinal cord stimulator trial since no previous treatment had helped Claimant's leg pain.

26. Claimant saw Dr. Mark Paz for an IME at Respondents' request in October 2017. Dr. Paz opined the left peroneal neuropathy had resolved per the EMG, and the L5 radiculopathy was not injury-related. Dr. Paz pointed out that Claimant did not complain of low back pain until several months after the original injury, and opined the mechanism of injury does not correlate to an L5 radiculopathy. Dr. Paz agreed Claimant was at MMI as of March 24, 2016, and requires no additional treatment for any injury-related condition. He disagreed with Dr. Gray's rating because it was based on conditions that are not related to the April 2015 accident.

27. Dr. Hattem testified in a deposition for Respondents on September 15, 2017. He does not believe Claimant's low back pain is work-related, as it did not manifest until well after the original injury. He also noted Claimant's pain from the work injury originated in the lower leg and radiated at times *upward*, which is not consistent with the later onset of L5 radiculopathy radiating from the back *downward*.

28. Dr. Paz testified at hearing on behalf of Respondents. He reiterated and expanded on the opinions expressed in his IME report. He explained that symptoms of peroneal neuropathy are similar to those of L5 radiculopathy, but they are distinct entities and peroneal neuropathy would not evolve into an L5 radiculopathy. He maintained the peroneal neuropathy has resolved and the L5 radiculopathy is not related to Claimant's industrial injury. Dr. Paz agreed with Dr. Hattem that Claimant requires no additional treatment for any injury-related condition.

29. The opinions of Dr. Hattem and Dr. Paz are more persuasive than opinions in the record to the contrary.

30. Claimant failed to prove by a preponderance of the evidence that his low back pain and L5 radiculopathy is causally related to the April 8, 2015 industrial accident.

31. Claimant failed to prove by a preponderance of the evidence that the industrial accident proximately caused the need for ongoing medical treatment.

CONCLUSIONS OF LAW

A. Respondents are not bound by the DIME's opinion regarding medical benefits after MMI.

Respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Medical benefits may extend beyond MMI if the claimant requires maintenance care to relieve symptoms or prevent deterioration of their condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). If the claimant establishes the probability of a need for future treatment, he is entitled to a general award of medical benefits after MMI,

subject to the respondents' right to dispute compensability, reasonableness, or necessity of any particular treatment. *Hanna v. Print Expediters, Inc.*, 77 P.3d 863 (Colo. App. 2003).

As found, the Respondents did not request a hearing to challenge the DIME's report within 20 days, and filed an FAL instead. Since the DIME recommended maintenance treatment, Claimant reasons the DIME's opinion is binding under § 8-42-107.2(4)(c), which provides:

> Within 20 days after the date of mailing of the division's notice that it has received the IMEs report, the insurer or self-insured employer shall either file its admission of liability pursuant to section 8-43-203 or request a hearing before the division contesting one or more of the IMEs findings or determinations contained in such report.

In *Leprino Foods Co. v. Industrial Claim Appeals Office*, 134 P.3d 475 (Colo. App. 2005), the court of appeals held that the requirements of § 8-42-107.2(4)(c)[1] are "jurisdictional." Thus, if the respondents do not request a hearing to contest the DIME's findings, those findings are binding on the parties and the ALJ.

The ALJ disagrees with Claimant's argument that the "findings or determinations" referenced in § 8-42-107.2(4)(c) include opinions regarding medical treatment after MMI. Rather, the preclusive effect is limited to determinations regarding MMI or whole person medical impairment.

The general assembly used various permutations of the term "findings" or "determinations" throughout §§ 8-42-107 and 8-42-107.2.[2] The terms are always linked to the issues of MMI or whole permanent impairment, and it is well-established that the DIME's findings are only given presumptive weight on those two issues. *E.g., Meza v. Industrial Claim Appeals Office*, 303 P.3d 158 (Colo. App. 2013); *Leprino Foods v. Industrial Claim Appeals Office, supra*; *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Yeutter v. CBW Automation, Inc.*, W.C. No. 4-895-940-03 (February 26, 2018). A DIME is not a prerequisite to a dispute over *Grover* medical benefits, and the DIME's opinion on the matter is afforded no special weight. *E.g.*, *Lassiter v. Trojan Labor*, W.C. No. 4-741-836 (June 23, 2010). "Regardless of whether . . . the DIME physician recommended future medical treatment, the respondents were free to

---

[1] *Leprino* construed a prior version of the statute, which was codified at § 8-42-107.2(4). The statute was subsequently amended by SB 13-249 to clarify the triggering event and reduce the time limit, but the substantive language was unchanged. *Leprino* thus remains good law with respect to this issue.

[2] See, e.g., § 8-42-107(8)(b)(I) (an ATP "shall make a *determination* as to when the injured employee reaches maximum medical improvement"); § 107(8)(b)(II) ("if either party disputes a *determination* by an [ATP] . . . whether the injured worker has . . . reached maximum medical improvement, an independent medical examiner may be selected in accordance with section 8-42-107.2"); § 107(8)(b)(III) ("if the [DIME] . . . *finds* that the injured worker has reached [MMI], the [DIME] shall also *determine* the injured worker's permanent medical impairment rating."); § 107(8)(c) ("If either party disputes the [ATP's] *finding* of medical impairment . . . the parties may select [a DIME]. The *finding* of the [DIME] may be overcome only by clear and convincing evidence"); § 107.2(2)(b) ("if any party disputes a *finding or determination* of the [ATP], such party shall request the selection of an IME."). (Italics supplied)

deny liability and place the burden on the claimant to prove by a preponderance of the evidence that she needed future medical treatment." *Wilkinson v. Wal-Mart Stores, Inc*., W.C. No. 4-657-582 (October 26, 2007).

B. Claimant failed to prove that the industrial accident proximately caused the need for ongoing medical treatment

A claimant must prove entitlement to medical benefits after MMI by a preponderance of the evidence, and the mere occurrence of a compensable injury does not compel the ALJ to find that all subsequent medical treatment was caused by the industrial injury. *Snyder v. City of Aurora*, 942 P.2d 1337 (Colo. App. 1997); *McIntyre v. KI, LLC*, W.C. No. 4-805-040 (ICAO, Jul. 2, 2010). The DIME's opinion regarding medical treatment after MMI is not entitled to any special weight but is simply another medical opinion for the ALJ to consider when evaluating the preponderance of the evidence. *See Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Story v. Industrial Claim Appeals Office*, 910 P.2d 80 (Colo. App. 1995).

As found, Claimant failed to prove by a preponderance of the evidence that the industrial accident proximately caused the need for ongoing medical treatment. Claimant simply did not present sufficient evidence for the ALJ to tease out the degree to which the industrial accident "more likely that not" caused a need for treatment. Dr. Hattem and Dr. Paz provided well-reasoned arguments and Claimant has no persuasive countervailing opinion evidence. No treating providers have recommended further treatment on a work-related basis, and Claimant is primarily relying on Dr. Gray's opinions. But Dr. Gray did not differentiate treatment intended to address injury-related peroneal nerve pain versus nonindustrial back pain and L5 radiculopathy. As Dr. Gray pointed out, the assessment of causation is "difficult" due to the conflicting EMG findings and evolving symptomatology. Claimant has some symptoms consistent with peroneal neuropathy, but no corresponding current EMG findings. He also has symptoms consistent with L5 radiculopathy and positive EMG findings, but no apparent spinal pathology per the lumbar MRI. Dr. Gray raised several valid questions in his report but failed to answer them. Ultimately, Dr. Gray "punted" on the causation question, conflated the conditions and calculated a rating which covers both the peroneal neuropathy and the nonindustrial L5 radiculopathy. It is reasonable to assume he applied similar reasoning to his recommendations for maintenance care. Therefore, the ALJ concludes there is insufficient persuasive evidence for Claimant to carry his burden.

ORDER

It is therefore ordered that:

1. Claimant's request for medical benefits after MMI is denied and dismissed.

2. Any issues not decided herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with this Supplemental Findings of Fact, Conclusions of Law, and Order, you may file a Petition to Review the order with the Denver Office of Administrative

Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 22, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

STIPULATION

At the commencement of hearing, the parties stipulated that Claimant's average weekly wage (AWW) with Employer equals $911.48 in the event that the injury is determined to be compensable. The parties' stipulation is approved.

REMAINING ISSUES

I. Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable work-related injury to his low back and knee, and is therefore, entitled to reasonable, necessary and related medical benefits to cure and relieve him of the effects of said injuries.

II. If Claimant established that he suffered compensable work-related injuries, whether he demonstrated, by a preponderance of the evidence, that he is entitled to select a physician of his choice to attend to his injuries because the right of selection passed to him.

III. Whether Claimant has proven, by a preponderance of the evidence, his entitlement to temporary disability benefits.

IV. Whether Respondents have proven, by a preponderance of the evidence, that Claimant was responsible for the termination of his employment thereby precluding his entitlement to TTD benefits subsequent to December 19, 2016, injury.

Because the undersigned concludes that Claimant failed to prove that he sustained a compensable injury on January 23, 2017, this order does not address questions II-IV as set forth above.

FINDINGS OF FACT

Based upon the evidence presented, including the post hearing deposition testimony of Dr. McCranie, the ALJ enters the following findings of fact:

1. Claimant worked for Employer as a truck driver. His job duties included hauling heavy excavating equipment from one job site to another and occasionally running an end dump truck. A large Peterbilt semi tractor-trailer rig was used to haul the heavy machinery from one location to another.

2. Claimant testified that his habit and routine was to arrive at work around 4:30 a.m. where he would clock in through his cell phone while pulling up to Employer's locked gate. Claimant testified that on December 19, 2016, he clocked in his usual

fashion[1] and drove to where the Peterbilt was parked in order to get it started and ready to move equipment for the day. Claimant exited his Jeep and climbed into the cab of the Peterbilt. When he tried to start it, the truck would not fire. Rather, the ignition made a clicking sound as if the battery was dead. Assuming there was a problem with the battery, Claimant testified that climbed out of the truck and drove to the shop on facility grounds to find a set of jumper cables. After failing to find the cables in the shop, Claimant testified that he got in his Jeep and drove to the WalMart located at Platte and Chelton to purchase a set of cables. According to Claimant, he purchased a cheap set of cables out of his pocket and drove back to the yard where he tried to jump the Peterbilt. Claimant explained that he drove up to the Peterbilt, exited his vehicle, removed the Peterbilt's battery cover,[2] hooked up the jumper cables from his Jeep's battery to the Peterbilt's battery, waited 10-15 minutes for a charge to build up, climbed back into the truck and tried to start it. Per Claimant the truck still would not start. Consequently, he testified that he exited the truck to check his connections. As he was climbing down, Claimant testified that his foot landed on and slipped off the batteries causing him to fall backwards to the ground onto his buttocks. According to Claimant's Worker's Claim for Compensation the entire aforementioned activity took approximately 15 minutes from his arrival at work as the injury allegedly occurred at 4:45 a.m. (Respondents' Exhibits, hereinafter *RE, Exhibit B*).

3. Claimant testified that there was only one set of jumper cables in the shop. He further testified that there was only one service truck on site and that he did not check the service truck because it would have been locked and he did not have a key.

4. Claimant's personal vehicle operates on a 12 volt charging system; the Peterbilt operates on a 24 volt charging system. Claimant testified to his knowledge of this, noting that was probably the reason why he could not get the truck to start. He also testified that when he left the truck step, i.e. the battery cover was still off and the hood was not buckled down.

5. At 5:04 a.m. on December 19, 2016, Claimant sent a text message to Seth Chiddix, owner and operator of Employer stating, "Truck wouldn't start, went to Walmart to get cables, fell and hurt knee and back. no moves done, truck don't start." (*RE J, Bates 283 (Text entry #51).* While Claimant testified that his text message included an indication that he was going home, the actual message fails to indicate the same. Additionally, Claimant conceded that his message is vague and does not specifically indicate that he fell in the yard and consequently sustained an injury while at work.

[1] When asked if he was sure he clocked in, Claimant testified that he was "quite sure [he] did" and that he could think of no reason he would not have.

[2] The battery cover also functions as a step up into and down from the cab of the Peterbilt and must be physically removed to expose the batteries.

6. Mr. Chiddix returned a text message to Claimant at 7:32 a.m. on December 19, 2016, attempting to clarify whether Claimant was coming in to work. Claimant did not respond.

7. The next day, December 20, 2016, Claimant texted Mr. Chiddix informing him he would not be in to work as his back was "hurt." Later at 5:57 p.m., Claimant texted Mr. Chiddix asking whether there were "moves", i.e. work for the morning of the 21st as he needed to work. *RE J, Bates 284 (Text entry #57)* Mr. Chiddix informed Claimant that he would need to provide a doctor's note releasing him to work. *RE J, Bates 284 (Text entry #58)*

8. Because Claimant needed a doctor's note clearing him for work, he sought medical treatment at a UCHealth facility near his home on December 21, 2016. He was examined by Physician's Assistant (PA) Alicia Libby. PA Libby obtained a history noting Claimant's chief complaint as back pain since he "jumped onto the side of his truck and slipped on the ice and fell on his back." Consistent with Mr. Chiddix's request, PA Libby also noted that Claimant "needs a work note." Finally, PA Libby noted that Claimant had an "extensive history of prior compression fractures at L1." At 10:28 a.m., PA Libby ordered x-rays of the lumbar spine to "r/o (rule out) new fx (fracture). The x-rays were completed by 11:02 a.m. revealing L1 and L3 compression fractures of indeterminate age.

9. PA Libby authored a letter indicating that Claimant was able to return to work without restrictions on December 22, 2016. PA Libby electronically signed the letter at 11:13 a.m. Based upon the medical record from this date of service, the letter was "sent." *RE C, Bates 15.* Claimant suggested that he did not get the letter and claimed that he was unaware that he had been cleared to return to work. The ALJ finds Claimant's suggestion that he did not get the letter from PA Libby dubious. The claim that he was unaware that he had been released to work is equally unconvincing. Here the evidence presented establishes that per Employer's instruction, Claimant presented to UCHealth for the sole purpose of getting a work release so he could return to work as he was requesting to do. Without a release, Claimant was aware that he could not return to work. Given that Claimant was expressing a desire to return to work and knowing he could not return without one, the ALJ finds his suggestion that he left without a release or an indication that he was cleared to return to work preposterous.

10. At 5:31 p.m. on December 21, 2016, Claimant sent a text message to Mr. Chiddix noting that he had been to the doctor and his condition was "worse then (sic) [he] realized from that fall [he] had Monday morning on the yard." Claimant indicated that he was instructed to "go to the spinal center . . . and to rest and be off my feet and back." Claimant did not provide any detail regarding his condition nor did he mention the letter (work note) authored by PA Libby releasing him to work in his text message. Rather, the ALJ finds that the content of Claimant's text message ostensibly implies that PA Libby excused him from work. *See RE J, Bates 284 (Text entry #60-#61).*

11. Claimant admitted on cross-examination that he has never provided Employer with a note or any medical record that indicates that he has been taken off work.

12. On January 10, 2017, Claimant presented to the neurosciences center of UC Health for a neurosurgical evaluation. Physician Assistant (PA) Justin Kidd and Dr. Todd Thompson, M.D. evaluated claimant. An MRI of the lumbar spine for a diagnosis of "compression fracture of lumbar spine, non-traumatic, initial encounter" was ordered and Claimant was scheduled for a follow-up appointment.

13. Claimant returned to the UC Health Neuroscience Out Patient Clinic on February 2, 2017 to review the results of his MRI. Dr. Stacy Greenspan reached the following impressions based upon Claimant's MRI findings:

1. No evidence of acute osseous abnormality.

2. Chronic mild to moderate compression fractures of T12 and L1 and multiple chronic endplate irregularities throughout the lumbar spine consistent with mild chronic compression fractures and Schmorl's node phenomenon.

3. Slight flattening along the ventral surface of the dural sac at T12-L1 without significant canal stenosis.

4. No significant canal stenosis or neural foraminal stenosis throughout the remainder of the lumbar spine.

14. Dr. Greenspan specifically referenced that Claimant's MRI findings were compared to the "plain radiographs", i.e. x-rays taken of his lumbar spine on 12/21/2016. In comparing the images, Dr. Greenspan noted that the moderate loss of vertebral body height at L1 and the mild to moderate loss of height at T12 were present on the 12/21/2016 x-rays "consistent with at least subacute to chronic compression fractures and multiple Schmorl's nodes."

15. Follow-up x-rays of Claimant's lumbar spine were obtained on April 18, 2017. The x-rays were interpreted as demonstrating "stable wedge-shaped fracture at L1 and compression fracture of T12. PA Kidd referred Claimant to Dr. Alexandra Coffey for additional non-surgical treatment recommendations and to physical therapy for rehabilitation.

16. Claimant was evaluated by Dr. Coffey on July 25, 2017. Dr. Coffey renewed Claimant's prescriptions and helped "facilitate" his physical therapy closer to his home for better access to treatment. Claimant was referred to Strive Physical Therapy and he participated in treatment from August 2, 2017 through August 30, 2017.

17. Claimant subsequently sought and obtained employment as a driver with Falcon Transportation (hereinafter "Falcon"). *RE K* Claimant failed to provide information of this employment in his answers to interrogatories when asked specifically to identify all employment he has held since leaving his employment with the employer. Nonetheless, employment records from Falcon were subsequently received by Respondents and were admitted into evidence at hearing. Claimant's wage records from Falcon indicate that he began his employment on August 31, 2017. *RE K, Bates 298.* Claimant testified that his employment with Falcon lasted "maybe a month" because he could not stay in the trucks as they were too stiff and he could not bend over to pull chains. Contrary to Claimant's testimony that his employment with Falcon lasted "maybe" a month, his wage records indicate that he was employed with Falcon through October 20, 2017. *RE K, Bates 302.* From August 31, 2017 through October 20, 2017, Claimant earned gross wages in the amount of $6,547.50. *RE K, Bates 298-302.* This yields an AWW of $916.63, which is $5.15 greater than the AWW claimant earned while working for Employer.

18. Claimant testified that he left his employment at Falcon on his own accord. He was adamant that he was not fired.

19. Patricia Farrenkopf is the co-owner of Falcon Transportation. She was allowed to testify as a rebuttal witness taken out of order. As part of her business duties, Ms. Farrenkopf is involved in the Human Resource functions for the business and testified that she would have been made aware if any employee, including claimant, was having difficulty with physically performing their job. Ms. Farrenkopf testified that she received no reports that Claimant had problems or difficulties with the physical performance of his job. Ms. Farrenkopf further testified that Claimant did not voluntarily resign his employment with Falcon Transportation. Rather, Ms. Farrenkopf testified that Claimant was terminated for cause for violation of safety regulations, namely his failure to chain down machinery that he was transporting as required by the Department of Transportation. Ms. Farrenkopf also testified that following Claimant's termination for cause, he contacted Falcon requesting that they give him another opportunity for employment, which request Falcon refused.

20. Claimant next sought and obtained employment with All American Disposal (hereinafter "All American"). Claimant testified that he did not start working for All American until December 3, 2017. Claimant's employment records from All American indicate that Claimant started his employment there on November 13, 2017. *RE L, Bates 303.* Additionally, when Claimant saw Dr. Timothy Hall for an IME on November 21, 2017, he told Dr. Hall that he had been working for All American. Consequently, Claimant's hearing testimony is inconsistent with his prior statements to Dr. Hall and the record evidence presented.

21. Claimant has earned gross wages in the amount of $8,057.29 from November 13, 2017 through February 20, 2018 while working for All American Disposal. *RE L, Bates 303-315.* This yields an AWW of $633.73, which is a difference of $277.75 from the AWW claimant earned with employer.

22. At hearing, Claimant testified that he has difficulty with walking, sitting, or standing for long periods. However, his physical therapy records indicate that he demonstrated the capacity to hike about 2 ½ hours for two consecutive days in August 2017. At hearing, Claimant testified that he never reported that he went hiking in Garden of the Gods as his physical therapy records indicate. Rather, Claimant explained that he would walk around Palmer Park with his fiancé for an hour during lunch and much of that time was spent sitting on rocks.

23. Tobias Glaser testified as Employer's computer network and timecard administrator. Mr. Glaser testified that Employer uses a computer-based timecard program that was implemented in the summer of 2016. The program allows employees to clock into work using their cell phones. Each employee has an application on their phone for this purpose that the employee installs on their respective phones. According to Mr. Glaser, the program contains a GPS function to track the position of Employer's drivers, to "make sure our employees are getting to where they're supposed to be when they're supposed to be." Once clocked in the GPS function tracks the employee's movements.

24. Mr. Glaser testified that if someone were attempting to clock into the system without having their location settings on, they would get an almost immediate notification that they cannot be clocked in due to the settings being turned off. Mr. Glaser refuted Claimant's testimony that it would take up to two hours to receive such notification. Mr. Glaser also testified that he is familiar with Claimant's habit and routine with regard to clocking in and out of the timecard system. He testified that Claimant was very consistent about clocking in. According to Mr. Glaser, there was never a day that Claimant worked that he failed to clock in. Finally, Mr. Glaser testified that if an employee was unable to clock in for some reason another employee (Lisa) could manually clock him or her in and adjust their time record to reflect an accurate clock in date and time. Lisa would attend to such adjustments the same day per Mr. Glaser.

25. Claimant's timesheet records reflect his habit and routine of clocking in for work. *RE I, Bates 220-225.* Mr. Glaser testified that if Claimant had clocked in on December 19, 2016 at 4:30 a.m. as he testified he did, or later through Lisa, there would be a record entry for this date. Mr. Glaser confirmed that Claimant's timesheet records reflect that he did not clock in on December 19, 2016, and did not appear for work on this date. *RE I, Bates 225.*

26. Seth Chiddix testified as the owner of Employer for 22 years. He testified that it was his usual practice and custom to communicate with Claimant via text message due to the unreliability of cell phone signal for the area where Claimant lived. Mr. Chiddix recalled the text message Claimant sent at 5:04 on December 19, 2016. He testified that the text message was vague and did not clearly indicate that Claimant had sustained a work related injury. Mr. Chiddix further testified that upon receipt of this text message, he immediately pulled up Claimant's "Tsheets" to see if he had reported to work that morning. Review of Claimant's electronic clock in data revealed that

Claimant had not clocked in; leading Mr. Chiddix to believe that Claimant had not reported to work that morning. Consequently, Mr. Chiddix did not feel Claimant's text message required a response at the time.

27. Upon his arrival at work on December 19, 2016, Mr. Chiddix saw the Peterbilt sitting in the yard, prompting him to respond to Claimant's earlier email with: "And you're not coming in, right?"

28. Mr. Chiddix testified that on December 19, 2016, there would have been at least two and possibly three sets of jumper cables in the shop, thus, even if one pair had been used and not returned to the shop, Claimant still would have had access to one or two other pair. Moreover, Mr. Chiddix testified that on December 19, 2016, there were two service trucks parked just outside the shop, both of which carried jumper cables and neither of which were locked. Thus, Claimant had access to at least two additional pairs of jumper cables according to Mr. Chiddix. According to Mr. Chiddix, there would have been no reason that Claimant would have needed to travel to WalMart to get jumper cables. Mr. Chiddix testified that the trucks remain unlocked because the facility is contained within a locked and fenced in area that is secured, and because the locks on the service trucks do not work.

29. Mr. Chiddix testified that he has traveled from the yard to the WalMart at Platte and Chelton and that depending on traffic and stop lights, it generally takes between 15-20 minutes one way. He agreed that traffic is generally lighter at 4:30-5:00 in the morning, but that Claimant's assertion that he traveled to the WalMart in five minutes is not realistic.

30. Mr. Chiddix testified that he has extensive knowledge of jump-starting 24 volt charging systems on heavy equipment based on his long history and experience in the excavation business. He also testified that he has extensive experience and knowledge regarding jump-starting 12 volt charging systems. Mr. Chiddix testified that if Claimant had hooked the 12 volt charging system of his personal vehicle to the 24 volt charging system of the Peterbilt, he would have "fried" the electronics in his Jeep because you cannot run a 24 volt to 12 volt system.

31. Mr. Chiddix testified that when he arrived at the yard on December 19, 2016, he spoke with his lead mechanic and learned that there was no problem with the Peterbilt and that it "fired right up" when the mechanic turned it over.

32. Mr. Chiddix confirmed that he requested Claimant to provide him with a work release from a doctor before he could return to work and that Claimant never provided him with the same. Instead, Mr. Chiddix testified that Claimant texted him that his injury was worse than he thought and that he was told to rest and be off his feet and back. Mr. Chiddix later learned that PA Libby had authored a letter returning Claimant to work without restriction, which was contrary to Claimant's text message to him. Mr. Chiddix testified that he would have put claimant back to work immediately if Claimant

had provided the note from PA Libby. As found above, Claimant did not provide the note and did not return to work for Employer despite being released to do so.

33. Mr. Chiddix attempted to reach Claimant via text message on December 27, 2017, January 2, 2018 and again on January 8, 2018 to inquire whether he would be returning to work. *RE J, Bates 285 (Text entries #64, #64, and #65).* Claimant never responded to any of Mr. Chiddix's text messages nor did he return to work. Accordingly, after more than a couple of weeks of Claimant's failure to appear for work, Mr. Chiddix testified that he was of the reasonable belief that Claimant had abandoned his job.

34. Mr. Chiddix testified that the first he learned that Claimant purportedly sustained a work injury was when he, as Employer received notification from Insurer in January 2017 that Claimant had filed a Workers' Claim for Compensation.

35. Colleen Chiddix testified as Employer's Office Manager and Human Resource Director. She testified that she is the person to whom employees are instructed to report all work injuries. Ms. Chiddix testified that she never received any notification from Claimant that he had sustained any type of work injury. She testified that she only became aware of the alleged work injury in this case when the Insurer notified Employer in January 2017 that Claimant had filed a Workers' Claim for Compensation.

36. After notification by Insurer of the claim, Ms. Chiddix testified that she attempted to contact Claimant but had been unable to reach him. She further testified that she sent him COBRA paperwork after it was determined that he had abandoned his employment.

37. When asked on direct examination why she did not initiate an injury report on or about December 19, 2016, Ms. Chiddix testified that though she had seen the text message from Claimant to Mr. Chiddix on that date, there was no clear indication where Claimant fell and what claimant was doing when he fell. Further, Ms. Chiddix testified that Claimant had not clocked in and was apparently not at work. Consequently, she did not believe that Claimant had suffered a work related injury.

38. On November 21, 2017, Claimant presented to Dr. Hall, a board certified physiatrist, for an independent medical examination (IME) at the request of his attorney. Dr. Hall testified that Claimant complained of low back pain, but that claimant denied any radiating pain or paresthesia. Dr. Hall testified that he reviewed medical records in advance of the IME, but on cross-examination, admitted that he did not view the MRI images. Instead, he read the reports commenting on the MRI made by Claimant's providers. Dr. Hall confirmed Claimant's diagnosis of compression fractures at T12-L1 and L3, but noted that care must be exercised when addressing the discussion about whether Claimant's compression fractures were "old or new." According to Dr. Hall, it is difficult to differentiate between old and new compression fractures. He testified that one assumes that with acute injury (fracture), there will be some bone marrow edema or

local swelling of the soft tissue, but that is not always the case. Regardless, he testified that Claimant's imaging is not consistent with an acute fracture.

39. While Dr. Hall testified that Claimant's symptomatology is consistent with the mechanism of injury—falling from a height of about four feet onto his buttock, he conceded that he is not sure what injury Claimant actually sustained. Dr. Hall surmised that, "something else got injured when [Claimant] fell." He suggested that Claimant's ongoing pain could be emanating from facet joints and/or SI joint dysfunction. Nonetheless, he agreed on cross-examination that Dr. Thompson, after multiple examinations and an MRI scan, has made no alternative diagnoses to account for Claimant's ongoing pain.

40. Respondents requested a medical records review from Dr. Kathy McCranie. Respondents also obtained Dr. McCranie's testimony via post hearing deposition. Dr. McCranie testified as a board certified physiatrist. She testified that she reviewed Claimant's available medical records including the MRI report. She testified that the MRI imaging revealed chronic, i.e. "old" mild to moderate compression fractures at T12 and L1. According to Dr. McCranie, Claimant's medical records and radiographic findings fail to support an objective basis for him having suffered acute compression fractures. *RE H.*

41. Dr. McCranie also addressed Dr. Hall's supposition that Claimant's ongoing pain complaints could be caused by the facet and/or SI joints and opined that this is not the case. Dr. McCranie testified that if the facet joints were Claimant's pain generator, there would be objective medical evidence of the same on the MRI scan. However, in reviewing the MRI scan there was no evidence of any kind of facet abnormality.

42. The ALJ credits the opinions Dr. McCranie and Dr. Greenspan to find that the compression fractures visualized on Claimant's x-rays and MRI likely predated his alleged slip and fall. While the suggestion that they are subacute has been attributed to Dr. Thompson, the ALJ finds that reference was actually raised in the MRI report authored by Dr. Greenspan. Specifically, Dr. Greenspan noted that the findings on MRI at the T12 and L1 spinal levels were also seen on the x-rays taken 12/21/16, which, at the time, demonstrated the compression fractures to be "at least subacute." Given that the x-rays of 12/21/16 failed to demonstrate evidence of acute injury only 2 days after the alleged slip and fall, per Dr. Greenspan, the ALJ finds Dr. McCranie's opinion regarding the chronicity of the compression fractures persuasive. Even Dr. Hall agreed that Claimant's imaging studies are not consistent with an acute fracture.

43. Based upon the evidence presented, the ALJ also credits the opinion of Dr. McCranie over the less persuasive opinion of Dr. Hall regarding the cause of Claimant's current low back pain. Specifically, the ALJ credits the opinion of Dr. McCranie that Claimant's low back pain as reported during the pendency of this case is related to his chronic compression fractures.

44. Claimant has failed to establish that he sustained a work related injury to his low back on December 19, 2016.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

Claimant's Credibility

C. Assessing the weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo.App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence presented. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo.App. 2002). In this case, the ALJ finds Claimant's testimony regarding the events leading up to his alleged injury unreliable and unpersuasive. The overwhelming evidence presented at hearing and through the post

hearing evidentiary deposition of Dr. McCranie belies Claimant's assertion that he sustained a work related injury.

D. Here, Claimant's self-admitted practice and routine is to clock in as he is approaching the gate to Employer's yard. Claimant testified, both on direct and cross examination, that he acted in accordance with his usual habit on the morning of December 19, 2016, and that he clocked in as he was approaching the gate at or near 4:30 a.m. Indeed, Claimant was "quite sure" he clocked in. Yet, review of his timesheets, as testified to by Mr. Glaser and Mr. Chiddix support that he did not clock in on December 19, 2016 as he claims. Claimant explained that in order to clock in the locations settings, i.e. the GPS function on the phone had to be turned on. Claimant testified that he would turn the GPS function on his phone off as it used data on his phone, suggesting that he may not have successfully clocked in on December 19, 2016. As found, Mr. Glaser testified that if Claimant had failed to turn on "Location Services," before attempting to clock in, he would have received an almost immediate notification on his cell phone that his attempt was unsuccessful and that he needed to turn on "Location Services." Claimant tried to elicit testimony from Mr. Glaser that such notification could take a couple of hours as testified to by Claimant. In response, Mr. Glaser testified that since the program was implemented in the summer of 2016, he had never experienced such a delay in notifications. The ALJ is convinced that had Claimant attempted to clock in on December 19, 2016 without his location services being turn on, he would have received an almost immediate notification that his attempt failed. Claimant's testimony that it would take up to two hours to receive such notification is not persuasive. Moreover, Mr. Glaser testified that since the implementation of the timekeeping system, Claimant has never failed to clock in on the days that he worked. The evidence presented persuades the ALJ that Claimant's assertion that he was at work but either forgot to clock in or was unsuccessful in doing so on December 19, 2016 is simply not credible. Based upon the evidence presented, the ALJ finds/concludes that Claimant probably did not appear for work on the morning of December 19, 2016 as he testified.

E. In support of the contention that Claimant did not report for work as he professed, Respondents cite the timeline surrounding the events leading up to his alleged injury. As found, Claimant testified and his Workers' Claim for Compensation notes that he arrived at work at 4:30 a.m. He reported that the injury occurred a mere 15 minutes later, at 4:45 a.m. Claimant testified that upon arrival at work he opened the gate, drove up to the Peterbilt, cracked the hood and checked the oil before attempting to start it. He then said that he tried to start the Peterbilt without success. Thereafter, he testified that he drove 100 yards to the shop, searched the shop for a set of jumper cables, and finding none, returned to his personal vehicle to drive to WalMart to purchase a pair. According to Claimant, he then drove to the WalMart at Platte and Chelton, which he claimed, took 5 minutes. He parked, entered the store, walked to far corner of the store, located jumper cables, walked to front of the store, paid for the jumper cables, returned to his car in the parking lot and then drove back to the employer's facility, which he claimed took 3-4 minutes. Once back at the yard, Claimant testified that he removed the battery cover and worked to get the jumper cables

attached (he testified that the cables he was using were shorter and harder to work with) to the truck. He then allowed the Peterbilt to charge for 10-15 minutes before attempting to start the Peterbilt's engine again. Based upon Claimant's testimony regarding the activities he took in an effort to start the Peterbilt, Respondents point out that the injury could not have taken place at 4:45 a.m. as claimed. Indeed, given that the minimum times described by the Claimant, excluding his efforts to locate jumper cables and get the truck started, exceed 15 minutes, the injury could not have taken place at 4:45 a.m. as claimed. At best, the injury could have occurred within 34 minutes from Claimant's arrival at work, assuming that he arrived at 4:30 as claimed, given his text message to Mr. Chiddix sent at 5:04 a.m. Weighing all that Claimant described he undertook in his alleged efforts to jump-start the Peterbilt against the more persuasive competing evidence, leads the ALJ to conclude that a claim of injury occurring within 34 minutes of Claimant's arrival at work is also improbable.

F. Claimant's testimony was contradicted a number of times throughout the hearing. Moreover, while Claimant testified that he was provided a receipt for the jumper cables he purchased at WalMart, he did not provide it to Employer or the court as some evidence that he traveled to WalMart as he claimed. Claimant called his own credibility into question when he failed to disclose that he had obtained employment with Falcon in his answers to interrogatories, and also that he had left his employment at Falcon voluntarily, when the evidence unequivocally demonstrates that Claimant was terminated for cause due to his failure to abide by DOT regulated safety precautions. Such inconsistences and lack of candor cannot be reconciled with the balance of the competing evidence nor ignored by the court. Accordingly, the ALJ concludes that Claimant's testimony regarding the events he asserts caused a low back injury is unreliable and unpersuasive. Given the totality of the evidence presented, the ALJ agrees with Respondents to find/conclude that Claimant probably did not attempt to clock in for work on December 19, 2016 as he likely did not appear for work that morning.

Compensability

G. To sustain his burden of proof concerning compensability, Claimant must establish that the condition for which he seeks benefits was proximately caused by an "injury" arising out of and in the course of employment. *Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo.App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

H. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs "in the course of" employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions.

In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co., 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). Here, the objective medical evidence supports Respondents' contention that Claimant did not sustain a work related injury even if Claimant had established that he was indeed at work on the morning of December 19, 2016 and that he fell while exiting the Peterbilt. Indeed, there is a dearth of objective medical evidence to support that he sustained any acute injury assuming that he did fall as claimed. The only medically based diagnosis supported by imaging is that of subacute to chronic compression fractures that the ALJ concludes likely pre-existed any alleged fall. While Dr. Hall speculated that Claimant's pain could be generated from the facet joints, this suggestion was persuasively discredited by Dr. McCranie, who testified that if the facet joints were the pain generator, there would be objective medical evidence of this on the MRI scan. She testified that upon her review of the MRI scan report, she found no objective evidence to support a finding that the facet joints are the source of Claimant's pain. As presented, the evidence supports a conclusion that Claimant's pain is, more probably than not, related to the delayed healing of his pre-existing chronic compression fractures.

I. A pre-existing condition "does not disqualify a claimant from receiving workers compensation benefits." *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004). To the contrary, a claimant may be compensated if his or her employment "aggravates, accelerates, or "combines with" a pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940). Assuming that Claimant had established that he was at work and had fallen from the Peterbilt as claimed, the medical evidence does not support a conclusion that he sustained an injury, including a compensable aggravation of an underlying pre-existing condition to his low back. Rather, when Claimant's pre-injury medical history, concerning his low back, as explained by Dr. McCranie, is combined with his imaging studies, a reasonable inference can be drawn that his symptoms are, more probably than not, due to pain associated with the delayed healing of his chronic compression fractures rather than the December 19, 2016 incident. Consequently, the ALJ concludes that had Claimant proven that he was at work and fell from the Peterbilt on December 19, 2016, he failed to prove, by a preponderance of the evidence, that there is a causal connection between his employment and the resulting condition for which medical treatment benefits are sought. §8-43-201, C.R.S.; *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). Because Claimant failed to establish he suffered a compensable injury, his claim must be denied and dismissed. Accordingly, his remaining claims need not be addressed.

ORDER

It is therefore ordered that:

1. Claimant’s claim for workers’ compensation benefits is hereby denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 23, 2018

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-004-079-05

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 1, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 3/1/18, Courtroom 1, beginning at 1:30 PM, and ending at 5:00 PM).

Claimant's Exhibits 1 through 12 were admitted into evidence, without objection, Respondents' Exhibits A through G were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ruled from the bench and referred preparation of a proposed decision to counsel for the Claimant, which was filed, electronically, on March 8, 2018. Respondents were given two working days within which to file objections to the proposed decision. None were timely filed and the matter was deemed submitted for decision. After a consideration of the proposed decision, the ALJ has modified it and hereby issues the following decision.

ISSUES

The issue to be determined by this decision concerns whether the Respondents have overcome the opinion of the Division Independent Medical Examiner's (DIME), Clarence Henke, M.D., that the Claimant is not at maximum medical improvement (MMI).

The Respondents bear the burden of proof, by clear and convincing evidence.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. Claimant Firefighter, a Paramedic Captain, suffered an admitted injury on November 4, 2015, while he was in the course and scope of employment. He received treatment from multiple sources for his right shoulder injury (RUE), as well as for his left elbow (LUE). He underwent right shoulder surgery on January 12, 2016, with Michael Hewitt, M.D.

2. Ultimately, Respondents filed a Final Admission of Liability (FAL), dated July 6, 2017, admitting for a scheduled impairment of the right shoulder (RUE) of 1% for a total of $596.77, with a maximum medical improvement (MMI) date of May 17, 2017; and, admitting for causally related and reasonably necessary post-MMI medical maintenance treatment (*Grover* medicals).

The Left Elbow

3. The Claimant sought treatment for his left elbow due to overuse in May 2016. He testified that his left elbow pain began when he was on light duty and due to the right shoulder surgery he was unable to use his RUE to perform the essential functions of his job. His light duty included sixteen to twenty safety/fire inspections per day using various tools.

4. The Claimant was treated by Doctors at On the Mend (a group of physicians). He received medical treatment for his left elbow during the summer of 2016. The Claimant's condition improved by September after he had been on vacation and not been performing work activity using his LUE. He was provided home exercise and an elbow strap for his left elbow. On September 15, 2016, Authorized Treating Physician (ATP) Sharon R. Walker, M.D., diagnosed the Claimant with lateral epicondylitis on September 15, 2016 (Respondents' Exhibit A, BS 8).

5. The Claimant returned to full duty on September 15, 2016, and subsequently began performing his regular job which requires physical work in the heavy category (Claimant's Exhibit 12, BS 4). After being released to full duty, the Claimant began lifting patients, trams, and extraction equipment, as well as engaging in fire suppression, training and overhaul. This activity caused his left elbow to worsen.

6. ATP Dr. Walker referred the Claimant to orthopedic surgeon Kulvinder Sachar, M.D., who is within the chain of authorized referrals. Dr. Sachar saw the Claimant on November 18, 2016. Dr. Sachar stated that the Claimant was using his left arm more significantly and had developed left medical epicondyle pain and that he had tried rest and anti-inflammatories without success. Dr. Sachar gave the Claimant an injection in the left medical epicondyle on that date.

7. The Claimant underwent an MRI (magnetic resonance imaging) on January 20, 3017, which established findings consistent with chronic medial epicondylitis with a partial thickness tear of the central fibers of the common flexor tendon (Claimant's Exhibit 1, BS 54).

8. The Claimant saw Dr. Sachar again on February 15, 2017. Dr. Sachar documented the fact that the November 2016 injection had given Claimant some relief but its effect had recently worn off. The Claimant underwent a second injection.

9. The Claimant has not received treatment for his left elbow since he last saw authorized referral physician, Dr. Sachar, because additional treatment for his left elbow has been denied by the Respondents.

10. Although ATP Dr. Walker had treated the Claimant for left elbow pain on numerous occasions, she did not render a specific opinion on causation until after she had reviewed an independent examination (IME) performed at the request of the Respondents by Carlos Cebrian, M.D., dated April 18, 2017 (Claimant's Exhibit 10, BS 17). After reviewing Dr. Cebrian's report, Dr. Walker stated the "opinion" that Claimant's left elbow epicondylitis was not related to his November 4, 2015, left elbow injury, despite Dr. Walker having treated Claimant's left elbow lateral tendon (Respondents' Exhibit A, BS 16). Consequently, when Dr. Walker released the Claimant at MMI on May 17, 2017, she did not provide him with a left elbow impairment rating (Respondents' Exhibit A, BS 18 – 21). Having reviewed the four corners of ATP Dr.

Walker's release of the Claimant at MMI, the ALJ infers and finds that Dr. Walker abdicated her independent medical judgment to IME Dr. Cebrian. On the left elbow issue, ATP Dr. Walker's ultimate opinion can be no better than Dr. Cebrian's opinion in this regard.

11. After the Claimant was placed at MMI the Respondents issued an FAL on July 6, 2017, as referenced in Finding No. 2 herein above, no impairment was given for the Claimant's left elbow. Thereafter, the Claimant timely sought a DIME, which Dr. Henke was assigned to perform.

The Division Independent Medical Examination (DIME) of Clarence Henke, M.D.

12. DIME Dr. Henke was of the opinion that the Claimant was **not** at MMI, and that the Claimant was suffering from the causally related condition of work-related left medial epicondylitis. Dr. Henke stated the opinion that as of the date of his evaluation on October 11, 2017, MMI had not been achieved for either the Claimant's right shoulder or his left elbow (Claimant's Exhibit 2, BS 19). DIME Dr. Henke did not provide permanent ratings for either the right shoulder or his left elbow because the Claimant was not at MMI. Dr. Henke also recommended that the Claimant undergo follow-up treatment for his left elbow. *Id.*

13. DIME Dr. Henke stated that the Claimant's "[l]eft elbow pain that developed from **overuse** (emphasis supplied) when he was rehabilitating from right shoulder surgery," and that he had some occupational therapy (OT) visits with some improvement, but pronation and flexion still causes discomfort (Claimant's Exhibit 2, BS 17).

Respondents' Independent Medical Examiner (IME), Carlos Cebrian, M.D.

14. Respondents' retained Dr. Cebrian, testified as an expert in the field of occupational medicine and a Level 11 accredited physician --to challenge DIME Dr. Henke's opinions. Dr. Cebrian agreed that the Claimant was suffering left medial epicondylitis but asserted that DIME Dr. Henke had inadequately addressed causation to support his opinion in finding that Claimant had suffered a work related left medical epicondylitis. Although there was no evidence of pre-existing left elbow problems, Dr. Cebrian stated the opinion that there was insufficient evidence establishing a causal relationship between the Claimant's epicondylitis and his November 2015 injury. Dr. Cebrian's ultimate opinion was that it was not medically probable that Claimant's left medial epicondylitis, with a partial tear, is causally related to his November 4, 2015, injury. The ALJ infers and finds that the underlying basis of Dr. Cebrian's opinion with respect to the Claimant's left elbow is inadequately explained and does not establish that it is highly probable, unmistakable and free from serious and substantial doubt that any of DIME Dr. Henke's opinions are wrong.

15. The ALJ draws a plausible inference and finds that Dr. Cebrian has a mere difference of opinion with DIME Dr. Henke's opinions, which does not rise to the level of "clear and convincing" evidence that Dr. Henke's opinions are wrong.

Claimant's IME, Ronald Swarsen, M.D.

16. The Claimant retained Dr. Swarsen, to testify in support of Dr. Henke's DIME. Dr. Swarsen testified as an expert in the field of occupational medicine and as a Level II an accredited physician.

17. Dr. Swarsen was of the opinion that DIME Dr. Henke had adequately provided a causation analysis under both the AMA *Guides to the Evaluation of Permanent Impairment*, 3rd Ed., Rev. AMA *Guides*) and the Division of Workers' Compensation (DOWC) Medical Treatment Guidelines (MTG*)*. After hearing the testimony of both Dr. Cebrian and the Claimant, Dr. Swarsen was of the opinion that there was more than adequate evidence to support DIME Dr. Henke's left elbow causation determination. Thus, the fact that Claimant was performing heavy work when he returned to full duty, had been evaluated by an orthopedic surgeon diagnosing left medial epicondylitis, had undergone MRIs which showed left elbow symptomatology, and the proximity of the development of left medial epicondylitis to the November 2015 injury, established that Claimant's left elbow injury was occupationally related.

Ultimate Findings

18. The ALJ finds the opinions of Dr. Swarsen, the testimony of the Claimant, and the medical records to be highly persuasive and credible. Together, these opinions and records support the opinion of DIME Dr. Henke that Claimant suffered a causally work related left elbow injury and is not at MMI, and the ALJ rejects the contrary opinion of Dr. Cebrian as lacking in overall credibility. Dr. Cebrian has a mere difference of opinion with DIME Dr. Henke's opinions, which does not rise to the level of "clear and convincing" evidence that Dr. Henke's opinions are wrong.

19. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept the opinions of DIME Dr. Henke and Claimant's IME Dr. Swarsen, plus the testimony of the Claimant, and to reject all opinions to the contrary.

20. Respondents have failed to demonstrate that it is highly probable, unmistakable, and free from serious and substantial doubt that DIME Dr. Henke's opinions that the Claimant's LUE injury is causally related to the November 4, 2015, admitted RUE injury and that the Claimant is **not** at MMI.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, the opinions of Dr. Swarsen, the testimony of the Claimant, and the medical records were highly persuasive and credible. Together, these opinions and records supported the opinion of DIME Dr. Henke that Claimant suffered a causally work related left elbow injury and is not at MMI. Also, as found, the ALJ rejected the contrary opinion of Dr. Cebrian as lacking in overall credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App.

2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept the opinions of DIME Dr. Henke and Claimant's IME Dr. Swarsen, plus the testimony of the Claimant, and to reject all opinions to the contrary.

Burden of Proof

c. As found, the party seeking to overcome a DIME physician's opinions bears the burden of proof by clear and convincing evidence. *Magnetic Engineering, Inc. v. Indus. Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000). *Also see Leprino Foods Co. v. Indus. Claim Appeals Office,* 134 P.3d 475 (Colo. App. 2005). The DIME physician's determination of MMI is binding unless overcome by "clear and convincing evidence." *Metro Moving & Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995); *See also Peregoy v. Indus. Claim Appeals Office,* 87 P.3d 261 (2004); and § 8-42-107(b)-(c), C.R.S. *Also see Whiteside v. Smith,* 67 P.3d 1240 (Colo. 2003). Where the threshold determination of compensability is not an issue, a DIME physician's conclusion that an injured worker's medical problems were components of the injured worker's overall impairment constitutes a part of the diagnostic assessment that comprises the DIME process and, as such the conclusion must be given presumptive effect and can only be overcome by clear and convincing evidence. *Qual-Med, Inc. v. Indus. Claim Appeals Office*, 961 P.2d 590 (Colo. App. 1998); *Leprino Foods Co. v. Indus. Claim Appeals Office, supra*; *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 400 (Colo. App. 2009). "Clear and convincing evidence" is evidence, which is stronger than preponderance, is unmistakable, makes a fact or facts highly probable or the converse, and is free from serious or substantial doubt. *Metro Moving & Storage Co. v. Gussert, supra; Leming v. Indus. Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). In other words, a DIME physician's finding may not be overcome unless the evidence establishes that it is "highly probable" that the DIME physician's opinion is incorrect. *Postelwait v. Midwest Barricade,* 905 P 2d 21 (Colo. App. 1995). To overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable

and free from serious or substantial doubt". *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 [Indus. Claim Appeals Office (ICAO), Oct. 4, 2001]. A mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc.,* W.C. Nos. 4-532-166 & 4-523-097 (ICAO, July 19, 2004); *see Shultz v. Anheuser Bush, Inc.,* W.C. No. 4-380-560 (ICAO, Nov. 17, 2000). As found, Respondents, as challenger to DIME Dr. Henke's opinions failed to sustain their burden as to MMI and to the alleged lack of causal relatedness of the Claimant's overuse LUE condition.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents' Request to overcome the opinions of Division Independent Medical Examiner Clarence Henke, M.D., that the Claimant's left upper extremity condition is causally related to the admitted right shoulder injury of November 4, 2015; and, that the Claimant is not at maximum medical improvement, is hereby denied and dismissed.

B. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of March 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUE

Whether Claimant has established by a preponderance of the evidence that her ambulance transportation and treatment at the St. Anthony's Hospital Emergency Room on June 8, 2017 constituted an emergency that was reasonable, necessary and causally related to her February 2, 2017 admitted lower back injury.

FINDINGS OF FACT

1. Claimant worked for Employer as an Assistant Store Manager. On February 2, 2017 Claimant suffered admitted industrial injuries during the course and scope of her employment with Employer. While Claimant was taking out trash she slipped on ice and fell down four cement stairs. Claimant suffered lower back pain, right hip pain, headaches and bruises as a result of the incident.

2. Claimant selected NextCare Urgent Care for medical treatment. She visited Authorized Treating Physician (ATP) Erick Gomer, M.D. and received conservative treatment for her symptoms. Claimant noted that she suffered extreme pain during the period.

3. Dr. Gomer referred Claimant to Usama Ghazi, D. O. for an examination. On April 3, 2017 Claimant visited Dr. Ghazi. Claimant reported that she was experiencing severe neck pain that caused headaches. She also noted stabbing lower back pain. Dr. Ghazi commented that Claimant specifically identified the "L4, L5 and S1 paraspinals and the SI joints." After reviewing Claimant's medical records and conducting a physical examination, Dr. Ghazi diagnosed Claimant with lumbar facet pain and paraspinal tightness as a result of her February 2, 2017 slip and fall. He recommended physical therapy, chiropractic treatment and facet joint injections.

4. On May 4, 2017 Claimant again visited Dr. Ghazi. He administered bilateral C2-3 and C3-4 cervical facet joint injections. He noted that Claimant suffered from "severe spondylosis with osteophytosis of the left C2-3 and C3-4 facet joints with moderate findings on the right side." Dr. Ghazi determined that Claimant sustained significant pain relief from the injections. He specifically remarked that Claimant "had 100% anesthetic relief with reproduction of her neck pain and headaches during the contrast injections, followed by 100% relief of the neck pain and 100% relief of the upper cervical facet pain at C2-3 and C3-4 as well as 100% relief of her headaches bilaterally."

5. Claimant testified that on June 8, 2017 she bent over to pick up a laundry basket at home. However, Claimant was unable to straighten and remained locked in the bent position for approximately one and one-half hours. Claimant remarked that she was not receiving treatment from a Workers' Compensation physician at the time because she

had been discharged from care by Dr. Gomer. Despite her pain and discomfort Claimant was thus unable to contact a physician.

6. Concerned about her symptoms, Claimant called an ambulance. She was transported to the St. Anthony Hospital Emergency Room. Providers noted that she had suffered an initial Workers' Compensation injury to her lower back approximately three months earlier. An MRI revealed a small disc bulge contacting the L5 nerve roots. The MRI did not reflect any acute surgical pathology. After undergoing a physical examination, Claimant was diagnosed with intervertebral disc disorders with radiculopathy in her lumbar region, headaches and hypertension. Claimant was discharged from care with medications.

7. On June 9, 2017 Claimant returned to Dr. Ghazi for an examination. The appointment had been previously scheduled as a follow-up for the cervical injections she received on May 4, 2017. She recounted that on June 8, 2017 she bent over and became stuck in a 90-degree flexion position. Claimant was unable to extend her back and was transported to the St. Anthony Hospital Emergency Room. Dr. Ghazi reported that Claimant had been experiencing treatment authorization issues, had been unable to visit a provider for three weeks and suffered a severe flare-up of her pain. He noted that the June 8, 2017 lumbar MRI reflected multilevel facet arthrosis as well as an annular tear with a small central disc protrusion at L5-S1. Dr. Ghazi commented that Claimant's physical examination was consistent with L4-L5 and L5-S1 facet joint pain that was confirmed by the MRI. He summarized that Claimant suffered cervical facet syndrome and headaches that had significantly improved after facet injections. Dr. Ghazi recommended additional injections, physical therapy, massage therapy and medications.

8. On June 29, 2017 Claimant underwent an initial evaluation with Matt Miller, M.D. at Front Range Occupational Medicine. Dr. Miller diagnosed Claimant with a work-related sprain of the ligaments of the cervical spine. He assigned work restrictions that limited Claimant to lifting and pushing/pulling not to exceed 15 pounds. Dr. Miller also noted that Claimant should change positions frequently and not engage in prolonged standing. He released her to modified duty employment.

9. Claimant subsequently underwent additional conservative treatment in the form of facet joint injections and visits with Drs. Ghazi and Miller. She still has not reached Maximum Medical Improvement (MMI) for her February 2, 2017 industrial injuries.

10. On January 24, 2018 Claimant underwent an independent medical examination with Timothy O. Hall, M.D. Dr. Hall considered whether Claimant's emergency room treatment on June 8, 2017 was reasonable, necessary and causally related to her February 2, 2017 industrial injuries. Dr. Hall reviewed Claimant's medical records including the report from the St. Anthony Hospital Emergency Room. He concluded that Claimant's June 8, 2017 emergency room visit was reasonable, necessary and causally related to her February 2, 2017 industrial injuries. Dr. Hall explained that Claimant had received extensive lower back treatment and undergone substantial invasive procedures to treat her lower back pain. Although Claimant's symptoms on June 8, 2017 did not constitute an "emergency situation" according to Dr. Hall, it was

reasonable for her to visit the emergency room because of the acute onset of symptoms that required a thorough evaluation. Dr. Hall summarized that "considering [Claimant's] pain levels and history of trauma to the area, it is understandable that a dramatic increase in pain would be concerning enough to make an emergent visit to the hospital appropriate."

11. Dr. Hall also testified at the hearing in this matter. He maintained that Claimant's June 8, 2017 emergency room visit was reasonable, necessary and causally related to her February 2, 2017 industrial injuries. Dr. Hall specifically explained that, although Claimant had not suffered a medical emergency, it was reasonable and appropriate for her to seek emergency room treatment. He remarked that Claimant's significant back pain on June 8, 2017 caused her to become fearful and concerned about her condition. Dr. Hall noted that Claimant lacked access to a treating physician at the time and no plan existed to obtain medical treatment if she experienced a flare-up of her back symptoms. Accordingly, to alleviate her concerns, Claimant's visit to the St. Anthony Hospital Emergency Room was reasonable and necessary under the circumstances.

12. Claimant has established that it is more probably true than not that her ambulance transportation and treatment at the St. Anthony's Hospital Emergency Room on June 8, 2017 constituted an emergency that was reasonable, necessary and causally related to her February 2, 2017 lower back injury. Initially, Claimant suffered admitted industrial injuries to her lower back and other body parts on February 2, 2017 when she slipped and fell at work. Claimant received conservative medical care including physical therapy, chiropractic treatment and facet joint injections. Claimant explained that on June 8, 2017 she bent over to pick up a laundry basket at home but was unable to straighten and remained locked in the bent position for approximately one and one-half hours. She remarked that she was not receiving treatment from a Workers' Compensation physician at the time because she had been discharged from care by Dr. Gomer. Despite her pain and discomfort Claimant was unable to contact a physician. She thus called an ambulance and was transported to the St. Anthony's Hospital Emergency Room. An MRI revealed a small disc bulge contacting the L5 nerve roots but no acute surgical pathology. After undergoing a physical examination, Claimant was diagnosed with intervertebral disc disorders with radiculopathy in her lumbar region, headaches and hypertension.

13. After conducting an independent medical examination Dr. Hall concluded that Claimant's June 8, 2017 emergency room treatment was reasonable, necessary and causally related to her February 2, 2017 industrial injuries. He explained that Claimant had received extensive lower back treatment and undergone substantial invasive procedures to treat her condition. Although Claimant's symptoms on June 8, 2017 did not constitute an "emergency situation" according to Dr. Hall, it was reasonable for her to visit the emergency room because of the acute onset of symptoms that required a thorough evaluation. Dr. Hall specifically explained that, although Claimant was not suffering a "medical emergency," it was reasonable and appropriate for her to seek emergency room treatment. He remarked that Claimant's significant back pain on June 8, 2017 caused her to become fearful and concerned about her condition. Dr. Hall noted that Claimant lacked access to a treating physician at the time and no plan existed to obtain medical treatment if she experienced a flare-up of her back symptoms. Based on

the medical records and persuasive opinion of Dr. Hall, Claimant's treatment at the St. Anthony Hospital Emergency Room to alleviate her concerns constituted an emergency that was reasonable and necessary under the circumstances. Claimant was thus permitted to obtain immediate medical treatment without the delay of notifying Employer to obtain a referral or approval.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

5. Section 8-43-404(5)(a), C.R.S. grants employers the initial authority to select the Authorized Treating Physician (ATP). However, in a medical emergency a claimant need not seek authorization from her employer or insurer before seeking medical treatment from an unauthorized medical provider. *Sims v. Industrial Claim Appeals Office,* 797 P.2d 777, 781 (Colo. App. 1990). A medical emergency affords an injured worker the right to obtain immediate treatment without the delay of notifying the employer to obtain a referral or approval. *In Re Gant*, W.C. No. 4-586-030 (ICAP, Sept. 17, 2004). Because there is no precise legal test for determining the existence of a medical emergency, the issue is dependent on the particular facts and circumstances of the claim. *In re Timko,* W.C. No. 3-969-031 (ICAP, June 29, 2005).

6. As found, Claimant has established by a preponderance of the evidence that her ambulance transportation and treatment at the St. Anthony's Hospital Emergency Room on June 8, 2017 constituted an emergency that was reasonable, necessary and causally related to her February 2, 2017 lower back injury. Initially, Claimant suffered admitted industrial injuries to her lower back and other body parts on February 2, 2017 when she slipped and fell at work. Claimant received conservative medical care including physical therapy, chiropractic treatment and facet joint injections. Claimant explained that on June 8, 2017 she bent over to pick up a laundry basket at home but was unable to straighten and remained locked in the bent position for approximately one and one-half hours. She remarked that she was not receiving treatment from a Workers' Compensation physician at the time because she had been discharged from care by Dr. Gomer. Despite her pain and discomfort Claimant was unable to contact a physician. She thus called an ambulance and was transported to the St. Anthony's Hospital Emergency Room. An MRI revealed a small disc bulge contacting the L5 nerve roots but no acute surgical pathology. After undergoing a physical examination, Claimant was diagnosed with intervertebral disc disorders with radiculopathy in her lumbar region, headaches and hypertension.

7. As found, after conducting an independent medical examination Dr. Hall concluded that Claimant's June 8, 2017 emergency room treatment was reasonable, necessary and causally related to her February 2, 2017 industrial injuries. He explained that Claimant had received extensive lower back treatment and undergone substantial invasive procedures to treat her condition. Although Claimant's symptoms on June 8, 2017 did not constitute an "emergency situation" according to Dr. Hall, it was reasonable for her to visit the emergency room because of the acute onset of symptoms that required a thorough evaluation. Dr. Hall specifically explained that, although Claimant was not suffering a "medical emergency," it was reasonable and appropriate for her to seek emergency room treatment. He remarked that Claimant's significant back pain on June 8, 2017 caused her to become fearful and concerned about her condition. Dr. Hall noted that Claimant lacked access to a treating physician at the time and no plan existed to obtain medical treatment if she experienced a flare-up of her back symptoms. Based on the medical records and persuasive opinion of Dr. Hall, Claimant's treatment at the St. Anthony Hospital Emergency Room to alleviate her concerns constituted an emergency that was reasonable and necessary under the circumstances. Claimant was thus

permitted to obtain immediate medical treatment without the delay of notifying Employer to obtain a referral or approval.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents are financially responsible for Claimant's ambulance transportation and treatment at the St. Anthony's Hospital Emergency Room on June 8, 2017

2. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable left shoulder and lower back injuries during the course and scope of her employment with Employer on May 30, 2017.

2. Whether Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment, including left shoulder arthroscopic surgery, for her May 30, 2017 industrial injuries.

FINDINGS OF FACT

1. Claimant is a 31-year-old female who worked for Employer as a Flight Attendant. On May 30, 2017 Claimant was staffing an airline flight traveling from Atlanta, GA to Fort Lauderdale, FL. As the aircraft was reaching the Florida airport the pilot noted there was significant turbulence from a storm and asked Claimant to clean-up early to prepare for the descent.

2. Claimant walked toward a two person jump seat to sit down and apply her safety restraint. Because the other occupant of the jump seat was a large man she had to squeeze between him and a wall. As Claimant was walking past the man's knees the plane hit a patch of turbulence and she fell forward. Claimant struck her left shoulder on the hinge on top of the jump seat and twisted her lower back. She suffered immediate pain.

3. Claimant believed her symptoms would improve. However, when she awoke during the night she was experiencing excruciating burning pain. Claimant thus reported her injuries to Employer on May 31, 2017 and obtained a flight back to her home in Atlanta.

4. Claimant selected Concentra Medical Centers for treatment. On June 1, 2017 Claimant visited Concentra for an examination. Claimant reported that she slammed into a jump seat during a turbulent airline flight while working as a Flight Attendant for Employer on May 30, 2017. She was diagnosed with a cervical strain and contusions of her left upper extremity. Medical providers recommended diagnostic testing, medications, physical therapy and work restrictions.

5. On June 1, 2017 Claimant underwent x-rays of her left shoulder and cervical spine. The shoulder imaging did not reveal any evidence of an "acute fracture, dislocation or osseous lesion." The cervical spine x-ray reflected "straightening of the normal cervical lordosis, possibly secondary to muscle spasm." The imaging was otherwise negative.

6. On June 19, 2017 Claimant underwent an MRI of her left shoulder. The MRI revealed a "small questionable" superior labral or SLAP tear. The imaging also reflected mild supraspinatus and infraspinatus tendinosis.

7. On June 22, 2017 Claimant underwent an evaluation with Ezequiel H. Cassinelli, M.D. Dr. Cassinelli noted that Claimant had been receiving treatment through Concentra for complaints of neck pain, lower back pain and left shoulder pain. He concluded that Claimant was suffering from either soft tissue or discogenic pain in her back and recommended physical therapy with restrictions.

8. Claimant obtained additional medical care through Concentra. On July 21, 2017 Claimant visited Eric Furie, M.D. She reported that she continued to experience left shoulder pain and clicking. Dr. Furie diagnosed a possible labral tear or loose body in Claimant's left shoulder. Because of her "severe crepitus and daily pain" Dr. Furie remarked that either a labral tear or loose body would require surgical intervention. He recommended scheduling arthroscopic left shoulder surgery and discontinuing physical therapy. Dr. Furie continued Claimant's work restriction of no reaching above shoulder level.

9. On September 11, 2017 Claimant visited private physician Orthopedic Surgeon Thomas P. Branch, M.D. for her left shoulder symptoms. Claimant reported that she has suffered left shoulder popping, cracking and locking since she was injured on May 30, 2017. She noted that her claim had been denied because of a misunderstanding that she had recently been involved in a motor vehicle accident that injured her shoulder. However, Claimant explained that her husband had been in a motor vehicle accident and she had not suffered any left shoulder or back symptoms prior to her May 30, 2017 industrial accident.

10. After conducting a physical examination and reviewing diagnostic testing Dr. Branch diagnosed Claimant with left shoulder impingement syndrome, a superior glenoid labrum lesion and an incomplete rotator cuff tear. He concluded that Claimant suffered a work-related injury on May 30, 2017. Dr. Branch remarked that Claimant's left shoulder MRI revealed a "small questionable superior labral tear" or SLAP tear. He thus recommended surgical repair. Dr. Branch specified that Claimant could not return to her position as a Flight Attendant because she was unable to perform her job duties.

11. On November 11, 2016 Claimant underwent an independent medical examination with Timothy S. O'Brien, M.D. Claimant recounted that she injured her back and left shoulder when she struck a wall because of turbulence during an airline flight in her capacity as a Flight Attendant for Employer. Despite medical treatment and physical therapy through Concentra, Claimant was unable to obtain relief of her symptoms. She specifically explained that activities of daily living including sitting, standing, bending lifting, pushing, pulling, sleeping and driving aggravated her left shoulder pain. Dr. O'Brien reviewed Claimant's medical treatment records and diagnostic testing. He also conducted a physical examination.

12. Dr. O'Brien concluded that Claimant suffered the following as a result of her May 30, 2017 work accident: (1) minor cervical, thoracic and lumbosacral strains/sprains; (2) a minor left shoulder strain/sprain/contusion; and (3) a minor left elbow contusion. Dr. O'Brien noted that Claimant described an appropriate mechanism of injury with no significant delay in reporting and thus acknowledged that she had suffered an injury on May 30, 2017. However, he commented that Claimant did not suffer any bleeding after the incident and there was no objective evidence of tissue breakage. Dr. O'Brien explained that a direct blow to the shoulder would not cause a labral tear or spinal injuries. He specifically remarked that, because there was no evidence of injury to the skin on the directly impacted left shoulder joint, there was "even less dissipation of energy into the axial skeleton or spinal elements."

13. Dr. O'Brien remarked that Claimant's minor injuries healed "uneventfully and expeditiously" by June 2017. He noted that Claimant's elbow pain was transient and she did not have any complaints of elbow symptoms by June 30, 2017. In addressing Claimant's spine, Dr. O'Brien commented that Claimant's cervical and thoracic regions healed by June 22, 2017 based on the resolution of her pain. He detailed that Claimant's lumbosacral spine healed by June 12, 2017 because she exhibited nonorganic findings. Finally, Dr. O'Brien explained that Claimant's left shoulder healed by June 19, 2017 because she had a normal MRI scan. Claimant did not exhibit labral or rotator cuff tears.

14. Dr. O'Brien remarked that, regardless of causation, Claimant had not exhausted her non-operative treatment modalities. He specifically remarked that surgery should not have been recommended without attempting a diagnostic or therapeutic injection to the left shoulder. Dr. O'Brien also commented that, because Claimant has been experiencing inorganic pain symptoms, surgery is not warranted. He summarized that Claimant has reached Maximum Medical Improvement (MMI) and does not require medical maintenance treatment.

15. On December 14, 2017 Claimant returned to Dr. Branch for an examination. After conducting a physical examination Dr. Branch recommended physical therapy for Claimant's pelvic and lower back pain as well as an MRI of the lumbosacral spine. He continued to recommend surgery for her work-related left shoulder injury. Dr. Branch also maintained that Claimant was still unable to perform her job duties as a Flight Attendant for Employer. He specified that Claimant was limited in her ability to stand and walk for long periods of time because of her back and SI joint symptoms. Dr. Branch commented that Claimant would be unable to work for three months pending "follow-up, treatment and recommended study results."

16. Claimant testified at the hearing in this matter. She explained that, prior to May 30, 2017, she was working full duty as a Flight Attendant and had never been assigned work restrictions. Claimant remarked that she had never undergone a shoulder MRI or received a recommendation for shoulder surgery. She noted that her current left shoulder symptoms include popping, locking and the inability to lift her arm. In addressing her back symptoms Claimant specified that she cannot "sit or stand for any length of time really without experiencing massive pressure that builds."

17. On February 2, 2018 the parties conducted the post-hearing evidentiary deposition of Dr. O' Brien. Dr. O'Brien maintained that Claimant did not suffer a labral tear to her left shoulder or any back injuries while performing her job duties on May 30, 2017. He explained that labral tears only occur when an acute injury results in a massive trauma. Moreover, labral tears are usually associated with shoulder dislocations. Dr. O'Brien thus noted that it was "virtually impossible" for Claimant to suffer a labral tear from a direct blow to the front of her left shoulder. He also detailed that only the axial plane of Claimant's left shoulder MRI revealed a "questionable labral tear" while the coronal and sagittal views did not reflect a tear. Dr. O'Brien then detailed that the questionable finding on the MRI did not corroborate with his physical examination of Claimant. Finally, Claimant did not likely suffer a back injury while performing her job duties for Employer. Because back injuries are typically caused by bending, stooping or twisting, a direct blow to the shoulder was inconsistent with Claimant's back symptoms.

18. Dr. O'Brien detailed that Claimant suffered minor injuries on May 30, 2017. He remarked that it was appropriate for Claimant to obtain medical care to determine the severity of her injuries, but her symptoms would have healed rapidly without treatment. Furthermore, the requested surgery for Claimant's left shoulder is not reasonable and necessary because there were no anatomical findings on Claimant's MRI that could be considered surgical indicators. Dr. O'Brien reasoned that Claimant's subjective symptoms could not be correlated with objective findings and thus did not warrant any ongoing medical care or surgical intervention.

19. Claimant has demonstrated that it is more probably true than not that she suffered compensable left shoulder and lower back injuries during the course and scope of her employment with Employer on May 30, 2017. Initially, Claimant explained that she was walking toward a jump seat to apply her safety restraint while working as a Flight Attendant for Employer. When the airplane encountered turbulence she struck her left shoulder on the hinge on top of the jump seat and twisted her lower back. A left shoulder MRI revealed a "small questionable" labral tear. Dr. Furie diagnosed a possible labral tear or loose body in Claimant's left shoulder and recommended surgical intervention. Dr. Branch diagnosed Claimant with left shoulder impingement syndrome, a superior glenoid labrum lesion and an incomplete rotator cuff tear. He concluded that Claimant suffered an industrial injury while working for Employer on May 30, 2017. Finally, Dr. O'Brien concluded that Claimant suffered the following as a result of her May 30, 2017 work accident: (1) minor cervical, thoracic and lumbosacral strains/sprains; (2) a minor left shoulder strain/sprain/contusion; and (3) a minor left elbow contusion. Dr. O'Brien noted that Claimant described an appropriate mechanism of injury with no significant delay in reporting and thus acknowledged that she had suffered a work injury on May 30, 2017. Accordingly, the persuasive medical evidence reflects that Claimant suffered left shoulder and lower back injuries while performing her job duties on May 30, 2017.

20. Claimant has established that it is more probably true than not that she is entitled to receive reasonable, necessary and causally related medical treatment for her May 30, 2017 industrial injuries. The record reflects that Claimant is seeking medical benefits for her left shoulder and lower back. Respondents are not challenging a specific medical benefit but instead assert that Claimant's current symptoms are not related to the

admitted injuries and seek a denial of additional medical treatment. Relying on the opinion of Dr. O'Brien, Respondents assert that Claimant is not entitled to receive any additional medical treatment. Dr. O'Brien specifically remarked that Claimant's minor injuries healed "uneventfully and expeditiously" by June 2017. He noted that Claimant's elbow pain was transient and she did not have any complaints of elbow symptoms by June 30, 2017. In addressing Claimant's spine, Dr. O'Brien commented that Claimant's cervical and thoracic regions healed by June 22, 2017 based on the resolution of her pain. He detailed that Claimant's lumbosacral spine healed by June 12, 2017 because she exhibited nonorganic findings. Finally, Dr. O'Brien explained that Claimant's left shoulder healed by June 19, 2017 because she had a normal MRI scan.

21. Relying on Dr. O'Brien's analysis requires a *de facto* finding that Claimant has reached Maximum Medical Improvement (MMI) regarding the May 30, 2017 injuries. Because Claimant is entitled to medical benefits until reaching MMI, a denial of all further medical treatment necessarily reflects an implicit determination that Claimant reached MMI for the effects of her industrial injuries. However, there has been no medical determination of MMI by an Authorized Treating Physician (ATP) or Division Independent Medical Examination (DIME) physician. Furthermore, the persuasive opinions of Claimant's treating doctors reflect that she requires continuing medical treatment for her lower back and left shoulder symptoms. Drs. Furie and Branch independently determined that a left shoulder arthroscopy was reasonable, necessary and causally related to her May 30, 2017 industrial accident. Finally, Claimant credibly remarked that she had never undergone a shoulder MRI or received a recommendation for shoulder surgery. She noted that her current left shoulder symptoms include popping, locking and the inability to lift her arm. In addressing her back symptoms Claimant specified that she cannot sit or stand for any length of time without suffering back pressure. The bulk of the persuasive evidence thus reveals that Claimant is entitled to continuing medical treatment, including left shoulder arthroscopic surgery, for her May 30, 2017 work injuries.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that she suffered compensable left shoulder and lower back injuries during the course and scope of her employment with Employer on May 30, 2017. Initially, Claimant explained that she was walking toward a jump seat to apply her safety restraint while working as a Flight Attendant for Employer. When the airplane encountered turbulence

she struck her left shoulder on the hinge on top of the jump seat and twisted her lower back. A left shoulder MRI revealed a "small questionable" labral tear. Dr. Furie diagnosed a possible labral tear or loose body in Claimant's left shoulder and recommended surgical intervention. Dr. Branch diagnosed Claimant with left shoulder impingement syndrome, a superior glenoid labrum lesion and an incomplete rotator cuff tear. He concluded that Claimant suffered an industrial injury while working for Employer on May 30, 2017. Finally, Dr. O'Brien concluded that Claimant suffered the following as a result of her May 30, 2017 work accident: (1) minor cervical, thoracic and lumbosacral strains/sprains; (2) a minor left shoulder strain/sprain/contusion; and (3) a minor left elbow contusion. Dr. O'Brien noted that Claimant described an appropriate mechanism of injury with no significant delay in reporting and thus acknowledged that she had suffered a work injury on May 30, 2017. Accordingly, the persuasive medical evidence reflects that Claimant suffered left shoulder and lower back injuries while performing her job duties on May 30, 2017.

Medical Benefits

8. Respondents are liable for authorized medical treatment that is reasonable and necessary to cure or relieve the effects of an industrial injury. §8-42-101(1)(a), C.R.S.; *Colorado Comp. Ins. Auth. v. Nofio*, 886 P.2d 714, 716 (Colo. 1994). A preexisting condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the preexisting condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). The claimant bears the burden of demonstrating a causal connection between his industrial injuries and the need for additional medical treatment. *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). The determination of whether a particular treatment modality is reasonable and necessary to treat an industrial injury is a factual determination for the ALJ. *In re of Parker*, W.C. No. 4-517-537 (ICAP, May 31, 2006); *In re Frazier,* W.C. No. 3-920-202 (ICAP, Nov. 13, 2000).

9. Section 8-42-101(1), C.R.S. requires the employer to provide medical benefits to cure or relieve the effects of the industrial injury, subject to the right to contest the reasonableness or necessity of any specific treatment. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). The employer's obligation continues until the claimant reaches MMI. MMI is defined as the point in time when the claimant's condition is "stable and no further treatment is reasonably expected to improve the condition." §8-40-201(11.5), C.R.S.

10. As found, Claimant has established by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical treatment for her May 30, 2017 industrial injuries. The record reflects that Claimant is seeking medical benefits for her left shoulder and lower back. Respondents are not challenging a specific medical benefit but instead assert that Claimant's current symptoms are not related to the admitted injuries and seek a denial of additional medical treatment. Relying on the opinion of Dr. O'Brien, Respondents assert that Claimant is not entitled to receive any additional medical treatment. Dr. O'Brien specifically remarked that

Claimant's minor injuries healed "uneventfully and expeditiously" by June 2017. He noted that Claimant's elbow pain was transient and she did not have any complaints of elbow symptoms by June 30, 2017. In addressing Claimant's spine, Dr. O'Brien commented that Claimant's cervical and thoracic regions healed by June 22, 2017 based on the resolution of her pain. He detailed that Claimant's lumbosacral spine healed by June 12, 2017 because she exhibited nonorganic findings. Finally, Dr. O'Brien explained that Claimant's left shoulder healed by June 19, 2017 because she had a normal MRI scan.

11. As found, relying on Dr. O'Brien's analysis requires a *de facto* finding that Claimant has reached Maximum Medical Improvement (MMI) regarding the May 30, 2017 injuries. Because Claimant is entitled to medical benefits until reaching MMI, a denial of all further medical treatment necessarily reflects an implicit determination that Claimant reached MMI for the effects of her industrial injuries. However, there has been no medical determination of MMI by an Authorized Treating Physician (ATP) or Division Independent Medical Examination (DIME) physician. Furthermore, the persuasive opinions of Claimant's treating doctors reflect that she requires continuing medical treatment for her lower back and left shoulder symptoms. Drs. Furie and Branch independently determined that a left shoulder arthroscopy was reasonable, necessary and causally related to her May 30, 2017 industrial accident. Finally, Claimant credibly remarked that she had never undergone a shoulder MRI or received a recommendation for shoulder surgery. She noted that her current left shoulder symptoms include popping, locking and the inability to lift her arm. In addressing her back symptoms Claimant specified that she cannot sit or stand for any length of time without suffering back pressure. The bulk of the persuasive evidence thus reveals that Claimant is entitled to continuing medical treatment, including left shoulder arthroscopic surgery, for her May 30, 2017 work injuries.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered compensable industrial injuries to her left shoulder and lower back on May 30, 2017.

2. Claimant is entitled to receive continued medical treatment, including left shoulder arthroscopic surgery, for her May 30, 2017 industrial injuries.

3. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory*

reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-057-876-01

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on February 22, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 2/22/18, Courtroom 1, beginning at 1:30 PM, and ending at 5:00 PM).

Claimant's Exhibits 1 through 11 were admitted into evidence, without objection. Respondents' Exhibits A through G were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ ordered post-hearing briefs. Claimant's opening brief was filed on March 6, 2018. Respondents' answer brief was filed on March 8, 2018. No timely reply brief was filed and the matter was deemed submitted for decision on March 13, 2018. After a consideration of the evidence and briefs, the ALJ hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern whether the Claimant sustained a compensable occupational injury, specifically, the mental impairment of Post-traumatic Stress Disorder (PTSD) under § 8-41-301, C.R.S.; if compensable,

whether the Claimant is entitled to ongoing temporary total disability (TTD) benefits from September 19, 2017, ongoing; whether Claimant was at fault for termination effective January 25, 2018, for a volitional act which he reasonably could have known would lead to his termination; and; whether Janet Ruby, Employee's Assistance Program (EAP), Denver Family Therapy, is an authorized provider.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

Preliminary Findings

1. At the commencement of the hearing, the parties stipulated if the claim is compensable that the Claimant's average weekly wage (AWW) is $1,871.48. The ALJ so finds.

2. The parties also stipulated if the claim is compensable, Hiep Ritzer, M.D., and Gary Gutterman, M.D., are authorized treating physicians (ATPs). The ALJ so finds.

3. The parties further stipulated if compensable, the Claimant is entitled to TTD benefits from September 19, 2017, and ongoing. The ALJ so finds.

4. The Claimant filed an initial claim for compensation due to a mental impairment, post-traumatic stress disorder (PTSD), on September 18, 2017 (Claimant's Exhibit 1. Respondents filed its First Report of Injury on September 25, 2017 (Claimant's Exhibit 2). Respondents also filed a Notice of Contest on February 28, 2017 (Claimant's Exhibit 3). The Claimant filed an Application for Hearing on October 27, 2017 (Claimant's Exhibit 4).

5. The Claimant filed his claim for mental impairment because he was suffering the signs and symptoms of PTSD for approximately one year. He continued working full duty during that period of time. When he filed his claim he was performing services as a Paramedic Lieutenant and had been a firefighter for approximately sixteen years (Claimant's Exhibit 1).

Circumstances Leading to PTSD

6. Prior to filing his claim, the Claimant had been experiencing increasingly significant psychological problems impacting his ability to function as a firefighter Paramedic Lieutenant. These symptoms caused anxiety and affected the Claimant's leadership, his ability to train younger firefighters and his concentration. As a Paramedic Lieutenant, his essential duties and responsibilities are extensive and

require him to supervise station personal and require him to be capable of "planning, directing, and supervising the work activities of subordinates, evaluating and reviewing the work products of subordinates; and making recommendations on disciplinary actions; plus, assisting in the training and professional development of subordinate employees" (Claimant's Exhibit 8, BS 40). The Claimant is also responsible for proctoring and providing training for EMS students assigned to his station. *Id.*

7. After the Claimant submitted his mental impairment claim, the Respondents referred him to Dr. Ritzer for evaluation and treatment. He first saw Dr. Ritzer on September 27, 2017. The Claimant reported to her that about a month prior to September 27, 2017, he had responded to an incident where a twenty year old female was found hanging in the woods. Additionally, in December 2016, and January 2017, he had responded to two graphic suicides of middle-aged men, one of which was a gunshot to the face. Dr. Ritzer also referenced the Claimant's exposure to a pilot being burned alive following a small plane crash as a traumatic experience (Claimant's Exhibit 5, BS 8). The ALJ infers and finds that Dr. Ritzer catalogues cumulative traumatic events leading to the Claimant's condition.

8. The Claimant's symptomatology included nightmares, wakening up terrified, panic attacks, and numbness and tingling in both extremities.

Causality

9. ATP Dr. Ritzer performed a causality analysis and stated that it was her opinion, to a reasonable degree of medical probability, that the Claimant's symptoms were consistent with a work place mental impairment of PTSD and anxiety. *Id.*, BS 11. She referred the Claimant to ATP Dr. Gutterman, a Level 11 accredited and board certified psychiatrist. Dr. Ritzer took the Claimant off work.

10. The Claimant first saw ATP Dr. Gutterman on October 4, 2017 (Claimant's Exhibit 6, BS 26). ATP Dr. Gutterman documented the Claimant's symptoms of anxiety, racing heart, nightmares, and hypervigilance. He noted that these had increased over the past three years following numerous traumatic incidents the Claimant had witnessed at work. ATP Dr. Gutterman noted that the Claimant was unable to sleep and that the Claimant was a zombie although he tried to sleep as best as possible (Claimant's Exhibit 7, BS 27). According to the Claimant, he has been suffering a disintegration of his personality and not functioning well at work, and he understood his need for psychological intervention when he filed his workers' compensation claim on September 17, 2017.

11. During his evaluation of the Claimant, ATP Dr. Gutterman stated that Claimant demonstrated anxiety when speaking about traumatic incidents to which he responded as a firefighter in the recent past. ATP Dr. Gutterman's concluded that the Claimant was experiencing symptoms consistent with PTSD, and was continuing to

suffer anxiety, panic attacks, hypervigilance, nightmares, and intrusive memories of the traumatic incidents and scenes he had responded to as a firefighter. Dr. Gutterman noted that although the Claimant had been prescribed anti-depressants by his family doctor these did not help (Respondents' Exhibit L, BS 29). ATP Dr. Gutterman prescribed Clonazepam and Trintellix.

12. At a follow-up examination with ATP Dr. Gutterman on October 17, 2017, ATP Dr. Gutterman again diagnosed the Claimant with PTSD and noted that the Claimant had some relief from his nightmares resulting from his use of Prazosin (Claimant's Exhibit 7, BS 31).

13. By November 14, 2017, ATP Dr. Gutterman reported that the Claimant had been more stable with less anxiety having been away from work and his sleep had improved, although his nightmares continued. At that point, ATP Dr. Gutterman suggested that the Claimant undergo Eye Movement Disintegration Resource (EMDR). (Claimant's Exhibit 7, BS 36). ATP Dr. Ritzer concurred in this recommendation and agreed that the Claimant see Janet Ruby, EMDR, for this treatment (Claimant's Exhibit 5, BS 21). The ALJ infers and finds that the referral to Ms. Ruby was within the chain of authorized referrals and within the natural progression of treatment. Therefore, treatment by Ms. Ruby was authorized.

14. When he saw ATP Dr. Ritzer on January 3, 2018, the Claimant was continuing to experience nightmares and waking up terrified. This was accompanied by panic attacks, palpations, as well as numbness and tingling in both extremities. *Id*. ATP Dr. Ritzer stated that Claimant had suffered a "syncopal episode" when he struck his head leaning forward in the middle of the night some weeks before the visit of January 3, 2018. *Id.*, BS 22.

Compensability of Claimant's PTSD-- Mental Impairment

15. Respondents' paramount argument against the compensability of Claimant's PTSD (mental impairment) is that the traumatic causes of the Claimant's mental impairment are **not** outside of his usual experience and would **not** evoke significant symptoms of distress in a worker similarly situated. § 8-41-301 (2) (a), C.R.S., goes on the enumerate disciplinary actions taken in good faith as not arising out of and in the course of employment. Boiled down to its bare essentials, Respondents argue that watching a plane crash victim burn alive, encountering suicides where the deceased is hanging in a barn are just another "day in the life" of a paramedic and within the usual experience of paramedics and would not evoke significant symptoms of distress in a paramedic similarly situated. In support of Respondents' argument, Melissa Saghy, the HR individual, testified that she knew of no other paramedics who made workers' compensation claims based on PTSD. The ALJ infers and finds that her testimony does not preclude other paramedics experiencing significant symptoms of

distress. Respondents' argument, stated simply, is that watching a human being burning alive and witnessing dead bodies of young women, after suicide, poised in grotesque positions is another normal work day for paramedics. Respondents' offered no expert testimony to support this argument, and Saghy's testimony (from memory) was based on a previous review of personnel records never furnished to the Claimant. The ALJ rejects this argument. As found herein below, the Claimant's work-related PTSD is supported by a qualified psychiatrist and by his ATP. The ALJ explicitly finds that Claimant's trauma is not common to his filed of employment and Respondents failed to demonstrate that Claimant's experiences that caused his PTSD would **not** evoke significant symptoms of distress in similarly situated paramedics. The ALJ finds that the Claimant's evidence demonstrates that his traumatic experiences that caused his PTSD are **not** within the usual experiences of paramedics. The ALJ draws a plausible inference and further finds that the Claimant's traumatic experiences would evoke significant symptoms of distress among similarly situated paramedics.

Authorization of EMDR by Janet Ruby

16. The Claimant was referred for EMDR by both ATP Drs. Ritzer and Gutterman for work-related PTSD, and he saw Janet Ruby for this purpose, consistently with ATP Dr. Gutterman's November 14, 2017, recommendation (Exhibit 5, BS 21). Although the Claimant may have seen Janet Ruby for marital counseling, there is no persuasive evidence that this prior relationship interfered with his need for PTSD treatment. Although there is evidence that Claimant had sought mental health counseling as a result of his divorce, there is no persuasive evidence that this treatment was causally related to a prior diagnosis of PTSD. Therefore, the ALJ finds that Ms. Ruby was within the authorized chain of referrals and within the natural progression of treatment for the work related PTSD.

The Claimant's Hearing Testimony

17. At hearing the Claimant testified consistently with his histories given to ATP Dr. Ritzer and ATP Dr. Gutterman.

18. The Claimant testified that over his years as a firefighter/Paramedic Lieutenant he had been exposed to multiple traumatic events despite which he was able to continue functioning in the work place. Thus, following the plane crash of 2014 he returned to work despite witnessing the body of the pilot burning and did not seek EAP (Employee Assistance Program) help. This situation changed after the events of 2016 and 2017, when he was dispatched for suicides. The Claimant has not argued that the events of 2014, involving the plane crash are the sole reason for his disintegrated mental status. Rather, he relied on that event, as well as the suicides which he was engaged in investigating in 2016 and 2017 as the cause of his PTSD.

Average Weekly Wage (AWW)

19. As stipulated and found herein above, the Claimant's AWW is $1,871.48, which establishes the maximum TTD rate of $948.15 per week, or $135.45 per day for Fiscal Year (FY) 2017/2018. The period from September 19, 2017, through the date of hearing, February 22, 2018, both dates inclusive, is a total of 157 days.

Temporary Total Disability

20. As stipulated and found herein above, the Claimant has been temporarily and totally disabled from September 19, 2017, and ongoing. He has not returned to work since September 18, 2017, nor has he been medically released to his pre-injury job. He has earned no wages since that time and he has not been declared to be at maximum medical improvement (MMI) by an ATP. Therefore, he has been temporarily and totally disabled since September 18, 2017.

Responsibility for Termination Affirmative Defense

21. Respondents argue that Claimant was at fault for his termination on January 25, 2018. Respondents rely on their letter of termination to support this (Claimant's Exhibit 11). First, respondents assert that Claimant inappropriately cancelled a Fit for Duty appointment on September 19, 2017. Claimant's Exhibit 11, however, acknowledges that Claimant rescheduled his Fit for Duty appointment for September 21, 2017. Although he did not complete the testing at Nicoletti-Flatter Associates on September 21, 2017, the Claimant credibly testified that his inability to complete the testing related directly to his mental impairment, specifically caused by the evaluation questions and his inability to concentrate and anxiety. The ALJ finds that Claimant's inability to complete testing was not volitional. Indeed, as a mentally impaired individual, he could not reasonably believe that his incapacitated ability to complete the testing would lead to his termination.

22. An additional basis for termination was the Claimant's failing to complete Family and Medical Leave Act (FMLA) and other leave paperwork. Melissa Saghy, Human Resources (HR) coordinator for the Employer testified that despite the Claimant's "unwillingness" [or inability] to complete this paperwork, the Employer nevertheless placed the Claimant on FMLA and on other leaves, even though, according to the Claimant, he did not request FMLA and did not want it.

23. Pursuant to CFR § 825-100 (Code of Federal Regulations), the purpose of the FMLA is to allow employees to balance their work and family life. There is no statutory basis that an employee has a legal obligation to apply for FMLA if requested by an employer. Saghy agreed that FMLA arises under Federal Law and is not governed by the workers' compensation system. Additionally, she agreed that the Employer makes its own determination of what should be provided to its injured

employees. The Employer's policy did not give rise to a requirement that employees request FMLA or any of the other benefit available through the Employer.

24. The ALJ finds that the Claimant did **not** commit a **volitiona**l act, or **exercised control over his termination**, in light of the totality of the circumstances. He could not **reasonably expect** that his actions or inactions due to his impairment could result in a loss of employment.

25. The fact that the Employer discharged the Claimant, **even in accordance with its policy**, does not establish that Claimant acted volitionally, or exercised control over the circumstances of termination.

26. To the extent that the Employer's decision to terminate Claimant on January 25, 2018, was based on either his failure to complete his Fit for Duty evaluation of not applying for FMLA or other leaves does not support a finding that Claimant committed a volitional act which he knew could have resulted in his termination from employment.

27. Additionally, the termination letter of January 25, 2018, acknowledges that regardless of the Claimant's cooperation or lack thereof, the Employer imposed the FMLA and other leave policies when Claimant did not return documents as requested. Thus, its decision to terminate the Claimant was based on its own internal policies, not due to Claimant's volitional act. An employer's policies regarding sufficient grounds for termination differ from the narrow workers' compensation provision concerning "responsibility for termination," based in volitional acts, which allows a discontinuance of TTD benefits, if affirmatively proven by an employer. The concept is an fair exception to the overriding purpose of the Workers Compensation Act (the "Act") to provide a source of income to injured individuals who are unable to work because of their work-related injuries.

Ultimate Findings

28. The medical opinions of ATP Dr. Ritzer and Dr. Gutterman, concerning the work-related cause of the Claimant's PTSD/Mental Impairment, are credible, persuasive and essentially undisputed. Respondents offered no expert medical opinions to contradict their opinions. The Claimant's testimony was straight-forward, persuasive, credible and corroborated by the histories he gave to ATP Dr. Ritzer and ATP Psychiatrist Dr. Gutterman.

29. Between conflicting evidence, Melissa Saghy's testimony in particular, and the opinions of Dr. Ritzer and Dr. Gutterman, the ALJ makes a rational choice, based on substantial evidence, the accept the opinions of Dr. Ritzer and Dr. Gutterman, plus the Claimant's testimony, and to reject any evidence to the contrary.

30. As found herein above, the Claimant sustained the compensable occupational disease of PTSD, a purely mental impairment, arising out of the course and scope of his employment. As found, his psychological traumas were **generally** outside the usual experience of paramedics and would evoke significant symptoms of distress in paramedics similarly situated. Death as the final frontier is significantly different than a paramedic's usual mission of trying to save lives.

31. As stipulated and found, all of the Claimant's medical care and treatment was authorized, causally related and reasonably necessary to cure and relieve the Claimant's PTSD. As found herein above, the EMDR treatment by Janet Ruby was within the authorized chain of referrals during the natural course of treatment for the Claimant's PTSD within the scope of the medical referrals, causally related to the occupational disease of PTSD, and reasonably necessary to cure and relieve the effects thereof. Marital treatment and counseling by Ruby was **not** authorized or causally related to the PTSD nor reasonably necessary to cure and relieve the effects of the PTSD.

32. The Claimant's AWW is $1,871.48, which establishes the maximum TTD rate of $948.15 per week, or $135.45 per day for Fiscal Year (FY) 2017/2018. The period from September 19, 2017, through the date of hearing, February 22, 2018, both dates inclusive, is a total of 157 days.

33. The evidence establishes that the Claimant has been temporarily and totally disabled since September 19, 2017. The period from September 19, 2017, through the date of hearing, February 22, 2018, both dates inclusive, is a total of 157 days, which establishes aggregate past due TTD benefits of $21,265.65. The Claimant continues to be temporarily and totally disabled since February 23, 2018.

34. As found herein above, the Claimant has proven a compensable mental occupational disease, PTSD, by a preponderance of the evidence. Respondents have failed to prove their affirmative defense of "responsibility for termination" by preponderant evidence. The Claimant has further prove, by preponderant evidence that all his medical care and treatment for his PTSD, including the EMDR treatment for PTSD by Janet Ruby was authorized, causally related to the PTSD, and reasonably necessary to cure and relieve the Claimant's PTSD. Ruby's marital counseling is not causally related to the compensable PTSD.

35. Respondents have failed to prove their affirmative defense of "responsibility for termination" by preponderant evidence.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the medical opinions of ATP Dr. Ritzer and Dr. Gutterman, concerning the work-related cause of the Claimant's PTSD/Mental Impairment, are credible, persuasive and essentially undisputed. Respondents offered no expert medical opinions to contradict their opinions. The Claimant's testimony was straight-forward, persuasive, credible and corroborated by the histories he gave to ATP Dr. Ritzer and ATP Psychiatrist Dr. Gutterman.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting evidence, Melissa Saghy's testimony in particular, and the opinions of Dr. Ritzer and Dr. Gutterman, the ALJ made a rational choice, based on substantial evidence, the accept the opinions of Dr. Ritzer and Dr. Gutterman, plus the Claimant's testimony, and to reject any evidence to the contrary.

Compensability of Claimant's PTSD

c. Section 8-41-301 (2) (a), C.R.S., provides added elements of proof for mental impairments such as PTSD: (1) the claim must be supported, which it is, as found herein above; (2) "mental impairment" applies to a recognized, **permanent disability**…consisting of a psychological traumatic event "that is outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances [**permanent** impairment is **not** an issue herein. Nonetheless, as inferred and found, the Claimant's exposures were outside the Claimant's usual experience as a paramedic and the exposures would evoke significant symptoms of distress in similarly situated paramedics]. Even if the "mental impairment" test applied to issues other than **permanent** impairment, the evidence established that Claimant met the tests for mental impairment without a physical component. The resolution of what is a "common work condition depends upon the particular facts and circumstances of each case. *See Holme, Roberts & Owen v. Indus. Claim Appeals Office*, 800 P.2d 1332 (Colo. App. 1999); *Pub. Serv. Of Colo. V. Indus. Claim Appeals Office,* 68 P.3d 583 (Colo. App. 2003).

d. An "occupational disease" means a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure

occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. § 8-40-201 (14), C.R.S. *See City of Colorado Springs v. Indus. Claim Appeals Office,* 89 P. 3d 504 (Colo. App. 2004). Occupational diseases typically involve long latency periods, sometimes produce symptoms at times remote from the last exposure, and yet may lead to disability or death. An occupational disease might be said to "occur" when the disease becomes **disabling.** *See Union Carbide Corporation v. Indus. Claim Appeals Office,* 128 P.3d 319 (Colo. App. 2005). As found, the evidence meets all of the tests for compensability of an occupational disease, in this case PTSD with increasing debilitating effects on the Claimant. .As found, Claimant has proven an occupational disease with an onset date that cannot be precisely pinpointed, and a last injurious exposure of September 18, 2017.

Medical

e. As found the parties stipulated, and the ALJ found that all of the medical care and treatment, with the exception of the EMDR by Janet Ruby was authorized, causally related and reasonably necessary. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). As found, the EMDR treatment by Janet Ruby was within the authorized chain of referrals during the natural course of treatment for the Claimant's PTSD within the scope of the medical referrals, causally related to the occupational disease of PTSD, and reasonably necessary to cure and relieve the effects thereof. Marital treatment and counseling by Ruby was **not** authorized or causally related to the PTSD nor reasonably necessary to cure and relieve the effects of the PTSD.

Average Weekly Wage (AWW)

f. As stipulated and found, the Claimant's AWW is $1,871.48, which establishes the maximum TTD rate of $948.15 per week, or $135.45 per day for Fiscal Year (FY) 2017/2018. The period from September 19, 2017, through the date of hearing, February 22, 2018, both dates inclusive, is a total of 157 days.

Temporary Total Disability

g. As stipulated and found, the Claimant has been temporarily and totally disabled since September 19, 2017. The period from September 19, 2017, through the date of hearing, February 22, 2018, both dates inclusive, is a total of 157 days, which

establishes aggregate past due TTD benefits of $21,265.65. The Claimant continues to be temporarily and totally disabled since February 23, 2018.

h. Section 8-41-301 92) (b), C.R.S., limits awards for **permanent** mental impairment, with no physical impairment, to 12 weeks. The 12-week limitation on **permanent** disability benefits for mental impairments, contained in § 8-41-301 (2) (b), C.R.S., applies to **permanent** impairment benefits only, not to temporary disability benefits. *See City of Thornton v. Replogle*, 873 P.2d 30 (Colo. App. 1993). Therefore, the 12-week limitation does not apply to TTD benefits.

"Responsibility for Termination" Affirmative Defense

i. Section 8-42-105 (4), C.R.S., provides that an employee responsible for his/her own termination is not entitled to temporary disability benefits. This statutory provision has been interpreted to mean that "responsibility for termination" must be through a volitional act on the part of the terminated employee. *Colorado Springs Disposal v. Indus. Claim Appeals Office,* 58 P. 3d 1061 (Colo. App. 2002). A finding of fault requires a volitional act or the exercise of a degree of control by a claimant over the circumstances leading to termination. *Gilmore v. Indus. Claim Appeals Office,* 187 P.3d 1129, 1132 (Colo. App. 2008); *Apex Transport, Inc. v. Indus. Claim Appeals Office,* **2014 COA 25.** In determining whether a claimant is responsible for termination, the ALJ may be required to evaluate competing factual theories concerning the actual reason or reasons for the termination. *See Rodriguez v. BMC West*, W.C. No. 4-538-788 [Indus. Claim Appeals Office (ICAO), June 25, 2003]. The Supreme Court has determined that the "responsibility for termination" defense is not absolute and is vitiated when a worsening of condition occurs. *Anderson v. Longmont Toyota,* 102 P. 3d 323 (Colo. 2004). As found, Respondents failed to satisfy their burden of proof on the affirmative defense that Claimant was responsible for his termination through a volitional act on his part and/or that Claimant exercised ad degree of control over the circumstances leading to termination.

Burden of Proof

j. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). Also, the burden of proof is generally placed on the party asserting the affirmative of a proposition. *Cowin & Co. v. Medina,* 860 P.2d 535 (Colo. App. 1992). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979).

People v. M.A., 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has satisfied his burden with respect to compensability, all medical benefits for his work-related PTSD, AWW, and TTD. Respondents have failed to satisfy their burden with respect to their affirmative defense of "responsibility for termination."

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all of the costs of Claimant's medical care and treatment for his compensable mental injury of post-traumatic stress disorder, including but not limited to the costs of medical care by Hiep Ritzer, M.D., Gary Gutterman, M.D., and Janet Ruby for the EMDR, subject to the Division of Workers Compensation Medical Fee Schedule.

B. Respondents shall pay the Claimant temporary total disability benefits from September 19, 2017, through the date of hearing, February 22, 2018, both dates inclusive, a total of 157 days, at the rate of $948.15 per week, or $135.45 per day, in the aggregate past due amount of $21,265.65, which is payable retroactively and forthwith.

C. From February 23, 2018, and continuing until cessation or modification of temporary disability benefits is warranted by law, Respondents shall continue to pay the Claimant temporary total disability benefits of $948.15 per week.

D. Respondents shall pay the Claimant statutory interest at the rate of eight percent (8%) per annum on all amounts due on indemnity benefits and not paid when due.

E. Any and all issues not determined herein are reserved for future decision.

DATED this_____day of March 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

ISSUES

- Whether Claimant overcame, by clear and convincing evidence, the opinion of the DIME that Claimant's conditions, at the time of maximum medical improvement, were not causally related to the work injury.

- Whether Claimant overcame, by clear and convincing evidence, the opinion of the Division Independent Medical Examination (DIME) physician as to maximum medical improvement.

- Whether Respondents established, by a preponderance of the evidence, that they are entitled to correct/modify the Final Admission of Liability admitting to a 2% upper extremity schedule rating, to properly reflect the DIME examiner's findings that Claimant did not suffer work-related permanent impairment.

- Whether Claimant established by a preponderance of the evidence that she is entitled to reasonable and necessary medical benefits, including surgery, to cure and relieve the effects of a work-related injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, including the deposition testimony of Dr. Castrejon, the ALJ enters the following findings of fact:

1. This claim has been the subject of a prior hearing held before ALJ Patrick Spencer on January 26, 2017. The undersigned ALJ adopts and incorporates the findings of fact from ALJ Spencer's March 1, 2017 order to find as follows:

    - Claimant is a long time employee of "Respondent-Employer" having worked for the county for approximately 31 years. For the past 9-10 years, Claimant has worked as an Income Maintenance Technician Supervisor. Her job duties vary daily and include among others things, supervision and training of five case workers; processing claims for Medicaid and Food Stamps; issuing EBT cards, interviewing potential social services clients, completing documentation and preparing written reports. Based upon the evidence presented, the ALJ finds that Claimant performs significant amounts of data entry on a computer.

    - On March 6, 2015, Claimant developed pain in her bilateral hands secondary to "continuous" mousing and keyboarding. She reported the injury prompting Respondent-Employer to file an Employer's Frist Report of Injury on March 9, 2015.

- Claimant was referred to Dr. Kevin Rice who evaluated her on March 13, 2015. During her initial evaluation, Claimant reported a two-year history of progressive wrist pain and a recent inability to use small writing utensils secondary to pain in the thumb and lateral wrist. Claimant was tender over the first extensor compartment of the wrists bilaterally, right greater than left. Finkelstein test was equivocal on the right and negative on the left. X-rays of the hand were obtained. The x-rays demonstrated mild-to-moderate degenerative changes, particularly involving the first DIP joints.

- Claimant undertook conservative care, including occupational therapy (OT). Recommendations were made to assist Claimant in keeping her wrists in a neutral position while typing and mousing.

- On July 23, 2015, Claimant was evaluated by Sadie Thomas, an orthopedic physician assistant (PA) who noted that Claimant reported "[working] at a computer most of the day and does a lot of typing which aggravates her pain." PA Thomas diagnosed tenosynovitis of the thumb, wrist pain, and hand osteoarthritis. Claimant declined aggressive treatment, including cortisone injections. Consequently, PA Thomas prescribed Voltaren gel and encouraged additional OT.

- On January 27, 2016, an MRI showed a ganglion cyst, but no other significant pathology. Claimant was referred to Dr. Karl Larsen for a surgical consultation.

- Claimant saw Dr. Larsen on February 29, 2016. Dr. Larsen opined that arthritis and associated MP instability accounted for Claimant's thumb symptoms. He felt the ganglion cyst shown on MRI was asymptomatic and not an issue. He opined the ulnar-sided wrist discomfort seemed most associated with pisotriquetral arthritis with some associated FCU tendinitis. He administered an injection in an effort to delineate Claimant's pain generator. He also recommended a splint to protect Claimant from resting on her pisiform when using her mouse.

- During a follow-up appointment on April 29, 2016, Claimant reported that the injection proved helpful. Dr. Larsen opined that Claimant seemed to be doing well with conservative care and was unlikely to improve further with nonsurgical treatment. He indicated that should Claimant's symptoms persist or worsen, a wrist arthroscopy should be considered. He also noted that should an arthroscopy fail, an ulnar shortening procedure would be "the final solution."

- On June 17, 2016, Claimant reported ongoing symptoms during a follow-up visit with Dr. Larsen. Because of Claimant's ongoing symptoms, Dr. Larsen recommended a wrist arthroscopy to evaluate and potentially

debride Claimant's TFC. He did not think surgery was indicated for her thumb but recommended a CMC joint cortisone injection, which he indicated he would administer intraoperatively.

- Claimant saw Dr. Thomas Mordick on August 5, 2016 for an Independent Medical Examination (IME) at Respondent's request. Dr. Mordick prepared a report dated August 5, 2016, and a supplemental letter dated September 1, 2016. He pointed out that the fact that a patient's symptoms bother them at work does not make it a work-related condition. Dr. Mordick requested a job analysis. Dr. Mordick opined that Claimant had "diffuse multifocal areas of wrist tenderness that "are not consistent with a specific anatomic diagnosis." Dr. Mordick opined Claimant was not a surgical candidate because there were no objective findings of surgical pathology. Dr. Mordick recommended the discontinuation of treatment, as he believed Claimant was at maximum medical improvement without a specific work-related diagnosis. He diagnosed CMC arthritis of the thumb.

- Sara Nowotny performed a Physical Demands Analysis & Risk Factor Assessment on September 12, 2016. Ms. Nowotny interviewed Clamant and observed Claimant perform the position of Income Maintenance Technician Supervisor and concluded Claimant's job did not expose her to any primary or secondary risk factors for a cumulative trauma injury.

- On September 15, 2016, Dr. Mordick reported that he reviewed the Job Demands Analysis report and there were no primary or secondary criteria for work causation of a repetitive motion disorder. "Hence, there is no evidence that Ms. Romero's complaints would be caused by her job."

- Dr. Rice placed Claimant at maximum medical improvement on October 10, 2016 without permanent impairment or work restrictions. His final diagnosis was "persistent right wrist pain secondary to arthritis and tendinitis." Dr. Rice recommended "maintenance care" including follow-up appointments and the wrist arthroscopy proposed by Dr. Larsen.

- While Respondents filed a Final Admission of Liability (FAL) consistent with the opinions expressed by Dr. Rice due to their statutory obligations, they reiterated an intent to proceed to hearing on compensability and withdraw a previously filed General Admission of Liability (GAL).

- Claimant objected to the FAL and requested a Division Independent Medical Examination (DIME), which was subsequently held in abeyance per order of prehearing Administrative Law Judge (PALJ), John Sandberg pending adjudication of the issues of compensability and withdrawal of the GAL.

2. ALJ Spencer denied Respondents request to withdraw their GAL

concluding that the evidence presented established that Claimant had sustained a compensable injury as result of her work duties, which injury required "evaluation, diagnostic workup and treatment with conservative measures." Consequently, the DIME process that was being held in abeyance commenced once again.

3. On June 12, 2017, Dr. Rosemary Greenslade performed the requested DIME and prepared a report. Dr. Greenslade noted the scope of the exam was based on a request for "determination of MMI, Partial Impairment, and Work-Relatedness, for Work Comp Claim for Bilateral Wrist and Thumb Pain." Dr. Greenslade took a history from Claimant that included information from her about her job duties. Dr. Greenslade reviewed the medical records and performed a physical examination. She diagnosed bilateral thumb arthritis, involving the MP Joint, with MP joint instability, as well as the carpal-metacarpal joints bilaterally, and the IP joints of the thumbs bilaterally. She opined that Claimant's diagnoses were "non-work related, and pre-existing." Dr. Greenslade noted in the discussion section of her report that "[t]here is no work-related causality." She reported that Claimant reached MMI on 10/10/2016 and that Claimant remained at MMI reiterating that Claimant's injuries were "pre-existing, and non-work-related." Dr. Greenslade did not recommend any maintenance care; however, rated Claimant's permanent impairment as 2% upper extremity impairment to the right wrist and thumb and 2% upper extremity impairment to the left wrist and thumb.

4. On August 23, 2017, Respondents prepared a FAL admitting to the impairment rating assigned by Dr. Greenslade.

5. Dr. Castrejon performed an independent medical evaluation (IME), at Claimant's request on November 14, 2017. He diagnosed CMC arthritis, bilateral thumbs. While he concluded that Claimant's arthritis was pre-existing, her work activities aggravated this underlying arthritis. He also specifically disagreed with Dr. Rice, Dr. Mordick, and Dr. Greenslade that Claimant's condition was non-work related and that she did not suffer work-related permanent impairment. In concluding as much, Dr. Castrejon opined that Dr. Greenslade misapplied the Colorado Medical Treatment Guidelines in determining that Claimant's condition was non-work related, stating as follows: "To begin, although the claimant has clinical findings of bilateral carpal tunnel syndrome, her presenting complaints are not consistent with carpal tunnel syndrome as being the etiology of her current symptomatology. Therefore a discussion regarding causation that attempts to incorporate Rule 17, Exhibit 5 of the Colorado Division of Workers Compensation Medical Treatment Guidelines, for [Claimant's] diagnosis, into the causation analysis is not appropriate. We are not dealing with carpal tunnel nor cubital tunnel syndrome in this case."

6. Dr. Castrejon professed his confusion as to how the DIME concluded that the Claimant's condition was non-work related, yet, calculated permanent impairment for the bilateral thumbs and wrists. Dr. Castrejon reported that he reviewed Dr. Mordick's September 1, 2016, report in which Dr. Mordick requested a job demands analysis (JDA) to help determine if Claimant suffered a work-related condition. Nonetheless, Dr. Castrejon did not report that he reviewed Dr. Mordick's September 15,

2016 note in which he (Dr. Mordick) indicated that he reviewed the job demands analysis report and it did not support a work injury. Instead, Dr. Castrejon mistakenly concluded that Dr. Mordick did not have the information, including the JDA, necessary to render an opinion as to causation and that "similarly, the DIME physician misconstrued or misinterpreted Dr. Mordick's letter by concluding that Dr. Mordick had, in fact, determined lack of causation based upon his review of the JDA– which he had not." Dr. Castrejon essentially admitted that causation was a matter of opinion and opinions differed noting that "the opinions of Dr. Mordick and Dr. Greenslade are just that, opinions."

7. Dr. Castrejon testified by deposition. He agreed that Claimant clearly has pre-existing osteoarthritis of the hands. He testified that the Medical Treatment Guidelines are "just guidelines for physicians, and physicians should then think and use their mind and use their medical judgement to make the right decision based on the specific condition of the patient." Dr. Castrejon agreed that Dr. Greenslade, Dr. Mordick, and Dr. Mitchell all reviewed information and arrived at their opinion that Claimant's condition was not work-related based on their knowledge, training, and experience. In so concluding, Dr. Castrejon noted: "We all have medical opinions. We try to use a skeleton model, which is what the Colorado treatment guidelines are, to direct us toward a well-thought-out and hopefully good decision or analysis."

8. Dr. Castrejon testified that other physicians opined that Claimant's symptoms were carpal tunnel syndrome related. He testified that Dr. Greenslade offered a "discussion where she alluded to Rule 17, Section 5, and she pretty much paraphrased what one looks for in carpal tunnel syndrome – which is not [Claimant's] problem." He continued to state that the diagnosis-based risk factor table for the diagnosis of aggravation of osteoarthritis of thumb at the CMC joint and wrist states there is no quality evidence available so the physician has to determine causation based on the medical findings, the history, and diagnostic studies. According to Dr. Castrejon, the various examiners who reached a conclusion that Claimant's condition was non-work related had not obtained a sufficiently detailed evaluation of Claimant's work history in order to determine causation. Dr. Castrejon reviewed Dr. Mordick's September 15, 2016 report and testified that Dr. Mordick indicated the job analysis did not contain adequate information for him to make a decision. Dr. Castrejon explained that he chose to rely on information Claimant provided about her work duties rather than rely on the job analysis. While Dr. Castrejon did not dispute the accuracy of the JDA including the duties completed for the day it was done, he stressed that the JDA was not "representative of [Claimant's] 30 years of employment" by her description of her work duties to him.

9. While he concluded that the JDA was not representative of Claimant's work duties for the past 30 years, Dr. Castrejon admitted that Dr. Greenslade's report indicated that she spoke to Claimant about her history of work activities even if the information documented from that discussion only comprised two lines of her report. He also agreed that both he and Dr. Greenslade relied on Claimant's verbal work history report, at least in part, to form conclusions regarding the causal relatedness of

Claimant's hand/thumb condition to her work duties. Finally, Dr. Castrejon agreed it is up to each physician to determine how much weight to place on the history given by Claimant and the information obtained and contained in a physical demands analysis, noting that it is a matter of opinion as to how much weight to give each item. In this regard, the following question and answer was posed and provided during Dr. Castrejon's deposition: "Q. It doesn't' mean one doctor is right and another is wrong, does it? A. No, it does not."

10. Dr. Linda Mitchell performed an IME at the request of Respondents. In a report dated January 17, 2018, Dr. Mitchell agreed with Dr. Greenslade and Dr. Mordick that Claimant's hand/thumb condition/symptoms are not related to her work duties based on the Medical Treatment Guidelines. According to Dr. Mitchell, Claimant has degenerative findings in the fingers, wrists, and shoulders. According to Dr. Mitchell, it is not unusual for a person of Claimant's age to develop degenerative osteoarthritis and while she may have discomfort at work, there is no evidence that her work activities are objectively aggravating her osteoarthritis at a cellular or tissue level.

11. Claimant testified at the hearing. She testified that she experiences pain primarily at the base of her thumbs and that the pain increases throughout the week as she works. In addition, she testified that her pain decreases during the weekends when she is not working. She also testified that she would like to do the surgery recommended by Dr. Larson.

12. The ALJ finds the opinions of Dr. Greenslade, Dr. Mordick, Dr. Rice, and Dr. Mitchell more persuasive than the contrary opinions of Dr. Castrejon.

13. Based upon the evidence presented as a whole, the ALJ finds that Claimant has not overcome, by clear and convincing evidence, the opinion of the DIME physician regarding the relatedness of Claimant's hand/thumb conditions to her work duties.

14. The ALJ finds, based on the totality of the evidence, that Claimant has not overcome by clear and convincing evidence the opinion of the DME physician as to MMI.

15. The ALJ finds, based on the totality of the evidence, that Respondents may correct the Final Admission, which admitted to a 2% upper extremity schedule rating, to properly reflect the DIME findings that Claimant did not suffer a work-related permanent impairment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, the medical record evidence coupled with JDA supports the opinions of Dr. Mordick, Dr. Greenslade and Dr. Mitchell that Claimant's hand/thumb symptoms are not causally related to her work duties. Rather, the evidence presented persuades the ALJ that Claimant's hand/thumb symptoms are likely related to the natural progression of Claimant's pre-existing osteoarthritis. The contrary opinions expressed by Dr. Castrejon are not convincing for the reasons set forth below.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming the DIME Opinion of Dr. Greenslade Regarding Causation and MMI

D. A DIME physician's findings of causation, MMI and impairment are binding on the parties unless overcome by "clear and convincing evidence." Section 8-42-107(8)(b)(III), C.R.S.; *Qual-Med v. Industrial Claim Appears Office*, 961 P.2d 590 (Colo. App. 1998); *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's opinion concerning MMI is incorrect. *Metro Moving and*

Storage Co. v. Gussert, 914 P.2d 411 (Colo. App. 1995) In other words, to overcome a DIME physician's opinion regarding MMI, permanency or the cause of a particular component of a claimant's medical condition, the party challenging the DIME must demonstrate that the physicians determinations in these regards are highly probably incorrect and this evidence must be "unmistakable and free from serious or substantial doubt." *Leming v. Industrial Claim Appeals Office,* 62 P.3d 1015, 1019 (Colo. App. 2002). *Adams v. Sealy, Inc*., W.C. No. 4-476-254 (ICAO, Oct. 4, 2001). The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Industrial Claim Appears Office, supra.*

E. As found here, the persuasive medical records as well as the JDA support Dr. Greenslade's conclusion regarding causation, i.e. relatedness of Claimant's hand/thumb condition to her work duties at the time of maximum medical improvement. Multiple physicians, including Dr. Rice, Dr. Mordick, and Dr. Mitchell support Dr. Greenslade's conclusion that Claimant's upper extremity condition was not work related at the time of maximum medical improvement. Dr. Castrejon's conclusion to the contrary is not persuasive. Here, Dr. Castrejon testified that it is up to each physician to determine how much weight to place on the history given by Claimant and the information obtained and contained in a JDA. He admitted that both he and Dr. Greenslade relied on Claimant's work history, at least in part, to form conclusions regarding relatedness of Claimant's condition. As a result, their disagreement regarding the weight to place on the history given by Claimant and the information obtained and contained in a physical demands analysis simply constitutes a matter of opinion. To the extent that Dr. Castrejon's opinions concerning the relatedness of Claimant's hand/thumb pain her work duties, including keyboarding and mousing vary from those expressed by Drs. Greenslade, Mordick and Mitchell, the ALJ concludes that those divergences constitute a professional difference of opinion. A professional difference of opinion does not rise to the level of clear and convincing evidence that is required to overcome Dr. Greenslade's opinion concerning causation. *See generally, Gonzales v. Browning Farris Indust. of Colorado, W.C. No. 4-350-356 (ICAO March 22, 2000).*

F. Furthermore, the ALJ is not persuaded that Dr. Greenslade erred in her causation analysis, as suggested by Dr. Castrejon, because she decided to use Rule 17, Exhibit 5 of the Medical Treatment Guidelines (MTG) as support in analyzing whether Claimant's hand/thumb conditions were related to her work duties. The Medical Treatment Guidelines are regarded as the accepted professional standards for care under the Workers' Compensation Act. *Hernandez v. University of Colorado Hospital*, W.C. No. 4-714-372 (January 11, 2008); see also *Rook v. Industrial Claim Appeals Office*, 111 P.3d 549 (Colo. App. 2005). The Medical Treatment Guidelines, specifically Rule 17-2(A), provide that: "All health care providers shall use the Medical Treatment Guidelines adopted by the Division." In spite of this direction, it is generally acknowledged that the Guidelines are not sacrosanct and may be deviated from under appropriate circumstances. *See*, Section 8-43-201(3) (C.R.S. 2014). Nonetheless, they carry substantial weight. While Rule 17, Exhibit 5 has been accepted in the assessment of the cause of carpal tunnel syndrome specifically, the Rule also addresses many other

cumulative trauma conditions that "comprise a heterogeneous group of diagnoses which include numerous specific clinical entities, including disorders of the muscles, tendons and tendon sheaths, nerves, joints and neurovascular structures" such as: de Quervain's disease, cubital tunnel syndrome, epicondylagia, and osteoarthritis. (Emphasis added.) The MTG includes a section titled "General Principles of Medical Causation Assessment." That section encourages doctors to address causation based on the totality of medical and non-medical evidence. Dr. Castrejon correctly pointed out that the Diagnosis-Based Risk Factors Table indicated that "No Quality Evidence is Available for osteoarthritis of the Thumb, Carpometacarpal (CMC) and Wrist;" however, he failed to note that the MTG specifically provide in section F 1, "Aggravated Osteoarthritis of the Digits, Hand, Or Wrist" that the provider should "Refer to Section D 3 for Medical Causation Assessment for Cumulative Trauma Conditions" and that section D 3 includes the Diagnosis-Based Risk Factors Table. Here, Dr. Mordick, Dr. Greenslade and Dr. Mitchell reviewed Claimant's job duties in conjunction with the Rules and did not find that they presented any risk factors for her condition, an opinion the ALJ concludes is supported by the JDA. Thus, while Rule 17, Exhibit 5 specifically addresses factors to consider when addressing the cause of carpal tunnel, the ALJ determines that Dr. Greenslade's decision to analyze the cause of Claimant's hand/thumb conditions under Rule 17 in this case does not, contrary to Dr. Castrejon's urging, constitute an error that would support a conclusion that her causation opinion is highly probably incorrect.

G. "Maximum medical improvement" is defined in Section 8-40-201(11.5), C.R.S. as:

> A point in time when any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition. The requirement for future medical maintenance which will not significantly improve the condition or the possibility of improvement or deterioration resulting from the passage of time shall not affect a finding of maximum medical improvement. The possibility of improvement or deterioration resulting from the passage of time alone shall not affect a finding of maximum medical improvement.

H. In resolving the question of whether the DIME physician's opinions have been overcome, the ALJ may consider a variety of factors including whether the DIME physician properly applied the AMA Guides and other rating protocols. *See Metro Moving and Storage Co. v Gussert,* 914 P.2d 411 (Colo. App. 1995); *Wackenhut Corp. v. Indus. Claim Appeals Office*, 17 P.3d 2002 (Colo. App. 2000); *Aldabbas v. Ultramar Diamond Shamrock*, W.C. No. 4-574-397 (ICAO August 18, 2004). The instant case involves complex medico-legal questions regarding the cause of Claimant's hand/thumb conditions. As found here, the persuasive evidence supports Dr. Greenslade's use of Rule 17, Exhibit 5 in determining that Claimant's hand/thumb conditions are unrelated to her work. While the Claimant clearly has ongoing medical treatment needs, the ALJ agrees with Dr. Mitchell that she "should see her primary healthcare provider for

management of her osteoarthritis" because those needs fall outside the worker's compensation system. Because Claimant has failed to produce unmistakable evidence that Dr. Greenslade's causation opinion is highly probably incorrect, it follows that her opinion regarding MMI has also not been overcome. Considering all the evidence presented, the ALJ concludes that Claimant has failed to establish that Dr. Greenslade's causation/MMI opinion is highly probably incorrect. Accordingly, the request to set the DIME aside must be denied and dismissed.

Claimant's Request for Medical Benefits

I. Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury or prevent further deterioration of the claimant's condition. § 8-42-101, C.R.S.; *Grover v. Industrial Commission,* 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Indus. Claim Appeals Office*, 916 P.2d 609, 611 (Colo.App.1995). However, the right to workers' compensation benefits, including medical benefits, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. C.R.S. § 8-41-301(1)(c); *Faulkner v. Indus. Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000).

J. Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). As found here, Claimant has failed to establish a causal relationship between her hand/thumb condition and her work duties, i.e. she failed to overcome the causality opinion of Dr. Greenslade. Here the evidence presented persuades the ALJ that Claimant's symptoms are likely emanating from the natural progression of her pre-existing degenerative osteoarthritis. While a pre-existing condition does not disqualify a claimant from receiving workers compensation benefits[1], a claimant must establish that his or her employment "aggravates, accelerates, or "combines with" the pre-existing infirmity or disease "to produce the disability and/or need for treatment for which workers' compensation is sought". *H & H Warehouse v. Vicory*, 805 P.2d 1167, 1169 (Colo. App. 1990). Even temporary aggravations of pre-existing conditions may be compensable. *Eisnack v. Industrial Commission*, 633 P.2d 502 (Colo. App. 1981). Pain is a typical symptom from the aggravation of a pre-existing condition. Thus, a claimant is entitled to medical benefits for treatment of pain, so long as the pain is proximately caused by the employment–related activities and not the underlying pre-existing condition. *See Merriman v. Industrial Commission*, 120 Colo. 400, 210 P.2d 488 (1940).

K. While pain may represent a symptom from the aggravation of a pre-existing condition, the fact that Claimant may have experienced an onset of pain while performing job duties does not compel the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent

[1] *Duncan v. Indus. Claims Appeals Office*, 107 P.3d 999, 1001 (Colo. App. 2004).

the result of the natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (August 18, 2005). In this case, the totality of the evidence presented persuades the ALJ that Claimant's ongoing hand/thumb pain is likely related to the natural progression of her pre-existing osteoarthritis. Any suggestion that the only logical conclusion that can be reached from the evidence presented is that Claimant's underlying pre-existing condition was aggravated by her keyboarding and mousing is unpersuasive when Claimant's explanation of her duties and the JDA is taken into account. The ALJ credits the opinions of Drs. Greenslade, Mordick and Mitchell in this case to conclude that the variety of job duties described and demonstrated by Claimant during the JDA are probably not exposing her to risk factors for the development of her hand/thumb condition. As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (October 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship between a claimant's alleged injury and his/her work based on temporal proximity. To the contrary, as noted by the panel in *Scully* "correlation is not causation." Because Claimant has failed to establish that her need for medical treatment was proximately caused by an injury arising out of and in the course of the employment, her claim for additional medical benefits must be denied and dismissed.

Final Admission Permanent Partial Disability Rating

L. Workers' Compensation Rules of Procedure (WCRP) 5 – 5.G provides that an insurer may modify an existing admission regarding medical impairment, whenever the medical impairment rating is changed pursuant to a division independent medical exam, a division independent medical examiner selected in accordance with Rule 5-5(E); or an order. However, any such modifications shall not affect an earlier award or admission as to monies previously paid.

M. Dr. Greenslade, as the division independent medical examiner, noted the scope of the exam was based on a request for "determination of MMI, Partial Impairment, and Work-Relatedness, for Work Comp Claim for Bilateral Wrist and Thumb Pain." Dr. Greenslade responded to all of these issues. As found, she determined that Claimant's hand/thumb conditions were not causally related to her work duties. Consequently, she placed the Claimant at MMI without maintenance treatment needs. Nonetheless, Dr. Greenslade assigned 2% upper extremity impairment to the right wrist and thumb and 2% upper extremity impairment to the left wrist and thumb. On August 23, 2017, Respondents mistakenly prepared a FAL that admitted for 2% right upper extremity and 2% left upper extremity impairment. Based upon the evidence presented, the ALJ is persuaded that Respondents' admission was filed in error because the Division IME determined Claimant's permanent impairment was not work related. Accordingly, the ALJ agrees with Respondents that the correct work-related impairment rating is 0% for each upper extremity. Respondents have carried their burden to establish that a modification of the FAL is necessary to prevent an unjust result in this case. Respondents may modify the existing admission to reflect the proper work-related medical impairment based on this order but such modification shall not affect an earlier award or admission as to monies previously paid.

ORDER

It is therefore ordered that:

1. Claimant's request to set aside Dr. Greenslade's causation determination is denied and dismissed.

2. Claimant's request to set aside Dr. Greenslade's MMI determination is denied and dismissed.

3. Claimant's request for medical treatment, including surgery, is denied and dismissed.

4. Respondents are permitted to file a new Final Admission to correct the erroneous indication that Claimant is entitled to medical impairment benefits for a non-work related condition as determined by Dr. Greenslade.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Colorado Springs, CO 80906

ISSUES

- Did Respondent prove by a preponderance of the evidence that Claimant's TTD benefits should be suspended or terminated based on an intervening event?

- Did Respondent prove by a preponderance of the evidence that Claimant's TTD benefits should be suspended under § 8-43-404(3) for refusing have surgery on his left elbow?

FINDINGS OF FACT

1. Claimant worked for Employer as an Automotive and Diesel Vehicle Technician for over 21 years. His job duties included repair and maintenance of over-the-road and local delivery trucks. Claimant sustained admitted injuries to his bilateral upper extremities on April 30, 2010, while performing maintenance work on a vehicle.

2. Claimant's injuries lead to a lengthy course of treatment, including conservative measures and multiple surgeries. In the course of this claim, Claimant has undergone the following surgical procedures:

- 12/9/10: right shoulder subacromial decompression/distal clavicle resection
- 7/7/11: left shoulder subacromial decompression/distal clavicle resection
- 7/7/11: left elbow ulnar neurolysis/elbow debridement
- 3/6/12: right elbow ulnar neurolysis
- 3/6/12: right carpal tunnel release
- 2/7/14: right elbow epicondylar debridement/ulnar nerve revision

3. At present, Claimant is awaiting a revision left ulnar neurolysis and submuscular transposition surgery, initially recommended by Dr. Karl Larsen in April 2015. The surgery has been the subject of considerable prior litigation. Respondent initially requested a hearing after receiving Dr. Larsen's request for surgical preauthorization, and ALJ Lamphere heard the matter on December 2, 2015. In an order dated February 3, 2016, ALJ Lamphere determined that the left ulnar nerve revision and transposition surgery was not reasonably necessary. Accordingly, ALJ Lamphere denied and dismissed the request for surgery.

4. Claimant subsequently saw Dr. Thomas Higginbotham for a DIME in April 2016. Dr. Higginbotham opined that "beyond a reason[able] degree of medical probability, the recommendation [made by Dr. Larsen] for the left ulnar nerve transposition is necessary and reasonable." He concluded Claimant "is not at MMI until after the proposed left ulnar nerve transposition."

5. Respondent requested a hearing to challenge the DIME's determination regarding MMI, which was heard by the undersigned ALJ on October 16, 2016. I found that ALJ Lamphere's order did not preclude the DIME from revisiting the issue of surgery in the context of determining MMI. I further found that Respondent failed to overcome the DIME by clear and convincing evidence, and ordered Respondent to pay for the surgery. Respondent appealed that decision to the ICAO, which affirmed on March 24, 2017.

6. Respondent notified Claimant on April 26, 2017 that the left ulnar nerve neurolysis and submuscular transposition surgery was authorized. As of the February 15, 2018 hearing, Claimant had not undergone surgery. The ostensible reason for the delay is residual complications from a gallbladder surgery on March 3, 2017.

7. Claimant saw Dr. Larsen on June 7, 2017 to discuss the proposed elbow surgery. Claimant still wanted surgery but was not ready to proceed at that time. Dr. Larsen noted "[h]e is recovering from a cholecystectomy, so he wants to wait until he has recovered a little bit more from that surgery before he actually undergoes a procedure." Dr. Larsen noted that his surgical recommendation was unchanged and stated, "we had him meet with scheduling today to sort out when he wants to do this." Dr. Larsen offered no opinion regarding whether it was medically necessary to delay surgery.

8. Claimant saw Dr. Frank Polanco on July 25, 2017 for a consultation regarding a potential change of ATP. The review of systems noted "the gastrointestinal system is negative," and there was no discussion of any ongoing gastrointestinal issues. Dr. Polanco ultimately declined to take over as Claimant's ATP.

9. Claimant had a follow-up appointment with Dr. Larsen on October 25, 2017. Dr. Larsen noted Claimant "has been undergoing other medical treatments for gastrointestinal issues and has concerns about his medical state associated with that by his report. He has requested to just go ahead and contact me when he has his medical issues situated." In response to questions posed by Respondent's counsel as to whether there was any reason to delay surgery, Dr. Larsen said:

> He remains a candidate for the procedure. He is delaying for what he reports are medical reasons that are outside the realm of my care. I do not have a lot of insight into the specifics of the medical issues but by his description, they sound to be fairly serious and would trump any surgery that I would need to perform for him. He can undergo the surgery at any point when he is ready but it is certainly not an emergency.

10. Respondent continued to pay TTD pending the surgery. On November 3, 2017, Respondents filed a petition to modify, terminate or suspend Claimant's TTD benefits because Claimant was delaying surgery "for reasons unrelated to the workers' compensation claim." Respondent requested termination of TTD "until . . . Claimant proceeds with surgery."

11. Claimant timely objected to Respondent's petition, stating "there are legitimate medical reasons why I cannot temporarily undergo the recommended elbow

surgery." Based on Claimant's timely objection, the Division denied the petition and advised Respondent "if you wish to pursue this issue you will need to apply for a hearing."

12. On November 16, 2017, Claimant's primary care physician, Dr. Opeyemi Banjoko, wrote a letter addressing the recommended surgery in the context of the non-work related GI condition. He wrote, "Given the stress of the diarrhea and tests he needs to get done, the patient wants to be done with his current evaluation with the gastroenterologist doctor before pursuing any surgical intervention on his left elbow." Dr. Banjoko did not opine that elbow surgery was medically contraindicated.

13. At the February 15, 2018 hearing, Claimant testified that he underwent gallbladder surgery on March 3, 2017 and developed GI complications. He described issues including chronic diarrhea, rectal bleeding, hemorrhoids, and digestive issues.

14. The ALJ received no records from the gastroenterologist managing Claimant's condition. The records submitted into evidence contain no objective clinical, laboratory, or other diagnostic or examination findings to document the frequency and severity of the GI issues. Nor are there any details of a specific treatment plan or the anticipated duration of treatment. No provider has predicted or discussed when Claimant could be expected to undergo elbow surgery.

15. Respondent failed to prove that Claimant's unrelated GI issues are an "intervening cause" because his wage loss remains attributable to the industrial injury "to some degree."

16. Respondent proved that Claimant's TTD benefits should be suspended under § 8-43-404(3). The persuasive evidence demonstrates the left elbow surgery is reasonably essential to promote recovery and bring Claimant to MMI. The ALJ further finds that Claimant's refusal to proceed with surgery is not objectively reasonable.

CONCLUSIONS OF LAW

A. Claimant's non-injury related GI issues are not an "intervening cause" sufficient to sever the causal connection between the injury and Claimant's temporary disability.

To receive TTD benefits, a claimant must establish a causal connection between a work-related injury and the subsequent wage loss. Section 8-42-103(1)(a). A claimant need not prove that the work-related injury was the *sole cause* of the wage loss to establish entitlement to TTD benefits. Rather, eligibility for TTD benefits requires only that the work-related injury contributes *"to some degree"* to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995).

Once commenced, TTD benefits generally continue until one of the four events enumerated in § 8-42-105(3). But the respondents can also terminate TTD by proving that an efficient intervening event has severed the causal connection between the injury and the wage loss. *Roe v. Industrial Commission*, 734 P.2d 138 (Colo. App. 1986). The existence of an intervening event is an affirmative defense which the respondents must

prove by a preponderance of the evidence. *Atlantic and Pacific Ins. Co. v. Barnes*, 666 P.2d 163 (Colo. App. 1983).

Given the relatively low threshold showing of causation needed to establish entitlement to TTD, the respondents face a considerable challenge in proving an intervening event to terminate TTD. Since TTD is payable if the injury contributes "to some degree" to a wage loss, the respondents must show that the injury no longer contributes *in any degree* to the claimant's wage loss. *E.g*., *Horton v. Industrial Claim Appeals Office*, 942 P.2d 1209 (Colo. App. 1996).

Horton v. Industrial Claim Appeals Office, *supra*, is dispositive of Respondent's intervening event defense here. In *Horton*, the claimant was receiving TTD benefits and awaiting surgery when she suffered a non-injury related fall. The fall aggravated a pre-existing condition and necessitated postponement of the surgery. An ALJ concluded that the fall was an intervening event and suspended TTD benefits. The ICAO reversed the ALJ, and the Court of Appeals affirmed the ICAO. The following language is particularly pertinent to Claimant's case:

> [P]etitioners admitted liability for temporary total disability benefits and they did not contend that the claimant's disability abated prior to the fall . . . . Since the claimant was already totally disabled by the injury at the time of the alleged "intervening event," the subsequent wage loss was necessarily caused to some degree by the injury. Thus, the ALJ's findings establish that claimant's injury contributed in part to the subsequent wage loss. Therefore, under *PDM Molding* [ ], claimant was entitled to temporary disability benefits for the disputed period. *Id*. at 1211.

In *Parks v. Ft. Collins Ready Mix, Inc*., W.C. No. 4-251-955 (March 31, 1999), the ICAO applied *Horton* to a situation similar to Claimant's case. In *Parks*, the claimant's physicians had recommended a talonavicular fusion. The claimant had refused to undergo surgery, and the respondents requested termination of TTD benefits based on an "intervening event." The ICAO held that the claimant's refusal to proceed with surgery was not an "efficient intervening event" because "benefits are only precluded when the industrial disability plays 'no part' in the wage loss." The ICAO stated:

> [I]t is undisputed that the claimant was temporarily disabled at the time Dr. Thomas recommended additional surgery. Thus, the industrial injury contributed "to some degree" to the claimant's wage loss . . . . Under *PDM*, it was incumbent upon the respondents to show that some particular point, the injury no longer contributed in any degree to the claimant's wage loss. . . . Absent evidence that the claimant's temporary disability would have resolved by a specific time but for his delay in undergoing surgery, we perceive no error in the ALJ's determination that the delay is not an efficient intervening event.

The ALJ perceives no meaningful distinction between *Horton*, *Parks,* and Claimant's case. Claimant was clearly disabled by the industrial injury before he

developed the GI problems, and there is no persuasive evidence to suggest his disability would have otherwise resolved by now with the elbow surgery. Indeed, it is nearly certain that Claimant will have some residual disability regardless of the outcome of surgery. Accordingly, Respondent did not prove an intervening event sufficient to terminate Claimant's TTD benefits.

B. Respondent proved that Claimant's TTD benefits should be suspended under § 8-43-404(3).

The Workers' Compensation Act requires employers to provide reasonably necessary medical treatment to cure and relieve the effects of an industrial injury. Section 8-42-101(1)(a). The Act also creates a corresponding obligation on the claimant's part to participate in treatment as a precondition for receiving indemnity benefits. Specifically, § 8-43-404(3) provides:

> If any employee persists in any unsanitary or injurious practice which tends to imperil or retard recovery or refuses to submit to such medical or surgical treatment . . . as is reasonably essential to promote recovery, the director shall have the discretion to reduce or suspend the compensation of such injured employee.

Application of § 8-43-404(3) is an affirmative defense, requiring the respondents to prove that the treatment "is calculated to effect a cure" or "is reasonably essential to promote recovery." *MGM Supply Co. v. Industrial Claim Appeals Office*, 62 P.3d 1001 (Colo. App. 2002).

The purpose of the statute is "to prevent the situation where a claimant by refusal of reasonable medical treatment aggravates the compensable consequences of the industrial injury and thereby imposes additional liability on the respondent" *Aranda v. Evraz, Inc*., W.C. No. 4-628-418 (February 17, 2010).

In deciding whether to reduce a claimant's compensation, the ALJ should evaluate the refusal of treatment under an objective standard, and ask "what a reasonable person would do given the circumstances facing the claimant." *Romero v. Alstom, Inc*., W.C. No. 4-767-157-06 (April 9, 2015). The ALJ should consider factors such as "the history of treatment, contrary medical opinions, the importance of the proposed recommendation to the medical outcome and other circumstances bearing on the ability of a patient to comply with the medical directions." *Id*.

As found, Respondent proved that Claimant has refused treatment that is reasonably essential to his recovery, and that his refusal is not objectively reasonable. There is no serious question that the left elbow surgery is reasonably necessary to promote recovery, and all physicians agree it is the only thing standing between Claimant and MMI. No treating or examining provider has recommended Claimant postpone the surgery. Dr. Larsen admitted he had no personal knowledge of Claimant's GI issues and simply relied on Claimant's description of ongoing symptoms. The ALJ does not interpret Dr. Larsen's reports as opining that surgery is contraindicated. Similarly, Dr. Banjoko

stated that "*the patient* wants to be done with his current evaluation with the gastroenterologist before pursuing any surgical intervention on his left elbow." The persuasive evidence shows no injury-related impediment to moving forward with the left elbow surgery, and surgery is being delayed solely due to a non-work related condition. While this condition was no doubt stressful and painful, Claimant presented no persuasive evidence that it was of sufficient magnitude to delay the recommended surgery for medical reasons. Rather, the decision to proceed with elbow surgery rested solely with Claimant.

The unreasonableness of Claimant's refusal to proceed with surgery is further underscored by the lengthy and open-ended nature of the delay. It has been more than a year since the gallbladder surgery and 11 months since Respondent authorized the elbow surgery, with no end in sight. No provider has outlined a specific treatment plan or an anticipated timeframe for the GI problems to improve or resolve. Based on the evidence presented, the ALJ has no principled basis to determine when, or if, Claimant will deem himself ready for surgery. Although Claimant can choose to postpone surgery while he attends to unrelated medical issues, it is not objectively reasonable for him to do so indefinitely at Respondent's ongoing expense.

ORDER

It is therefore ordered that:

1. Respondent's request to suspend Claimant's TTD benefits under § 8-43-404(3) is granted. Respondent may suspend TTD benefits effective November 3, 2017, and continuing until Claimant undergoes left elbow surgery.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. DATED: March 30, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable right shoulder injury during the course and scope of his employment with Employer on July 20, 2017.

2. If compensable, whether Respondents have proven by a preponderance of the evidence that they are entitled to recover a penalty of 17 days of Temporary Total Disability (TTD) benefits for Claimant's failure to timely notify Employer of his injury pursuant to §8-43-102(1)(a), C.R.S.

STIPULATIONS

The parties agreed to the following:

1. If Claimant suffered a compensable industrial injury on July 20, 2017 Michael A. Dallenbach, M.D. and Derek Purcell, M.D. are Authorized Treating Physicians (ATP's).

2. If Claimant suffered a compensable industrial injury on July 20, 2017 he is entitled to receive TTD benefits for the period August 19, 2017 until terminated by statute.

3. Claimant earned an Average Weekly Wage (AWW) of $1,064.21.

FINDINGS OF FACT

1. Claimant worked for Employer as a Route Salesman. His job duties involved loading and delivering bread products to various locations across the state.

2. On July 20, 2017 Claimant was unloading trays of bread from a stack that was 15 trays high. Claimant estimated that each tray weighed approximately 30 pounds. As he was lowering two of the trays, he experienced a tearing or ripping sensation in his right shoulder. Claimant was unable to lift his arm but completed his work shift.

3. Claimant subsequently took two weeks off from work for a scheduled vacation. He expected his right shoulder condition to improve with rest. However, when his symptoms continued after approximately one week off of work, he contacted Market Sales Leader William White to report his July 20, 2017 injury.

4. After Claimant completed his two weeks of vacation he visited Employer's facility to complete Workers' Compensation paperwork. On August 11, 2017 he filled-out an Employee Statement of Injury. He stated that he injured his right shoulder on July 20,

2017 while lowering trays of bread from a stack. Employer also completed a First Report of Injury on August 11, 2017.

5. Mr. White testified that Claimant contacted him while on vacation on August 4, 2017. Claimant specified that he had injured his shoulder, but was uncertain about where the injury occurred. Mr. White confirmed that Claimant subsequently completed the Workers' Compensation paperwork on August 11, 2017.

6. On August 11, 2017 Claimant visited Authorized Treating Physician (ATP) Michael A. Dallenbach, M.D. for an examination. Dr. Dallenbach recounted that Claimant had been lowering two baskets weighing a total of approximately 60 pounds to load his delivery truck when he "felt a rip in his right shoulder." After performing a right shoulder x-ray Dr. Dallenbach diagnosed Claimant with a right rotator cuff tear and biceps tendon tear. Dr. Dallenbach assigned work restrictions of no lifting, carrying, pushing/pulling or repetitive lifting in excess of five pounds.

7. The record reflects that Claimant has a prior history of right shoulder problems. On May 9, 2017 Claimant visited Sean Oquist, D.C. for chiropractic treatment. Claimant reported that he had been lifting a couch at home and experienced pain in his right shoulder and lower neck area on May 8, 2017. He explained that he suffered constant pain and almost any movement aggravated his symptoms. Dr. Oquist determined that Claimant had "localized tenderness in the anterior shoulder congruent with a rotator cuff strain."

8. On June 6, 2017 Claimant returned to Dr. Oquist for chiropractic treatment. Claimant remarked that his right shoulder had been popping more than normal. Nevertheless, Dr. Oquist noted that Claimant's symptoms were improving.

9. On July 7, 2017 Claimant visited Ann Daggett, M.D. at Arkansas Valley Family Medicine for an examination. He reported that about two months earlier he was lifting furniture while helping his daughter move when he felt a pop in his right shoulder. Dr. Daggett noted that Claimant's right shoulder was "constantly popping in and out of place with any overhead movement." She diagnosed Claimant with right shoulder pain and ordered an x-ray.

10. On July 11, 2017 Claimant returned to Dr. Daggett for an evaluation. Dr. Daggett continued to diagnose Claimant with right shoulder pain and administered a steroid injection.

11. On November 29, 2017 Claimant underwent an independent medical examination with Timothy O'Brien, M.D. Claimant reported that on July 20, 2017 he was removing two trays of bread from a stack that was 15 trays high. He immediately experienced a "profound ripping in his right arm" and could no longer lift trays. Although Claimant hoped his condition would improve while he was on vacation for the following two weeks, his symptoms continued and he reported his injury to Employer. Dr. O'Brien noted that Claimant had suffered a right arm injury in April 2017 while helping his daughter move a couch. He reviewed Claimant's medical records and conducted a physical

examination. Dr. O'Brien concluded that Claimant did not suffer a new right shoulder injury on July 20, 2017 because his symptoms were a manifestation of his personal health.

12. Dr. O'Brien explained that an MRI arthrogram of Claimant's right shoulder revealed longstanding rotator cuff degenerative changes, tearing, retraction and atrophy. He noted that the conditions take years to develop. Dr. O'Brien commented that Claimant's torn rotator cuff "looked degenerative" and there was no objective evidence that he suffered an acute injury on July 20, 2017. Furthermore, Claimant has suffered daily pain, range of motion limitations and weakness in his right shoulder since he helped his daughter move in April 2017. Dr. O'Brien summarized that Claimant's "massive rotator cuff tear" constituted "an incurable and relentlessly progressive condition that is expected to result in episodic pain and those episodes of pain are typically not the result of identifiable trauma, but rather a manifestation of the underlying disease process." Claimant did not suffer any "new tissue breakage or yielding of his rotator cuff" while working for Employer on July 20, 2017.

13. Dr. O'Brien testified at the hearing in this matter. He maintained that Claimant's work activities on July 20, 2017 did not cause a new injury in the form of a rotator cuff tear. Instead, Claimant suffered a gradual, degenerative rotator cuff tear that developed over years. Claimant's right shoulder popping and intense inflammation documented in the medical records were consistent with the degenerative process of osteoarthritis. The April 2017 incident in which Claimant helped his daughter move a couch constituted an acute flare of an arthritic joint. The July 20, 2017 incident at work was not an acute incident because Claimant did not tear any new tissue. Claimant already had a massive rotator cuff tear. Accordingly, the work incident did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment.

14. Claimant testified at the hearing in this matter. He acknowledged that he injured his right shoulder in late April 2017 while assisting his daughter move from one apartment to another. He specifically remarked that he moved several pieces of furniture including a couch, chairs, tables, a bed frame and mattresses. The medical records from May through July 2017 document ongoing symptoms in Claimant's right shoulder including significant pain, popping, catching and limited range of motion. Claimant confirmed that he sought active medical care following the April/May 2017 right shoulder injury, including chiropractic treatment, medications, palliative care and an injection.

15. Claimant has failed to demonstrate that it is more probably true than not that he suffered a compensable right shoulder injury during the course and scope of his employment with Employer on July 20, 2017. Initially, Claimant asserts that he injured his right shoulder while lowering two trays from a large stack. However, the record is replete with evidence that Claimant suffered an acute right shoulder injury in late April or early May 2017 while helping his daughter move. The medical records from May through July 2017 document ongoing symptoms in Claimant's right shoulder including significant pain, popping, catching and limited range of motion. Claimant sought medical care

following the April/May 2017 right shoulder injury, including chiropractic treatment, medications, palliative care and an injection.

16. Dr. O'Brien explained that an MRI arthrogram of Claimant's right shoulder revealed longstanding rotator cuff degenerative changes, tearing, retraction and atrophy. He remarked that Claimant suffered a gradual, degenerative rotator cuff tear that developed over years. Claimant's right shoulder popping and intense inflammation documented in the medical records were consistent with osteoarthritis. The April/May 2017 incident in which Claimant helped his daughter move furniture constituted an acute flare of an arthritic joint. The July 20, 2017 incident at work was not an acute incident because Claimant did not tear any new tissue. Claimant already had a massive rotator cuff tear. Accordingly, the July 20, 2017 work incident did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals*

*Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has failed to demonstrate by a preponderance of the evidence that he suffered a compensable right shoulder injury during the course and scope of his employment with Employer on July 20, 2017. Initially, Claimant asserts that he injured his right shoulder while lowering two trays from a large stack. However, the record is replete with evidence that Claimant suffered an acute right shoulder injury in late April or early May 2017 while helping his daughter move. The medical records from May through July 2017 document ongoing symptoms in Claimant's right shoulder including significant pain, popping, catching and limited range of motion. Claimant sought medical care following the April/May 2017 right shoulder injury, including chiropractic treatment, medications, palliative care and an injection.

8. As found, Dr. O'Brien explained that an MRI arthrogram of Claimant's right shoulder revealed longstanding rotator cuff degenerative changes, tearing, retraction and atrophy. He remarked that Claimant suffered a gradual, degenerative rotator cuff tear that developed over years. Claimant's right shoulder popping and intense inflammation documented in the medical records were consistent with osteoarthritis. The April/May 2017 incident in which Claimant helped his daughter move furniture constituted an acute flare of an arthritic joint. The July 20, 2017 incident at work was not an acute incident because Claimant did not tear any new tissue. Claimant already had a massive rotator cuff tear. Accordingly, the July 20, 2017 work incident did not aggravate, accelerate or combine with his pre-existing condition to produce a need for medical treatment.

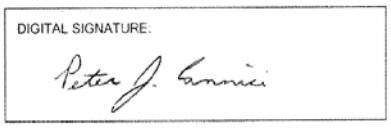
ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

Claimant's claim for Workers' Compensation benefits is denied and dismissed.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: March 29, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that medical treatment including: a computed tomography (CT) scan taken at St. Mary's Hospital on July 6, 2017, temporomandibular joint (TMJ) treatment, treatment of concussive symptoms, and psychiatric treatment, constitutes reasonable medical treatment necessary to cure and relieve claimant from the effects of the June 20, 2017 work injury.

- At hearing, the parties stipulated that respondents would file a General Admission of Liability (GAL) on this claim and issue payment of temporary total disability (TTD) benefits for the period of August 31, 2017 through September 12, 2017, based upon a stipulated average weekly wage (AWW) of $783.04.

FINDINGS OF FACT

1. Claimant has worked for employer since 2016 as manager of the Seafood Department. On June 30, 2017, claimant was walking into her department when she slipped on a wet floor and fell. Claimant testified that while falling she struck the right side of her jaw on a pole and then fell to the ground and struck the back of her head on the floor. Store security video taken on June 30, 2017 supports claimant's description of the incident.

2. Claimant testified that following the incident she had pain in her right jaw. Claimant immediately reported the slip and fall incident to a supervisor. Claimant's supervisor instructed her to seek medical treatment with Work Partners because claimant was already receiving treatment with Work Partners related to a prior work injury. [1]

3. On June 30, 2017, claimant received medical treatment at Work Partners and was seen by Dr. Lori Fay. On that date, claimant reported pain in her right jaw, right hip, left hand, left knee, and lumbar region. Dr. Fay determined that claimant was able to return to work with no restrictions.

4. On July 5, 2017, claimant returned to Dr. Fay and reported headaches, and vision issues. Claimant also reported that when she fell on June 30, 2017 that she "lost time" and was concerned that she suffered a concussion. Claimant denied any dizziness, weakness, confusion, nausea, or vomiting. At that time, Dr. Fay opined that claimant did not need a computed tomography (CT) scan of her head. Dr. Fay

[1] On April 18, 2017, claimant suffered injuries to her left knee, right hip, and right groin while working for employer. Claimant receives treatment for that April 2017 injury with Work Partners as her authorized treating provider (ATP).

recommended brain rest and instructed claimant to avoid computers, telephones, and televisions.

5. On July 6, 2017, claimant sought treatment at the emergency department (ED) at St. Mary's Hospital (SMH). Claimant testified that she went to the ED because she had concerns about her ongoing headaches. Claimant also testified that she felt that she could not think quickly and could not speak correctly. Work Partners did not refer claimant to SMH for treatment.

6. While at SMH on July 6, 2017, claimant was seen by Dr. Wendy Filener. Dr. Filener diagnosed claimant with a head contusion and a concussion with loss of consciousness. Claimant testified that she understood that she was diagnosed with a Grade 2 concussion. Dr. Filener also diagnosed a jaw strain.

7. Also on July 6, 2017 at SMH, claimant underwent CT scans of her cervical spine, head, and maxillofacial area. The CT of claimant's cervical spine showed no evidence of an acute injury. The head CT showed no acute inter cranial abnormality. The CT of claimant's face was negative for any bony injury.

8. On July 21, 2017, claimant sought treatment with Dr. Karen Frye as her primary care provider. During that visit claimant described her fall at work and complained of headaches, neck pain, visual disturbances, and dizziness. With regard to these symptoms, Dr. Frye diagnosed claimant with concussion syndrome.

9. On August 9, 2017, respondents sent claimant to Dr. Lawrence Lesnak for an independent medical examination (IME). Dr. Lesnak reviewed claimant's medical records, obtained a history from claimant, and performed a physical examination. The focus of the IME was claimant's April 18, 2017 work injury. However, in his IME report Dr. Lesnak opined that, as a result of the June 30, 2017 slip and fall, claimant likely had right lateral buttock, pelvic, and right thigh myalgia. Dr. Lesnak also opined that claimant was nearing maximum medical improvement (MMI) related to the June 30, 2017 injury.

10. On August 18, 2017, claimant returned to Work Partners and was seen by Erica Herrera, PA. At that time claimant reported aching and dull pain in her head and neck, a constant headache, and ringing in her ears. In addition, claimant reported problems with her memory. Ms. Herrera recommended that claimant undergo psychologic rehabilitation. Ms. Herrera also recommended that claimant see a dentist because of claimant's complaints that since the June 30, 2017 fall at work she had difficulty with her teeth not "lining up" correctly and not "closing right". At that August 18, 2017 visit, Ms. Herrera placed claimant on restricted duty including no lifting overhead, and a 15 pound limit for lifting, pushing and pulling. Ms. Herrera also instructed claimant to limit screen time and caffeine.

11. On August 31, 2017, claimant returned to Dr. Fay and reported symptoms that included constant headache, neck pain, and ringing in her ears. Dr. Fay noted that claimant's concussive symptoms had worsened and she recommended neuropsychiatric testing. In addition, Dr. Fay made a referral regarding claimant's continuing jaw complaints. At that time, Dr. Fay restricted claimant from all work.

12. On September 12, 2017, claimant was seen by Dr. Fay and reported that she continued to have headaches with neck pain, but that it was improved. Dr. Fay released claimant to return to work with restrictions, including no lifting, carrying, pushing or pulling over 15 pounds and no reaching overhead.

13. On September 20, 2017, Dr. Lesnak issued an addendum to his IME report because he had reviewed additional medical records and was asked to opine on the reasonableness and necessity of various recommended medical treatments. In the addendum Dr. Lesnak noted that claimant did not report any cognitive symptoms during the August 9, 2017 IME. Dr. Lesnak also noted that there was "absolutely no evidence" of any type of brain injury or cerebral concussion that may have occurred on June 30, 2017. As a result, Dr. Lesnak noted that it is his opinion that the recommended medical treatment would not be reasonable or necessary because it is not related to the June 30, 2017 incident.

14. Dr. Lesnak's testimony by deposition was consistent with his written reports. Dr. Lesnak reiterated his opinions that claimant did not suffer a concussion on June 30, 2017 and the recommended medical treatment is not reasonable or necessary to treat claimant. In support of his opinions Dr. Lesnak noted that there were no radiologic abnormalities. In his testimony Dr. Lesnak also pointed to the August 31, 2017 note by Dr. Fay that indicated that claimant's cognitive symptoms had not improved, but had worsened. Dr. Lesnak testified that worsening of symptoms is a non-physiologic response to a concussion. Dr. Lesnak also testified that claimant did not report any cognitive difficulties at the IME.

15. The ALJ is persuaded by claimant's post-hearing affidavit in which she notes that because she understood that the focus of the IME was her April 18, 2017 work injury, she completed the pain diagram regarding only the April incident.

16. Claimant returned to Dr. Frye on November 10, 2017 and reported that she continued to have difficulty with memory and recall. At that time, Dr. Frye recommended claimant undergo treatment with a speech therapist.

17. Claimant testified that she chose to seek treatment with Dr. Christopher Young on her own because Dr. Fay had previously recommend him[2]. Claimant was seen by Dr. Young on January 3, 2018. At that time, Dr. Young recorded that claimant's complaints as including tinnitus, mental fogginess, cognitive problems, lethargy, anxiety,

[2] The ALJ infers that claimant is referencing Dr. Fay's August 31, 2017 recommendation for neuropsychiatric testing.

emotional lability, problems with balance and coordination, auditory discrimination problems, dizziness, nausea, photosensitivity, phonosensitivity, and blurred vision. Dr. Young diagnosed sequela of traumatic injury to the brain and adjustment disorder. His treatment recommendations included neuropsychological evaluation, physical therapy, audiology, and biofeedback.

18. The ALJ credits[3] the medical records, claimant's testimony, and the opinions of Ms. Herrera, Dr. Fay, Dr. Filener, Dr. Frye, and Dr. Young over the contrary opinion of Dr. Lesnak and finds that claimant has demonstrated that it is more likely than not that she suffered a concussion and injury to her jaw on June 30, 2017.

19. The ALJ credits the medical records and the opinions of Ms. Herrera, Dr. Fay and Dr. Young over the contrary opinion of Dr. Lesnak and finds that claimant has demonstrated that it is more likely than not that the recommended medical treatment (including TMJ treatment, treatment of concussive symptoms, and psychiatric treatment) is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury.

20. The ALJ credits the medical records and Dr. Fay's July 5, 2017 opinion that claimant did not need to undergo a head CT. In that same medical report Dr. Fay recognized claimant's concussive symptoms and continued to recommend brain rest. The ALJ finds that claimant has failed to demonstrate that it is more likely than not that on July 6, 2017 she experienced a bona fide emergency that necessitated medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

[3] In claimant's position statement the ALJ is asked to take judicial notice of credibility determinations made by another ALJ regarding respondents' expert. In issuing this order, the ALJ does not consider the credibility determinations of another fact finder. The ALJ finds that to do so would be wholly inappropriate.

unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990).

4. As found, claimant has demonstrated by a preponderance of the evidence that she suffered a concussion and injury to her jaw on June 30, 2017. As found, claimant has demonstrated by a preponderance of the evidence that recommended medical treatment (including TMJ treatment, treatment of concussive symptoms, and psychiatric treatment) is reasonable medical treatment necessary to cure and relieve claimant from the effects of the work injury. As found, the medical records, claimant's testimony, and the opinions of Ms. Herrera, Dr. Fay, Dr. Filener, Dr. Frye, and Dr. Young are credible and persuasive.

5. "Authorization" refers to the physician's legal authority to treat, and is distinct from whether treatment is "reasonable and necessary" within the meaning of Section 8-42-101(1)(a), C.R.S. 2008. *Leibold v. A-1 Relocation, Inc.*, W.C. No. 4-304-437 (January 3, 2008). Section 8-43-404(5)(a), C.R.S. specifically states: "In all cases of injury, the employer or insurer has the right in the first instance to select the physician who attends said injured employee.

6. In an emergency situation, a claimant need not seek authorization from the employer before seeking medical attention. *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). However, a question may be raised as to whether a bona fide emergency exists that would justify treatment at an emergency room. *Timko v. Cub Foods*, W.C. No. 3-969-031 (June 29, 2005).

7. As found, claimant has failed to demonstrate by a preponderance of the evidence that on July 6, 2017 she suffered a bona fide emergency that necessitated medical treatment. Therefore, the head CT claimant obtained on July 6, 2017 is not authorized medical treatment. As found, the ALJ finds the medical records and the July 5, 2017 report by Dr. Fay to be credible and persuasive.

ORDER

It is therefore ordered that:

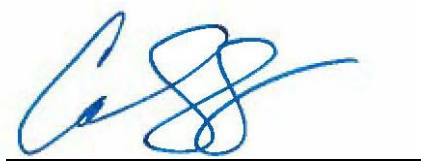
1. Respondents shall pay for reasonable and necessary medical treatment related to claimant's June 30, 2017 work injury, including TMJ treatment, treatment of

concussive symptoms, and psychiatric treatment, pursuant to the Colorado Medical Fee Schedule.

2. Claimant's claim for the July 6, 2017 head CT is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

Dated: March 27, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury to his right shoulder while working for Employer.

II. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable, necessary, and related medical treatment.

III. Whether Claimant established by a preponderance of the evidence that the medical treatment he has received is authorized.

IV. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits.

V. Claimant's average weekly wage.

VI. Whether Claimant's compensation should be increased by 50% pursuant to §8-43-408(1), C.R.S., for Employer's failure to carry Workers' Compensation insurance.

VII. Whether Claimant is an independent contractor.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Employer, Ross Landscape and Irrigation, is owned by Mr. Chris Ross. Mr. Ross is married to Ms. Shannon Ross. Claimant is Ms. Ross' brother. Therefore, Mr. Ross is Claimant's brother-in-law.

2. Employer provides landscaping and irrigation services to its customers.

3. Claimant alleges he injured his right shoulder on June 17, 2016, while moving a wheelbarrow full of rock (cobble) while working on a rock garden for Employer. (Claimant's Exhibit 6; Respondent's Exhibit F)

4. Claimant was born on April 13, 1964. On the date of the alleged injury, Claimant was 51.

5. Claimant has a broad range of experience working in the construction industry. Claimant has done this type of work his entire career. Claimant's experience and skill-set includes, but is not limited to, remodeling kitchens and bathrooms, tile work, installation and repair of drywall, installation and repair of fences,

landscaping, painting, general carpentry, and performing finish work. Claimant also described himself as a "handy-man." (Hearing Transcript., pg. 104, ln. 5-12)[1]

6. Mr. Ross has known Claimant for twenty years. Since Mr. Ross has known Claimant, Claimant has complained of shoulder pain. (Tr., pg. 160). Claimant's shoulder problems began when he was in his 20's and injured his shoulder at Fuddruckers when he picked up a side of beef that was too heavy. (T., p. 160, ln. 7-16.)

7. Claimant has been taking opiates for pain on a regular basis since 2002. (Respondent's Exhibit C, pg. 126)

8. Prior to the date of the alleged injury, Claimant had chronic shoulder pain.

9. Claimant also fell off of a roof in 2007 and injured his right shoulder. (T., pg. 120, ln. 1-6.)

10. Claimant underwent an MRI scan of his right shoulder in 2007 due to pain and limited range of motion caused by an injury. (Id., Respondent's Exhibit D, pp. 129.)

11. Claimant began treating with Dr. Euser for a workers' compensation injury in 2010. (T., p. 46, ln. 22-25; p. 47, ln. 1-6.) The extent or type of treatment Dr. Euser provided Claimant due to the 2010 work injury is not clear from the medical records submitted at hearing.

12. On January 29, 2014, Dr. Euser evaluated Claimant. The report from this visit indicates Claimant was a "new patient." The medical report from this visit indicates Claimant was complaining of back and shoulder joint pain which was chronic and was due to an injury. It was also noted that Claimant had recently filled a prescription for hydrocodone.

13. Between 2014 and 2017, Dr. Euser's medical records regarding Claimant document that he treated Claimant for chronic shoulder and back pain and prescribed Claimant hydrocodone on a regular basis. (Respondent's Exhibit B)

14. Claimant was incarcerated in the Weld County jail in 2014 and was released on December 13, 2014. While incarcerated, Claimant was treated for withdrawal symptoms due to not taking opiates. After his release, he continued to treat with Weld County physicians for pain management through March, 2015, and received prescriptions for chronic pain. (T., p. 122, ln. 7-25; p. 123, ln. 1-8; Respondent's Exhibit C, pp. 125-127.)

15. After his release from jail, Claimant lived with his mother until she passed away in November, 2015. (T., p. 104, ln. 22.) After she passed away, he continued to

[1] All future references to the Hearing Transcript will be identified by T., followed by a page and line number.

live in her home, which was inherited by his sister, Ms. Shannon Ross. (Id., ln. 23-25.) Once Ms. Ross owned the home, Claimant entered into a rental agreement with Ms. Ross wherein his rent to live in the home was $750 per month. (T., p. 105, ln. 13-14.)

16. Towards the end of 2015, Claimant's construction jobs were starting to dry up. As noted in his December 20, 2015, text message to Ms. Ross, Claimant was just finishing up the tile work on a bathroom he was remodeling and wanted to know if she or Mr. Ross had any leads for work. (Respondent's Exhibit H).

17. Based on a January 4, 2016, text message from Claimant to Ms. Ross, Claimant was late paying his January rent. But, Claimant indicated he had additional work lined up. (Respondent's Exhibit, H., p.2)

18. On January 31, 2016, Claimant sent a text message to Ms. Ross indicating he was working on a project up North that required him to install a dishwasher and go through some drywall and change out a faucet he had recently installed in a shower. (Respondent's Exhibit, H., p.6)

19. On February 9, 2016, Claimant sent a text to Ms. Ross and indicated he started a new bathroom job that day. (Respondent's Exhibit, H., p.8)

20. Mr. Ross testified at the December 5, 2017, hearing. He testified that he brought Claimant on as an independent contractor to give him something to do and to try and help him out. (T., p. 153, ln. 6-19.)

21. Mr. Ross further testified that he has never had any employees, but from time to time he hires independent contractors to help with his company. (T., p. 151, ln. 17-23.) He testified that he agreed to pay Claimant $15.00 per hour for any project Claimant accepted, but that he had no control over Claimant's schedule, did not pay any taxes or social security for the Claimant, Claimant did not complete an application for employment, and that Claimant was free to, and did, work for other clients at his own discretion. (T., p. 155, ln. 8-25; p. 156, ln. 1-3; p. 163, ln. 25; p. 164, ln. 1-22.)

22. Claimant performed general landscaping labor for Employer from April 5, 2016, through July 22, 2016. (Respondent's Exhibit G) During this period of time, Claimant also performed work for others. (Claimant's Exhibit 4).

23. Claimant testified that he injured his right shoulder while moving large river rock with a wheelbarrow. (Tr., pg. 32-33.) Claimant contends the accident occurred on June 17, 2016. (Respondent's Exhibit F)

24. Claimant kept a log of his work assignments in 2016 regardless of where he was working for purposes of his probation officer, as he needed to show his probation officer that he was gainfully employed. (T., p. 102, ln. 10-25; p. 103, ln. 1-2)

Claimant documented his jobs starting in May, 2016. (Claimant's Exhibit 4, pp. 1-3.) However, Claimant testified that he also worked jobs prior to May, 2016, which were not associated with Employer, including a finishing job in Thornton in January, 2016, and a partial bathroom remodel job in February, 2016. (T., p. 123, ln. 23-25 - p. 125, ln. 1-9.) He further testified that he also accepted jobs into October, 2016, but began refusing work at that point for many reasons including clients not being able to pay and not being able to purchase materials. (T., p. 128, ln. 12-25.)

25. Claimant's documentation regarding his jobs indicates that he was working on the rock garden on June 16th and June 17th of 2016. (Claimant's Exhibit 4)

26. Tommy Southcott testified at the December 5, 2017 hearing. Mr. Southcott also worked with Employer. Mr. Southcott testified that Claimant told him in passing prior to June 17, 2016, that he had previously injured his shoulder and referred to his shoulder as being a problem and that his pain complaints were pretty routine. (T., pp. 138, ln. 6-16; p. 141, ln. 10-16.) Mr. Southcott also testified that Claimant would take pain pills at work for his shoulder. Id. Claimant would call his pain pills his "candy" and indicate it was "candy time" when taking his pain pills. (T., p. 146, ln. 1-9.) He further testified he personally hired Claimant to complete projects at his home in the spring of 2016, including rebuilding a bathroom and woodworking on 10 foot high pillars. (T., p. 138, ln. 24-25 – p. 140, ln. 1-22.)

27. Mr. Southcott also testified that he worked at the jobsite where Claimant contends he injured his right shoulder moving large rocks with a wheelbarrow on June 17, 2016. He testified that the day before the alleged accident, June 16, 2016, only he and Mr. Ross were using the heavy wheelbarrows to truck and dump the rocks ("cobble") to the back of the house where Claimant was working. (T., p. 137, ln. 1-19) Each rock was about the size of a football. (T., p. 136, ln. 24) Then, once Mr. Southcott and Mr. Ross would dump the rock by Claimant, Claimant would set each rock in place by hand. (T., p. 137, ln. 1-19). Mr. Southcott also testified that on the following day, June 17, 2016, the day of the alleged accident, he and Mr. Ross got in an argument that morning and he – Mr. Southcott - left the jobsite. T., p. 33, ln. 19-24.) The ALJ finds Mr. Southcott's testimony to be credible.

28. Mr. Ross testified that he was present the entire time Claimant was on the job site with Ross Landscaping on June 17, 2016, and that Claimant was not using a wheelbarrow at any time as he was clearing dirt to install new drain pipes in the front yard. (T., p. 158, ln. 3-9.) Mr. Ross also testified he got into an argument with Mr. Southcott as to how he wanted the rock – cobble – moved and he ended up moving the remaining rocks himself which consisted of three wheelbarrows. (T., 158, ln. 3-19) He further testified that he did not see Claimant injure his shoulder on June 17, 2016, nor did the Claimant or anyone else advise him that Claimant injured his shoulder on June 17, 2016. (T., p. 159, ln. 23-25; p. 160, ln. 1-5.) He testified that Claimant had previously advised him of a prior injury to his

shoulder while working at Fuddruckers when the Claimant was in his 20's and that the Claimant had complained of shoulder problems since they first became acquainted. (T., p. 160, ln. 7-16.) The ALJ finds Mr. Ross' testimony to be credible.

29. Claimant's work logs specifically indicate the projects at which he was working on June 16th and June 17th of 2016 involved the rock "garden" or rocks. (Claimant's Exhibit 4, p.2). The only other project listed on Claimant's work logs that indicate he was working with rocks was on June 10, 2016. (Claimant's Exhibit 4, p.1-3.) Claimant's work logs from May, June, and July of 2016, indicate Claimant performed other tasks, and worked at other locations, but there are no other time entries which indicate Claimant was working with cobble or rock. (Claimant's Exhibit 4, p.1-3).

30. Mr. Ross was out of town and not working from July 2, 2016 through July 12, 2016. (T., p. 168, ln. 15-16.) During this period of time, Claimant did not work with Employer. (Id.; Respondent's Exhibit G). It is not known who Claimant worked for during this period. Claimant also did not work with Employer after July 22, 2016, because Claimant was working on other personal jobs. (Respondent's Exhibit G).

31. On August 4, 2016, Claimant was working on a personal job painting a house. This job required Claimant to use a ladder to reach the second story, such as above the garage. (Respondent's Exhibits, pg. 251.) Claimant and Mr. Ross began texting each other. Claimant advised Mr. Ross that he was not available to work that day since he was working on another job which involved painting the exterior of a house. During their discussion, via text, a rift developed between Claimant and Mr. Ross regarding the amount of hours Claimant worked during July of 2016. According to Mr. Ross, Claimant worked on a personal project at "Dee's" house during the first two weeks of July and had been working on another personal job which involved painting the exterior of a house for the last two weeks. Employer's payment history regarding Claimant established Claimant worked with Employer approximately 5 ½ days, or 44.5 hours, between July 1, 2016, and July 22, 2016. The payment history also shows Claimant did not work with Employer after July 22, 2016. By the end of the conversation, Mr. Ross advised Claimant that he was done working with him. (Respondent's Exhibit I, pg. 248-257.) After this conversation, Claimant did not work with Employer again.

32. While renting the house from his sister, Ms. Ross, Claimant got behind in his rent payments. Claimant also failed to pay various utility bills. (T., p. 161, ln. 8-11.)

33. Towards the end of September, 2016, the relationship between Claimant and Ms. Ross deteriorated due to Claimant's failure to pay his rent and utility bills. (T., p. 161, ln. 8-11., Respondent's Exhibits, pg. 209-212)

34. On October 1, 2016, Claimant texted Ms. Ross about wanting to give her a check that day, but he could not. Claimant also indicated that he was picking up more supplies and wood for another project and that he would be "sitting real pretty" after finishing up various projects. He also indicated that he got a contract on Jim and Dee's fence plus both of their neighbors' fences. Furthermore, he also said he got another job to remodel a kitchen. None of these text messages indicate he hurt his shoulder working with Employer, that he was having shoulder problems which impacted his ability to work, or that his long standing shoulder condition had gotten worse. (Respondent's Exhibit H, pg. 219-220)

35. Up until October 5, 2016, Claimant had not reported to Employer, or his sister, that he injured his shoulder working with Employer.

36. It is undisputed that Claimant did not perform any work for Employer on June 25, 2016, or at any time after July 22, 2016. (T, p. 106, ln. 5-25; p. 110, ln. 8-10; Claimant's Exhibit 4, pp. 3-4; Respondent's Exhibit G, pp. 174.)

37. Claimant was hired by other individuals to perform various types of work on July 24, 2016, July 26-30, 2016, and in August, 2016, for almost the entire month. (Claimant's Exhibit 4, pp. 3) This work consisted of sprinkler work and fixing a garage door, trim work, demo work, sanding and finishing work, painting the exterior of a house, and building a large deck. (Id.)

38. Ms. Ross testified at the February 12, 2017, hearing. She testified that during the time Claimant lived in her house, he was unable to pay his rent timely. Thus, Ms. Ross decided to sell the home and on October 5, 2016, gave Claimant notice via a text message that the house was being sold and that he would have 90 days to relocate. (T., p. 129, ln. 1-8; Respondent's Exhibit H, pp. 45.)

39. On October 5, 2016, Claimant sent a text message in response to his sister's advisement that he would need to relocate, stating "[t]he bad news doesn't quit my doctor's appointment yesterday I ripped my rotator cuff in the major muscle above that when I was working with Chris. Anyway, no hard feelings you gotta do what you gotta do and I have to do what I have to do." (Respondent's Exhibit H, pp. 46.)

40. On October 6, 2016, after Claimant was given notice that he had to move, Mr. Ross and Mr. Southcott went to Claimant's house to turn off the water to the sprinkler system in anticipation of a freeze. (T., pg. 141-142). When Mr. Ross arrived at the house, he could hear someone working in the garage and sanding something. Mr. Ross rang the doorbell and Claimant's son answered the door. Claimant's son then went to get Claimant from the garage. While waiting for Claimant to come to the front door, the sanding stopped. Shortly thereafter, Clamant came to the door wearing a bathrobe and he had sawdust on his hands, face, and hair - but not on his bathrobe. Claimant was trying to hide the fact that he was working in the garage based on the fact that he told his sister the day

before that he injured his shoulder working with Mr. Ross. Claimant was verbally upset with Mr. Ross, and threated to sue Mr. and Ms. Ross in probate court and threatened to file a workers' compensation claim, stating "I'm going to get my money one way or the other." (T., p. 141, ln. 20-25; p. 142, ln. 1-15; p. 163, ln. 7-19.)

41. Claimant was also demanding money from Ms. Ross, or the estate, for allegedly taking care of his mother, while he was living with her and before she passed away.

42. The parties ended up in an eviction proceeding to remove Claimant from the premises owned by Ms. Ross. At a mediation conference during that proceeding on October 22, 2016, Claimant handed Chris and Shannon Ross a statement indicating that he injured his shoulder while moving rock working for Ross Landscaping on June 17, 2016. (Claimant's Exhibit 6.)

43. Claimant testified that he had previously filed numerous workers' compensation claims wherein he received TTD benefits, PPD benefits and settlements, and that he knew how to report work related injuries and file workers' compensation claims. (T., p. 112, ln. 3-24.)

44. Despite knowing how to properly file a workers' compensation claim, Claimant testified that he "kind of" reported his workers' compensation injury to Chris Ross verbally on June 17, 2016, by stating he tweaked his shoulder, or words to that effect. (T., p. 35, ln. 9-18; p. 114, ln., 11-25 – p. 116, ln. 1-17.) He admitted, however, that he did not submit any written report of his injury until his eviction proceedings on October 25, 2016, and did not file his workers' compensation claim with the Division until October 31, 2016, more than four (4) months after his alleged date of injury. (T., p. 130, ln. 4-11, Respondent's Exhibit F, pp. 169.)

45. Claimant was also asked when he decided that he needed to file a workers' claim for compensation. Claimant testified that he had talked to Mr. Ross about it, when they were starting to go their separate ways due to a conflict over hours worked. According to Claimant, his shoulder was "killing" him at that time. (Tr., pg. 36, ln. 9-24.) However, the conversation between the Claimant and Mr. Ross that resulted in them going their separate ways occurred on August 4, 2016, via text message. The text messages were submitted into evidence by Respondent. (See Respondent's Exhibit I, pg. 250-260.) At no time did Claimant advise Mr. Ross that he injured his shoulder. Moreover, at no time during this conversation did Claimant indicate his shoulder was "killing" him. Instead, Claimant complained about the wasps he was encountering behind the shutters that were above the garage of the house he was painting. (Id.)

46. Mr. Ross testified that the first time he was made aware the Claimant was asserting an injury to his shoulder caused by working for Ross Landscaping was on October 5, 2016, when Claimant sent his October 5, 2016 text message to

Ms. Ross in response to a text message she sent Claimant indicating she had decided to sell the house Claimant was living in and he would have to move out. (T., p. 161, p. 13-25; p. 163, ln. 7-24.)

47. As found above, when Claimant was behind in his rent, he texted his sister, Ms. Ross, on October 1, 2016, and said he was picking up some wood and supplies for another project. He also specifically stated that he "got the contract on Jim and Dees fence." At hearing, however, Claimant testified that he really didn't get the contract on their fence but that they were merely talking about it and they knew Claimant couldn't handle the weight and physically perform the work. (T., pg 127, ln. 16-23.) Claimant also indicated in his text message that was redoing Karen and Randy's Kitchen. At hearing, however, Claimant testified that he did not do that job either because he never got the job to redo Karen and Randy's kitchen, they just "possibly" wanted him to redo their kitchen. (T., pg. 127, ln. 24; pg. 128, ln. 1-6) Therefore, Claimant was either leading his sister along with misrepresentations about jobs he had which would allow him to pay the rent or was making misrepresentations to the court if he actually did the jobs.

48. Dr. Euser was Claimant's primary care physician. Dr. Euser testified that every time Claimant would see him for an office visit, Claimant was required to update his social history on an electronic tablet that was incorporated into his medical reports. (T., p. 70, ln. 23-25; p. 71, ln 1-19.)

49. Claimant confirmed that at each evaluation with the Dr. Euser, he was given an electronic tablet to update his social history section and that he was honest in what he reported. (T., p. 120, ln. 14-25.)

50. The social history section of Dr. Euser's reports references whether or not an injury occurs in the workplace or is work related. (T., p. 71, ln. 20-25; p. 72, ln. 1-19.)

51. It is undisputed that in every medical report authored by Dr. Euser at the relevant times, the social history for each visit reports the shoulder injury as non-work related. (Respondent Exhibit B, pp. 11-123.)

52. Claimant stated very clearly in his Workers' Claim for Compensation that he injured his shoulder on June 17, 2016, pushing a wheelbarrow full of cobblestone. (Respondent's Exhibit F). However, On June 7, 2016, during an evaluation by Dr. Euser, Claimant reported complaints of bilateral shoulder pain. The report also indicates Claimant planned to have his shoulder fixed at some point in the future. (Respondent Exhibit B, pp. 87.) And, the report specifically indicates the injury is not work related.

53. Dr. Euser also testified that his report of June 7, 2016, indicates that he and Claimant discussed his bilateral shoulder problems and that they would discuss it further when and if Claimant wanted to fix it. (T., p. 80, ln. 1-17.)

54. The ALJ infers from Dr. Eueser's June 7, 2016, medical report, Dr. Euser's testimony, as well as his other medical records, that Claimant's shoulder problems have been a chronic long standing problem which supported Dr. Euser's ongoing prescriptions for hydrocodone and most likely resulted in them discussing on such date that Claimant would have to undergo shoulder surgery to fix his chronic shoulder problem and reduce his shoulder pain.

55. Due to the fact that Claimant alleged he injured his shoulder on June 17, 2016, and the fact that Dr. Euser's June 7, 2016, report indicates Claimant has was evaluated for bilateral shoulder problems, and would discuss it further when and if Claimant wanted to fix it, Claimant's attorney asked Claimant if he might have injured his shoulder on June 7, 2016. In response to such question, and in light of the stark discrepancy, Claimant testified that he was not exactly sure what date he injured his shoulder. (T., p. 99, ln. 17-25; p. 100, ln. 1-2; p. 101, ln. 11-20.)

56. On July 8, 2016, Claimant returned to Dr. Euser. Again, Claimant used the electronic tablet to indicate the reason for his visit. Again, he specifically indicated his appointment was not due to a work-related injury. The medical report from this visit indicates Claimant was treating for chronic right shoulder pain. Dr. Euser evaluated Claimant and continued prescribing opiates for Claimant's chronic pain. There is no indication that Claimant's shoulder condition worsened since the prior visit of June 7, 2016.

57. On August 15, 2016, Claimant returned to Dr. Euser with continued complaints of ongoing shoulder pain. Again, Claimant indicated he was not seeking treatment for a work-related injury. Moreover, Claimant had not worked with Employer since July 22, 2016, approximately 3 weeks. Based on Claimant's pain complaints, Dr. Euser ordered an MRI.

58. The first report from Dr. Euser wherein range of motion testing was documented and revealed decreased range of motion to Claimant's shoulder was September 6, 2016, which is after Claimant stopped working with Employer on July 22, 2016. (T., p. 72, ln. 20-24; p. 73, ln. 4 – p. 75, ln. 1-5; Respondent Exhibit B, pp. 99.)

59. On October 4, 2016, Dr. Euser went over the MRI results with Claimant. (Respondent's Exhibit B, pg. 100-103.) In the assessment section of his report, Dr. Euser noted Claimant had an incomplete rotator cuff tear or rupture of the right shoulder, and that it was not specified as traumatic. (Id. at 103.) Consistent with his prior reports, Dr. Euser continued to note that the onset and timing of Claimant's shoulder pain was chronic and that the injury was not work-related. (Id. at 102)

60. Despite indicating in his October 4, 2016, report - after reviewing the MRI results - the rotator cuff tear or rupture was not specified as traumatic, Dr. Euser testified

that the findings/impressions on the MRI, except impression number 5, indicated acute trauma. (T., pg. 60-61.)

61. On April 7, 2017, Claimant was evaluated by Dr. Euser. The report from this visit indicates Claimant has had chronic right sided shoulder pain for greater than 5 years.

62. On July 31, 2017, Claimant underwent right shoulder surgery. (Respondent's Exhibit A, pg. 7).

63. Dr. Euser testified that at no time did he ever issue any work restrictions for the Claimant during the course of his treatment. (T., p. 77, ln. 6-22.)

64. Dr. Euser was not able to state within a reasonable degree of medical probability that Claimant's shoulder injury arose out of a work related incident. (T., p. 64, ln. 23-25; p. 65, ln. 1-14.)

65. Claimant testified that he wrote down the date he injured his shoulder in his notes that he prepared while at the Division of Worker's Compensation, and that his notes reflect an injury date of June 25, 2016. (T., p. 107, ln. 16-25). Claimant further testified that the June 25 date was originally listed as July 25, 2016, and that his injury could have occurred on that date as well. (T.,p. 108, ln. 25; p. 109, ln. 1-11.) However, Claimant did not perform any work with Employer on June 25, 2016, and Claimant ceased working with Employer on July 22, 2016. (Respondent's Exhibit, G).

66. Dr. Beatty evaluated the Claimant on October 10, 2017. (Respondent Exhibit A.) Dr. Beatty states in his report that Claimant denied any history of shoulder injuries. (Respondent Exhibit A, pp. 9.) Claimant's denial of prior shoulder injuries or problems is not true.

67. Dr. Beatty further opined that based on the prior medical history and medical evidence he reviewed in the file, he could not opine within a reasonable degree of medical probability that Claimant's right shoulder injury occurred on June 17, 2016. (Id.)

68. Claimant also treated with Dr. Euser for chronic back pain. Dr. Euser testified that although Claimant's medical records document chronic shoulder pain, he primarily treated Claimant for chronic back pain. Dr. Euser testified that even though Claimant's medical records document chronic shoulder pain at each visit, such reference merely means that Claimant had previously complained of chronic shoulder pain at some point in the past while being treated by Dr. Euser. Therefore, according to Dr. Euser, he was not actively treating Claimant for shoulder pain at each visit between 2014 and 2017.

69. Claimant listed three different dates of injury. On handwritten notes, Claimant first wrote July 25, 2016 – and payroll records indicate he did not work that day - then he scratched it out and wrote June 21, 2016, then he wrote a statement indicating he hurt his shoulder on June 17, 2016. Claimant also testified at hearing that he wrote June 25, 2016, in his notes as the possible date of his injury. Then, at hearing, when presented evidence that he treated for shoulder pain with Dr. Euser on June 7, 2016, and discussed getting it fixed with Dr. Euser, Claimant indicated he did not know when he hurt it.

70. The ALJ finds the testimony of Mr. Ross, Ms. Ross, and Mr. Southcott to be credible and persuasive. The testimony of these witnesses, combined with the documentary evidence submitted at hearing, is consistent and cohesive.

71. On June 16th and June 17th of 2016, Claimant was working on the jobsite that involved the rock garden described by Mr. Southcott, Mr. Ross, and Claimant. Claimant did not, however, use a wheelbarrow to move any of the rock.

72. The ALJ finds that Claimant did not report his alleged shoulder injury to Employer, either in writing or verbally, at any time while Claimant was working with Employer. The ALJ finds that the first time Claimant alleged he hurt his shoulder while working with Employer was in his responsive text message to his sister, Ms. Ross, on October 5, 2016. As found, Claimant was responding to Ms. Ross' text advising him that he would have to move out of the home he was renting from her.

73. The ALJ does not find Claimant to be credible.

74. The ALJ finds the testimony of Mr. Southcott, Mr. Ross, and Ms. Ross to be credible.

75. The ALJ finds the opinion of Dr. Beatty to be credible and persuasive.

76. Claimant failed to establish by a preponderance of the evidence that his work with Employer caused his right shoulder condition and produced a disability or need for medical treatment.

77. Claimant failed to establish by a preponderance of the evidence that his work with Employer aggravated, accelerated, or combined with his pre-existing right shoulder condition to produce a disability or need for medical treatment.

78. Claimant has failed to establish by a preponderance of the evidence that he injured his right shoulder while working with Employer.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERAL PROVISIONS

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2007).

Where the medical evidence is subject to conflicting inferences, it is the ALJ's sole prerogative to resolve the conflict. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

I. **Whether Claimant established by a preponderance of the evidence that he suffered a compensable injury to his right shoulder while working with Employer.**

Claimant was required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury was proximately caused by the performance of such service. Section 8-41-301(1)(b) & (c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005).

The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

The ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that he injured his right shoulder performing work with Employer. As found, the ALJ did not find Claimant credible. The ALJ did not find Claimant credible for a number of reasons.

First, Claimant underwent an IME with Dr. Beatty. Claimant told Dr. Beatty that he did not have any prior shoulder injuries. The testimony and medical records established Claimant had prior shoulder injuries and suffered from chronic shoulder pain long before the alleged accident of June 17, 2016. Mr. Ross credibly testified that Claimant told him he originally injured his shoulder when he was in his twenties working at Fuddruckers when he picked up a side of beef that was too heavy. Mr. Ross also credibly testified that Claimant has had shoulder problems since he has known Claimant and he has known Claimant for 20 years. Claimant's medical records from Weld County indicate Claimant has been on opiates for chronic pain since 2002. In addition, Claimant underwent an MRI in 2007 due to an injury to his right shoulder. Moreover, Dr. Euser's medical records document Claimant has had chronic shoulder pain due to an injury for years and such pain predated the alleged accident of June 17, 2016.

Second, Claimant was very specific in his October 31, 2016, Workers' Claim for Compensation regarding the date he allegedly injured his shoulder, the project on which he was working, and task he was performing. The testimony of Mr. Ross, Mr. Southcott, and Claimant, corroborated that they were working on the rock garden on June 16th and June 17th of 2016. However, both Mr. Ross and Mr. Southcott credibly testified that Claimant was not moving rock or cobblestone with a wheelbarrow on the

date of the alleged accident or even the day before the date of the alleged accident. The ALJ is mindful that mistakes can be made when a Claimant tries to determine the exact date of an accident that is not timely reported. However, in this case the project at issue defined the date of the alleged accident.

Third, as set forth above, Claimant was very specific about the project on which he was working when he allegedly injured his shoulder. Claimant indicated that he injured his shoulder while working on a rock garden. Based upon the evidence, the work regarding the rock garden was performed on June 16, 2016 and June 17, 2016. Claimant, however, presented to Dr. Euser on June 7, 2016, with complaints of bilateral shoulder pain. The report from the visit that day indicates Dr. Euser and Claimant indicated they would discuss it further, if and when, Claimant wanted to fix his shoulder problems. As found above, the ALJ inferred from the evidence that they discussed surgery was the only option left to fix his shoulder problems and reduce his shoulder pain.

Fourth, following Dr. Euser's testimony, the Claimant changed his testimony and stated that he was not sure his injury happened on June 17, 2016, and could have occurred on June 7, 2016. Thereafter, Claimant admitted that when he filed his paperwork with the Division to commence his claim, his notes listed a date of injury of June 25, 2016, and thereafter admitted that the date had initially been written as July 25, 2016 but had been changed in his notes to June 25, 2016, however he could have injured his shoulder on July 25, 2016. Thus, Claimant testified to a possible four different dates over the course of a two month period on which he claims he could have injured his right shoulder.

Fifth, it is undisputed that each time the Claimant treated with Dr. Euser, he was required to update his social history on an electronic tablet, which included advising the doctor if any of his complaints were work related. At no time did the Claimant ever report any of his symptoms or injuries to Dr. Euser as work related, thus in every medical report authored by Dr. Euser at the relevant times, each report specifically denies any work related injury. The ALJ finds this evidence credible and persuasive.

Sixth, it is undisputed that the Claimant did no work or projects for Ross Landscaping on either June 25, 2016 or July 25, 2016, but did perform other handyman services and contract work for other clients that had no connection to Ross Landscaping both prior to June 17, 2016 and after July 22, 2017.

Seventh, the reporting of Claimant's alleged injury is problematic. Claimant testified that he "kind of" reported his injury to Chris Ross on June 17, 2016, however was not clear on what he actually said to Mr. Ross to confirm he reported an injury on that date. Mr. Ross denies Claimant reported any injury on that date. There is no dispute, however, that the Claimant provided his first written reporting of any injury with Ross Landscaping to Chris and Shannon Ross during an eviction mediation on October 22, 2016. Prior to that, the only possible reporting of any injury from Claimant was made when he sent a text message to Shannon Ross on October 5, 2016, claiming to

have injured his shoulder while "working with Chris" without providing any specific details. Even assuming the October 5, 2016 report of injury is appropriate notice, there is no question that Claimant waited four months to report his injury with Ross Landscaping and almost 5 months before he filed his claim form with the Division. Claimant had filed numerous prior workers' compensation claims in the past and testified that he was well aware how to report injuries in the workplace and file claims with the Division. The ALJ finds the testimony of Chris Ross credible and persuasive that the Claimant did not report any injury to his right shoulder to Mr. Ross on June 17, 2016.

Eighth, Claimant texted his sister, Ms. Ross, on October 1, 2016, about work he was currently performing and new jobs he got which included Jim and Dee's fence and remodeling Randy and Karen's kitchen. At hearing, however, Claimant denied getting those jobs and denied performing those jobs. Such contradictions further diminished Claimant's credibility.

Dr. Beatty was retained by Respondent to provide an opinion as to the causation of Claimant's right shoulder injury. Dr. Beatty reviewed all of the medical records in this case and conducted an evaluation of the Claimant. He opined that the Claimant denied any prior injury to his shoulder, which is not supported by the medical records or Claimant's own testimony at the hearing. He concluded that he could not state, within a reasonable degree of medical probability, that the Claimant's injury was causally related to any work related event on June 17, 2016. The ALJ is persuaded by the opinion of Dr. Beatty.

The ALJ concludes that the Claimant is not able to meet his burden of proof that his right shoulder injury arose out of, or occurred in the course and scope of employment with Ross Landscaping. As such, Claimant's claim for benefits is hereby denied and dismissed.

Because Claimant failed to establish by a preponderance of the evidence that he suffered a compensable injury, the remaining issues raised by Claimant are moot and will not be addressed.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim for benefits is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed

it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 15, 2018

ISSUES

I. Whether Respondents have presented clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Stephen Gray, M.D. that Claimant suffered a 20% whole person impairment.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. On May 17, 2016, Claimant was injured while helping unload a truck. At the time of the accident, Claimant was facing away from the truck when a heavy wooden door swung and hit him in the back of the head. He was knocked to the ground and lost consciousness for a brief period of time.

2. Respondents admitted liability for the claim.

3. Lynn Walker, M.D., saw Claimant on May 18, 2016. At this appointment, Claimant described the accident and indicated that he was knocked unconscious, but that he did not really know for how long. He indicated that it might have been just a few seconds or it could have been as long as a minute. Dr. Walker diagnosed him with a head injury, likely concussion, and neck pain/strain. Dr. Walker took Claimant off work and ordered cervical x-rays.

4. Claimant underwent cervical x-rays on May 18, 2016. The x-rays showed moderate degenerative changes at C5-C6 with mild to moderate bilateral foraminal stenosis and no acute findings.

5. On May 20, 2016, Claimant was seen at Care Plus Medical Center by Darlene Hughes, N.P. Claimant was placed on restrictions for lifting, carrying, bending, squatting, crawling, climbing, and changing positions quickly. He reported that as he was getting up from the dinner table he became dizzy and had to be helped to the couch by his wife.

6. On May 23, 2016, Claimant was seen by Dr. Walker. Claimant complained of headaches, neck pain, occasional nausea, and sometimes seeing double. Dr. Walker noted reduced range of motion of his neck. She recommended an MRI of his brain. She also returned Claimant to modified duty.

7. On June 1, 2016, Dr. Walker referred Claimant to Dr. Eric Hammerberg, a neurologist, due to ongoing neurological complaints.

8. On June 7, 2016, Dr. Hammerberg evaluated Claimant. Dr. Hammerberg noted Claimant was experiencing continuous pain in his neck and daily headaches. Dr. Hammerberg indicated Claimant was unable to return to work due to profound vertigo and nausea with movement. Dr. Hammerberg also found Claimant's cognition was mildly impaired, with Claimant scoring 23/28 on the MMSE. Dr. Hammerberg concluded Claimant had post-traumatic headache with cervical strain, post-traumatic vertigo, post-concussion syndrome, situational adjustment reaction, depression, and anxiety. Dr. Hammerberg referred Claimant to an ENT for evaluation and treatment recommendations.

9. On June 8, 2016, Claimant was seen by Nurse Hughes. Claimant complained of head and neck pain. He reported dizziness when making sudden movements. Claimant was prescribed Cymbalta.

10. On June 13, 2016, Abby Emdur, M.D., examined Claimant. Dr. Emdur diagnosed Claimant with vertigo, neck pain, tinnitus, and mild asymmetric sensorineural hearing loss, the latter unlikely related to the accident.

11. On June 23, 2016, Claimant attended physical therapy. This is the first time that Claimant's cervical range of motion measurements were taken after his work related accident. His range of motion was limited.

12. On August 3, 2016, Claimant returned to Dr. Walker. He complained of ongoing headaches which were the same, or worsening. He did, however, state that his neck pain was getting slightly better and that he had less dizziness. Dr. Walker noted in the objective findings section of her report that Claimant had limited range of motion of his neck and some tenderness to palpation on the posterior aspect of his neck and in the occipital region.

13. On August 5, 2016, Dr. Tashoff Bernton performed a records review. Dr. Bernton indicated Claimant's symptomatology with high pain levels appeared to be inconsistent with what would be anticipated on a physiologic basis given the reported injury and normal MRI scan of the brain. He cited a study regarding postconcussive syndrome and that its symptomatology is more common in individuals with depression, anxiety, and somatization than it is with individuals with a history of concussion. Dr. Bernton then indicated that based on his review of Claimant's records, it would not be particularly helpful or accurate diagnostically to attribute "significant" symptomatology to a postconcussive syndrome at that point in time. Dr. Bernton did not say Claimant was not having any symptoms from his head injury. Therefore, it is found that Dr. Bernton still concluded Claimant was having symptoms as a result of his head injury.

14. On August 17, 2016, Claimant returned to Dr. Walker. Claimant complained of ongoing headaches, neck pain, and depression. He did, however, indicate that his dizziness had improved significantly. Dr. Walker noted objective findings of decreased range of motion regarding his neck and some continued neck tenderness in response to palpation. She also noted that Claimant was unable to

get any additional physical therapy appointments approved. Therefore, she recommended Claimant use moist heat and perform range of motion exercises at home.

15. On August 31, 2016, Claimant was evaluated by Dr. Walker and she noted he seemed to be quite a bit better.

16. On September 14, 2016, Claimant returned to Dr. Walker. Claimant stated he has good and bad days. At this visit, he did indicate that the last two days were particularly bad because he had fairly persistent headaches and a slight recurrence of dizziness. Dr. Walker noted that Claimant was continuing to take his medications, which consisted of Gabapentin, Citalopram, and Mobic. Regarding objective findings, Dr. Walker noted improved range of motion regarding his neck, but not full range of motion.

17. On September 20, 2016, Dr. Hammerberg examined Claimant again. Claimant reported ongoing headaches, but that they had improved. Claimant indicated that his dizziness essentially resolved and that he was experiencing only a momentary sensation of imbalance upon lying down, which happened no more than once per week. He was taking Gabapentin, Meloxicam, Celexa, and Tylenol. Dr. Hammerberg did not recommended further vestibular testing or therapy. Dr. Hammerberg noted that Claimant was confused about how often he was to take the Gabapentin. After clarifying the dosage of the Gabapentin, he recommended that Claimant continue on the current medication regimen which also included Mobic and Citalopram.

18. On October 10, 2016, Claimant returned to Dr. Walker with continued complaints of neck pain and headaches. Claimant indicated that when he has bad days, he will have continuous headaches and at other times it will be intermittent, but that it still bothers him most of the time. Dr. Walker noted “essentially normal” range of motion regarding his neck. She continued Claimant’s medication regimen, but did increase Claimant’s Citalopram, which was being prescribed for Claimant’s depression and poor sleep.

19. On October 31, 2016, Claimant was evaluated by Dr. Walker. He advised Dr. Walker that he had a headache that was bad enough to keep him from going to work and performing his modified job. He also indicated that he had 2-3 headaches per week and that his headaches sometimes kept him from performing his usual activities.

20. On November 28, 2016, Claimant complained to Dr. Walker of having a pretty bad headache at work and that it did not respond to the Mobic, but that overall, his headaches had improved over the last month since increasing his Gabapentin.

21. Claimant was ultimately let go from his employment around November 30, 2016. Claimant did, however, obtain new employment driving a truck and performed

that work starting around May of 2017 and continued that work for about 4 months. Claimant, however, ultimately had to quite that job because of his headaches.

22. On December 19, 2016, Dr. Walker examined Claimant. Claimant complained of intermittent headaches and neck pain. He continued to take Gabapentin and Meloxicam. Dr. Walker again noted "essentially normal" range of motion of the neck. Dr. Walker placed Claimant at MMI with no impairment and no work restrictions.

23. On March 1, 2017, Claimant was seen by Dr. Walker. He reported ongoing headaches, neck pain, stress, and depression. Claimant continued to be prescribed, and take, Gabapentin, Mobic, and Citalopram.

24. Claimant underwent a DIME examination with Dr. Gray on April 27, 2017. Dr. Gray summarized the medical records and emphasized portions of those records. Claimant reported intermittent dull aching head pain and upper neck pain. He reported that the pain increased when lifting and reaching. He also reported intermittent dizziness, especially when standing up too fast. Claimant reported that the head and neck pain affects everything as he is unable to concentrate or focus. Dr. Gray noted that Claimant was a poor historian.

25. Dr. Gray also listed his objective findings. Under objective findings, Dr. Gray described his findings upon his physical examination of Claimant's neck. Dr. Gray noted tenderness over the left trapezius musculature with palpation which increased with right side bending and rotation. He also noted, and measured, Claimant's decreased range of motion regarding his cervical spine.

26. Dr. Gray diagnosed Claimant with work related scalp contusion with loss of consciousness with post-concussion syndrome with persistent post-traumatic headache, mostly resolved post-traumatic vertigo, tinnitus, cervical strain with imaging evidence of pre-existing moderate degenerative disc disease at C5-C6 with mild to moderate bilateral foraminal stenosis, and situational adjustment reaction with depression and anxiety.

27. Dr. Gray opined after examining the medical records and Claimant that Claimant was entitled to an impairment rating due to his work injury. Dr. Gray emphasized sections of the medical records to support his opinion.

28. Dr. Gray opined that Claimant was entitled to an impairment rating per the AMA Guides. Dr. Gray assigned a 6% impairment under Table 53(II)(C) due to the cervical strain and "specific disorders."

29. Table 53(II)(C) of the AMA Guides provides that a 6% impairment rating is appropriate for an intervertebral disc or other soft-tissue lesion, unoperated, with medically documented injury and a minimum of six months of medically documented pain and rigidity, without or without muscle spasm, associated with moderate to severe degenerative changes on structural tests.

30. In this case, Claimant had a medically documented soft tissue injury to his cervical spine as set forth in the medical records. Claimant also had a minimum of six months of medically documented pain and limited range of motion, i.e., rigidity, as demonstrated by Dr. Walker's medical records and testimony. Dr. Gray also noted claimant's cervical pain complaints – and measured Claimant's limited cervical range of motion. In addition, Claimant underwent x-rays which showed moderate degenerative changes of his cervical spine.

31. Dr. Gray noted that Claimant displayed minimal, if any pain, behaviors. He indicated that during the examination Claimant showed some mild pain behaviors with regard to his cervical spine range of motion. But, Dr. Gray went on to state that Claimant actually gave a reasonably good effort and Dr. Gray had no difficulty validating his examination.

32. Dr. Gray measured Claimant's cervical range of motion with double inclinometers as dictated by the AMA Guides. The measurements obtained by Dr. Gray met the strict validity requirements of the AMA Guides. Dr. Gray found a cervical spine range of motion impairment of 11%. Neither Dr. Fall nor Dr. Walker indicated that the range of motion measurements documented and used by Dr. Gray to calculate Claimant's 11% rating for his decreased range of motion – rigidity - were invalid pursuant to the AMA Guides.

33. Dr. Gray also assigned Claimant a 5% impairment rating under Table I for brain impairment. Dr. Gray opined that Claimant's persistent headaches were an episodic neurological disorder that caused slight interference with daily living. Pursuant to the AMA Guides, the criteria for evaluating such impairments are based on the frequency, severity, and duration of attacks as they affect the Claimant's performance of activities of daily living.[1] The AMA Guides go on to provide that an episodic neurological disorder is of slight severity and under such control that most of the activities of daily living can be performed.[2] The AMA Guides provide that when most activities of daily living can be performed, a rating of 5-15% can be provided for slight impairment.[3] Dr. Gray indicated in his report that Claimant stated his headaches negatively impacted his ability to concentrate and focus on his religious activities, which include reading, discussions, and holding services. Dr. Gray also noted that Dr. Hammerberg, the neurologist, indicated Claimant's cognition was mildly impaired. Therefore, Dr. Gray provided Claimant a 5% rating under Table 1, which is the lowest rating available for an episodic neurological disorder – such as headaches – which is impairing.

34. It appears the DIME occurred while Claimant was unemployed, therefore, Claimant did not indicate his headaches were impacting his current employment since he did not have current employment. However, as stated by Dr. Gray, Claimant's headaches were impacting his ability to concentrate and perform

[1] AMA Guides, pg. 106.
[2] Id.
[3] Id.

certain religious activities and his headaches had previously impacted his work activities.

35. Overall, Dr. Gray assigned Claimant a 20% whole person impairment from his work related injury of May 17, 2016.

36. Claimant was last seen by Dr. Walker on September 18, 2017. At that time Claimant was still taking the medications Gabapentin and Mobic for headaches and neck pain. He was also taking Citalopram for stress and depression.

37. Dr. Walker testified that Claimant had objective findings, via x-rays, showing moderate degenerative changes at C5-C6 with mild to moderate bilateral foraminal stenosis. She also testified that Claimant had objective findings regarding his neck injury based upon her palpation of Claimant's cervical spine and his report of pain.

38. Dr. Walker testified that Claimant had "essentially normal" cervical range of motion at the appointment on October 10, 2017, and on December 19, 2016, when she placed Claimant at MMI. However, Dr. Walker testified that she did not perform formal range of motion measurements with inclinometers. Dr. Walker also testified that "essentially normal" cervical range of motion meant normal based on Claimant's age and prior examinations. Therefore, Dr. Walker's medical records and deposition testimony which indicates Claimant had "essentially normal" cervical range of motion at times does not mean Claimant had normal range of motion pursuant to the AMA Guides.

39. Dr. Walker testified that Claimant's condition had resolved in approximately five months, on October 31, 2016. However, when presented with her report dated November 14, 2016, Dr. Walker testified that Claimant presented with objective findings that his condition was not resolved. In addition, Claimant was evaluated by Dr. Walker on January 16, 2017. Although his condition had improved, Claimant still had continued complaints of headaches and neck pain. Based on her evaluation of Claimant, Dr. Walker renewed Claimant's prescription medications for pain, headaches, and depression. Therefore, Dr. Walker's testimony that Claimant's condition had resolved prior to six months is not persuasive.

40. Dr. Walker testified that Claimant's range of motion, based upon the formal measurements taken by the physical therapist in July of 2016 was better than the range of motion measured by Dr. Gray. However, during July of 2016, Claimant had been undergoing active physical therapy to help decrease his pain and improve his range of motion. However, based upon the medical records presented at hearing, Respondents would not authorize additional physical therapy and physical therapy ceased around August 3, 2016. Therefore, Claimant had not undergone physical therapy for quite some time by the time he was placed at MMI and when he underwent the DIME. Thus, any gains made regarding his range of motion might have been lost due to the failure to continue

his physical therapy, or the mere passage of time, by the time Claimant underwent the DIME.

41. Dr. Fall testified and indicated in her report that Dr. Gray erred in providing Claimant a Table 53 rating of 6% for his cervical strain. Dr. Fall indicated that Dr. Gray should have provided Claimant a 4% rating for his cervical strain. However, a review of Table 53 of the AMA Guides indicates that a 4% rating is appropriate when there are "none-to-minimal" degenerative changes on structural tests and that a 6% rating is appropriate when there are "moderate-to-severe" degenerative changes on structural tests. In this case, Claimant's cervical spine x-rays demonstrated moderate degenerative changes. Thus, the 6% rating provided by Dr. Gray is consistent with Table 53. Therefore, Dr. Fall's opinion that Dr. Gray erred in providing a Table 53 rating of 6% instead of 4% is not persuasive.

42. Dr. Fall also indicated that Dr. Gray reported a normal spine exam at the DIME appointment. However, this is not persuasive as Dr. Fall was not at the DIME appointment. Dr. Gray reported Claimant had cervical tenderness with palpation upon exam as well as decreased cervical range of motion. Dr. Gray also determined that Claimant's injury to his cervical spine resulted in a specific disorder that is ratable pursuant to the AMA Guides.

43. Dr. Fall also indicated in her testimony that there were no objective findings of pathology to support a rating. In her report she also indicates that there were no "significant objective findings." However, she goes on to note that there were "minimal" objective findings. Therefore, even Dr. Fall found objective findings regarding Claimant's injury to his cervical spine.

44. Dr. Fall testified that Claimant's limited range of motion was due to his not putting forth full effort. However, Dr. Gray opined in his DIME report that Claimant's range of motion measurements were valid under the "strict" AMA Guidelines, Claimant put forth reasonably good effort, and Claimant had "no difficulty at all validating his examination." Dr. Fall's opinion regarding Claimant's effort is not found to be persuasive since she was not present for the evaluation and range of motion measurements and Claimant's measurements met the validity requirements of the AMA Guides.

45. Dr. Fall testified that Dr. Gray erred in assigning the headache/brain impairment because the medical record did not show any documentation that the headaches caused problems with his daily activities. However, the medical records document times where Claimant needed assistance to sit down and also where he was unable to work due to his headaches. Claimant also indicated that his headaches negatively impacted his ability to concentrate and focus on his religious activities, which include reading, discussions, and holding services. Therefore, Dr. Fall's opinion is not persuasive in establishing Dr. Gray erred.

46. Dr. Fall testified that Dr. Gray failed to explain any inconsistencies in his medical evaluation. However, there are no inconsistencies with Dr. Gray's medical evaluation. Claimant presented with the same symptoms, taking the same medications, and with limited cervical range of motion as he always had.

47. Dr. Fall testified that Claimant sustained an injury of cervical strain which is a soft tissue lesion. She testified that Claimant had six months of documented pain. She testified that there is no good definition of rigidity but that limited range of motion could be rigidity. Dr. Fall testified that Claimant's cervical x-rays showed moderate degenerative changes. Dr. Fall testified that muscle spasms are not a requirement for an impairment rating under the AMA Guides, Table 53IIC.

48. Limited range of motion is the equivalent of rigidity under the AMA Guides.

49. Dr. Fall testified that headaches that cause disruption in daily activities could be classified as episodic neurological disorders as described in AMA Guides Table 1.

50. Dr. Fall testified that Claimant was not provided any work restrictions and that a 20% impairment rating could be inconsistent with such a high impairment rating. However, The AMA Guides define medical impairment as the "alteration of an individual's health status that is assessed by medical means."[4] The AMA Guides go on to provide that medical impairment is distinguished from "disability," which represents "an alteration of an individual's capacity to meet personal, social, or occupational demands," and is assessed by nonmedical means.[5] The AMA Guides also indicate that an individual who is "impaired" is not necessarily "disabled."[6] Therefore, the fact that Claimant has not been assigned work restrictions does not negate the fact that Claimant has a ratable medical impairment pursuant to the AMA Guides.

51. Dr. Fall also testified that Dr. Gray did not follow the "Impairment Rating Tips" (Tips) authored by the Division of Workers' Compensation.[7] The Tips indicate that a spinal rating shall only be provided when a specific diagnosis and objective pathology is identified. In this case, Dr. Gray diagnosed Claimant as suffering from a cervical strain. He also identified objective pathology which consisted of pain with palpation of the cervical spine, a particular pattern of pain with right sided bending and rotation, limited range of motion of the cervical spine, and x-ray findings. Moreover, his objective findings were consistent with the type of findings identified by Dr. Walker.

[4] AMA Guides, pg.1.
[5] Id.
[6] Id., pg. 2.
[7] The Department of Labor and Employment, Division of Workers' Compensation Impairment Rating Tips, Desk Aid #11, Spinal Ratings, 1-2.

The Tips also indicate that:

> Whenever 6 months of treatment of the spine has occurred and a Table 53 zero percent rating is assigned, the physician must provide justification for the zero percent rating, based on the lack of physiologic findings. The rating physician shall be aware that a zero percent rating in this circumstance implies that treatment was performed in the absence of medically documented pain and rigidity.[8]

Neither Dr. Walker nor Dr. Fall has indicated that the treatment provided to Claimant was provided in the absence of medically documented pain and rigidity.

The Tips also provide direction when rating headaches due to a closed head injury. They provide:

> Headaches that qualify for a separate work-related impairment rating should be rated using the Episodic Neurological Disorders section in Table 1- Section B (Chapter 4, p. 109). It is important to remember that if the individual has a closed head injury the highest applicable rating from this table is the only rating used. If the headache rating is to be combined with another body part, the rater must be very careful not to rate the activities of daily living deficits in both impairment areas. [9]

There is no indication that Dr. Gray rated Claimant's deficits regarding his slight impairment in performing some activities of daily living due to his headaches in any other impairment provided to Claimant in a manner that is inconsistent with the Tips.

52. Claimant testified at hearing regarding his employment after he was let go by Employer. He testified that he was not working construction. He was driving. He did not lift heavy things. Neither Dr. Walker nor Dr. Fall investigated what Claimant's job duties entailed. Dr. Walker and Dr. Fall both erroneously opined that Claimant had returned to full duty heavy work.

53. Claimant's headaches and neck pain make it difficult for him to work full duty and full time.

54. Due to his work related accident, Claimant suffered a cervical strain and injury to his head. Claimant's head injury caused Claimant's post-concussion syndrome with persistent post-traumatic headaches.

[8] Id.
[9] Id, General Principals, Section 10.

55. Claimant's post-concussion syndrome with persistent post-traumatic headaches slightly impairs Claimant's ability to perform certain activities of daily living such as working. It also slightly impairs his ability to concentrate and focus on his religious activities, which include reading, discussions, and holding services.

56. Claimant was prescribed numerous medications for his post-concussion syndrome with persistent post-traumatic headaches. The medications, as expected, provided Claimant some relief from his symptoms.

57. Claimant's continued use of the prescribed medications – with some benefit - supports the finding that Claimant was experiencing the symptoms he described. These medications would not have been prescribed and continued if he was receiving no benefit in the form of reduced symptoms.

58. Claimant's representations to his physicians regarding his accident, symptoms, response to medications, response to treatment, and impairment, are found to be credible.

59. Claimant's representations to his physicians regarding his accident, symptoms, response to medications, response to treatment, and impairment, are found to be consistent with the diagnosis of cervical strain and post-concussion syndrome with post-traumatic headaches.

60. Claimant has a specific disorder of the cervical spine which is ratable under Table 53 of the AMA Guides.

61. There is no indication by Dr. Hammerberg, a neurologist, or Dr. Walker, or Dr. Gray, that Claimant's post-concussion syndrome symptoms and persistent post-traumatic headaches are non-physiologic. Therefore, the ALJ finds there is a physiologic basis for Claimant's post-concussion syndrome and persistent post-traumatic headaches and the resulting slight interference with Claimant's ability to perform activities of daily living.

62. The AMA Guides Table IB allows for a brain impairment for episodic neurological disorders which cause slight interference with activities of daily living. Episodic neurological disorders are defined as, but not limited to syncope, epilepsy, and convulsive disorders. Episodic neurological disorders can include headaches.

63. Claimant has an episodic neurological disorder in the form of chronic headaches.

64. Dr. Gray did not provide Claimant an impairment rating for chronic pain.

65. Dr. Gray's impairment rating is supported by objective findings with an anatomic correlation.

66. Dr. Gray's impairment rating is also supported by evidence of a physiologic correlation.

67. Dr. Gray was correct in assigning an impairment rating under the AMA Guides Table 53 IIC and Table IB. Claimant met all the criteria for the impairment rating provided by Dr. Gray. Dr. Gray's opinion is supported by Claimant's testimony, the medical record, and his DIME examination of Claimant.

68. Respondents have failed to present clear and convincing evidence that Dr. Gray erred in his DIME report assigning a 20% whole person impairment to Claimant. Dr. Walker and Dr. Fall's opinions amount to a mere difference of opinion and not clear and convincing evidence.

69. Claimant sustained a 20% whole person impairment as opined by Dr. Gray in the DIME report.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

GENERAL PROVISIONS

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979); *People v. M.A*., 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); CJI, Civil 3:16 (2007).

Where the medical evidence is subject to conflicting inferences, it is the ALJ's sole prerogative to resolve the conflict. *Egan v. Industrial Claim Appeals Office*, 971 P.2d 664 (Colo. App. 1998).

I. Whether Respondents have presented clear and convincing evidence to overcome the Division Independent Medical Examination (DIME) opinion of Stephen Gray, M.D., that Claimant suffered a 20% whole person impairment.

A DIME physician must apply the AMA Guides when determining Claimant's medical impairment rating. Section 8-42-101(3.7), C.R.S.; §8-42-107(8)(c), C.R.S. The finding of a DIME physician concerning Claimant's medical impairment rating shall be overcome only by clear and convincing evidence. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

As a matter of diagnosis the assessment of permanent medical impairment inherently requires the DIME physician to identify and evaluate all losses that result from the injury. *Mosley v. Industrial Claim Appeals Office,* 78 P.3d 1150 (Colo. App. 2003). Consequently, a DIME physician's finding that a causal relationship does or does not exist between an injury and a particular impairment must be overcome by clear and convincing evidence. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002); *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 P.2d 590 (Colo. App. 1998). The rating physician's determination concerning the cause or causes of impairment should include an assessment of data collected during a clinical evaluation and the mere existence of impairment does not create a presumption of contribution by a factor with which the impairment is often associated. *Wackenhut Corp. v. Industrial Claim Appeals Office,* 17 P.3d 202 (Colo. App. 2000).

The questions of whether the DIME physician properly applied the AMA Guides, and ultimately whether the rating was overcome by clear and convincing evidence present questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office, supra*. A mere difference of opinion between physicians does not necessarily rise to the level of clear and convincing evidence. *See Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

As found, the ALJ determined that Dr. Gray properly applied the AMA Guides in this case. Dr. Gray provided Claimant a 20% whole person impairment rating for Claimant's cervical strain and his post-concussion syndrome with post-concussive headaches.

Respondents contend Dr. Gray misapplied the AMA Guides. As found, Dr. Gray properly applied the AMA Guides when providing a rating for Claimant's cervical spine. Dr. Gray properly determined Claimant had a specific disorder of his cervical spine

which is ratable under Table 53. As found, Dr. Gray also properly provided Claimant a 6% rating pursuant to Table 53 based upon Claimant's soft tissue injury, and associated moderate degenerative changes, shown on Claimant's x-rays. Dr. Gray also properly measured Claimant's range of motion deficits pursuant to the AMA Guides and assigned the proper rating, which was 11%.

It was also found that Dr. Gray properly applied the AMA Guides when rating Claimant's headaches. Dr. Gray determined that Claimant's headaches slightly impacted his ability to perform activities of daily living. Dr. Gray determined Claimant's headaches slightly impacted Claimant's ability to concentrate and focus on his religious activities, which includes reading, discussions, and holding services. The record also demonstrates that Claimant's headaches impacted his ability to work. Therefore, pursuant to Table I, Dr. Gray provided Claimant a 5% rating for his episodic neurological disorder - headaches.

Respondents also contend Dr. Gray did not follow the Department of Labor and Employment, Division of Workers' Compensation Impairment Rating Tips, Desk Aid #11. As found, Dr. Gray properly followed the rating tips. Dr. Gray properly rated Claimant's cervical strain and headaches based on Claimant having a specific disorder – diagnosis – and objective pathology – or physiologic correlation - consistent with C.R.S. §8-42-107(8)(c). Moreover, Dr. Gray's rating for Claimant's headaches is consistent with the Tips because it did not provide a rating for any impairment that was provided for in Claimant's cervical spine rating.

Respondents also contend Dr. Gray erred by providing Claimant a rating for chronic pain, without anatomic correlation based on objective findings, or physiologic correlation, as set forth by C.R.S. §8-42-107(8)(c). In this case, Dr. Gray did not rate Claimant for chronic pain. Dr. Gray rated Claimant for a specific disorder resulting from an injury to his cervical spine, i.e., cervical sprain, and a specific disorder resulting from an injury to his head, i.e., post-concussion syndrome with post-traumatic headaches, which slightly impacted Claimant's ability to perform some activities of daily living. Both of these disorders where identified and treated by Claimant's primary treating physician, Dr. Walker, as well as Dr. Hammerberg, a neurologist. The Industrial Claim Appeals Office has held that C.R.S. §8-42-107(8)(c) is not applicable when Claimant is rated for a specific disorder. See *Murphy v. Legend's Casino*, W.C. No. 4-297-222 (May 24, 2001); *Herrera v. Sturgeon Electric Co*., W.C. No. 4-320-602 (January 8, 1999) (anatomic correlation requirement not applicable where claimant is rated for a specific disorder of lumbar spine under AMA Guides).

To the extent C.R.S. §8-42-107(8)(c) is applicable, the ALJ also concludes that Claimant's impairment rating, as determined by Dr. Gray, is consistent and in accord with the statute. First, Dr. Gray relied upon Claimant's medical records which document Claimant's injuries, loss of consciousness, underlying moderate degenerative changes in his cervical spine, pain complaints, headaches, neurological complaints, reported symptoms, response to medical treatment, and impairment. Second, Dr. Gray relied upon the physical examinations of other physicians, and his own physical examination of Claimant. Third, Dr. Gray relied upon the information provided by Claimant. Based

on these findings, Dr. Gray determined Claimant's work accident caused a cervical strain and post-concussion syndrome with post-traumatic headaches and the injuries caused impairment that is ratable under the AMA Guides. The ALJ concludes there are sufficient findings to support an anatomical and physiological correlation between Claimant's injuries, symptoms, and the medical impairment rating provided by Dr. Gray.

The ALJ concludes Respondents have failed to overcome Dr. Gray's opinion by clear and convincing evidence.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have failed to overcome the DIME physician's opinions by clear and convincing evidence.

2. Respondents shall pay permanent partial disability benefits to Claimant based upon a whole person impairment rating of 20%.

3. Respondents shall pay Claimant interest at a rate of 8% per annum on compensation benefits not paid when due.

4. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 8, 2018

Glen Goldman

_____

Glen B. Goldman
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established by a preponderance of the evidence that she suffered a compensable injury to her right shoulder arising out of and in the course of her employment on June 27, 2017.

II. If compensable, whether the requested treatment by authorized treating physician ("ATP") Sean G. Grey, M.D. is related to the June 27, 2017 industrial injury and reasonably necessary to cure and relieve Claimant the effects of the injury.

III. If compensable, whether Claimant demonstrated by a preponderance of the evidence an average weekly wage ("AWW") of $700.95, based upon her year-to-date earnings through August 5, 2017.

FINDINGS OF FACT

1. Claimant is a 51-year-old woman who works for Employer as a medical assistant. Her job duties include among other things, checking patients in and out, answering telephones, performing drug screens, ordering and stocking supplies, and referring patients for authorization.

2. Claimant has a longstanding history of right upper extremity complaints, including right arm, elbow, wrist and hand pain. Claimant was seen on April 29, 2014 complaining of right wrist, arm and shoulder pain after falling over a vacuum. Claimant was diagnosed with a wrist sprain, forearm contusion, shoulder strain, and paresthesia in the right hand. Claimant was seen on January 8, 2015 with complaints of right arm, wrist, neck, shoulder, elbow and hand pain, which she attributed to her keyboard and mouse use at work. Claimant continued to treat for her symptoms and was last seen by Robert Dupper, M.D. on October 21, 2016. Dr. Dupper diagnosed Claimant with right shoulder impingement, bicipital tendinitis, myalgia, and right shoulder, arm, hand and forearm pain. Claimant underwent physical therapy through November 9, 2016, and continued to report that her symptoms remained the same. Medical records indicate Claimant was scheduled to treat for an additional four weeks, however, no evidence was introduced at hearing indicating she sought any treatment for her condition after that time.

3. Claimant alleges she suffered an acute right shoulder injury on June 27, 2017 while unstocking boxes filled with reams of paper. Claimant does not contend she suffered a cumulative trauma injury. Claimant testified that approximately four or five boxes of paper were stacked on the floor. She estimated the boxes each weighed 20-25 pounds. Claimant testified that she reached up to retrieve the second box from the stack

of boxes and felt a pop and a burning sensation when grabbing the box and setting the box on the ground. The medical records reflect Claimant is 5'2".

4. Dawn Kramer, Claimant's supervisor, testified it is unlikely there would have been four or five boxes of paper to stock at the time, as the last order of paper prior to June 27, 2017 was delivered on May 30, 2017, and consisted of four boxes. She testified that stocking generally occurs one day to one week after the delivery.

5. Claimant testified that after the alleged incident she stopped unloading the boxes and went to the front desk area to inform two co-workers of the incident. She testified that she did not inform Ms. Kramer at the time because Ms. Kramer was not at work. Claimant testified she then performed her other duties, including unloading boxes of medical supplies.

6. The First Report of Injury, Incident Injury Report Form, and Claimant's initial visit to a physician were delayed because both Claimant and Ms. Kramer took vacation time for the Fourth of July holiday.

7. Claimant completed an Incident Injury Report Form on July 11, 2017, indicating she was working at the front desk at the time of the incident. She reported right arm, hand, neck, shoulder and arm pain. In response to the question "What caused your injury/illness/symptoms?" Claimant responded, "The desk area, has caused same injury for years, never solved or address (*sic*) at last injury (same)."

8. Ms. Kramer completed a First Report of Injury indicating she was notified of the incident on June 27, 2017. The report notes that the injury occurred while Claimant was working at the front desk performing general work and experienced pain in her hand, arm, wrist. Ms. Kramer listed "Pain when using at other duties" in response to the question "type of injury sustained." In response to "What equipment was being used" Ms. Kramer noted, "Front desk- east end." Ms. Kramer testified that Claimant did not report a specific incident or event occurring.

9. On July 18, 2017, Claimant presented to Neal Tah, M.D. complaining of right arm, hand, and shoulder pain, back pain, and numbness. Regarding the mechanism of injury Dr. Tah wrote,

> Patient reports right arm pain from constantly being at the front desk at work. Had a similar situation about 2 years ago. She didn't really get therapy or massage because they were so short staffed at work. She thinks it really got worse about 2 months ago, and now it's much worse."

10. Dr. Tah's clinical notes contain no mention of Claimant experiencing a pop or specific event. On physical examination of the right shoulder, Dr. Tah noted weakness with abduction, tenderness at the anterior deltoid, trapezius and middle deltoid, 100 degrees active abduction, pain to palpation over the right upper arm, forearm and hand, with normal strength and range of motion of the forearm. Dr. Tah provided the following diagnosis: impingement syndrome of the right shoulder, right rotator cuff sprain, radiculopathy, and pain in the right shoulder, arm, hand and forearm. Dr. Tah noted that

the objective findings were consistent with the history of a work-related etiology. He released Claimant to restricted duty, prescribed a muscle relaxer, and ordered an EMG, MRI of the right shoulder, chiropractic treatment, physical therapy, and massage therapy.

11. Claimant began physical therapy on July 20, 2017. Matthew McLaughlin, MSPT, noted, "[Claimant's] primary problem is R shoulder, neck strain. The onset was gradual. The problem began on June 27, 2017." He further documented, "Patient reports right arm pain from constantly being at the front desk at work. Had a similar situation about 2 yrs ago." The physical therapy notes do not contain any reference to Claimant feeling a pop.

12. Claimant underwent a right shoulder MRI on July 25, 2017 which revealed a focal full-thickness tear of the distal anterior supraspinatus fibers, significant tendinopathy in the intra-articular portion biceps tendon, and mild subacromial/subacute bursitis.

13. Claimant attended a follow-up evaluation with Dr. Tah on August 7, 2017, reporting continued right shoulder pain, neck pain, numbness and tingling. Dr. Tah updated his diagnoses to include a complete rotator cuff tear or rupture of right shoulder, not specified as traumatic. He again noted that the objective findings were consistent with history of a work-related etiology and released Claimant to restricted duty.

14. On August 9, 2017, Claimant presented to Eric M. Shoemaker, D.O. and underwent an EMG. Dr. Shoemaker noted Claimant reported having gradual symptoms that became "significantly worse late June or early July with increased demands at work of lifting and moving boxes of paper which he (*sic*) estimates weighed over 100 pounds. She was doing this repetitively and symptoms became significantly worse." Dr. Shoemaker's clinical notes contain no mention of Claimant experiencing a pop. The EMG results were normal. Dr. Shoemaker diagnosed Claimant with a supraspinatus tendon tear, cervicalgia, and myalgia. He opined that Claimant had supraspinatus tendinopathy and some existing scapular dyskinesis that progressed to a full thickness tear while performing a lifting maneuver at work. He concluded the injury was work-related and recommended surgical repair or deferred ultrasound guided subacromial injections.

15. Claimant presented to orthopedic surgeon Sean G. Grey, M.D. on August 15, 2017. Claimant reported having prior intermittent right shoulder pain for which she treated with physical therapy and improved. Claimant reported experiencing an abrupt increase in pain while unloading boxes on June 27, 2017. There is no mention in Dr. Grey's clinical note of a pop. Dr. Grey noted, "Reviewed and otherwise noncontributory" in the category "Past medical history." Dr. Grey reviewed the shoulder MRI and diagnosed Claimant with a full-thickness supraspinatus tear and potential split in proximal biceps tendon of the right shoulder. He recommended proceeding with a right shoulder arthroscopy, subacromial decompression, evaluation of the biceps tendon with potential biceps release, and arthroscopic rotator cuff repair. Dr. Grey noted that the

objective findings were consistent with the history and/or work-related mechanism of injury/illness.

16. On August 22, 2017, David Orgel, M.D. performed a records review at the request of Respondents. Dr. Orgel diagnosed Claimant with stage two and possibly stage three impingement. He noted that impingement first involves irritation and swelling of the rotator cuff tendons, then progresses to a full-thickness tear. Dr. Orgel explained that impingement is not a cumulative trauma disorder, and usually results from significant overhead activity and/or an acute event. He found that the medical records did not reveal either an acute injury or significant overhead activity, and opined that Claimant's shoulder impingement was not work-related. He noted there was not a significant mechanism of injury to cause the abnormalities noted on the MRI, and reiterated that Claimant's condition is usually a degenerative progressive process.

17. Joseph B. Blythe, MA, CRC, performed a Jobs Demands Analysis on December 12, 2017 and issued a reported dated December 17, 2017. Mr. Blythe observed another employee performing Claimant's job duties. He determined Claimant's duties fell in the light work category, with frequent lifting of 1-5 pounds, rare lifting of 6-40 pounds, and frequent reaching but rarely above the shoulders.

18. Claimant testified that Mr. Blythe's report was accurate, with the exception of his omission of other duties including training, referral coordinating, and ordering and unpacking supplies. She also contended that she reached above her shoulder on a "frequent" basis rather than the "rare" basis, stating she spent approximately fifty to sixty percent of her day reaching over her head. Claimant later testified she had no idea how many times during a typical day she reached above her head. She testified that she does not perform any extended work over her head. Ms. Kramer testified Claimant's job did not require reaching overhead for fifty percent of her day.

19. On December 13, 2017, X.J. Ethan Moses, M.D., performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Moses physically examined Claimant and reviewed medical records from 2014 through 2017, as well as Mr. Blythe's job analysis findings from December 12, 2017. Dr. Moses issued an IME report dated December 19, 2017. Claimant reported to Dr. Moses that she injured herself lifting multiple reams of paper and stacking them on a shelf. She reported that she initially thought she just "overdid it" and that her pain was due to her previous injury "because it never really went away." Claimant then reported that she "felt kind of like a pop." Claimant subsequently reported that she thought the issue was part of her longstanding right arm issues, but later said the location of the pain was specifically in the right shoulder and that she "immediately could tell it was different" and "couldn't lift the arm like I used to." Claimant reported two previous work-related right arm repetitive motion injuries, and denied any other previous right arm or shoulder injuries.

20. Dr. Moses diagnosed Claimant with chronic, diffuse right upper extremity pain of uncertain etiology, Stage 3 chronic right shoulder impingement syndrome with full thickness supraspinatus tear, and chronic right bicipital tendonitis with split tear of the right long head of the biceps. He opined that Claimant's condition was not work-related.

21. He noted that the history provided to him by Claimant significantly diverged from the history contained in the medical records. He noted Claimant reported to him having two prior workers' compensation claims and no prior right shoulder injuries, while the medical records reflected four other work-related claims over the past three years and evidence of an April 2014 injury. Dr. Moses remarked,

> … [W]hen viewed as a whole, the divergence between the medical evidence presented in regards to the mechanism of injury for her 6/27/17 injury leads me to believe that her current reports are less than reliable. The pattern is revealing for significant familiarity with the workers' compensation system, and it raises the concern for the use of that knowledge to obfuscate the fact that there was no specific injury, but rather a resurgence of her previous diffuse and widespread right upper extremity pain that was previously determined not to be work-related.

22. He referenced the Shoulder Injury Medical Treatment Guidelines, Rule 17, Exhibit 4, Section E "Rotator Cuff Tear," subsection 10, which states that rotator cuff tears "May be caused by 1) sudden trauma to the shoulder such as breaking a fall using an overhead railing or an out-stretched arm; or 2) chronic use." Dr. Moses opined that there is insufficient evidence to support an acute right shoulder injury, and no medically probably risk factors for cumulative trauma disorder.

23. Dr. Moses explained that Stage 3 impingement is common in patients 40 years and older, and that the condition progresses and eventually results in a full-thickness tear of the supraspinatus. He opined that Claimant's supraspinatus tear is likely due to the natural progression of chronic degenerative changes secondary to impingement syndrome, and not work-related. He further opined that Claimant's bicep pathology is also not work-related. Dr. Moses determined Claimant is at maximum medical improvement with no further treatment warranted under the workers' compensation system. He noted that, if Claimant's condition was found to be work-related, surgical intervention would be unlikely to resolve her pain complaints, and recommended diagnostic injections.

24. Dr. Moses testified at hearing on behalf of Respondents as an expert in occupational medicine. Dr. Moses testified consistent with his IME report. Dr. Moses reiterated his opinion that Claimant's condition is not work-related, based on the medical records and discrepancies in Claimant's reporting of the incident. Dr. Moses stated Claimant's reported history was inconsistent, varying between an acute injury and cumulative trauma. He testified that Dr. Tah documented complaints consistent with a repetitive motion issue, but did not include a thorough causation analysis or request a job analysis. He acknowledged that Dr. Grey performed a sufficient causation analysis if Claimant's reported mechanism of injury is, indeed, correct. Dr. Moses testified it is difficult to determinate the age of Claimant's supraspinatus tear but opined, within a medical degree of probability, that the supraspinatus tear and biceps pathology, were likely the result of the natural progression of a longstanding degenerative process, and were not caused or aggravated by Claimant's work activities.

25. Claimant testified she was not working any under restrictions prior to the alleged injury. She also testified that she had not been told she had impingement syndrome prior to June 27, 2017. Regarding the inconsistencies in the reported mechanism of injury, Claimant testified she did not initially report that she felt a pop because she always had pain in her right arm and did not think the incident was significant. She later testified that the pain she experienced on June 27, 2017 was different than her prior pain, and resulted in limited range of motion, lifting limitations, a constant burning sensation and pain in her neck and down her shoulder. Claimant further testified that she did not report feeling a pop to Dr. Tah because he did not ask about her specific activities that day, but subsequently reported feeling a pop to Dr. Grey because he further inquired about her activities. Claimant also stated she was unaware of the results of her right shoulder MRI until she saw Dr. Grey.

26. Claimant's testimony is not found credible or persuasive.

27. The ALJ credits the opinions of Drs. Mason and Orgel over the conflicting opinions of Drs. Tah, Grey and Shoemaker and finds Claimant's work activities did not cause Claimant's right shoulder and arm condition or otherwise aggravate, accelerate or combine with a preexisting condition to produce the need for medical treatment.

28. Claimant failed to prove by a preponderance of the evidence that she sustained a compensable industrial injury arising out of and in the course of her employment on June 27, 2017.

29. Evidence and inferences contrary to or inconsistent with these findings of fact are not credible and persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Compensability

A claimant is required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

As found, Claimant failed to meet her burden to prove she sustained a compensable acute industrial injury on June 27, 2017. Ms. Kramer credibly testified that Claimant did not report a specific event that caused her symptoms. This testimony is

corroborated by the First Report of Injury and Incident Injury Report Form which are devoid of any mention of a specific event or incident, and contain repeated references to longstanding pain associated with working at the front desk. Upon receiving medical treatment, Claimant continued to report longstanding unresolved pain associated with desk work, reporting to Dr. Tah the pain had worsened two months prior. Claimant did not allege a specific event occurred until she was diagnosed with a rotator cuff tear. Claimant's testimony that she was unaware of the rotator cuff tear diagnosis until her visit with Dr. Grey is incredible. The ALJ also notes that, while Claimant contends she mentioned to Dr. Grey that she felt a pop, the ALJ notes there is no mention of a pop in Dr. Grey's notes or anywhere else in the records provided except Dr. Moses' IME report. Both in her testimony and her reported history to Dr. Moses, Claimant vacillates between purporting that the pain was due to her longstanding right upper extremity issues, and claiming she immediately noticed the pain was different and more severe than her prior issues. Claimant's explanation regarding the discrepancies and the reported mechanism of injury is not credible or persuasive.

Beyond the aforementioned discrepancies, Claimant has a longstanding, documented history of pre-existing right shoulder and arm issues, including impingement. The medical records establish Claimant's pain never fully resolved and worsened by the time of the June 27, 2017 alleged injury. Dr. Moses credibly explained that Stage 3 impingement is common in patients over 40 years old, and both Dr. Moses and Dr. Orgel credibly explained that impingement naturally progresses to a full-thickness tear of the supraspinatus. Drs. Moses and Orgel credibly opined there was not a significant mechanism of injury to cause or aggravate Claimant's condition. Drs. Moses and Orgel opinion that Claimant's condition is due to the natural progression of a chronic degenerative condition is credible and persuasive.

While Dr. Tah opined that Claimant's condition is work-related, Dr. Tah's clinical notes contain no mention of an acute event and only reflect a reported repetitive motion injury. Dr. Tah did not request a job demands analysis or conduct a thorough causation analysis. Furthermore, when Dr. Tah diagnosed Claimant with a rotator cuff tear, he noted the tear was not specified as traumatic. Dr. Shoemaker determined Claimant's condition is work-related based on Claimant's erroneous reported mechanism of injury of repetitively moving boxes of paper weighing over 100 pounds. With respect to Dr. Grey, although he indicated he reviewed Claimant's past medical history, there is no indication he reviewed Claimant's prior medical records or was aware of the prior diagnosis of impingement. Moreover, Dr. Grey's opinion on work-relatedness, like those of Drs. Tah and Shoemaker, was based on Claimant's unreliable and incredible reported history.

While Claimant may have experienced increased symptoms at work on June 27, 2017, based on Claimant's inconsistent reporting, the credible opinions of Drs. Moses and Orgel, and the objective medical evidence, there is insufficient credible and persuasive evidence establishing that it is more likely than not that work activities caused an injury, or otherwise aggravated, accelerated or combined with a pre-existing condition causing the need for treatment.

As Claimant failed to meet her burden to prove that she sustained a compensable injury, the remaining issues of requested medical treatment and AWW are moot.

ORDER

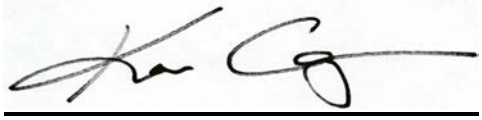
It is therefore ordered that:

1. Claimant failed to prove by a preponderance of the evidence that she suffered a compensable injury on June 27, 2017. Claimant's claim is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 9, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

within the time frame given by Employer, who would pressure Claimant to finish.

5. Claimant and Mr. Benegas began removing snow from the roof. While on the roof, Claimant slipped and fell off the roof. The ice from the roof fell on top of Claimant. Claimant testified that he sustained injuries to his ribs, chest and nose as a result of the fall. Claimant testified that he did not have a good memory of the accident or his injuries immediately thereafter as he lost consciousness. Mr. Benegas took Claimant into the residence and called Employer.

6. Mr. Gantick arrived at the job site after Claimant was injured. Claimant was taken to Yampa Valley Medical Center. He awoke and saw his wife and brother.

7. Claimant was taken to Denver Health by helicopter. Claimant underwent surgery to his stomach at Denver Health. Claimant displayed a surgical scar in the middle of his torso approximately five inches in length. Claimant also displayed a protruding rib higher on his chest, to the left side. Claimant remained hospitalized at Denver Health approximately one week. Claimant received follow up medical treatment at Yampa Valley Medical Center approximately one month after his injury where x-rays were taken. Claimant followed up at Denver Health on March 15, 2017.
.
8. Claimant received medical bills from Yampa Valley Medical Center for treatment on February 6, 2017, and a follow up visit. These medical bills were the result of treatment Claimant received for injuries caused by the fall from the roof on February 6, 2017.

9. Claimant received medical bills from Classic Air Care, Inc. for helicopter transportation on February 6, 2017. The medical bill for the helicopter flight were the result of treatment he received for injuries caused by the fall from the roof on February 6, 2017.

10. Claimant received medical bills from Denver Health for treatment on February 6, 2017, including, but not limited to, surgery and a follow up visit.

11. These medical bills were the result of treatment he received for injuries caused by the fall from the roof on February 6, 2017.

12. Claimant was paid in cash from Employer for his snow removal services. Claimant was paid $20 per hour for the hours he worked. Claimant would submit his hours to Employer and would receive payment. Claimant was not paid on a fixed schedule. Claimant filled out a card upon which Claimant would submit his daily hours. Claimant contemporaneously kept track of his hours on his cell phone. Claimant worked 108 hours for Employer from

January 5, 2017 to February 6, 2017. It is found that Claimant's AWW is $458.18.

13. Employer never consulted with Claimant for purposes of deciding how to bid or determine an estimate for a snow removal job.

14. Claimant did not return to work for Employer after his injury. Claimant was unable to perform his regular job duties for Employer after he was discharged. Claimant tried to return to work painting in mid-April, 2017 and worked for approximately 3-4 weeks. Claimant earned $16 per hour and worked 10 hours per day, 6 days per week during this period. Claimant was unable to continue painting due to his work injuries. Claimant returned to work washing dishes and preparing food for an event company on June 11, 2017, earning $14 per hour working 40 hours per week. Claimant could not return to his work at Employer at this time.

15. Mr. Gantick is the sole owner of Employer. The business purpose of Employer is concrete construction. Mr. Gantick testified that he did not have any employees in February 2017. Mr. Gantick testified he last had employees two and one-half years prior when he issued payroll for concrete construction services. Mr. Gantick testified he sub-contracted out his work for the past two and one-half years. Mr. Gantick's testimony is found to be less credible and persuasive than Claimant's testimony.

16. Mr. Gantick identified Claimant as "Tommy". Mr. Gantick became familiar with Claimant through Mr. Benegas, identified by Mr. Gantick as an independent subcontractor who contracted with Employer. Mr. Gantick testified Mr. Benegas approached Employer indicating Claimant was an experienced shoveler and brought him to work on a particular day. Mr. Gantick testified that Claimant rode in his truck one time. Mr. Gantick testified that Claimant's services worked out to $20 per hour. Mr. Gantick testified he would receive a phone call from a home owner for snow removal service and Mr. Gantick would contact a list of independent subcontractors. Mr. Gantick testified that whoever could do the job would perform snow removal services. The Employer would get paid and Employer would pay the independent subcontractors. Mr. Gantick testified that he did pay Claimant money by handing him cash directly. Mr. Gantick testified that to keep the independent contractors organized by providing index cards for them to write their time down for snow removal services which he would then record. To the extent that Mr. Gantick's testimony contradicts Claimant's testimony, Claimant's testimony is found to be more credible and persuasive than Mr. Gantick's testimony.

17. Mr. Gantick testified that he requested Claimant's Social Security number to issue a 1099 tax form but was unable as Claimant never provided the requested information. Mr. Gantick testified he paid Claimant a total of

$1620.00 for 81 hours of snow removal services from January 5, 2017, to February 6, 2017. The hours recorded by Employer were read into the record. Mr. Gantick denied requiring Claimant to work exclusively for him and denied providing Claimant any training. Mr. Gantick testified he had tools, identified as ladder and scoops, but so did Claimant, as he witnessed them being removed from the vehicles. Mr. Gantick testified he had been providing snow removal for several years.

18. Mr. Gantick testified on February 6, 2017, Mr. Benegas and Claimant followed him to the job site. Mr. Gantick testified that he would take the labor that he contacted to a job site and expect that they Mr. Benegas called Mr. Gantick approximately 1 hour later. Mr. Gantick arrived back at the job site and found Claimant in Mr. Benegas's car. Mr. Gantick observed a cut on Claimant's nose and placed some snow on the wound. Claimant was complaining of pain in his side and Mr. Gantick instructed that they needed to get Claimant to Yampa Valley Medical Center. Mr. Gantick testified he went with Claimant to Yampa Valley Medical Center and witnessed him being airlifted.

19. Mr. Gantick testified he did not have workers' compensation insurance on February 6, 2017. Mr. Gantick testified he would decide, together with his independent contractors, how many hours a snow removal job would take and charge the customer $30 per hour per individual on the job to make up the estimate or bid. Mr. Gantick testified Claimant did not provide snow removal services for Employer after February 6, 2017.

20. Claimant submitted documentation from Yampa Valley Medical Center that on February 6, 2017, medical services identified as Pharmacy IV Solutions, General Supplies, Laboratory, Laboratory Chemistry, Laboratory Immunology, Laboratory Hematology, Chest XRay, CAT Scan Head, CAT Scan Body Portion, Ultrasound, Emergency Room Services, Echocardiology, Drug with detailed coding, Trauma Activ Respon IV, Preventative Care Vaccine, Physician Fees Radiology, Physician Fees Emergency were performed and charged to Claimant.

21. Claimant submitted documentation from Classic Air Care, Inc. indicating the Claimant was transported on February 6, 2017, from Yampa Valley Medical Center to Denver Health Medical Center.

22. Claimant submitted documentation from Denver Health that Claimant received hospital services from February 6, 2017, to February 12, 2017, identified as Room and Board, Intensive Care, Pharmacy, Medical/Surgical Supplies and Devices, Laboratory, Radiology, Operating Room Services, Anesthesia, Respiratory Services, Emergency Room, Pulmonary Function, Pharmacy-Extension of 025X-Single, Source Drug Not Used, Recovery Room, Radiology Diagnostic, Physician services by Dr. Michael Breyer

(Critical Care E/M 30-74 Minutes), Physician services by Dr. Donald Townsend (Insert Cath,art, Percut, Shorterm, Emergency Anesthesia, Anesth, Open Heart; W/O Pump Oxygenator), Physician Services by Dr. David Symonds (Chest X-Ray), Physician Services by Dr. Linda Fielding (Chest X-Ray), Physician Services by Dr. Michael Mestek (Chest X-Rays) and Physician Services by Dr. Ronald Townsend (Chest X-Ray).

23. The medical report from Denver Health dated March 15, 2017, indicated Claimant was seen for post-operative follow up after a pericardial window by Dr. Cohen on February 6, 2017. Claimant was seen this date by Nupur Sehdev PA-C. Claimant reported feeling great and denied chest pain. Claimant's wound looked good. Mr. Sehdev offered Claimant a letter returning him to work light duties but Claimant was seeking a letter returning him to stay at home until he obtain surgery for a his nasal fracture which Mr. Sehdev declined to provide.

24. It is found that Claimant proved by preponderance of the evidence that he was an employee of Respondent on the date of the work injury, February 6, 2017, and that he received the medical treatment, described above, that was reasonably necessary and related to cure and relieve Claimant of the effects of the work injury.

CONCLUSIONS OF LAW

1. The purpose of the Workers' Compensation Act of Colorado (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40- 102(1), C.R.S. A claimant in a workers' compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43- 201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark,* 197 Colo. 306, 592, P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43- 201, C.R.S. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385,389 (Colo. App. 2000).

2. The ALJ is empowered to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *See Bodensieck v. ICAO*, 183 P.3d 684 (Colo.App. 2008); *Kroupa v. ICAO*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull*, 802 P.2d 1182, 1183 (Colo. App. 1990). When determining credibility, the fact finder should consider, among other things,

the consistency or inconsistency of the witnesses testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205(1936).

COMPENSABILITY (EMPLOYEE VS. INDEPENDENT CONTRACTOR)

3. Pursuant to Section 8-40-202(2)(a), C.R.S. "any individual who performs services for pay for another shall be deemed to be an employee" unless the person is "free from control and direction in the performance of the service, both under the contract for performance of service and in fact and such individual is customarily engaged in an independent trade, occupation, profession, or business related to the service performed." The putative employer may establish that the claimant was free from direction and control and engaged in an independent business or trade by proving the presence of some or all of the nine criteria set forth in Section 8-40- 202(2)(b)(II), C.R.S.; *Baker v. BV Properties, LLC*, W.C. No. 4-618-214 (August 26, 2005) (*See also Nelson v. Industrial Claim Appeals Office,* 981 P.2d 210 (Colo. App. 1998)).

4. The factors set forth in Section 8-40- 202(2)(b)(II) indicating that an individual is not an independent contractor include the individual being paid a salary or hourly rate instead of a fixed contract rate, and being paid individually rather than under a trade or business name. Conversely, independence may be shown if the person for whom the services are performed provides no more than minimal training to the claimant, does not dictate the time of performance, does not establish a quality standard for the claimant's work, does not combine its business with the business of the claimant, does not require the claimant to work exclusively for a single person or company, and is not able to terminate the claimant's employment without liability. *Baker v. BV Properties, LLC, supra.* This statute creates a "balancing test" to overcome the presumption of employment contained in Section 8-40- 202(2)(a), C.R.S. and establish independent contractor status. *Nelson v. Industrial Claim Appeals Office, supra*. The question of whether the employer has presented sufficient proof to overcome the presumption is one of fact for the ALJ. *Baker v. BV Properties, LLC, supra*.

5. As found, there was no dispute that Claimant received compensation for snow removal services. Claimant was paid in cash, by Employer, based on an hourly rate of $20 per hour. It was undisputed that Claimant would submit his hours to Employer and was then compensated at his hourly rate. As a result, Claimant established a prima facie case that he was an employee of Employer.

6. As found, Employer has failed to establish by a preponderance of the evidence of Claimant's independence from Employer. In addition to the payment at an hourly rate, Claimant testified that he never performed snow removal services prior to working for Employer. As a result, Claimant was not customarily engaged in the snow removal business but worked only for Employer. Claimant credibly testified that Employer provided the tools for the snow removal services, including shovels, ladders and picks. Claimant credibly testified that Employer instructed him on snow removal on his first day of work. Claimant credibly testified that Employer took Claimant to the job sites on a daily basis and provided instruction on the job. Claimant credibly testified, as did Employer, that he was compelled to work on a given job by Employer and was not given freedom to complete the project based on Claimant's own schedule. Claimant credibly testified that Employer pressured him to complete projects.

7. It is concluded that Claimant was an employee of Respondent on February 6, 2017, and injured himself in the course and scope of his employment with Respondent.

AVERAGE WEEKLY WAGE

8. "Wages" is defined as the "money rate at which the services rendered are recompensed under the contract of hire in force at the time of the injury, either express or implied." Section 8-40- 201 (19(a)), C.R.S. The objective of wage calculation is to arrive at a fair approximation of the Claimant's wage loss determined from the employee's wage at the time of injury. Section 8-42- 102(3); *Campbell v. IBM Corporation*, 867 P.2d 77 (Colo.App.1993); *See Williams Brother, Incorporated v. Grimm*, 88 Colo. 416, 197 P.1003 (1931); Vigil v. Industrial Claim Appeals Office, 841 P.2d 335 (Colo. App. 1992).

9. Claimant credibly testified that he worked 108 hours for the 33 day period from January 5, 2017, to February 6, 2017. As a result, Claimant's AWW is calculated at $458.18 (108 hours x $20.00 / 33 days x 7 = $458.18).

MEDICAL BENEFITS

10. Respondents are liable for medical treatment that is reasonably necessary to cure and relieve the effects of a work-related injury. Section 8-42- 101(1) (a), C.R.S. (2008). Where a claimant's entitlement to benefits is disputed, the claimant has the burden to prove a causal relationship between a work related

injury and the condition for which benefits are sought. *See Snyder v. Industrial Claim Appeals Office,* 942 P.2d 1337 (Colo. App. 1997). Whether a claimant sustained her burden of proof is generally a factual question for resolution by the ALJ. *See City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997).

11. Claimant credibly testified that he was taken to Yampa Valley Medical Center then airlifted to Denver where he underwent surgery at Denver Health. The medical records, including bills, support and confirm that Claimant underwent emergency treatment at Yampa Valley Medical Center and Denver Health on February 6, 2017. The medical records, including bills, support that Claimant was airlifted from Yampa Valley Medical Center to Denver Health on February 6, 2017. The medical records, including bills, support and confirm that Claimant was seen in follow up at Yampa Valley Medical Center for x-rays and physician evaluation on February 22, 2017. The medical records, including medical bills, support and confirm that Claimant was admitted to Denver Health from February 6 to February 12, 2017, and seen in follow up at Denver Health on March 15, 2017. Claimant credibly testified that all the medical treatment was related to his industrial fall. The evidence provided by Claimant was not contested by Respondent. In fact, Employer confirmed that Claimant was treated at Yampa Valley Medical Center and airlifted to Denver.

12. As a result, because the evidence provided by Claimant was uncontested with regard to the medical treatment, Claimant has sustained his burden of proof establishing the medical treatment obtained from Yampa Valley Medical Center on February 6, 2017, and February 22, 2017, was reasonable, necessary and related to his work-related fall. As found, Claimant has sustained his burden of proof establishing the airlift on February 6, 2017, was reasonable and necessary medical treatment arising out of his work-related fall.

13. As found, Claimant has sustained his burden of proof establishing that the medical treatment received at Yampa Valley Medical Center and Denver Health from February 6, 2017, to February 12, 2017, and March 15, 2017, was reasonable, necessary and related to his industrial fall.

TEMPORARY DISABILITY BENEFITS

14. To establish entitlement to temporary disability benefits, an employee must prove that the industrial injury, or occupational disease, has caused a "disability," and that he/she suffered a wage loss that, "to some degree," is the result of the industrial disability. Section 8-42- 103(1), C.R.S.; *PDM Molding, Inc. v. Stanburg*, 898 P.2d 542, 546 (Colo. 1995). The term "disability," as used in workers' compensation cases, connotes two elements. The first is "medical incapacity" evidenced by loss or reduction of bodily function. "Disability" connotes both medical incapacity and restrictions to bodily function.

15. The second element of temporary disability is loss of wage earning capacity. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). The impairment of earning

capacity element of "disability" may be evidenced by a complete or partial inability to work, or physical restrictions that preclude a claimant from securing employment. *See Culver v. Ace Electric, supra; Hendricks v. Keebler Company*, W.C. No. 4-373- 392 Industrial Claim Appeals Office (ICAO), June 11, 1999.

16. It is concluded that Claimant was disabled from his usual employment and is therefore entitled to an award of indemnity benefits. Claimant and Employer testified Claimant did not return to work after his injury. Claimant was physically unable to return to work until April 15, 2017. This testimony was uncontested. The only medical documentation with regard to work restrictions was from the Physician's Assistant Sehdev which suggests Claimant could return to light duty on March 15, 2017. As a result, Claimant has sustained his burden of proof establishing entitlement to TTD from February 7, 2017, to April 14, 2017, when Claimant started painting.

17. Based on Claimant's testimony, he did not sustain wage loss for approximately 4 weeks starting April 15, 2017. Claimant credible testified he was unable to continue painting due to his work injuries on or about May 12, 2017. Claimant is entitled to TTD from May 13, 2017 until June 10, 2017. Based on Claimant's testimony, he returned to work on June 11, 2017, and did not sustain work-related wage loss thereafter.

PENALTIES

18. Mr. Gantick testified he was uninsured on February 6, 2017. Pursuant to Section 8-43-408(1), C.R.S. Claimant's indemnity benefits in the present claim shall be increased by 50%.

19. Section 8-43-408(2), C.R.S., requires that an uninsured employer post a bond or certificate of deposit for the present value of all of the unpaid compensation and benefits. WCRP 9-5 provides that the trustee is to be the Subsequent Injury Fund in the Division of Workers' Compensation. Pursuant to WCRP 9-5, the ALJ has calculated a total of $5,958.03 for past-due TTD benefits through the date of hearing in addition to $112.234.43 for known authorized medical expenses. There is no present value discount for these past-due amounts. A bond or certificate of deposit in the amount of $118,192.46 is appropriate.

ORDER

IT IS, THEREFORE ORDERED THAT:

1. Claimant sustained a compensable injury as an employee of Respondent on February 6, 2017, when he fell off a roof.

2. Claimant's average weekly wage is $458.18 with a corresponding TTD rate of $305.54. With the additional 50% liability, Claimant is entitled to TTD benefits at the rate of $458.31 per week.

3. Respondent are liable and shall pay all medical benefits received by Claimant from Yampa Valley Medical Center for dates of service on February 6, 2017, and February 22, 2017.

4. Respondent are liable and shall pay for the airlift services provided to Claimant by Classic Air Care, Inc. on February 6, 2017.

5. Respondents are liable and shall pay all medical benefits received by Claimant from Denver Health from February 6, 2017 to February 12, 2017 and for March 15, 2017.

6. Respondent are liable and shall pay Claimant for TTD benefits from February 7, 2017 to April 14, 2017 and May 13, 2017 to June 10, 2017.

7. Respondent are liable and shall pay Claimant an additional 50% on all indemnity benefits pursuant to Section 8-43- 408 (1), C.R.S. for failure to maintain workers' compensation insurance.

8. Pursuant to WCRP 9-5, the ALJ has calculated a total of $5,958.03 for past-due TTD benefits through the date of hearing in addition to $112.234.43 for known authorized medical expenses. There is no present value discount for these past-due amounts. A bond or certificate of deposit in the amount of $118,192.46 is appropriate.

9. Within ten (10) days of the date of service of this order, deposit the sum of $118.192.46 with the trustee, Subsequent Injury Fund Unit of the Division of Workers' Compensation, P.O. Box 300009, Denver, Colorado 80203-0009, Attention: Sue Sobolik, to secure the payment of all unpaid compensation and benefits awarded, or in lieu thereof,

10. Within ten (10) days of the date of service of this order, Claimant shall file a bond in the sum of $118,192.46 with the Division of Workers' Compensation within ten (10) days of the date of this order:

    (1) Signed by two or more responsible sureties who have received prior approval of the Division of Workers' Compensation or

    (2) Issued by a surety company authorized to do business in Colorado.

The bond shall guarantee payment of the compensation and benefits awarded.

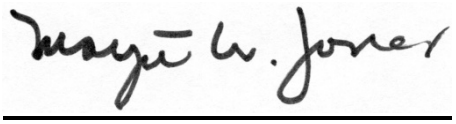
11. IT IS FURTHER ORDERED: Pursuant to Section 8-43-408(5) C.R.S., the uninsured employer shall pay an amount equal to 25% of the compensation to which Claimant is entitled to the Colorado uninsured employer fund created in Section 8-67-105 C.R.S.

12. IT IS FURTHER ORDERED: That the employer shall notify the Division of Workers' Compensation of payments made pursuant to this order.

13. IT IS FURTHER ORDERED: That the filing of any appeal, including a petition for review, shall not relieve the employer of the obligation to pay the designated sum to a trustee or to file the bond. Section 8-43-408(2) C.R.S.

If you are dissatisfied with the Judge's order, you may file a Petition to review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43- 301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 5, 2018



MARGOT W. JONES
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

a. Whether Claimant established by a preponderance of the evidence that his alleged work injury arose out of and in the course and scope of his employment on February 21, 2017;

b. Whether Claimant established by a preponderance of the evidence that he is entitled to reasonable, necessary and related medical treatment;

c. Whether Claimant established by a preponderance of the evidence that he is entitled to temporary total disability benefits beginning on February 23, 2017, and continuing until terminated by law ;

d. Whether Claimant was responsible for his termination under Sections 8-42-103(1)(g) and 8-42-105(4)(a); and

e. Whether Claimant's compensation shall be reduced by fifty percent for his willful failure to follow safety rules pursuant to Section 8-42-112(1)(b), C.R.S.

STIPUATION OF FACT

The parties stipulate and agree that Claimant's average weekly wage is $959.93.

FINDINGS OF FACT

1. Claimant began working for Employer on February 13, 2017. Claimant's duties were to drive Employer's truck which carried all the equipment necessary for the crew to work on the job site each day and to work as a general laborer pouring and finishing concrete.

2. Prior to beginning work for Employer, on February 12, 2017, Claimant completed paperwork for the Employer and signed an acknowledgement that he received and understood the Employer's Written Safety Plan. Claimant's acknowledgement reflected that Claimant read and understood Employer's written safety plan and agreed to follow all safety policies and rules.

3. Employer's safety rules included a prohibition regarding horseplay on the job. The rule warned that injury or termination could result from horseplay on the job. Charles Franklin, the General Manager for Employer, credibly testified that Claimant was given the safety policies and rules and instructed to read the written safety plan.

4. Mr. Franklin explained in his deposition testimony that, in January 2017, he and his parents purchased the concrete business, in which they employed all employees previously employed by the company.

5. On February 21, 2017, Claimant was on break with other employees waiting for concrete to be delivered. Two other employees were present with Claimant, Fermin Galindo and Joel Ernesto Escarecega-Olivas. While the group was waiting for the concrete to arrive, Claimant and Escarecega-Olivas decided to arm wrestle. Claimant initiated the arm wrestling.

6. Claimant, Galindo and Escarecega-Olivas were aware that arm wrestling was not part of their job duties. Galindo and Escarecega-Olivas knew that arm wrestling was not permitted and no such horseplay had been observed by them at work. During Claimant's brief employment with Employer, he had not observed anyone arm wrestling.

7. Claimant and Escarecega-Olivas started arm wrestling, facing each other and grasping each other's right hands. The arm wrestling match lasted about 30 seconds. Escarecega-Olivas declared that he had won the wrestling match, Claimant declared an end to the match and Claimant let go of Escarecega-Olivas's hand. Claimant step back from Escarecega-Olivas, tripped and fell to the ground landing on his back. Claimant fell almost immediately after ending the arm wrestling match. Escarecega-Olivas did not cause Claimant's fall.

8. Claimant provided contradictory testimony regarding the arm wrestling incident. Claimant's testimony was found to be less credible and persuasive than the testimony of Escarecega-Olivas and Galindo.

9. Claimant treated for his alleged injury with Dr. David Yamamoto, M.D. On February 22, 2017, Dr. Yamamoto recorded that Claimant suffered an injury while walking backwards when he tripped over rebar. Claimant is reported to have told the physician that he injured his right shoulder. On February 24, 2017, Dr. Yamamoto referred Claimant for a right shoulder MRI, which revealed a full thickness rotator cuff tear, as well as a partial tear of the infraspinatus tendon, strain of the deltoid and infraspinatus muscles, and moderate joint effusion.

10. On March 2, 2017, Claimant treated with Dr. Eric C. McCarty, an orthopedic surgeon. The doctor recommended and requested a right arthroscopic rotator cuff repair, subacromial decompression, distal clavicle excision and biceps tendenosis. The doctor opined that Claimant's right shoulder condition was acute.

11. On July 25, 2017, Claimant saw Dr. Peter Weingarten for an IME and the doctor reported that Claimant was pushed and fell backwards. Claimant reported to this doctor that he could not recall exactly how he fell, whether he fell on his shoulder or fell on his outstretched arm. Dr. Weingarten opined that

Claimant sustained a full thickness tear of the supraspinatus tendon in the February 21, 2017, fall incident.

12. Following the February 21, 2017, incident, Claimant continued to work the remainder of the day. On February 23, 2017, Claimant met with Mr. Franklin, the General Manager, about the safety rule violation and Claimant's tardiness for work. Claimant was issued a written warning regarding his violation of Employer's safety rules prohibiting horseplay. Employer also warned Claimant about his late arrival for work on three occasions. Employer sought Claimant's signature on the written warning regarding his horseplay and tardiness. Claimant refused to sign the warning and walked off the job addressing Mr. Franklin using expletives.

13. Mr. Franklin deemed Claimant's refusal to sign the written warning and his departure from the work site to be a resignation from his position. Later, on February 23, 2017, Claimant returned to the job site and surrendered his keys to the Employer's vehicle when he was advised his employment was deemed terminated.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (Colo. 1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

2. The claimant must prove by a preponderance of the evidence that his injury was proximately caused by an injury arising out of and in the course of his employment with the employer. Section 8-41-301(1)(b) & (c), C.R.S.*; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury occurs "in the course of" employment where the claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *See Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" element is narrower and requires the claimant to show a causal connection between the employment and the injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *See Triad Painting Co. v. Blair*, *supra.*

Compensability

3. If the acts of an employee at the time of the injury are for the employee's sole benefit, then the injury does not arise out of and in the course of employment. *Panera Bread, LLC v. Industrial Claim Appeals Office,* 141 P.3d 970 (Colo. App. 2006), *Kater v. Industrial Claim Appeals Office,* 728 P.2d 746 (Colo.App. 1986); *Brogger v. Kezer,* 626 P.2d 700 (Colo.App.1980). If the claimant's activity at the time of the injury constitutes such a substantial deviation from the circumstances and conditions of the claimant's employment that the activity is for the claimant's sole benefit, the injury does not arise out of and in the course of employment. *Kater v. Industrial Commission, supra.* Where, the alleged deviation from employment involves "horseplay," our courts apply a four-part test to determine whether the resulting injury is compensable. In *Lori's Family Dining v. Industrial Claim Appeals Office,* 907 P.2d 715, 718 (Colo. App. 1995), the Court of Appeals held that the relevant factors are:

> (1) the extent and seriousness of the deviation; (2) the completeness of the deviation, *i.e.,* whether it was commingled with the performance of a duty or involved an abandonment of duty; (3) the extent to which the practice of horseplay had become an accepted part of the employment; and (4) the extent to which the nature of the employment may be expected to include some horseplay.

4. In any event, the critical concern is "whether the claimant's conduct constituted such a deviation from the circumstances and conditions of employment that the claimant stepped aside from his job and was performing the activity for his sole benefit." *Panera Bread, LLC v. Industrial Claim Appeals Office, supra. Ultimately, resolution of the issue is one of fact for determination by the ALJ. Panera Bread, LLC v. Industrial Claim Appeals Office*, *supra.*

5. In this matter, Claimant failed to prove by a preponderance of the evidence that he injured himself in the course and scope of his employment for Employer. Claimant's testimony regarding the mechanism of his injury was less credible and persuasive than that of his co-workers. Claimant's explanation to medical providers was evolving, changing and not credible. Claimant's assertions that he was pushed by a co-worker and fell, that he did not instigate the horseplay activity or that his injury did not occur in the midst of the horseplay was not deemed credible. Claimant's horseplay was a deviation from his duties and provided no service to Employer. Claimant's deviation was not co-mingled with Claimant's duties for Employer. Claimant's injury arises from a brief deviation from providing service to Employer. However, though the deviation was brief in the amount of time Claimant and his co-worker were involved with arm wrestling, the brevity of their deviation was dictated by the time it took for Claimant to injure himself bringing the deviation to an end.

6. The evidence established that Employer maintained a written safety policy which included a prohibition against horseplay at work. Claimant was provided with this written safety policy and was aware of the prohibition. Claimant's co-workers credibly testified that they observed no horseplay in the workplace. The evidence further established that despite Claimant's knowledge of Employer's safety policy, Claimant initiated an arm wrestling match. Upon concluding the horseplay which involved Claimant's right arm being wrapped around his co-worker's right arm, Claimant stepped backward and fell. It is concluded that Claimant's deviation from his employment for Employer was substantial to the extent that Claimant's activities leading up to his fall and at the time of his fall, provided no service to Employer, was outside the scope of Claimant's employment and did not arise from his employment for Employer.

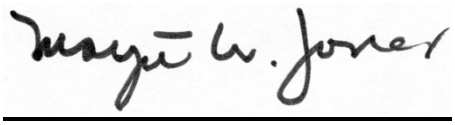
7. Claimant failed to sustain his burden of proof to establish that the injury occurred in the course and scope of his employment, therefore his claim is not found to be compensable.

ORDER

Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43- 301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: May 14, 2018



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable work related injury on May 20, 2017.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to reasonable and necessary medical benefits to treat his May 20, 2017 work injury.

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits from May 21, 2017 through August 25, 2017.

4. Determination of Claimant's average weekly wage (AWW).

FINDINGS OF FACT

1. Claimant was employed by Employer as a laborer with duties including demolition and remediation at Colorado Mills Mall which had been damaged by a hail storm. Claimant's duties included pulling and bagging ceiling tiles that had sustained water and hail damage and removing screws from drywall.

2. Claimant began employment on May 16, 2017 and worked 4 total days for Employer. Claimant worked 9.5 hours on the 16th, 9.5 hours on the 18th, 4 hours on the 19th, and 9.5 hours on the 20th and was paid $12.50 per hour.

3. Claimant testified that during his 4 days of work for Employer he carried and hauled heavy bags full of wet and demolished drywall to the trash. Claimant reported that he had carried hundreds of these bags out to the trash. Claimant testified that a few days prior to May 20 he had back pain, but that on May 20 it became "insane" and was the worst pain he has had in his life.

4. On May 20, 2017, his fourth day of work, Claimant alleges he sustained an injury to his lumbar spine. Claimant testified that he was on a ladder near the end of the day removing drywall screws and felt his shoulder pop which it does sometimes but that he also felt pain in his back at that time and went down the ladder. Claimant reported that after a couple of steps off the ladder he hit the ground.

5. Claimant reported having one problem previously with his low back when he was cutting a tree and twisting and that he went to the emergency room for low back pain but that it was not a big problem, so he didn't report it to Dr. Roth. Claimant reported that his low back pain at this time lasted only one week and then was gone and that he has had no low back problems whatsoever since (incident was in 2011).

6. On May 21, 2017 Claimant was evaluated at Denver Health Medical Center (DHMC). Claimant reported that he thought he hurt his back at work a few days ago but denied any specific injury or trauma. Claimant reported left sided shooting pain to his left lower extremity that started in the past 7 days with pain in the sacro-iliac radiating to the left foot, left knee, and left thigh. Claimant reported that he started having pain on Tuesday (May 16) and that he had been working a lot and a lot of long hours. Claimant reported that sometimes his entire leg goes numb and he gets a Charlie horse along the side of the left lower leg. Claimant reported that he was able to keep working through it, but that it definitely was getting worse. Claimant was assessed with radiculopathy of the lumbar region and was advised to follow up with his primary care provider. *See* Exhibits 1, I.

7. On May 28, 2017 Claimant was evaluated at DHMC. Claimant reported a lifting/twisting injury at work last week and that he had no improvement of his symptoms. Claimant reported continued pain in his lower back and left sciatic pain. X-rays of Claimant's lumbar spine were performed and showed mild anterior wedging of the T12 vertebral body which was age-indeterminate. Scattered small endplate osteophytes were noted. Otherwise, the x-rays showed no acute findings. *See* Exhibits 1, I.

8. On May 30, 2017 Claimant was evaluated at DHMC. Claimant reported back pain after starting a new job which involved lifting and that he injured his back approximately 10 days prior. Claimant reported sharp shooting pain from his left lumbar spine to his hip, and all the way down the lower lateral part of his left lower extremity. At this visit, Claimant had a tooth extracted. *See* Exhibits 1, I.

9. On June 6, 2017 Claimant was evaluated at DHMC. Claimant reported that at work he was going up and own ladders carrying heavy objects and that toward the end of the day his back started hurting. Claimant reported that the first day of pain it started to be uncomfortable in his low back, that he kept working, and that the pain then got severe in his low back above the left hip running down to the knee and into the calf. Claimant's exam and history were consistent with sciatic pain and SI joint pain and an injection was recommended. *See* Exhibits 1, I.

10. On June 15, 2017 Claimant underwent an MRI of his lumbar spine. The impression provided was: L4-L5 moderate diffuse disc bulge lateralizing to the left with left foraminal disc protrusion and a large superimposed superior disc extrusion extending from the left paracentral region of the left intervertebral foramen with mild central stenosis, compression, and displacement of the traversing left L4 nerve root as well as compression of the existing left L4 root in the foramen by the large disc extrusion. *See* Exhibits1, I.

11. Claimant was previously evaluated at the emergency department of St. Anthony's Hospital for lower back pain. On October 24, 2011 he reported lower back pain for one week after picking up a heavy tree with pain at a 7/10 in his bilateral lower back. Claimant was treated with pain medications and was referred to outpatient primary care for follow up. *See* Exhibit H.

12. On November 4, 2011 Claimant was evaluated at Denver Health Medical Center. Claimant reported low back pain, bilateral hip pain, and groin pain for the past two weeks. Claimant reported that he had been given pain medications from St. Anthony's but had run out and that now he also had pain and intermittent leg numbness. Claimant was found to have tenderness across the L5 area and bilateral iliac crests. *See* Exhibit I.

13. On December 18, 2017 Claimant underwent an independent medical examination performed by Henry Roth, M.D. Claimant reported low back and left leg pain. Claimant reported that on May 20, 2017 while working in construction demolition, he was removing drywall screws with a power screwdriver and going up and down a 10 foot ladder. Claimant reported that near the end of his shift, he was at the top of the ladder removing screws when he thought he heard a noise near his shoulder but felt back pain that traveled down his left leg. Claimant reported that he came down the ladder, took two steps, and then had to sit on the ground due to pain. *See* Exhibit G.

14. Dr. Roth reviewed medical records that noted back pain starting on May 16, 2017 and Claimant indicated the medical record was wrong. Dr. Roth reviewed the lumbar MRI. Claimant reported pain at a 5-6 but with activity that it could be to a 9/10. Claimant reported his primary pain is in the posterior lateral aspect of his left leg. After his review of medical records and physical examination of Claimant, Dr. Roth opined that he was unable to identify with medical probability, a work related cause of injury. Dr. Roth pointed out that Claimant did not report a specific time, activity, and sudden pain onset until September 28, 2017 and that he had indicated previously discomfort with no specific incident. Dr. Roth also opined that Claimant's lumbar spine MRI showed degenerative changes without any edema or suggestion of an acute disorder and that Claimant's findings were ordinary. Dr. Roth opined that Claimant's work related activities in removing drywall screws and going up and down a ladder were not mechanisms of injury for an alteration of lumbar anatomy or even lumbar strain and were not of sufficient force to produce an alteration to the sacroiliac anatomy. *See* Exhibit G.

15. Dr. Roth opined that Claimant's left sided lumbopelvic pain syndrome and left sided sciatic were a pre-existing personal illness and that any symptoms Claimant may have experienced at work between May 16 and May 20 were incidental and not the direct result of work activities. Dr. Roth opined that Claimant definitely had an L4/5 degenerative disc herniation causing an L4/5 left leg radiculopathy but that there was no acute anatomic disruption. *See* Exhibit G.

16. Dr. Roth testified at hearing. Dr. Roth opined that Claimant needed lumbar discectomy and decompression surgery and that Claimant was long overdue for surgery. Dr. Roth noted that Claimant did not tell him about lifting heavy bags of wet drywall tiles. Dr. Roth opined that Claimant's condition was a personal illness and that it was not medically probable that repetitive materials handling would produce a condition requiring surgery or sustained back pain. Dr. Roth opined that just having pain at work does not make work responsible. Dr. Roth opined that Claimant's employment did not cause his anatomy and that if Claimant had pain on Tuesday the 16th (as reported to DHMC), then Claimant had pain on his first day of work that would just be a reflection of Claimant's existing anatomy at the time he was hired. Dr. Roth opined there was no aggravation of a pre-existing condition.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence

contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995); *Breeds v. North Suburban Medical Center,* WC 4-727-439 (ICAO August 10, 2010); *Cotts v. Exempla, Inc.,* WC 4-606-563 (ICAO August 18, 2005). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to meet his burden to establish that he sustained a compensable work related injury on May 20, 2017. Initially, Claimant's testimony that his prior back pain from 2011 lasted only a week and then he had no further problems or symptoms whatsoever is not consistent with earlier treatment records. In 2011, Claimant was initially evaluated on October 24 stating he had been having lower back pain for a week. On November 4, he returned and he was reporting continued low back pain as well as intermittent leg numbness and tenderness in the L5 and bilateral iliac crests. From the records, Claimant was continuing to have severe enough pain to return for more treatment approximately 3 weeks after his incident cutting a tree. Although the records show no further follow up, it is clear that on November 4 he was still having significant symptoms from the tree incident three weeks earlier.

The symptoms Claimant reported in 2011 are in the same area he currently reports symptoms. Dr. Roth is credible and persuasive that Clamant is long overdue for lumbar spine surgery. The MRI demonstrates pathology consistent with Dr. Roth's opinion. However, the MRI and the lumbar x-rays fail to show an acute incident or injury causally related to Claimant's employment on May 20, 2017. Claimant's work activities and duties did not cause or alter his pre-existing lumbar spine condition or anatomy. Further, Claimant's reports to providers on the date of his pain symptoms and mechanism of injury have not been consistent throughout treatment for this alleged work related injury. The opinion of Dr. Roth that Claimant has a pre-existing condition is credible and persuasive. This condition was not aggravated or accelerated by his employment. Although Claimant may have felt pain at work due to his pre-existing and underlying condition, Dr. Roth is credible and persuasive that there is no causal relationship and that work did not aggravate or accelerate the condition. Claimant's symptoms at work are more likely to represent the natural progression of Claimant's pre-existing condition that is unrelated to his employment with Employer.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish by a preponderance of the evidence that he sustained a work related injury on May 20, 2017 during his course and scope of employment with Employer.

2. As Claimant failed to meet his burden to establish a compensable injury, the remaining issues are not addressed. The claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 28, 2018

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable occupational disease or work injury on or about April 1, 2016.

2. Whether Claimant has established by a preponderance of the evidence an entitlement to medical benefits to treat his occupational disease or work injury, including the bills of Dr. Beatty and his referrals.

STIPULATIONS

1. Claimant's average weekly wage (AWW) is $821.95.

FINDINGS OF FACT

1. Claimant is a 38 year old male who is employed by Employer as an operational coordinator at Employer's fitness gym and facility, the PEAK Center.

2. The facility has adaptive equipment for clients with special accommodation needs which makes it easier for clients to work out.

3. Claimant initially began working as a volunteer for Employer, was moved to a per diem position, and became a full time employee in May of 2015.

4. Claimant has been employed full time as the operational coordinator since May 9, 2015. Claimant performs a lot of administrative work and schedules and receives applications for new clients on a daily basis. The facility sees approximately 120 clients per day. Claimant is sometimes on the floor of the gym facility to discuss with clients scheduling or billing issues, but is primarily in his office at a desk performing administrative work.

5. Between May of 2015 and April of 2016, Claimant's workload was of a fairly constant intensity. Claimant's work required regular mousing, typing, and computer work. The scheduling program used by Employer's facility is heavily mouse dependent. Since May of 2015, the time Claimant has spent on the computer during a work day has varied from heavier times of computer use at 50% of each hour to lighter times of computer use at 30% of each hour.

6. In the spring of 2016, Claimant began experiencing pain in his right elbow. Claimant tried to ignore the little pains until it became a larger problem for him and he eventually sought treatment in April of 2016.

7. Claimant was ultimately diagnosed with right cubital tunnel syndrome and medial epicondylitis.

8. Claimant contends that his right elbow condition is an occupational disease caused by computer work (keyboarding and mousing) performed at Employer's facility.

9. In 2003 Claimant was injured in a diving accident. As a result, Claimant experienced a spinal cord injury and is a C7 tetraplegic. Claimant has disability in all four limbs due to his accident. The spinal cord injury affects Claimant's upper extremity function and he has limited finger function and flexion function. Due to this, the mechanics involved when Claimant uses the mouse at work are different. Claimant turns the mouse in a clockwise direction and rolls his hand out to be able to right click the mouse. The motion necessitates Claimant's elbow and shoulder. Claimant does not have enough finger flexion to put pressure on the mouse clicker and to depress the mouse clicker he has to use pressure from his shoulder and elbow.

10. Claimant uses tenodesis griping for everything and with all techniques involving his right hand.

11. Claimant also lacks core strength due to his 2003 injury. Claimant thus has to stabilize himself when seated at his work desk with his upper extremities and forearms. If he does not place pressure on his hands and forearms to stabilize himself, he falls forward into the desk. When Claimant is on the computer at work and using the mouse or keyboard, he is simultaneously holding himself erect and placing pressure and his weight on his upper extremities to stabilize himself.

12. In April of 2016, approximately 11 months after beginning full time employment with Employer, Claimant sought medical treatment. Claimant testified that he wanted a quick fix and didn't want to draw attention and sought treatment on his own without reporting it as a work injury.

13. On April 25, 2016 Claimant was evaluated by Maureen Preston, NP. Claimant reported that he had been experiencing right elbow pain which he believed may be related to his computer use at work and that he had developed a new right elbow ulcer due to ice he had been applying to the area. NP Preston referred Claimant to hand therapy associates to evaluate his right elbow pain. NP Preston also referred Claimant for a job site evaluation. *See* Exhibit 1.

14. On April 29, 2016 Claimant was evaluated at hand therapy associates by Phillip Heyman, M.D. Claimant reported pain on the medial side of the right elbow and that he had been using a mouse lately in a somewhat different way than usual and that it seemed to have contributed to his symptoms. Dr. Heyman found that Claimant was

unusually well developed from the elbows on proximal and that Claimant was tender just at the posterior edge of the medial epicondyle and not particularly tender over the ulnar nerve. Dr. Heyman provided an impression of medial epicondylitis and provided an injection into the medial epicondyle. *See* Exhibits 2, G.

15. On May 18, 2016 Claimant was evaluated by Dr. Heyman. Claimant reported modest relief from the prior injection and reported pain in the medial aspect of the right elbow when he used his touch pad or mouse. Dr. Heyman again noted point tenderness in the same location just beyond the medial epicondyle on examination. Dr. Heyman performed a second injection into the medial epicondyle. *See* Exhibits 2, G.

16. On August 10, 2016 Claimant was evaluated by Dr. Heyman. Claimant had persisting right medial elbow pain. Dr. Heyman noted that Claimant was essentially insensate in the small and ring finger due to spinal injury. Dr. Heyman recommended therapy modalities and stretching. *See* Exhibits 2, G.

17. Claimant began physical therapy with massage, strengthening, and stretching exercises performed. On August 25, 2016 Claimant reported at physical therapy that he wanted to return to the gym and to outdoor activities and that his elbow discomfort had limited his participation in both activities. Claimant reported no mechanism of injury but that his pain had been going on for multiple months. Claimant reported that massage/stretches helped alleviate the constant pain. Claimant reported that on the weekends his pain significantly reduces. *See* Exhibits 2, G.

18. At physical therapy on September 8, 2016 Claimant reported little to no pain. Claimant reported that he had gone on vacation for 5 days during which he did no keyboarding and that his pain disappeared during this trip and appeared to be coming back when he keyboarded. The occupational therapist noted a plan to find an ergonomic solution or fabricate adaptive equipment to take strain off Claimant's forearm flexors. *See* Exhibits 2, G.

19. Claimant testified that the 5 day vacation was a weeklong work conference in New Orleans. Claimant testified that he had no computer and that his symptoms got better that week with rest and time away from the computer but that they did not completely go away.

20. By October of 2016, Claimant's symptoms had not subsided and he reported a work injury. Claimant testified that he decided to report the injury because his symptoms had not gone away, he needed his employer to be aware, and he knew he needed to make changes to his workstation and equipment.

21. On October 18, 2016 Claimant was evaluated by Brian Beatty, D.O. Claimant reported that he did a lot of scheduling on a computer all day long and started to develop right elbow pain in the spring. Claimant reported a diagnosis of medial epicondylitis and that he had two injections with some improvement as well as physical therapy without much improvement. Dr. Beatty noted that Claimant wore a tennis elbow

brace. Dr. Beatty found tenderness to palpation over the medial aspect of the right elbow. Dr. Beatty diagnosed right medial epicodylitis and recommended hand therapy, medication, and ergonomic evaluation of Claimant's workstation with appropriate changes. Dr. Beatty opined that based on Claimant's description of the injury and the clinical findings, he believed that the objective findings were consistent with a work related mechanism of injury. Dr. Beatty listed the work related medical diagnosis as medial epicondylitis. *See* Exhibits 3, I.

22. An ergonomic evaluation of Claimant's work station was performed and changes were made to Claimant's work station. The changes along with taking recommended breaks and stretching throughout the course of the day made Claimant's work easier, but his pain did not subside.

23. As part of the overall ergonomic recommendations, Claimant initially moved the computer mouse to the left side, then moved to a trackball mouse, and later moved to using dragon speak software.

24. Claimant underwent an initial occupational therapy evaluation on October 20, 2016. Claimant reported symptoms increased when pushing on wheelchair rails, typing, using the mouse, and using a phone screen. Claimant reported pain at the elbow and that he mostly used tenodesis for object manipulation. The therapist opined that the prognosis for functional recovery was good but that Claimant would need optimal ergonomics and an optimal long range distal upper quadrant maintenance program to sustain resolution of symptoms. *See* Exhibits 6, H.

25. On October 31, 2016 Claimant underwent therapy. Claimant reported that he noticed the pain when he types. The therapist noted that Claimant's triceps and extrinsic flexors were intensely tight perpetuated by his use of the upper limbs for wheelchair mobility. The symptoms were noted to be most bothersome when using computer but the therapist noted the use of upper limbs for wheeled mobility very likely was a significant factor in overall cumulative stress to tissue. The therapist opined that the occurrence of symptoms appeared to be consistent with workstation ergonomics as causal issues and opined that the changes recommended by the ergonomic evaluator should help. *See* Exhibits 6, H.

26. On November 3, 2016 Claimant was evaluated by Dr. Beatty. Claimant reported gradual improvement in his symptoms with less pain and tightness in the forearm and elbow and improved numbness and tingling in his fingers. Dr. Beatty diagnosed right medial epicondylitis and cubital tunnel syndrome. Dr. Beatty recommended continued hand therapy, medications, and performed a trigger point injection to the flexor muscles of the forearm. Dr. Beatty continued to opine that it was a work related mechanism of injury. *See* Exhibit 3.

27. On November 30, 2016 at therapy, it was noted that Claimant still developed immediate regression of symptoms on initiation of computer keyboard use. The therapist

opined that there was clearly a significant ergonomic contribution to Claimant's symptoms. *See* Exhibits 6, H.

28. On December 5, 2016 at therapy, it was noted that Claimant had an ergonomic evaluation, but that Claimant still developed increased pain fairly quickly on initiation of computer use. *See* Exhibits 6, H

29. On December 7, 2016 Claimant was evaluated by Dr. Beatty. Claimant reported that he tended to have more symptoms of tingling into his fingers when his elbow was bent. At an evaluation with Dr. Beatty on December 21, 2016 it was noted that Claimant's symptoms were about the same and had overall greatly improved but seemed to now be plateaued. *See* Exhibits 3, I.

30. On December 14, 2016 a job demands analysis was performed. It was noted that Claimant's job involved constant sitting, frequent reaching below shoulders when using computer mouse, keyboard, transferring documents/items, and using telephone headset, and frequent fingering when using computer mouse, keyboard, telephone, writing and processing documents. It was noted that gripping was rare and while using telephone handset and stapler. Under the risk factor assessment it was found that Claimant did not have risk factors present. Specifically, under the risk factor of 4 hours of mouse usage, it was noted that Claimant used the mouse approximately 3.7 hours per day and that he used the keyboard approximately 52.5 minutes per day. *See* Exhibit M.

31. On December 21, 2016 Jonathan Sollender, M.D. issued a letter recommending denial of Claimant's claim. Dr. Sollender noted diagnoses of cubital tunnel syndrome and right medial epicondylitis and Dr. Sollender reviewed the job demands analysis. Dr. Sollender opined that it was certainly possible that Claimant may have generated mouse use with the injured right hand for upwards of 4 hours per workday (not directly quantified by the job demands analysis) but that the underlying reason for considering mouse use as a risk factor over 4 hours was not for the flexor tendons but for the extensor tendons that raise the hand for clicking purposes. Dr. Sollender opined that typically someone with high amounts of mousing will have extensor tendon symptoms including forearm extensor tendinitis up to and including lateral epicondylitis. Dr. Sollender opined that the use of the mouse was inconsistent with the development of medial epicondylar symptoms. Dr. Sollender also opined that cubital tunnel syndrome would tend to arise in someone with elbow flexion greater than 90 degrees for over 4 hours per day which was not the case. Dr. Sollender opined, therefore, that although Claimant might be using the mouse near the threshold valued for a repetitive motion injury, mousing was physiologically inconsistent with the development of medial epicondylitis or cubital tunnel syndrome and he recommended denial. *See* Exhibit A.

32. On January 11, 2017 Claimant was evaluated by Craig Davis, M.D. of Colorado Orthopedic Consultants. Dr. Davis noted that Claimant was sent for a second opinion and consultation regarding right elbow problems. Dr. Davis noted that in April of 2016 Claimant developed gradually increasing pain around the right medial elbow. Dr.

Davis noted that Claimant does a lot of typing for work and would rest his arm on the desk and because of his quadriplegia had to rest a little weight on his arm. Dr. Davis reviewed the treatment history and performed a physical examination. Dr. Davis provided the impression of right medial epicondylitis and ulnar neuropathy at the right elbow. Dr. Davis noted with 8 months of conservative treatment it would be reasonable now to get an MRI of the elbow and to consider electrodiagnostic testing to evaluate the ulnar nerve conduction and that depending on the findings it might be worth considering surgical treatment, although surgical treatment should be a last resort. *See* Exhibits 5, 8, J.

33. On January 24, 2017 Claimant underwent an MRI of his right elbow. The impression provided was: mild medial epicondylitis change but fatty denervation type change of the common flexor muscular origin, flexor carpal ularis, flesor digitorum superficialis and the flexor carpi radialis muscle bellies; small physiologic elbow joint effusion with minimal synovitis change and no chondral or osseous abnormality; and probable artifact medial aspect olecranon. *See* Exhibit L.

34. On February 9, 2017 Claimant was evaluated by Barry Ogin, M.D. Dr. Ogin noted that Claimant performed a lot of repetitive use with the mouse at work and that due to Claimant's tetraplegia, Claimant had an awkward position holding the mouse. Dr. Ogin noted that Claimant had good strength with elbow flexion and extension as well as wrist extension but had no hand intrinsic or finger flexion strength in either hand. Dr. Ogin noted that in the spring of 2016 Claimant began developing some achiness along the medial aspect of the right arm and that while Claimant admitted it could be in part related to chronic wheelchair use, it seemed that it was predominantly the mouse work that was throwing him over the edge. Dr. Ogin noted that symptoms were only on the right side where Claimant utilized the mouse. Dr. Ogin noted that Claimant had a very muscular upper body but significant atrophy of hand intrinsic muscles and no active finger flexion or hand intrinsic activation. Dr. Ogin attempted electrodiagnostic testing but noted it was quite limited given Claimant's tetraplegia. Dr. Ogin noted that a diagnostic ultrasound could be considered to identify if the ulnar nerve appeared swollen, entrapped, or sublexed in regards to the cubital tunnel. Dr. Ogin assessed probable ulnar neuropathy, right and right medial epicondylitis. *See* Exhibits 7, F.

35. On March 14, 2017 Claimant underwent an independent medical examination performed by Jonathan Sollender, M.D. Dr. Sollender noted that he had reviewed medical records and the job demands analysis report. Dr. Sollender opined that mouse use was not associated medial epicondylitis or cubital tunnel syndrome but that mouse usage can cause wrist extensor tendinitis or lateral epicondylitis. Dr. Sollender opined that based on the lack of physiologic relatedness of the risk factor of mousing to Claimant's condition, he recommended claim denial. *See* Exhibit A.

36. Dr. Sollender noted that after his March 14 evaluation he came to understand that Claimant does not really have any active flexion of any finger joint on the right hand and that Claimant's manner of mousing and keyboarding was really biceps and shoulder controlled to strike keys and mouse and that the evaluation was done with Claimant's left hand. Dr. Sollender recommended a repeated job site evaluation to

ensure that the right wrist, fingers, and elbows were more carefully evaluated while Claimant mouses with his right hand. *See* Exhibit A.

37. Dr. Sollender noted that updated photographs and video of Claimant mousing and keyboarding noted minimal flexion of the right elbow while typing or mousing and Dr. Sollender noted that he did not see Claimant anchoring forearms on the desk or resting forearms on any edge of the desk/work station and that there was no awkward posture of flexion or extension at the wrist or any elbow flexion while typing or mousing confirming his earlier suspicion that Claimant's right hand was not at an awkward posture while typing or mousing. Dr. Sollender continued to opine that Claimant's work activities did not accelerate or aggravate Claimant's chronic condition that worsened in Spring of 2016. Dr. Sollender agreed that Claimant's condition could be in part related to chronic wheel chair use based on significant calluses Claimant had on the hypothenar aspect of both hands. Dr. Sollender opined that he did not see anything from Claimant's hand motions at work that would give him any suspicion that Claimant's hand use from typing or mousing would naturally lead to the development of cubital tunnel syndrome or medial epicondylitis. *See* Exhibit A.

38. On July 25, 2017 Claimant underwent an independent medical evaluation performed by Hugh Macaulay, M.D. Claimant reported that using his office and desk space at work he noticed right elbow discomfort at first and that once it started it slowly progressed to being pretty painful. Claimant reported that the pain was worse while mousing and using his keyboard to type. Claimant reported that due to his spinal cord injury, he is very body conscious and body aware and analyzed what he was doing when the pain occurred and realized it was a lot worse when he was at his desk and particularly when he used his mouse. Claimant reported that he does not have enough flexion with his finger to be able to put pressure on the mouse clicker and that in order to depress the clicker, he has to rotate the mouse clockwise and use his shoulder and elbow to depress the clicker on the mouse. Claimant reported using the mouse about 4 hours per day. Dr. Macaulay noted that Claimant did not have any core strength or back extension and that while at a desk, Claimant stabilizes himself with his hands and forearms and that without doing so, he falls forward. Claimant reported that when he held himself to stabilize his thorax and to pronate his hand he had sharp and stabbing pain in the medial epicondylar area. Claimant reported continued pain in his right elbow that was static and not improving. Claimant reported that leaning on his desk to support himself increased his discomfort. *See* Exhibits 4, B.

39. Dr. Macaulay reviewed medical records and performed a physical examination. DR. Macaulay found tenderness along the right medial epicondyle with the lateral epicondyle unremarkable. Dr. Macaulay found tinel's at the cubital tunnel showed tenderness neuritic irritation. Dr. Macaulay found significant calluses on the left and right hands at the palms base and wrist and that Claimant propelled his wheelchair using the base of the hand with external shoulder rotation to keep his fingers from being caught in the spokes. Dr. Macaulay opined with reasonable medical probability that Claimant had ulnar neuritis and medial epicondylitis as a result of his work activities. Dr. Macaulay noted that when sitting at his desk, Claimant has to use his forearms to help support his

trunk and that to right click the mouse Claimant had to keep his elbow bent and pronate his hand to enable sufficient force to depress the key. Dr. Macaulay noted also that when Claimant types, he once again has to flex the elbow and pronate the hand to use his thumb to depress the key on the keyboard. *See* Exhibits 4, B.

40. Dr. Macaulay opined that using the algorithm set up by the medical treatment guidelines would have limited if any utility because the studies are based on normal ergonomic apposition of the body to the keyboard and mouse which Claimant does not do. Thus, Dr. Macaulay opined that the time intervals, degree of force, and frequency were not applicable to Claimant and opined that Claimant's approach was profoundly different. Dr. Macaulay opined that flexing the elbow and pronating the forearm were provocative motions for the development of medial epicondylitis and ulnar nerve dysfunction and that Claimant did those things. Thus, Dr. Macaulay opined that the mechanism by which Claimant interfaced with his workstation and performed his tasks was provocative and causal for medial epicondylitis and ulnar nerve dysfunction and he opined that the conditions were work related. *See* Exhibits 4, B.

41. At hearing, Claimant testified. Claimant's testimony is found credible and persuasive and consistent with the overall weight of the evidence.

42. Claimant is very physically fit, active, and muscularly developed as noted by the medical records, his appearance at hearing, and his testimony. Claimant plays quad rugby and works out regularly. Prior to full time employment with Employer, Claimant worked out approximately 4 times per week. After beginning full time employment, his workouts went down to 2-3 times per week.

43. Claimant also uses a manual wheelchair that requires him to push it. Claimant has exercised before with a crank bicycle, pedaling the bicycle with his upper extremities. Claimant has done weight training and created a YouTube channel to help show other quadriplegics how they can still exercise in the gym. During exercise and weight training, Claimant hooked in to weights with a d-ring strapped around his wrist since he cannot grip the apparatus.

44. Dr. Sollender testified at hearing. He opined that Claimant's medial epicondylitis and cubital tunnel syndrome were not work related due to outside factors and non-occupational causes. Dr. Sollender disagreed with Dr. Macaulay's opinion to not use the medical treatment guidelines. Dr. Sollender opined that although Claimant has special circumstances because of his spinal cord injury, you have to use a muscle group and have sufficient exposure to cause the conditions. He opined Claimant did not have sufficient exposure. He opined that the MRI showed chronic wasting of the nerve signal to the muscle in the right elbow and chronic changes to the muscle that would take more than one year to develop. Dr. Sollender opined that mousing does not cause cubital tunnel or medial epicondylitis. Dr. Sollender opined that Claimant had no primary or secondary risk factors and that there were no studies to support that quadriplegic patients developed differently than anyone else for the conditions at issue. Dr. Sollender opined that the removal of exposure when the mouse was moved from the right side to the left

side, Claimant should have had relief. Dr. Sollender opined that there was no pressure on Claimant's right elbow at work.

45. Dr. Sollender opined that there can be an increase in nerve entrapment and changes as a spinal cord injury patient ages. Dr. Sollender opined that Claimant was athletic, worked out vigorously, was well developed, and was physically active and that the overuse injuries of a wheelchair athlete is high. Dr. Sollender opined that Claimant's workouts, sports, and other activities were more likely to be a direct cause of Claimant's diagnosis along with the natural aging process than Claimant's work exposure. Dr. Sollender opined that Claimant was more exposed to development of his conditions due to his outside of work activities.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or

every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Compensability

Claimant is required to prove by a preponderance of the evidence that at the time of the injury he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. *See* § 8-41-301(1)(b) & (c), C.R.S. A claimant seeking benefits for an occupational disease must establish the existence of the disease and that it was directly and proximately caused by his employment or working conditions. *Cowin & Co. v. Medina*, 860 P.2d 535 (Colo. App. 1992). The definition of occupational disease is: a disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment. See 8-40-201(14), C.R.S. The question of whether the claimant met the burden of proof to establish that he sustained a compensable occupational disease is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has established, by a preponderance of the evidence, that his right medial epicondylitis and right cubital tunnel syndrome are work related occupational diseases. Although keyboarding and mousing in a person with a normal body habitus are not physiologically related to the diagnoses at issue, Claimant does not keyboard or mouse in the same physiologic manner due to his spinal cord injury. Rather, Claimant's testimony is credible and persuasive that he puts pressure on his arms and upper extremities and has to use them to support himself regularly while at his desk due to his lack of trunk muscles and so he does not fall into the desk. While putting pressure on his arms, he also uses tenodesis gripping methods, and puts force on and through his elbow to strike the mouse and keyboards. As found above, Claimant's reports and testimony were consistent with the job demands analysis as the amount of time per workday he spends mousing and performing heavy mouse activity. Claimant is not just mousing for almost 4 hours per day. He is leaning on his arms, using tenodesis to grip the mouse, and placing pressure through his right upper extremity to click and strike the mouse buttons during his work day. As found above, the job demands analysis found grip use to be "rare" at work. However, Claimant is credible and persuasive that he uses tenodesis grip techniques mostly to grip all objects and thus the job demands analysis does not accurately reflect the grip technique required for Claimant to grip and hold the mouse.

Further, although Claimant has out of work exposures, it is notable that the pain and symptoms developed less than one year after his full time employment began. Claimant had been physically active with out of work exposures for many years prior to the development of his right upper extremity conditions. Claimant's testimony that the pain is worse when at his desk and performing tasks and that it gets better with rest and

time away from the computer is credible, persuasive, and consistent with the overall medical reports and evidence. The pressure Claimant places on his right upper extremity at work to keep himself upright and the way in which he has to use his upper extremity to be able to grip, click, and type are different than a person with a normal body habitus.

The opinions of Dr. Beatty and Dr. Macaulay are found credible and persuasive. Additionally, the physical therapist noted improvement over the weekends when away from the computer and opined there was clearly a significant ergonomic contribution to the symptoms. Claimant has established, more likely than not, that his occupational disease resulted directly from his employment and that the work exposure was the proximate cause of the development of his medial epicondylitis and cubital tunnel syndrome. Although Claimant has some outside exposures, the hazards outside of work are not equal or greater to his full time work schedule with significant pressure on his right upper extremity, gripping tenodesis to use the computer, and pressure to click and type.

Medical Benefits

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

As Claimant has established a compensable occupational disease, Respondents are liable to provide reasonable and necessary medical treatment. Claimant has established an entitlement to such medical benefits including the treatment and referrals of Dr. Beatty.

ORDER

It is therefore ordered that:

1. Claimant has established by a preponderance of the evidence that he sustained a compensable occupational disease or work injury on or about April 1, 2016.

2. Claimant has established by a preponderance of the evidence an entitlement to medical benefits to treat his occupational disease or work injury, including the bills of Dr. Beatty and his referrals.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or

service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

/s/ Michelle E. Jones

_____

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUE

1. Whether Claimant is entitled to request and undergo a Division Independent Medical Examination (DIME) when her claim involves no lost time.

2. Whether Pre-hearing ALJ (PALJ) Steninger's October 3, 2017 Order allowing Claimant to proceed with a DIME was in error.

FINDINGS OF FACT

1. Claimant was employed by Employer and sustained an admitted work related injury to her left knee, right shoulder, and right hip on June 8, 2017.

2. Claimant was referred by Employer for medical treatment and received medical treatment for her admitted injury which was paid for and admitted to by Respondents. Respondents paid medical benefits in the amount of $1,854.64. *See* Exhibit 1.

3. Claimant was evaluated on multiple occasions by medical providers and had evaluations on June 12, 2017, June 22, 2017, June 28, 2017, July 6, 2017, July 12, 2017, and July 26, 2017.

4. On July 26, 2017 Claimant was evaluated by Henry Roth, M.D. Dr. Roth noted that Claimant continued to have discomfort. However, Dr. Roth opined that Claimant was at maximum medical improvement (MMI) with no medical impairment and opined that she did not have any future medical specifically planned or anticipated. *See* Exhibit 1.

5. On August 15, 2017 Respondents filed a Final Admission of Liability (FAL). Respondents noted that Claimant had been placed at MMI with no impairment on July 26, 2017 and noted the claim was medical only with no lost time. Respondents attached Dr. Roth's July 26, 2017 report to the FAL. *See* Exhibits 1, B.

6. On August 31, 2017 Claimant filed an objection to the FAL. Claimant noted that she disagreed with the determination made by Dr. Roth and requested a Division Independent Medical Examination (DIME). Claimant indicated her understanding that the DIME would consider the issues of MMI and permanent impairment. *See* Exhibit 2.

7. Respondents' requested a pre-hearing conference and filed a Motion to Strike Claimant's Notice and Proposal to Select an IME.

8. On October 3, 2017, PALJ Steninger issued an Order denying Respondents' motion. *See* Exhibit C.

9. On October 26, 2017 Respondents filed an Application for Hearing with the Office of Administrative Courts. The sole issues listed to be heard was the appeal of the 10/3/2017 order of PALJ Steninger which allowed Claimant's application for DIME to proceed. Respondents argued in the Application that Claimant had no entitlement to a DIME under the Loufbourrow, Kazazian, and Trujillo case law as Claimant had a non-lost time claim without permanent impairment assigned by the ATP.

10. At hearing, no witnesses were called and the parties made brief legal arguments.

11. The October 3, 2017 Order of PALJ Steninger is persuasive and well-reasoned. The Order is upheld and the Order is incorporated herein as findings and conclusions of the undersigned ALJ. *See* Exhibit C.

12. Prior to this matter reaching the Office of Administrative Courts, Claimant underwent a DIME performed by Timothy Hall, M.D. Dr. Hall opined that Claimant was not at MMI and recommended further medical treatment. *See* Exhibit 4.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the

discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Claimant is entitled to a DIME

Respondents' arguments are not persuasive. Although no indemnity benefits were admitted in this case, Claimant is entitled to a DIME to dispute the determination and findings of the authorized treating provider regarding MMI and permanent impairment. As pointed out by PALJ Steninger, if a Claimant had no ability to contest the determinations of an authorized treating provider (designated by Employer), providers could regularly place injured workers at MMI with no permanent impairment and their opinions would be binding. This is clearly not the intent of the Act. The plain language of the Act indicates and provides parties with a mechanism to dispute a determination of an authorized treating physician on whether or not an injured worker has reached MMI. The mechanism to dispute the determination is to request a DIME. *See* § 8-42-107(8)(b)(II), C.R.S. The plain language of the Act also provides that only if a party fails to timely request a DIME will the authorized treating provider's findings and determinations be binding. *See* § 8-42-107.2(2)(b), C.R.S. Respondents essentially argue that the authorized treating provider's opinions in this case cannot be challenged or disputed. Respondents suggest that merely because Claimant did not miss time from work due to her admitted injury, the authorized treating provider's opinions on MMI and permanent impairment are binding and Claimant does not have a "compensable" claim. This is not persuasive.

As pointed out by PALJ Steninger, in his October 3, 2017 Order incorporated herein by reference, the Supreme Court in *Whiteside v. Smith*, 67 P.3d 1240 (Colo. 2003) held that Respondents must either admit liability or issue a notice of contest and that if they admit liability ***they must compensate the injured employee in two ways***. First, by providing employees with temporary total disability benefits. ***Second, by providing employees with medical treatment to cure and relieve the employee from the effects of the injury***. As found above, Claimant was compensated in this claim by having $1,854.64 worth of medical treatment provided by Respondents. Here, Respondents admitted in the general admission of liability that Claimant had sustained a compensable injury. As required by the Act, Respondents admitted liability and paid medical benefits. As noted in the October 3, 2017 PALJ Order, MMI has a dramatic statutory significance in being the point of time where medical care and admitted medical benefits are terminated and there is a fundamental right for an injured worker to challenge the termination of medical benefits through the DIME process. MMI has significant meaning and acts to terminate curative medical treatment in admitted injury cases. To take away

the ability of an injured worker to challenge the determination of an authorized treating provider is inconsistent with the Whiteside analysis. For the reasons above and the reasons analyzed in the well written and persuasive October 3, 2017 PALJ Order incorporated by reference herein, Claimant is entitled to challenge the determination of MMI and the termination of her curative medical treatment by initiating the DIME process.

ORDER

It is therefore ordered that:

1. Claimant is entitled to dispute the determination of an authorized treating provider as to MMI and permanent impairment. Claimant is entitled to request and undergo a Division Independent Medical Examination (DIME).

2. Pre-hearing ALJ (PALJ) Steninger's October 3, 2017 Order is found persuasive and is incorporated herein.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 12, 2018

Michelle E. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th floor
Denver, CO 80203

ISSUES

1. Whether Respondents have established by a preponderance of the evidence that the general admission of liability filed July 20, 2017 may be withdrawn.

2. Determination of Claimant's average weekly wage (AWW).

3. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary total disability (TTD) benefits.

4. Whether Claimant has established by a preponderance of the evidence an entitlement to temporary partial disability (TPD) benefits.

5. Whether Claimant was responsible for the termination of her employment in September of 2017.

FINDINGS OF FACT

1. Claimant is a 21 year old who began working for Employer on January 23, 2017 as a nurse's aide. Claimant became a certified nursing assistant (CNA) for Employer on April 1, 2017 after receiving her CNA certification. Claimant continued to work for Employer as a CNA until and through September 3, 2017.

2. Prior to starting employment, and on January 17, 2017, Claimant underwent a job function test performed by Employer. Claimant passed the test indicating her ability to push/pull 45 pounds at hip level, lifting 15 pounds from hip level and holding 5 seconds, and that she could perform all 10/10 job functions. The musculoskeletal assessment showed her upper extremities to be within normal limits and not limited in motion or weakness. *See* Exhibit 1.

3. In addition to her employment with Employer, Claimant is a full time student at Colorado State University. Claimant attends classes during the fall and spring semesters and generally takes the summers off from school and works during the summer.

4. Claimant initially began working a schedule that included every Friday and every other Saturday and Sunday. Claimant realized the hours were too much with her school schedule and dropped the Friday shift, and began working every other Saturday and Sunday. Claimant testified that she was working approximately an average of 8 hours per week prior to her injury. Claimant was hired at $10.85/hour for weekday work and at $12.10/hour for weekend work. Claimant's rate of pay was scheduled to increase to

$11.60/hour for weekday work as of April 1, 2017 to reflect her CNA certification. Wage records show that her weekend rate of pay increased after April 1, 2017 to $12.85/hour, then to $13.08/hour on April 16, 2017, then to $13.30/hour on July 16, 2017. *See* Exhibits 13, V, W, X.

5. Wage records show that Claimant worked the following hours for Employer before her March 25, 2017 work injury:

Jan.	23-31	13 hours
Feb.	1-15	43.5 hours
Feb.	16-28	33 hours
March	1-15	17.5 hours

See Exhibits 13, X.

6. On Saturday March 25, 2017 Claimant was working a normal scheduled shift. Claimant was in a resident's room at Employer's facility when she lifted a mattress to pull up a fitted sheet over the corner of the resident's bed.

7. Claimant had initially mechanically raised the bed to about the level of her waist. Claimant testified that the sheets are tight and that she was on the last corner of the bed trying to stretch the fitted sheet around the last mattress corner. Claimant lifted the mattress up from the waist level (where it had been mechanically raised to) to about her shoulder or head level with her left hand while she had the fitted sheet in her right hand. When she lifted the mattress with her left hand, she felt a pop in her shoulder and felt a large amount of immediate sudden pain.

8. Claimant reported the injury to Employer and filled out an Employee Incident Report. Claimant described that she was changing sheets, lifting a mattress to hook the corner when she was injured. Nursing Supervisor Jennifer Thompson noted that Claimant was changing sheets to a patient bed and felt her left shoulder pop and had immediate pain. Ms. Thompson noted no external injury apparent and no redness/swelling/bruising but that Claimant reported pain, had limited range of motion, and was unable to elevate her left upper extremity above the shoulder level without pain. Ms. Thompson advised Claimant to seek a provider for follow-up. Claimant went to the emergency room of UC Health. *See* Exhibit U.

9. On March 25, 2017 Claimant was evaluated at UC Health. Claimant reported that she had been at work lifting a mattress when she felt a pop and pain in her left shoulder. On examination, Claimant had decreased range of motion, tenderness, and bony tenderness in her left shoulder. X-rays were performed and showed borderline wide AC joint which may be indicative of a type 1 AC joint injury. A recommendation was to correlate clinically. The records show that the x-rays were negative for fracture but showed a mild separation of the shoulder and the clavicle. Claimant was advised to take ibuprofen, use a sling, apply ice, and to follow up on Monday with workers' compensation. Claimant was provided a handout with information on acromioclavicular separation. At

UC Health, they filled out a physician's report of workers' compensation form indicating a work related medical diagnosis of AC separation. *See* Exhibits 2, Q, R.

10. On Monday March 27, 2017 Claimant was evaluated at Workwell Occupational Medicine by Kevin Keefe, D.O. Claimant reported that while performing work duties on March 25, she was reaching out with both hands to lift up a mattress and then shifted the weight of the mattress to her left arm while using the other arm for other purposes and had the sudden onset of pain in her left shoulder that got worse over the next hour. Claimant reported that the pain had not improved. Claimant reported no prior similar problems. On examination, Dr. Keefe found pain localized and centered at the left AC joint which was very tender to palpate. Dr. Keefe provided a diagnosis of unspecified dislocation of the left acromioclavicular joint and opined that the cause of the problem was related to work activities. He placed Claimant on restricted duty work status with restrictions of: no use of left arm. *See* Exhibits 3, P.

11. On April 4, 2017 Claimant underwent physical therapy. Claimant reported that she was adjusting sheets on a resident's bed holding the mattress up with her left hand when she felt a sudden onset of pain in her left shoulder. Claimant was assessed with pain and limited upper extremity movement due to diagnosed AC dislocation. *See* Exhibit N.

12. On April 4, 2017 Claimant underwent an MRI of her left shoulder that was interpreted by Samuel Fuller, M.D. The impression provided was: mild degree of abnormal intrasubstance signal within the biceps/labral complex, with an unlikely evolving SLAP lesion but difficult to rule out; mildly laterally downsloping acromion which could predispose to subacromial impingement; mild subacromial/subdeltoid bursitis. *See* Exhibit 4, O.

13. On April 18, 2017 Claimant was evaluated at Workwell by Ralph Holsworth, D.O. Claimant reported feeling as though her left shoulder was not improving. Dr. Holsworth noted that an MRI performed showed some degenerative changes about the AC joint but no other findings and that the radiologist raised the possibility of a SLAP tear but that the findings were equivocal. Dr. Holsworth recommended an orthopedic surgeon referral for further evaluation and treatment. Dr. Holsworth diagnosed unspecified dislocation of left acromioclavicular joint and opined that that cause of the problem was related to work activities. Dr. Holsworth provided work restrictions of lifting no more than 5 pounds with the left arm and no use of the left arm outstretched or above shoulder level. Dr. Neal noted that Claimant had separation of the left AC joint as well as subluxation of the left SC joint. *See* Exhibit 3.

14. On May 8, 2017 Claimant was evaluated at Orthopaedic & Spine Center of the Rockies by Mark Durbin, M.D. Claimant reported that on March 25 she was lifting a mattress when she felt something pop in her left shoulder and had a lot of pain. Claimant reported concern about the deformity in her SC joint and the pain in the anterolateral aspect of her shoulder as well as the weakness in her arm. Claimant reported no other trauma to her left shoulder. On examination, Dr. Durbin found tenderness over the AC

and SC joints and an obvious little prominence of her SC joint. Dr. Durbin noted that the x-rays and MRI showed maybe a little bit of AC joint swelling and some impingement with a little bit of bursitis but that you could not see the SC joint on the MRI. Dr. Durbin recommended a CT scan of the left SC joint. Dr. Durbin provided work restrictions of no use of left arm and opined that the work related medical diagnosis was left shoulder. *See* Exhibits 5, M.

15. On May 17, 2017 Claimant was evaluated by Dr. Durbin. Dr. Durbin noted that the CT scan showed subluxation and possibly even an anterior dislocation of the SC joint. Dr. Durbin explained that he does not perform surgery on SC joints and he referred Claimant for a second opinion with a shoulder surgeon who treats SC joints. *See* Exhibits 5, K.

16. On June 2, 2017 Claimant was evaluated by orthopedic surgeon Armadios Hatzidakis, M.D. Claimant reported an injury at work on March 25 when she lifted a mattress with her arm extended overhead and immediately felt as though the shoulder was not right. Claimant reported the injury had gotten progressively worse ad that she had trouble with many activities. Claimant reported no prior problems in her left shoulder. Claimant reported the pain was mostly to the anterior shoulder and across the clavicle with some radiation to the neck. Claimant reported she enjoyed working out, was in body building competitions, and hiking in her spare time. Dr. Hatzidakis noted on examination that Claimant's left arm is shortened compared to the right arm, that Claimant had tenderness at the AC and SC joint, and that she had reduced range of motion on the left. Dr. Hatzidakis reviewed the imaging. Dr. Hatzidakis assessed left shoulder strain with possible left SC joint subluxation and dislocation. Dr. Hatzidakis recommended an extensive list of tests. *See* Exhibits 7, J.

17. On June 21, 2017 Claimant underwent an MRI of her SC joints. The impression provided was apparent superior subluxation of the medial left clavicle at the SC joint, no joint effusion, and no bone marrow edema or fracture. Claimant also underwent a CT of her chest with an impression of some superior subluxation medial left clavicle at the SC joint with no fracture and abnormal bony articulation between the anterior left 1st and 2nd ribs. *See* Exhibits 8, I.

18. On June 26, 2017 Claimant was evaluated at Workwell by Tah Neal, M.D. Dr. Neal found deformity of Claimant's left shoulder and clavicle and noted the left scapula was prominent compared to the right, the left sternoclavicular joint was prominent and exquisitely tender, and the left acromioclavicular joint was also quite tender and enlarged. Dr. Neal noted that Claimant's entire left shoulder was held at a much higher angle than the right shoulder. Dr. Neal diagnosed unspecified dislocation of the left AC joint and unspecified subluxation of the left SC joint. Dr. Neal opined that the cause of the problem was related to work activities and he continued Claimant's work restrictions of no lifting more than 5 pounds with the left arm and no use of the left arm outstretched or above shoulder level. Dr. Neal noted that Claimant had separation of the left AC joint as well as subluxation of the left SC joint. *See* Exhibit 3.

19. On July 13, 2017 Claimant underwent an EMG performed by Kristin Mason, M.D. Claimant reported never having any shoulder issues in the past and that she was pushing up a mattress when she felt extreme pain in her left shoulder. Claimant reported her usual recreational activities included bodybuilding, lifting upper body, some lower body movements (lifts), and running. Dr. Mason provided the impression of: no evidence of long thoracic or spinal accessory nerve disruption. Pattern of continuous involuntary firing may represent dystonia. *See* Exhibits 9, H.

20. On August 16, 2017 Claimant was evaluated by neurologist Bennett Machanic, M.D. Claimant reported that on March 25 she was working as a CNA and was pushing up underneath a mattress with her left arm when she noted immediate, severe, sharp left shoulder pain. Dr. Machanic noted that the films showed a superior subluxation of the medial left clavicle at the SC joint with distinct asymmetry as compared to the right side. He noted that standard films of the SC joints done with MRI imaging showed also significant subluxation of the medial left clavicle at the SC joint, yet no joint effusion. Dr. Machanic noted that the left shoulder was carried way above the right and that although it appeared prominent and almost winged, when he tested radius anterior function there was no true scapular winging per se and opined it was a postural situation. Dr. Machanic noted that the trunk was tilted to the right with an apparent convex scoliosis to the left. Dr. Machanic noted that the clinical exam showed a left shoulder adhesive capsulitis but also that Claimant had weakness over the distribution of the suprascapular nerve. *See* Exhibits 10, G.

21. After the MRI of her SC joints, the EMG testing, and neurologist evaluation, Claimant returned to orthopedic surgeon Dr. Hatzidakis. On August 24, 2016 Dr. Hatzidakis reviewed the imaging and evaluations that had taken place since Claimant's prior appointment with him. Dr. Hatzidakis assessed: left shoulder strain, work related injury with persistent SC joint pain, superior displacement of the clavicle on the manubrium, and persistently elevated scapulothoracic joint, possible dystonia. Dr. Hatzidakis opined that Claimant did not have a severe enough injury, in his opinion, to cause anterior or posterior instability of the SC joint. He noted that the position of Claimant's clavicle was abnormal and that he was uncertain whether this was due to the persistent scapular elevation that was occurring versus Claimant's work related injury, or both. He did not have a surgical solution to offer Claimant and recommended Claimant have a second opinion with another shoulder specialist, such as Peter Millett or Tom Hackett in Vail, since Claimant's condition was quite uncommon. Dr. Hatzidakis opined that it would benefit Claimant to have multiple opinions. *See* Exhibit E.

22. Following her injury and during this period of time that Claimant was undergoing treatment, she continued to work for Employer on restricted duty. Wage records show that following her injury she worked the following hours:

Dates:		Hours:
Mar.	16-31	17.25
April	1-15	12.5
April	16-30	8.25

May	1-15	12.25
May	16-31	12.75
June	1-15	0
June	16-30	12.75
July	1-15	12.5
July	16-31	12.5
Aug.	1-15	12
Aug	16-31	12.25
Sept.	1-15	12.25

See Exhibits 13, X.

23. On September 1, 2017 Claimant submitted a resignation letter to Employer indicating the letter was her 2 weeks' notice. Claimant stated that due to her injury on March 25, 2017, the time she had allotted in her schedule for work was being taken up by her doctor's and physical therapy appointments. *See* Exhibit S.

24. On September 26, 2017 Claimant was evaluated by Peter Millett, M.D. at the Steadman Clinic in Vail. On her intake form Claimant indicated the sport or instrument that was most important to her was bodybuilding and that she had been unable to partake due to her injury. Claimant reported that she had sustained an injury while working part-time as a CNA in March. Claimant reported she had been lifting a mattress with her left upper extremity when she had immediate pain in the area of her left shoulder girdle. Claimant reported that she enjoyed working out, was into body building competitions, and liked to hike. On examination, Dr. Millett found notable swelling and prominence about the left SC joint which was particularly tender to palpation. He found muscle spasm over the anterior cervical muscles extending into the upper trapezius and deltoid region. Dr. Millett found Claimant's shoulder girdle to be considerably elevated as well as rotated anteriorly. He also found from examination posteriorly an elevated left scapula and considerable spasm of the upper trapezius muscles extending into the deltoid. Dr. Millett reviewed multiple outside images. AN MRI and X-rays of the cervical spine were performed at the clinic and shoed a reversal of the cervical lordosis with mild kyphosis with scoliosis of the cervical spine and cervicothoracic juncture and upper thoracic spine. *See* Exhibits 11, C, D.

25. Dr. Millett opined that Claimant had a complex problem with the left shoulder after an injury sustained while working as a CNA. Dr. Millett opined that Claimant's examination and imaging were consistent with a left SC joint injury. He opined that her left SC joint was clinically unstable and that reconstruction may be needed in the future but with the shoulder girdle as elevated as it was, a reconstruction of the left SC joint would be at risk for re-injury. They discussed at length options to assist with reduction of the left shoulder girdle spasms and elevation including an interscalene block for a period of 3 days so Claimant could participate in physical therapy to reduce spasm and work on range of motion. *See* Exhibits 11, C.

26. The interscalene block was performed that same day. After the catheter was placed, Claimant reported 70% reduction in her symptoms and had notable lowering of her shoulder girdle and reduction in palpable spasm. Dr. Millett planned to have claimant continue with physical therapy and to reevaluate and update the plan based on Claimant's progress. *See* Exhibits 11, C.

27. Claimant testified at hearing. Claimant is found credible and persuasive. Claimant has never had problems with her left shoulder or upper extremities before the incident on March 25, 2017. Claimant was able to always lift or maneuver as needed and passed her pre-employment physical for Employer. Claimant is very into health and fitness and prior to the injury she lifted weights and did cardiovascular exercises regularly and several times per week at a gym. Claimant rotated lifting with her upper body, legs, and back and went to the gym 2-3 times per week once she started college. Prior to college Claimant was more consistently in the gym lifting and performing cardio workouts. Claimant entered a physique and fitness competition in her junior year of high school, approximately three years prior to the work injury. Claimant has never had any problems working out or lifting weights.

28. Claimant testified that she intended to work full time in the summer and that she had mentioned her desire to work more hours during the summer to her supervisor and had provided him with a schedule of her available days for the summer. Claimant testified that she hoped to work 35-40 hours the weeks that she was available in the summer, but that she had some weeks marked as unavailable.

29. Claimant provided her supervisor a calendar indicating her availability once school ended in May. The calendar shows Claimant was available for work while school was out of session (between May 12, 2017 and August 21, 2017) for 9 days in May, 12 days in June, 15 days in July, and 10 days in August. Out of the 100 days Claimant was off from school, she indicated she was available for work on 46 of the days. The 100 day period covers 14.29 weeks, and averages out to an available work schedule of 3.23 maximum days of work per week if she worked every day she listed as available. At 8 hours per day this would amount to 25.84 hours per week maximum during this period of time if she worked every day she listed as available. As Claimant testified that she typically worked 8 hour shifts, the likely maximum amount of work and shifts possible per week would be 24 hours per week and three shifts per week of work. *See* Exhibit T.

30. Claimant testified that she resigned in September because she was seeing doctors, doing physical therapy, and was having to drive to Vail for appointments. Claimant testified that she did not have enough time to work with her full time school schedule and all the time her injury was taking up for treatment. When she resigned, Claimant had not yet been evaluated in Vail, but had been referred to physicians in Vail.

31. Scott Bolton, Claimant's supervisor, testified at hearing. He indicated that Claimant initially was hired in January at more hours, but that she had dropped to working just every other weekend by mid-March due to her full time school. After dropping down to working every other weekend in mid-March, he testified that Claimant never requested

more shifts or hours during her modified duty. Mr. Bolton indicated that after she was placed on modified duty and at the time of her resignation, Claimant's restrictions were being accommodated and Claimant was working 6 hour shifts instead of 8 hour shifts. Mr. Bolton testified that Employer was able to accommodate Claimant's restrictions and that following her injury and near the beginning of the summer Claimant provided him with a calendar of her availability during the summer. He agreed that Claimant had hoped to work 24 hours per week over the summer. Mr. Bolton indicated his plan to call Claimant to fill a slot if someone was sick on the days Claimant marked as available and that he always had open shifts and gaps to fill year round.

32. Frederick Scherr, M.D. testified at hearing. Dr. Scherr performed an independent medical evaluation on November 20, 2017. He examined Claimant and reviewed medical records. Dr. Scherr diagnosed dislocated SC joint, AC separation, and left shoulder strain. Dr. Scherr opined that the SC joint takes a very high energy force to dislocate and provided examples of car accidents or football hits. Dr. Scherr also opined that the Claimant's AC separation would require a high force and a downward force and opined that pushing up on a mattress was not sufficient to cause a separation. Dr. Scherr opined the injury was not work related mainly due to the amount of force required to sustain the types of injuries Claimant has but also due to the positioning and forces required that were not consistent with pushing up a mattress. Dr. Scherr testified that Claimant's injury was very rare and that he did research and that her injury and mechanism didn't make sense with the clinical research. Dr. Scherr opined that weightlifting as an adolescent and before the age of 20 can damage growth plates. Dr. Scherr opined that Claimant's history of repetitive weightlifting pre-disposed her to injury but that even with a pre-disposition, lifting the mattress was still not enough force. Dr. Scherr opined that studies as well as the medical treatment guidelines refer to AC separation as requiring a downward force and that an SC dislocation or fracture are described as requiring sudden trauma.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. Claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ

to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Withdrawal of General Admission of Liability

Respondents have failed to meet their burden of proof to establish that they may withdraw the general admission of liability filed July 20, 2017. The credible and persuasive evidence establishes that Claimant sustained an acute work related injury to her AC joint, SC joint, and left shoulder on March 25, 2017. The credible and persuasive evidence establishes that at the time of the injury Claimant was performing services in the course and scope of her employment and that the injury was caused by lifting a mattress. The persuasive and credible evidence and testimony establishes that Claimant had no prior injuries or restrictions and that she sustained an acute injury while lifting the mattress to put on a fitted sheet. Claimant is found credible and persuasive in her testimony of the acute incident that caused injury. The opinions of the medical providers who found the injury to be work related injury are persuasive. Additionally, it is found that this is an unusual injury and that Claimant may have been predisposed to this type of an injury due to her prior history of lifting weights while a teenager. However unusual, Claimant sustained an acute injury and suffered pain and limitations that did not exist prior to lifting the mattress on March 25, 2017. Although Respondents point to other possible causes of the injury and to what they believe is Claimant’s pre-disposition to injury, they have failed to meet their burden by a preponderance of the evidence to withdraw the general admission of liability. Rather, the credible evidence and testimony establish that Claimant sustained an acute work related injury while changing sheets and lifting a mattress on a bed on March 25, 2017.

Although the medical treatment guidelines and the opinions of Dr. Scherr have been considered, they are not found to be controlling or persuasive in this case. Claimant’s injury, as noted above, is unusual. Claimant also may have been pre-disposed

to this type of injury based on a history of lifting weights prior to complete body development. However, although the force and position has been opined by Dr. Scherr to not have been sufficient enough to cause these types of injuries even with a predisposition, the Claimant is credible and persuasive that she felt a pop and immediate pain when lifting the mattress. Claimant had no prior symptoms, restrictions, or treatment and the acute event of the lifting the mattress is found to have caused injury despite the opinions of Dr. Scherr and the medical treatment guidelines.

Average Weekly Wage

Section 8-42-102(2), C.R.S., requires the ALJ to base the claimant's AWW on his earnings at the time of injury. However, under certain circumstances the ALJ may determine the claimant's AWW from earnings received on a date other than the date of injury. *Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008); *Campbell v. IBM Corp.*, 867 P.2d 77 (Colo. App. 1993). Specifically, § 8-42-102(3), C.R.S., grants the ALJ discretionary authority to alter the statutory formula if for any reason it will not fairly determine the claimant's AWW. *Coates, Reid & Waldron v. Vigil*, 856 P.2d 850 (Colo. 1993). The overall objective in calculating the AWW is to arrive at a fair approximation of the claimant's wage loss and diminished earning capacity. *Campbell v. IBM Corp., supra.* Where the claimant's earnings increase periodically after the date of injury the ALJ may elect to apply § 8-42-102(3) and determine that fairness requires the AWW to be calculated based upon the claimant's earnings during a given period of disability, not the earnings on the date of the injury. *Avalanche Industries, Inc. v. Clark, supra*; *Campbell v. IBM Corp.*, *supra*.

As found above, at the time of her injury Claimant was working approximately 8 hours per week at a pay rate of $12.10/hour. This amounts to an average weekly wage at the time of her injury of $96.80. However, in this case the ALJ finds it appropriate to use discretionary authority in order to fairly determine Claimant's diminished earning capacity due to her work related injury. Claimant is credible and persuasive that she intended to work more hours during the summer months when she was off school. This is typical for a college student and is found to be logical and persuasive testimony. Claimant also had the capacity prior to her injury to work more hours while in school, working initially 24 hours/week, then 16h hours/week before dropping down to 8 hours/week based on her own perception of priority with her school work. However, Claimant's testimony that she anticipated 35+ hours per week of work during the summer months is not plausible given her availability calendar. As found above, even if Claimant worked every single day she listed as available on the calendar, Claimant would work a maximum of approximately 24 hours per week, or 3 shifts per week. It is not found likely that Claimant would be tasked to work every single day she listed as available, or that she would have been called in every day listed as available. Rather, it is more likely that Claimant would have worked during the summer months in a capacity of somewhere between the 8 hours per week she was working at the time of injury and the maximum 24 hours she was available during the summer months. In addition, once school started in the fall, her earning capacity again would be in between 8 hours per week that she requested to be reduced to in the spring of 2017 and the initial 24 hours of work per week that she was hired at. The ALJ finds that a fair approximation of Claimant's wage loss

and diminished earning capacity due to her injury is fairly calculated at 16 hours per week. Further, the pay rate that fairly demonstrates Claimant's diminished earning capacity is found to be $13.30/hour which is the rate Claimant was earning at the time of her resignation. Claimant's average weekly wage and a fair approximation of her lost earning capacity due to her injury is thus found to be $212.80 (16 hours x $13.30/hour).

Temporary Total Disability

Claimant has failed to establish an entitlement to TTD benefits. TTD benefits are owed in cases where an employee is temporarily and totally disabled and unable to work due to the injury sustained. Here, Claimant returned to work in a modified duty position immediately following her injury. Although Claimant had new medical incapacity due to her injury, she was still able to earn wages and to perform work within her medical restrictions. Respondents were able to provide Claimant with modified duty work within her restrictions and provided work within Claimant's restrictions until her resignation in September of 2017. The testimony of Mr. Bolton is credible and persuasive that they would have continued to accommodate Claimant in modified duty work had she not resigned. Claimant has not established that she was totally disabled and unable to work or unable to be accommodated such that TTD was ever owing in this case. Her request for TTD benefits is denied and dismissed.

Temporary Partial Disability

In cases of temporary partial disability, an employee is entitled to receive sixty-six and two-thirds percent of the difference between their AWW at the time of the injury and in the AWW during the continuance of the temporary partial disability. *See* § 8-42-106(1), C.R.S. Following Claimant's injury on March 25, 2017 she was released to modified work duty and was accommodated by Respondents. As testified to by Claimant's supervisor, Claimant went from working 8 hour shifts to working 6 hour shifts. This is consistent with the wage records that show an overall decreased number of work hours subsequent to the injury. Claimant has established, more likely than not, that due to her injury she had a difference in her average weekly wage prior to and after the injury. As found above, a fair approximation of Claimant's AWW and diminished earning capacity is $212.80. Following her injury, and due to work restrictions and her medical incapacity and disability resulting from the injury, Claimant earned approximately $72.97/week. Claimant has established that she is entitled to sixty-six and two-thirds of the difference of $139.83, and TPD in the amount of $93.22/week during the continuance of her temporary partial disability and has established that her partial wage loss is attributed to her medical incapacity due to her March 25, 2017 work injury.

Responsible for Termination

Respondents have established by a preponderance of the evidence that Claimant was responsible for the termination of her employment. Although Claimant indicated in her resignation that she essentially did not have enough time to work due to school, her injury, and medical appointments, the ALJ finds this not to be entirely persuasive. Claimant's average weekly wage establishes an average work week of 16 hours per

week. Claimant, during her disability, was working even fewer hours than the AWW base hours. Although the ALJ realizes demands of full time school and doctors' appointments, Claimant's decision is found to be based on where Claimant volitionally chose to focus her attention and priority (namely, school). During her disability and while working within her work restrictions, Claimant was working only approximately 6 hours per week. Working 6 hours per week is found to be possible in addition to full time school and doctors' appointments. Although the injury certainly took up time in her schedule, Claimant was accommodated and worked minimum hours during her disability and made the volition decision to focus her time and energy elsewhere. Respondents accommodated Claimant's restrictions and offered her modified duty work within the restrictions and at reduced hours. Despite this, Claimant volitionally chose to resign based on her own priority determination. As such, she was responsible for termination of employment and the resulting wage loss ($72.97/week) from Claimant's resignation and the termination of Claimant's employment is not attributable to the on-the job injury.

ORDER

It is therefore ordered that:

1. Respondents have failed to establish that the general admission of liability in this case may be withdrawn.

2. Claimant's average weekly wage is $212.80.

3. Claimant has failed to establish by a preponderance of the evidence an entitlement to TTD benefits. Her request for TTD is denied and dismissed.

4. Claimant has established by a preponderance of the evidence an entitlement to TPD benefits from the date of her injury and ongoing at a rate of $93.22 per week until terminated pursuant to law.

5. Respondents have established by a preponderance of the evidence that Claimant was responsible for the termination of her employment and that the wage loss from her employment termination is not attributable to the March 25, 2017 injury.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference,

see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 19, 2018

/s/ Michelle E. Jones

Michelle E. Jones
Administrative Law Judge

Denver, CO 80203

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable mental impairment during the course and scope of his employment with Employer.

II. Whether Claimant has proven by a preponderance of the evidence that the medical treatment he has received was authorized, reasonable and necessary to cure or relieve the effects of a work-related injury.

III. Whether Claimant has demonstrated by a preponderance of the evidence that he is entitled to receive temporary total or temporary partial disability benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was born on February 25, 1967.

2. After high school, Claimant joined the National Guard in Ohio. It is not known for how long Claimant was in the National Guard. After the National Guard, Claimant attended one semester of college at the University of Cincinnati and then dropped out. After dropping out of college, Claimant went into sales and has been in sales his entire career.

3. Claimant has a long history of suffering from bipolar disorder. Claimant believes that he has suffered from bipolar symptoms his entire adult life.

4. Claimant typically experienced a mania cycle in which he felt like he was "king of the world" from January through March. Claimant's manic symptoms included reckless spending of money, doing stupid and impulsive acts, and feeling elated in terms of mood. (Respondents' Exhibits, p. 271.)

5. Claimant typically experienced a depressive cycle from August through December. Claimant's depressive symptoms caused him to become argumentative and also caused him to push people away and become isolated.

6. Claimant has also suffered from bouts of anger and anxiety. (Transcript, p. 78).

7. Claimant became addicted to alcohol at the age of 16 or 17. Claimant has drank excessively on many occasions.

8. Claimant's bouts of anger, anxiety, and depression have caused him to go from job to job over the years – with most jobs lasting no longer than 1 ½ years or 2 years at the most. (Transcript, p. 78-79.)

9. Claimant struggles with relationships. Claimant was married at age 21 for two years and had two children, who are currently 26 and 28. His wife left him because he worked excessively and drank alcohol excessively. Claimant has had almost no contact with his children for the last 10 years. Claimant blamed his ex-wife's parents, and their influence with the court, for losing custody of his first two children. Claimant had a third child with another woman. His third child is 20. Claimant said the court also kept him from seeing this child as well and he has had no contact with this child for many years. Claimant indicated that losing his children and not having contact with them because of court rulings has been the most difficult thing he has had to deal with as an adult. (Respondent's Exhibit VV, p. 275.). Claimant married again and had a daughter. She is currently 12. Claimant divorced from his second wife in 2012. According to Claimant, that divorce was a "heartbreaker" and he became severely depressed and suicidal. Claimant was prescribed psychotropic medications, including an antidepressant, Wellbutrin, and Lithium, an anti-manic drug.

10. Claimant met his third wife in 2016, while he was living in Texas, and she was living in Louisiana. They got married on June 21, 2016, which was about three to four months after they met.

11. Later in 2016, Claimant, his third wife, and his youngest child moved to Colorado.

12. Towards the end of 2016, after he and his family moved to Colorado, Claimant gradually became depressed and was not paying attention to either his wife or his daughter. He became isolated, started drinking alcohol heavily, and ultimately became severely depressed.

13. Claimant started a new sales job at Best Buy in September or October of 2016. However, consistent with his pattern of not keeping a job for very long, Claimant left this job in December due to excessive fatigue and memory problems. (Respondents' Exhibits, p. 50.)

14. On January 20, 2017, Claimant emailed his physician, Dr. Hebert, and stated:

> After taking the assessment on the Kaiser website, it appears that I may be severely depressed. I have battled with depression for years, but this is the worst it has ever been. I can't sleep, can't seem to motivate myself to do anything, have become antisocial and am constantly feeling irritated.

(Respondents' Exhibits, p. 36.)

15. On January 23, 2017, Dr. Hebert diagnosed Claimant with a major depressive disorder, recurrent episode, and severe anxiety. It was also noted that although Claimant stopped drinking alcohol a week earlier, he was drinking 3-5 glasses of wine every night. (Respondents' Exhibits, p. 37-38.) Claimant also indicated he was having relationship issues with his new wife.

16. On January 25, 2017, progress notes from Dr. Lee-Lopez indicate Claimant has previously been on lots of different medications for depression, including lithium, has been treated by three different psychiatrists, and has participated in therapy.

17. On or about February 2, 2017, Claimant was started on various medications to treat his major depressive disorder and severe anxiety. (Respondents' Exhibits, p. 68.)

18. On February 4, 2017, Claimant wrote an email to Dr. Hebert. Claimant indicated that his mood had improved dramatically and that he has been looking for work and felt that he had performed well in his interviews. Claimant also indicated that he felt like his anxiousness had gone away and that he felt much more comfortable talking to people and being social. (Respondents' Exhibits, pg. 76.)

19. On February 6, 2017, Claimant was evaluated by Ms. Jeanne Sullivan, R.N. According to her notes from that day, Claimant indicated he was "feeling a lot better", but "still feeling pretty anxious." Claimant was advised that it might take 4-6 weeks for the medication to start making a difference. (Respondents' Exhibits, pg. 69-70.)

20. On February 20, 2017, Claimant was evaluated by Ms. Sullivan, R.N. Claimant indicated he was feeling very good, "a complete 180." Claimant indicated that he was feeling so much better that he was "going after jobs he normally wouldn't have tried for. But is optimistic and hopeful w/job search."

21. On March 29, 2017, Employer offered Claimant a sales position. It is not clear from the record when Claimant actually started working for Employer.

22. On April 27, 2017, Claimant sent a communication to Dr. Hebert. He indicated that although things were going well on the Zoloft, the sexual side effects were just too much to handle and he wanted to know about trying a different medication. Therefore, Claimant was started on Wellbutrin and his Zoloft was discontinued. (Respondents' Exhibits, pg. 94-95, and 98.)

23. On April 27, 2017, the Employer's Director of Human Resources, Mr. Brian Hartman, spoke with Claimant about verifying the information contained in his resume. Mr. Hartman advised Claimant that his resume indicated he was consulting under the name JLP Ventures from 2009 to the present. Mr. Hartman also indicated that the licensing information Claimant provided regarding JLP Ventures showed a license was issued on June 23, 2009, but went delinquent on May 1, 2014, and therefore it was inconsistent with Claimant working as a consultant up through his application for employment with Employer. Claimant

advised Mr. Hartman that he did not renew his license in May of 2014 because he was accepting payment directly as an individual. Therefore, Mr. Hartman requested Claimant to provide invoices, 1099s or similar proof, to show that he was working as Ron Pitcock and/or JLP Ventures from May 1, 2014 to the present. (Respondents' Exhibits, pg. 322-323.)

24. Claimant also told Mr. Hartman that he was working for his father from February of 2015 to April of 2016 which overlapped the dates above. Therefore, Mr. Hartman also requested W2's, 1099s, or some other proof of payment. (Respondents' Exhibits, pg. 323.)

25. Mr. Hartman also asked Claimant to explain why the information he provided to Sterling, the third party background checking company, indicated Claimant was working for JLP Ventures as of April of 2016, even though he told Mr. Hartman that he started operating JLP Ventures in 2008 and then applied for a business license in 2009. (Respondents' Exhibits, pg. 323.)

26. On April 27, 2017, Claimant responded to Mr. Hartman via email and explained to him that when he provided the information to Sterling, the on-line form prepopulated with a start date of April 2016 for JLP Ventures and he could not correct the date. (Respondents' Exhibits, pg. 322.)

27. On April 28, 2017, Mr. Hartman responded to claimant via email and told him that he would follow up with Sterling regarding Claimant's contention that he could not fix the date and told Claimant to focus on obtaining the other information requested to verify his employment. (Respondents' Exhibits, pg. 321-322.)

28. On May 2, 2017, Mr. Hartman followed up with Claimant to see if he had been able to obtain the documents necessary to verify his employment as set forth on his resume. Claimant indicated that he had "looped in" his manager, Ms. Camron Carhart, and was waiting for direction from her, but that she was on vacation that week. Mr. Hartman advised Claimant that Ms. Carhart really has no involvement in the matter. He advised Claimant that if he needed assistance or had a clarifying question, Claimant should connect with him. Mr. Hartman then specifically asked whether Claimant was unable to provide documentation verifying his employment from May 2014 to the present. (Respondents' Exhibits, pg. 320-322.)

29. On May 15, 2017, Claimant sent an email to Dr. Hebert. Claimant indicated that the switch to Wellbutrin did not work as planned. Claimant indicated that:

> Actually, it made me regress into the fogginess I was having prior to getting on the Zoloft, so I stopped taking it. It also decreased sexual desire. . .
>
> Also, I have been getting the shakes and feeling more anxious than normal for the last 3-4 weeks. Not sure what that is about since nothing else really changed. This is a

> real problem for me because I have to talk to people for work and sometimes I feel panicky (is that a word?) when meeting people or trying to make phone calls.

(Respondents' Exhibits, pg. 97.)

30. On May 16, 2017, Claimant was restarted on Zoloft, i.e., sertraline. (Respondents' Exhibits, pg. 98.)

31. On May 16, 2017, Claimant responded to Mr. Hartman and Ms. Reinhard via email and provided some additional information regarding his work history as well as some additional documentation.

32. On May 18, 2017, Ms. Elaine Reinhard, who also works in Human Resources, wrote an email to Mr. Ferng and copied Mr. Hartman. She succinctly stated that they were trying to verify the following:

    - Consulting as Ron Pitcock Jr. from 5/1/2014 – current, and

    - Worked for father from 2/2015 to 4/2016.

    In another email that same day, Ms. Reinhard indicated Claimant had provided some information, but not enough information to cover the entire time periods at issue. She indicated that Claimant had failed to provide the following:

    - Nothing to show the worked as a Consultant or his father from 5/1/2014 – 11/30/2015

    - Nothing to show he worked as a Consultant or his father from 5/1/2016 – current.

    She also indicated that the information Claimant provided included a paycheck from a company called Clare Controls for the time period of 7/1/2013 to 7/12/2013.

(Respondents' Exhibits, pg. 312-313.)

33. On May 22, 2017, Ms. Reinhard followed up with Clare Controls and was advised Claimant worked for them from June 24, 2013, through July 11, 2014. However, Claimant did not list this employer on his resume. In addition, Claimant's work for Clare Controls overlapped the time period he said he was working as a consultant for his company, JLP Ventures. (Respondents' Exhibits, pg. 310-311.)

34. On May 23, 2017, Ms. Ferng wrote an email and indicated that Mr. Grey Wyman would talk with Claimant to see what Claimant had to say about the gaps and inconsistencies in his resume. The two key issues Ms. Ferng wanted to have explained were: i) Claimant's failure to verify that he worked as an independent

contractor from 5/1/2014 through 11/30/2015 and 5/1/2016 – current, and ii) Claimant's failure to include Clare Controls as an employer on his resume. (Respondents' Exhibits, pg., 310.)

35. On May 24, 2017, Mr. Hartman indicated in an email to Ms. Ferng, Ms. Reinhard, and Mr. Wyman that he did not think having Mr. Wyman meet with Claimant to discuss the missing information would hurt. Mr. Hartman indicated that:

> [O]ver the last two months Claimant has had no less than half a dozen opportunities to provide the documents requested or "come clean." He went on to say that Claimant will either continue to take us further down this rabbit hole or he will confess that he was not 100% truthful with his employment history. I think we are at a decision point to either fish or cut bait. Integrity is part of POISE, and I do not think [Claimant] has demonstrated any integrity through this entire process. With his lack of integrity, we have to ask ourselves is he someone we want representing TriNet in selling products to prospects or servicing existing clients? My answer is no because integrity is everything.

(Respondents' Exhibits, pg. 309.)

36. On May 24, 2017, Mr. Wyman spoke with Claimant about the unresolved matters regarding his resume. Claimant stated that he has provided everything that Employer should need and that he wanted to get past the matter. Mr. Wyman indicated that he did not believe they had everything – i.e., and that was the reason for the phone call. He asked Claimant whether he stretched or overstated anything on his resume. Claimant said he did not. Claimant was also asked about the inconsistency regarding Clare Controls and not listing that employer on his resume. Claimant indicated he was consulting for them and they needed funding and had to have a certain number of people on the books and that's why they added him. He also mentioned that during some of the open times when he was consulting – he did not have clients. At the end of the conversation, Mr. Wyman thought that he had not gotten any further "on this mystery" and advised the other people working on this matter, including Ms. Feng, about his phone call with Claimant. (Respondents' Exhibits, pg. 308.)

37. On May 24, 2017, via email, Ms. Feng thanked Mr. Wyman for the update, and asked Ms. Reinhard and Mr. Hartman if Claimant's explanations satisfied their issues. She indicated that she did not think his answers were satisfactory, but was open to the thoughts of the others. She also indicated that his answer regarding Clare Controls employment did not sound very plausible. (Respondents' Exhibits, pg. 308.)

38. Employer decided to terminate Claimant.

39. On May 25, 2017, Mr. Hartman and Ms. Carhart terminated Claimant due to the inconsistencies in Claimant's resume and the manner in which Claimant handled himself with Employer during the process of trying to resolve the inconsistencies contained in his resume.

40. The ALJ finds that Employer's conduct in investigating the discrepancies and gaps in Claimant's resume and ultimate decision to terminate his employment was done in good faith. Claimant set forth certain dates of employment, and in the end, he could not verify certain dates of employment and refused to acknowledge that he stretched, overstated, or misrepresented the length of some of his employment. In addition, Claimant failed to list all of his employers on his resume such as Clare Controls.

41. On June 15, 2017, Claimant emailed Dr. Hebert. Claimant contacted Dr. Hebert for a new prescription for Sildenafil, which was for another medical condition. Claimant indicated that he was having a problem filling his prescription and thought it was because of his insurance being terminated at the end of May after losing his job. (Respondents' Exhibits, pg. 110.)

42. On August 10, 2017, Claimant contacted Dr. Hebert and asked for his medications to be refilled. Claimant indicated that his depression and anxiety have become much worse since he lost his job. Claimant indicated that he was in bad shape and did not know where to turn.

43. On August 14, 2017, Claimant was seen by Ms. Lee-Lopez, Phd. Claimant complained of worsening symptoms of depression and anxiety since losing his job. Claimant indicated that he was let go abruptly because of "something in his background check." Claimant indicated he tried to work with his brother performing construction, but could not do the work since he was having a hard time being around people and was afraid that he might cause someone to get hurt. Dr. Lee-Lopez did not opine as to whether the conduct of Claimant's employer, as alleged by Claimant, was a psychologically traumatic event. (Respondents' Exhibits, pg. 120.)

44. On August 15, 2017, Claimant saw Dr. Hebert. Dr. Hebert noted that Claimant was prescribed lithium due to a concern of bipolar disorder. Claimant complained of ups and downs with elevated moods in the spring and crashes in June and December. Claimant also indicated that things started going downhill in June of 2016 and that he was making crazy financial moves and incurred $20,000 of debt. Dr. Hebert noted that she did not know whether Claimant's alcohol abuse was causing his roller coaster of moods. (Respondents' Exhibits, pg. 126.)

45. On September 5, 2017, Claimant presented to Dr. Hebert. Claimant was shaking and feeling really panicked. Claimant indicated he tried going out Sunday on a "date night" and went bowling. Claimant indicated that he started shaking after being out for about 35 minutes. Claimant was assessed as suffering from a

panic attack. An ambulance was called to transport Claimant to the emergency department, but he declined. Dr. Hebert also indicated in her report that Claimant was drinking 2-3+ glasses of wine per night and that she could not rule out that Claimant's symptoms were due to alcohol withdrawal. Her note indicates that Claimant was going to see a psychiatrist the following week. (Respondents' Exhibits, pg. 152.)

46. There is also a call documentation note dated September 5, 2017, which was made by Dr. Christopher Frazier. The note indicates Claimant was in the clinic having a panic attack and that the physician was calling EMS for transport. It was also noted that Claimant had been drinking lots of alcohol lately. (Respondents' Exhibits, pg. 155.)

47. On September 13, 2017, Claimant underwent a psychiatric evaluation at AllHealth Network, which was performed by Dr. Sohini Parikh. Claimant's chief complaint was "I need meds for my anxiety, depression, mood swings." Claimant reported a long history of emotional problems, including one psychiatric hospitalization. Claimant also reported a strong family history of mood disorders. Claimant also reported that he could not hold a job for more than 1½ years due to anxiety and irritability and that he recently lost his job in May of 2017 for "no reason." Claimant also reported mood swings, including impulsivity spending money unwisely, hyper-sexual, hyper-verbal, less need for sleep, and anxiety. Dr. Parikh diagnosed Claimant with a general anxiety disorder, social major depressive disorder vs bipolar disorder, and alcohol use. Dr. Parikh also changed Claimant's medication regimen by reducing and increasing certain medications as well as starting other medications. Dr. Parikh did not opine as to whether Employer's conduct, as alleged by Claimant, was a psychologically traumatic event. (Respondents' Exhibits, pg. 155-158.)

48. On September 25, 2017, Claimant wrote an email to Dr. Hebert. Claimant complained of increased confusion, problems sleeping, and horrible dreams. Claimant also complained of problems with balance, dizziness, and feeling like he is going to pass out. He also complained of increasing rage and that he is getting more and more agitated as time passes. Claimant also complained of increasing anxiety and shaking that even occurs at home.

49. On November 1, 2017, Claimant met with a counselor, Julie Handley, LPC CACIII, of AllHealth network. (Ms. Handley is a Licensed Professional Counselor and a Certified Addiction Counselor, III; *See* Respondent's Exhibits, pg. 217.) This is one of the few records where Claimant discusses the alleged conduct of his employer that Claimant alleges made things so difficult. Claimant indicated that when he was talking to his manager [about the inconsistencies in his resume] he thought things were okay and when he talked to human resources [about the inconsistencies in his resume] he did not think things were okay. (Respondent's Exhibits, pg. 212 and 217.) This is consistent with Claimant's testimony at hearing.

50. The notes from Ms. Handley, also indicate that Claimant losing his job, and the way that it transpired, has been devastating for him. (Respondents' Exhibits, pg. 214.) Claimant's goals, as set forth in her notes, indicates that "I want to get back to how things were before I started feeling troubled. Before I was fired I was able to be productive." (Respondents' Exhibits, pg. 215.)

51. Although Ms. Handley's notes indicate that Claimant stated that "Before I was fired I was able to be productive," such statement is inconsistent with the medical records. As noted in his medical records, towards the end of 2016, Claimant obtained a job at Best Buy and had to quit after 2-3 months due to memory and fatigue problems. Then, in January of 2017, Claimant continued to decompensate and ended up being diagnosed with major depression and severe anxiety.

52. Ms. Handley did not opine that the events described by Claimant qualified as a psychologically traumatic event. Moreover, Ms. Handley is not a licensed physician or psychologist.

53. Claimant testified at hearing. Claimant testified that Employer's conduct regarding the inquiry into the inconsistencies contained in his resume and his termination caused his psychological condition, need for medical treatment, and disability. Claimant testified that on the one hand, while they were investigating the discrepancies contained in his resume, his communications with his supervisor, Ms. Carhart, led him to believe that everything was okay and that his job was not in jeopardy. Claimant testified that on the other hand, his communications with human resources led him to believe that everything was not okay and his job was in jeopardy. Claimant described the emails and telephone calls from human resources as badgering and indicated that the tone maintained during the phone calls was very accusatory and cruel. (Hearing Transcript, pg. 34-36.) Claimant indicated that this back and forth was traumatic. Claimant testified that Employer's conduct caused him to think on one day he had this fabulous job and on the next day he was going to lose this fabulous job. (Hearing Transcript, pg. 36.) According to Claimant, he thought Employer's conduct towards him regarding the inconsistencies contained in his resume was cruel and unusual. (Id.)

54. The ALJ finds that there were discrepancies in Claimant's resume and that Employer did not act in a cruel and unusual manner in requesting Claimant to verify his employment history as set forth in his resume. The communications – emails - provided by Respondents demonstrate they acted appropriately throughout the process and even gave Claimant the opportunity to "come clean" regarding the discrepancies and Claimant refused to do so.

55. On January 10, 2018, Gary Gutterman, M.D., (a psychiatrist) performed an Independent Medical Examination on behalf of Respondents, and issued a report dated January 29, 2018. As part of his examination, Dr. Gutterman obtained detailed history regarding Claimant's development and psychiatric history. Dr.

Gutterman also obtained from Claimant his version of events regarding the investigation into the discrepancies contained in his resume and his termination.

56. Claimant told Dr. Gutterman that when he interviewed for the job with Employer he was upfront about his background and employment. Claimant said that he explained that there were many positions not on his resume because he, in many instances, worked with startup companies in which he did not receive a W-2 and he was paid on the side or in some other manner and therefore his employment resume was incomplete. (Respondent's Exhibits, pg. 272.)

57. The ALJ does find Claimant's statement to Dr. Gutterman that he told Employer during his interview that his resume was incomplete to be credible. Had Claimant made this statement to Employer during his interview, it would seem logical that Claimant would have reiterated that statement to human resources when he was repeatedly asked for documentation to support his resume and again when asked if he stretched or overstated his resume. Instead of telling Employer that his resume was incomplete, he stated that his resume was complete and was offended that he was being questioned about it.

58. Claimant went on to tell Dr. Gutterman that at some point, Employer had a "beef" with his resume and that they started asking him for information about his background in an accusatory manner. Claimant said that he thought his job was being threatened and they were being mean and brutal. Claimant said that he asked his manager whether he was going to lose his job and she told him that everything was fine. He said that one day he thought he was going to be terminated and the next day he thought he was in good graces. Claimant said the telephone call from human resources made him feel like a "bad person." He told himself, "here we go again" (meaning that he was going to lose something that he had invested in as he had done so often in his life). Claimant stated that it was stressful while things went back and forth between himself and human resources. (Respondent's Exhibits, pg. 273.)

59. Dr. Gutterman testified at the hearing. Claimant cross examined Dr. Gutterman about Claimant's perceived treatment by Employer and asked Dr. Gutterman whether he had ever evaluated a similar situation in which someone was led to believe by one person that their job was safe and then led to believe by another person that their job was not safe. Dr. Gutterman testified that although he had not evaluated the exact situation described by Claimant, the situation was very similar to the typical relationship problems he has evaluated numerous times in which one person is ambivalent about their love towards another person. As stated by Dr. Gutterman:

> I certainly have had many patients who have been in relationships, who've been told I love you, and then I don't love, you and I love you, but no, I don't love you. Or had some nuance that suggested yes, your part of -- we're part of a relationship, but no, we're not. So that kind of back and

> forth, that kind of ambivalence that you're talking about, that kind of disappointment, many, many times.

(Hearing Transcript, pg. 100-101.)

60. Claimant also cross examined Dr. Gutterman about Dr. Gutterman's statement that Employer told Dr. Gutterman that they do not want to fire employees. Claimant asked Dr. Gutterman:

> In your expertise does a company that does not want to fire individuals go hunting for reasons to fire them?

Dr. Gutterman responded as follows:

> See, that's again -- that's an interesting way of phrasing it. You're saying they were hunting to look for reasons, rather than they're trying to fill in the gaps that you didn't provide them, again, as if somehow they're devious.

(Hearing Transcript, pg. 101.)

61. Claimant stated that he was ultimately asked by a vice president whether he had embellished his resume. Claimant stated that he said "I don't know how you could ask me that." Claimant stated that his supervisor asked him how the phone call went and he started crying. After Claimant started crying, he left the office for lunch, and then returned to the office and spoke to his supervisor again. Claimant indicated that his supervisor could tell he was distraught. Claimant stated that he was unable to hold his thoughts easily and he was experiencing sadness, frustration and rage. He stated that he knew he was probably going to be fired. Therefore, he told his supervisor that he was going to seek legal counsel because he thought he was being retaliated against for making comments about the company's discrimination policy. (Respondents' Exhibits, pg. 273.)

62. Claimant told Dr. Gutterman that he was terminated the following day. Claimant also told Dr. Gutterman that after he was terminated, he was out of it for the next three months. Claimant indicated that he could not leave his home, could not talk to his wife, and would have to be reminded to take his medications. Claimant further indicated that he could not find pleasure in anything and he had no motivation to do anything. He wanted to curl up in a ball and hide under his covers. He then gradually spent a few days out of his house each month. (Respondent's Exhibits, pg. 273-274.)

63. Claimant also told Dr. Gutterman that he has also filed an EEOC claim based on age and disability discrimination. Claimant stated that "he thought he was being retaliated against for making comments about Employer's discrimination policy which constituted whistleblowing" and "thought he was working in a hostile work environment." (Respondent's Exhibits, pg. 276.)

64. Dr. Gutterman concluded in his report that if Claimant's reported symptoms are accurate, since he did not have Claimant's medical records at the time he performed his IME, Claimant experienced a significant psychological reaction of withdrawal, isolation, and depression after being terminated from Employer which represented a depressive episode. Dr. Gutterman also stated that Claimant's condition started to improve in September of 2017 and that he has improved gradually and steadily since that time with the psychological treatment provided by Julie Handley, and additional psychopharmacologic medication prescribed by Dr. Parikh. He also opined that he did not anticipate Claimant would have any permanent disability due to his termination. (Respondents' Exhibits, pg. 278.)

65. Dr. Gutterman opined that Claimant's treatment by Human Resources in which they requested Claimant to explain the inconsistencies in his resume and provide supporting documentation regarding his employment history as well as his termination was not a psychologically traumatic event. Dr. Gutterman indicated that Human Resources' attempts to have Claimant verify the information contained in his resume left him feeling "persecuted and victimized." Dr. Gutterman stated:

> The patient seems to have a recurrent theme of feeling "persecuted and victimized" in various instances, including his not having custody or contact with three of his children due to divorce court determinations. The patient seems to have experienced the HR investigation as being done in a mean, brutal, accusatory and nonprofessional manner. I would seriously question the patient's reality testing regarding this perception on his part given his propensity to recurrently experience encounters and events in a persecutory fashion. Bipolar patients can often experience life events as persecutory due to altered reality testing influenced by suspiciousness and agitation.

(Respondents' Exhibits, pg. 277.)

66. Dr. Gutterman also stated in his report that Claimant's reaction to being questioned about his resume and then being terminated would not evoke significant symptoms of distress in a worker in similar circumstances. Dr. Gutterman indicated that:

> [Claimant's] response was extreme and not one that would be noted in an employee in a similar environment. The patient's significant depressive episode was due to his history or Bipolar Disorder. It was also due to multiple stressors having accumulated in his psychological and emotional life. . . [T]he patient's response was idiosyncratic and unique to his particular intrapsychic life and preexisting psychiatric disorder; namely, Bipolar Disorder. Hence, even

> if the patient's claim that he was terminated on the basis of age and disability factors as well as a retaliation for his whistleblowing (which I question due to reality testing factors), I do not believe that other individuals in a similar work situation would have reacted as the patient did. I believe that his reaction was idiosyncratic and extreme based on his Bipolar Disorder and his having experienced multiple preexisting and co-existing stressors. The patient experienced a significant depressive episode in late 2016 and various psychotropics had been added to his regimen as a result of that depressive episode. Hence, the patient's long standing Bipolar Disorder, various psychological stressors that he encountered during his adulthood over the years, and his recurrence of a depressive episode in late 2016 all left him vulnerable to his idiosyncratic and extreme response to his being terminated from [Employer].

(Respondents' Exhibits, pg. 277.)

67. Dr. Gutterman also testified consistent with his report. Dr. Gutterman testified that Employer's treatment of Claimant and his termination was not a psychologically traumatic event. He also testified that such treatment and the termination would not evoke significant symptoms of distress in a worker in similar circumstances. Dr. Gutterman also testified that Claimant would not suffer any permanent disability due to his termination.

68. The ALJ finds the opinions offered by Dr. Gutterman in his report and testimony to be persuasive and credible.

69. The ALJ does not find Claimant's testimony, statements to various medical providers, and statements to Dr. Gutterman, regarding the way he was treated by Employer to be reliable. As credibly testified to by Dr. Gutterman, he seriously questioned Claimant's reality testing regarding the events based on Claimant's propensity to recurrently experience encounters and events in a persecutory fashion due to Claimant's bipolar disorder which can cause him to experience life events as persecutory due to altered reality testing influenced by suspiciousness and agitation.

70. The ALJ also finds that although Claimant worked for Best Buy towards the end of 2016, it appears he also failed to include Best Buy on his resume. Such failure further erodes Claimant's credibility.

71. The ALJ finds that Employer questioning Claimant about the inconsistencies in his resume, requesting supporting documentation, and then terminating Claimant based on the inconsistencies contained in his resume and the manner in which Claimant handled the matter is not a psychologically traumatic event or events.

72. The ALJ finds that Claimant did have psychological symptoms due to his termination. However, the ALJ finds that Employer acted in good faith when terminating Claimant.

73. Claimant has failed to establish by a preponderance of the evidence that he suffered a permanent mental disability due to the way he was treated by his employer based on the inconsistencies in his resume and his termination.

74. Claimant has also failed to establish that he suffered a "psychologically traumatic event" during his employment.

75. Claimant also failed to establish by a preponderance of the evidence that his termination was outside his usual experience. At the time Claimant was terminated from his employment with Employer, he was 50 years old. As found, Claimant has not been able to keep a job for more than 1 ½ years, or 2 years at most, due to his underlying psychological problems. After high school Claimant went into the National Guard and then went to college for one semester. Assuming Claimant started working at 20, he has lost approximately 15-20 jobs. Therefore, Claimant's termination and loss of his job is not outside his usual experience.

76. The ALJ finds that a similarly situated worker who misrepresented their work history, was asked to verify their work history, and was subsequently terminated based on their inability to verify their work history would not end up suffering from significant symptoms of distress i.e., a major depressive disorder, significant anxiety, and end up homebound for almost three months.

77. Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable psychiatric impairment, disability, or injury.

CONCLUSIONS OF LAW

General Provisions

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

I. Whether Claimant has established by a preponderance of the evidence that he sustained a compensable mental impairment during the course and scope of his employment with Employer.

For a claim to be compensable under the Act, a claimant has the burden of proving that he suffered a disability that was proximately caused by an injury arising out of and within the course and scope of employment. §8-41-301(1)(c) C.R.S.; *In re Swanson,* W.C. No. 4-589-645 (ICAP, Sept. 13, 2006). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844, 846 (Colo. App. 2000); *Singleton v. Kenya Corp.,* 961 P.2d 571, 574 (Colo. App. 1998). The question of causation is generally one of fact for determination by the Judge. *Faulkner,* 12 P.3d at 846.

The Workers' Compensation Act has authorized recovery for a broad range of physical injuries, but has "sharply limited" a claimant's potential recovery for mental injuries. *Mobley v. King Soopers*, WC No. 4-359-644 (ICAP, Mar. 9, 2011). Enhanced proof requirements for mental impairment claims exist because "evidence of causation is less subject to direct proof than in cases where the psychological consequence follows a physical injury." *Davidson v. City of Loveland Police Department*, WC No. 4-292-298 (ICAP, Oct. 12, 2001), *citing Oberle v. Industrial Claim Appeals Office*, 919 P.2d 918 (Colo. App. 1996). A claimant experiencing physical symptoms caused by emotional stress is subject to the requirements of the mental stress statutes. *Granados v. Comcast Corporation*, WC No. 4-724-768 (ICAP, Feb. 19, 2010); *see Esser v. Industrial Claim Appeals Office*, 8 P.3d 1218 (Colo. App. 2000), affd 30 P.3d 189 (Colo. 2001); *Felix v. City and County of Denver* W.C. Nos. 4-385-490 & 4-728-064 (ICAP, Jan. 6, 2009).

Section 8-41-301(2)(a), C.R.S. imposes additional evidentiary requirements regarding mental impairment claims. The section provides, in relevant part:

> A claim of mental impairment must be proven by evidence supported by the testimony of a licensed physician or psychologist. For purposes of this subsection (2), "mental impairment" means a recognized, permanent disability arising from an accidental injury arising out of and in the course of employment when the accidental injury involves no physical injury and consists of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances. A mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer.

The definition of "mental impairment" consists of two clauses that each contains three elements. The first clause requires a claimant to prove the injury consists of: "1) a recognized, permanent disability that, 2) arises from an accidental injury involving no physical injury, and 3) arises out of the course and scope of employment." *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023, 1030 (Colo. 2004). The second clause requires the claimant to prove the injury is: "1) a psychologically traumatic event, 2) generally outside a worker's usual experience, and 3) that would evoke significant symptoms of distress in a similarly situated worker." *Id.*

As found, Claimant has failed to establish by a preponderance of the evidence that he sustained a compensable injury - mental impairment - during the course and scope of his employment with Employer.

Claimant's claim fails for a number of reasons. First, Claimant has failed to establish by a preponderance of the evidence that he suffered a permanent mental disability due to the way Employer handled the inquiry into the inconsistencies in his resume and his termination. As found, Dr. Gutterman opined that Claimant's reaction to the inquiry into the inconsistencies in his resume and his termination would not result in permanent disability, and the ALJ credits Dr. Gutterman's testimony regarding this issue.

Second, Claimant failed to establish that the manner in which Employer handled the inquiry regarding the inconsistencies in his resume and his termination was a psychologically traumatic event or events. Dr. Gutterman credibly opined that the manner in which Claimant was treated due to the inconsistencies contained in his resume and his termination would not qualify as a psychologically traumatic event or events and the ALJ credits his opinion.

Claimant also failed to establish by the testimony of a licensed physician or psychologist (via oral testimony, reports, or other documentary evidence) that he suffered a "psychologically traumatic event" during his employment. As found, Claimant

described to Ms. Handley how he felt based upon how he perceived the way his employer handled the inconsistencies in his resume and ultimate termination. However, Ms. Handley did not opine that Employer's conduct, if true, constituted a psychologically traumatic event. In addition, Ms. Handley is not a licensed physician or psychologist. Claimant told Dr. Parikh that he was terminated for unexplained reasons. Dr. Parikh, however, did not render an opinion as to whether Claimant's termination was considered a psychologically traumatic event. Claimant also told Dr. Lee-Lopez, a psychologist, that he was terminated from employment due to something in his background check. Dr. Lee-Lopez did not opine whether the manner in which Claimant alleges he was treated and his termination constituted a psychologically traumatic event.

In addition, Claimant's testimony and statements that he was treated in a cruel and unusual manner during the investigation into the inconsistencies in his resume and that this treatment was psychologically traumatic was not found to be credible or reliable. As found, the emails between Claimant and the various people in human resources were not cruel and unusual. The emails were professional and cordial and merely requested Claimant to provide supporting documentation for the employment history listed on his resume. In addition, the fact that Claimant perceived he was getting mixed messages from his supervisor and those in human resources as to whether his job was in jeopardy was not found to be a psychologically traumatic event.

Moreover, Dr. Gutterman opined that Claimant's reality testing regarding his perception of events is flawed given his propensity to recurrently experience encounters and events in a persecutory fashion and to experience life events as persecutory due to altered reality testing influenced by suspiciousness and agitation. In other words, Claimant's misperceives reality. The ALJ found Dr. Gutterman's opinion to be credible and persuasive and his opinion provides additional support for the finding that Employer's conduct was reasonable and that they acted in good faith – despite Claimant's contentions and characterizations.

Third, Claimant failed to establish that losing a job and being terminated was "generally outside of a worker's usual experience." Being terminated might be generally outside of some workers' usual experience. However, as found in this case, Claimant has been unable to keep a job for more than 1 ½ years, or 2 years at most, due to the manifestations of his underlying psychological conditions. Therefore, Claimant has probably lost 15-20 jobs since he was 20. Thus, Claimant's loss of his job was not generally outside Claimant's usual experience.

Fourth, Claimant's psychological reaction was due to his termination. And, Employer acted in good faith when investigating the discrepancies in Claimant's resume and terminating Claimant. As found, Claimant misstated his employment history on his resume and was unable to provide sufficient documentation to support the work history stated on his resume. This included the failure to list a prior employer. Employer gave Claimant the opportunity to explain why he failed to list a prior employer and to admit that he overstated or stretched some of the dates on his resume. Employer determined

Claimant's excuse for not listing a prior employer was not plausible. Claimant also refused to admit that he overstated or stretched some of his employment dates. Therefore, Employer terminated Claimant and the ALJ found that the decision to terminate Claimant was made in good faith.

Claimant told Dr. Gutterman that when he interviewed for the job with Employer he was upfront about his background and employment. Claimant said that he explained that there were many positions not on his resume because he, in many instances, worked with startup companies in which he did not receive a W-2 and he was paid on the side or in some other manner and therefore his employment resume was incomplete. The ALJ did not find Claimant's statement to Dr. Gutterman that he told Employer during his interview that his resume was incomplete to be credible. Had Claimant made such a statement to Employer during his interview, Claimant would have reiterated that statement to human resources when they repeatedly asked him for documentation to support his resume and asked him whether he stretched or overstated his resume. Instead of telling Employer that his resume was incomplete, he stated that his resume was complete and was offended that he was being questioned about it. Therefore, Claimant's contention that Employer knew his resume was incomplete from the beginning and asked for supporting documentation for an ulterior motive is not found to be credible or persuasive.

Fifth, the ALJ found Employer's actions would not evoke significant symptoms of distress in a similarly situated worker. Dr. Gutterman opined Claimant's reaction to Employer requesting Claimant to verify his employment history as set forth on his resume and then terminating him was idiosyncratic and extreme based on his bipolar disorder and Claimant having experienced multiple preexisting and co-existing stressors. Dr. Gutterman indicated that Claimant experienced a significant depressive episode in late 2016 and various psychotropics had been added to his medication regimen as a result of that depressive episode. Dr. Gutterman opined that Claimant's long standing bipolar disorder, various psychological stressors that he encountered during his adulthood over the years, and his recurrence of a depressive episode in late 2016 all left him vulnerable to his idiosyncratic and extreme response to his being terminated. The ALJ found Dr. Gutterman's opinions to be credible and persuasive.

In addition, Claimant had only worked for Employer for two months. His reaction to losing a job that he only had for two months also supports a finding that his reaction was out of proportion to how a similarly situated worker would respond.

Based on the evidence submitted at hearing, and the persuasive opinions of Dr. Gutterman, the ALJ concludes that Claimant has failed to establish by a preponderance of the evidence that he suffered a compensable mental impairment injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 22, 2018

ISSUES

- Claimant applied for hearing endorsing the issues of compensability, medical benefits, authorized provider, average weekly wage, petition to reopen claim, and disfigurement. His date of alleged injury was December 23, 2015.

FINDINGS OF FACT

1. Claimant sustained an admitted injury on January 23, 2015, while working as a carpenter for Employer. Respondents admitted for medical benefits only as Claimant missed no work time.

2. On September 16, 2016, Respondents filed a Final Admission of Liability ("FAL") admitting to September 2, 2016 as the date of MMI date and an upper extremity impairment rating of 17%. The value of the scheduled impairment rating was $10,145.14.

3. On November 28, 2016, Claimant filed an untimely objection to the FAL. In the objection, he explained that his objection was late because he began serving a sixty-day jail sentence the day after he received a copy of the FAL.

4. On November 6, 2017, Claimant filed an application for hearing identifying the issues stated above, including a petition to reopen claiming a change in his medical condition. Claimant alleged that his back had been injured on December 23, 2015, as well, but that he had not received treatment for that injury. He attached a copy of a medical form of Julie Parsons, MD, which lists as a work related medical diagnosis, "LSS." The ALJ finds that in this particular context those abbreviations stand for lumbar spinal stenosis. However, that medical record is not associated with this claim. Rather, it relates to a November 5, 2017, injury which lists Flatirons Construction Corp. as the employer and Zurich Insurance as the insurer.

5. On December 7, 2017, Respondents responded to Claimant's application for hearing. Respondents alleged that the claim had closed as a matter of law because Claimant had failed to timely obtain a DIME.

6. Claimant testified at hearing. The substance of his testimony was that he had been injured at work on December 23, 2015. And although he had received treatment for his right wrist, he had not received medical treatment for his back or right shoulder.

CONCLUSIONS OF LAW

Based upon the forgoing Findings of Fact, the ALJ makes the following Conclusions of Law:

The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. (2017). The facts in a workers' compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. § 8-43-201, C.R.S.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

It is within the ALJ's purview as the finder of fact to determine the credibility of witnesses and resolve conflicts in the evidence. *Metro Moving & Storage v. Gussert*, 914 P.2d 411 (Colo. App 1995).

Section 8-43-303(1), C.R.S., provides that an award may be reopened on the ground of, *inter alia*, change in condition. The claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. Section 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted if the claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

The question of whether the claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

The Administrative Law Judge finds and concludes that, considering the totality of the evidence, Claimant failed to prove it more likely than not that his worsened condition and need for treatment were caused by the industrial injury. Thus, the additional issues need not be addressed.

ORDER

It is therefore ordered that:

Claimant's claim to reopen his claim is denied and dismissed with prejudice.

NOTE: If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/oac/appeals.

ISSUES

The following issues were raised for consideration at hearing:

a. Whether Claimant proved by a preponderance of the evidence that she sustained a work-related industrial injury and/or aggravation of a preexisting condition on February 25, 2017;

b. Whether Claimant's lower back and left hip injuries are compensable under this claim as a direct and natural consequence of the February 25, 2017, right knee injury;

c. Whether Claimant proved by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her right knee, low back and left hip injuries;

d. Whether Claimant established by a preponderance of the evidence that she is entitled to receive Temporary Total Disability (TTD) benefits for the period of April 30, 2017, to October 16, 2017; and

e. What is Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

1. Claimant is 54 years old and has worked for Employer as a Customer Service Agent since December 1, 2014. Each day at work as a Customer Service Agent, Claimant is assigned a position at either the ticket counter, the gate or at the baggage service office, and she works that assignment for her entire shift.

2. As a part of her work-related duties at the ticket counter, Claimant normally weighs customers' bags, checks their identification and then lifts their bags onto a bag belt. Customer Service Agents for the Employer are taught proper bag lifting techniques, which requires squatting to complete each lifting motion. Each time Claimant moves a bag, she squats down, lifts the bag and then takes one to two steps before placing the bag on the bag belt. Claimant estimated that in a normal shift at the ticket counter she lifts at least 300 bags weighing 40 to 50 pounds each.

3. Claimant was assigned to work at the ticket counter from 7:00 a.m. to 3:30 p.m. on February 25, 2017. The morning of February 25, 2017, was not a typical morning at the ticket counter, because the bag belt malfunctioned and could not be used. The bag belt is a conveyor belt. Instead of simply lifting each bag once to put it onto the bag belt, she had to move each customer's bag twice, once to a staging area and then later onto the repaired bag belt.

4. At approximately 10:00 a.m. on the morning of February 25, 2017, Claimant's right knee became painful. Claimant was able to work through the pain, but by the end of her shift at 3:30 p.m., Claimant's knee was extremely painful and swollen. Claimant did not report her symptoms to a supervisor at that time. It is common for Claimant to have aches and pains after working a busy day at the ticket counter, so she went home with the hope that her knee pain and swelling would resolve on its own. Claimant spent the evening resting and icing her knee.

5. Claimant's knee did not improve with rest and ice. Therefore, when she reported to work for her next regularly scheduled shift on February 27, 2017, Claimant formally reported her injury to Customer Service Supervisor Brandy Barr. The Occupational Injury Report completed by Ms. Barr lists "carrying/lifting" as the cause of Claimant's injury, and goes on to state as follows:

> [Claimant] cannot remember a specific action that caused the injury however about half way into the shift she began to feel pain in her knee in which she states she felt like she must have twisted or strained it in some way. [Claimant] gave it the weekend to see if it was still feeling the same and as of now it is still painful and she is now reporting the injury …

6. Claimant injured her knee while squatting down to lift a heavy bag at work on February 25, 2017, but she cannot pinpoint an exact moment when the injury occurred. Claimant also reported the same mechanism of injury to each of the medical providers she has seen in this case. On February 25, 2017, Claimant had a busy day at the airport and that she had already serviced 60 to 70 customers by the time her knee became painful around 10:00 a.m.

7. Before February 25, 2017, Claimant had never experienced pain or swelling in her right knee, and she had never gone to a physician for treatment relating to her right knee. In fact, Claimant's insurance records reflect that December 1, 2014, to February 25, 2017, Claimant had only been to a physician on one occasion, and that was for a sinus infection.

8. After reporting her injury to Employer, Claimant established care with Martin Kalevik, D.O. of HealthONE Occupational Medicine and Rehabilitation. Dr. Kalevik sent Claimant for MRI imaging of the knee on March 10, 2017, and then ultimately referred Claimant to Rajesh Bazaz, M.D., an orthopedic surgeon with Western Orthopedics. Dr. Bazaz met with Claimant and evaluated Claimant's knee on six occasions, and also provided expert testimony in this case.

9. Dr. Bazaz diagnosed Claimant with arthritis of the right knee. Dr. Bazaz credibly opined that twisting the knee or squatting up and down to lift heavy items could suddenly aggravate previously asymptomatic arthritis.

10. Dr. Bazaz opined that it is impossible to tell what caused Claimant's arthritis or how long it has been present in Claimant's right knee. However, Dr. Bazaz further opined that Claimant sustained an aggravation of her preexisting arthritis on February 25, 2017, while squatting down and lifting baggage at work. Dr. Bazaz opined that the timing of the onset of Claimant's symptoms was relevant. Also relevant to Dr. Bazaz was the fact that prior to lifting bags all day at work on February 25, 2017, Claimant had never previously suffered from issues associated with her right knee.

11. Dr. Bazaz recommended non-operative treatment for Claimant's right knee condition, including a steroid injection, a lubricant injection, and physical therapy. Claimant underwent these treatments, and her knee is now approximately 50% improved. While she has not been able to return to doing all of her hobbies, Claimant reports that the treatment she has received for her knee has allowed her to return to work in a full-time capacity performing her normal job duties.

12. Claimant underwent a medical examination with Timothy O'Brien, M.D. on July 14, 2017, and Dr. O'Brien issued a report of the same date. Dr. O'Brien agreed with much of Dr. Bazaz's opinions. Dr. O'Brien opined that Claimant had arthritis in the knee that preexisted the February 25, 2017 incident and Dr. O'Brien agrees that arthritis in the knee can be completely asymptomatic and then suddenly become symptomatic due to an aggravation. Dr. O'Brien opined that spending an entire day lifting 30 to 40 pound pieces of luggage could aggravate preexisting arthritis. However, Dr. O'Brien would not agree that spending a day lifting luggage weighing 30 to 40 pounds did aggravate Claimant's preexisting arthritis in the right knee. However, Dr. O'Brien concluded that Claimant's sudden onset of symptoms in the right knee on February 25, 2017, was due to her "personal health."

13. In June of 2017, Claimant developed pain in the left hip and lower back and was referred to Samuel Chan, M.D. for evaluation. After completing an examination of Claimant, Dr. Chan opined that Claimant suffered from "compensatory symptoms" of the left lumbar spine and hip area. Dr. Chan recommended and performed an SI injection under fluoroscopic guidance for Claimant's lower back, and also recommended chiropractic treatment. With respect to the hip, Dr. Chan obtained MRI imaging and then determined that Claimant was suffering from an exacerbation/aggravation of preexisting arthritis.

14. Dr. O'Brien opined regarding Claimant's lower back and hip symptoms concluding Claimant's symptoms were a manifestation of Claimant's personal health and were not in any way related to Claimant's work on February 25, 2017 or right knee symptoms.

15. Claimant credibly testified at hearing that prior to June of 2017 she had never suffered from lower back or left hip symptoms. Claimant testified that since beginning treatment for her hip and lower back, those conditions have improved by approximately 60%.

16. Martin Kalevik, D.O. assigned work restrictions for Claimant beginning on March 2, 2017. Employer was not able to accommodate those restrictions between April 30, 2017, and October 16, 2017, and Claimant lost wages from Employer during that period.

17. Prior to her injury, Claimant worked for Employer approximately 40 hours per week and was paid at a rate of $14.58 per hour. Between February 16, 2016, and February 15, 2017, Claimant earned a total of $25,733.40. This equates to a daily rate of pay of $70.31 and an average weekly wage of $492.17 ($25,733.40/366 Days = $70.31; $70.31 x 7 = $492.17).

18. Claimant also works as a golf professional and owns her own company, Lana Ortega Golf, since 2006. Claimant has not sustained any wage loss with respect to Lana Ortega Golf. Claimant discussed her work for Lana Ortega Golf with her medical providers in this case, and they approved her continued work.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the "Workers' Compensation Act of Colorado" (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might

lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Compensability – Claimant's Right Knee

4. A claimant bears the burden of proving by a preponderance of the evidence that an injury occurred within the course of, and arose out of, employment with the employer. Section 8-41- 301(1), C.R.S.; *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury or condition is in the course of employment if it occurred within the time and place limits of employment and during an activity that has some connection with the employee's job-related functions. *Wild West Radio, Inc. v. Industrial Claim Appeals Office*, 905 P.2d 6 (Colo. App. 1995). An injury or condition arises out of employment if "there is a causal connection between the duties of employment and the injuries suffered." *Deterts v.Times Pub. Co*., 38 Colo. App. 48, 552 P.2d 1033 (1976).

5. The mere existence of a pre-existing condition does not prevent an injury from "arising out of" an injured worker's employment. If an industrial injury aggravates, accelerates, or combines with a preexisting condition so as to produce disability and a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997.

6. In this case, the credible and persuasive evidence presented at hearing established that Claimant had arthritis of the right knee that preexisted her February 25, 2017, injury. Claimant's arthritis constituted a preexisting condition. Further, the evidence established that Claimant's work for Employer on February 25, 2017, aggravated her preexisting condition of arthritis and caused the sudden need for medical attention. Prior to February 25, 2017, Claimant had never had a problem with her right knee. Then, suddenly, after an especially strenuous morning at work filled with squatting and lifting 40 to 50-pound pieces of luggage, Claimant's knee became swollen and painful. Dr. Bazaz's medical records and testimony offers the most probable explanation for Claimant's sudden onset of symptoms on February 25, 2017. Claimant's onset of symptoms was caused by her work. Dr. O'Brien's disagreement with this conclusion was not deemed credible. Accordingly it is concluded that Claimant's injury was precipitated by her work for Employer on February 25, 2017, when she was squatting down and lifting 300 or more bags weighing 40 to 50-pounds in an eight-hour shift.

Causation – Claimant's Lower Back & Left Hip

7. In Colorado, an employer is liable for the natural consequences of a work injury or the treatment obtained because of the work injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970). In this case, substantial evidence established that Claimant's altered gait caused by her right knee injury led to pain in her lower back and left hip. Dr. Chan, M.D. credibly opined that Claimant's symptoms are a "compensatory" injury related to her right knee. Also, Claimant credibly testified that prior to the onset of her right knee symptoms she had never experienced any pain or symptoms in her lower back or left hip. For these reasons, Claimant's lower back and left hip symptoms are deemed to be causally related to the compensable February 25, 2017, right knee injury.

Medical Benefits

8. A claimant is entitled to authorized medical treatment that is related and reasonably necessary to cure and relieve the effects of the injury. Section 8-42-101(1)(a), C.R.S.; *Yeck v. Industrial Claims Appeals Office*, 996 P.2d 228 (Colo.App. 1999). A claimant bears the burden to prove by a preponderance of the evidence the causal relationship between the work-related injury and the condition for which treatment is sought. *Snyder v. Industrial Claims Appeals Office,* 942 P.2d 1337 (Colo.App. 1997).

9. An employer is responsible for medical treatment when, in the normal progression of treatment, an authorized treating physician refers the claimant to other providers for additional treatment. *Greager v. Industrial Commission*, 701 P.2d 168 (Colo.App. 1985). If a claimant seeks treatment outside the chain of authorized providers, respondents are not required to pay for it. Section 8-43-404(7), C.R.S.; *Yeck v. Industrial Claims Appeals Office, supra.*

10. As found, Claimant has proven by a preponderance of the evidence that she sustained a compensable right knee injury on February 25, 2017, that ultimately led to pain in her lower back and left hip. Claimant is therefore entitled to receive reasonable, necessary and casually related medical benefits for her right knee, lower back, and left hip injuries.

11. The medical treatment Claimant received through HealthONE Occupational Medicine and Rehabilitation, Health Images, Western Orthopedics, Colorado Occupational Medical Partners, Inc., Mile High Sports & Rehabilitation, and Injury Care Associates is found to be reasonable, necessary, and related to Claimant's compensable claim.

Temporary Disability Benefits

12. To prove entitlement to temporary total disability benefits, a claimant must prove the industrial injury caused a "disability." Section 8-42-103(1), C.R.S.; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). The term "disability" connotes two

elements. The first is “medical incapacity,” which is evidenced by loss or impairment of bodily function. The second is temporary loss of earning capacity, which is evidenced by the claimant’s inability to perform his pre-injury full duty job. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). Temporary disability benefits continue until the occurrence of one of the four terminating events specified in Section 8-42-105(3), C.R.S. *PDM Molding, Inc. v. Stanberg, supra*.

13. Claimant’s February 25, 2017 injury/aggravation caused functional limitation and restriction the prohibited her from completing her full, regular duty job for Employer. This is reflected by the restrictions assigned by Dr. Kalevik. Claimant’s functional limitations and restrictions interfered with her ability to work for Employer. As a result, Claimant testified that she lost wages between April 30, 2017, and October 16, 2017. Claimant has established by a preponderance of the evidence that she is entitled to temporary total disability benefits for that period.

Average Weekly Wage

14. The average weekly wage of an injured employee shall be taken as the basis upon which to compute compensation payments. Section 8-42-102(2), C.R.S. normally requires a judge to determine a claimant’s average weekly wage based on her earnings at the time of injury. A judge must calculate the money rate at which services are paid to the claimant under the contract of hire in force at the time of the injury. *Pizza Hut v. ICAO,* 18 P.3d 867, 869 (Colo. App. 2001). However, Section 8-42-102(3), C.R.S. authorizes a judge to exercise discretionary authority to calculate an average weekly wage in another manner if the prescribed methods will not fairly calculate the average weekly wage based on the particular circumstances of the case. *Campbell v. IBM Corp*., 867 P.2d 77, 82 (Colo. App. 1993). The overall objective in calculating an average weekly wage is to arrive at a fair approximation of a claimant’s wage loss and diminished earning capacity*. Ebersbach v. United Food & Commercial Workers Local No. 7*, W.C. No. 4-240- 475 (ICAO May 7, 1997).

15. As found, a calculation based on the relevant period of September 16, 2016, through February 15, 2017, results in an AWW of $492.17. This constitutes a fair approximation of Claimant’s wage loss and diminished earning capacity.

ORDER

1. Claimant suffered a compensable work-related injury to her right knee on February 25, 2017.

2. Claimant’s lower back and left hip injuries are a natural consequence of her February 25, 2017, injury, and are therefore causally related to this compensable claim.

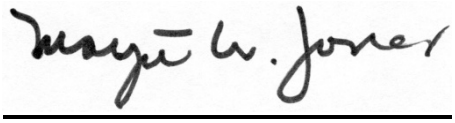
3. Respondents are financially responsible for all medical treatment that is reasonable, necessary and related to Claimant’s right knee, lower back, and left hip injuries. This includes treatment previously provided and treatment

recommended in the future to cure and relieve the effects of Claimant's compensable injuries.

4. Claimant shall receive TTD benefits for the period of April 30, 2017 to October 16, 2017.

5. Claimant's AWW is $492.17.

DATED: March 21, 2018



Margot W. Jones, Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant has proven by a preponderance of the evidence the medical treatment recommended by Dr. Sacha is reasonable, necessary and related to Claimant's January 10, 2017 admitted industrial injury.

II. Whether Respondents have proven by a preponderance of the evidence no further medical treatment is reasonable, necessary and related to Claimant's January 10, 2017 admitted industrial injury.

FINDINGS OF FACT

1. Claimant is a 49 year old woman.

2. Claimant was not present at hearing and did not testify.

Prior History

3. Claimant has a history of anxiety, panic attacks, and depression.

4. Claimant injured her neck and back in a non-work-related 2011 motor vehicle accident, which was treated in part with opioids and facet joint injections. A September 2012 cervical spine MRI revealed a C4-5 disc bulge.

5. Claimant filed for social security disability benefits in 2013. Claimant reported "sharp pain in neck, very severe, pain down right arm, numbness in hands, sharp pain in lower back, numbness and tingling in feet." Claimant also reported she had been unable to work since October 21, 2012 due to a bulging disc in her back and neck and anxiety. Claimant did not qualify for social security disability benefits.

6. On December 8, 2014, Claimant sustained an injury while working for a different employer. Claimant reported that a five pound metal beam fell and struck her on the left side of her forehead. Claimant underwent treatment at Concentra and was diagnosed with a cervical strain with radicular symptoms, post-concussion syndrome, headaches, and adjustment reaction with anxious mood. Claimant's Concentra physicians referred her for a variety of care, including an MRI, EMG, neurology consultation, psychotherapy with Joel Cohen, Ph.D., care with a concussion specialist Susan Ladley, M.D., vestibular rehabilitation, physical therapy, and delayed recovery specialist care with Dr. Eric Tentori, D.O.

7. At a January 14, 2015 neurological evaluation with Eric K. Hammerberg, M.D., Claimant reported neck pain, headaches, nausea, vomiting, and dizziness. Claimant's

EMG was negative. Her November 24, 2015 cervical MRI noted the same C4-5 disc bulge from her 2012 MRI.

8. On February 2, 2015, Claimant began psychotherapy care with Dr. Cohen. Dr. Cohen opined that it is "imperative that we distinguish between injury-related issues…and noninjury-related longstanding…physical issues…which led to her decision to…apply for SSDI coupled with her very obvious propensity for anxiety." On March 9, 2015, Dr. Cohen noted Claimant should be showing significant signs of improvement in her mild postconcussive syndrome, and that "a substantial degree of her psychological issues [are] preexisting and longstanding in nature and need to be addressed and treated outside of the workers' compensation system." On December 16, 2015, Dr. Cohen opined Claimant's symptoms are not characteristic of postconcussive issues, but are related to non-injury psychosocial stressors. Dr. Cohen noted Claimant's vertigo may be related to her anxiety.

9. Claimant did not give a history of neck trauma, pain, or cervical disc bulge from her 2011 accident to any of the eight providers she treated with for her 2014 injury. Claimant. In Respondents' written interrogatories, Claimant was asked about treatment in the five years predating her January 2017 work injury. Claimant did not disclose her neck condition/treatment in 2012 or 2013, nor did she list those providers. Claimant again did not provide this information in her supplemental answers.

10. Claimant filed a workers' compensation claim for the 2014 injury, which was closed due to her failure to follow up her with medical care at a January 19, 2017 demand appointment. Her treating physicians never released her and more care was recommended.

Current Injury

11. On January 10, 2017, Claimant sustained an admitted industrial injury while working for Employer. Claimant reported to her supervisor, Jose Botello, that a mop bucket fell from a hook and struck her on the head.

12. Mr. Botello offered credible testimony at hearing on behalf of Respondents. Mr. Botello testified he was sitting approximately five feet away from where the incident occurred. He did not see the incident, but did hear the sound of an empty mop bucket hit what he believed to be the sink then the floor. Mr. Botello stated the mop buckets are plastic and hang on hooks approximately seven feet above the ground. He estimated the mop buckets weigh no more than five pounds. Mr. Botello testified he observed Claimant standing after the incident. She was not bleeding or slurring her speech, and had no apparent swelling or bumps on her head. He stated Claimant continued to work a portion of her shift and complained of symptoms. He subsequently released Claimant from the remainder of her shift to seek medical attention. No medical records were provided indicating Claimant sought medical attention January 10, 2017 through January 15, 2017.

13. On January 16, 2017, Claimant presented to the emergency department at the Medical Center of Aurora with complaints of nausea, vomiting, intermittent headaches and vertigo. Claimant reported a mop bucket fell and hit her on the back of the head while she was bent over. It was noted Claimant did not lose consciousness. CT scans were normal. Claimant was treated for a concussion and discharged.

14. Claimant began treating at Concentra on January 19, 2017. Claimant presented with complaints of headache, nausea, dizziness, ringing in her ears, bilateral neck pain, and tingling in her hands and fingers. Claimant did not give a history of her 2011 neck injury. On physical examination, Natasha Deonarain, M.D. noted tenderness in the cervical spine and "possible overexaggerated response to very light palpation over the posterior cervical and upper shoulder girdle." Dr. Deonarain further noted full range of motion and no spasms, facial lesions or swelling. She gave an assessment of a closed head injury and concussion. She released Claimant to modified duty, prescribed Tramadol, and referred Claimant to a neurologist.

15. Respondents filed a General Admission of Liability ("GAL") on January 31, 2017, admitting for medical benefits and temporary total disability ("TTD") from January 13, 2017 and ongoing.

16. A February 13, 2017 MRI of Claimant's head/brain was normal.

17. Respondents filed a second GAL on February 14, 2017 admitting for medical benefits, TTD from January 13, 2017 through January 22, 2017, and temporary partial disability from January 23, 2017 and ongoing. Respondents contend they were not aware of Claimant's pre-existing condition when they filed the GALS, and did not receive medical records documenting Claimant's prior condition until October 18, 2017

18. On March 1, 2017, Claimant attended a neurological consultation with Alexander H. Zimmer, M.D. Claimant reported sustaining a concussion in December 2014 and experiencing headaches and numbness in her fingertips that never resolved. Claimant estimated having headaches five days a week after the 2014 accident. Dr. Zimmer noted Claimant had a history of depression since 2010 and panic attacks for several years with high frequency. Dr. Zimmer's examination revealed a normal comprehensive cranial nerve exam and sensory exam over the lower extremities, as well as a negative Romberg test with swaying at the waist. He opined Claimant sustained a concussion and recommended Claimant continue current treatment. He noted he would attempt to obtain medical records to review Claimant's baseline condition prior to the January 10, 2017 injury.

19. Despite undergoing conservative treatment, including physical therapy and medication, Claimant continued to report worsening symptoms. Claimant was eventually referred to delayed recovery specialist John Burris, M.D.

20. Dr. Burris first evaluated Claimant on June 7, 2017. Claimant reported 7/10 pain, headaches, and ongoing problems with memory and cognition. Dr. Burris' notes do not contain any reference to Claimant's 2011 injury. On physical examination, Dr.

Burris noted full neck range of motion with negative Spurling's sign bilaterally, and a normal neurologic examination. He diagnosed Claimant with a head contusion, noting he suspected "a fair amount of psychosomatic overlay" in Claimant's presentation. He recommended Claimant discuss possible other medication trials with Dr. Zimmer and undergo a neuropsychological evaluation.

21. Claimant returned to Dr. Burris for a follow-up evaluation on June 21, 2017 complaining of worsening pain headache and neck pain. She denied persistent numbness or weakness in her extremities. Dr. Burris noted functional self-limited range of motion, diffuse tenderness with no localized muscle spasm or trigger points, and a normal neurologic exam. He again remarked Claimant presented with "clear psychosomatic overlay," noting Claimant continued to report worsening symptoms and "very elevated subjective" pain complaints after a "minor workplace event." He referred Claimant to a rehabilitation specialist, John Sacha, M.D. He remarked, "Based on the overall clinical picture, including her request for her to be taken off of work, it indicates that likely secondary gain issues are contributing to her symptom maintenance."

22. Claimant presented to Dr. Sacha on July 17, 2017. He noted Claimant has long history of preexisting neck pain and closed head injury, including a motor vehicle accident "15 years ago" and a mild closed head injury with whiplash three years ago. He documented an incorrect mechanism of injury, noting Claimant fell nine feet and hit her head. Claimant reported constant pain to her neck bilaterally with radiation in the occipital and periorbital area bilaterally, some dizziness, nausea, vomiting, insomnia, and bilateral ear ringing, and some difficulties with concentration, memory and speech. Dr. Sacha opined that there was no evidence of a closed head injury and gave the following impression: cervical facet syndrome posttraumatic in nature, occipital neuralgia secondary to cervical facet syndrome, dizziness and blurry vision secondary to cervical facet syndrome, and adjustment disorder. He recommended a change in medications, cervical MRI, chiropractic treatment, acupuncture, and a psychological evaluation with Dr. Cohen.

23. Claimant continued to have persistent and expanding pain complaints in subsequent visits with Dr. Burris on August 9, 2017 and August 16, 2017. Dr. Burris noted he agreed with Dr. Sacha's recommendations. At both visits, Claimant demanded to be taken off of work, purporting she could not perform light duty work. Dr. Burris took Claimant off of work on August 16, 2017, stating, "It is clear that there is psychosomatic overlay likely contributing to symptom maintenance as well as potential secondary gain. Given all that is going on at this point, I recommend taking her off of work until we can try to get some of these issues resolved."

24. On August 22, 2017, Lloyd J. Thurston, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. He issued an IME report on August 24, 2017. Dr. Thurston reviewed Claimant's medical records from January 16, 2017 through July 26, 2017 and performed a physical examination. Claimant reported feeling 80% recovered from the 2014 injury at the time of the January 10, 2017 incident. She reported that after the January 10, 2017 incident she felt 30% recovered to her pre-injury state, which she defined as her ailments from her 2014 injury. Claimant

rated her pain 8/10 on average. She did not disclose her 2011 injury to Dr. Thurston. On physical examination, Dr. Thurston noted normal cervical range of motion with the exception of cervical extension, left side flexion and left rotation, mild tenderness to palpation over the greater occipital nerves with no localized discomfort with facet loading or firm palpation over the facets, mild upper cervical paraspinous muscle tenderness without trigger points or localized spasm, and negative Spurling's maneuver. Dr. Thurston agreed Claimant did not suffer a head injury, concussion or traumatic brain injury as a result of her January 10, 2017 injury. He opined Claimant suffered a minor exacerbation of her December 2014 injuries. He noted that without the medical records from Claimant's 2014 injury, he was unable to determine what, if any, of Claimant's current symptoms are related to the January 10, 2017 work injury.

25. On September 27, 2017, Dr. Sacha noted he previously documented an incorrect mechanism of injury due to a typographical error. He revised the history of accident to reflect that a bucket fell eight feet and hit Claimant's head. Dr. Sacha did not change his assessment of cervical facet syndrome, occipital neuralgia secondary to cervical facet syndrome, and adjustment disorder.

26. On October 4, 2017 Dr. Burris noted Claimant "continues to have diffuse pain complaints which do not follow anatomical pattern…"

27. Dr. Sacha reviewed surveillance video of Claimant and issued reports dated October 16, 2017 and November 20, 2017. He noted Claimant had "significantly more pain behaviors" when she presented at his office, and more functional ability than she reports and when observed in his office. He noted function is usually not compromised with cervical facet syndrome. Dr. Sacha stated that nothing on the surveillance video changed his opinion with respect to diagnosis, causality or recommendations for treatment. He opined Claimant is not at maximum medical improvement ("MMI"), and continued to recommend a cervical spine MRI and a trial of cervical facet injections and occipital nerve blocks for diagnostic, treatment and causality purposes.

28. The ALJ reviewed surveillance video taken July 17, 2017, July 19, 2017 and September 1, 2017. Claimant is observed walking, standing, bending, squatting, climbing stairs, tossing large garbage bags, and carrying a large purse, all with no apparent discomfort. Claimant appeared to be dizzy and swayed on approximately one occasion.

29. On November 9, 2017, Dr. Thurston issued an addendum to his August 24, 2017 IME report after reviewing records from Claimant's 2014 injury. Dr. Thurston opined Claimant's symptoms were residual from her 2014 injury and are consistent with the diagnosis of malingering. He outlined the American Psychiatric Association's multi-factor test for malingering, and opined Claimant satisfied at least three of the four criteria. Dr. Thurston opined Claimant does not need any further medical evaluation or treatment. Dr. Thurston opined Claimant required further care for her psychological issues outside of the worker's compensation system.

30. On November 16, 2017, Dr. Thurston testified by deposition as an expert in occupational medicine. Dr. Thurston testified consistent with his IME report and addendums. Dr. Thurston testified Claimant sustained a minor injury with nonspecific symptoms that are out of proportion to her exam findings, and diagnostic studies have not confirmed the source of Claimant's pain. Dr. Thurston disagreed with Dr. Sacha's diagnosis of posttraumatic cervical facet syndrome, as there were no indications of cervical facet syndrome on his examination of Claimant. He opined Claimant's symptoms are not related to the January 10, 2017 work injury and no further medical treatment, including a cervical MRI, chiropractic care, acupuncture or injections, is reasonable, necessary or related to the January 10, 2017 work injury. Dr. Thurston agreed with Dr. Burris that there is a fair amount of psychosomatic overlay with Claimant, along with indications of secondary gain and malingering. Dr. Thurston stated he would recommend Claimant undergo psychological treatment outside of the workers' compensation system.

31. Dr. Burris reevaluated Claimant on December 6, 2017. He supported Dr. Sacha's recommendations for diagnostic injections. He remarked that Claimant "has no objective findings with extreme pain behaviors." He noted Claimant refused to go back to work and stated, "I do not believe that there is any objective basis to have the patient off of work. However, given her extreme reaction in the past I am not ready to release her back to light activities."

32. Dr. Thurston reviewed additional medical records from Dr. Sacha and Dr. Burris and issued a second addendum report on January 8, 2018. Dr. Thurston opined Claimant does not have cervical facet syndrome, pain arising from cervical facets or adjustment disorder. He stated Claimant's neck pain was not the result of the January 10, 2017 industrial injury. Dr. Thurston reiterated his opinion that Claimant sustained minor trauma with no objective evidence of a traumatic brain injury or neck injury beyond a mild cervical myofascial strain. He noted Claimant's headaches, dizziness and neck pain never completely resolved from her 2014 injury. Dr. Thurston again noted there was no significant objective pathology on exam consistent with Claimant's symptoms and mechanism of injury, and no imaging studies identified objective pathology explaining her symptoms. He noted Claimant's lack of response to "appropriate treatments" was not physiologic. Dr. Thurston opined Claimant suffered a head contusion and cervical myofascial strain as a result of the January 10, 2017 incident. He continued to opine further medical treatment was not reasonable, necessary or related to Claimant's January 10, 2017 injury. He explained that, even if the facet injections produced a positive diagnostic response, such response does not establish Claimant's symptoms are caused by the January 10, 2017 injury. Dr. Thurston opined Claimant at MMI with 0% impairment with no restrictions and no need for medical maintenance care.

33. The ALJ credits the opinion of Dr. Thurston over the conflicting opinions of Drs. Sacha and Burris.

34. Claimant failed to prove by a preponderance of the evidence that the medical treatment recommended by Dr. Sacha, including a cervical MRI, chiropractic treatment,

acupuncture, psychological evaluation, occipital injections and facet injections, is reasonable, necessary and related to Claimant's January 10, 2017 industrial injury.

35. Respondents established by a preponderance of the evidence that no further medical treatment is reasonable, necessary or related to Claimant's January 10, 2017 industrial injury.

36. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 165 Colo. 504, 441 P.2d 21 (1968).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo.

1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Medical Care

A respondent is liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. *Colorado Compensation Insurance Authority v. Nofio*, 886 P.2d 714 (Colo. 1994). The determination of whether a particular treatment is reasonable and necessary to treat the industrial injury is a question of fact for the ALJ. *See generally Parker v. Iowa Tanklines, Inc.*, W.C. No. 4-517-537 (May 31, 2006); *Chacon v. J.W. Gibson Well Service Company*, W. C. No. 4-445-060 (February 22, 2002). Causation is also a question of fact for resolution by the ALJ. *F.R. Orr Construction v. Rint*, 717 P.2d 965 (Colo. App. 1985).

Respondents are permitted to challenge causation and relatedness of the need for any treatment, despite having admitted liability for a claim. *Hanna v. Print Expediters, Inc*. 77 P.3d 863 (Colo. App. 2003). In a dispute over medical benefits that arises after filing an admission of liability, respondents may assert, based upon subsequent medical reports, that a workers' compensation claimant did not establish a threshold requirement of direct causal relationship between the on-the-job injury and need for medical treatment. *Snyder v. Industrial Claim Appeals Office of the State of Colo.,* 942 P.2d 1337 (Colo. App. 1997). Claimant bears the burden to prove a causal connection exists between a particular treatment and the industrial injury, and that the treatment is reasonable and necessary. *Id*.; *see also Grover v. Industrial Commission of Colorado*, 759 P.2d 705 (Colo. 1988).

Where, however, respondents attempt to modify an issue that previously has been determined by an admission of liability, they bear the burden of proof for such modification. *Section 8-43-201(1), C.R.S*.; *Dunn v. St. Mary Corwin Hospital*, W.C. No. 4-754-838 (Oct. 1, 2013); *see also Salisbury v. Prowers County School District*, W.C. No. 4-702-144 (June 5, 2012); *Barker v. Poudre School District*, W.C. No. 4-750-735 (July 8, 2011). When respondents seek a ruling at hearing that would serve as "terminating the claimant's right to receive medical benefits," they are seen as seeking to reopen that admission and the burden is theirs. In *Salisbury v. Prowers County School District*, *supra,* the Industrial Claims Panel held that where the effect of the respondents' argument is to terminate previously admitted maintenance

medical treatment, the respondents have the burden, pursuant §8-43-201(1), C.R.S., to prove that such treatment is not reasonable, necessary or related to the claimant's industrial injury.

Here, Respondents seek a determination that both the specific treatment recommended by Dr. Sacha and any further medical treatment is not reasonable, necessary and related to Claimant's January 10, 2017 industrial injury. Claimant bears the burden of proof with respect to the specific treatment recommended by Dr. Sacha. As Respondents' challenge to any further medical treatment is effectively a request to modify their previously filed GALs and terminate Claimant's right to receive medical benefits, Respondents have the burden of proof regarding further medical treatment.

The preponderance of the evidence establishes that both the specific medical treatment recommended by Dr. Sacha, and any further medical treatment is not reasonable, necessary and related to Claimant's January 10, 2017 industrial injury. Both Dr. Thurston and Dr. Burris note Claimant sustained a very minor injury, with overexaggerated responses, non-objective findings, psychosomatic overlay and indications of secondary gain. Dr. Burris complied with Claimant's repeated demands to be taken off of work, despite his own acknowledgment that there is no objective basis to do so.

The medical records clearly establish Claimant has a longstanding history of pre-existing cervical pain, hand numbness, headaches, dizziness, nausea, depression and anxiety, much of which had not resolved prior to the January 10, 2017 injury. Claimant's 2011 injury caused significant enough neck pain that she underwent medical treatment and applied for social security disability. Claimant failed to disclose this information to providers, with the exception of Dr. Sacha, to whom she incorrectly informed that the accident was 15 years prior. There is no indication Drs. Sacha and Burris reviewed medical records from Claimant's 2011 and 2014 injuries, which resulted in many of the same symptoms as the January 10, 2017 injury, and for which Claimant had already received some of the same treatment recommended by Dr. Sacha, including facet injections and cervical MRIs.

Dr. Thurston conducted a thorough medical records review and physical examination, and was aware of the extent of Claimant's pre-existing condition and treatment. Accordingly, Dr. Thurston's opinion is more credible and persuasive than the opinions of Drs. Sacha and Burris, which are based on an incomplete view of Claimant's medical condition. Dr. Thurston credibly and persuasively opined that Claimant does not have cervical facet syndrome or related symptoms, Claimant's current symptoms and need for treatment are not related to the January 10, 2017 work injury, and Dr. Sacha's recommendations and any further medical treatment is not reasonable, necessary and related to the January 10, 2017 work injury. Based on the totality of the evidence, it is more likely than not that Dr. Sacha's recommended treatment, as well as any further medical treatment, is not reasonable, necessary or related to the January 10, 2017 industrial injury.

ORDER

It is therefore ordered that:

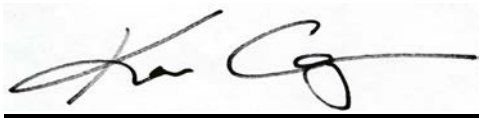
1. Claimant's request for chiropractic care, acupuncture, psychological treatment, occipital injections, facet injections and a cervical MRI as recommended by Dr. Sacha is denied and dismissed.

2. No further medical care is reasonable, necessary or related to Claimant's January 10, 2017 injury. Respondents are not liable for additional medical treatment related to Claimant's January 10, 2017 injury.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 2, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

I. Whether Claimant established, by a preponderance of the evidence, that the explantation of an existing spinal cord stimulator and re-implantation of a DRG spinal cord stimulator or IPG reprogramming is reasonable and necessary post-MMI medical treatment.

II. Whether Claimant established, by a preponderance of the evidence, that the ongoing prescriptions of Celebrex and Cymbalta are reasonable and necessary post-MMI medical treatment.

III. Whether Claimant established, by a preponderance of the evidence, that the ongoing prescription of physical therapy is reasonable and necessary post-MMI medical treatment.

FINDINGS OF FACT

1. On May 25, 2009, Claimant suffered an admitted industrial injury to his right hip and groin during the course and scope of his employment with Employer. Claimant stepped off a pallet and felt a pop in his hip and groin area.

2. Claimant treated with Michael J. Gesquiere, M.D. He was initially diagnosed with lumbar and groin strains. Claimant underwent a femoral hernia repair and hip surgery in 2009. He subsequently had various forms of conservative treatment and diagnostic procedures.

3. Brian Beatty, D.O. placed Claimant at MMI on July 12, 2011 with a 2% whole person impairment rating for injuries to Claimant's ilioinguinal nerve.

4. Claimant returned to Dr. Gesquiere for an evaluation on January 3, 2012. Dr. Gesquiere noted that Claimant suffered from chronic pain syndrome and opioid dependence. Claimant sought to decrease his reliance on narcotic pain medications. Dr. Gesquiere recommended neuromodulation therapy or a spinal cord stimulator in an attempt to decrease pain, improve function and reduce reliance on narcotic pain medications.

5. On January 4, 2012, Claimant underwent a Division Independent Medical Examination ("DIME") with John Aschberger, M.D. Dr. Aschberger opined Claimant reached MMI as of July 12, 2011, with a combined 16% whole person impairment, consisting of impairments for loss of range of hip motion, neurological condition, and iliohypogastric nerve and ilioinguinal nerve impairments. Dr. Aschberger recommended

maintenance medication and physician follow-ups with drug monitoring. Regarding the recommended spinal cord stimulator, Dr. Aschberger stated,

> [Claimant] should understand that there are issues that may occur with spinal cord implantation and associated complications. It certainly will be an unusual case where it completely eliminates use of medication for symptomatic control. That being said, given his response to the nerve blocks at the high lumbar levels, he is a candidate for a nerve stimulator trial.

6. On January 27, 2012, Glenn M. Kaplan, Ph.D. examined Claimant and opined Claimant was a candidate for a neurostimulator procedure for chronic pain management.

7. Dr. Gesquiere renewed his recommendation for a spinal cord stimulator on February 3, 2012, March 2, 2012, March 22, 2012, and June 7, 2012. On June 7, 2012, Dr. Gesquiere stated that he hoped a spinal cord stimulator would relieve nerve pain, decrease Claimant's dependence on medications, improve his overall function, and allow Claimant to return to work.

8. On February 27, 2012, Respondents filed a Final Admission of Liability admitting for reasonably necessary and related post-MMI medical benefits.

9. On May 4, 2012, Brent Van Dorsten, Ph.D., performed an independent psychological evaluation at the request of Respondents. Dr. Van Dorsten issued a report dated May 14, 2012. He opined Dr. Kaplan's examination did not meet the Medical Treatment Guidelines requirement for a comprehensive psychiatric or psychological evaluation. Dr. Van Dorsten discussed multiple risk factors, including involvement in litigation, heavy job demands, Claimant's belief that he has chronic nerve damage, and pre-injury psychological treatment for depression and anxiety. He stated that Claimant's belief he has nerve damage requiring stimulation treatment should be address prior to proceeding to spinal stimulation. He concluded that "a pre-surgical psychological assessment of risk factors for surgical treatment outcome does not easily allow for a yes or no dichotomous decision."

10. On May 18, 2012, J. Tashof Bernton, M.D. conducted an independent medical examination ("IME") at the request of Respondents. Dr. Bernton reviewed medical records and physically examined Claimant. Dr. Bernton opined spinal cord stimulation was not reasonable, necessary, or consistent with the Medical Treatment Guidelines, referring to spinal cord stimulation as a "grossly inappropriate medical intervention" for Claimant. In support of his position, Dr. Bernton discussed Claimant's variable response to different procedures, psychologic factors, and a "dramatic disconnect between the patient's reported pain levels and functional impairment and his physical examination which is remarkably benign." Dr. Bernton also opined that Claimant should withdraw from narcotic medications.

11. On August 8, 2012, Claimant went to hearing before ALJ Bruce C. Friend. ALJ Friend issued an order dated August 23, 2012 denying Dr. Gesquiere's request for prior authorization for a spinal cord stimulator. ALJ Friend relied on Dr. Bernton's report and testimony in determining that the spinal cord stimulator trial was not reasonably needed to cure and relieve Claimant from the effects of his industrial injury.

12. On October 9, 2012, Claimant underwent a spinal cord stimulator trial through his private insurance. Because he reported pain relief of approximately 80% to 90% with the trial, Dr. Gesquiere permanently implanted a spinal cord stimulator on December 17, 2012. However, by January 15, 2013, Claimant's pain had returned to an 8/10 level.

13. Dr. Bernton reevaluated Claimant on June 4, 2013. Claimant reported right hip and groin pain, lower back pain, and neck pain. Claimant could not identify any functional improvement since the implantation of the spinal cord stimulator. Claimant was asked to rate his pain levels on a 0 to 10 scale, where 0 was no pain and 10 was pain so severe you would faint or die. Claimant noted pain levels as high as a 7 in his right leg and hip, with his least pain being a 3 to 4; pain as high as an 8 to 9 in his low back, with his least pain being a 6 to 7; and with respect to his neck, Claimant noted pain levels as high as an 8 to 9, with his least pain being a 6 to 7. Dr. Bernton remarked that Claimant's pain levels had not substantially changed and there was no improvement in Claimant's level of function. He opined that maintenance of the spinal cord stimulator was non work-related. Dr. Bernton continued to recommend withdrawal from narcotic medications.

14. On August 14, 2013, Claimant went to hearing before ALJ Barbara S. Henk on the issue of Claimant's medications. ALJ Henk issued a Summary Order dated November 5, 2013. Relying on Dr. Bernton's reports and testimony, ALJ Henk ruled that Claimant failed to prove that the Morphine ER, Klonopin, Norco and Nucynta were reasonable and necessary medications related to the May 25, 2009 accident. She found that Claimant met his burden in proving that Cymbalta, Tramadol and Celebrex were reasonable and necessary.

15. Claimant continues to take the narcotic pain medications of Hysingla ER, Roxicodone, Klonopin, together with the non-narcotic prescription medications of Cymbalta and Celebrex.

16. On August 25, 2014, Dr. Gesquiere performed right L3-L4 facet joint blocks, a L3 medial branch nerve block, a right L4-L5 facet joint block and a L5 medial branch block. Claimant reported 50% relief from the blocks.

17. On September 29, 2014, Dr. Gesquiere requested prior authorization for right L3-4, L4-5 and L5-S1 radiofrequency nerve ablations, opining that Claimant's facet joints were his identified pain generators. Insurer denied Dr. Gesquiere's prior authorization request.

18. On November 11, 2014, Dr. Bernton conducted a third IME, reviewing additional medical records and physically examining Claimant. Relying on the Medical Treatment

Guidelines, Dr. Bernton concluded that L3-L4, L4-L5 and L5-S1 radiofrequency nerve ablation was not reasonable, necessary and causally related to Claimant's May 25, 2009 industrial injury. Dr. Bernton explained that a medial branch block is a procedure used to determine whether the facet is the pain generator. The Medical Treatment Guidelines require an 80% response from medial branch blocks to proceed with a radiofrequency ablation. Dr. Bernton opined that, because Claimant received only 50% relief, the medial branch blocks were non-diagnostic.

19. On March 4, 2015, Claimant went to hearing before ALJ Peter J. Cannici on the issue of authorization of the requested radiofrequency facet blocks. ALJ Cannici issued an order dated May 21, 2015. Relying on Dr. Bernton's reports and April 10, 2015 deposition testimony, ALJ Cannici held that Claimant failed demonstrate it is more probably true than not that the request for prior authorization of L3-L4, L4-L5 and L5-S1 radiofrequency nerve ablation by Dr. Gesquiere was reasonable, necessary and causally related to his May 25, 2009 industrial injury.

20. Claimant continued to treat with Dr. Gesquiere through his private insurance. Claimant resumed physical therapy in approximately March 2016.

21. On May 23, 2016, Claimant saw Eric Anderson PA-C at Dr. Gesquiere's office. Claimant reported a pain score of 6-7/10, with 50-60% relief from his medications. PA-C Anderson noted, "Medications improve his quality of life. However, even with his medications his quality of life has decreased secondary to pain symptoms in his back and groin area. He is unable to do things such as walk distances or standing for long periods of time." Claimant reported being unsure if he was actually improving from the physical therapy.

22. On July 9, 2016. Claimant saw Dr. Gesquiere's assistant, Amber Aguilera. He reported worsening of symptoms over the last six to nine months. Ms. Aguilera noted, "[Claimant] has had a spinal cord stimulator analysis and reprogramming, it does seem to cover the appropriate area although its effectiveness has significantly declined to the point where he has reached pain levels not seen him in about 3 or 4 years. It is currently affecting his day-to-day activities." She further noted, "He has been increasing his medications secondary to lack of efficacy from long-term use of medications." Ms. Aguilera administered an ilioinguinal nerve block. She recommended Claimant undergo a spinal cord stimulator revision with updated technology including DRG therapy, noting estimates of 80-90% improvement of ilioinguinal pain.

23. Dr. Gesquiere referred Claimant to Dr. Kaplan for a psychological evaluation. Dr. Kaplan evaluated Claimant on November 17, 2016 and opined Claimant is an appropriate candidate for the DRG stimulator procedure, with no signs of secondary gain issues or need for psychological treatment.

24. On November 17, 2016, Dr. Gesquiere requested prior authorization for a DRG trial and, if successful, permanent placement.

25. On November 28, 2016, Respondents authorized the DRG trial and permanent implantation for a one year period.

26. On December 19, 2016, Eric Anderson, PA-C noted, "There seems to be confusion on the patients (*sic*) part as to what procedure is going to be done. He is cancelling his DRG for 12/28/16 and will follow up with Dr. Gesquiere to further discuss what is going to be done."

27. Dr. Gesquiere evaluated Claimant on January 17, 2017. He remarked,

> There has been some confusion on whether we were going to undergo DRG therapy or an IPG replacement…We discuss again our current plan of action for patient's SCS. His Worker's Comp approved DRG therapy but patient was under the impression we were proceeding with an IPG replacement. Given patient's success with current system in the past and present pain symptoms, I have agreed that an IPG replacement would be the best course of action to undertake. Patient needs time however to discuss with his attorney if worker's comp will change their authorization to cover his IPG replacement.

28. Claimant continued to treat at Dr. Gesquiere's office and continued to attend physical therapy. Medical reports note the physical therapy "helps tremendously for maintaining."

29. Dr. Bernton performed a fourth IME on November 7, 2017. Dr. Bernton reviewed additional medical records and physically examined Claimant. Dr. Bernton continued to opine Claimant does not meet the criteria for placement or replacement of a spinal cord stimulator, noting that there are no clearly defined pain generators and very strong psychologic factors. Dr. Bernton further noted that Claimant "failed to get significant relief from the initial spinal cord stimulator, as defined by lack of significant change in subjective pain reports, lack of functional change, and lack of significant reduction in pain medication." Dr. Bernton addressed an August 8, 2016 medical report that stated the stimulator's effectiveness significantly declined resulting in pain levels not seen by Claimant in the last three or four years and worsening of symptoms in last six to nine month. He emphasized that the medical records do not support such assessment, as the Visual Analog Pain scale "stayed remarkably consistent over a period of more than a year prior to that report." He further noted that Claimant's functional status was significantly better than most patients with spinal cord stimulators. Dr. Bernton continued to opine Claimant's narcotic medications should be tapered and discontinued. Regarding Claimant's other medications, Dr. Bernton stated,

> I believe at this point, on a work-related basis, an antiinflammatory medication may be reasonable. This could be Celebrex or another nonsteroidal. Patient has a preexisting history of depression, and it is my assessment that the use of Cymbalta at this period of time eight and one-half years following the occupational injury can reasonably be regarded as necessary care on a work-related basis….Some continuation of the anti-

> inflammatory at this point in time is the only treatment that I would regard as reasonable and necessary on a work-related basis.

30. Dr. Bernton testified at hearing as an expert in occupational and internal medicine. Dr. Bernton is Level II accredited by the Division of Workers' Compensation and board certified in occupational medicine and internal medicine. Dr. Bernton testified consistent with his reports. He testified that, almost nine years post-accident, Claimant's pain generators have never been adequately identified. He stated there is a very strong psychological component to Claimant's pain syndrome, as documented by psychological evaluations and is consistent with Claimant's pattern of very good or even "100%" relief of pain initially with procedures on multiple different pain generators, but the lack of any significant, long-lasting relief. Claimant's pain level and function has not materially changed. Dr. Bernton testified that Claimant does not meet the Medical Treatment Guidelines, Rule 17, Exhibit 9, criteria for placement or replacement of the spinal cord stimulator, as Claimant does not have a clearly defined pain generator. He noted that the medical records evidence very significant psychological factors complicating Claimant's pain presentation, which is another contraindication for spinal cord stimulator placement or replacement. Additionally, the record does not indicate Claimant got effective relief of pain when the original stimulator was placed. Dr. Bernton testified that replacing the stimulator placed on a non-work-related basis under the workers' compensation system would not be medically reasonable.

31. Dr. Bernton explained that a spinal cord stimulator consists of an impulse generating unit ("IPG") and leads. "DRG" refers to the dorsal root ganglion, the specific area where the stimulator is placed. Dr. Bernton testified that there have not been any dramatic technological advancements in spinal cord stimulators that would make placement or replacement of a stimulator reasonable in Claimant's case.

32. Dr. Bernton reiterated his opinion that Claimant's continued use of narcotic medications and Klonopin is not medically reasonable or necessary. Dr. Bernton opined that, if tapered from narcotics, Claimant's continued use of Celebrex and Cymbalta would be reasonable. He testified that, in light of Claimant's continued use of narcotic medications, Celebrex, an anti-inflammatory medication, is not reasonable or necessary. He stated Claimant's continued use of Cymbalta is reasonable and necessary.

33. Dr. Bernton further testified that the ongoing prescription of physical therapy almost nine years post-accident is not reasonable and necessary and is not consistent with the Medical Treatment Guidelines. Dr. Bernton stated that Claimant can continue Pilates exercises in a home exercise program.

34. Claimant testified that he continued working two jobs after the industrial injury. In October 2017, Claimant began working a different job managing call centers.

35. Claimant testified that he experienced 80% relief of pain with the trial stimulator and 30-40% relief after the permanent placement. He stated that, at the most, he has experienced 40% relief, even with multiple attempts to cover different areas. Claimant testified that he would like an effective electronic stimulator to allow him to wean off of

opioid medications, which he sees as dangerous to his health. His belief is that new technology and better lead placement holds prospects for better results than what he has currently.

36. Claimant testified that he takes Cymbalta, Celebrex, and Hysingla in the morning, oxycodone for spikes in pain, and Klonopin in the evening to assist with sleep. He testified that on medications his pain is 6-7/10. Claimant testified that he experienced increased swelling and pain when he was without Celebrex.

37. Claimant stated that he has been participating in physical therapy for almost two years, and has benefitted from the core strengthening. He testified that at home he does not have access to Pilates devices, exercise balls and plastic bands used in physical therapy. Claimant wants to continue physical therapy.

38. At hearing, Respondents challenged the reasonableness and necessity of Claimant's Celebrex, Tramadol and Cymbalta prescriptions. Respondents' position statement identifies Cymbalta prescription medication at issue.

39. Claimant has not used Tramadol for a few years.

40. The ALJ credits the opinion of Dr. Bernton over the conflicting opinion of Dr. Gesquiere on the issues of the spinal cord stimulator, physical therapy and ongoing prescriptions of Celebrex and Cymbalta.

41. Claimant failed to prove, by a preponderance of the evidence, that the spinal cord stimulator, physical therapy, and ongoing prescription of Celebrex are reasonable and necessary to cure and relieve Claimant of the effects of the May 25, 2009 industrial injury.

42. Claimant established, by a preponderance of the evidence, that the ongoing prescription of Cymbalta is reasonable and necessary to cure and relieve the effects of the May 25, 2009 industrial injury.

43. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, Section 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents. Section 8-43-201(1), C.R.S. Generally, the claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201(1), C.R.S. A preponderance of the evidence is that which leads the

trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Medical evidence is not required to establish causation and lay testimony alone, if credited, may constitute substantial evidence to support an ALJ's determination regarding causation. *Industrial Commission of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *Apache Corp. v. Industrial Commission of Colorado*, 717 P.2d 1000 (Colo. App. 1986).

The ALJ's resolution of issues will be affirmed if supported by substantial evidence in the record. Section 8-43-301(8), C.R.S.; *City and County of Denver School District 1 v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). Substantial evidence is that quantum of probative evidence, which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995).

Medical Benefits

The respondents are liable to provide such medical treatment "as may reasonably be needed at the time of the injury or occupational disease and thereafter during the disability to cure and relieve the employee of the effects of the injury." Section 8-42-101(1)(a), C.R.S. Colorado courts have ruled that the need for medical treatment may extend beyond the point of MMI where the claimant presents substantial evidence that future medical treatment will be reasonably necessary to relieve the effects of the injury or prevent further deterioration of her condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Stollmeyer v. Industrial Claim Appeals Office,* 916 P.2d 609 (Colo. App. 1995).

In cases where the respondents file a final admission of liability admitting for ongoing medical benefits after MMI they retain the right to challenge the compensability, reasonableness, and necessity of specific treatments. *Hanna v. Print Expediters Inc.,* 77 P.3d 863 (Colo. App. 2003). When the respondents challenge the claimant's request for

specific medical treatment the claimant bears the burden of proof to establish entitlement to the benefits. *Ford v. Regional Transportation District,* W.C. No. 4-309-217 (ICAO February 12, 2009). The question of whether the claimant proved that specific treatment is reasonable and necessary to maintain his condition after MMI or relieve ongoing symptoms is one of fact for the ALJ. *See Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

When determining the issue of whether proposed medical treatment is reasonable and necessary the ALJ may consider the provisions and treatment protocols of the Medical Treatment Guidelines because they represent the accepted standards of practice in workers' compensation cases and were adopted pursuant to an express grant of statutory authority. However, evidence of compliance or non-compliance with the treatment criteria of the Medical Treatment Guidelines is not dispositive of the question of whether medical treatment is reasonable and necessary. Rather the ALJ may give evidence regarding compliance with the Medical Treatment Guidelines such weight as he determines it is entitled to considering the totality of the evidence. *See Adame v. SSC Berthoud Operating Co., LLC.*, WC 4-784-709 (ICAO January 25, 2012); *Thomas v. Four Corners Health Care*, WC 4-484-220 (ICAO April 27, 2009); *Stamey v. C2 Utility Contractors, Inc.*, WC 4-503-974 (ICAO August 21, 2008).

As found, Claimant failed to prove it is more likely than not that the DRG spinal cord stimulator/IPG reprogramming is reasonable and necessary to cure and relieve the effects of the May 25, 2009 industrial injury. Subsequent to ALJ Friend's denial of Dr. Gesquiere's request for prior authorization for a spinal cord stimulator, Claimant underwent the procedure through his private insurance. The medical record establishes that, despite Claimant's initial reports of improvement in pain, there has been no material improvement in Claimant's pain or function. Dr. Bernton credibly opined that Claimant does not meet the Medical Treatment Guidelines criteria for neurostimulation, as Claimant's pain generator is unclear and there are strong psychological factors. Although Dr. Gesquiere has repeatedly recommended neurostimulation throughout Claimant's claim, he has not provided any analysis of the criteria for implantation under the Medical Treatment Guidelines, or any reason to deviate from the Medical Treatment Guidelines. While compliance with the criteria of the Medical Treatment Guidelines is not dispositive for purposes of the ALJ's determination, considering the totality of the evidence, the spinal cord stimulation procedure recommended by Dr. Gesquiere is not reasonable or necessary.

As found, Claimant failed to prove that it is more likely than not that the ongoing prescription physical therapy is reasonable and necessary. Dr. Bernton credibly opined that continued physical therapy in Claimant's circumstance is not indicated under the Medical Treatment Guidelines, and that Claimant can achieve the benefits of physical therapy through a home exercise program.

As found, Claimant also failed to prove that it is more likely than not the ongoing prescription of Celebrex is reasonable and necessary. Dr. Bernton credibly testified that, while Claimant continues to use narcotic medications, Claimant's use of Celebrex is not medically reasonable or necessary.

As found, Claimant established by a preponderance of the evidence that the ongoing prescription of Cymbalta is reasonable and necessary. Dr. Bernton credibly opined that the continued use of Cymbalta is reasonable and necessary.

ORDER

It is therefore ordered that:

1. Claimant failed to establish, by a preponderance of the evidence, that the spinal cord stimulator procedure is reasonable and necessary. Claimant's request for prior authorization of a DRG spinal cord stimulator or IPG revision is denied and dismissed.

2. Claimant failed to establish by a preponderance of the evidence that the ongoing prescription for physical therapy is reasonable and necessary. Respondents are not liable for the cost of physical therapy.

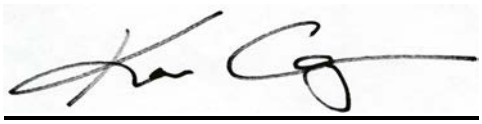
3. Claimant failed to establish, by a preponderance of the evidence, that the ongoing prescription for Celebrex is reasonable and necessary. Respondents are not liable for the cost of Celebrex.

4. Claimant established, by a preponderance of the evidence, that the ongoing prescription for Cymbalta is reasonable and necessary. Respondents are liable for the cost of Cymbalta.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 30, 2018



Kara R. Cayce.
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-969-585-03

ISSUES

The issues to be determined by this decision are the following issues:

- Whether Claimant has proven by a preponderance of the evidence that she sustained a compensable work injury on August 12, 2014?

- If so, whether Claimant has proven by a preponderance of the evidence that she is entitled to medical treatment.

FINDINGS OF FACT

1. Claimant complains of right hand and wrist pain which she has experienced for several years. Claimant first sought treatment for her complaints in 2007, treated at Concentra, and was eventually released.

2. Claimant again sought treatment at Concentra on July 27, 2012, with similar complaints. She reported experiencing pain in her right hand and wrist on and off for several years that was intermittent and would resolve on its own. She complained that recently her pain was worsening. Her treatment providers noted limited physical findings including some shaking in Claimant's hand and arm which her provider attributed to possible fatigue in her right upper extremity.

3. This is Claimant's third workers' compensation claim for the same cluster of symptoms.

4. Claimant works as an operations manager for Employer. She has been in that position for four years, and employed by Employer for fourteen years. Claimant testified that her position requires her to perform multiple job duties. These include renting cars to customers from a counter desk, checking in cars upon return, working at the security gate where she scans information related to the car to the customers' contracts, entering data, and preparing reports.

5. Claimant testified that on a normal day, she spends most of her shift at the rental counter. She did not quantify the period of time, though. There, she pulls up information on a computer, types in information provided by customers, and swipes credit cards. She testified that on a busy day she can help 12 to 15 people an hour. However, some days were slow and some parts of busy days were slow.

6. Claimant testified that she "constantly" uses a mouse because as she enters information into the computer or scanner, she clicks on different data fields. For example, when a customer picks up a rental car, she uses a tablet to scan in the car and

contract, and types in information. Claimant described the tablet as weighing between five and eight pounds.

7. When Claimant works at the security gate, she scans cars before they leave the lot to attach them to customers' contracts in Employer's database, and uses the mouse to switch between fields to enter information.

8. Claimant testified she completes daily reports that take approximately one hour to prepare. She stated the reports require researching contracts and returns, and data entry.

9. Claimant testified that she experienced pain, numbness, tingling and weakness first in her right wrist and then her left wrist.

10. On November 18, 2014, Genex performed a Job Site Analysis and concluded Claimant's job duties had no risk factors for repetitive use injuries. Claimant was observed performing her job duties for the analysis. The job site analysis took longer than usual as Claimant has multiple work stations and job functions. Her job duties included working outside of the office assisting staff with checking in customers for car rentals, doing reports in her office, and assisting with car returns and with security. The analyst found Claimant used a keyboard approximately two to three hours a day and her mouse use varied depending upon the task.

11. Claimant's keyboard use varied depending on the job duty, but ranged from 16 to 25 seconds per minute, which extrapolated into 16 to 25 minutes per hour and 2.1 to 3.3 hours per day. Claimant's mouse use averaged 19.11 minutes per hour while performing administrative work in her office, and 13.47 minutes per hour while working at the customer service desk. Claimant's total mouse use based on an eight hour work day was 1 hour and 48 minutes.

12. The job site analyst evaluated risk factors including force and repetition/duration, awkward posture and repetition/duration, computer work, use of vibratory power tools and duration, and cold working environment. The analysis found that force and repetition risk factors were not present in Claimant's job duties.

13. Claimant agreed the job site analysis was performed by observing her perform her job duties. She stated it was a slow day, but agreed that if her job duties were observed on a busier day, how she performed the task would not change – just how often she performed it. She agreed her job duties varied throughout the day and that she does not work behind a computer or with a tablet all day.

14. Claimant had been treating at Concentra for her bilateral upper extremity pain complaints. On December 4, 2014, Concentra released Claimant from care at MMI because the work site evaluation concluded that work related criteria were not met.

15. After Concentra released Claimant, she treated outside of the workers' compensation system with Dr. Von Linderman. Claimant reported that she began

developing left sided symptoms because she had overused her left upper extremity while her right side was more symptomatic.

16. On January 23, 2015, Claimant sought a second opinion with Dr. Davis. Claimant. Despite the job site analysis which concluded otherwise, she reported that her job duties involved "constant" typing and mousing for the prior ten years. Claimant also reported to Dr. Oh that she spent most of her work day typing.

17. On February 27, 2015, Claimant underwent an EMG/nerve conduction study with Dr. Oh. The testing results were within normal limits. Dr. Oh found no convincing evidence of compression neuropathy in the left wrist, or focal neuropathy, brachial plexopathy, or cervical radiculopathy in the right upper extremity.

18. On March 13, 2015, Claimant followed up with Dr. Davis. He noted that Claimant had myofascial pain in both hands and wrists, and that her symptoms did not clinically fit with carpal tunnel syndrome and the EMG testing was "completely normal." He pointed out that Claimant's thumb pain was diffuse and not localized to any one joint.

19. During a later visit on July 1, 2016, Dr. Davis continued to comment on how Claimant's presentation was atypical.

20. Claimant's symptoms did not abate, so she underwent a second EMG/nerve conduction study on May 11, 2015. Claimant's bilateral upper extremities test results again were read as normal.

21. On August 3, 2015, Dr. Raschbacher performed an independent medical evaluation of Claimant. Claimant reported that her right upper extremity issues began about 3-1/2 years prior but he noted she appeared to have symptoms for five to six years. Her symptoms began as pain at the forearm, fingers and palm of her right hand. Her hand also felt weak. In the past year she began to experience numbness and tingling in her right palm and middle three digits. Claimant also reported pain and paresthesia in her left hand and thumb from "compensating."

22. Dr. Raschbacher reviewed the Department of Labor's definition of repetitive work – which is performing a specific task every 30 seconds – and testified that he would not qualify Claimant's job duties as repetitive.

23. Dr. Raschbacher testified that normal EMG test results do not provide objective evidence to support a diagnosis of carpal tunnel syndrome.

24. Dr. Raschbacher noted that Claimant took a week-long vacation in June 2015 during which her symptoms remained unchanged. Claimant also testified that she would take vacations for maybe one week, and that her symptoms did not change while being away from work. Dr. Raschbacher clarified that the lack of change of symptoms whether Claimant was at work or not would suggest that the causative factor was not likely work-related. He would anticipate that if the offending activity stopped for a time, even as short as one week, one would expect to see improvement in symptoms.

25. Dr. Raschbacher indicated that Claimant may have both carpal tunnel syndrome and radial tunnel syndrome in her right hand. Claimant had a positive compression test but negative EMG/nerve conduction studies. Overall, he opined that Claimant's complaints and her need for further treatment were not related to her job duties. Dr. Raschbacher pointed to the Medical Treatment Guidelines for cumulative trauma disorders and lack of support in medical literature to support that Claimant's job duties likely caused radial or carpal tunnel syndrome.

26. Dr. Raschbacher testified that carpal tunnel syndrome does not have a clear causative factor in most people and is idiopathic. He added that the medical literature does not support that Claimant's work activities would cause carpal tunnel syndrome.

27. Dr. Raschbacher opined that Claimant's bilateral issues were more suggestive that her complaints were not work related, and could also indicate she had a predisposition for that type of pathology. He opined that Claimant's symptoms were idiopathic.

28. Dr. Raschbacher testified that none of Claimant's treating physicians provided a causation analysis as required by the Medical Treatment Guidelines. Dr. Raschbacher stated that he went through the causation analysis to reach his conclusions. He first diagnosed Claimant with carpal and cubital tunnel syndrome, and questioned her tenderness in the area of radial tunnel syndrome. He then determined that the disorder was not known or plausibly associated with work. Dr. Raschbacher interviewed Claimant to determine whether there were risk factors to support that work aggravated or caused her condition. Finally, Dr. Raschbacher matched the risk factors with the established diagnosis, and opined Claimant's work activities were not causative of her various bilateral symptoms.

29. On August 22, 2016, Dr. Davis performed surgery on Claimant diagnosing left elbow ulnar neuropathy and left carpal tunnel syndrome. The procedures performed were subcutaneous transposition of the left ulnar nerve and endoscopic carpal tunnel release.

30. On May 12, 2017, Claimant had right wrist and elbow surgery with Dr. Davis for diagnosed right carpal tunnel syndrome and right elbow ulnar neuropathy. Dr. Davis performed an endoscopic carpal tunnel release of the right wrist and decompression of the ulnar nerve at the right elbow.

31. Claimant testified that she experienced slight relief in both wrists following her surgeries. However, she did not experience relief in her elbows and continued to experience nerve pain. Dr. Raschbacher testified that it was surprising that Claimant had persistent symptoms after surgery.

32. Claimant testified that she returned to full duty work in June or July 2017. She stated that when she returned to full duty, her pain has resumed. Claimant stated that she believes typing and mousing caused her arms to hurt.

CONCLUSIONS OF LAW

General Legal Standards

The purpose of the "Workers' Compensation Act of Colorado" (Act), Title 8, Articles 40 to 47 C.R.S., is to ensure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to the employers without the necessity of any litigation. §8-40-102(1), C.R.S. Claimant, in a workers' compensation claim, has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-40-101, C.R.S. A preponderance of the evidence is that which leads the trier of fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). A claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A workers' compensation case is decided on its merits. §8-43-201, C.R.S.

The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ does not address every piece of evidence that might lead to a conflicting conclusion and rejects evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions; the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *Prudential Ins. Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *Young v. Burke*, 139 Colo. 305, 338 P.2d 284 (1959).

A claimant is required to prove that an injury arose out of and in the course of the claimant's employment. *Faulkner v. Indus. Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000). See also, §8-41-301(1)(b) & (c) C.R.S. A claimant must also prove by a preponderance of the evidence that there is a proximate causal relationship between an incident/injury and the need for medical treatment, plus the entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2017). See *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. ICAO*, 12 P.3d 844 (Colo. App. 2000).

The fact that a claimant experiences symptoms while performing work does not require the inference there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the logical and recurrent consequence of the pre-existing condition. *F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). When a claimant experiences symptoms while at work, it is for the ALJ to determine whether any subsequent need for treatment was caused by an industrial aggravation of a pre-

existing condition or by the natural progression of the pre-existing condition. The mere experience of symptoms at work does not necessarily require a finding the employment aggravated or accelerated the pre-existing condition. Resolution of that issue is also one of fact for the ALJ. *F.R. Orr Construction v. Ringa*, 717 P.2d 965 (Colo. App. 1985).

Moreover, section 8-40-201(14), C.R.S., defines occupational disease as:

> A disease which results directly from the employment or the conditions under which work was performed, which can be seen to have followed as a natural incident of the work and as a result of the exposure occasioned by the nature of the employment, and which can be fairly traced to the employment as a proximate cause and which does not come from a hazard to which the worker would have been equally exposed outside of the employment.

A claimant is required to prove by a preponderance of the evidence that the alleged occupational disease was directly or proximately caused by the employment or working conditions. *Wal-Mart Stores, Inc. v. Indus. Claim Appeals Office,* 989 P.2d 251, 252 (Colo. App. 1999). Moreover, §8-40-201(14), C.R.S. imposes proof requirements in addition to those required for an accidental injury by adding the "peculiar risk" test; that test requires that the hazards associated with the vocation must be more prevalent in the work place than in everyday life or in other occupations. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993). A claimant is entitled to recovery only if the hazards of employment cause, intensify, or, to a reasonable degree, aggravate the disability for which compensation is sought. *Id*. Where there is no evidence that occupational exposure to a hazard is a necessary precondition to development of the disease, the claimant suffers from an occupational disease only to the extent that the occupational exposure contributed to the disability. *Id.*

The *Guidelines* provide, in relevant part:

> Indirect evidence from a number of studies supports the conclusion that task repetition up to 6 hours per day unaccompanied by other risk factors is not causally associated with cumulative trauma conditions. Risk factors that are likely to be associated with specific CTS diagnostic categories include extreme wrist or elbow postures, force including regular work with hand tools greater than 1 kg or tasks requiring greater than 50% of an individual's voluntary maximal strength, work with vibratory tools at least 2 hours per day; or cold environments.

The duration of force and repetition as a primary risk factor must be greater than six hours at 50% of individual maximum force with task cycles of 30 seconds or less.

"Good" but not "strong" evidence that occupational risk factors cause carpal tunnel syndrome, as set forth in the *Guidelines*, include a combination of force, repetition, and vibration, or a combination of repetition and force for six hours, or a combination of repetition and forceful tool use with awkward posture for six hours, or a combination of force, repetition, and awkward posture. "Some" evidence of occupational risk factors for the development of carpal tunnel syndrome include wrist bending or awkward posture for four hours, mouse use more than four hours, and a combination of cold and forceful repetition for six hours. W.C.R.P. Rule 17, Exhibit 5, pp. 23-24.

Claimant Failed to Prove She Sustained a Compensable Injury to the Bilateral Upper Extremities on August 12, 2014

The Medical Treatment Guidelines provide guidance for clinicians regarding the diagnosis and treatment of cumulative trauma disorders, such as carpal tunnel syndrome, de Quervains syndrome and lateral epicondylitis.

Per Rule 17, the Guidelines should be used to evaluate and treat categories of occupational disease. Per the Guidelines, employees' self-report of keyboard use appeared to be approximately double the actual time spent using the keyboard. Further, studies have provided evidence that "keyboarding in a reasonable ergonomic … posture up to 7 hours per day under usual conditions is very unlikely to cause carpal tunnel syndrome or other upper extremity disorders."

The MGT provide the steps in completing a medical causation assessment for cumulative trauma conditions. The steps are to:

(1) Make a specific and supportable diagnosis.

(2) Determine whether the disorder is known to be or is plausible associated with work.

(3) Interview the patient to find out whether risk factors are present in sufficient degree and duration to cause or aggravate the condition.

(4) Complete the required match between the risk factors in Section D.3.d Risk Factors Definitions Table and the established diagnosis using the system described in Section D.3.d.

(5) Determine whether a temporal association exists between the workplace risk factors and the onset or aggravation of symptoms.

(6) Identify non-occupational diagnoses … as well as avocational activities.

Claimant did not prove by a preponderance of the evidence that she suffered a work related injury on August 12, 2014, and failed to meet the causation requirements outlined by the Guidelines. This conclusion is based in part upon the following evidence:

- Claimant testified that her job duties varied throughout the day. She did not sit behind a computer and consistently type or use a mouse constantly during the day. Her job duties involved a variety of activities.

- A Job Site Evaluation and Physical Demands Analysis were completed. Claimant was physically present and observed to complete the analysis. After reviewing Claimant's job duties, the analyst determined Claimant spent approximately two to three hours per day using a keyboard and less than two hours per day using a mouse. The analyst found no risk factors present in Claimant's job duties.

- While Claimant advised her treating doctors that she "constantly" used the keyboard and mouse, per the Guidelines, studies are clear that patients' self-reports do not match objective measures and are usually double the time actually spent.

- Claimant underwent two EMG tests, with "completely normal" results, and no objective evidence of bilateral carpal tunnel syndrome.

- Dr. Raschbacher evaluated Claimant and assessed medical causation per the Guidelines. He opined that Claimant's job duties did not qualify as repetitive per the Department of Labor's definition. Dr. Raschbacher opined that Claimant's complaints were not caused by her job duties and were not work related.

- Claimant testified that she would take approximately one week vacations. However her pain complaints did not change or lessen while on vacation. Dr. Raschbacher testified he would expect an improvement in symptoms if the offending activity was stopped, even for one week.

- Claimant's complained of bilateral pain. Dr. Raschbacher testified that bilateral symptoms suggest the cause was not work related and opined Claimant's symptoms were idiopathic.

Physicians from Concentra and Dr. Raschbacher opined that Claimant's complaints were not work related. Claimant failed to present persuasive medical evidence to the contrary.

Accordingly, Claimant has not demonstrated that the hazards of her employment caused, intensified, or, to a reasonable degree, aggravated her bilateral carpal tunnel syndrome. Claimant has failed to prove by a preponderance of evidence that her bilateral symptoms were directly or proximately caused by her employment.

The ALJ finds, based on the totality of the evidence, that Claimant failed to prove a compensable work injury to her bilateral upper extremities.

An injured worker has the burden of proof, by a preponderance of the evidence, of establishing the proximate causal relationship between an incident/injury and the need for medical treatment, plus entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. (2013). See *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *Lutz v. Industrial Claim Appeals*

Office, 24 P.3d 29 (Colo. App. 2000). Even if an incident occurs it must be significant enough to result in an injury requiring medical treatment or resulting in impairment. *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (Ind. Cl. App. Office, March 7, 2002). Pursuant to *Wherry v. City and County of Denver*, W.C. No. 4-475-818 (Ind. Cl. App. Off. March 7, 2002), if an incident is not a significant event resulting in an injury, claimant is not entitled to benefits.

Even if Claimant were to have sustained an injury to her bilateral upper extremities on August 12, 2014, she is not entitled to medical benefits based on the following:

- Claimant's treating physician, Dr. Davis, and Dr. Raschbacher, opined that Claimant had an unusual presentation of pain complaints that did not fit with carpal tunnel syndrome.

- Claimant underwent bilateral carpal tunnel release and left transposition of the ulnar nerve and right decompression of the ulnar nerve surgeries. However, Claimant testified that she experienced only slight relief in her bilateral wrists and no relief in her elbows. Dr. Raschbacher testified it was surprising Claimant continued to experience pain following the surgical intervention.

Claimant did not present persuasive medical evidence that her job duties resulted in her bilateral upper extremity complaints and thus the need for medical treatment. The treating physicians at Concentra and Dr. Raschbacher both offered opinions that her complaints were not the result of her job duties.

Claimant has failed to prove by a preponderance of the evidence that she required medical treatment to her bilateral upper extremities as a result of her job duties.

The ALJ finds and concludes based on the totality of the evidence that Claimant failed to prove by a preponderance of the evidence that she sustained a compensable work in injury on August 12, 2014.

ORDER

It is, therefore, ordered that:

1. Claimant failed to prove by a preponderance of the evidence that she sustained a work injury on August 12, 2014.

2. Claimant's claim for benefits is denied and dismissed with prejudice.

DATED: 03/20/2018

/s/ Kimberly Turnbow
Kimberly Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman St 4th Floor
Denver, CO 80203

NOTE: If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/oac/appeals.

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that the cervical fusion at C4-C6 recommended by William Biggs, M.D. is reasonable, necessary, and related to his November 21, 2016 work injury.

2. Whether Respondents have established that sanctions are appropriate pursuant to 8-43-207(1)(p) for Claimant's failure to comply with Orders compelling him to respond to discovery and to provide supplemental discovery responses. Whether the appropriate sanction is termination of temporary total disability (TTD) benefit payments from December 26, 2017 through February 8, 2018.

FINDINGS OF FACT

1. Claimant is employed by Employer as a full service vending worker with duties that include stocking and re-stocking vending machines with Pepsi products. Claimant also removes excess change from the machines. Claimant drives a delivery truck that is already stocked when Claimant arrives to work. Claimant is tasked with driving the truck to different locations, lifting cases of product/soda off the truck and onto a hand cart, and pushing the hand cart with product to the vending machine locations to restock.

2. On November 21, 2016 Claimant was reaching above his head to remove a case of Mountain Dew soda from the top shelf of his work truck when he felt right shoulder and neck pain with tingling into his right arm and hand. Claimant reported that he slid the case of soda off the top of another case, but pulled too hard and it slipped. Claimant reported he caught the case with his left hand as it was about to fall and that he felt a twinge in his right shoulder just above the right scapular region. Claimant reported that he had immediate pain at a 7-8/10. *See* Exhibit C.

3. Claimant immediately called his supervisor to report the incident. Claimant reported that his supervisor sent a relief driver and that he was sent to NextCare for evaluation.

4. A summary of Claimant's medical treatment was prepared by Dr. Paz as part of an independent medical evaluation. *See* Exhibit C.

5. On November 21, 2016 At NextCare, Claimant reported pain and numbness in his right neck and shoulder after pulling a case of soda off the top shelf of his work truck. The pain was noted to be in the right lateral neck, right posterior neck, right shoulder, and right upper back with radiation into the right hand. It was noted that the events described involved lifting and twisting and did not involve axial loading or cervical

compression. Claimant was found to have no cervical spine tenderness, normal mobility, and normal curvature in his cervical spine. Claimant had positive testing in his right shoulder with positive O'Brien's, Speeds, and Yergason's. Claimant was advised to rest and reduce use and it was noted that he would be referred for a right shoulder MRI if he had no improvement. *See* Exhibit C.

6. On December 12, 2016 Claimant underwent an MRI of his right shoulder. The findings included: mild supraspinatus, infraspinatus, and subscapularis tendinosis. Articular surface fraying of the infraspinatus tendon was found with an intramuscular ganglion cyst. Low signal intensity thickening of the inferior glenohumeral ligament was identified with a recommendation to clinically correlate for adhesive capsulitis. Blunting and degeneration of the superior and posterior superior glenoid labrum were identified as was severe acromioclavicular joint arthritis. *See* Exhibit C.

7. On March 1, 2017 Claimant underwent an MRI of his cervical spine. The impression included multilevel spondylitic change with the most significant findings at C5-6 with severe bilateral neural foraminal narrowing as well as severe canal stenosis. In addition, findings of severe canal stenosis and moderate bilateral neural foraminal narrowing were identified at C4-5. *See* Exhibit C.

8. Claimant continued to be evaluated with complaints of neck pain and right shoulder pain. Neck stiffness was noted as well as difficulty with rotation. Claimant also reported some numbness and tingling in both his hands and forearms. *See* Exhibit C.

9. On April 12, 2017 Claimant underwent bilateral C4-5 and C5-6 transforaminal epidural steroid injections. Claimant reported that the injections did not help his pain much but that he felt better after physical therapy. *See* Exhibit C.

10. Claimant continued to report arm symptoms and it was noted that Claimant would be set up for bilateral upper extremity EMG tests as well as a CT scan of the neck. *See* Exhibit C.

11. On June 30, 2017 Claimant underwent a CT of his cervical spine. The impression provided was: multilevel disc protrusion and posterior longitudinal ligament ossification; moderate spinal and severe foraminal stenosis at C3-4, C4-5, and C5-6; and moderate spinal and foraminal stenosis at C-7. *See* Exhibit C.

12. On July 26, 2017 Claimant underwent an EMG of his bilateral upper extremities performed by Raymond van den Hoven, M.D. Dr. van den Hoven noted a physical exam that included significantly decreased cervical range of motion with increased neck discomfort on motion, as well as slight positive tinel's and carpal tunnel compression test on the bilateral wrists. Dr. van den Hoven's impression following EMG testing was: moderate bilateral carpal tunnel syndrome, relatively symmetrical in degree without denervation with much of the numbness and tingling coming from carpel tunnel syndrome although he suspected some contribution from cervical stenosis; no acute or chronic cervical radiculopathy in the C5-T1 myotomes or brachial plexopathy; no ulnar

neuropathy at the elbow/wrist; no peripheral neuropathy; and on a clinical bases, some suspected impairment of the C5 nerve roots and/or impingement on cord C4-5 serving C5 roots (decreased biceps reflexes, increased pronator teres and triceps reflexes). *See* Exhibits 2, C.

13. On August 3, 2017 Claimant was evaluated by Dr. Briggs who recommended a four level cervical fusion. *See* Exhibit C.

14. On August 8, 2017 F. Mark Paz, M.D. performed an independent medical record review. He noted that he had been asked to provide a medical opinion as to whether or not the request for a three level cervical fusion was reasonable, necessary, and causally related to the November 21, 2016 incident. Dr. Paz reviewed the medical records. Dr. Paz opined that Claimant had a diagnosis of cervical myelopathy with severe canal stenosis at the C4-5 and C5-6 levels, without cord signal abnormality and in addition had foraminal stenosis bilaterally at the C4-5 and C5-6 levels. Dr. Paz opined that Claimant did not have diagnostic therapeutic response to the bilateral transforaminal epidural steroid injections. Dr. Paz opined that the diagnosis of cervical spondylosis is a degenerative condition of the cervical spine found more often in older adults. Dr. Paz pointed out the anatomical changes identified included disc protrusion at C3-4, C4-5, and C5-6 levels and ossification of the longitudinal ligaments. *See* Exhibit C.

15. Based on the records that he reviewed and the documented mechanism of injury, Dr. Paz opined that it was not established that Claimant sustained a neck injury. Dr. Paz opined that it was not medically probable that the requested fusion was reasonable, necessary, and causally related to the November 21, 2016 incident. Dr. Paz opined that the mechanism of injury documented by the records was not consistent with a cervical spondylytic myelopathy diagnosis and that the multilevel cervical spondylosis was a pre-existing degenerative cervical spine condition. Dr. Paz also opined that it was not medically probable that the pre-existing cervical spine spondylosis was aggravated or accelerated as a result of the November 21, 2016 incident. *See* Exhibit C.

16. On August 9, 2017 Respondents issued a letter to Dr. Briggs indicating that the surgical request made by Dr. Briggs had been reviewed by Dr. Paz who opined that the requested surgery was not reasonable, necessary, or related to the November 21, 2016 work injury. Respondents indicated that Dr. Briggs' request could be reconsidered upon submission of further documentation supporting the reasonableness, necessity and relatedness of the procedure. *See* Exhibit B.

17. On August 11, 2017 Dr. Briggs issued a letter to Insurer. Dr. Briggs noted that Claimant had been under his care for a work related injury involving the neck. Dr. Briggs noted Claimant had reported that prior to the November 21, 2016 incident he had no difficulty with his arms and no significant pain in his neck. Dr. Briggs opined that there was no question that Claimant has cervical myelopathy. Dr. Briggs opined that the recommended surgery was reasonable and necessary and that once a patient presents with myelopathic findings, surgery is definitely indicated. Dr. Briggs opined that the causality was definitely due to Claimant's cervical degeneration and pressure on the

spinal cord that was clearly a pre-existing condition present before Claimant's work injury. However, Dr. Briggs opined that the injury at work seemed to aggravate it. Dr. Briggs noted that it was impossible to tell on MRI whether or not this was a disc herniation or just straight disc degeneration and noted there was no prior MRI for comparison. Dr. Briggs acknowledged that it was possible Claimant had a small disc herniation that hit his cord and gave him myelopathy findings at the time of injury, but that there was no way of knowing for sure. Dr. Briggs opined that either way, Claimant had a pre-existing injury aggravated or exacerbated by a work related injury since Claimant had no significant symptoms prior to the work related injury. Dr. Briggs urged Insurer to reconsider approval of the three level anterior cervical decompression fusion. *See* Exhibits 1, C.

18. On August 17, 2017 Respondents issued a letter to Dr. Briggs noting that they had received his response and would forward it to Dr. Paz who was scheduled to complete an independent medical evaluation. Respondents indicated until further notice, Dr. Paz should accept the correspondence as denial of the request for authorization. *See* Exhibit B.

19. Also on August 17, 2017, Respondents applied for hearing on the issue of whether the surgery requested by Dr. Briggs was reasonable, necessary, and causally related to the November 21, 2016 incident. *See* Exhibit A.

20. On October 2, 2017 Claimant underwent an independent medical evaluation performed by Dr. Paz. Dr. Paz issued his report on November 17, 2017. Claimant reported that on November 21, 2016 he was unloading from the top shelf of his trailer a case of mountain dew and that he slid the case off the top of another case, pulled too hard, and the case of soda slid off the top of the overhead shelf. Claimant reported catching the case with his left hand as it was about to fall and that he felt a twinge in his right shoulder just above the right scapular region. Claimant reported symptoms of the upper back and neck over the trapezial region, extending to the right and left scapular region as well as symptoms on the dorsal aspects of the right and left hand. Claimant also reported cervical spine symptoms aggravated with holding his head, rotating his head, and sleeping. On examination, Claimant had severely restricted active range of motion on gross inspection in three planes. Dr. Paz noted grimacing and pain behaviors with active range of motion testing which were not present prior to direct examination of the cervical spine. Dr. Paz found hypertonicity over the right levator muscle and tenderness to palpation with partial leaning on the right in the neutral position when compared with the left scapula. Dr. Paz found that Claimant was non tender to palpation of the superior and medial segments of the trapezius muscles on the right and left. Dr. Paz found the paraspinous muscles of the cervical spine to be without spasm but tenderness to palpation at the base of the cervical spine on both the left and right. Dr. Paz reviewed medical records and imaging reports. *See* Exhibit C.

21. Dr. Paz opined that it was not medically probable that the cervical spondylosis with myelopathy was causally related to the November 21, 2016 incident. He opined that based on reasonable medical probability, the cervical spondylosis predated the November 21, 2016 incident and opined that the cervical spondylosis with advanced

degenerative changes at multiple levels was not aggravated or accelerated as a result of the November 21, 2016 incident. Dr. Paz opined that the mechanism of injury involved no force across the neck/cervical spine. He again opined that cervical spondylosis is a degenerative condition of the cervical spine. *See* Exhibit C.

22. On December 6, 2017 the parties attended a status conference in anticipation of hearing set for December 8, 2017. At the status conference, ALJ Goldman granted Claimant an extension of hearing date until January 26, 2018 to allow Claimant additional time to seek counsel.

23. On December 13, 2017 Pre-hearing ALJ Goldstein issued an Order after a pre-hearing conference addressing Respondents' motion to compel supplemental responses to discovery and to propound three additional interrogatories less than 60 days prior to hearing. Respondents requested that Claimant supplement responses to interrogatories 3 and 6 which sought information concerning any prior illness, injury, or disability to the same body parts subject to the current claim… Claimant responded to interrogatories 3 and 6 by stating "N/A" and indicated at the prehearing conference that he intended by his responses to indicate that he had never suffered any prior illnesses, injuries, or disabilities nor has he suffered any conditions, symptoms, or pain concerning his cervical spine prior to the date of injury. ALJ Goldstein ordered that within seven days, Respondents had to provide Claimant with a copy of the initial discovery requests and Claimant's answers and that Claimant had to supplement his responses to interrogatories 3 and 6. ALJ Goldstein also ordered that Respondents could propound three additional interrogatories on Claimant to address any residency or work outside of Colorado within the last 10 years. *See* Exhibit A.

24. 25. On January 5, 2018 Respondents filed a Motion for Termination or Suspension of Temporary Disability Benefits Pursuant to Violation of Order. Respondents indicated that they provided Claimant copies of the original interrogatories and additional interrogatory questions on December 18, 2017 and that Claimant's supplemental responses were due by December 25, 2017 but that to date they had not received responses. Respondents argued that they were not able to complete their investigation into the prior medical history due to Claimant's noncompliance and they requested and argued that the Claimant's failure to comply with the December 13, 2017 Order was willful and that they were prejudiced in their inability to fully research Claimant's medical history and had to continue paying temporary total disability benefits while the hearing was pending. They requested to terminate or suspend temporary total disability benefits as a sanction and to add sanctions as an issue for hearing. *See* Exhibit A.

25. On January 22, 2018 Pre-hearing ALJ DeMarino issued an Order noting that Respondents had moved for sanctions against Claimant for failing to answer or respond to the additional discovery allowed by the December 13, 2017 pre-hearing Order. ALJ DeMarino noted that the issue of sanctions would be added as an issue for the January 26, 2018 hearing. *See* Exhibit A.

26. At hearing on January 26, 2016 Respondents requested as a sanction that they be allowed to terminate TTD benefits from December 26, 2017 (the day after Claimant's responses were due) through February 8, 2018 (the date of Dr. Paz's deposition). At hearing, Claimant indicated his belief that he had responded as required by the December pre-hearing Order. Respondents indicated that they had received responses to their additional interrogatories from Claimant in early January but that the responses were illegible. The parties were given the opportunity to submit any email exchanges regarding the additional discovery responses within 20 days of hearing. The ALJ did not receive any email exchanges or records concerning the additional discovery beyond the arguments and statements made at the January 26, 2018 hearing.

25. After hearing, and on February 8, 2018 Dr. Paz testified by deposition. Dr. Paz opined that Claimant's diagnosis was not disputed and was cervical sponydlolisthetic myelopathy which is a degenerative compression and congenital condition compressing the spinal cord. He opined that the condition affects the ligaments connecting the bones within the spinal cord causing them to thicken and ossify, that it can also affect the vertebral bodies themselves causing them to gain bony material compromising the diameter of the spinal cord, and affects disc degeneration and can cause disc herniation. Dr. Paz opined that the spinal canal space can be narrowed by conditions and if narrowed then the cord can be compressed. Dr. Paz opined that they are age related degenerative changes with a component of underlying genetics. Here, Dr. Paz opined that Claimant had degenerative conditions from C4 down to C6 where his spinal cord was compressed.

26. Dr. Paz noted that at the initial evaluation at NextCare there was no documented trauma to Claimant's spinal cord and that the events were listed as not including axial loading or cervical compression. Dr. Paz opined that based on the history given by Claimant, there was no trauma to the cervical cord. Dr. Paz opined that the surgery requested by Dr. Biggs was not reasonable, necessary, and causally related to the November 21, 2016 incident primarily because there was no mechanism of injury to support the cervical spondylitic myelopathy.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University*

Park Care Center v. Industrial Claim Appeals Office, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Medical benefits

Respondents are required to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). The claimant is required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether the claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

Claimant has failed to establish by a preponderance of the evidence that the three level cervical fusion requested by Dr. Biggs is reasonable, necessary, or casually related to his November 21, 2016 work injury. Claimant has failed to establish that he sustained an acute injury to his cervical spine or that he aggravated a pre-existing cervical spine condition on November 21, 2016 requiring a three level fusion. Rather, the testimony and

reports of Dr. Paz are found more credible and persuasive that there was no trauma to the cervical spine sufficient to have caused or aggravated/accelerated Claimant's condition. Claimant has failed to establish that the requested surgery is work related. Claimant's pre-existing degenerative condition was not aggravated or accelerated by the November 21, 2016 incident and Claimant's request for surgery is denied and dismissed.

Sanctions

The ALJ has wide discretion to enter sanctions deemed appropriate for violation of an Order. Here, Respondents argue that Claimant violated a December 13, 2017 pre-hearing Order by failing to respond to additional interrogatory questions and by failing to supplement responses to interrogatories 3 and 6. Respondents request to be allowed to terminate TTD benefits from the day after the responses were due (December 26, 2017) through the date of Dr. Paz's deposition (February 8, 2018) and they specifically argue that they were unable to adequately prepare for hearing due to an inability to fully research Claimant's medical history. Initially, it was found at the December 13, 2017 Order that Claimant had answered "n/a" to questions 3 and 6 and Claimant indicated he had answered in such a way because he had no prior issues with his cervical spine, including any treatment. At hearing on January 26, 2018 Claimant indicated he had answered the additional questions and that he had tried to comply with the pre-hearing Order. Respondents indicated and admitted that they actually had received responses in early January to the interrogatories addressed by the December 13, 2017 Order but that the responses were illegible. The parties were allowed to submit any email exchanges/records on this issue following hearing. No records were received.

The ALJ declines to impose sanctions and specifically declines to impose the sanction of termination of TTD benefits from December 26, 2017 through February 8, 2018. It appears initially that Claimant answered interrogatories 3 and 6 indicating there were no records, etc. to disclose. With nothing to disclose, it is unclear how Claimant's responses or lack of any additional responses would have prejudiced Respondents in preparing for hearing. Claimant answered "n/a," explained at pre-hearing that "n/a" meant he had nothing to disclose and no prior problems/issues with his cervical spine, and had nothing to add to his answer. Although Claimant was ordered to supplement the answers, there really was nothing to supplement or add since Claimant maintained at the December 13, 2017 pre-hearing that there was nothing to add to his "n/a" response as no records, treatment, etc. existed. Further, the parties indicated at the January 26, 2018 hearing that Claimant had actually responded to the December 13, 2017 Order in early January. Although this response would have been slightly late, it appears Claimant did respond. If his answers were illegible as Respondents indicated, Respondents could have contacted Claimant to ask for typed responses and/or could have filed a motion to compel legible answers instead of requesting sanctions. Based on the statements of the parties, it appears Claimant attempted to comply with the December 13, 2017 Order by providing responses. Further, the statements at the December 13, 2017 pre-hearing also indicate there was no additional information Claimant would have or could have provided to questions 3 and 6 even if he had timely responded with legible answers. Respondents have failed to show that even if Claimant failed to comply, they were prejudiced to a

degree that termination of TTD would be an appropriate sanction. The request for sanctions is denied.

ORDER

It is therefore ordered that:

1. Claimant has failed to establish that the cervical spine surgery recommended by Dr. Biggs is reasonable, necessary, or casually related to his November 21, 2016 work injury. His request for surgery is denied and dismissed.

2. Respondents request for sanctions is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 26, 2018,

/s/ Michelle E. Jones

Denver, CO 80203

ISSUES

- Whether claimant has proven that he is entitled to an award of permanent partial disability ("PPD") based on the impairment rating provided by Dr. Machanic, the Division-sponsored Independent Medical Examination ("DIME") physician?

- If claimant has proven that he is entitled to an award of PPD benefits based on the impairment rating of the DIME, whether respondents have overcome the opinion of the DIME regarding PPD impairment by clear and convincing evidence?

FINDINGS OF FACT

1. Claimant sustained an admitted work injury on November 22, 2014. Claimant testified at hearing that he was getting carpet rolls down off of a pyramid of carpets when he fell off the carpets to the ground. Claimant was referred for medical treatment by employer with Ms. Kylie Wead, a physician's assistant, and Dr. Burris with Concentra Medical Center.

2. Prior to his work injury, claimant had received medical treatment for his lumbar spine dating back to at least 2006. This treatment included a spinal cord stimulator implant in 2010, replacement of the stimulator in 2012 and reprogramming of the stimulator at a subsequent date.

3. Following claimant's injury, claimant was evaluated at Concentra Medical Center. It was noted on November 22, 2014 that claimant had fallen about 10 feet striking his head and having a loss of consciousness. Claimant complained of pain in the lower back of 6 out of 10.

4. According to the medical records from Ms. Wead, claimant was provided with work restrictions that included "no work" when he was evaluated on November 24, 2014 and November 26, 2014. Claimant was released to return to modified activity as of December 2, 2014 according to the December 1, 2014 note from Ms. Wead that kept claimant off of work for the rest of the shift with modified activity tomorrow.

5. Claimant returned to Ms. Wead on December 5, 2014. Ms. Wead released claimant to return to modified duty that limited claimant to a 4 hour work shift as of that day. Claimant's work shift was increased to six hours on December 16, 2014, with a 10 pound lifting restriction. These restrictions were kept in place through May 14, 2015 when claimant's lifting restriction was increased to 20 pounds and he was allowed to work an 8 hour shift.

6. Claimant underwent a computed tomography ("CT") scan of the head that was read as normal. Claimant also underwent a CT scan of the thoracic spin that

showed some atelectasis over his lungs, along with mild multilevel degenerative disc change. Claimant underwent a CT scan of the lumbar spine that showed his prior L5-S1 posterior fusion intact without evidence of loosening or failure.

7. Claimant was referred for physical therapy before being referred to Dr. Ghiselli for surgical consultation. Dr. Ghiselli noted that claimant had segment degeneration at T12-L1 and L1-L2 and recommended physical therapy. Dr. Ghiselli did not recommend surgery at the time of his evaluation.

8. Claimant was referred to a physiatrist, Dr. Blau. Dr. Blau noted claimant had chronic sacroilitis, chronic pain syndrome, opioid dependence and recommended ultrasound guided bilateral sacroiliac joint/ligament steroid injection with lidocaine. Claimant underwent the recommended injection on February 20, 2015.

9. Claimant was subsequently referred to Dr. Duhon on May 13, 2015. Dr. Duhon diagnosed claimant with facetogenic pain/spondylosis and felt the fall on November 22, 2014 had exacerbated this condition. Dr. Duhon felt claimant was not getting good coverage from his spinal cord stimulator and suggested adjusting the stimulator settings. Dr. Duhon also recommended medial branch blocks at the T11, T12, L1 and L2 levels along with rhizotomies.

10. Claimant was referred to Dr. Ghazi on July 8, 2015 for the medial branch blocks at T11, T12, L1 and L2 levels. Dr. Ghazi performed medial branch rhizotomies on August 11, 2015 at the T11, T12, L1 and L2 levels on the right side. A second set of rhizotomies was performed on August 25, 2015, again by Dr. Ghazi, this time on the left side at the T11, T12, L1 and L2 levels.

11. Issues arose with regard to whether the ongoing medical care being recommended by the various physicians treating claimant was related to his work injury. Respondents obtained a peer review report from Dr. Ayyar on November 11, 2015 that indicated that Dr. Barolat's request for a lumbar peripheral nerve stimulator should be denied as the information provided did not establish the medical necessity of the request. Dr. Burris noted on January 15, 2016 that there were significant pre-existing issues with regard to claimant's prior surgery. Dr. Burris recommended a one-time evaluation with a pain specialist to determine causality.

12. Claimant was evaluated by Dr. Sacha on February 9, 2016. Dr. Sacha opined that claimant had issues with opioid dependence and was at his baseline level of pain. Dr. Sacha opined that claimant was at maximum medical improvement with regard to his work injury and recommended case closure.

13. Claimant was eventually placed at maximum medical improvement ("MMI") by Dr. Burris on April 8, 2016. Dr. Burris noted that claimant continued to have back pain 1 ½ years after his work injury, but diagnostic testing had failed to reveal any new issues. Dr. Burris agreed with Dr. Sacha that claimant's current back complaints were related to his pre-existing issues and placed claimant at MMI. Dr. Burris opined that claimant had no permanent impairment as a result of the work injury.

14. Claimant filed a workers' claim for compensation on July 5, 2016. Respondents filed a final admission of liability ("FAL") admitting for $26,035.49 in medical expenses, but no temporary or permanent disability. Claimant filed a timely objection to the FAL and requested a Division-sponsored Independent Medical Examination ("DIME").

15. Claimant underwent a DIME with Dr. Machanic on August 9, 2017. Dr. Machanic reviewed claimant's medical records, obtained a medical history and performed a physical examination in connection with his DIME. Dr. Machanic noted claimant's long history of pre-existing issues involving his low back and his medical treatment after his November 22, 2014 fall at work.

16. Dr. Machanic opined that claimant was at MMI as of April 18, 2016. Dr. Machanic acknowledged the significant complex issue with regard to claimant's long history of prior low back pain. Dr. Machanic provided claimant with a 19% whole person impairment rating after apportionment. Dr. Machanic based this impairment rating off of claimant's medical treatment, including the two rhizotomies. Dr. Machanic noted that claimant had documented pre-existing numbness and provided no additional impairment for this condition.

17. Respondents obtained an independent medical examination ("IME") with Dr. Lesnak on December 15, 2017. Dr. Lesnak evaluated claimant and reviewed his medical records and issued a report documenting his findings. Dr. Lesnak opined that there was no medical evidence to support Dr. Machanic's opinion that claimant would qualify for a 19% whole person impairment rating.

18. Claimant testified at hearing that following his injury, when he was on restrictions, he was mostly doing work behind the desk. Claimant testified that he did not lose any wages after his injury as he was a salaried employee and continued to receive his full salary after his injury.

19. Claimant testified that he eventually got a new job in 2016 with a new employer. Claimant testified he did not leave Employer due to his injury or any disability. Claimant testified he did miss time from work to attend medical appointments, but continued to receive his salary.

20. Respondents argue that the DIME report from Dr. Machanic is invalid in this case due to the fact that claimant did not suffer a loss of earning capacity following his industrial injury. The ALJ is not persuaded that claimant is precluded from obtaining a DIME in this case.

21. Notably, while claimant did not suffer a wage loss, claimant did suffer a disability in this case. Claimant was taken off of work completely by the treating physician for over a week following the initial injury. Claimant was then precluded from working his regular eight hour shift for another 5 months. The mere fact that the employer elected to continue claimant on his salary while his ability to perform the work for employer was limited by his physician does not compel a finding that claimant failed

to establish a "disability" following the injury. The ALJ finds that where claimant is incapable of performing his prior job due to the injury, the mere fact that employer elects to continue to pay claimant does not mean claimant is not disabled.

22. Moreover, respondents filed an FAL in this case which triggered claimant's time period for applying for a DIME to address the issues of MMI and permanent impairment. Respondents moved to strike claimant's DIME report only after the report was received. Respondents made no effort to limit the DIME prior to Dr. Machanic performing the DIME to address only the issue of MMI.

23. Claimant bore the cost of the DIME pursuant to the statute. If respondents felt claimant was not entitled to a DIME on the issue of PPD benefits, they could have moved to limit the DIME prior to the DIME occurring. Instead, respondents waited until after the DIME occurred, and after claimant bore the cost of the DIME, and then sought to limit the impact of the DIME.

24. With regard to the impairment rating of Dr. Machanic, Dr. Machanic noted that claimant did have prior numbness and did not provide claimant with an impairment rating for that condition, implicitly finding that the numbness was not related to claimant's work injury. Dr. Machanic did provide claimant with a permanent impairment rating for the surgery and rhizotomies related to his work injury, but apportioned the impairment for his prior surgeries. This left claimant with an impairment rating of 2% associated with the most recent injury. Dr. Machanic noted that he did not have prior range of motion measurements in which to provide an opinion with regard to apportionment, and therefore, provided claimant with 17% whole person impairment for loss of range of motion. Dr. Machanic combined the 2% specific disorder impairment rating with the 17% range of motion rating to come to a final rating of 19% whole person.

25. Notably, Dr. Machanic's impairment rating before apportionment was 30% whole person, but Dr. Machanic found that only 19% of the impairment could be related to the industrial injury, the vast majority of which was attributable to claimant's range of motion measurements.

26. Dr. Lesnak in his IME report notes that it was his opinion that claimant's condition was entirely related to his pre-existing condition, finding that there was no radiographic, MRI or CT abnormalities that could be associated with claimant's work injury. Dr. Lesnak further noted that claimant's range of motion measurements would be invalidated using the straight leg raising criteria.

27. The ALJ credits the DIME report from Dr. Machanic and finds that respondents have failed to overcome the findings of Dr. Machanic by clear and convincing evidence with regard to the issue of permanent partial disability. The ALJ notes that while Dr. Lesnak invalidated claimant's range of motion measurements, Dr. Machanic did not find it necessary to do so based on his examination. The ALJ finds that at best, this represents a difference of medical opinion regarding whether the range of motion measurements are valid.

28. The ALJ further notes that Dr. Machanic appears to have taken into consideration the amount of impairment that could be attributable to the admitted work injury in this case and properly applied the concept of apportionment and causation to the best of his ability in his report. The ALJ therefore finds that the opinion expressed by Dr. Machanic regarding the extent of permanent impairment that can be attributable to the admitted work injury in this case is credible and persuasive.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. Likewise, Respondents have the burden of proving any affirmative defenses raised at hearing by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S., 2006. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P2d 1205 (1936); CJI, Civil 3:16 (2008).

3. Respondents argue that pursuant to *Harman-Bergstedt v. Loofbourrow,* 320 P.3d 327 (Colo. 2014), bars the claimant from pursuing a DIME in a case in which claimant is put at MMI and no temporary disability benefits have been paid. The ALJ finds that Respondents' interpretation of *Loofbourrow* is misguided.

4. In *Loufbourrow*, the Colorado Supreme Court held that an injured worker was not precluded from pursuing temporary total disability benefits where the worker was placed at MMI prior to the injured worker suffering a wage loss. However, even if *Loufbourrow* were to hold that injured workers are not entitled to a DIME where the injury resulted in no lost time from work and no disability benefits paid to claimant, the ALJ finds that in this case, claimant did have a disability, and therefore, is entitled to a DIME.

5. As argued by respondents, to prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a), C.R.S., requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra.*

6. The term disability, connotes two elements: (1) Medical incapacity evidenced by loss or restriction of bodily function; and (2) Impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo.App. 1998).

7. In this case, claimant established a disability as he was taken off of work completely by his physician for a period of a week. Claimant was then restricted from working his normal shift for another 5 months. Employer continued claimant's salary during this time, but that does not mean that claimant was not "disabled". Only that claimant did not lose any earnings as a result of his disability.[1]

8. Respondents argument in this case illustrates some of the issues with regard to the interpretation of *Loufbourrow* as a defense to the claimant's right to a DIME. Section 8-42-107(8)(b)(II), C.R.S. allows either party to request a DIME on the issue of whether or not the injured worker has reached maximum medical improvement. There is no limitation in Section 8-42-107(8)(b)(II) that would limit the request for a DIME on the issue of maximum medical improvement to only cases in which the injured worker is paid temporary disability benefits.

[1] The ALJ would note that the Colorado Workers' Compensation Act makes a specific provision for what occurred in this case under Section 8-42-124(2)(a), C.R.S. but requires that the employer be reimbursed by the insurance carrier. No evidence was presented at hearing that the agreement in this case was done pursuant to a wage continuation plan as allowed by the statute, nor that the plan was approved by the Director as required under Section 8-42-124(5), C.R.S. However, the mere fact that the wages continued does not necessarily mean that the injured worker was not disabled. The ALJ makes no finding that this was or was not a wage continuation plan as allowed by statute, only that the evidence establishes that claimant was "disabled" as contemplated by the Colorado Workers' Compensation Act.

9. Moreover, Section 8-42-107(8)(c), C.R.S. provides in pertinent part:

> When the injured employee's date of maximum medical improvement has been determined pursuant to subparagraph (I) of paragraph (b) of this subsection (8), and there is a determination that permanent medical impairment has resulted from the injury, the authorized treating physician shall determine a medical impairment rating as a percentage of the whole person based on the revised third edition of the "American Medical Association Guides to the Evaluation of Permanent Impairment", in effect as of July 1, 1991. Except for a determination by the authorized treating physician providing primary car that no permanent medical impairment has resulted from the injury, any physician who determines medical impairment rating shall have received accreditation under the level II accreditation program.... If either party disputes the authorized treating physician's finding of medical impairment, *including a finding that there is no permanent medical impairment,* the parties may select an independent medical examiner in accordance with section 8-42-107.2. The finding of the independent medical examiner may be overcome only by clear and convincing evidence. (emphasis added)

10. Again, nothing in Section 8-42-107(8)(b) or (c) provides that the DIME process is only for cases in which temporary disability benefits have been paid. In fact, the statute allows for physicians who have failed to go through the Level II accreditation program to issue an opinion that the injured worker has no permanent impairment.

11. To accept respondents argument with regard to the interpretation of *Loufbourrow*, would leave injured workers who have obvious permanent impairment without a remedy when they are placed at MMI with a zero percent impairment rating that could be provided by a physician who has not received required training for providing an opinion on permanent impairment under Colorado Law without any recourse to challenge that rating, merely because they did suffer a wage loss as a result of the injury, for whatever reason. The ALJ finds that this is contrary to the intended result of the Colorado Supreme Court in *Loufbourrow*.

12. Regardless, however, the ALJ has found that claimant has established that he suffered a disability as a result of the work injury and is therefore entitled to a DIME on the issue of PPD benefits.

13. Section 8-42-107(8)(b)(III) and (c), C.R.S. provides that the DIME physician's finding of MMI and permanent medical impairment is binding unless overcome by clear and convincing evidence. Clear and convincing evidence is highly probable and free from substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it is highly probably the DIME physician is incorrect. *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). A fact or proposition has been proved by clear and convincing evidence if, considering all of the evidence, the trier-of-fact finds it to be highly probable and free from substantial doubt. *Metro Moving & Storage, supra.* A mere difference of opinion

between physicians fails to constitute error. See *Gonzales v. Browning Ferris Industries of Colorado*, W.C. No. 4-350-356 (March 22, 2000).

14. The ALJ may consider a variety of factors in determining whether a DIME physician erred in his opinions including whether the DIME appropriately utilized the Medical Treatment Guidelines and the AMA Guides in his opinions.

15. As found, respondents have failed to overcome the opinion of Dr. Machanic by clear and convincing evidence with regard to the amount of permanent impairment that can be attributable to claimant's work injury. As found, Dr. Machanic's opinion regarding permanent impairment is found to be credible and persuasive.

ORDER

It is therefore ordered that:

1. Respondents shall pay claimant PPD benefits based on Dr. Machanic's 19% whole person impairment rating.

2. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. WC 4-588-918-21

ISSUE

- Whether Claimant established by a preponderance of the evidence that the hearing aids prescribed to address his tinnitus condition are reasonable, necessary, and related to cure and relieve the effects of Claimant's admitted industrial injury.

FINDINGS OF FACT

1. Claimant sustained an admitted industrial injury to his left ankle in the course and scope of his employment with Employer on January 22, 2003.

2. As a result of Claimant's admitted industrial injury, Claimant underwent multiple surgeries, including multiple attempts at ankle fusions. Claimant developed complications with infections and ultimately had a below the knee amputation of his left leg on May 2, 2012.

3. Christopher J. Huser, M.D., Claimant's ATP has prescribed and Claimant has taken multiple medications during the course of his treatment. Since approximately January of 2015, he has been taking Cymbalta and using a Butrans Patch to control his pain at a level of 6/10, and other injury related symptoms.

4. Although Respondents challenged the referral, the ALJ's order authorizing the referral was ultimately affirmed by the Industrial Claims Appeal Office.

5. On November 9, 2016, Dr. Huser sent Claimant to "The Hearing Clinic" for evaluation of his history of increasing bilateral tinnitus.

6. On November 17, 2016, Ira Dector, an audio engineer and hearing instrument specialist at The Hearing Clinic evaluated Claimant. The evaluation included hearing tests among other things. The Hearing Clinic issued a report which reads in pertinent part:

> Joseph Robbins came to our clinic on November 17, 2016 with complaints about tinnitus (ringing in the ears). His tinnitus is causing him severe anxiety, stress and sleep deprivation. Joe was injured on the job on July 2nd 2003 and prescribed several medications, including Cymbalta and a Butrans pain patch, both of which are listed by the American Tinnitus Association as causing tinnitus. During his tinnitus evaluation, Joe was also diagnosed with a severe high frequency hearing loss in both ears.
>
> Unfortunately, there is no cure for tinnitus, only treatment. The most effective treatment is sound therapy, and given

> Joe's hearing loss, the sound therapy must be amplified and presented through hearing aids. After just a few minutes of wearing hearing aids in our office Joe's adverse reaction to his tinnitus lessened substantially. The Hearing aids with the sound therapy that will most effectively help Joe are Resound linx2 9's which cost $7,000.

7. The Hearing Clinic permitted Claimant to try the prescribed hearing aids which he testified eliminated the symptoms of his tinnitus by 90%.

8. At the conclusion of his appointment, The Hearing Clinic provided Claimant a bill and purchase agreement for the hearing aids.

9. Mr. Dector referenced the American Tinnitus Association website as identifying several medications that have been known to cause tinnitus including Cymbalta and Butrans.

10. Respondents retained Dr. Alan Lipkin, a board-certified otolaryngologist to evaluate Claimant. As part of his evaluation, Dr. Lipkin reviewed The American Tinnitus Association website, including the medications that The American Tinnitus Association notes as potential causes of tinnitus. Dr. Lipkin testified that The American Tinnitus Association website has identified no less than 1,000 medications that potentially cause tinnitus, including common medications such as Tylenol and Pepto Bismol. Dr. Lipkin noted that The American Tinnitus Association identifies medications that are commonly used to treat tinnitus, including Xanax, as potential causes of tinnitus. As such, Dr. Lipkin, opined that The American Tinnitus Association was unreliable.

11. Dr. Lipkin evaluated Claimant on October 10, 2017. Dr. Lipkin conducted audio testing and diagnosed Claimant with bilateral, high frequency, sensory neural hearing loss. Individuals with this condition have hearing losses in the upper frequencies.

12. Dr. Lipkin testified that tinnitus is a sensation of noise in your ears or head that is not present in the environment. Claimant has the common type, subjective tinnitus, which is typically associated with sensory neural hearing loss.

13. Dr. Lipkin testified that, in the course of his practice, he has treated thousands of people with tinnitus.

14. Dr. Lipkin opined in his report that it is highly likely that Claimant's tinnitus is caused by Claimant's severe bilateral sloping sensory neural hearing loss. At hearing, Dr. Lipkin clarified that the likelihood that Claimant's tinnitus was caused by his severe bilateral sloping sensory neural hearing loss was greater than a 90%.

15. Dr. Lipkin opined that Claimant's consumption of Cymbalta and Butrans patches had not caused Claimant's tinnitus because, "Although tinnitus has apparently been associated with Cymbalta and Butrans patches, this must be a very uncommon association as I have not seen this in the past in any of the thousands of tinnitus patients that I have seen." At hearing, Dr. Lipkin further clarified that there would be less than a

5% chance that Claimant's consumption of Cymbalta and use of Butrans patches would somehow be the cause of his tinnitus.

16. Respondents denied authorization of the hearing aids asserting that Claimant's tinnitus is not related to his work injury or treatment for the injury.

17. On October 30, 2017, Claimant returned to Dr. Huser and provided him with a copy of Mr. Dector's report. At that visit, Dr. Huser – who previously sought to refer Claimant to an otolaryngologist to determine the cause of Claimant's tinnitus – appears to have adopted Mr. Dector's opinion that Claimant's medications had caused his tinnitus. Dr. Lipkin, the board-certified otolaryngologist, testified that he would not defer his opinions to those of Dr. Huser.

CONCLUSIONS OF LAW

Based upon the forgoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. CRS Section 8-42-101. The right to workers' compensation benefits, including medical benefits, however, arises only when an injured employee establishes by a preponderance of the evidence that the need for medical treatment is proximately caused by an injury arising out of an in the course of employment. C.R.S. section 8-41-301(1)(c); *Faulkner v. Industrial Claim Appeals Office*, 12 P.3rd 844 (Colo. App. 2000). In addition, Respondents are free to challenge the reasonableness and necessity of current or newly requested treatment notwithstanding its position regarding previous medical care on a case. *See Kroupa v. Industrial Claim Appeals Office*, 53 P.3rd 192 (Colo. App. 2002). The question of whether a particular medical treatment is reasonable and necessary and/or related to the claim is one of fact for determination from the ALJ. *Id.; Walmart Stores Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999). Claimant continues to bear the burden to prove her right to specific medical benefits. *HLJ Management Group, Inc. v. Kim*, 804 P.2d 250 (Colo. App. 1990).

The ALJ credits the opinions of Dr. Lipkin as being more credible and persuasive than those of Dr. Huser and Mr. Dector. Dr. Lipkin based his opinions on years of experience, having treated thousands of patients with tinnitus, and his specialized training.

The ALJ gives little credence to the fact that The American Tinnitus Association associates certain of Claimant's medications. As found, that association has identified no less than 1,000 medications that potentially cause tinnitus, including common medications such as Tylenol and Pepto Bismol; and identifies medications that are commonly used to treat tinnitus, including Xanax, as potential causes of tinnitus.

The ALJ finds and concludes that more likely than not Claimant developed tinnitus secondary to his severe bilateral sloping sensory neural hearing loss.

The ALJ finds and concludes that Claimant has not proven by a preponderance of the evidence that his tinnitus is causally related to medications that he is taking.

ORDER

It is therefore ordered that:

1. Claimant's request that Respondents pay for his hearing aids is denied and dismissed with prejudice.

2. All matters not determined herein are reserved for future determination.

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 5-057-574-01

ISSUE

- Whether Claimant has proven by a preponderance of the evidence that he suffered a compensable injury on September 8, 2017 arising out of and in the course and scope of his employment, and if so, whether Claimant requires medical care.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was employed by Employer as a driver who made deliveries for Office Depot. Claimant's duties included transporting loads from the store's warehouse to area stores.

2. Office Depot employees would stack supplies onto pallets, shrink-wrap the pallets in plastic, and load the wrapped pallets onto the truck. Pallets weighed between 1,200 and 1,500 pounds. Occasionally, pallets were improperly stacked, resulting in uneven, unbalanced, or top-heavy loads. When pallets were properly loaded onto the truck, the plastic they were wrapped in did not touch. However, pallets were occasionally improperly loaded resulting in the plastic wrap of two pallets touching and sticking together.

3. Upon arrival at the stores, Claimant was responsible for removing the pallets from the truck, most often using a pallet jack.

4. On September 8, 2017, Claimant began unloading his truck and noticed the plastic wrap on two of the pallets was stuck together. As he attempted to separate the plastic with his hands, one of the pallets tipped over, the plastic broke, and the majority of supplies fell onto him pinning him against another pallet which was behind him. Claimant ultimately was able to exit the cargo portion of the truck, but was unable to complete his delivery. Claimant testified that the Office Depot manager on duty came onto the truck to assist him and take photographs for her report.

5. Claimant returned to the warehouse, reported the accident and his injuries to his manager, and was unable to make his second delivery for the same day. Claimant testified that he asked to see a doctor at that time.

6. Claimant testified that his manager told him to take the weekend off, and then more time off, to see if his injuries resolved. They did not, and Claimant began experiencing difficulty with his activities of daily living.

7. Claimant testified that he told Employer again that he needed to see a doctor. Employer did not provide Claimant with a list of medical providers. Rather, Employer told Claimant on Friday, September 15, 2017, that they would schedule an appointment for him the following Monday. At that time, Claimant called his regional safety manager seeking medical care.

8. On Monday, September 18, Employer sent Claimant to a conference room at a Best Western Hotel where he was seen for "EFA" testing by a technician. No persuasive evidence established what, if any, qualifications the technician had.

9. As part of his on-boarding with Employer, Claimant underwent a pre-employment medical examination that included an "electrodiagnostic functional assessment" (EFA) also performed by a technician associated with Emerge Diagnostics. The EFA purportedly measures the baseline status of certain body parts. Claimant testified that the pre-employment EFA was performed in a five foot by five foot room; that electrodes were attached to his neck, shoulders, and chest; and that he performed stretches, ranges of motion, and static resistance bar testing. The EFA took approximately thirty minutes, during which time the technician commented that she was having problems with the equipment. The technician did not explain what she was doing and did not provide Claimant with the EFA results. Employer assigned no restrictions and Claimant was issued a CDL.

10. The parties described the September 18, 2017, post-injury EFA as a "telemedicine" visit with Frank Tomecek, M.D. Claimant testified that the doctor was only on screen for a portion of the examination where Claimant was asked to perform certain movements with his left shoulder while both shoulders were connected to electrodes. Claimant testified he inquired about his right shoulder and low back which he also identified as being injured. Apparently, the technician made a phone call and then told Claimant that only his left shoulder had been reported. Claimant testified further that he was unable to perform several of the tasks Dr. Tomecek asked of him, and that he had more pain after the exam. According to Claimant, Dr. Tomecek interrupted the testing by saying, "I've seen enough." Claimant asked what treatment or further evaluation he would have, and the doctor responded, "They'll get back to you."

11. After the September 18, 2017, EFA exam, Claimant contacted the Labor Board to determine how to proceed. Employer ultimately provided Claimant with a list of designated medical providers on September 20, twelve days post-injury.

12. Claimant scheduled an appointment with Dr. Brian Williams, one of the designated providers, in part because he was able to see Claimant the soonest.

13. On September 20, 2017, Claimant presented to Dr. Williams for examination of his work related injuries. At the initial examination, Dr. Williams diagnosed Claimant with left and right shoulder strain, lumbar strain, and back pain with left-sided radiculopathy. Dr. Williams prescribed medications, physical therapy for Claimant's right shoulder and low back, and a left shoulder MRI for a suspected tear. Dr. Williams assessed that "based on the patient history provided, the injuries described more likely

did occur within the scope and duties of the [Claimant's} employment for the following injuries: left shoulder strain, right shoulder strain, lumbar strain, back pain with left-sided radiculopathy, and acute stress reaction."

14. On September 27, 2017 Claimant presented to Dr. Williams with continued bilateral shoulder pain and lower back pain. Claimant complained of difficulty with sitting, standing, lifting, traveling, personal care, and intense pain. Dr. Williams' progress report noted that his objective findings were consistent with Claimant's history and the work-related mechanism of injury.

15. On September 28, 2017, Insurer notified Dr. Williams that it had denied compensability on the claim. Insurer denied Claimant's claim based largely on Dr. Tomecek's report.

16. On October 11, 2017, Claimant returned to Dr. Williams after deciding to continue treatment using his private insurance, outside of the Workers' Compensation system. Dr. Williams reiterated his concern for the left shoulder injury and his opinion that an MRI was necessary. Dr. Williams assigned lifting restrictions including maximum lifting not to exceed 10 pounds, repetitive motion not to exceed 5 pounds, and pushing and pulling not to exceed 10 pounds. Employer could not accommodate Claimant's restrictions, and ultimately Employer terminated Claimant's employment. Claimant received an email at approximately the same time notifying him that Insurer had denied his claim.

17. On November 11, 2017, Claimant underwent a left shoulder MRI examination which he paid for. According to the interpreting radiologist, Charles Wells, M.D., it revealed linear hyper-intense signal in the posterior labrum, extending from approximately 11:00 to 8:00. The impressions portion of the MRI report provided: "suspected nondetached tear of the posterosuperior labrum extending from 11:00-8:00."

18. Claimant did not attend physical therapy because he lost his personal health insurance when Employer terminated him, and he could not afford it.

19. The ALJ finds Claimant credible. His testimony was straight forward, reasonable, and supported by and consistent with his medical records. Photographs admitted as Claimant's exhibit 4 document Claimant's testimony regarding pallets being improperly stacked, resulting in uneven, unbalanced, or top-heavy loads. Further, the exhibit shows the stack of supplies that fell onto Claimant in a manner consistent with Claimant's testimony.

20. Maryrose Reaston, Ph.D., testified on Respondents' behalf at the hearing. Ms. Reaston introduced herself as the "chief scientific officer" of Emerge Diagnostics, and the inventor of EFA. Although Respondent offered Ms. Reaston as an expert in electrodiagnostics, following Claimant's voir dire, the ALJ found that Ms. Reaston was not qualified as an expert.

- Ms. Reaston's education was limited to a bachelor's degree in psychology from UCLA and a Ph.D. in psychology from Sierra University in Costa Mesa, California. The seal Ms. Reaston uses, however, is that of Sierra College, a community college.

- Sierra University no longer exists and was only accredited for a short period of time if at all. It was described as a "university without walls," and has been sued for fraud.

- Ms. Reaston never practiced in her degreed field of psychology.

- Ms. Reaston testified that she attended a "roughly" three-month program at "Harvard," and earned a "certificate." However, she had not performed EMGs or any other work in electrodiagnostics even at the level of a technician, at the time she attended the program. Ms. Reaston's testimony implied that she was a student at Harvard. However she was never admitted to Harvard University as a student.

- Ms. Reaston initially testified that Emerge Diagnostics had fifteen employees. When pressed, she clarified that she included remote consultants and salespeople as employees.

- Ms. Reaston testified that her title is Chief Science Officer, but later acknowledged that no scientists work under her supervision. Rather, she "collaborates" with other scientists. She asserted that she was collaborating on research with consultants from Harvard and MIT but when asked why she did not publicize that association, she replied, "Because we are still working on the research, and the publications are coming out in the near future."

- Ms. Reaston appears in Emerge Diagnostics marketing videos which claim that EFAs help curb workers' compensation claim costs.

- Ms. Reaston testified that Emerge Diagnostics has a research and development department, later clarifying that it was composed of "consulting" physicians and a software engineer, and that "Emerge Diagnostics consults with MIT and Harvard different research projects."

- Although Ms. Easton mentioned Harvard and MIT frequently in her testimony, she did not identify with whom she was working or even what department of the universities she was engaged with.

- Ms. Reaston testified that the EFA has independent validation for reliability. She later clarified that really *EMGs* have independent validation. She testified that EFAs are "more reliable than EMGs and better than an MRI." On cross examination, she conceded that EFA is really a surface EMG that

she markets as a "revolutionary technology for the diagnosis and treatment of soft tissue injuries."

21. Ms. Reaston testified that the EFA is similar to other diagnostic surface EMGs, and the EFA technology is classified as a class two diagnostic physical medicine and rehab and neurology device by the FDA. Its labeled usage says that it can age an injury. The EFA is also FDA approved to perform baseline testing. However, her testimony was not supported by any documentary evidence and was conclusory and defensive rather than descriptive.

22. Ms. Reaston testified that EFA data is collected by certified EMTs, physician assistants, and nurses. That testimony was contradicted by Dr. Tomecek who testified that the person collecting the EFA data only needed to be able bodied and able to understand English. Claimant's testimony also contradicted that of Ms. Reaston.

23. No Colorado doctor uses EFAs and the Medical Treatment Guidelines do not support or provide for their use.

24. The ALJ finds Ms. Reaston to be incredible. Her testimony was largely unsupported and was contradicted by her own doctor/consultant. She exaggerated her credentials. She lacks training. And she is clearly biased.

25. Dr. Tomecek testified for Respondents by phone at the hearing. He is a board certified neurosurgeon and 95% of his work involves spine surgery operating out of Tulsa, Oklahoma. While he has evaluated some workers for workers' compensation claims, he follows the CDC Guidelines, not the Medical Treatment Guidelines required by Colorado law. He is not Level II certified. Dr. Tomecek thought he had been doing EFA testing for about five years. He acknowledged that his practice uses MRIs – not EFAs -- to diagnose joint problems, and that MRIs are the "gold standard" for diagnosing rotator cuff injuries.

26. The doctor's training with respect to shoulders was provided over twenty years prior to the hearing. It consisted of differentiating between neck and shoulder problems and was provided as part of his spine surgery training. Although his training and practice have always specialized in spinal surgeries, Dr. Tomecek testified that he was "fully capable of making *any* type diagnosis regarding neck and joint problems."

27. Dr. Tomecek testified that the procedure for a telemedicine visit was as follows: "What happens is Mr. Smith, or another patient, would come to the clinic where we have a medical assistant or nurse, and that medical assistant or nurse would hook Mr. Smith up to the electrodiagnostic functional assessment equipment, and after they're hooked up to the equipment, they contact me. I then visit with the patient where we have – it is basically like a Face Time visit." He continued that the camera is focused on the patient and a medical assistant or nurse conducts the examination, including range of motion testing, under his supervision. Dr. Tomecek indicated that the patient wears the EFA testing equipment for the duration of the examination and that he "can see what their muscles and nerves are doing when we are moving their arms, when they're moving their

arms and neck, when they're lifting, when they're bending." Dr. Tomecek appeared unaware Claimant's exam took place in a Best Western hotel, not a clinic. And no persuasive evidence supports a finding that the technician was a nurse or medical assistant. As Dr. Tomecek later testified, the technician only had to be able bodied and able to understand English.

28. The ALJ finds Dr. Tomecek's report to be seriously flawed for the following reasons:

- Although Claimant complained of bilateral shoulder and low back injuries, reporting pain in those areas of five and six over ten, Dr. Tomecek only evaluated Claimant's left shoulder.

- The doctor did not join the exam until after the technician had attached electrodes to Claimant's left shoulder, and told Claimant he had "seen enough," and that the technician would finish the examination. However, Dr. Tomecek testified that he supervised "the entire exam from start to finish."

- Dr. Tomecek's report is dismissive of Claimant's pain complaints. And, without even examining Claimant's right shoulder or low back, he attributed Claimant as having unspecified Waddell's signs rather than legitimate pain complaints.

- The doctor also opined that Claimant displayed distraction signs "where he had less pain when he moved his arms when he thought we weren't observing." It is unreasonable to assume that Claimant ever thought he was not being observed as he was in front of a camera and the technician and connected to electrodes for the entire time Dr. Tomecek participated in the exam.

- Dr. Brian Williams, Claimant's current medical provider, noted that Dr. Tomecek's report omitted portions of the MRI report which did not support his opinion. The section Dr. Tomecek omitted provides, "There is linear hyper intense signal in the posterior labrum, extending from approximately 11:00 to 8:00. There is mild rounding of the underlying posterior glenoid, with minimal edema like signal." Dr. Tomecek also omitted the radiologist's impression which stated, "Suspected nondetached tear of the posterosuperior labrum extending from approximately 11-8 o'clock."

29. Dr. Tomecek has only testified on behalf of respondents.

30. Dr. Tomecek testified that he was unable to provide any opinion with respect to Claimant's lower back injury because he "could not recall" whether he evaluated Claimant's low back. He also testified that Claimant was not injured in the course and scope of his employment, based on the EFA results.

31. When Dr. Tomecek evaluated Claimant on September 18, 2017, he noted that Claimant, "displayed several of Waddell's signs of exaggerated pain response to motion of his arms, supination of the arms, pronation of the arms, and again during different parts of the examination checking his motor strength. Again, he displayed several of Waddell's signs with groaning, grimacing, and also displayed some distraction signs where he had less pain when he moved his arms when he thought we weren't observing." Dr. Tomecek concluded after his single telemedicine examination that he was "highly concerned about secondary gain" and that "Claimant would have a bad outcome with treatment." None of Claimant's Colorado treatment providers have voiced any similar concerns.

32. Dr. Tomecek compared Claimant's September 18, 2017 left shoulder EFA results with Claimant's pre-employment EFA left shoulder data. Per Dr. Tomecek, both demonstrated chronic changes, and the latter actually demonstrated an improvement over the baseline.

33. No persuasive evidence was offered to support a finding that the EFA data was reliable and not the result of faulty equipment or misplaced electrodes.

34. He noted no evidence of acute pathology and no evidence of an acute injury. He concluded, "[t]here is no need for treatment on an industrial basis."

35. At hearing, Dr. Tomecek testified that he reviewed surveillance footage of Claimant and noted no evidence of back pain or back problems. However, the surveillance footage was not offered as evidence and no persuasive evidence supports a finding that Claimant was the person surveilled.

36. On November 20, 2017, Claimant underwent an MRI of his left shoulder. Charles Wells, M.D., the radiologist who read the report suspected a nondetached tear of the posterosuperior labrum and distal clavicular osteolysis.

37. Dr. Tomecek reviewed the MRI prior to the hearing and disagreed with Dr. Well's opinions, and testified that the MRI did not show any evidence of an acute injury.

38. Dr. Tomecek testified, "Unlike an MRI, an EFA can actually tell us when an injury occurred. It can time soft tissue injury, and it is FDA approved to do so." However, the doctor did not explain how an EFA would be more accurate at determining the time of an injury than any other diagnostic technology that was performed pre- and post- injury.

39. Dr. Tomecek testified that with a soft tissue injury, telemedicine combined with the EFA is just as effective as a face to face visit. "With the EFA on the patient while I'm examining them, I get a lot of additional information of the muscles and nerves that I could not get even in a face-to-face visit. I can really assess their soft tissues at rest and with activity, and I can't do that just seeing a person face to face."

40. The ALJ finds Dr. Tomecek's opinions and testimony not credible or persuasive. He was unaware of the context of Claimant's exam, he did not know the qualifications of the person who assisted in the exam, and his examination of Claimant

was incomplete. He uses the CDC guidelines which are not approved in Colorado. He relied on the EFA data when no persuasive evidence supports its validity. He omitted unfavorable MRI findings from his report.

41. Based on the totality of the evidence, the ALJ finds that Claimant has proven by a preponderance of the evidence that he suffered a compensable injury on September 8, 2017 arising out of and in the course and scope of his employment.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. §§ 8-40-101, *et seq.*, is to assure the quick and efficient delivery of benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1). A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. C.R.S. § 8-43-201. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. C.R.S. § 8-43-201.

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *see also Heinicke v. ICAO*, 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007). A workers' compensation case is decided on its merits. C.R.S. § 8-43-201.

With regards to compensability, C.R.S. §8-43-201 states, "A claimant in a workers' compensation claim shall have the burden of proving entitlement to benefits by a preponderance of the evidence." The claimant always carries the initial burden of proof in a workers' compensation case." *DiCamillo v. Gosney & Sons, Inc.*, W.C. No. 4-328-945 (ICAO May 21, 1998). The preponderance standard is met when "the existence of a contested fact is more probable than its nonexistence." *Industrial Com. of Colorado v. Jones*, 688 P.2d 1116 (Colo. 1984); *People v. Taylor*, 618 P.2d 1127 (Colo. 1980).

The question of whether claimant met his burden of proof to establish a compensable injury is one of fact for determination by the judge. *See Faulkner v. I.C.A.O.*, 12 P. 3d 844 (Colo. App. 2000).

A claimant must prove by a preponderance of the evidence that his injury arose out of the course and scope of his employment with employer. *Section 8-41-301(1)(b), C.R.S.; see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). An injury "arises out of and in the course of" employment when the origins of the injury are sufficiently related to the conditions and circumstances under which the employee usually performs his or her job functions to be considered part of the employee's services to the employer. *General Cable Co. v. Industrial Claim Appeals Office,* 878 P.2d 118 (Colo. App. 1994).

Claimant met his burden of proving that it is more probably true than not that he suffered an injury in the course and scope of employment on September 8, 2017. The persuasive and credible evidence shows evidence of any injury or acute pathology.

The ALJ finds that Claimant was injured while unloading pallets during the course of his employment with Respondents. Claimant's testimony regarding the mechanism of his injury was credible and supported by photographic evidence. Rather than provide Claimant a list of qualified Colorado Workers' Compensation physicians, Respondents sent Claimant to a Best Western Hotel, where he was treated by a technician associated with Emerge Diagnostics, and was "examined" by a Tulsa, Oklahoma based physician via a video chat. Feeling that this procedure was not appropriate, Claimant contacted the Colorado Labor Board, and was made aware of proper Workers' Compensation procedures. Thereafter, Claimant was examined by Dr. Brian Williams who opined that Claimants bilateral shoulder strain, lumbar strain, and back pain with left side radiculopathy were related to his at work injury on September 8, 2017. Dr. Williams further opined that an MRI would be appropriate as a diagnostic tool to further determine the extent of Claimants left shoulder injury, and that physical therapy was necessary. Respondents denied compensability for the injuries and Claimant was not provided that care.

Claimant continued to treat with Dr. Williams outside of Workers' Compensation. Claimant then paid out-of-pocket for an MRI as suggested by Dr. Williams. The MRI revealed a suspected nondetached tear of the posterosuperior labrum extending from 11:00 to 8:00.

During hearing, Respondents attempted to establish validity to the EFA technology promoted by Ms. Maryrose Reaston and Emerge Diagnostics. Ms Reaston was not

qualified as an expert on this technology. Ms. Reaston earned her psychology graduate degree from a university that may or may not have been accredited, and existed for only a period of years. She has never worked in any capacity as a psychologist or as a scientist in the field of electrodiagnostics. As a founding partner in Emerge Diagnostics, Ms. Reaston's testimony regarding the effectiveness of the technology was biased and unsupported by any scientific evidence, and lacks credibility.

Respondents provided the testimony of Dr. Frank Tomecek. Dr. Tomecek was not qualified as an expert in shoulder surgery. Dr. Tomecek never physically examined Claimant. His video examination was incomplete. He was selective in his report, omitting information about MRI findings that were inconsistent with his opinion. Dr. Tomecek never examined Claimant's lower back. Rather than treating Claimant's pain complaints as sincere, Dr. Tomecek opined after a single, short video chat, that Claimant sought secondary gains and would not respond well to treatment. Dr. Tomecek uses CDC Guidelines rather than the Medical Treatment Guidelines. Also, Dr. Tomecek is a consultant to Emerge Diagnostics and has a financial interest in the success of the company and of the EFA technology.

Dr. Tomecek did not place his hands on Claimant, did not diagnose him with any injury related to his at work incident, and did not see Claimant with the intention of providing medical care. The ALJ rejects Dr. Tomecek's opinion that Claimant was not injured in the course and scope of employment.

Dr. Williams examined Claimant in person, diagnosed his injuries, provided prescription medications, recommended follow up appointments and further diagnostic imaging studies. Dr. Williams opined that Claimant was injured as a result of his at work incident. Further, the MRI Dr. Williams recommended revealed a suspected rotator cuff tear. The ALJ credits Dr. Williams' opinion that Claimant injured both his left and right shoulder and his lower back. The ALJ also finds that Claimant needs additional medical care for his shoulders and back.

ORDER

Based upon the foregoing Findings of Fact and Conclusions of Law, the ALJ enters the following order:

1. Claimant has proven by a preponderance of the evidence that his September 8, 2017 work injury suffered on is compensable.

2. Claimant has proven by a preponderance of the evidence that associated medical benefits related to his work injury are reasonably necessary.

3. Respondents shall pay for reasonable and necessary treatment of Claimant's left and right shoulder and lower back.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 633 17th Street, Suite 1300, Denver, Colorado, 80202. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUE

1. Whether Respondents overcame the opinion of Dr. Caroline Gellrick, Division independent medical examiner (DIME), by clear and convincing evidence regarding Claimant's impairment rating.

FINDINGS OF FACT

1. Claimant sustained a compensable injury to her back on March 24, 2016, when she slipped and fell in a parking lot at work. A lumbar MRI was performed on July 28, 2016. The MRI demonstrated an L5-S1 disk desiccation and annular tear. On January 18, 2017, Claimant's authorized treating physician (ATP), Dr. Samuel Y. Chan, opined that Claimant was at maximum medical improvement (MMI) and had not suffered permanent impairment because he identified no significant permanent pathology.

2. Claimant reported that she still had pain of two on a scale of ten, but her pain was no longer functionally limiting, and she moved around a room without any difficulties.

3. Respondents filed a Final Admission of Liability (FAL) on March 13, 2017, based on Dr. Chan's report. The FAL admitted to reasonable and necessary post-MMI medical benefits for the lumbar spine/SI joint, but did not admit to a permanent impairment rating. Claimant objected to the FAL and underwent a DIME with Dr. Caroline Gellrick on May 30, 2017.

4. In the DIME report, Dr. Gellrick agreed with the date of MMI assigned by Dr. Chan, January 18, 2017, but she assigned Claimant a 14% whole person impairment rating. Specifically, Dr. Gellrick assigned Claimant a 7% whole person impairment for Claimant's L5-S1 disk desiccation with annular tear and 4% whole person impairment for range of motion, for a total 11% whole person lumbar spine impairment. Additionally, Dr. Gellrick assigned Claimant a 2% whole person impairment for her thoracic spine, with a 1/2% range of motion impairment, for a total of 2 ½, which she rounded to 3% thoracic spine whole person impairment. The 11% and 4% whole person equate to a 14% whole person impairment rating. Dr. Gellrick opined, "Using page 80 IIC of the spine table, the patient would be seen to fit under 7% whole person for the L5-S1 disk desiccation with annular tear."

5. Respondents filed an Application for Hearing on July 7, 2017, endorsing the issues of reasonably necessary, causation, relatedness, offsets, overpayments, credits, and to contest the findings of the DIME. Claimant filed a Response to Application for Hearing on July 21, 2017, which endorsed the additional issue of PPD benefits.

6. On August 21, 2017, Claimant underwent an independent medical examination (IME) requested by Respondents with Dr. Carlos Cebrian. Dr. Cebrian's report is dated September 26, 2017. When Claimant presented to Dr. Cebrian, she complained of low back pain, mid back pain, buttock pain and burning, and right subscapular region pain. Claimant denied any previous thoracic or lumbar spine complaints or past surgical history.

7. Dr. Cebrian opined Claimant suffered a lumbar strain with SI joint dysfunction and a thoracic strain/contusion. He noted that Dr. Chan and Dr. Gellrick also made the same diagnoses. Dr. Cebrian opined Dr. Chan appropriately placed Claimant at MMI on January 18, 2017. Dr. Cebrian concluded that the findings on MRI did not correlate with Claimant's subjective complaints nor her examination findings, which were consistent with SI joint dysfunction. Dr. Cebrian opined the MRI findings were merely incidental degenerative findings that are a normal part of aging and unassociated with Claimant's pain.

8. Dr. Cebrian credibly testified regarding this conclusion, explaining that there is no correlation between any of the symptoms that Claimant was having throughout her claim and the findings in the lumbar MRI. None of Claimant's medical providers noted disk pathology that was causing symptoms. Claimant was treated for SI joint pathology that did not show any findings on the MRI.

9. Dr. Cebrian opined no further treatment was necessary. He acknowledged that Claimant still has right SI joint pain, but opined that her examination findings do not warrant SI joint injections. Dr. Cebrian recommended Claimant engage in an aerobic exercise program with core strengthening, as this would improve both her SI joint complaints and her thoracic spine complaints. He also suggested weight loss to take pressure off the SI joint and thoracic spine. Dr. Cebrian utilized the *AMA Guides* in his analysis, and he utilized the Colorado Department of Workers' Compensation Impairment Rating Tips in reaching his conclusion that Claimant has a 5% whole person impairment rating (WPI) for her SI joint dysfunction. He concluded that Claimant does not have a range of motion impairment. Therefore, the overall rating for her lumbar spine impairment is 5% WPI.

10. Dr. Cebrian assigned Claimant an impairment rating for her SI joint dysfunction based on objective evidence he observed in his examination of Claimant and Claimant's reported symptoms. He testified that Claimant "had some rotation of her right SI joint that was present in the pelvis. And that was something that was previously identified by her physical therapy providers." However, Dr. Cebrian declined to assign Claimant an impairment rating for her thoracic spine because he found that there is no specific diagnosis nor objective pathology on which he could base an impairment rating.

11. Dr. Cebrian opined Dr. Gellrick erred in her assignment of Claimant's permanent impairment rating in two ways. First, Dr. Cebrian concluded that Dr. Gellrick erred because she assessed impairment based on Claimant's lumbar MRI findings which are incidental and do not correlate to her symptoms. Dr. Cebrian credibly explained that because the findings on the MRI reflect a pre-existing condition and are not causing any symptoms, Dr. Gellrick should not have assigned a rating for the lumbar spine or thoracic spine based on these findings.

12. Dr. Cebrian further explained that the Impairment Rating Tips address this issue in directing physicians not to rate findings by diagnostic imaging if they have not been clearly defined as contributing significantly to the patient's condition. Dr. Cebrian opined that Dr. Gellrick erred by rating Claimant's MRI findings when those findings did not clinically correlate with Claimant's examination findings.

13. In regard to Claimant's thoracic spine injury, Dr. Cebrian declined to assign Claimant an impairment rating and credibly opined Dr. Gellrick's assignment of a rating was erroneous. Dr. Cebrian acknowledged Claimant's pain complaints, but explained that there was no objective evidence suggesting a permanent impairment. Because Claimant did not suffer a permanent injury to her thoracic spine, Dr. Cebrian declined to assign a rating for it.

14. Dr. Cebrian credibly opined that Claimant's myofascial pain complaints do not result in permanent impairment. Dr. Cebrian opined that assignment of impairment needs the rating physician to identify a specific diagnosis that correlates with objective pathology.

15. Additionally, Dr. Cebrian found no structural abnormality of Claimant's thoracic spine, and, therefore, opined that she did not have a thoracic spine impairment. Dr. Cebrian performed spine range of motion measurements using the dual inclinometer method consistent with *the AMA Guides*.

16. On October 18, 2017, Claimant met with Dr. Ethan Moses for an IME at Claimant's request. Dr. Moses opined that Claimant's injury is work related, based on Claimant's report that she slipped on ice after exiting her car in her Employer's parking lot. Dr. Moses concluded that Claimant has progressed in an appropriate manner with treatment including massage therapy, chiropractic therapy, physical therapy and therapeutic injections. Dr. Moses explained that the next level of treatment would be SI neurotomy. He opined there is no indication for additional SI joint steroid injections, as the functional benefits Claimant gained from them do not satisfy the guidelines.

17. Dr. Moses reviewed Dr. Cebrian's report and discussed Dr. Cebrian's conclusion that Dr. Gellrick erred in her calculation of Claimant's impairment rating. Dr. Moses opined that the impairment rating performed by Dr. Gellrick was done appropriately and without error.

18. Dr. Moses concluded that Dr. Gellrick's DIME opinion was time-limited in her report writing as DIME examiner. Dr. Moses offered assurance regarding the propriety of Dr. Gellrick's rating, stating that Dr. Gellrick's rating is correct because she identified that same level of permanent impairment as did Dr. Moses. Dr. Moses opined that reproducibility is the only known criterion for validating optimum effort. Yet, Dr. Moses did not reproduce Dr. Gellrick's results. Both doctors assigned a 14% WPI.

19. It is found that Dr. Gellrick erred in assigning Claimant an impairment rating for her thoracic spine with no objective pathology. Dr. Gellrick assigned Claimant a 2% whole person impairment for her thoracic spine, with a 1/2% range of motion impairment, for a total of 2 ½, which she rounded to 3% thoracic spine whole person impairment. Dr. Cebrian credibly explained, "Application of medical impairment requires that the disorder being rated is identified (specific diagnosis), there is objective pathology, is accurately treated, is reproducible, measurable and permanent. There is no such thing as a permanent strain or contusion. Myofascial pain complaints do not result in permanent impairment. Level II Accreditation indicates that there needs to be a specific diagnosis that correlates with objective pathology to assign an impairment."

20. This ALJ finds the testimony and medical report of Dr. Cebrian to be credible and finds that he points to clear and convincing evidence why Dr. Gellrick's impairment rating was most probably incorrect. It is found that Dr. Cebrian's rating of 5% WPI is the correct impairment rating.

CONCLUSIONS OF LAW

General Legal Principles

1. The purpose of the "Workers' Compensation Act of Colorado" (Act), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

Overcoming the DIME Physician's Opinion

4. Sections 8-42-107(8)(b)(III) and (c), C.R.S., provides that the finding of a DIME selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by clear and convincing evidence. Section 8-42- 107(8)(b)(III); *Peregoy v. Indus. Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004).

5. "Clear and convincing evidence" is evidence that shows that it is "highly probable" that the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office,* 961 12 P.2d 590, 592 (Colo. App. 1998). The evidence presented must be "unmistakable and free from serious or substantial doubt." *In the Matter of Adams*, W. C. No. 4-476- 254, 2001 WL 1502158 (Colo. Ind. Cl. App. Off. Oct. 4, 2001). Where the evidence is subject to conflicting inferences a mere difference of opinion

between qualified medical experts does not necessarily rise to the level of clear and convincing evidence. *See, Gonzales v. Browning Ferris Indust. of Colorado*, W.C. No. 4-350-36 (ICAO March 22, 2000).

6. A DIME physician is required to rate a claimant's impairment in accordance with the *AMA Guides*. Section 8-42-107(8)(c), C.R.S.; *Wilson v. Industrial Claim Appeals Office,* 81 P.3d 1117, 1118 (Colo. App. 2003). However, deviations from the *AMA Guides* do not mandate that the DIME physician's impairment rating was incorrect. *In Re Gurrola*, W.C. No. 4-631- 447 (ICAP, Nov. 13, 2006). Instead, the ALJ may consider a technical deviation from the *AMA Guides* in determining the weight to be accorded the DIME physician's findings. Whether the DIME physician properly applied the *AMA Guides* to determine an impairment rating is generally a question of fact for the ALJ*. In Re Goffinett*, W.C. No. 4-677- 750 (ICAP, Apr. 16, 2008).

7. It is found and concluded that Dr. Gellrick erred in assigning Claimant an impairment rating for MRI findings unrelated to Claimant's symptoms. The evidence established that on May 30, 2017, Claimant underwent a DIME with Dr. Gellrick. Dr. Gellrick agreed with the date of MMI assigned by Dr. Chan of January 18, 2017, but she disagreed with his opinion that Claimant suffered no permanent impairment.

8. Upon review of Claimant's July 28, 2016, MRI, Dr. Gellrick found that, using the *AMA Guides,* page 80, Table 53 IIC of the spine table, Claimant fit under 7% whole person for the L5-S1 disk desiccation with annular tear. However, nowhere in Dr. Gellrick's report did she find that the disk desiccation or annular tear contributed to Claimant's symptoms. No provider concluded that Claimant's MRI findings were correlated with her symptoms. Nonetheless, Dr. Gellrick erroneously assigned Claimant a 7% whole person impairment for Claimant's L5-S1 disk desiccation with annular tear and 4% whole person impairment for range of motion, for a total 11% whole person lumbar spine impairment.

9. The evidence established that Dr. Gellrick, Dr. Chan, and Dr. Cebrian made the same diagnoses of lumbar strain with SI joint dysfunction. While Dr. Gellrick's diagnosis was appropriate, her assignment of impairment based on the lumbar MRI findings was not.

10. It is undisputed that that Dr. Gellrick assigned a 7% whole person impairment under Table 53 IIC of the *AMA Guides* for the L5-SI disc desiccation with annular tear. This was erroneous because the MRI findings are incidental and do not correlate with Claimant's symptoms. Dr. Cebrian credibly opined that impairments are only assigned for claim-related objective pathology which correlates with a specific diagnosis.

11. Dr. Gellrick provided no justification for her deviation from the impairment rating tips aside from Claimant's unrelated, degenerative MRI findings. Dr. Moses did find this placement to be appropriate based on the moderate degenerative changes observed on MRI. However, he does not conclude that the MRI findings are correlated with Claimant's symptoms, nor does he explain why it was appropriate to place

Claimant in Category II(C) instead of II(B) in light of the lack of correlation. Instead, he makes a conclusory remark, "Any reasonable reader would recognize this, and Dr. Gellrick's opinion should not be dismissed simply because she was time-limited in her report writing as DIME examiner."

12. Respondents assert Dr. Gellrick's opinion should be dismissed not because she was time-limited in writing her report, but because she erred in assigning Claimant an impairment rating based on degenerative MRI findings unrelated to her symptoms.

13. Dr. Gellrick erred in assigning Claimant an impairment rating for her thoracic spine with no objective pathology. Dr. Gellrick assigned Claimant a 2% whole person impairment for her thoracic spine, with a 1/2% range of motion impairment, for a total of 2 ½, which she rounded to 3% thoracic spine whole person impairment. Dr. Cebrian explained, "Application of medical impairment requires that the disorder being rated is identified (specific diagnosis), there is objective pathology, is accurately treated, is reproduceable, measurable and permanent. There is no such thing as a permanent strain or contusion. Myofascial pain complaints do not result in permanent impairment. Level II Accreditation indicates that there needs to be a specific diagnosis that correlates with objective pathology to assign an impairment."

14. Respondents established by clear and convincing evidence through the expert testimony of Dr. Carlos Cebrian, and through the medical records, that Dr. Gellrick's thoracic spine impairment rating was erroneous because there was no specific diagnosis for the thoracic spine, there were no objective findings related to the thoracic spine area, and Claimant's thoracic spine complaints are described as myofascial pain complaints and are not expected to be permanent.

15. Although she identified tenderness and pain in the region, Dr. Gellrick did not identify any underlying pathology or make a specific permanent diagnosis other than a strain/sprain, nor did any other physician. Because Claimant does not have a structural abnormality of her thoracic spine, she does not have a spinal mediated disorder of the thoracic spine. Therefore, she does not have a Table 53 diagnosis upon which to base a permanent impairment rating.

16. It is concluded that Dr. Gellrick erred in her assignment of a 14% whole person impairment rating because she assigned Claimant an impairment rating for incidental MRI findings unrelated to Claimant's symptoms and assigned Claimant an impairment rating for her thoracic spine with no objective pathology.

17. It is further concluded that Dr. Cebrian's opinion is more credible and persuasive than the opinion rendered by Claimant's independent medical examiner, Dr. Ethan Moses. It is further found and concluded that the 5% whole person impairment rating assessed by Dr. Cebrian is correct and supported by the evidence.

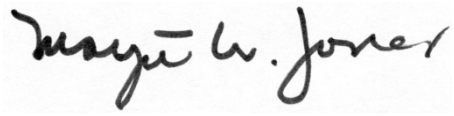
ORDER

1. Respondents shall be liable to Claimant for worker's compensation benefits based on a 5% whole person impairment.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 15, 2018



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant proved by a preponderance of the evidence that he suffered a worsening of condition attributable to his April 12, 2012, right shoulder injury, warranting reopening of the claim.

2. In the event that the claim is reopened for a worsening of condition, whether Dr. David Schneider is an authorized provider.

3. In the event that the claim is reopened for a worsening of condition, whether surgery recommended by Dr. Schneider is reasonable, necessary and related to the April 12, 2012, right shoulder injury.

FINDINGS OF FACT

1. Claimant is a 52 year-old freight driver who has had preexisting right and left shoulder pain and symptoms since at least 2007. Claimant had been treating with Dr. Christopher Isaacs, orthopedic surgeon, for his bilateral shoulders since this time. Claimant also treated for his bilateral shoulders with Dr. Eric Smith, his family physician since the time that he was a child.

2. On January 1, 2012, Claimant suffered an admitted injury to his right shoulder as the result of work-related exposure. There was no specific mechanism of injury. Claimant was diagnosed with a full-thickness rotator cuff tear of the right shoulder and underwent surgical repair of the torn rotator cuff with Dr. Isaacs in June of 2013. Claimant specifically requested that Dr. Isaacs perform the surgery for the right shoulder, as he had previously performed a surgery for the left shoulder and was familiar with Claimant's shoulder problems.

3. Dr. Isaacs placed Claimant at MMI on October 31, 2013. Dr. Isaacs gave Claimant a 10% scheduled rating of the right upper extremity, which was later converted to a 6% whole person impairment rating at a previous hearing. Dr. Isaacs released Claimant to full duty and recommended maintenance care for the shoulder, limited to Lidoderm patches for one year after MMI. Claimant was otherwise discharged from care.

4. Respondents filed a Final Admission of Liability (FAL) on December 3, 2014. Respondents admitted for a 6% whole person impairment rating and reasonable, necessary, and related maintenance medical treatment.

5. Following his placement at MMI, Claimant continued treatment with his family physician, Dr. Smith, for regular yearly injection treatments. Claimant did not receive this treatment through workers' compensation.

6. Claimant presented to Dr. Isaacs on January 24, 2017, with complaints of ongoing bilateral shoulder pain. Dr. Isaacs noted that his was a problem that had been present for years. Dr. Isaacs indicated that Claimant had not had an injection for approximately one year for his right shoulder. Dr. Isaacs noted that Dr. Smith was retiring and that Claimant was "in the market for a new family physician." Dr. Isaacs reviewed x-ray imaging of both shoulders and noted some mild acromioclavicular degeneration, but otherwise no significant abnormalities. Dr. Isaacs stated the diagnosis was "Bilateral shoulder rotator cuff tendinitis and impingement." Dr. Isaacs recommended and performed a repeat subacromial injection. There were no recommendations for surgery or further treatment or evaluation.

7. Claimant subsequently independently sought further evaluation for his right shoulder through Dr. David Schneider, an orthopedic surgeon at Panorama Orthopedics recommended by his wife. Claimant presented to Panorama on March 27, 2017 and was referred for diagnostic MRI studies for his bilateral shoulders, pursuant to complaints of pain in the shoulder joints of both his left and right shoulders.

8. MRI studies of the left and right shoulders were performed on March 30, 2017. The radiologist, Dr. Andrew Sonin, indicated the MRI of the right shoulder reflected a prior rotator cuff repair with no full-thickness defect or retear, no retraction or atrophy of the cuff musculature, with a normal subscapularis. The biceps tendon and anchor are intact. There was no evidence of instability lesion. Dr. Sonin noted a cyst formation around the repair site in the lateral humeral head.

9. Claimant saw Dr. Schneider on April 26, 2017. It is noted that Claimant has chronic bilateral shoulder problems. It is noted that Claimant had difficulty sleeping due to bilateral shoulder pain. Dr. Schneider indicated that "both" of Claimant's MRIs showed a thinning and tearing of the supraspinatus. Dr. Schneider also noted "pretty large impending insufficiency fractures of both greater tuberosities with large cystic area right near the supraspinatus insertion site." The diagnosis was listed as complete tears of the right and left rotator cuffs. Dr. Schneider recommended that Claimant have a right shoulder surgery first (implying a pending left shoulder surgery). Dr. Schneider recommended shoulder "arthroscopy with rotator cuff repair, because of the edema and impending fracture, nature of the greater tuberosity." Dr. Schneider also recommended a calcium phosphate injection into the area at the time of surgery. Dr. Schneider requested that Claimant consult with his workers' compensation physician so he could have the procedure covered under the work-related claim.

10. Claimant returned to Dr. Isaacs on May 2, 2017, for a recheck in accordance with the findings of Dr. Schneider. It is reported that Claimant was having ongoing shoulder pain and was beginning to take time off work for his pain. Dr. Isaacs noted that Claimant was informed by Dr. Schneider that he had a cyst in the humeral

head and that there was a recommended arthroscopy with injection of the cyst area. Dr. Isaacs reviewed the MRI findings from March 30, 2017, and stated that he did not see the findings indicated by Dr. Schneider, including a full-thickness re-tear of the cuff or an impending fracture of the greater tuberosity. Dr. Isaacs indicated that he was not familiar with a calcium phosphate injection. Dr. Isaacs stated that Claimant was, without question, having pain related to his work injury but that he could not say whether the MRI findings were related to the injury. Dr. Isaacs did not schedule a follow-up appointment. .

11. Dr. Isaacs issued correspondence addressed specifically to Claimant's attorney, dated July 6, 2017. Dr. Isaacs noted that, since the initial right shoulder rotator cuff repair, Claimant had intermittent pain in his shoulders. Dr. Isaacs stated that Claimant had sought a "second opinion" from Dr. Schneider and had come away from this appointment with the impression that he had a cyst in his humerus that was quite large and required an injection. Dr. Isaacs also noted that Dr. Schneider was requesting a repeat rotator cuff repair and calcium phosphate injection into the greater tuberosity. Dr. Isaacs stated that the MRI did not show any rotator cuff tear but did show cystic changes that were likely related to the anchor placements at the time of the initial surgery. Dr. Isaacs opined that the cystic changes were likely a natural progression from surgery but that he was unfamiliar with the calcium phosphate injection procedure and would not have classified the MRI findings as an "impending fracture." Dr. Isaacs opined that there were no findings on the MRI to indicate the need for a repeat rotator cuff repair.

12. Dr. Isaacs signed a facsimile transmittal sheet, not addressed to any person or entity, dated both November 20 and November 22, 2017. Dr. Isaacs referred Claimant back to Dr. David Schneider for right shoulder surgery. There is no further comment concerning the referral or the procedure to be performed. This document was sent by Claimant to his attorney on November 27, 2017.

13. Dr. Mark Paz performed an IME on November 10, 2017, and issued his report on November 22, 2017. Claimant denied any new injury or trauma to the right shoulder since his rotator cuff repair. Claimant told Dr. Paz that he was scheduled for surgery on December 21, 2017, with Dr. Schneider for a "resection of the cyst." Dr. Paz agreed with Dr. Isaacs that there was no rotator cuff tear seen on the most recent March 30, 2017 MRI and that this also did not document impending fractures. Dr. Paz further opined that there was no mechanism of injury which would explain fractures. Dr. Paz opined that the proposed treatment of the calcium phosphate injection was not indicated to treat the work-related diagnoses of rotator cuff tendinitis and impingement, as set forth by authorized treating physician, Dr. Isaacs. Dr. Paz recommended conservative care as outlined by Dr. Isaacs, which could be completed under maintenance.

14. Dr. Paz issued an addendum report on December 5, 2017, after reviewing the November 22, 2017, referral note from Dr. Isaacs to Dr. Schneider. Dr. Paz noted that documentation supporting the basis for the referral was not presented. Id. Dr. Paz

stated that the primary issue was not a difference of opinion regarding treatment options for the right shoulder, but rather the absence of objective findings on the MRI study supporting any of the treatments proposed by Dr. Schneider. Dr. Paz noted that Dr. Isaacs specifically disagreed with Dr. Schneider's assessment of the MRI results.

15. Claimant testified that he was not referred by Dr. Isaacs to see Dr. Schneider until he solicited this request in November 2017. Claimant testified at hearing that he had specifically requested Dr. Isaacs to do surgeries for his right shoulder and unrelated knee injury because Dr. Isaacs was familiar with his claim and was a good surgeon. Claimant testified that Dr. Isaacs would not perform surgery and was unfamiliar with the proposed procedure requested by Dr. Schneider. Claimant testified that he received regular treatment for his right shoulder after surgery with his personal care provider, Dr. Eric Smith. Claimant testified that he had previously been out on FMLA leave for the shoulder. Claimant testified that he had been working full duty up until the point that he again went on FMLA leave on November 4, 2017. Claimant testified that his right shoulder had always been hurting, prior to his 2012 injury and after his 2013 surgery. Claimant testified that he had always had intermittent pains after surgery.

16. Dr. Paz testified at hearing as Respondents' medical expert in occupational medicine. Dr. Paz testified that there were no medical restrictions imposed by any provider in the records reviewed, to date. Dr. Paz testified that Claimant's present, ongoing diagnosis was impingement syndrome of the right shoulder and "post-operative" right shoulder rotator cuff repair status. Dr. Paz testified that Dr. Isaacs had not indicated any surgical recommendations to address the cyst formation and indicated no surgical recommendations after review of the MRI. Dr. Paz testified that there were no objective findings to support the opinion and recommendation for surgery by Dr. Schneider. Dr. Paz testified that the purpose of calcium phosphate injections is to heal fractures, and that cysts are resected out, not treated with calcium phosphate. Dr. Paz testified that there was no request for any specific type of surgical procedure in the record by Dr. Isaacs. Dr. Paz testified that the calcium phosphate injections recommended by Dr. Schneider were secondary to the recommendation for rotator cuff repair surgery and surgery for what Dr. Schneider classified as impending insufficiency fractures. Dr. Paz opined that any further reasonable, necessary, and related treatment could be performed as maintenance care.

CONCLUSIONS OF LAW

Reopening of the Claim

1. A claimant may file a Petition to Reopen his claim on the basis of a change in condition within six years of the date of injury, or otherwise after the date the last temporary or permanent disability benefits, or medical benefits, become due and payable. Section 8-43-303(1)-(2)(a)-(b), C.R.S. The claimant has the burden of proof, by a preponderance of the evidence, in seeking to reopen a claim for a worsened condition. *Anderson v. Longmont Toyota, Inc*., 102 P.3d 323 (Colo. 2004). A "change in condition" refers either to a change in condition of the original principal injury or a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury. *Chavez v. Industrial Comm'n of State of Colo*., 714 P.2d 1328 (Colo. App. 1985). Reopening of a claim is appropriate when the degree of permanent disability has changed, or when additional medical or temporary disability benefits are warranted. *Richards v Industrial Claim Appeals Office of State of Colo*., 996 P.2d 756 (Colo. App. 2000). The ALJ has broad discretionary authority to determine whether a claimant has met his burden of proof to reopen. *Kilpatrick v. Industrial Claim Appeals Office of State*, 356 P.3d 1008 (Colo. App. 2015).

2. In determining whether a claimant has met her burden of proof, the ALJ may resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence. *Bodensleck v. Indus.* Claim Appeals Office, 183 P.3d 684 (Colo. App. 2008). When determining credibility, the ALJ should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness, probability or improbability, of the testimony and actions, the motives of the witness; whether the testimony has been contradicted; and bias, prejudice and interest. *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936). The ALJ should consider an expert witness' special knowledge, training, experience or research, and has broad discretion to determine the weight of evidence on this basis. *See Young v. Burke*, 338 P.2d 284 (Colo. 1959).

3. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office*, 240 P.3d 429 (Colo. App. 2010). Substantial evidence is that "quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. *See Pacesetter Corp. v. Collett,* 33 P.3d 1230 (Colo. App. 2001). It is not necessary that the ALJ address every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as

unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

4. Claimant had preexisting right shoulder pain before his April 12, 2012, work injury and had treated with his family doctor, Dr. Smith, for both shoulders since the time he was a child. There was no acute injury in this matter and Claimant's pain continued intermittently after his 2013 surgical repair with Dr. Isaacs and his October 31, 2013, placement at MMI. Dr. Isaacs recommended Lidoderm patches as maintenance and otherwise discharged Claimant from care after MMI. Claimant continued to treat with his family doctor, Dr. Smith, after placement at MMI for the injury and only saw Dr. Isaacs for his injection treatments when Dr. Smith retired. Claimant sought treatment for his bilateral shoulders and it is noted that he was seeking a new family physician to continue treatment for the shoulders.

5. Dr. Isaacs did not recommend surgery, further diagnostics or care when Claimant presented to him on January 24, 2017. Dr. Isaacs likewise did not recommend surgery or further care at his May 2, 2017, follow-up visit. Dr. Isaacs never indicated a change in Claimant's MMI status or his work restrictions. Dr. Isaacs only referred Claimant back to Dr. Schneider when he was asked to do so by Claimant.

6. Claimant voluntarily removed himself from work in November to go on FMLA. Claimant has previously removed himself from work to go on FMLA for his bilateral shoulder condition.

7. Based upon the above, there is no work-related change in condition that warrants a reopening of the claim for additional medical or temporary disability benefits. There is no indication by the ATP that the cystic changes require removal from MMI or temporary disability. Likewise, there is no indication by the ATP that the referral solicited by Claimant to Dr. Schneider is for treatment related to the claim. Dr. Isaacs did not independently recommend surgery or further medical care after his review of the MRI study. Claimant has not met his burden to show that he suffered a work-related change in condition.

8. Since Claimant's petition reopen is denied and dismissed, it is found and concluded that Claimant's claim for medical benefits is also denied.

ORDER

1. Claimant has failed to establish that he suffered a work-related change in condition warranting reopening of his claim. Claimant's Petition to Reopen is therefore denied and dismissed.

2. Since Claimant failed to sustain his burden of proof to establish a worsening of his condition, Claimant's claims regarding medical benefits are also denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43- 301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, and "WCRP" refers to Workers' Compensation Rules of Procedure, 7 CCR 1101-3.Hearing in this matter was held on

Denver, CO 80203

ISSUES

- Is Claimant entitled to permanent total disability benefits?

STIPULATIONS

1. Respondents admitted that the atrial fibrillation condition ("a-fib") is related to the admitted injury.

2. Medical benefits were not an issue to be determined at hearing, as there were no specific medical treatments currently in dispute.

3. Respondents reserve their right to contest liability for any other heart conditions which may arise in the future beyond the atrial fibrillation.

4. In light of the above Stipulations, Claimant does not intend to pursue the issue of overcoming the DIME regarding his medical impairment rating.

5. If Claimant is awarded PTD benefits, Respondents are entitled to the statutory offset for Claimant's receipt of Social Security retirement benefits.

6. Claimant was permitted to present evidence on the issue of disfigurement at the hearing on May 8, 2017 and the disfigurement hearing set for July 17, 2017 at 9:00 a.m. was cancelled.

The Stipulations were accepted by the Court and are made part of this Order.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant was 67 years old at the time of the hearing (D.O.B. March 20, 1950).

2. Claimant reported he completed the equivalent of one year of school in Honduras. Claimant had limited ability to write Spanish.

3. From approximately 1999 to 2005, Claimant worked as a laborer for a metal company which made gutters. From 2005 two 2008, Claimant worked for B&D

Roofing. From 2008 to 2010, Claimant worked for several companies, removing asbestos. The ALJ found Claimant's jobs were ones that involve physical labor.[1]

4. Claimant testified he took classes to obtain his asbestos certification from the State of Colorado.[2] He was licensed in 2008 and renewed the license every year after that.

5. Claimant underwent physical evaluations for the job of the asbestos removal on August 3, 2012 and August 14, 2013. In these forms, physicians certified Claimant was found to be able to use a respiratory device and there was no medical condition that would place him at an increased risk of material health impairment from exposure to asbestos.

6. Claimant began working for Employer as an asbestos remediation specialist in 2011. He worked there until he was injured.

7. There was no evidence in the record Claimant had physical restrictions before April 23, 2014. The ALJ noted Claimant told Dr. Gellrick he had not treated with a doctor in the twenty years before his industrial injury.

8. On April 23, 2014, Claimant sustained an admitted industrial injury when he fell from scaffolding while working for Employer. There were differing accounts as to how far he fell, which was anywhere from 15-25 feet. Claimant suffered a loss of consciousness and sustained multiple injuries as a result of the fall. He was transported to the emergency room at Vail Valley Medical Center.

9. Claimant was treated at Vail Valley Medical Center his lacerations were repaired. A CT scan revealed multiple left rib fractures and small pulmonary contusions, with a small left pneumothorax. An April 26, 2014 note from Jamie Craig, M.D. discussed the diagnosis of atrial fibrillation, which was likely from the stress of an acute pulmonary emboli. Claimant was treated with therapeutic Lovenox for bilateral pulmonary emboli, with bilateral deep vein thrombosis. On April 26, 2014, Claimant was discharged from Vail Valley Medical Center and transferred to Denver Health.[3]

10. At Denver Health, Claimant underwent a flexible bronchoscopy, left posterior lateral thoracotamy and open reduction internal fixation of left ribs (numbers 2,3,4,5 and 6). Claimant was discharged from Denver Health on May 28, 2014.

11. Claimant was hospitalized at Kindred Hospital with acute hypercarbic respiratory failure, pulmonary embolism/deep vein thrombosis, for which he was prescribed Coumadin. The treatment received during this hospitalization also included

[1] Exhibits 27 and 28.

[2] Exhibit 1.

[3] Claimant's early course of treatment was summarized in Dr. Hattem's IME report-Exhibit 16, pp. 165-167, along with Dr. Gellrick's DIME report. Also, both vocational experts prepared extensive medical summaries.

treatment for an infection and an acute kidney injury. Claimant was then discharged to home care.

12. On July 7, 2014, Claimant was evaluated by Greg Smith, D.O. at Occmed Colorado. Dr. Smith noted he did not have all of Claimant's medical records he anticipated significant permanent impairment as a result of the traumatic brain injury and pneumothorax, noting Claimant could not work. Dr. Smith received Claimant's hospital file, which noted diminished cognition, TMJ frozen left shoulder, along with changes. Dr. Smith referred Claimant to Barry Ogin, M.D. for treatment.

13. Claimant was hospitalized again on July 17, 2014 at University Hospital for a pulmonary embolism, acute hypoxic respiratory failure, a fib, post-traumatic brain injury, recent CVA, decreased visual acuity, pulmonary hypertension, thyroid hypertonicity, medical delirium, chest pain/rib fractures. Claimant was discharged on July 25, 2014.

14. On August 15, 2014, Claimant was hospitalized at Swedish Hospital with chest pain. Diagnostic tests were run and he was discharged.

15. On August 22, 2014, Claimant was evaluated by William Boyd Ph.D., who conducted a psychological evaluation. Dr. Boyd's impression was: rule out emotional disorder, pain disorder and personality factors. Claimant received cognitive-behavioral therapy (eight sessions). The last section with Dr. Boyd was December 18, 2014. Dr. Boyd concluded Claimant's somatic symptom disorder was resolved and the adjustment disorder with anxiety, was partially resolved.

16. On October 22, 2014, Claimant was evaluated by Suzanne Kenneally, Psy.D. Dr. Kenneally conducted a clinical interview, as well as administering tests, including a neuropsychological test, nonverbal intelligence, memory malingering and the Beck depression inventory. Dr. Kenneally diagnostic impressions were: major depressive episode: single episode; psychological factors affecting a general medical condition; and status six months post-work site injury. Dr. Kenneally opined Claimant did not have persistent cognitive deficits associated with the injury and the test results were markedly variable.

17. Claimant returned Dr. Smith on February 18, 2015. With regard to the atrial fibrillation, Dr. Smith noted this condition was found before Claimant underwent to surgery a few weeks ago. Dr. Smith initially opined it was not work related and referred Claimant to his personal physician, who believed he did not have a-fib before the injury. Claimant had an embolus and his primary care physician believed this was a work-related injury. Dr. Smith agreed with this physician that the embolus lodged in the atrium caused the a-fib, which needed to be corrected before he underwent surgery.

18. On examination, Claimant had a positive straight leg raising on the right and negative on the left. Claimant reported tenderness in his left eye. There was a positive Phalen's test in the left wrist. Dr. Smith's assessment was: closed head injury-improved and returned to baseline; chest injuries resolved; partial rotator cuff tear with

adhesive capsulitis-good response to injection; pulmonary embolism and DVT secondary to stasis from closed head injury; multiple rib fractures status post-open reduction and internal fixation; Coumadin therapy; hypertension; and atrial fibrillation.

19. Claimant was treated by Alan Lipkin, M.D. for vertigo and sensorineural hearing loss after he was injured. Dr. Lipkin's impression was bilateral post-tramautic hearing loss; tinnitus; and vertigo. In the evaluation on April 28, 2015, Dr. Lipkin noted all three conditions had improved.

20. On September 25, 2015, Claimant underwent a functional capacity evaluation ("FCE") by Kristine Couch, OTR. Claimant reported being unable to sit more than twenty minutes or stand more than thirty minutes, but was observed sitting for fifty minutes and standing for forty minutes. Claimant reported being able to walk for 30 to 45 minutes. He demonstrated the ability to lift up to 10 pounds from the ground to overhead. A hand function test confirmed the ability to perform such tasks in the sedentary and light work categories, even though a validity check indicated possible poor effort during left hand grip tests. Ms. Couch noted that Claimant's lift capacity testing "was terminated based upon his determination" that he reached his safe and reliable capacities. Ms. Couch placed the FCE results in the sedentary work category.

21. On October 14, 2015, Claimant was evaluated by Dr. Bloch. At that time, Claimant was complaining of ringing in his ears, as well as pain in the ribs, where he underwent an open reduction and internal fixation of multiple rib fractures. On examination, Dr. Bloch noted significant limitation of range of motion of the thoracic spine and shoulder, along with swelling in the rib area. The ALJ found these were objective findings made on examination.

22. Dr. Bloch's assessment was: closed head injury-improved and returned to baseline; chest injuries-resolved; partial rotator cuff tear-with significant adhesive capsulitis with a good response to injection by Dr. Fuller; pulmonary embolism and DVT; multiple rib fractures-status post open reduction and internal fixation; Coumadin therapy; encounter for therapeutic drug monitoring; hypertension; and atrial fibrillation; awaiting echocardiogram studies by Dr. Cohen; physiatry injections on hold due to anticoagulation; and chest wall pain, contusion to chest and rib, costochondritis, closed head injury with loss of consciousness, blunt facial trauma, and left shoulder rotator cuff repair.

23. Dr. Bloch concluded Claimant was at MMI and sustained a permanent medical impairment. Dr. Bloch assigned a 37% whole person impairment to the thoracic spine, as well as a shoulder impairment of 29% (extremity), which converted to a 17% whole person impairment rating. Dr. Bloch also assigned a 5% whole person impairment for tendinitis. Claimant's total medical impairment was 48%. Citing the FCE, Dr. Bloch noted Claimant was placed in a moderate duty category[4], with lifting

[4] The ALJ notes this does not correspond all aspects of the medium work category as identified by Mr. White and Ms. Bartmann.

limited to 10 pounds from the floor to chest; pushing and pulling to 50 pounds, as well as limitations in ability to work overhead. He was also limited from bending, kneeling, crawling, squatting and climbing; should not drive company vehicles or work with power equipment.

24. Claimant was treated for the right eye retinal tear by Frank Siringo, M.D. and was evaluated by Ronald Wise, M.D. for visual impairment on January 5, 2016. Dr. Wise assigned a 5% rating for each eye. Claimant had no restrictions provided that he used appropriate spectacle correction. He also required lifelong monitoring for signs and symptoms of a retinal tear or detachment.

25. On March 25, 2016, Claimant underwent an independent medical examination which was performed by Edward Healy, M.D. at the request of Claimant. At that time, he complained of headaches, intermittent vertigo, along with cognitive dysfunction, including mild problems with memory, attention and concentration. He also had pain in his cervical, left upper trapezius, medial periscapular and levator scapular muscle, with tingling and numbness radiating into his third, fourth and fifth digits of his left hand. On examination, Claimant had an irregular heart beat and was not able to do serial three subtractions, which was deemed secondary to his minimal education. The Dix-Hallpike maneuver (left and right) caused dizziness and vertigo. Claimant had limitations in the range of motion ("ROM") left shoulder. Tenderness was found in the cervical spine, lumbar mild hypertonicity over the left cervical paraspinals and left upper trapezius muscles. Decreased cervical ROM was found, but full ROM was present in the lumbar spine.

26. Dr. Healey's diagnoses included: traumatic brain injury/concussion, with post-concussion syndrome including central vertigo, disequilibrium, post-traumatic headaches and cognitive dysfunction; left first through seventh rib fractures-status post ORIF with the thoracotomy of the second, third, fourth, fifth and sixth ribs; chronic respiratory pain in the distribution of rib fractures noted in diagnosis number two; left pneumothorax and pulmonary contusion; history of pulmonary emboli related to chest trauma and rib fractures and subsequent recurrence of pulmonary emboli-rule out pulmonary insufficiency; history bilateral lower extremity deep venous thrombosis, trauma-related; chronic atrial fibrillation, secondary to pulmonary emboli; status post left facial laceration repair; status post hand laceration repair; history of acute failure requiring mechanical ventilation; history work injury related injury; history of pneumonia; history of acute kidney injury work related; bilateral neurosensory hearing loss, left greater than right, with associated tinnitus, pre-existing, but hearing loss increased; left visual blurring and history of right retinal detachment requiring photocoagulation; post-traumatic headaches with occipital neuralgia; left shoulder contusion with a partial supraspinatus tear and tendinopathy requiring left shoulder arthroscopy with SLAP tear repair and distal clavicle section; chronic cervicalgia, with cervical MRI revealing C3-C4 disc extrusion, C6-C7 disc extrusion and C7-T1 facet arthropathy with disc bulge; left cervical brachial myofascial pain and secondary headaches; adjustment disorder with mixed anxiety and depressed mood; chronic chest wall pain secondary to blunt trauma, and fractured ribs with costochondritis. Dr. Healey opined Claimant was permanently and totally disabled and required additional

treatment including psychological counseling, long-term medical care with an internal medicine doctor or cardiologist and re-evaluation by orthopedic surgeon.

27. A DOWC IME was performed by Caroline Gellrick, M.D. on May 24, 2016. At that time, Claimant described persistent headaches, neck pain, mid- and low back pain, left shoulder pain and right leg pain. Dr. Gellrick's diagnoses were: TBI, PCS, with central vertical disc equilibrium-symptoms mostly resolved; cervical strain; rib fractures with resultant hemothorax, pulmonary embolism, pneumonia, persistent intercostal neuritis; history of DVT bilateral lower extremities; cranial contusion resulting in left facial laceration, left eye contusion and retinal tears-repaired; left partial supraspinatus tear, left shoulder arthroscopy with SLAP tear repair, DCR with biceps tendinotomy.

28. Dr. Gellrick opined that Claimant reached MMI on October 14, 2015, with a 37% combined impairment rating, consisting of a 21% left upper extremity rating (which converted to 13% whole person rating), an 11% spine rating (cervical and thoracic), a 10% rib rating, and a 5% vision rating. Dr. Gellrick did not assign permanent impairment ratings for a-fib, headaches, hearing loss, or cognitive impairment.

29. Dr. Gellrick confirmed Claimant was at MMI but needed extensive maintenance treatment. This included injections for the shoulder, as well as anti-coagulants. Dr. Gellrick agreed Claimant was in the sedentary work classification, as opined by Dr. Bloch. He should not use ladders or do overhead work with his left shoulder and the condition of the cervical spine. Dr. Gellrick opined Claimant also should not be operating heavy equipment with the condition of his chest wall and pain. Dr. Gellrick concluded Claimant should not drive with his cardiac condition of a-fib, including personal vehicles.

30. On June 21, 2016, a Final Admission of Liability ("FAL") was filed on behalf of Respondents, admitting for a 37% whole person medical impairment. Claimant's TTD benefits ended on October 143 2015. Respondents admitted for reasonable and necessary and related medical treatment and/or medications after MMI.

31. Claimant underwent an FCE on August 8, 2016 at XRTS. The testing was performed by Alexander Guido, PT/DPT. PT Garrido concluded Claimant's effort was inconsistent, which led to inconclusive findings. Claimant was also reported to have overt pain behaviors and positive Waddell's signs. His lowest-lift was a right unilateral lift of 24.75 pounds from 10 inches to waist. His heaviest lift was right unilateral lift of 32.25 pounds to waist. The grip strength testing for the right and left hand was valid.

32. On September 26, 2016, Claimant underwent an IME performed by Respondents' expert Albert Hattem, M.D., who observed non-physiologic signs on examination. The only medications Claimant reported taking were Tramadol, Ibuprofen, and Eliquis; he did not report taking Metoprolol. Claimant did not describe left wrist or hand pain to Dr. Hattem, who documented normal strength in the hands and wrists

without any neurological deficits, and no left hand condition was diagnosed. Claimant reported he was very healthy before the accident, his contemporaneous pain level was 2/10, and his pain is normally mild. Dr. Hattem concluded that Claimant could work in the sedentary-to-light work category.

33. On December 15, 2016, Claimant underwent a vocational assessment by Cynthia Bartmann, C.C.M, C.D.M.S. He denied having any medical conditions before the accident which limited the type or amount of work he could perform and reported that his job with Respondent-Employer required substantial use of the upper extremities. Claimant reported numbness in the left upper extremity, but did not describe any functional limitations of the left hand. Ms. Bartmann concluded Claimant could work in the sedentary-to-light category. There was no evidence Ms. Bartman performed academic testing at the time of her assessment of Claimant.

34. Ms. Bartmann identified several open positions within Claimant's commutable labor market and the restrictions issued by Drs. Bloch and Hattem: (1) American Made Apparel Manufacturing: apparel maker with seamstress positions (for which prior experience was preferred but not required) and seasonal clothes folding positions (for which no prior experience was needed, though no such positions were open then); (2) Hemp Temp: temporary employment company servicing marijuana growers with trimmer jobs; (3) Casa Bonita: Mexican restaurant with several open positions, including food assemblers and sopapilla runners; (4) Hammond's Candies: candy maker with production jobs which did not require lifting; and (5) Casa Vallarta: Mexican restaurant with salsa runner positions who can choose how many plates they carry at a time. Ms. Bartmann also listed Simmons Company as a possibility, a mattress manufacturer willing to train workers for frequently available and sedentary seamstress positions, although they did not have openings at the time of her report. Ms. Bartmann noted that these were examples of jobs Claimant can pursue, rather than a complete list of those he can perform. The ALJ inferred all of these positions required some use of both upper extremities.

35. On January 17, 2017, Claimant underwent a disability evaluation with Lee White. Mr. White prepared a lengthy summary of Claimant's medical treatment.[5] He concluded the combination of Claimant's ratable impairments (cervical, thoracic, rib - related, visual, shoulder, heart, and circulatory) resulted in a constellation of restrictions. This limited Claimant to sedentary duty. Mr. White also noted that it was reasonable to consider tinnitus, hearing loss, headaches and a complex integrated cerebral function as part of the disability. Admittedly, Claimant was a difficult individual to psychologically evaluate given his limited education, language barrier and negligible Spanish literacy. Mr. White concluded Claimant had ongoing cognitive limitations. Mr. White noted Claimant was employable in several capacities before the injury, including as a farm worker, service worker, and as a construction laborer. He was now limited to working at the sedentary level and his physical/vocational abilities no longer matched. He agreed with Dr. Healey that Claimant was permanently and totally disabled.

[5] Exhibit 21, pp. 244-351. Exhibit 22, pp. 354-430.

36. Mr. White reviewed Ms. Bartmann's report and agreed Claimant did not have marketable transferable skills. He opined Claimant was limited to the sedentary job classification. Mr. White opined Ms. Bartmann did not adequately address the role that the combination of Claimant's head, neck, shoulder and rib problems would play in his ability to work in the suggested assignments. Mr. White reviewed all of the employers listed by Ms. Bartmann and concluded Claimant could not work in those positions, as the physical requirements exceeded his post-injury physical limitations. He concluded Claimant's back, shoulder, and rib conditions precluded his employment as Claimant did not have the ability to perform in these positions.

37. On March 7, 2017, Claimant underwent a rest and pharmacologic stress myocardial perfusion imaging. Claimant experienced chest pain, dizziness, headache, and shortness of breath during the test. Sundeep Viswantan, M.D. determined this was an abnormal rest and pharmacologic rest and pharmacologic stress myocardial perfusion imaging scan. There was a 6% reversible defect present in the apex and in 408 pickle area concerning for ischemia. Claimant had normal left ventricular systolic function and equivocal EKG response to Regadenoson. The results were sent to Dr. Cohen.

38. Mr. White prepared a supplemental report, dated April 28, 2017. He offered further opinions regarding Claimant's limitations, noting that Claimant was limited from sustained use of the left upper extremity. He also believed Claimant's general endurance was affected by his cardiac situation. Mr. White also reviewed Ms. Bartmann's report regarding other potential employers, which she found were either hiring or taking applications. Mr. White found as follows:

> Denver Bookbinding Company: contacted in person-4/20/17-not hiring.
> Broncorp Manufacturing: contacted in person-4/20/17-not hiring.
> Pro-Tel, Inc.: called to inquire about applying-not hiring.
> Davis Manufacturing: contacted in person-4/21/17 not hiring.
> Your Bindery: contacted in person-4/21/17-not hiring.
> Color Productive Printing: Google lists as permanently closed-address now occupied by fast food establishment.
> Peak Fulfillment-contacted a person-4/26/17-not hiring.
> Styro-Tech-not at that location for year.

39. Mr. White concluded that it was unlikely that Claimant was employable in food service/production, industrial printing, apparel manufacturing, or light manufacturing packaging. He opined Claimant was unable to use his upper extremities in a sustained and bilateral manner.

40. The evidentiary deposition of Dr. Hattem was taken on May 12, 2017. Dr. Hattem testified as an expert in the fields of Occupational Medicine and Preventive Health. He is Level II accredited pursuant to the WCRP. Dr. Hattem discussed his evaluation of Claimant, including the conclusion that Claimant was at MMI. He opined Claimant had no functional limitation in his right upper extremity, but limitations in his left upper extremity. Dr. Hattem testified that both he and Dr. Gellrick found close to full

ROM in Claimant's shoulder, which differed from Dr. Smith and Dr. Healey. He thought the explanation was Claimant was self-limiting or had behavioral issues, which caused inconsistent measurements. Dr. Hattem believed Claimant could perform repetitive work activities with the left hand, but should limit use of the left shoulder overhead or at chest height.[6]

41. Dr. Hattem testified Claimant had no limitations with regard to his hearing and sight.[7] Dr. Hattem agreed to Claimant could have pain with regard to the rib injury, if he were required to perform repetitive activities.[8] Dr. Hattem stated Claimant could perform the potential jobs identified by Ms. Bartmann from a medical standpoint because these were in the sedentary-to-light category.

42. With regard to the a-fib, Dr. Hattem testified this condition was related to the work injury and Claimant had an ongoing need to take anti-coagulation medications. He stated if that condition was well-controlled, the blood clotting was within a therapeutic range and assuming one had a normal heart rate, this would not preclude employment. Dr. Hattem stated he would send Claimant to work in occupations that did not require extreme exertion. On cross-examination, Dr. Hattem agreed that symptoms of shortness of breath, fatigue, dizziness, chest pain were consistent with the diagnosis of atrial fibrillation (as opined by Dr. Cohen), if the a-fib was not under control. Dr. Hattem testified he did not focus on Claimant's subjective complaints, but rather on objective findings.

43. Santos Ortiz, a longtime friend and now landlord of the Claimant, testified that the Claimant rents his basement. He and the Claimant interact on a daily basis. Mr. Ortiz testified that the Claimant requires his help with basic living needs, such as cleaning and cooking two or three times per day, and that the niece of the Claimant also frequently helps with the same. Mr. Ortiz credibly testified that he has been witness to the fact Claimant required naps during the day due to fatigue, and testified that the Claimant often awakes him at night when he is unable to sleep confirming the Claimant's testimony that he has difficulty sleeping. Mr. Ortiz testified that he has been witness to the fact that the Claimant has difficulty using his left arm and avoids using his left arm.

44. Dr. Healey testified as an expert in the neurology and occupational medicine. He is Level II accredited pursuant to the WCRP. He examined Claimant on two occasions. Dr. Healey testified Claimant's symptoms from the injuries caused permanent physical and mental impairment. He noted Dr. Keneally assessed Claimant's IQ at 74, which was in the 4th percentile. This could be a combination of cognitive problems from the injury, as well as innate abilities. Dr. Healey also found Claimant's diagnoses with respect to the cervical spine and shoulder caused limitations. These were noted in his second evaluation. Claimant also had decreased

[6] Hattem deposition, pp. 51:25-52:2.

[7] Hattem deposition, pp. 10:20-11:8.

[8] Hattem deposition, pp. 26:7-27:6.

grip strength left hand. Dr. Healey opined this limited his activities. Claimant's impairment necessitated work restrictions in addition to those assigned by Dr. Hattem and Dr. Bloch. Dr. Healey concluded Claimant was permanently and totally disabled.

45. Dr. Healey testified Claimant's a-fib required him to take Metropolol, which caused various symptoms, including tiredness, low energy, decreased ability to respond to exercise, slow heartbeat, mental sluggishness. This affected his ability to maintain a steady work throughout the day, especially if the job was physically demanding. The ALJ credited this testimony and concluded the symptoms would affect Claimant's ability to earn wages.

46. The ALJ considered the various opinions and concluded Claimant had permanent physical restrictions related to the industrial injury. These included no bending, kneeling, crawling, squatting and climbing. Claimant was restricted from lifting overhead with his left arm and at chest-level, as stated by Dr. Hattem. The ALJ inferred Claimant was precluded from doing jobs which required repetitive use of both upper extremities. Per Dr. Bloch (an ATP), Claimant was limited in the company vehicles he could drive.[9]

47. Claimant did not return to work after his industrial injury.

48. There was no evidence Claimant could return to his pre-injury employment.

49. Ms. Bartmann testified as a vocational expert on behalf of Respondents. Ms. Bartmann testified consistently with her vocational report. She concluded the Denver labor market was one that was growing and in which there were jobs available. More particularly, there were entry-level jobs available within Claimant's restrictions. These were the type of jobs that had a great deal of turnover and were open frequently. Ms. Bartmann stated Claimant did not evince any cognitive difficulties during her evaluation. He stated Claimant did not demonstrate physical discomfort during her meeting. The ALJ found Ms. Bartmann discounted Claimant's restrictions, including those he reported, as well as those related to the a-fib. Ms. Bartmann testified there were jobs where Claimant would not be required to use his left upper extremity or it would only be used to assist the other hand. Ms. Bartmann conceded there were other positions were Claimant was required to use both upper extremities, however, her reading of the medical restrictions indicated he could do that.[10] Ms. Bartmann opined Claimant was able to earn wages.

50. Mr. White testified as a vocational expert on behalf of Claimant. He testified consistently with his vocational report and supplemental reports he prepared. He concluded Claimant was unable to earn wages as a result of the injury sustained on April 23, 2014. Mr. White testified Claimant's limited education and work experience limited his access to the Denver labor market. Although there were jobs available

[9] Exhibit 26, p. 508.

[10] Bartmann deposition page 54:19-55:17.

within the Denver labor market, Mr. White opined Claimant would not be able to obtain and keep those positions. Mr. White testified that he believed Claimant could not work in positions where he had to use his upper extremities on a continuous basis. Mr. White's testimony regarding positions which required use of both upper extremities was persuasive to the ALJ. Based on all the medical records, Mr. white believed Claimant was limited to the sedentary work classification. Mr. White also concluded that Claimant's need for frequent breaks was a barrier to obtaining and keeping employment. The ALJ credited Mr. White's opinions and found him to be more credible than Respondents' expert, Ms. Bartmann.

51. Claimant testified that he still experiences pain in his head, left shoulder, chest and left eye. He has a buzzing in his ear, which sounds like a fly. Claimant also stated he has hand/arm symptoms. Claimant said his pain ranges from 2/10 to 7/10. Claimant stated the pain he experiences increases when he does more activity. Claimant state he is able to walk short distances, including to McDonalds. The pain also interrupts his sleep and he gets tired quickly. Claimant testified he rests during the day, sometimes taking naps. Claimant did not believe he would be able to do a job that required using both hands. The ALJ credited Claimant's testimony that he continued to have pain in the parts of his body injured in the accident and this can be variable. The ALJ also concluded this pain limited Claimant's physical abilities.

52. Claimant testified he has applied for jobs, with friends taking him to fill out the applications. The ALJ inferred Claimant's experience and background limited to him in the job search and led him to enlist help in the search.

53. There was no evidence in the record Claimant performed any production or assembly jobs before his injury. There was no evidence Claimant performed any job involving sewing before his injury. The ALJ concluded Claimant's left upper extremity condition, including restrictions precluded him from performing these jobs. To the extent those jobs were available, Claimant could not perform the functions required for those positions.

54. Claimant receives $514.00 in Social Security retirement benefits every month.

55. Claimant's a-fib was related to the work injury.

56. Claimant takes Atorvastatin, Metoprolol Tartrate, Eliquis, which were prescribed by Dr. Cohen. He is also taking Tramadol for pain.[11]

57. Claimant proved he is no longer able to earn wages as a result of restrictions from his industrial injury and the pain he experiences on a regular basis.

58. Evidence inconsistent with the above findings is either not credible and/or not persuasive.

[11] Exhibit 25, pp.441-442.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). The question of whether Claimant proved he was permanently and totally disabled rested on a relation of the credibility of witnesses, including the vocational experts.

Permanent Total Disability

To prove his claim that he is permanently and totally disabled, Claimant shouldered the burden of proving by a preponderance of the evidence that he is unable to earn any wages in the same or other employment. §§ 8-40-201(16.5)(a) and 8-43-201, C.R.S. (2003); *see City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). Claimant must also prove the industrial injury was a significant causative factor in the PTD by demonstrating a direct causal relationship between the injury and the PTD. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office,* 21 P.3d 866 (Colo. App. 2001).

The term "any wages" means more than zero wages. *See Lobb v. Industrial Claim Appeals Office,* 948 P.2d 115 (Colo. App. 1997); *McKinney v. Industrial Claim Appeals Office,* 894 P.2d 42 (Colo. App. 1995). In weighing whether Claimant is able to earn any wages, the ALJ may consider various human factors, including Claimant's physical condition, mental ability, age, employment history, education, and availability of work that Claimant could perform. *Weld County School Dist. Re-12 v. Bymer*, 955 P.2d 550 (Colo. 1998). As Justice Martinez articulated:

"We hold that, in determining eligibility for PTD benefits, it is appropriate to consider various, well-settled human factors related to the claimant's ability to earn wages. These factors may include consideration of the claimant's commutable labor market or other analogous concept which depends upon the existence of employment that is reasonably available to the claimant under his or her particular circumstances". *Weld County School Dist. Re-12 v. Bymer*, *supra,* 955 P.2d at 558.

The ALJ may also consider Claimant's ability to handle pain and the perception of pain. *Darnall v. Weld County,* W.C. No. 4-164-380 (I.C.A.O. April 10, 1998). The critical test is whether employment exists that is reasonably available to Claimant under his or her particular circumstances. *Weld County School Dist. Re-12 v. Bymer*, *supra*. The question of whether Claimant proved inability to earn wages in the same or other employment presents a question of fact for resolution by the ALJ. *Best-Way Concrete Co. v. Baumgartner,* 908 P.2d 1194 (Colo. App. 1995).

In the case at bench, Claimant asserted that the combination of his educational and work background, along with his physical injuries rendered him permanently and totally disabled. Claimant pointed to his continuing ongoing physical complaints and limitations as support for this claim. Claimant argued he could not maintain employment and earn wages. Respondents averred there were multiple jobs within Claimant's commutable labor market in which he was employable. Therefore, he could earn wages and was not permanently and totally disabled as a result of his industrial injury. Based upon the evidence, the ALJ determined Claimant met his burden of proof and was entitled to permanent total disability benefits. The ALJ reached this conclusion based upon Claimant's background, as well as the sequelae of the April 23, 2014 injury.

As a starting point, the ALJ first considered Claimant's age, education and work experience to determine whether he satisfied his burden of proving he was entitled to PTD benefits. As determined in Findings of Fact 1-2, Claimant was sixty-seven years old and had limited education. There was no evidence in the record Claimant had the ability to read and write in English. Although Claimant's writing ability in Spanish was disputed, there was no evidence in the record Claimant held any job before the injury in which he used his writing abilities. The evidence in the record led the ALJ to conclude he had limited ability to write in Spanish. (Finding of Fact 2).

As found, Respondents' expert did not conduct any academic testing on Claimant at the time of her evaluation and the evidence supported the conclusion that Claimant had very limited academic experience or proficiency. (Finding of Fact 33). The ALJ credited the testimony of Claimant's vocational expert that his academic background and experience represented a barrier to re-employment. (Findings of Fact 39, 50).

Claimant's employment since 1999 included jobs which were physical in nature, many of which involved lifting, as well as use of both upper extremities. As reflected in his work history, most of Claimant's work experience was doing jobs which required physical labor. (Finding of Fact 3). Claimant most recent employment of asbestos removal was a labor-intensive job, which required climbing ladders/scaffolding. As

found, Claimant could not return to jobs he had previously done after his work-related injury. (Findings of Fact 47-48, 50).

Second, the inquiry then turned to Claimant's physical condition, including consideration of his physical limitations which resulted from his industrial injury. There was no dispute that Claimant suffered substantial physical injuries as a result of his fall on April 23, 2014. The course of his treatment included four hospitalizations in the first six months after the injury, as well as extensive treatment for injuries to his head, neck, shoulder, as well as internal injuries.

However, there was a divergence of opinions with regard to Claimant's permanent physical restrictions. As determined in Finding of Fact 23, ATP Dr. Bloch found these injuries led to permanent medical impairment ratings, as well as physical restrictions. All of the physicians who performed independent medical examinations also concluded Claimant had permanent restrictions as a result of the injury. (Finding of Fact 29-Dr. Gellrick; 39-Dr. Hattem; 43-Dr. Healey). The first FCE placed Claimant in the sedentary work classification. The second FCE did not place Claimant in a classification. The ALJ considered the multiple opinions regarding Claimant's restrictions and determined Claimant was in the sedentary to light work classification, along with restrictions to his left upper extremity, as well as those related to standing, squatting, climbing ladders and driving. Specifically, with regard to the left upper extremity, the ALJ found Claimant was not precluded from using his arm entirely. However, the restrictions for reaching overhead and at chest height impacted his ability to perform jobs in which repetitive upper extremity use was required. The ALJ found Claimant's permanent restrictions limited his access to the labor market and ability to earn wages.

Third, the ALJ was persuaded the sequelae from Claimant's industrial injury precluded him from earning wages. The ALJ credited the Claimant's testimony that he experienced frequent physical pain related to the accident. (Finding of Fact 51). There was no evidence Claimant had physical conditions which caused pain or any restrictions prior to his industrial injury. He experienced ongoing pain, specifically in his chest, neck and back. This impacted his ability to secure employment and earn wages.

The ALJ also found the a-fib condition impacted Claimant's employability. In this regard, the medication Claimant took for this condition caused symptoms, including fatigue, which he verified. Dr. Hattem who testified it was possible that a-fib in the medication could cause the symptoms, but qualified the answer by saying symptoms would not occur if the a-fib was well-controls. Dr. Healey testified the a-fib and the medication claimant was taking for this problem affected him. Claimant's testimony, as well as the cardiac workup in March 2017 led the ALJ to conclude that Claimant's a-fib condition impacted him. The ALJ found this supported claim for permanent total disability benefits.

When considering all of these facts, the ALJ credited the opinions of Mr. White over those offered by Ms. Bartmann. The ALJ concluded Mr. White integrated Claimant's residual symptoms, along with his restrictions when analyzing whether he

could obtain employment and earn wages. The ALJ found it was the combination of Claimant's background, as well as his physical conditions which rendered him permanently and totally disabled. (Finding of Fact 57). The ALJ concluded, even though the commutable labor market had open positions, these were not jobs Claimant could perform.

In coming to this conclusion, the ALJ considered Respondents' argument that were open positions in the Denver labor market within Claimant's restrictions. Respondents also contended Claimant did not commence his job search until recently. The assertion that Claimant delayed in seeking a job was undercut, at least in part, by the fact that Claimant had four hospitalizations in the aftermath of the injury, as well as extensive treatment through his ATPs. That said, Claimant did not immediately seek employment. Indeed, the evidence showed his applications for work were completed more recently. As found, Claimant was limited in his job search by his physical condition, along with his work experience and background. (Finding of Fact 52). The ALJ concluded this restricted Claimant's access to the job market.

Respondents also argued Claimant did not include all of his prior experience in some applications and appeared to sabotage some of the potential employment opportunities, in that he talked about his restrictions and took his shirt off during one interview. Although the ALJ could find no rational explanation for Claimant removing shirt during an interview, disclosing restrictions on an application or during an interview did not necessarily lead the ALJ to conclude Claimant was sabotaging these employment opportunities. Indeed, some employers inquire as to physical limitations when a candidate is interviewed. The overriding question was whether Claimant could secure employment and earn wages, which the ALJ concluded he could not.

Respondents also focused on the tests in the FCEs, in which the individuals administering the tests felt Claimant was self-limiting and where the results did not meet validity criteria. Respondents correctly pointed out at least some of Claimant's self-described restrictions were greater than those imposed by his physicians. Respondents also relied upon Dr. Hattem's testimony to support the assertion that Claimant could perform jobs identified by Ms. Bartmann. The ALJ was not convinced Claimant could obtain employment at any of these companies. In addition, the ALJ was not persuaded that the unskilled jobs identified by Respondents' expert constituted employment opportunities in which Claimant could earn wages. On balance, the ALJ was persuaded Claimant would not be able to obtain a position and earn wages.

Based upon the totality of the evidence adduced at hearing, the ALJ determined Claimant proved he was permanently and totally disabled as a result of his industrial injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents shall pay Claimant permanent total disability benefits, commencing on October 14, 2015.

2. Respondents are entitled to a credit for PPD benefits paid.

3. Respondents shall pay Claimant interest at the rate of 8% per annum on compensation benefits not paid when due.

4. Pursuant to the parties' Stipulation, Respondents shall provide medical benefits to treat Claimant's a-fib, including medications.

5. Respondents are entitled to take the statutory offset for Claimant's social security retirement benefits.

6. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: March 20, 2018

ISSUES

The issues set for determination included:

- Whether Claimant proved by a preponderance of the evidence that he suffered a worsening of condition (right foot) related to the admitted September 17, 2015 injury, entitling him to reopen his claim.

- Whether Claimant has proven by a preponderance of the evidence that his bilateral knee complaints are a compensable component of the admitted September 17, 2015 work injury.

- If Claimant proved that his bilateral knee condition is a compensable component of the admitted injury, did he establish by a preponderance of the evidence that he is no longer at MMI?

- Did Claimant prove that treatment for his right foot and both knees was reasonable, necessary, and related to his industrial injury?

FINDINGS OF FACT

1. Claimant was employed as a driver for Employer. This job involved delivering packages to various locations.

2. There was no evidence in the record that Claimant sustained an injury to his right foot before September 2015. There was no evidence Claimant injured or received treatment for his right knee before September 2015.

3. In 1998, Claimant injured his left knee for which he required ACL surgery. There was no evidence admitted at hearing which documented any permanent work restrictions related to Claimant's left knee. Claimant testified he was able to perform his job duties for Employer without any knee problems.[1]

4. On September 17, 2015, Claimant sustained an admitted industrial injury while he was checking his truck. He was hurt when he walked between two pallets and caught his right foot on the corner of a pallet. Claimant testified this caused his foot to twist and it was really sore. Claimant reported the injury two hours later to his dispatcher.

[1] Hearing Transcript ("Hrg Tr.") pp. 37:24-38:3.

5. Claimant initially treated at North Suburban Medical Center on September 17, 2015. X-rays were taken and read by Matthew Schmitz, M.D. Dr. Schmitz' impression was: proximal fifth metatarsal minimally displaced fracture, approximately 2 cm. from the base. A splint was applied and Claimant was given crutches, as well as oxycodone and tramadol.

6. On September 21, 2015, Claimant was evaluated by Carlos Guerrero, M.D. at Concentra. Dr. Guerrero's impressions were: fracture of right foot and fracture of fifth metatarsal bone of right foot. An Achilles tendon sprain was also noted. X-rays showed a non-displaced fifth metatarsal fracture, along with a plantar and Achilles tendon spur. Claimant was given restrictions, including no driving a company vehicle, no climbing ladders, stairs or walk, and may not walk on uneven terrain. Claimant was referred for an orthopedic evaluation.

7. Claimant was evaluated by Michael Zyzda, M.D. on September 30, 2015. Pain was noted of the base of the fifth metatarsal, with slight pain of the cuboid. Dr. Zyzda recommended Claimant stay non-weightbearing for an additional week. In the follow-up evaluation which occurred on October 21, 2015, Dr. Zyzda recommended Claimant put full weight on the foot with the cast boot on and to discontinue crutches in two weeks.

8. Claimant was followed by Candace Sobanski, M.D. who continued the work restrictions in the evaluation on November 9, 2015, at which time he was going to be weaned from the walking boot. Claimant received physical therapy ("PT") in the form of electrical stimulation, iontophoresis, ultrasound, and heat/cold. The November 9, 2015 note from Dr. Sobanski indicated Claimant was being weaned from the walking boot. The ALJ inferred Claimant's use of a walking boot and the process of being weaned from it could cause bilateral knee symptoms, as Claimant reported symptoms once he was out of the walking boot.

9. On November 18, 2015, Dr. Zyzda noted Claimant was still experiencing soreness and had been out of the boot over the last few days. Claimant was to begin PT. An x-ray taken that day was read by Abbas Chamsuddin, M.D., who identified callus formation at the level of the fracture of the base of the fifth metatarsal bone, along with a decrease in edema and swelling. No MRI scan was done of the right foot before Claimant reached MMI.

10. The medical records before November 24, 2015 did not contain references to complaints of knee pain made by Claimant. In a PT note dated November 24, 2015, Kristin Johnson, P.T. noted Claimant reported bilateral knee pain. Additional notes from Bethany Lubacz, P.T. for the period of December 1, 2015 through December 7, 2015 were admitted onto evidence. These records documented bilateral knee pain, which PT Lubacz initially described as unrelated.

11. On December 9, 2015 Claimant was evaluated by Stephanie Missey, PA-C, at which time he was reporting right knee pain and weakness. PA-C Missey

recommended additional PT for strengthening. Claimant received additional PT provided by Catherine Kent, P.T.

12. On December 22, 2015, Claimant was placed at MMI. A narrative report was prepared by PA-C Missey and Claimant was released by Dr. Zyzda. There was a report of bilateral knee pain noted by PA-C Missey. X-rays taken that day showed no osseous abnormality in his right foot, as found by radiologist Carol Stephenson, M.D. An old fracture proximal to the fifth metatarsal was noted, along with small dorsal osteophytes and plantar heel spurs.

13. On December 29, 2015, a Final Admission of Liability ("FAL") was filed on behalf of Respondents based upon Dr. Guerrero's December 22, 2015 evaluation.[2] Respondents denied liability for post-MMI medical treatment on the grounds that it was not reasonable, necessary or related to the compensable injury.

14. Claimant testified since he was placed at MMI, his foot condition has gotten worse.[3]

15. Claimant continued to receive PT, which also included the right knee. After the evaluation on January 8, 2016, Dr. Sobanski diagnosed right knee injury and sprain of the right knee. Dr. Sobanski noted causation of the bilateral knee complaints would be determined after imaging was obtained. In the M-164 signed by Daniel Peterson, M.D. on January 14, 2016, Dr. Peterson indicated his objective findings were consistent with the history and/or work related mechanism of injury/illness. Claimant received PT for the knee through January 27, 2016. The notes reflected pain reported by Claimant as well as catching/locking found by the therapist (PT Lubacz).

16. Claimant was evaluated on January 19, 2016 by Scott Richardson, M.D. at Concentra. At that time, he complained of pain in the right lateral foot, as well as both knees. Claimant indicated the latter symptoms started two days after his injury. Dr. Richardson's assessment was fracture of the fifth metatarsal bone of the right foot; right knee injury; and left knee injury. Claimant's work restrictions were continued. A prescription for ibuprofen was issued, along with knee sleeves and PT was ordered. The February 9, 2016 treatment note from PT Lubacz recorded that Claimant was discharged from care, as he was not making progress and would not benefit from further therapy.

17. On February 9, 2016, Claimant was evaluated by Mark Foster, D.O., at which time he was reporting bilateral knee pain and right foot pain. This pain had worsened since MMI. Dr. Foster noted bilateral knee crepitus and tenderness on examination. Tenderness was noted over the proximal right 5th metatarsal. Claimant's list of active problems included: Achilles tendon sprain; fracture of the fifth metatarsal bone of the right foot; fracture right foot; left knee injury; right knee injury; and sprained

[2] Dr. Guerrero's M-164 was admitted into evidence and referenced in the FAL.

[3] Hrg Tr. p. 27:5-10.

of right knee. Dr. Foster recommended an MRI and podiatry evaluation. He also prescribed ibuprofen. Dr. Foster noted the compensability of both knees had been contested by the insurance company, but did not provide a definitive opinion regarding causation.

18. X-rays of Claimant's left knee were taken on February 10, 2016, which showed evidence of a prior ACL repair in the distal femur, as well as surgical screws in the proximal tibia. The films were read by Steven Abrams, M.D., who identified moderate narrowing of the medial joint compartment and marginal osteophytes, along with patellar spurring. Dr. Abrams' impression was: no bony abnormality; degenerative changes and the evidence of prior postsurgical changes as described above. The x-rays of the right knee showed mild to moderate narrowing of the medial joint compartment, marginal osteophytes involving the femoral condyles and tibial plateau, along with patellar spurring which were also noted by Dr. Abrams.

19. On March 4, 2016, Claimant underwent an MRI of the right foot. The films were read by Joseph Ugorji, D.O., who concluded there was a nondisplaced, ununited sub-acute fracture at fifth metatarsal base; early microtrabecular stress fracture at fourth metatarsal base; non-displaced acute/sub-acute fracture of the lateral sesamoid; low-grade contusion at insertional peroneus brevis. The ALJ found this was the first MRI of the right foot in the record.

20. Claimant also underwent an MRI of the left knee on March 4, 2016. These were read by Dr. Ugorji. His conclusion was medial and lateral tibial femoral compartment failure, as evidence by grade 4 of 4 bone on bone chondromalacia, with synovial hypertrophy, bulk marginal osteophytosis, areas of subchondral osteonecrosis, with extensive subchondral edema. There was also evidence of prior ACL reconstruction, with occlusion of the intercondylar notch, which contributed to high-grade fraying without tear of the posterior ligament; grade three chondromalacia patella; advanced proximal tibiofibular osteoarthropathy; and bulky posterolateral interarticular loose body. No lateral meniscus tear was found.

21. On March 10, 2016, Amanda Cava, M.D. performed a one-time evaluation Claimant and recommended reopening of the case and a referral to podiatry in light of continued symptoms and the MRI. Dr. Cava noted there was an ununited fracture on the MRI. Dr. Cava completed an M-164 (dated March 20, 2016) which repeated this recommendation. The ALJ credited this opinion.

22. Matt Lewis, M.D. authored a letter, dated March 21, 2016 which referenced the March 4th MRI. Dr. Lewis noted the MRI showed three separate fractures with in the affected foot, one with nonunion. Because of Claimant's continued symptoms due to the original injury and his worsening clinical status, Dr. Lewis recommended the case be reopened. This opinion was persuasive to the ALJ.

23. Claimant filed a Petition to Reopen on April 29, 2016. On May 20, 2016, Respondents filed an objection to Claimant's Petition to Reopen.

24. On June 3, 2016, Claimant was evaluated by Philip Stull, M.D. Claimant reported persistent symptoms in his foot, as well as the onset of bilateral knee pain at the time of the injury in September 2015. Dorsal edema was seen in the foot, along with a small effusion in the right knee. X-rays taken at the office showed mild lucency around the medial border of the base of the fifth metatarsal. Dr. Stull recommended bilateral knee cortisone injections and braces. The injections were administered in the office. He referred Claimant to a foot consultant. The ALJ inferred Dr. Stull was of the opinion that the condition of Claimant's knees was related to the work injury, although the report did not contain a specific opinion on causation.

25. There was no recommendation for further treatment of the right or left knee in the record.

26. On August 10, 2016, Claimant was evaluated by Stuart Myers, M.D. Mild swelling over the lateral TMT joints and fifth metatarsal base was noted, as well as tenderness at those locations. The ALJ noted the swelling was an objective finding. A CT scan of the right foot was done. Dr. Myers' impression was: healed fifth metatarsal fracture; post-traumatic arthritis, fourth and fifth TMT joints. Topical diclofenac was prescribed and an injection was discussed. Dr. Myers was asked about the relationship between the original injury and his post-traumatic arthritis and noted degenerative changes at the location of fracture could certainly be related to the injury. Dr. Myers stated it was difficult to tell.

27. On January 11, 2017, Claimant was evaluated by Kathleen D'Angelo, M.D. at the request of Respondents. At that time, he was complaining of pain in his right knee, left knee, lower back and right foot. On examination, Dr. D'Angelo noted swelling to the right foot, along with tenderness in the right knee over the patella. Dr. D'Angelo stated the only diagnosis related to the claim was a fractured fifth right metatarsal bone, which she found to be healed and Claimant remained at MMI. The diagnoses not related to the claim included: hypertension, query Diabetes Mellitus type two; osteoarthritis; bilateral knee degenerative joint disease; Charcot's joints and fractures. Dr. D'Angelo opined Claimant's right proximal fifth metacarpal fracture was at MMI. She concluded the other right foot fractures, degenerative changes and other radiological findings were incidental and causally unrelated to the work injury.[4] Dr. D'Angelo concluded Claimant developed neuropathic arthropathy as a result of diabetes, which had not been confirmed as a diagnosis.

28. Dr. D'Angelo testified as an expert in internal medicine at hearing. She is Level II accredited pursuant to the WCRP. Dr. D'Angelo testified consistently with her IME report. Dr. D'Angelo opined Claimant's bilateral knee pain was not related to the September 17, 2015 injury. She based this conclusion on the delay in reporting knee symptoms, as well as the presence of degenerative changes in both knees. Dr. D'Angelo also opined Claimant's foot condition was not related to the original injury, but

[4] Dr. D'Angelo's diagnoses, including Diabetes Mellitus type two and Charcot's joints were not made by Claimant's ATPs.

felt there were amyotrophic damage to the foot. This was potentially related to diabetes. Claimant had a family history of diabetes (grandmother) and needed to be re-tested. The ALJ noted no other physician attributed Claimant's foot condition to diabetes. Dr. D'Angelo also stated that Claimant had a fracture to a different part of his foot. The ALJ found Dr. D'Angelo's opinions were not as persuasive as Dr. Cava.

29. Claimant proved the condition of his right foot worsened.

30. Claimant proved he required treatment for his right foot.

31. Claimant proved his bilateral knee pain resulted from the industrial injury and caused the need for medical treatment.

32. Claimant failed to prove additional treatment was required for his right and left knee.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005). In the case at bench, the ALJ focused on the credibility of Claimant and the various medical experts to determine the issues.

Reopening

Section 8-43-303(1), C.R.S. (2016) authorizes an ALJ to reopen any award within six years after the date of injury on a number of grounds, including error, mistake, or a change in condition. *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 220

(Colo. App. 2008); *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002). A change in condition refers either "to a change in the condition of the original compensable injury or to a change in Claimant's physical or mental condition which can be causally connected to the original compensable injury". *Chavez v. Industrial Comm'n*, 714 P.2d 1328, 1330 (Colo. App. 1985).

The reopening authority granted ALJs by § 8-43-303, C.R.S. "is permissive, and whether to reopen a prior award when the statutory criteria have been met is left to the sound discretion of the ALJ". *Cordova v. Industrial Claim Appeals Office*, *supra,* 55 P.3d at 189. The party seeking reopening bears "the burden of proof as to any issue sought to be reopened". § 8-43-303(4), C.R.S. (2016). As the *Heinicke* Court noted, reopening is proper where a showing can be made that "Claimant's physical or mental condition that is causally connected to the original compensable injury". *Heinicke v. Industrial Claim Appeals Office*, supra, 197 P.3d at 223.

The medical evidence before the Court led to the conclusion that Claimant's foot condition worsened after MMI and was tied to the original compensable injury. As a starting point, the evidence established Claimant continued to have symptoms (including swelling) in his right foot after MMI. (Finding of Fact 16-17, 26). Claimant testified his right foot symptoms were worse. (Finding of Fact 14).

Claimant also did not have an MRI before being placed at MMI. The March 4, 2016 MRI showed an ununited fracture of the fourth metatarsal. (Finding of Fact 20). In addition, the opinions of Dr. Lewis and Dr. Cava supported the ALJ's conclusion that Claimant's symptoms worsened. As treating physicians, Dr. Lewis and Dr. Cava were in a better position to evaluate Claimant as to whether his condition had worsened.

Dr. Richardson also made objective findings concerning Claimant's right foot in his evaluation on January 19, 2016. He made referrals based upon Claimant's symptoms. (Finding of Fact 16). The ALJ was not persuaded that Claimant sustained an injury to a different part of his foot after MMI, as testified to by Dr. D'Angelo. It was more probable than not that the MRI revealed the extent of Claimant's injury and that condition worsened after MMI. There was also evident (albeit not conclusive) that Claimant developed post traumatic arthritis as a result of the industrial injury. (Finding of Fact 26). Accordingly, Claimant adduced sufficient evidence to meet his burden of proof on reopening.

Claimant had the burden of proving his entitlement to medical benefits for his foot. As found, Dr. Cava recommended additional treatment for the right foot. The ALJ credited this opinion over the opinion offered by Dr. D'Angelo. Claimant therefore proved he was entitled to receive additional benefits to cure and relieve the effects of his injury and Respondents are liable to provide said benefits.

Compensability of Bilateral Knee Condition

Turning to the question of whether Claimant's knee symptoms were a compensable part of the claim, the ALJ found Claimant's injury caused both his right

knee and left knee to become symptomatic. (Finding of Fact 31). There was no evidence Claimant had previously injured his right knee before September 17, 2015. Specifically, there was no medical evidence that Claimant had prior symptoms in his right knee or required treatment for his right knee. (Finding of Fact 2). The evidence led the ALJ to conclude Claimant began experiencing symptoms in his right knee after the industrial injury when he was first required to use crutches, then a walking boot. Based upon the evidence before the Court, the ALJ was persuaded the industrial injury aggravated the condition of Claimant's right knee.

Although Claimant underwent a left knee ACL repair in approximately 1998, Claimant had no work restrictions and was not limited prior to the September 2015 injury. (Finding of Fact 3). There was evidence of degenerative changes in the left knee, as documented by the MRI. (Finding of Fact 20). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004).

Where there was no evidence in the record that Claimant's prior left knee condition limited him in any way prior to the September 17, 2015 work injury, the ALJ concluded that the industrial injury caused the need for medical treatment. (Finding of Fact 31). The record was clear that Claimant became symptomatic after the subject work injury and required treatment. Under these circumstances, the ALJ determined that the September 17, 2015 work injury caused him to experience symptoms in his bilateral knees and therefore this was a compensable facet of the subject claim.

The ALJ considered Respondents' argument that the delay in the report of knee pain and equivocation on the part of some of the providers impels the conclusion that the bilateral knee pain was not related. The ALJ was persuaded that the industrial injury aggravated both of Claimant's knees. As determined in Findings of Fact 15-16, the records admitted at hearing documented the fact that Claimant received treatment (including PT) under the auspices of his ATPs for bilateral knee complaints and this lent support for this conclusion. Claimant was credible when describing his knee complaints which was accepted by his ATPs.

Based upon the evidence admitted at hearing, the ALJ was persuaded Claimant developed bilateral knee symptoms as a result of the work-related injury. This required medical treatment. Accordingly, Respondents are liable for the aggravation of the underlying condition in both of Claimant's knees.

Medical Benefits-Knees

The ALJ concluded that Claimant failed to prove he was entitled to medical treatment for either knee. As found, the MRI of the left knee showed the presence of degenerative changes in the knee. (Finding of Fact 20). Claimant received physical therapy for both knees. (Findings of Fact 15-16). No ATP recommended a course of

further treatment for either knee after this course of PT was concluded. (Finding of Fact 25). In fact, there were no recommendations made by any physician for further treatment of either knee in the record. *Id.*

Claimant was required to establish the need for such treatment by a preponderance of the evidence, but failed to do so. (Finding of Fact 32). In the absence of such evidence, Claimant's request for medical benefits for his knees is denied.

ORDER

It is therefore ordered:

1. Claimant met his burden of proof and established a worsening of his right foot condition. Respondents shall provide medical benefits to Claimant for his right foot to cure and relieve the effects of the work injury.

2. Claimant established his right and left knee symptoms were related to the industrial injury. Claimant bilateral knee conditions were worsened by the September 17, 2015 injury.

3. Claimant failed to establish his right and left knees required medical treatment. Claimant's request for medical benefits for the left knee is denied and dismissed. Claimant's request for medical benefits for the right knee is denied and dismissed.

3. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUES

1. Did Claimant prove by a preponderance of the evidence that he suffered a compensable right knee injury on November 23, 2016.

2. Did Claimant prove by a preponderance of the evidence that the right knee meniscus repair recommended by Dr. Beard is reasonable, necessary and related to the work injury.

3. Whether the authorized treating provider is Rosalinda Pineiro, M.D. at Concentra Medical Centers.

STIPULATIONS

The parties reached the following stipulations:

1. If the claim is found compensable, Claimant's average weekly wage is $1,050.00 per week.

2. If the claim is found compensable, Claimant is entitled to temporary partial disability benefits as of November 28, 2016 and continuing.

These stipulations were accepted by the ALJ and are made part of this Order.

FINDINGS OF FACT

1. Claimant's medical history was significant in that he suffered a right knee fracture when he was in his teens and underwent arthroscopic surgery in the 1980s.

2. Claimant also testified that he fractured his left knee. He underwent three arthroscopic surgeries, ultimately requiring a left knee replacement.

3. In 2012, Claimant fell on a carpet step on a stage at church. Claimant testified he had swelling in his knee and was back to work after a month. At that time, he was performing a physical job and had no problems with his right knee after the injury.

4. On May 25, 2012, Claimant underwent an MRI of the right knee and the films were read by David Stoller, M.D. The medial meniscus was intact and the lateral meniscus showed mild fraying of the apex. Chondromalacia patella with grade 3 chondral erosions of the lateral patellar facet and a hypoplastic medial facet were

shown. Dr. Stoller's impression was: large hemorrhagic fluid collection anterior and medial to the tibia 6.6 cm. x 1.5 cm. in cross-section of the axial plane and 4.5 cm. x 1.7 cm. in the sagittal plane.

5. There was no evidence in the record Claimant suffered a subsequent injury to the right knee from 2012-2016. Claimant testified he was able to perform his job duties during this period of time. There was no evidence in the record that he had permanent restrictions related to his right knee as a result of the 20112 injury.[1]

6. Claimant was employed as a repair technician for Employer, beginning work on February 2, 2016. In this capacity, he responded to maintenance calls for appliances sold by Employer. Claimant testified this job involved bending, stooping, as well as carrying tools. Sometimes he was required to work in awkward positions, with a limited area in which to work.

7. Claimant worked on November 23, 2016, which was the Wednesday before Thanksgiving. He testified he started work at 8:00 in the morning and did jobs throughout the day. Claimant thought he had done a job in in Broomfield and then at approximately 3:30 p.m. went to the last job of the day in Commerce City.

8. Claimant stated he was working in a confined space on a refrigerator that had a leak in the cooling system. He estimated the space was probably 2.5' x 4'. He left the job location at approximately 7:30 p.m. The ALJ inferred Claimant's job duties that day required him to bend, stoop and carry tools. He was working a small space. Claimant testified he worked long hours and he didn't notice the pain until he was driving home. His knee had stabbing pain and stiffness. When he got home, Claimant applied ice and took ibuprofen. Claimant was a credible witness when describing the activities of that day.

9. Claimant testified he reported the injury on Friday morning by sending a text to his manager. She was off for a four-day weekend due to the Thanksgiving holiday. Over the weekend, Claimant said his knee was very painful and he treated it by elevation, icing and occasional heat.

10. Claimant returned to work on Monday, November 28, 2016. At that time, he was sent to the designated ATP for Employer, Concentra. Claimant was evaluated by Cynthia Goacher, M.D. on November 28, 2016. No acute injury or accident was noted, but swelling/pain was present in the right knee after working on his knees 3-4 hours. On examination, an effusion grade 1 and swelling was noted on the anteromedial aspect and medial fossa of the right knee. Restrictions in the range of motion ("ROM") were noted on flexion and extension. Dr. Goacher was concerned about DVT and ordered an ultrasound.

11. On December 12, 2016, Claimant returned Concentra and was evaluated by Dr. Pineiro. He noted no improvement of the knee over the past weeks and was working with restrictions. Dr. Pineiro noted tenderness of the underside of the patella

[1] Hearing transcript, p. 35:16-19.

and popliteal fossa, along with crepitus on examination. There was a positive Lachman's test, but no laxity on valgus stress or varus stress. Dr. Pineiro's assessment was acute pain of right knee and she ordered an MRI.

12. On December 29, 2016, Claimant underwent an MRI of the right knee. The films were read by Eric Smith, M.D., whose impression was: longitudinal horizontal tear in the posterior horn segment medial meniscus. Dr. Smith noted this was a new finding when compared with 2012. There was also free edge fraying versus small free edge body segment lateral meniscus present. Progressive arthrosis was present in the lateral patella and lateral trochlea, along with deep cartilage fissuring in the lateral tibial plateau, with mild interval progression noted.

13. Claimant returned to Dr. Pineiro on January 9, 2017, at which time he noted increased pain in the right knee. On examination, tenderness and swelling were noted over the medial joint line and lateral joint line. Swelling was also found in the infrapatellar region, with tenderness found in the patella and popliteal fossa, along with crepitus. Dr. Pineiro restricted Claimant to a lifting maximum of 40 pounds, no kneeling, squatting and climbing ladders. He was to use kneepads while working. Claimant was to return after the orthopedic evaluation.

14. Claimant was evaluated by Thomas Sachtleben, M.D. on January 16, 2017. He was having quite a bit of pain in his anterior knee that was worse with kneeling. On examination, trace effusion was noted, along with mild medial joint line tenderness. Claimant had a negative McMurray test and negative Lachman's test. Claimant had mild pain with patellar compression testing and one plus retro patellar crepitus was noted. Dr. Sachtleben's diagnosis was right patellofemoral joint osteoarthritis and right medial meniscus tear. Dr. Sachtleben did not think the medial meniscus tear noted on the MRI was a significant contributor to his pain, but rather the patellofemoral joint was the source of Claimant's pain. Dr. Sachtleben administered a corticosteroid injection and referred Claimant to physical therapy ("PT"). Claimant's restrictions were continued.

15. The ALJ found that there was insufficient documentation in the record to determine whether Dr. Pineiro referred Claimant to Dr. Sachtleben. Dr. Pineiro received a copy of Dr. Sachtleben's report.

16. On February 20, 2017, Claimant was reevaluated by Dr. Pineiro. Claimant reported pain relief after the injection for a short time, but the pain returned. Claimant's right knee had tenderness on the under surface of the patella, along with crepitus on palpation. Limited ROM was noted in all planes. Dr. Pineiro noted Claimant was to begin PT for the right knee as soon as possible.

17. On March 6, 2107, Claimant returned to Dr. Sachtleben. Claimant noted relief for about a week after the injection, but was still getting catching and popping in the right knee. On examination, Claimant's ROM for the right knee was 10° to 130° of flexion, with negative McMurray's testing and no appreciable effusion. Medial joint line tenderness was present, but the Lachman's test was negative. Dr. Sachtleben's

assessment was the same as the previous evaluation and he recommended a surgical consultation. He opined Claimant may ultimately benefit from a trial of viscosupplementation, but would need to consider a patellofemoral arthroplasty or total knee arthroplasty at some point.

18. On March 10, 2017, Claimant was evaluated by David Beard, M.D., who is an orthopedic surgeon. Dr. Beard noted trace knee effusion, with moderate medial joint line tenderness and pain with the McMurray test. There was a negative Lachman test and negative anterior posterior drawer, with some patellofemoral crepitus upon active knee extension. Claimant's ROM for the right knee was 0° extension to 135° of flexion. Dr. Beard's diagnoses were: right knee primary osteoarthritis affecting the patellofemoral articulation, not work-related; right knee medial meniscus tear, work related. Dr. Beard recommended a knee arthroscopy to address the meniscal pathology. Dr. Beard noted there were no osteoarthritic findings in the medial compartment and opined the surgery should significantly alleviate Claimant's symptoms. He also advised Claimant that he would be unable to change the fact that there was pre-existing patellofemoral osteoarthritis. The ALJ found Dr. Beard's opinion regarding the relatedness of the meniscus tear to be persuasive.

19. On March 13, 2017, Claimant was re-evaluated by Dr. Pineiro. Dr. Pineiro stated she agreed with the surgical procedure based on MRI findings and Dr. Beard's assessment. Dr. Pineiro's assessment was: acute pain of right knee; patellofemoral syndrome.

20. On July 13, 2017, Claimant underwent an independent medical examination which was performed by Timothy O'Brien, M.D., at Respondents' request. On examination, Dr. O' Brien noted 0° to 110° of the right knee on flexion. Patellofemoral crepitus was present and there was a positive compression test to the right patellofemoral joint. The McMurray test was negative and there was no obvious medial or lateral instability. Claimant did not have an antalgic gait that Dr. O'Brien observed.

21. Dr. O'Brien concluded the November 24, 2016 [2] onset of right knee pain was a manifestation of Claimant's personal health and not causally related to his brief occupational exposure. He disagreed with Dr. Beard's opinion that the meniscal tear occurred while Claimant was kneeling. Dr. O' Brien said medial meniscal tears were created by energy that was dissipated to the knee when the foot was planted and rotational forces were directed to the knee. He noted Claimant had pre-existing patellofemoral arthrosis and it was possible that he noted knee pain while kneeling, which was just a manifestation of his arthritis. Dr. O'Brien stated Claimant's delay in seeking treatment was the behavior of a person who was accustomed to arthritic knee pain. Dr. O' Brien noted Claimant had age-related to generation of his patellofemoral joint based on plane radiographs, which was a long-standing, pre-existing condition. Dr. O'Brien opined the surgical intervention recommended by Dr. Beard was contraindicated, unreasonable and not within the standard of care.

[2] This appears to be a typographical error.

22. Claimant returned to Dr. Pineiro on November 21, 2017. On examination, swelling was noted in the right knee, along with tenderness over the medial joint line and in the undersurface of the patella. Crepitus was found on palpation. Dr. Pineiro noted limited ROM in all planes, with pain. Dr. Pineiro's assessment was: acute pain of right knee; derangement, knee. Dr. Pineiro continued Claimant's work restrictions of: may lift up to 20 pounds frequently, push/pull up to 20 pounds frequently, no climbing ladders, no kneeling for more than five minutes at a time and must wear knee pads.

23. On December 6, 2017, Dr. Pineiro responded to questions posed by Respondents' counsel on the issues of causation and the reasonableness of the proposed surgery.[3] Dr. Pineiro opined Claimant's meniscus tear was work-related, but the osteoarthritis was not. Dr. Pineiro also recommended the meniscus be repaired. She specifically disagreed with Dr. O'Brien's opinion that the right knee pain was a manifestation of Claimant's personal health and not causally related to his employment. She also disagreed with Dr. O'Brien's opinion that the proposed right knee surgery was contraindicated. The ALJ credited Dr. Pineiro's opinions on causation and the reasonableness of the proposed surgery.

24. Dr. O'Brien testified as an expert in orthopedic surgery. He is Level II accredited pursuant to the WCRP. He testified consistently with his IME report. Dr. O'Brien testified there was not an injury to the Claimant's right knee. The act of kneeling would not cause an injury of this type because there was insufficient energy in this activity to cause a tear. The ALJ found this was a somewhat limited view of Claimant's activities, as he was doing more than kneeling on November 23, 2016. Dr. O'Brien opined Claimant's symptoms were a manifestation of his arthritis.[4] Dr. O'Brien stated Claimant had pain behind the kneecap or in the patellofemoral joint. He believed the 2012 injury was traumatic and the MRI showed evidence of a chronic meniscus tear at that time. He said the MRI was misread and a cyst was present. The ALJ noted that to the extent Dr. O'Brien found a pre-existing meniscus tear in 2012, there was no evidence to show Claimant suffered from symptoms and/or limitations following the 2012 injury. Therefore, the ALJ inferred that the work activities aggravated the underlying condition of the right knee.

25. Dr. O'Brien testified Claimant's surgeries on his left knee were indicators of what could be expected with regard to the right. There were three prior arthroscopies on the left knee; all of which failed. Dr. O'Brien stated the medical literature indicated arthroscopic surgery was not successful in relieving pain related to arthritis. He opined Claimant would not benefit from this surgery. Dr. O'Brien also testified that where a knee that has had a prior surgical intervention such as an arthroscopy, it makes the knee replacement much more difficult.[5] Dr. O'Brien stated the surgery recommended by Dr. Beard should not be approved.

---

[3] Respondents' Exhibit B, p. 23.

[4] O'Brien deposition, p. 6:18-7:22.

[5] O'Brien deposition, p. 23:14-24:4.

26. Claimant testified that he wishes to have the surgery. He has been working on modified duty, which includes maintenance of the vans, along with helping supply technicians with tools and equipment. This has reduced his pay almost in half.

27. The ALJ found Claimant's work on November 23, 2016 caused his right knee to become symptomatic.

28. The surgery proposed by Dr. Beard is reasonable and necessary

29. Evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S.

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Compensability-Right Knee

Claimant was required to prove by a preponderance of the evidence that, at the time of the injury, he was performing service arising out of and in the course of the employment, and that the injury or occupational disease was proximately caused by the performance of such service. Sections 8-41-301(1)(b) & (c), C.R.S. (2016). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

However, the mere occurrence of symptoms at work does not require the ALJ to conclude that the duties of employment caused the symptoms, or that the employment aggravated or accelerated any pre-existing condition. Rather, the occurrence of symptoms at work may represent the result of or natural progression of a pre-existing condition that is unrelated to the employment. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1995). Claimant must establish a nexus between the work activities and the claimed disability. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985). The question of whether Claimant met the burden of proof is one of fact for determination by the ALJ. *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000). The particular focus in the case at bench is whether the Claimant's work on November 23, 2016 aggravated and/or accelerated the underlying condition of Claimant's right knee.

Claimant argued his right knee became symptomatic as a result of his work duties on November 23, 2016. More particularly, the work performed that day caused the meniscus to become symptomatic. Claimant asserted the activities on November 23, 2016 either created the condition or caused the underlying condition to become symptomatic. Claimant contended that although he did not know the exact moment he injured himself, this did not bar his claim. Claimant relied upon the opinions of Dr. Pineiro and Dr. Beard to support the conclusion that the proposed treatment was reasonable, necessary and related to the injury.

Respondents argued Claimant's job activities on November 23, 2016 were insufficient to cause a torn medial meniscus. Respondents contended Claimant's medial meniscus was a result of ongoing degenerative changes in the right knee, which were similar to those in the left knee. They argued there was a delay in the onset of Claimant's symptoms, which came as the result of his arthritis. Respondents relied upon Dr. O'Brien's testimony to support these contentions.

On balance, the ALJ was persuaded Claimant's job duties caused the onset of symptoms in the right knee, thereby making Respondents liable for benefits. As a starting point, the ALJ found Claimant to be credible when describing the work performed on November 23, 2016. He was working in a small space and when doing a job of this type, this required not only kneeling, but bending stooping and twisting. (Finding of Fact 8). The ALJ also relied upon the findings of ATP, Dr. Pineiro, who concluded Claimant's job duties were the cause of his right knee symptoms. (Findings of Fact 19, 23). Dr. Pineiro was a treating physician over the course of the claim and responded in the affirmative to the specific question of whether the right knee condition was related to the incident of November 26, 2016. (Finding of Fact 23). Dr. Pineiro also confirmed that the proposed surgery by Dr. Beard was reasonable, necessary and related to the injury. *Id.* Based upon the evidence admitted at hearing, the Judge concluded Claimant established a sufficient nexus between his job duties and the symptoms in of his right knee.

The ALJ considered Respondents' assertions on the issue of compensability. As found, the ALJ concluded Dr. O'Brien's view was somewhat circumscribed regarding Claimant's job duties. He did not take into account that the work performed on November 23, 2016 was not just kneeling, but involved crouching, squatting, lifting, and twisting while working in a confined space. (Finding of Fact 24). In addition, to the extent that Claimant had a meniscal tear in the right knee which was chronic, the ALJ determined it was made symptomatic by Claimant's work activities. The ALJ credited the opinions of Dr. Pineiro, as well as Dr. Beard over those offered by Dr. O'Brien.

The ALJ also reviewed the case cited by Respondents, who argued that the instant case was similar to *Sanchez v. Industrial Claim Appeals Office*, 15CA1481 (Colo. App. March 17, 2016) [Unpublished]. In *Sanchez*, Claimant's knee was asymptomatic before he knelt under and arose from working under a crane. When he stood up, he felt a pop, which is what he advised the various medical providers. There was no evidence in the record that Claimant had symptoms prior to the date of injury. The ALJ initially denied benefits based upon the IME physician's conclusion that Claimant's knee injury would not have occurred when he stood up. This expert opined that the type of tear that occurred was generally a chronic condition and the ALJ credited that opinion. The Industrial Claim Appeals Office affirmed the decision.

The Colorado Court of Appeals, in an unreported decision, reversed and remanded the case, concluding the ALJ applied the incorrect legal standard. The Court of Appeals determined that Claimant was in the neutral risk category, pursuant to the *City of Brighton v. Rodriguez*, 318 P.3d 496, 505 (Colo. 2014). The ALJ implicitly found that Claimant's knee condition was chronic and pre-existing. This amounted to a finding that Claimant's injury was in the purely idiopathic personal risk category and generally not compensable under the Colorado Workers' Compensation Act, absent an exception. However, the Court concluded that Claimant's knee injury would not have occurred but for his actions at work. Therefore, Claimant's activities should have been analyzed under the positional risk test and the Court of Appeals concluded the injury was compensable.

Both the rationale and result in *Sanchez v. Industrial Claim Appeals Office* support the ALJ's conclusions in the case at bench. The ALJ concluded that it was Claimant's work activities on November 23, 2016 that led to Claimant's symptoms. Therefore, he was entitled to receive benefits under the Colorado Workers' Compensation Act.

Medical Benefits

In light of the ruling on compensability, Respondents are required to provide medical benefits to Claimant to cure and relieve the effects of the industrial injury. Section 8-42-101(1)(a), C.R.S. The question of whether Claimant proved the proposed treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002). As found, ALJ concluded the arthroscopic surgery proposed by Dr. Beard was reasonable, necessary and related.

(Finding of Fact 28). Dr. Pineiro's opinion, as well as Dr. Peter's opinion persuaded the ALJ on this question. In addition, the ALJ credited Dr. Beard's opinion that this would relieve Claimant's pain. (Finding of Fact 18).

The ALJ notes that the record was unclear whether Dr. Pineiro directly referred Claimant to Dr. Sachtleben, who in turn referred Claimant for a surgical evaluation by Dr. Beard. (Finding of Fact 15). Without sufficient evidence in the record, additional evidence is required on this issue. Accordingly, the parties will be ordered to confer on the authorization issue to try to resolve it.

ORDER

It is therefore ordered:

1. Claimant suffered a compensable injury on November 23, 2016, injuring his right knee while working as a service technician.

2. Respondents shall provide medical benefits to cure and relieve the effects of Claimant's injury. Dr. Pineiro remains an ATP.

3. Because the ALJ could not determine whether Dr. Sachtleben and Dr. Beard were ATPs, counsel for the parties shall confer within thirty (30) days of this Order becoming final regarding the authorization issue to try to reach an agreement. If no agreement is reached, either Claimant or Respondents may file an Application for Hearing on this issue.

4. Pursuant to the parties' Stipulations, Respondents shall pay Claimant TPD benefits from November 28, 2016 until terminated by law.

5. Respondents shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a

petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Denver, CO 80203

ISSUE

Whether Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on July 10, 2017.

STIPULATIONS

The parties agreed to the following:

1. Claimant earned an Average Weekly Wage (AWW) of $433.55.

2. If compensable, Claimant is entitled to receive Temporary Total Disability (TTD) benefits for the period July 7, 2017 through October 2, 2017.

3. If compensable, Annu Ramaswamy, M.D. is Claimant's Authorized Treating Physician (ATP).

4. If compensable, all medical treatment that Claimant has received for his lower back injury is reasonable, necessary and related to the July 10, 2017 accident.

FINDINGS OF FACT

1. Claimant worked for Employer as a Landscaper. He began his employment on May 9, 2017. Claimant's job duties involved mowing lawns, raking leaves, cleaning gutters, using blowers and basic sprinkler repair.

2. On July 10, 2017 Claimant was assigned to perform work at the Early Learning Child Center in Lakewood, Colorado. Employer's Manager Joshua Pedersen was at the job site in the morning but left for another job location. Claimant's co-workers Mike and Matt were also at the jobsite to clear the grounds and create a play area. The process involved cutting trees, removing shrubs and disposing of debris. After lunch Mike and Matt left the location. By early afternoon only Claimant and Foreman Patrick Moreno remained on the Child Center job site.

3. While Mr. Moreno was in the back of a truck, Claimant was using a wheelbarrow to transport groundcover materials from the truck to the property. Claimant was pushing a loaded wheelbarrow that weighed approximately 50-60 pounds. When the wheelbarrow struck the ground and began to wobble, Claimant attempted to keep the device upright. Nevertheless, the wheelbarrow fell on its side and Claimant landed awkwardly on the ground. Claimant specified that his left leg bent behind him and he heard a "pop" in his back. Although Claimant immediately experienced back pain and symptoms radiating down his left leg, he completed his wheelbarrow trips. Claimant

remarked that he told Mr. Moreno that he had fallen and instructed him to contact Manager Mr. Pedersen about the accident.

4. Claimant explained that on July 10, 2017 he called Mr. Pedersen and left a voicemail message about his injury. He stated that he was going to see how badly he felt before going to a doctor and determining whether he would attend work on the following day.

5. Claimant returned to work on the next day and performed his job duties. He advised Mr. Pedersen about his back injury and commented that he would try to make it through the week. However, Claimant noted that he might need to visit a doctor.

6. On July 12, 2017 Claimant was assigned to work with Mr. Pedersen to remove and install a fountain. Claimant explained that while he was lifting a section of the fountain he suffered increased back pain and symptoms radiating down his left leg. Claimant noted that he informed co-worker Matthew Katzenmaier and Mr. Pedersen that he had re-injured his back. Claimant completed his job duties and worked the following two days without incident.

7. On July 17, 2017 Claimant did not report to work but mentioned his back injury to Mr. Pedersen. He visited the Medical Center of Aurora Emergency Department for an evaluation. Claimant reported that he injured his back five days earlier while lifting a heavy planter at work. A lumbar MRI revealed a left lateral and inferior disc extrusion that impinged on the left S1 nerve root in the lateral recess and a broad-based right lateral disc protrusion that impinged on the descending L5 nerve root in the lateral recess. Claimant was diagnosed with left-sided lower back pain.

8. Claimant ceased working for Employer on July 21, 2017.

9. Mr. Moreno testified that he was working with Claimant on July 10, 2017 at the Early Learning Child Center. He explained that Claimant was using a wheelbarrow to transport material from a work truck onto the job site. Mr. Moreno commented that he never saw Claimant fall while pushing the wheelbarrow and Claimant did not report any accident.

10. Mr. Pedersen testified that he worked with Claimant at various job sites after July 10, 2017. Claimant did not inform him of any injuries until July 17, 2017. Mr. Pedersen also did not notice any pain behaviors or discomfort.

11. On July 27, 2017 Claimant visited Colorado Orthopedic Consultants and received treatment from Stephen F. Pehler, M.D. Claimant reported that he had injured his back at work approximately two weeks earlier. Dr. Pehler noted that Claimant's lumbar MRI reflected a left paracentral disc herniation at L5-S1 with a disc bulge at L4-L5. He recommended medications, physical therapy and left-sided L5-S1 epidural steroid injections.

12. On August 3, 2017 Claimant completed a Workers' Claim for Compensation. Claimant specified that he injured his lower back and left leg on July 10,

2017 while pushing a wheelbarrow. He explained that he fell over with the wheelbarrow after it struck a pothole.

13. On August 9, 2017 Claimant underwent physical therapy at Altitude Physical Therapy & Sports Medicine. Claimant reported that on July 10, 2017 he injured his back while pushing a wheelbarrow. He commented that he re-injured his back later in the week at work while moving a stone waterfall. Claimant noted back pain that radiated down his left leg.

14. On October 18, 2017 Claimant visited Annu Ramaswamy, M.D. for an evaluation. On a Physician's Report of Workers' Compensation Injury Dr. Ramaswamy noted that his objective findings were consistent with a work-related mechanism of injury. He assigned work restrictions and noted that Claimant would reach Maximum Medical Improvement (MMI) in about three to four months.

15. On November 21, 2017 Claimant presented to Dr. Pehler for an examination. Claimant reported that he injured his back in July 2017 during a lifting and twisting incident at work. He remarked that he has continued to suffer lower back and left lower extremity symptoms. Claimant commented that, despite conservative treatment, his symptoms have worsened. Dr. Pehler recommended a repeat MRI, a bilateral EMG, continued physical therapy and a second injection.

16. On November 22, 2017 Claimant underwent a second MRI that revealed similar findings to the July 17, 2017 MRI. Claimant subsequently underwent a third lumber MRI that again yielded similar results.

17. On January 8, 2018 Claimant returned to Dr. Ramaswamy for an evaluation. Dr. Ramaswamy again noted that his objective findings were consistent with a work-related mechanism of injury. He continued to assign work restrictions and commented that Claimant would likely reach MMI in two to three months.

18. Claimant continued to periodically visit Dr. Ramaswamy. By February 14, 2018 Dr. Ramaswamy remarked that his objective findings were consistent with a work-related mechanism of injury. He assigned work restrictions and estimated that Claimant would reach MMI in about three to four months.

19. Claimant has demonstrated that it is more probably true than not that he suffered a compensable lower back injury during the course and scope of his employment with Employer on July 10, 2017. Claimant credibly explained that on July 10, 2017 he was using a wheelbarrow at work weighing about 50-60 pounds to transport groundcover materials. When the wheelbarrow struck the ground and began to wobble, Claimant attempted to keep the device upright. Nevertheless, the wheelbarrow fell on its side and Claimant landed awkwardly on the ground. Claimant specified that his left leg bent behind him and he heard a "pop" in his back. He immediately experienced back pain and radiating left leg symptoms. Claimant's Workers' Claim for Compensation also specified that he injured his lower back and left leg on July 10, 2017 while pushing a wheelbarrow. He explained that he fell over with the wheelbarrow after it struck a pothole. Claimant

added that on July 12, 2017 he aggravated his lower back and left leg symptoms while lifting a section of fountain when working at a private residence for Employer.

20. The medical records support Claimant's testimony that he suffered a lower back injury while at work on July 10, 2017. On July 27, 2017 Claimant received medical treatment from Dr. Pehler. Claimant reported that he had injured his back at work approximately two weeks earlier. Dr. Pehler noted that Claimant's lumbar MRI reflected a left paracentral disc herniation at L5-S1 with a disc bulge at L4-L5. He recommended medications, physical therapy and left-sided L5-S1 epidural steroid injections. Two subsequent lumbar MRI's revealed similar findings. Furthermore, Dr. Ramaswamy repeatedly noted that his objective findings were consistent with a work-related mechanism of injury. He assigned work restrictions and noted that Claimant has not yet reached MMI.

21. In contrast, Mr. Moreno testified that, although he was working with Claimant on July 10, 2017, he never saw Claimant fall while pushing the wheelbarrow and there was no accident report. Moreover, Mr. Pedersen testified that Claimant did not inform him of any injuries until July 17, 2017 and he did not notice any pain behaviors. Finally, the medical records reflect some inconsistencies on the precise mechanism of Claimant's lower back injury. Nevertheless, the bulk of the evidence demonstrates that Claimant suffered a lower back injury while working for Employer on July 10, 2017. The diagnostic testing and other medical records demonstrate a causal connection between Claimant's work activities and his lower back symptoms. Accordingly, Claimant's work activities aggravated, accelerated or combined with his condition to produce a need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979); *People v. M.A.*, 104 P.3d 273, 275 (Colo. App. 2004). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. §8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. §8-43-201, C.R.S.

2. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

3. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2007).

4. For an injury to be compensable under the Act, it must "arise out of" and "occur within the course and scope" of employment. *Price v. Industrial Claim Appeals Office*, 919 P.2d 207, 210 (Colo. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. § 8-41-301(1)(c) C.R.S.; *Faulkner v. Industrial Claim Appeals Office,*12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the ALJ. *Faulkner,* 12 P.3d at 846.

5. A pre-existing condition or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing condition to produce a need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999, 1001 (Colo. App. 2004). However, when a claimant experiences symptoms while at work, it is for the ALJ to determine whether a subsequent need for medical treatment was caused by an industrial aggravation of the pre-existing condition or by the natural progression of the pre-existing condition. *In re Cotts,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005).

6. The mere fact a claimant experiences symptoms while performing work does not require the inference that there has been an aggravation or acceleration of a preexisting condition. *See Cotts v. Exempla, Inc.,* W.C. No. 4-606-563 (ICAP, Aug. 18, 2005). Rather, the symptoms could represent the "logical and recurrent consequence" of the pre-existing condition. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985); *Chasteen v. King Soopers, Inc.*, W.C. No. 4-445-608 (ICAP, Apr. 10, 2008). As explained in *Scully v. Hooters of Colorado Springs,* W.C. No. 4-745-712 (ICAP, Oct. 27, 2008), simply because a claimant's symptoms arise after the performance of a job function does not necessarily create a causal relationship based on temporal proximity. The panel in *Scully* noted that "correlation is not causation," and merely because a coincidental correlation exists between the claimant's work and his symptoms does not mean there is a causal connection between the claimant's injury and work activities.

7. As found, Claimant has demonstrated by a preponderance of the evidence that he suffered a compensable lower back injury during the course and scope of his employment with Employer on July 10, 2017. Claimant credibly explained that on July 10, 2017 he was using a wheelbarrow at work weighing about 50-60 pounds to transport groundcover materials. When the wheelbarrow struck the ground and began to wobble, Claimant attempted to keep the device upright. Nevertheless, the wheelbarrow fell on its side and Claimant landed awkwardly on the ground. Claimant specified that his left leg bent behind him and he heard a "pop" in his back. He immediately experienced back pain and radiating left leg symptoms. Claimant's Workers' Claim for Compensation also specified that he injured his lower back and left leg on July 10, 2017 while pushing a

wheelbarrow. He explained that he fell over with the wheelbarrow after it struck a pothole. Claimant added that on July 12, 2017 he aggravated his lower back and left leg symptoms while lifting a section of fountain when working at a private residence for Employer.

8. As found, the medical records support Claimant's testimony that he suffered a lower back injury while at work on July 10, 2017. On July 27, 2017 Claimant received medical treatment from Dr. Pehler. Claimant reported that he had injured his back at work approximately two weeks earlier. Dr. Pehler noted that Claimant's lumbar MRI reflected a left paracentral disc herniation at L5-S1 with a disc bulge at L4-L5. He recommended medications, physical therapy and left-sided L5-S1 epidural steroid injections. Two subsequent lumbar MRI's revealed similar findings. Furthermore, Dr. Ramaswamy repeatedly noted that his objective findings were consistent with a work-related mechanism of injury. He assigned work restrictions and noted that Claimant has not yet reached MMI.

9. As found, in contrast, Mr. Moreno testified that, although he was working with Claimant on July 10, 2017, he never saw Claimant fall while pushing the wheelbarrow and there was no accident report. Moreover, Mr. Pedersen testified that Claimant did not inform him of any injuries until July 17, 2017 and he did not notice any pain behaviors. Finally, the medical records reflect some inconsistencies on the precise mechanism of Claimant's lower back injury. Nevertheless, the bulk of the evidence demonstrates that Claimant suffered a lower back injury while working for Employer on July 10, 2017. The diagnostic testing and other medical records demonstrate a causal connection between Claimant's work activities and his lower back symptoms. Accordingly, Claimant's work activities aggravated, accelerated or combined with his condition to produce a need for medical treatment.

ORDER

Based upon the preceding findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant suffered a compensable lower back injury while working for Employer on July 10, 2017.

2. Claimant earned an AWW of $433.55.

3. Claimant shall receive TTD benefits for the period July 7, 2017 through October 2, 2017

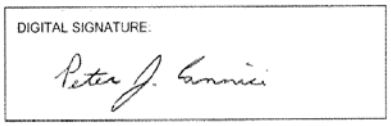
4. Annu Ramaswamy, M.D. is Claimant's ATP.

5. All medical treatment that Claimant has received for his lower back injury is reasonable, necessary and related to the July 10, 2017 accident.

6. Any issues not resolved in this Order are reserved for future determination.

If you are a party dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. *For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a form for a petition to review at http://www.colorado.gov/dpa/oac/forms-WC.htm.*

DATED: April 5, 2018.



Peter J. Cannici
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

- Did Claimant prove that an L5-S1 lumbar fusion recommended by Dr. Ronald Hammers is reasonably necessary and related to the admitted injury?

- Did Claimant prove entitlement to TTD from April 18, 2017 through May 22, 2017?

- Claimant seeks an increase in his average weekly wage to $1,411.89, effective August 1, 2017, due to the cancellation of his Employer-sponsored health insurance coverage. Respondents conceded the issue in their position statement, so AWW has been resolved by agreement.

FINDINGS OF FACT

1. Claimant worked for Employer as a warehouse associate, commercial driver and delivery person. He worked in that physically demanding job for seven years before his industrial injury. Before that, he worked other medium to heavy jobs including highway maintenance and fuel delivery.

2. On October 14, 2016, Claimant suffered admitted injuries on as a result of a slip and fall accident. He was walking down a grass-covered hill and slipped and fell onto his back. Claimant injured his low back and left shoulder as a result of the accident.[1]

3. Claimant had a pre-injury history of low back problems dating to at least 1994. He underwent a laminotomy in October 1994 for a large, left-sided L5-S1 disc herniation displacing the left S1 nerve root. He initially did well after the surgery but developed recurrent symptoms approximately six months later. A lumbar MRI on May 3, 1995 showed a recurrent herniation surrounded by scar tissue displacing the left S1 nerve root. His symptoms were not severe enough to warrant surgery and Claimant underwent three lumbar ESIs, which provided excellent relief. The last ESI was performed on October 13, 1995.

4. The next documented mention of low back pain is in records from Claimant's PCP, Dr. Leyva, in April 2011. At the time, Claimant was awaiting surgery on his right elbow, and Dr. Leyva prescribed Vicodin and Mobic for elbow pain. Dr. Leyva's report included a diagnosis of "Lumbago. Stable at this time. No heavy lifting. Instructed on proper lifting technique. Strengthen abdominal core and back." Later records contain nearly identical language regarding the "lumbago" diagnosis, so these are likely "cloned" entries prepopulated in Dr. Leyva's electronic medical records.

[1] The ALJ is mindful of the parties' disagreement whether other parts of Claimant's body were injured in accident, and this order takes no position those issues.

5. Claimant started seeing a new PCP, Dr. Uusinarkaus, in February 2015. His active problems at that time included his left shoulder, right elbow, and low back. Dr. Uusinarkaus referenced Claimant's remote history of lumbar surgery and noted "he works in a warehouse and his back hurts at the end of the day. He uses hydrocodone for this." Thereafter, Dr. Uusinarkaus refilled Claimant's Vicodin approximately every six months. It appears his standing prescription was for 60 tablets "PRN," which equates to approximately 10 Vicodin per month. That is consistent with Claimant's testimony that he used the Vicodin "two or three times a week" before the October 2016 accident.

6. The pre-injury medical records establish that Claimant had mild chronic low back pain before the October 2016 accident, which waxed and waned with activity, including his work. He worked physically demanding jobs with no significant limitations. There is no persuasive evidence of any pre-existing right lower extremity radicular symptoms.

7. After the October 2016 work accident, Employer referred Claimant to Dr. Robi Baptist at Colorado Springs Health Partners. At his initial visit on October 17, 2016, Claimant described low back pain and radiating right leg pain "like before he had a discectomy several years ago."[2] Sensory and motor examinations were normal, but based on the reported symptoms Dr. Baptist diagnosed lumbar radiculopathy and requested a lumbar MRI. She also imposed sub-sedentary work restrictions with a maximum lifting of 5 pounds.

8. Claimant had a lumbar MRI on October 25, 2016, which showed significant right foraminal stenosis at L5-S1 with probable impingement of the right L5 nerve root. The MRI also showed a "residual or recurrent" left-sided disc bulge possibly impinging the left S1 nerve, severe chronic degenerative disc disease at L4-5, and lesser degenerative changes at L3-4.

9. Claimant saw a neurologist, Dr. Kimberly Wagner, on November 10, 2016. He described back pain with pain and paresthesias in his buttocks, worse on the right than the left. Dr. Wagner noted decreased right lower extremity sensation "in a nondermatomal distribution." Dr. Wagner ordered electrodiagnostic testing "to rule out radiculopathy," and referred Claimant to Dr. Scott Ross for pain management.

10. On November 17, 2016, Dr. Baptist noted Claimant's right leg symptoms had improved, with only intermittent discomfort to the knee without weakness.

11. Claimant underwent a lower extremity on December 1, 2016 with Dr. Ales, which showed evidence of chronic right L5 radiculopathy with no acute denervation.

12. Claimant had a surgical consultation with Dr. Joseph Illig on December 7, 2016. Dr. Illig noted Claimant "currently has no radiating right L5 radicular symptoms but occasionally some buttocks soreness bilaterally." He reported the low back pain was improving with physical therapy. Examination of the lower extremities showed no motor

[2] Since there is no evidence of any preinjury right leg symptoms, the ALJ interprets this to mean Claimant's right leg pain was equivalent to the left leg radiculopathy he had before his 1994 back surgery.

or sensory abnormalities. Dr. Illig opined there was "no indication for surgical intervention in the lumbar spine without evidence of root compression with no recurrent disc herniation."

13. On December 8, 2016, Dr. Baptist noted no surgery was planned because "most radicular leg sx resolved." She also noted a second surgical opinion was pending. At his next visit, on December 30, Dr. Baptist noted the numbness and weakness in Claimant's right leg "is gone but pain continues."

14. Claimant attended numerous physical therapy sessions between November 8, 2016 and January 27, 2017. The PT records reflect steady and significant improvement in his low back pain and radicular symptoms. At the initial visit, Claimant reported pain down the back of his right greater than left leg with occasional numbness and tingling. His back pain was 10/10 at its worst. His sleep was poor, and he could only maintain a posture for approximately 30 minutes before needing to change positions. By December 20 Claimant reported "he hardly notices the numbness/tingling in his butt – it is hardly there anymore." He completed a 5+ hour drive over Christmas with minimal symptoms. On January 20 his "lumbar ROM was pain free, and LE nerve tension has almost all resolved." The PT stopped in the end of January 2017.

15. By the time he returned to therapy on April 4, 2017, Claimant had lost all the previous gains. The therapist noted,

> L shoulder pain . . . has gotten worse since stopping PT at the end of Jan 2017 and this has led to adhesive capsulitis. L shoulder ROM is extremely limited and follows a capsular pattern. He is unable to do most ADLs with his L arm. His low back pain has also gotten worse since stopping PT, and he now experiences shooting pains down his R>L LE. He has decreased lumbar ROM, (+) neural tension test, and impaired dermatomes of L5-S1 in R LE.
>
> * * *
>
> Since stopping PT . . . the back and leg pain is more severe and more frequent. . . . [H]is back is terrible. It hurts to bend a little to make the bed and causes pain to shoot down his R leg to the calf and the L buttcheek. Getting out of a low chair hurts the back. Last week he had to take breaks every hour during his road trip. Sneezing completely debilitates him. . . Sitting is worse than standing.

16. Claimant saw Dr. Ronald Hammers, a neurosurgeon, the next day. He reported "low back pain and right greater than left lower extremity pain. The right lower extremity pain is present in the buttocks, posterior thigh and posterior leg. The left leg pain is present in the buttocks. He believes his lower extremity symptoms are worse than any back pain." The physical examination was relatively benign, with no significant motor or sensory deficits. Dr. Hammers recommended a lumbar ESI and "hoped" conservative care would resolve Claimant's symptoms.

17. Claimant had the ESI on April 10, 2017 but received no significant benefit.

18. Claimant started a modified duty assignment on April 18, 2017. Since Employer had no suitable light duty work available at its facility, it assigned Claimant to work at the ARC Thrift Store. The work aggravated claimant's condition, even though the ARC was careful to abide by his restrictions. When the store manager realized the work was aggravating Claimant's pain, she notified Employer the ARC was no longer willing to have Claimant work there. She sent Claimant home on April 21, 2017 after he had worked one hour.

19. On May 23, 2017, Claimant had surgery with Dr. Weinstein for his admitted left shoulder condition.

20. Respondents admitted TTD benefits from October 15, 2016 through April 17, 2017. Respondents terminated TTD benefits and started TPD benefits on April 18, 2017 based on the modified duty at the ARC. Respondents reinstated TTD on May 23, 2017 when Claimant had shoulder surgery.

21. Claimant saw Dr. Hammers again on June 28, 2017. His primary complaint was right greater than left lower extremity pain radiating to the thigh and down the leg, "most closely resembling an L5 dermatome." Dr. Hammers noted the recent lumbar ESI was ineffective, and opined:

> As for his back and lower extremities, he does have spondylosis in the setting of prior lumbar discectomy. I suspect the majority of his symptoms, resembling L5, reflect right sided L5-S1 foraminal stenosis with compression of the exiting L5 nerve root. He has failed to improve with conservative management and I think further evaluation and consideration of surgery is appropriate.

22. Dr. L. Barton Goldman has performed two IMEs and at least one record review for Respondents addressing various medical treatment issues in this claim. Dr. Goldman also testified at the hearing to elaborate on his opinions regarding the proposed L5-S1 fusion. Dr. Goldman opined Claimant does not meet the criteria for lumbar fusion set forth in the Low Back Pain MTGs. He disagreed with Dr. Ales' interpretation that the EMG shows a right L5 radiculopathy. Dr. Goldman raised concerns about somatization, and noted Claimant has not undergone a psychological evaluation as required by the MTGs as a prerequisite to surgery. Dr. Goldman explained that the proposed surgery is a major undertaking with a difficult recovery, because it involves both a posterior and anterior approach. Dr. Goldman noted no progressive neurological deficits or spinal instability which require surgery on an urgent basis. He also noted Claimant's positive response to physical therapy before it was terminated in January 2017. Ultimately, Dr. Goldman opined an intensive physical medicine and rehabilitation program, with psychological support to address somatization issues, has a better chance of success than surgery.

23. Dr. Hammers testified in a deposition on January 30, 2018 to justify his surgical recommendation. Dr. Hammers explained the primary goal of surgery is to address Claimant's right leg symptoms, which he believed correlate with the L5 nerve root compression seen on MRI. Dr. Hammers opined conservative treatment had failed because Claimant did not respond to the lumbar ESI and received no lasting benefit from physical therapy. He opined that Claimant's low back symptoms and need for surgery are related to the October 14, 2016 accident. Although Claimant had significant pre-existing low back issues, he was functioning fairly well before the accident. Dr. Hammers noted Claimant now has a very different presentation, including radicular symptoms.

24. Dr. Hammers testified he reviewed Dr. Goldman's reports in preparation for the deposition, and modified his recommendations somewhat:

> As I prepared for this deposition, I had all of the reports from Dr. Goldman; and although I don't know if I agree with every one of his assertions, I appreciate that he recognizes concerns about somatization.
>
> And so the way that I would deal with that is, number one, I would require pain psychology; number two, I would require a pain management plan, both pre- . . . during, and post-operative.
>
> And number three, I'm very appreciative that Dr. Goldman has raised these concerns in this case. Where I ever to see [Claimant] again, not only would I have a thorough conversation with him, letting him know that there are reasonable doctors bringing up concerns, but I would do one more confirmatory injection to see if we could get a better understanding of his ability to respond to surgery.
>
> * * *
>
> [P]rior to considering surgery, I would do a right L5-S1 selective nerve root injection.

25. As agreed by the parties, Claimant's average weekly wage is $1,411.89, effective August 1, 2017.

26. Claimant proved by a preponderance of the evidence he is entitled to TTD benefits from April 22, 2017 through May 22, 2017. The ALJ credits Ms. Hovenic's testimony that she terminated Claimant's modified duty at the ARC thrift store because the work was aggravating his injury-related symptoms.

27. Claimant proved the injury aggravated, accelerated or combined with his pre-existing condition to cause his current low back pain and radicular symptoms. Before the October 2016 accident, Claimant had only mild chronic low back pain and no right leg radicular symptoms. He worked full time in physically demanding jobs with no significant limitations. Even Dr. Goldman agreed that the October 2016 accident "exacerbated" or "aggravated" Claimant's pre-existing condition.

28. Claimant proved by a preponderance of the evidence that the L5-S1 fusion recommended by Dr. Hammers is reasonably necessary to cure and relieve the effects of his admitted work injury, **if** Dr. Hammers still recommends the surgery **and** Claimant obtains psychological pre-clearance as contemplated by the MTGs. The ALJ credits Dr. Hammers' opinions regarding surgical indications over those of Dr. Goldman. Claimant has severe and disabling symptoms which have not responded to conservative measures. Since Claimant lost all the gains he made in therapy within two months of its termination, it is unlikely he will achieve lasting benefit from more therapy. The MRI shows objective pathology at L5-S1 that reasonably correlates with his most significant symptoms, and the proposed surgery is reasonably calculated to address that pathology. The finding regarding reasonable necessity comes with the caveat that Dr. Hammers still recommends surgery after reevaluating Claimant as discussed in his deposition. The ALJ further notes that Claimant has not undergone a psychological evaluation for this non-emergency surgery as required by the MTGs. Given the legitimate concerns raised regarding potential somatization and other possible psychological factors, the ALJ finds no basis to deviate from the requirement that Claimant obtain psychological pre-clearance as a precondition to surgery.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). The claimant must prove that an injury directly and proximately caused the condition for which he seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents, and the claimant must prove entitlement to benefits by a preponderance of the evidence. Section 8-43-201. The insurer takes the claimant as it finds him. If an industrial injury aggravates, accelerates, or combines with a preexisting condition to produce the need for treatment, the insurer is liable for that treatment. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Under § 8-42-101(3)(b) and WCRP 17-2(A), medical providers must use the MTGs when furnishing medical treatment. As the arbiter of disputes regarding treatment, the ALJ may consider the MTGs as an evidentiary tool but is not bound by the MTGs when determining whether requested medical treatment is reasonably necessary or injury-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011). As found, Claimant has proven by a preponderance of the evidence that the lumbar surgery requested by Dr. Hammers is reasonably necessary to cure or relieve the effects of the admitted work injury, assuming that Dr. Hammers still recommends the surgery and Claimant obtains psychological pre-clearance as required by the MTGs.

To receive temporary disability benefits, a claimant must prove that must prove that the injury caused medical incapacity or a wage loss. *Montoya v. Industrial Claim Appeals Office*, ___ P.3d ___ (Colo. App. 2018). The persuasive evidence shows Claimant suffered a total wage loss commencing April 22, 2017 as a direct and proximate consequence of his industrial injury. The ALJ credits Ms. Hovenic's testimony that she

terminated Claimant's modified duty at the ARC because it was aggravating his injury-related symptoms. It is immaterial that the work was otherwise within the restrictions outlined by the ATP. Once the third-party chosen by Employer declined to provide further work, for whatever reason, it was incumbent on Respondents to offer alternative work or reinstate Claimant's TTD benefits.

ORDER

It is therefore ordered that:

1. Insurer shall pay for the L5-S1 fusion requested by Dr. Hammers if Dr. Hammers still recommends the surgery and Claimant receives psychological clearance.

2. Insurer shall pay Claimant TTD benefits from April 22, 2017 through May 22, 2017, based on the admitted AWW of $1,028.78.

3. Claimant's AWW shall be increased to $1,411.89 effective August 1, 2017.

4. Insurer shall pay interest to Claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

5. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 6, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

I. Whether Claimant has established by a preponderance of the evidence that she sustained a compensable injury on July 31, 2017.

II. Whether Claimant has established by a preponderance of the evidence that she is entitled to all reasonable, necessary, and related medical treatment stemming from the July 31, 2017 incident.

III. Whether Claimant has established by a preponderance of the evidence that her stress fracture, and need for medical treatment, is related to her July 31, 2017, work injury.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the Judge enters the following findings of fact:

1. Claimant began working for Employer in July 2017. She was employed as a day laborer whose tasks would vary based upon the jobs assigned to her crew on any given assignment. Those tasks generally involved various types of physical labor. Claimant testified that she would wear steel-toed boots while working, and estimated that the boots she wore during this period were in good condition, and possibly up to a year old.

2. Prior to her employment with Respondents, Claimant was diagnosed with renal disease. (Clmt. Ex. 5, pp. 59-95). She required kidney dialysis from 2007 through 2010 to address her end-stage renal disease, eventually receiving a kidney transplant in 2010. Since that time, Claimant has required numerous medications, as well as regular bone density tests. Due to this medical history, Claimant was placed at increased risk for stress fractures and infections from even minor injuries. *Id*. at 74.

3. Claimant testified at hearing that on July 31, 2017, she arrived at work around 6:00 A.M. She and her crew went to their job site, a school in the midst of construction. As the roof of the school gymnasium was not completed at that time, the gym had filled with water due to rains that had occurred a few days before. Claimant and her crew were tasked with removing the water, which they endeavored to accomplish by means of pushing water with push brooms and squeegees toward other workers who were operating vacuums. Claimant estimated that the standing water in the gymnasium was about three inches deep.

4. Claimant testified that as she was pushing water in this manner, she and a coworker had to quickly move to avoid a piece of heavy machinery that was operating near them. As Claimant stepped back with her right foot, she stepped on a nail jutting from a board that was obscured by the standing water. The nail went through the sole of Claimant's boot and punctured the bottom of the arch of her right foot. Claimant testified that she felt immediate pain as a result. Claimant testified that she informed her site supervisor, used the worksite's first aid to bandage the wound, and returned to Employer to report her injury.

5. Upon returning to Employer, Claimant completed an Employee's Report of Injury Form. (Resp. Ex. B, pp. 7-8). Consistent with her testimony at hearing, Claimant indicated that she stepped backward with her right foot, stepping on a nail that punctured the arch of her right foot. Claimant was provided with a Rule 8 medical provider list, from which she chose Concentra Medical Center ("Concentra"). *Id*. at 9.

6. Claimant reported to Concentra that same day. (Resp. Ex. C, pp. 13-34). She was examined by physician's assistant Jordan Maas, who diagnosed her with a puncture wound to the right foot without the presence of a foreign body. Claimant was not given any work restrictions during this initial visit. Claimant returned to Concentra on August 2, 2017, with Maas noting that the puncture wound appeared to be healing normally.

7. In the days following her injury, Claimant testified that she shifted her weight onto the outside of her right foot while walking and standing in order to avoid pressure directly on the puncture wound. As she kept doing so, she testified that she began having additional pain in the lateral side of her right foot, as well as swelling that had not previously been present.

8. Claimant returned to Concentra on August 8, 2017, complaining of lateral right foot pain over the preceding days, worsened by direct pressure and walking. She was given an ankle brace. Claimant returned on August 29, 2017, when Maas noted that Claimant was having continued right lateral foot pain, "likely from compensatory gait changes due to puncture wound." (Resp. Ex. C at 29). Maas noted Claimant was referred to physical therapy for gait training and for possible orthotics. Claimant was also referred for x-rays, which were performed that day. *Id*.

9. Claimant returned to Concentra on September 6, 2017. On that date, Maas diagnosed a stress fracture of the right distal fifth metatarsal from the x-rays that were performed on Claimant's prior visit. Maas further noted that Claimant suffered from lateral forefoot swelling, as well as tenderness in the fourth and fifth metatarsal and the lateral midfoot. Maas examined Claimant's x-rays on that date and diagnosed her with work-related stress fracture of the distal right fifth metatarsal, also noting that the initial puncture wound had healed. (Resp. Ex. C at 32-34).

10. Claimant returned to Concentra and Dr. Zyzda on October 4. 2017. Dr. Zyzda recommended that Claimant receive a specialized orthotic to correct the antalgic

gait that had led to her stress fracture. X-rays continued to show incomplete healing of the stress fracture in Claimant's right foot.

11. On November 1, 2017, Claimant returned for a follow-up appointment with Dr. Zyzda. She noted continued pain along her stress fracture, although her symptoms had improved since her last visit. Approval for the orthotic recommended by Dr. Zyzda was not forthcoming at that time.

12. Claimant presented to Kathleen D'Angelo, M.D. for an IME at Respondents' request on January 28, 2018. (Clmt. Ex. 5, pp. 59-95). As part of her IME, Dr. D'Angelo performed a physical exam, took a patient history, and reviewed the medical record. She ultimately concluded that Claimant's fifth metatarsal stress fracture was a logical consequence of the puncture wound she sustained on July 31, 2017; due to Claimant's pre-existing renal disease and resultant mineral bone disease, Claimant was more susceptible to these types of fractures. As such, when Claimant shifted her weight to the lateral aspect of her foot, i.e., the fifth metatarsal, to avoid pressure on the puncture wound while walking or standing, she had high risk potential for the exact type of fracture that ultimately occurred. Dr. D'Angelo recommended that Claimant receive treatment for her fifth metatarsal stress fracture, specifically recommending a customized orthotic as recommended by Dr. Zyzda.

13. Dr. D'Angelo was subsequently deposed on February 23, 2018. In her testimony, Dr. D'Angelo emphasized that Claimant's stress fracture to the fifth metatarsal could not have occurred due to an acute injury, but rather would have been only caused by a shift in Claimant's weight to the lateral portion of her right foot to avoid placing pressure directly upon the puncture wound while walking. Dr. D'Angelo reiterated the major conclusions of her report, namely that Claimant's preexisting renal disease and mineral bone disease made Claimant more susceptible to a stress fracture due to Claimant putting additional weight on the lateral aspect of her foot while walking due to her work injury. Dr. D'Angelo testified that:

> I absolutely believe that the puncture wound to the medial aspect of her foot caused her to distribute weight on the lateral aspect, therefore causing the stress reaction to the fifth metatarsal and stress fracture.

(Dep. Tr., pg. 27).

14. Dr. D'Angelo concluded that Claimant's fifth metatarsal stress fracture would not have occurred but for the July 31, 2017 work injury, which caused Claimant to put more weight on the lateral portion of her right foot while walking and caused the stress fracture.

15. The ALJ finds Dr. D'Angelo's opinions as set forth in her report and deposition testimony to be credible and highly persuasive.

16. Claimant testified live at hearing. She testified as to how her injury occurred, as well as the steps she took to report and seek treatment for the injury, and how the puncture injury caused her to walk and put more weight on the lateral aspect of her right foot. Claimant also testified as to the treatment she received for the initial puncture wound and the subsequent stress fracture.

17. The ALJ finds Claimant to be credible. Claimant testified credibly as to how her injury occurred, and her subsequent reporting of the injury is consistent with her testimony as to how it occurred. Claimant also testified credibly regarding how the puncture wound to her foot caused her to walk in a manner that put additional weight on the lateral aspect of her right foot. Additionally, Respondents' medical expert was emphatic that, but for the initial injury at work and Claimant's prior medical history, the subsequent stress fracture would not have occurred. Respondents did not introduce credible and persuasive evidence to rebut Claimant's testimony. Dr. D'Angelo's opinions and conclusions as set forth in her medical report and testimony were also unrebutted by credible and persuasive testimonial or documentary evidence.

CONCLUSIONS OF LAW

Generally

1. The purpose of the Workers' Compensation Act of Colorado (Act), C.R.S. § 8-40-101, *et seq.*, is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. C.R.S. § 8-40-102(1).

2. The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

3. Assessing weight, credibility and sufficiency of evidence in Workers' Compensation proceeding is the exclusive domain of the ALJ. *University Park Care Center v. Industrial Claim Appeals Office*, 43, P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008); *Kroupa v. Industrial Claim Appeals Office*, 53 P.3d 1192 (Colo. App. 2002). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55, P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or

none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission*, 441, P.2d 21 (Colo. 1968).

4. The Judge's factual findings concern only evidence that is dispositive of the issues involved; the Judge has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385, 389 (Colo. App. 2000).

Compensability

5. An injury occurs "in the course of" employment where Claimant demonstrates that the injury occurred within the time and place limits of his employment and during an activity that had some connection with his work-related functions. *Triad Painting Co. v. Blair*, 812 P.2d 638 (Colo. 1991). The "arising out of" requirement is narrower and requires claimant to show a causal connection between the employment and injury such that the injury has its origins in the employee's work-related functions and is sufficiently related to those functions to be considered part of the employment contract. *Id.*

6. The ALJ concludes that Claimant has established by a preponderance of the evidence that she sustained a compensable injury while working for the Employer on July 31, 2017. Claimant testified credibly as to how she stepped backward onto a nail on that date and suffered a puncture wound to bottom of her right foot which necessitated the need for medical treatment. Claimant's testimony as to this point is unrebutted, and Respondents have not attempted to dispute that this incident occurred consistently with Claimant's testimony. Claimant's description of the July 31, 2017 work incident is consistent with the description completed by Claimant for her employer, as well as the synopses completed by Claimant's treating physicians throughout her course of treatment. For these reasons, the ALJ finds Claimant's claim to be compensable.

Medical Benefits

7. Claimant has the burden to prove her entitlement to medical benefits by a preponderance of the evidence. C.R.S. §8-43-201. The respondents are only liable for the medical treatment that is reasonable and necessary to cure and relieve the work-related injury. C.R.S. §8-42-101(1)(a).

8. Claimant was required to prove by a preponderance of the evidence that the conditions for which she seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. Section 8-41-301(1)(c), C.R.S. A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial*

Claim Appeals Office, 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990). The question of whether Claimant met the burden of proof to establish the requisite causal connection is one of fact for determination by the ALJ. *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Faulkner v. Industrial Claim Appeals Office,* 12 P.3d 844 (Colo. App. 2000).

9. The ALJ concludes that Claimant is entitled to all reasonable, necessary, and related medical treatment as it relates to the July 31, 2017 work incident. There is no doubt that the treatment Claimant received immediately following this incident was reasonable and necessary; Claimant sustained a puncture wound that needed treatment to avoid infection or irritation. Moreover, the causal connection between this initial injury and Claimant's subsequent stress fracture is also clear. The causation analysis provided by Dr. D'Angelo is particularly lucid, providing a clear explanation for why Claimant would be at particular risk for the type of fracture that, in fact, occurred subsequent to the initial puncture wound. The ALJ finds that, per Claimant's testimony, and the report and testimony of Dr. D'Angelo, Claimant's renal disease and mineral bone disease were pre-existing yet stable conditions that, in confluence with the July 31, 2017 puncture wound, caused the eventual stress fracture in Claimant's right foot. That fact that Respondents' own expert, Dr. D'Angelo, conceded the relatedness of the stress fracture to the work injury lends particular credibility to the opinions of Dr. D'Angelo as to causation.

10. The ALJ concludes that Claimant's medical treatment received to date has been reasonable, necessary, and related. Respondents shall provide ongoing medical treatment for Claimant's right foot injury including treatment for Claimant's stress fracture.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Claimant's claim of a July 31, 2017 industrial injury to her right foot is found to be compensable.

2. Respondents are liable for all healthcare that is reasonable and necessary to cure Claimant from the effects of her puncture wound and stress fracture to her right foot.

3. Issues not expressly decided herein are reserved to the parties for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 9, 2018

Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO

W.C. No. 5-050-014-04

FULL FINDINGS OF FACT, CONCLUSIONS OF LAW AND ORDER

IN THE MATTER OF THE WORKERS' COMPENSATION CLAIM OF:

Claimant,

v.

Employer,

and

Insurer / Respondents.

Hearing in the above-captioned matter was held before Edwin L. Felter, Jr., Administrative Law Judge (ALJ), on March 7, 2018, in Denver, Colorado. The hearing was digitally recorded (reference: 3/7/18, Courtroom 1, beginning at 1:30 PM, and ending at 4:30 PM).

Claimant's Exhibits 1 through 11 were admitted into evidence, without objection, Respondents' Exhibits A through E were admitted into evidence, without objection.

At the conclusion of the hearing, the ALJ established a post-hearing briefing schedule. On March 14, 2018, Claimant filed his opening brief, electronically. On March 20, 2018, Respondents filed their answer brief, electronically. On the same date, Claimant indicated that no reply brief would be filed, thus, the matter was deemed submitted for decision at that time. Consequently, the ALJ hereby issues the following decision.

ISSUES

The issues to be determined by this decision concern the compensability of a left shoulder injury of January 14, 2017; if compensable, medical benefits and average weekly wage (AWW) are also issues. At the commencement of the hearing, the Claimant withdrew the issue of temporary disability and Respondents withdrew the affirmative defense of "responsibility for termination," which must be predicated on temporary disability.

The Claimant bears the burden of proof by a preponderance of the evidence on all issues.

FINDINGS OF FACT

Based on the evidence presented at hearing, the ALJ makes the following Findings of Fact:

1. The Claimant suffered an injury to his left shoulder on January 14, 2017 (a Saturday). At the time, he was working with co-employee Vince Martinez (Martinez) on the loading dock. The Claimant injured his left shoulder trying to raise the door of a trailer which became stuck. He loudly yelled "ouch" when he felt pain in his left shoulder. This was heard by Martinez. Both the Claimant and Martinez testified that Martinez helped the Claimant using a crowbar to get the trailer door open. After it was opened Martinez helped the Claimant loading the trailer. The ALJ finds the Claimant's testimony in the regard credible and corroborated by Martinez.

2. After the incident, Martinez advised the Claimant to report his injury to his supervisor, Nicholas Mathurs (Mathurs). The Claimant spoke with Mathurs about his left shoulder injury on January 14, 2017. He received a dismissive response from Mathurs and he was not referred for medical treatment (Claimant's Exhibit 1, BS 2).

3 When the Claimant reported his injury to Mathurs, the Claimant said that Scott Petrie (Petrie), a co-employee was present. Petrie was called to testify by the Respondents and he denied being present during the Claimant's meeting with Mathurs. Petrie testified that he did not "recall" the Claimant reporting an injury to Mathurs on January 14, 2017, however, he did not positively deny that the reporting as recounted by the Claimant occurred. He also did not "recall" the Claimant's signature on the Employer's First-Aid Report of January 14, 2017. The ALJ finds Petrie's testimony to be

of a neutral character because Petrie simply didn't remember, but he didn't contradict the Claimant.

4. The Claimant filed a written notice of his injury on January 14, 2017, by making a notation on the company's Denver Plant Daily First-Aid Report (Respondents' Exhibit D, BS 129). In the column titled "Nature of Injury," the Claimant notes that he pulled his left arm back. He also stated he was taking Aleve. *Id.* The ALJ infers and finds that this near-simultaneous written document complies, in substance, with the written reporting requirement

5. Several lay witnesses testified on behalf of the Respondents. Martinez testified that he assisted the Claimant with opening the door to the trailer on January 14, 2017. Both Martinez and Petrie testified that the Claimant complained of left shoulder pain between January 14, 2017 and May 24, 2017. Mathurs testified that the Claimant never reported the injury to him and that he never had a meeting with the Claimant that he could "recall." Although Matthurs was Claimant's supervisor, the First Report of Injury by the Employer's safety Manager, dated June 22, 2017, acknowledges a reporting on January 14, 2017, the date of injury ((Respondents' Exhibit B). The ALJ finds the testimony of the Claimant concerning reporting to be credible. The Employer witnesses simply could not remember, as opposed to clearly contradicting the Claimant.

6. In late May of 2017, the Claimant completed an Incident Data Report showing that he was working as a "weekend warrior" (12 hours a day for 3 days) over the weekend on January 14, 2017 (a Saturday). The Claimant stated that his injury was witnessed by Martinez. The Claimant sent a written report to HR (Human Resources) detailing the incident including the reaction of Mathurs. The Claimant also gave Mathurs the name and trailer number (Claimant's Exhibit 1, BS 2).

7. The Claimant filed a Workers' Claim for Compensation on June 14, 2017 (Claimant's Exhibit 8). Consistently, with his testimony, the Claimant reported that he was trying to open the door of a trailer which he thought was frozen. It started to open and then stuck. He received assistance from co-employee Vince Martinez. He also stated that his last day worked was May 29, 2017. *Id.* This is consistent with the overall evidence at hearing.

8. There is no persuasive evidence that the Employer made a referral of the Claimant to a medical treatment provider, after the Employer knew or reasonably should have known that the Claimant was claiming a work-related injury. The only referral that respondents made was to Kathleen D'Angelo, M.D., for a respondents' Independent Medical Examination (IME).

Medical

9. The Claimant sought medical advice following his right shoulder injury with Kaiser on January 24, 2017. The Kaiser report recounts that the Claimant stated that he had injured his left arm on January 14, 2017, while trying to load a trailer and felt something tear in his "deltoid or tricep" but continued working thereafter (Respondents' Exhibit C, BS 34). The Claimant was complaining of pain and weakness when raising his left arm above his head, although he was able to bend and straighten his arm at the elbow. He was advised by Kaiser to contact HR or his supervisor for direction on where to get evaluated for workers' compensation and call back if there were worsening symptoms. *Id*.

10. The Kaiser records show that the Claimant sought additional treatment on May 23, 2017, when he was evaluated by orthopedist James F. MacDougall, M.D. Dr. MacDougall reported that the Claimant's arm had bothered him from January 14th and that he had reported his injury to the Employer. The Claimant described the injury as occurring when he was pulling open a trailer door that was stuck when he felt a burn and pain in his shoulder and upper arm. When the Claimant saw Dr. MacDougall, he was continuing to have tingling in his forearm and rated his pain at 7/10 (Claimant's Exhibit 3, BS 5 and 6). Dr. MacDougall recommended that the Claimant undergo an MRI (magnetic resonance imaging) since Dr. MacDougall was concerned that there was a likelihood that the Claimant had an irreparable shoulder tear.

11. An MRI (magnetic resonance imaging) was performed on May 24, 2017 (Claimant's Exhibit 2, BS 3). The MRI documented chronic full thickness, full width supraspinatus and full thickness partial width infraspinatus tendon tears, and a medial retraction of the torn tendon fibers to the glenohumeral joint line. There was also a diffusely abnormal signal intra-articular longhead bicep suggesting tendinosis. The MRI also found a postero-superior degenerative labral tear. *Id*.

12. According to Mathurs, Dr. MacDougall gave the Claimant a 5 lb. lifting restriction which the Claimant brought to his Employer in late May. The Employer did not accommodate this restriction.

13. Contemporaneously, the Claimant was suffering multiple disabling physical problems (not work-related), including degenerative arthritis to his left knee. This would eventually require a left knee replacement. He also testified he recently underwent carpal tunnel surgery (Claimant's Exhibit C, BS 54). Because of his multiple problems, the Claimant withdrew his request for temporary total disability (TTD) benefits as he would not have been able to work due to these additional problems.

14. The Claimant underwent left shoulder surgery on June 27, 2017. He was placed in a sling with restrictions of no lifting with his left upper extremity (LUE) [Claimant's Exhibit 3, BS 14). The Claimant has not returned to work since May 29,

2017, nor has he been released to return to work by an authorized treating physician (ATP). And, he has not been declared to be at MMI for the left shoulder, by an ATP.

Independent Medical Examination (IME) by Kathleen D'Angelo, M.D.D

15. At the Respondent's request, Dr. D'Angelo, M.D., a board certified physician in family medicine, performed an IME of the Claimant. She is Level II accredited by the Division of Workers Compensation (DOWC), and she practices in the field of occupational medicine. In her report and at the hearing, Dr. D'Angelo stated she had no way of knowing what happened in the Claimant's work place on January 14, 2017. She commented on the Claimant's reporting the injury to Mathurs because of an off-color joke made by Mathurs concerning the Claimant's manhood when the Claimant reported it.

16. Dr. D'Angelo noted that the Claimant had not presented to his primary care provider for prior disabling left shoulder complaints (Claimant's Exhibit 4, BS 36). Thus, Dr. D'Angelo could not point either to evidence that the Claimant's left shoulder was industrially problematic before the January 14, 2017, injury, or to his left shoulder restrictions, imposed as a result of the January 14, 2017, injury.

17. At hearing, Dr. D'Angelo testified that the medical records do not establish whether, when, or if, an injury had occurred. She agrees that the Claimant may have had some pre-existing degenerative left shoulder problems prior to his injury; and she was surprised that the Claimant continued working after the January 14, 2017, event, given the heavy nature of his work and the MRI findings.

18. In her report, dated December 14, 2017, Dr. D'Angelo concluded that the Claimant suffered a work related left shoulder injury on January 14, 2017, and that the treatment he had received to date was reasonable and necessary. *Id*. The ALJ finds this written report by Dr. D'Angelo is more credible and reliable than her testimony at hearing, wherein she **changed** her opinion.

19. Dr. D'Angelo "**modified" [changed]** her opinion at the hearing based on the testimony by the Claimant's supervisor's that the Claimant had not reported his injury on January 14, 2017 (Claimant's Exhibit 4, BS 000020). Dr. D'Angelo commented that the supervisor's testimony caused her to question whether the Claimant had reported his injury. The ALJ infers and finds that the basis of Dr. D'Angelo's changed opinion is based, in part on misinformation. Indeed, the Employer's First Report of Injury, dated June 22, 2017, completed by Joshua Lane, Safety Manager, acknowledged a reporting on January 14, 2017. Apparently, this Report was not made available to Dr. D'Angelo prior to her hearing testimony and changed opinion. The First report of injury undermines the paramount basis of Dr. D'Angelo's **changed** opinion. The ALJ further infers and finds that the basis for Dr. D'Angelo's changed opinion, based upon a lack of complete information regarding the reporting of the

Claimant's injury is not credible. As found herein above, the first opinion (expressed in Dr. D'Angelo's letter report) is more credible that her "about-face" on the issue of causality.

Employer's Knowledge of the Injury

20. Respondents argue that the Claimant did not comply with the reporting requirements of the company requiring an employee to make a written report of injury within four days of the happening of the January 14, 2017, incident. The evidence is that the Claimant reported his injury, in writing, when he completed the Daily First-Aid Report on January 14, 2017. This is an issue where fair notice to the Employer takes precedence over a formalistic, written document, labeled "Report," prevails as far as credibility is concerned. Further, "late reporting" was not designated as an issue, however, the fact that Dr. D'Angelo places importance on the alleged "late reporting," which was based on a lack of complete information (Employer's First Report, Claimant's Exhibit B), not only undermines Dr. D'Angelo's **changed** opinion, but it undermines the thrust of Respondents' contention that the injury was not reported to Supervisor Mathurs, based on his testimony. Employer's Safety Manager Lane, however, acknowledged that the Employer was notified on January 14, 2017 (Respondents' Exhibit B).

Average Weekly Wage (AWW)

21. At the time of his injury the Claimant testified that his AWW was $1,076.76. This is supported by the Employer's records (Claimant's Exhibit 7). The Employer's First Report of Injury, completed by Joshua Lane, Safety Manager, on June 22, 2017, recites an hourly wage of $29.91, which computes to $1,196.40 per seek, based on an assumption of a 40-hour week (Respondents' Exhibit B). The ALJ finds that the Claimant's AWW is $1,076.76. This finding, however, is academic at this point because the Claimant withdrew the issue of TTD at the commencement of the hearing.

Ultimate Findings

22. Respondents argue that the Claimant did not comply with the reporting requirements of the company requiring an employee to make a written report of injury within four days of the happening of the January 14, 2017, incident. The evidence is that the Claimant reported his injury when he completed the Daily First-Aid Report on January 14, 2017. This is an issue where fair notice to the Employer taking precedence over a formalistic, written document prevails as far as credibility is concerned. Further, "late reporting" was not designated as an issue, however, the fact that Dr. D'Angelo places importance on the alleged "late reporting," which was based on a lack of complete information (Employer's First Report, Claimant's Exhibit B), not only undermines Dr. D'Angelo's **changed** opinion, but it undermines the thrust of

Respondents' contention, based on Supervisor Mathurs' testimony, that the injury was not reported to the Employer. Safety Manager Lane, however, acknowledged that the Employer was notified on January 14, 2017 (Respondents' Exhibit B). Therefore, as an ultimate proposition, the ALJ finds the Claimant's testimony straight-forward and credible, Dr. D'Angelo's **changed** causality opinion entirely lacking in credibility; and, the testimony of Mathurs, Petrie and Martinez, insofar as their testimonies are inconsistent with the Claimant's testimony, are lacking in credibility.

23. Between conflicting medical opinions, the ALJ makes a rational choice, based on substantial evidence, to accept Dr. D'Angelo's first written opinion on causality as more reliable, and to reject her testimony wherein she changed her opinion, based in part upon misinformation concerning when the Claimant reported his injury to his Employer. Also, the ALJ accepts the Claimant's testimony as credible and rejects any evidence to the contrary.

24. The Claimant has shown that it is more probably true than not that his job activities caused, intensified, aggravated and accelerated any pre-existing, dormant left shoulder condition on January 14, 2017.

25. After the Employer reasonably should have known, as of January 14, 2107, that the Claimant was claiming a work-related injury, the Employer offered the Claimant **no** medical treatment nor did it make any referral to a medical provider. Therefore, beyond 10-days after the Employer's knowledge of a claimed work-related injury, the Claimant self-selected a medical provider. Therefore, any medical providers who provided treatment for the Claimant's work-related left shoulder injury, after January 26, 2018, were authorized; and, any referrals within the authorized chain of referrals were authorized.

26. All of the Claimant's medical care and treatment for his compensable left shoulder injury of January 14, 2017 was and is causally related to that injury, and reasonably necessary to cure and relieve the effects thereof.

27. The Claimant's AWW is $1,076.76. This is academic, however, since the issues concerning temporary disability were withdrawn at the commencement of the hearing.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ makes the following Conclusions of Law:

Credibility

a. In deciding whether an injured worker has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. Indus. Claim Appeals Office,* 183 P.3d 684 (Colo. App. 2008);*Kroupa v. Indus. Claim Appeals Office*, 53 P.3d 1192, 1197 (Colo. App. 2002); *Rockwell International v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990); *Penasquitos Village, Inc. v. NLRB*, 565 F.2d 1074 (9th Cir. 1977). The ALJ determines the credibility of the witnesses. A*renas v. Indus. Claim Appeals Office*, 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. Indus. Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *Youngs v. Indus. Claim Appeals Office,* 297 P.3d 964, **2012 COA 85.** The same principles concerning credibility determinations that apply to lay witnesses apply to expert witnesses as well. *See Burnham v. Grant,* 24 Colo. App. 131, 134 P. 254 (1913); *also see Heinicke v. Indus. Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008). The fact finder should consider, among other things, the consistency or inconsistency of a witness' testimony and/or actions; the reasonableness or unreasonableness (probability or improbability) of a witness' testimony and/or actions (this includes whether or not the expert opinions are adequately founded upon appropriate research); the motives of a witness; whether the testimony has been contradicted; and, bias, prejudice or interest. *See Prudential Ins. Co. v. Cline,* 98 Colo. 275, 57 P. 2d 1205 (1936); CJI, Civil, 3:16 (2005). The fact finder should consider an expert witness' special knowledge, training, experience or research (or lack thereof). *See Young v. Burke,* 139 Colo. 305, 338 P. 2d 284 (1959). The ALJ has broad discretion to determine the admissibility and/or weight of evidence based on an expert's knowledge, skill, experience, training and education. *See* S 8-43-210, C.R.S; *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P.2d 501 (Colo. App. 1995). As found, *See, Annotation, Comment: Credibility of Witness Giving Un-contradicted Testimony as Matter for Court or Jury,* 62 ALR 2d 1179, maintaining that the fact finder is not free to disregard un-contradicted testimony. As found, the Claimant reported his injury, in writing, when he completed the Daily First-Aid Report on January 14, 2017. As found, Dr. D'Angelo placed importance on the alleged "late reporting," which was based on a lack of complete information (Employer's First Report, Claimant's Exhibit B). This not only undermined her **changed** opinion, but it undermined the thrust of Respondents' contention, based on Supervisor Mathurs' testimony, that the injury was not reported to the Employer. As found, Safety Manager Lane, however, acknowledged that the Employer was notified on January 14, 2017 (Respondents' Exhibit B). Therefore, as an ultimate proposition, the Claimant's testimony was straight-forward and credible, Dr.

D'Angelo's **changed** causality opinion was entirely lacking in credibility; and, the testimony of Mathurs, Petrie and Martinez, insofar as their testimonies were inconsistent with the Claimant's testimony, were lacking in credibility.

Substantial Evidence

b. An ALJ's factual findings must be supported by substantial evidence in the record. *Paint Connection Plus v. Indus. Claim Appeals Office,* 240 P.3d 429 (Colo. App. 2010); *Leewaye v. Indus. Claim Appeals Office,* 178 P.3d 1254 (Colo. App. 2007); *Brownson-Rausin v. Indus. Claim Appeals Office,* 131 P.3d 1172 (Colo. App. 2005). *Also see Martinez v. Indus. Claim Appeals Office,* 176 P.3d 826 (Colo. App. 2007). Substantial evidence is "that quantum of probative evidence which a rational fact-finder would accept as adequate to support a conclusion, without regard to the existence of conflicting evidence." *Metro Moving & Storage Co.v. Gussert,* 914 P.2d 411 (Colo. App. 1995). Reasonable probability exists if a proposition is supported by **substantial evidence** which would warrant a reasonable belief in the existence of facts supporting a particular finding. *See F.R. Orr Construction v. Rinta,* 717 P.2d 965 (Colo. App. 1985). It is the sole province of the fact finder to weigh the evidence and resolve contradictions in the evidence. See *Pacesetter Corp. v. Collett,* 33 P. 3d 1230 (Colo. App. 2001). An ALJ's resolution on questions of fact must be upheld if supported by substantial evidence and plausible inferences drawn from the record. *Eller v. Indus. Claim Appeals Office,* 224 P.3d 397, 399-400 (Colo. App. 2009). As found, between conflicting medical opinions, the ALJ made a rational choice, based on substantial evidence, to accept Dr. D'Angelo's first written opinion on causality as more reliable, and to reject her testimony wherein she changed her opinion, based in part upon misinformation concerning when the Claimant reported his injury to his Employer. Also, the ALJ accepted the Claimant's testimony as credible and rejected any evidence to the contrary.

Compensability

c. In order for an injury to be compensable under the Workers' Compensation Act, it must "arise out of" and "occur within the course and scope" of the employment. *Price v. Indus. Claim Appeals Office,* 919 P.2d 207, 210, 210 (Colo. 1996). An injury "arises out of' employment if it would not have occurred **but for** the fact that the conditions and obligations of employment placed the employee in a position that he or she was injured." *See City of Brighton v. Rodriguez,* 318 P.3d 496, **2014 CO 7** [presumption that an injury arises out of employment when an unexplained injury occurs during the course of employment whereupon, it is incumbent to show that non-work related factors caused the injury. Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any benefits are awarded. § 8-41-301 (1) (c), C.R.S. *See Faulkner v. Indus. Claim Appeals Office,* 24 P.3d 844 (Colo. App. 2000)*; Eller v. Indus. Claim Appeals Office*, 224 P.3d 397, 399 (Colo. App. 2009); *Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277, 1279 (Colo. App. 2008). The question of causation is generally one of fact for

determination by an ALJ. *Faulkner* at 846; *Eller* at 399-400. The Claimant must show a connection between the employment and the injury such that the injury has its origin of the employee's work- related functions which is sufficiently related to those functions to be considered part of the employment contract. See *Madden v. Mountain W. Fabricators*, 977 P.2d 861 (Colo. 1999). As found, it is more probably true than not that the Claimant's job activities caused, intensified, or, to a reasonable degree, aggravated and accelerated any u7nderlying conditions of his left shoulder in the incident of January 14, 2017.

Authorization of Medical Treatment

d. Pursuant to § 8-43-404(5), C.R.S. Respondents in the "first instance" had the authority to select the treating provider for the Claimant. When an employer fails to provide a physician "in the first instance," the right of selection passes to the Claimant. See *Rogers v. Indus. Claim Appeals Office*, 746 P .2d 565 (Colo. App. 1987) (employer must tender medical treatment **"forthwith"** on notice of an injury or the right of first selection passes to the Claimant). This was not done here, thus, triggering the Claimant's right to select a physician and he selected the treaters at Kaiser, who are authorized.

Chain of Authorized Referrals

e. To be authorized, all referrals must remain within the chain of authorized referrals in the normal progression of authorized treatment. *See Mason Jar Restaurant v. Indus. Claim Appeals Office,* 862 P. 2d 1026 (Colo. App. 1993); *One Hour Cleaners v. Indus. Claim Appeals Office,* 914 P. 2d 501 (Colo. App. 1995); *City of Durango v. Dunagan,* 939 P.2d 496 (Colo. App. 1997). When an ATP refers an injured worker to his personal physician, under the mistaken belief that the claim was not compensable, the referral was nonetheless within the chain of authorized referrals and, thus, subsequent treatment was authorized. *See Cabela v. Indus. Claim Appeals Office,* 198 P.3d 1277 (Colo. App. 2008). As found, medical providers who provided treatment for the Claimant's work-related left shoulder injury, after January 26, 2018, were authorized; and, any referrals within the authorized chain of referrals were authorized.

Medical Treatment

f. To be a compensable benefit, medical care and treatment must be causally related to an industrial injury or occupational disease. *Dependable Cleaners v. Vasquez,* 883 P. 2d 583 (Colo. App. 1994). As found, Claimant's medical treatment was and is causally related his left shoulder injury of January 14, 2017. Also, medical treatment must be reasonably necessary to cure and relieve the effects of the industrial occupational disease. § 8-42-101 (1) (a), C.R.S. *Morey Mercantile v. Flynt,* 97 Colo. 163, 47 P. 2d 864 (1935); *Sims v. Indus. Claim Appeals Office,* 797 P.2d 777 (Colo. App. 1990). As found, the Claimant's medical care and treatment for his left shoulder

injury of January 14, 2017 was and is reasonably necessary to cure and relieve the effects thereof.

Average Weekly Wage (AWW)

g. An AWW calculation is designed to compensate for **total** temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. An ALJ has the discretion to determine a claimant's AWW. *See Avalanche Industries, Inc. v. Clark,* 198 P.3d 589 (Colo. 2008). As found, the Claimant's AWW is $1,076.76, which is academic at this point since issues concerning temporary disability benefits were withdrawn at the commencement of the hearing.

Burden of Proof

h. The injured worker has the burden of proof, by a preponderance of the evidence, of establishing the compensability of an industrial injury and entitlement to benefits. §§ 8-43-201 and 8-43-210, C.R.S. *See City of Boulder v. Streeb,* 706 P. 2d 786 (Colo. 1985); *Faulkner v. Indus. Claim Appeals Office,* 12 P. 3d 844 (Colo. App. 2000); *Lutz v. Indus. Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000). *Kieckhafer v. Indus. Claim Appeals.Office*, 284 P.3d 202, 205 (Colo. App. 2012). A "preponderance of the evidence" is that quantum of evidence that makes a fact, or facts, more reasonably probable, or improbable, than not. *Page v. Clark,* 197 Colo. 306, 592 P. 2d 792 (1979). *People v. M.A.,* 104 P. 3d 273 (Colo. App. 2004); *Hoster v. Weld County Bi-Products, Inc.,* W.C. No. 4-483-341 [Indus. Claim Appeals Office (ICAO), March 20, 2002]. *Also see Ortiz v. Principi,* 274 F.3d 1361 (D.C. Cir. 2001). "Preponderance" means "the existence of a contested fact is more probable than its nonexistence." *Indus. Claim Appeals Office v. Jones*, 688 P.2d 1116 (Colo. 1984). As found, the Claimant has proven all designated issues.

ORDER

IT IS, THEREFORE, ORDERED THAT:

A. Respondents shall pay all of the costs of medical care and treatment for the Claimant's compensable left shoulder injury of January 14, 2017, subject to the Division of Workers Compensation Medical Fee Schedule.

B. Any and all issues not determined herein, including entitlement to temporary and permanent disability benefits, are reserved for future decision.

DATED this_____day of April 2018.

_____
EDWIN L. FELTER, JR.
Administrative Law Judge

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts,**1525 Sherman Street, 4th Floor, Denver, CO 80203.** You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) that you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) that you mailed it to the above address for the Denver Office of Administrative Courts. **For statutory reference, *see* § 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, *see* Rule 26, OACRP. You may access a form for a petition to review at** *http://www.colorado.gov/dpa/oac/forms-WC.htm*.

CERTIFICATE OF SERVICE

I hereby certify that I have sent true and correct copies of the foregoing **Full Findings of Fact, Conclusions of Law and Order** on this_____day of April 2018, electronically in PDF format, addressed to:

Division of Workers' Compensation

ISSUES

I. Whether Respondents produced clear and convincing evidence to overcome Dr. Clarence Henke's Division Independent Medical Examination ("DIME") opinion on maximum medical improvement ("MMI").

II. If Respondents have overcome the DIME opinion on MMI, what is Claimant's impairment rating?

III. Whether Claimant is entitled to an award for disfigurement pursuant to C.R.S. §8-42-108.

FINDINGS OF FACT

1. Claimant is 63-year-old right-hand-dominant woman. Her date of birth is November 8, 1954. Claimant worked for Employer as a cook.

2. Claimant suffered an admitted industrial injury to her right wrist and hand on October 23, 2014. Claimant felt a pop in her right wrist while lifting and emptying a trash can into a dumpster.

3. Braden Reiter, D.O., evaluated Claimant on October 24, 2014 and diagnosed Claimant with a right wrist strain. She was placed in a splint, prescribed ibuprofen and referred to occupational therapy. Dr. Reiter issued the following work restrictions: no lifting, grasping, or twisting with the right hand.

4. Claimant underwent an MRI of her right wrist on November 22, 2014. Bao Nguyen, M.D. gave the following impression: 1) No occult distal radius or distal ulnar fracture, but equivocal fracture of the distal pole of the scaphoid vs. degenerative changes across the STT joint simulating a fracture, for which CT correlation is suggested for further evaluation; 2) also suspected old fracture deformity of the inner aspect of the first metacarpal base (old Bennett's fracture) plus an adjoining nonunited fracture of the ulnar rim of the opposing trapezium, all further associated with severe osteoarthritis of the first CMC joint; 3) some degenerative changes also across the capitolunate joint and to some extent, the capitoharnate joint, but no carpal AVN or bone tumor, no evidence of DISI or VISI; 4) small irregular tear of the central disc of the TFCC; 5) accompanying mild diffuse extensor and flexor tenosynovitis but no flexor/extensor tendon rupture or retracted tendon stump; 6) mass effect upon the median nerve at the level of the carpal tunnel could be an issue due to flexor tenosynovitis.

5. Dr. Reiter reevaluated Claimant on December 2, 2014. He reviewed the wrist MRI and noted severe osteoarthritis of the first CMC joint, old fracture deformities, a

questionable fracture of the distal pole of the scaphoid versus degenerative changes, and an irregular tear of the TFCC diffuse tenosynovitis. Dr. Reiter again diagnosed Claimant with a right wrist strain. He continued Claimant's restrictions and occupational therapy, and referred Claimant to a hand specialist.

6. On December 16, 2014, Claimant presented to orthopedic hand surgeon In Sok Yi, M.D. Dr. Yi gave the following impression after physically examining Claimant and reviewing the MRI: right wrist flexor tenosynovitis with CMC and STT arthritis. Dr. Yi opined that Claimant had a "very difficult problem" because he felt "a lot of the problems such as the CMC arthritis and the STT arthritis are underlying problems which could have been exacerbated by her twisting type activity." Dr. Yi administered an injection of into the mid-carpal joint and opined that Claimant may need to undergo serial injections, including injections of the CMC joint and possibly the carpal tunnel. He recommended Claimant wear a splint and hold off on therapy.

7. Claimant returned to Dr. Yi for a follow-up evaluation on February 10, 2015 and reported that the injection was not helpful and aggravated her symptoms. On physical examination, Claimant remained tender over the CMC joint with swelling and tender over the area of the TFC. Dr. Yi opined Claimant's condition may be a permanent exacerbation of an underlying condition and recommended CMC and STT arthroplasty with ligament reconstruction and tendon reposition, De Quervain's release and a wrist arthroscopy with debridement.

8. Dr. Yi performed the recommended surgery on March 20, 2015. Claimant initially responded well to the surgery, but subsequently continued to complain of pain in her right wrist and arm. As of June 2, 2015, Claimant was reporting to Dr. Yi improved thumb pain with constant wrist pain. Dr. Yi opined Claimant's wrist abnormality was either overshadowed by the CMC arthritis pain prior to surgery, or the CMC arthroplasty aggravated Claimant's underlying arthritis within the scaphoid fossa. He noted Claimant's pain had worsened and recommended a proximal row carpectomy.

9. Dr. Yi performed a right wrist proximal carpectomy with radial styloidectomy and posterior interosseous nerve neurectomy on July 10, 2015.

10. Claimant continued to report symptoms, including pain in the right hand, wrist and forearm, a burning sensation, limited range of motion, and difficulty gripping. On August 28, 2015, Dr. Reiter referred Claimant for a pain psychological evaluation.

11. Claimant continued to treat with Dr. Yi and Dr. Reiter. On October 6, 2015. Claimant reported pain and stiffness. Dr. Yi noted limited range of motion and some swelling about the dorsal capsule. He felt Claimant may be overworking her hand and wrist in therapy and suggested Claimant cease therapy and wear a splint.

12. Claimant presented to Matthew Lugliani, M.D. on November 19, 2015. Claimant reported persistent 8/10 pain, excruciating pain to any light touch, no movement of her finger, and persistent swelling. Physical examination revealed right hand proximal distal carpal row deformity, swelling over the dorsal surface of the palm, limited range of

motion in all fingers as well as the thumb, hyperesthesia and allodynia. Dr. Lugliani assessed status post right wrist proximal row carpectomy with chronic pain, allodynia, and hyperesthesia. He referred Claimant for pain management and rehabilitation, noting he wanted to rule out the possibility of complex regional pain syndrome ("CRPS").

13. Claimant underwent a follow-up MRI of the right wrist on December 15, 2015. Bao Nguyen, M.D. gave the following impression: 1) mild extensor tenosynovitis across the mid dorsum of the wrist, primarily affecting the extensor digitorum communis, with possible focal partial tear of the most medial EDC tendon where the tendon tracks over the 3rd CMC joint; 3) other extensor tendons remain intact; 4) also TFCC different in size and shape than before, suggesting a larger re-tear; 5) no occult wrist fracture, carpal AVN or bone tumor; 6) no flexor tendon tear or tenosynovitis.

14. Claimant presented to David L. Reinhard, M.D. on December 22, 2015. Claimant reported experiencing constant 6-9/10 pain in her right wrist, hand and fingers, along with numbness in her ring finger and shooting pain into her shoulder and neck. On examination, Dr. Reinhard noted decreased sensation in certain areas of the right hand and allodynia in others, swelling through the right hand and wrist, reddish discoloration of the hand, little to no active motion of the right wrist and very minimal flexion of the fingers, and "extremely shiny" skin over the fingers. No abnormal sweating or trophic nail changes were noted. Dr. Reinhard diagnosed Claimant with probable CRPS, type 1, of the right upper limb. He recommended Claimant undergo an EMG and nerve conduction studies of the right upper extremity to evaluate the function of the right median nerve, and a three-phase bone scan to evaluate for CRPS.

15. Dr. Reiter reevaluated Claimant on December 29, 2015. Claimant reported persistent 8/10 pain, numbness, tingling, swelling, and skin discoloration. Physical examination revealed right hand and wrist swelling, decreased range of motion, hypersensitivity over the dorsum of the wrist and hand, weakness with grip strength, and hypersensitivity along the forearm and extensor musculature.

16. On December 31, 2015, Claimant returned to Dr. Reinhard for a follow-up evaluation, reporting 8/10 right hand and wrist pain and severe right-sided neck pain. EMG and nerve conduction studies were conducted and revealed mild slowing of the right median and radial distal sensory latencies, as well as the right median distal motor latency. Findings on the right ulnar sensory conduction study and right ulnar and radial motor conduction studies were normal, as was the needle EMG examination of the right upper limb. Dr. Reinhard gave the following diagnostic impression: 1) moderate primarily demyelinating right median sensorimotor neuropathy at the level of the right wrist consistent with moderate right carpal tunnel syndrome 2) mild primarily demyelinating right radial sensory neuropathy at the wrist.

17. Claimant underwent a three-phase bone-scan on January 12, 2016. Orlin W. Hopper, M.D. gave the following impression: 1) no scintingraphic findings to suggest a diagnosis of CRPS, and 2) asymmetric delayed phase uptake along the radial aspect of the left carpus suggesting degenerative uptake.

18. On January 21, 2016, Claimant returned to Dr. Reinhard for a follow-up evaluation. On physical examination, Dr. Reinhard noted severe restricted range of motion in the right wrist and fingers, allodynia, and reddish discoloration. He noted that the bone scan results ruled out CRPS and that peripheral nerve damage explained some of Claimant's pain.

19. Dr. Yi reevaluated Claimant on January 26, 2016 and noted that the bone scan was essentially negative. He administered an injection of the right carpal tunnel and around the right fourth dorsal compartment for the fourth dorsal compartment tendonitis.

20. Claimant returned to Dr. Lugliani on February 9, 2016 reporting continued pain with numbness and tingling into her forearm. On physical examination, Dr. Lugliani noted fullness and mottling of the skin, extreme hypersensitivity and allodynia with light touch, and an inability to make a fist.

21. On February 18, 2016, Claimant again saw Dr. Reinhard, who noted bluish discoloration in Claimant's right distal forearm and hand, allodynia, restricted range of motion and some tremor. He recommended that Claimant undergo a test more sensitive than the bone scan to further evaluate for CRPS, "particularly since her exam findings, which include temperature changes, extreme allodynia and prominent bluish discoloration, all speak to a diagnosis of CRPS type 2." Dr. Reinhard referred Claimant to Tashof Bernton, M.D. for further consultation and testing.

22. Claimant presented to Dr. Bernton on March 1, 2016. Physical examination revealed marked hyperalgesia in the distal right extremity, marked decreased range of motion in the wrist and fingers, swelling in the wrist, and discoloration. Dr. Bernton performed a stress thermography, obtaining three series of 12 thermographic images. Dr. Bernton opined that the findings were consistent with CRPS and met diagnostic criteria for CRPS with "marked and evident asymmetry increasing with cold stress in a nondermatomal distribution. The degree of temperature asymmetry of up to 3 degrees, in the absence of evident vascular compromise, is strongly suggestive of CRPS."

23. Dr. Bernton also performed an autonomic testing battery (QSART). Claimant's total laboratory score was five out of nine possible points, which Dr. Bernton noted represented a high probability of dysautonomia. He opined that the results were a positive diagnostic assessment for CRPS, stating that Claimant's laboratory scale of five and clinical scale of five represented a high probability of CRPS.

24. Dr. Bernton opined that the diagnosis of CRPS was clearly established, as Claimant's clinical findings were strongly consistent with CRPS, and Claimant met the criteria for CRPS under the Guidelines with two positive objective diagnostic tests. He noted, "The stress thermography, particularly, demonstrates marked changes which are close to pathognomonic for complex regional pain syndrome as long as vascular compromise is ruled out, and there is no indication of any vascular compromise present on a clinical basis." Dr. Bernton further noted that Claimant's carpal tunnel syndrome and mild right radial sensory neuropathy were consistent with CRPS Type 2. He concluded topical analgesics and stellate ganglion or epidural steroid blocks would be

appropriate but cautioned against any further invasive or operative procedures, stating that such procedures can result in delayed healing and often increased symptoms.

25. Claimant attended a follow-up evaluation with Dr. Lugliani on March 8, 2016. Dr. Lugliani noted confirmatory tests were positive for CRPS. Claimant reported two episodes where her forearm went numb, excruciating pain, and an inability to move her hand or arm. Dr. Lugliani referred Claimant to Usama Ghazi, D.O. for evaluation and treatment of her CRPS.

26. Claimant also saw Dr. Yi on March 8, 2016, and reported that the injections only helped for one to two days. Dr. Yi recommended proceeding with a right endoscopic carpal tunnel release and right EDC tendonitis release.

27. On March 17, 2016, Dr. Reinhard noted that the stress thermography and autonomic test battery were positive for CRPS. Claimant reported experiencing episodes of severe pain. Physical examination revealed right upper extremity allodynia, distal bluish discoloration, and severely restricted wrist and hand and finger range of motion.

28. Claimant presented to Dr. Ghazi on March 30, 2016. Dr. Ghazi noted Claimant had a positive QSART and thermography test. On physical examination, strength testing was limited in the right upper extremity due to diffuse allodynia and pain radiating all the way into the trapezius. There was hyperesthesia from the trapezius all the way down to the distal hand, whereas in the superficial radial nerve and median nerve distributions allodynia was actually noted along the posterior aspect/dorsum of the hand. This also extended into the ulnar distribution where there was hyperesthesia and allodynia, but the degree of allodynia was far less significant than in the superficial radial distribution. There was some distal coolness with vasoconstriction in the tips of the fingers. Claimant was unable to make a full fist or fully extend the fingers. He noted Claimant held her hand in slight wrist extension and the fingers are held in slightly flexed position. There was a tremor in the hand but no fasciculations noted. Dr. Ghazi diagnosed Claimant with CRPS, opining that the CRPS "began in the superficial radial nerve and now has spread into the median and ulnar nerves diffusely, traversing proximally up the arm into the trapezius." He recommended beginning with sympathetic and radial nerve blocks combined. Dr. Ghazi administered a right superficial radial nerve block.

29. On April 14, 2016, Dr. Reinhard noted that Claimant had "[c]lassic findings of CRPS in the right wrist and hand with marked allodynia, reddish discoloration, decreased temperature, moderate swelling, and severe restricted range of motion at the hand and wrist."

30. On April 21, 2016, Dr. Ghazi performed a right stellate ganglion block and right radial nerve block at the spiral groove for diagnoses of CRPS, neuritis of the right upper extremity, and postoperative neuralgia with sympathetic mediate pain of the right arm and hand. Pre-injection temperature of the right upper extremity was 93.2 degrees,

compared to 94.5 degrees of the left hand. Post-injection temperature of the right upper extremity was 95.9 degrees versus 90.3 degrees on left, with 50% reduction of pain.

31. Claimant saw Dr. Reinhard on May 19, 2016 and he noted Claimant had complete resolution of her pain at rest and 50% pain reduction with palpation after the right stellate ganglion block and right radial nerve block. Dr. Reinhard noted Claimant continued to have significant decrease in allodynia in the right hand and improved range of motion in her fingers. There was still minimal range of motion at the wrist. On examination, Dr. Reinhard noted less reddish discoloration in the wrist and hand and a decrease in the swelling in the right hand and better ability to tolerate light touch to the hand and arm.

32. Claimant returned to Dr. Lugliani for a follow-up evaluation on May 26, 2016, Claimant reported color changes, extreme sensitivity with any type of touch involving her right hand/wrist, and persistent range of motion deficits in her fingers. Physical examination revealed fullness and mottling of the skin, allodynia to touch over the dorsum of the hand, limited grip strength and finger movement, and limited range of motion in the wrist.

33. On June 14, 2016, Dr. Ghazi performed a repeat right stellate ganglion block, repeat right radial nerve block and right median nerve block. Dr. Ghazi noted a temperature change of 82.2 degrees in the right upper extremity versus 84.5 in the left. He further noted vasoconstriction and pallor notes on right hand compared to the left. Dr. Ghazi noted that post-injection, Claimant reported 0/10 pain at rest or with palpation and light touch. He determined there was a 100% anesthetic relieve of median neuralgia and allodynia.

34. Dr. Reinhard reevaluated Claimant on June 20, 2016 and noted that, while Claimant had a positive response to the first blocks, the most recent blocks seemed to cause a flare-up of symptoms. He further noted that the right carpal tunnel release was denied and that he not proceed with the surgery at that time due to Claimant's severely symptomatic CRPS. Physical exam revealed a bluish discoloration of the right hand and wrist, severe allodynia, and very little if any active motion in the fingers or wrist.

35. Claimant returned to Dr. Lugliani on June 30, 2016 and reported worsening symptoms. Exam revealed fullness and mottling of the skin, exquisite tenderness to palpation with allodynia and hyperesthesia, limited wrist range of motion, and an inability to move her right fifth digit.

36. On July 20, 2016, Dr. Reinhard reexamined Claimant and noted no active range of motion of the right fifth digit with some deformity and very minimal movement in the other fingers and wrist. Dr. Reinhard noted Claimant's "daily activities are carried out almost entirely with the left upper extremity, that includes meal prep, hygiene, bathing, and dressing. There is really no function at all in the right arm in the absence of function at the right wrist and hand." He referred Claimant to Dr. Ghazi for another right stellate ganglion block and radial and median peripheral nerve blocks.

37. On August 11, 2016, Claimant saw Dr. Lugliani and reported persistent pain and swelling. Exam revealed full and mild mottling of the skin, exquisite tenderness to palpation with allodynia and hyperesthesia, and an inability to move her right pinkie finger and grip. Dr. Lugliani noted that the request for carpal tunnel release was denied and that a repeat sympathetic block was scheduled. Dr. Lugliani opined that Claimant plateaued and had reached MMI. He referred Claimant to Dr. Reinhard for an impairment rating.

38. On August 25, 2016, Dr. Ghazi performed a repeat right stellate ganglion block, ultrasound guided radial nerve block, and ultrasound guided median nerve block. Post-injection, Claimant's pain decreased from 10/10 to 6/10, with 100% relief of allodynia to light touch.

39. Dr. Reinhard reevaluated Claimant on September 6, 2016 and noted Claimant did not experience any significant benefit from the third stellate ganglion block. Claimant continued to report 8/10 pain and restricted motion in her right hand and wrist. Physical examination revealed reddish discoloration, decreased temperature, severe allodynia, limited active range of motion, and development of some deformity in the fingers. Dr. Reinhard noted Claimant had severe contracture of the right wrist and hand with little, if any, function in the right hand stating, "She needs assistance brushing her hair or tying her hair up in a hair band. She needs assistance with household activities that require two arms such as making a bed. She has a lot of problems cutting food and doing meal prep. She is not able to open jars or bottles." Dr. Reinhard placed Claimant at MMI, restricting all use of Claimant's right upper extremity. He opined Claimant required maintenance care in the form of Gabapentin, Ambien, topical ketamine cream and Percocet for severe pain. He assessed a 30% whole person permanent impairment rating for CRPS noting, "Her impaired use of her right upper extremity is a product of the CRPS, which resulted in both neuropathic pain and allodynia as well as contractures." Using Table 1A of the AMA Guides, he placed Claimant in the section "Use of upper extremities" under the subsection of "Has difficulty with self-care," which lists 30-35% whole person impairment for the preferred extremity.

40. Claimant returned to Dr. Lugliani for a follow-up visit on September 15, 2016. She continued to report persistent 7-8/10 pain in her right hand and wrist. On examination, Dr. Lugliani noted fullness and mottling of the skin, tenderness to palpation with allodynia and hyperesthesia, no movement of the right pinkie finger, and an inability to grip. Dr. Lugliani noted Claimant is at MMI and discharged her from care.

41. Dr. Yi reevaluated Claimant on September 26, 2016. He noted the stellate ganglion blocks did not provide any relief. On physical examination, Dr. Yi noted adherence of skin to the underlying extensor tendons, increased sensitivity to touch, and no skin coloration changes or any changes in hair pattern. He opined some of Claimant's pain stemmed from the median nerve and the adherence of extensor tendons to the underlying skin. Dr. Yi recommended a tenolysis.

42. Respondents obtained surveillance video of Claimant taken in October 2016. The ALJ reviewed the surveillance video and observed Claimant performing the

following actions with her right hand: opening and closing a mailbox, retrieving and sorting through mail, picking up a newspaper, lighting, holding and putting out a cigarette, adjusting her pants and shirt, opening and shutting car doors, pushing a shopping cart, opening and closing the back hatch of an SUV, grabbing and lifting multiple grocery bags and placing the grocery bags into the SUV, running her hand over her hair, attempting to swat an insect, picking in her ear, cleaning underneath a fingernail on her left hand using the right hand, picking up and carrying a large purse, removing a ponytail holder from her hair and putting her hair back into a ponytail, retrieving sunglasses from a purse, and scratching her face. No apparent pain behaviors, guarding, or pinkie deformity was observed.

43. On October 26, 2016, Gary Gutterman performed an independent psychiatric consultation of Claimant. Dr. Gutterman issued a report dated October 31, 2016. He opined that, if the diagnosis of CRPS is accurate, there is no indication embellishing her symptoms or experiencing a Somatoform Symptom Disorder or malingering. Dr. Gutterman concluded that Claimant is capable of returning to some type of employment and is not in need of any psychiatric or psychological treatment.

44. On December 22, 2016 Carlos Cebrian, M.D. performed an Independent Medical Examination ("IME") at the request of Respondents. Dr. Cebrian performed a medical records review and physically examined Claimant. Regarding Claimant's activity, Dr. Cebrian noted, "…she states she is able to do most things, but primarily uses her left arm. She states she tries to do as much as she can and is able to shower and get dressed. She is able to prepare simple food, but states she cannot cut with her right hand…She states she is able to clean up including vacuum." Claimant reported enjoying ziplining and kayaking, which she had not done in over a year. Claimant reported using her left arm while ziplining and placing the oar under her right arm while kayaking.

45. Dr. Cebrian noted the following on physical examination: tenderness to extremely light touch throughout the entire right hand, wrist and forearm, pain to palpation on the upper arm, a six degree difference in temperature between the right and left hands, no swelling, no sensory abnormalities or sweating changes, no color changes, and symmetrical nails. Dr. Cebrian provided the following work-related diagnoses: related right wrist sprain and CRPS Type 2. He agreed with Dr. Reinhard that Claimant reached MMI on September 6, 2016.

46. Dr. Cebrian opined Claimant's pain complaints were out of proportion to her objective findings and in contrast to her presentation. He noted, "Her activities have also not been in keeping with someone with extremely elevated levels of pain as she reported that she continue to zipline, camp and kayak even after her injury." Dr. Cebrian noted Claimant fulfilled the diagnostic criteria for CRPS based on the positive thermogram and QSART tests; however, he further noted that the results could have been false positives due to certain medications and vascular disease.

47. Dr. Cebrian assigned a 15% whole person impairment for CRPS under Table 1A of the AMA Guides "Use of Upper extremities" section in the subsection "Has no

digital dexterity." He explained that he assigned a 15% impairment because Claimant continued to be active after the injury, including kayaking, camping and ziplining, and reported being able to take care of self-care needs. Dr. Cebrian disagreed Claimant should be restricted from using her right hand, and instead assigned permanent work restrictions of no lifting over one pound with the right hand. He opined that additional stellate ganglion blocks or injections were not indicated, nor was additional surgery, as it could have the potential of worsening Claimant's symptoms. Dr. Cebrian recommended Gabapentin, Ambien and a topical cream and quarterly visits with Dr. Reinhard as maintenance treatment.

48. On January 23, 2017, John Hughes, M.D. performed an IME at the request of Claimant. Dr. Hughes performed a medical records review and physically examined Claimant. Claimant reported being unable to tolerate touch and having no use of her right arm or hand. On physical examination, Dr. Hughes noted Claimant held her arm and hand in a "claw" position and did not tolerate any touch. He further noted that Claimant's hand appeared red and mildly swollen, with some nail changes compared to the left hand. Dr. Hughes provided the following diagnoses: right wrist sprain/strain with development of hand and wrist pain, right carpal tunnel syndrome, and right CRPS Type 1. He remarked, "Diagnosis of CRPS-1 does not appear to be in doubt. All evaluators to date agree with this particular diagnosis and that its etiology stems from [Claimant's] work-related injuries of October 23, 2014." Dr. Hughes opined Claimant suffered permanent impairment rated under Table 1A of the AMA Guides, concluding Claimant has difficulty with self-care activities in her dominant right arm/hand as a result of CRPS, and agreed with Dr. Reinhard of a whole person permanent impairment in the range of 30-35%.

49. On February 16, 2017, Claimant underwent a DIME with Clarence E. Henke, M.D. Dr. Henke issued a DIME report on February 28, 2017. Dr. Henke reviewed medical records from the period October 24, 2014 to January 23, 2017 and physically examined Claimant. Claimant reported 8-9/10 pain. On physical examination of the right upper extremity, Dr. Henke noted Claimant held her right upper extremity in a marked guarded position, moderate swelling and discoloration of the entire right hand, "very brittle nail changes," and tenderness to palpation of surgical scars. Pinwheel sensation testing could not be performed due to Claimant's marked pain level. Dr. Henke gave the following impressions: right wrist carpal bone fracture, nonunited, with developed right carpal tunnel syndrome symptoms, and right upper extremity CRPS Type 1, secondary to the right wrist and thumb injuries. Dr. Henke opined Claimant is not at MMI and recommended Claimant follow-up Dr. Reinhard for continued pain medications, delay surgical procedures until symptoms improve, and consider a stellate ganglion rhizotomy procedure for diagnosis of her current symptoms and possible pain relief. In his discussion of the medical records, Dr. Henke noted Dr. Reinhard considered a 30-35% whole person impairment rating; however, Dr. Henke did not indicate whether he agreed or disagreed with such rating, or otherwise assess any provisional impairment rating.

50. Respondents filed a General Admission of Liability on April 11, 2017, admitting for medical benefits and TTD from October 24, 2014 and ongoing.

51. Dr. Reinhard reevaluated Claimant on April 11, 2017. He noted no change in Claimant's condition. Dr. Reinhard discussed with Claimant Dr. Henke's recommended radiofrequency ablation of the stellate ganglion procedure and a possible alternative, a spinal cord stimulator. Dr. Reinhard noted that neither he, nor Claimant, were in favor of proceeding with radiofrequency ablation or spinal cord stimulator. He wrote,

> The current management is fairly conservative in that she is on three tramadol a day as opposed to large amounts of opioid analgesics. Also, she has had three stellate ganglion blocks. Only one of three was helpful. I tried to explain to her that there is a lot of territory between where we are now in her management as opposed to going to the mostly invasive aggressive procedures. She explained that she actually feels pretty good, although she is not able to use the hand very much and if she does she does have increased pain symptoms. However, she is fairly comfortable with where she is at and still not in favor of doing anything real aggressive. We talked about maybe seeing if we can get a topical ketamine compound authorized as a more prudent alternative to a spinal cord stimulator or radiofrequency ablation of the stellate ganglion.

Dr. Reinhard opined Claimant remained at MMI with no change in the impairment rating he previously assigned.

52. Dr. Henke performed a DIME reexamination on May 12, 2017 and issued a written report dated May 18, 2017. Dr. Henke reviewed Dr. Reinhard's April 11, 2017 clinical summary report and noted that both Claimant and Dr. Reinhard were not in favor of proceeding with the radiofrequency ablation of the stellate ganglion. On physical examination he noted Claimant held her right upper extremity in a marked guarded position during the entire examination, and refused to move it in any direction, requesting that Dr. Henke make no physical contact. Physical examination of the right upper extremity revealed generalized moderate swelling and discoloration of the right upper extremity and hand, and brittle fingernail changes. Dr. Henke gave the following impressions: right wrist carpal bone fracture, non-united, with developed right carpal tunnel syndrome, and right upper extremity stage 2 CRPS, secondary to right wrist and thumb injuries. He again opined Claimant was not at MMI. Dr. Henke did not provide a provisional impairment rating. He recommended that Claimant follow-up with Dr. Ghazi for a stellate ganglion rhizotomy. He remarked,

> A long discussion with [Claimant] was made to inform her that the right upper extremity symptoms would continue to progress with muscle contracture and weakness and continued ongoing symptoms of constant pain. She was informed that the potential side effects of a stellate ganglion rhizotomy procedure far outweigh the expected future right upper extremity future complications of muscular contracture and atrophy.

53. On August 25, 2017, Respondents filed an Application for Hearing endorsing the issue of overcoming the DIME on MMI and impairment rating.

54. On September 8, 2017, Claimant filed a Response to Application for Hearing endorsing medical benefits (reasonably necessary), average weekly wage, disfigurement, temporary total disability, temporary partial disability, permanent partial disability ("PPD") and permanent total disability.

55. On August 18, 2017, L. Barton Goldman, M.D. performed an IME at the request of Respondents. Dr. Goldman reviewed medical records dated October 24, 2014 through May 18, 2017 and physically examined Claimant. Claimant reported 6-9.9/10 pain and no digital dexterity. She reported difficulty with self-care, stating that the pain and dysesthesia prevented all activity. Claimant advised Dr. Goldman that she is not sure whether there is anything left to do to help her condition and she was not enthusiastic at all about having her "nerves burned." Dr. Goldman reviewed September and October 2016 surveillance video with Claimant. He noted, "She states that she was doing better than (*sic)* but has worsened since January 2017 but she is 'not sure.'"

56. On physical examination, Dr. Goldman noted Claimant kept her right arm in a dependent, guarded, adducted and internally rotated position with fear-avoidant movement patterns. He also noted she would keep her right pinky finger abducted most of the time and periodically would abduct her second and fourth fingers in a rather unusual "papal sign" variant, although this posturing was not noted most of the time on indirect examination or with distraction. Dr. Goldman noted minimal movement of the right hand, fingers and wrist that would improve periodically when he was observing her indirectly. In particular, Dr. Goldman noted more normal movement of the right upper arm, wrist and fingers, including the fifth (pinky) digit when distracted. Dr. Goldman noted some post-surgical disuse atrophy but no other trophic asymmetries. In particular he noted Claimant's nails appeared to be symmetrical and "quite normal." Dr. Goldman noted a slight "rubor" or redness of the skin that resolved with any type of movement or elevation. He noticed no sudomotor asymmetries and no difference in temperature from the right to left hand with the exception of the right pinky which was slightly cooler on the right. Dr. Goldman noted borderline trace edema in the right dorsal wrist that improved rapidly with elevation. With respect to cervical range of motion, Dr. Goldman opined that Claimant's motion was guarded, self-limited and nonphysiologic. Right shoulder active range of motion was diminished compared to the left. Dr. Goldman noted he was unable to obtain reliable active range of motion measurements of the right wrist. With respect to the right upper extremity, Dr. Goldman found "diffuse inconsistent nondermatomal hypersensitivity throughout the entire limb with an atypical pseudo-allodynia presentation associated with fear avoidant components to the degree that Claimant reacted with dramatic withdrawal before the skin was eve touched, but this reaction was somewhat variable and inconsistent." Dr. Goldman opined that Claimant's altered sensation was "glove like" in distribution, nondermatomal and overall considered inconsistent and nonphysiologic.

57. Dr. Goldman found Claimant's presentation represented "gross symptom magnification" and concluded that Claimant's physical presentation and subjective pain complaints cannot be relied upon. Dr. Goldman expressed "serious concern regarding the accuracy of the neuropathic and CRPS diagnoses being rendered in this matter that

are based on unreliable subjective presentations by this patient and presumed on the basis of relatively weak to non-diagnostic studies."

58. Dr. Goldman remarked that, even if Claimant presented in a more physiologic fashion and met the CRPS criteria, he disagreed with the recommendation for stellate ganglion radiofrequency ablation. Dr. Goldman noted he was perplexed as to why Dr. Henke did not place Claimant at MMI, as Claimant does not want to undergo the procedure. Dr. Goldman opined Claimant should be placed at MMI as of October 13, 2016, the last date of the video surveillance he reviewed with an impairment rating based on normalized range of motion discrepancy between Claimant's right and left wrist. In considering this, Dr. Goldman determined that it is appropriate to rely on Chapter 3, tables 10 and 14 of the AMA Guides for a mild categorization of median and radial sensory neuropathy with an equally mild table 11 gradation applied for median motor neuropathy of a mild category. Dr. Goldman further noted that the resulting impairment should be considered a scheduled right upper extremity impairment at the wrist. Based on this, Dr. Goldman calculated Claimant's impairment rating as follows:

> I have graded the patient's right median sensory neuropathy from Chapter 3, table 10 of the AMA Guides, third edition revised at 30% multiplied by a maximum sensory impairment of 40% from table 14. I have graded the motor component at 5% from table 11, Chapter 31 multiplied by a maximum 35%, table 14 motor impairment. This results in 12% median nerve sensory upper extremity impairment and 2% upper extremity motor impairment that combines to a 14% right upper extremity impairment at the wrist for the median nerve. For the right radial sensory neuropathy, I have graded table 10 at 26% multiplied by maximum 5% sensory impairment from table 14, resulting in a 1% radical peripheral sensory nerve impairment at the right wrist. Using the combined values chart, overall peripheral neurologic impairment in this case is equal to 15% right upper extremity at the wrist, which converts via table 3 to a 9% whole person impairment, although in this case, a scheduled upper extremity impairment rating of the wrist would be the most applicable interpretation of this rating.

59. As for maintenance medical care, Dr. Goldman recommended weaning and discontinuing most of Claimant's medications with the exception of the gabapentin. Again, Dr. Goldman opined that he "obviously strongly disagree[s] with Dr. Henke's conclusions and recommendations with respect to diagnosis, MMI status and treatment of [Claimant]." He noted application of Rule 17 of the Guidelines argues against Dr. Henke's treatment recommendations as does Dr. Goldman's experience and medical literature on the subject. Regarding work restrictions, he noted Claimant "has much more function and dexterity than she often presents to her providers," and opined that restrictions should be considered relative, and not absolute, limitations. Dr. Goldman recommended limitations on lifting with both of her upper limbs at 25 pounds occasionally and 10 pounds repetitively.

60. Respondents obtained additional surveillance video of Claimant in August and

September 2017, which the ALJ reviewed. Surveillance footage taken at 4:47 p.m. on August 18, 2017 shows Claimant holding her right hand in a guarded position, with a perceived deformity of the right pinkie finger. She uses her left hand to open and shut a car door and put on a seatbelt.

61. Claimant testified at hearing that she continues to experience swelling and pain in her right hand and wrist, which she describes as a burning, stabbing and shooting sensation into her arm and neck. She testified the symptoms wax and wane, and that she attempts to utilize the right extremity as much she can. Claimant stated that, at times, she is entirely unable to use her right extremity. She testified that it is very difficult to brush her hair or put it in a ponytail. She stated she uses her left hand to cook, and can use her right hand to hold very light grocery bags. Claimant stated she went kayaking in 2015 but was unable to hold the oar. She further testified that she went ziplining after the industrial injury but only used her left hand. She stated she spoke to Dr. Reinhard and then definitely decided she did not want to undergo the procedure. Claimant testified that she does not want to undergo the stellate ganglion rhizotomy and had informed Dr. Henke of this fact.

62. Dr. Goldman testified at hearing as an expert in physical medicine and rehabilitation and specifically within the area involving CRPS patients. Dr. Goldman is Level II accredited and board certified. Dr. Goldman testified generally in accordance with his August 18, 2017 IME report. He initially testified that Claimant could be considered to be at MMI on October 13, 2016, the date of the video surveillance, but also felt Dr. Reinhard's initial September 6, 2016 MMI date was appropriate and agreed that was the point where it became unlikely that more aggressive interventions or medication management were going to improve Claimant's function and her condition was stabilized.

63. He further testified that it was clear Claimant is at MMI because she does not want to undergo the stellate ganglion rhizotomy procedure. With respect to the DIME physician's finding that Claimant is not at MMI due to the treatment recommendation for the stellate ganglion rhizotomy procedure, Dr. Goldman testified that he strongly disagreed. He stated that this is an extraordinary recommendation and is indicated for patients who clearly have ischemic vascular changes in the arm. He opined that the procedure recommended by Dr. Henke is not at all in line with any version of the Guidelines and it is only recommended in the most unique and extraordinary cases. Dr. Goldman further testified that the procedure has a 30% chance of making Claimant worse. He opined that the procedure recommended by Dr. Henke is not indicated for Claimant. Dr. Goldman stated he is not simply expressing a mere difference of opinion with Dr. Henke, but rather, Dr. Henke is "profoundly incorrect" in providing an erroneous recommendation that not only contradicts the Guidelines but also contradicts good judgment. Dr. Goldman further stated that Dr. Henke's insistence on Claimant undergoing the stellate ganglion rhizotomy and failure to place Claimant at MMI knowing Claimant does not want the procedure is illogical and erroneous.

64. Regarding the diagnosis of CRPS, Dr. Goldman testified he disagreed with Dr. Bernton's endorsement of CRPS. Dr. Goldman testified that, while the thermogram

technique used by Dr. Bernton was not contradictory to the Guidelines, he believes the cold water stress test is the superior test. He conceded that the QSART results were positive, but emphasized what he deemed to be Claimant's inconsistent and subjective clinical findings and lack of true response to the sympathetic blocks.

65. Dr. Goldman testified that the impairment ratings assigned by Drs. Reinhard, Cebrian and Hughes are incorrect because the ratings are based on a CRPS diagnosis. Dr. Goldman explained that, even if Claimant has CRPS, it is very mild and should be rated under Chapter 3 of the AMA Guides for a peripheral nerve injury and not as a centralized CRPS injury. Dr. Goldman emphasized that, although Dr. Reinhard and Dr. Lugliani noted Claimant has no use of her right upper extremity and Dr. Reinhard rated Claimant in the subsection that requires Claimant to have difficulty with self-care, the video surveillance from October of 2016 and Claimant's testimony at the hearing on October 31, 2017 demonstrate that Claimant is able to perform activities of daily living and is not as limited in self-care as reported.

66. Dr. Goldman reiterated his opinion that Claimant sustained a 15% upper extremity (9% whole person impairment) as rated under Chapter 3, Tables 10, 11 and 14 of the AMA Guides. He testified that he rated Claimant conservatively based, in part, on discrepancies in Claimant's function noted in the surveillance video compared to Claimant's objective presentation. He noted he was unable to obtain a normalized range of motion impairment.

67. Dr. Bernton testified by post-hearing deposition on November 28, 2017. Dr. Bernton is Level II accredited and board certified in internal medicine, occupational medicine, and thermology. Dr. Bernton explained the different stress thermogram methods, including immersion in cold water and whole body cold stress tests. He testified Claimant underwent a whole body cold stress test, which is approved by the American Academy of Thermology and consistent with the requirements of the Guidelines. Dr. Bernton strongly disagreed with Dr. Goldman's assertion that the Guidelines historically required a true cold water stress evaluation test. Dr. Bernton testified that Claimant's test produced "very clear documentation of the presence of CRPS," and met the diagnostic criteria for CRPS. He testified that his opinion is not only based on testing, but also his consultation with Claimant and his physical exam, where the findings were also consistent with CRPS. Dr. Bernton testified that both the QSART test and thermography were was positive and provided clear and strong evidence for CRPS. Dr. Bernton disagreed with Dr. Goldman's premise, stating the thermogram findings were not limited to the peripheral nerve. Claimant has a mild right radial sensory neuropathy and carpal tunnel syndrome, which indicate Claimant has Type 2 CRPS. Dr. Bernton explained that the CRPS categories of Type 1 and Type 2 refer to the level of nerve involvement, not severity.

68. The ALJ examined Claimant's right upper extremity at hearing. Claimant has a visible disfigurement to the body consisting of the following: (1) a faint, well-healed scar on the Claimant's right thumb down to her wrist approximately 1 ½ inches in length and less than ¼ inch in width; (2) a second scar on the top of the hand and wrist approximately 2 inches in length and less than ¼ inch wide with some discoloration of

the skin surrounding the scar; (3) a third well-healed scar on the Claimant's right forearm approximately ½ inch in length that was not very perceptible to the ALJ; (4) swelling/enlargement in the area over the knuckles of the index and middle fingers of the right hand; (5) a pinky finger extended out from the right hand which the Claimant could not say for certain was like that all the time. The ALJ finds that Claimant has sustained a serious permanent disfigurement to areas of the body normally exposed to public view, which entitles Claimant to additional compensation.

69. The ALJ credits the opinions of Drs. Reinhard, Cebrian, and Goldman over the opinion of Dr. Henke on MMI.

70. Respondents have established that it is highly probable Dr. Henke's opinion on MMI is incorrect. The ALJ finds that Claimant reached MMI on September 6, 2016, the date Claimant's ATP, Dr. Reinhard, placed Claimant at MMI.

71. The preponderance of the evidence establishes Claimant suffered a 15% whole person impairment based on her CRPS diagnosis, as rated under Table 1A of the AMA Guides, "Use of upper extremity – Has no digital dexterity." The ALJ credits the opinion of Dr. Cebrian over the opinions of Drs. Reinhard, Hughes and Goldman with respect to permanent impairment.

72. Evidence and inferences contrary to these findings were not credible or persuasive.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado (the "Act"), Sections 8-40-101, *et seq.*, C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. Claimants shoulder the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of claimants nor in favor of the rights of respondents. Section 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a workers' compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness' testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the

testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

MMI

MMI exists at the point in time when "any medically determinable physical or mental impairment as a result of injury has become stable and when no further treatment is reasonably expected to improve the condition." Section 8-40-201(11.5), C.R.S. A DIME physician's finding that a party has or has not reached MMI is binding on the parties unless overcome by clear and convincing evidence. Section 8-42-107(8)(b)(III), C.R.S.; *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, supra*. Clear and convincing evidence is that quantum and quality of evidence which renders a factual proposition highly probable and free from serious or substantial doubt. Thus, the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician's finding concerning MMI is incorrect. *Metro Moving and Storage Co. v. Gussert*, 914 P.2d 411 (Colo. App. 1995). The question of whether the party challenging the DIME physician's finding regarding MMI has overcome the finding by clear and convincing evidence is one of fact for the ALJ.

Under the statute, MMI is primarily a medical determination involving diagnosis of the claimant's condition. *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Monfort Transportation v. Industrial Claim Appeals Office,* 942 P.2d 1358 (Colo. App. 1997). A determination of MMI requires the DIME physician to assess, as a matter of diagnosis, whether various components of the claimant's medical condition are causally related to the industrial injury. *Martinez v. Industrial Claim Appeals Office*, 176 P.3d 826 (Colo. App. 2007). A finding that the claimant needs additional medical treatment (including surgery) to improve his injury-related medical condition by reducing pain or improving function is inconsistent with a finding of MMI. *MGM Supply Co. v. Industrial Claim Appeals Office,* 62 P.3d 1001 (Colo. App. 2002); *Reynolds v. Industrial Claim Appeals Office,* 794 P.2d 1090 (Colo. App. 1990); *Sotelo v. National By-Products, Inc.,* W.C. No. 4-320-606 (I.C.A.O. March 2, 2000). Similarly, a finding that additional diagnostic procedures offer a reasonable prospect for defining the claimant's condition or suggesting further treatment is inconsistent with a finding of MMI. *Abeyta v. WW Construction Management,* W.C. No. 4-356-512 (ICAO May 20, 2004); *Hatch v. John H. Garland Co.,* W.C. No. 4-638-712 (ICAO August 11, 2000).

Claimant concedes she is at MMI because she does not wish to proceed with the stellate ganglion rhizotomy recommended by Dr. Henke. However, Claimant argues she should be placed at MMI as of the date she definitively determined she did not want to proceed with the procedure.[1] Respondents argue Claimant reached MMI on September 6, 2016.

Respondents have produced clear and convincing evidence that Dr. Henke's DIME opinion on MMI is in error. The medical records and the credible and persuasive opinions of Drs. Reinhard, Cebrian and Goldman regarding MMI establish that Claimant reached MMI on September 6, 2016. Claimant underwent conservative therapy, two surgeries and multiple injections. Dr. Henke opined Claimant is not at MMI based on his recommendation for Claimant to undergo a stellate ganglion rhizotomy. Dr. Goldman credibly and persuasively opined that such procedure is only recommended in unique and extraordinary cases, is not indicated for Claimant, and is not consistent with the Guidelines. Furthermore, the procedure has a 30% chance of worsening Claimant's condition. Dr. Goldman's opinion regarding the recommended procedure is supported by Dr. Reinhard, who opined Claimant should not undergo such an aggressive procedure. While Dr. Cebrian's evaluation took place prior to Dr. Henke's recommendation, Dr. Cebrian also opined, in general terms, that Claimant additional surgery is not recommended for Claimant, as it could worsen Claimant's symptoms.

The evidence establishes that the procedure recommended by Dr. Henke does not offer a reasonable prospect for defining Claimant's condition, improving Claimant's condition, or improving her function. It is undisputed Claimant does not wish to undergo the recommended procedure. Despite knowing this, Dr. Henke declined to place Claimant at MMI and continued to insist Claimant proceed with the recommended procedure. All physicians who have treated or evaluated Claimant, with the notable exception of the DIME physician, agree Claimant's condition has plateaued and there does not currently appear to be any further medical treatment that is likely to improve her condition or prevent further deterioration. Based on the totality of the evidence, it is highly probable Dr. Henke's DIME opinion on MMI is incorrect and that Claimant reached MMI on September 6, 2016.

Medical Impairment

DIME Panel Physician Note #4 of the Impairment Rating Tips provides, in relevant part, "If the party requesting the DIME has asked that impairment be addressed, and if you find the patient not at MMI for that work-related injury, you should nevertheless provide a rating for that injury." Dr. Henke did not provide a provisional impairment rating nor indicate whether \ he agreed or disagreed with Dr. Reinhard's rating. Claimant argues the issue of impairment is not ripe and Claimant should return to Dr. Henke for a follow-up DIME to allow Dr. Henke to assign an impairment rating.

[1] Claimant's position statement argues different MMI dates. Claimant argues an MMI date of April 11, 2017, the date she was reevaluated by Dr. Reinhard, as well as an MMI date of August 18, 2017, the date Claimant was evaluated by Dr. Goldman.

Claimant identifies no statute, rule or case law requiring yet another follow-up DIME evaluation under the specific circumstances.

Generally, the term "ripeness" refers to whether an issue is "real, immediate, and fit for adjudication." *Olivas-Soto v. Industrial Claim Appeals Office,* 143 P.3d 1178 (Colo. App. 2006); *also see Silviera v. Colorado Springs Health Partners,* W.C. 4-502-555 (I.C.A.O. November 8, 2011). In general, under the doctrine of ripeness courts will not consider uncertain or contingent future matters because the injury is speculative, may never occur and might resolve prior to the court's determination. *See Stell v. Boulder County Dep't of Social Svcs*., 92 P.3d 910 (Colo. 2004).

As discussed, Claimant is found to be at MMI. Respondents endorsed the issue of impairment on their Application for Hearing and Claimant endorsed the issue of PPD in her Response to Application for Hearing. The issue of impairment is ripe.

As Dr. Henke did not provide an impairment rating, there is no impairment rating to overcome by clear and convincing evidence. Moreover, once the ALJ determines that the DIME's opinion has been overcome, the claimant's correct medical impairment then becomes a question of fact and the ALJ is free to calculate Claimant's impairment rating based upon the preponderance of the evidence. *See Garlets v. Memorial Hosp.*, W.C. No. 4-336-566 (I.C.A.O. Sept. 5, 2001). "The only limitation is that the ALJ's findings must be supported by the record and consistent with the AMA Guides and other rating protocols." *Deleon v. Whole Foods Market, Inc.*, W.C. No. 4-600-477 (I.C.A.O. Nov. 16, 2006).

Claimant has a confirmed diagnosis of CRPS per the criteria set forth in Rule 17 of the Guidelines. Rule 17 requires both a clinical diagnosis and at least two positive tests from the following categories of diagnostic tests: (1) trophic tests, which include comparative x-rays and triple bone scans; (2) vasomotor/temperature tests (infrared stress thermography); (3) sudomotor test (autonomic test battery with an emphasis on QSART); and (d) sensory/sympathetic nerve test (sympathetic blocks). Rule 17 identifies a whole body thermal stress test as an acceptable thermographic test.

The medical records evidence continuing pain, allodynia, temperature asymmetry, skin color changes, restricted motion, edema, tremor, and trophic changes, which support the clinical diagnosis of CRPS. Claimant has two positive objective diagnostic tests, a positive QSART and a positive whole body thermal stress test. Drs. Bernton, Reinhard, Ghazi, Hughes and Cebrian all opined that Claimant has CRPS. Dr. Bernton opined that the diagnosis is clearly established. Dr. Hughes noted the CRPS diagnosis was not in doubt. Dr. Reinhard referred to Claimant as having "classic findings" of CRPS. While Dr. Cebrian mentioned the possibility of false positives on the diagnostic tests, he nevertheless diagnosed Claimant with CRPS and assessed a rating based on such diagnosis. Dr. Goldman acknowledged that the QSART test was positive, and that, although he believed a cold water stress test is superior to a whole body thermal stress test, the thermogram method used by Dr. Bernton was within the criteria of the Guidelines. Accordingly, the overwhelming majority of the evidence establishes that Claimant suffers from CRPS. Drs. Reinhard, Hughes and Cebrian

assigned impairment ratings based on the CRPS diagnosis, all using Table 1A of the AMA Guides. Dr. Goldman's opinion that Claimant does not suffer from CRPS and should not be rated under Table 1A of the AMA Guides is not credible or persuasive.

The ALJ finds Dr. Cebrian's opinion on permanent impairment most credible and persuasive in light of the supporting medical records and surveillance footage. Dr. Reinhard's assessment of a 30% impairment was based on Claimant's reports of having little to no function of the right hand. Dr. Reinhard noted Claimant needed assistance doing her hair, preparing meals, and performing household activities. Dr. Hughes agreed with a 30-35% impairment rating based on Claimant's reports of difficulty with self-care. In contrast, Dr. Cebrian noted that Claimant continued ziplining and kayaking for some period of time after the injury, and was able to shower, get dressed and clean. Dr. Goldman noted improved movement when he observed Claimant indirectly on examination. The surveillance video reviewed by the ALJ clearly shows Claimant with more function than she reported. Claimant is observed performing various functions with her right hand with no pinkie deformity, guarding or apparent pain behaviors. Claimant is only observed holding her hand and arm in a guarded position exhibiting a pinkie deformity in surveillance video taken August 18, 2017 at 4:47 p.m., the same day of Dr. Goldman's evaluation, where she was confronted about previous surveillance footage. While CRPS symptoms may wax and wane, Claimant continuously reported elevated pain levels and minimal function throughout the medical records, which is inconsistent with her presentation in the surveillance footage. Based on the totality of the evidence, it is more likely than not Claimant sustained a 15% whole person impairment under Table 1A of the AMA Guides "Use of upper extremities- Has no digital dexterity."

Disfigurement

Section 8-42-108(1), C.R.S. provides that a claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view."

As found, Claimant has surgical scars as a result of his compensable injury. The ALJ concludes Claimant should be awarded $1,500.00 for this disfigurement.

ORDER

It is therefore ordered that:

1. Respondents have overcome the DIME opinion of Dr. Clarence Henke regarding MMI by clear and convincing evidence. Claimant is at MMI as of September 6, 2016.

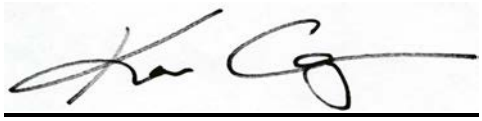
2. Respondents established by a preponderance of the evidence that the correct impairment rating is that calculated by Dr. Cebrian. Claimant's impairment rating is a 15% whole person impairment rating.

3. Respondents shall pay Claimant $1,500.00 for disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 10, 2018



Kara R. Cayce
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

ISSUES

1. Whether Claimant has established by a preponderance of the evidence that left knee surgery recommended by Christopher Isaacs, M.D. is reasonable, necessary, and causally related to his June 7, 2016 work injury.

2. Whether Respondents have established by a preponderance of the evidence that temporary total disability (TTD) benefits should be terminated, effective August 24, 2017, based on the petition to terminate compensation filed pursuant to §§ 8-42-103 and 8-42-105, C.R.S.

FINDINGS OF FACT

1. Claimant was employed by Employer and sustained an admitted work related left knee injury on June 7, 2016.

2. On August 5, 2016 Claimant underwent an MRI of his left knee. The conclusion was a radial tear in the posterior horn of the medial meniscus with partial extrusion of medial meniscal body segment and scuffing at the posterior root of the lateral meniscus. The findings noted fraying at the posterior root lateral meniscus without discrete lateral meniscal tear. *See* Exhibit 6.

3. On August 31, 2016 Claimant underwent a left knee arthroscopy partial medial and lateral meniscectomies performed by Dr. Isaacs. The post-operative diagnosis noted a left knee torn medial meniscus plus a torn lateral meniscus. The operative report noted a complex tear in the medial meniscus required 40% resection and that the lateral meniscus required 25% resection. *See* Exhibits 5, C.

4. Following his first left knee surgery, Claimant returned to work for Employer. On September 23, 2016 Claimant stepped off a curb awkwardly and twisted his left knee while working, re-injuring it.

5. On September 30, 2016 Claimant underwent an updated MRI of his left knee. The impression was: new posterior horn medial meniscus tear superimposed on previous partial meniscectomy at the body segment; and acute lateral meniscus tear in the posterior horn extending to the root ligament with displaced debris posteriorly in the notch. The impression included acute lateral meniscus tear in the posterior horn extending to the root ligament with displaced debris posteriorly in the notch. *See* Exhibits 6, C.

6. On December 14, 2016 Claimant underwent a second left knee arthroscopy and further medial meniscectomy performed by Dr. Isaacs. Dr. Isaacs noted that Claimant had undergone a prior arthroscopy and debridement of the meniscus but had a subsequent injury and re-tearing. In the operative report, Dr. Isaacs noted that the further tearing of the medial meniscus required near total meniscectomy. *See* Exhibits 5, C.

7. On December 22, 2016 Claimant was evaluated by Dr. Isaac's PA, Charles Jennings. Claimant reported he was doing well with significantly decreased pain. PA Jennings noted that Claimant had a medial and lateral meniscal tears of the left knee and that Claimant was status post meniscectomy and debridement. PA Jennings noted that Claimant still needed to be taking it easy. *See* Exhibits 5, C.

8. At a follow up with Dr. Isaacs on January 19, 2017 Claimant reported doing better but still having mild discomfort in his left knee. Dr. Isaacs noted mild tenderness medially. At a follow up on February 16, 2017 Claimant still reported discomfort in the medial aspect of his knee and a slight instability feeling. Dr. Isaacs found a benign examination and deferred to Dr. Mason whether or not further physical therapy was needed. *See* Exhibits 5, C.

9. On April 7, 2017 Claimant was evaluated by Dr. Mason. Claimant reported a pain level of 3/10 and that he was taking occasional ibuprofen. Dr. Mason found no effusion and that Claimant's vmo strength continued to progress. Dr. Mason noted that Claimant had finished his work conditioning physical therapy but that Claimant had been laid off from work. Claimant reported the possibility of work out of state but that he would need to be taken off restrictions. Claimant reported feeling ready and that he wanted to test out the knee. Dr. Mason opined that was probably a good idea. Dr. Mason cleared Claimant for a trial of full duty work and noted that if Claimant was doing well she would consider MMI. *See* Exhibits 4, B.

10. On May 16, 2017 Claimant was evaluated by Dr. Mason. Claimant reported his pain level at a 3-4/10 and that lifting and carrying 80 pounds seemed to increase his left knee symptoms. Claimant reported that he was able to tolerate up to five miles of hiking, but that he needed ice and ibuprofen afterwards. On examination, Dr. Mason found some tenderness along the medial joint line and pes anserine areas. Dr. Mason noted that Claimant was going to be starting a job in Utah on May 31 and that they were hoping it would go fine, but that Claimant actually had not done a trial of full duty, so she was not certain that Claimant wouldn't require some permanent restrictions. Dr. Mason noted that Claimant would call her once he had the opportunity to trial full duty work to let her know how it was going. Dr. Mason opined that it the work trial was going well, she would file an impairment report but that if it was not going well, she would need to follow up with Claimant and possibly get a functional capacity evaluation for permanent restrictions. Dr. Mason noted that if he was doing well, she would place Claimant at MMI and that otherwise Claimant might need further attention, a functional capacity evaluation, and permanent restrictions. *See* Exhibits 4, B.

11. On June 2, 2017 Dr. Mason noted she had spoken with Claimant. She noted that Claimant had been working a trial of full duty work in Utah for the last 5-6 days and that his knee had been swelling at the end of the day and he reported it more intolerable today and that he thought he could not continue and was planning on returning to Denver. *See* Exhibits 4, B.

12. On June 14, 2017 Dr. Mason responded to a letter from Respondents. Dr. Mason opined that Claimant was not at maximum medical improvement for his June, 2016 injury. *See* Exhibits 4, B.

13. On June 20, 2017 Claimant was evaluated by Dr. Mason. She noted that Claimant had contacted her when he was working a job in Utah earlier in the month reporting that he had been more symptomatic since he was on a trial of full duty. Claimant reported his knee had been swelling again, that he couldn't straighten it all the way, and that he had cramping in the calves. Claimant reported that the job in Utah was not very heavy but that he did have to crawl on his hands and knees. Dr. Mason noted his recurrent symptoms and placed him back on restrictions. Dr. Mason also recommended a new MRI and a referral back to Dr. Isaacs. *See* Exhibits 4, B.

14. On July 11, 2017 Claimant underwent an updated MRI of his left knee. The conclusions were: sequel of significant remote proximal MCL spraining without appreciable resultant laxity accompanying the sequel of a significant partial medial meniscectomy involving its body and posterior horn without evidence of significant degenerative changes or re-tearing. The conclusion also recommended correlation with previous MRIs of the left knee due to the appearance of the medial third of the posterior horn of the lateral meniscus which was highly suspicious for a partially attached anteromedially displaced 1 cm tear fragment. *See* Exhibits 6, D.

15. On July 14, 2017 Claimant was evaluated by Dr. Mason. Dr. Mason noted that the new MRI showed the medial meniscus repair looked okay but showed a question of a fragment on a loose body from the lateral meniscus. Dr. Mason noted that they did not have Claimant's prior MRIs to compare, but felt that the lateral meniscus looked suspicious for a partially attached anteromedially displaced 1 cm tear fragment. Dr. Mason reviewed Claimant's prior MRI and noted the prior MRI also questioned the same lesion. Dr. Mason reviewed Dr. Isaacs's operative report which showed that Dr. Isaacs did not see the lesion in question at the time of surgery. Dr. Mason recommended follow up with Dr. Isaacs. *See* Exhibits 4, B.

16. On August 7, 2017 Claimant was evaluated by Dr. Isaacs. Claimant reported recurrent symptoms in his left knee with no recent injury. Claimant reported after starting a job in Utah he began having pain and swelling in his knee. Dr. Isaacs reviewed the July 11, 2017 MRI and noted that in the lateral compartment there appeared to be a fragment displaced away from the lateral meniscus about 1 cm in size. Dr. Isaacs provided the impression of lateral meniscus tear, possible loose body, in the left knee. Dr. Isaacs recommend a repeat arthroscopy. *See* Exhibits 5, C.

17. On August 8, 2017 Claimant was evaluated by Dr. Mason. She noted that Dr. Isaacs had recommended scoping for a loose body in Claimant's knee and that she agreed since Claimant had fairly clear cut mechanical symptoms. Dr. Mason noted a possible lateral meniscus tear vs. loose body shown on MRI. *See* Exhibits 4, B

18. On August 10, 2017 Claimant underwent an independent medical examination performed by Allison Fall, M.D. Claimant reported that while working on June 7, 2016 he was shoveling a pile of dirt, put his foot down landing on something, and slipped. Claimant reported feeling a twinge of pain in his left knee and that within 2-3 minutes it was swollen a little bit. Claimant reported after a few weeks his knee was locking up on him and that after another man fell and he rushed over to help, the knee swelled significantly. Claimant reported undergoing surgery on August 31, 2016 and that he was doing well after surgery. Claimant reported however, that one day while walking on the sidewalk he twisted and rolled off and his knee swelled up again. Claimant reported having a second surgery followed by physical therapy and that he underwent a trial of full duty work in Utah but that each day with work his pain became worse. Claimant reported that his job duties included bending, squatting, crawling, and climbing a ladder. Claimant reported he underwent a new MRI that showed an abnormality in the lateral compartment and that Dr. Isaacs was recommended surgery. Claimant reported it could have been anything that caused his recurrent symptoms and reported no specific incident. *See* Exhibit A.

19. Dr. Fall reviewed medical records and performed a physical examination. Dr. Fall assessed status post left medial and lateral meniscectomies with recurrent medial meniscus tear and status post a near complete medial meniscectomy with increased pain now and a new onset of lateral knee pain after returning to work in Utah with recurrent swelling and lateral meniscus abnormality on a recent MRI. Dr. Fall opined that it appeared as if there were a new abnormality of the lateral meniscus. Dr. Fall opined that previously, most of Claimant's symptoms were on the medial side and explained by having a near complete resection of the medial meniscus but that after working in Utah, Claimant developed more pain on the lateral side. Dr. Fall noted that Claimant had done well on conditioning before working in Utah to the point that Claimant had been released to full duty by Dr. Mason. Dr. Fall opined therefore, with Claimant doing so well before working in Utah, it indicated that something had occurred after Claimant had been released to full duty and may be related to the work Claimant performed in Utah. Dr. Fall opined that there was a new incident that occurred in Utah leading to Claimant's symptoms and that therefore Claimant was at MMI for his prior work related knee injury. Dr. Fall opined that the third recommended surgery would not be related to the June 7, 2016 work injury. *See* Exhibit A.

20. Dr. Fall noted that there had been an abnormality noted in the lateral meniscus on the second MRI prior to Claimant's second surgery. However, she noted that Dr. Isaacs did not find any abnormalities in the lateral meniscus when performing the second surgery. She noted that Dr. Isaacs did not see any fragments during surgery in the intercondylar notch. *See* Exhibit A.

21. On August 24, 2017 Respondents filed a petition to terminate compensation noting their position that they were entitled to terminate temporary total disability (TTD) benefits based on the medical opinions of Dr. Fall, Dr. Mason, and Dr. Isaacs and argued the medical opinions all indicated Claimant presented with complaints of left knee pain after working at a new employer.

22. On September 5, 2017 Claimant was evaluated by Dr. Mason. Claimant was clear that he didn't have any event in Utah but that his knee just gradually got worse over the days that he was there and came on gradually with increased normal activity. *See* Exhibits 4, B.

23. On November 10, 2017 Claimant was evaluated by Dr. Mason. Dr. Mason noted that she had reviewed Dr. Fall's IME report where Dr. Fall opined that something must have happened when Claimant was in Utah. Dr. Mason again discussed it with Claimant and noted there was no significant incident and that in Utah Claimant had been doing fairly light things and could not identify any specific time when he might have sustained an injury. *See* Exhibits 4, B.

24. On November 21, 2017 Dr. Mason responded to Claimant's letter. Dr. Mason opined that the 3rd left knee arthroscopy recommended by Dr. Isaacs was reasonable, necessary, and related to cure Claimant from the effects of his June 7, 2016 industrial fall. *See* Exhibit 4.

25. On December 1, 2017 Claimant was evaluated by Dr. Mason. Dr. Mason noted that Claimant was status post left medial meniscectomy x2 after a tear and recurrent tear, and now with a possible lateral meniscus tear versus loose body and noted that Claimant was awaiting arthroscopic surgery. *See* Exhibits 4, B.

26. Claimant testified credibly at hearing. Claimant testified that after his second left knee surgery, his rehabilitation was going well and he was getting back into shape, but that he always had swelling. Claimant testified that he was told at physical therapy that the pain and swelling would always be there. Claimant testified that at physical therapy twice per week, his left knee was always iced. Claimant testified that Dr. Mason wanted him to trial full duty work.

27. Claimant testified that he went to Utah and started working in Salt Lake City at the Utah Jazz stadium. Claimant testified he did light duty pipe work on the water system. Claimant testified that it was the easiest job he had and that he lifted lighter things, but that he was working 10 hours per day and 7 days per week. Claimant reported noticing problems with his knee and with swelling after his first 10 hour day of work which involved 5 hours of orientation and 5 hours of learning the job. Claimant testified that after his first day of work in Utah, his knee swelling was a little worse. After the end of the second day of work, Claimant testified that his knee was swollen and that he iced it and took ibuprofen. Claimant testified credibly that he did not sustain any new acute injury and that he had no acute pain or incident and that he didn't want to get reinjured.

28. Claimant testified credibly that he worked three days, then had Memorial Day weekend off and that he rested over the weekend and his swelling went down. Claimant testified that the next week on Tuesday he started working again and that the swelling started again and came back right away and that he knew the physical therapist had said there would be swelling and he would have to deal with it. Claimant testified that by Thursday he was worse and called Dr. Mason. Claimant testified that his symptoms at the Utah job were in the same place as the symptoms he had following the second left knee surgery.

29. Dr. Fall testified at hearing. Dr. Fall testified that based on the MRIs, there was a new finding in July of 2017 in the lateral part and that based on the new finding a new surgery was recommended. Dr. Fall opined that there was a new injury and/or an aggravation of Claimant's pre-existing condition that occurred at his new place of employment. Dr. Fall opined that Claimant's current wage loss was due to a new re-injury and due to the original June 7, 2016 injury. Dr. Fall believed that Claimant had a loose body present in his left knee and that the swelling was consistent with that but opined that before his work in Utah, Claimant had problems in the medial compartment and that when he got back from Utah, his problems were noted in the lateral compartment. Dr. Fall noted that Claimant did have swelling at physical therapy that gradually decreased and that with work in Utah, Claimant had increased activity and more swelling. Dr. Fall testified that Claimant already had activity related swelling that then seemed to increase in Utah and that the additional swelling beyond the swelling Claimant previously had with activity was due to a new tear.

CONCLUSIONS OF LAW

Generally

The purpose of the Workers' Compensation Act of Colorado, §§ 8-40-101, *et seq.*, C.R.S. is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *See* § 8-40-102(1), C.R.S. The claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. *See* § 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the

testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

Reasonable and Necessary Medical Treatment

Respondents are liable to provide medical treatment that is reasonable and necessary to cure and relieve the effects of the industrial injury. *See* § 8-42-101(1)(a), C.R.S. The question of whether the claimant proved treatment is reasonable and necessary is one of fact for the ALJ. *Kroupa v. Industrial Claim Appeals Office,* 53 P.3d 1192 (Colo. App. 2002).

The claimant was required to prove by a preponderance of the evidence that the conditions for which he seeks medical treatment were proximately caused by an injury arising out of and in the course of the employment. *See* § 8-41-301(1)(c), C.R.S. The claimant must prove a causal nexus between the claimed disability and the work-related injury. *Singleton v. Kenya Corp.,* 961 P.2d 571 (Colo. App. 1998). A pre-existing disease or susceptibility to injury does not disqualify a claim if the employment aggravates, accelerates, or combines with the pre-existing disease or infirmity to produce a disability or need for medical treatment. *Duncan v. Industrial Claim Appeals Office,* 107 P.3d 999 (Colo. App. 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167 (Colo. App. 1990).

Claimant has met his burden of proof to establish by a preponderance of the evidence that the left knee arthroscopy recommended by Dr. Isaacs is reasonable, necessary, and related to his June 7, 2016 work injury. Claimant did not have a pre-existing condition that was aggravated by his work in Utah. Rather, he had an ongoing left knee condition at the time he started a “trial” of full duty work in Utah and the ongoing condition was due to his June 7, 2016 work injury that had never fully healed. The recommended third left knee arthroscopy is related to and was caused by Claimant’s work injuries that occurred prior to his trial of work in Utah.

As found above, Claimant was only doing a “trial” of full duty work when he went to Utah. The trial was due to Dr. Mason’s concern over whether or not Claimant’s left knee was in the condition to allow full duty work with no restrictions. She allowed a trial of full duty work to help figure this out. Before starting his full duty work trial and before

going to Utah, Claimant had ongoing pain in his left knee, ongoing swelling in his left knee with activity, and had problems in his lateral meniscus that had previously been identified by MRI. The ALJ concludes that Claimant's original injuries and Claimant's left knee condition never fully healed and was not at 100% before he went to Utah. Respondents suggest that Claimant was doing well and then re-injured or aggravated his knee in Utah. This is not persuasive. Rather, the weight of the evidence establishes that Claimant had ongoing pain, swelling, and problems with his left knee prior to going to Utah. His left knee problems due to his work injuries were ongoing at the time he began his return to work "trial" in Utah. Clearly, the return to work trial of full duty work with no restrictions did not go well. This is found to be due to Claimant's continued and ongoing left knee condition that never fully healed or resolved subsequent to his second left knee surgery.

The opinion of Dr. Mason is credible and persuasive that the third left knee arthroscopy recommended by Dr. Isaacs is reasonable, necessary, and causally related to Claimant's June 7, 2016 work injury. This is supported by the weight of the evidence showing MRI findings prior to the second left knee surgery consistent with current MRI findings. Dr. Fall's opinion that Claimant sustained a new injury or an aggravation of his underlying condition is not credible or persuasive. Dr. Fall's opinion that there were new findings in the lateral meniscus and that Claimant sustained a new incident in Utah since he had been doing so well before going to Utah is not credible or persuasive. Rather, Claimant's testimony is credible and persuasive. Claimant had swelling with activity following his second surgery. After returning to a trial of work in Utah, his swelling increased without any acute incident or injury. The records show that after his original June 7, 2016 work injury and during his first left knee surgery, he was found to have a torn lateral meniscus. In that first surgery, Dr. Isaacs resected 25% of the lateral meniscus. After he re-injured his knee the September 2016 MRI showed acute lateral meniscus tear in the posterior horn extending to the root ligament with displaced debris posteriorly in the notch. Although Dr. Isaacs didn't see any loose fragments or debris during the second left knee surgery, the third left knee surgery is being recommended due to what Dr. Isaacs opined in August of 2017 was a lateral meniscus tear or possible loose body. This third recommendation for surgery addresses findings that were present before the second surgery took place and are not new findings as suggested by Dr. Fall. Claimant overall is credible and persuasive. His left knee never healed following the second surgery. He continued to have swelling and pain. He tried to return to work during a trial that did not go well with his swelling and pain increased.

Claimant has established, by a preponderance of the evidence, that the third left knee arthroscopy requested by Dr. Isaacs is reasonable, necessary, and related to his June 7, 2016 work injury.

Temporary Total Disability

Respondents may not terminate TTD benefits in this case and their petition is denied. As found above, Claimant did not sustain a new intervening injury with a new employer. Rather, at the time of his trial back to work, Claimant had an ongoing injury and ongoing problems due to his June 7, 2016 work related injury. Claimant did not have

an underlying condition that was aggravated by his employment in Utah nor did he sustain a new acute injury in Utah. Rather, Claimant had an ONGOING condition that had been aggravated with activity since his second surgery. Claimant has established that his condition is related to his June 7, 2016 work injury and thus terminating any entitlement to TTD benefits due to an alleged new injury with a new employer is not supported. Respondents' petition to terminate TTD benefits is denied.

ORDER

It is therefore ordered that:

1. Claimant has established, by a preponderance of the evidence that the left knee arthroscopy recommended by Dr. Isaacs is reasonable, necessary, and related to his June 7, 2016 work injury.

2. Respondents' Petition to Terminate Temporary Disability Benefits is denied.

3. All issues not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Whether Claimant has demonstrated by a preponderance of the evidence that she suffered compensable injuries during the course and scope of her employment on August 11, 2017.

II. Whether Claimant has proven by a preponderance of the evidence that she is entitled to receive reasonable, necessary and causally related medical benefits for her industrial injuries.

III. A determination of Claimant's Average Weekly Wage (AWW).

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Elisa Leake owns and operates a personal care business known as Kind Heart Home Care, LLC (Employer). Employer provides home care services, including assistance with activities of daily living (ADL), light housekeeping, cooking and grocery shopping based upon individual need to various clients, including Medicaid recipients.

2. As a personal care attendant, Claimant assists Employer's clients with the aforementioned activities. On August 11, 2017, Claimant was assisting Vernelda Bonet, a Medicaid client assigned to her, through security at the courthouse so Ms. Bonet could attend a probation appointment. While clearing security, Ms. Bonet suffered a seizure, tensed up and grabbed Claimant by the left arm as she fell to the floor. Claimant felt a pop in her left shoulder. After physical therapy and an MRI, Claimant has been diagnosed with a rotator cuff tear requiring surgery. Claimant reported her injury to Employer on August 14, 2017 and a first report of injury was filed by Ms. Leake on August 24, 2017.

3. Respondents have denied liability for Claimant's injury. Respondents assert that Claimant was outside the course and scope of her employment because she had driven Ms. Bonet to her probation appointment in contravention of prior instructions not to drive and or accompany her to probation appointments.

4. Claimant testified that on the date of injury, she was working 34 hours per week at $9.75 per hour. She was assigned to work with Ms. Bonet for four hours per day in the mornings, for a total of 24 hours per week. She also assisted another client named Barbara for two hours a day in the afternoon for a total of 10 hours per week.

5. Claimant testified she started working for Employer in October 2016. According to Claimant, Employer informed her that in addition to a list of duties such as dusting and feeding and bathing the clients, she was required to run errands and take the clients to their appointments.

6. Claimant testified she began taking care of Ms. Bonet in January 2017 after Ms. Bonet was temporarily assigned to her when her regular caretaker, Milagros Estrello went on vacation. The assignment became permanent. The first month following the assignment becoming permanent, Claimant testified that Ms. Bonet requested to be transported to a meeting with her probation officer at the courthouse. Claimant testified that she was present when Ms. Bonet called Employer requesting that she (Claimant) be given permission to take her (Ms. Bonet) to said probation appointments. Claimant testified that Employer authorized the transportation. Employer disputes that Claimant was given permission to transport or accompany Ms. Bonet to her probation appointments.

7. Ms. Bonet testified that she was placed on probation in October 2016. She testified that her prior caregiver, Milagros Estrello had transported her to her probation appointments on three occasions. Ms. Bonet was subsequently placed in jail and upon her release was not permitted to drive. After her release from jail, Ms. Bonet testified that she called Employer, in the presence of Claimant, to ask if her caretaker could take her to her monthly probation appointments. Ms. Bonet testified that Employer gave permission for Claimant to drive and accompany her to probation.

8. Ms. Estrello confirmed she had driven Ms. Bonet to the probation office while caring for her. She believed it only happened once and did not seek permission from Employer to do so as she understood taking clients to their appointments was part of her job and providing transportation was otherwise permitted. She testified that she was never specifically told that she could not transport Ms. Bonet or other clients to appointments until after Claimant's August 11, 2017 accident.

9. Claimant testified that she was required to call in to the office every morning upon her arrival at Ms. Bonet's home. The purpose of the call in was to report the plan of care for that day and discuss any transportation requests. In addition to the owner, there are two other office employees to whom Claimant would report before beginning her care with Ms. Bonet. If no one was available, Claimant would leave the information on the answering machine. Claimant testified that if there was an unusual request for transportation from Ms. Bonet, she would call Ms. Leake on her personal phone and request permission for the trip. Sometimes Ms. Leake would authorize the transportation, other times she would not. According to Claimant, Employer authorized trips to the courthouse on two occasions when Ms. Bonet was scheduled to attend a probation appointment, informing her that said appointments were going to last up to two years.

10. Claimant testified that Ms. Bonet was a very persistent client with excessive and at times inappropriate transportation requests. She testified that Ms.

Bonet frequently demanded to be driven to multiple destinations the same day. Consequently, Claimant asked Employer if she could be reimbursed for her gas expense, including the expense for the trips she was making to the probation office. According to Claimant, Employer did not respond except to tell her that Ms. Bonet was scheduled for probation appointments for the next one to two years. During cross-examination, Claimant reiterated her understanding that it was her obligation to take Ms. Bonet and other clients "where ever they had to go."

11. Claimant testified that the first time she learned she could not drive Ms. Bonet to her probation appointments was the Friday after the incident occurring in the courthouse wherein she injured her shoulder. Claimant testified that she received a copy of an August 18, 2017, letter drafted by Ms. Leak and sent to all employees stating that they were not allowed to drive clients. By this time, Claimant, who had been calling in to report her anticipated treatment plan and clarify transportation requests, had driven Ms. Bonet to the probation office every month since January 2017 except once when Claimant was ill, and another co-worker had taken her.

12. Ms. Leake testified that Colorado Medicaid rules do not allow her employees to transport clients in the employees' vehicles or in the clients' vehicles. Rather, she testified that caregivers are allowed to meet clients at their appointments or for example, at the grocery store where they can assist the client as necessary. According to Ms. Leake, she limited the personal care providers to accompanying a client to one doctor's appointment and one grocery store trip per week. She testified that since her business opened in 2009, she had established a strict rule that her employees cannot drive the clients anywhere in the employees' vehicles except in cases of emergency. She testified that if client was injured in her employees' cars, she would be liable. Medicaid could shut down her business if she did not follow the rules.

13. Ms. Leake testified that when she initially assigned Claimant to take care of Vernalda Bonet, she was asked by Claimant if she could transport Ms. Bonet to her probation department appointments. Ms. Leake testified that she specifically told Claimant that she could not drive Ms. Bonet anywhere, purportedly telling her that without exception she was only allowed to complete her job duties of picking-up medications, attending patients doctors' appointments, and assisting with grocery shopping once per week.

14. Ms. Leake also testified that she was asked by Ms. Bonet if she could receive transportation to the probation appointments. Ms. Leake testified that contrary to Ms. Bonet's report, she did not authorize Claimant to transport or assist her with personal appointments.

15. Ms. Leake testified that on August 9, 2017, two days before her injury, Claimant was reminded not drive Ms. Bonet anywhere. Claimant testified that, as she had previously done, she called into the office because Ms. Bonet had insisted that she be driven to different places and Claimant called the office to inform them. According to Claimant, she was given permission to take Claimant to probation during this call but

nowhere else. Moreover, she was given suggestions on how to curb Ms. Bonet's demands and told simply to say "no" when Ms. Bonet began demanding that she drive her here and there. Asked why she then drove Ms. Bonet to the probation appointment on August 11, 2017, Claimant testified that she believed that it was her duty to drive Ms. Bonet to her probation appointments. She had reported it as part of her daily plan reports and had complained to Ms. Leake of the cost to drive Ms. Bonet to the probation office and did not receive a response other than being informed that Ms. Bonet's probation appointments would continue for two years. When asked whether she had called the office on the morning of August 11, 2017 to tell them that she was taking Ms. Bonet to her probation appointment, she said she had not because when she got to Ms. Bonet's house, Ms. Bonet was waiting outside ready and demanding to be taken to her appointment forthwith.

16. Pertinent documentary evidence establishes that an employee meeting was held on May 12, 2017. Among the topics discussed at the meeting was transportation of clients. The agenda list suggests that care givers were permitted to drive clients to grocery shop one time per week, drive clients for medication pick-up and to one doctor's appointment although it does not specify a time frame for these two activities. Importantly, the agenda indicates, "any alternatives must be discussed with office staff", suggesting that driving clients for other reasons was open to discussion. Separate documentation reveals that Claimant was in attendance for this meeting.

17. An April 4, 2017 communication note indicates that Ms. Bonet went to jail and would return on May 29, 2017. A June 3, 2017 communication note indicates that Ms. Bonet called in requesting services again and asking that Claimant be assigned to her.

18. Despite Ms. Leake's emphatic testimony that her employees are prohibited from driving clients anywhere, the evidence presented persuades the undersigned ALJ that this prohibition was honored more in the breach than in the observance. In a letter signed by Ms. Leake, dated July 14, 2017, less than a month before Claimant's accident, Ms. Leake complained to her clients that in "many cases our Caregivers are doing more driving then [sic] providing the services that you all need."

19. The ALJ credits the testimony of Claimant and the documentary evidence to find that there were probable frequent discussions between Claimant and Employer regarding Ms. Bonet's transportation demands and that Employer occasionally acquiesced to those demands permitting Claimant to drive Ms. Bonet to outside appointments, including her probation meetings. At a minimum, both Ms. Estrello and Claimant were under the impression that such transportation and assistance were permitted. The ALJ finds the pre-injury documents relied upon by Employer, as proof that Claimant was outside the scope of her employment, to be vague and unlikely to dissuade Claimant of her belief that such transportation and assistance was sanctioned. Concerning the August 9, 2017 communication note, the ALJ is not convinced Claimant understood that she was not permitted to take Ms. Bonet to her August 11, 2017 probation appointment. The ALJ infers from the evidence presented that Claimant was

likely given permission to take Ms. Bonet to her probation appointment by a manager (Maria) and later counseled by Ms. Leake about "transfering (sic) client in her car" without further discussion regarding the upcoming August 11, 2017 probation appointment. Only after Claimant's injury did Employer clarify to all employees the directive concerning transporting clients in either the Employee's or the client's personal vehicle.

20. Even if one were to deem Claimant's transportation of Ms. Bonet to her probation appointments as an activity outside the course and scope of her employment, the ALJ finds that the injury did not happen while she was driving. Rather, the injury occurred while Claimant was assisting Ms. Bonet in attending an appointment outside of the client's home. The job description for a personal care provider includes, as a duty and responsibility, the need to *"[assist] in completing activities such as shopping and appointments outside the home."* (emphasis added). Consequently, the ALJ is persuaded that Claimant not only had a reasonable belief that her job required her to take clients where they needed to go to but also to assist them in completing the activities associated with their appointments. Assisting a client prone to seizures in clearing security clearly falls within the job description duty/responsibility statement in furtherance of Employer's mission to provide personal care to her clients.

21. Claimant has proven by a preponderance of the evidence that she was in the course and scope of her employment when she sustained an injury to her left shoulder while assisting Ms. Bonet on August 11, 2017. The evidence presented also persuades the ALJ that contrary to her assertion, Employer did not issue a clear unambiguous directive that employees were never permitted to transport clients to and assist them during appointments outside their homes. Indeed, the May 12, 2017 meeting agenda sheet as well as the job description of a personal care provider contradicts such assertion.

22. Based upon the evidence presented, the ALJ finds Claimant's treatment through Emergicare, including the referral to Colorado Springs Imaging and Centura Orthopedics were reasonably necessary to cure and relieve her from the effects of her compensable injury.

23. Wage records admitted into evidence reflect that Claimant's earnings vary from pay period to pay period. They also establish that Claimant earned $5,406.42 for the 30 weeks from January 13, 2017 and August 11, 2017. The ALJ relies upon the records submitted from this time period to calculate Claimant's average weekly wage (AWW) as it provides a reflection of Claimant's hours after assuming Ms. Bonet's care up to the day of injury. These records provide approximately seven months of earnings from which an average wage up to the date of Claimant's injuries can be calculated. Based upon the evidence presented, the ALJ calculates Claimant's AWW to equal $180.21 per week ($5,406.42 ÷ 30 weeks = $180.21).

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

General Legal Principals

A. The purpose of the Workers' Compensation Act of Colorado (Act), Sections 8-40-101, C.R.S. 2007, *et seq*., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. Section 8-40-102(1), C.R.S. In general, the claimant has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not, *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of the respondents. Section 8-43-201, C.R.S.

B. In accordance with § 8-43-215, C.R.S., this decision contains specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision, the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. *See Davison v. Industrial Claim Appeals Office*, *84 P.3d 1023 (Colo. 2004).* This decision does not specifically address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office, 5 P.3d 385 (Colo. App. 2000).*

Compensability

C. A "compensable injury" is one which requires medical treatment or causes disability. *Romero v. Industrial Commission*, 632 P.2d 1052 (Colo. App. 1981); *Aragon v. CHIMR, et al.*, W.C. No. 4-543-782 (ICAO, Sept. 24, 2004); *H & H Warehouse v. Vicory,* 805 P.2d 1167, 1169 (Colo. App. 1990). No benefits flow to the victim of an industrial accident unless the accident results in a compensable "injury." *Romero*, supra; § 8-41-301, C.R.S. To sustain her burden of proof concerning compensability, Claimant must establish that the condition for which she seeks benefits was proximately caused by an "injury" arising out of and in the course of employment*. Loofbourrow v. Industrial Claim Appeals Office*, 321 P.3d 548 (Colo. App. 2011), *aff'd Harman-Bergstedt, Inc. v. Loofbourrow*, 320 P.3d 327 (Colo. 2014); *Section 8-41-301(I)(b), C.R.S.*

D. The phrases "arising out of" and "in the course of" are not synonymous and a claimant must meet both requirements for the injury to be compensable. *Younger v. City and* County of Denver, 810 P.2d 647, 649 (Colo. 1991); *In re Question Submitted by U.S. Court of Appeals,* 759 P.2d 17, 20 (Colo. 1988). The latter requirement refers to the time, place, and circumstances under which a work-related injury occurs. *Popovich v. Irlando,* 811 P.2d 379, 381 (Colo. 1991). An injury occurs in the course and scope of

employment when it takes place within the time and place limits of the employment relationship and during an activity connected with the employee's job-related functions. *In re Question Submitted by U.S. Court of Appeals, supra; Deterts v. Times Publ'g Co.,* 38 Colo. App. 48, 51, 552 P.2d 1033, 1036 (1976). The "arising out of" test is one of causation. It requires that the injury have its origins in an employee's work related functions, and be sufficiently related thereto so as to be considered part of the employee's service to the employer. *Horodyskyj v. Karanian*, 32 P.3d 470, 475 (Colo. 2001). In this case there is little question that Claimant's alleged injury arose out of what can be considered a work related function, specifically assisting a client during an appointment outside of her home. Rather, the question here is whether Claimant was acting outside the sphere of her employment when she was injured because she violated an asserted employer directive not to transport Ms. Bonet to her probation appointment or otherwise assist her once there.

E. An employer may limit an employee's sphere of employment such that the employee is not acting within the "course of" his employment if he violates the express limitations imposed by the employer. *Bill Lawley Ford v Miller,* 672 P.2d 1031 (Colo. App. 1983). Generally, an employer has a right to issue directives concerning what an employee may do, and when the employee may do it. *Id*. For purposes of determining the compensability of an injury, an employer's direction to an employee falls into one of two categories. *Id.* It may limit the sphere of the employment relationship, or it may simply regulate the employee's conduct while he is engaged in such employment. *Id.* A violation of a directive of the first type means that the employee is no longer within the sphere of employment, so that any injury occurring to the employee does not arise out of or in the course of his employment. *Id.* A violation of an order of the second type, while it may result in a reduced benefit under § 8–52–104, C.R.S. (1986 Repl. Vol. 3B), does not affect the compensability of an injury. *See Industrial Commission v. Funk,* 68 Colo. 467, 191 P. 125 (1920).

F. In order for an employer directive to remove conduct from the sphere of employment, it is necessary that the directive be clear and evidence an intent to remove conduct from the scope of employment. *Butland v. Industrial Claim Appeals Office*, 754 P.2d 422 (Colo. App. 1988). In this case, Respondents contend that Claimant took herself outside the sphere of employment because she violated her employer's directive and was injured as a result. As found, the ALJ is not persuaded. Contrary to Respondents' assertion, the evidence presented does not support a conclusion that Claimant was issued a clear directive limiting the her sphere of employment multiple times. While Ms. Leake may have attempted to communicate the policy regarding transporting and assisting clients to and during appointments outside the home on numerous occasions, that message was sufficiently confusing and so ambiguous that both Claimant and Ms. Estrello unequivocally testified that they understood that they were "supposed" to take clients to their appointments. Moreover, even assuming that Claimant was precluded from taking Ms. Bonet to her probation appointments as a limitation concerning the sphere of her work activity, the injury in this case occurred while Claimant was assisting Ms. Bonet as part of an outside the home appointment. As noted, such assistance is a stated part of the duties and responsibilities of a

personal care provider according to Employer provided job description. Furthermore, the evidence presented persuades the ALJ that Claimant was never given an explicit directive that she could only discharge this job duty/responsibility while at doctor's appointments, at the grocery store or during prescription pick-up. Consequently, the ALJ concludes that Claimant's injury occurred during the course and scope of her employment on August 11, 2017 and that a logical causal connection exists between Claimant's work duties and her left shoulder symptoms and the need for treatment. Accordingly, the injury is compensable.

Medical Benefits

G. Once a claimant has established the compensable nature of his/her work injury, he/she is entitled to a general award of medical benefits and respondents are liable to provide all reasonable, necessary, and related medical care to cure and relieve the effects of the work injury. Section 8-42-101, C.R.S.; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). Where the relatedness, reasonableness, or necessity of medical treatment is disputed, Claimant has the burden to prove that the disputed treatment is causally related to the injury, and reasonably necessary to cure or relieve the effects of the injury. *Ciesiolka v. Allright Colorado, Inc*., W.C. No. 4-117-758 (ICAO April 7, 2003). The question of whether a particular medical treatment is reasonably necessary to cure and relieve a claimant from the effects of the injury is a question of fact. *City & County of Denver v. Industrial Commission*, 682 P.2d 513 (Colo. App. 1984). As found here, Claimant has proven by a preponderance of the evidence that she sustained a compensable injury to her left shoulder. The evidence presented persuades the ALJ that this compensable "injury" is the proximate cause of Claimant's need for medical treatment, including her need for physical therapy and imaging. Taken in its entirety, the ALJ finds the evidentiary record to contain substantial evidence to support a conclusion that Claimant's work duties and not a pre-existing condition or a prior injury, as suggested by Respondent's inclusion of Claimant prior work related injury record, caused her current symptoms and need for treatment. Consequently, the ALJ concludes that Claimant has established that her need for treatment with Emergicare and Centura Orthopedics is causally related to her August 11, 2017 work injury. Moreover, the totality of the evidence presented establishes that the care, including physical therapy and specialist referral were reasonable and necessary given Claimant's continued pain and functional decline. Consequently, the ALJ concludes that Respondents are liable for Claimant's care at Emergicare, Colorado Springs Imaging and Centura Orthopedics.

Average Weekly Wage

H. The overall purpose of the average weekly wage (AWW) statute is to arrive at a fair approximation of Claimant's wage loss and diminished earning capacity resulting from the industrial injury. *See Campbell v. IBM Corp., 867 P.2d 77 (Colo. App. 1993); National Fruit Prod. v. Crespin, 952 P.2d 1207 (Colo. App. 1997).*

I. Sections 8-42-102 (3) and (5) (b), C.R.S. (2013), give the ALJ discretion to determine an AWW that will fairly reflect loss of earning capacity. An AWW calculation is designed to compensate for total temporary wage loss. *Pizza Hut v. Indus. Claim Appeals Office,* 18 P. 3d 867 (Colo. App. 2001). *See* § 8-42-102, C.R.S. The best evidence of Claimant's actual wage loss and therefore a fair approximation of his diminished earning capacity at the time of his industrial injury comes from the wage records submitted into evidence. As found, the wage records admitted into evidence establish that Claimant earned $5,406.42 for the 30 weeks from January 13, 2017 and August 11, 2017 for an AWW of $180.21 per week ($5,406.42 ÷ 30 weeks = $180.21). The ALJ finds that this figure most closely approximates Claimant's wage loss and diminished earning capacity at the time of her August 11, 2017 compensable work related injury. Accordingly, for purposes of this claim, Claimant's AWW is $180.21.

ORDER

It is therefore ordered that:

1. Claimant has proven, by a preponderance of the evidence, that she suffered a compensable injury to her left shoulder on August 11, 2017.

2. Respondents shall pay for all medical expenses, pursuant to the Workers' Compensation medical benefits fee schedule, to cure and relieve Claimant from the effects of her left shoulder injury, including, but not limited to the care provided at Emergicare, Colorado Springs Imaging and Centura Orthopedics and that care provided as a consequence of any referrals from Emericare, i.e. physical therapy.

3. Claimant's AWW for purposes of paying TTD associated with this claim is $180.21.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service;

otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Did Claimant prove by a preponderance of the evidence she suffered a whole person impairment?

- At the commencement of the hearing, the ALJ granted Claimant's motion to bifurcate and preserve the issues of PTD, average weekly wage and medical benefits. Respondent stipulated that the FAL admits for a general award *Grover* medical benefits.

FINDINGS OF FACT

1. Claimant worked for Employer as a forensic case manager. On September 8, 2014 she injured her left knee getting into her car at work. Respondent admitted liability for the injury.

2. Employer referred Claimant to CCOM on September 10, 2014, where she saw Dr. Richard Nanes. Dr. Nanes ordered an MRI, which showed a bucket-handle medial meniscus tear, a chronic-appearing ACL tear, and advanced arthritis. Respondent denied the claim, so Claimant pursued treatment under her health insurance.

3. Claimant had a left knee arthroscopy with partial medial meniscectomy on November 7, 2014 with Dr. Romero. He did not repair the torn ACL because of the arthritis, which was even more severe on intraoperative inspection than previously shown by the imaging studies. Claimant continued to have problems with the left knee, and Dr. Romero recommended a left total knee arthroplasty (TKA).

4. The matter went to hearing before ALJ Lamphere in February 2016 on the issues of compensability and medical benefits. ALJ Lamphere found Claimant suffered a compensable aggravation of a pre-existing condition and that the recommended TKA was causally related to the accident.

5. Claimant resumed treatment at CCOM in March 2016. She saw Dr. Nanes twice before being transferred to Dr. Daniel Olson, who has been her primary ATP since May 2016.

6. Claimant had the left TKA with Dr. Nakamura on June 21, 2016. She had extensive physical therapy for approximately ten months after surgery. Records from the post-operative period documented no low back or hip issues.

7. Claimant completed numerous pain diagrams during her treatment at CCOM. Her reported symptoms were typically limited to the left knee and leg. There is only one pain diagram, dated March 20, 2017, on which Claimant documented aching in her low back. But Dr. Olson did not mention the low back in his corresponding treatment

note. On April 17, 2017, Dr. Olson documented Claimant's back was "**not** hurting," which matches the pain diagram she completed at that visit.

8. Dr. Olson placed Claimant at MMI on April 17, 2017, and assigned a 26% lower extremity impairment rating, which corresponds to 10% of the whole person. His report contains no reference to low back or hip problems.

9. Claimant saw Dr. Stephen Gray for a DIME on August 1, 2017. Claimant's gait was "minimally antalgic," and she showed "essentially no pain behaviors." When describing her ongoing symptoms, Claimant did not mention any low back or hip problems. She described difficulties with a variety of ambulatory activities, all of which are attributable to her lower extremity impairment. Dr. Gray assigned a 26% lower extremity rating, which converts to 10% whole person.

10. Claimant underwent a vocational evaluation with Patricia Anctil at Respondent's request on February 23, 2018. Claimant described ongoing leg symptoms and associated limitations, including difficulty with prolonged standing and walking, climbing stairs, kneeling and squatting. She told Ms. Anctil she could not pass a mandatory "take-down and hold" test required for her job. Claimant did not mention any low back or hip problems.

11. Dr. Olson testified in a deposition on March 7, 2018. When asked whether Claimant's impairment affected her whole person, he opined, "I think it would be appropriate, because it does affect her – it's obviously affected her job, and . . . a total knee is still not the same as your regular knee, so I think it does kind of affect the whole person." He did not testify as to any injury-related low back pain or other problems.

12. Claimant failed to prove she suffers functional impairment not listed on the schedule of disabilities.

CONCLUSIONS OF LAW

The term "injury" as used in the context of permanent partial disability "refers to the manifestation in a part or parts of the body which have been impaired or disabled as a result of the industrial accident." *Strauch v. PSL Swedish Healthcare System*, 917 P.2d 366, 368 (Colo. App. 1996). Whether a claimant has sustained a scheduled injury or a whole person impairment is a question of fact for determination by the ALJ. *Id.* In resolving this question, the ALJ must determine "the situs of the functional impairment," which refers to "the part of the body that sustained the ultimate loss, and not necessarily the situs of the injury itself." *Walker v. Jim Fuoco Motor Co*., 942 P.2d 1390, 1391 (Colo. App. 1997). The schedule of disabilities refers to the loss of "a leg." Section 8-42-107(2)(a). To establish entitlement to a whole person rating, the claimant must show functional impairment to part(s) of her body other than the "leg." It is the claimant's burden to prove a non-scheduled impairment by a preponderance of the evidence. *Cassius v. Entegris*, W.C. No. 4-732-489 (March 26, 2010).

Functional impairment need not take any particular form, and "pain and discomfort which interferes with the claimant's ability to use a portion of the body may be considered 'impairment' for purposes of assigning a whole person impairment rating." *Martinez v. Albertson's LLC*, W.C. No. 4-692-947 (June 30, 2008). Referred pain from the primary situs of the initial injury may show functional impairment to the whole person. *E.g., Latshaw v. Baker Hughes, Inc*., W.C. No. 4-842-705 (December 17, 2013); *Mader v. Popejoy Construction Co., Inc*., W.C. No. 4-198-489 (August 9, 1996). Although medical opinions may be relevant to this determination, the ALJ can also consider lay evidence such as the claimant's testimony regarding pain and reduced function. *Savio House v. Dennis*, 665 P.2d 141 (Colo. App. 1983); *City Market, Inc. v. Industrial Claim Appeals Office*, 68 P.3d 601 (Colo. App. 2003); *Olson v. Foley's*, W.C. No. 4-326-898 (September 12, 2000).

As found, there is no persuasive evidence that Claimant suffers functional impairment in parts of her body not listed on the schedule. Dr. Olson's opinion regarding conversion is not persuasive because it suggests a knee replacement which interferes with a person's ability to perform their preinjury job always constitutes a whole person impairment. It is well settled that functional impairment cannot be determined strictly by reference to a claimant's diagnosis, or the presence or absence of permanent work restrictions. *E.g*., *Ellison v. People's National Bank*, 4-449-392 (January 7, 2002); *Copp v. City of Colorado Springs*, W.C. No. 4-271-758; 4-337-778 (January 24, 2001); *Villoch v. Opus Northwest, LLC*, W.C. No. 4-514-339 (June 17, 2005); *Colacion v. Excel Corporation*, W.C. No. 4-546-219 (March 26, 2004). Rather, this determination must be made on a case-by-case basis, based on all the evidence regarding a particular claimant's situation. *Martinez v. Pueblo County Sheriff's Office*, W.C. No. 4-806-129 (August 9, 2011); *Ellison v. People's National Bank, supra*.

The persuasive evidence demonstrates Claimant's functional impairment is limited to her left leg. One of her primary arguments to support whole person impairment is that she allegedly developed low back and hip pain because of altered gait mechanics. But there is no persuasive corroborating evidence in Claimant's medical records to support that argument. Claimant noted back pain only once on the numerous pain diagrams she completed at CCOM, and reported no back or hip symptoms to the DIME or Ms. Anctil. Although Claimant may experience transient low back pain, the ALJ is not persuaded that any such symptoms represent a functional impairment that would justify a finding of whole person impairment. The ALJ does not doubt that Claimant has ongoing difficulties with ambulation that affect her ability to perform routine activities. But those limitations are a function of her lower extremity impairment and not caused by any injury-related functional impairment extending beyond the leg.

ORDER

It is therefore ordered that:

1. Claimant's request for whole person PPD benefits is denied and dismissed.

2. All issues not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

- Should Claimant's average weekly wage (AWW) be increased to $764.49, effective March 2, 2017, because of concurrent employment?

FINDINGS OF FACT

1. Claimant suffered an admitted low back injury on September 1, 2015 while working for Employer as a custodian. Claimant's typical job duties included cleaning, gardening, and babysitting children during services. The job likely falls within the medium physical demand category as customarily defined. The parties stipulated that Claimant's AWW with Employer is $314.39.

2. At the time of the admitted injury, Claimant was concurrently employed by Colorado Springs School District 11 (D-11) as a custodian at Coronado High School. D-11 initially hired Claimant on a part-time basis in November 2012. In March 2015, she became a full-time employee. The parties stipulated that Claimant's AWW from D-11 is $450.10.

3. The formal job description for the custodian position at Coronado states, "This work is regularly active with periods of heavy exertion. Typical positions require workers to walk or stand for long periods; lift and carry up to 100 pounds; climb stairs, ladders and scaffolding; bend, kneel, crouch and crawl . . . ." D-11 required Claimant to complete a pre-employment physical before she could be hired. Claimant demonstrated the ability to lift 50 pounds to shoulder height. She could not lift 70 pounds and did not attempt to lift 100 pounds.

4. D-11 deemed Claimant's inability to lift more than 50 pounds a "permanent medical restriction." But the building manager at Coronado was able to accommodate a 50-pound restriction because "no one at Coronado lifts more than 50lbs, we use caster floor dollies for heavy items with two wheel assist."

5. Claimant began receiving primary care from Dr. Sheldon Ravin on July 20, 2015. She complained of progressive stomach pain for at least a week. Dr. Ravin's nurse ordered lumbar x-rays to evaluate "abdo[minal] pain radiating to lower back." The x-rays showed "moderate-to-advanced" facet osteoarthritis at L4-L5 and L5-S1, and "advanced" degenerative disc disease at L5-S1 with grade 1 spondylolisthesis. Dr. Ravin ordered a lumbar MRI after receiving the x-ray report but there is no indication it was ever completed. There was no further mention of any back pain until after the September 2015 work accident. The abdominal pain resolved after treatment for H. pylori infection.

6. In September 2015, Claimant developed acute low back pain after lifting a heavy stone at work. She did not report the injury immediately, but waited several months

before seeking treatment. Eventually, she reported the injury, and Respondents admitted liability. She has received conservative care including physical therapy and injections.

7. Claimant has been continuously disabled from her regular job with Employer since at least June 2016. During that period, Claimant's ATP assigned various work restrictions because of the industrial injury. At times she was restricted from all work due to pain flares. Otherwise, she has had restrictions such as no lifting over 15-20 pounds, no twisting with lifting, frequent breaks, "work as tolerated," and "light duty." The restrictions have been appropriate given the severity of her symptoms and the physically demanding nature of her work. Respondents admitted TTD benefits from June 1, 2016 through September 11, 2017.

8. Claimant's husband and son also worked as custodians at Coronado High School. From time to time before September 2015, they helped Claimant complete some of the more strenuous tasks required of her job. After the work injury, Claimant's husband and son provided much more assistance; she performed lighter tasks such as dusting and sweeping, while her husband and son took out the trash, mopped, cleaned restrooms, and performed other heavier duties. The ALJ infers that any help Claimant received from her husband and son before the accident was significantly less than she required afterward.

9. In approximately February 2017, the custodial assignments at Coronado were changed, and Claimant's husband and son could no longer assist with her duties. Claimant resigned from D-11 on March 2, 2017 because she could not perform the job by herself. Claimant's injury-related limitations and restrictions would have forced her to stop working at Coronado sooner had her husband and son not been available to help with the physically demanding tasks.

10. Claimant's injury disabled her from her concurrent job and proximately caused a wage loss commencing March 2, 2017.

11. Claimant proved by a preponderance that her AWW should be increased to $764.49, effective March 2, 2017.

CONCLUSIONS OF LAW

Under § 8-42-103(3) the ALJ has discretion to determine AWW by any method that will "fairly" calculate the claimant's earnings. The entire objective of AWW calculation is to arrive at a "fair approximation" of the claimant's actual wage loss and diminished earning capacity as a result of the industrial injury. *Campbell v. IBM Corp*., 867 P.2d 77 (Colo. App. 1993). If a claimant was concurrently employed at the time of the accident, "the ALJ may, in order to achieve fairness, include all such wages in the computation of average weekly wage." *Broadmoor Hotel v. Industrial Claim Appeals Office*, 939 P.2d 460, 461 (Colo. App. 1996); *see also St. Mary's Church & Mission v. Industrial Commission*, 735 P.2d 902 (Colo. App. 1986). There is no *ipso facto* rule that the AWW must invariably include wages from concurrent employment, and the ALJ should consider

the specific factors in each case. *Jefferson County Schools v. Dragoo*, 765 P.2d 636 (Colo. App. 1988).

As found, Claimant proved that concurrent earnings from D-11 should be included in the AWW to achieve a fair approximation of her injury-related wage loss and diminished earning capacity. The job at D-11 exceeded Claimant's post-injury physical limitations and restrictions, and she was only able to keep working there after the accident because she received assistance from her husband and son. Once they were no longer available to help, she was forced to resign.

The ALJ is not persuaded by Respondents' argument that Claimant was already "disabled" from the job at D-11 because she received accommodations and some help from her family members before September 2015. There is no persuasive evidence that Claimant was substantially limited by low back pain before the industrial accident. Although she had significant pre-existing degenerative changes in her lumbar spine, there is no indication she was symptomatic or required treatment. The July 2015 lumbar x-rays were ordered to investigate abdominal pain rather than back pain. Her abdominal pain subsequently resolved with treatment for H. pylori, and there was no further mention of any back problems until after the industrial accident. There is no persuasive evidence that her inability to lift more than 50 pounds in 2012 was related to any low back problems as opposed to Claimant's body habitus and the natural physical abilities of a 54-year-old woman.

ORDER

It is therefore ordered that:

1. Claimant's average weekly wage is increased to $764.49, effective March 2, 2017.

2. Insurer shall recalculate and pay all admitted benefits on and after March 2, 2017 based on the increased AWW.

3. Insurer shall pay Claimant statutory interest of 8% per annum on all benefits not paid when due.

4. All issues not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow

when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 20, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

The issues set for determination were:

- Did Claimant file a timely Petition to Reopen his Claim?
- What was the effect of the Stipulation signed on December 22, 2011 and approved January 5, 2012 (hereinafter referred to as the "2012 Stipulation")?
- Did the 2012 Stipulation withdraw, waive, or resolve Claimant's Petition to Reopen?
- What was the effect of the Order issued by ALJ Broniak on December 7, 2012?
- What was the effect of the Prehearing Orders issued by PALJ Purdie on June 25 and July 10, 2013, respectively?
- What was the effect of the Order issued by ALJ Cain on December 12, 2013?
- What was the effect of the Order issued by ALJ Broniak on February 5, 2015?
- Was Claimant precluded from obtaining a DIME?
- Is Claimant entitled to additional PPD benefits?
- If none of the prior Orders resolved Claimant's Petition to Reopen – did Claimant prove by a preponderance of the evidence that his condition worsened?
- If Claimant proved a worsening of condition, did Respondents overcome the DIME opinion by clear and convincing evidence?

PROCEDURAL HISTORY AND PRELIMINARY FACTS

The following is a summary of the extensive procedural history of the case, along with preliminary factual findings:

1. Claimant sustained an admitted back injury on April 8, 2005. Respondents provided medical benefits to Claimant and he was treated by Hector Brignoni, M.D.,

Scott Hompland, D.O. and Robert Anderson-Oeser, M.D. Claimant received conservative treatment, including physical therapy ("PT"), along with facet injections.

2. There was no evidence in the record that Claimant sustained an injury to his low back before April 8, 2005.

3. Claimant underwent a lumbar MRI on July 18, 2005 at Fort Collins MRI. The films were read by John Roth, M.D., whose impression was: early changes, disk degeneration-lumbar and low thoracic spine; slight posterior annular bulging L4-5; and mild relative narrowing of the proximal portions of the L4-5 neural foramina. No nerve root impingement was noted.

4. On July 7, 2006, Respondents filed a Final Admission of Liability ("FAL") admitting for PPD benefits based upon the 5% whole person impairment rating issued by the DIME physician, John Aschberger, M.D. The FAL denied liability for post-maximum medical improvement (MMI) medical benefits.

5. As of May 21, 2007, Claimant's restrictions were: max 20 pounds lifting; limited bending- occasional; no repetitive pushing/pulling; sit five minutes/every hour. Dr. Brignoni confirmed Claimant was at MMI as of that date.

6. On December 7, 2007, the parties entered into a written Stipulation Regarding Reopening and a follow-up DIME. The Stipulation specified Claimant filed a Petition to Reopen in August 2007. The stipulation stated as follows: "the parties have agreed this claim was reopened on March 26, 2007", and that the Claimant was back at MMI with no additional impairment as of May 21, 2007. The Stipulation also provided Claimant would undergo another DIME with Dr. Aschberger within 30 days of the date the stipulation was approved. ALJ Harr approved the Stipulation by Order dated December 7, 2007.

7. Dr. Aschberger conducted a second DIME on January 30, 2008. In a report issued on February 11, 2008, Dr. Aschberger opined that Claimant was at MMI on February 28, 2006 with no additional impairment.

8. On March 27, 2008, Respondents filed an amended FAL pursuant to Dr. Aschberger's February 11, 2008 report. The FAL did not admit for additional PPD benefits. The FAL also denied liability for post-MMI medical benefits. There was no record that Claimant filed an objection to the FAL. There was no evidence in the record that Claimant received indemnity or permanency benefits after 2006.

9. On March 28, 2011, Claimant's counsel filed a Petition to Reopen the claim. This Petition alleged a "change in medical condition" and was accompanied by the emergency room report dated July 27, 2010.

10. On July 25, 2011, Claimant's counsel filed an Application for Hearing and Notice to Set, which listed as the issue for determination: Petition to Reopen the claim.

11. On December 22, 2011, Claimant's counsel and Respondents' counsel entered into a signed Stipulation on behalf of their respective clients. Paragraph 1 of the Stipulation stated that Claimant filed a Petition to Reopen the claim for the April 8, 2005 injury, as well as a new claim that listed the date of injury as July 27, 2010. The Stipulation stated these claims had been consolidated for purposes of a hearing and the issues involved "compensability, causality, and relatedness".

Paragraph 2 of the Stipulation stated that Claimant filed a timely Petition to Reopen the 2005 claim and that the parties "stipulate and agree that Claimant will continue to receive reasonable, necessary and related medical care to maintain maximum medical improvement for the 2005 claim by way of authorized treating physician, Dr. Cathy Smith". The ALJ noted the language of the Stipulation did not state Claimant was withdrawing the Petition to Reopen.

Paragraph 3 of the Stipulation specified the parties stipulated and agreed the evidence did not support a "new injury to the lumbar spine on July 27, 2010" and Claimant agreed to withdraw the claim for that alleged injury. The Stipulation provided that the claim for a July 2010 injury shall only be reopened for fraud or mutual mistake of material fact. Finally, paragraph 3 stated: "All other issues are hereby reserved".

12. On January 5, 2012, PALJ Purdie signed an "Order Granting Stipulation". That Order incorporated the language concerning *Grover* medical benefits, which would be provided by Dr. Smith and the withdrawal of the July 2010 claim.

13. On July 23, 2012, Claimant filed an Application for Hearing and Notice to Set for the April 8, 2005 injury. The only issue listed was permanent partial disability benefits. Respondents filed a Response listing issues of jurisdiction, ripeness, whether "PPD is closed and whether Claimant has to establish a right to reopen before the court can address PPD".

14. On December 7, 2012, ALJ Broniak conducted a hearing concerning the Claimant's July 2012 Application for Hearing. On February 8, 2013 ALJ Broniak entered Findings of Fact, Conclusions of Law, and Order ("FFCL"). The FFCL stated the issue for determination is "whether the Claimant is entitled to an increased permanent impairment rating". However, ALJ Broniak concluded she lacked "authority" to resolve this issue because Claimant had not obtained a DIME to challenge the ATP's rating as required by § 8-42-107(8)(c), C.R.S. and § 8-42-107.2, C.R.S.

15. The February 8, 2013 FFCL was interlocutory as it did not deny or award a benefit.

16. On April 16, 2013, the Claimant's counsel filed an Application for a Division Independent Medical Examination. The body parts listed for examination were low back and any other area deemed related by the examiner. A DIME was scheduled for July 2, 2013.

17. On June 6, 2013, Respondents' filed a Motion to Strike Claimant's Application for a Division IME. In this Motion, Respondents took the position that the claim was closed pursuant to the March 27, 2008 FAL and had never been reopened.

18. Claimant filed an objection to the Respondents' Motion to Strike the DIME application. Citing ALJ Broniak's FFCL, Claimant argued that the claim had been reopened.

19. PALJ Purdie granted Respondents' Motion to Strike on June 25, 2013, stating there had been no Response to the Motion. Claimant filed a Motion to Reconsider this ruling since he had, in fact, filed a Response.

20. Dr. Shea performed the DIME on July 2, 2013. On examination, Dr. Shea noted Claimant had mild Waddell's signs denoting symptom exaggeration, particularly when sitting down or standing up. Limitations in his lumbar ROM were noted, as well as mild restrictions in cervical ROM on right rotation and side bending. Moderate restrictions in right shoulder ROM was found on abduction and internal rotation, with mild restrictions noted on extension, adduction and flexion. Tender points were noted in the right lumbar sacral paraspinal musculature.

Dr. Shea's assessment was: chronic low back pain; degenerative disc disease with moderately severe right to neural foraminal narrowing, especially at the L4-5 levels; her MRI, mild cervical degenerative disc disease; myofascial pain in the lumbar spine, thoracic, and lower cervical regions, right side greater than left; right shoulder impingement; right sacralization of the right L5 vertebrae; moderately restricted range of motion of the lumbar spine. Dr. Shea opined the Claimant reached MMI on February 28, 2006 and that he sustained a 19% whole person impairment rating. The rating included 7% from the specific disorders table 53, with 13% ROM impairment of the lumbar spine. The ALJ found Dr. Shea's ROM measurements met validity criteria, including the straight leg raise measurements. Dr. Shea noted he rated only the body parts involved in the initial lumbar injury of April 8, 2005.

The ALJ found Dr. Shea concluded Claimant's permanent medical impairment was the result of the April 8, 2005 injury and he reviewed both Dr. Smith and Dr. Wunder's records when coming to this conclusion. Dr. Shea had the opportunity to adopt Dr. Smith and Dr. Wunder's opinions that Claimant's pain complaints were related to the degenerative condition of his spine and not the industrial injury, but chose not to reach that conclusion. The ALJ credited Dr. Shea's opinion on causation.[1]

21. On July 10, 2013, PALJ Purdie denied Claimant's Motion to Reconsider her June 25, 2012 Order. PALJ Purdie wrote the following: "Paragraph 2 of the parties' December 22, 2011 Stipulation affirms that Claimant was at MMI as of that date (or earlier) and was receiving maintenance benefits. Claimant abandoned the petition to

[1] Dr. Shea's report was not part of Respondents' Motion for Summary Judgment or Claimant's Objection filed in response. It was not considered by the ALJ when the Motion for Summary Judgment was granted. Claimant moved for admission of the report at the time of Dr. Shea's evidentiary deposition and Respondents did not object. (Shea deposition, page 16:13-20).

reopen by canceling the hearing. The claim remains closed except for maintenance medical benefits".

22. On August 7, 2013, Respondents filed an Application for Hearing and Notice to Set endorsing the issues of "PPD, penalties for failure to comply with ALJ Purdie's June 25, 2012 and July 10, 2012 orders, petition to reopen if necessary, and if necessary the Respondents' motion to overcome the opinion of the Division evaluator". Claimant filed a Response to the Application for Hearing endorsing the issues of PPD, issue preclusion and appeal of PALJ Purdie's Order of July 10, 2013.

23. After a prehearing conference, Judge Goldstein issued an Order on October 24, 2013 concluding that the issues of PPD and penalties "should be bifurcated from issues set to be determined at the hearing scheduled to commence on November 8, 2013". Judge Goldstein concluded that it would be a waste of judicial and party resources to address these issues while there are "genuine issues of law and fact" concerning (1) whether the December 22, 2011 stipulation of the parties included an agreement to reopen the claim; (2) whether ALJ Brondiak's [sic] order confirmed that the matter was reopened, as opposed to only ruling that a DIME would be jurisdictionally required 'if' the matter had been reopened; (3) whether, if the claim was reopened, Respondents had a duty to file a final admission of liability or notice and proposal within thirty (30) days of Dr. Smith's November 12, 2012 report; whether, if they had that duty, they should now be compelled to file a final admission of liability; and whether, in the absence of the FAL, Claimant is jurisdictionally barred from pursuing the DIME".

24. The case was submitted to ALJ Cain on stipulated facts and position statements. On December 12, 2013, ALJ Cain entered Findings of Fact, Conclusions of Law, and Order (FFCL)[2] and concluded that the December 22, 2011 Stipulation was ambiguous as to whether the parties agreed to reopen the claim and did not unequivocally establish that they intended to do so. Part of ALJ Cain's reasoning was that the December 22, 2011 Stipulation did not explicitly state it was reopening the claim.[3] ALJ Cain found it was plausible to construe the December 22, 2011 Stipulation as a form of partial settlement of issues related to the Petition to Reopen, without any agreement or admission that the claim was reopened. Therefore, ALJ Cain concluded the Stipulation was ambiguous with respect to the parties' intent concerning the reopening of the claim. ALJ Cain also found ALJ Broniak's FFCL, dated February 8, 2013, did not determine that the claim was reopened. Further, ALJ Cain determined ALJ Broniak's Order had no preclusive or determinative effect.

In his Order, ALJ Cain stated the claim for benefits in WC 4-679-322-03 was not reopened by the Stipulation of the parties, dated December 22, 2011. ALJ Cain held

[2] The Findings of Fact, Conclusions of Law and Order issued by ALJ Cain were admitted into evidence (as Exhibit D), as were the PHC Orders issued by PALJ Purdie and PALJ Goldstein. The Findings of Fact, Conclusions of Law and Order issued by ALJ Broniak was also admitted as Exhibit C.

[3] Exhibit D, p. 23.

that the Order of ALJ Broniak dated February 8, 2013 did not determine that the claim was reopened and the claim for the April 2005 injury remained closed pursuant to the Final Admission of Liability filed on March 27, 2008.

25. A hearing was held on May 16, 2014 before ALJ Broniak. The issues set for determination were whether this workers' compensation claim has remained open, closed, or whether it was reopened. Also listed as an issue for adjudication was whether Claimant was entitled to additional permanent partial disability benefits and whether penalties should be imposed against the Claimant for his failure to comply with PALJ Purdie's orders.

On February 5, 2015, ALJ Broniak determined the claim was not open and has "never been reopened". (Finding of Fact 29). The FFCL found that no Petition to Reopen had been filed with DOWC since March 2011. (Finding of Fact 27). The Order specified Claimant had not properly filed a Petition to Reopen and did not address whether his condition worsened. The Order provided in pertinent part:

"Claimant's workers' compensation claim is closed, and has been pursuant to the March 28, 2008 final admission of liability. Thus, as a matter of law, the issue of whether Claimant should receive an increase in his PPD award cannot be determined at this time".[4]

ALJ Broniak also found Claimant did not violate PALJ Purdie's Orders of June 25 and July 10, 2013 and denied the request for penalties.

26. Claimant and Respondents were represented by counsel at the May 16, 2014 hearing. There was no appeal of ALJ Broniak's February 5, 2015 Order.

27. Claimant filed an Application for Hearing and Notice to Set on April 23, 2015, listing as the issues to be determined: "medical benefits, petition to reopen claim, permanent partial benefits and *Grover* medicals". Respondents filed a Response to Application for Hearing, listing statute of limitations, waiver, estoppel and *res judicata* as the issues to be determined. The Response also specified: "Case is closed; Petition to reopen is necessary and whether the issues endorsed by Claimant are ripe for adjudication".

28. On or about August 10, 2015, Respondents filed a Motion for Summary Judgment, arguing the Petition to Reopen and claim for PPD benefits were barred by the statute of limitations. Claimant filed a timely Objection to the Motion for Summary Judgment on August 25, 2015.

29. On October 19, 2015, an amended Order was issued granting the Motion for Summary Judgment. Claimant filed a timely appeal of the Order.

[4] Exhibit C, p.16.

30. On February 11, 2016, the Industrial Claim Appeals Office ("ICAO") issued an Order of Remand, determining that summary judgment was not proper and an evidentiary hearing needed to be held regarding factual issues. The factual issues included the effect of the January 2012 Stipulation and whether Claimant withdrew of the July 23, 2012 Application for Hearing. Whether Claimant properly filed a Petition to Reopen and the effect of ALJ Broniak's February 5, 2015 Order were also deemed factual disputes. Following a Status Conference on May 12, 2016, the hearing was held on August 22, 2016.

FURTHER FINDINGS OF FACT

31. On July 27, 2010, Claimant was evaluated at the North Colorado Medical Center Emergency Room and was examined by John Hurst, M.D. He complained of increased low back pain related to his 2005 work injury. X-rays showed no fractures, subluxation, bony lesions, spondylosis or spondylolisthesis in the lumbar spine. The diagnosis was: exacerbation of lumbar pain. Dr. Hurst stated he was unsure if this was related to the original injury and referred Claimant back to Employer.

32. Records from Employer's in-house clinic were admitted, starting with an evaluation that took place on January 20, 2011. Sharp pain was noted in Claimant's neck, shoulder blade, and right arm. The case of the pain was listed as pushing/pulling. Full ROM was noted, although the name of the examiner was not listed. On January 28, 2011, Claimant returned to the clinic and full ROM, with mild tenderness and pain of 4/10 were noted. Claimant missed work on January 29, 30, 31 and February 1, 2011.

33. Claimant was evaluated by Dr. Dhupar on March 1, 2011. He was noted to have a five-year history of right neck and right arm pain radiating to long finger. His symptoms were described as chronic, but progressively worse over the last five months. On examination, Claimant ambulated with a slightly antalgic gait. He was unable to toe walk, heel walk or perform tandem gait. The ALJ noted that these were objective signs of a worsening of condition. Dr. Dhupar's impression was: Claimant was a 45-year-old male with mechanical low back pain, right leg pain, neck pain and right arm pain. He was to follow-up after the MRI was completed.

34. On March 9, 2011, Claimant underwent a lumbar MRI. The films were read by Michael Bennett, M.D., whose impression was: severe right foraminal narrowing at L4-L5, with nerve compression; lateral recess narrowing at L4-L5, could affect the traversing right L5 nerve root; left L5 spondylolisthesis, without listhesis.

35. The ALJ finds that Claimant's March 28, 2011 Petition to Reopen was filed five years, eleven months and twenty days after the April 8, 2005 date of injury. The Petition to Reopen was timely filed within the limitation period specified by § 8-43-303(1), C.R.S.[5]

[5] The ALJ noted the language of paragraph 2 in the 2012 Stipulation stated the parties stipulated the Petition to Reopen was filed in a timely fashion. Respondents did not contradict this, either by way of their hearing submissions or post-hearing Position Statement.

36. Claimant was examined by Cathy Smith M.D. on June 16, 2011. The history of Claimant's April 5, 2005 injury and his treatment were reviewed by Dr. Smith. Claimant said he felt better for approximately 6-12 months, but began having increased low back pain, as well as mid-back and neck pain. On examination, Dr. Smith noted decreased lumbar lordosis, along with pain with direct palpation over the right lower cervical area and right periscapular area, as well as right thoracic ribs. Claimant had pain with direct palpation over the right L5-S1 area.

Dr. Smith's impression was: lumbar strain, with alternating right and left leg pain, intermittent, with possible facet dysfunction status post work-related slip and twist injury 4/8/05; chronic low back pain with intermittent complaints of increased low back pain 2007, as well as 2010-11; mid back pain reported in 2007 without new injury, not related to the 4/8/05 incident; cervical pain with right arm pain in 2011, with MRI showing mild left foraminal narrowing, C3-4 without central stenosis. Dr. Smith recommended a follow-up PT evaluation for Claimant, with six visits of manipulative therapy and review of home exercise program. Claimant also wished to proceed with facet injections and he was referred to Dr. Hompland. His permanent work restrictions were continued and Dr. Smith recommended a job site evaluation.

37. On June 20, 2011, Claimant was examined by John Hughes, M.D., at the request of his attorney. On examination, he was complaining of right shoulder and elbow pain, as well as right-sided spine pain and tenderness extending from his right eye through his mid-and low back. He also had right knee and ankle pain, which was described as having a stabbing quality. On examination, Claimant's cervical spine had superficial touch tenderness of the right superomedial scapular border. Cervical spine R0M was limited. Claimant's upper extremity had limited ROM, on flexion and extension, which Dr. Hughes described as inconsistent. Claimant's lumbar spine ROM was quite guarded, as well as variable.

Dr. Hughes' assessment included: general asymmetry of L5, with sacralization on the right and lumbarization on the left, along with hypoplastic posterior elements, as described by Dr. van den Hoven. Claimant was also diagnosed with lumbar sprain/strain, with development of symptomatic degenerative disc disease and L5 radiculitis, as described by Dr. Viola; progressive degenerative spondylolisthesis, with development of severe right foraminal narrowing at L4-L5, as described in the MRI report of March 9, 2011. With regard to the right upper extremity, right shoulder pain and mobility restriction an unclear etiology was noted, along with right lateral epicondylitis. Claimant was diagnosed with cervical spondylosis; mild uncovertebral spurring and facet arthrosis, most notably present on the left at C3-C4; mild hand osteoarthritis and somatization behaviors.

Dr. Hughes opined Claimant sustained a natural progression of injury-related degenerative changes in his lumbar spine, present at the L4-L5 level, which were related to his initial work injury of April 8, 2005. The ALJ found Dr. Hughes' opinion on causation to be persuasive.

38. Claimant returned to Dr. Hompland on November 15, 2011, complaining of low back and leg pain. At that time, Dr. Hompland reviewed his MRIs in detail. Dr. Hompland's impression was: probable right L5 and possibly L4 radiculitis, secondary to foraminal encroachment at L4-L5 and lateral recess stenosis, as identified on the MRI. Claimant did not wish to proceed with additional injections and was referred to Dr. Dhupar/Dr. Smith for a surgical evaluation. The ALJ noted Dr. Hompland's opinion regarding Claimant's diagnosis was based on the MRI and differed from Dr. Smith's diagnosis.

39. Claimant returned to Dr. Smith on October 3, 2012 and November 12, 2012. Dr. Smith reviewed a video of Claimant's job duties and said Claimant was not working in an awkward position and was working well within his permanent restrictions. On review of the video, Dr. Smith also noted that Claimant's use of the knife and throwing product onto the conveyor would not explain his low back pain. The ALJ noted Dr. there was no indication Dr. Smith had information concerning the frequency of Claimant's breaks in that position with Employer.

Dr. Smith reviewed the repeat MRI of March 9, 2011 which was positive for severe right foraminal narrowing, L4-5, with nerve root compression at the right L4 and L5 nerve roots, left L5 spondylolysis without listhesis. Dr. Smith opined the changes would be expected as a natural progression of the underlying degenerative and congenital condition found in the lumbar spine. Based on the MRI results and her examination of Claimant, Dr. Smith found that Claimant remained at MMI with no change in his permanent impairment. Dr. Smith recommended no change in Claimant's work restrictions.

40. On October 25, 2012, Claimant was evaluated by Jeffrey Wunder, M.D., at the request of Respondents. Claimant was complaining of pain on his right side of his back up to his neck. He also reported numbness in his right index finger. On examination, hyperkyphosis was noted in the thoracic spine, but no tenderness was noted in that area. Claimant reported diffuse muscular tenderness right of midline and in the parascapular region. He complained of tenderness right of midline in the lumbar spine, but no palpable vertebral muscle spasm was noted. Dr. Wunder's impression was: nonspecific low back pain; lumbar degenerative disc disease; right sacralization, right L5.

Dr. Wunder opined Claimant was still at MMI and agreed with Dr. Ashberger's impairment. He noted the physical examination was inconsistent with what he observed in terms of lumbar ROM. Dr. Wunder did not believe the incident of April 8, 2005 caused a worsening of his lumbar MRI and disagreed Claimant's condition had worsened. Dr. Wunder was in agreement with Dr. Smith concerning the congenital findings documented in 2005 and 2008, along with the natural progression of same. The ALJ noted Dr. Wunder did not specifically consider the question of whether Claimant's job duties had increased, but adopted Dr. Smith's conclusion that Claimant was working within his restrictions. Dr. Wunder did not do a formal impairment rating at the time of the IME. Dr. Wunder's opinions were less persuasive than those offered by Dr. Hughes.

41. Video surveillance of the Claimant was admitted into evidence.[6] It included surveillance taken on the following days:

- November 18, 2012 at 3:05 PM. Claimant was seen walking into a house and opened the door with his left hand. He was not walking quickly or slowly.

- November 21, 2012 at 2:11 PM. Claimant was seen walking to the parking lot, holding a plastic bag in one hand and what could be a lunch box. He was also drinking water. He walked relatively slowly and got into a minivan.

- November 21, 2012 at 2:11 PM. Claimant walked into a store, got back into a minivan and drove away.

- November 28, 2012 at 9:50 AM. Claimant was seen walking into a store, holding hands with a young girl. Slowly jogged as he approached the entrance to the store. Claimant exited the store and put plastic bags in the back of a minivan, using primarily his right hand.

- November 28, 2012 at 10:13AM. Claimant entered/exited another store. He picked up a young child at the minivan.

- November 28, 2012 at 10:50 AM. Claimant returned home and held the door while various young people unloaded the minivan. Claimant carried one load of plastic bags into the house, holding two or three in each hand, respectively.

The ALJ found Claimant performed the above activities, as depicted in the videos. Claimant did not appear to be in physical distress at the various dates/times shown. The ALJ was not able to conclude Claimant exceeded his restrictions while doing the activities at the various time shown. In addition, the ALJ did not derive any conclusions regarding whether Claimant's condition worsened from this video.

42. Claimant testified at the December 7, 2012 hearing that his symptoms had increased since 2008. He had a lot of pain in his back, as well as on one side.[7] Claimant stated he was working harder than before in his job, which included specifically putting meat on a conveyor above him.[8] Claimant stated his pain was stronger and his headaches were worse. He took more Advil. Claimant testified he was given a break at 9:00 a.m. and 12:00 p.m. He was not given a break to sit down five minutes of every hour, as required by his permanent restrictions.

---

[6] Exhibit Z.

[7] December 7, 2012 Hearing Transcript ("Hearing Tr.") p. 25:7-14.

[8] Hearing Tr. p. 30:4-7.

43. At the December 2012 hearing, Dr. Wunder was qualified as an expert in Physical Medicine and Rehabilitation, along with pain medicine. He is Level II accredited pursuant to the WCRP. Dr. Wunder testified regarding his findings at the time of the October 26, 2012 IME. He also reviewed the surveillance video of Claimant. Dr. Wunder noted there were no pain behaviors by Claimant in the video.

Dr. Wunder testified Claimant's diagnoses were: non-specific low back pain, lumbar degenerative disc disease and sacralization to the right side of the L5 root. This last diagnosis was related to congenital abnormalities in his spine. The changes were as a result of aging, as opposed to an injury and this caused the discs to change.

Dr. Wunder testified Claimant had limited ROM on examination, which was not consistent with observations he made before the examination. Claimant was able to walk around, get up from a sitting position, but then had trouble doing so on examination. Dr. Wunder also opined that Claimant's job duties would not worsen the condition of his lumbar spine. He cited the study attached to his report. Dr. Wunder opined there was no increased impairment to Claimant's lumbar spine.

44. The ALJ found Dr. Shea reviewed the IME reports issued by Dr. Wunder and Dr. Hughes, along with Dr. Aschberger's DIME reports when he evaluated Claimant on July 2, 2013.

45. On November 1, 2013, Dr. Wunder issued a supplemental report, after reviewing the DOWC IME report from Brian Shea, D.O. Dr. Wunder noted Claimant reported low back pain, which was essentially unchanged over seven years. He also said at the time of the DIME, Dr. Aschberger gave a rating of 5% of the basis of Table 53, as the MRI showed only mild degenerative disease. The primary area of Dr. Wunder's disagreement was Dr. Shea, as the DIME examiner relied on the 2011 MRI scan, which showed progressive degenerative disease and Dr. Wunder stated this was an age-related progression. He did not believe the 7% Table 53 impairment could be justified.

Dr. Wunder also opined Dr. Shea neglected to compare his ROM measurements with those done in the past. Dr. Wunder did not indicate whether this was required for evaluation of Claimant's medical impairment under the AMA Guides to the Evaluation of Permanent Impairment (Third Edition revised). The ALJ noted Dr. Wunder did not find that the ROM measurements done by Dr. Shea were invalid. The ALJ concluded Dr. Wunder expressed a different opinion regarding Claimant's medical impairment than the opinion offered by Dr. Shea.

46. The Prehearing Orders issued by PALJ Purdie on June 25 and July 10, 2013 were superseded by the FFCLs issued by ALJ Cain on December 12, 2013 and ALJ Broniak on February 5, 2015, respectively.

47. The ALJ concludes that the December 12, 2013 FFCL issued by ALJ Cain determined the 2012 Stipulation did not reopen the case, which remained closed pursuant to the FAL issued on March 27, 2008. The ALJ also determined that when ALJ Cain made this determination both Claimant and Respondents were represented at the hearing and had the opportunity to present evidence on the March 28, 2011 Petition to Reopen and the 2012 Stipulation.

48. Dr. Wunder performed a follow-up IME at the request of Respondents on May 26, 2016. Since Dr. Wunder's initial IME, Claimant underwent the DIME with Dr. Shea, as well as evaluations by Dr. Smith including one on October 9, 2014 for a hand injury. Dr. Smith also saw Claimant on January 12, 2015 and her report referenced electrodiagnostic studies were related to peripheral neuropathy suggestive of hereditary sensory for polyneuropathy and diabetic neuropathy.[9]

Claimant indicated he had not received treatment for his low back since 2012 and reported pain on the right side of his back, extending from the right scapular area down to the right foot. He also reported pain radiating down the lateral right lower extremity to the heel. On examination, Claimant's thoracic spine revealed increased kyphosis, but no midline or periscapular tenderness. Claimant's lumbar spine had normal spinal contours, with tenderness noted in the central to right sacrum. Sacroiliac joint tests were noted to be negative. Claimant had 2/5 Waddell findings. Dr. Wunder's impression was: mechanical low back pain; progressive lumbar degenerative disease.

Dr. Wunder noted limitations in Claimant's ROM in the lumbar spine. He commented there was a reduction in the lumbar ROM, which corresponded to the mobility measurements taken by Dr. Shea. He opined this was related to the progressive degenerative cascade, which correlated to increased symptoms with increased use. Dr. Wunder discussed Dr. Hughes' opinion that the natural progression of degenerative disease of Claimant's lumbar spine was attributed the injury. He noted Dr. Smith disagreed with that opinion and he agreed with her assessment. Dr. Wunder opined there had not been a worsening of Claimant's condition over time and did not believe any ongoing maintenance treatment would be related to the April 8, 2005 injury.

49. Claimant testified in the August 22, 2016 hearing he continues to experience low back pain. The pain went down his leg and limited his activities.

50. In his evidentiary deposition on September 20, 2016, Dr. Wunder continued his expert testimony. Dr. Wunder noted that in a study of identical twins, one half of the group sustained significant back injury or trauma and the other did not.[10] The conclusion was that significant back injury or trauma did not have a role in the progression of degenerative disc disease.

[9] Exhibit M, p. 94.

[10] This study was "The Role of Back Injury or Trauma in Lumbar Disc Degeneration: An Exposure-discordant Twin Study, Spine (May 12, 2016).

Dr. Wunder noted Claimant had mild symptom magnification (Waddell's signs) at the time the DIME was performed by Dr. Shea. Dr. Shea measured 15° straight leg raising at a normal gait, which he thought was "probably" not valid.

On cross-examination, Dr. Wunder agreed that there was always a possibility that studies could be disputed. He agreed the city of twins did not indicate the type of injury or degree of impairment. Dr. Wunder stated if Claimant's restrictions were not followed, this could cause increased symptoms. He also testified Claimant's presentation in 2016 as no longer having constant pain was at variance with the diagnosis of progressive degenerative disc disease.[11]

Dr. Wunder agreed that Claimant's Table 53 impairment had increased from 5% to 7%. However, Dr. Wunder believed this was a result of the degenerative changes, as opposed to the natural progression of the injury. Dr. Wunder did not do formal ROM testing of Claimant at the time of his second evaluation, other than the straight leg raise testing. The ALJ found Dr. Wunder's conclusions regarding impairment were less persuasive than those offered by Dr. Shea.

51. The 2012 Stipulation did not constitute a waiver of Claimant's right to seek an adjudication of the Petition to Reopen.

52. None of the prior FFCLs issued by ALJ Broniak and ALJ Cain in the case made a factual determination on the issue of whether Claimant met his burden of proof for the Petition to Reopen.

53. Claimant proved by a preponderance of the evidence that his condition worsened.

54. Respondents failed to overcome the opinion of Dr. Shea by clear and convincing evidence.

55. There was no evidence in the record that Claimant required treatment after Dr. Shea's July 2, 2013 evaluation.

56. Evidence inconsistent with the above findings is either not credible and/or not persuasive.

CONCLUSIONS OF LAW

General

The purpose of the Workers' Compensation Act of Colorado (Act), § 8-40-101, *et seq.*, C.R.S. (2016), is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of

[11] Shea deposition pages 26:19-27:2.

litigation. § 8-40-102(1), C.R.S. (2016). The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the Claimant nor in favor of the rights of Respondents. § 8-43-201(1), C.R.S. (2016).

A Workers' Compensation case is decided on its merits. § 8-43-201, C.R.S. (2016). The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office,* 5 P.3d 385 (Colo. App. 2000).

When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2005).

Legal Effect of Prior Orders Issued in the Case

As noted *supra,* this case was the subject of multiple hearings and Orders. The threshold question considered by the ALJ was the impact of the December 12, 2013 FFCL issued by ALJ Cain, as well as the February 8, 2013 and February 5, 2015 Broniak FFCLs. The ALJ determined Judge Cain's prior Order concluded the claim was not reopened by virtue of the January 2012 Stipulation and there was no basis to disturb this finding. Accordingly, the ALJ rejected Claimant's argument was reopened at that time. ALJ Cain's reasoned this Stipulation was ambiguous and this was credited by the undersigned. (Finding of Fact 11). In addition, the Stipulation did not, by its terms, specifically provide for reopening of the claim. Therefore, the case remained closed as of the December 12, 2013 findings of Fact, Conclusions of Law and Order.

Likewise, the ALJ determined ALJ Broniak's Orders did not constitute an adjudication on the merits of reopening. By their very terms, both of ALJ Broniak's Orders did not make factual findings on the merits of the reopening the claim. (Findings of Fact 14 and 25). More particularly, in the February 8, 2013 FFCL, ALJ Broniak concluded she lacked the authority to resolve the medical impairment issue, since claimant had not obtained a DIME. (Finding of Fact 14). In the February 5, 2015 Order, ALJ Broniak determined the claim was not opened and had never been reopened. (Finding of Fact 25).

The ALJ found the previous orders issued in the case can be harmonized and the discretionary doctrine of law of the case applies in this instance. Under this doctrine, a court will generally adhere to a prior ruling on a question of law that it made at an earlier stage of the same litigation. *Giampapa v. Am. Family Mut. Ins. Co.,* 64 P.3d 230, 243 (Colo. 2003). There is discretion to deviate from the law of the case principle, if the court determines that the prior ruling at issue was no longer sound because of changed conditions, factual errors, intervening changes in the law or

resulting manifest injustice. *Id; People of the City of Aurora, ex rel. State v. Allen, 885 P.2d 207, 212 (Colo. 1994).* The FFCL issued by ALJ Cain constitutes the law of the case concerning the effect of the 2012 Stipulation. In the case at bench, the ALJ determined that the findings with regard to the 2012 Stipulation, namely that it did not reopen the claim, should be adhered to and no reason was presented to vitiate that ruling. (Finding of Fact 47). Likewise, ALJ Broniak determined that the case had never been reopened and there had never been an adjudication on the merits of reopening issue. Under the law of the case doctrine, the under signed ALJ has abided by these previous rulings.

Respondents argued that by virtue of the 2012 Stipulation, Claimant waived his right to file a Petition to Reopen. Respondents pointed to the cancellation of hearing made after the Stipulation was entered into and approved by PALJ Purdie in support this argument. The ALJ concluded there was nothing in the record that indicated an knowing, voluntary, unequivocal waiver on the part of Claimant to have his right to proceed to hearing on the Petition to Reopen the claim. (Finding of Fact 51). Indeed, Respondents did not contest the fact that Claimant's Petition to Reopen was filed in a timely fashion and that no formal adjudication was made on the Petition to Reopen. Nothing in the Order issued by ALJ Cain contravened this conclusion. The ALJ therefore concluded Claimant did not waive his right to proceed on the Petition to Reopen.

Reopening

§ 8-43-303(1), C.R.S. (2016), provides that an award may be reopened on the ground of, *inter alia*, change in condition. Claimant shoulders the burden of proving his condition has changed and his entitlement to benefits by a preponderance of the evidence. § 8-43-201; *Berg v. Industrial Claim Appeals Office,* 128 P.3d 270 (Colo. App. 2005); *Osborne v. Industrial Commission*, 725 P.2d 63 (Colo. App. 1986). A change in condition refers either to change in the condition of the original compensable injury or to a change in the Claimant's physical or mental condition that can be causally related to the original injury. *Heinicke v. Industrial Claim Appeals Office,* 197 P.3d 220 (Colo. App. 2008); *Chavez v. Industrial Commission,* 714 P.2d 1328 (Colo. App. 1985). Reopening is warranted Claimant proves that additional medical treatment or disability benefits are warranted. *Richards v. Industrial Claim Appeals Office,* 996 P.2d 756 (Colo. App. 2000); *Dorman v. B & W Construction Co.,* 765 P.2d 1033 (Colo. App. 1988).

Colorado recognizes the "chain of causation" analysis holding that results flowing proximately and naturally from an industrial injury are considered to be compensable consequences of the injury. Thus, if the industrial injury leaves the body in a weakened condition and the weakened condition plays a causative role in producing additional disability or the need for additional treatment such disability and need for treatment represent compensable consequences of the industrial injury. *Standard Metals Corp. v. Ball,* 172 Colo. 510, 474 P.2d 622 (1970); *Jarosinski v. Industrial Claim Appeals Office,* 62 P.3d 1082, 1086 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). However, no compensability exists if the disability and need for

treatment were caused as a direct result of an independent intervening cause. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002).

The question of whether Claimant met the burden of proof to establish a causal relationship between the industrial injury and the worsened condition is one of fact for determination by the ALJ. *Cordova v. Industrial Claim Appeals Office*, 55 P.3d 186 (Colo. App. 2002); *City of Durango v. Dunagan, supra.* Similarly, the question of whether the disability and need for treatment were caused by the industrial injury or by an intervening cause is a question of fact. *Owens v. Industrial Claim Appeals Office, supra.*

Claimant argued his condition worsened, as evidenced by his return to the doctor in July 2010-March 2011. Claimant also asserted there was objective evidence of a worsening in the form of the MRI findings in March 2011. Respondents argued, relying on the opinions of Dr. Smith and Dr. Wunder, that Claimant's condition had not worsened as a result of the work-related injury, but rather the progression of his degenerative condition. Respondents also asserted Claimant's evaluations were characterized by symptom magnification, which called into question whether his condition had in fact worsened.

As found, the ALJ determined Claimant filed a timely Petition to Reopen. (Finding of Fact 52). There were prior hearings held in the case, however, none of the prior orders determined whether Claimant satisfied his burden of proof on reopening. As determined in Finding of Fact 53, the ALJ concluded Claimant met his burden of proof and established a worsening of condition. This conclusion was based, first on the medical evidence in the case. There was evidence of increased symptoms and treatment for those symptoms through Claimant's ATPs. As found, Claimant was evaluated in the Emergency Department of North Suburban Medical Center, complaining of increased low back symptoms. (Finding of Fact 31). The increased symptoms were documented in Employer's clinic notes, as well as by Dr. Smith. (Finding of Fact 32, 36). Dr. Dhupar also noted increasing pain over the past five (5) months and recommended treatment. (Finding of Fact 33). These increased symptoms led to evaluations and treatment provided by ATPs, as found in Findings of Fact 33-36 and 38-39.

In this regard, Dr. Hughes's opinion was persuasive to the Judge that there was a causal link between the increased symptoms and the Claimant's April 2005 work-related injury. Dr. Hughes stated his belief that Claimant's symptoms were the result of the work-related injury. (Finding of Fact 37). Accordingly, the ALJ was satisfied Claimant met his burden to establish a causal link between the industrial injury and the consequences, including further degeneration of his lumbar spine. *Jarosinski v. Industrial Claim Appeals Office, supra,* 62 P.3d at 1086.

Second, Claimant's testimony established a link between a worsening of Claimant's symptoms and his job duties. There was direct evidence that Claimant was not provided the breaks specified by his permanent restrictions. As found, there was no evidence in the record that Claimant had a prior injury to his low back and the ALJ

determined that the consequences of the injury, including an aggravation and worsening of the underlying condition was attributable to the original injury. Thus, the testimony of Claimant helped to establish that his increased symptoms were attributable to his low back injury in April 2005.

Third, the ALJ determined the issue of Claimant's worsening of condition as referenced by the Petition to Reopen was properly evaluated as of the time the Petition to Reopen was filed in March 2011. Respondents did not argue this point, either at hearing or in post-hearing submissions.[12] Based upon the evidence admitted at hearing, the ALJ determined Claimant's increased symptoms were the result of his injury, increased job duties and the treatment required to address the symptoms, as documented in the evaluations by his ATPs. This evidence persuaded the ALJ that Claimant proved that his condition was worse than when Dr. Aschberger performed a second DIME in 2008.

Statute of Limitations

The ALJ then considered Respondents' argument that more than six years had passed since the date of injury and more than two years had passed since the last indemnity payment. Respondents averred Claimant was barred, as a matter of law, from reopening his claim to seek any additional indemnity benefits. The first part of Respondents' argument was resolved by the Judge's finding that the Petition to Reopen was filed in a timely fashion, pursuant to § 8-43-303(1), C.R.S. (2016). Respondents did not contest that the Petition to Reopen was timely filed and the ALJ considered Claimant's treatment in the 2010-2013 timeframe when concluding his condition had worsened. In addition, Respondents conceded if the claim was reopened under this section, additional indemnity benefits may be paid.

The Court did not reach the question of whether the claim for additional PPD benefits was barred by § 8-43-303(2)(a), C.R.S., which allows a claim to be reopened within two (2) years from the date of the last disability payment where there is a change in condition. Respondents agreed if a claim was reopened under either subsection (1) or (2)(a), additional indemnity benefits could be paid.

Therefore, the ALJ determined Claimant adduced sufficient evident to show by a preponderance of the evidence that his condition was worsened. The claim of reopening was not barred by the applicable statute of limitations and Claimant had the right to a further DIME, as this was within the ambit of ALJ Broniak's February 8, 2013 Order. Claimant also established that he was entitled to the increased medical impairment rating, as found by Dr. Shea. The inquiry then turned into Respondents attempt to overcome Dr. Shea's opinion.

[12] Respondents' counsel agreed the issue of worsening of condition went back to 2011 in Dr. Shea's deposition, page 14:7-10.

Legal Standard for Overcoming the DIME

In resolving the issues, the ALJ notes the question of whether Respondents overcame Dr. Shea's opinion is governed by §§ 8-42-107(8)(b)(III) and (c), C.R.S. (2016); *Peregoy v. Indus. Claim Apps. Office*, 87 P.3d 261, 263 (Colo. App. 2004). These sections provide that the finding of a DIME physician selected through the Division of Workers' Compensation shall only be overcome by clear and convincing evidence. A DIME physician's findings of MMI, causation, and impairment are binding on the parties unless overcome by "clear and convincing evidence". § 8-42-107(8)(b)(III), C.R.S.; *Leprino Foods Co. v. Indus. Claim Appeals Office*, 134 P.3d 475, 482-83 (Colo. App. 2005); *accord Martinez v. Indus. Claim Appeals Office*, 176 P.3d 826, 827 (Colo. App. 2007).

Clear and convincing evidence is highly probable and free from serious or substantial doubt, and the party challenging the DIME physician's finding must produce evidence showing it highly probable the DIME physician is incorrect. *Metro Moving and Storage Co. v. Gussert,* 914 P.2d 411 (Colo. App. 1995). The mere difference of medical opinions does not constitute clear and convincing evidence to overcome the opinion of the DIME physician. *Javalera v. Monte Vista Head Start, Inc*., W.C. Nos. 4-532-166 & 4-523-097 (ICAO July 19, 2004); see *Shultz v. Anheuser Busch, Inc.*, W.C. No. 4-380-560 (ICAO Nov. 17, 2000).

The enhanced burden of proof reflects an underlying assumption that the physician selected by an independent and unbiased tribunal will provide a more reliable medical opinion. *Qual-Med v. Indus. Claim Apps. Office*, 961 P.2d 590 (Colo. App. 1998). Since the DIME physician is required to identify and evaluate all losses and restrictions that result from the industrial injury as part of the diagnostic assessment process, the DIME physician's opinion regarding causation of those losses and restrictions is subject to the same enhanced burden of proof. *Id*. The elevated burden is evidence of the Colorado Legislature's intent to limit overcoming the DIME physician's opinion to those cases where it is more probable than not that the opinion was incorrect. In the case at bar, the ALJ determined Respondents failed to meet this burden of proof and establish that Dr. Shea's opinion was more probably incorrect.

As found, Dr. Shea's opinion was supported by the medical evidence. In this regard, Dr. Shea examined Claimant and confirmed he remained at MMI, but assessed a higher medical impairment rating, based upon ROM testing. (Finding of Fact 20). Dr. Shea specifically noted he rated only Claimant's body parts which were injured in the April 8, 2005 injury. Implicit in Dr. Shea's opinion was a finding that the permanent medical impairment was caused by this injury.

As found, Dr. Shea's evaluation occurred after Claimant experienced and increased symptoms and required additional treatment. (Finding of Fact 20). Dr. Shea also had the opportunity to consider whether Claimant exaggerated his symptoms and made findings based upon positive Waddell's signs. *Id*. Nonetheless, despite mildly positive Waddell's findings, Dr. Shea determined Claimant was entitled to an increased medical impairment rating. There was no evidence presented that Dr. Shea's range of

motion testing was invalid and indeed it met the validity criteria as documented in the worksheets. (Finding of Fact 20).

In addition, Dr. Shea's diagnoses and opinions were supported by Dr. Hughes and objective findings in the MRI. Dr. Shea had the benefit of reviewing Dr. Hughes report and the 2011 MRI. In addition, Dr. Shea also reviewed Dr. Wunder's initial IME, as well as Dr. Smith's evaluations in 2011-12. Dr. Shea concluded Claimant was entitled to a higher impairment rating. (Finding of Fact 44).

In coming to this conclusion, the ALJ considered Respondents' argument that Dr. Smith should not have relied upon the latter MRI films and gone back to the original date of MMI. Respondents also pointed to the opinions of Drs. Smith and Dr. Wunder that Claimant experienced symptoms as a result of degeneration in his lumbar spine and not the industrial injury. Based on this evidence, Respondents asserted Claimant was not entitled to additional permanency. The ALJ determined these represented different medical opinions, but did not lead to the conclusion that Dr. Shea was more probably incorrect in his findings and opinions. As such, Claimant is entitled to the permanent medical impairment rating assigned by Dr. Shea and PPD benefits based upon that rating.

ORDER

It is therefore ordered:

1. Claimant's claim is reopened.

2. Claimant remains at MMI.

3. Respondents shall pay PPD benefits based upon the medical impairment rating of 19% issued by the DIME physician, Dr. Shea.

4. Respondents are entitled to a credit for PPD benefits previously paid.

5. Respondents shall pay statutory interest of eight percent on all sums ordered, pursuant to § 8-43-410(2) C.R.S. (2016).

6. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see § 8-43-301(2), C.R.S. For further information regarding procedures to

follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

I. Has Claimant shown, by a preponderance of the evidence, that she sustained a compensable injury on July 12, 2017?

II. Has Claimant shown, by a preponderance of the evidence, that she is entitled to all reasonable, necessary, and related treatment arising out of the July 12, 2017 incident?

STIPULATIONS

The parties stipulated that if the injury is found compensable, Respondents would pay $26.50 in mileage reimbursement. This stipulation was accepted by the ALJ.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following Findings of Fact:

1. Claimant is employed as a member service supervisor with one of the Employer's Sam's Club warehouse locations in Colorado Springs, Colorado. Claimant's job duties include supervising personnel and assisting customers throughout the Employer's warehouse. She began working there in 2013.

2. Claimant alleges she sustained an injury to her thoracic spine on July 12, 2017. Claimant testified she was moving a soda "BIB," (beverage-in-box), from a shelving unit, which was positioned above her head. She stood on a step stool, making the BIB around eye level. She was pulling it towards her when she felt pain in her right scapula and thoracic spine. Claimant reported the alleged injury and presented to Concentra for treatment. At hearing, she estimated the BIB to weigh around 53 pounds.

3. Claimant has a pre-existing history of pain and treatment for her spine dating back several years. Claimant has treated for her spine with her primary care physicians and has received conservative treatment modalities for a number of years. Claimant has also been prescribed numerous narcotic medications through her primary care physicians for ongoing pain to her spine.

4. On January 5, 2013, Claimant presented to her primary care physicians for chiropractic care. (Ex. A) Claimant completed a patient questionnaire at registration detailing her spine complaints. Claimant noted pain from her neck down through her lumbar spine. Claimant's treating chiropractor specifically noted the location of her pain as C5-C6, T6-T7, and L5-S1. *(Id* at p. 4). A pain diagram depicts pain down the entire cervical region, lower lumbar, and *broadly between both scapulae.* Claimant detailed a

history of pain stemming from car accidents in 2001 and 2004, a fall from 2006, and a prior fibromyalgia diagnosis. (*Id* at p.2). Claimant noted that her pain occurred "every day."

5. Throughout the course of treatment with her chiropractor, Claimant was noted to have pain throughout her spine, including the thoracic spine. On her initial visit, Claimant noted that she was having thoracic spine pain that was an "8" out of 10. (*Id* at p. 6) On a follow-up visit on February 25, 2013, Claimant noted that she was having thoracic spine pain that was a "6" out of 10. (*Id* at p. 11)

6. On March 6, 2013, Claimant went to her primary care physicians at Colorado Pain Relief Center. (Ex. B) Claimant's physicians documented a history of chronic thoracic and lumbar spine back pain with occasional neck pain. (*Id* at p.13) Claimant indicated she takes Vicodin regularly and that chiropractic and acupuncture treatment was not helpful. Claimant's physicians opined that her back pain appears to be muscular and that Claimant had been taking multiple pain medications, (some addictive) for an extended period of time without relief. (*Id* at p.15)

7. On March 17, 2015, Claimant presented to Lynn Huffman, M.D. at Interventional Pain Management for her ongoing pain. (Ex. C, p. 17). Dr. Huffman noted that Claimant was having thoracic spine pain in "upper (thoracic) back upper back above the level of the shoulder blades bilaterally; upper back overlying both shoulder blades; and upper back below the level of the shoulder blades bilaterally…." Claimant noted that her pain was constant from her low back all the way up to her neck. Claimant complained of pain that was an "8" out of 10 despite taking Norco and Soma. (*Id* at p. 20)

8. On May 29, 2015, Claimant presented to Rachael Degurse, M.D. for her ongoing pain complaints. (*Id* at p.34) Dr. Degurse noted that Claimant was having pain in her thoracic area after bending her head forward. Claimant described her pain level in the thoracic spine as "9.5" out of 10. Dr. Degurse refilled Claimant's prescriptions for Soma and Percocet, and recommended that Claimant undergo repeat radiofrequency ablations. (*Id* at p. 36)

9. From 2015 through the date of the alleged incident, Claimant continued to treat with her primary care physicians at Interventional Pain Management. (Ex. C) Claimant's treating physicians have consistently noted chronic pain throughout her spine, including her thoracic spine and shoulder blades. Despite her reported pain, Claimant's primary care physicians noted that she continued to work full time for Employer.

10. Claimant presented for a follow-up visit to Dr. Degurse on December 1, 2016. (*Id* at p. 83) Claimant indicated she was having neck pain that had gotten worse over the past month. Claimant noted that her pain began in the right trapezius area and radiated towards the base of her skull. Dr. Degurse noted that Claimant was taking Opana, Meloxicam, Soma, and Zanaflex for pain. Dr. Degurse noted that Claimant's

cervical spine MRI results were relatively benign. (*Id* at p. 85). Dr. Degurse recommended that Claimant undergo bilateral occipital nerve blocks.

11. On May 11, 2017, Claimant again presented to Dr. Degurse. (*Id* at p. 92) Claimant noted continued pain throughout her spine. Claimant noted that she was not able to obtain Butrans due to not being able to afford the medication. Dr. Degurse noted that Claimant was having flare-ups in her chronic spine pain, which included the thoracic spine and shoulder blade regions. Dr. Degurse further noted that Claimant had not undergone thoracic spine injections to help alleviate her pain.

12. On July 6, 2017, Claimant was seen by Dr. Degurse for her ongoing chronic pain. (Ex. C at p. 95). Dr. Degurse increased Claimant's Opana prescription and continued claimant on Zanflex. Dr. Degurse also recommended that the claimant undergo translaminar steroid injections to the T12-L1 portion of the spine. Dr. Degurse noted under "Assessment" that Claimant was currently suffering from "..intervertebral disc degeneration, thoracic region". *Id*

13. Claimant first presented to Concentra following her alleged 7/12/17 injury on July 17, 2017. (Ex. D, p. 101) Claimant noted that that she was having right sided mid-back pain following lifting a "pallet of soda." Claimant reported a history of nerve burning in her low back and upper cervical but denied any surgeries. Claimant was referred for therapy to alleviate her pain.

14. On July 21, 2017, Claimant had a follow-up visit with Daniel Peterson, M.D. (Ex. D at p.104). Dr. Peterson noted that Claimant had previously indicated no prior history of thoracic spine pain or mid-back pain prior to her alleged July 12, 2017 injury. Dr. Peterson was concerned about Claimant's use of multiple narcotic medications without progress in alleviating her pain symptoms. Dr. Peterson indicated he was "worried that the Claimant's thoracic spine will become a chronic issue just like the low back and neck." Dr. Peterson further noted that Claimant had been working regular duty and was doing "fine."

15. On July 27, 2017, Dr. Peterson evaluated Claimant for a follow-up visit. (Ex. D, pp.116-118). Dr. Peterson again noted that Claimant presented with ongoing pain in her thoracic spine and that she had denied prior thoracic spine complaints. Dr. Peterson opined that Claimant was at MMI, without impairment or restrictions. Dr. Peterson further indicated that he believed that the minor strain could not be the cause of the Claimant's ongoing pain complaints. Dr. Peterson opined that Claimant's ongoing fibromyalgia and pre-existing condition was the cause of her continued pain complaints.

16. Claimant was examined by Carlos Cebrian, M.D. on November 13, 2017 for an Independent Medical Examination ("IME") at the request of Respondents. (Ex. E). Dr. Cebrian performed a physical examination of Claimant and was able to review her complete medical records. Dr. Cebrian noted that Claimant described a mechanism of injury involving pulling down a soda "bib" that weighed between "20-25 pounds." (*Id* at p. 121). Dr. Cebrian noted that Claimant denied any prior treatment to the thoracic

spine with her primary care physicians. He noted the inconsistencies in claimant's alleged mechanism of injury to what was described to Dr. Peterson.

17. Dr. Cebrian noted that, contrary to Claimant's statements, she had a significant prior history of thoracic spine pain dating back several years. He further noted that Claimant had undergone multiple forms of treatment to the thoracic spine, and that she had been on multiple forms of narcotics and pain medications to control pain throughout her spine. Dr. Cebrian ultimately concluded that Claimant did not sustain an injury, or an aggravation of her prior spine complaints. He further found that Claimant's subjective complaints were out of proportion to the objective findings. Dr. Cebrian further opined that Claimant's complaints were due to the natural progression of her underlying degenerative spine condition and not due to the alleged incident at work.

18. On February 5, 2018, Claimant presented to Timothy Hall, M.D., for an IME at her request. (Ex. 4). Dr. Hall indicated he reviewed numerous medical records and also noted a prior history of thoracic spine issues. Claimant also described to him moving a box that weighed between 20-25 pounds. Dr. Hall reviewed noted from Claimant's chiropractor and indicated that Claimant had prior lumbar and cervicothoracic pain. Dr. Hall disagreed with Dr. Cebrian that an injury did not occur. He reasoned that there was enough force to create an injury and focused more on Claimant's subjective complaints noting that Claimant appeared to him to be "a reasonable historian to me". *Id.* Dr. Hall opined that Claimant sustained an injury to her thoracic spine and parascapular region. Dr. Hall also noted that before her reported injury "She was not missing work. She was not leaving work early due to 'unbearable' pain as she has on occasion since this event."(Ex. 4, p. 9). Dr. Hall indicated that sometimes one must sometimes rely heavily upon subjective symptoms in diagnosing soft tissue injuries:

> The fact that we cannot see it or feel it or image it does not mean it does not exist, meaning the injury. There are many soft tissue injuries that do not have "objective" findings. (Ex. 4, p. 10).

19. Claimant testified at hearing regarding her alleged injury and pre-existing condition. Claimant indicated she injured her thoracic spine when she moved a soda "bib" from a shelf that was above her. Claimant testified that the alleged injury happened on a Friday and that she waited until Monday to report the injury, hoping it would get better. Claimant testified that she stood up on a ladder to move the box. Claimant described the box as being an 8-inch x 8-inch x 11-inch box that weighed approximately "53 pounds" by her estimate. Claimant testified that the box was at eye-level and directly in front of her when she moved it towards her to get it down from the shelf. Claimant alleges that she felt a pop when moving the box towards her.

20. Claimant testified at hearing that she did not experience pain in her thoracic spine prior to July 12, 2017. Claimant testified that the pain in her spine was to the cervical and lumbar regions only. When asked to describe where her thoracic spine

was relative to her body, Claimant (essentially correctly) testified "cervical is mainly for your upper neck, lumbar is down in the lower region, and thoracic is mainly in your shoulder blade area." Claimant also testified that the pain in her thoracic spine would be as high as "13 out of 10" at times.

21. Dr. Cebrian testified at hearing on behalf of the Respondents. Dr. Cebrian noted the inconsistencies in the Claimant's testimony and what she had described to the other physicians and himself. Dr. Cebrian noted that Claimant had described to him and Dr. Hall a box that weighed "20-25" pounds, whereas Claimant testified in court that the box weighed 53 pounds. Dr. Cebrian noted that Claimant had denied prior thoracic spine pain complaints, although her medical records had numerous instances in which the she was treated for chronic thoracic spine complaints and was on several narcotic medications for her ongoing pain.

22. Dr. Cebrian disagreed with Dr. Hall that Claimant was a reliable historian. He noted the inconsistencies in her pain complaints and her own testimony about having pain that was a 13 out of 10 in her thoracic spine. Dr. Cebrian re-iterated his prior opinions that Claimant did not sustain an injury, and that her subjective complaints have consistently been out of proportion to the objective findings. Dr. Cebrian further opined that Claimant's description of injury at hearing would not involve the muscles in the thoracic region. Dr. Cebrian specifically testified that if Claimant were pulling the box directly out from in front of her as described, it would involve more of the upper extremities than the thoracic spine. Dr. Cebrian indicated that Claimant was having ongoing chronic pain in the thoracic spine and had presented for treatment with her primary care physician six days prior to the date of the alleged incident.

23. Following the hearing, Respondents took the post-hearing evidentiary deposition of Dr. Peterson, Claimant's ATP. Dr. Peterson was shown Claimant's medical records and Dr. Cebrian's IME report. Dr. Peterson noted that Claimant had also denied prior thoracic spine complaints to him. Dr. Peterson confirmed that Claimant had a long-standing pre-existing back condition and had treated on multiple occasions for her thoracic spine. Dr. Peterson agreed with Dr. Cebrian that it was more probable than not that Claimant did not sustain a strain to her thoracic spine. Dr. Peterson opined that his prior suspicions were confirmed that the cause of Claimant's complaints were due to her fibromyalgia, and a natural progression of her underlying degenerative condition. Dr. Peterson agreed with Dr. Cebrian that Claimant did not sustain an injury or aggravation to her thoracic spine or shoulder region.

24. In support of this, Dr. Peterson testified:

> She [Claimant] presents with a mechanism that describes an onset of pain at this particular time of day and a particular day and a particular event. When I examined her, she did on my exam have tenderness at the thoracic spine T4, 5, 6, 7, 8, and 9, but not at the left paraspinal, not at the right paraspinal. No tenderness at the right rhomboid muscle and no tenderness in the left rhomboid

muscle. It was odd that having complained of pain, she didn't have any muscular pain on either side. (Peterson Depo, pp. 18-19).

CONCLUSIONS OF LAW

Based upon the forgoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

1. The purpose of the "Workers' Compensation Act of Colorado" (Act) is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. §*8-40-102(1)*, C.R.S. (2017) A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. §*8-42-101*, C.R.S. (2017) A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979)

2. Assessing weight, credibility, and sufficiency of evidence in Workers' Compensation proceeding is exclusive domain of administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968). The ALJ's factual findings concern only evidence that is dispositive of the issues involved; the ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *See Magnetic Engineering, Inc. v. ICAO,* 5 P.3d 385, 389 (Colo. App. 2000).

Compensability

3. Whether the Claimant has proven that the conditions of employment caused, or contributed to, a disease is a question of fact for determination by the ALJ. *Wal-Mart Stores, Inc. v. Industrial Claims Office*, 989 P.2d 251 (Colo. App. 1999).

Moreover, if an industrial injury aggravates or accelerates a preexisting condition which causes a need for treatment, the treatment is compensable. *Joslins Dry Goods Co. v. Industrial Claim Appeals Office*, 21 P.3d 866 (Colo. App. 2001); *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *Seifried v. Industrial Commission*, 736 P.2d 1262 (Colo. App. 1986). Under §*8-40-201(14)*, C.R.S., the Claimant is not required to prove the conditions of the employment were the sole cause of the disease. Rather, it is sufficient if the Claimant proves the hazards of employment caused, intensified, or aggravated - to some reasonable degree - the disability for which compensation is sought. *Anderson v. Brinkhoff*, 859 P.2d 819, 824 (Colo. 1993).

4. Claimant's testimony at hearing is at odds with her prior statements given to Dr. Peterson and Dr. Cebrian regarding her prior thoracic spine complaints and treatment. Claimant detailed on numerous office visits to her primary care physicians, chronic thoracic spine pain that extends on occasion into her cervical spine and shoulder blade regions. Claimant correctly confirmed at hearing her understanding of where the thoracic spine was located. This was not simply a misarticulation by an unsophisticated patient. Despite this, Claimant reiterated at hearing that she had never had treatment to this area of her back. While Claimant may have been simply adding drama to emphasize her point, her characterization at hearing of having pain at "13 out of 10" was not helpful. It renders her prior reports of pain levels rather meaningless. Similarly, while Claimant's estimation of the BIB weight could be overlooked, more than doubling its weight at hearing calls her reliability into question. The ALJ finds it highly improbable that boxes designed to routinely replenish soda dispensers would weigh anywhere near 53 pounds.

5. In the final analysis, Dr. Hall correctly articulated that sometimes physicians must rely heavily on the subjective reporting of symptoms by their patients. In his professional judgment, Claimant was a reliable historian. The ALJ does not concur in this instance. Claimant's subjective complaints were indeed out of proportion to her objective symptoms (or lack thereof). The ALJ notes that the Claimant presented to Dr. Degurse six days prior to the alleged incident for treatment of her pre-existing back condition. Claimant's medications were re-filled and Dr. Degurse recommended that the Claimant consider translaminar steroid injections to the T12-L1 portion of the spine. In May 2017, Claimant was noting pain in the same thoracic region that she described at hearing to her primary care physicians. This caused her physicians to increase her narcotic medications to alleviate the flare-up in her pain.

6 The ALJ further finds no evidence that Claimant has missed time from work as a result of her continued pain complaints, despite Dr. Hall's notations to the contrary. Claimant testified at hearing that she has continued to work in a full-duty capacity despite the alleged incident.

7. Claimant has failed to prove that she has sustained a compensable injury as a result of the described incident on July 12, 2017. The ALJ further finds that the claimant did not aggravate her long-standing pre-existing degenerative spine condition as a result of the July 12, 2017 incident. Rather, the ALJ finds the opinions of Dr.

Cebrian and Dr. Peterson credible and persuasive that the Claimant's pain complaints represent a natural progression of her underlying degenerative spine condition.

Medical Benefits and Mileage Reimbursement

8. Claimant has failed to prove compensability. There is no further need to address medical benefits or mileage reimbursement.

ORDER

It is therefore Ordered that:

1. Claimant's request for Workers Compensation benefits is denied and dismissed.

2. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 27, 2018

Colorado Springs, Colorado 80906

ISSUES

- Did Claimant prove by a preponderance of the evidence that a stellate ganglion block and an evaluation with Dr. Barolat are reasonably necessary treatment after MMI?

FINDINGS OF FACT

1. Claimant suffered admitted injuries to her right upper extremity on June 24, 2016 while delivering pizzas for Employer. She stepped in a pothole and fell on her outstretched right arm. She developed immediate pain and swelling in her right wrist and hand.

2. Claimant went to the Parkview Hospital emergency room the next day. X-rays were negative for fracture of other acute injury, and she was diagnosed with a wrist sprain. Employer referred Claimant to CCOM for authorized treatment, where she primarily saw Dr. Daniel Olson and PA-C Steven Byrne.

3. After a month of splinting and occupational therapy, Claimant still had significant pain, so she was sent for an MRI of the right wrist and hand. The MRI showed a non-displaced fracture at the base of the fourth metacarpal bone, moderate arthritis at the base of the first metacarpal bone, inflammation around the fourth and fifth digits, and an ulnar collateral ligament strain.

4. Claimant started treating with Dr. Karl Larsen, a hand surgeon, on August 1, 2016. Dr. Larsen opined, "[she] has the sequelae of middle, ring and small finger CMC joint sprains and intrinsic sprains. She has a non-displaced ring finger metacarpal base fracture, severe pain and dysfunction associated with this, and may be developing complex regional pain syndrome. I think certainly nothing surgical is noted here. I have recommended that she be evaluated by pain management to see if she would benefit from a stellate block."

5. She saw Dr. Bertram Willman, an interventional pain specialist, on September 2, 2016. Dr. Willman diagnosed complex regional pain syndrome and concurred with Dr. Larsen's recommendation for a stellate ganglion block.

6. Claimant followed up with Dr. Larsen on September 7, 2016 and reported persistent pain. He noted hypersensitivity to palpation of the hand and wrist, and difficultly moving her fingers. Dr. Larsen opined:

> She has pain symptoms that are out of proportion to anything that I would expect off of her MRI. She has some elements that seem consistent with complex regional pain syndrome. Unfortunately, really the treatments that

> we recommended last time have not been fully implemented, so it is hard to judge her response at this point.

7. Dr. Willman performed a right side stellate ganglion block on September 30, 2016. Three days later, PA-C Byrne at CCOM documented "her pain is about 50% better than her last visit." Similarly, on October 5, 2016, Dr. Willman noted Claimant enjoyed approximately 30% pain reduction for a few days until manipulation caused an increase in pain.

8. On October 19, 2016, Dr. Larsen noted:

> She had a stellate ganglion block at the end of August with Dr. Willman that actually cut her pain down significantly but was not long lasting. . . . The best diagnosis I can give her is complex regional pain syndrome. I do not have any interventions that can help her. . . . I think continued pain management with drug treatment dedicated to managing her neuropathic symptoms and consideration of repeat stellate ganglion blockade would be reasonable.

9. Claimant saw Dr. Olson at CCOM on November 10, 2016. He saw no skin mottling, discoloration, or shininess on examination of her right hand. Claimant reacted strongly to light manipulation of her hand and abruptly left the examination room. Dr. Olson though her behavior was "odd" and suspected psychological overlay exacerbating her perception of pain. He released Claimant from his care.

10. Dr. Willman performed a second stellate ganglion block on November 19, 2016.

11. Dr. Olson formally placed Claimant at MMI on December 14, 2016. He opined she had permanent impairment but should be referred to a different Level II physician because he was not comfortable performing the rating.

12. Claimant saw Dr. William Watson for an impairment evaluation on April 11, 2017. She described severe, unremitting pain in the right hand and fingers. She stated her right hand felt cooler than the left hand, and her fingernails on the right hand were "thinner." She told Dr. Watson she did not like anything touching the hand and felt more comfortable holding the hand against her side with her elbow flexed. When Dr. Watson entered the exam room, he noted "she held her hand close to her side" and was wearing a compression glove. On examination, she had "evidence of marked allodynia, hyperalgesia with hyperpathia." Sensation was normal. Dr. Watson saw no atrophy or edema, and "temperature seemed symmetric between the left and right hands." He diagnosed "symptoms of complex regional pain syndrome without verified diagnosis." After reviewing the CRPS MTGs, Dr. Watson credibly and persuasively opined:

> I believe she qualifies for the initial diagnosis of complex regional pain syndrome. Unfortunately she has not had any diagnostic components which have confirmed the complex regional pain syndrome. She has not had comparative x-rays of both extremities, triple phase bone scan, vasomotor

> temperature test to include infrared stress thermography, sudomotor test, autonomic test battery with emphasis on QSART. She has had sensory sympathetic nerve test, sympathetic blocks which have been equivocal. . . . [S]he does not want to do any further testing. Therefore, my provisional diagnosis would be complex regional pain syndrome. Unfortunately we cannot make a final definitive diagnosis because the patient would prefer not to do any further testing.

13. Dr. Watson assigned a 35% whole person impairment utilizing the Spinal Cord and Brain Impairment Values methodology the DOWC recommends for CRPS.

14. Respondents filed a Final Admission of Liability (FAL) based on Dr. Watson's rating on June 19, 2017. The FAL also admitted for reasonably necessary medical treatment after MMI.

15. At present, Claimant sees Dr. Miguel Castrejon for maintenance care. The ALJ was given only one report from Dr. Castrejon, dated November 13, 2017, but it appears he began treating Claimant in approximately June 2017. Dr. Castrejon's diagnoses include CRPS "by history," and "chronic pain." His examination of the right hand showed slight swelling but no temperature abnormalities. Dr. Castrejon appreciated slight skin mottling and decreased wrist range of motion in all planes. He also noted, "extensive hypersensitivity with allodynia making any further examination of the hand and wrist not possible." Dr. Castrejon recommended a stellate ganglion block with Dr. Stephen Ford and referred Claimant to Dr. Giancarlo Barolat "regarding the option of a peripheral stimulator."

16. Claimant proved by a preponderance of the evidence that the stellate ganglion block and the consultation with Dr. Barolat are reasonably necessary *"Grover"* treatment for her industrial injury.

CONCLUSIONS OF LAW

The respondents are liable for medical treatment after MMI that is reasonably necessary to relieve the effects of the injury or prevent deterioration of the claimant's condition. Section 8-42-101; *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Compensable medical treatment includes diagnostic testing to investigate the injury-related diagnosis or suggest a further course of treatment. *Garcia v. Express Personnel*, W.C. No. 4-587-458 (August 24, 2000). The claimant must prove that an injury directly and proximately caused the condition for which she seeks benefits. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents, and the claimant must prove entitlement to benefits by a preponderance of the evidence. Section 8-43-201. As the arbiter of disputes regarding treatment, the ALJ may consider the MTGs as an evidentiary tool but is not bound by them when determining whether requested medical treatment is reasonably necessary or injury-related. Section 8-43-201(3); *Logiudice v. Siemans Westinghouse*, W.C. No. 4-665-873 (January 25, 2011). As

found, Claimant proved by a preponderance of the evidence that Dr. Castrejon's referrals for a stellate ganglion block and consideration of peripheral nerve stimulation are reasonably necessary *"Grover"* treatment for the industrial injury.

Respondents dispute Dr. Castrejon's recommendations on the theory that Claimant has "not actually been diagnosed with CRPS." Respondents also argue stellate blocks are not reasonable because the previous blocks were "ineffective."

The CRPS MTGs differentiate between "clinical CRPS" and "confirmed CRPS" depending on the strength of evidence to support the diagnosis. A claimant satisfies the criteria for "clinical CRPS" with characteristic pain and other symptoms, combined with various clinical signs. A diagnosis of "confirmed CRPS" requires at least two positive tests, such as a triple-phase bone scan, sympathetic blocks, thermography, or QSART. The MTGs also put forth an alternative diagnosis of sympathetic maintained pain (SMP) for patients with CRPS-like pain and a positive response to sympathetic blocks, but no clinically detectable vasomotor or sudomotor signs.

Although Claimant has not undergone the testing to establish "confirmed" CRPS per the MTGs, the clinical data supports a finding of "clinical" CRPS.[1] Multiple treating and examining providers have accepted CRPS as a working diagnosis. The fact that Claimant received some relief from the prior sympathetic blocks suggests that at least some of her pain is sympathetically driven. At the very least she may have SMP, which also warrants treatment with stellate blocks under the MTGs. The ALJ acknowledges Claimant's "equivocal" response to the previous blocks but finds it difficult to draw definitive conclusions since the blocks were spaced two months apart, rather than "3-14 days" as directed by the MTGs for diagnostic purposes.[2]

Dr. Castrejon's recommendation for a repeat stellate ganglion block is reasonable, given Claimant's ongoing severe pain only partially relieved with medication. Stellate blocks are a well-accepted treatment modality for CRPS/SMP, and they gave Claimant some relief in the past. The ALJ has no reason to presume Dr. Castrejon will continue to recommend additional blocks if they are not helpful in managing Claimant's pain.

The referral to Dr. Barolat for consultation is also reasonably necessary. Both the CRPS MTGs and the Chronic Pain MTGs allow peripheral stimulation for neuropathic pain in appropriate circumstances, and the only request at this time is for an *evaluation* to determine Claimant's candidacy for the procedure. The Chronic Pain MTGs state this modality can be used for any "nerve" pain, so the presence or absence of CRPS is not determinative. The ALJ sees no persuasive basis to deny Claimant a consultation with Dr. Barolat to receive his treatment recommendations.

[1] The current version of DOWC Rule 17, Exhibit 7 became effective November 30, 2017. Although Dr. Watson was applying an earlier version of the CRPS MTGs, the ALJ does not consider the interval changes sufficiently substantive to undercut his conclusion.
[2] Rule 17, Exhibit 7 § (G)(7)(a).

ORDER

It is therefore ordered that:

1. Respondents shall pay for a stellate ganglion block with Dr. Ford and a consultation with Dr. Barolat, as recommended by Dr. Castrejon.

2. All issues not determined herein, or otherwise closed by operation of law, are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on the certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 18, 2018

s/Patrick C.H. Spencer II
Patrick C.H. Spencer II
Administrative Law Judge
Office of Administrative Courts

ISSUES

1. The issues to be determined by this decision are:

   a. Whether Claimant sustained his burden of proof to establish that he suffered a work injury in the course and scope of his employment for Employer on August 21, 2017;

   b. Whether Claimant is entitled to reasonably necessary and related medical benefits for his work related injury of August 21, 2017, including the November 2, 2017, surgery with Dr. Snyder; and

   c. Whether Claimant was disabled from his usual employment and therefore entitled to an order awarding temporary disability benefits from August 22, 2017, to December 13, 2017.

STIPULATION OF FACT

The parties stipulate that Claimant's average weekly wage (AWW) is $2141.00.

FINDINGS OF FACT

1. Claimant is a 56 year old man who has worked for Employer for seven years and, most recently, in a supervisory capacity in the bulk plant. Claimant's duties as a supervisor in the bulk plant is to oversee the cementing of wells upon completion of drilling.

2. On August 20, 2017, Claimant started work at the bulk plant at 9:00 a.m. Claimant received a 2:00 p.m. call to perform work outside of the bulk plant. This work consisted of taking company trucks containing cement and material to a well site. At the bulk plant, Claimant blended the cement that would be used at the well site and started toward the well site in Kersey, CO at 4:00 p.m. The well site is approximately 50 miles from the bulk plant. At the well site, he performed a safety clearance and unloaded materials. Claimant walked up and down twenty steps going up two stories on the rig multiple times. In addition, he entered and alighted from his truck multiple times.

3. Claimant was able to perform the essential functions of his job and continued to do so at the well site until approximately 2:00 or 2:30 a.m. on August 21, 2017. Then, he slept in his truck and awoke around dawn, at approximately 5:00 or 5:30 a.m., and proceeded to a truck stop where his truck experienced mechanical difficulties. Claimant stopped the truck and found anti-freeze spewing out.

4. As Claimant was walking around his truck, he felt pain in his right knee. He checked his right knee and found that it was swollen and bruised. He testified credibly that he was unsure why the swelling and bruising occurred yet he was conscious of the arduous activities at the well site, the drive in the middle of the night in his truck, his

attempt to sleep in the cab of his truck and his surveillance of his truck's mechanical difficulties.

5. Claimant reported his injury to Employer and Supervisor Kitsmiller drove the Claimant to be evaluated by Dr. Julie Parsons at UC Health. On the way to Dr. Parsons' office, Mr. Kitsmiller suggested to Claimant that he may have a blood clot in his right knee.

6. During Claimant's examination by Dr. Parsons, Claimant was not asked to explain the mechanism of his injury. Claimant did not report his arduous activities at the well site in Kersey. At Dr. Parsons' office, Claimant waited while Mr. Kitsmiller conversed with Dr. Parsons outside of Claimant's presence, and without Claimant's authorization. Claimant told Dr. Parsons he was upset with her communication with Mr. Kitsmiller outside his presence. Dr. Parsons explained in her August 21, 2017, report that it was routine protocol to talk with the Employer's representative to "ascertain the circumstances surrounding the injury."

7. Dr. Parsons reported that Claimant had sudden right knee swelling and bruising and the doctor issued a report concluding that Claimant's injury was not work related. Dr. Parsons stated that Claimant did not hit his knee, step in a hole, or experience a twisting injury. Claimant credibly testified that the doctor did not question him concerning the mechanism of his injury. Additionally, Dr. Parsons referenced potential clotting. Dr. Parsons referred Claimant to his primary care physician for further treatment.

8. On August 23, 2017, Claimant returned to UC Health and was examined by Dr. Brent Grauerholz for a second opinion. During this second evaluation, Dr. Grauerholz noted Claimant described his mechanism of injury as follows:

> On the night of Sunday night, he was out East of Kersey in a semi truck. The truck broke down. He has been getting up and down ladders etc. all day, which is not atypical for his job description. He then went to sleep in the cab while he awaited assistance from a wrecker. When he woke up and stepped off the truck, he had sharp pain and swelling in the right knee. He has some ecchymosis over the medial aspect of the knee that has gotten perhaps a bit better. He told his employer, we then evaluated at a clinic in Brighton. He said, "they looked at me, palpated my knee and told me I had a blood clot." They told him it was not work related. He wanted a second opinion and is brought in by an employee of Halliburton's HR department. . .

9. Claimant was released to full duty work. Dr. Grauerholz noted that Claimant's condition was probably work-related. Claimant was referred for x-rays. Dr. Grauerholz opined he would let the process sort itself out regarding if Claimant's condition is from a work injury.

10. On August 31, 2017, Claimant was evaluated at UC Health by Michael, Deitz, Physician's Assistant, Certified (PAC). During Claimant's third evaluation, Claimant described his mechanism of injury as occurring ten (10) days prior. Claimant described that:

> . . . he had been doing a lot of climbing about his truck. He states that he did several ascends and descends about his truck. He states he had a truck breakdown. In the process of waiting he then rested in his cab. He got out of his truck and felt something pull in his right knee. He states that he then started to develop swelling and marked pain to the medial aspect of his knee in the posterior aspect of the knee. He had a little bit referral pain to his calf but that was not his main concern.

11. Claimant was diagnosed with a knee strain including the quad and hamstrings and first degree medial collateral ligament sprain. Mr. Deitz noted that a differential diagnosis may include a medial meniscus tear, partial quad defect muscular tear and a remote possibility of a DVT in the calf. Mr. Deitz referred Claimant for an MRI. Mr. Deitz noted that Claimant was scheduled to go on a two-week vacation starting in four days. Mr. Deitz assigned temporary work restrictions of "no clutch driving, max lift 25 pounds. No crawling, climbing, kneeling, or squatting. Patient must work on dry and even surfaces."

12. Claimant was referred for an MRI which established that he had suffered an oblique tear of the medial meniscus body along with a partial thickness articular heterogenity along the weight bearing surfaces of the meniscus. The MRI showed that Claimant's medial collateral ligament was normal. Claimant has underlying pre-existing osteoarthritis and degenerative medial meniscus tear.

13. Claimant also saw Dr. Rafferty at UC Health who described the history of the Claimant's injury as 10 days earlier Claimant was doing a lot of climbing about his truck, doing his "usual duties" and his knee started swelling. Dr. Rafferty credibly opined in his December 1, 2017, letter that Claimant's right knee pain results from a combination of medial meniscus tear and degenerative changes that have been identified within the knee. Dr. Rafferty further credibly opined that it is probable that Claimant's pre-existing, degenerative medial meniscus tear was made symptomatically worse by his usual duties at work.

14. Claimant was given temporary restrictions and was allowed to return to modified duty on August 23, 2017. He was not permitted to perform overtime.

15. On referral from UC Health, Claimant saw orthopedist Dr. Snyder on September 22, 2017. Claimant underwent surgery on November 2, 2017, for his right knee medial meniscus tear and a right knee chondromalacia of the patella, i.e., medial meniscectomy and a chondroplasty for the medial femoral condyle and patella.

16. Claimant credibly testified that he was allowed to return to work, working forty to fifty hours per week, depending on the "hitch", but was not permitted overtime. Working forty hours a week the Claimant was paid a hourly rate of $25.39 or $1,015.60 per week for a forty hour week, less than his stipulated AWW of $2,141.00.

17. Claimant testified that he continued working after surgery on modified duty until he was returned to full duty in December 2017.

18. A medical record review was performed by Dr. Failinger at the request of Respondents on September 30, 2017. He testified at hearing as an expert in the field of orthopedics. When he prepared his report, Dr. Failinger did not have a complete set of records.

19. Dr. Failinger's opinion concerning work relatedness relied on the initial report of Dr. Parsons. However, he was present in court when Claimant testified concerning the various activities that he was required to perform just before his onset of knee problems on August 21, 2017. He testified that the activities performed by the Claimant had the potential of giving rise to the type of disease processes found in the Claimant's diagnostic MRI of September 2, 2017. Dr. Failinger opined that meniscus tears can be either acute or degenerative in nature.

20. Dr. Failinger opined that there is no evidence in the records that Claimant had meniscal problems prior to the events of August 21, 2017. And, it is found that no credible or persuasive evidence was presented to establish that Claimant had no prior medical history of right knee symptoms or treatment.

21. On December 12, 2017, Dr. John Charbonneau, an authorized treating physician (ATP), credibly opined that Claimant suffered an occupational injury arising from the Claimant's arduous work on August 21, 2017. In the December 12, 2017, progress note, Dr. Charbonneau noted the same mechanism of injury regarding Claimant's strenuous work, sleep in a truck cab and awakening to right knee swelling, bruising and pain.

22. The ALJ finds the report of ATP Dr. Charbonneau and the testimony of the Claimant credible and concludes that this evidence supports that the Claimant suffered a work related right knee injury.

CONCLUSIONS OF LAW

General Legal Principles

The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-42-101, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all

of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, C.R.S. A Workers' Compensation case is decided on its merits. Section 8-43-201, C.R.S. The ALJ's factual findings concern only evidence dispositive of the issues involved. The ALJ has not addressed every piece of evidence leading to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. ICAO*, 5 P.3d 385 (Colo. App. 2000).

Compensability

A claimant must prove that he is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1), C.R.S.; *see, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, 33 P.3d 1230 (Colo.App. 2001). If an industrial injury aggravates, accelerates, or combines with a preexisting condition so as to produce disability and a need for treatment, the claim is compensable. *H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). As found, this Claimant has proven by a preponderance of the evidence that he suffered a work related injury to his right knee arising out of and in the course of his employment on August 21, 2017.

Here, it is found and concluded that Claimant's underlying asymptomatic degenerative condition was made symptomatic by the right knee injury resulting from the arduous nature of the work he was required to perform for the Employer at the work site, including walking, climbing stairs, and carrying materials on August 21-22, 2017. It is found and concluded that Claimant's work injury arose from his work activities in combination with Claimant's degenerative condition as reflect in the MRI. The evidence established that Claimant's injury arose out of and in the course and scope of his employment.

Both parties argue that the cause of Claimant's purportedly unexplained injury is analyzed based on *City of Brighton v. Rodriguez*, 318 P.3d 496 (Colo. App. 2014). However, to the contrary, the Judge concludes that *City of Brighton, supra,* is inapplicable in this case because the cause of Claimant's injury is explained by the combined impact of Claimant's pre-existing degenerative condition and the arduous labor on August 21-22, 2017, performed by Claimant in the course and scope of his employment. *H & H Warehouse v. Vicory*, *supra*, controls the analysis of this case since the evidence established that Claimant's industrial injury aggravated, accelerated,

or combined with Claimant's degenerative condition to produce disability and a need for treatment and is therefore compensable.

Medical Benefits

If there is a compensable injury, the employer and its insurance carrier must provide all medical benefits, which are reasonably necessary to cure and relieve the work-related injury. Section 8-42-101 C.R.S.; *Owens v. Indus. Claim Appeals Office of State of Colo.,* 49 P.3d 1187, 1188 (Colo. Ct. App. 2002). The right to workers' compensation benefits, including medical payments, arises only when an injured employee initially establishes, by a preponderance of the evidence that the need for medical treatment was proximately caused by an injury arising out of and in the course of the employment. Section 8-42-101, C.R.S.; See *Snyder v. Indus. Claim Appeals Office*, 942 P.2d 1337, 1339 (Colo. Ct. App. 1997). Where liability for a particular medical benefit is contested, the claimant must prove that it is reasonably necessary to treat and is causally related to the industrial injury. *Id*.; See *Grover v. Industrial Commission,* 759 P2d 705 (Colo. 1988). The record must distinctly reflect that the medical treatment was necessary and designed to cure or relieve the effects of the work injury. *Pub. Serv. Co. of Colorado v. Indus. Claim Appeals Office of State of Colo.,* 979 P.2d 584, 585 (Colo. Ct. App. 1999). Whether services are medically necessary for treatment of a claimant's injuries or incidental to obtaining such treatment is a question of fact to be determined by the ALJ. *Bellone v. Indus. Claim Appeals Office of the State,* 940 P.2d 1116 (Colo. Ct. App. 1997).

The respondents are only liable for authorized or emergency medical treatment. See section 8-42-101(1), C.R.S. (2002); *Pickett v. Colorado State Hospital*, 32 Colo. App. 282, 513 P.2d 228 (1973). Section 8-43-404(5)(a) directs that respondents will provide Claimant with a list of at least four physicians who are willing to provide treatment without regard to non-medical issues such as the prospects for payment in the event the claim is ultimately denied. *Lutz v. Industrial Claim Appeals Office,* 24 P.3d 29 (Colo. App. 2000); *Ruybal v. University of Colorado Health Sciences Center,* 768 P.2d 1259 (Colo. App. 1988). Whether the ATP has refused to provide treatment for non-medical reasons is a question of fact for the ALJ. *Ruybal v. University of Colorado Health Sciences Center, supra.*

Here, the record establishes that Dr. Parsons refused to provide to Claimant further medical care on his right knee for non-medical reasons and referred the Claimant to his PCP. This triggered the Claimant's right to select his physician. *See Roybal v. University of Colorado Health Sciences Center*, *supra*. Claimant selected UC Health as his ATP where he received treatment, including surgery.

Claimant's providers are deemed authorized. The treatment rendered by ATPs is reasonable, necessary and related and therefore compensable.

TPD

To establish entitlement to temporary disability benefits, the Claimant must prove that the industrial injury, or occupational disease, has caused a "disability," and that the claimant suffered a wage loss which, "to some degree," is the result of the industrial disability. Section 8-42- 103(1), C.R.S; *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542, 546 (Colo. 1995). The claimant's medical incapacity is evidenced by his loss or reduction of bodily function. There is no statutory requirement that the Claimant present medical opinion evidence from an attending physician establishing his physical disability. *See Lymbum v. Symbois Logic*, 952 P.2d 831 (Colo. App. 1997). Rather, the Claimant's testimony alone is sufficient to establish a temporary disability. *Id.*

Claimant established by a preponderance that he suffered an adverse impact on his ability to perform his job. It is found and concluded that Claimant suffered a loss of wage earning capacity due to his injury. His impairment of earning capacity is evidenced by his partial inability to work. The testimony of Claimant and Claimant's medical records establish this. Here the Claimant has shown that he lost overtime for which he is entitled to TPD from August 23, 2017, to December 12, 2017.

ORDER

It is, therefore, ordered that:

a. Claimant sustained his burden of proof to establish by a preponderance of the evidence that his work injury of August 21, 2017, arose in the course and scope of his employment for Employer.

b. Since Claimant suffered a work related injury, Respondents shall be liable for reasonably necessary and related medical benefits with UC Health, Dr. Snyder.

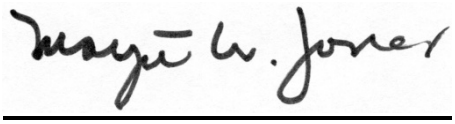
c. Claimant established by a preponderance of the evidence that he was disabled from his usual employment and therefore entitled to an award of indemnity. Claimant is entitled to benefits from August 23, 2017, to December 12, 2017.

d. Based on Employer's wage records, Respondents shall be liable to Claimant for temporary partial disability benefits during any week during this period when Claimant's AWW fell below Claimant's admitted AWW of $2141.00.

e. Respondents shall pay interest at the rate of 8% per annun for all amounts not paid when due.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

DATED: April 27, 2018



Margot W. Jones
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, 4th Floor
Denver, CO 80203

OFFICE OF ADMINISTRATIVE COURTS
STATE OF COLORADO
WORKERS' COMPENSATION NO. 4-975-232

ISSUE

- Has Claimant proven by a preponderance of the evidence that Respondent is responsible for medical treatment received from Dr. Gottlob and Axis PT after MMI through December 31, 2016?

FINDINGS OF FACT

1. Claimant sustained an industrial injury on February 4, 2015.

2. In 2015, the authorized treating physician, Dr. Scherr, referred Claimant to orthopedic surgeon Dr. Janes, who performed two right knee surgeries. Claimant returned to Dr. Janes with continued right knee pain.

3. Because of Claimant's frustration, Dr. Janes referred Claimant to two additional orthopedic surgeons for evaluation, Dr. Sterett and Dr. LaPrade. All three orthopedic surgeons agreed Claimant would benefit from additional surgical intervention.

4. On April 24, 2016, Claimant returned to Dr. Scherr. Dr. Scherr reported Claimant refused to undergo the surgical procedures recommended by the authorized providers and requested a fourth surgical opinion. Dr. Scherr placed Claimant at MMI, as she no longer wanted the treatment recommend by her authorized providers.

5. On October 7, 2016, Claimant underwent a DIME with Dr. Lindenbaum, who opined that Claimant could benefit from hardware as maintenance, and would not require additional physical therapy. He placed Claimant at MMI.

6. After MMI, Claimant sought treatment with physical therapist Ami Doyle and orthopedic surgeon Dr. Gottlob. Between April 24, 2016 and December 30, 2016, Claimant treated with these providers, without authorization, paid by her personal health insurance or out of pocket. She now requests Respondent pay for this treatment.

7. On May 2, 2016, Ami Doyle (physical therapist) recommended Claimant be evaluated by Dr. Gottlob. No physician in the chain of referral, including Dr. Scherr, Dr. Janes, Dr. Sterett, or Dr. LaPrade made a referral to Dr. Gottlob. Claimant underwent knee surgery with Dr. Gottlob, who referred her for additional physical therapy.

8. In a previous hearing to overcome the DIME and request a change of physician, Claimant testified she treated with Dr. Gottlob on her own, without any

referral and outside the workers' compensation system. As a result, ALJ Michelle Jones determined that Claimant went to Dr. Gottlob on her own, and failed to establish that he is an authorized physician.

9. Here Claimant conceded at hearing that her physical therapy after April 24, 2016, was unauthorized. Claimant conceded she treated with Dr. Gottlob outside the workers' compensation system. Claimant presented no credible evidence that she sought authorization prior to undergoing the treatment.

10. Ami Doyle conceded at hearing that she never requested authorization from Claimant's workers' compensation adjuster.

11. Additionally, Claimant underwent vein treatment, which Dr. Scherr opined was not related to the industrial injury.

CONCLUSIONS OF LAW

1. A claimant shoulders the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 592 P.2d 792 (1979). The facts in a workers' compensation case must be interpreted neutrally; neither in favor of the rights of the claimant nor in favor of the rights of respondents; and a workers' compensation claim shall be decided on its merits. Section 8-43-201, C.R.S.

2. The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Eng'g, Inc. v. ICAO,* 5 P.3d 385 (Colo. App. 2000).

3. In deciding whether a party has met the burden of proof, the ALJ is empowered "to resolve conflicts in the evidence, make credibility determinations, determine the weight to be accorded to expert testimony, and draw plausible inferences from the evidence." *See Bodensleck v. ICAO*, 183 P.3d 684 (Colo. App. 2008). The ALJ determines the credibility of the witnesses. *Arenas v. ICAO,* 8 P.3d 558 (Colo. App. 2000). The weight and credibility to be assigned evidence is a matter within the discretion of the ALJ. *Cordova v. ICAO*, 55 P.3d 186 (Colo. App. 2002). The fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions, the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness, whether the testimony has been contradicted, and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (1936). A workers' compensation case is decided on its merits. Section 8-43-201, C.R.S.

4. Section 8-43-404(5)(a) prohibits a claimant from retaining additional physicians, outside the chain of referral, without following the statutory procedure.

Martinez v. The Central States Roofing & Insulating Company, W.C. No. 4-228-090 (August 23, 1996) *see Pickett v. Colorado State Hospital*, 513 P.2d 228 (1973).

5. Authorization refers to a physician's legal status to treat the industrial injury at the respondents' expense. *Bunch v. Industrial Claim Appeals Office*, 148 P.3d 381 (Colo. App. 2006); *Popke v. Industrial Claim Appeals Office*, 944 p.2d 677 (Colo. App. 1997). Authorized treating providers include those medical providers to whom the claimant is directly referred by the employer, as well as providers to whom an ATP refers the claimant in the normal progression of authorized treatment. *Town of Ignacio v. Industrial Claim Appeals Office*, 70 P.3d 513 (Colo. App. 2002); *City of Durango v. Dunagan*, 939 P.2d 496 (Colo. App. 1997). Whether an ATP has made a referral in the normal progression of authorized treatment is a question of fact for the ALJ. *Suetrack USA v. Industrial Claim Appeals Office*, 902 P.2d 854 (Colo. App. 1995).

6. Even if the treatment is reasonable, necessary and related, if the treatment is unauthorized, the respondents are not required to pay for it. Section 8-43-404(7); *Johnston v. Hunter Douglas, Inc.*, W.C. No. 4-879-066-01 (April 29, 2014); *Yeck v. Industrial Claim Appeals Office*, 996 P.2d 228 (Colo. App. 1999).

7. A limited referral for specific treatment does not render the referred physician an ATP for purposes of making general referrals. *Clark v. Hudick Excavating, Inc.*, W.C. No. 4-524-162 (November 5, 2004) (chiropractor could not make referrals as he was only authorized to perform chiropractic treatment.)

8. Here, the record contains no credible evidence that Respondent authorized the physical therapy provided by Ami Doyle post-MMI. Claimant and Ami Doyle conceded the physical therapy was provided without requesting authorization. Regardless of medical reasonableness or necessity, Respondent is not required to pay for unauthorized treatment. Further, even if there existed a referral to Ami Doyle, such referral is limited to performing physical therapy and does not provide authority to make referrals to physicians.

9. Similarly, Claimant treated with Dr. Gottlob outside the chain of referral. The credible evidence presented at hearing does not establish that an authorized provider referred Claimant to Dr. Gottlob. At hearing, Claimant testified she proceeded to Dr. Gottlob outside the workers' compensation system. While she allegedly did so out of necessity because her claim was closed, this testimony is not credited. Claimant had access to three authorized orthopedic surgeons. She declined to continue treatment with any of them. Instead, Claimant chose to direct her own care. The Act does not compel Respondent to pay for this choice.

10. Finally, Claimant requests reimbursement for vein treatment. However, in his final report, Dr. Scherr opined that Claimant's need for vein treatment did not relate to the industrial injury. As there is no credible medical evidence to the contrary, Claimant's request for reimbursement is denied.

ORDER

1. Claimant's claim for medical benefits for the medical treatment Claimant obtained after MMI from (1) Axis Physical Therapy and (2) Dr. Gottlob is denied and dismissed.

2. Claimant claim for vein treatment is denied and dismissed.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman Street, 4th Floor, Denver, Colorado, 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. ***For statutory reference, see section 8-43-301(2), C.R.S. (as amended, SB09-070). For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.***

Denver, CO 80203

ISSUE

- Whether Respondents overcame by clear and convincing evidence the opinion of the Division Independent Medical Examination (DIME) physician as to Claimant's permanent impairment rating and relatedness of Claimant's left knee.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ finds as fact:

1. On June 13, 2016, Claimant, a firefighter, suffered multiple work-related injuries in the course and scope of his employment. Claimant was transported to Boulder Community Hospital where medical providers initially diagnosed Claimant with a scalp laceration, vertebral artery injury, neck injury, and right knee pain. Hospital records indicate that Claimant did not report left knee symptoms or suffer a left knee injury. Claimant subsequently experienced acute bilateral pulmonary emboli.

PROCEDURAL POSTURE

2. On June 20, 2016, Dr. Matt Miller performed his initial examination of Claimant who reported injury to his head, neck, vertebral artery, right knee, left hand, and tailbone contusion. Dr. Miller's record reflects that Claimant did not report left knee symptoms or suffer a left knee injury.

3. On June 21, 2017, Respondents filed a Final Admission admitting to a whole person impairment of 17% for his spine and 30% for his right lower extremity.

4. Claimant requested a DIME evaluation which Dr. Jade Dillon performed. By report dated October 6, 2017, Dr. Dillon opined that Claimant suffered a 26% whole person impairment for his spine, a 33% impairment right lower extremity impairment. Dr. Dillon also assigned a 7% left lower extremity impairment.

5. Respondents applied for a hearing to overcome Dr. Dillon's DIME opinion with respect to her opinion that Claimant sustained a left knee injury as the result of his June 13, 2016 work injury.

FIRST ELEVEN MONTHS OF TREATMENT

6. During the eleven months following Claimant's injury, Claimant's medical providers – including Drs. Boublik, Carbaugh, Hewitt, Miner, and Miller – noted no left knee symptoms and diagnosed no left knee injuries.

7. On July 11, 2016, Dr. Martin Boublik evaluated Claimant. Dr. Boublik previously treated Claimant in 2000 for right knee ACL reconstruction, patellar tendon bone autograft, and extensive partial medial and lateral meniscectomies.

- Dr. Boublik examined Claimant's injured right knee and noted mild effusion, gentile motion 0-80, and tenderness.

- Dr. Boublik examined Claimant's left knee and noted no effusion, good mobility and range of motion 1-140 without pain, ligamentously stable, and mild patellofemoral crepitance without pain.

- Dr. Boublik diagnosed right knee pain, acute ACL graft tear, and degenerative medial and lateral meniscus tears.

- Dr. Boublik's record reflects that Claimant did not report left knee symptoms and did not suffer a left knee injury.

8. Clamant returned to Dr. Boublik on July 27, 2016, August 24, 2016, September 21, 2016, and November 2, 2016. At each visit, Dr. Boublik, or his PA Jameson Parker, noted that Claimant returned for reevaluation of Claimant's *right* knee following the work accident at which he also injured his head, and cervical spine. Dr. Boublik's records for these visits also do not reflect that Claimant reported left knee symptoms or suffered a left knee injury.

9. On October 25, 2016, Dr. Ron Carbaugh performed a psychological assessment of Claimant and prepared a report. Dr. Carbaugh presented a "relevant history" taken from Claimant's self-report and from the medical records. Dr. Carbaugh noted Claimant's injuries included a C2 vertebral fracture, vertebral artery injury, right knee fracture and ACL tear, and thoracic vertebral fractures. Dr. Carbaugh's record and report reflect that Claimant did not report left knee symptoms or suffer a left knee injury.

10. On December 21, 2016, Dr. Michael Hewitt provided a second opinion regarding Claimant's right knee. Dr. Hewitt referenced that body parts injured during the Claimant's June 13, 2016 work injury included cervical fracture, vertebral artery dissection, scalp laceration, and right knee fracture. Dr. Hewitt's record reflects that Clamant did not report left knee symptoms or suffer a left knee injury.

11. On January 6, 2017, Dr. Todd Miner, an orthopedist, consulted regarding Claimant's chronic and worsening right knee pain. Dr. Miner referenced that body parts injured during the Claimant's June 13, 2016 work injury included the right knee, scalp, thoracic spine and right tibial plateau. Dr. Miner examined Claimant's right and left knees and reviewed radiographs that revealed osteoarthritic changes in both knees. Dr. Miner did not reference a left knee injury.

12. On January 25, 2017, Dr. Miller noted Claimant was "much improved" and "was able to go up and down 9 flights of stairs with 50 lbs on his back. Was pushing and pulling 170 lbs 40 ft x 8. Is carrying 65 lb box without issues." Dr. Miller noted that "PT notes indicate that [Claimant] should likely be able to pass his fitness exam in 3-4 weeks." Dr. Miller's record does not reflect that Clamant reported left knee symptoms or suffered a left knee injury.

13. On March 29, 2017, Dr. Boublik reexamined Claimant's right knee and noted that during the previous nine months, Claimant had participated in rehab treatment for his right knee. Dr. Boublik did not reference left knee symptoms or a left knee injury. Dr. Boublik noted that Claimant presented with significant degenerative changes in both knees and that Claimant was at some risk for struggling with both of his knees in the future. He suggested that if Claimant felt like he required Visco supplementation for either his right knee or both knees, he should call.

14. On April 14, 2017, Claimant returned to work at full duty.

CLAIMANT"S FIRST MENTION OF LEFT KNEE PROBLEMS

15. On May 10, 2017, eleven months after Claimant's occupational injury, Claimant complained to a treatment provider about left knee problems. Dr. Boublik's assistant, Jameson Lee Parker, PA, noted, for the first time, that Claimant presented for examination of his *bilateral* knees. X-rays revealed degenerative changes of the patellofemoral joint of the left knee but no other acute bony masses, lesions, or abnormalities were noted. Mr. Parker itemized Claimant's occupational "polytrauma" to include head injury, C-spine injury, thoracic spine fractures, and right knee injury. Mr. Parker did not associate Claimant's left knee degenerative changes to the occupational "polytrauma." Rather, he characterized them as "persistent degenerative type symptoms."

16. On May 22, 2017, Amber Seno, a medical assistant at the Steadman Hawkins clinic drafted a letter "to whom it may concern," commenting that Claimant was treating for a work related right knee injury. She explained that because the office was involved in treating the work related right knee, they were also addressing Claimant's left knee complaints. Ms. Seno noted: "Given the mechanism of injury, it is conceivable that the left knee degenerative changes were flared up and may have ben made worse due to the injury as well as the amount of work the left leg had to do to support [Claimant] during his recovery." The ALJ finds that the following factors greatly reduce the persuasive value of Ms. Seno's letter:

- Ms. Seno is a medical assistant, not a physician or physician assistant.
- No persuasive evidence supports that the letter was sent, to whom it was sent, or for what purpose it was created.
- The language used by Ms. Seno – "conceivable," and "may have" – do not rise to the level required to establish causation.
- The letter was not carefully prepared and contains at least five errors which decrease its clarity.

MAXIMUM MEDICAL IMPROVEMENT

17. On May 23, 2017, Dr. Miller reported that Claimant had reached maximum medical improvement for his work-related injuries. Dr. Miller noted that Claimant presented with left knee arthritis, but specifically noted that Claimant's left knee was not injured in the occupational accident. He explained that Claimant did not have a primary injury to the left knee, x-rays revealed the presence of arthritis, and, as Claimant resumed his normal activity levels, he might experience some pain in the left knee but that it was *not* due to the occupational trauma. Dr. Miller rated Claimant with a 17% whole person impairment for neck and back injuries and a 30% lower extremity impairment for the right knee injury.

18. Respondents filed a final admission based on Dr. Miller's report. Claimant objected and requested a DIME.

19. On October 3, 2017, Dr. Jade Dillon performed the Division IME and prepared a report dated October 6, 2017. Dr. Dillon's pertinent history section noted that Claimant "is not sure if his memory is faulty with a short period of amnesia from the head injury, or if his recollections blurred simply because everything happened so quickly." Nevertheless, Claimant was able to recall that "at the time . . . both knees hurt, worse on the right." With regard to the left knee, Dr. Dillon concluded that Claimant "did sustain an injury at the time of the occupational injury in question and [Claimant had] residual stiffness. This is a ratable condition." Dr. Dillon did not include a diagnosis. Dr. Dillon agreed with Dr. Miller that Claimant reached maximum medical improvement on May 23, 2017. Dr. Dillon rated Claimant with a 26% whole person for the neck and back and 33% extremity for the right lower extremity and 7% for the left knee.

20. On November 17, 2017, Dr. Barry Ogin performed a Claimant sponsored independent medical examination. Dr. Ogin agreed with Dr. Miller that Claimant's left knee symptoms were not related to the work injury. Therefore, Dr. Ogin did not rate an impairment for the left knee. Dr. Ogin noted that Claimant's medical records did not support a conclusion that Claimant injured his left knee in the accident. Emergency Room notes on several occasions, imaging studies, primary care notes, and orthopedic records all focused just on the right knee without any mention of an injury to his left knee in the months after his initial trauma. Claimant's left knee symptoms progressively worsened over time which is consistent with an arthritic condition.

21. On January 10, 2018, Dr. Boublik reexamined both of Claimant's knees, but continued to identify the right knee, not the left knee, as part of the June 13, 2016, occupational "polytrauma." He noted that both knees showed end-stage degenerative changes and that Claimant's left knee was more painful than his right. Dr. Boublik recommended right knee treatment, pursuant to the Workers' Compensation Guidelines. Separately, Dr. Boublik recommended left knee treatment and that Claimant's personal insurance had denied hyaluronic acid injections because Claimant had not responded well to a cortisone injection.

22. Dr. Dillon testified at hearing. Dr. Dillon admitted she did not include a left knee diagnosis in her written report. Dr. Dillon did not specifically provide a work-related left knee diagnosis when she testified. Nevertheless, Dr. Dillon maintained that Claimant's left knee condition was work-related. Dr. Dillon primarily based her conclusion on three factors: 1) Claimant provided Dr. Dillon a verbal history on October 6, 2017, 17 months after the work injury, that his recollections blurred but he was able to recall that both knees hurt at the time of the accident. Dr. Dillon admitted, however, that Claimant saw multiple medical providers and none of them referenced left knee symptoms for several months following the work accident, including the Emergency Room records. 2) Dr. Dillon relied on the possibility that Claimant's left knee symptoms were minor compared to Claimant's other injuries and that Claimant's left knee symptoms could easily have been masked while the medical providers treated the other injuries. Dr. Dillon admitted that she expected Claimant to report left knee symptoms within a few weeks of good recovery and return to function. Dr. Dillon noted that probably occurred around the time that Amber Seno prepared a note that reflected Claimant reported left knee symptoms on May 22, 2017. Subsequently, Dr. Dillon agreed that she was a little troubled by the fact that four months earlier, on January 25, 2017, Dr. Miller noted good recovery and return to function and that Claimant was able to go up and down 9 flights with 50 lbs. on his back, and pushing and pulling 170 lbs. 40 ft x 8, and carried a 65 lb. box without issues but that medical records did not reflect left knee complaints for another 4 months. 3) Dr. Dillon relied on the fact that Claimant was asymptomatic prior to the occupational injury but, at the time Dr. Dillon saw Claimant, his left knee was symptomatic. Dr. Dillon's testimony was not persuasive.

23. Dr. Ogin testified at the hearing as an expert in Physical Medicine and Rehabilitation, and in Pain Management. Dr. Ogin concluded that Claimant's left knee symptoms are due to (1) underlying, pre-existing arthritis, (2) the normal progression of arthritis, and (3) Claimant's left knee condition/symptoms are not related to a work injury. Dr. Ogin testified that Dr. Dillon erred in reaching a different conclusion, and that the difference was more than simply one of opinion.

24. Specifically, Dr. Ogin testified:

- Work relatedness was not supported by the Medical Treatment Guidelines which require swelling and/or pain in a joint due to an aggravating activity. In this case, none of the medical records support that claimant reported any left knee symptoms or hurt his left knee at the time of the injury or for several months thereafter. Clamant agreed that he was not aware of any left knee pain or physical symptoms for several months after the accident.

- Dr. Boublik, an orthopedic specialist, evaluated Claimant's left knee, in conjunction with his evaluation of Claimant's injured right knee, and Dr. Boublik did not identify any pain or swelling and noted good range of motion in Claimant's left knee. Dr. Boublik identified underlying arthritis and expected risk with both knees in the future but Dr. Boublik did not recommend any left knee treatment at that time.

- There was no indication of a left knee trauma that aggravated/worsened the underlying left knee arthritis. Claimant's diagnosis of pre-existing osteoarthritis, in and of itself, is not an occupational condition.

- Every medical provider agreed that the left knee arthritis predated the work injury but was asymptomatic.

- According to the Guidelines, osteoarthritis commonly leads to functional loss over time; with or without a work-related aggravation. In this case, Claimant was asymptomatic prior to the work injury and for several months after the work injury. After left knee symptoms began, Claimant's left knee symptoms progressively worsened over time which was consistent with an underlying arthritic condition.

- Claimant presented with the non-occupational risk factor of a body mass index of 25 or greater.

25. Dr. Ogin summarized that if Claimant's work injury caused significant enough trauma to Claimant's left knee to aggravate his underlying arthritic condition, the aggravation would have been evidenced by pain and swelling most prominently immediately after the injury. Claimant would have reported symptoms at or around the time of the accident, which he did not. The medical records reflect that Claimant did not report any left knee symptoms for several months.

26. Dr. Ogin summarized that had Claimant injured his left knee, the normal progression of his condition would have been improvement and then worsening over time. That did not occur.

27. Finally, Dr. Ogin summarized that Claimant treated with multiple medical providers who identified Claimant's underlying arthritic condition, but none – other than Dr. Dillon -- considered the left knee symptoms work related.

28. Dr. Ogin concluded that Dr. Dillon erred in the following ways:

- when she relied on Claimant's history of left knee pain 17 months after the work injury rather than relying on the medical records prepared contemporaneously with each visit;

- when she postulated that Claimant's other injuries masked his left knee pain;

- and that she erred when she related left knee problems to a work injury simply because his left knee was asymptomatic at the time of the injury but symptomatic approximately one year later .

The ALJ credits Dr. Ogin's testimony and opinions as credible, persuasive, and well supported by the medical records and other medical opinions.

29. Claimant testified at the hearing that he struck both knees during his fall, but that nothing was wrong with his left knee for several months, and he did not experience any pain in his left knee until November or December 2016. Claimant testified that in November or December, 2016, he mentioned left knee symptoms to Dr. Miller who referred Clamant to Drs. Hewitt and Minor. However, Claimant admitted on cross examination that Dr. Miller's referrals were only for his right knee. Claimant testified that he did not return to normal function until May, 2017, contrary to Dr. Miller's January 25, 2017, medical note that Claimant was much improved and able to go up and down 9 flights with 50 lbs. on his back, push and pull 170 lbs. 40 ft x 8, and carry a 65 lb. box without issues. The ALJ finds Claimant to be a poor historian which limited the persuasive value of his testimony.

30. The ALJ finds, based on the totality of the evidence, that Respondents have overcome by clear and convincing evidence the opinion of the DIME physician as to the relatedness of Claimant's left knee injury and permanent impairment rating.

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the Judge draws the following conclusions of law:

Generally

The purpose of the Workers' Compensation Act of Colorado, sections 8-40-101, et seq., C.R.S., is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. § 8-40-102(1), C.R.S. The facts in a workers' compensation case must be interpreted neutrally, neither in favor of the rights of the claimant nor in favor of the rights of respondents and a workers' compensation claim shall be decided on its merits. § 8-43-201, C.R.S.

Assessing weight, credibility, and sufficiency of evidence in a Workers' Compensation proceeding is the exclusive domain of the administrative law judge. *University Park Care Center v. Industrial Claim Appeals Office*, 43 P.3d 637 (Colo. App. 2001). Even if other evidence in the record may have supported a contrary inference, it is for the ALJ to resolve conflicts in the evidence, make credibility determinations, and draw plausible inferences from the evidence. When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and actions; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. See *Prudential Insurance Co. v. Cline*, 57 P.2d 1205 (Colo. 1936); *Bodensieck v. Industrial Claim Appeals Office*, 183 P.3d 684 (Colo. App. 2008). The weight and credibility to be assigned expert testimony is a matter within the discretion of the ALJ. *Cordova v. Industrial Claim Appeals Office,* 55 P.3d 186 (Colo. App. 2002). To the extent expert testimony is subject to conflicting interpretations, the ALJ may resolve the conflict by

crediting part or none of the testimony. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 441 P.2d 21 (Colo. 1968).

The ALJ's factual findings concern only evidence and inferences found to be dispositive of the issues involved; the ALJ has not addressed every piece of evidence or every inference that might lead to conflicting conclusions and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

Overcoming DIME on PPD Impairment Rating and Relatedness

A DIME physician's findings of causation or relatedness and impairment are binding on the parties unless overcome by "clear and convincing evidence." §8-42-107(8)(b)(III), C.R.S.; *Peregoy v. Industrial Claim Appeals Office*, 87 P.3d 261, 263 (Colo. App. 2004). "Clear and convincing evidence" is evidence that demonstrates that it is "highly probable" the DIME physician's rating is incorrect. *Qual-Med, Inc. v. Industrial Claim Appeals Office*, 961 P.2d 590, 592 (Colo. App. 1998). In other words, to overcome a DIME physician's opinion, "there must be evidence establishing that the DIME physician's determination is incorrect and this evidence must be unmistakable and free from serious or substantial doubt." *Adams v. Sealy, Inc.,* W.C. No. 4-476-254 (ICAP, Oct. 4, 2001). The mere difference of medical opinion does not constitute clear and convincing evidence to overcome the opinion of the DIME physician.

The question of whether the DIME physician's rating was overcome by clear and convincing evidence presents questions of fact for determination by the ALJ. *Wackenhut Corp. v. Industrial Claim Appeals Office*, 17 P.3d 202 (Colo. App. 2000). The determination of whether there is a sufficient "nexus" or causal relationship between the claimant's employment and the injury is one of fact that the ALJ must determine based on a totality of the circumstances. *Moorhead Machinery & Boiler Co. v. DelValle*, 934 P.2d 861 (Colo. App. 1996). Proof of causation is a threshold requirement that an injured employee must establish by a preponderance of the evidence before any compensation is awarded. *Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844, 846 (Colo. App. 2000). The question of causation is generally one of fact for determination by the Judge. *Faulkner*, 12 P.3d at 846.

All results flowing proximately and naturally from an industrial injury are compensable. See *Standard Metals Corp. v. Ball*, 172 Colo. 510, 474 P.2d 622 (1970). However, no compensability exists when a later accident or injury occurs as the direct result of an independent intervening cause. An unrelated medical problem may be considered an independent intervening cause even where an industrial injury impacts the treatment choices for the underlying medical condition. *Owens v. Industrial Claim Appeals Office,* 49 P.3d 1187 (Colo. App. 2002).

Respondents have met their burden and have established by clear and convincing evidence that it was "highly probable" that Dr. Dillon, the DIME physician, incorrectly related Claimant's left knee problems to the work injury. As a result, Dr.

Dillon incorrectly assigned a 7% lower extremity permanent impairment rating for Claimant's left knee. The opinions and testimony of Dr. Ogin are found credible and persuasive. The opinion of Dr. Miller is found credible and persuasive. Their overall opinions were detailed and supported by the medical records.

Dr. Dillon erred when she concluded Claimant's left knee was injured during the accident and that Claimant's current left knee symptoms are related to the work injury. Dr. Dillon's causation assessment was flawed and did not comply with the Medical Treatment Guidelines. Specifically, the Medical Treatment Guidelines require swelling and/or pain in a joint due to an aggravating activity. In this case, no persuasive medical records support the conclusion that Claimant reported any left knee symptoms or hurt his left knee at the time of the injury or for several months thereafter. Multiple medical providers evaluated Claimant and diagnosed multiple medical conditions, however, none of the medical providers referenced left knee symptoms until almost one year after the work injury. These include the Boulder Community Hospital Emergency Room, Dr. Matt Miller, Dr. Martin Boublik, Dr. Ron Carbaugh, Dr. Michael S. Hewitt, Dr. Todd Miner, and Dr. Barry Ogin. Dr. Boublik specifically examined Claimant's left knee less than one month after the work injury and Dr. Boublik noted no effusion, good mobility and range of motion without pain, ligamentously stable, and mild patellofemoral crepitance without pain.

Multiple doctors, including orthopedic specialists, identified underlying left knee osteoarthritis, but did not relate the arthritis to the work injury. Dr. Boublik and Dr. Miner noted that radiographs revealed tricompartmental osteoarthritic changes in both knees. None of the doctors treated Claimant's left knee in the workers' compensation claim, even after Claimant's left knee became symptomatic almost one year after the work injury. Most recently, on January 10, 2018, Dr. Boublik referenced Claimant's right knee as part of the June 13, 2016, occupational "polytrauma" but not the left knee. Dr. Boublik noted that both knees reflected end-stage degenerative changes and he recommended treatment of the right knee as part of the worker's compensation claim but noted treatment of the left knee was handled by Claimant's commercial insurance.

Dr. Dillon's conclusion was not persuasive and her opinion was overcome because Dr. Dillon ignored the overwhelming evidence provided in the medical records. Instead, Dr. Dillon relied on Claimant's verbal history given to her 17 months after the work injury that, even though his recollection was blurred, he recalled that he injured his left knee during his fall. Dr. Dillon's conclusion is at odds with Claimant's testimony that there was nothing wrong with his left knee for several months, and that he did not experience any pain in his left knee until November or December 2016.

Dr. Dillon's conclusion was not persuasive and her opinion was overcome because Dr. Dillon based her conclusion, in part, on the possibility that Claimant's left knee symptoms were minor and masked by Claimant's other injuries. Dr. Dillon admitted that if the other injuries masked the left knee injury, she would expect Claimant to have reported left knee symptoms within a few weeks of good recovery and return to function which she estimated occurred around May 2017. The medical records, however, reflect

that Claimant recovered well and returned to function in January 2017. Even Dr. Dillon admitted that she was "a little troubled" by the fact that four months earlier, on January 25, 2017, Dr. Miller noted good recovery and return to function and that Claimant was able to go up and down 9 flights with 50 lbs. on his back, and pushing and pulling 170 lbs. 40 ft x 8, and carried a 65 lb. box without issues but that medical records did not reflect left knee complaints for another 4 months.

Dr. Dillon's conclusion was not persuasive and her opinion was overcome because she ignored the natural progression of arthritic conditions. Dr. Dillon relied on the fact that Claimant was asymptomatic prior to the occupational injury but, at the time Dr. Dillon saw Claimant, almost one and a half years later, his left knee was symptomatic. Dr. Ogin persuasively pointed out that Claimant was asymptomatic for several months after the work injury. Also, Claimant's diagnosis of pre-existing osteoarthritis, in and of itself, is not an occupational condition. There was no indication of a left knee trauma that aggravated/worsened the underlying left knee arthritis. Osteoarthritis commonly leads to functional loss over time; with or without a work-related aggravation. In this case, several months after the work injury, Claimant's underlying arthritis became symptomatic and Claimant's left knee symptoms progressively worsened over time; consistent with an underlying arthritic condition. Dr. Ogin persuasively testified that if Claimant's work injury caused significant enough trauma to Claimant's left knee to aggravate his underlying anthric condition, the aggravation would have been evidenced by pain and swelling most prominently after the injury, and Claimant would have reported symptoms at or around the time of the accident, which he did not.

Colorado Division of Workers' Compensation Impairment Rating Tips provide that permanent impairment ratings are only warranted when a specific diagnosis and objective pathology can be identified. See Desk Aid #11, General Principles 1. Dr. Dillon erred when she failed to identify a work-related diagnosis of his left knee symptoms.

In summary, Respondents met their burden of proof that it was highly probable that Dr. Dillon, the DIME physician, incorrectly related Claimant's left knee problems to the work injury and incorrectly assigned Claimant a 7% lower extremity permanent impairment rating. The opinions of Dr. Miller and Dr. Ogin are more credible that Claimant suffered from underlying non-work-related arthritis and that Claimant did not suffer any permanent impairment as a result of his work-related injury.

ORDER

Based upon the foregoing findings of fact and conclusions of law, the Judge enters the following order:

1. Respondents have overcome Dr. Dillon's opinion that Claimant suffered a left knee injury as part of his compensable workers' compensation injury.

2. Respondents have overcome Dr. Dillon's opinion of permanent impairment by clear and convincing evidence. Thus, Claimant is not entitled to a left knee permanent impairment rating.

3. Issues not expressly decided herein are reserved to the parties for future determination.

DATED: April 30, 2018

/s/ Kimberly Turnbow

Kimberly B. Turnbow
Administrative Law Judge
Office of Administrative Courts
1525 Sherman Street, Suite 400
Denver, CO 80203

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

STIPULATIONS

If the claimed injury is found compensable, the parties reached the following stipulations:

1. Claimant is subject to the maximum temporary total disability rate for 2016 as her average weekly wage is $1,407.75.

2. Claimant returned to work full duty as of November 1, 2017 resulting in a period of temporary total disability exposure extending from June 21 through October 31, 2017.

The stipulations are approved.

REMAINING ISSUES

I. Is Claimant's claimed psychological injury based in part on circumstances common to all fields of employment and thus should be denied and dismissed?

II. Did Claimant prove by a preponderance of the evidence that she endured psychologically traumatic event(s) generally outside of a worker's usual experience that would have evoked significant symptoms of distress in a similarly situated worker?

III. Did Claimant prove by a preponderance of the evidence that she was temporary and totally disabled as a consequence of her alleged work injury?

Because the ALJ concludes that Claimant failed to prove the elements required to establish a claim of mental impairment as required by § 8-41-301(2)(a), this order does not address her entitlement to temporary total disability benefits.

FINDINGS OF FACT

Based upon the evidence presented at hearing, the ALJ enters the following findings of fact:

1. Claimant was hired as the Facility Education Director, i.e. the school principal at Grand Mesa Youth Services Center (GMYSC) in the summer of 2015.

2. Grand Mesa is a multipurpose detention facility and school for juveniles involved with the criminal justice system.

3. As school principal, Claimant was to manage the educational services that are provided to committed youth, supervise ten staff members, oversee curriculum, schedules, and ensure educational compliance components for Division of Youth Services.

4. Claimant testified that upon taking the position, she understood there were many issues for the incoming education director to address, including student scheduling concerns, difficult staff members and problems with lesson plans not meeting standards.

5. Cris Matoush testified as the director of GMYSC. He functioned in that position for three and one half years, and for the duration of claimant's employment at the facility. Mr. Matoush has a total of ten years of experience as a supervisor for the State of Colorado.

6. As facility director, Mr. Matoush was involved in Claimant's hiring process. He sat on her interview panel and testified that the facility had just been audited and was found to be out of compliance in certain areas. Accordingly, he testified that he communicated his expectations about getting the educational components of the facility, including special education back into compliance. He also addressed the need for strong personnel management and the supervisory components of the job.

7. Mr. Matoush met with Claimant to discuss each person she was to supervise. During this meeting, the two discussed each person's relative strengths and their weaknesses.

8. While Claimant was not hired as a turnaround principal, she felt she was acting in that capacity, testifying that she was set up to be a "hatchet man." Based upon the evidence presented, the ALJ finds that Claimant was apprised of the specific challenges associated with her job, including the supervisory changes necessary to bring the educational component of GMYSC into compliance. Moreover, the evidence presented persuades the ALJ that Claimant knew that making would be difficult and the subject of significant pushback by the staff. Indeed, Claimant testified as much indicating, in both her testimony and interrogatory responses, that "[i]n school turnaround where major functions, procedures, and schedules are changed, it is always difficult for staff to accept . . ."

9. Claimant testified that Mr. Matoush refused to support her decisions concerning staff and would directly contradict and undermine her instructions/directives to staff members leaving her with little authority over the staff she was charged with supervising. Consequently, she testified that the staff become increasingly insubordinate and hostile. Claimant testified that Mr. Matoush would yell and point his finger at her in front of staff members creating a hostile work environment and unnecessary stress. According to Claimant, Mr. Matoush would ask her out to dinner and drinks and to his kids' soccer games. Claimant submitted that these invites were sexual advances and beyond the normal supervisor/subordinate employment relationship. On one occasion, Mr. Matoush went to Claimant's home while she was

sick. Claimant found this unusual, testifying that Mr. Matoush apologized for the chaos at work but that no changes were made, testifying "the next day it would be back to the same thing."

10. Mr. Matoush testified that he never asked Claimant out to dinner or drinks. Moreover, he testified that he just threw out that if Claimant was bored and had nothing to do, she could come watch his kids soccer games. The ALJ interprets the evidence surrounding Mr. Matoush's offer to watch a soccer game as a social invite made to Claimant and others he worked with and not a sexual advance as suggested by Claimant. Mr. Matoush testified that he is not a yeller and that he never yelled at Claimant or anyone else he supervises.

11. Mr. Matoush admitted that he went to Claimant's home on a single occasion around the middle of December 2016 after she failed to appear for her scheduled shift. According to Mr. Matoush, Claimant failed to show up for her 7:30 AM shift and not notified anyone of her unscheduled absence.

12. Pursuant to GMYSC protocol, an employee taking unexpected leave was to call the control unit and notify Mr. Matoush for supervisory approval. Claimant was familiar with the protocol and had previously followed it when calling in sick.

13. Having received no contact from Claimant regarding her unanticipated absence, Mr. Matoush testified that he checked with control and they had not heard from Claimant. Mr. Matoush then asked several other facility members if they had contact with Claimant, and no one had heard from her.

14. Mr. Matoush called and texted Claimant several times to ask if she was okay. Claimant did not respond. Consequently, at about 11:00 a.m. he discussed the need to make a welfare check on Claimant with colleagues Justin Roberts and Patty Maurer. Neither Mr. Roberts nor Ms. Maurer voiced an opposition to Mr. Matoush checking on Claimant. Accordingly, Mr. Matoush drove to Claimant's house and knocked on her door. Claimant did not answer immediately and when she did, Mr. Matoush testified that she did not look well and appeared as if she had been crying.

15. Mr. Matoush testified that he was invited in and sat down on the couch while Claimant sat in a recliner. They discussed why she was not at work. According to Mr. Matoush, he and Claimant discussed several personal life stressors including a custody battle involving her grandchildren and her doing all the legwork for that legal dispute. They also discussed the fact that Claimant's husband was not working and that they were struggling financially, were "house poor," and had been unable to afford a turkey dinner for Thanksgiving. They discussed that Claimant and her husband were not doing well and had discussed divorce. Per Mr. Matoush, he and Claimant discussed how these personal outside struggles were affecting her work performance. He reminded Claimant of the policies and protocol to follow if she was to be unexpectedly absent. Mr. Matoush testified that the visit ended cordially and at no time did Claimant express any discomfort or ask him to leave.

16. On June 6, 2017, Claimant had a meeting with Mr. Matoush and Dave Livingston, a life coach hired by GMYSC to work with Claimant, to address what was happening with her team. Claimant became upset during the meeting and abruptly left Mr. Matoush's office and the GMYSC facility, abandoning the remainder of her shift. She did not return to the facility and did not seek permission to take the balance of the day off.

17. On June 21, 2017, Mr. Matoush hand-delivered a Corrective Action to Claimant for her actions during the June 6, 2017 meeting. The Corrective Action expressed that Claimant's abrupt departure from the meeting and the facility on June 6 violated three separate rules/policies, specifically State Personnel Board Rule 5-4, Board Rule 6-1, and Division of Youth Services (DYS) Policy 3.6, Article III, Subsection D.1. Claimant has alleged a date of injury that corresponds with service of the corrective action.

18. State Personnel Board Rule 5-1 states, "Employees are required to work their established work schedule unless on approved leave…Unauthorized use of any leave may result in the denial of paid leave and/or corrective or disciplinary action."

19. State Personnel Board Rule 6-1 states, "Employees represent the state so they are required at all times to use their best efforts to perform assigned tasks promptly and efficiently and to be courteous and impartial in dealing with those served."

20. DYS Policy 3.6, Article III, Subsection D.1 states, "Whenever an employee has a need to request time off, the employee shall make a request to their appointing authority or designee. All requests shall be made in writing prior to the date(s) needed and in accordance with the facility/office implementing procedure. In situation of emergency or unexpected circumstances, notification shall be made to the appointing authority or designee, as soon as the information becomes available."

21. Mr. Matoush testified that Claimant's shift abandonment warranted a corrective action because he had already addressed the leave policy with Claimant during his welfare check in December 2016. He specifically testified, "The second time that had happened is more of a this is a formal document now, this is the second time that it's happened. So we are going to address it." Based upon the evidence presented, the ALJ finds that the corrective action issued by Mr. Matoush was taken in good faith to address Claimant's failure to follow established leave policy.

22. Claimant testified that at least one employee filed a grievance against her, and two others filed a type of formal complaint. Claimant admitted that negative peer reviews did not psychologically traumatize her. According to Claimant, she knew she was going to get negative reviews, testifying that "the negative reviews were not the issue...did that destroy my world? No. That's just part of the principal."

23. Claimant was not disciplined or demoted in any way while the aforementioned grievances/complaints were being investigated or because of receiving a corrective action.

24. Mr. Matoush testified that being the subject of a grievance/complaint is not generally outside of the expected experience encountered by someone in the position of facility education director at GMYSC. According to Mr. Matoush, simply being in a supervisory capacity as part of an administrative position "only increase (sic) your chances to get a form of grievance at some point in your career."

25. Mr. Matoush was grieved by the same employee who grieved Claimant and over the same events that formed the grievance against her. Mr. Matoush did not consider this to be outside his experience as facility Director nor as an employee with supervisory capacity in general. He was not psychologically traumatized by the grievance.

26. Claimant outlined a number of events involving her subordinates that she characterized as involving unethical behavior. These included: a teacher leaving doors open after Claimant instructed her not to; a teacher keeping a calendar after Claimant told her there was to be one master calendar for student registration; a teacher sending inappropriate emails, including a satirical prescription ad; an administrative assistant who was setting her own hours and using a former employee's computer credentials to access the computer; a P.E. teacher having a high number of time outs and a computer teacher not getting out of his chair to teach during lessons. Claimant testified that these events were not traumatizing per se. Rather, Claimant suggested that dealing with these events became traumatizing after she felt undermined and marginalized by what she perceived was a lack of support on the part of Mr. Matoush.

27. Much of Claimant's direct testimony regarding her experiences at GMYSC was directly contradicted by Mr. Matoush, including her allegations that GMYSC did not hire a life coach for her; that she did not discard old folders and binders in her administrative assistant's office; that Mr. Matoush was always texting her for dinner and drinks; that Mr. Matoush appointed a science teacher to a (non-existent) position of dean of students and that Claimant called off sick to Tracy Schwartz the day of Mr. Matoush's wellness check.

28. Claimant has a history of Wellbutrin and Celexa use predating her employment with GMYSC by several years. Claimant testified that she uses these medications for treatment of ADHD.

29. Claimant sought treatment for her alleged psychological injuries from her primary physician, Dr. Klemmetson with Primary Care Partners in Grand Junction.

30. On September 7, 2017, Dr. Klemmetson's office and Claimant exchanged emails regarding Claimant's claim for disability. Dr. Klemmetson's triage assistant, "Wendi" told Claimant to let her know what she needed, and "Hopefully you can get at least what they owe you out of them!!"

31. On September 15, Claimant visited the Community Hospital Emergency Department in Grand Junction. Claimant testified that she was directed to the ER to get

"some medical documentation" for her condition and to "check off the requirements for workmen's comp." According to Claimant, she did not go to the ER for treatment.

32. While in the ER, Claimant told Dr. Roper that "she used to enjoy going out with friends and now has no interest…symptoms are severe enough that she has been unable to work and has experienced significant disruption to her normal everyday life."

33. On September 19, 2017, Claimant wrote Dr. Klemmetson an email stating, "Don't be alarmed by my ER visit on Friday after I left your office. This was what Workman's Comp asked me to do. Ridiculous!"

34. On September 21, 2017, Dr. Klemmetson wrote Claimant an email regarding her claim for benefits and her work restrictions stating: "We faxed a letter stating you have been on continuous leave since the beginning and also you are off work until 10/5 f/u. You must f/u with us on that date or before to continue your leave. If you miss that it will give the ins another reason to deny your claim for not following up as you were requested to do so. We want to make sure we all do our part and not give them any more ammunition to deny you payment and this is one area I have run into them picking apart claims as well and we know that you are very much knowing they have not been playing very nicely with us."

35. On October 2, 2017, Claimant sent an email to Dr. Klemmetson requesting that a fitness to return to work document be faxed to her. Dr. Klemmetson responded, "What date for return to work did you want on it and any restrictions or reduced scheduled hours?"

36. Concurrently with her workers' compensation claim, Claimant filed a Colorado Department of Human Services (CDHS) Employee Discrimination Compliant, alleging "a hostile work environment, bullying, harassment by some of the Grand Mesa Education Staff. She also filed a specific complaint against Cris Matoush for creating a hostile work environment, for discrimination based on sex, for inappropriate comments and boundaries for supervisor, retaliation for seeking other employment, retaliation for requesting a new supervisor, retaliation for contacting Vern Jackson, all of which she complained caused her to have a mental breakdown.

37. Claimant's complaints were investigated. Both she and Mr. Matoush were interviewed. During her interview, Claimant stated that Cris Matoush asked to take her for dinner and drinks and came to her house once when she was sick. According to Claimant's statement, "it felt like an inappropriate relationship, continuing to be hostile towards me and then engage in a 'honeymoon cycle' similar to domestic violence." Claimant also stated to the Civil Rights Board that her performance evaluations were "inappropriate" and the corrective action was "vindictive."

38. In response to Claimant's assertion that he did not support her in a "consistent manner as Principal", Mr. Matoush replied that he "supported her when he believed it was warranted, but, as the Facility Director, he felt it was sometimes his responsibility to support the efforts and/or ideas of others as well." Mr. Matoush reported

that from the start of Claimant's employment there "seemed to have been many family issues . . . that took her away from the facility" resulting in "frequent absences from the first." Nonetheless, Mr. Matoush reported that multiple opportunities were presented to Claimant to improve her performance and behavior. He reported that he hired a team coach and scheduled mediation sessions but that these efforts were not as "successful as hoped." According to Mr. Matoush, staff members, both old and new were complaining of Claimant's professionalism and trustworthiness prompting a "full revolt of teachers."

39. Mr. Matoush adamantly denied asking Claimant to dinner or drinks. He admitted that she was invited to group lunches. He further admitted he went to Claimant's house to "check" on her, as he knew her self-esteem was not high, that she was not coming to work and that she was not in a "good space."

40. Following their investigation, the Civil Rights Board found it significant that Claimant's "initial complaint focused solely on her difficult work environment due to the hostility directed towards her by subordinates" and only after speaking to investigators during which she was informed that complaints about insubordinate and challenging staff were not matters that are investigated by the Civil Rights Unit, did the tone and wording of the written complaint change to include retaliation, harassment, discrimination and hostile work environment. The Board noted that Claimant's complaints centered on what "she defined as hostility and harassment from subordinates and co-workers, combined with the lack of support from her supervisor, [Mr. Matoush]." According to the Board's report, Claimant appeared "angry and defensive."

41. The Civil Rights Board found, "[Matoush's] alleged invitations for dinner and drinks unsubstantiated. The Board also concluded that, "[Matoush's] visit to [Claimant's] home on one occasion did not appear to be sexually motivated, but instead appeared to be for reasons of a wellness check."

42. The Civil Rights Board found, "There is no evidence that the employer issued the corrective action in bad faith and that Claimant admitted she left a scheduled meeting with her supervisor and coach (David Livingston) on June 6, 2017, and left the facility for the rest of the day without permission."

43. Finally, the Board noted that there was "sufficient evidence that [Claimant] had room for improvement in her performance and management of subordinates."

44. Based upon the totality of the evidence presented, the Civil Rights Board concluded, "[Claimant's] allegations of gender discrimination, sexual harassment, and hostile work environment are unsubstantiated and do not support a claim for damages.

45. While the evidence presented confirms that several outside personal stressors were affecting her work performance and causing her substantial mental stress, the ALJ is convinced that Claimant's alleged mental impairment was emanating primarily from her occupation and place of employment. Nonetheless, the ALJ credits

the testimony of Mr. Matoush and the documentary evidence to find that Claimant failed to establish other statutory elements necessary to prove that she suffered a compensable mental impairment arising out of and in the course of her employment with GMYSC. Specifically Claimant failed to establish that she was subjected to psychologically traumatic events generally outside her employment that would evoke significantly distress in a worker in similar circumstances and/or that the corrective action issued June 21, 2017, was taken in bad faith, i.e. "vindictively."

CONCLUSIONS OF LAW

Based upon the foregoing findings of fact, the ALJ draws the following conclusions of law:

A. To receive compensation or medical benefits, a claimant must prove that he/she is a covered employee who suffered an injury arising out of and in the course of employment. Section 8-41-301(1); *see also, Faulkner v. Industrial Claim Appeals Office*, 12 P.3d 844 (Colo. App. 2000); *City of Boulder v. Streeb*, 706 P.2d 786 (Colo. 1985); *Pacesetter Corp. v. Collett*, *33 P.3d 1230* (Colo. App. 2001). The claimant must prove that an injury directly and proximately caused the condition for which benefits are sought. *Wal-Mart Stores, Inc. v. Industrial Claim Appeals Office*, 989 P.2d 251 (Colo. App. 1999); *Snyder v. Industrial Claim Appeals Office*, 942 P.2d 1337 (Colo. App. 1997), *cert. denied* September 15, 1997. Claimant must prove entitlement to benefits by a preponderance of the evidence. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S.

B. "Mental-mental" injuries are injuries in which mental impairment follows a solely emotional stimulus. *Oberle v. Indus. Claim Appeals Office,* 919 P.2d 918, 920 (Colo. App. 1996). "An injury that is 'the product of purely an emotional stimulus that results in mental impairment' requires a 'heightened standard of proof' to 'help prevent frivolous or improper claims.'" *Kieckhafer v. Indus. Claim Appeals Office*, 284 P.3d 202, 205–06 (Colo. App. 2012) (internal citations omitted). This is true because "[c]ases in which a claimed disability is based on emotional or psychological cause and in which physical injury is absent are less subject to direct proof and more susceptible to being frivolous in nature." *Dushane v. Beneficial Colorado, Inc.,* W.C. No. 4-218-217 (ICAO July 17, 1996).

C. Section 8-41-301(2)(a), C.R.S., addresses this heightened burden of proof and provides the conditions of recovery for claims of mental impairment. According to § 8-41-301(2)(a), the claim "must be proven by evidence supported by the testimony of a licensed physician or psychologist." Moreover, the mental injury must "consist of a psychologically traumatic event that is generally outside of a worker's usual experience and would evoke significant symptoms of distress in a worker in similar circumstances." *Id.* "This interpretation of the statute serves the legislative purpose of weeding out frivolous claims predicated on alleged idiosyncratic responses to non-stressful, or mildly

stressful, occurrences which would not have produced significant distress in a reasonable worker." *Gaudett v. Stationers Distributing Company,* W.C. No. 4-135-027 (ICAO April 5, 1993). Finally, "a mental impairment shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement or similar action taken in good faith by the employer." Section 8-41-301(2)(a), C.R.S. Good faith personnel actions are those which are reasonable under an objective standard. The question of whether employer discipline is objectively reasonable is a question of fact to be determined by examining the surrounding facts and circumstances. *Spencer v. Synthes USA,* W.C. No. 4-370-762 (ICAO, Dec. 28, 2000).

D. Section 8-41-301(2), C.R.S. applies to claims of multiple, allegedly traumatic events, as well as claims alleging a single traumatic event. "When multiple stressors are alleged, that determination must include a separate analysis of each event to ascertain whether the claim is based in whole or in part upon facts or circumstances common to all fields of employment." *Pub. Serv. of Colorado v. ICAO,* 68 P.3d 583, 585 (Colo. App. 2003). If a claim is based on one or more incidents that are common to all fields of employment, it should be denied. *Trujillo v. ICAO,* 957 P.2d 1052, 1054 (Colo. App. 1998).

E. In this case, the ALJ agrees with Respondents that Claimant's stress claim is based at least in part on incidents common to all fields of employment, specifically routine conflict and stress related to managing and being managed by others at work. Conflict between employees and supervisors over unpopular directives, job performance, schedules, personality differences and perceived lack of support is not isolated to correctional facilities or schools, but rather widespread and shared with all fields of employment. Here, the testimony of Mr. Matoush coupled with the balance of the persuasive documentary evidence convinces the ALJ that Claimant's allegation that she was working in a hostile, retaliatory and vindictive work environment (created by Mr. Matoush) which generated conflict/stress that exceeds the level common to all fields of employment is most probably overstated. Indeed, the Civil Rights Board concluded as much in finding that Claimant's assertions of a hostile work environment were unsubstantiated after investigation of the same.

F. As discussed above, Claimant's conflict with Mr. Matoush and her subordinate staff is common to all fields of employment. Moreover, Claimant's issues with Mr. Matoush and her staff were to be expected within her position. Claimant testified that she took the position understanding there were significant problems with schedules, standards, and difficult staff members. Claimant admitted that it is always difficult for staff to accept major changes, that such changes are often met with hostility. She also admitted that the conflict she experienced with subordinates was not unexpected, noting that her negative reviews and peer treatment were simply part of being the principal. In this regard, Claimant's testimony mirrors that of Mr. Matoush who testified that complaints and grievances were part of Claimant's job as education director, part of being a supervisor, and part of working for a State agency. Based upon a totality of the evidence presented, the ALJ concludes that none of the conflict that

Claimant alleges she had with her colleagues constitutes a psychologically traumatic event that would be considered outside of a principal's usual working experience.

G. In concluding that Claimant's claim involves incidents common to all fields of employment and that Claimant was not subjected to conflict which was so unusually intense that it was outside the normal conditions of her employment as a principal, the ALJ finds the case of *Spencer v. Synthes USA,* W.C. No. 4-370-762 (ICAO, Dec. 28, 2000) instructive. In *Spencer*, the claimant's relationship with her supervisor became "quite strained" when the supervisor disciplined her for failure to keep her radio and keys in her possession. Analogous to the instant case, the claimant in *Spencer* alleged that her supervisor "set out on a course of behavior with the sole intent of harassing and belittling her" and that his conduct caused her anxiety and depression. The ALJ ruled that "claimant presented insufficient evidence to demonstrate that her conflict with her supervisor, and the results which flowed from that conflict, were so unusually intense that they were outside of the normal conditions of employment." *Id.* The ICAO upheld the ALJ's dismissal of the claim stating: "We agree with the ALJ's conclusion that some level of conflict between employees and supervisors is 'objectively common' to all fields of employment." *Id.* Because the ALJ finds/concludes that Claimant's conflict with Mr. Matoush is based in part upon facts and circumstances common to all fields of employment, it must be denied under the principals announced in *Trujillo, supra.*

H. Even if Claimant had established that the incidents she asserts exposure to were so unusually intense that they would be considered to be outside of the normal conditions of her employment, she failed to establish that those events would evoke significant symptoms of distress in a worker whose experience, training, and duties are similar to hers, i.e. an experienced school principal. Here, the persuasive evidence persuades the ALJ that none of Claimant's allegations meets this standard. Claimant's allegedly traumatic events include: a lack of perceived support from Mr. Matoush, teachers propping doors open; emails with cartoons and fake prescription ads; dual competing spreadsheets and calendars, and being told to write up teachers for various insubordinations. The ALJ finds/concludes that Claimants perceived lack of supervisor support and the aforementioned events are not likely to cause significant emotional distress in a similarly situated worker possessing the same training and work experience as Claimant. In this case, the ALJ finds Claimant's allegations similar to those where certain behavior/events were not found to be outside a worker's usual experience or so abusive as to cause significant distress in a similarly situation worker. Those events/circumstances include, enforcing polices regarding overtime and the length of lunch breaks (*Davis v. Minnequa Bank of Pueblo,* W.C. No. 4-506-911 (ICAO Jan. 17, 2002); not taking claimant's ideas seriously at meetings (*Trujillo,* 957. P.2d at 1053); minor harassment by coworkers including kicking and shoving (*Gaudett, supra)*; departure of subordinate due to problems with claimant; and a telephone conversation regarding claimant's job performance. (*McCallum v. Dana's Housekeeping,* W.C. No. 4-211-605 (ICAO Feb. 22, 1996). By contrast, the following work place events have been found to be objectively, reasonably traumatizing to a similarly situated worker resulting in a claim for psychological trauma, sabotage of equipment for which claimant was responsible, puncturing claimant's car tire with a knife, rumors that claimant traded his

testimony for money and sexual favors, and threats that claimant's wife would be informed he was allegedly engaged in extramarital affairs. *Pub. Serv. of Colorado v. ICAO,* 68 P.3d 583 (Colo. App. 2003). As noted above, the evidence presented persuades the ALJ that Claimant's reaction to the perceived lack of supervisor support and "unethical" staff behavior constitutes an idiosyncratic response to non-stressful or mildly stressful events which are unlikely to evoke significant symptoms of distress in a similarly situated worker called upon to address said behavior. *See generally*, *Brown v. Family Inn of Colorado Springs*, W.C. No. 4-271-351 (November 12, 1996); *Gaudett, supra.*

I. Finally as required by § 8-41-301(2)(a), claims for mental impairment "shall not be considered to arise out of and in the course of employment if it results from a disciplinary action, work evaluation, job transfer, lay-off, demotion, promotion, termination, retirement, or similar action taken in good faith by the employer." In this case, it is clear that that Claimant filed her claim for mental impairment following service of a corrective action. Indeed, the date of injury as alleged is the same date of service of her corrective action and the decision of the Civil Rights Board also references that Claimant was severed a corrective action on June 21, 2017. To the extent that Claimant asserts that she suffered mental impairment as a consequence of the corrective action served on her on June 21, 2017, the ALJ agrees with Respondents that she failed to prove her corrective action was taken in bad faith. Here, corrective action was taken after Claimant abandoned her shift after becoming upset and leaving GMYSC during a meeting with her supervisor and team coach. She did not seek or obtain prior permission to leave the facility and did not return for the balance of her shift. In the assessment of Claimant's supervisor, her conduct violated three written policies in effect at GMYSC. Moreover, this was not the first time that Claimant violated Employer's leave policy. Based upon the evidence presented, the ALJ concludes that the disciplinary action against Claimant was taken in good faith.

J. When determining good faith, the ALJ may consider whether a claimant was instructed to follow policy prior to the disciplinary action. *Spencer, supra* (supervisor instructed claimant to keep her keys and radio on her person before ultimately confiscating them when she failed to do so). In this case, Mr. Matoush testified that he had previously discussed leave protocol with Claimant during his welfare check when she had no-called, no-showed. He stated that he practiced progressive discipline, and waited until Claimant violated leave protocol a second time to issue the corrective action. The Civil Rights Board also expressly found there was no evidence that the corrective action was issued in bad faith. Accordingly, the ALJ is persuaded that Claimant's corrective action was issued in good faith to address her failure to adhere to established leave policies and dissuade further similar conduct.

ORDER

It is therefore ordered that:

1. Because the ALJ concludes that Claimant's claim for mental impairment is based, in part on incidents common to all fields of employment, and because she failed

to establish she was subjected to psychologically traumatic events generally outside her employment that would evoke significantly distress in a worker in similar circumstances and/or that the corrective action issued June 21, 2017, was taken in bad the claim must be denied and dismissed. Accordingly, Claimant's remaining claims need not be addressed further.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

Colorado Springs, CO 80906

ISSUES

1. Has Claimant shown, by the preponderance of the evidence, that he is entitled to post-MMI medical treatment to relieve the effects of his work injury and prevent deterioration of his condition?

2. Has Claimant suffered serious permanent disfigurement about the head, face, or parts of the body normally exposed to public view, which would entitle him to additional compensation?

FINDINGS OF FACT

Based upon the evidence received at hearing, the ALJ enters the following Findings of Fact:

1. Claimant injured his left knee in an admitted work injury on 7/7/16, while stepping into a pothole. Prior to this injury, Claimant's knee had not been symptomatic, despite his having been previously diagnosed with rheumatoid arthritis.

2. He was referred to an orthopedist, Dr. Wiley Jinkins, M.D. Conservative treatment was not entirely successful. Dr. Jinkins eventually performed an arthroscopic surgery on 6/19/17, which Claimant tolerated well. Claimant had medical and lateral meniscus tears repaired, among other procedures.

3. Claimant continued to follow-up with Dr. Jinkins, who sought authorization for three injections of hyaluronate (Supartz) into the knee to relieve ongoing post-surgical pain. Those were performed, with some relief noted by Claimant, in the fall of 2017.

4. Dr. Jinkins placed Claimant at MMI on 11/14/17 following these injections. At this visit, Claimant noted that he was "75% better" as a result of the surgery and injections. Slight swelling in the knee was noted. In this final visit, Dr. Jinkins noted the following:

> The only medication he is taking at the present time is Relafin and I did give him a *new prescription on this date*. David will return to see me on an as needed basis. I do think it *reasonable for him to have a period of "maintenance care"* for a period of time into the future, should he need an injection, prescription, etc. (Ex. 1, p. 3) (emphasis added).

5. It was noted by Dr. Jinkins, and other physicians, that Claimant would likely need a knee replacement in the future, but no timeline for this has been established.

6. In a previous visit on 3/21/17, Dr. Jinkins had written to Claimant's ATP at Concentra that Claimant had reported that he had placed Claimant on Pennsaid as a

topical nonsteroidal anti-inflammatory medication which had helped to some degree. This Pennsaid prescription was refilled on this date.

7. Claimant had been going to Concentra in a series of visits since shortly after the injury, and had been seeing Randall Jones until March of 2017, after which he was seen by Dr. Daniel Peterson. In a visit dated 4/3/17 Dr. Peterson notes that Claimant had reported that the Pennsaid lotion was helping 'considerably' with the swelling. (Ex. E, p. 54).

8. Dr. Peterson's final visit with Claimant was 11/17/17. He concurred with the MMI assessment, but noted that "David Strine is at functional goal, not at end of healing." (Ex. 1, p.71). He noted at this visit that "Dr. Jinkins did his IR [Impairment Record] already. Specialist is not supposed to do this, but Dr. Jinkins does anyway! Will not waste time repeating it today". (Ex. 1, p. 69). In this visit, Dr. Peterson merely notes that Claimant "needs no medical maintenance care," without further explanation. (Ex. 1, p. 72).

9. Claimant testified at hearing. He reported that he benefitted from the surgery and treatment to date, but still experiences some pain and swelling. He described some benefit from the Relafin as an anti-inflammatory, and the Pennsaid lotion helped with his pain. He still sleeps with a pillow between his legs, and will occasionally awake at night from the pain.

10. Claimant acknowledges that he has not gone to the emergency room or urgent care in recent months, nor has he seen a primary care physician. Claimant explained that he is not currently working, and has no health insurance.

11. Claimant also presented for his disfigurement hearing. Claimant showed some slight swelling on the inner portion of his left kneecap, and two small arthroscopic scars around the kneecap. Each scar is slightly indented, and perhaps 5 mm in length. Additionally, Claimant does have a barely discernable gait disturbance, favoring his left knee when walking.

CONCLUSIONS OF LAW

Based upon the foregoing Findings of Fact, the ALJ draws the following Conclusions of Law:

Generally

A. The purpose of the Workers' Compensation Act of Colorado is to assure quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of litigation. *Section 8-40-102(1).* Claimant must prove entitlement to benefits by a preponderance of the evidence. The facts in a workers' compensation case are not interpreted liberally in favor of either claimant or respondents. Section 8-43-201, C.R.S. A preponderance of the evidence is

that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979).

B. In determining credibility, the ALJ should consider the witness' manner and demeanor on the stand, means of knowledge, strength of memory, opportunity for observation, consistency or inconsistency of testimony and actions, reasonableness or unreasonableness of testimony and actions, the probability or improbability of testimony and actions, the motives of the witness, whether the testimony has been contradicted by other witnesses or evidence, and any bias, prejudice or interest in the outcome of the case. *Colorado Jury Instructions, Civil*, 3:16. The ALJ, as the fact-finder, is charged with resolving conflicts in expert testimony. *Rockwell Int'l v. Turnbull,* 802 P.2d 1182, 1183 (Colo. App. 1990) Moreover, the ALJ may accept all, part, or none of the testimony of a medical expert. *Colorado Springs Motors, Ltd. v. Industrial Commission,* 165 Colo. 504, 441 P.2d 21 (1968); *see also Dow Chemical Co. v. Industrial Claim Appeals Office,* 843 P.2d 122 (Colo. App. 1992) (ALJ may credit one medical opinion to the exclusion of a contrary medical opinion). In this case, no expert testimony was offered, but the medical reports have been reviewed, and the opinions of Claimant's treating physicians have been weighed.

C. In accordance with Section 8-43-215, C.R.S., this decision contains Specific Findings of Fact, Conclusions of Law and an Order. In rendering this decision the ALJ has made credibility determinations, drawn plausible inferences from the record, and resolved essential conflicts in the evidence. See *Davison v. Industrial Claim Appeals Office*, 84 P.3d 1023 (Colo. 2004). This decision does not address every item contained in the record; instead, incredible or implausible testimony or unpersuasive arguable inferences have been implicitly rejected. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000).

General Award of Medical Benefits after MMI

D. The respondents are liable for medical treatment from authorized providers that is reasonably necessary to cure or relieve the employee from the effects of the injury. Section 8-42-101(1)(a); *Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond MMI if the Claimant requires further treatment to relieve the effects of the injury or prevent deterioration of their physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988).

E. To establish entitlement to *Grover* medical benefits, a Claimant must prove that future medical treatment is or will be reasonably necessary to relieve the effects of the injury or to prevent deterioration of their condition. *Hanna v. Print Expediters Inc*., 77 P.3d 863 (Colo. App. 2003). A claimant need not be receiving treatment at the time of MMI to obtain a general award of future medical benefits. *Holly Nursing Care Center v. Industrial Claim Appeals Office*, 992 P.2d 701 (Colo. App. 1989). If the Claimant establishes the probability of a need for future treatment, the claimant is entitled to a general award of future medical benefits, subject to the employer's right to contest compensability, reasonableness, or necessity. *Hanna, supra*.

F. Claimant has established, with substantial evidence, the probability of a need for future medical treatment, which entitles him to a general award of future medical benefits. The ALJ finds Claimant's testimony to be credible. The ALJ further finds that Claimant accurately reported his symptoms to his medical providers. He continues to suffer pain and swelling related to his work injury. He reports some benefit from the Pennsaid and Relafin, which are not affordable through private insurance-nor is it reasonable to require him to resort to that. Additionally, the ALJ is more persuaded by the notes of Dr. Jinkins than those of Dr. Peterson-who does not explain his reasoning why Claimant could not benefit from post-MMI treatment.

Disfigurement

G. Section 8-42-108(1) provides that a Claimant is entitled to additional compensation if he is "seriously, permanently disfigured about the head, face, or parts of the body normally exposed to public view." Claimant's disfigurement, as found, is all exposed to public view. The ALJ concludes that Claimant should be awarded $1,800.00 for this disfigurement. Insurer shall be given credit for any amount previously paid for disfigurement in connection with this claim.

ORDER

It is therefore Ordered that:

1. Respondent shall cover all reasonable and necessary medical treatment from Authorized Treatment Providers to relieved the effects of Claimant's injury and prevent deterioration of his injury.

2. Respondent shall pay Claimant $1,800.00 for his disfigurement. Respondent may take credit for any disfigurement benefits previously paid to Claimant in this matter.

3. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

4. All matters not determined herein are reserved for future determination.

If you are dissatisfied with the Judge's order, you may file a Petition to Review the order with the Denver Office of Administrative Courts, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the Judge's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the Judge; and (2) That you mailed it to the above address for the Denver Office of Administrative Courts. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that recommended medical treatment, including physical therapy for the claimant's right shoulder and consultation with Dr. Tom Hackett, is reasonable medical treatment necessary to maintain the claimant at maximum medical improvement (MMI).

- Whether the claimant has demonstrated by a preponderance of the evidence that his claim should be reopened pursuant to Section 8-43-303, C.R.S. based on a change of condition.

- If the claimant's claim is reopened, whether the claimant has demonstrated by a preponderance of the evidence that recommended medical treatment, including physical therapy for the claimant's right shoulder and consultation with Dr. Tom Hackett, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted occupational disease.

FINDINGS OF FACT

1. While working for the employer as a grocery clerk, the claimant sustained an admitted occupational disease to his right shoulder with a date of onset of October 20, 2014. The claimant initially treated with his primary care provider, Dr. Gina Martin. Subsequently, the claimant reported his right shoulder pain to the employer as a work related injury.

2. On August 10, 2015, the parties went to hearing before ALJ Keith Mottram on issues that included, *inter alia*, compensability for an occupational disease. On September 23, 2015, ALJ Mottram issued a Corrected Order in which it was determined that the claimant suffered a compensable occupational disease while working for the employer. Thereafter the claimant's authorized treating physician (ATP) for this claim became Dr. Craig Stagg.

3. On October 9, 2015, a magnetic resonance image (MRI) was taken of the claimant's right shoulder and showed advanced humeral degenerative joint disease and mild supraspinatus tendiopathy.

4. Dr. Stagg referred the claimant to Dr. Douglas Huene. The claimant was first seen by Dr. Huene on November 25, 2015. Dr. Huene opined that the claimant's right shoulder pain was due to glenohumeral bone on bone arthritis with biceps tendonitis. Dr. Huene administered a right glenohumeral injection. On that same date, Dr. Huene discussed with the claimant the possibility of undergoing arthroscopic surgery. The claimant expressed to Dr. Huene that he did not wish to pursue surgery.

5. On December 29, 2015, the claimant returned to Dr. Stagg and reiterated that he did not wish to pursue total shoulder arthroplasty. On that date, Dr. Stagg determined that the claimant had reached maximum medical improvement (MMI) and assessed a permanent impairment rating of 22% for the claimant's right upper extremity. Dr. Stagg noted that the claimant would need maintenance medical treatment including three to four follow up visits per year, repeat injections (up to three per year) and medications. Dr. Stagg also noted that the claimant "will need a total shoulder arthroplasty in the future".

6. On May 23, 2016, the parties went to hearing before ALJ Mottram on the issue of permanent partial disability (PPD) benefits and, more specifically, converting the claimant's scheduled impairment to a whole person impairment. On June 22, 2016, ALJ Mottram issued Findings of Fact, Conclusion of Law and Order in which the claimant's scheduled impairment of 22% for his right upper extremity was converted to a whole person impairment of 13%.

7. On June 29, 2016, the respondent filed a Final Admission of Liability (FAL) admitting for the MMI date of December 29, 2015, the 13% whole person impairment rating, and reasonable and necessary post-MMI medical treatment.

8. On September 18, 2017, the claimant returned to Dr. Stagg and reported that he was having significant pain in his right shoulder, with pain in his neck and bilateral numbness in his hands. The claimant also requested a referral to Dr. Tom Hackett, for a "second opinion" regarding his right shoulder. At that time, Dr. Stagg referred the claimant to Dr. Hackett for an orthopedic consultation. In addition, Dr. Stagg referred the claimant to Dr. Ellen Price for pain management.

9. The claimant was first seen by Dr. Price on September 21, 2017. At that time, Dr. Price noted that the claimant had been unable to return to work since reaching MMI, had retired, and was "on long-term disability." Dr. Price also noted that the claimant had significant degenerative arthritis and supraspinatus tendinopathy on MRI, and was "still being considered for a total shoulder replacement and plans to see Dr. Hackett at Steadman Hawkins." Dr. Price provided acupuncture treatment, referred the claimant for pool-based physical therapy, and prescribed Lyrica.

10. On October 16, 2017, Dr. Frank Polanco reviewed the claimant's medical records regarding Dr. Price's recommendation for pool physical therapy. In his report, Dr. Polanco opined that pool physical therapy was not medically necessary because there was no indication that the claimant was unable to perform land based rehabilitation activities or an independent exercise program. Dr. Polanco also noted that the claimant was three years post injury with no significant change, flare up or new injury. As a result, Dr. Polanco recommended that the respondent deny pool physical therapy for the claimant's right shoulder.

11. In addition, on October 16, 2017, Dr. John Burris completed a review of the claimant's medical records and opined that the claimant's current treatment was driven by the claimant's underlying arthritic condition and no further care would be

warranted for his occupational disease. Dr. Burris also noted that the claimant suffered from chronic pain related to numerous musculoskeletal issues that are unrelated to the current workers' compensation claim.

12. The respondent has denied authorization for additional physical therapy and the referral to Dr. Hackett.

13. On December 7, 2017, the claimant returned to Dr. Price who noted that the claimant failed to progress with five sessions of acupuncture. At that time, Dr. Price opined that the claimant needed to see Dr. Hackett at Steadman Hawkins for consideration of shoulder replacement. Dr. Price also stated that "there is likely no other option".

14. On January 8, 2018, claimant was again seen by Dr. Price. In the medical record of that date, Dr. Price noted that the respondent had denied authorization for consultation with Dr. Hackett, massage therapy, and other modalities of treatment. Dr. Price provided trigger point injections to the claimant's shoulders and reiterated her opinion that the claimant should see Dr. Hackett.

15. On January 18, 2018, the claimant attended an independent medical examination (IME) with Dr. Wallace Larson. As part of the IME, Dr. Larson reviewed the claimant's medical records, obtained a medical history from the claimant, and performed a physical examination. In his report, Dr. Larson opined that the claimant does need a total right shoulder arthroplasty. With regard to causation, Dr. Larson opined that the claimant's need for right shoulder surgery is due to the preexisting osteoarthritis and not because of any work related injury.

16. Dr. Larson's testimony by deposition was consistent with his IME report. Dr. Larson testified that it is his opinion that the claimant's current right shoulder condition is not related to an occupational disease. Instead, Dr. Larson opined that it is the degenerative arthritis in the claimant's shoulder that is causing his symptoms. Dr. Larson also testified that while repetitive activity can cause tendonitis, repetitive activity with the shoulders does not cause arthritis.

17. The ALJ credits the testimony of the claimant along with the medical records entered into evidence, and finds that the claimant has established that it is more likely than not that due to a worsening of his condition, the claimant is no longer at MMI. The ALJ notes that although the claimant's physicians suggested shoulder surgery as a possibility at the time he reached MMI, beginning in September 2017 Dr. Stagg and Dr. Price have opined that total shoulder arthroplasty should be considered, and have opined that a referral to Dr. Hackett is reasonable.

18. The ALJ credits the opinions of Dr. Stagg and Dr. Price, along with the testimony of the claimant, over the conflicting opinions of Dr. Larson and finds that the claimant has proven that it is more likely than not that the consultation with Dr. Hackett at the Steadman Clinic is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted occupational disease.

19. The ALJ credits the opinions of Dr. Price, along with the testimony of the claimant, over the conflicting opinions of Dr. Larson and finds that the claimant has proven that it is more likely than not that the pool-based physical therapy is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted occupational disease.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2012).

3. At any time within six years after the date of injury, the ALJ may reopen an award on the ground of a change in condition. Section 8-43-303(1), C.R.S. A change in condition refers to "a change in the condition of the original compensable injury or to a change in the claimant's physical or mental condition which can be causally connected to the original compensable injury." *Heinicke v. Industrial Claim Appeals Office*, 197 P.3d 222 (Colo. App. 2008). The ALJ is not required to reopen a claim based upon a worsened condition whenever an authorized treating physician finds increased impairment following MMI. *Id.* The party attempting to reopen an issue or claim shall bear the burden of proof as to any issues sought to be reopened. Section 8-43-303(4), C.R.S.

4. As found, the claimant has proven by a preponderance of the evidence that he suffered a worsening of his condition and is no longer at MMI. Therefore, the claimant's claim for workers' compensation benefits shall be reopened pursuant to Section 8-43-303, C.R.S. As found, the claimant's testimony, the medical records, and the opinions of Dr. Stagg and Dr. Price are credible and persuasive on this issue.

5. Respondents are liable for authorized medical treatment reasonably necessary to cure and relieve an employee from the effects of a work related injury. Section 8-42-101, C.R.S.; *see Sims v. Industrial Claim Appeals Office*, 797 P.2d 777 (Colo. App. 1990). The need for medical treatment may extend beyond the point of maximum medical improvement where the claimant requires periodic maintenance care to prevent further deterioration of his physical condition. *Grover v. Industrial Commission*, 759 P.2d 705 (Colo. 1988). Section 8-42-101, C.R.S., thus authorizes the ALJ to enter an order for future maintenance treatment if support by substantial evidence of the need for such treatment. *Grover v. Industrial Commission, supra*.

6. As found, the claimant has demonstrated by a preponderance of the evidence that the recommended consultation with Dr. Hackett is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted occupational disease. As found, medical notes indicating the progression and worsening of the claimant's shoulder symptoms, the claimant's testimony, and the opinions of Dr. Stagg and Dr. Price are credible and persuasive.

7. As found, the claimant has demonstrated by a preponderance of the evidence that pool-based physical therapy recommended by Dr. Price is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted occupational disease**.** As found, claimant's testimony, the medical records, and the opinion of Dr. Price are credible and persuasive.

ORDER

It is therefore ordered that:

1. The claimant's claim shall be reopened.

2. The respondent shall pay for the reasonable medical treatment necessary to cure and relieve the claimant from the effects of the admitted occupational disease, including physical therapy recommended by Dr. Price and surgical consultation with Dr. Tom Hackett, pursuant to the Colorado Medical Fee Schedule.

3. All matters not determined herein are reserved for future determination.

Dated: April 16, 2018

Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he sustained an injury that arose out of and it course and scope of his employment with employer on January 5, 2016.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that the total right knee arthroplasty is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the January 5, 2016 work injury.

STIPULATED FACTS

The parties submitted the following stipulated facts:

1. The claimant is now a 49 year old police office for the Town of Carbondale. He alleges that he sustained an injury to his right knee on January 5, 2016 when he felt his knee buckle and pop while lifting a box. The respondents issued a Notice of Contest on January 28, 2016.

2. The claimant has significant preexisting injuries and conditions relating to both of his knees due to injuries and his weight.

3. With regard to his left knee, the claimant has received numerous surgical interventions for conditions including degenerative joint disease. On April 18, 2008, Dr. Robert Adams, an orthopedic surgeon, noted that the claimant's biggest concern was his weight, and that he had a 70 year old knee on a 39 year old body. The claimant's weight was such that Dr. Adams could not recommend that the claimant exercise because he would wear out his knee before he could lose enough weight. On July 21, 2008, Dr. John Findley told the claimant that his weight, which at that time was 374 pounds, would likely expedite his need for total knee replacement.

4. At a visit with bariatric surgeon Dr. Michal Snyder on April 15, 2009, the claimant noted that his obesity was causing him problems with his knees, feet, and hips.

5. With regard to the claimant's right knee, the claimant most recently sustained a work related injury on March 1, 2013, when he was kicked in the right knee. Claimant sustained a medial meniscus tear, and underwent a right knee arthroscopy and partial medial meniscectomy on May 22, 2013. The claimant was found to have had grade III and IV tricompartmental arthritic changes in the right knee at that time. When he was placed at maximum medical improvement (MMI) for that injury on September 27, 2013, Dr. David Lorah noted that the claimant still had pain over the medial aspect of the knee. He further noted that the claimant had "occasional locking

and an associated sensation of giving way." At the time of the 2013 injury, the claimant was morbidly obese with a weight in excess of 400 pounds.

6. On September 27, 2013, Dr. Lorah assigned the claimant a permanent impairment rating of 26% for the claimant's right lower extremity. A functional capacity evaluation showed that claimant's right knee flexion was limited to 103 degrees, with extension limited to 5 degrees.

7. The claimant returned to Dr. Snyder on May 8, 2014, who noted that the claimant's past medical history included "arthritis of the weight bearing joints."

8. The claimant had a visit at Glenwood Medical Associates on January 6, 2016. The claimant stated that he felt a pop in his knee, and that it felt unstable and was giving way. An x-ray taken on that date showed extensive degenerative changes in all three knee compartments.

9. The claimant was referred to Glenwood Orthopedic Center, where he treated with Dr. Adams on January 13, 2016. Dr. Adams noted a "long-term history of right knee pain and problems", which included multiple surgeries. He remarked that the claimant had multiple previous right knee injuries which resulted in severe osteoarthritis. Dr. Adams remarked that "most of the pain was located medially." The claimant had a range of motion of 110 degrees of flexion, and 5 degrees of flexion contracture (extension).

10. Dr. Adams' reading of the claimant's x-rays was that that the claimant had "severe bone on bone changes to the medial aspect of his knee, large osteophytic changes, large osteophytes of the patella with bone on bone changes of the patellofemoral compartments as well."

11. Dr. Adams diagnosed the claimant with right knee osteoarthritis, and recommended a total knee arthroplasty. At a visit with Dr. Kelli Konst-Skwiot on January 21, 2016, she noted that Dr. Adams said that the claimant "had severe degeneration and that it was time for a knee replacement."

12. Dr. Andrew Parker issued a staffing opinion on February 12, 2016. He noted that the claimant already had severe right knee arthritis years prior to his workplace incident. Dr. Parker remarked that the proposed surgery addressed a non-work related problem. The insurer denied any liability for total knee replacement.

13. On July 14, 2016, the claimant told Dr. Konst-Skwiot that his right knee was still "popping and cracking and often gives out."

14. The claimant underwent the right knee arthroplasty on October 18, 2016. Preoperative and postoperative diagnoses were right knee degenerative joint disease. Indications were "a longstanding history of knee pain and problems."

15. The claimant returned to Dr. Adams on November 21, 2016. Dr. Adams remarked that claimant's right knee "looks great". The claimant has not received treatment for his right knee since that time. Dr. Adams remarked that the claimant now wanted to have his left knee replaced due to severe tricompartmental arthritis. Dr. Adams felt that was reasonable and performed a total left knee arthroplasty on December 20, 2016.

16. All of the claimant's medical care, including the right knee arthroplasty, was paid for by his personal health insurer. The claimant did not miss any uncompensated time from work.

17. In his answers to the respondents' interrogatories, the claimant acknowledged that he had pain in his right knee due to arthritis prior to the January 5, 2016 incident.

FINDINGS OF FACT

1. The ALJ credits the opinion of Dr. Parker and finds that prior to the January 5, 2016 incident at work, the claimant had severe right knee arthritis. The ALJ also credits the claimant's answers to interrogatories in which he acknowledged that he had pain in his right knee due to arthritis prior to the January 5, 2016 incident.

2. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that his right knee injury arose out of and in the course and scope of his employment with employer. The ALJ finds that the claimant's right knee injury was the result of a preexisting condition.

3. The ALJ finds that the claimant has failed to demonstrate that it is more likely than not that the act of picking up a box on January 5, 2016 aggravated, accelerated, or combined with his preexisting right knee condition. The ALJ finds that the act of picking up a box is ubiquitous and does not constitute a "special hazard" of the claimant's employment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2015).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with a preexisting disease or infirmity to produce disability or need for treatment." *See H & H Warehouse v. Vicory, supra.*

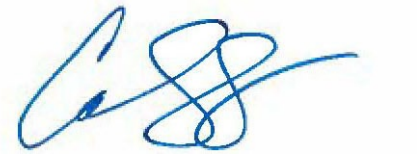
4. An otherwise compensable injury does not cease to arise out of employment because it is partially attributable to a preexisting physical infirmity of the employee. *National Health Laboratories v. Industrial Claim Appeals Office*, 844 P.2d 1259 (Colo. App. 1992). Rather, an injury which results from the concurrence of a preexisting condition and a special hazard of employment is compensable. *H&H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990). Thus, even if the direct cause of the accident is a preexisting idiopathic disease or condition, the resulting disability is compensable if the conditions or circumstances of employment have contributed to the accident or to the injuries sustained by the employment. *Ramsdell v. Horn*, 781 P.2d 150 (Colo. App. 1989). To be an employment hazard for this purpose, the employment condition must not be a ubiquitous one; it must be a special hazard not generally encountered. *See Ramsdell supra*, (high scaffold constituted special employment hazard to worker who suffered epileptic seizure and fell).

5. As found, the claimant has failed to demonstrate by a preponderance of the evidence that he suffered an injury arising out of and in the course and scope of his employment with employer on January 5, 2016. As found, the direct cause of the claimant's right knee injury was the preexisting condition of his right knee as documented by the claimant's various medical providers.

ORDER

It is therefore ordered that the claimant's claim for workers' compensation benefits related to the January 5, 2016 incident is denied and dismissed.

Dated: April 17, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether claimant has demonstrated by a preponderance of the evidence that he suffered an injury arising out of and in the course and scope of his employment with employer.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary total disability (TTD) benefits.

- If claimant proves a compensable injury, whether claimant has demonstrated by a preponderance of the evidence that he is entitled to temporary partial disability (TPD) benefits.

STIPULATIONS

- The parties have stipulated that if claimant's claim is found compensable, his average weekly wage (AWW) is $990.00.

- The parties agree that all medical treatment related to the August 2017 incident has been authorized and paid for by respondents.

FINDINGS OF FACT

1. Claimant began working for employer's predecessor, Proline Supply, in December 2012. In January 2016, employer purchased Proline Supply and claimant's employment began with employer. Employer is a plumbing and heating distributor. Claimant works for employer in inside sales.

2. Claimant works primarily in the electrical portion of the store handling wiring. Claimant's job duties include checking out customers, ordering, receiving and stocking. When assisting a customer with an order for wire, claimant will load a large spool of wire onto a spooling machine. This machine will measure and re-spool the wire for the customer. To place the larger spool on the machine, it is necessary to place the spool on the round edges and roll the spool to the machine using both a pushing and pulling motion.

3. Claimant testified that on August 21, 2017 he was engaging in the task of moving one of these large spools of wire when he felt a "twinge" in his low back near his belt line. Claimant continued working and completed his scheduled shift. At home that night claimant's back was sore and he treated it with ice, ibuprofen, and stretches.

4. Claimant testified that the following day, August 22, 2017, his back was still sore, but he reported for his scheduled work shift. While claimant was at work the pain in his back continued to worsen. Claimant notified his supervisor, Ms. Jardine, that he had hurt his back moving large spools of wire the day before and that that his back was hurting. Claimant also informed Ms. Jardine that he felt that he should go home. Ms. Jardine agreed that claimant could leave at that time. Once home, claimant treated his back pain with ibuprofen. However, claimant continued to have pain and he contacted Ms. Jardine to ask where he should seek treatment for a work injury. Ms. Jardine instructed claimant to go to Pagosa Springs Medical Clinic.

5. Claimant testified that there were no appointments available at the clinic on August 23, 2017. As a result, claimant received treatment in the emergency department at Pagosa Springs Medical Center and was seen by Dr. Mark Turpen. At that time, claimant reported that he felt pain in his back while bending and lifting heavy bales of wire. Dr. Turpen recorded that claimant's pain was located in his bilateral lumbar spine with pain radiating into both legs. Dr. Turpen diagnosed claimant with acute bilateral low back pain and degenerative disc disease in his lumbar spine. Dr. Turpen prescribed pain medication including Norco, cyclobenzaprine, and meloxicam. Dr. Turpen also recommended claimant undergo physical therapy.

6. Claimant testified that his back pain did not improve and on August 25, 2017, he sought additional treatment at the emergency department and was seen by Dr. Robert Halterman who prescribed a different pain medication, Robaxin.

7. Claimant continued to have back pain and returned to Dr. Halterman on August 29, 2017. In addition to his back pain, claimant reported that he was having difficulty emptying his bladder. Dr. Halterman prescribed Floxmax for claimant's urinary symptoms and ordered a magnetic resonance image (MRI) of claimant's lumbar spine.

8. An MRI of claimant's lumbar spine was taken on August 29, 2017 and showed multilevel neural foraminal stenosis or spinal canal stenosis, and multilevel degenerative spondylosis.

9. Dr. Halterman instructed claimant to seek additional treatment from his primary care provider (PCP) Tabitha Zappone, FNP. Claimant was seen by Ms. Zappone on September 5, 2017. At that time, claimant reported back pain radiating into his bilateral groin. Ms. Zappone referred claimant to Spine Colorado for consultation.

10. On September 11, 2017, claimant was seen at Spine Colorado by Dr. Amir Abtahi. At that time, Dr. Abtahi opined that claimant's symptoms were most consistent with hip pathology and referred claimant to orthopedics for evaluation of his hips.

11. Subsequently, it was determined that claimant could not continue treating with Ms. Zappone for his workers' compensation claim. As a result, claimant began to treat with Dr. Julie Buchner at Pagosa Springs Medical Center.

12. Claimant was first seen by Dr. Buchner on September 14, 2017. Claimant reported extreme low back pain, radiating around the bilateral groin creases and, at times, radiating down the posterior of the left leg. Dr. Buchner diagnosed lumbosacral radiculitis and ordered x-rays of claimant's lumbar spine.

13. On September 15, 2017, x-rays of claimant's lumbar spine showed degenerative changes in the lumbosacral spine without other acute radiologic findings.

14. On September 18, 2017, claimant returned to Dr. Buchner and reported that his low back pain was improving, but he was still experiencing pain that radiated into his groin. Claimant also reported that he was having difficulty urinating. A post void residual ultrasound of claimant's bladder was performed and showed potential urinary retention. Dr. Buchner opined that the cause was claimant's discontinuation of Flomax. In addition, Dr. Buchner referred claimant to Dr. William Webb for an orthopedic consultation. On September 25, 2017, claimant was seen by Dr. Webb who diagnosed low back pain and made a referral for physical therapy.

15. On October 13, 2017, claimant returned to Dr. Abtahi and reported that the orthopedist in Pagosa Springs did not believe that claimant had a hip issue. At that time, Dr. Abtahi recommended that claimant undergo sacroiliac (SI) joint injections. The recommended bilateral SI joint injections were performed by Dr. James Santos on October 27, 2017.

16. Claimant returned to Dr. Abtahi on November 17, 2017 and reported that since the SI joint injections he had improvement in his bilateral hip and low back pain. Dr. Abtahi recommended that claimant continue with conservative treatment including physical therapy and injections.

17. Claimant testified that he felt that the injections to his SI joint "really helped" to reduce his pain symptoms.

18. Also on November 17, 2017, claimant began treating with providers with Centura Centers for Occupational Medicine (CCOM) including Dr. Emily Burns and Dr. Randall Jernigan. The parties agree that CCOM is an ATP.

19. On December 8, 2017, claimant was seen by Dr. Burns who recorded that claimant was showing slow, but continuous improvement and no longer had radicular symptoms into his legs. On that date, Dr. Burns released claimant to return to work, four hours per day with a lifting restriction of no more than five pounds. Claimant testified that he returned to work on this part-time basis the following Monday, January 11, 2017.

20. On December 13, 2017, Dr. Michael Janssen reviewed claimant's medical records and opined that treatment of claimant's lumbar spine is not related to the August 21, 2017 lifting incident. In support of his opinion, Dr. Janssen noted that the August 29, 2017 MRI showed no acute pathology.

21. Dr. Janssen's testimony by deposition was consistent with his written report. Dr. Janssen testified that it is his opinion that claimant did not suffer an injury at work. Dr. Janssen also testified that his opinion is based upon the medical records he was provided and he was unaware that claimant had received SI joint injections.

22. On December 29, 2017, claimant returned to CCOM and was seen by Dr. Jernigan. On that date, Dr. Jernigan released claimant to work six hours per day, with a lifting restriction of no more than 20 pounds.

23. Claimant continued to improve and on February 1, 2018, Dr. Jernigan released claimant to full duty, working eight hours per day, with work restrictions for lifting, pushing, and pulling of no more than 30 pounds.

24. Based upon the payroll records entered into evidence at hearing, employer paid claimant partial wages during the period of August 23, 2017 through September 16, 2017. Beginning September 17, 2017 and through December 10, 2017, claimant was off of work with no workers' compensation benefits. Upon returning to work on a part-time basis on December 11, 2017 claimant again was paid partial wages until returning to full duty on February 1, 2018.

25. At hearing, the parties agreed that respondents have paid for all of claimant's medical care related to the August 21, 2017 incident.

26. Claimant testified that during 2017 he worked on a part-time basis of Pagosa Electric Services, LLC (PES). Claimant was paid $26.00 per hour with PES. Records entered into evidence indicate that claimant earned a total of $3,003.00 while working for PES in 2017. Claimant's final day of work with PES was August 15, 2017. Employer was aware of claimant's additional employment with PES.

27. Mr. Iverson, owner of PES, also testified at hearing. Mr. Iverson's testimony was consistent with claimant's testimony regarding claimant's employment with PES.

28. The ALJ credits claimant's testimony and the medical records over the contrary opinion of Dr. Janssen and finds that claimant has demonstrated that it is more likely than not that he injured his low back at work on August 21, 2017.

29. The ALJ credits the medical records and finds that claimant has demonstrated that it is more likely than not that from August 22, 2017 until December 8, 2017 claimant was unable to work because of his low back injury. As a result, claimant has demonstrated that it is more likely than not that he suffered a loss of wages during that time.

30. The ALJ credits the medical records and finds that claimant has demonstrated that although he returned to work on December 11, 2017, he did so on a part-time basis because of his work restrictions. Therefore, claimant has demonstrated that it is more likely than not that he continued to suffer a wage loss from December 11, 2017 until returning to full duty on February 1, 2018.

31. The parties have stipulated that claimant's average weekly wage (AWW) for this claim is $990.00. The ALJ adopts this stipulation of the parties.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.

2. The ALJ's factual findings concern only evidence that is dispositive of the issues involved. The ALJ has not addressed every piece of evidence that might lead to a conflicting conclusion and has rejected evidence contrary to the above findings as unpersuasive. *Magnetic Engineering, Inc. v. Industrial Claim Appeals Office*, 5 P.3d 385 (Colo. App. 2000). When determining credibility, the fact finder should consider, among other things, the consistency or inconsistency of the witness's testimony and actions; the reasonableness or unreasonableness (probability or improbability) of the testimony and action; the motives of the witness; whether the testimony has been contradicted; and bias, prejudice, or interest. *See Prudential Insurance Co. v. Cline*, 98 Colo. 275, 57 P.2d 1205 (1936); CJI, Civil 3:16 (2017).

3. A compensable industrial accident is one that results in an injury requiring medical treatment or causing disability. The existence of a preexisting medical condition does not preclude the employee from suffering a compensable injury where the industrial aggravation is the proximate cause of the disability or need for treatment. *See H & H Warehouse v. Vicory*, 805 P.2d 1167 (Colo. App. 1990); *see also Subsequent Injury Fund v. Thompson*, 793 P.2d 576 (Colo. App. 1990). A work related injury is compensable if it "aggravates accelerates or combines with" a preexisting disease or infirmity to produce disability or need for treatment. *See H & H Warehouse v. Vicory, supra.*

4. As found, claimant has demonstrated by a preponderance of the evidence that he suffered an injury to his low back that arose out of an in the course and scope of his employment. Claimant's preexisting degenerative condition was aggravated, accelerated, or combined with the incident on August 21, 2017, resulting in the need for medical treatment. As found, claimant's testimony and the medical records are credible and persuasive on this issue.

5. To prove entitlement to temporary total disability (TTD) benefits, claimant must prove that the industrial injury caused a disability lasting more than three work shifts, that he left work as a result of the disability, and that the disability resulted in an actual wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Section 8-42-103(1)(a) C.R.S., *supra*, requires claimant to establish a causal connection between a work-related injury and a subsequent wage loss in order to obtain TTD benefits. *PDM Molding, Inc. v. Stanberg, supra*. The term disability, connotes two elements: (1) medical incapacity evidenced by loss or restriction of bodily function; and (2) impairment of wage earning capacity as demonstrated by claimant's inability to resume his prior work. *Culver v. Ace Electric*, 971 P.2d 641 (Colo. 1999). There is no statutory requirement that claimant establish physical disability through a medical opinion of an attending physician; claimant's testimony alone may be sufficient to establish a temporary disability. *Lymburn v. Symbios Logic*, 952 P.2d 831 (Colo. App. 1997). The impairment of earning capacity element of disability may be evidenced by a complete inability to work, or by restrictions which impair the claimant's ability effectively and properly to perform his regular employment. *Ortiz v. Charles J. Murphy & Co.*, 964 P.2d 595 (Colo. App. 1998).

6. As found, claimant has demonstrated by a preponderance of the evidence that he suffered a wage loss during the period of September 17, 2017 through December 10, 2017. Therefore, he is entitled to TTD benefits during that time. As found, the payroll records and claimant's testimony are credible and persuasive.

7. To prove entitlement to temporary partial disability (TPD) benefits, claimant must prove that the industrial injury contributed to some degree to a temporary wage loss. *PDM Molding, Inc. v. Stanberg*, 898 P.2d 542 (Colo. 1995). Temporary partial disability payments ordinarily continue until either claimant reaches maximum medical improvement or an attending physician gives claimant a written release to return to modified employment, such employment is offered to the employee in writing, and the employee fails to begin such employment. *See* 8-42-106, C.R.S.

8. As found, claimant has demonstrated by a preponderance of the evidence that he suffered a wage loss during the period of August 23, 2017 through September 16, 2017, and for the period beginning December 11, 2017 until claimant returned to full duty on February 1, 2018. Therefore, the claimant is entitled to TPD benefits during that time. As found, the payroll records and claimant's testimony are credible and persuasive.

9. The ALJ must determine an employee's AWW by calculating the monetary rate at which services are paid the employee under the contract of hire in force at the time of the injury, which must include the reasonable value of any advantage or fringe benefit provided to the claimant in lieu of wages. Section 8-42-102(2), C.R.S.; *Celebrity Custom Builders v. Industrial Claim Appeals Office*, 916 P.2d 539 (Colo. App. 1995).

10. As found, the parties have stipulated that claimant's AWW for this claim is $990.00 and the ALJ adopts the stipulation of the parties.

ORDER

It is therefore ordered that:

1. Claimant suffered a compensable injury arising out of and in the course and scope of his employment with employer on August 21, 2017.

2. Claimant is entitled to temporary total disability (TTD) benefits for the period of September 17, 2017 through December 10, 2017.

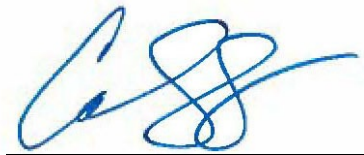
3. Claimant is entitled to temporary partial disability (TPD) benefits for the period of August 23, 2017 through September 16, 2017 and for the period of December 11, 2017 through January 31, 2018.

4. The ALJ adopts the stipulation of the parties and orders that claimant's average weekly wage (AWW) for this claim is $990.00.

5. The insurer shall pay interest to claimant at the rate of 8% per annum on all amounts of compensation not paid when due.

6. All matters not determined herein are reserved for future determination.

Dated: April 23, 2018



Cassandra M. Sidanycz
Administrative Law Judge
Office of Administrative Courts
222 S. 6th Street, Suite 414
Grand Junction, Colorado 81501

If you are dissatisfied with the ALJ's order, you may file a Petition to Review the order with the **Denver Office of Administrative Courts**, 1525 Sherman St., 4th Floor, Denver, CO 80203. You must file your Petition to Review within twenty (20) days after mailing or service of the order, as indicated on certificate of mailing or service; otherwise, the ALJ's order will be final. You may file the Petition to Review by mail, as long as the certificate of mailing attached to your petition shows: (1) That you mailed it within twenty (20) days after mailing or service of the order of the ALJ; and (2) That you mailed it to the above address for the **Denver Office of Administrative Courts**. For statutory reference, see section 8-43-301(2), C.R.S. For further information regarding procedures to follow when filing a Petition to Review, see Rule 26, OACRP. You may access a petition to review form at: http://www.colorado.gov/dpa/oac/forms-WC.htm.

ISSUES

- Whether the claimant has demonstrated by a preponderance of the evidence that he sustained an injury that arose out of and in the course and scope of his employment with the employer on September 2, 2016.

- If the claimant proves a compensable injury, whether the claimant has demonstrated by a preponderance of the evidence that recommended medical treatment, including an electromyography (EMG) study as recommended by Erica Herrera, PA, is reasonable medical treatment necessary to cure and relieve the claimant from the effects of the work injury.

- Prior to hearing, the claimant endorsed the issue of average weekly wage (AWW). However, at hearing the ALJ granted the claimant's motion to reserve that issue, without prejudice.

FINDINGS OF FACT

1. The employer performs investigations for clients, primarily in the workers' compensation system. The claimant is the owner of the employer's company and conducts surveillance for the employer's clients.

2. The claimant testified that he volunteers as the "assistant get back coach" for a local high school football team. In that position, the claimant ensures that players do not enter the field during a game. The claimant also testified that as a volunteer assistant coach he does not coach a position group, lead or demonstrate drills, or perform any physical duties.

3. The claimant testified that on September 2, 2016 he was conducting surveillance that involved filming an individual from his vehicle. While sitting in the driver's seat of his vehicle, the claimant turned to the right to film over his shoulder through the back driver's side window. The claimant testified that during this process of twisting his body, he felt a "pop" in his right low back or right hip and felt a "jolt" down his right leg. At that time, the claimant had to lay down on the ground until the pain subsided. The claimant testified that following that incident he had difficulty raising his right foot to walk. The claimant describes the feeling "like a pinched nerve".

4. The medical records entered into evidence demonstrate extensive prior treatment of the claimant's left hip and low back. A pelvic x-ray taken on March 20, 2013 showed mild bilateral hip osteoarthritis. The claimant testified that he has had issues with his left hip and left knee for many years and considered his right leg to be his "good" leg.

5. The claimant first communicated the September 2, 2016 incident to a medical provider when he contacted his primary care physician Dr. Andrew Mohler on September 13, 2016 via a "patient portal". In that communication the claimant indicated that he twisted his body "weird" and was unable to lift his right foot. Dr. Mohler instructed the claimant to schedule an appointment to been seen.

6. On September 19, 2016, the claimant sought treatment at Dr. Mohler's office and was seen by Courtney Kasun, NP. At that time, the claimant reported "burning pain" in his right hip and the inability to lift his right leg to step. Ms. Kasun instructed the claimant to treat the area with heat and referred him to physical therapy.

7. Thereafter, the claimant was seen by Dr. Mohler on September 30, 2016 and reported right hip pain with an occasional "zinger" down his right leg. Dr. Mohler referred the claimant to Dr. Fletcher Colwell for consultation. Claimant was seen by Dr. Colwell on October 7, 2016 who administered a right intra-articular hip injection. The claimant testified that the injection seemed to help his right hip symptoms.

8. On November 29, 2016, the claimant was seen by Dr. Richard Price regarding pain he was experiencing in his left knee. The claimant reported to Dr. Price that several weeks prior he had fallen on his left knee while hunting. The claimant testified that he tripped on a root and fell on his left knee. The claimant also testified that this pain was different from the pain he has in his low back and right hip.

9. The claimant did not receive further treatment for right hip pain until he returned to Dr. Mohler for treatment on March 29, 2017. At that time, the claimant reported a numb, tingling pain on the lateral aspect of his thigh, with a different kind of pain on the medial aspect of his thigh. The claimant linked those symptoms to the September 2, 2016 twisting incident. Dr. Mohler referred the claimant back to Dr. Colwell for consultation.

10. The claimant reported the September 2, 2016 incident to the insurer on April 18, 2017 by filing a First Report of Injury with the insurer. The claimant testified that he did not report the September 2, 2016 incident to his workers' compensation carrier sooner because he believed that the issue would resolve. When his hip pain continued and he sought additional medical treatment, the claimant decided he would report the incident to the insurer.

11. The claimant was instructed to obtain treatment with Work Partners as his authorized treating provider (ATP). The claimant first treated at Work Partners on May 1, 2017 and was seen by Dr. Lori Fay. At that time, the claimant reported pain in his right hip that was "tight" with burning on the inside of his leg and numbness on the outside of his leg. Dr. Fay opined that the claimant's symptoms indicated lumbar radiculopathy and ordered a magnetic resonance image (MRI) of the claimant's lumbar spine.

12. On May 3, 2017, an MRI was taken of the claimant's lumbar spine that showed degenerative facet changes throughout the lumbar spine with minor degenerative disc changes, most marked at the L4-5 level.

13. The claimant returned to Dr. Fay on May 10, 2017. Based upon the MRI results, Dr. Fay opined that the claimant's pain and numbness was likely originating from the facet arthritis and disc bulge at L4-5. She further opined that the incident on September 2, 2016 likely exacerbated the claimant's underlying degenerative condition. Dr. Fay referred the claimant to Dr. Kirk Clifford for consultation.

14. On May 31, 2017, the claimant was seen by Dr. Clifford and Todd Ousley, PA-C with Rocky Mountain Orthopaedic Associates. The claimant reported back pain that radiated into his right thigh as well as numbness in his thigh. Based upon the claimant's complaints and the results of the lumbar spine MRI, the claimant was instructed to continue to pursue non-operative treatment including exercise, weight loss, and smoking cessation. Dr. Clifford opined that the claimant would not benefit from injection therapy.

15. On June 1, 2017, x-rays of the claimant's bilateral hips showed moderate degenerative changes in each hip joint.

16. Subsequently, Dr. Fay referred the claimant for physical therapy and to Dr. Frazho for an orthopedic consultation. On June 9, 2017, the claimant was seem by Bryan Whitesides, MPT with Rocky Mountain Orthopaedic Associates. Mr. Whitesides opined that the claimant's chronic back pain could be caused by a gluteus medius tendon injury or tear.

17. On June 15, 2017, the claimant returned to Work Partners and was seen by Erica Herrera, PA. The claimant indicated to Ms. Herrera that he did not intend to return to Mr. Whitesides for treatment because the claimant disagreed with the assessment of a possible torn muscle. At that time, Ms. Herrera opted to wait on the referral to Dr. Frahzo and instead ordered an MR arthrogram of the claimant's right hip.

18. On July 11, 2017 an MR arthrogram of the claimant's right hip showed degenerative joint disease, small marginal osteophytes along the femoral head, minimal labral degeneration, with mild bursitis, and no labral tear.

19. On July 13, 2017, the claimant returned to Work Partners and was seen by Ms. Herrera. At that time, Ms. Herrera noted that the claimant's pain was a "shooting pain that radiates down the anterior thigh crossing over at the knee and in the medial aspect of the lower leg to the ankle". The claimant also reported that his symptoms seemed to worsen when he "shuffles down the field" when coaching football. At that time, Ms. Herrera opined that the claimant did not suffer a significant injury because the mechanism was "benign" and this was a slight exacerbation of claimant's preexisting condition. Despite this opinion, Ms. Herrera recommended an electromyography (EMG) study of the claimant's right leg.

20. On July 21, 2017, Dr. Kathryn Bird reviewed the request for an EMG study of the claimant's right leg. Dr. Bird opined that the need for an EMG would not be related to the claimant's workplace injury, and therefore would not be reasonable or necessary medical treatment. In support of this opinion, Dr. Bird noted that the claimant's mechanism of injury would not have be forceful enough to cause the changes seen on MRI. Dr. Bird opined that it was more likely that the degeneration seen on the imaging was due to the aging process and not a specific injury. Based upon Dr. Bird's opinion, respondents have denied authorization for the requested EMG.

21. On October 3, 2017, the claimant attended an independent medical examination (IME) with Dr. Albert Hattem. In connection with the IME, Dr. Hattem reviewed the claimant's medical records, obtained a medical history from the claimant, and performed a physical examination. In his written report, Dr. Hattem opined that the September 2, 2016 incident was a "very minor mechanism of injury" that resulted in a strain of the claimant's right hip. Dr. Hattem also opined that the claimant's chronic right hip pain was likely caused by his time as a football coach, or the fall he suffered while hunting in October 2016. In his report, Dr. Hattem stated that the claimant had reached maximum medical improvement (MMI), did not need further medical treatment, and did not have any permanent impairment. Dr. Hattem's testimony at hearing was consistent with his written report.

22. On October 30, 2017, Dr. Fay and Ms. Herrera authored a letter in which they agreed with Dr. Hattem's assessment that claimant's hip pain is not likely related to the September 2, 2016, but instead related to his underlying and preexisting arthritis.

23. The ALJ credits the opinions of Dr. Fay, Ms. Herrera, Dr. Bird, and Dr. Hattem and finds that the incident on September 2, 2016 was a minor and "benign" event. The ALJ also credits the opinions of Dr. Fay, Ms. Herrera, and Dr. Hattem that if anything, the claimant suffered a brief exacerbation of pain as the result of the September 2016 twisting incident, but his need for medical treatment is causally related to the claimant's preexisting arthritis.

24. The ALJ credits the medical records and finds that although the claimant sought medical treatment with Dr. Mohler in the weeks following the September 2, 2016 incident, the complaints that caused him to return to Dr. Mohler in March 2017 were related to his preexisting right hip, left hip, and low back conditions.

25. For the foregoing reasons, the ALJ finds that the claimant has failed to demonstrate that it is more likely than not that he suffered an injury at work on September 2, 2016 that required medical treatment. The ALJ also finds that the claimant has failed to demonstrate that it is more likely than not that the event on September 2, 2016 did not aggravate, accelerate, or combine with claimant's preexisting condition to warrant the need for medical treatment.

CONCLUSIONS OF LAW

1. The purpose of the "Workers' Compensation Act of Colorado" is to assure the quick and efficient delivery of disability and medical benefits to injured workers at a reasonable cost to employers, without the necessity of any litigation. Section 8-40-102(1), C.R.S. A claimant in a Workers' Compensation claim has the burden of proving entitlement to benefits by a preponderance of the evidence. Section 8-43-201, C.R.S., 2008. A preponderance of the evidence is that which leads the trier-of-fact, after considering all of the evidence, to find that a fact is more probably true than not. *Page v. Clark*, 197 Colo. 306, 592 P.2d 792 (1979). The facts in a Workers' Compensation case are not interpreted liberally in favor of either the rights of the injured worker or the rights of the employer. Section 8-43-201, *supra*. A Workers' Compensation case is decided on its merits. Section 8-43-201, *supra*.
